NOTE

Symbols of United Nations documents are composed of capital letters combined with figures. Mention of such a symbol indicates a reference to a United Nations document.

The footnote numbering follows that used in the original documents on which this *Yearbook* is based. Any footnotes added subsequently are indicated by lower-case letters.

Changes of and additions to wording that appeared in earlier drafts of conventions, model laws and other legal texts are in italics, except in the case of headings to articles, which are in italics as a matter of style.

CONTENTS

Part Three. Annexes

INTRODUCTION

This is the forty-eighth volume in the series of *Yearbooks* of the United Nations Commission on International Trade Law (UNCITRAL).[1]

The present volume consists of three parts. Part one contains the Commission's report on the work of its fiftieth session, which was held in Vienna, from 3-21 July 2017, and the action thereon by the United Nations Conference on Trade and Development (UNCTAD) and by the General Assembly.

In part two, most of the documents considered at the fiftieth session of the Commission are reproduced. These documents include reports of the Commission's Working Groups as well as studies, reports and notes by the Secretary-General and the Secretariat. Also included in this part are selected working papers that were prepared for the Working Groups.

Part three contains summary records, the bibliography of recent writings related to the Commission's work, a list of documents before the forty-ninth session and a list of documents relating to the work of the Commission reproduced in the previous volumes of the *Yearbook*.

REPORT OF THE COMMISSION ON ITS ANNUAL SESSION AND COMMENTS AND ACTION THEREON

THE FIFTIETH SESSION (2017)

A. Report of the United Nations Commission on International Trade Law, fiftieth session (Vienna, 3-21 July 2017) (A/72/17)

[Original: English]

Contents

I. Introduction

1. The present report of the United Nations Commission on International Trade Law (UNCITRAL) covers the fiftieth session of the Commission, held in Vienna from 3 to 21 July 2017.

2. Pursuant to General Assembly resolution 2205 (XXI) of 17 December 1966, the present report is submitted to the Assembly and is also submitted for comments to the United Nations Conference on Trade and Development (UNCTAD).

II. Organization of the session

A. Opening of the session

3. The fiftieth session of the Commission was opened by the Under-Secretary-General for Legal Affairs and Legal Counsel of the United Nations, Mr. Miguel de Serpa Soares, on 3 July 2017.

B. Membership and attendance

4. The General Assembly, in its resolution 2205 (XXI), established the Commission with a membership of 29 States, elected by the Assembly. By its resolution 3108 (XXVIII) of 12 December 1973, the Assembly increased the membership of the Commission from 29 to 36 States. By its resolution 57/20 of 19 November 2002, the General Assembly further increased the membership of the Commission from 36 States to 60 States. The current members of the Commission, elected on 14 November 2012, 14 December 2012, 9 November 2015, 15 April 2016 and 17 June 2016 are the following States, whose term of office expires on the last day prior to the beginning of the annual session of the Commission in the year indicated: [1] Argentina (2022), Armenia (2019), Australia (2022), Austria (2022), Belarus (2022), Brazil (2022), Bulgaria (2019), Burundi (2022), Cameroon (2019), Canada (2019), Chile (2022), China (2019), Colombia (2022), Côte d'Ivoire (2019), Czechia (2022), Denmark (2019), Ecuador (2019), El Salvador (2019), France (2019), Germany (2019), Greece (2019), Honduras (2019), Hungary (2019), India (2022), Indonesia (2019), Iran (Islamic Republic of) (2022), Israel (2022), Italy (2022), Japan (2019), Kenya (2022), Kuwait (2019), Lebanon (2022), Lesotho (2022), Liberia (2019), Libya (2022), Malaysia (2019), Mauritania (2019), Mauritius (2022), Mexico (2019), Namibia (2019), Nigeria (2022), Pakistan (2022), Panama (2019), Philippines (2022), Poland (2022), Republic of Korea (2019), Romania (2022), Russian Federation (2019), Sierra Leone (2019), Singapore (2019), Spain (2022), Sri Lanka (2022), Switzerland (2019), Thailand (2022), Turkey (2022), Uganda (2022), United Kingdom of Great Britain and Northern Ireland (2019), United States of America (2022), Venezuela (Bolivarian Republic of) (2022) and Zambia (2019).

5. With the exception of Côte d'Ivoire, Iran (Islamic Republic of), Kenya, Lebanon, Lesotho, Liberia, Malaysia, Mauritania, Nigeria, Sierra Leone and Zambia, all the members of the Commission were represented at the session.

---

[1] Pursuant to General Assembly resolution 2205 (XXI), the members of the Commission are elected for a term of six years. Of the current membership, 29 were elected by the Assembly on 14 November 2012, at its sixty-seventh session, one was elected by the Assembly on 14 December 2012, at its sixty-seventh session, 23 were elected by the Assembly on 9 November 2015, at its seventieth session, five were elected by the Assembly at its seventieth session, on 15 April 2016, and two were elected by the Assembly on 17 June 2016, at its seventieth session. By its resolution 31/99, the Assembly altered the dates of commencement and termination of membership by deciding that members would take office at the beginning of the first day of the regular annual session of the Commission immediately following their election and that their terms of office would expire on the last day prior to the opening of the seventh regular annual session following their election.

6. The session was attended by observers from the following States: Albania, Algeria, Belgium, Bolivia (Plurinational State of), Bosnia and Herzegovina, Croatia, Cyprus, Democratic Republic of the Congo, Dominican Republic, Estonia, Finland, Lao People's Democratic Republic, Malta, Myanmar, Netherlands, New Zealand, Norway, Portugal, Republic of Moldova, Serbia, Slovakia, South Africa, Sudan, Sweden, Syrian Arab Republic, United Republic of Tanzania and Viet Nam.

7. The session was also attended by observers from the European Union.

8. The session was also attended by observers from the following international organizations:

(a) United Nations system: International Centre for the Settlement of Investment Disputes (ICSID), UNCTAD, United Nations Industrial Development Organization and the World Bank;

(b) Intergovernmental organizations: Asian-African Legal Consultative Organization, European Bank for Reconstruction and Development (EBRD), International Cotton Advisory Committee, International Institute for the Unification of Private Law (Unidroit), Organization for Economic Cooperation and Development (OECD), Organization for the Harmonization of Business Law in Africa and Permanent Court of Arbitration (PCA);

(c) Invited non-governmental organizations: Advisory Council of the United Nations Convention for the International Sale of Goods, American Bar Association, American Society of International Law, Asia-Pacific Regional Arbitration Group, Association for the Promotion of Arbitration in Africa (APAA), Association of the Bar of the City of New York, Beijing Arbitration Commission/Beijing International Arbitration Center (BAC/BIAC), Centro de Estudios de Derecho, Economía y Política (CEDEP), Chartered Institute of Arbitrators (CIARB), Comité Maritime International (CMI), Commercial Finance Association, European Law Students' Association, Factors Chain International and the EU Federation for the Factoring and Commercial Finance Industry (FCI and EUF), Grupo Latinoamericano de Abogados para el Derecho del Comercio International, Hong Kong Mediation Centre (HKMC), Independent Film and Television Alliance, Institute of Law and Technology at Masaryk University, Instituto Iberoamericano de Derecho Concursal (IIDC), International Association of Lawyers, International Association of Restructuring, Insolvency and Bankruptcy Professionals (INSOL International), International Bar Association (IBA), International Chamber of Commerce (ICC), International Institute for Sustainable Development, International Law Institute, International Mediation Institute, International Swaps and Derivatives Association (ISDA), Law Association for Asia and the Pacific, Moot Alumni Association, National Law Center for Inter-American Free Trade, Russian Arbitration Association (RAA), Singapore International Mediation Institute (SIMI), Stockholm Chamber of Commerce Arbitration Institute, Swiss Arbitration Association (ASA), Vienna International Arbitral Centre (VIAC) and World Association for Small and Medium Enterprises.

9. The Commission welcomed the participation of international non-governmental organizations with expertise in the main items on the agenda. Their participation was crucial for the quality of texts formulated by the Commission and the Commission requested the Secretariat to continue to invite such organizations to its sessions.

C. Election of officers

10. The Commission elected the following officers:

Chair:	Mr. János Martonyi (Hungary)
Vice-Chairs:	Mr. Jorge Roberto Maradiaga (Honduras)
	Ms. Natalie Y. Morris-Sharma (Singapore)
	Ms. Kathryn Sabo (Canada)
Rapporteur:	Mr. Salim Moollan (Mauritius)

D. Agenda

11. The agenda of the session, as adopted by the Commission at its 1047th meeting, on 3 July, was as follows:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Commemoration of the fiftieth anniversary of UNCITRAL.
5. Micro, small and medium-sized enterprises: progress report of Working Group I.
6. Insolvency law: progress report of Working Group V.
7. Technical assistance to law reform.
8. UNCITRAL regional presence.
9. Promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts: CLOUT and digests.
10. Status and promotion of UNCITRAL legal texts and the New York Convention:
    (a) General;
    (b) Functioning of the transparency repository;
    (c) International commercial arbitration moot competitions;
    (d) Bibliography of recent writings related to the work of UNCITRAL.
11. Coordination and cooperation:
    (a) General;
    (b) Reports of other international organizations;
    (c) International governmental and non-governmental organizations invited to sessions of UNCITRAL and its working groups.
12. Relevant General Assembly resolutions.
13. Role of UNCITRAL in promoting the rule of law at the national and international levels.
14. International dispute settlement: progress report of Working Group II.
15. Possible future work in the area of international dispute settlement:
    (a) Concurrent proceedings;
    (b) Code of ethics/conduct for arbitrators;
    (c) Possible reform of investor-State dispute settlement.
16. Finalization and adoption of a model law on electronic transferable records and explanatory notes.
17. Electronic commerce: progress report of Working Group IV.
18. Legal developments in the area of public procurement and infrastructure development.
19. Possible future work in the area of security interests and related topics.
20. Endorsement of texts of other organizations: the Uniform Rules for Forfaiting of the International Chamber of Commerce.
21. Work programme of the Commission.
22. Date and place of future meetings.

23. Other business:

(a) Internship programme;

(b) Evaluation of the role of the Secretariat in facilitating the work of the Commission.

24. Progress report of Working Group VI (Security Interests): finalization and adoption of a guide to enactment of the UNCITRAL Model Law on Secured Transactions.

25. Adoption of the report of the Commission.

12. Several delegations expressed concern that agenda item 21 (Work programme of the Commission) had been scheduled for consideration at the end of the second week of the session, which would not allow sufficient time for its consideration before the adoption of the report on 14 July. Another concern, shared by some delegations, was that placing that agenda item after agenda item 16 (Finalization and adoption of a model law on electronic transferable records and explanatory notes) did not facilitate the presence in the room of State representatives in charge of the general work programme of UNCITRAL. The alternative view was that the agenda item was scheduled in a way that would allow the Commission to have the complete information about progress made by all UNCITRAL working groups and views of delegates regarding proposals for future work before the item on the work programme of the Commission was considered.

13. Acknowledging that rescheduling the consideration of agenda item 21 at the current session of UNCITRAL would interfere with the travel arrangements already made by delegates and observers, the Commission decided to retain the scheduling of agenda items for the current session as announced in the provisional agenda (A/CN.9/894). It requested the Secretariat to schedule the consideration of the work programme of UNCITRAL at future sessions in such a way that it would accommodate the presence of relevant representatives of States and allow sufficient time for the consideration of that item. The Secretariat was also requested to be in close consultation with the Bureau of UNCITRAL on scheduling agenda items for future sessions. (See also chapter XIX, section C, below.)

E. Adoption of the report

14. The Commission adopted the present report by consensus at its1060th meeting, on 14 July, at its 1067th meeting, on 20 July, and at its 1068th meeting, on 21 July 2017.

III. Consideration of issues in the area of electronic commerce

A. Finalization and adoption of a model law on electronic transferable records and explanatory notes

1. Introduction

15. The Commission recalled that, at its forty-first and forty-second sessions, in 2008 and 2009, respectively, it had received proposals from States for work on electronic transferable records.[2] The Commission also recalled that, after preparatory work,[3] the Commission, at its forty-fourth session, in 2011, had mandated its Working Group IV (Electronic Commerce) to undertake work in the field of

[2] *Official Records of the General Assembly*, *Sixty-third Session, Supplement No. 17* and corrigendum (A/63/17 and Corr.1), para. 335; and ibid., *Sixty-fourth Session, Supplement No. 17* (A/64/17), para. 338.

[3] Ibid., *Sixty-fifth Session, Supplement No. 17* (A/65/17), paras. 245-247 and 250; and ibid., *Sixty-sixth Session, Supplement No. 17* (A/66/17), paras. 232-235.

electronic transferable records.[4] The Commission further recalled that, from its forty-fifth to its forty-ninth session, from 2012 to 2016, it had considered reports of the Working Group,[5] reaffirming its mandate and endorsing its decision to prepare a model law with explanatory materials.[6]

16. At its current session, the Commission was informed that the Working Group had completed its work on the preparation of a draft model law on electronic transferable records with accompanying explanatory materials at its fifty-fourth session (held in Vienna from 31 October to 4 November 2016). At that session, the Working Group had requested the Secretariat to revise the draft model law and explanatory materials contained in document A/CN.9/WG.IV/WP.139 and its addenda to reflect the deliberations and decisions at that session and transmit the revised text to the Commission for consideration at its fiftieth session (A/CN.9/897, para. 20). The Commission was further informed that, in accordance with the usual practice of UNCITRAL, the text of the draft model law as recommended by the Working Group had been circulated by the Secretariat to all Governments and relevant international organizations for comment.

17. At the session, the Commission had before it: (a) the report of Working Group IV (Electronic Commerce) on the work of its fifty-fourth session (A/CN.9/897); (b) a draft model law on electronic transferable records with explanatory notes (A/CN.9/920); (c) compilation of comments by Governments and international organizations on the draft model law and explanatory notes (A/CN.9/921 and Adds.1-3); and (d) a note by the Secretariat on proposed amendments to the draft explanatory notes and additional issues for consideration by the Commission (A/CN.9/922).

18. The Commission proceeded with the article-by-article consideration of the draft model law together with the accompanying draft explanatory notes and related amendments proposed by Governments, international organizations and the Secretariat.

2. Article-by-article consideration

Article 1. Scope of application

19. It was suggested that an explicit reference to the United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea (New York, 2008)[7] (the "Rotterdam Rules") should be inserted in the footnote to draft article 1. It was recalled that the Rotterdam Rules enabled the use of negotiable electronic transport records and it was added that no other electronic transferable records should be issued under those Rules.

20. Noting that footnote 1 contained an illustrative list of items that enacting States could decide to exclude from the scope of their law on electronic transferable records while enacting it on the basis of the UNCITRAL model, some delegations did not object to listing transport documents issued under the Rotterdam Rules in footnote 1 as additional sub-item (d).

21. In response, it was indicated that one of the goals of the draft model law was to support the implementation of the Rotterdam Rules, and that suggesting an exclusion of the Rotterdam Rules from the scope of application of the draft model law might hinder that goal. It was added that the Rotterdam Rules and the draft model law were generally compatible. It was further indicated that a conflict could arise only with

[7] General Assembly resolution 63/122, annex.

respect to interaction between the Rotterdam Rules and draft article 15, and that such a conflict, if it arose, should be dealt with in that specific context. However, it was also noted that other aspects of those two legislative texts could diverge. For instance, it was said that the notion of integrity of an electronic transferable record in the draft model law and the notion of integrity of an electronic transport record in the Rotterdam Rules were different.

22. It was also suggested that sub-item (c) in footnote 1 should be redrafted to refer to "electronic transferable records without a corresponding paper-based document", which would eliminate the need to refer to electronic transferable records whose substantive law was medium-neutral, as suggested in paragraph 22 of document A/CN.9/922.

23. After discussion, the Commission agreed to leave the text of the footnote unchanged and to insert the following paragraph after paragraph 11 of document A/CN.9/920: "The list of possible exclusions provided in the footnote to paragraph 3 is purely illustrative. Other subject matter that could be excluded from the scope of application of the Model Law include transport documents and electronic transport records falling under the scope of application of the United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea (New York, 2008) (the 'Rotterdam Rules')".

Draft explanatory notes to article 1 (A/CN.9/920, paras. 1 to 15; A/CN.9/922, paras. 22-23)

24. In addition to the amendments agreed to be made to the draft explanatory notes in connection with footnote 1 to draft article 1 (see para. 23 above), the Commission agreed to redraft paragraph 9 of the draft explanatory notes contained in document A/CN.9/920 as follows: "Paragraph 3 clarifies that the Model Law does not apply to investment securities. The general determination as to which instruments are to be counted as securities is a matter of substantive law. The term 'investment instruments' is understood to include derivative instruments, money market instruments and any other financial product available for investment. The term 'securities' does not refer to the use of electronic transferable records as collateral and therefore the Model Law does not prevent the use of electronic transferable records for security rights purposes".

25. While some support was expressed for the suggestions contained in paragraph 22 of document A/CN.9/922, the prevailing view was that they should not be implemented. It was indicated that adding a reference to medium-neutral substantive law in the draft explanatory notes might add an unnecessary level of complexity, as it was clear that the draft model law could operate only on a functional equivalence basis.

26. It was indicated that contractual parties would be free to use in their agreement any source deemed useful and that, therefore, the insertion in the draft explanatory notes of specific text to indicate that possibility, as suggested in paragraph 23 of document A/CN.9/922, was unnecessary.

Article 2. Definitions

27. No comment was made with respect to the draft article.

Draft explanatory notes to article 2 (A/CN.9/920, paras. 16-21; A/CN.9/922, paras. 24-25)

28. The Commission agreed to replace "the person in control" with "possessor" in the last sentence of paragraph 19 of document A/CN.9/920. The Commission also agreed that the substantive comments contained in paragraphs 24 and 25 of document A/CN.9/922 should be reproduced in a footnote to the term "insurance certificates" in paragraph 20 of document A/CN.9/920.

Article 3. Interpretation

29. No comment was made with respect to the draft article.

Draft explanatory notes to article 3 (A/CN.9/920, paras. 22-27)

30. No comment was made with respect to the accompanying draft explanatory notes.

Article 4. Party autonomy and privity of contract

31. It was suggested that the draft model law or explanatory notes should explicitly identify provisions from which derogations by parties were permissible. The Commission noted that similar suggestions had been discussed in the Working Group and that the conclusion of that discussion was reflected in paragraph 1 of the draft article, which left it to enacting States to identify provisions from which parties could derogate.

32. The Secretariat informed the Commission that some States, while considering the adoption of the draft model law, had indicated that they would not enact draft article 4. The suggestion was made to monitor legislative enactments, business implementation and judicial application of that article.

Draft explanatory notes to article 4 (A/CN.9/920, paras. 28-34; A/CN.9/922, para. 26)

33. No comment was made with respect to the accompanying draft explanatory notes.

Article 5. Information requirements

34. The consideration of a suggestion to reflect provisions of national law related to the sanctity of private life in the draft article was deferred to a later stage.

35. In the subsequent discussion, no support was expressed for inclusion of the proposed amendment to the draft article, because such an amendment would touch upon issues of substantive law and would go beyond the intended scope of the draft model law. The Commission decided to retain the draft article unchanged.

Draft explanatory notes to article 5 (A/CN.9/920, paras. 35-37)

36. No comment was made with respect to the accompanying draft explanatory notes.

Article 6. Additional information in electronic transferable records

37. It was suggested that the phrase “as permitted by law” be inserted after the word “information” in the draft article. In response, it was noted that article 1, paragraph 2, of the draft model law precluded the insertion in an electronic transferable record of information not permitted under substantive law. Concern was also expressed that the suggested wording could be interpreted as restricting the addition in electronic transferable records of useful information such as automatically generated technical information.

38. Some delegations were nevertheless of the view that the draft model law or explanatory notes should impose some restrictions on information that could be added in the electronic transferable records so as not to introduce substantive changes with respect to their paper-based equivalents. The Commission decided to retain the draft article unchanged and address the matter in the draft explanatory notes (see para. 39 below).

Draft explanatory notes to article 6 (A/CN.9/920, paras. 38-40)

39. The Commission agreed to explain in paragraph 39 of document A/CN.9/920 that article 1, paragraph 2, of the Model Law would preclude inclusion in an electronic transferable record of additional information not permitted under substantive law.

Article 7. Legal recognition of an electronic transferable record

40. No comment was made with respect to the draft article.

Draft explanatory notes to article 7 (A/CN.9/920, paras. 41-48; A/CN.9/922, para. 27)

41. The Commission agreed with the suggestion contained in paragraph 27 of document A/CN.9/922.

Article 8. Writing

42. No comment was made with respect to the draft article.

Draft explanatory notes to article 8 (A/CN.9/920, paras. 50-56; A/CN.9/922, paras. 42-47)

43. No comment was made with respect to the accompanying draft explanatory notes.

Article 9. Signature

44. No comment was made with respect to the draft article.

Draft explanatory notes to article 9 (A/CN.9/920, paras. 50-54 and 57-61; A/CN.9/922, paras. 28 and 42-47)

45. The Commission agreed to insert in paragraph 57 of document A/CN.9/920 the following clarification: "Reference to electronic signatures in article 9 of the Model Law is intended also as reference to electronic seals or other methods used to enable the signature of a person electronically."

Article 10. Requirements for the use of an electronic transferable record

46. The Commission agreed that the title of the draft article should read "Transferable documents or instruments". It was explained that the suggested title was in line with the naming convention of provisions relating to functional equivalence and was clearer to a reader. No support was expressed for adding the word "exclusive" before the word "control" in paragraph 1 (b) (ii) of the draft article. The Commission agreed to replace the phrase "the electronic transferable record" with the phrase "that electronic record" in paragraph 1 (b) (iii) of the draft article to align the draft of that provision with that of paragraph 1 (b) (ii) of the draft article.

47. Concern was expressed that the translation of the definite article "the" in some languages did not convey the intended meaning. Recognizing that the suggestion raised linguistic rather than substantive issues, the Commission referred the matter to delegates for linguistic consultations together with paragraphs 77 and 78 of the accompanying draft explanatory notes contained in document A/CN.9/920.

48. Further to the linguistic consultations held pursuant to the Commission's request, the Commission considered two options: (a) to include a qualifier "singular" before the words "electronic transferable record" in paragraph 1 (b) (i) of the draft article; or (b) to insert an appropriate qualifier before the phrase "electronic transferable record" in paragraph 1 (b) (i) in those language versions where the definite article could not be used to appropriately convey the notion of singularity of the electronic transferable record. For the latter case, the Commission considered adding explanations along the following lines in paragraphs 77 and 78 of the draft explanatory notes contained in document A/CN.9/920:

> 77. The purpose of the provision is to identify the electronic transferable record that is the equivalent of the transferable document or instrument.
>
> 78. The combination of the article "the" and singular noun in the Arabic, English, French and Spanish language versions of the Model Law suffices to point at the singularity approach. A qualifier is omitted to avoid interpretative challenges. A qualifier could be interpreted as referring to the notion of uniqueness which has been abandoned and could ultimately foster litigation. A qualifier is used in the Chinese and Russian language versions of the Model Law because the proper qualifier may be found in those languages to avoid interpretation problems. All six language versions intend to convey the same notion.

49. Some delegations were of the view that the most desirable solution would be to insert a qualifier in all language versions to avoid any impression that various language versions intended to convey different meaning. It was, however, also recognized by those delegations that the matter had already been extensively discussed in the Working Group and that reopening that discussion in the Commission would not be desirable.

50. Concern was expressed that the proposed wording did not explain in full the meaning of the notion of "singularity". It was suggested that working group reports and other *travaux préparatoires* could be used to gather additional information on that notion.

51. The Commission decided to implement option (b), with the addition of the word "functional" before the word "equivalent" in the proposed revised paragraph 77 (see para. 48 above). (For further consideration of the matter, see paras. 64 and 66 below.)

Draft explanatory notes to article 10 (A/CN.9/920, paras. 62-86; A/CN.9/922, paras. 29, 30 and 38-41)

52. The proposal was made to change the second sentence of paragraph 63 of document A/CN.9/920 as follows: "Uniqueness of a transferable document or instrument aims to prevent the circulation of multiple documents or instruments relating to the same performance and thus to avoid the existence of multiple claims for performance of the same obligation." The suggestion was accepted.

53. Support was expressed for the proposal to change the third sentence of paragraph 63 of document A/CN.9/920 as follows: "Providing a guarantee of uniqueness in an electronic environment functionally equivalent to an original or authentic document or instrument in the paper world has long been considered a peculiar challenge". The Commission accepted that proposal.

54. The Commission agreed to change the first sentence of paragraph 64 of document A/CN.9/920 as follows: "Uniqueness is a relative notion that poses technical challenges in an electronic environment, as providing an absolute guarantee of non-replicability may not be technically feasible and as the identification of the specific record that is supposed to constitute the equivalent to a corresponding transferable document or instrument is not obvious due to the lack of a tangible medium."

55. The Commission agreed to change the third sentence of paragraph 64 of document A/CN.9/920 as follows: "However, a paper document, as a physical object,

is by nature unique and, furthermore, centuries of use of paper in business transactions have provided sufficient information to commercial operators for an assessment of the risks associated with the use of that medium, while practices relating to the use of electronic transferable records are not yet equally well established."

56. The Commission agreed to change paragraph 65 of document A/CN.9/920 as follows: "Article 10 aims at preventing the possibility of the existence of multiple claims to perform the same obligation by combining two approaches, i.e. 'singularity' and 'control'."

57. A suggestion was made to delete the words "and 'control'" in paragraph 67 of document A/CN.9/920. There was disagreement with the suggested change and the Commission decided to retain the wording unchanged.

58. The Commission agreed to add the word "also" before the phrase "have an evidentiary value" in the last sentence of paragraph 68 of document A/CN.9/920.

59. After discussion, the Commission agreed to replace the first and the second sentences of paragraph 70 of document A/CN.9/920 as follows: "The definition of 'electronic transferable record' does not cover certain documents or instruments which are generally transferable but whose transferability may be limited due to other agreements, for example in the case of straight bills of lading."

60. The suggestion was made to redraft the second sentence in paragraph 76 of document A/CN.9/920 as follows: "That requirement implements the requirement of a singular claim." The alternative view was that the wording should be retained unchanged since the provisions in question aimed at achieving the singularity of the record, not a singularity of claim. The Commission decided to retain the text unchanged.

61. The Commission agreed to delete the words "as opposed to other electronic records that are not transferable" in the first sentence of paragraph 77 of document A/CN.9/920. Clarification was sought about the second sentence in paragraph 77.

62. The suggestion was made to state clearly, for example in an introductory part to the explanatory notes, that an electronic transferable record confers the same rights and imposes the same obligations as a corresponding transferable document or instrument.

63. The Commission heard the suggestion that paragraph 78 of document A/CN.9/920 should be deleted or amended to explain the difference between "singularity" and "uniqueness". The alternative suggestion was to delete the introductory words "unlike other legislation on electronic transferable records,".

64. The Commission deferred decisions on paragraphs 77 and 78 of document A/CN.9/920 to a later stage until the linguistic issues referred to in paragraph 47 above were resolved. (For further consideration of the matter, see para. 66 below.)

65. The suggestion was made to delete paragraph 80 of document A/CN.9/920 or add to it a reference to article 12. The Commission agreed to retain the paragraph with a reference to article 12 along the lines of the reference contained in the last part of paragraph 81 of document A/CN.9/920.

66. The Commission agreed to revise paragraphs 77 and 78 of the draft explanatory notes to reflect the understanding reached on provisions of draft article 10, paragraph (1) (b) (i) (see para. 51 above).

67. With respect to the relationship between paragraphs 81 and 119 of the draft explanatory notes as to whether the reliability standard should be characterized as subjective or objective, the suggestion was made to remove the words "or subjective" from paragraph 81. It was explained that the same general reliability standard applied to the various articles of the model law and was therefore objective, while the assessment of the reliability of each method was to be carried out in the light of the specific function pursued with that method and was therefore relative. The Secretariat was requested to reflect those points in explanatory notes.

68. The Commission agreed to remove the words "or subjective" from paragraph 81 of the draft explanatory notes.

69. The Commission agreed to revise paragraphs 82 and 83 of the draft explanatory notes as follows:

> 82. Unlike other UNCITRAL texts on electronic commerce, the Model Law does not use the term "original" in the provisions that contain the requirements for establishing functional equivalence to the paper-based notion of "original". In that respect, it should be noted that article 8 of the UNCITRAL Model Law on Electronic Commerce refers to a static notion of "original", while electronic transferable records are meant, by their very nature, to circulate. Therefore, the notion of "original" in the context of electronic transferable records is different from that adopted in other UNCITRAL texts. With regard to the dynamic notion of "original" in the context of electronic transferable records, article 10, paragraph 1 (b) (iii), of the Model Law refers to integrity of the electronic transferable record as one of the requirements that needs to be fulfilled in order to achieve functional equivalence with a transferable document or instrument.
>
> 83. Hence, while the notion of "original" of transferable documents or instruments is particularly relevant to prevent multiplicity of claims, the Model Law achieves that goal with the use of the notions of "singularity" and "control" that allow identifying both a specific electronic record as the electronic transferable record to entitle the person in control to claim performance and that is the object of control (see above, paras. 65-67).

70. Clarification was sought regarding the words "dynamic notion of 'original'". The attention of the Commission was drawn to the explanation already contained in paragraph 82 of the draft explanatory notes, which could be expanded as necessary. The additional explanation could convey in particular that article 8 of the UNCITRAL Model Law on Electronic Commerce,[8] establishing functional equivalence for the notion of "original", referred to concepts such as "first generated in its final form", and was therefore particularly suitable for documents such as contracts whose modification was possible but neither necessary nor frequent. The notion of "original" in the draft model law, on the other hand, took into account the fact that, after issuance, the electronic transferable record was necessarily subject to modifications and would not be in its "final form" until presentation. The Commission agreed to insert that clarification in paragraph 82 of the draft explanatory notes.

71. The Commission agreed to implement the suggestion contained in paragraph 30 of document A/CN.9/922.

Article 11. Control

72. It was suggested that the title of the draft article should be changed from "Control" to "Possession" to convey the intended purpose of that draft article and to ensure consistency with the naming style of other articles relating to functional equivalence contained in the draft model law. In reply, it was noted that the Working Group had decided to highlight the notion of "control" in the title of article 11 because of its novelty and relevance. Recalling that discussion of the Working Group, the Commission agreed to retain the title unchanged.

73. It was also suggested that the word "publicly" should be added before the word "identify" in paragraph 1 (b) to stress the need to identify the person in control vis-à-vis concerned parties. Concern was raised that the suggestion might have substantive law implications, in particular as regards the role of public registries. Concern was also expressed that the proposal had never been discussed by the Working Group. The point was made that the suggestion would need to be reconciled with the need to accommodate anonymity and the use of pseudonyms under the draft model law. Support was expressed for retaining the text unchanged with inclusion of additional

[8] General Assembly resolution 51/162, annex.

explanation in the explanatory notes, if necessary, of the issue intended to be addressed with the suggestion. The Commission agreed to retain the text unchanged.

74. It was also suggested that the word "exclusive" should be inserted before the word "control" in paragraph 2 of the draft article to ensure consistency between that paragraph and paragraph 1 (a) of the same article that contained that qualifier. The Commission agreed to retain the text unchanged and to add at the end of paragraph 100 of the draft explanatory notes the following sentences: "Transfer of control implies transfer of exclusive control since the notion of 'control', similarly to that of 'possession', implies exclusivity in its exercise. The considerations on the joint exercise of control apply also to transfer of control (see above, paras. 92 and 95)."

75. Another suggestion was to insert the words "or permits" before the words "the possession" in the chapeau of paragraph 1 of the draft article, to reflect that security rights could be made effective against third parties by various methods, such as by taking possession or control or registering notice of the security right. It was noted that the same wording "or permits" was used in paragraph 2 of the draft article. Recognizing the need to ensure consistency of the draft model law with UNCITRAL texts in the area of security interests, the Commission agreed to change the chapeau of paragraph 1 of draft article 11 as suggested. The Commission also agreed to add to the draft explanatory notes the following explanations that would accompany the revision made: "This Model Law is not intended to restrict the creation of security rights in transferable documents or instruments. Thus, the control envisaged under article 11 provides the functional equivalent in those cases where the security rights would be created and made effective against third parties by possession of a paper document or instrument. This Model Law is also not intended to limit the creation of security rights where those rights would be made effective against third parties by their registration in a public registry." The Secretariat was requested to ensure that the text was consistent with the UNCITRAL texts in the area of security interests as regards terminology.

*Draft explanatory notes to article 11 (*A/CN.9/920*, paras. 87-102)*

76. In addition to the changes in the draft explanatory notes agreed in conjunction with the proposed amendments to draft article 11 (see paras. 74 and 75 above), the Commission also agreed:

(a) To revise paragraph 94 of the draft explanatory notes as follows: "Paragraph 1 (b) requires the person in control of the electronic transferable record to be reliably identified as such. The person in control of an electronic transferable record is in the same legal position as the possessor of an equivalent transferable document or instrument.";

(b) To replace the second sentence of paragraph 96 of the draft explanatory notes with the following wording: "The use of the services of a third party to exercise exclusive control does not affect exclusivity of control. It neither implies nor excludes the possibility that such a third party service provider or any other intermediary is a person in control. The person in control is to be determined by the applicable substantive law.";

(c) To replace the third sentence of paragraph 102 with the following: "The Model Law does not contain specific provisions on surrender, since paragraph 2, which governs transfer of control as the functional equivalent of transfer of possession and thus of delivery, would apply also to those cases.".

Article 12. General reliability standard

77. Several delegations were of the view that some of the circumstances listed in the draft article should be mandatory. It was explained that, in particular, the assurance of data integrity, the ability to prevent unauthorized access to and use of the system and the security of hardware and software were elements of critical importance for the correct management of electronic transferable records, in particular across borders. It was added that, for the same reasons, derogations by

contracting parties from the standards to determine the reliability of those elements should not be allowed.

78. Another suggestion was to insert additional items under paragraph (a) of the draft article that would address reliability of the method in addition to the reliability of the computer system. Specific indicators suggested for inclusion in paragraph (a) included extensive use of the standard, maturity of the technology used and reasonable design of the technology. The suggestion was made that, if those provisions were not included in the draft article, they should at least be reflected in the explanatory notes.

79. Views were expressed that those same issues had already been extensively discussed in the Working Group and the result of those deliberations was reflected in the current draft of article 12. Reopening the discussion of those issues in the Commission would therefore be undesirable.

80. The Commission decided to retain the draft article unchanged and reflect relevant points in the explanatory notes. (For further consideration of the matter, see paras. 82 to 84 below.)

*Draft explanatory notes to article 12 (*A/CN.9/920*, paras. 103-120;* A/CN.9/922*, paras. 29, 31, 32 and 48)*

81. With respect to paragraph 32 of document A/CN.9/922, the Commission agreed to clarify in paragraph 116 of the draft explanatory notes that reference to industry standards should not be interpreted as favouring the industry standards of one sector over those of others, which could be detrimental to supply chain management.

82. The view was expressed that paragraphs 104, 119 and other parts of the draft explanatory notes should highlight such elements as data integrity, access protection and hardware and software security as mandatory or more important for the reliability of electronic transferable records, in particular in the cross-border context. A related view was that the explanatory notes could encourage the parties to comply with those elements.

83. The alternative view was that no particular element from the illustrative list contained in draft article 12, subparagraph (a), should be highlighted in the explanatory notes as mandatory or more important, as the relevance of each element was circumstantial. The Commission recalled its decisions as regards draft article 4, on party autonomy and privity of contract (see para. 31 above), which left it to enacting States to identify provisions from which derogations by parties would not be permissible. It was understood that those provisions of article 4 would also be applicable to the list in draft article 12, subparagraph (a).

84. Some support was expressed for deleting paragraph 119 of the draft explanatory notes. The alternative view was that the paragraph should be retained. The Commission decided to retain the text of paragraph 119 unchanged.

Article 13. Indication of time and place in electronic transferable records

85. The Commission agreed to revise the draft article as follows: “Where the law requires or permits the indication of time or place with respect to a transferable document or instrument, that requirement is met if a reliable method is used to indicate that time or place with respect to an electronic transferable record.”

*Draft explanatory notes to article 13 (*A/CN.9/920*, paras. 121-126)*

86. No comment was made with respect to the accompanying draft explanatory notes.

Article 14. Determination of place of business

87. The suggestion was made to change the title of the draft article to “Place of business” to better reflect its content. The Commission agreed with that suggestion.

88. Doubts were expressed about the scope of the draft article, in particular in the absence of any reference to the place of business in other provisions of the draft model law. The view was expressed that the determination of the place of business would be relevant with respect to issuance of the electronic transferable record and performance of the obligation contained therein, and that in both of those cases applicable substantive law would determine the place of business. Support was expressed for deleting draft article 14 because it might interfere with substantive law. The alternative view was that the draft article was the result of careful consideration by the Working Group and should be retained unchanged.

89. The Commission agreed to retain the draft article unchanged on the understanding that it might be helpful to States whose substantive law was silent on the determination of the place of business relevant to electronic transferable records.

Draft explanatory notes to article 14 (A/CN.9/920, paras. 127-130)

90. No comment was expressed with respect to the accompanying draft explanatory notes.

Article 15. Issuance of multiple originals

91. The suggestion was made to delete the draft article. The point was made that the practice of requiring multiple originals had originated in the paper environment in the light of concerns about loss of the only existing original. Doubts were expressed about the intent and the meaning of issuance of multiple originals in the electronic environment where such risks did not arise. It was noted that the Working Group had considered the draft article on the understanding that a business need for the issuance of multiple originals might arise, whereas subsequent consultations on the draft model law had not indicated such a need.

92. Another view was that the draft article should be retained unchanged. It was recalled that the draft model law did not purport to establish substantive rules on the matter (e.g., to permit or prohibit issuance of multiple originals). It was added that, where the substantive law allowed issuance of multiple originals, the draft article could be useful in establishing functional equivalence rules.

93. Broad support was expressed for the view that the deletion or retention of the draft article did not change the fact that issuance of multiple originals was possible under draft article 10 of the model law. The question arose as to whether the draft model law and explanatory notes should nevertheless encourage or discourage such a practice. It was agreed that the draft model law and explanatory notes should remain neutral on the matter.

94. The Commission agreed to delete the draft article but to retain most of the comments on issuance of multiple originals in explanatory notes.

Draft explanatory notes to article 15 (A/CN.9/920, paras. 131-136; A/CN.9/922, paras. 33-35)

95. Following the deletion of draft article 15 (see para. 94 above), the Commission agreed to amend paragraphs 131 to 136 of the draft explanatory notes contained in document A/CN.9/920 to read as follows:

> 131. The possibility of issuing multiple originals of a transferable document or instrument exists in several fields of trade. The Model Law does not affect the continuation of that practice with respect to the use of electronic transferable records in accordance with article 10 of the Model Law when that practice is permitted under applicable law. Similarly, the Model Law does not prevent the possibility of issuing multiple originals on different media (e.g., one on paper and one in electronic form), where this is permitted under applicable law.
>
> 132. As noted (see above, para. 82), the Model Law does not contain a functional equivalent of the paper-based notion of original. Instead, the functions fulfilled by the original of a transferable document or instrument with respect to requesting performance are satisfied in an electronic environment by

the notions of "singularity" and "control" (see above, paras. 65-67). Hence, the transposition of the practice of issuing multiple original transferable documents or instruments in an electronic environment requires the issuance of multiple electronic transferable records relating to the performance of the same obligation.

133. However, caution should be exercised when issuing multiple electronic transferable records. In fact, doing so might lead to multiple claims for the same performance based on the presentation of each original. Moreover, in an electronic environment, the same functions may be pursued as with the issuance of multiple original transferable documents or instruments by selectively attributing control over one electronic transferable record to multiple entities on the basis of the legal rights attributed to each entity (for example, title to property of goods, or security interests). In practice, an electronic transferable records management system could, for instance, provide information on multiple claims having different objects relating to the same electronic transferable record.

134. If substantive law contains an obligation to indicate whether multiple originals have been issued, the electronic transferable record must comply with it in accordance with the information requirements contained in article 10, paragraph 1 (a), of the Model Law.

135. Similarly, the Model Law does not specify whether one or all originals must be presented to request the performance of the obligation contained in the electronic transferable record as this matter is determined by applicable law or, where possible, by contractual agreement.

Article 16. Endorsement

96. No comment was made with respect to the draft article.

Draft explanatory notes to article 16 (A/CN.9/920, paras. 137-141)

97. No comment was made with respect to the accompanying draft explanatory notes.

Article 17. Amendment

98. No comment was made with respect to the draft article.

Draft explanatory notes to article 17 (A/CN.9/920, paras. 142-147)

99. No comment was made with respect to the accompanying draft explanatory notes.

Article 18. Replacement of a transferable document or instrument with an electronic transferable record

100. No comment was made with respect to the draft article.

Draft explanatory notes to article 18 (A/CN.9/920, paras. 148-162)

101. The Commission agreed to insert after paragraph 157 of the draft explanatory notes the following sentences: "However, information contained in a transferable document or instrument may have legal value for purposes not related to the functions pursued with transferability. For instance, a bill of lading may provide evidence of a contract of carriage of goods. The legal status of that information is to be determined by substantive law. Moreover, article 18 does not apply in cases where a second original is deliberately issued on a medium different from that used for the first original."

Article 19. Replacement of an electronic transferable record with a transferable document or instrument

102. No comment was made with respect to the draft article.

Draft explanatory notes to article 19 (A/CN.9/920, paras. 163-170)

103. No comment was made with respect to the accompanying draft explanatory notes.

104. It was agreed to add before paragraph 167 of the draft explanatory notes the following guidance on storage and archiving: "The Model Law does not contain specific provisions on storage and archiving. All applicable retention requirements found in other law, including the law on privacy and data retention, should be complied with. The notions of storage and archiving may apply to the information contained in the electronic transferable record, but not to the electronic transferable record as such." (A/CN.9/834, paras. 74 and 75.)

Article 20. Non-discrimination of foreign electronic transferable records

105. The suggestion was made that the draft article should be supplemented with the following provision: "The principle of non-discrimination of electronic transferable records may not in itself constitute grounds for recognizing the legal effect, validity or enforceability of foreign electronic transferable records if such records do not meet the criteria determining the reliability of the method used, as set out in article 12." It was indicated that if that suggestion was not accepted by the Commission, the proposed text could be included in the explanatory notes as an alternative.

106. The Commission decided to retain the draft article unchanged. (For the consideration of the suggestion in the context of the draft explanatory notes to article 20, see para. 108 below.)

Draft explanatory notes to article 20 (A/CN.9/920, paras. 171-179)

107. The suggestion was made to add to the explanatory notes the following provision: "The underlying domestic criteria concerning acceptance or non-acceptance of electronic transferable records issued or used in a jurisdiction not allowing the issuance and use of such records should not only be made public (transparency) but also be non-discriminatory. Therefore, the relevant implementing measures in such cases should be objective in nature and also not, in themselves, based 'solely' on origin. This assumes that acceptance of such records from jurisdictions that do allow their issuance or use would normally not raise these issues." It was noted that the suggested addition had substantive law implications and would broaden the intended scope of draft article 20. For those reasons, the Commission decided not to include the suggested wording in the explanatory notes to article 20.

108. As regards the suggestion to reflect in explanatory notes to article 20 the proposed wording in paragraph 105 above, concern was expressed about including it in its entirety since that text might conflict with paragraph 2 of draft article 20 by dictating a universal answer on how to deal with issues arising from the cross-border use of electronic transferable records. It was explained that paragraph 2 of draft article 20 left those issues for resolution by States on a case-by-case basis. The Commission agreed to include in paragraph 176 of the draft explanatory notes the following wording: "The principle of non-discrimination of electronic transferable records may not in itself constitute a ground for recognizing the legal effect, validity or enforceability of foreign electronic transferable records."

Draft explanatory notes: Introduction (A/CN.9/922, paras. 4-21)

109. It was suggested that the second sentence of paragraph 8 of the draft introduction contained in document A/CN.9/922 could be revised as follows: "Article 14, paragraph 3, of the Hamburg Rules may be interpreted as implying the possible use of electronic bills of lading." The Commission agreed with the suggestion.

110. The Commission recalled its decision to refer, in paragraph 13 and elsewhere in the explanatory notes where reference was made to medium-neutral electronic transferable records, to electronic transferable records for which substantive law was medium-neutral. In line with that decision, the Commission agreed to revise the fourth sentence of paragraph 13 of the proposed introduction to the explanatory notes contained in document A/CN.9/922 as follows: "The Model Law does not apply to electronic transferable records existing only in electronic form, as those records do not need a functional equivalent to operate in the electronic environment. The Model Law does not affect the medium-neutral substantive law applicable to electronic transferable records".

111. Subject to the above changes, the Commission approved the insertion of the introduction contained in chapter II, section A ("Proposed introduction"), of document A/CN.9/922, in the explanatory notes.

Relationship of the draft model law with other UNCITRAL texts in the area of electronic commerce (A/CN.9/922, paras. 36-53)

112. No support was expressed for adding a passage on the issues raised in paragraphs 42-48 of document A/CN.9/922 to the explanatory notes. The view was expressed that consideration of those issues should be deferred to a working group or should be addressed by enacting States on a case-by-case basis. In the subsequent discussion, no support was expressed for taking up those issues at the working group level.

113. It was recalled that the draft model law had been drafted with a focus on electronic transferable records and that no interaction with other UNCITRAL texts in the area of electronic commerce had thoroughly been considered by the Working Group. It was explained that different legislative solutions could be justified in the light of the specific focus of each text. It was also noted that practices of States in enacting UNCITRAL model laws varied, and it could therefore be undesirable to provide a universally applicable solution.

114. The Commission left it to the Secretariat, as part of its technical assistance activities, to provide guidance to States on how the UNCITRAL model law on electronic transferable records could interact with other texts of UNCITRAL in the area of electronic commerce on a case-by-case basis.

3. Adoption of the UNCITRAL Model Law on Electronic Transferable Records with an Explanatory Note

115. The Commission, after consideration of the text of the draft model law, adopted the following decision at its 1057th meeting, on 13 July 2017:

The United Nations Commission on International Trade Law,

Recalling General Assembly resolution 2205 (XXI) of 17 December 1966, which established the United Nations Commission on International Trade Law with the purpose of furthering the progressive harmonization and unification of the law of international trade in the interests of all peoples, in particular those of developing countries,

Mindful that, while the United Nations Convention on the Use of Electronic Communications in International Contracts (New York, 2005),[9] the UNCITRAL Model Law on Electronic Signatures (2001)[10] and the UNCITRAL Model Law on Electronic Commerce (1996)[11] are of significant assistance to States in enabling and facilitating electronic commerce in international trade, they do not deal or do not sufficiently deal with issues arising from the use of electronic transferable records in international trade,

[9] General Assembly resolution 60/21, annex.
[10] General Assembly resolution 56/80, annex.
[11] General Assembly resolution 51/162, annex.

Considering that uncertainties as to the legal value of electronic transferable records constitute an obstacle to international trade,

Convinced that legal certainty and commercial predictability in electronic commerce will be enhanced by the harmonization of certain rules on the legal recognition of electronic transferable records on a technologically neutral basis and according to the functional equivalence approach,

Recalling that, at its forty-fourth session, in 2011, it mandated Working Group IV (Electronic Commerce) to undertake work on electronic transferable records,[12]

Having considered at its fiftieth session, in 2017, a draft model law on electronic transferable records prepared by the Working Group,[13] together with comments on the draft received from Governments and international organizations invited to sessions of the Working Group,[14]

Noting that the draft model law prepared by the Working Group deals with the use of electronic transferable records equivalent to paper-based transferable documents or instruments and does not deal with the use of transferable records existing only in electronic form or transferable records, documents or instruments for which substantive law is medium-neutral,

Believing that an UNCITRAL model law on electronic transferable records will constitute a useful addition to existing UNCITRAL texts in the area of electronic commerce by significantly assisting States in enhancing their legislation governing the use of electronic transferable records, or in formulating such legislation where none currently exists,

1. *Adopts* the UNCITRAL Model Law on Electronic Transferable Records, annexed to the report of the fiftieth session of the Commission;

2. *Requests* the Secretariat to finalize an explanatory note that will accompany the UNCITRAL Model Law on Electronic Transferable Records by reflecting deliberations and decisions at the Commission's fiftieth session as regards the draft explanatory notes contained in documents A/CN.9/920 and A/CN.9/922;

3. *Requests* the Secretary-General to publish the UNCITRAL Model Law on Electronic Transferable Records together with an explanatory note, including electronically and in the six official languages of the United Nations, and to disseminate it broadly to Governments and other interested bodies;

4. *Recommends* that all States give favourable consideration to the UNCITRAL Model Law on Electronic Transferable Records when revising or adopting legislation relevant to electronic transferable records, and invites States that have used the Model Law to advise the Commission accordingly.

B. Progress report of Working Group IV

116. The Commission recalled that, at its forty-ninth session, in 2016, it had mandated Working Group IV (Electronic Commerce) to take up work on the topics of identity management and trust services as well as of cloud computing upon completion of the work on the draft model law on electronic transferable records. In that context, the Secretariat, within its existing resources, and the Working Group were asked to continue to update and conduct preparatory work on the two topics, including with respect to their feasibility, in parallel and in a flexible manner and to

[12] *Official Records of the General Assembly, Sixty-sixth Session, Supplement No. 17* (A/66/17), para. 238.
[13] A/CN.9/920.
[14] A/CN.9/921 and addenda.

report back to the Commission so that it could make an informed decision at a future session, including on the priority to be given to each topic.[15]

117. At its current session, the Commission had before it reports of the Working Group on its fifty-fourth session (A/CN.9/897), held in Vienna from 31 October to 4 November 2016, and on its fifty-fifth session (A/CN.9/902), held in New York from 24 to 28 April 2017. The Commission was informed that, at the fifty-fifth session of the Working Group, there was general agreement on the view that the suggested work on identity management and trust services on the one hand, and on cloud computing on the other, were different in scope and content. At the same session of the Working Group, it had been suggested that work on the two topics could continue in parallel, taking into account that differences between the projects on those two topics could lead to their having different rates of development. However, at the session, the view had also been reiterated that parallel work on both topics could place excessive demands on the Working Group, in particular at a more advanced stage, to the detriment of the quality of the final products (A/CN.9/902, para. 94). The Commission was also informed that, at the session of the Working Group, various views had been expressed on recommendations for future work (A/CN.9/902, paras. 95 and 96).

118. At the current session, the Commission heard different preferences for continuing work on each topic.

119. As regards work in the area of cloud computing, the view was expressed that the preparation of a checklist of contractual issues relating to cloud computing, identified by the Working Group as its project in that area, could proceed and be finalized expeditiously on the basis of research already accomplished, given that the content and the structure of the envisaged checklist had already been defined by the Working Group. It was noted that that work would be of great relevance for commercial operators. The view was expressed that, after completion of that work, the Working Group might consider taking up further projects in that area under the mandate given to it by the Commission during the previous year. The desirability of elaborating substantive rules on cloud computing by UNCITRAL was noted.

120. The prevailing view, however, was that it would be premature to discuss further work in that area beyond the preparation of the checklist. Some delegations were of the view that no further work in that area by UNCITRAL would be necessary. It was further indicated that, in any work in that area, cooperation would need to be sought with other organizations active in the field, namely the Hague Conference on Private International Law, with respect to the private international law aspects of cloud computing.

121. While recognizing that cloud computing raised important legal issues, many delegations were of the view that priority should be given to the work of UNCITRAL on legal aspects of identity management and trust services. Several delegations stressed that identity management and trust services were foundational to all UNCITRAL texts on electronic commerce and, more generally, to the use of electronic communications. It was indicated that strong commercial interest existed with regard to those topics. Ensuring cross-border reliability and interoperability and recognition of identity management and trust services for trustworthiness of commercial transactions and cross-border trade were thus considered important and urgent. The view was expressed that work on both identity management and trust services should proceed together in the light of a close interaction between those two topics. Drawing on existing regional instruments in that area, such as the European Union regulation on electronic identification and trust services for electronic transactions in the internal market,[16] was considered important.

122. It was recognized that work in the area of identity management and trust services was newer and more ambitious, touched upon more sensitive issues, generated greater

[15] *Official Records of the General Assembly*, *Seventy-first Session*, *Supplement No. 17* (A/71/17), para. 235.

[16] Regulation No. 910/2014 of the European Parliament and of the Council of 23 July 2014 on electronic identification and trust services for electronic transactions in the internal market and repealing Directive 1999/93/EC.

interest and required, at the current stage, more brainstorming and concretization than work in the area of cloud computing. Support was expressed for the drafting of a legislative text on identity management and trust services. The suggestion was also made to continue discussing scope, key definitions and key principles related to identity management and trust services, since those issues would be relevant to any instrument prepared in that area.

123. The alternative view was that it would be unfeasible and undesirable for the Working Group to start drafting any text on identity management and trust services before the scope and goals of the work in that area had been clarified. Attention was drawn in particular to the need to clarify the relevance of trust services for identity management. Preference was therefore expressed for continuing to brainstorm, in the Working Group, general issues related to identity management and trust services. It was suggested that, once the progress report of the Working Group to the Commission at its next session had been considered, the Commission would be in a better position to give a more concrete mandate to the Working Group as regards its work in that area.

124. Some delegations did not object to the work in the area of cloud computing proceeding in parallel with the work in the area of identity management and trust services, although doubt was expressed about the utility of the envisaged checklist. Other delegations favoured prioritizing work in the area of identity management and trust services if the issue of resource constraints in handling work in both areas in parallel would arise. Other delegations expressed the view that they would wish to prioritize work in the area of cloud computing if resource constraints were indeed an issue.

125. A suggestion was made to delegate the work in the area of cloud computing to the Secretariat or an expert group so as not to use the Working Group's resources for detailed deliberations on the checklist. The understanding was that, if such an approach were followed, the Working Group would periodically review the progress of the Secretariat with regard to the preparation of the checklist.

126. While some support was expressed for that suggestion, there was also strong support for having the Working Group proceed with the work in that area. The view was expressed that work on cloud computing would require extensive technical deliberations in the Working Group, in addition to research by the Secretariat, since cloud computing touched on complex issues of cross-border legal relations and various branches of law.

127. Recognizing that, until the next session of the Commission in 2018, both the Secretariat and the Working Group would be able to handle both projects in parallel, the Commission reaffirmed the mandate given to the Working Group at its forty-ninth session, in 2016 (see para. 116 above). It agreed to revisit that mandate at its next session, in particular if the need arose to prioritize between the topics or to give a more specific mandate to the Working Group as regards its work in the area of identity management and trust services. The Secretariat was requested to consider convening expert group meetings as it deemed necessary to expedite the work in both areas and ensure the productive use of conference resources by the Working Group. States and international organizations were invited to share with the Working Group and the Secretariat their expertise in the areas of work assigned to the Working Group.

128. The Commission was informed about ongoing work in the field of paperless trade, including the legal aspects of electronic single-window facilities. It was indicated that that work was aimed in particular at exploring the complementarity between the chapters of free trade agreements on electronic commerce and UNCITRAL texts on electronic commerce, with a view to supporting the implementation of those chapters through the adoption of UNCITRAL texts.

IV. Consideration of issues in the area of security interests

A. Finalization and adoption of a guide to enactment of the UNCITRAL Model Law on Secured Transactions

129. The Commission recalled that, at its forty-ninth session, in 2016, it had adopted the UNCITRAL Model Law on Secured Transactions,[17] and had given Working Group VI (Security Interests) two sessions to complete its work on a draft guide to enactment of that Model Law.[18] The Commission noted with appreciation that, at its thirtieth and thirty-first sessions, the Working Group had done so. At its current session, the Commission had before it the reports of those sessions of the Working Group (A/CN.9/899 and A/CN.9/904) and the draft guide to enactment (A/CN.9/914 and Adds.1-6).

130. The Commission agreed that the Secretariat should be given a mandate to make the changes to the draft guide to enactment that were approved by the Commission at its current session and necessary consequential editorial changes, avoiding making changes where it was not clear whether they would be editorial or substantive. The Commission also agreed that the Secretariat should review the entire draft guide to enactment to ensure consistency in the terminology used.

131. After considering a recommendation made by the Working Group at its thirty-first session, the Commission decided that a corrigendum should be issued to the Model Law: (a) to refer in article 81, paragraph 5, to paragraphs 3 and 4, and not to paragraphs 1 and 2 (see A/CN.9/904, para. 35); and (b) to add in article 85, paragraph 1, a reference to article 98 (see A/CN.9/904, para. 41).

1. Preface and general part (A/CN.9/914, paras. 1-20)

132. With respect to paragraph 4, it was agreed that: (a) the purpose of the Model Law should be stated more clearly by reference to wording that was used in the decision of the Commission adopting the Model Law and the relevant General Assembly resolution;[19] and (b) it should clarify that the Model Law had been designed for implementation in States with different legal traditions.

133. In the discussion, a suggestion was made that an additional paragraph should be inserted after paragraph 7 to explain the need to adapt the Model Law in States that already had efficient and modern systems of secured transactions that partially departed from the Model Law. It was stated that, for example, a system based on an ex-ante control of the documents by highly specialized civil servants might lead to the reduction of litigation, avoid delays in States with slow and inefficient judicial systems and facilitate control of money-laundering and abusive contractual clauses between large lenders and small and medium-sized enterprises. That suggestion did not receive sufficient support. It was stated that the Model Law was already sufficiently flexible and that such a paragraph could be interpreted as an open invitation to States to consider adopting the Model Law partly rather than as a whole.

134. Subject to the above-mentioned changes, the Commission adopted the preface to and the general part of the draft guide to enactment (A/CN.9/914, paras. 1-20).

2. Chapter I. Scope of application and general provisions (A/CN.9/914, paras. 21-76)

135. With respect to paragraph 28, it was agreed that recommendation 6 in the *UNCITRAL Legislative Guide on Secured Transactions*[20] (the "Secured Transactions Guide") was different from article 1, paragraph 4, and thus the reference to that recommendation should be deleted or explained.

---

[19] General Assembly resolution 71/136.

[20] United Nations publication, Sales No. E.09.V.12.

136. With respect to paragraph 29, it was agreed that the last sentence should be deleted, as the Model Law did not contain any consumer protection rules.

137. The Commission considered the question of whether paragraph 31 should be revised and complemented by a set of model rules on security rights in attachments to movable and immovable property.

138. After discussion, the Commission agreed that paragraph 31 should be revised (but not complemented by a set of model provisions) to: (a) draw the attention of legislators to issues relating to attachments in movable and immovable property, referring to the relevant recommendations of the Secured Transactions Guide (see recommendations 21, 41, 43, 87, 88, 164-166 and 184); (b) explain that the Model Law did not address issues relating to security rights in attachments mainly because the general rules applied to security rights in attachments to movable property, and attachments to immovable property involved issues that did not lend themselves to harmonization at the international level; (c) note that, for that reason, the Secured Transactions Guide essentially deferred to national immovable property law; (d) explain that an attachment to movable property meant a tangible asset that was physically attached to another tangible asset in a manner that did not cause it to lose its separate identity; (e) clarify that a security right might be created in a tangible asset that was an attachment to movable property at the time of creation of the security right or became an attachment subsequently (see recommendation 21); (f) mention that a security right in a tangible asset that was effective against third parties at the time when the asset became an attachment to movable property remained effective against third parties thereafter without any further action (see recommendation 42); (g) note that the rule of "first to register or otherwise make effective against third parties a security right" applied to the various priority competitions discussed in the Secured Transactions Guide, including to a priority competition between a security right in a tangible asset that had become an attachment to movable property and a security right in that movable property (see Secured Transactions Guide, chap. V, para. 115); and (h) recommend that States enact a rule providing that the enforcing secured creditor would be liable for any damage to a movable asset caused by the act of removal of an attachment to movable property other than any diminution in its value attributable solely to the absence of the attachment (see recommendation 166).

139. With respect to paragraph 40, it was agreed that the last sentence should be deleted, as the question whether a control agreement needed to be in a single document or not was a matter for contract law or the law of evidence.

140. With respect to paragraph 43, it was agreed that examples should be given of assets that, depending on their use, could be characterized as consumer goods, inventory or equipment.

141. With respect to paragraph 44, it was agreed that the second sentence should be placed elsewhere in the draft guide to enactment (possibly in document A/CN.9/914/Add.1, para. 3), as it did not necessarily relate to the definition of the term "grantor".

142. With respect to paragraph 53, it was agreed that the example at the end of the last sentence should be deleted, as in that example the issuer did not have possession of the document.

143. With respect to paragraph 71, it was agreed that the third and fourth sentences should be more closely aligned with the text approved by the Commission at its last session.[21]

144. With respect to paragraph 74, it was agreed that the words "is inspired by" and "based on" in the first sentence should be replaced with more generic wording along the following lines: "follows the approach taken in".

[21] *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), para. 98.

145. Subject to the above-mentioned changes, the Commission adopted chapter I (Scope of application and general provisions) (A/CN.9/914, paras. 21-76).

3. Chapter II. Creation of a security right (A/CN.9/914/Add.1, paras. 1-36)

146. It was agreed that paragraph 1 should be revised to encourage States to enact the Model Law as a whole, including the asset-specific rules (in particular those on core commercial assets such as receivables), omitting only rules relating to types of assets that were unlikely to be used as security for credit in those States.

147. With respect to paragraph 3, it was agreed that it should clarify that: (a) in a general lease, a lessee could only create a security right in its rights under the lease; and (b) in a financial lease, as a result of the priority rules, a lessee could create a security right in the leased asset as a whole and that security right could have priority over the financial lease right of the lessor with respect to which no security right was registered. It was also agreed that the discussion as to whether the creditor of a receivable had the right to create a security right in a receivable even if it had transferred the receivable was a different matter and should be discussed in a separate paragraph.

148. With respect to paragraph 8, it was agreed that the last two sentences should be deleted because the maximum amount for which the security right might be enforced was often set at an extremely high level and thus did not protect grantors from excessive economic commitments.

149. With respect to paragraph 9, it was agreed that it should also reflect the last sentence of recommendation 17 contained in the Secured Transactions Guide ("Any exceptions to these rules should be limited and described in the law in a clear and specific way.").

150. With respect to paragraph 10, it was agreed that it should include a reference to paragraph 30 of document of A/CN.9/914, which explained that article 1, paragraph 6, implemented recommendation 18 contained in the Secured Transactions Guide.

151. With respect to paragraph 14, it was agreed that it should explain: (a) that to avoid giving the secured creditor a windfall, the secured creditor's right to enforce its security right both in the original encumbered asset and in the proceeds was limited by the amount of the secured obligation outstanding at the time of enforcement (see the Secured Transactions Guide, chap. II, para. 85); and (b) the impact of the absence of a rule along the lines of article 10, paragraph 1, which was discussed in the last sentence.

152. With respect to paragraph 15, it was agreed that the reference to a negotiable warehouse receipt that covered new inventory as proceeds of original encumbered inventory should be deleted, as such a warehouse receipt would not constitute proceeds. It was also agreed that the last sentence should be revised to stipulate that if encumbered assets were described in the security agreement in a comprehensive way (for example, inventory and receivables), those assets would be original encumbered assets, but they could also be proceeds if necessary (as, for example, in the grantor's insolvency, where a security right would not extend to assets acquired after the commencement of insolvency with respect to the grantor, unless they were proceeds of encumbered assets that belonged to the grantor before the commencement of insolvency; see the Secured Transactions Guide, recommendation 235).

153. It was agreed that paragraphs 16 and 17 should also refer to money, as article 10, paragraph 2, applied not only to rights to payment of funds credited to a bank account, but also to money. It was also agreed that the last sentence of paragraph 17 should be revised to explain that, if the balance in a bank account fell below the amount deposited, subsequent increases were unlikely to be proceeds of the original encumbered assets.

154. It was agreed that the last two sentences of paragraph 20 should be revised to refer to the quantity of the mass, as article 11, paragraph 2, limited the right to a mass by reference to its quantity, and not to its value.

155. With respect to paragraph 21, it was agreed that it should be revised to explain that the limit of a security right in a product under article 11, paragraph 3, related to value rather than to quantity, because the components of a mass could be counted (such as the number of litres of combined oil in the example in paragraph 20), but such counting was impossible in a product.

156. It was agreed that paragraph 24 should be revised to explain that an agreement limiting the grantor's right to create a security right in a receivable did not prevent the security right from being effective.

157. It was agreed that paragraph 28 should be revised to explain the rationale for the limitation of the scope of the rule in article 13, paragraph 1, to the types of receivables listed in article 13, paragraph 3.

158. It was widely felt that paragraph 28 should explain that: (a) the interference with party autonomy under article 13, paragraph 1, was justified, in the case of trade receivables, by the need to promote access to credit with receivables as security, but not in the case of receivables arising from financial contracts (excluded from the Model Law under art. 1, para. 3 (d)) or loan receivables, in which there was a justifiable reason for the debtor of those types of receivables to be able to control who its counter-party would be; and (b) under article 1, paragraph 3 (d), the Model Law applied to a payment right arising upon the termination of all outstanding transactions and, under article 13, paragraph 3 (d), the rule in article 13, paragraph 1, applied to such payment rights in line with the approach taken in article 4, paragraph 2 (b), and article 9, paragraph 3 (d), of the United Nations Convention on the Assignment of Receivables in International Trade (New York, 2001) [22] (the "Assignment Convention").

159. With respect to paragraph 29, it was agreed that the reference to article 14, in parentheses, was unnecessary and should be deleted.

160. With respect to paragraph 30, it was agreed that the reference to an accessory guaranty or suretyship should be qualified, as in some States such a guaranty or suretyship was a personal right that supported rather than secured payment.

161. It was agreed that paragraph 31 should be revised to explain briefly the reasons why article 14 did not include recommendation 25, subparagraphs (g) and (h), contained in the Secured Transactions Guide.

162. It was agreed that paragraph 35 should be revised to explain that, under article 16, a security right in a negotiable document extended to the assets covered by the document only if the issuer of the document was in possession of the assets when the security right was created.

163. Subject to the above-mentioned changes, the Commission adopted chapter II (Creation of a security right) (A/CN.9/914/Add.1, paras. 1-36).

4. Chapter III. Effectiveness of a security right against third parties
(A/CN.9/914/Add.1, paras. 37-53)

164. It was agreed that paragraph 42 should be revised to explain that the purpose of article 21 was to preserve the priority achieved by the first method of third-party effectiveness.

165. It was agreed that paragraph 46 should be revised to explain that the price should not be so high as to prevent a consumer from encumbering his or her assets to obtain credit, but not so low either as to dissuade a creditor from entering into the transaction in the first instance because the transaction costs of ensuring and monitoring the third-party effectiveness of its security right would exceed the benefits.

166. With respect to paragraphs 52 and 53, it was agreed that: (a) the heading should be revised to read along the following lines: "Additional considerations for States parties to certain conventions for negotiable instruments and certificated non-intermediated securities"; (b) paragraph 53 should be revised to read along the

[22] General Assembly resolution 56/81, annex.

following lines: "A State that had enacted the Geneva Uniform Law (or the Bills and Notes Convention) might wish to note that a secured creditor in possession of a negotiable instrument or certificated non-intermediated security might have, in addition to its rights under the Model Law, the rights afforded by the Geneva Uniform Law (or the Bills and Notes Convention) where the instrument or the security contained an endorsement contemplated by the Geneva Uniform Law (or the Bills and Notes Convention)".

167. Subject to the above-mentioned changes, the Commission adopted chapter III (Effectiveness of a security right against third parties) (A/CN.9/914/Add.1, paras. 37-53).

5. Chapter IV. Registry system (A/CN.9/914/Add.2, paras. 1-58 and A/CN.9/914/Add.3, paras. 1-82)

168. With respect to paragraph 2 of document A/CN.9/914/Add.2, it was agreed that the essence of the first sentence of footnote 8 to the Model Law should be reflected to more clearly explain that, if the Model Registry Provisions were enacted in a separate law or other instrument, their enactment and entry into force should be coordinated so that they would enter into force simultaneously with the enactment of the Model Law and at a time when the Registry would be operational.

169. It was agreed that paragraph 3 of document A/CN.9/914/Add.2 should be revised to make a stronger recommendation for a fully electronic registry system in which notices could be submitted, stored and searched electronically.

170. A suggestion to delete paragraph 17 of document A/CN.9/914/Add.2 in its entirety did not receive support.

171. With respect to paragraph 19 of document A/CN.9/914/Add.3 and in other parts of the draft guide to enactment where reference was made to an article of the Model Law being "based on" another text, it was agreed that those words should be reviewed for accuracy and perhaps replaced with more general wording.

172. With respect to paragraph 22 of document A/CN.9/914/Add.3, it was agreed that the statement in the last sentence would not be true in all cases, and thus should be qualified along the following lines: "This option is predicated on the rationale that such a claimant generally may not have been prejudiced by relying on the unauthorized registration."

173. It was agreed that paragraph 34 of document A/CN.9/914/Add.3 should be deleted in its entirety, as it explained an approach that was not taken in the Model Law.

174. With respect to paragraph 42 of document A/CN.9/914/Add.3, it was agreed that the third and fourth sentences should be deleted, and instead the paragraph should: (a) refer to the two situations in which the secured creditor could select a registration period that would be too long or too short as described in paragraph 215 of the *UNCITRAL Guide on the Implementation of a Security Rights Registry*; [23] and (b) explain that article 24, paragraph 6, would rarely have any effect.

175. Subject to the above-mentioned changes, the Commission adopted chapter IV of the draft guide to enactment (A/CN.9/914/Add.2, paras. 1-58 and A/CN.9/914/Add.3, paras. 1-82).

6. Chapter V. Priority of a security right (A/CN.9/914/Add.4, paras. 1-80)

176. It was agreed that paragraph 74 would be deleted as it provided an explanation of what the Model Law did not address, which was unnecessary. In lieu of paragraph 74, it was agreed that paragraph 73 should include a reference to article 1, paragraph 3 (b), of the Model Law and paragraph 204 of the *Supplement on Security Rights in Intellectual Property*,[24] to clarify that article 50 would not apply to security

[23] United Nations publication, Sales No. E.14.V.6.
[24] United Nations publication, Sales No. E.11.V.6.

rights in intellectual property insofar as it was inconsistent with the law of the enacting State relating to intellectual property.

177. With respect to paragraph 78, it was agreed that the reference to the applicable law in the second sentence should be replaced by a reference to "the law of the enacting State" rather than to the law applicable under article 100, as that sentence was not intended to deal with a conflict-of-laws issue.

178. Subject to the above-mentioned changes, the Commission adopted chapter V of the draft guide to enactment (A/CN.9/914/Add.4, paras. 1-80).

7. Chapter VI. Rights and obligations of the parties and third-party obligors (A/CN.9/914/Add.5, paras. 1-51)

179. It was agreed that paragraph 1 should be revised to clarify that: (a) chapter VI applied to the rights and obligations of the parties before or after default, while chapter VII applied only to post-default rights and obligations of the parties; and (b) while, under article 3, the provisions of section II of chapter VI were not mandatory, the grantor and the secured creditor could not modify the rights and obligations of the debtor of the receivable or other third-party obligor without its consent, except to the extent provided in the provisions of section II of chapter VI (e.g., art. 63).

180. It was agreed that paragraph 6 should be revised to clarify that: (a) any additional cost for returning the encumbered asset to the grantor or a person designated by the grantor would generally be borne by the grantor; (b) whether that cost was reasonable should be subject to the standard of article 4; and (c) while article 54 was a mandatory provision, the allocation of the cost for returning the asset to the grantor or a person designated by the grantor was subject to party autonomy.

181. With respect to paragraph 11, it was agreed that the grantor had a right to request and obtain information from the secured creditor irrespective of the method by which the security right was made effective against third parties, and thus the reference to the contrary in the second sentence should be deleted.

182. With respect to paragraph 15, it was agreed that the fourth and fifth sentences, referring to implicit and explicit agreements, should be deleted. It was widely felt that those sentences dealt with a matter of contract law and was not specific to article 57.

183. With respect to paragraph 28, it was agreed that: (a) the example referring to successive security rights was very complex and potentially misleading, and should thus be deleted; and (b) the example referring to successive outright assignments should be retained and further clarified.

184. With respect to paragraph 33, it was agreed that: (a) the example in the third sentence should be revised to refer to successive outright transfers of receivables; and (b) the last sentence should be revised to state that article 63, paragraphs 8 and 9, provided ways for the debtor of the receivable to ensure that it would not make payment to the wrong person in those circumstances.

185. With respect to paragraph 41, it was agreed that: (a) the reference to the United Nations Convention on International Bills of Exchange and International Promissory Notes (New York, 1988)[25] in the first sentence should be deleted, as paragraph 41 dealt with article 65, paragraph 3, which was based on article 19 of the Assignment Convention; and (b) the last sentence should clarify why the debtor of the receivable should not be able to waive defences based on its incapacity or fraud committed by the secured creditor.

186. With respect to paragraph 49, it was agreed that: (a) the last sentence should be replaced with a reference to the discussion in the Secured Transactions Guide (chap. VII, para. 34); and (b) an additional reference should be made to paragraph 37, which dealt with the rights of set-off of the debtor of the receivable (art. 64, para. 1(b)).

[25] General Assembly resolution 43/165, annex.

187. Subject to the above-mentioned changes, the Commission adopted chapter VI of the draft guide to enactment (A/CN.9/914/Add.5, paras. 1-51).

8. Chapter VII. Enforcement of a security right (A/CN.9/914/Add.5, paras. 52-96)

188. With respect to paragraph 58, it was agreed that the phrase "judicial or similar proceedings may not be efficient" should be replaced with the phrase "judicial or similar proceedings may be efficient".

189. With respect to paragraph 59, it was agreed that the discussion of the extrajudicial exercise of post-default rights should be complemented by a reference to article 3, paragraph 3, which dealt with alternative dispute resolution.

190. With respect to paragraph 67, it was agreed that the first sentence should be revised along the following lines: "Under paragraph 2, the right to terminate enforcement is extinguished once the relevant enforcement process is completed or a third party has acquired rights in the asset."

191. With respect to paragraph 69, it was agreed that the last sentence should be revised along the following lines: "This is so because the enforcement process has advanced so far that there is no merit in the higher-ranking secured creditor taking over the process."

192. It was agreed that paragraph 73 should be revised to explain that, whether it was the grantor or a third person, the person in possession of the encumbered asset was unlikely to raise unfounded objections, as such an objection might expose that person to liability to pay the additional costs incurred by the secured creditor in having to seek judicial assistance. It was widely felt that the risk of a breach of contract would not prevent the debtor or grantor already in breach of contractual obligations from raising unfounded objections.

193. With respect to paragraph 75, it was agreed that: (a) the more important rationale to be set out first was that, if the higher-ranking secured creditor had obtained possession through enforcement, the lower-ranking secured creditor should not be able to obtain possession from the higher-ranking secured creditor and thus interfere with the exercise of the enforcement rights of the higher-ranking secured creditor; and (b) the fifth sentence should include a reference to paragraph 90 (the last sentence of which suggested how States could implement article 81, paragraph 1) and explain that the conclusion reached in that sentence would only be accurate in States that enacted article 81, paragraph 1, as suggested in paragraph 90.

194. It was agreed that paragraph 76 should be revised to: (a) discuss the relationship between the right of the secured creditor to obtain possession and the right of the secured creditor to dispose of an encumbered asset (in particular, that a secured creditor might dispose of an encumbered asset without taking possession); and (b) clarify that article 78 applied also to intangible assets, with respect to which the concept of "possession" had no application.

195. It was agreed that paragraph 79 should be revised to refer to: (a) the grantor and other addressees of the notice; and (b) the notice, rather than the proposal, of the secured creditor's intention to dispose of the encumbered asset extrajudicially.

196. With respect to paragraph 80, it was agreed that the last two sentences should be revised to refer to an organized market related to a type of asset within the scope of the Model Law (e.g., a commodity exchange, rather than to a stock exchange in which intermediated securities would typically be traded that were not within the scope of the Model Law).

197. With respect to paragraph 81, it was agreed that the last sentence should be expanded to include reference to article 81, paragraph 2.

198. It was agreed that paragraphs 87 and 88 should be revised to avoid suggesting that the grantor might not have an interest in objecting to the secured creditor's proposal to acquire the asset in total or partial satisfaction of the secured obligation. It was widely felt that, if the encumbered asset's value was higher than the amount of the secured obligation, the grantor might object in order to claim any surplus. It was

also generally felt that other addressees of the proposal, such as other secured creditors, might have an interest in objecting irrespective of whether the secured obligation was fully or partially discharged through the acquisition of the encumbered asset by the enforcing secured creditor.

199. Subject to the above-mentioned changes, the Commission adopted chapter VII of the draft guide to enactment (A/CN.9/914/Add.5, paras. 52-96).

9. Chapter VIII. Conflict of laws (A/CN.9/914/Add.6, paras. 1-58)

200. It was agreed that paragraph 4 should be revised to clarify that the parties were permitted to select the law applicable to their mutual obligations as article 84 permitted a choice of law, and not because article 84 was non-mandatory.

201. It was agreed that paragraph 10 should be revised to clarify that a motor vehicle would always be treated as a mobile asset, irrespective of whether it actually crossed national borders.

202. It was agreed that paragraph 24 should explain that, even though under article 91, the applicable law would change as a result of a change in the connecting factor, the third-party effectiveness of a security right could be preserved under article 23 if the law of an enacting State became applicable.

203. It was agreed that paragraph 41 should be revised to clarify that the location of the relevant branch could be easily located in most, but not all, cases. It was agreed that both paragraphs 41 and 42 should be revised to refer to the different expectations of the parties.

204. With respect to paragraphs 46 and 48, it was agreed that the last sentence should be deleted, as it was either not fully accurate or specific to article 50, which dealt with security rights in intellectual property.

205. Subject to the above-mentioned changes, the Commission adopted chapter VIII of the draft guide to enactment (A/CN.9/914/Add.6, paras. 1-58).

206. In the context of the discussions on article 85, the question was raised whether article 85 or article 86 would apply to electronic negotiable instruments and electronic negotiable documents and thus whether the applicable law would be the law of the location of the asset or of the grantor. It was widely felt that the answer would depend on whether electronic negotiable instruments and negotiable documents were treated as tangible or intangible assets.

207. In that connection, it was noted that negotiable instruments and negotiable documents were listed in the definition of the term “tangible asset” in article 2, subparagraph (ll), of the Model Law as examples of tangible assets, since the Model Law had been prepared against the background of negotiable instruments and negotiable documents in their paper form. It was also noted that that the term “possession” was defined in article 2, subparagraph (z), of the Model Law as meaning “the actual possession of a tangible asset”. Thus, for specific policy considerations of secured transactions law, the provisions of the Model Law that referred to “possession” of a negotiable instrument or negotiable document (for example, arts. 16, 26, 46 and 49) were meant to apply only to negotiable instruments and negotiable documents in their paper form. It was also noted that the Model Law did not include definitions of the terms “negotiable instrument” or “negotiable document”, thus leaving their meaning to the law of the enacting State relating to negotiable instruments and negotiable documents, to which the Model Law deferred also for the rights and obligations of a person obligated on a negotiable instrument or the issuer of or other person obligated on a negotiable document (see arts. 68 and 70).

208. After discussion, it was agreed that, for reasons of clarity: (a) paragraph 65 of document A/CN.9/914 should list negotiable instruments and negotiable documents in their paper form as examples of tangible assets; (b) paragraph 46 of document A/CN.9/914 should list electronic negotiable instruments and negotiable documents as examples of intangible assets; and (c) the draft guide to enactment

should clarify that negotiability was left to other laws of the enacting State relating to negotiable instruments and negotiable documents.

209. The Commission next considered the relationship between the UNCITRAL Model Law on Secured Transactions and the UNCITRAL Model Law on Electronic Transferable Records (see chapter III, section A, above, and annex I to the present report). It was widely felt that the Model Law on Electronic Transferable Records was not intended to revise the substantive provisions of other laws but rather to facilitate the use of transferable documents or instruments in electronic form by providing rules on achieving the functional equivalent of possession. In particular, it was generally felt that article 11 of the Model Law on Electronic Transferable Records was not intended to change the concept of "possession" under the Model Law on Secured Transactions, which was intended to apply to tangible assets such as negotiable instruments and negotiable documents in paper form. Another view was that the plain meaning of article 11 of the Model Law on Electronic Transferable Records made the concept of "control" the functional equivalent of "possession" for the purposes of the Model Law on Secured Transactions.

210. After discussion, it was agreed that paragraph 53 of document A/CN.9/914 should: (a) clarify that the concept of "possession" in the Model Law on Secured Transactions applied only to tangible assets, and thus the provisions of that Model Law that applied specifically to tangible assets did not apply to negotiable instruments and negotiable documents in electronic form, to which the general provisions on general intangible assets of the Model Law would apply as they were movable assets in the sense of article 2, subparagraph (u); and (b) suggest that States that wished to enact both model laws should consider the relationship between them.

10. Chapter IX. Transition (A/CN.9/914/Add.6, paras. 59-83)

211. With respect to paragraph 69, it was agreed that it should be: (a) revised to clarify that the reference to article 103, paragraph 2, in the first sentence was to article 103, paragraph 1; and (b) placed after, or incorporated in to, paragraph 67, which also dealt with article 103, paragraph 1.

212. It was agreed that paragraph 74 should be deleted in its entirety as it discussed matters dealt with in paragraphs 75 and 77.

213. With respect to paragraph 78, it was agreed that the last sentence should be deleted as it could be misleading.

214. It was agreed that paragraph 83 should be revised to emphasize that: (a) the registry had to be operational before the law entered into force; (b) in determining when the new law would enter into force, States should take into account the criteria set out in subparagraphs (a), (c) and (d) in the third sentence, as well as the novelty of the new law and the complexity of the relevant markets of the enacting State; and (c) the mechanisms to determine the time when the new law should enter into force should be moved from the last sentence of paragraph 83 to paragraph 82, without any reference to specific time periods.

215. Subject to the above-mentioned changes, the Commission adopted chapter IX of the draft guide to enactment (A/CN.9/914/Add.6, paras. 59-83).

11. Adoption of the Guide to Enactment of the UNCITRAL Model Law on Secured Transactions

216. At its 1067th meeting, on 20 July 2017, the Commission adopted the following decision:

The United Nations Commission on International Trade Law,

Recalling General Assembly resolution 2205 (XXI) of 17 December 1966, which established the United Nations Commission on International Trade Law with the purpose of furthering the progressive harmonization and unification of the law of international trade in the interests of all peoples, in particular those of developing countries,

Recalling also General Assembly resolutions 56/81 of 12 December 2001, 63/121 of 11 December 2008, 65/23 of 6 December 2010 and 68/108 of 16 December 2013, in which the General Assembly recommended that States consider or continue to consider becoming parties to the United Nations Convention on the Assignment of Receivables in International Trade (New York, 2001) [26] and giving favourable consideration to the *UNCITRAL Legislative Guide on Secured Transactions* (2007),[27] the *Supplement on Security Rights in Intellectual Property*[28] and the *UNCITRAL Guide on the Implementation of a Security Rights Registry*,[29] respectively,

Recalling further that, at its forty-ninth session, in 2016, the Commission adopted the UNCITRAL Model Law on Secured Transactions[30] and that the General Assembly, in its resolution 71/136 of 13 December 2016, recommended the Model Law for use by States,

Convinced that the overarching benefits of the Model Law include an increase in access to affordable credit, the facilitation of the development of international trade and greater legal certainty in the exercise of international commercial activities,

Noting that a number of issues were referred to a draft guide to enactment of the Model Law during the deliberations of the Model Law and that, at its forty-ninth session, in 2016, the Commission agreed to give Working Group VI (Security Interests) up to two sessions to complete its work on the draft guide to enactment and submit it to the Commission for final consideration and adoption at its fiftieth session, in 2017,[31]

Noting also that the Working Group devoted two sessions, in 2016 and 2107, to the preparation of the draft guide to enactment, [32] and that, at its thirty-first session, in 2017, the Working Group approved the substance of the draft guide to enactment and decided to submit it to the Commission for final consideration and approval at its fiftieth session,[33]

Noting further with satisfaction that the draft guide to enactment provides background and explanatory information that could assist States in revising or adopting legislation relevant to secured transactions on the basis of the Model Law, and thus a guide to enactment of the Model Law would be an extremely important text for the implementation and interpretation of the Model Law, [34]

Expressing its appreciation to international intergovernmental and non-governmental organizations active in the reform of secured transactions law for their participation in and support for the development of the Model Law and the draft guide to enactment,

Having considered the draft guide to enactment at its fiftieth session, in 2017,

Considering that the draft guide to enactment has received sufficient consideration and has reached the level of maturity for it to be generally acceptable to States,

1. *Adopts* the *Guide to Enactment of the UNCITRAL Model Law on Secured Transactions*, consisting of the text contained in document A/CN.9/914 and

---

[26] General Assembly resolution 56/81, annex. Also available as United Nations publication, Sales No. E.04.V.14.

[31] *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), para. 122.

[32] For the reports of those sessions of the Working Group, see A/CN.9/899, and A/CN.9/904.

[33] A/CN.9/904, para. 135.

[34] *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), para. 121.

Add.1-6, with amendments adopted by the Commission at its fiftieth session, and authorizes the Secretariat to edit and finalize the text of the Guide to Enactment of the Model Law pursuant to the deliberations of the Commission at that session;

2. *Requests* the Secretary-General to publish the Guide to Enactment of the Model Law, including electronically and in the six official languages of the United Nations, and to disseminate it broadly to Governments and other interested bodies;

3. *Recommends* that all States give favourable consideration to the Model Law, taking also into account the information in the Guide to Enactment, when revising or adopting legislation relevant to secured transactions, and invites States that have used the Model Law to advise the Commission accordingly;

4. *Also recommends* that, where necessary, States continue giving favourable consideration to the *UNCITRAL Guide on the Implementation of a Security Rights Registry* when revising relevant legislation, administrative regulations or guidelines, and to the *UNCITRAL Legislative Guide on Secured Transactions* and the *Supplement on Security Rights in Intellectual Property* when revising or adopting legislation relevant to secured transactions, and invites States that have used the guides to advise the Commission accordingly;

5. *Further recommends* that all States continue to consider becoming parties to the United Nations Convention on the Assignment of Receivables in International Trade (New York, 2001), the principles of which are also reflected in the Model Law, and the optional annex of which refers to the registration of notices with regard to assignments.

217. The Commission was informed that the Model Law had been made available as a United Nations publication and that the Guide to Enactment would be made available as a separate United Nations publication, as there was no budget to publish both the Model Law and the Guide to Enactment again. It was further noted that the Model Law and the Guide to Enactment would be made available on the UNCITRAL website at different times.

B. Possible future work in the area of security interests

218. The Commission held a preliminary discussion regarding future work in the area of security interests. The conclusions reached during that preliminary discussion were reaffirmed by the Commission upon its consideration of agenda item 21 (Work programme of the Commission) (see chapter XVII below).

219. The Commission recalled that, at its forty-ninth session, in 2016, it had decided that the preparation of a contractual guide on secured transactions and a uniform law text on intellectual property licensing should be retained in its future work programme together with the following topics: (a) whether the Model Law and its Guide to Enactment might need to be expanded to address matters related to secured finance to micro, small and medium-sized enterprises; (b) whether any future work on a contractual guide on secured transactions should include a discussion of contractual issues of concern to such enterprises (e.g., transparency issues); (c) any question that might not have already been addressed in the area of warehouse receipt financing (e.g., the negotiability of warehouse receipts); and (d) whether disputes arising from security agreements could be resolved through alternative dispute resolution mechanisms. The Commission also recalled that it had decided that those issues should be considered at a future session on the basis of notes to be prepared by the Secretariat after a colloquium or expert group meeting.[35]

220. At the current session, the Commission had before it two notes by the Secretariat (A/CN.9/913 and A/CN.9/924) reflecting the deliberations and conclusions of the

[35] *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), paras. 124 and 125.

Fourth International Colloquium on Secured Transactions, which had been held in Vienna from 15 to 17 March 2017. The Commission took note of the possible future legislative work topics presented in document A/CN.9/913, which included contractual, transactional and regulatory issues related to secured transactions, finance to micro-businesses, warehouse receipts, intellectual property licensing, alternative dispute resolution in secured transactions and real estate financing. In particular, the Commission noted the desirability and feasibility of work on each topic, as well as the issues possibly to be addressed and the form such work might take. In that connection, the Commission noted that, in view of its limited resources, work could not be undertaken on all possible topics and priorities would thus need to be set.

221. In addition, the Commission considered a proposal by Australia, Canada, Japan and the United Kingdom (A/CN.9/926) that the Commission should prepare a practice guide for potential users of the Model Law with respect to contractual, transactional and regulatory issues related to secured transactions, as well as financing of micro-businesses. It was noted that the proposal referred to a number of issues addressed in document A/CN.9/913.

222. There was general support in the Commission for the preparation of such a practice guide. It was stated that the Guide to Enactment of the UNCITRAL Model Law on Secured Transactions, adopted by the Commission at the current session (see section A of the present chapter), was mainly addressed to legislators and not to users of laws implementing the Model Law. In addition, it was said that, to be able to use a law implementing the Model Law to their benefit, parties to transactions, judges, arbitrators, regulators, insolvency administrators and academics would need some guidance with respect to contractual issues, such as the types of secured transactions that were possible under that law, transactional issues such as the valuation of collateral, and regulatory issues such as the conditions under which movable assets were treated as eligible collateral for regulatory purposes.

223. Moreover, it was pointed out that, in many States that had adopted a modern secured transactions law along the lines of the Model Law, users were not able to use it to the full extent and thus obtain access to lower-cost credit. It was also mentioned that the financing of micro-businesses raised some special issues (for example, with respect to notifications under the Model Law and the enforcement of a security interest). The proposed practice guide could provide useful guidance on those issues. It was further stressed that the overall value of the Model Law and of other texts prepared by UNCITRAL in the field of security interests would increase if they were complemented by a practice guide; that, it was said, would be the best use of the resources already devoted by the Commission to the preparation of its texts on security interests.

224. At the same time, in view of the limited resources available to the Commission, some doubts were expressed as to whether work on security interests should continue. It was stated that it might be better to refer the preparation of the proposed practice guide to the Secretariat with the assistance of experts and that the Commission could consider the text thus prepared at a future session.

225. With respect to warehouse receipts, the suggestion was made that the Secretariat should prepare a study on the feasibility and desirability of preparing an international legal standard. With respect to intellectual property licensing, the suggestion was made that the Commission might prepare a text on contractual issues, given their importance and the fact that there were gaps in the law relating to them. With respect to the use of alternative mechanisms to resolve disputes arising in the context of secured transactions, it was suggested that model rules might be prepared to address arbitrability and third-party issues. Those suggestions did not receive sufficient support for immediate referral to a working group. The Commission was informed that a delegation intended to prepare and submit a study on warehouse receipts for future consideration by the Commission.

226. The Commission took note of possible future coordination and technical assistance work on security interests and related topics (see A/CN.9/924). Recalling

its discussion on coordination and cooperation activities in the area of security interests (see chapter XIV, section A, below), the Commission renewed the mandate given to the Secretariat to continue its coordination and cooperation efforts with the European Commission with a view to ensuring a coordinated approach to the issue of the law applicable to third-party effects of transactions in receivables and securities. That mandate also included coordination and cooperation with international banking regulatory authorities.

227. After discussion, the Commission decided that a practice guide on secured transactions should be prepared and referred that task to Working Group VI. It was also agreed that the issues addressed in document A/CN.9/926 and the relevant sections of document A/CN.9/913 should form the basis of that work. The Commission further agreed that broad discretion should be accorded to the Working Group in determining the scope, structure and content of the practice guide.

228. With respect to the time frame, it was generally felt that at the current stage it was premature to fix the number of meetings the Working Group might need to complete its work, but the Commission requested the Working Group to proceed as expeditiously as possible. It was agreed that the date and place of future meetings of Working Group VI would be discussed under agenda item 22 (Date and place of future meetings). (For further consideration of the matter, see chapter XX below.)

229. With respect to the other future work topics discussed in document A/CN.9/913, the Commission decided that, with the exception of real estate financing, those topics should be retained on the Commission's future work agenda for further discussion at a future session, without assigning any priority to them.

V. Consideration of issues in the area of micro, small and medium-sized enterprises: progress report of Working Group I

230. The Commission had before it the reports of Working Group I Micro, Small and Medium-sized Enterprises on the work of its twenty-seventh and twenty-eighth sessions (A/CN.9/895 and A/CN.9/900, respectively) outlining progress on the two topics on its current work agenda, each of which involved the preparation of a legislative guide "aimed at reducing the legal obstacles faced by micro, small and medium-sized enterprises throughout their life cycle and, in particular, those in developing economies" [36] in respect of:

(a) The creation of a simplified business entity;

(b) Key principles of business registration.

231. The Commission noted that Working Group I, at its twenty-seventh session, held in Vienna from 3 to 7 October 2016, had continued its deliberations regarding the creation of a simplified business entity by considering the draft legislative guide on an UNCITRAL limited liability organization (UNLLO) (as set out in A/CN.9/WG.I/WP.99 and Add.1). Progress at that session had included discussion of section A, on general provisions (draft recommendations 1 to 6), section B, on the formation of an UNLLO (draft recommendations 7 to 10), and section C, on the organization of an UNLLO (draft recommendations 11 to 13). The Working Group had also heard the presentation of a legislative approach known in France as "Entrepreneur with limited liability" (A/CN.9/WG.I/WP.94), which represented a possible alternative legislative model applicable to micro and small businesses.

232. The Commission further noted that the Working Group had considered both topics currently on its agenda during its extended twenty-eighth session, held in New York from 1 to 9 May 2017. Those deliberations had commenced with a review of the entire consolidated draft legislative guide on key principles of a business registry

[36] Ibid., *Sixty-eighth Session, Supplement No. 17* (A/68/17), para. 321; ibid., *Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 134; ibid., *Seventieth Session, Supplement No. 17* (A/70/17), paras. 220, 225 and 340; and ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), para. 219.

(A/CN.9/WG.I/WP.101), save for the introductory section and draft recommendation 9 (Core functions of business registries) and its attendant commentary, to which the Working Group had agreed to revert at a future session. The Commission noted that the Working Group had further agreed to again consider the draft legislative guide on key principles of a business registry, as revised, at its twenty-ninth session, to be held in Vienna in 2017, with a view to its possible adoption by the Commission at its fifty-first session, in 2018. With respect to its deliberations regarding the creation of a simplified business entity, the Working Group had continued the work begun at its twenty-seventh session and considered the following recommendations (and related commentary) of the draft legislative guide on an UNLLO: section D, on managers (draft recommendations 14 to 16), section E, on contributions (draft recommendations 17 and 18), and section F, on distributions (draft recommendations 19 to 21).

233. The Commission also noted two proposals that had been made by States at the twenty-eighth session of the Working Group, the first being a proposal on possible future work on contractual networks, which was before the Commission at its current session (A/CN.9/925; see chapter XVII below), and the second being a proposal that the Working Group should attach model provisions on the dissolution and liquidation of micro, small and medium-sized enterprises as an annex to the legislative guide on an UNLLO (A/CN.9/WG.I/WP.104, containing the model provisions in an annex). In respect of the latter proposal, it was noted that the Working Group had agreed that any further consideration of that proposal should first be subject to domestic consultations and considered at a future session of the Working Group in conjunction with its deliberations regarding recommendation 24 (and related commentary) of the draft legislative guide on an UNLLO, regarding issues related to dissolution and winding-up of an UNLLO.

234. Several delegations highlighted the importance of the efforts of Working Group I to prepare legal standards aimed at reducing the administrative and legal burdens faced by micro, small and medium-sized enterprises, in particular in the light of the key role that such enterprises played in economies around the world, including in those of developing States. Confidence was expressed that the efforts of the Working Group would have a positive impact on such enterprises, and that the role of such norms in establishing a simple and sound system to support such businesses could have key economic benefits. It was further observed that efforts to reduce the obstacles faced by micro, small and medium-sized enterprises were likely to have a positive effect for enterprises of all sizes.

235. After discussion, the Commission commended the Working Group for the progress it had made on the two topics as reported above. In particular, the Commission welcomed the potential completion of the draft legislative guide on key principles of a business registry for possible adoption at the fifty-first session of the Commission. It noted that, consistent with the principles contained in General Assembly resolutions on the work of UNCITRAL,[37] the legislative texts resulting from the current work of the Working Group on those two topics should be published, including electronically, and in the six official languages of the United Nations, and be disseminated to Governments and other interested bodies.

VI. Consideration of issues in the area of international dispute settlement

A. Progress report of Working Group II

236. The Commission recalled that, at its forty-seventh session, in 2014, it had agreed that the Working Group should consider at its sixty-second session the issue of enforcement of international settlement agreements resulting from conciliation proceedings and should report to the Commission on the feasibility and possible form

[37] For example, General Assembly resolution 70/115, paras. 16 and 21.

of work in that area. At that session, the Commission had also invited delegations to provide information to the Secretariat in respect of that subject matter.[38]

237. The Commission also recalled that, at its forty-eighth session, in 2015, it had before it a compilation of responses received by the Secretariat (A/CN.9/846 and addenda).[39] At the same session, it had agreed that the Working Group should commence work at its sixty-third session on the topic of enforcement of settlement agreements to identify relevant issues and develop possible solutions, including the preparation of a convention, model provisions or guidance texts. The Commission had also agreed that the mandate of the Working Group with respect to that topic should be broad, to take into account the various approaches and concerns.[40] At its forty-ninth session, in 2016, the Commission had commended the Working Group for its work on the topic and confirmed that the Working Group should continue its work.[41]

238. At the current session, the Commission considered the reports of the Working Group on the work of its sixty-fifth session (A/CN.9/896), held in Vienna from 12 to 23 September 2016, and sixty-sixth session (A/CN.9/901), held in New York from 6 to 10 February 2017. The Commission took note of the compromise reached by the Working Group at its sixty-sixth session, which addressed five key issues as a package (A/CN.9/901, para. 52) and expressed support for the Working Group to continue pursuing its work based on that compromise.

239. After discussion, the Commission expressed its satisfaction with the progress made by the Working Group and the support provided by the Secretariat. Considering the progress made, the Commission requested the Working Group to complete the work expeditiously.

B. Possible future work in the area of international dispute settlement

240. The Commission held a preliminary discussion regarding future work in the area of international dispute settlement. The conclusions reached during that preliminary discussion were reaffirmed by the Commission upon its consideration of agenda item 21 (Work programme of the Commission) (see chapter XVII below).

241. The Commission recalled that, at its forty-ninth session, in 2016, it had considered three topics for possible future work: concurrent proceedings, the preparation of a code of ethics for arbitrators, and possible reform of the investor-State dispute settlement regime.[42] At that session, the Commission had decided to retain those topics on its agenda for further consideration. It had further requested that the Secretariat, within its existing resources, continue to update and conduct preparatory work on all those topics so that the Commission would be in a position to make an informed decision whether to undertake work in any of the topics.

242. At its current session, the Commission had before it notes by the Secretariat on possible future work on concurrent proceedings (A/CN.9/915) and ethics (A/CN.9/916) in international arbitration, as well as on possible reforms of investor-State dispute settlement (A/CN.9/917), including a compilation of comments by States and international organizations (A/CN.9/918 and addenda). The Commission agreed to proceed with the consideration of possible reforms, taking those notes into account. For deliberation purposes it was agreed that the topic of investor-State dispute settlement reform would be considered in a comprehensive manner to also include the topics of concurrent proceedings and ethics.

243. At the outset, it was suggested that UNCITRAL should undertake work on investor-State dispute settlement reform as a matter of priority, as there was a need to

---

[38] *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 129.
[39] Ibid., *Seventieth Session, Supplement No. 17* (A/70/17), para. 135.
[40] Ibid., para. 142.
[41] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), para. 165.
[42] Ibid., paras. 174-195.

identify issues in relation to the existing settlement mechanism, to discuss whether those issues needed to be addressed and, if so, to develop any relevant solutions. As a general point, it was stressed that the main objective of that work should be to restore confidence in the overall system. It was underlined that there was value in multilateral consideration of the issues so as to avoid further fragmentation of the investor-State dispute settlement regime.

244. However, some doubts were expressed on the desirability and feasibility of UNCITRAL undertaking work on possible investor-State dispute settlement reforms. It was highlighted that there was currently a diverse body of more than 3,000 international investment agreements with significantly different approaches to both substantive investment protection and investor-State dispute settlement mechanisms. It was underlined that the diversity in approaches to investor-State dispute settlement reflected thoughtful decisions by sovereign States on what approach best suited their particular legal, political, and economic circumstances. It was said that because of those well-founded differences, past attempts to forge a single, multilateral approach to investment treaties had failed (for example, the negotiation of the multilateral agreement on investment under the auspices of OECD). In response, it was suggested that, although international investment agreements were not identical to and, indeed, contained differences, they generally followed similar patterns with regard to their structure and were centred around a number of core principles. It was stated that reforms to investor-State dispute settlement might enhance consistency in treaty interpretation and application.

245. In expressing further doubts, it was suggested that the diversity of approaches on investor-State dispute settlement needed to be respected. It was pointed out that reform was neither something new nor something that could be pursued only multilaterally, as States had advanced investor-State dispute settlement reform in myriad ways for many years. Some States had elected to modify and supplement existing arbitral rules, some had chosen to limit or eliminate access to arbitration, while others had elected to do away with investment treaties altogether. In that context it was suggested that discussions in international forums about approaches to investor-State dispute settlement reform were useful where that work was targeted at empirical research, experience-sharing and capacity-building to help countries identify and implement approaches that best suited their individual circumstances.

246. It was stated that criticism about investor-State dispute settlement was mainly based on perceptions and that work by UNCITRAL should not be undertaken based on mere perceptions, but on facts. In response, it was pointed out that the numerous studies on investor-State dispute settlement were based on empirical data and surveys.

247. The prevailing view was that UNCITRAL should undertake work on investor-State dispute settlement reform. Views expressed ranged from those fully supportive of conducting future work on the topic, those generally in favour of having an open-ended discussion at UNCITRAL and those who did not object to proceeding with future work but were cautious about the approach to be undertaken. As to the possible method of undertaking work on investor-State dispute settlement reform, the following suggestions were outlined.

248. As a first step, it was stated that work should begin with identifying underlying issues and concerns in order to provide the rationale for any proposed reforms and to proceed with the development of possible solutions.

249. It was suggested that work should build on an in-depth analysis and assessment of existing international investment agreements and investor-State dispute settlement mechanisms; it should not simply identify the problems but also ascertain the positive aspects and benefits of the current regime. It was underlined that a wealth of studies already existed from academia, civil society and international organizations that would assist in the consideration of the matter. It was further suggested that the work should be fact-driven rather than perception-driven and should aim at outlining the advantages and drawbacks of the different solutions.

250. It was stressed that work should be conducted through a Government-led process where States would be able to openly discuss and consider a wide range of

issues. It was noted that investor-State dispute settlement reform was connected with a number of policy issues and that Governments should have a leading role in that process. In that context, it was also noted that there was a need to take into account that States had different experiences and expectations with regard to the investor-State dispute settlement regime. The need for Governments to be represented by officials with adequate expertise and experience in negotiating investment treaties or investment chapters in free trade agreements and with exposure to claims related to investor-State dispute settlement was highlighted.

251. While the need for the process to be government-led was highlighted in particular, the need to engage with diverse stakeholders was similarly stressed. The participation in the process of intergovernmental organs and organizations (such as UNCTAD, the World Trade Organization (WTO), OECD, ICSID and PCA) and non-governmental organizations that had accumulated a vast amount of experience in that area was underscored. The benefits of involving experts, investors, academia and practitioners were noted.

252. It was generally agreed that discussion on investor-State dispute settlement reforms should be undertaken without prejudging the outcome and should not exclude any specific options. There was a general preference that work should cover the widest range of issues and possible solutions. It was generally stated that any investor-State dispute settlement reform should be conducted in a gradual manner. In that context it was stated that work by UNCITRAL should not rush to hasty conclusions about the need for reform or solutions for addressing issues.

253. It was also stated that any future work on the topic should be without any prejudice to possible approaches States might wish to adopt in the future. States had different perspectives, and diversity in approaches should be fully respected. It was mentioned that participation of States in the process should not be construed as a commitment to the result of the work.

254. There was general support that the working group tasked with the topic of investor-State dispute settlement reform should determine the specific issues to be considered. While a few suggested that future work should focus only on the topics of concurrent proceedings and ethics, it was generally felt that work on concurrent proceedings and a code of ethics could form part of the discussions on investor-State dispute settlement reforms. In relation to concurrent proceedings, it was mentioned that work could be considered on guidance to arbitral tribunals and to the manner in which the matter had been addressed in international investment agreements. Regarding the topic of ethics, it was highlighted that aspects mentioned in paragraphs 38 and 39 of document A/CN.9/916 would deserve further consideration. It was further suggested that work on ethics could address the conduct of various participants in the arbitral process, not just arbitrators.

255. As a possible solution for investor-State dispute settlement reform, a significant number of references were made to the establishment of a permanent multilateral investment court. It was suggested that, while not being the only possible solution, the idea of a permanent multilateral investment court should be given due consideration. It was suggested that one feature of a permanent multilateral investment court might be a built-in appellate mechanism. In that context, the possibility of establishing regional courts was mentioned.

256. Other topics mentioned for possible discussion by a working group included the appointment or selection of judges or arbitrators, an appeal or review mechanism, the seat of arbitration, applicable law and fees, as well as overall cost of investor-State dispute settlement and the nature and enforcement of awards or judgments. The suggestion was made that it would be useful to consider the role of domestic courts, State-to-State dispute settlement mechanisms and any other means of investment dispute resolution.

257. It was mentioned that work on investor-State dispute settlement reform should not be limited to procedural issues relating to investor-State dispute settlement but should encompass a broader discussion on the substantive aspects of international investment agreements, including but not limited to States' right to regulate, fair and

equitable treatment, expropriation and due process requirements. Nonetheless, it was stated that work on substantive standards was deemed less feasible than work on the procedural aspects.

258. Considering the above, the prevailing view was that UNCITRAL provided an appropriate multilateral forum to discuss relevant issues in an inclusive and transparent manner, where the interests not only of States but also of other stakeholders could be considered. It was recalled that UNCITRAL had successfully undertaken a reform of investor-State dispute settlement with the preparation of standards on transparency.

259. It was recalled that legislative work by UNCITRAL and its working groups was generally based on consensus. It was further recalled that, in accordance with UNCITRAL practice, consensus did not require unanimity, but was instead based on a widely prevailing majority and the absence of a formal objection that would trigger a request for a vote. The adoption of an instrument or a text by consensus did not give it any binding nature. It was stated that efforts should be made to consider all possible options so as to rally the broadest consensus.

260. While a few suggested that Working Group II should be tasked with investor-State dispute settlement reform upon completion of its work on the enforcement of settlement agreements resulting from international commercial conciliation, it was generally felt that it would be preferable to assign that work to another working group so as not to burden Working Group II unduly while it continued to fulfil its mandate.

261. The Commission had a preliminary discussion on the possible dates that could be allocated to a working group tasked with investor-State dispute settlement reform. While some expressed a preference for commencing work in 2018 so as to allow for consultations with domestic stakeholders and appropriate consideration of travel-related resources, there was also support for work to be undertaken with priority in 2017. (See chapter XX below for the final decision on that matter.)

262. The suggestion was made that the Secretariat should look into the possibility of holding working group sessions at locations other than Vienna and New York as a means to increase participation by States and relevant stakeholders. The Secretariat was requested to report back to the Commission on the administrative and financial implications of that suggestion.

263. Having considered the topics in documents A/CN.9/915, A/CN.9/916 and A/CN.9/917, the Commission decided on the mandate set out below.

264. The Commission entrusted Working Group III with a broad mandate to work on the possible reform of investor-State dispute settlement. In line with the UNCITRAL process, Working Group III would, in discharging that mandate, ensure that the deliberations, while benefiting from the widest possible breadth of available expertise from all stakeholders, would be Government-led, with high-level input from all Governments, consensus-based and fully transparent. The Working Group would proceed to: (a) first, identify and consider concerns regarding investor-State dispute settlement; (b) second, consider whether reform was desirable in the light of any identified concerns; and (c) third, if the Working Group were to conclude that reform was desirable, develop any relevant solutions to be recommended to the Commission. The Commission agreed that broad discretion should be left to the Working Group in discharging its mandate, and that any solutions devised would be designed taking into account the ongoing work of relevant international organizations and with a view to allowing each State the choice of whether and to what extent it wished to adopt the relevant solution(s).

265. At the end of the deliberations on the topic of future work in the area of international commercial arbitration, a proposal was made that UNCITRAL should consider preparing model legislative provisions on adjudication. The proposal was based on experience in the construction industry and legislative developments in a number of jurisdictions that provided for recourse to an “adjudicator” for urgent resolution of disputes through summary proceedings. It was said that the introduction of such an adjudicator procedure required a legislative basis, in particular with respect

to the enforcement of the interim decision issued by the adjudicator. Considering the lack of time, the Commission agreed that the proposal could be further presented and considered at its next session, in 2018.

VII. Consideration of issues in the area of insolvency law: progress report of Working Group V

266. The Commission had before it the reports of Working Group V on the work of its fiftieth and fifty-first sessions (A/CN.9/898 and A/CN.9/903, respectively), outlining progress on the following topics on its current work agenda:

(a) Facilitating the cross-border insolvency of multinational enterprise groups, pursuant to a mandate given by the Commission at its forty-third session;[43]

(b) Recognition and enforcement of insolvency-related judgments, pursuant to a mandate given by the Commission at its forty-seventh session;[44]

(c) Obligations of directors of enterprise group companies in the period approaching insolvency, pursuant to a mandate given by the Commission at its forty-third session;[45]

(d) The insolvency treatment of micro, small and medium-sized enterprises, pursuant to a mandate given by the Commission at its forty-seventh session, in 2014,[46] and clarified at its forty-ninth session, in 2016.[47]

267. With respect to the work on enterprise groups, the Commission noted with satisfaction that the Working Group had made significant progress in developing a draft text on that complex and technically challenging topic. The substance of chapters 2 (arts. 3-11, on cooperation and coordination), 3 (arts. 12-13, on conduct of planning proceedings in the enacting State) and 4 (arts. 14-20, dealing with recognition of foreign planning proceedings and relief) were already well developed. While the discussion in the Working Group had clarified the policy considerations to be addressed in chapter 5, which addressed the treatment of foreign claims and included optional articles (arts. 22, 22bis and 23), the drafting required some further consideration. The Commission also noted that, given the complexity of the subject matter, the text would need to be accompanied by a guide to enactment that not only explained the policy behind the provisions, but also included examples of how the provisions might work in practice. While it was possible that the draft provisions would be sufficiently developed for consideration and adoption by the Commission in 2018, it was unlikely that the guide to enactment could be completed for consideration at the same time.

268. With respect to the work on recognition and enforcement of insolvency-related judgments, the Commission noted with satisfaction the progress that had been made towards the development of a draft model law, as evidenced by the draft text attached as an annex to the report of the fifty-first session (A/CN.9/903). While a few issues remained to be resolved, including the final definition of the term "insolvency-related judgment", one of the grounds for refusal of recognition and the relationship between the draft model law and the UNCITRAL Model Law on Cross-Border Insolvency,[48] the Commission noted that the draft text, together with a guide to enactment (which was currently being prepared), might be finalized at the upcoming fifty-second session of the Working Group, in 2017, in time to be circulated to States for comment in anticipation of completion and adoption by the Commission in 2018. The Commission further noted the steps that had been taken to facilitate close coordination with the Hague Conference on Private International Law, including the Secretariat's attendance, in February 2017, at the Special Commission on the Recognition and

[43] Ibid., *Sixty-fifth Session, Supplement No. 17* (A/65/17), para. 259.
[44] Ibid., *Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 155.
[45] Ibid., *Sixty-fifth Session, Supplement No. 17* (A/65/17), para. 259.
[46] Ibid., *Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 156.
[47] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), para. 246.
[48] General Assembly resolution 52/158, annex.

Enforcement of Foreign Judgments. That coordination had enabled progress on the judgments project of the Hague Conference to be taken into consideration in the draft model law being developed by the Working Group. Stressing the importance of ensuring coordination with the work of the Hague Conference, the Commission encouraged the Secretariat to continue its efforts in that regard.

269. On the third topic of the obligations of directors of enterprise group companies in the period approaching insolvency, the Commission recalled that, while the work was already well developed, it would not be referred to the Commission for finalization and approval until the work on enterprise group insolvency was sufficiently advanced to be able to ensure that the two texts were consistent in their approaches. It was anticipated that if the work on enterprise groups were to be ready for consideration by the Commission in 2018, the text on directors' obligations could also be submitted for finalization.

270. The Commission welcomed the initial work that had been done on the topic of insolvency of micro, small and medium-sized enterprises. It noted in particular that the Working Group had organized, at its fifty-first session, a number of presentations on approaches to micro, small and medium-sized enterprise insolvency and, following those presentations, had held a preliminary discussion on how to approach the topic. The Commission further noted that the Working Group had agreed that the *UNCITRAL Legislative Guide on Insolvency Law* [49] provided an appropriate framework for structuring future work on the topic. That work could proceed by examining each of the topics addressed in the *Legislative Guide* and considering whether the treatment provided was appropriate and necessary for a micro, small and medium-sized enterprise insolvency regime, building upon the brief outline provided in A/CN.9/WG.V/WP.121. Where such treatment was not found to be appropriate, consideration should be given to how it might need to be adjusted to micro, small and medium-sized enterprise insolvency. In addition, consideration should be given to issues not covered by the *Legislative Guide* that should nevertheless be addressed in a micro, small and medium-sized enterprise insolvency regime. The Commission took note that the work might be taken up in 2018 once work on some of the other topics on the current agenda of Working Group V had been finalized.

271. After discussion, the Commission commended the Working Group for the progress that was being made with its current work agenda, in particular for rising to the technical challenge posed by the various topics under consideration and for finding appropriate solutions, as reported above. The Commission requested the Secretariat to reflect, in its publications programme, the decisions to mandate work on those topics and to take any other measures necessary to ensure future publication of final texts resulting from that work, including in electronic form and in the six official languages of the United Nations.

VIII. Legal developments in the area of public procurement and infrastructure development

272. The Commission had before it a note by the Secretariat on possible future work in procurement and infrastructure development (A/CN.9/912). The Commission recalled its earlier consideration that it would be premature to engage in any type of legislative work on public procurement and infrastructure development, but that in the light of the continued importance of those topics, the Secretariat should (a) continue to monitor developments on suspension and debarment in public procurement and report periodically thereon to the Commission;[50] and (b) consider updating, where necessary, all or parts of the *UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects* (2000),[51] involving experts.[52]

---

[49] United Nations publication, Sales No. E.05.V.10.

[50] *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), para. 361.

[51] United Nations publication, Sales No. E.01.V.4.

[52] *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17),

273. The Commission noted the importance of suspension and debarment procedures to effective systems of public procurement and in particular the avoidance of corruption. It was observed, however, that other organizations, including the United Nations Office on Drugs and Crime (UNODC) and OECD, were engaged in developing guidance on the issues involved. In order to avoid duplication of work, and taking into account that legislative development in UNCITRAL in that area was not considered feasible at present,[53] it was decided that the topic would not be added to the Commission's agenda in the near future. The Secretariat was authorized to conduct a further review of the topic at an appropriate time thereafter and, if that review indicated that legislative work might be desirable and feasible, report to the Commission accordingly.

274. The importance of public-private partnerships to States, particularly developing countries, was also highlighted. The Commission reaffirmed that the mandate to work on that topic should be limited, should not involve a working group, and should involve a Secretariat-led project to update, as necessary, the *UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects*, involving experts. It was also recalled that the Commission had requested the Secretariat to consolidate the provisions of that *Legislative Guide* with the Model Legislative Provisions on Privately Financed Infrastructure Projects (2003),[54] and noted that the Secretariat-led project included work to consolidate the texts accordingly. The Commission confirmed that the Secretariat should continue to update and consolidate the *Legislative Guide* and other relevant UNCITRAL materials, and should report further to the Commission, with draft texts as appropriate, at its fifty-first session, in 2018.

275. It was agreed that the Secretariat should also continue to promote the UNCITRAL Model Law on Public Procurement (2011) [55] through activities such as those referred to in documents A/CN.9/905 and A/CN.9/908, which were before the Commission at its current session (see chapters X and XIV of the present report).

276. It was also emphasized that the above-mentioned activities should be undertaken taking into account the resources available to the Secretariat.

IX. Endorsement of texts of other organizations: the Uniform Rules for Forfaiting of the International Chamber of Commerce

277. ICC requested the Commission to consider possible endorsement of the ICC Uniform Rules for Forfaiting. The Commission recalled that it had endorsed a number of ICC texts, such as the Incoterms 2010, the Uniform Rules for Demand Guarantees: 2010 Revision, the Uniform Customs and Practices for Documentary Credits, the Incoterms 2000, the International Standby Practices, the Uniform Rules for Contract Bonds and the Uniform Customs and Practices for Documentary Credits.

278. It was noted that the objective of the Uniform Rules for Forfaiting was to facilitate, without recourse, financing of receivables arising from international trade transactions by providing a new set of rules applicable to forfaiting transactions. The Commission further noted that forfaiting transactions were covered by the Assignment Convention and the UNCITRAL Model Law on Secured Transactions, and that the Uniform Rules complemented and were consistent with the provisions of the Convention and the Model Law.

279. Taking note of the usefulness of the Uniform Rules in facilitating international trade, the Commission, at its 1059th meeting, on 14 July 2017, adopted the following decision:

The United Nations Commission on International Trade Law,

---

paras. 359, 360 and 362.

[53] A/CN.9/912, para. 6.

[54] *Official Records of the General Assembly, Fifty-eighth Session, Supplement No. 17* (A/58/17), paras. 18-21 and annex I.

[55] Ibid., *Sixty-sixth Session, Supplement No. 17* (A/66/17), para. 192 and annex I.

Expressing its appreciation to the International Chamber of Commerce for transmitting to it the Chamber's Uniform Rules for Forfaiting, which were approved by the Chamber's Banking Commission in November 2012 and adopted by the Chamber's Executive Board in December 2012, with effect from 1 January 2013,

Congratulating the International Chamber of Commerce on having made a further contribution to the facilitation of international trade by providing a new set of rules applicable to forfaiting transactions,

Noting that the Uniform Rules for Forfaiting constitute a valuable contribution to the facilitation of international receivables financing and thus international trade,

Also noting that the Uniform Rules for Forfaiting complement a number of international trade law instruments, including the United Nations Convention on the Assignment of Receivables in International Trade (New York, 2001)[56] and the UNCITRAL Model Law on Secured Transactions,[57]

Commends the use of the Uniform Rules for Forfaiting, as appropriate, in forfaiting transactions.

X. Technical assistance to law reform

280. The Commission had before it a note by the Secretariat (A/CN.9/905) on technical cooperation and assistance activities undertaken since the last report to the Commission in 2016 (A/CN.9/872). The Commission stressed that technical cooperation and assistance continued to be an important part of the Secretariat's activities aimed at ensuring that the legislative texts developed and adopted by the Commission were enacted or adopted by States and applied and interpreted in a uniform manner so as to promote the basic goal of harmonization of international trade law. Such technical assistance and cooperation activities enabled the Secretariat to provide States with information, including technical information, about the enactment of UNCITRAL texts, as well as with drafting assistance, practical experience of enactment, and information and advice on the interpretation and implementation of texts. The Commission acknowledged that the development of legislative texts was only the first step in the process of trade law harmonization and that technical cooperation and assistance activities were vital to the further use, adoption and interpretation of those legislative texts. The Commission expressed its appreciation for the work undertaken by the Secretariat in that regard.

281. The Commission noted that the continuing ability to respond to requests from States and regional organizations for those activities was dependent upon the availability of funds to meet associated costs. With respect to the UNCITRAL Trust Fund for Symposia, the Commission acknowledged the contribution by the Republic of Korea in support of participation in the Asia-Pacific Economic Cooperation (APEC) Ease of Doing Business project (as noted in A/CN.9/905, paras. 18 and 67). The Commission further noted that, despite efforts by the Secretariat to solicit new donations, funds available in the UNCITRAL Trust Fund for Symposia were very limited. Accordingly, requests for technical cooperation and assistance activities continued to be considered very carefully and the number of such activities was limited. Of late, they had mostly been carried out on a cost-share or no-cost basis. The Commission requested the Secretariat to continue exploring alternative sources of extrabudgetary funding, in particular by more extensively engaging permanent missions and other possible partners in the public and private sectors. The Commission also encouraged the Secretariat to seek cooperation and partnership with international organizations, including through regional offices and bilateral assistance providers, in the provision of technical assistance. The Commission appealed to all

[56] General Assembly resolution 56/81, annex. Also available as United Nations publication, Sales No. E.04.V.14.

[57] United Nations publication, Sales No. E.17.V.1.

States, international organizations and other interested entities to facilitate such cooperation and take any other initiative to maximize the use of relevant UNCITRAL standards in law reform.

282. The Commission reiterated its appeal to all States, international organizations and other interested entities to consider making contributions to the UNCITRAL Trust Fund for Symposia, if possible in the form of multi-year contributions or as specific-purpose contributions, in order to facilitate planning and enable the Secretariat to meet the increasing number of requests for technical cooperation and assistance activities.

283. The Commission appealed to the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to UNCITRAL Trust Fund for travel assistance to developing countries. The Commission noted that resources had been provided to El Salvador, Honduras and Sri Lanka to attend the forty-ninth session of the Commission and to Armenia, Côte d'Ivoire and Sierra Leone to attend sessions of working groups II, IV and VI.

284. With regard to the dissemination of information on UNCITRAL work and texts, the Commission noted the important role played by the UNCITRAL website (www.uncitral.org) and the UNCITRAL Law Library. The Commission welcomed the Library's inclusion on the UNCITRAL website of a new feature highlighting the role of UNCITRAL in supporting the Sustainable Development Goals. The Commission recalled its request that the Secretariat continue to explore the development of new social media features on the UNCITRAL website as appropriate,[58] noting that the development of such features in accordance with the applicable guidelines had also been welcomed by the General Assembly.[59] In that regard, the Commission noted with approval the continued development of the "What's new at UNCITRAL?" Tumblr microblog[60] and the establishment of an UNCITRAL presence on LinkedIn.[61] Finally, recalling the General Assembly resolutions commending the website's six-language interface,[62] the Commission requested the Secretariat to continue to provide, on the website, UNCITRAL texts, publications, and related information in a timely manner and in the six official languages of the United Nations.

XI. UNCITRAL regional presence

A. Regional Centre for Asia and the Pacific

285. The Commission had before it a note by the Secretariat on the activities undertaken by its Regional Centre for Asia and the Pacific (A/CN.9/910) and a note by the Secretariat on technical cooperation and assistance (A/CN.9/905, part II) that incorporated the activities undertaken in the region covered by the Regional Centre, and heard an oral report by the Head of the Regional Centre.

286. The Commission acknowledged the noticeable progress, made as a result of the regional activities of the Secretariat through the Regional Centre, in terms of awareness, adoption and implementation of UNCITRAL texts in Asia and the Pacific.

287. Strong support was expressed for the various activities undertaken by the Secretariat and the Regional Centre, which were aimed at:

(a) Providing capacity-building and technical assistance services to States in Asia and the Pacific, including to international and regional organizations and development banks. The Commission emphasized that key goal and how such efforts were also positively impacting the regional contributions to the work of UNCITRAL;

[61] Available from www.linkedin.com/company/uncitral.

[62] General Assembly resolutions 61/32, para. 17; 62/64, para. 16; 63/120, para. 20; 69/115, para. 21; 70/115, para. 21; and 71/135, para. 23.

(b) Supporting public, private and civil society initiatives to enhance international trade and development by promoting certainty in international commercial transactions through the dissemination of international trade norms and standards, in particular those elaborated by UNCITRAL;

(c) Building and participating in regional international trade law partnerships and alliances, including with other appropriate United Nations funds, programmes and specialized agencies, and furthering the establishment of such partnerships. The Commission noted with appreciation the participation, as a non-resident agency, in the efforts of the United Nations to deliver as one in the Lao People's Democratic Republic-United Nations Partnership Framework 2017-2021, in the United Nations Development Assistance Framework (UNDAF) Papua New Guinea 2018-2022 and in the United Nations Pacific Strategy 2018-2022. The Commission also welcomed the agreement on collaboration with the Asian Development Bank aimed at reforming arbitration laws in the South Pacific, focusing on assistance towards accession to the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, done at New York on 10 June 1958[63] (New York Convention);

(d) Strengthening information, knowledge and statistics through briefings, workshops, seminars, publications, social media and information and communications technologies, including in regional languages;

(e) Functioning as a channel of communication between States in the region and the Secretariat. The Commission reiterated the suggestion, made at its forty-seventh session,[64] that States designate focal points in charge of coordinating with the Regional Centre, on non-legislative regional activities of the Secretariat. The Commission further recommended the Secretariat to continue enhancing its communication with States in the region.

288. The Commission requested the Secretariat to actively engage in fundraising activities in order for the Regional Centre to carry out its activities and urged Member States in the region to provide voluntary contributions to the project.

289. The Commission was informed that the Secretariat had completed the necessary arrangements for the extension of the support given by the Government of the Republic of Korea for the operation of the Regional Centre, covering an additional five-year period, from 2017 to 2021, including the necessary amendments to the Memorandum of Understanding signed on 18 November 2011 between the United Nations and the Ministry of Justice and the Incheon Metropolitan City of the Republic of Korea. The Government of the Republic of Korea extended its offer for an annual financial contribution of $450,000 to the UNCITRAL Trust Fund for Symposia, in addition to the office premises, equipment and furniture which it had already provided. The Republic of Korea also extended its offer to provide the non-reimbursable loan of a legal expert to engage in technical cooperation and assistance activities for the coming years. The Commission expressed its gratitude to the Government of the Republic of Korea for the generous gesture to extend its contribution, making possible the continued operation of the Regional Centre.

290. The Commission noted with appreciation the extension by the Government of Hong Kong, China, of the arrangement to contribute a non-reimbursable loan of a legal expert to the Regional Centre to engage in technical cooperation and assistance activities for a second year. The Commission expressed its gratitude to the Government of China for its support to the operations of the Regional Centre.

B. Proposals for the establishment of other regional centres

291. The Commission heard a statement by Cameroon recalling the commitment of the country, through the Chair of the forty-ninth session of the Commission, to seeking to develop the interest of African States in UNCITRAL and to enhancing their

[63] United Nations, *Treaty Series*, vol. 330, No. 4739.

[64] *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 212.

participation in its activities. In that context, the Commission welcomed the announcement by Cameroon that it was in the process of accession to and ratification of the United Nations Convention on Contracts for the International Sale of Goods (Vienna, 1980)[65] (United Nations Sales Convention), the Rotterdam Rules, the United Nations Convention on the Use of Electronic Communications in International Contracts (New York, 2005),[66] and the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration (New York, 2014)[67] (Mauritius Convention on Transparency). The Commission also noted with appreciation that the fiftieth anniversary of UNCITRAL had been celebrated in a well-attended event in Cameroon, entitled "UNCITRAL at 50 and arbitration in Africa".

292. The Commission was advised that Cameroon proposed to host an UNCITRAL regional centre for Africa, subject to the relevant rules and regulations of the United Nations and the internal approval process of the Office of Legal Affairs of the Secretariat. The objectives of the regional centre would be to contribute to the interest of relevant stakeholders in the region in the work of the Commission and to promote the adoption, use and understanding of UNCITRAL texts in Africa.

293. The Commission expressed its gratitude to the Government of Cameroon for its proposal. The Commission noted that the specific offer received from the Government of Cameroon was for a pilot project under which its ministries of justice, trade, finance and foreign affairs had pledged to contribute to the establishment and operation of an UNCITRAL regional centre for Africa that would rely entirely on extrabudgetary resources and would be inspired by the model followed for the establishment of the UNCITRAL Regional Centre for Asia and the Pacific. The Commission approved the establishment of the UNCITRAL Regional Centre for Africa in Cameroon, subject to the relevant rules and regulations of the United Nations and the internal approval process of the Office of Legal Affairs. The Secretariat was requested to take the necessary steps for the establishment of the UNCITRAL Regional Centre for Africa and to keep the Commission informed of developments, including its funding and budget situations.

294. The Commission's attention was also drawn to its statements at previous sessions about the importance of a regional presence for raising awareness of the work of UNCITRAL and, particularly, for promoting the adoption and uniform interpretation of UNCITRAL texts. In view of the successful activities of the Regional Centre for Asia and the Pacific, further efforts should be made to establish an UNCITRAL presence in other regions.

295. The Bahrain Chamber for Dispute Resolution advised that the Government of Bahrain was actively pursuing the establishment, subject to the relevant rules and regulations of the United Nations and the internal approval process of the Office of Legal Affairs, of an UNCITRAL regional centre for the Middle East and North Africa in that State to increase familiarity with UNCITRAL texts and their level of adoption and use in the region. The objectives of the proposed regional centre would be to provide technical assistance to States on the adoption, use and understanding of UNCITRAL texts, to coordinate with international and regional organizations on trade law reform projects in the region, to coordinate communication between States in the region and UNCITRAL and its secretariat, and to build and participate in appropriate regional partnerships and alliances, including with other United Nations bodies.

296. The Commission expressed its gratitude to the Government of Bahrain for its proposal. The Commission noted that the specific offer received from the Government of Bahrain was for a pilot project under which the Bahrain Chamber for Dispute Resolution, in cooperation with other government authorities, had pledged to contribute to the establishment and operation of an UNCITRAL regional centre for the Middle East and North Africa that would rely entirely on extrabudgetary resources and would be inspired by the model followed for the establishment of the UNCITRAL

[65] United Nations, *Treaty Series*, vol. 1489, No. 25567.

[67] General Assembly resolution 69/116, annex.

Regional Centre for Asia and the Pacific. The Commission approved the establishment of the UNCITRAL Regional Centre for Middle East and North Africa in Bahrain, subject to the relevant rules and regulations of the United Nations and the internal approval process of the Office of Legal Affairs. The Secretariat was requested to take the necessary steps for the establishment of the UNCITRAL Regional Centre for the Middle East and North Africa and to keep the Commission informed of developments, including its funding and budget situations.

XII. Promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts

297. The Commission considered document A/CN.9/906, on promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts, which provided current information on the system for collecting and disseminating information on court decisions and arbitral awards relating to UNCITRAL texts (CLOUT) and the digests of case law.

298. As in previous sessions, the Commission commended the Secretariat for its work on CLOUT and noted with appreciation the increasing number of UNCITRAL legislative texts that were available in the system. As at the date of document A/CN.9/906, 179 issues of compiled case-law abstracts had been prepared, dealing with 1,661 cases. At the date of the oral report to the Commission, that number had arisen to 180 issues for a total of 1,771 cases. The cases related to the following texts:

- New York Convention
- Convention on the Limitation Period in the International Sale of Goods (New York, 1974) [68] and Convention on the Limitation Period in the International Sale of Goods as amended by the Protocol of 11 April 1980 (Vienna)[69]
- United Nations Convention on the Carriage of Goods by Sea (Hamburg, 1978)[70]
- United Nations Sales Convention
- United Nations Convention on Independent Guarantees and Stand-by Letters of Credit (New York, 1995)[71]
- Electronic Communications Convention
- UNCITRAL Model Law on International Commercial Arbitration (1985) as amended in 2006[72]
- UNCITRAL Model Law on International Credit Transfers (1992)[73]
- UNCITRAL Model Law on Electronic Commerce (1996)[74]
- UNCITRAL Model Law on Cross-Border Insolvency (1997)[75]
- UNCITRAL Model Law on Electronic Signatures (2001)[76]

299. The Commission took note that there were no meaningful changes in respect of figures provided at its forty-ninth session, in 2016, as to the jurisdictions contributing abstracts to CLOUT. The Commission also took note that the majority of the abstracts published referred to countries in the Group of Western European and other States. With regard to the legislative texts available in the system, the United Nations Sales

[68] United Nations, *Treaty Series*, vol. 1511, No. 26119.
[69] Ibid., vol. 1511, No. 26121.
[70] Ibid., vol. 1695, No. 29215.
[71] Ibid., vol. 2169, No. 38030, p. 163.
[72] United Nations publication, Sales No. E.08.V.4.
[73] *Official Records of the General Assembly, Forty-seventh Session, Supplement No. 17* (A/47/17), annex I.
[74] General Assembly resolution 51/162, annex.
[75] General Assembly resolution 52/158, annex.
[76] General Assembly resolution 56/80, annex.

Convention and the UNCITRAL Model Law on International Commercial Arbitration were still the most reported, although there had been a modest but continuous increase of cases concerning the UNCITRAL Model Law on Cross-Border Insolvency and the New York Convention.

300. The Commission was informed that the Secretariat had coordinated a new round of appointments of national correspondents for the period 2017-2022. The Commission further noted that in the period reviewed in document A/CN.9/906, national correspondents had provided approximately 53 per cent of the abstracts published in CLOUT. Although the contribution from the national correspondents was large, it was observed that the materials had mainly been prepared by a small number of correspondents, while the majority had been unable to contribute for the entire duration of their mandate.

301. The Commission expressed its appreciation for the publication of the updated digest of case law relating to the United Nations Sales Convention on the UNCITRAL website in English and Arabic. The Commission acknowledged that translation of the digest into the other official languages of the United Nations was ongoing.

302. The Commission noted with satisfaction the performance of the website www.newyorkconvention1958.org, the continuous efforts to improve its content and accessibility on all electronic supports, and the successful coordination between that website and CLOUT.

303. The Commission was informed that, in order for CLOUT to remain consistent with its original purpose, reach higher volumes of users and provide those users with extensive information on the interpretation of UNCITRAL texts, a further strengthening or reorganization of the system should be explored. In that regard, it was noted that CLOUT was established at a time in which the desired information on the interpretation of UNCITRAL texts was available to a limited extent. At the same time, a wealth of well-established commercial and non-commercial legal resources had been developed, both online and on paper, on domestic and international case law, including case law that applied UNCITRAL texts, which had greatly facilitated access to legal information worldwide. It would thus be timely for the Commission to consider the most appropriate way forward for the system. In that respect, while reaffirming the Secretariat's mandate to coordinate CLOUT and the preparation of digests, the Commission noted that the Secretariat, after consulting with CLOUT national correspondents, might provide more detailed information on possible ways to approach that matter for the Commission's consideration at its future sessions.

304. The Commission also heard an oral report of the meeting of national correspondents. The Commission was informed that the Secretariat had given a presentation of document A/CN.9/906, which had provided the opportunity to brief the newly appointed national correspondents on the structure and functioning of the CLOUT system and on their responsibilities as national correspondents. Moreover, information had been provided on how the UNCITRAL secretariat promoted the uniform application of UNCITRAL texts, including by collaborating with Unidroit and the Hague Conference on Private International Law. Ways to further improve the performance of the CLOUT system in order to reach an increasingly higher volume of users had also been discussed at the meeting. It was noted that those exchanges of views would further continue in order to involve those correspondents who could not attend the meeting, and would inform the Secretariat's notes on the subject for consideration at future Commission sessions.

XIII. Status and promotion of UNCITRAL legal texts

A. General discussion

305. The Commission considered the status of the conventions and model laws emanating from its work and the status of the New York Convention on the basis of a note by the Secretariat (A/CN.9/909). The Commission noted with appreciation the

information on treaty actions and legislative enactments received since its forty-ninth session.

306. The Commission also noted the following actions and legislative enactments made known to the Secretariat subsequent to the submission of the Secretariat's note:

(a) Mauritius Convention on Transparency — signature by Cameroon (3 States parties);

(b) United Nations Sales Convention — accession by Fiji (86 States parties);

(c) Electronic Communications Convention — accession by Fiji (8 States parties).

307. The Commission expressed appreciation to the General Assembly for the support it provided to UNCITRAL in its activities and in particular in its distinct role in furthering the dissemination of international commercial law. In particular, the Commission referred to the long-established practice of the General Assembly, upon acting on UNCITRAL texts, to recommend to States to give favourable consideration to UNCITRAL texts and to request the Secretary-General to publish UNCITRAL texts, including electronically, in the six official languages of the United Nations, and take other measures to disseminate UNCITRAL texts as broadly as possible to Governments and all other relevant stakeholders.

B. Functioning of the transparency repository

308. The Commission recalled that, under article 8 of the UNCITRAL Rules on Transparency in Treaty-based Investor-State Arbitration[77] (Transparency Rules), the repository of published information under the Transparency Rules (transparency repository) was to be established.

309. The Commission further recalled that, at its forty-sixth session, in 2013, it had expressed its strong and unanimous opinion that the UNCITRAL secretariat should fulfil the role of the transparency repository.[78] It had been said that the United Nations, as a neutral and universal body, and its Secretariat, as an independent organ under the Charter of the United Nations, should be expected to undertake the core functions of a transparency repository as a public administration directly responsible for the servicing and proper operation of its own legal standards.[79]

310. The Commission also recalled that, at its forty-seventh session, in 2014, the Secretariat had reported on steps taken in respect of the transparency repository function to be performed.[80]

311. The Commission further recalled that, at its forty-eighth session, in 2015, it had reiterated its strong and unanimous opinion that the secretariat of the Commission should fulfil the role of the transparency repository and that it should establish and operate the transparency repository, initially as a pilot project.[81] It also recalled that the General Assembly, in its resolution 70/115, had requested the Secretary-General to establish and operate through the secretariat of the Commission the repository of published information under the Rules on Transparency, in accordance with article 8 of the Rules, initially as a pilot project until the end of 2016, to be funded entirely by voluntary contributions.

312. The Commission noted that the General Assembly, in its resolution 71/135, on the report of the Commission on the work of its forty-ninth session, had requested the Secretary-General to continue with the pilot project until the end of 2017, to be funded entirely by voluntary contributions.

---

[77] *Official Records of the General Assembly, Sixty-eighth Session, Supplement No. 17* (A/68/17), annex I.

[78] Ibid., para. 80.

[79] Ibid., para. 79.

[80] Ibid., *Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 108.

[81] Ibid., *Seventieth Session, Supplement No. 17* (A/70/17), para. 161.

313. The Commission noted with appreciation that the Secretariat had received a grant from the Fund for International Development (OFID) of the Organization of the Petroleum Exporting Countries in the amount of $125,000 and funding by the European Commission in the amount of 100,000 euros, which would allow the secretariat of the Commission to operate the pilot project until the end of 2017.

314. The Commission recalled that a legal officer had been hired in April 2016 to operate the transparency repository. The Commission noted that the Secretariat had received an increased number of inquiries on the Transparency Rules and performed a steadily increasing number of capacity-building activities on the UNCITRAL standards on transparency in treaty-based investor-State arbitration (the UNCITRAL transparency standards). The Commission was further informed that a number of educational activities had taken place and that the UNCITRAL transparency standards were included in several academic programmes, including moots such as the Willem C. Vis International Commercial Arbitration Moot, the Frankfurt Investment Arbitration Moot Court, the Foreign Direct Investment International Arbitration Moot and the IBA-VIAC Mediation and Negotiation Competition. As a result, more than 3,800 students became familiar with the UNCITRAL transparency standards.

315. The Commission was informed about the launch of a new 18-month project under the overall project "Open regional fund — legal reform", conducted by the Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ), upon appointment by the Federal Ministry for Economic Cooperation and Development of Germany (BMZ). Among the main aims of the project was the promotion of the UNCITRAL transparency standards in South-Eastern Europe.

316. The Commission noted that, overall, and partly as a result of the promotional activities, the trend in investor-State dispute settlement was moving towards transparency. The Commission also noted that, after ratification by Mauritius, Canada and Switzerland (listed in chronological order of ratification), the Mauritius Convention on Transparency would enter into force on 18 October 2017. None of the ratifying States had made reservations and, as a result, the Transparency Rules were now part of the investor-State dispute settlement regime created by investment treaties concluded by those three States. Thus, the Transparency Rules would apply on a unilateral basis, under all treaties concluded by those States, if the claimant agreed to their application (i.e., 35 treaties for Canada, 28 treaties for Mauritius and 114 treaties for Switzerland). The Commission also noted that 16 other States had signed the Mauritius Convention on Transparency.

317. The Commission was informed that the UNCTAD International Investment Agreement Navigator database contained 60 treaties that had been concluded after 1 April 2014. Of those treaties, 46 offered investors the possibility of initiating arbitration according to the UNCITRAL Arbitration Rules (with new article 1, paragraph 4, as adopted in 2013)[82] and thereby incorporating the Transparency Rules. In addition, about 50 per cent of those treaties established elements of transparency for arbitral proceedings not conducted under the UNCITRAL Arbitration Rules. Only 14 treaties excluded the application of the Transparency Rules, half of which foresaw some elements of transparency, either the publication of documents, access to hearings or the possibility of third parties submitting submissions, inspired by the Transparency Rules.

318. With respect to the budget situation of the transparency repository, the Commission was informed about the financial commitment of the European Commission to continue supporting the operation of the transparency repository until 2020, through the provision of an additional 300,000 euros. The grant agreement had been signed on 13 December 2016. The Commission expressed its appreciation to the European Commission for its renewed commitment to providing funding that would allow the Secretariat to continue operating the transparency repository.

319. The Commission was informed that the Secretariat was currently in contact with OFID regarding the obtaining of renewed funding. More generally, the Commission

[82] Ibid., *Sixty-eighth Session, Supplement No. 17* (A/68/17), annex II.

reiterated its appeal to all States, international organizations and other interested entities to consider making contributions to the funding of the transparency repository, preferably in the form of multi-year contributions, so as to facilitate its continued operation.

320. The Commission was informed that, with the recent provision of funds from the European Commission, and taking into account the pending decision by OFID to continue funding, as well as possible new commitments, the secretariat would be able to continue operating the transparency repository until the end of 2020.

321. After discussion, the Commission reiterated its strong and unanimous opinion that the secretariat of the Commission should fulfil the role of the transparency repository and that it should continue to operate the transparency repository. Accordingly, the Commission recommended to the General Assembly that it request the secretariat of the Commission to continue operating the repository of published information in accordance with article 8 of the Transparency Rules, as a pilot project until the end of 2020, to be funded entirely by voluntary contributions. The Commission also requested that the Commission and the General Assembly be informed of developments regarding the funding and budgetary situation of the transparency repository, based on its pilot operation.

C. International commercial arbitration moot competitions

1. Willem C. Vis International Commercial Arbitration Moot

322. It was noted that the Association for the Organization and Promotion of the Willem C. Vis International Commercial Arbitration Moot had organized the Twenty-fourth Moot, the oral arguments phase of which had taken place in Vienna from 7 to 13 April 2017. It was also noted that the best team in oral arguments had been the University of Ottawa (Canada). As in previous years, the Moot had been co-sponsored by the Commission. Legal issues addressed by the teams in the Twenty-fourth Moot were based on the United Nations Sales Convention.

323. The representative of the Vis Moot recalled the historical background of the Vis Moot and mentioned that it was one of the remarkable educational events in the area of international trade law. The significant contribution of Michael L. Sher to the Vis Moot was reiterated, and it was recalled that the idea of the Moot had emanated from the UNCITRAL twenty-fifth anniversary Congress. An update on the competition was provided: 338 teams from 76 countries had participated in the 2017 Vis Moot, comprising some 2,000 students, 1,000 arbitrators and 700 coaches. Reiterating the role of the Vis Moot in fostering international trade law and promoting standards in international arbitration, it was stressed that the Vis Moot had also contributed to increasing cultural diversity and improving the gender balance in international arbitration.

324. It was mentioned that an improved gender balance had been demonstrated by the increased participation of female students in recent Vis moots. It was further mentioned that the following year would mark the twenty-fifth anniversary of the Vis Moot and that the UNCITRAL Arbitration Rules would be used. The oral arguments phase of the Twenty-fifth Vis Moot would be held in Vienna from 23 to 29 March 2018. Lastly, the representative expressed appreciation to the Commission for its continued support of the Vis Moot.

325. It was also noted that the Vis East Moot Foundation had organized the Fourteenth Willem C. Vis (East) International Commercial Arbitration Moot, which had been co-sponsored by the Commission, the East Asia Branch of CIARB and many law firms based in Hong Kong, China. The final phase had taken place in Hong Kong from 26 March to 2 April 2017. A total of 125 teams from 31 jurisdictions had participated and the best team in oral arguments had been the West Bengal National University of Juridical Sciences (India). The Fifteenth Vis (East) Moot would be held in Hong Kong from 11 to 18 March 2018.

2. Madrid Commercial Arbitration Moot 2017

326. It was noted that Carlos III University of Madrid had organized the Ninth International Commercial Arbitration Competition in Madrid from 3 to 7 April 2017, which had been co-sponsored by the Commission. Legal issues addressed by the teams had related to an international sale of goods to which the United Nations Sales Convention, the New York Convention and the rules of arbitration of the Madrid Court of Arbitration were applicable. A total of 23 teams from 11 jurisdictions had participated in the Madrid Moot 2017, which had been held in Spanish. The best team in oral arguments was Pontificia Universidad Católica del Perú (Peru). The Tenth Madrid Moot would be held from 16 to 20 April 2018.

3. Mediation and negotiation competition

327. It was noted that the third mediation and negotiation competition organized jointly by IBA and VIAC, with the support of the Commission, would take place in Vienna from 10 to 14 July 2017. Legal issues to be addressed by the teams had been those addressed at the Twenty-fourth Willem C. Vis International Commercial Arbitration Moot (see para. 322 above). A total of 33 teams from 15 jurisdictions had registered to participate.

D. Bibliography of recent writings related to the work of UNCITRAL

328. The Commission recalled that the UNCITRAL Law Library specialized in international commercial law. Its collection featured important titles and online resources in that field in the six official languages of the United Nations. In 2016, library staff had responded to approximately 490 reference requests from more than 45 countries and had hosted researchers from more than 22 countries.

329. Considering the broader impact of UNCITRAL texts, the Commission took note of the bibliography of recent writings related to the work of UNCITRAL (A/CN.9/907) and the influence of UNCITRAL legislative guides, practice guides and contractual texts as described in academic and professional literature. The Commission noted the importance of facilitating a comprehensive approach to the creation of the bibliography and the need to remain informed of activities of non-governmental organizations active in the field of international trade law. In that regard, the Commission recalled and repeated its request that non-governmental organizations invited to the Commission's annual session donate copies of their journals, reports and other publications to the UNCITRAL Law Library for review.[83] The Commission expressed appreciation to all non-governmental organizations that had donated materials. The Commission noted, in particular, the addition to the UNCITRAL Law Library collection of current and forthcoming issues of the journals *Revue camerounaise de l'arbitrage* (APAA) and *Islamic Capitals and Cities* (Organization of Islamic Capitals and Cities), as well as a great number of books, yearbooks and other publications from the Arab Society of Certified Accountants, CEDEP, the Centre for Transnational Law at the University of Cologne (Germany), the International Rail Transport Committee, the China International Economic and Trade Arbitration Commission, the International Institute for Conflict Prevention and Resolution, the Club of Arbitrators of the Milan Chamber of Arbitration, the Council of the Notariats of the European Union, the European Consumer Centres Network, the European Commerce Registers' Forum, the European Law Institute (ELI), EUF, FCI, the International Federation of Consulting Engineers, the Fondation pour le droit continental, the International Commercial Arbitration Court at the Chamber of Commerce and Industry of Ukraine, the International Law Association, INSOL Europe, INSOL International, ISDA, the International Women's Insolvency and Restructuring Confederation, the Stockholm Chamber of Commerce and the Kuala Lumpur Regional Centre for Arbitration. The Commission also took note of a large monographic donation by the publisher C.H. Beck.

[83] Ibid., *Seventieth Session, Supplement No. 17* (A/70/17), para. 264.

XIV. Coordination and cooperation

A. General

330. The Commission had before it a note by the Secretariat (A/CN.9/908) providing information on the activities of international organizations active in the field of international trade law in which the Secretariat had participated since the last note to the Commission (A/CN.9/875). The Commission expressed appreciation for the Secretariat engaging with a high number of organizations and entities, both within and outside the United Nations system. Among others, the Secretariat had participated in the activities of the following organizations: the Hague Conference on Private International Law, Unidroit, the European Commission, the United Nations Inter-Agency Cluster on Trade and Productive Capacity, the Office of the United Nations High Commissioner for Human Rights, UNODC, OECD, the Economic Commission for Europe, UNCTAD, the World Bank, the International Law Institute and WTO.

331. The Commission took particular note with satisfaction of the coordination activities involving the Hague Conference on Private International Law and Unidroit. It was mentioned that the Secretariat could pursue further cooperation with the Hague Conference with regard to its judgments project (see para. 268 above) so that developments, including the up-to-date draft text, could be shared with the relevant working groups of the Commission. It was said that having such information would greatly assist the work of the working groups in considering how the projects interacted and in ensuring that there was no overlap or duplication of work.

332. The Commission also noted that the coordination work of the Secretariat concerned topics currently being considered by the working groups, as well as topics related to texts already adopted by the Commission, and that the Secretariat had participated in expert groups, working groups and plenary meetings with the purpose of sharing information and expertise and avoiding duplication of work in the resultant work products.

333. The Commission heard an oral report on the preparation of a guidance document in the area of international commercial contract law (with a focus on sales). It was recalled that, over the previous few decades, UNCITRAL, the Hague Conference on Private International Law and Unidroit, as well as a number of other entities, including at the regional level, had drawn up various legislative and non-legislative instruments in the area of international commercial contract law. It was added that, given the number of instruments in place, it would be beneficial to provide guidance in order to identify the relevance and impact of each instrument and their relationship with other legal instruments. In that light, at its forty-ninth session, the Commission had approved the "Joint proposal on cooperation in the area of international commercial contract law (with a focus on sales)" and had asked the Secretariat to implement the Commission's decision in coordination with the Hague Conference on Private International Law and with Unidroit and to report periodically on the progress of that work.[84]

334. It was indicated that work had started by identifying experts who, in a personal capacity, could assist in preparing a draft text, tentatively in the form of a legal guide, to be circulated for validation to stakeholders and, eventually, to be presented to the Commission. It was explained that the goal of the suggested legal guide was to assist in identifying, understanding and applying uniform instruments. It was added that the legal guide would be aimed at explaining the relationship between different instruments and the fundamental features of each of them, rather than focusing on their details. It was reiterated that the legal guide would have no normative character and would not contain an interpretation of relevant rules, but rather would provide basic information on existing instruments and include illustrations for the benefit of different legal actors, such as judges, arbitrators, legislators and legal counsels. It was

[84] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), para. 281.

also indicated that special attention was being paid to minimizing the budgetary impact of the suggested work.

335. The Commission took note of the progress made on the preparation of a guidance document on international commercial contract law (with a focus on sales) and encouraged the Secretariat to continue its collaboration with the Hague Conference on Private International Law and Unidroit on the project.

336. The Commission also heard an oral report on coordination activities relating to security interests. It was recalled that, at its forty-ninth session, in 2016, it had renewed the mandate of the Secretariat to continue its coordination efforts in the area of security interests and given a mandate to the Secretariat to update the joint publication *UNCITRAL, Hague Conference and Unidroit Texts on Security Interests*[85] and to reflect that decision in its publications programme.[86] The Commission requested the Secretariat to continue those efforts and to update the joint publication in order to include further recently adopted texts on security interests. The Commission asked the Secretariat to reflect that request in its publications programme and to take any other measures to ensure future publication of any final text resulting from that work, including electronically and in the six official languages of the United Nations.

337. The Commission noted with appreciation the efforts of the Secretariat in coordinating and cooperating with a number of other organizations active in the area of security interests. It was noted that the Secretariat had provided comments on the World Bank principles for effective insolvency and creditor/debtor regimes contained in the Insolvency and Creditor Rights Standard and was expecting to receive the comments of the World Bank on a revised draft of the Standard that contained the key recommendations of the Secured Transactions Guide. In addition, it was noted that the Secretariat had met with representatives of the European Commission and had discussed further coordination efforts, including a joint expert group meeting, with a view to ensuring a coordinated approach to the law applicable to the third-party effects of transactions in receivables and securities. It was further noted that the Secretariat had attended the first meeting of governmental experts on a draft protocol to the Convention on International Interests in Mobile Equipment (Cape Town Convention) on matters specific to agricultural, construction and mining equipment, with a view to ensuring the avoidance of duplication of efforts that could lead to overlap and conflict with the Commission's work on security interests. The Commission also noted with appreciation the Secretariat's coordination efforts with the World Bank Group, the Organization of American States and APEC in providing technical assistance and assistance with respect to local capacity-building in the area of security interests.

338. The Commission observed that coordination work often involved travel to meetings of the different organizations concerned and the use of funds allocated for official travel. The Commission reiterated the importance of such work being undertaken by UNCITRAL as the core legal body in the United Nations system in the field of international trade law and supported the use of travel funds for that purpose.

B. Reports of other international organizations

339. The Commission took note of statements made on behalf of the following international and regional organizations.

1. International Institute for the Unification of Private Law

340. The Secretary-General of Unidroit reported on the main activities of Unidroit since the forty-ninth session of UNCITRAL, in 2016. In particular, the Commission was informed about the activities set out below.

---

[85] United Nations (New York, 2012).

[86] *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), paras. 127 and 128.

(a) Cape Town Convention

341. The Cape Town Convention continued to attract new accessions, with 73 States parties. Similarly, the Aircraft Protocol now had 67 States parties, while the recent ratification of the Protocol to the Cape Town Convention on Matters Specific to Railway Rolling Stock (Rail Protocol) by Gabon, and its signature by France, Sweden and the United Kingdom had put it firmly on the path towards further ratification and entry into force.

342. The Ratification Task Force for the Rail Protocol (in which Unidroit participated in as co-chair of the Rail Preparatory Committee), had met several times in the previous 12 months to monitor progress and identify strategic partners.

343. The committee of governmental experts entrusted with the preparation of a draft protocol to the Cape Town Convention on matters specific to agricultural, construction and mining equipment had held its first meeting from 20 to 24 March 2017. The meeting had been attended by 126 representatives from 48 Governments (30 Unidroit member States and 18 non-member States), six regional and intergovernmental organizations, including an observer from UNCITRAL, and four international non-governmental organizations.

344. The committee had made good progress in reviewing the preliminary draft text provided by the study group. The most debated issues had been: (a) the scope of the protocol in relation to agricultural, construction and mining equipment; (b) how the protocol should address interests arising out of the association of such equipment with immovable property; and (c) the amendment procedure for the protocol, with particular regard to the Harmonized System codes of the World Customs Organization, contained in the annexes to the preliminary draft protocol.

345. Most of the text proposed by the study group had been adopted by the committee. The committee hoped that it would be able to finalize the draft protocol at its second meeting, scheduled to take place in Rome from 2 to 4 October 2017.

(b) Transnational civil procedure — formulation of regional rules

346. Against the background of the American Law Institute /Unidroit Principles of Transnational Civil Procedure, which had been adopted in 2004, Unidroit continued to work with ELI to adapt those Principles to the specificities of European regional legal cultures, with a view to drafting Europe-specific regional rules.

347. The steering committee and co-reporters of working groups had met in Vienna in November 2016 and in Rome in April 2017. The project had also been presented at the ELI Annual Assembly held in Ferrara, Italy, from 7 to 9 September 2016. Unidroit and ELI had confirmed their estimate of substantial completion of the project by 2018.

(c) Legislative guide on principles and rules capable of enhancing trading in securities in emerging markets

348. The Committee on Emerging Markets Issues, Follow-up and Implementation, established to assist with the promotion and implementation of the 2009 Geneva Convention on Substantive Rules for Intermediated Securities, had held its third meeting in Rome on 12 and 13 December 2016, at which it had reviewed in detail the comments received on the draft legislative guide circulated earlier in 2016. Following the meeting, a videoconference had been held on 16 January 2017 to review the revised draft legislative guide, which had later been circulated again for comment.

349. The Committee had held its fourth meeting in Beijing on 29 and 30 March 2017, at the invitation of the China Securities Regulatory Commission. It had been jointly hosted by the China Securities Depository and Clearing Corporation Ltd.

350. On the first day, an open colloquium had been held on the theme “Enhancing and ensuring legal certainty in both current and future holding systems”. On the second day, building upon the discussions during the colloquium, the members and observers of the Committee, as well as other States and organizations, had reviewed in detail the draft legislative guide on intermediated securities. The draft legislative

guide, as revised, had been adopted by the Unidroit Governing Council at its ninety-sixth session, held in Rome from 10 to 12 May 2017. The guide was being edited and would be published later in 2017.

(d) Cooperation on international sales law

351. The secretariats of Unidroit, UNCITRAL and the Hague Conference on Private International Law had continued their exploratory work on the preparation of a guidance document on existing texts in the area of international sales law (see also paras. 333 and 334 above).

(e) Cultural property

352. Unidroit had a long-standing history of cooperation with the United Nations Educational, Scientific and Cultural Organization (UNESCO) in the area of cultural property. The 1995 Convention on Stolen or Illegally Exported Cultural Objects had 40 States parties, following the recent accessions of Bosnia and Herzegovina, the Lao People's Democratic Republic and Tunisia. Cooperation had intensified with UNESCO and the other organizations participating in the task force on the implementation of Security Council resolution 2199.

(f) Private law and agriculture

353. Unidroit was pursuing its cooperation with the Rome-based organizations of the United Nations system for food and agriculture. After the adoption of the Unidroit/ Food and Agriculture Organization of the United Nations (FAO)/ International Fund for Agricultural Development *Legal Guide on Contract Farming*, the three organizations had devised a series of promotional and follow-up activities. In that context, the Unidroit and FAO secretariats were currently preparing a legislative study on contract farming with a view to assisting in the development of a favourable legal framework in that area of importance for food security. Another follow-up activity was the preparation of a legal guide on agricultural land investment contracts, the scope and structure of which had been discussed at the first meeting of the working group, from 3 to 5 May 2017. The first draft chapters would be considered at the next meeting, in late 2017.

2. Organization for Economic Cooperation and Development

354. The OECD representative outlined some of the recent work of the Organization relevant to that of UNCITRAL, particularly relating to arbitration and investment dispute settlement. Issues pertaining to differences between commercial arbitration and investment arbitration, with regard to the role of appointing authorities, and to multiple investment treaty claims against a Government by shareholders of the same company for the same injury, were presented as examples of issues discussed at OECD, which provided important background for investment policymakers considering questions relating to dispute settlement. In addition, the experience of OECD in updating the thousands of existing double tax treaties was mentioned. The conclusion by 68 jurisdictions of the Multilateral Convention to Implement Tax Treaty Related Measures to Prevent Base Erosion and Profit Shifting in June 2017, which allowed Governments to update the many existing bilateral tax treaties in a single process, was highlighted, along with its possible relevance for reform of the many investment treaties. In conclusion, the current work of OECD at its investment round tables, in which a wide range of OECD, Group of 20 and other Governments participated, was presented. It was noted that, as an intergovernmental forum that had met every six months since 2011 to discuss investment treaties, the round table had fostered an informative dialogue between Governments, enriched with input from stakeholders and experts. Lastly, it was mentioned that the current agenda of the round table addressed: (a) the balance between investor protection and Governments' right to regulate; (b) the societal benefits and costs of investment treaties; and (c) arbitrators, adjudicators and appointing authorities. The OECD representative reaffirmed the continued interest of OECD in cooperating with UNCITRAL.

3. United Nations Conference on Trade and Development

355. The representative of UNCTAD presented the *World Investment Report 2017: Investment and the Digital Economy*, launched on 7 June 2017. Some of the main foreign direct investment trends at the global and regional levels were presented, as well as the latest trends in international investment policymaking. With respect to the latter it was noted that, in 2016, the number of international investment agreements had continued to grow, as had the number of known treaty-based investor-State dispute settlement cases.

356. It was noted that, since 2010, UNCTAD had focused its work on the reform of international investment agreements to make them more conducive to sustainable development and that many of the new international investment agreements included reform elements that preserved the right to regulate, while maintaining investor protection, and improved investor-State dispute settlement, while fostering responsible investment. It was stated that the *World Investment Report 2017*, in which the need to modernize existing old-generation international investment agreements had been emphasized, contained an analysis of 10 policy options that States could adapt and adopt in line with their specific reform objectives. Among those reform options, engaging multilaterally was particularly underscored. It was stated that multilateral engagement established a common understanding and that it would be the most efficient way to address the inconsistencies, overlaps and development challenges of today's international investment agreement regime. However, it was also stated that such an approach would also be the most challenging avenue for international investment agreement reform.

357. The Mauritius Convention on Transparency, which fostered greater application of the Transparency Rules to international investment agreements concluded prior to 1 April 2014, was mentioned as an example of a possible multilateral approach. It was stated that future international investment agreement reform actions could draw upon the process of multilateral negotiations that had led to the Transparency Rules and the Mauritius Convention on Transparency, and the Convention's opt-in mechanism.

358. At the end of the presentation, some high-level UNCTAD events were highlighted, including the annual international investment agreements conference (to be held in Geneva from 9 to 11 October 2017), at which discussions would be held on how to modernize existing old-generation international investment agreements, and the regional conference on international investment policies (to be held in Baku on 24 and 25 October 2017), at which discussions would be held on the latest developments and key challenges in international investment policies for economies in transition and assistance would be provided to policymakers in devising and reforming international investment policies.

4. Permanent Court of Arbitration

359. The representative of the Court made a statement providing a summary of its work during the period 2016-2017, including an update of the Court's provision of registry support in a number of different international arbitration and conciliation proceedings and its experience with the operation of the UNCITRAL Arbitration Rules, including its role as the appointing authority. Noting the Court's experience in investment arbitration and with tribunals with a permanent or long-term character, and recognizing the numerous reforms being proposed in the area of investment dispute settlement, the Court's role in assisting its member States in designing and implementing efficient and fair dispute resolution proceedings was underscored. It was further stated that, while the Court took no view on the desirability of particular reforms, it stood ready to support any new approaches to the present system of investment arbitration at the technical level.

C. International governmental and non-governmental organizations invited to sessions of UNCITRAL and its working groups

360. The Commission recalled that, at its forty-third session, in 2010, it had adopted the summary of conclusions on the UNCITRAL rules of procedure and methods of work.[87] In paragraph 9 of that summary,[88] the Commission had decided to draw up and update as necessary a list of international organizations and non-governmental organizations with which UNCITRAL had long-standing cooperation and which had been invited to sessions of the Commission. The Commission also recalled that, further to its request to restructure the information about such organizations,[89] the Secretariat had adjusted the online presentation of information concerning intergovernmental and non-governmental organizations invited to sessions of UNCITRAL and its working groups and the modality of communicating such information to States, and that the adjustments made had been to the satisfaction of the Commission.[90]

361. The Commission also recalled that, at its forty-eighth session, in 2015, it had requested the Secretariat, when presenting its oral report on the topic of organizations invited to sessions of UNCITRAL, to provide comments on the manner in which invited organizations fulfilled the criteria applied by the Secretariat in making its decision to invite non-governmental organizations.[91] The Commission further recalled that, at its forty-ninth session, in 2016, it had welcomed the detailed and informative report presented by the Secretariat pursuant to that request.[92]

362. The Commission noted that, since its forty-ninth session, the Energy Community had been added to the list of international intergovernmental organizations invited to sessions of UNCITRAL and that the following organizations had been added in the list of international non-governmental organizations invited to sessions of UNCITRAL: Arbitrators' and Mediators' Institute of New Zealand Inc. BAC/BIAC, HKMC, IIDC, RAA, and SIMI. The Commission noted the reasons for the Secretariat's decision to invite those additional international non-governmental organizations to sessions of UNCITRAL and its working groups. It also heard information about non-governmental organizations whose requests to be invited to sessions of UNCITRAL and its working groups had been rejected and reasons for the rejection.

363. The Commission also noted that, pursuant to General Assembly resolutions 68/106 and 69/115 (para. 8 in both resolutions), 70/115 (para. 7) and 71/135 (para. 9), all States and invited organizations were reminded, when they were invited to UNCITRAL sessions, about the rules of procedure and methods of work of UNCITRAL. Such a reminder was effectuated by inclusion in invitations issued to them of a reference to a dedicated page of the UNCITRAL website where the main official documents of UNCITRAL pertaining to its rules of procedure and work methods could be easily accessed.

364. The Commission welcomed the report of the Secretariat on international governmental and non-governmental organizations invited to sessions of UNCITRAL and its working groups, but requested the Secretariat to provide the relevant information in writing for future sessions.

XV. Commemoration of the fiftieth anniversary of UNCITRAL

A. Statements congratulating UNCITRAL

365. States from all regions joined in applauding the outstanding contribution of UNCITRAL to a better international legal order. Throughout the session, the Commission heard further messages of congratulation from States and long-standing delegates to UNCITRAL, emphasizing its achievements and contributions to the development of the international law of trade.

366. At the 1068th meeting of the Commission, the Secretariat informed the Commission that a message had been received from the Prime Minister of the Russian Federation on the occasion of the fiftieth session of UNCITRAL. The Secretary of UNCITRAL read out the message to the Commission.

367. It was observed that, in the period to 1966, the focus of the international legal community — including the International Law Commission — had been on public international law. Consequently, there had been no United Nations-led systematic approach to developing substantive legal rules of a private international law character to govern international trade. The proposal of Hungary to the General Assembly at its nineteenth session to establish UNCITRAL had subsequently been welcomed by the General Assembly as an opportunity for considering the challenges in international trade law and trading relations that had arisen as a result of the significant technological and social changes over the previous century.

368. The Commission's attention was drawn to the major achievements of UNCITRAL in issuing conventions, model laws, legislative guides and other texts over its 50 years of existence. States acknowledged the success, in a variety of areas of international trade law, of UNCITRAL texts including the New York Convention, the United Nations Sales Convention, the UNCITRAL Arbitration Rules and the texts on insolvency, secured transactions and electronic commerce. It was recalled that UNCITRAL had issued recommendations to Governments and international organizations concerning the legal value of computer records [93] back in 1985, demonstrating innovative legal thinking at a time when e-commerce was an entirely new, and little understood, topic. That intellectual leadership underpinned the wide acceptance of later UNCITRAL texts on e-commerce and others.

369. It was noted that the benefits of the highly regarded UNCITRAL texts also accrued in their effective implementation and use in practice, and States enumerated the many UNCITRAL texts that they had enacted domestically.

370. The development potential of UNCITRAL texts was noted to be reflected in many of the Sustainable Development Goals. Predictable, stable and balanced legal frameworks, such as those promoted by UNCITRAL, enabled and increased trust between trading partners, which in turn allowed the potential benefits of international trade to be realized. In other words, people prospered because those benefits allowed trading partners to minimize their legal risks and to resolve disputes in a fair, efficient and speedy manner.

371. In addition, it was underscored that the benefits of such an international legal order extended beyond those well-understood economic benefits to improved peace and security — themselves key elements of the United Nations agenda. Peace and security required a solid legal grounding and a common understanding of the principles of law in a variety of fields, so that States were enabled to support a business environment and cooperation and thus to foster development.

372. It was also observed that an increasingly economically interdependent world required not just a harmonized but also a modernized legal framework for the facilitation of international trade and investment. Here, too, the sustainability of developments from social, environmental and economic perspectives were crucial for meeting today's challenges, and the demonstrated willingness of UNCITRAL to

[93] Available from www.uncitral.org/pdf/english/texts/electcom/computerrecords-e.pdf.

balance human and economic needs was welcomed in that regard. It was added that UNCITRAL had proved itself adept at meeting past and present challenges, also in cooperation with other international and regional organizations active in international trade law reform.

373. In that connection, it was observed that the fiftieth anniversary offered an opportunity to look to the future. Many delegates and observers appreciated that ideas for possible future work were considered during the Commission session.

374. The contributions of all participants in the UNCITRAL law-making process were recognized. The achievements of the eight secretaries of UNCITRAL to date were acknowledged. It was noted that the efforts of the Secretariat in supporting the Commission and its working groups, the devotion of considerable resources by States and the expertise of international observer organizations had all played a considerable part in ensuring the success of UNCITRAL. That success, it was emphasized, was founded on the practical value of UNCITRAL texts, the development process of which had ensured the provision of commercially realistic texts that could and would function well in domestic use. It was also emphasized that the limited resources of UNCITRAL also indicated a need for cooperation with other rule-formulating agencies and development institutions.

375. In addition, it was recalled that UNCITRAL had been established to provide countries at all levels of development with a voice in the development of its legal texts. States, including developing countries, were pleased to observe that they had been able to provide officers of the Commission and its working groups, and had benefited not only from being able to contribute to legislative development, but also from enacting and using the resulting texts. Further benefits had been provided to an entire generation of lawyers in terms of training, experience and practical implementation of rules in the field of international trade law. UNCITRAL was urged to continue its efforts to facilitate the participation of all member States in its meetings, so as to ensure the continued worldwide acceptance of its texts.

B. Mini-conference organized by Hungary

376. The Commission heard that, on 3 July 2017, Hungary had held a mini-conference at the Vienna International Centre to celebrate the fiftieth annual session of UNCITRAL. The Commission recalled that the Government of Hungary made the proposal to the nineteenth session of the General Assembly that had resulted in the establishment of UNCITRAL by means of resolution 2205 (XXI). Hungary had proposed the inclusion of an item on the agenda of that session entitled “Consideration of steps to be taken for progressive development in the field of private international law with a particular view to promoting international trade”.

377. At the mini-conference, the relationship between UNCITRAL and Hungary, pitfalls and challenges in the international unification of private law and the United Nations Sales Convention as a source of inspiration for the new Hungarian contractual liability were discussed.

378. The Commission expressed its appreciation for the mini-conference.

C. UNCITRAL Congress 2017

379. The Commission recalled its instruction to the Secretariat to organize a Congress to commemorate its fiftieth anniversary,[94] and heard that the Congress had taken place from 4 to 6 July 2017. The Commission was informed that the programme and other materials for the Congress were available on the UNCITRAL website.

380. At the Congress, which had been entitled “Modernizing International Trade Law to Support Innovation and Sustainable Development”, the question of how trade law

[94] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), para. 366.

reform based on the modern, fair and harmonized rules of UNCITRAL could contribute to the 2030 Agenda for Sustainable Development had been examined. In that regard, the Commission's attention was drawn to the Addis Ababa Action Agenda of the Third International Conference on Financing for Development,[95] in which States had endorsed the efforts and initiatives of UNCITRAL, as the core legal body within the United Nations system in the field of international trade law, aimed at increasing coordination of and cooperation on legal activities by international and regional organizations active in the field of international trade law and at promoting the rule of law at the national and international levels in that field.

381. The Commission heard that the Congress had provided an opportunity for the first in-depth look into the past and future of UNCITRAL since 2007. It was reported that the event had succeeded in bringing together delegates and experts who had worked with UNCITRAL for decades and new and young participants with an interest in the work of UNCITRAL.

382. It was noted that one of the aims of the Congress had been to raise awareness of issues that the Commission might wish to take into account in considering its work programme at a future time, including topics for possible future research, how UNCITRAL developed and updated legislative texts and how to encourage the effective use and implementation of such texts. Some participants submitted policy and proposed research papers and had been able, through brief presentations, to encourage other participants to read those papers and consider the issues raised. The quality of the interventions from speakers, moderators and other participants had been recognized as excellent.

383. The Congress had also elicited innovative ideas for modernizing international trade law in a sustainable manner. It was observed that the articulation of ideas for the future was precisely what such a Congress should achieve — in other words, the Congress had been much more than a celebratory event.

384. The Legal Counsel had opened the Congress by emphasizing the importance of international cooperation and trade to the United Nations agenda, particularly the 2030 Agenda for Sustainable Development. In addition to congratulating UNCITRAL on its achievements, he had acknowledged the transparent, inclusive and multilingual manner in which its texts were developed, and had welcomed the opportunity it provided for developing countries to have a voice in that process. The comment echoed the overarching goal of the 2030 Agenda to "leave no one behind".

385. The Minister of Justice of Austria, the country that had hosted UNCITRAL for nearly 40 years, had congratulated UNCITRAL on its fiftieth anniversary and recalled the proposal of Hungary that had led to the establishment of the Commission, in 1966. He recognized that UNCITRAL had met the need for progressive development of private international law in international trade, had allowed the enormous technological and social changes over recent decades to be accommodated in the resulting legal frameworks and had taken the lead through dialogue to bring many divergent views together. He had welcomed the emphasis on modernization of those frameworks and on sustainability, which remained a necessity in the current times of enormous environmental, economic and social challenges.

386. During the first session of the Congress, distinguished speakers from a variety of regions and organizations[96] had presented international regional and national perspectives on the achievements of UNCITRAL and its potential contributions to sustainable development (including economic growth, development and institution-building). The speakers had voiced ongoing commitment to UNCITRAL, described as one of the most influential organs in legal harmonization, and had encouraged nations to join together to support its work, described as a "masterpiece of global hope and security". Points raised included the importance of reducing barriers to access to international commercial markets and of enhancing trade and economic

[95] General Assembly resolution 69/313, annex.

[96] Details on the speakers and sessions may be found in the Congress programme, available on the UNCITRAL website.

growth, and so improving peoples' well-being in all countries, and in developing countries in particular. In addition, the Commission's major and positive effect on the rule of law and in improving international trade and cooperation, the importance of recognizing the anti-globalization movement and the pernicious effect of corruption on international trade had been emphasized.

387. The benefits of cooperation and coordination and the positive contributions of UNCITRAL to a collaborative approach had also been highlighted. Examples included the Commission's work on anti-corruption with UNODC (custodian of the United Nations Convention against Corruption) and the support given to other international bodies such as the World Bank in its reform activities in insolvency and secured transactions and to EBRD in its legal transition work, in which UNCITRAL texts had served as models for national legislative reform.

388. Key emerging themes had included the "convening power of UNCITRAL", a phrase repeated throughout the Congress. The phrase reflected that UNCITRAL provided a learning space in which people could gain an understanding of the questions to be addressed and of the experience of others, so as to develop the law of international trade in a way that would be fit for purpose.

389. In a keynote speech opening the afternoon sessions on 4 July, the benefits to one system from the use of UNCITRAL texts had been outlined, demonstrating the importance of creativity in law-making, the benefits and challenges of increased human interaction in cross-border commerce and the importance of the rule of law in supporting that commerce. International cooperation and coordination, once again, had been identified as key drivers of success.

390. During the first panel of the Congress, the qualitative and quantitative benefits in the use of model laws, including empirical research demonstrating a large and positive impact of UNCITRAL texts on dispute settlement, the challenges raised in the interpretation of model law-based provisions and success factors for model laws, and the need for, and impact and functions of, model laws at the regional level, had been considered.

391. A second panel had addressed the process of UNCITRAL law-making in corporate insolvency, transport of goods by sea and secured transactions, and the benefits of the participation of both delegates from States and experts in legislative development. The challenges of achieving broad and consistent representations in UNCITRAL work had also been noted.

392. A subsequent panel had considered the relationship between multilateral and regional organizations, and whether their work reinforced each other's or created tension. The similarities between law reform at the multilateral and regional levels had been noted, and it had been observed that transferability of solutions between systems should be assumed — and, indeed, that attempts to impose one region's or system's solution might be counterproductive. The benefits of an empirically based approach had been highlighted, and the power of UNCITRAL to convene participants had again been recognized as key. Ongoing challenges relating to disengagement in some regions and retaining consistent expert presence in some working groups had been noted, and UNCITRAL had been urged to engage in interactive regional engagement in response.

393. Opportunities and challenges in the use of UNCITRAL models had also been discussed. While the success of UNCITRAL in bridging impasses and finding middle ground had been noted, so had the challenges that nonetheless remained. Examples included unexpected interpretations of texts and the use of options and guidance rather than legislative text and variations in enactment, which had all led to divergence in practice. On the other hand, the role of UNCITRAL in promoting consistency in terminology as an aid to understanding had been a positive step, although linguistic issues would remain considerable. The growing interaction between investment law and foreign direct investment also brought into play the need to balance the interests of the private and public sectors and the importance of stable legal frameworks.

394. The first day had concluded with a moderated exchange of views by former secretaries and Chairs of UNCITRAL and the Commission's current Secretary. They had discussed the comparative advantage of UNCITRAL in law reform in terms of its multilingualism and inclusiveness and had agreed that, despite the Commission's limited resources, pursuing cooperative approaches would remain critical. It had been added that the influence of UNCITRAL could not always be measured and that success criteria went far beyond the domestic enactment of UNCITRAL texts. Indeed, it had been considered that even failures could be instructive and lead to new and creative solutions. It had been further agreed that there was no perfect system of working groups and that the Commission's willingness to adapt its structure to meet the challenges it faced was another factor underpinning its achievements.

395. The second day had started with a session on the topic "Developments in the law of international trade and commerce: integrated systems to support cross-border trade". Stressing the importance of existing UNCITRAL texts on electronic commerce, several suggestions had been made to build upon that solid platform.

396. The day's first panel had been devoted to legal issues arising from digital contracts and digital property. Reference had been made to smart goods, whose software component, including periodic access to updates, was essential for proper use. Another example cited was that of electronic enforcement, which could significantly impact upon remedies for non-performance. It had been noted that the legal aspects of those emerging issues was yet to be fully explored. Another set of questions related to the relationship between the notion of ownership, itself subject to different definitions, and control over data, including for privacy and data protection purposes.

397. During the second panel, various aspects of the use of distributed ledgers based on blockchain technology (DLT), including cryptocurrencies and smart contracts, had been discussed. It had been indicated that several of those aspects could be addressed in existing legislative texts inspired by the principle of technological neutrality, and a "fitness check" of UNCITRAL texts might indicate that they were better able to accommodate modern tools than was in fact appreciated. However, matters related to the delocalized nature of certain distributed ledgers could pose additional challenges to legal notions based on geographical location. It had been added that ongoing efforts aimed at dealing with legal and regulatory issues pertaining to distributed ledgers would benefit from closer coordination and that UNCITRAL could be in a position to do so effectively. It had been concluded that UNCITRAL should monitor developments in the field.

398. The third panel had dealt with transport, trade facilitation and payments. With respect to payments, it had been indicated that business practices had changed significantly since the adoption of the UNCITRAL Model Law on International Credit Transfers (1992)[97] and that the preparation of a new legislative text could bring significant benefits, for instance with respect to supporting regulatory mechanisms, promoting financial inclusion and stability and implementing monetary policies more effectively. Examples of issues to be considered included: liability allocation, including for fraud and error; authentication of parties and security of transfers; finality of settlements; and recognition of multilateral clearing.

399. With respect to trade facilitation, reference had been made to the importance of UNCITRAL texts, namely the Electronic Communications Convention and the Model Law on Electronic Transferable Records, in implementing provisions on electronic commerce and paperless trade facilitation contained in free trade agreements. In particular, it had been indicated that the possibility of dematerializing bills of lading and similar commercial documents could greatly support interoperability for business-to-business and business-to-Government electronic exchanges at the national and international levels.

[97] *Official Records of the General Assembly, Forty-seventh Session, Supplement No. 17* (A/47/17), annex I.

400. It had also been suggested that UNCITRAL could consider preparing a uniform legal regime for logistics contracts, which were distinct from traditional carriage of goods or warehousing contracts, and some aspects of which were already successfully dealt with in the Rotterdam Rules. It had further been noted that, while most existing legislative provisions on electronic commerce were transactions-oriented, the platform model was currently prevalent in the digital economy. Accordingly, it had been suggested that UNCITRAL should consider preparing dedicated legislative provisions for electronic platforms, dealing with issues such as the relationship between platform operators and users, including allocation of liability, and decentralized reputational systems.

401. Applying modern technologies to the question of the credit economy, it had been considered at the Congress how DLT might affect many aspects of secured transactions, including the substantive rules, the infrastructure and the practices. One issue that had been raised was whether the rules of the UNCITRAL Model Law on Secured Transactions that applied to equity securities should also apply to cryptocurrencies and tokens that were similar to equity securities. DLT might minimize a number of risks, such as that of unauthorized registrations, for which the Model Law provided comprehensive and complex rules. DLT also had the potential to facilitate the indexing of registrations against unique identifiers of grantors that might be allocated by and maintained in DLT systems, reducing the risk that registrations would be found seriously misleading. From the practical standpoint, DLT applications had the potential to facilitate the monitoring of encumbered assets, preventing their misuse and connecting those assets with other applications that facilitated their disposal (e.g., supply chain systems). Enforcement of security rights could also be streamlined while preserving the balance between the rights of secured creditors, grantor and third parties affected by enforcement. Finally, DLT introduced a number of new questions in relation to the intersection of secured transactions and prudential regulation, including whether cryptocurrencies and equity-like tokens would qualify as eligible collateral allowing banks to reduce capital charges.

402. Enhancing coordination between secured transactions law and prudential regulation had been noted as an essential element for fostering access to credit in a safe and sound financial environment. In particular, the panel had highlighted that a lack of coordination between those two branches of the law undermined the effectiveness of secured transactions law reforms in broadening financial inclusion and might raise financial stability concerns. In fact, while the UNCITRAL Model Law on Secured Transactions facilitated the use of any movable assets as collateral, capital requirements were sceptical of the ability of non-financial assets to effectively reduce risk. Hence, asset-based lending tended to develop outside regulated banking activities. It had been suggested UNCITRAL should promote a dialogue and inter-institutional cooperation with the Basel Committee on Banking Supervision and other relevant organizations, so as to develop guidance on compatible use of their tools. The overarching aim should be to facilitate the extension of secured credit, including through domestic banking systems, in order to reduce the cost of borrowing and promote financial stability.

403. The subsequent sessions on insolvency law had commenced with a short panel discussion on the work undertaken by UNCITRAL on insolvency law to date, including the lessons learned not only from the range of harmonization techniques used in the texts completed by Working Group V (e.g., model law, legislative guide and practice guide), but also from the degree of complexity of the topics pursued and their relevance to the different participants in the process.

404. A second panel had introduced proposals on the following: a model law approach to resolving sovereign insolvency; the need to incorporate, in insolvency regimes for micro, small and medium-sized enterprises, provisions on both corporate and personal insolvency; a global recognition regime for the resolution of financial institutions; and addressing various issues arising from the intersection of insolvency proceedings and arbitration.

405. A third panel had extended the discussion to include the following: the development of a framework for asset tracing and recovery; the unification of private

international law rules to resolve conflict and achieve consistency in cross-border insolvency judgments; the possibility of developing a convention on various aspects of cross-border insolvency; an approach to resolving sovereign insolvency involving the use of arbitration and conciliation; an approach to resolving transnational corporate collapse through recognition of the right of corporations (at their inception) to select and register the insolvency law that would apply to resolve future financial difficulty; and formulation of choice-of-law rules to facilitate certainty and avoid conflict in cross-border bank insolvencies. The participants had concluded that there remained much work to be done in the field, and had once again highlighted the importance of cooperation in achieving successful outcomes.

406. The third day of the Congress had started with consideration of the topic of dispute settlement. The first panel had been a round-table discussion on possible reforms of the investor-State dispute settlement regime, and had prompted three topics for discussion: issues related to the current investor-State dispute settlement regime; adjustments and improvements to that regime; and, finally, the possible creation of a multilateral investment court. The panel had debated various recently developed solutions to the issues identified. The adoption of the Transparency Rules by an increasing number of stakeholders, as well as the forthcoming entry into force of the Mauritius Convention on Transparency, had also been mentioned as positive developments.

407. The second panel had focused mainly on commercial arbitration, and had considered three main issues: whether there was a need for further regulation or whether the time had come for deregulation; issues faced when regulating in a multilateral context, such as the inherent tensions in any harmonization project, and how UNCITRAL had sought to strike a balance through its working methods and the different types of instruments it has developed; and the spillover from investor-State arbitration into commercial arbitration. Topics of interest for possible work mentioned during the panel discussion had included the question of combining arbitration and conciliation, parallel proceedings and adjudication.

408. The third panel, on new frontiers in dispute settlement, had covered developments in the field of online dispute resolution and solutions of a technological nature to enhance access to justice. A proposal on developing bilateral treaties on commercial arbitration had also been introduced.

409. During the afternoon of the third day, the use, implementation and effective understanding of UNCITRAL texts in practice had been addressed. The first panel had considered the tools that UNCITRAL and cooperating entities had issued to support the better understanding of its texts on dispute settlement: guides on the New York Convention, the *2012 Digest of Case Law on the Model Law on Arbitration* and the ASA toolbox for promoting the 2016 UNCITRAL Notes on Organizing Arbitral Proceedings.[98]

410. Participants at the Congress had then considered the issue of implementing the United Nations Sales Convention and had discussed aspects of promoting the adoption, use and uniform interpretation of that Convention. At a general level, it had been indicated that a dynamic interpretation of the Convention was necessary to ensure its continuing relevance for evolving business practices. It had been noted that a number of existing legal mechanisms promoted that dynamic interpretation, but that more specific guidance, possibly in the form of a model law, could also be beneficial. A case study had examined issues related to the possible adoption of the Convention at the national level, and had concluded that the provisions of the Convention were generally compatible with all legal traditions and economic systems, and should therefore be adopted universally.

411. Another case study had highlighted the influence of certain fundamental notions of the Convention on the development of contract law at the national level, suggesting that smaller jurisdictions might be more open to the influence of uniform and international law texts. Other suggestions had been to fill gaps in legal education at

[98] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), paras. 159-160.

the undergraduate level and to develop rules and practices specific to cross-border sales and not strictly connected with national law. Yet another participant had stressed the importance of extending the number of languages in which guidance on the United Nations Sales Convention was available, to the benefit of legal actors, commercial operators and, in particular, small and medium-sized enterprises that were unaware of contractual agreements in foreign languages and under foreign law.

412. At the penultimate session, the challenges of keeping UNCITRAL texts up to date had been considered, using public procurement and public-private partnerships as an example. The challenges of working in a dynamic area of law (common to most UNCITRAL topics), the amount of time necessary to develop an UNCITRAL legislative text and the importance of evaluating the effectiveness of those texts in practice had all been highlighted. Participants had highlighted areas of possible improvement in the UNCITRAL Model Law on Public Procurement to reflect new developments, and had discussed whether or not they indicated that the Model Law itself should be amended. The risks of reopening issues that had proved challenging in achieving consensus, of some States seeking to impose their solutions (echoing comments made earlier in the Congress) and the benefits of complementing texts through providing supplemental materials, up-to-date guidance and interpretation had all been noted. Examples of the use of the Model Law in practice had been recognized as underscoring the need to take into account experience in regional reform and when enacting the text domestically when seeking to harmonize systems worldwide. No easy answers had been found to the questions of how to preserve the UNCITRAL knowledge base when working groups completed their work, although the potential to harness modern technology to preserve discussion and continuity had been raised.

413. During the final session, participants had considered the coordination and cooperation function of UNCITRAL, and how knowledge-gathering and knowledge dissemination could be enhanced through more in-depth and systematized cooperation, despite the different structures, membership and working modalities of the rule-formulating agencies. It had been noted that they all faced a common challenge: persuading the intended beneficiaries of their work of its value, since none had enforcement power.

414. The importance of legal infrastructure on trade and investment at the regional level by reference to the Asia-Pacific region had been highlighted, and the Congress had heard about the variety of international models used and their benefits for the region and events improving the understanding of those models. The potential of the Global Legal Information Network a multilingual and worldwide resource tool for the assimilation of laws — had also been discussed, and participants had been urged to support and raise awareness of the Network.

415. The panel had discussed various mechanisms to disseminate and preserve the value of the work of UNICTRAL, and concluded that one of them, discussed for some time in UNCITRAL circles, would be for UNCITRAL to survey and report annually on international, regional and some domestic reforms in international trade law in an annual publication.

416. In closing the Congress, the Secretary of UNCITRAL had thanked all the participants for their commitment and enthusiasm and had encouraged further study of the new concepts in international commerce that had been discussed during the Congress, the discussions of how existing solutions and instruments might already meet many new challenges, and the conclusion that wider promotion and adoption would further contribute to the successes of UNCITRAL. He had been pleased to hear the widespread view that the Commission had a major and exciting role to play in the years to come.

417. The Commission had also heard that other events were organized in connection with the Congress. The first was a side event on contractual networks, organized by Italy to provide an overview of its proposal for consideration by Commission at its current session (A/CN.9/925; see chapter XVII below) regarding possible future work by UNCITRAL on contractual networks. At that event, the main features of a contractual network, which could be considered as bridging the gap between contract

law and company law, had been briefly outlined, and representatives of the private sector in Italy had provided examples of contractual networks intended to facilitate the internationalization of local businesses, mainly micro, small and medium-sized enterprises. In that regard, the success story of a contractual network aiming to facilitate access by Italian businesses to the Indian market and establish partnerships with local businesses had been presented in detail.

418. The topics of other side events had been "Integrating sustainability considerations into international commercial law reform" (such as inclusive competitiveness and access to global supply chains, the business and human rights legal framework in the UNCITRAL context and environmental issues, climate change and UNCITRAL texts) and "The potential contribution of the digital economy to the sustainability agenda" (including free flow of information and implications for UNCITRAL works on e-commerce, uniform law on electronic contracts as a step forward in the elimination of barriers in electronic commerce and improving cooperation in cross-border insolvency issues by means of blockchain technology).

419. The Commission welcomed the report of the Congress and congratulated UNCITRAL on the event. The structure and breadth of the sessions, it was noted, had enabled an enriching discussion that would benefit the participants, and future deliberations in UNCITRAL.

420. The Commission requested the Secretariat to prepare and publish the proceedings of the Congress and selected materials presented for consideration at the Congress.

XVI. Role of UNCITRAL in promoting the rule of law at the national and international levels

A. Introduction

421. The Commission recalled that the item on the role of UNCITRAL in promoting the rule of law at the national and international levels had been on the agenda of the Commission since its forty-first session, in 2008,[99] in response to the General Assembly's invitation to the Commission to comment, in its report to the Assembly, on the Commission's current role in promoting the rule of law.[100] The Commission further recalled that, since that session, the Commission, in its annual reports to the General Assembly, had transmitted comments on its role in promoting the rule of law at the national and international levels, including in the context of post-conflict reconstruction. It had expressed its conviction that the promotion of the rule of law in commercial relations should be an integral part of the broader agenda of the United Nations to promote the rule of law at the national and international levels.[101] That view had been endorsed by the General Assembly.[102]

422. At its fiftieth session, the Commission took note of General Assembly resolution 71/148, on the rule of law at the national and international levels, in paragraph 22 of which the General Assembly invited the Commission to continue to comment, in its

---

[99] For the decision of the Commission to include the item on its agenda, see *Official Records of the General Assembly, Sixty-second Session, Supplement No. 17* (A/62/17), part two, para. 113.

[100] General Assembly resolutions 62/70, para. 3; 63/128, para. 7; 64/116, para. 9; 65/32, para. 10; 66/102, para. 12; 67/97, para. 14; 68/116, para. 14; 69/123, para. 17; and 70/118, para. 20.

[101] *Official Records of the General Assembly, Sixty-third Session, Supplement No. 17* and corrigendum (A/63/17 and Corr.1), para. 386; ibid., *Sixty-fourth Session, Supplement No. 17* (A/64/17), para. 419; ibid., *Sixty-fifth Session, Supplement No. 17* (A/65/17), para. 334; ibid., *Sixty-sixth Session, Supplement No. 17* (A/66/17), para. 320; ibid., *Sixty-seventh Session, Supplement No. 17* (A/67/17), para. 195; ibid., *Sixty-eighth Session, Supplement No. 17* (A/68/17), para. 267; ibid., *Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 215; ibid., *Seventieth Session, Supplement No. 17* (A/70/17), paras. 294 and 318; and ibid., *Seventy-first Session, Supplement No. 17* (A/71/17),para. 303.

[102] General Assembly resolutions 63/120, para. 11; 64/111, para. 14; 65/21, para. 12; 66/94, para. 15; 67/89, para. 16; 68/106, para. 12; 69/115, para. 12; 70/115, para. 11; and 71/135, para. 13.

reports to the General Assembly, on its current role in promoting the rule of law. The Commission decided to focus its comments to the General Assembly on ways and means to further disseminate international law to strengthen the rule of law from the perspective of the areas of work of UNCITRAL, in line with paragraph 26 of that resolution. In formulating its comments to the General Assembly on the topic, the Commission was assisted by the views of experts summarized in section B below.

423. The Commission requested the Secretariat to consider informing the Commission in writing about relevant developments related to topics on which the Commission would be expected to provide comments to the General Assembly under the agenda item at future sessions.

424. The Commission heard a statement about role of UNCITRAL in promoting the rule of law. Reference was made in particular to its work towards enhancing the effectiveness of settlement of international and regional commercial disputes, compiling best practices and ensuring acceptance and uniform interpretation of international commercial law. The importance of the transparency, objectivity and inclusiveness of the Commission was considered to be a major contributor to its continued success in strengthening the rule of law at the national and international levels.

B. Summary of experts' views

425. Experts shared experiences regarding the dissemination of international commercial law in the national, bilateral, regional and international contexts, highlighting the role of State and non-State institutions in that respect. The role of national legislators in using international commercial law while implementing national commercial law reform and the role of judges in applying and interpreting international commercial law in a uniform way were highlighted in particular.

426. Specific reference was made to the importance of outreach in dissemination activities to micro, small and medium-sized enterprises, as they often lacked access to professional legal advice and faced difficulties in ensuring the contractual balance and the need to cut transaction costs to stay competitive. Means of dissemination of international contract law to that particular audience could include model contracts for small firms or standard clauses based on internationally accepted standards and their translation into local languages by chambers of commerce or other professional associations.

427. The speakers were unanimous in underscoring the role of education for all relevant actors, in particular youth and legal practitioners, on international commercial law. Organization of courses, training sessions and other similar events, such as Vis Moot competitions, and reviews of international commercial law developments in publications, were considered traditional but still very effective and indispensable ways of disseminating international commercial law. The relevance of CLOUT and digests to judicial training was emphasized.

428. Specific examples were provided on the use of UNCITRAL texts in technical assistance, legal diagnostics, ranking, benchmarking, assessment methodologies and similar tools implemented by multilateral institutions in partnerships with UNCITRAL. UNCITRAL partners in those activities valued UNCITRAL texts, model laws in particular, for provisions readily transposable to national legislation and for verifiable targets for policy implementation.

429. The Commission was also informed about recent examples of UNCITRAL texts being used to devise information technology solutions for implementing commercial law reform, in particular electronic public procurement portals. The dialogue established between the legal and information technology communities through the EBRD UNCITRAL Public Procurement Initiative[103] helped to explain to developers of those solutions policy considerations embedded in the 2011 UNCITRAL Model Law on Public Procurement. As a result, transparency standards of the Model Law

[103] www.ppi-ebrd-uncitral.com.

were expected to underlie the Open Contracting Data Standard[104] used globally for electronic public procurement. The value of the Model Law was also highlighted in the context of accession by States to the WTO Agreement on Government Procurement and implementation of regional instruments in the area of public procurement.

430. The Commission was also informed about current trends in legal research technology and challenges faced by international intergovernmental organizations in adopting them. Examples of information technology-based solutions employed by Governments and private entities for expediting legal research, including cross-border research, facilitating contract drafting and achieving consistent results in jurisprudence were provided.

431. The lack of financial and human resources, in particular dedicated information technology resources, and long-term budget sustainability were cited as the main challenges faced by international intergovernmental organizations in becoming innovative developers of legal research technology. The need to adhere to the principle of multilingualism made the implementation of innovative solutions in the United Nations system particularly difficult.

432. The digital divide was cited as another major challenge faced by a United Nations body that might be mandated to reach all jurisdictions or specifically target countries with no or limited Internet access or where most users used mobile devices. Without pre-existing commercial models that addressed the particular needs of that group of end users, development of a suitable solution by a United Nations body would require greater information technology expertise and costs.

433. The UNCITRAL partnership on the New York Convention Guide[105] was cited as an example of successful partnering of a United Nations body with external partners where the external partners provided resources and skills for information technology innovation while the UNCITRAL secretariat offered substantive expertise, reputation and the infrastructure to provide translations into six languages. There were, however, also examples of projects that had intended to be international in outreach but had subsequently failed, producing a significant negative impact on end users and jeopardising their trust in future similar projects. Any partnership or project with external partners would thus need to address reputational risks, issues of long-term sustainability or at least preservation and a mechanism for perpetual access and ownership by a United Nations body.

434. The Commission expressed appreciation to experts for their valuable input to the discussion of that agenda item and requested the Secretariat to reflect the main points made by experts in the report of the Commission.

C. UNCITRAL comments to the General Assembly

435. The Commission recalled that collection and dissemination of information concerning international trade law was listed among the functions of UNCITRAL in General Assembly resolution 2205 (XXI) and, at its first session, had been envisaged as a permanent aspect of the work of the Commission, in particular to avoid wasteful duplication of effort and of result and to ensure effective coordination among all concerned.[106]

436. The Commission recognized that dissemination of international trade law, in addition to being a stand-alone function of UNCITRAL, was also inherently present in its other functions, such as the function of coordinating the work of organizations active in the field of international trade law and encouraging cooperation among them and the function of promoting wider use of UNCITRAL texts and their uniform

[106] *Official Records of the General Assembly, Twenty-third Session, Supplement No. 16* (A/7216), paras. 29 and 30.

[106] *Official Records of the General Assembly, Twenty-third Session, Supplement No. 16* (A/7216), paras. 29 and 30.

interpretation and application. The Commission also considered that it made an important contribution to the dissemination of texts of other organizations that were of relevance to its work, in particular by endorsing them for use or adoption.

437. The Commission decided therefore to bring to the General Assembly's attention the deliberations and decisions at the current session under other agenda items of relevance to the topic (see chapters IX-XV and XVIII of the present report).

438. The Commission recognized the role of States, the General Assembly, international organizations invited to sessions of UNCITRAL, other UNCITRAL partners, UNCITRAL methods of work, documentation and publications in the dissemination of international commercial law. The Commission also recognized the role of regular reviews of the work of UNCITRAL in the *Repertory of Practice of United Nations Organs*, the *United Nations Juridical Yearbook* and other United Nations and non-United Nations publications, and the importance of enhancing cooperation with academia, which the Commission had highlighted at its forty-fifth session, in 2012.[107]

439. The Commission expressed appreciation to the Advisory Committee on the United Nations Programme of Assistance in the Teaching, Study, Dissemination and Wider Appreciation of International Law for reflecting international trade law within the framework of activities conducted under the Programme pursuant to the request made by UNCITRAL in its early years.

440. While recalling achievements in the dissemination of international commercial law, the Commission recognized the need for constant adaptation of its dissemination practices to new issues and requested the Secretariat to consider the improvements in its dissemination practices suggested at the Congress and by the experts (see section B above). A specific call was made for removing obstacles to innovative dissemination practices faced by the United Nations. The proliferation of online tools designed to assist with international commercial law reform but not representing internationally agreed commercial law standards was cited as a new challenge to the implementation of the UNCITRAL mandate.

441. The Commission reiterated the need for better integration of its work in the broader agenda of the United Nations. The Commission was of the view that achieving that result would in itself contribute to further dissemination of international commercial law to strengthen the rule of law. To that end, the Commission recommended that the Secretariat should take additional steps towards dissemination across the United Nations system, in particular to legal advisers, of the Guidance Note on Strengthening United Nations Support to States, Upon Their Request, to Implement Sound Commercial Law Reforms, endorsed by the Commission at its 2016 session.[108]

XVII. Work programme of the Commission

442. The Commission recalled its agreement to reserve time for discussion of its overall work programme as a separate topic at each session, in order to facilitate the effective planning of its activities.[109]

443. The Commission took note of the documents prepared to assist its discussions on the topic (A/CN.9/911, the documents referred to therein and two proposals submitted separately, namely, A/CN.9/923 and A/CN.9/925).

A. Current legislative programme

444. The Commission took note of the progress of its working groups as reported earlier in the session (see chapters III to VII of the present report), and confirmed the

[107] Ibid., *Sixty-seventh Session, Supplement No. 17* (A/67/17), paras. 179-181.
[108] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), para. 262 and annex II.
[109] Ibid., *Sixty-eighth Session, Supplement No. 17* (A/68/17), para. 310.

programme of current legislative activities as set out in table 1 of document A/CN.9/911.

B. Future legislative programme

445. Recalling the importance of a strategic approach to the allocation of resources to, inter alia, legislative development, and its role in setting the work programme of UNCITRAL, especially as regards the mandates of working groups, [110] the Commission recalled that it had considered proposals for possible future legislative development earlier in the session. It proceeded to review its provisional decisions on those proposals, as follows. [111]

446. As regards e-commerce, the Commission confirmed that Working Group IV should continue with its ongoing projects on the contractual aspects of cloud computing and on legal issues related to identity management and trust services (see also para. 127 above).

447. The Commission confirmed that Working Group III should undertake work on the possible reform of investor-State dispute settlement, including questions of concurrent proceedings in the field of investment arbitration and code of ethics in international arbitration. In so doing, the Working Group should identify and consider concerns regarding investor-State dispute settlement and whether reform was desirable; if so, it should develop solutions to be recommended to the Commission (see also para. 264 above).

448. As regards procurement and infrastructure development, the Commission confirmed that the Secretariat (with the assistance of experts) should continue to update and consolidate the *UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects* and associated texts, and should report further to the Commission, with draft texts as appropriate, at its fifty-first session, in 2018. The Commission also decided not to include the question of suspension and debarment in its agenda for the time being. (See also paras. 273 and 274 above.)

449. As regards secured transactions, the Commission confirmed that a practice guide on the topic should be prepared to address contractual, transactional and regulatory issues arising in the context of secured transactions, as well as finance to micro-businesses, and referred that task to Working Group VI (see also para. 227 above).

450. The Commission also heard two further proposals for legislative development.

451. Firstly, the Government of Italy presented a proposal on possible future work on contractual networks (A/CN.9/925).

452. It was explained that the proposal sought to support the current work of Working Group I on business registration and the creation of a simplified business entity. The proposal envisaged research into ways to allow business activity prior to the creation of a legal personality and into the determination of corporate structure, allowing businesses to access credit and government facilities. The objective would be to allow such businesses to form networks and contract with larger companies in supply chains as a network. The proponents stated that the intention was to conduct further research to identify solutions, with initial results to be presented to the Commission at its fifty-first session, in 2018.

453. Support was expressed for the proposal as set out in document A/CN.9/925, recognizing the importance of the topic to micro, small and medium-sized enterprises in particular, and it was suggested that Working Group I could undertake the research set out in the proposal.

454. An alternative view was that, while the proposal was supported in principle, it was not currently appropriate to refer the work concerned to Working Group I. In

[110] Ibid., paras. 294 and 295.

[111] See also table 2, entitled "Summary of mandated and possible future legislative activity", in document A/CN.9/911.

support of that view, it was stated that further study and a consideration of the many questions that the proposal raised should first be undertaken, and that the solutions should not necessarily be confined to micro, small and medium-sized enterprises (and consequently, if referred to a working group, need not be undertaken necessarily by Working Group I).

455. The Commission expressed its thanks to the Government of Italy for the proposal. It also welcomed the willingness of the proponents to conduct additional research to develop the proposal further, so that it could come before the Commission in 2018 for decisions on whether the work should go forward and, if so, in what capacity.

456. CMI presented a proposal on possible future work on cross-border issues related to the judicial sale of ships (A/CN.9/923).

457. The proponents explained the nature of judicial sales addressed in the proposal, and issues that were preventing the transfer of vessels with clean title. Recalling that over 95 per cent of world trade took place using transport by sea and that, in current times of financial difficulty, there were increasing failures by ship owners, unable to obtain additional financing, to pay debts as they fell due. In addition, the scale and worldwide nature of the concerns were highlighted.

458. It was explained that a variety of debts would arise as a result of the operation of a ship, and that non-payment thereof would give rise to maritime claims that enabled creditors to arrest a vessel for non-payment, with an eventual order for judicial sale of the vessel. The outcome of such a sale should be to transfer clean title to the purchaser of the vessel, but in some jurisdictions, courts did not recognize and enforce that outcome when the order for the judicial sale emanated from another jurisdiction. The consequences of that failure included difficulties for the purchaser in re-registering such vessels and trading freely with them, as well as the exposure of such purchasers to claims against prior owners for undisclosed liabilities. The risks of a failure to obtain clean title depressed the price fetched by vessels through judicial sale by as much as half their value and led to a cascading set of problems in a number of sectors, including reluctance by financial institutions to lend, lower repayments to creditors and an inability for ship owners to obtain funding. Those problems resulted in serious loss in economic value and a reduction in the state and maintenance of the world fleet.

459. The proponents also explained that a short, self-contained instrument along the lines of the New York Convention could provide a solution to those issues. In essence, it would ensure that prior claimants would look to ship sale proceeds and previous ship owners to settle their claims, and clean title to vessels would be transferred and recognized across borders.

460. It was observed, in considering the proposal, that the concerns were highly relevant to UNCITRAL and to world trade. The pernicious consequences of the current situation included the hindering of the flow of cargo, the destruction of value and assets and unnecessary legal action, which compromised the industry and world trade because vessels unable to trade clogged ports. For all those reasons, and those set out in document A/CN.9/923, UNCITRAL was requested to take up the proposal.

461. A view was expressed that the proposal might be better addressed in an organization specializing in maritime matters, such as the International Maritime Organization (IMO). The view was further expressed that the problem, while a legitimate concern, might not have broad enough support from enough States in UNCITRAL and that it should not be taken up by a working group at the present time in the light of the full complement of issues currently assigned to those groups.

462. It was recalled that CMI had also presented its proposal to IMO and the Hague Conference on Private International Law, but that neither organization had placed it on its work programme. However, CMI had been invited to present additional information in respect of the matter for possible future discussion in those organizations in due course.

463. There was support for the view that UNCITRAL was well placed to resolve the private international law issues raised by the proposal in a technical and non-politicized environment and it was observed that, in discussions at the Hague Conference on Private International Law, a number of delegations had expressed the view that the proposal would be best taken up by UNCITRAL. It was also considered doubtful that the proposal fell within the mandate of IMO, given its focus on public international law and on more technical issues relating to safety and the protection of the environment.

464. A number of delegations supported the proposal and expressed their interest in taking it up, subject to the availability of working group resources and any necessary consultation with other organizations. While swift resolution of the questions raised by the proposal was encouraged, the Commission agreed that additional information in respect of the breadth of the problem would be useful and that the proposal could be reconsidered by the Commission at a future session. It was therefore suggested that CMI might seek to develop and advance the proposal by holding a colloquium so as to provide additional information to the Commission and allow it to take an informed decision in due course.

465. The Commission thanked CMI for its proposal and noted the importance of the issues raised. It decided not to refer the proposal to a working group at the present time but agreed that UNCITRAL, through its secretariat, and States would support and participate in a colloquium to be initiated by CMI to discuss and advance the proposal. The Commission agreed to revisit the matter at a future session.

C. Current and possible future activities to support the adoption and use of UNCITRAL texts (support activities)

466. The Commission recalled the importance of support activities and the need to encourage such activities at the global and regional levels through the Secretariat, through the expertise available in the working groups and the Commission, through member States and through partnering arrangements with relevant international organizations. It also recalled the importance of promoting increased awareness of UNCITRAL texts among those organizations and within the United Nations system.[112]

467. The Commission took note of the reports on support activities before it at its current session (listed in document A/CN.9/911), notably technical cooperation and assistance activities undertaken by the Secretariat, including through the UNCITRAL website; the promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts; and coordination activities (A/CN.9/905, A/CN.9/906 and A/CN.9/908).

468. In concluding the agenda item, it was emphasized that all the above-mentioned activities should be undertaken taking into account the extent of the resources available to the Secretariat.

XVIII. Relevant General Assembly resolutions

469. The Commission took note of General Assembly resolutions 71/135, on the report of UNCITRAL on the work of its forty-ninth session, 71/136, on the UNCITRAL Model Law on Secured Transactions, 71/137, on the 2016 UNCITRAL Notes on Organizing Arbitral Proceedings, and 71/138, on the Technical Notes on Online Dispute Resolution, adopted upon the recommendation of the Sixth Committee.

[112] See *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), paras. 263-265.

XIX. Other business

A. Internship programme

470. The Commission recalled the considerations taken by its secretariat in selecting candidates for internships and noted with satisfaction the continuing positive implications of changes introduced in 2013 and 2014 in the United Nations internship programme (selection procedures and eligibility requirements) on the pool of eligible and qualified candidates for internships from underrepresented countries, regions and language groups.[113]

471. The Commission was informed that, since the Secretariat's oral report to the Commission at its forty-ninth session, in July 2016, 19 new interns had undertaken an internship with the UNCITRAL secretariat in Vienna. Most of them had come from developing countries and countries in transition, with two coming from the least developed countries.

472. The Commission was informed, however, that the large majority of applications were received from the Group of Western European and other States. In particular, the Secretariat faced difficulties in attracting candidates from Africa and Latin America and candidates with fluent Arabic language skills.

473. States and observer organizations were requested to bring the possibility of applying for internships at the UNCITRAL secretariat to the attention of interested persons who met those specific requirements. Taking into account that internships at the United Nations were unpaid, States and observer organizations were invited to consider granting scholarships to potential interns.

B. Evaluation of the role of the Secretariat in facilitating the work of the Commission

474. The Commission recalled that, at its fortieth session, in 2007,[114] it had been informed of the programme budget for the biennium 2008-2009, which had listed "facilitating the work of UNCITRAL" among the expected accomplishments of the Secretariat. The performance measure for that expected accomplishment was the level of satisfaction of UNCITRAL with the services provided, as evidenced by a rating on a scale ranging from 1 to 5 (5 being the highest rating).[115] At that session, the Commission had agreed to provide feedback to the Secretariat.

475. The Commission was informed that the request for evaluation of the role of the Secretariat in servicing UNCITRAL since the start of its forty-ninth session (27 June 2016) had elicited 14 responses, and that the level of satisfaction with the services provided to UNCITRAL by the UNCITRAL secretariat, as indicated in those responses, remained generally high (seven States had given 5 out of 5, four States had given 4 out of 5, two States had given 3 out of 5, and one State had given 1 out of 5).

476. The Commission took note of the concern that the level of responses to the request for evaluation remained low and that it was essential to receive feedback, for budgetary and other purposes, about the UNCITRAL secretariat's performance from more States for a more objective evaluation of the role of the Secretariat.

477. The Commission expressed its appreciation to the Secretariat for its work in servicing UNCITRAL.

---

[115] A/62/6 (Sect. 8) and Corr.1, table 8.19 (d).

C. Methods of work

478. Delegates recalled their statements regarding scheduling of agenda items, in particular agenda item 21, made upon the adoption of the agenda of the session (see para. 12 above). In addition, it was suggested that clustering related issues and consolidating items on possible future work on which the decision of the entire Commission, rather than experts in a particular field, was required, would help in better organizing UNCITRAL sessions.

479. The Secretariat was requested to seek the views of States on the draft provisional agenda as early as possible before the next UNCITRAL session. It was understood that, in finalizing the provisional agenda, the Secretariat would seek to take those comments into account.

480. Delegates also recalled statements made under other agenda items requesting the Secretariat not to repeat in their oral reports to the Commission the content included in the Secretariat's written reports to the Commission and to replace, as and where appropriate, in particular, regarding agenda items 11 (c) and 12, oral reports by the Secretariat with written reports to be issued before the session (see also paras. 364 and 423 above). A view was expressed that written reports would facilitate consultations on important issues within and among States before the session. However, it was generally felt that it should be left to the Secretariat to achieve the right balance between written and oral methods of communication of necessary information to the Commission.

481. The view was also expressed that States should have confidence in the Secretariat's ability to organize UNCITRAL sessions in the best way, taking into account various considerations. The extensive experience of the Secretariat in the organization of UNCITRAL meetings and its ability to reconcile various competing considerations was emphasized.

D. Retirement of the Secretary of UNCITRAL and other long-serving members of the UNCITRAL secretariat

482. The Commission noted that its Secretary, Renaud Sorieul, having reached the age of retirement, was scheduled to leave the United Nations Secretariat on 31 October 2017. Mr. Sorieul had served as a member of the Secretariat since 1989 and as Secretary of the Commission and Director of the International Trade Law Division of the Office of Legal Affairs since 2008. The Commission saluted Mr. Sorieul's major contribution to achieving the goals of UNCITRAL, which, as had been stated by the General Assembly, was the core legal body within the United Nations system in the field of international trade law. It was acknowledged that Mr. Sorieul had strongly supported the work of the Commission and had built enduring foundations for its ongoing projects and future endeavours. The time during which Mr. Sorieul had served as Secretary of the Commission had been a most productive one and, under his leadership, the secretariat of the Commission had made essential contributions to that work, despite the limited resources available to it. The Commission expressed its appreciation to Mr. Sorieul for his 28 years of exemplary United Nations service, for his outstanding contribution to the process of modernization, unification and harmonization of international trade law, and for his efforts towards expanding the presence of UNCITRAL around the world.

483. The Commission also took note of the retirement of two long-standing members of its secretariat, Mr. Timothy Lemay, Principal Legal Officer, and Mr. Spyridon Bazinas, Senior Legal Officer. The Commission expressed its appreciation to those two staff members for their essential support to the activities of UNCITRAL and its secretariat.

XX. Date and place of future meetings

484. At its thirty-sixth session, in 2003, the Commission had agreed that: (a) working groups should normally meet for a one-week session twice a year; (b) extra time, if required, could be allocated from the unused entitlement of another working group provided that such arrangement would not result in the increase of the total number of 12 weeks of conference services per year currently allotted to sessions of all six working groups of the Commission; and (c) if any request by a working group for extra time would result in the increase of the 12-week allotment, it should be reviewed by the Commission, with proper justification being given by that working group regarding the reasons for which a change in the meeting pattern was needed.[116] At the current session, the Commission noted that all working groups would meet for two one-week sessions before its fifty-first session, in 2018, except for Working Group IV (Electronic Commerce), which would meet only for one one-week session that would take place in New York in the first half of 2018.

485. The Commission took note of General Assembly resolutions on the pattern of conferences promulgating policies as regards six significant holidays (Orthodox Good Friday, Yom Kippur, the Day of Vesak, Diwali, Gurpurab and Orthodox Christmas), on which the United Nations Headquarters and the Vienna International Centre remained open but United Nations bodies were invited to avoid holding meetings. The Commission noted that the policies had become effective at United Nations Headquarters on 1 January 2017 and would become effective at the Vienna International Centre on 1 January 2018. Accordingly, dates proposed by the Secretariat for sessions of UNCITRAL working groups in the second half of 2017 in Vienna were not affected by those policies. The Commission agreed to take into account those policies as far as possible when considering the dates of its future meetings.

A. Fifty-first session of the Commission

486. The Commission approved the holding of its fifty-first session in New York from 25 June to 13 July 2018 (it was noted that the United Nations Headquarters would be closed on 4 July 2018). The Secretariat was requested to consider shortening the duration of the session by one week if the expected workload of the session would justify doing so.

B. Sessions of working groups

1. Sessions of working groups between the fiftieth and fifty-first sessions of the Commission

487. The Commission approved the following schedule of meetings for its working groups:

(a) Working Group I (Micro, Small and Medium-sized Enterprises) would hold its twenty-ninth session in Vienna, from 16 to 20 October 2017, and the thirtieth session in New York, from12 to 16 March 2018;

(b) Working Group II (Dispute Settlement) would hold its sixty-seventh session in Vienna, from 2 to 6 October 2017, and its sixty-eighth session in New York, from 5 to 9 February 2018;

(c) Working Group III (Investor-State Dispute Settlement Reform) would hold its thirty-fourth session in Vienna, from 27 November to 1 December 2017, and its thirty-fifth session in New York, from 23 to 27 April 2018;

[116] *Official Records of the General Assembly, Fifty-eighth Session, Supplement No. 17* (A/58/17), para. 275.

(d) Working Group IV (Electronic Commerce) would hold its fifty-sixth session in New York, from 16 to 20 April 2018;

(e) Working Group V (Insolvency Law) would hold its fifty-second session in Vienna, from 18 to 22 December 2017, and its fifty-third session in New York, from 7 to 11 May 2018;

(f) Working Group VI (Security Interests) would hold its thirty-second session in Vienna, from 11 to 15 December 2017, and its thirty-third session in New York, from 30 April to 4 May 2018.

488. The Commission noted that two remaining days of reserved conference services for UNCITRAL in Vienna in 2017 would be used for an expert meeting on public-private partnerships (see chapter VIII above).

489. The Secretariat was requested to inform States about changes in the dates of sessions announced in the provisional agenda sufficiently in advance to allow consultation with States' representatives in affected working groups.

2. Sessions of working groups in 2018 after the fifty-first session of the Commission

490. The Commission noted that the following tentative arrangements had been made for working group meetings in 2018 after its fifty-first session, subject to the approval by the Commission at that session, and that those dates included Gurpurab (23 November 2018). The Commission requested the Secretariat to explore whether an alternative week in the second half of 2018 could be found for a session of Working Group IV (Electronic Commerce) in Vienna that would not include a significant holiday, and decided to consider the matter further at its next session:

(a) Working Group I (Micro, Small and Medium-sized Enterprises) would hold its thirty-first session in Vienna from 24 to 28 September 2018;

(b) Working Group II (Dispute Settlement) would hold its sixty-ninth session in Vienna from 10 to 14 September 2018;

(c) Working Group III (Investor-State Dispute Settlement Reform) would hold its thirty-sixth session in Vienna, from 8 to 12 October 2018;

(d) Working Group IV (Electronic Commerce) would hold its fifty-seventh session in Vienna from 19 to 23 November 2018;

(e) Working Group V (Insolvency Law) would hold its fifty-fourth session in Vienna from 10 to 14 December 2018;

(f) Working Group VI (Security Interests) would hold its thirty-fourth session in Vienna from 26 to 30 November 2018.

Annex I

UNCITRAL Model Law on Electronic Transferable Records

CHAPTER I. GENERAL PROVISIONS

Article 1. Scope of application

1. This Law applies to electronic transferable records.

2. Other than as provided for in this Law, nothing in this Law affects the application to an electronic transferable record of any rule of law governing a transferable document or instrument including any rule of law applicable to consumer protection.

3. This Law does not apply to securities, such as shares and bonds, and other investment instruments, and to […].[1]

Article 2. Definitions

For the purposes of this Law:

"*Electronic record*" means information generated, communicated, received or stored by electronic means, including, where appropriate, all information logically associated with or otherwise linked together so as to become part of the record, whether generated contemporaneously or not;

"*Electronic transferable record*" is an electronic record that complies with the requirements of article 10;

"*Transferable document or instrument*" means a document or instrument issued on paper that entitles the holder to claim the performance of the obligation indicated in the document or instrument and to transfer the right to performance of the obligation indicated in the document or instrument through the transfer of that document or instrument.

Article 3. Interpretation

1. This Law is derived from a model law of international origin. In the interpretation of this Law, regard is to be had to the international origin and to the need to promote uniformity in its application.

2. Questions concerning matters governed by this Law which are not expressly settled in it are to be settled in conformity with the general principles on which this Law is based.

Article 4. Party autonomy and privity of contract

1. The parties may derogate from or vary by agreement the following provisions of this Law: […].[2]

2. Such an agreement does not affect the rights of any person that is not a party to that agreement.

---

[1] The enacting jurisdiction may consider including a reference to: (a) documents and instruments that may be considered transferable, but that should not fall under the scope of the Model Law; (b) documents and instruments falling under the scope of the Convention Providing a Uniform Law for Bills of Exchange and Promissory Notes (Geneva, 1930) and the Convention Providing a Uniform Law for Cheques (Geneva, 1931); and (c) electronic transferable records existing only in electronic form.

[2] The enacting jurisdiction may consider which provisions of the Model Law, if any, the parties may derogate from or vary by agreement.

Article 5. Information requirements

Nothing in this Law affects the application of any rule of law that may require a person to disclose its identity, place of business or other information, or relieves a person from the legal consequences of making inaccurate, incomplete or false statements in that regard.

Article 6. Additional information in electronic transferable records

Nothing in this Law precludes the inclusion of information in an electronic transferable record in addition to that contained in a transferable document or instrument.

Article 7. Legal recognition of an electronic transferable record

1. An electronic transferable record shall not be denied legal effect, validity or enforceability on the sole ground that it is in electronic form.

2. Nothing in this Law requires a person to use an electronic transferable record without that person's consent.

3. The consent of a person to use an electronic transferable record may be inferred from the person's conduct.

CHAPTER II. PROVISIONS ON FUNCTIONAL EQUIVALENCE

Article 8. Writing

Where the law requires that information should be in writing, that requirement is met with respect to an electronic transferable record if the information contained therein is accessible so as to be usable for subsequent reference.

Article 9. Signature

Where the law requires or permits a signature of a person, that requirement is met by an electronic transferable record if a reliable method is used to identify that person and to indicate that person's intention in respect of the information contained in the electronic transferable record.

Article 10. Transferable documents or instruments

1. Where the law requires a transferable document or instrument, that requirement is met by an electronic record if:

(a) The electronic record contains the information that would be required to be contained in a transferable document or instrument; and

(b) A reliable method is used:

(i) To identify that electronic record as the electronic transferable record;

(ii) To render that electronic record capable of being subject to control from its creation until it ceases to have any effect or validity; and

(iii) To retain the integrity of that electronic record.

2. The criterion for assessing integrity shall be whether information contained in the electronic transferable record, including any authorized change that arises from its creation until it ceases to have any effect or validity, has remained complete and unaltered apart from any change which arises in the normal course of communication, storage and display.

Article 11. Control

1. Where the law requires or permits the possession of a transferable document or instrument, that requirement is met with respect to an electronic transferable record if a reliable method is used:

(a) To establish exclusive control of that electronic transferable record by a person; and

(b) To identify that person as the person in control.

2. Where the law requires or permits transfer of possession of a transferable document or instrument, that requirement is met with respect to an electronic transferable record through the transfer of control over the electronic transferable record.

CHAPTER III. USE OF ELECTRONIC TRANSFERABLE RECORDS

Article 12. General reliability standard

For the purposes of articles 9, 10, 11, 13, 16, 17 and 18, the method referred to shall be:

(a) As reliable as appropriate for the fulfilment of the function for which the method is being used, in the light of all relevant circumstances, which may include:

(i) Any operational rules relevant to the assessment of reliability;

(ii) The assurance of data integrity;

(iii) The ability to prevent unauthorized access to and use of the system;

(iv) The security of hardware and software;

(v) The regularity and extent of audit by an independent body;

(vi) The existence of a declaration by a supervisory body, an accreditation body or a voluntary scheme regarding the reliability of the method;

(vii) Any applicable industry standard; or

(b) Proven in fact to have fulfilled the function by itself or together with further evidence.

Article 13. Indication of time and place in electronic transferable records

Where the law requires or permits the indication of time or place with respect to a transferable document or instrument, that requirement is met if a reliable method is used to indicate that time or place with respect to an electronic transferable record.

Article 14. Place of business

1. A location is not a place of business merely because that is:

(a) Where equipment and technology supporting an information system used by a party in connection with electronic transferable records are located; or

(b) Where the information system may be accessed by other parties.

2. The sole fact that a party makes use of an electronic address or other element of an information system connected to a specific country does not create a presumption that its place of business is located in that country.

Article 15. Endorsement

Where the law requires or permits the endorsement in any form of a transferable document or instrument, that requirement is met with respect to an electronic transferable record if the information required for the endorsement is included in the

electronic transferable record and that information is compliant with the requirements set forth in articles 8 and 9.

Article 16. Amendment

Where the law requires or permits the amendment of a transferable document or instrument, that requirement is met with respect to an electronic transferable record if a reliable method is used for amendment of information in the electronic transferable record so that the amended information is identified as such.

Article 17. Replacement of a transferable document or instrument with an electronic transferable record

1. An electronic transferable record may replace a transferable document or instrument if a reliable method for the change of medium is used.

2. For the change of medium to take effect, a statement indicating a change of medium shall be inserted in the electronic transferable record.

3. Upon issuance of the electronic transferable record in accordance with paragraphs 1 and 2, the transferable document or instrument shall be made inoperative and ceases to have any effect or validity.

4. A change of medium in accordance with paragraphs 1 and 2 shall not affect the rights and obligations of the parties.

Article 18. Replacement of an electronic transferable record with a transferable document or instrument

1. A transferable document or instrument may replace an electronic transferable record if a reliable method for the change of medium is used.

2. For the change of medium to take effect, a statement indicating a change of medium shall be inserted in the transferable document or instrument.

3. Upon issuance of the transferable document or instrument in accordance with paragraphs 1 and 2, the electronic transferable record shall be made inoperative and ceases to have any effect or validity.

4. A change of medium in accordance with paragraphs 1 and 2 shall not affect the rights and obligations of the parties.

CHAPTER IV. CROSS-BORDER RECOGNITION OF ELECTRONIC TRANSFERABLE RECORDS

Article 19. Non-discrimination of foreign electronic transferable records

1. An electronic transferable record shall not be denied legal effect, validity or enforceability on the sole ground that it was issued or used abroad.

2. Nothing in this Law affects the application to electronic transferable records of rules of private international law governing a transferable document or instrument.

B. United Nations Conference on Trade and Development (UNCTAD): extract from the report of the Trade and Development Board on its sixty-fourth session

(TD/B/64/12)

Progressive development of the law of international trade: fiftieth annual report of the United Nations Commission on International Trade Law

At its 1162nd plenary meeting, the Board took note of the annual report of the United Nations Commission on International Trade Law at its fiftieth session (A/72/17), held in Vienna from 3 to 21 July 2017.

C. General Assembly: Report of the Sixth Committee on the report of the United Nations Commission on International Trade Law on the work of its fiftieth session (A/72/458)

[Original: English]

Rapporteur: Mr. Peter **Nagy** (Slovakia)

I. Introduction

1. At its 2nd plenary meeting, on 15 September 2017, the General Assembly, on the recommendation of the General Committee, decided to include in the agenda of its seventy-second session the item entitled "Report of the United Nations Commission on International Trade Law on the work of its fiftieth session" and to allocate it to the Sixth Committee.

2. The Sixth Committee considered the item at its 10th, 17th and 21st meetings, on 9, 20 and 25 October 2017. The views of the representatives who spoke during the Committee's consideration of the item are reflected in the relevant summary records.[1]

3. For its consideration of the item, the Committee had before it the report of the United Nations Commission on International Trade Law on the work of its fiftieth session (A/72/17).

4. At the 10th meeting, on 9 October, the Chair of the United Nations Commission on International Trade Law at its fiftieth session introduced the report of the Commission on the work of its fiftieth session.

II. Consideration of proposals

A. Draft resolution A/C.6/72/L.10

5. At the 17th meeting, on 20 October, the representative of Austria, on behalf of Argentina, Australia, Austria, Belgium, Bulgaria, Canada, Chile, Cyprus, Denmark, Finland, France, Germany, Greece, Hungary, Israel, Italy, Japan, Liechtenstein, Lithuania, Luxembourg, Madagascar, Mauritius, Namibia, the Netherlands, the Philippines, Portugal, Romania, the Russian Federation, Serbia, Singapore, Slovakia, Slovenia, Spain, Sweden, Switzerland, Thailand, Trinidad and Tobago, Ukraine, the United Kingdom of Great Britain and Northern Ireland and the United States of America, subsequently joined by Czechia, El Salvador, Mexico and the Republic of Moldova, introduced a draft resolution entitled "Report of the United Nations Commission on International Trade Law on the work of its fiftieth session" (A/C.6/72/L.10).

6. At the 21st meeting, on 25 October, Armenia, Belarus, Ireland, Kiribati, Latvia and Poland joined in sponsoring the draft resolution.

7. At the same meeting, the Committee adopted draft resolution A/C.6/72/L.10 without a vote (see para. 10, draft resolution I).

B. Draft resolution A/C.6/72/L.11

8. At the 17th meeting, on 20 October, the representative of Austria, on behalf of the Bureau, introduced a draft resolution entitled "Model Law on Electronic Transferable Records of the United Nations Commission on International Trade Law" (A/C.6/72/L.11).

[1] A/C.6/72/SR.10, A/C.6/72/SR.17 and A/C.6/72/SR.21.

9. At its 21st meeting, on 25 October, the Committee adopted draft resolution A/C.6/72/L.11 without a vote (see para. 10, draft resolution II).

III. Recommendation of the Sixth Committee

10. The Sixth Committee recommends to the General Assembly the adoption of the following draft resolutions:

Draft resolution I
Report of the United Nations Commission on International Trade Law on the work of its fiftieth session

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Reaffirming its belief that the progressive modernization and harmonization of international trade law, in reducing or removing legal obstacles to the flow of international trade, especially those affecting developing countries, would contribute significantly to universal economic cooperation among all States on a basis of equality, equity, common interest and respect for the rule of law, to the elimination of discrimination in international trade and, thereby, to peace, stability and the well-being of all peoples,

Having considered the report of the Commission,[2]

Reiterating its concern that activities undertaken by other bodies in the field of international trade law without adequate coordination with the Commission might lead to undesirable duplication of efforts and would not be in keeping with the aim of promoting efficiency, consistency and coherence in the unification and harmonization of international trade law,

Reaffirming the mandate of the Commission, as the core legal body within the United Nations system in the field of international trade law, to coordinate legal activities in this field, in particular to avoid duplication of efforts, including among organizations formulating rules of international trade, and to promote efficiency, consistency and coherence in the modernization and harmonization of international trade law, and to continue, through its secretariat, to maintain close cooperation with other international organs and organizations, including regional organizations, active in the field of international trade law,

1. *Takes note with appreciation* of the report of the United Nations Commission on International Trade Law;[1]

2. *Commends* the Commission for the finalization and adoption of the Model Law on Electronic Transferable Records;[3]

3. *Also commends* the Commission for the finalization and adoption of the Guide to Enactment of the Model Law on Secured Transactions, which provides useful background and explanatory information for States in revising or adopting legislation on the basis of the Model Law, which is aimed at establishing an efficient secured transactions regime that would increase access to affordable secured credit and promote sustainable development through the facilitation of international trade and commercial activities, and requests the Secretary-General to publish the Guide to

[2] *Official Records of the General Assembly, Seventy-second Session, Supplement No. 17* (A/72/17).
[3] Ibid., chap. III, sect. A.

Enactment of the Model Law, including electronically, in the six official languages of the United Nations and to disseminate it broadly to Governments and other interested bodies;[4]

4. *Congratulates* the Commission on its fiftieth anniversary, and notes with satisfaction that the Congress to commemorate the anniversary, held in Vienna from 4 to 6 July 2017 during the fiftieth session of the Commission, entitled "Modernizing International Trade Law to Support Innovation and Sustainable Development", acknowledged the centrality of international cooperation and coordination to the achievements of the Commission, elicited innovative ideas for modernizing international trade law in a sustainable manner that could not only raise awareness of the work of the Commission and its potential to support cross-border commerce but also contribute to the 2030 Agenda for Sustainable Development,[5] and emphasized the leading role played by the Commission in providing an inclusive, transparent and multilateral forum in which to address the legal challenges facing international trade, and requests the Secretary-General to ensure the publication of the proceedings of the Congress to the extent permitted by available resources;

5. *Notes with satisfaction* the contributions from the Fund for International Development of the Organization of the Petroleum Exporting Countries and from the European Commission, which allow the operation of the repository of published information under the Rules on Transparency in Treaty-based Investor-State Arbitration[6] and that the Commission reiterated its strong and unanimous opinion that the secretariat of the Commission should continue to operate the transparency repository, which constitutes a central feature both of the Rules on Transparency and of the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration (Mauritius Convention on Transparency);[7]

6. *Requests* the Secretary-General to continue to operate, through the secretariat of the Commission, the repository of published information in accordance with article 8 of the Rules on Transparency, as a pilot project until the end of 2020, to be funded entirely by voluntary contributions, and to keep the General Assembly informed of developments regarding the funding and budgetary situation of the transparency repository based on its pilot operation;

7. *Takes note with interest* of the decisions taken by the Commission as regards its future work and the progress made by the Commission in its work in the areas of micro, small and medium-sized enterprises, dispute settlement, electronic commerce, insolvency law and security interests,[8] and encourages the Commission to continue to move forward efficiently to achieve tangible work outcomes in those areas;

8. *Takes note* of the decision by the Commission to entrust Working Group III with a broad mandate to work on the possible reform of investor-State dispute settlement, whereby it would: first, identify and consider concerns regarding investor-State dispute settlement; second, consider whether reform was desirable in the light of any identified concerns; and, third, if the Working Group were to conclude that reform was desirable, develop relevant solutions to be recommended to the Commission with a view to allowing each State the choice of whether and to what extent it wished to adopt the relevant solution(s);[9]

9. *Also takes note* of the decision by the Commission to reaffirm the mandate given to Working Group IV at its forty-ninth session to take up work on the topics of identity management and trust services, as well as cloud computing, and to revisit that mandate at its following session, in particular if the need arose to prioritize between

[9] Ibid., para. 264.

the topics or to give a more specific mandate to the Working Group as regards its work in the area of identity management and trust services;[10]

10. *Endorses* the efforts and initiatives of the Commission, as the core legal body within the United Nations system in the field of international trade law, aimed at increasing coordination of and cooperation on legal activities of international and regional organizations active in the field of international trade law and at promoting the rule of law at the national and international levels in this field, and in this regard appeals to relevant international and regional organizations to coordinate their activities with those of the Commission, to avoid duplication of efforts and to promote efficiency, consistency and coherence in the modernization and harmonization of international trade law;

11. *Reaffirms* the importance, in particular for developing countries, of the work of the Commission concerned with technical cooperation and assistance in the field of international trade law reform and development, and in this connection:

(a) Welcomes the initiatives of the Commission towards expanding, through its secretariat, its technical cooperation and assistance programme, and in that respect encourages the Secretary-General to seek partnerships with State and non-State actors to increase awareness about the work of the Commission and facilitate the effective implementation of legal standards resulting from its work;

(b) Expresses its appreciation to the Commission for carrying out technical cooperation and assistance activities and for providing assistance with legislative drafting in the field of international trade law, and draws the attention of the Secretary-General to the limited resources that are made available in this field;

(c) Expresses its appreciation to the Governments whose contributions enabled the technical cooperation and assistance activities to take place, and appeals to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the United Nations Commission on International Trade Law Trust Fund for Symposia and, where appropriate, for the financing of special projects and otherwise to assist the secretariat of the Commission in carrying out technical cooperation and assistance activities, in particular in developing countries;

(d) Reiterates its appeal to the United Nations Development Programme and other bodies responsible for development assistance, such as the World Bank and regional development banks, as well as to Governments in their bilateral aid programmes, to support the technical cooperation and assistance programme of the Commission and to cooperate with the Commission and coordinate their activities with those of the Commission in the light of the relevance and importance of the work and programmes of the Commission for the promotion of the rule of law at the national and international levels and for the implementation of the international development agenda, including the achievement of the 2030 Agenda for Sustainable Development;[11]

(e) Recalls its resolutions stressing the need to strengthen support to Member States, upon their request, in the domestic implementation of their respective international obligations through enhanced technical assistance and capacity-building, and welcomes the efforts of the Secretary-General to ensure greater coordination and coherence among United Nations entities and with donors and recipients;

12. *Recalls* the importance of adherence to the rules of procedure and methods of work of the Commission, including transparent and inclusive deliberations, taking into account the summary of conclusions as reproduced in annex III to the report on the work of its forty-third session,[12] requests the Secretariat to issue, prior to meetings of the Commission and of its working groups, a reminder of those rules of

[10] Ibid., para. 127.
[11] Resolution 70/1.

procedure and methods of work with a view to ensuring the high quality of the work of the Commission and encouraging the assessment of its instruments, and recalls in this regard its previous resolutions related to this matter, and notes in that regard the discussions of the Commission during its fiftieth session on its methods of work, including the request by Member States that the Secretariat seek and take into account the views of States on the draft provisional agenda as early as possible before the next session of the Commission,[13] as well as achieve the right balance between written and oral methods of communication of necessary information to the Commission;[14]

13. *Welcomes* the activities of the United Nations Commission on International Trade Law Regional Centre for Asia and the Pacific, in the Republic of Korea, towards providing capacity-building and technical assistance services to States in the Asia-Pacific region, including to international and regional organizations, expresses its appreciation to the Republic of Korea and China, whose contributions enabled continuing operation of the Regional Centre, notes that the continuation of the regional presence relies entirely on extrabudgetary resources, including but not limited to voluntary contributions from States, welcomes expressions of interest from other States in hosting regional centres of the Commission, and requests the Secretary-General to keep the General Assembly informed of developments regarding the establishment of regional centres, in particular their funding and budgetary situation;

14. *Welcomes* the offer of the Government of Bahrain, approved by the Commission, to establish, subject to the relevant rules and regulations of the United Nations and the internal approval process of the Office of Legal Affairs of the Secretariat, a regional centre for the Middle East and North Africa in Bahrain as an important step for the Commission in reaching out to increase familiarity with texts of the Commission and to provide technical assistance to developing countries in the region, it being understood that the establishment of a regional presence would have to rely entirely on extrabudgetary resources, including but not limited to voluntary contributions from States,[15] and expresses its appreciation to the Government of Bahrain for its generous contribution to the project, and requests the Commission, in its annual report, to keep the General Assembly informed of developments regarding the project, in particular its funding and budgetary situation;

15. *Welcomes* the offer of the Government of Cameroon, approved by the Commission, to establish, subject to the relevant rules and regulations of the United Nations and the internal approval process of the Office of Legal Affairs, a Regional Centre for Africa in Cameroon as an important step for the Commission in reaching out to increase familiarity with Commission texts and to provide technical assistance to developing countries in the region, it being understood that the establishment of a regional presence would have to rely entirely on extrabudgetary resources, including but not limited to voluntary contributions from States, expresses its appreciation to the Government of Cameroon for its generous contribution to the project, and requests the Commission, in its annual report, to keep the General Assembly informed of developments regarding the project, in particular its funding and budgetary situation;

16. *Appeals* to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the Trust Fund established to provide travel assistance to developing countries that are members of the Commission, at their request and in consultation with the Secretary-General, in order to enable renewal of the provision of that assistance and to increase expert representation from developing countries at sessions of the Commission and its working groups, necessary to build local expertise and capacities in those countries to put in place a regulatory and enabling environment for business, trade and investment;

17. *Decides*, in order to ensure full participation of all Member States in the sessions of the Commission and its working groups, to continue, in the competent

[13] Ibid., *Seventy-second Session, Supplement No. 17* (A/72/17), para. 479.

[15] Ibid., paras. 295 and 296.

Main Committee during the seventy-second session of the General Assembly, its consideration of granting travel assistance to the least developed countries that are members of the Commission, at their request and in consultation with the Secretary-General;

18. *Endorses* the conviction of the Commission that the implementation and effective use of modern private law standards in international trade are essential for advancing good governance, sustained economic development and the eradication of poverty and hunger and that the promotion of the rule of law in commercial relations should be an integral part of the broader agenda of the United Nations to promote the rule of law at the national and international levels, including through the Rule of Law Coordination and Resource Group, supported by the Rule of Law Unit in the Executive Office of the Secretary-General;

19. *Notes* the statement and the views of experts on the role of the Commission in promoting the rule of law presented during the fiftieth session of the Commission on ways and means of further disseminating international law to strengthen the rule of law from the perspective of the areas of work of the Commission and the comments transmitted by the Commission pursuant to paragraph 22 of General Assembly resolution 71/148 of 13 December 2016, highlighting its role in promoting the rule of law, in particular through wide dissemination of international commercial law, including across the United Nations system;[16]

20. *Notes with satisfaction* that, in paragraph 8 of the declaration of the high-level meeting of the General Assembly on the rule of law at the national and international levels, adopted by consensus as resolution 67/1 of 24 September 2012, Member States recognized the importance of fair, stable and predictable legal frameworks for generating inclusive, sustainable and equitable development, economic growth and employment, generating investment and facilitating entrepreneurship and, in this regard, commended the work of the Commission in modernizing and harmonizing international trade law and that, in paragraph 7 of the declaration, Member States expressed their conviction that the rule of law and development were strongly interrelated and mutually reinforcing;

21. *Also notes with satisfaction* that, in paragraph 89 of the Addis Ababa Action Agenda of the Third International Conference on Financing for Development, adopted by the General Assembly by consensus as resolution 69/313 of 27 July 2015, States endorsed the efforts and initiatives of the Commission, as the core legal body within the United Nations system in the field of international trade law, aimed at increasing coordination of and cooperation on legal activities of international and regional organizations active in the field of international trade law and at promoting the rule of law at the national and international levels in this field;

22. *Reiterates its request* to the Secretary-General, in conformity with resolutions of the General Assembly on documentation-related matters,[17] which, in particular, emphasize that any invitation to limit, where appropriate, the length of documents should not adversely affect either the quality of the presentation or the substance of the documents, to bear in mind the particular characteristics of the mandate and functions of the Commission in the progressive development and codification of international trade law when implementing page limits with respect to the documentation of the Commission;[18]

23. *Requests* the Secretary-General to continue the publication of Commission standards and the provision of summary records of the meetings of the Commission, including committees of the whole established by the Commission for the duration of its annual session, relating to the formulation of normative texts, and takes note of the decision of the Commission to continue the trial use of digital recordings, in parallel with summary records where applicable, with a view to assessing the

[18] Resolutions 59/39, para. 9, and 65/21, para. 18; see also *Official Records of the General Assembly, Fifty-ninth Session, Supplement No. 17* (A/59/17), paras. 124–128.

experience of using digital recordings and, on the basis of that assessment, taking a decision at a future session regarding the possible replacement of summary records by digital recordings;[19]

24. *Recalls* paragraph 48 of its resolution 66/246 of 24 December 2011 regarding the rotation scheme of meetings between Vienna and New York;

25. *Stresses* the importance of promoting the use of texts emanating from the work of the Commission for the global unification and harmonization of international trade law, and to this end urges States that have not yet done so to consider signing, ratifying or acceding to conventions, enacting model laws and encouraging the use of other relevant texts;

26. *Notes* the decision of the Commission to commend the use of the Uniform Rules for Forfaiting of the International Chamber of Commerce, as appropriate, in forfaiting transactions, to facilitate international receivables financing and thus international trade more generally;

27. *Notes with appreciation* the work of the Secretariat on the system for the collection and dissemination of case law on Commission texts in the six official languages of the United Nations (the CLOUT system), notes the resource-intensive nature of the system, acknowledges the need for further resources to sustain and expand it, and in this regard welcomes efforts by the Secretariat towards building partnerships with interested institutions, and appeals to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to assist the secretariat of the Commission in raising awareness as to the availability and usefulness of the CLOUT system in professional, academic and judiciary circles and in securing the funding required for the coordination and expansion of the system and the establishment, within the secretariat of the Commission, of a pillar focused on the promotion of ways and means of interpreting Commission texts in a uniform manner;

28. *Welcomes* the continued work of the Secretariat on digests of case law related to Commission texts, including their wide dissemination, as well as the continuing increase in the number of abstracts available through the CLOUT system, in view of the role of the digests and the CLOUT system as important tools for the promotion of the uniform interpretation of international trade law, in particular by building local capacity of judges, arbitrators and other legal practitioners to interpret those standards in the light of their international character and the need to promote uniformity in their application and the observance of good faith in international trade;

29. *Recalls* its resolutions affirming the importance of high-quality, user-friendly and cost-effective United Nations websites and the need for their multilingual development, maintenance and enrichment,[20] commends the fact that the website of the Commission is published in the six official languages of the United Nations, and welcomes the continuous efforts of the Commission to maintain and improve its website, including by developing new social media features, in accordance with the applicable guidelines;[21]

30. *Expresses its appreciation* to Mr. Renaud Sorieul, Secretary of the Commission since 2008, who will retire on 31 October 2017, for his outstanding and devoted contribution to the process of the unification and harmonization of international trade law in general and to the Commission in particular.

Draft resolution II
Model Law on Electronic Transferable Records of the United Nations Commission on International Trade Law

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Recalling also its resolution 60/21 of 23 November 2005, by which it adopted the United Nations Convention on the Use of Electronic Communications in International Contracts and called upon all Governments to consider becoming party to the Convention, and its resolutions 51/162 of 16 December 1996 and 56/80 of 12 December 2001, in which it recommended that all States give favourable consideration to the Model Law on Electronic Commerce and the Model Law on Electronic Signatures of the Commission, respectively,

Noting that, while the Convention, the Model Law on Electronic Commerce and the Model Law on Electronic Signatures are of significant assistance to States in enabling and facilitating electronic commerce in international trade, they do not fully address issues arising from the use of electronic transferable records in international trade,

Considering that uncertainties as to the legal value of electronic transferable records constitute an obstacle to international trade,

Convinced that legal certainty and commercial predictability in electronic commerce will be enhanced by the harmonization of certain rules on the legal recognition of electronic transferable records on a technologically neutral basis and according to the functional equivalence approach,

Recalling that, at its forty-fourth session, in 2011, the Commission mandated its Working Group IV (Electronic Commerce) to undertake work on electronic transferable records,[22]

Noting that the Working Group devoted 10 sessions, from 2011 to 2016, to that work, and that the Commission considered at its fiftieth session, in 2017, a draft model law on electronic transferable records prepared by the Working Group, together with comments on the draft received from Governments and international organizations invited to sessions of the Working Group,[23]

Believing that a model law on electronic transferable records will constitute a useful addition to existing Commission texts in the area of electronic commerce by significantly assisting States in enhancing their legislation on electronic commerce, in particular as it relates to the use of electronic transferable records, or in formulating such legislation where none exists,

1. *Expresses its appreciation* to the United Nations Commission on International Trade Law for completing and adopting the Model Law on Electronic Transferable Records;[24]

2. *Requests* the Secretary-General to publish the Model Law together with an explanatory note, including electronically, in the six official languages of the United Nations, and to disseminate it broadly to Governments and other interested bodies;

[23] Ibid., *Seventy-second Session, Supplement No. 17* (A/72/17), chap. III.
[24] Ibid., annex I.

3. *Recommends* that all States give favourable consideration to the Model Law when revising or adopting legislation relevant to electronic commerce, and invites States that have used the Model Law to advise the Commission accordingly;

4. *Also recommends* that States continue to consider becoming parties to the United Nations Convention on the Use of Electronic Communications in International Contracts[25] and to give favourable consideration to the use of the Model Law on Electronic Commerce[26] and the Model Law on Electronic Signatures[27] when revising or adopting legislation on electronic commerce;

5. *Appeals* to the relevant bodies of the United Nations system and other relevant international and regional organizations to coordinate their legal activities in the area of electronic commerce, including paperless trade facilitation, with those of the Commission, to avoid duplication of efforts and to promote efficiency, consistency and coherence in the modernization and harmonization of legislation on electronic commerce.

D. General Assembly resolutions 72/113, 72/114, and 72/119

72/113. Report of the United Nations Commission on International Trade Law on the work of its fiftieth session

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Reaffirming its belief that the progressive modernization and harmonization of international trade law, in reducing or removing legal obstacles to the flow of international trade, especially those affecting developing countries, would contribute significantly to universal economic cooperation among all States on a basis of equality, equity, common interest and respect for the rule of law, to the elimination of discrimination in international trade and, thereby, to peace, stability and the well-being of all peoples,

Having considered the report of the Commission,[28]

Reiterating its concern that activities undertaken by other bodies in the field of international trade law without adequate coordination with the Commission might lead to undesirable duplication of efforts and would not be in keeping with the aim of promoting efficiency, consistency and coherence in the unification and harmonization of international trade law,

Reaffirming the mandate of the Commission, as the core legal body within the United Nations system in the field of international trade law, to coordinate legal activities in this field, in particular to avoid duplication of efforts, including among organizations formulating rules of international trade, and to promote efficiency, consistency and coherence in the modernization and harmonization of international trade law, and to continue, through its secretariat, to maintain close cooperation with other international organs and organizations, including regional organizations, active in the field of international trade law,

1. *Takes note with appreciation* of the report of the United Nations Commission on International Trade Law;[146]

2. *Commends* the Commission for the finalization and adoption of the Model Law on Electronic Transferable Records;[29]

3. *Also commends* the Commission for the finalization and adoption of the Guide to Enactment of the Model Law on Secured Transactions, which provides useful background and explanatory information for States in revising or adopting legislation on the basis of the Model Law, which is aimed at establishing an efficient secured transactions regime that would increase access to affordable secured credit and promote sustainable development through the facilitation of international trade and commercial activities, and requests the Secretary-General to publish the Guide to Enactment of the Model Law, including electronically, in the six official languages of the United Nations and to disseminate it broadly to Governments and other interested bodies;[30]

4. *Congratulates* the Commission on its fiftieth anniversary, and notes with satisfaction that the Congress to commemorate the anniversary, held in Vienna from 4 to 6 July 2017 during the fiftieth session of the Commission, entitled “Modernizing International Trade Law to Support Innovation and Sustainable Development”, acknowledged the centrality of international cooperation and coordination to the

achievements of the Commission, elicited innovative ideas for modernizing international trade law in a sustainable manner that could not only raise awareness of the work of the Commission and its potential to support cross-border commerce but also contribute to the 2030 Agenda for Sustainable Development,[31] and emphasized the leading role played by the Commission in providing an inclusive, transparent and multilateral forum in which to address the legal challenges facing international trade, and requests the Secretary-General to ensure the publication of the proceedings of the Congress to the extent permitted by available resources;

5. *Notes with satisfaction* the contributions from the Fund for International Development of the Organization of the Petroleum Exporting Countries and from the European Commission, which allow the operation of the repository of published information under the Rules on Transparency in Treaty-based Investor-State Arbitration[32] and that the Commission reiterated its strong and unanimous opinion that the secretariat of the Commission should continue to operate the transparency repository, which constitutes a central feature both of the Rules on Transparency and of the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration (Mauritius Convention on Transparency);[33]

6. *Requests* the Secretary-General to continue to operate, through the secretariat of the Commission, the repository of published information in accordance with article 8 of the Rules on Transparency, as a pilot project until the end of 2020, to be funded entirely by voluntary contributions, and to keep the General Assembly informed of developments regarding the funding and budgetary situation of the transparency repository based on its pilot operation;

7. *Takes note with interest* of the decisions taken by the Commission as regards its future work and the progress made by the Commission in its work in the areas of micro, small and medium-sized enterprises, dispute settlement, electronic commerce, insolvency law and security interests,[34] and encourages the Commission to continue to move forward efficiently to achieve tangible work outcomes in those areas;

8. *Takes note* of the decision by the Commission to entrust Working Group III with a broad mandate to work on the possible reform of investor-State dispute settlement, whereby it would: first, identify and consider concerns regarding investor-State dispute settlement; second, consider whether reform was desirable in the light of any identified concerns; and, third, if the Working Group were to conclude that reform was desirable, develop relevant solutions to be recommended to the Commission with a view to allowing each State the choice of whether and to what extent it wished to adopt the relevant solution(s);[35]

9. *Also takes note* of the decision by the Commission to reaffirm the mandate given to Working Group IV at its forty-ninth session to take up work on the topics of identity management and trust services, as well as cloud computing, and to revisit that mandate at its following session, in particular if the need arose to prioritize between the topics or to give a more specific mandate to the Working Group as regards its work in the area of identity management and trust services;[36]

10. *Endorses* the efforts and initiatives of the Commission, as the core legal body within the United Nations system in the field of international trade law, aimed at increasing coordination of and cooperation on legal activities of international and regional organizations active in the field of international trade law and at promoting the rule of law at the national and international levels in this field, and in this regard appeals to relevant international and regional organizations to coordinate their activities with those of the Commission, to avoid duplication of efforts and to promote

efficiency, consistency and coherence in the modernization and harmonization of international trade law;

11. *Reaffirms* the importance, in particular for developing countries, of the work of the Commission concerned with technical cooperation and assistance in the field of international trade law reform and development, and in this connection:

(a) Welcomes the initiatives of the Commission towards expanding, through its secretariat, its technical cooperation and assistance programme, and in that respect encourages the Secretary-General to seek partnerships with State and non-State actors to increase awareness about the work of the Commission and facilitate the effective implementation of legal standards resulting from its work;

(b) Expresses its appreciation to the Commission for carrying out technical cooperation and assistance activities and for providing assistance with legislative drafting in the field of international trade law, and draws the attention of the Secretary-General to the limited resources that are made available in this field;

(c) Expresses its appreciation to the Governments whose contributions enabled the technical cooperation and assistance activities to take place, and appeals to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the United Nations Commission on International Trade Law Trust Fund for Symposia and, where appropriate, for the financing of special projects and otherwise to assist the secretariat of the Commission in carrying out technical cooperation and assistance activities, in particular in developing countries;

(d) Reiterates its appeal to the United Nations Development Programme and other bodies responsible for development assistance, such as the World Bank and regional development banks, as well as to Governments in their bilateral aid programmes, to support the technical cooperation and assistance programme of the Commission and to cooperate with the Commission and coordinate their activities with those of the Commission in the light of the relevance and importance of the work and programmes of the Commission for the promotion of the rule of law at the national and international levels and for the implementation of the international development agenda, including the achievement of the 2030 Agenda for Sustainable Development;[37]

(e) Recalls its resolutions stressing the need to strengthen support to Member States, upon their request, in the domestic implementation of their respective international obligations through enhanced technical assistance and capacity-building, and welcomes the efforts of the Secretary-General to ensure greater coordination and coherence among United Nations entities and with donors and recipients;

12. *Recalls* the importance of adherence to the rules of procedure and methods of work of the Commission, including transparent and inclusive deliberations, taking into account the summary of conclusions as reproduced in annex III to the report on the work of its forty-third session,[38] requests the Secretariat to issue, prior to meetings of the Commission and of its working groups, a reminder of those rules of procedure and methods of work with a view to ensuring the high quality of the work of the Commission and encouraging the assessment of its instruments, and recalls in this regard its previous resolutions related to this matter, and notes in that regard the discussions of the Commission during its fiftieth session on its methods of work, including the request by Member States that the Secretariat seek and take into account the views of States on the draft provisional agenda as early as possible before the next session of the Commission,[39] as well as achieve the right balance between written and oral methods of communication of necessary information to the Commission;[40]

Coordination and Resource Group, supported by the Rule of Law Unit in the Executive Office of the Secretary-General;

19. *Notes* the statement and the views of experts on the role of the Commission in promoting the rule of law presented during the fiftieth session of the Commission on ways and means of further disseminating international law to strengthen the rule of law from the perspective of the areas of work of the Commission and the comments transmitted by the Commission pursuant to paragraph 22 of General Assembly resolution 71/148 of 13 December 2016, highlighting its role in promoting the rule of law, in particular through wide dissemination of international commercial law, including across the United Nations system;[42]

20. *Notes with satisfaction* that, in paragraph 8 of the declaration of the high-level meeting of the General Assembly on the rule of law at the national and international levels, adopted by consensus as resolution 67/1 of 24 September 2012, Member States recognized the importance of fair, stable and predictable legal frameworks for generating inclusive, sustainable and equitable development, economic growth and employment, generating investment and facilitating entrepreneurship and, in this regard, commended the work of the Commission in modernizing and harmonizing international trade law and that, in paragraph 7 of the declaration, Member States expressed their conviction that the rule of law and development were strongly interrelated and mutually reinforcing;

21. *Also notes with satisfaction* that, in paragraph 89 of the Addis Ababa Action Agenda of the Third International Conference on Financing for Development, adopted by the General Assembly by consensus as resolution 69/313 of 27 July 2015, States endorsed the efforts and initiatives of the Commission, as the core legal body within the United Nations system in the field of international trade law, aimed at increasing coordination of and cooperation on legal activities of international and regional organizations active in the field of international trade law and at promoting the rule of law at the national and international levels in this field;

22. *Reiterates its request* to the Secretary-General, in conformity with resolutions of the General Assembly on documentation-related matters,[43] which, in particular, emphasize that any invitation to limit, where appropriate, the length of documents should not adversely affect either the quality of the presentation or the substance of the documents, to bear in mind the particular characteristics of the mandate and functions of the Commission in the progressive development and codification of international trade law when implementing page limits with respect to the documentation of the Commission;[44]

23. *Requests* the Secretary-General to continue the publication of Commission standards and the provision of summary records of the meetings of the Commission, including committees of the whole established by the Commission for the duration of its annual session, relating to the formulation of normative texts, and takes note of the decision of the Commission to continue the trial use of digital recordings, in parallel with summary records where applicable, with a view to assessing the experience of using digital recordings and, on the basis of that assessment, taking a decision at a future session regarding the possible replacement of summary records by digital recordings;[45]

24. *Recalls* paragraph 48 of its resolution 66/246 of 24 December 2011 regarding the rotation scheme of meetings between Vienna and New York;

25. *Stresses* the importance of promoting the use of texts emanating from the work of the Commission for the global unification and harmonization of international trade law, and to this end urges States that have not yet done so to consider signing,

[43] Resolutions 52/214, sect. B, 57/283 B, sect. III, and 58/250, sect. III.

[44] Resolutions 59/39, para. 9, and 65/21, para. 18; see also *Official Records of the General Assembly, Fifty-ninth Session, Supplement No. 17* (A/59/17), paras. 124–128.

[45] *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 276.

ratifying or acceding to conventions, enacting model laws and encouraging the use of other relevant texts;

26. *Notes* the decision of the Commission to commend the use of the Uniform Rules for Forfaiting of the International Chamber of Commerce, as appropriate, in forfaiting transactions, to facilitate international receivables financing and thus international trade more generally;

27. *Notes with appreciation* the work of the Secretariat on the system for the collection and dissemination of case law on Commission texts in the six official languages of the United Nations (the CLOUT system), notes the resource-intensive nature of the system, acknowledges the need for further resources to sustain and expand it, and in this regard welcomes efforts by the Secretariat towards building partnerships with interested institutions, and appeals to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to assist the secretariat of the Commission in raising awareness as to the availability and usefulness of the CLOUT system in professional, academic and judiciary circles and in securing the funding required for the coordination and expansion of the system and the establishment, within the secretariat of the Commission, of a pillar focused on the promotion of ways and means of interpreting Commission texts in a uniform manner;

28. *Welcomes* the continued work of the Secretariat on digests of case law related to Commission texts, including their wide dissemination, as well as the continuing increase in the number of abstracts available through the CLOUT system, in view of the role of the digests and the CLOUT system as important tools for the promotion of the uniform interpretation of international trade law, in particular by building local capacity of judges, arbitrators and other legal practitioners to interpret those standards in the light of their international character and the need to promote uniformity in their application and the observance of good faith in international trade;

29. *Recalls* its resolutions affirming the importance of high-quality, user-friendly and cost-effective United Nations websites and the need for their multilingual development, maintenance and enrichment,[46] commends the fact that the website of the Commission is published in the six official languages of the United Nations, and welcomes the continuous efforts of the Commission to maintain and improve its website, including by developing new social media features, in accordance with the applicable guidelines;[47]

30. *Expresses its appreciation* to Mr. Renaud Sorieul, Secretary of the Commission since 2008, who will retire on 31 October 2017, for his outstanding and devoted contribution to the process of the unification and harmonization of international trade law in general and to the Commission in particular.

[47] Resolution 63/120, para. 20.

72/114. Model Law on Electronic Transferable Records of the United Nations Commission on International Trade Law

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Recalling also its resolution 60/21 of 23 November 2005, by which it adopted the United Nations Convention on the Use of Electronic Communications in International Contracts and called upon all Governments to consider becoming party to the Convention, and its resolutions 51/162 of 16 December 1996 and 56/80 of 12 December 2001, in which it recommended that all States give favourable consideration to the Model Law on Electronic Commerce and the Model Law on Electronic Signatures of the Commission, respectively,

Noting that, while the Convention, the Model Law on Electronic Commerce and the Model Law on Electronic Signatures are of significant assistance to States in enabling and facilitating electronic commerce in international trade, they do not fully address issues arising from the use of electronic transferable records in international trade,

Considering that uncertainties as to the legal value of electronic transferable records constitute an obstacle to international trade,

Convinced that legal certainty and commercial predictability in electronic commerce will be enhanced by the harmonization of certain rules on the legal recognition of electronic transferable records on a technologically neutral basis and according to the functional equivalence approach,

Recalling that, at its forty-fourth session, in 2011, the Commission mandated its Working Group IV (Electronic Commerce) to undertake work on electronic transferable records,[48]

Noting that the Working Group devoted 10 sessions, from 2011 to 2016, to that work, and that the Commission considered at its fiftieth session, in 2017, a draft model law on electronic transferable records prepared by the Working Group, together with comments on the draft received from Governments and international organizations invited to sessions of the Working Group,[49]

Believing that a model law on electronic transferable records will constitute a useful addition to existing Commission texts in the area of electronic commerce by significantly assisting States in enhancing their legislation on electronic commerce, in particular as it relates to the use of electronic transferable records, or in formulating such legislation where none exists,

1. *Expresses its appreciation* to the United Nations Commission on International Trade Law for completing and adopting the Model Law on Electronic Transferable Records;[50]

2. *Requests* the Secretary-General to publish the Model Law together with an explanatory note, including electronically, in the six official languages of the United Nations, and to disseminate it broadly to Governments and other interested bodies;

---

[48] *Official Records of the General Assembly, Sixty-sixth Session, Supplement No. 17* (A/66/17), para. 238.

[49] Ibid., *Seventy-second Session, Supplement No. 17* (A/72/17), chap. III.

[50] Ibid., annex I.

3. *Recommends* that all States give favourable consideration to the Model Law when revising or adopting legislation relevant to electronic commerce, and invites States that have used the Model Law to advise the Commission accordingly;

4. *Also recommends* that States continue to consider becoming parties to the United Nations Convention on the Use of Electronic Communications in International Contracts[51] and to give favourable consideration to the use of the Model Law on Electronic Commerce[52] and the Model Law on Electronic Signatures[53] when revising or adopting legislation on electronic commerce;

5. *Appeals* to the relevant bodies of the United Nations system and other relevant international and regional organizations to coordinate their legal activities in the area of electronic commerce, including paperless trade facilitation, with those of the Commission, to avoid duplication of efforts and to promote efficiency, consistency and coherence in the modernization and harmonization of legislation on electronic commerce.

72/119. The rule of law at the national and international levels

The General Assembly,

Recalling its resolution 71/148 of 13 December 2016,

Reaffirming its commitment to the purposes and principles of the Charter of the United Nations and international law, which are indispensable foundations of a more peaceful, prosperous and just world, and reiterating its determination to foster strict respect for them and to establish a just and lasting peace all over the world,

Reaffirming that human rights, the rule of law and democracy are interlinked and mutually reinforcing and that they belong to the universal and indivisible core values and principles of the United Nations,

Reaffirming also the need for universal adherence to and implementation of the rule of law at both the national and international levels and its solemn commitment to an international order based on the rule of law and international law, which, together with the principles of justice, is essential for peaceful coexistence and cooperation among States,

Bearing in mind that the activities of the United Nations carried out in support of efforts of Governments to promote and consolidate the rule of law are undertaken in accordance with the Charter, and stressing the need to strengthen support to Member States, upon their request, in the domestic implementation of their respective international obligations through enhanced technical assistance and capacity-building,

Convinced that the advancement of the rule of law at the national and international levels is essential for the realization of sustained economic growth, sustainable development, the eradication of poverty and hunger and the protection of all human rights and fundamental freedoms, and acknowledging that collective security depends on effective cooperation, in accordance with the Charter and international law, against transnational threats,

Reaffirming the duty of all States to refrain in their international relations from the threat or use of force in any manner inconsistent with the purposes and principles of the United Nations and to settle their international disputes by peaceful means in such a manner that international peace and security and justice are not endangered, in accordance with Chapter VI of the Charter, and calling upon States that have not yet done so to consider accepting the jurisdiction of the International Court of Justice in accordance with its Statute,

Convinced that the promotion of and respect for the rule of law at the national and international levels, as well as justice and good governance, should guide the activities of the United Nations and its Member States,

Recalling paragraph 134 (e) of the 2005 World Summit Outcome,[54]

1. *Recalls* the high-level meeting of the General Assembly on the rule of law at the national and international levels, held during the high-level segment of its sixty-seventh session, and the declaration adopted at that meeting,[55] takes note of the report of the Secretary-General submitted pursuant to paragraph 41 of the declaration,[56] and requests the Sixth Committee to continue its consideration of ways and means of further developing the linkages between the rule of law and the three pillars of the United Nations;

2. *Acknowledges* the efforts to strengthen the rule of law through voluntary pledges, encourages all States to consider making pledges, individually or jointly, based on their national priorities, and also encourages those States that have made

[54] Resolution 60/1.
[55] Resolution 67/1.
[56] A/68/213/Add.1.

pledges to continue to exchange information, knowledge and best practices in this regard;

3. *Takes note* of the annual report of the Secretary-General on strengthening and coordinating United Nations rule of law activities;[57]

4. *Encourages* the Secretary-General and the United Nations system to accord high priority to rule of law activities;

5. *Reaffirms* the role of the General Assembly in encouraging the progressive development of international law and its codification, and further reaffirms that States shall abide by all of their obligations under international law;

6. *Also reaffirms* the imperative of upholding and promoting the rule of law at the international level in accordance with the principles of the Charter of the United Nations;

7. *Further reaffirms* its commitment to working tirelessly for the full implementation of the 2030 Agenda for Sustainable Development,[58] and recalls that the goals and targets are integrated and indivisible and balance the three dimensions of sustainable development;

8. *Recalls* the constructive debate held on the subtopic "Ways and means to further disseminate international law to strengthen the rule of law" in the Sixth Committee during the seventy-second session of the General Assembly;

9. *Recognizes* the role of multilateral treaty processes in advancing the rule of law, and in this regard reaffirms its support for the annual treaty event organized by the Secretary-General, welcomes the organization of workshops on treaty practice by the Treaty Section of the Office of Legal Affairs of the Secretariat, both at the regional level and at United Nations Headquarters, as an important capacity-building initiative, and invites States to continue to support this activity;

10. *Reaffirms* the importance of the registration and publication of treaties under Article 102 of the Charter, takes note of the report of the Secretary-General entitled "Review of the regulations to give effect to Article 102 of the Charter of the United Nations",[59] submitted pursuant to its resolution 71/148, and stresses that the regulations should be useful and relevant to Member States;

11. *Recalls* the obligation of Member States, under Article 102 of the Charter, to register with the Secretariat every treaty and every international agreement they enter into, and expresses appreciation for the efforts by the Secretariat and by Member States to support activities aimed at ensuring the implementation of this obligation, including capacity-building, publications or technical assistance;

12. *Welcomes* the efforts made to develop and enhance the United Nations electronic treaty database, providing online access to comprehensive information on the depositary functions of the Secretary-General and the registration and publication of treaties under Article 102 of the Charter, and encourages the continuation of such efforts in the future, while bearing in mind that many developing countries lack affordable access to information and communications technologies;

13. *Recognizes* the importance of the legal publications prepared by the Treaty Section, and stresses the need to update the *Summary of Practice of the Secretary-General as Depositary of Multilateral Treaties* in the light of these new developments and practices;

14. *Welcomes* the dialogue initiated by the Rule of Law Coordination and Resource Group and the Rule of Law Unit in the Executive Office of the Secretary-General with Member States on the topic "Promoting the rule of law at the international level", and calls for the continuation of this dialogue with a view to fostering the rule of law at the international level;

---

[57] A/72/268.
[58] Resolution 70/1.
[59] A/72/86.

15. *Recognizes* the importance of the United Nations Programme of Assistance in the Teaching, Study, Dissemination and Wider Appreciation of International Law to the furtherance of United Nations rule of law programmes and activities, emphasizes that further technical assistance and capacity-building initiatives, focused on increasing and improving the participation of Member States in the multilateral treaty process, should be examined, and invites States to support these activities;

16. *Stresses* the importance of adherence to the rule of law at the national level and the need to strengthen support to Member States, upon their request, in the domestic implementation of their respective international obligations through enhanced technical assistance and capacity-building in order to develop, reinforce and maintain domestic institutions active in the promotion of rule of law at the national and international levels, subject to national ownership, strategies and priorities;

17. *Reiterates its request* to the Secretary-General to ensure greater coordination and coherence among the United Nations entities and with donors and recipients, and reiterates its call for greater evaluation of the effectiveness of such activities, including possible measures to improve the effectiveness of those capacity-building activities;

18. *Calls*, in this context, for dialogue to be enhanced among all stakeholders, with a view to placing national perspectives at the centre of rule of law assistance in order to strengthen national ownership, while recognizing that rule of law activities must be anchored in a national context and that States have different national experiences in the development of their systems of the rule of law, taking into account their legal, political, socioeconomic, cultural, religious and other local specificities, while also recognizing that there are common features founded on international norms and standards;

19. *Calls upon* the Secretary-General and the United Nations system to systematically address, as appropriate, aspects of the rule of law in relevant activities, including the participation of women in rule of law-related activities, recognizing the importance of the rule of law to virtually all areas of United Nations engagement;

20. *Expresses full support* for the overall coordination and coherence role of the Rule of Law Coordination and Resource Group within the United Nations system, within existing mandates, supported by the Rule of Law Unit and under the leadership of the Deputy Secretary-General;

21. *Requests* the Secretary-General to submit, in a timely manner, his next annual report on United Nations rule of law activities, in accordance with paragraph 5 of its resolution 63/128 of 11 December 2008, addressing, in a balanced manner, the national and international dimensions of the rule of law;

22. *Recognizes* the importance of restoring confidence in the rule of law as a key element of transitional justice;

23. *Recalls* the commitment of Member States to take all necessary steps to provide fair, transparent, effective, non-discriminatory and accountable services that promote access to justice for all, including legal aid, encourages further dialogue and the sharing of national practices and expertise in strengthening the rule of law through access to justice, including with regard to the provision of birth registration for all, appropriate registration and documentation of refugees, migrants, asylum seekers and stateless persons, and legal aid, where appropriate, in both criminal and civil proceedings, and in this regard recognizes the role of knowledge and technology, including in judicial systems, and stresses the need to intensify the assistance extended to Governments upon their request;

24. *Stresses* the importance of promoting the sharing of national practices and of inclusive dialogue, welcomes the proposals made by the Secretary-General, inviting Member States to voluntarily exchange national best practices on the rule of law in informal meetings and on an electronic depository of best practices on the United Nations rule of law website, and invites Member States to do so;

25. *Invites* the International Court of Justice, the United Nations Commission on International Trade Law and the International Law Commission to continue to comment, in their respective reports to the General Assembly, on their current roles in promoting the rule of law;

26. *Invites* the Rule of Law Coordination and Resource Group and the Rule of Law Unit to continue their dialogue with all Member States by interacting with them in a regular, transparent and inclusive manner, in particular in informal briefings;

27. *Stresses* the need for the Rule of Law Unit to carry out its tasks in an effective and sustainable manner and the need to provide it with reasonable means required to that effect;

28. *Decides* to include in the provisional agenda of its seventy-third session the item entitled "The rule of law at the national and international levels";

29. *Invites* Member States and the Secretary-General to suggest possible subtopics for future Sixth Committee debates, for inclusion in the forthcoming annual report, with a view to assisting the Sixth Committee in choosing future subtopics.

67th plenary meeting
7 December 2017

Part Two

STUDIES AND REPORTS ON SPECIFIC SUBJECTS

I. MICRO, SMALL AND MEDIUM-SIZED ENTERPRISES (MSMEs)

A. Report of the Working Group on MSMEs on the work of its twenty-seventh session (Vienna, 3-7 October 2016)

(A/CN.9/895)

[Original: English]

Contents

I. Introduction

1. At its forty-sixth session, in 2013, the Commission requested that a working group should commence work aimed at reducing the legal obstacles encountered by micro, small and medium-sized enterprises (MSMEs) throughout their life cycle.[1] At that same session, the Commission agreed that consideration of the issues pertaining to the creation of an enabling legal environment for MSMEs should begin with a focus on the legal questions surrounding the simplification of incorporation.[2]

2. At its twenty-second session (New York, 10 to 14 February 2014), Working Group I (MSMEs) commenced its work according to the mandate received from the Commission. The Working Group engaged in preliminary discussion in respect of a number of broad issues relating to the development of a legal text on simplified incorporation[3] as well as on what form that text might take,[4] and business registration was said to be of particular relevance in the future deliberations of the Working Group.[5]

3. At its forty-seventh session, in 2014, the Commission reaffirmed the mandate of Working Group I, as set out above in paragraph 1.[6]

---

[2] For a history of the evolution of this topic on the UNCITRAL agenda, see A/CN.9/WG.I/WP.97, paras. 5-20.

[3] A/CN.9/800, paras. 22-31, 39-46 and 51-64.

[4] Ibid., paras. 32-38.

[5] Ibid., paras. 47-50.

[6] *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 134.

4. At its twenty-third session (Vienna, 17 to 21 November 2014), Working Group I continued its work in accordance with the mandate received from the Commission. Following a discussion of the issues raised in working paper A/CN.9/WG.I/WP.85 in respect of best practices in business registration, the Working Group requested the Secretariat to prepare further materials based on parts IV and V of that working paper for discussion at a future session. In its discussion of the legal questions surrounding the simplification of incorporation, the Working Group considered the issues outlined in the framework set out in working paper A/CN.9/WG.I/WP.86, and agreed that it would resume its deliberations at its twenty-fourth session beginning with paragraph 34 of that document.

5. At its twenty-fourth session (New York, 13 to 17 April 2015), the Working Group continued its discussion of the legal questions surrounding the simplification of incorporation. After initial consideration of the issues as set out in Working Paper A/CN.9/WG.I/WP.86, the Working Group decided that it should continue its work by considering the first six articles of the draft model law and commentary thereon contained in Working Paper A/CN.9/WG.I/WP.89, without prejudice to the final form of the legislative text, which had not yet been decided. Further to a proposal from several delegations, the Working Group agreed to continue its discussion of the issues included in A/CN.9/WG.I/WP.89, bearing in mind the general principles outlined in the proposal, including the "think small first" approach, and to prioritize those aspects of the draft text in A/CN.9/WG.I/WP.89 that were the most relevant for simplified business entities. The Working Group also agreed that it would discuss the alternative models introduced in A/CN.9/WG.I/WP.87 at a later stage.

6. At its forty-eighth session, in 2015, the Commission noted the progress made by the Working Group in the analysis of the legal issues surrounding the simplification of incorporation and to good practices in business registration, both of which aimed at reducing the legal obstacles encountered by MSMEs throughout their life cycle. After discussion, the Commission reaffirmed the mandate of the Working Group under the terms of reference established by the Commission at its forty-sixth session in 2013 and confirmed at its forty-seventh session in 2014.[1] In its discussion in respect of the future legislative activity, the Commission also agreed that document A/CN.9/WG.I/WP.83 should be included among the documents under consideration by Working Group I for the simplification of incorporation.[2]

7. At its twenty-fifth session (Vienna, 19 to 23 October 2015), the Working Group continued its preparation of legal standards aimed at the creation of an enabling legal environment for MSMEs, exploring the legal issues surrounding the simplification of incorporation and on good practices in business registration. In terms of the later, following presentation by the Secretariat of documents A/CN.9/WG.I/WP.93, Add.1 and Add.2 on key principles of business registration and subsequent consideration by the Working Group of A/CN.9/WG.I/WP.93, it was decided that a document along the lines of a concise legislative guide on key principles in business registration should be prepared, without prejudice to the final form that the materials might take. To that end, the Secretariat was requested to prepare a set of draft recommendations to be considered by the Working Group when it resumed its consideration of Working Papers A/CN.9/WG.I/WP.93, Add.1 and Add.2 at its next session.[3] In respect of the legal issues surrounding the simplification of incorporation, the Working Group resumed its consideration of the draft model law on a simplified business entity as contained in working paper A/CN.9/WG.I/WP.89, starting with Chapter VI on organization of the simplified business entity, and continuing on with Chapter VIII on dissolution and winding up, Chapter VII on restructuring, and draft article 35 on financial statements (contained in Chapter IX on miscellaneous matters).[4] The

[2] Ibid., *Seventieth session, Supplement No. 17* (A/70/17), para. 340.

[3] See Report of Working Group I (MSMEs) on the work of its twenty-fifth session, A/CN.9/860, para. 73.

[4] Ibid., paras. 76 to 96.

Working Group agreed to continue discussion of the draft text in Working Paper A/CN.9/WG.I/WP.89 at its twenty-sixth session, commencing with Chapter III on shares and capital, and continuing with Chapter V on shareholders' meetings.

8. At its twenty-sixth session (New York, 4 to 8 April 2016), Working Group I continued its consideration of the legal issues surrounding the simplification of incorporation and on key principles in business registration. In respect of the former, the Working Group resumed its deliberations on the basis of working paper A/CN.9/WG.I/WP.89. Following its discussion of the issues in Chapters III and V,[5] the Working Group decided that the text being prepared on a simplified business entity should be in the form of a legislative guide, and requested the Secretariat to prepare for discussion at a future session a draft legislative guide that reflected its policy discussions to date (see A/CN.9/WG.I/WP.99 and Add.1).[6] In respect of key principles in business registration, the Working Group considered recommendations 1 to 10 of the draft commentary (A/CN.9/WG.I/WP.93, Add.1 and Add.2) and recommendations (A/CN.9/WG.I/WP.96 and Add.1) for a legislative guide, and requested the Secretariat to combine those two sets of documents into a single draft legislative guide for discussion at a future session.[7] In addition, the Working Group also considered the general architecture of its work on MSMEs, and agreed that its MSME work should be accompanied by an introductory document along the lines of A/CN.9/WG.I/WP.92, which would form a part of the final text and would provide an overarching framework for current and future work on MSMEs.[8] The Working Group also decided at its twenty-sixth session[9] that it would devote the deliberations at its twenty-seventh session to a draft legislative guide on a simplified business entity, and at its twenty-eighth session (New York, 1 to 9 May 2017) to a consideration of a draft legislative guide reflecting key principles and good practices in business registration.

9. At its forty-ninth session (New York, 27 June to 15 July 2016), the Commission commended the Working Group for its progress in the preparation of legal standards in respect of the legal issues surrounding the simplification of incorporation and to key principles in business registration, both of which aimed at reducing the legal obstacles faced by MSMEs throughout their life cycle. The Commission also noted the decision of the Working Group to prepare a legislative guide on each of those topics and States were encouraged to ensure that their delegations included experts on business registration so as to facilitate its work.[10]

II. Organization of the session

10. Working Group I, which was composed of all States Members of the Commission, held its twenty-seventh session in Vienna from 3 to 7 October 2016. The session was attended by representatives of the following States Members of the Working Group: Argentina, Brazil, Canada, China, Colombia, Czechia, El Salvador, France, Germany, India, Indonesia, Italy, Japan, Kuwait, Mexico, Pakistan, Panama, Poland, Republic of Korea, Russian Federation, Singapore, Spain, Sri Lanka, Switzerland, Thailand, Turkey, United Kingdom of Great Britain and Northern Ireland, United States of America and Venezuela (Bolivarian Republic of).

11. The session was attended by observers from the following States: Croatia, Cyprus, Dominican Republic, Luxembourg, Netherlands, Niger, Republic of Moldova, Saudi Arabia, Slovakia, Tunisia and United Arab Emirates.

12. The session was also attended by observers from the European Union.

[6] Ibid., paras. 48 to 50.

[7] Ibid., paras. 51 to 85 and 90.

[8] Ibid., paras. 86 to 87.

[9] Report of Working Group I (MSMEs) on the work of its twenty-sixth session, A/CN.9/866, para. 90.

[10] *Official Records of the General Assembly, Seventy-first session, Supplement No. 17* (A/71/17), under preparation.

13. The session was also attended by observers from the following international organizations:

(a) *Organizations of the United Nations system*: World Bank (WB);

(b) *Invited intergovernmental organizations*: Asian-African Legal Consultative Organization (AALCO), Organisation pour l'Harmonisation en Afrique du Droit des Affaires (OHADA);

(c) *Invited international non-governmental organizations*: American Bar Association (ABA); Fondation pour le droit continental (FDC); the National Law Center for Inter-American Free Trade (NLCIFT); New York State Bar Association (NYSBA); and the Law Association for Asia and the Pacific (LAWASIA).

14. The Working Group elected the following officers:

Chair: Ms. Maria Chiara Malaguti (Italy)

Rapporteur: Mr. Arjuna Obeyesekere (Sri Lanka)

15. In addition to documents presented at its previous sessions, the Working Group had before it the following documents:

(a) Annotated provisional agenda (A/CN.9/WG.I/WP.97);

(b) Note by the Secretariat on a Draft legislative guide on an UNCITRAL limited liability organization (A/CN.9/WG.I/WP.99 and Add.1); and

(c) Observations by the Government of the French Republic (A/CN.9/WG.I/WP.94).

16. The Working Group adopted the following agenda:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Preparation of legal standards in respect of micro, small and medium-sized enterprises.
5. Other business.
6. Adoption of the report.

III. Deliberations and decisions

17. The Working Group considered the observations in document A/CN.9/WG.I/WP.94 and engaged in discussion in respect of the preparation of legal standards aimed at the creation of an enabling legal environment for MSMEs, in particular on a draft legislative guide on an UNCITRAL limited liability organization on the basis of Secretariat documents A/CN.9/WG.I/WP.99 and Add.1. The deliberations and decisions of the Working Group on these topics are reflected below.

IV. Preparation of legal standards in respect of micro, small and medium-sized enterprises: draft legislative guide on an UNCITRAL limited liability organization

Preliminary matters

Introduction of the legislative guide on an UNCITRAL limited liability organization

18. The Working Group recalled that the draft legislative guide on an UNCITRAL limited liability organization ("UNLLO") contained in A/CN.9/WG.I/WP.99 and Add.1 had been prepared with a view to including all of the concepts that the Working Group had considered to date, as well as those it had agreed upon, in respect of the

preparation of a legal text on a simplified business entity. In summarizing the introduction to the draft legislative guide in paragraphs 1 to 24 of A/CN.9/WG.I/WP.99, a number of observations were made in regard to the preparation of the text, including the following:

(a) The draft text took a "think small first" approach, focusing on the perceived needs of various types of MSMEs wishing to participate in the legally regulated economy and accommodating their growth over time;

(b) The purpose of the text was to attempt to satisfy those perceived MSME needs;

(c) Discussions in the Working Group to date had considered a number of different simplified business forms reflected in legislation from many different States, which had proven a rich source of information for distilling best practices for a cross-border approach;

(d) Freedom of contract was an important aspect of the draft legislative guide, as were mandatory provisions and default rules intended to fill any gaps in the agreement of parties forming the enterprise; and

(e) The draft legislative guide followed the Working Group's discussions to date in taking an informed but innovative approach to creating a free-standing legal regime that could meet the needs of MSMEs and that was derived from the collective domestic experience of States but attempted to avoid unnecessary formalistic and rigid corporate law rules that were not suited to MSMEs.

19. It was further noted that the draft legislative guide adopted neutral terminology in an attempt to establish clear concepts unencumbered by existing corporate law regimes. These terms included "UNLLO" (which the Working Group was encouraged to use at least as an interim term until it could decide on a preferred name); "members" instead of "shareholders"; "ownership" or "interest" instead of "shares"; "formation information" to denote the data required for formation of the UNLLO; and "members' agreement" to indicate the rules agreed among members for the operation of the UNLLO. It was observed that definitions of these and other concepts would be required in the introductory section of the draft text, but that those definitions would be prepared in future, as the text took shape.

Preliminary issues

20. Various delegations in the Working Group raised the following preliminary matters:

(a) Some delegations were of the view that it would be necessary to prepare a model law with standard forms in addition to a legislative guide in order to provide effective assistance to developing countries in reforming their laws;

(b) It was observed that de-linking the draft legislative guide from corporate law would not be possible since gaps in the UNLLO approach would need to be filled by corporate law. It was pointed out that other reforms that have taken place with regard to simplified incorporation have done so. It was further observed that the terminology would need to be adjusted to make this possible;

(c) Support was expressed for the commentary in A/CN.9/WG.I/WP.99 to more fully discuss the list of considerations for simplified incorporation in footnote 19 of A/CN.9/WG.I/WP.99 and paragraph 66 of A/CN.9/825, repeated in paragraph 2 of A/CN.9/WG.I/WP.89 and echoed in section D.3 of A/CN.9/WG.I/WP.98, which set forth the views of the UNCTAD secretariat;

(d) Reservations were expressed in respect of using the term "UNLLO";

(e) It was suggested that alternative dispute resolution should be included in the draft legislative guide (in response, reference was made to the mention of dispute resolution in paragraph 52 of A/CN.9/WG.I/WP.99/Add.1); and

(f) Some concern was expressed that the UNLLO had not yet been implemented in any economy (in response, it was observed by some delegations that neither the Dutch East India Company nor the German GmbH — Gesellschaft mit beschraenkter Haftung — had been tested in any economy prior to becoming huge successes of company law globally).

A. General Provisions

Recommendation 1 and paragraphs 25 to 30 of A/CN.9/WG.I/WP.99

21. A delegation expressed the concern that the phrases "members' agreement" and "formation information" might be confusing, since the phrase "members' agreement" could not distinguish the agreements intended here from other agreements among some but not all of the members, and suggested that the Working Group revert to its previous use of "operating document" and "formation document". That suggestion was not taken up and it was noted that "formation information" should be defined in the text, as should "members' agreement", particularly in the case of a single member UNLLO.

22. It was suggested that draft paragraph 25 would need to be revised to the extent that it suggested that the draft legislative guide need not be specifically linked to existing legislation in the enacting State. It was pointed out that the recent legislative reforms on simplified incorporation for MSMEs have been done in the context of revising the corporate code. For example, in some States, legislation on simplified incorporation for MSMEs has incorporated by reference general corporate law on mergers, consolidations, spin-offs and sales of substantially all the assets. In response it was clarified that the UNLLO draft legislative guide simply intended to establish an innovative and freestanding legislative approach for dealing with MSME concerns, but that the UNLLO legal form would need to be consistent with a State's domestic law and general principles of law would continue to apply to fill any gaps. In addition, it was noted that in order for it to represent an innovative international standard, it was logical that the UNLLO regime would have to avoid being directly linked to existing domestic company law. Moreover, it was observed that the list of suggested gaps was certainly relevant for more sophisticated enterprises and might be kept in mind for UNLLOs that were scaling up their operations and converting to other forms, but that it was less likely to be relevant in respect of MSMEs. A suggestion was made that more sophisticated rules of that nature might be mentioned in the commentary, but that such rules should not be the focus of the draft legislative guide. The Working Group agreed to revert to this discussion at a later stage.

23. There was support for the suggestion that mention of "expansive freedom of contract" in paragraph 30 of A/CN.9/WG.I/WP.99 could also be accompanied by mention of the protection of third parties dealing with the UNLLO, perhaps by way of inclusion in a definition of "members' agreement" (which could set out the relationship among members and vis-à-vis third parties) or in connection with draft recommendation 11. In addition, some terminological questions were raised in respect of the different language versions of the draft legislative guide, and delegations were invited to contact the Secretariat with specific instances so that they could be followed up with the translation teams.

24. A concern was raised that the phrase "if any" in draft recommendation 1 was unnecessary, since the members of an UNLLO would always have a members' agreement, whether that agreement was in writing or otherwise. It was observed that the phrase could refer to the possibility that there might be gaps in aspects of the member agreement governance of the UNLLO, but there was support for the view that the phrase "if any" was confusing, if not redundant, and it was agreed that that phrase could be deleted.

25. A suggestion was made to reverse the order of the references to the members' agreement and the governing law in draft recommendation 1 in order to emphasize that the members' agreement was of greater importance as between the two. Other delegations were of the view that the two sources were of equal importance and that

reversing their order would not in any event render one more important than the other. The suggestion to reverse the order was not taken up, nor was a suggestion to include "formation information" in draft recommendation 1.

26. Concern was expressed that draft recommendation 1 was in itself redundant, since it should be clear that the law enacted on the basis of the draft legislative guide governed the UNLLO, and that stating it might seem circuitous. It was further suggested that reference need not be made in the draft recommendation to the members' agreement at all, since its importance as an element of the regime governing the UNLLO was obvious through its inclusion in draft recommendation 11. However, in view of the importance of the members' agreement to the governance of the UNLLO, some delegations preferred to retain mention of it in draft recommendation 1.

27. In an effort to clarify draft recommendation 1, text was suggested along the lines of: "Except when statutory default rules are mandatory, the members' agreement governs the rights, duties and relations among the members, and controls over any contrary provisions of the statute. To the extent the members' agreement does not otherwise provide, the provisions of the statute control." A suggestion was also made to separate draft recommendation 1 into two separate concepts dealing with: (1) how other laws applied to the UNLLO and (2) the application of the members' agreement to the relationship among members and to third parties. Alternatively, it was suggested that draft recommendation 1 could consist of text along the lines of: "The law should provide that it governs the UNLLO."

28. After discussion, the Working Group agreed that it should defer its decision on draft recommendation 1 and its commentary until after it had considered recommendation 11 and its accompanying commentary.

Recommendation 2 and paragraphs 31 to 34 of A/CN.9/WG.I/WP.99

29. A drafting suggestion was made that the commentary in draft paragraph 34 could enumerate the industrial sectors in which an UNLLO could participate and leave to a footnote the list of regulated sectors in which an UNLLO could be prohibited from engaging.

30. There was some support in the Working Group for the view that draft recommendation 2 was too broad in permitting an UNLLO to be organized for "any lawful activity." There was also support for the alternate view that the phrase was appropriate in that the activities of the UNLLO should not be unnecessarily constrained, leaving it to an enacting State to decide upon any necessary exclusions. There was, however, general agreement in the Working Group that the main focus of the UNLLO's activities was intended to be commercial in nature. It was noted that UNCITRAL texts broadly defined "commercial" activities, and it was suggested that that definition might be considered for inclusion in the text. It was also observed that the terms "commercial" or "business" might exclude certain activities in some jurisdictions. After discussion, the Working Group agreed to insert the phrase "business or commercial" between the words "any lawful" and "activity" in draft recommendation 2, and to clarify in the draft commentary that States should interpret those terms broadly, and could in fact permit broader application of the UNLLO regime.

Recommendation 3 and paragraphs 35 to 38 of A/CN.9/WG.I/WP.99

31. It was suggested that the second sentence in draft paragraph 37 should be moved elsewhere since it could be said to detract from draft recommendation 3, by referring to legislative models adopted in some States that permitted the separation of business assets of an entity from the personal assets of its members without resort to the concept of legal personality. However, other delegations were of the view that it was important to maintain reference in the draft text of such other business models. After discussion, the Working Group requested the Secretariat to resolve the matter by attempting to locate an appropriate section in the draft text where mention of those business models could be included.

32. There was agreement in the Working Group that draft paragraph 37 should be corrected by deleting the phrase "and limited liability", which appeared after the phrase "without resort to legal personality" in the current text.

33. The Working Group also agreed to add the phrase "distinct from its members" after the phrase "legal personality" at the end of draft recommendation 3.

Recommendation 4 and paragraphs 39 to 43 of A/CN.9/WG.I/WP.99

34. The Working Group agreed to delete the following phrases from the draft commentary:

(a) In paragraph 41, third sentence, the phrase "or liability to other members of the UNLLO" since it concerned liability matters of a different nature from the member's liability solely by reason of being a member of the UNLLO; and

(b) In paragraph 42, first sentence, the phrase "in the ordinary course of business", since it was not a phrase commonly used in lifting limited liability protection of an UNLLO ("piercing the corporate veil"), which more often referred to fraud or abuse of the legal business form.

35. A question was raised concerning footnote 42 in A/CN.9/WG.I/WP.99 and the suggestion that if the law were completely de-linked from corporate law, it would still be possible for courts to pierce the corporate veil under State law. After discussion, it was generally agreed that, as set out in footnote 42, "rules on piercing the corporate veil were quite detailed and could vary widely from State to State, such that it might not be productive to attempt to establish such standards in the draft text, outside of noting the potential importance of such a remedy in the commentary and leaving the establishment of standards on it to enacting States." It was also observed by some delegations that in countries with a civil law tradition, as was equally the case in States with a common law tradition, the suppletive law would provide for piercing the corporate veil, even if it was not specifically included in a law enacted on the basis of the UNLLO legislative guide.

36. The Working Group expressed its preference for the drafting of recommendation 4 as reflected in footnote 37. However, some concern was expressed that draft recommendation 4.2 might require clarification, in that it referred to liability beyond the member's personal liability for the obligations of the UNLLO solely by virtue of being a member. For the same reason, a proposal to add cross-references to other instances of member liability in the draft legislative guide — for example, in recommendation 21 — was not taken up. Further, although it was observed that in some States, members could agree that they would bear unlimited liability to third parties for obligations incurred by the business, the Working Group was of the view that such an approach was too complex for the UNLLO context, particularly since it raised issues of notice to third parties. While draft recommendation 4.2 was thought to have some value in making it clear that members had the freedom to decide among themselves on how to apportion liability, the Working Group was of the view that that point might best be highlighted elsewhere in the text and in reference to the members' agreement.

37. After discussion, the Working Group agreed to retain the text of recommendation 4.1 as it appeared in footnote 37, but to delete draft recommendation 4.2.

Recommendation 5 and paragraphs 44 to 47 of A/CN.9/WG.I/WP.99

38. The Working Group recalled that it had at previous sessions considered the issue of whether or not an UNLLO should be required to have minimum capital at the time of its formation (see, for example, paras. 29 and 51 to 59 of A/CN.9/800; paras. 56 and 75 to 76 of A/CN.9/825; paras. 26 to 29 of A/CN.9/WG.I/WP.85; and paras. 10 to 12 of A/CN.9/WG.I/WP.86/Add.1). It was noted that draft recommendation 5 advised that the law should not contain a minimum capital requirement for the formation of an UNLLO. Further, it was observed that paragraph 45 of the commentary noted a number of mandatory mechanisms in the draft legislative guide

for the protection of third parties dealing with the UNLLO, as well as suggesting in paragraph 47 certain other mechanisms that might be implemented by States whose policy considerations required the imposition of a minimum capital requirement.

39. A proposal was made that the text should also permit States to require a nominal amount of minimal capital at the time of formation of the UNLLO, or to impose progressive capital requirements over time. The reason for that suggestion was said to be that minimum capital requirements functioned not only to protect third parties, but that they also assisted in terms of the soundness, effectiveness and productivity of the enterprise and provided information in respect of financial and governance rights.

40. In response, reference was made to previous discussions in the Working Group opposing the imposition of minimum capital requirements on MSMEs (see the references in para. 38 above), as well as to the fact that draft recommendation 5 did not preclude the UNLLO from raising capital later in its life cycle, after its formation.

41. In reference to consideration in the Working Group of paragraph 47, it was observed that some regional and State legal systems contained a conversion mechanism requiring very small enterprises to be converted to more complex legal business forms once they reached a certain size. It was also noted that some States provided assistance for micro-enterprises only until they reached a certain size. There was some support in the Working Group for the content of draft paragraph 47, which some delegations were also in favour of expanding, for example by emphasizing in the commentary the importance to the UNLLO of building up its capital over time. There was also support for retaining the first sentence of paragraph 47 in its current location and for relocating the second and third sentences of that paragraph, possibly in relation to draft recommendations 23 and 24 in respect of the later stages of the UNLLO's life cycle. It was also observed that the Working Group may wish to consider draft recommendation 5 in relation to its future consideration of draft recommendation 17 in respect of members' contributions, although it was observed that the context of the two was different in that recommendation 5 concerned capital required at the formation of the UNLLO, while recommendation 17 was in respect of the operation of the UNLLO after its creation.

42. After discussion, the Working Group agreed that the general view and the current prevailing practice was that minimum capital requirements should not be imposed since such requirements could create barriers for MSMEs wishing to enter the legally regulated economy. As such, it was agreed that draft recommendation 5 should be retained in the text as prepared. In addition, the Secretariat was requested to reflect the considerations raised in the Working Group during the current and previous sessions in regard to policy choices for and against capital requirements in the commentary of the draft legislative guide for review at a future session.

Recommendation 6 and paragraphs 48 to 52 of A/CN.9/WG.I/WP.99

43. The Working Group was in agreement with the general principle of draft recommendation 6 that the name of the simplified business entity should include a phrase or abbreviation that put third parties on notice of its nature. While there was agreement to use UNLLO on an interim basis as suggested earlier in the session, some concern was raised in respect of its appropriateness due to its reference to "UNCITRAL" ("UN") and its use of the word "organization". The Working Group agreed that, particularly in light of the considerations outlined above in paragraphs 18, 19 and 22, the draft legislative guide in A/CN.9/WG.I/WP.99 and Add.1 were an appropriate starting point for the Working Group in the fulfilment of its mandate.

44. A proposal was made to combine draft recommendation 6 with draft recommendation 9(a)(i). The Working Group did not take up that proposal, as the prevailing view was that the two recommendations concerned different matters (recommendation 6 concerned disclosure of the UNLLO's limited liability status to third parties, while recommendation 9 concerned what information must be filed for

the UNLLO's creation), and that the concepts should be kept separate for the sake of simplicity and clarity.

45. In relation to paragraph 49 of the commentary, it was observed that while there was agreement that strict sanctions for UNLLOs failing to use their distinctive name or abbreviation in correspondence with third parties might not be recommended, the Working Group might wish to consider at a later stage whether it should include a recommendation in respect of the consequences for an UNLLO that did not observe its legal requirements.

46. It was suggested that paragraphs 50 to 52 of the commentary were more in keeping with the Working Group's preparation of a draft legislative guide on business registration. In reference to draft paragraph 52, a view was expressed that access to modern technology could be a complicating factor for businesses with a similar name, even when they operated in different industries or geographic regions; however, it was also observed that similar names were likely to arise given the sheer number of small businesses and that prohibiting their use might not be practical. The Working Group agreed to delete paragraphs 50 to 52 and to replace them with an appropriate reference to the draft legislative guide on business registration. The Working Group agreed to retain the text of draft recommendation 6 as drafted.

B. Formation of the UNLLO

Recommendation 7 and paragraphs 53 to 55 of A/CN.9/WG.I/WP.99

47. In keeping with the previous decision of the Working Group (see footnote 51 of A/CN.9/WG.I/WP.99), there was broad support for the suggestion that draft recommendation 7 should be adjusted to state expressly that any "legal or natural" person could be a member of the UNLLO. Concern was expressed that if a legal person, and especially another UNLLO, were permitted to be the sole member of an UNLLO such an arrangement might increase the risk of money-laundering, fraud and other illicit behaviour on the part of the UNLLO. It was observed that business law was not thought to be an appropriate tool for such regulation and that it should be left to enacting States to adopt the necessary measures to prevent such illicit activity, but that the commentary might include additional reference to the work of the Financial Action Task Force (FATF) on disclosure of beneficial ownership (see also footnote 67). After discussion, the Working Group agreed that the draft legislative guide should facilitate broad use of the UNLLO, and should thus permit the UNLLO to have legal persons among its members. The Working Group requested the Secretariat to consider how best to reflect that decision, whether through including in draft recommendation 7 the phrase "legal or natural" between "any" and "person" or whether to include it in a definitional section, as well as to ensure that the understanding of "a legal person" was broad enough to include legal entities capable of making an investment. A delegation observed that the approach in recommendation 7 was too restrictive, because it precluded additional alternatives to become a member in this type of entity such as through trusts and other patrimonial structures existing in both civil law and common law jurisdictions.

48. It was suggested that an addition be made to paragraph 54 of A/CN.9/WG.I/WP.99 including the possibility of States having a limit on the number of UNLLOs of which a legal or natural person could be a member. There was support in the Working Group that the phrase "an UNLLO may have a maximum number of members, or that" in paragraph 54 of A/CN.9/WG.I/WP.99 should be deleted. Further, it was observed that the final sentence of paragraph 53 should be maintained, and possibly moved to the beginning of paragraph 54, to signal that stipulating a maximum number of UNLLO members was not recommended. A proposal was also made that the draft commentary to draft recommendation 7 could clarify that the UNLLO was not permitted to be listed in the stock market. It was, however, noted that paragraphs 26 and 27 of A/CN.9/WG.I/WP.99 already addressed the issue of the nature and main features of the UNLLO, but that if necessary, additional detail could be added to those paragraphs for consideration by the Working Group at a later stage.

49. A suggestion was made to divide draft recommendation 7 into two recommendations along the following lines: (a) The law should provide that the UNLLO must have at least one member from the time of its formation until its dissolution; and (b) Any legal or natural person may be a member of the UNLLO. A view was expressed that adjusting the recommendation as suggested could result in a situation in which a sole member who passed away would leave the UNLLO without a member, however, it was agreed that the inheritance laws of the State or the dissolution and winding-up provisions of the legislative guide would govern such an eventuality. Although the Working Group agreed to leave the issue of whether or not to divide draft recommendation 7 for future consideration, there was agreement that the commentary to draft recommendation 7 should emphasize the requirement that an UNLLO should have at least one member at all times (see para. 55 of A/CN.9/WG.I/WP.99).

Recommendation 8 and paragraphs 56 to 59 of A/CN.9/WG.I/WP.99

50. The Working Group recalled that at a previous session there had been broad agreement that the preferred time of formation was at the moment of issuance of the certificate of registration of the simplified business entity (see para. 58, A/CN.9/WG.I/WP.99 and para. 65 of A/CN.9/831). It was observed that that approach would likely be included in the draft legislative guide on business registration and should be linked to the current text, and further that draft recommendation 8 and its commentary left scope for the enacting State to specify the precise moment at which an UNLLO came into existence as a legal entity. After discussion and consideration of whether it should be possible for the UNLLO to come into legal existence at a time before or after the moment of its registration, the Working Group agreed to revise the text of draft recommendation 8 along the following lines: "The law should specify the moment at which the UNLLO acquires its legal personality." The Working Group agreed that the commentary should recommend that the time of constitution of legal personality should be either at the time of registration or after registration.

51. It was observed that the Working Group might wish to consider including commentary in the legislative guide in respect of contracts that were entered into prior to the legal formation of the UNLLO. It was suggested that such commentary could be inserted at an appropriate location in the current draft so as to highlight that members may wish to consider how such matters are to be dealt with in their members' agreement.

Recommendation 9 and paragraphs 60 to 67 of A/CN.9/WG.I/WP.99

52. The Working Group agreed to revert in the draft legislative guide to the use of the phrase "formation document" (as found in the draft model law in A/CN.9/WG.I/WP.89 and the annex to A/CN.9/WG.I/WP.83) in lieu of the phrase "formation information," on the understanding that the word "document" was intended to refer to electronic, paper-based and mixed media information that must be submitted to the designated State authority in order to create an UNLLO. The Working Group also widely supported a suggestion that at this stage of its discussion on draft recommendation 9 it should only consider the information required for the valid formation of an UNLLO, and that it would discuss at a later stage which information on the formation and organization of the UNLLO should be required to be publicly disclosed.

53. It was observed that the current text of draft recommendation 9 was intended to contain the minimum information required for the valid formation of the UNLLO. Views were expressed that additional information should be added to that minimum requirement. However, the Working Group was reminded that in the spirit of the "think small first" approach taken by the draft legislative guide, the purpose of the recommendation was to list only the minimum information necessary for the establishment and operation of the UNLLO and that any additional requirements could create an unnecessary burden for MSMEs and could jeopardize their resort to the UNLLO legal form. Although some views were expressed that it was not necessary to include the names of the managers of the UNLLO, the Working Group

was in general agreement that the information listed in subparagraph (a) of draft recommendation 9 met the threshold for the minimum information necessary to create the UNLLO, although some clarification of the terminology in subparagraph (a)(iii) might be necessary.

54. It was suggested that in keeping with the approach outlined in the paragraph above, information in subparagraph (b) of draft recommendation 9 on the name and address of each member of the UNLLO should not be required for the valid formation of the UNLLO. It was observed that such a requirement might place an unnecessary burden on entrepreneurs in terms of the need to update the information whenever membership in the UNLLO changed. It was further suggested that errors in the spelling of names and addresses of the members could raise questions relating to the legal validity of the UNLLO. It was observed that the issue of the correction of errors was one of the matters considered in the legislative guide on business registration also under preparation by the Working Group. It was also observed that this matter might need to be addressed in the commentary to the UNLLO. Moreover, it was noted that compliance by an enacting State with FATF recommendation 24 (see footnote 67 of A/CN.9/WG.I/WP.99 as well as para. 47 above) required only information on the name(s) of the UNLLO manager(s), and not of the members of the UNLLO. Further, it was suggested that for transparency and other purposes, information on the names and addresses of its members could be maintained by the UNLLO, and that such information could made available upon the request of the State or of interested parties. Although some delegations remained of the view that the name(s) of at least the founding member(s) should be included in draft recommendation 9, after discussion, the Working Group agreed that the names and addresses of the UNLLO members need not be included in the information required for the formation of the UNLLO and that paragraph (b) of draft recommendation 9 should be deleted.

55. After discussion and although different views were expressed on this issue, the Working Group agreed that the following information was not necessary for the valid formation of an UNLLO, and thus should not be included in draft recommendation 9: (i) the limited liability status of the UNLLO, which was noted to be explicit in the UNLLO's name; (ii) the moment at which the UNLLO possessed legal personality, which would form part of its business registry file; (iii) the business activities of the UNLLO; (iv) the capital of the UNLLO, if any; (v) any limitation on the extent to which UNLLO managers could legally bind the UNLLO; (vi) any limitation on the number of members of the UNLLO; and (vii) any restrictions on the transfer of ownership interests in the UNLLO.

Recommendation 10 and paragraph 68 of A/CN.9/WG.I/WP.99

56. It was observed that draft recommendation 10 might be unnecessary and could cause confusion by seeming to suggest that a manager could unilaterally change the content of the formation document of the UNLLO. Such information could possibly include key features of the UNLLO including its name or type of management, and there was a general view that such decisions should be left to UNLLO members. The Working Group further noted that if the goal of the draft recommendation was to keep the information in the business registry current, that issue might be sufficiently dealt with in the draft legislative guide on business registration, which considered various mechanisms for that purpose (see also para. 61 of A/CN.9/WG.I/WP.99).

57. After discussion, the Working Group agreed to delete draft recommendation 10 from the text, requesting the Secretariat to consider whether elements of the commentary in draft paragraph 68 should be retained elsewhere in the text, possibly in respect of draft recommendation 9.

C. Organization of the UNLLO

Recommendation 11 and paragraphs 1 to 4 of A/CN.9/WG.I/WP.99/Add.1

58. The Working Group agreed to defer consideration of draft recommendation 11 until a later stage of its deliberations in light of its reference to a list of the mandatory

recommendations drawn from throughout the text, including some that had not yet been considered by the Working Group.

Recommendation 12 and paragraphs 5 to 8 of A/CN.9/WG.I/WP.99/Add.1

59. The view was expressed that recommendation 12 as currently drafted might be cumbersome for UNLLOs wishing to scale up in size. The reasoning for that view was said to be that the increased number of members would not easily permit each of them to share equally in management, as established by the default rule, and that it might not be practical for members to nominate a manager, despite the default rule in draft recommendation 16 that they could do so by way of a simple majority decision. It was proposed that draft recommendation 12 should instead be adjusted such that the default rule would be that only a single member UNLLO would be member-managed, while the default position for all multi-member UNLLOs would be that they would be manager-managed. Academic research was also cited in support of that position, and there was some support for the proposal in the Working Group.

60. In response to that proposal, it was noted that draft recommendation 12 was designed with the "think small first" principle in mind and that, in that context, the appropriate default rule was thought to be the simple approach that all members of the UNLLO should share equally in its management. The appropriateness of that approach was thought to be particularly so in the case of micro and small enterprises, since those UNLLOs that were larger in size would have greater understanding of management concepts and more resources so as to better be able to contract out of the simple member-manager default rule and adopt a management regime considered more appropriate for their context. In addition, it was noted that unless the proposal intended to limit the number of managers to one, the issue of multiple decision-makers could equally arise if the proposal were adopted by the Working Group. It was further observed that members of the UNLLO were free, in any event, to agree by unanimous decision to adopt a manager-managed system in lieu of the member-managed default approach, and in doing so each member would thus have to agree consciously to give up any management role, but that if the default rule were changed to require the appointment of a manager for multiple member UNLLOs, a member could effectively be deprived against that member's will of an opportunity to manage the business.

61. Reference was made to paragraph 84 of the report of the twenty-fifth session of the Working Group (A/CN.9/860) which listed a number of features that the Working Group agreed should be contained in the text being prepared on a simplified business entity. It was noted that although that list had been prepared in reference to the draft model law contained in A/CN.9/WG.I/WP.89 that had then been under consideration by the Working Group and was thus quite detailed, each of the features listed in paragraph 84 was in fact consistent with the draft legislative guide on an UNLLO currently under consideration.

62. The prevailing view in the Working Group was that recommendation 12 should be retained in the text as currently drafted, and the proposal to change it was not taken up. Later in the session, the Working Group revisited that decision (see para. 69 below).

Recommendation 13 and paragraphs 9 to 11 of A/CN.9/WG.I/WP.99/Add.1

63. There was broad agreement in the Working Group that the unanimous consent rule in draft recommendation 13(c) might not be workable in practice, particularly if the UNLLO could have an unlimited number of members. It was agreed that the rule for decisions on matters outside of the ordinary course of business should instead be that of a "qualified majority" such as, for example, a two-thirds majority. It was also agreed that the phrase "simple majority" as used in the text should be modified by referring either to "majority" or "absolute majority" and that consideration might be given to whether such terms should be defined in the text. In determining which matters would be considered "outside of the ordinary course of business and activities of the UNLLO", the Working Group agreed that those instances, which would require

a qualified majority, could be illustrated by reference to the non-exhaustive list found in paragraph 10 of the commentary, which should later be specified clearly.

64. The view was expressed that draft recommendation 13 might be clearer if the concepts of management and control (i.e. members' authority to make decisions) that it contained were separated out into two distinct recommendations irrespective of whether the UNLLO was member-managed or manager-managed. For example, it was said to be unclear whether paragraph (c) of draft recommendation 13 would also apply to manager-managed UNLLOs, since it concerned matters outside of the ordinary course of the activities and affairs of the UNLLO. It was also suggested that additional clarification might be achieved by considering separately the application of the draft recommendation in the member-manager context, particularly in reference to paragraphs (b) and (c) of recommendation 13, and in the manager-managed context. There was support in the Working Group for those views.

65. In order to further clarify the text, a proposal was made to differentiate the concepts represented in draft recommendation 13 into two distinct recommendations, with one dealing with daily management issues and the other dealing with control of the UNLLO by its members. The proposal was: to move draft recommendation 12 and issues relating to the daily management of the UNLLO to Chapter D ("Managers"); to change the name of Chapter C to "Organization and Control of the UNLLO"; and to change the word "manage" in paragraph (a) of recommendation 13 to "control". It was explained that an "equal right to control" would mean that the default approach would be that each member would have a vote, which could be cast in making majority decisions in the cases outlined in paragraph (b), which concerned day-to-day operational aspects of the business, and by way of qualified majority in the cases outlined in paragraph (c), which concerned decisions of fundamental importance to the UNLLO itself. There was some support in the Working Group for that proposal.

66. In considering the proposal outlined in the paragraph above, a number of additional issues were raised in the Working Group, including:

(a) That discussion of control might be more appropriate in connection with recommendations 17 and 18 on contributions by members of the UNLLO;

(b) That discussion, in particular, of voting rights might also be had in connection with contributions, and that such rights might be linked to the proportion of a member's contribution;

(c) That it could be difficult to value a member's contribution to the UNLLO, which could consist of goodwill or other intangibles, suggesting that equal allocation of voting rights might be a better default rule;

(d) That members would be likely to agree on their voting rights based on their contributions, such that resort to a default rule for equal voting was unlikely in practice;

(e) That the UNLLO could be required to make decisions on a variety of matters at the time of its formation; however, it was observed that that approach could in itself create barriers to entry; and

(f) That the draft legislative guide generally contained default rules based on equality, for example, in respect of control, contributions, and distributions, but that they were in the text as a consequence of having been agreed as appropriate at previous sessions of the Working Group and that, in any event, broad freedom of contract for members to decide their own rules was the underlying principle of the text.

67. After discussion in the Working Group, it was proposed that paragraph (a) of draft recommendation 13 should be replaced with the text along the following lines: "(a) The members of the UNLLO have rights of control in proportion to their contributions, if the value of the contribution is stated in the formation document or members' agreement. If the value of the contribution is not stated in the formation document or members' agreement, members have equal rights of control." Although it was observed that the phrase "unless otherwise agreed" might not be needed in the

chapeau of draft recommendation 13, it was noted that it might still be needed in respect of paragraphs (b) and (c) and that efforts to rationalize the drafting could be made in a future iteration of the text. In response to a question whether the adoption of the proposal would necessitate a change to the agreed text of draft recommendation 5 that the law should not contain a minimum capital requirement, it was observed that members were entitled to provide information in the formation document in addition to the recommendation 9 minimum requirements (see, also, the commentary in paragraph 67 of A/CN.9/WG.I/WP.99). An additional proposal was made that the phrase "voting rights" could be substituted for the phrase "rights of control" in the proposal, and with that adjustment, the Working Group agreed to adopt the proposed text for draft recommendation 13(a).

68. It was noted that in order to create an UNLLO, draft recommendation 9(a)(iii) already required its founders to indicate whether the UNLLO was to be member-managed or manager-managed. There was general agreement in the Working Group that this requirement effectively obviated the need for a default rule on the matter, since the choice would already be made upon the establishment of the UNLLO.

69. In light of the Working Group's consideration of draft recommendation 13 and of its agreement that draft recommendation 9 required an indication of whether the UNLLO was member-managed or manager-managed at the time of its formation, a proposal was made to revise the decision of the Working Group in respect of the text of draft recommendation 12 (see para. 62 above) by replacing it with text along the following lines: "The UNLLO may be member-managed or manager-managed. A single member UNLLO will be member-managed unless otherwise agreed." It was queried whether the second sentence of the proposal was necessary, since all UNLLOs, including single member UNLLOs, would have to choose at the time of formation whether they were member-managed or manager-managed. An additional question was raised whether an UNLLO would be validly formed if a member was declared manager in the formation document or submitted the formation document without expressly being appointed manager in the members' agreement. After discussion, the Working Group agreed to replace the text of draft recommendation 12 with the proposed text. A few delegations supported the view that commentary should be added indicating that it was also recommended that enacting States should provide that UNLLOs with only a few members would also be subject to the default rule of member-management.

D. Presentation of A/CN.9/WG.I/WP.94

70. The Working Group heard a short introduction of working paper A/CN.9/WG.I/WP.94 which presented a legislative approach that allows individual entrepreneurs to benefit from limited liability without requiring them to create a legal person that is separate from the natural person. It was said that under such a scheme, defined as Entrepreneur with Limited Liability (EIRL), the individual entrepreneur could allocate assets to its professional activity that were segregated from its personal assets. Pursuant to this form of asset partitioning, business creditors could only pledge the assets allocated to the commercial activity of the entrepreneur and not its personal assets or those of the entrepreneur's family. It was also said that the principle of asset segregation, along the lines presented in A/CN.9/WG.I/WP.94, was not new and that several States had prepared legislation based on that principle in the past fifty years. It was further noted that similar principles to those underlying the scheme of the Entrepreneur with Limited Liability had inspired the legislative scheme of the "entreprenant" adopted by the seventeen OHADA Member States.

V. Other matters

71. The Working Group recalled that its twenty-eighth session was scheduled to be held in New York from 1 to 9 May 2017. The Working Group further noted the decision of the Commission at its forty-ninth session (para. 394, A/71/17) that the

fifty-first session of Working Group V (Insolvency Law) would be held from 10 to 19 May 2017. The Working Group was advised that Working Group V intended to consider issues related to MSMEs (pursuant to the decision of the Commission confirmed in 2016, see para. 246, A/71/17) on the first day of its session, i.e. 10 May 2017, and that delegates to Working Group I were invited to attend and participate in that discussion.

72. The Working Group confirmed that it would consider the draft legislative guide on key principles of business registration currently under preparation during the first week of its twenty-eighth session, i.e. from 1 to 5 May 2017. Further, the Working Group decided that from 8 to 9 May 2017, it would continue its discussion of a draft legislative guide on an UNLLO (A/CN.9/WG.I/WP.99 and Add.1), as well as consider possible future work.

B. Contribution by the United Nations Conference on Trade and Development (UNCTAD): lessons learned on business registration (A/CN.9/WG.I/WP.98)

[Original: English]

The secretariat of the United Nations Conference on Trade and Development (UNCTAD) has submitted to the secretariat of the United Nations Commission on International Trade Law (UNCITRAL) the information in the annex attached in order to provide assistance to the Working Group in its deliberations. The information attached is reproduced in the form in which it was received by the UNCITRAL Secretariat.

Background

This paper is an initial contribution from the United Nations Conference on Trade and Development (**UNCTAD**). It reflects insights and best practices learned over the past decade by the Business Facilitation Program (www.businessfacilitation.org) in UNCTAD's Division on Investment and Enterprise, and by the Global Enterprise Registration team. The paper provides:

(a) An overview of importance of formalization;

(b) A definition of business registration and the challenges it poses;

(c) Lessons learned regarding business registration;

(d) Lessons learned regarding the business registry; and

(e) Examples of effective business registration websites already implemented.

Over the past 10 years UNCTAD's business facilitation program has helped 27 countries put 1,786 administrative procedures online, and in the process reduced the number of steps required to register a business by 80 per cent on average.[1] UNCTAD's business facilitation program provides technical assistance to help countries develop computer systems (information portals and online single windows) that contribute to greater transparency and efficiency in public services and improved governance.

The Global Enterprise Registration portal (**GER.co**), launched at the United Nations World Investment Forum in October 2014, is the world's first website with links to all business registration websites worldwide and a rating of each website's user-friendliness. The GER.co website shows that as of March 11, 2016, 62 economies have not put their business registration processes online. Twenty-eight economies have developed single windows to allow easy online registration; of those, four provide all mandatory registrations and certificates online. The remaining 107 economies with online business registration processes offer information portals describing those processes.[2] Governments can reference GER.co to learn best practices from their peers.

A. Importance of Formalization

Recognizing the importance of formalizing businesses, the **United Nations' Sustainable Development Goal 8, Target 8.3** "encourages the formalization and growth of micro, small, and medium-sized enterprises[3] **ILO labor standard (R204)** further recommends that International Labor Organization (ILO) members facilitate workers' transition from the informal to the formal economy.[4]

[4] www.ilo.org/dyn/normlex/en/f?p=NORMLEXPUB:12100:0::NO::P12100_ILO_CODE:R204.

A 2010 report by UNCTAD shows that formalizing even just a small portion of the informal sector could significantly increase government fiscal revenues and support the infrastructure development vital for domestic growth and for attracting foreign investment.[5]

Informality is a global challenge. According to the Organization for Economic Cooperation and Development (OECD), 1.8 billion people work in the informal economy out of a global working population of 3 billion.[6] That is 60 per cent of the global workforce, with the proportion projected to increase to around 66 per cent by 2020.[7] In developing countries the problem of informality is particularly acute. The World Bank's International Finance Corporation (IFC) and the Global Partnership for Financial Inclusion estimate that over 90 percent of MSMEs in developing countries operate in the informal sector.[8]

Informality also has a gender dimension. According to the IFC, "worldwide, women are three times more likely than men to be working in the informal economy. This has huge implications. Formalization of a business is the first step toward accessing financial and other types of support that can help a small business grow to scale."[9]

Greater formalization is essential to inclusive economic growth, since formalization provides workers with the dignity of lawfulness and greater access to social and financial services and protections. Greater formalization will reduce corruption and opportunities for extortion. It will also increase government's tax revenues and ability to provide public services and infrastructure, which will contribute to economic growth.

B. Definitions

Business registration is, in practice, a series of processes involving multiple public agencies. To be able to work legally, an enterprise has to register with various registries.

In most countries these registries are:

- Business registry (declaration of legal existence)
- National tax administration (registration as a tax payer)
- Social Security (registration as an employer)

In addition to these basic registrations, depending on the country, additional registrations may be required:

- Subnational tax administration (state or municipal level)
- Ministry of Labor (if the company employs personnel)
- Pension funds
- Chamber of Commerce
- Statistical office

A/CN.9/WG.I/WP.92 (Aug. 12, 2015) (citing studies by the International Finance Corporation and the Global Partnership for Financial Inclusion finding that "[t]he total number of MSMEs worldwide is estimated to be between 420 to 510 million businesses, of which 360 to 440 million (around 86 per cent) are in emerging markets. Of these, 36 to 44 million SMEs globally (comprising about 9 percent of the total MSME population) are registered, i.e. they are operating within the legally regulated economy."

• Other offices

Depending on the business activity and location, specific licences may be required: hygiene and security, conformity to urban planning, banking and insurance licences, food processing, sale of liquors, etc.

The complexity of registration derives, for businesses, from the multiple registries and interactions or steps involved in the process, and from the quantity of information they are required to provide.

C. Lessons learned regarding business registration across all public agencies

1. **User-centric approach**. Governments' goals at all times should be simple, efficient, low cost registration, and simple, cost-effective procedures, as seen from the user's point of view.

2. **Procedures**. Governments should keep to a minimum:

(a) The number of different registries to which businesses should register. Governments should review carefully the services provided by existing registries, their relevance, and the cost/benefit relationship;

(b) The quantity and complexity of information requested from businesses by the various registries. The information requested should be strictly restricted to the data effectively necessary for the concerned registries to exercise properly the control, or grant the support, entrusted to them;

(c) The number of interactions and the time necessary for registration with the various registries.

3. **Single Windows**. Governments should make it possible for businesses to register simultaneously with all the mandatory registries, by providing data through a single form, providing only one set of documents and only one payment, through physical or electronic single windows.

4. **Information**. Governments should make publicly available, at a minimum:

(a) A list of all registries for which registration is mandatory, and for each registry indicate who must register and the purpose of that registration;

(b) For each registry, a list of the steps needed to achieve the registration, indicating for each step, the necessary contacts, the data, documents and payment required, the results to be expected, ways of complaints and recourse and the legal basis;

(c) Information about obligations taken on through business registration, clear instructions for compliance, and a description of penalties for non-compliance, if any;

(d) Information about the benefits of business registration, which typically include the ability to open a business bank account, protections through application of labor and safety standards, and improving infrastructure and services through tax payments;

(e) Whenever possible, this information should be made available online.

5. **Unique Business Identification Number**. Governments should grant to businesses a unique identification number that should be recognized and accepted by all public entities, at the national and subnational levels. The first registry with which a business registers should grant the unique identification number, and it should be easy for a business to retrieve that number if lost or forgotten. It would simplify registration and cross border trade and investment if all governments were to agree on a common alphanumeric system for registering businesses that would facilitate identification of a company's ultimate beneficiary ownership by country.

6. **Outreach, obligations and benefits**. Governments should proactively educate youth and entrepreneurs about the complete business registration process, including obligations taken on through registration, and the benefits of registration:

(a) Governments should promote business registration through public outreach campaigns to reduce informality arising from lack of access or understanding of the registration process and of the benefits of being registered;

(b) Governments should ensure that information regarding ongoing compliance with the law, such as issuance of licences and permits and notification of a business' closure, and fulfilment of obligations taken on by registration, such as tax payment, is similarly clear and easily available, and that penalties for non-compliance, if any, are known;

(c) Governments should consider adding incentives to the registration process, e.g. through access to ancillary services for registered businesses, such as establishment of a bank account, credit, training and access to health insurance.

D. Lessons learned regarding the business registry specifically

1. Registration at the business registry should be mandatory only for companies.

2. Individuals (i.e. sole traders/sole proprietorships) and partnerships should be offered the possibility to register if they want to benefit from services offered by the business registry, such as protecting a business or trade name, separating personal assets from assets devoted to the business or limiting their liability. (Removing the obligation for individuals to register at the business registry would not compromise the objective to formalize their activities, as they would still be required to register as tax payers and comply with all other registration procedures.)

3. Incorporation of non-publicly traded companies should be simplified through regimes such as the "SAS" (e.g. no minimum capital, no need for notarized by-laws, possibility of having only one shareholder, standardized incorporation documents, broad purpose clause permitting MSMEs to engage in all lawful activities, flexible organizational structure, maximum freedom of contract, full-fledged limited liability).

E. Examples of effective business registration websites already implemented in developing countries

The Global Registration Portal (GER.co) rates all the world's official business registration websites using a 10 dot scale to show their user-friendliness. The rating criteria reflect lessons learned by UNCTAD and the Kauffman Foundation's Global Entrepreneurship Network, which is the largest non-governmental organization in the world promoting the interests of entrepreneurs. GER.co is divided between online single windows and information portals. GER.co calls "online single windows" websites which either allow entrepreneurs to apply simultaneously for all mandatory registrations, with various public agencies, or will allow entrepreneurs to do so in the near future, even if that goal has not been achieved yet. Websites allowing registration with only one administration are not listed.

GER.co defines "Information portals" as websites showing information on the business registration process. These websites detail all of the mandatory registration processes with various public agencies or aim to do so in the future. Information portals describing processes for only one administration are not listed.

With the "Assessment of websites" tool on GER.co, governments can evaluate their own sites according to the GER rating criteria, which describe a website's functionality and features. Through self-assessment, governments can see their sites from the vantage point of users and see how to make their sites more user-friendly. Governments can look at websites with higher ratings on GER.co to learn from their peers.

A perfect rating for an online single window (10 green dots) means a government has implemented a web platform that allows the user to: (1) apply for all mandatory registrations through a single online form; (2) pay all fees through an electronic website included in the platform; (3) receive online all the certificates documenting that the business was successfully registered; and (4) contact a competent institution with any problems that may occur during the registration process.

A perfect rating for an information portal (10 green dots) means a government has clearly listed: (1) what to do: the mandatory steps to register a business, with the end goals of each mandatory registration clearly described and their legal justifications clearly indicated; (2) how to do it: clearly explained how to process the mandatory registrations by providing the contact information for each office involved in the registration process along with required documentation, downloadable forms, and the cost and average time to complete each registration, and (3) that the site has a user-friendly orientation: the process is presented step-by-step, from the user's point of view, and the site provides contact information to register a complaint.

C. Note by the Secretariat on a draft legislative guide on an UNCITRAL Limited Liability Organization (A/CN.9/WG.I/WP.99 and Add.1)

[Original: English]

Contents

I. Introduction

1. At its forty-sixth session in 2013, the United Nations Commission on International Trade Law (UNCITRAL) requested that work be commenced aimed at reducing the legal obstacles and barriers encountered by micro, small and medium-sized enterprises (MSMEs) throughout their life cycle, with a particular focus on their context in developing economies.[1] The life cycle of a business could be said to consist of several stages, which may be summarized as starting a business, operating a business, restructuring a business and dissolving a business. The mandate granted to Working Group I by the Commission was that work should focus on the first stage in that life cycle, i.e. starting a business.[2]

2. To that end, Working Group I commenced its deliberations at its twenty-second session in February 2014. At its most recent session (twenty-sixth session, New York, 4 to 8 April 2016), Working Group I continued its consideration of two main topics, one of which is discussion of a simplified business entity as a business suited to the needs of MSMEs.[3] These deliberations had been taking place on the basis of the framework of issues drawn from the key features of simplified business regimes (outlined in A/CN.9/WG.I/WP.86), and as illustrated in the draft model law on a simplified business entity (A/CN.9/WG.I/WP.89), as well as other possible models (for example, that contained in the annex to A/CN.9/WG.I/WP.83).

3. Following its discussion of the framework of issues that might be considered in a simplified business regime, the Working Group decided that the legislative text it was preparing on a simplified business entity should be in the form of a legislative guide. To that end, the Working Group requested the Secretariat to prepare for discussion at a future session a draft legislative guide (consisting of recommendations and commentary) that reflected its policy discussions to date.[4] This draft legislative guide has been prepared by the Secretariat in response to that request.

4. The vast majority of businesses in both the developing and the developed world are MSMEs. As recognized by the Commission through its decision to grant Working Group I its current mandate, in the light of the forces of globalization and economic

---

[1] *Official Records of the General Assembly, Sixty-eighth Session, Supplement No. 17* (A/68/17), para. 321; reiterated at subsequent sessions of the Commission: ibid., *Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 321 and *Seventieth Session, Supplement No. 17* (A/70/17), paras. 220, 225, 340 and 321.

[2] The Commission stated that "such work should start with a focus on the legal questions surrounding the simplification of incorporation" and has confirmed Working Group I's approach that such work should proceed on two relevant issues: legal questions surrounding the creation of a simplified business entity and key principles in business registration. Supra, note 1, and ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), under preparation.

[3] Report of Working Group I (MSMEs) on the work of its twenty-sixth session, A/CN.9/866, paras. 22 to 47.

[4] Ibid., paras. 48 to 50.

integration it is important to strengthen the economic role and position of MSMEs. The Working Group has thus sought to establish the best practices of States and policymakers to create a legal business form tailored to facilitate the operation of MSMEs, thereby also stimulating entrepreneurship and innovation.

5. In its discussions to date, the Working Group has considered a number of different simplified business forms on which legislation has been enacted in various jurisdictions representing different legal traditions around the world. A selection of such business forms included in the comparative analysis that the Working Group first considered in this regard (A/CN.9/WG.I/WP.82) was drawn from 11 different States from different regions of the world and included 16 different legal regimes in total.[5] The Working Group has also received documentation and information in respect of several other simplified business forms that have been adopted in certain States to provide the benefits of, inter alia, asset partitioning to business entities, in a less complex form that may not necessitate the granting of legal personality.[6]

6. Other information in respect of different approaches to creating simplified business forms has been provided by delegations to Working Group I. These reforms have included specific legislative efforts to provide for single member businesses or business entities,[7] as well as broader reforms to assist MSMEs that have been implemented in various States, including in developing economies.[8]

7. Discussion in the Working Group on this topic has also provided a rich source of information relevant to the present topic. Many delegations have intervened to share the benefit of their lengthy experience in creating an appropriate national legislative framework to deal appropriately with key issues in respect of the various corporate business forms in their State.

8. Many of these business forms, simplified and otherwise, have enjoyed economic success in their respective jurisdictions. Moreover, the Working Group's combined experience regarding the various domestic approaches to creating and reforming legal business forms — both MSME-specific and otherwise — has highlighted that States' good practices share a number of key principles. These principles appear to transcend national borders and could be said to be international in their application.

9. This draft legislative guide has attempted to distil these good practices and key principles into a series of draft recommendations on how a State should institute and regulate a legal form for MSMEs that can best promote their success and sustainability. The draft commentary that precedes each recommendation relies on discussions that have taken place in the Working Group and on documentation it has considered at its sessions to explain in greater detail the rationale leading to those recommendations. The Working Group may wish to note that the Secretariat has made every effort to ensure that each issue that has been considered in discussions in the Working Group to date, as well as any agreement that has been reached on such issues,

---

[5] Those States were Colombia, France, Germany, India, Japan, New Zealand, Singapore, South Africa, the United Arab Emirates, the United Kingdom of Great Britain and Northern Ireland, and the United States of America. See footnote 4, A/CN.9/WG.I/WP.82.

[6] See the alternative legislative models for micro and small businesses described by Italy and France in A/CN.9/WG.I/WP.87 and A/CN.9/WG.I/WP.94.

[7] Information shared with the Working Group has included, for example, that in respect of the "auto-entrepreneur", in force both in France (see paras. 22 to 23, A/CN.9/WG.I/WP.87) and the Member States of the Organisation for the Harmonization of Business Law in Africa (known by its French acronym, OHADA) (Acte Uniforme Révisé Portant Sur Le Droit Commercial Général, adopted 15 December 2010, see www.ohada.com/actes-uniformes/940/999/titre-2-statut-de-l-entreprenant.html). Other efforts to create particular regimes for single member businesses have included those of the European Union (Proposal for a Directive of the European Parliament and of the Council on single-member private limited liability companies, European Commission, Brussels, 9.4.2014 (COM (2014) 212 final)), as well as a draft model law on a single member business entity prepared by the Secretariat (A/CN.9/WG.I/WP.86/Add.1).

[8] Information in this respect has been shared in the Working Group in respect of such reform efforts in a number of States, including Chile, China, Colombia, El Salvador, Mexico, the Philippines, Rwanda, Thailand, and others.

has been reflected in this draft legislative guide.[9] To assist readers in that regard, the present text is heavily footnoted.

10. As emphasized in materials previously considered by the Working Group,[10] and in keeping with its desire to create a legal text that can accommodate the evolution of the MSME from a very small single entrepreneur model to a more complex multi-member entity,[11] a "think small first" approach has also been taken in this draft legislative guide. To that end, this draft text has been prepared with a focus on the actual needs of MSMEs and consideration of how those entrepreneurs who operated them could most benefit from legislation based on these recommendations and be encouraged to conform to the rules they contain. Such entrepreneurs could range from individual street vendors working in busy marketplaces, to small family business owners wishing to scale up and formalize their operations, to small firms seeking to grow and position themselves in more innovative sectors, such as the information technology field.

11. In order to "think small first" and assess how best to design these draft legislative recommendations to meet the needs of entrepreneurs operating MSMEs, the Working Group may wish to consider what those needs might be. These could include a number of items, but it is suggested that, at a minimum, such needs might be the following.

12. First, most entrepreneurs could be expected to want *freedom, autonomy and flexibility* in how they operate their business, without the need to resort to rigid and formalistic rules and procedures or have detailed requirements dictated to them regarding how they must carry out their activities. They are likely to want to decide for themselves on many aspects of the business' current operations, as well as on how it might evolve and develop over time.

13. Second, MSME entrepreneurs are likely to want *speed and simplicity* to characterize not only the legal establishment of their business, but also its administration and operation. The rules governing the business should be in simple and accessible terms, and the use of modern technology and other simple techniques, such as the use of mobile applications to complete payments or prepare balance sheets, should be encouraged to assist such entrepreneurs.

14. Third, MSMEs need an *identity and visibility* in order to successfully compete in the market and to attract clients. These features facilitate their recognition in the market and permit third parties to more easily locate the business and its products. In addition to the obvious protections and advantages associated with taking on a legally recognized identity and operating within a framework of statutory laws,[12] the business can also use its identity to develop the reputation and "brand" of the business, which can add value to it.

15. Fourth, such entrepreneurs need *certainty in and protection of their property rights*. As such, MSME operators may be expected to want to be permitted to control the ownership rights in their business and to be able to take advantage of asset partitioning, so as to protect their personal assets from the claims that their creditors may have against the business. It is equally important for the personal creditors of those who own and/or manage these businesses not to be able to seize the assets of such businesses in order to satisfy such personal debts.

16. Finally, MSME operators generally want *to control and to manage their business*, rather than leaving those details to a professional manager.

---

[9] Of course, the Secretariat would be grateful if any oversight in that regard is highlighted so that those issues can be included in a future iteration of this draft text.

[10] See paras. 1 and 5, A/CN.9/WG.I/WP.86/Add.1; para. 3 (iii), A/CN.9/WG.I/WP.90; and paras. 2 and 39, A/CN.9/WG.I/WP.89.

[11] As agreed by the Working Group at its previous sessions (see paras. 24, 32 and 42 to 43 of A/CN.9/800, paras. 67 and 74 of A/CN.9/825, and para. 19 of A/CN.9/831).

[12] Such protections and advantages have been enumerated in para. 35 of A/CN.9/WG.I/WP.92, and include, inter alia, asset partitioning, protection against potential administrative abuse and other abuse of rights, easier access to credit, labour law protection for employees, and similar features.

17. Through "thinking small first" and considering the above-described real world business needs, this draft legislative guide aims at assisting States in the creation of legal rules tailored to satisfy those needs and expectations. For example, the need of MSME entrepreneurs for freedom, autonomy and flexibility is woven throughout this draft legislative guide in its recognition of the importance of freedom of contract and the text's avoidance of formalistic and rigid corporate law rules. However, this draft guide also acknowledges through its many default rules that such entrepreneurs may also require protection against circumstances or events that they may not foresee. Second, speed and simplicity characterize not only the recommendations for rules on the establishment of the business entity, but this guide as a whole uses accessible terminology, clearly acknowledges technology and welcomes its use. In addition, to provide MSMEs with identity and visibility, the draft recommendations provide the business entity with legal personality and provide a simple vehicle for the entrepreneur to create a legally recognized business. Further, limited liability protection for the business entity and rules on the transfer of rights of its members are some of the mechanisms that provide certainty and protection for the property rights of MSME operators. Finally, control by the MSME entrepreneur over the operation and management of their business is assured through an emphasis on member-management as the default governance approach and on the more horizontal hierarchical governance structure that characterizes this draft legislative guide.

18. The Working Group has also considered different approaches that could be taken to achieving its goal of creating a specific and simplified legal form to facilitate the operation of MSMEs. There was broad agreement in the Working Group that its goal should not be to reform and simplify outdated company law regimes, but rather to develop a separate and innovative approach based on the collective domestic experience of delegations, and to specifically tailor it to MSMEs.[13]

19. In view of that agreement and in recognition that more formalistic and rigid corporate-style rules may not be appropriate for such businesses, this draft legislative guide has taken the view that the optimal solution for the creation of an appropriate simplified legal regime for MSMEs is to draw ideas from the good practices in corporate law reform identified by the Working Group to date, while creating an innovative legal regime for MSMEs capable of standing on its own. The scheme envisioned in this draft legislative guide is thus neither dependent upon nor specifically linked to existing company law in any State.

20. One clear advantage of that approach is that it enables States to more easily adopt a regime that implements the legislative recommendations. Perhaps more important, however, is that this approach permits States to craft appropriate legislative measures using a clean slate approach, allowing them to step away from existing business forms and to respond to the real needs of the types of businesses that such a scheme seeks to serve. The approach favoured in this draft legislative guide is intended to acknowledge and focus on the real nature of many businesses in developing economies. Some of these businesses, of course, share common traits with businesses in more developed economies. The recommendations in this draft legislative guide create a legal business form that moves away from more traditional, hierarchical and formal governance towards less rigid and formalistic structures based on the actual needs and expectations of entrepreneurs. This approach may also present the best possible opportunity for the Working Group to achieve a unified text capable of being used in a cross-border context, and not dependent on the legal regime of any particular State, but rather representing a product of good practices drawn from legal regimes around the world.

21. Further, such an approach may also have important cross-border effects. As was indicated in the materials before UNCITRAL during its deliberations in 2013 leading to the establishment of the present MSME work, in addition to reducing barriers to MSMEs registering and operating their businesses within statutory frameworks and

[13] As agreed by the Working Group at its twenty-fourth session (New York, April 2015) (para. 54, A/CN.9/831). See, also different approaches to legal reform as outlined in paras. 5 to 7, A/CN.9/WG.I/WP.82.

helping them to maximize their economic potential, work on the simplification of business incorporation and registration could have additional international effects. In particular, an internationally recognized simplified business form could facilitate cross-border trade for MSMEs, since it would provide a recognizable basis for such business forms and avoid problems that might arise due to a lack of international recognition of the business form of the enterprise.[14]

22. In pursuit of this informed and innovative approach to MSME law reform, this draft legislative guide has adopted revised terminology that is intended to be as neutral as possible. In order to assist the Working Group in considering the real issues facing MSMEs and to learn from existing company law solutions but not to rely on their more rigid rules, "corporate" and "company" terminology is not used. Nor is the previous term "simplified business entity" used.[15] Instead, this guide describes a new entity: the "UNCITRAL Limited Liability Organization" (the "UNLLO"). Like all aspects of this draft text, use of this term is of course subject to the approval of the Working Group, but it is suggested that the term be adopted on an interim basis as a reminder of the innovative and independent goal to which the Working Group aspires.

23. Similarly, this draft text has dispensed with other corporate-related terminology in favour of more neutral terms. As previously agreed by the Working Group, the term "members" (and not "shareholders")[16] is used to describe the owners of the UNLLO, and a member's interest in the UNLLO is referred to as "ownership" or "interest" (and not "shares").[17] In addition, non-corporate terminology has also been chosen by describing as "formation information" the set of data that must be submitted upon the formation of an UNLLO and will largely be made public. The rules agreed by the members for the operation of the UNLLO, which will not generally be publicly disclosed, are referred to as the "members' agreement".[18]

24. The UNLLO approach in this draft legislative guide has been taken in an effort to fulfil each of the desired goals and considerations outlined above.[19] In addition, this text is intended to include all of the business law concepts considered by the Working Group to date, using them to create an innovative but informed legal business form based upon the actual needs of MSMEs in emerging markets.

---

[14] Note by the UNCITRAL Secretariat, A/CN.9/780, para. 10.

[15] The Working Group may wish to recall its previous discussions on what might be the best and most neutral term for the business entity being created. Although there was support for the use of the term "simplified business entity", a view was expressed that the phrase "simplified company" should be used, and the Working Group agreed to use the former term in the draft model law but to place it in square brackets (see para. 68, A/CN.9/825; and paras. and 38, A/CN.9/831.

[16] The Working Group agreed at its twenty-sixth session (New York, April 2016) that the term "share" should be replaced with an alternative and more neutral term (see para. 25, A/CN.9/866).

[17] The Working Group agreed at its twenty-fourth session (New York, April 2015) to use the term "member" rather than "shareholder", since it was thought to be more system-neutral and inclusive (see para. 48, A/CN.9/831).

[18] Although the terms "formation document" and "operating document" were chosen as neutral terms in previous iterations of the materials before the Working Group, concern was expressed since the legal regime in some States did not recognize two separate documents that corresponded to the functions as indicated. The Working Group agreed that the important feature to be preserved in a future iteration was not necessarily regarding the terminology, but rather in respect of the contents or information contained therein and which aspects of that information would be made public (see para. 39 and 68, A/CN.9/831).

[19] This draft legislative guide also takes into account those considerations said by some delegations to be key (see para. 66, A/CN.9/825 and para. 2, A/CN.9/WG.I/WP.89) including:
(i) permitting the simplified business entity to have one or more members; (ii) providing for full-fledged limited liability; (iii) establishing simple registration (see the draft legislative guide on business registration currently under preparation by the Working Group) and formation requirements; (iv) enabling maximum freedom of contract for members while establishing clear default rules to fill any gaps in rule-making; (v) providing for a flexible organizational structure; (vi) making minimum capital optional; (vii) not requiring a statement of the entity's purpose; (viii) permitting the optional use of intermediaries; (ix) providing for fiscal transparency and simplified accounting; and (x) building on the presumption that a ready-made business form statute should focus on the needs of the smallest entities first (the "think small first" principle).

II. Draft legislative guide on an UNCITRAL Limited Liability Organization (UNLLO)

A. General Provisions

25. As noted above, the approach taken in this draft legislative guide on an UNLLO is to create a legal business form that does not depend for its establishment, definition or operation on the existing law in an enacting State. Instead, the UNLLO is intended to be a distinct product of independent legislation whose preparation is guided by the recommendations in this draft legislative guide, and which is not specifically linked to any existing legislation in the enacting State.[20]

26. Although the legal forms for privately held businesses may vary from State to State, one of their main hallmarks could be said to be to function as independently as possible from the strict rules that govern public companies. For example, privately held businesses tend to have specific relief from the rules governing public companies including: simpler formation rules; nominal or no minimum capital requirement; greater freedom of contract; and fewer disclosure requirements.[21]

27. The main focus of legislative reforms to assist the creation of privately held business entities to date has been on the creation of flexible business forms that can be tailored to the needs of certain types of closely held businesses, including: MSMEs wishing to formalize and segregate personal and business assets; family firms; joint ventures; and professional service firms.[22] By way of this legislative guide, the UNLLO can now be added to this list. This flexibility in business form has been achieved in part by allowing the members of the business to agree through contractual mechanisms on the internal governance of the enterprise, to contract around the more superfluous and cumbersome protective requirements traditionally associated with public companies, and to tailor rights and duties that are more consistent with the needs of privately held businesses. Of course, most simplified business entity legislation also includes certain mandatory rules that cannot be contracted out of by agreement among the members, as well as default provisions to fill any gaps in their agreement.[23]

28. The Working Group has agreed in principle that freedom of contract should be a guiding principle in establishing the internal organization of the UNLLO.[24] In recognition of the importance of freedom of contract for such privately held businesses, the operation of the UNLLO is governed to as great an extent as possible by the contractual agreement reached by its members, except in cases where the legislation establishing the UNLLO is mandatory and cannot be contracted out of by agreement. Of course, in the case where an UNLLO has only one member, this agreement will be a reflection of the will of the single member of the UNLLO. The contractual agreement between the members of the UNLLO is referred to in this text as the "members' agreement".

29. In addition to offering broad flexibility and freedom of contract in establishing the internal governance of the enterprise, the provisions establishing the UNLLO as

---

[20] It will be recalled that this draft legislative guide takes an informed but innovative approach, first assessing the real needs of MSMEs in their economic context and then applying principles learned from existing domestic legal business forms to create an innovative and independent approach to satisfy those particular needs. This approach includes a movement away from more traditional, hierarchical and formal corporate governance structures to a more flexible and responsive regime so as to meet the needs and expectations of MSMEs, particularly in developing economies.

[21] International Encyclopedia of Comparative Law, Volume XIII, Business and Private Organizations (1998), Detlev Vagts ed., Chapter 2, Limited Liability Companies and Private Companies, pp. 2 and 13.

[22] See Working Paper A/CN.9/WG.I/WP.82, paras. 8-11.

[23] See Working Papers A/CN.9/WG.I/WP.82, paras. 10-11 and A/CN.9/WG.I/WP.86, para. 22.

[24] In that regard, the Working Group also observed that MSMEs could find it difficult to establish such rules, and that standard forms could be useful to assist such businesses (see para. 63, A/CN.9/800 and para. 23 of A/CN.9/WG.I/WP.86). Once the Working Group has advanced its work on this draft legislative guide, it may wish to consider whether it would be useful to prepare such standard form members' agreements to assist MSMEs in this regard.

recommended in this draft legislative guide provide default provisions to fill any gaps that might exist in the rules established by the members of the UNLLO. These default rules can be particularly important for smaller or less-experienced business persons who may not foresee every eventuality required for the successful operation of the UNLLO.

30. The fact that the UNLLO is established through an independent and delinked legislative approach along with expansive freedom of contract among its members to organize the UNLLO's operations is reflected in draft recommendation 1. In addition, the fact that the operation of the UNLLO will in large part be governed by the principle of the freedom of contract of its members is reflected below (in A/CN.9/WG.I/WP.99/Add.1) in draft recommendation 11.

Recommendation 1: The law should provide that an UNCITRAL Limited Liability Organization ("UNLLO") is governed by this law and by the members' agreement, if any.

31. Draft recommendation 2 permits an UNLLO to be organized for any lawful activity. Although the UNLLO must naturally be a privately held enterprise, this legislative guide takes a very broad approach to the permitted activity of an UNLLO in order to provide maximum flexibility to the MSMEs that are anticipated will use the business form. No mention is made in this draft legislative guide in respect of general objectives clauses, since the modern trend in that respect is to allow business entities to engage in all lawful activities under the law of the relevant State and to leave it open to the members of the UNLLO to decide whether or not they wish to include a more restrictive purpose clause in the members' agreement.[25]

32. The Working Group may wish to note that while it previously suggested that a simplified business entity could be limited to commercial or business purposes,[26] such a narrowing of the broad scope of the UNLLO may not be warranted in a text like the present legislative guide. Although this text recommends that a very permissive approach should be taken to drafting legislation to create the UNLLO legal form, a State referring to the legislative guide in the preparation of its legislation could nonetheless decide to narrow the permitted scope of an UNLLO according to its particular policy requirements.

33. As the recommendation is currently drafted, it would permit UNLLOs to engage in a very broad range of lawful activities, which could include non-profit activities as well as activities that may not necessarily be considered business activities under the law of the State, such as the simple ownership of property.

34. States wishing to more specifically enumerate the industrial sectors or activities in which an UNLLO may participate could prohibit an UNLLO from engaging in certain regulated industries, such as in the banking, microcredit or insurance industry.[27] Similarly, for additional clarity, participation in specific activities could also be specifically permitted, and might include activities in the agricultural, artisanal and cultural sectors,[28] or participation by cooperatives and funds.[29]

---

[25] The Working Group agreed at its twenty-third session (November 2014) during a discussion of whether purpose clauses were necessary that a very broad approach should be taken in this regard in order to provide maximum flexibility for MSMEs wishing to use the legal form being established (see para. 70, A/CN.9/825, para. 27 of A/CN.9/WG.I/WP.86, and para. 9 of A/CN.9/WG.I/WP.89).

[26] The Working Group suggested at a previous session that the simplified business entity be limited to a commercial privately held entity (see para. 69, A/CN.9/825), and later modified its view to suggest that the legal form should be limited to lawful "business", rather than "commercial" activity (see paras. 33, 36 and 37, A/CN.9/831).

[27] The Working Group agreed that it might be useful to establish what the scope of application of the legal text would be, for example, that it might exclude enterprises in certain highly regulated sectors (see para. 24, A/CN.9/800, para. 68, A/CN.9/825 and para. 8, A/CN.9/WG.I/WP.89).

[28] The Working Group agreed on such an inclusion at its twenty-fourth session (April 2015) (see para. 36 of A/CN.9/831).

[29] The Working Group agreed on the possibility of such an inclusion at its twenty-second (February 2014) and twenty-third (November 2014) sessions (see para. 25 of A/CN.9/800 and para. 69 of A/CN.9/825).

Recommendation 2: The law should provide that an UNLLO may be organized for any lawful activity.

35. This draft legislative guide on an UNLLO embraces the granting of legal personality in order to give clear expression to the nature of the UNLLO as a legal entity separate from its members.[30] Legal personality in this context confers upon the UNLLO the legal rights and duties necessary for it to function within a legal system, including the ability to acquire rights and assume obligations in its own name.[31]

36. Legal personality provides a means through which the UNLLO's assets can be separated from the personal assets of its members, a process which has been referred to as affirmative asset partitioning.[32] This, in turn, facilitates defensive asset partitioning by an UNLLO that has been granted limited liability and which can then protect the personal assets of the UNLLO members from exposure in the event that the UNLLO does not do well or becomes involved in legal disputes. At the same time, the distinct legal personality of the UNLLO also permits it to be shielded from potential claims by the personal creditors of its members.

37. Legal personality and limited liability protection (see draft recommendation 4) provide a convenient legal mechanism for the UNLLO to separate its assets from the personal assets of its members. However, it should be noted that, in some States, there are legislative models that permit the separation of business assets of an entity from the personal assets of its members without resort to legal personality and limited liability, thus providing the benefits of asset partitioning for MSMEs and their members by way of a legal structure that stops short of full limited liability and legal personality.[33]

38. It should be noted that this draft legislative guide does not consider domestic taxation policy in respect of the legal form of an UNLLO. In the interests of preparing a system-neutral legal form, such policy matters were thought best left to States drafting legislation on the basis of this guide, with the understanding that States consider their policy options in terms of how best to reduce legal obstacles for UNLLOs, and MSMEs, more generally.[34]

Recommendation 3: The law should provide that the UNLLO has a legal personality.

39. Limited liability is a legal concept that permits entrepreneurs to take business risks without fear that their personal assets will be jeopardized in case of failure. This is important both for the protection of the members of the organization and for the promotion of innovation and business creation. However, many MSMEs do not currently enjoy the benefits of limited liability protection. As such, and in order to offer that important and attractive feature to such economic actors, the legislative

---

[30] At its twenty-second session (February 2014), the Working Group expressed general support for the view that limited liability and legal personality offered MSMEs important advantages in doing business and that it was important to provide access to these advantages to such enterprises (see para. 28, A/CN.9/800 and para. 69, A/CN.9/800). Legal personality was also considered by the Working Group at its twenty-third (November 2014) and twenty-fourth (April 2015) sessions (see para. 10 of A/CN.9/WG.I/WP.89, para. 72 of A/CN.9/825 and paras. 42-49 of A/CN.9/831), including key aspects that should be included in the concept of legal personality.

[31] The concept of legal personality of the entity has also been variously described as including the power to do all things necessary or convenient to carry on its activities, the ability to acquire and hold tangible or intangible assets, the ability to act through agents, and the capacity to sue and be sued in its own name.

[32] See, for example, Henry Hansmann and Reinier Kraakman, "The Essential Role of Organizational Law", 110 Yale L.J. 387 (2000) (www.yalelawjournal.org/article/the-essential-role-of-organizational-law).

[33] See, for example, the mechanisms described in paras. 47 to 49 of A/CN.9/WG.I/WP.92, as reported to the Working Group in A/CN.9/WG.I/WP.87, and referred to in para. 29 of A/CN.9/800, paras. 56 to 61 of A/CN.9/825 and para. 20 of A/CN.9/831. An additional such legislative mechanism is described in A/CN.9/WG.I/WP.94.

[34] The Working Group was encouraged at its twenty-fourth session (New York, April 2015) to avoid an overemphasis on tax-related issues and focus on developing a system-neutral legal instrument, and it was suggested that although tax issues need not be directly addressed in the draft text, they should be noted in the commentary (see paras. 18 and 50, A/CN.9/831).

regime establishing the UNLLO offers limited liability protection to UNLLO members.[35]

40. The presence of such a liability shield generally prevents the members of an UNLLO from incurring direct or indirect personal liability as a result of the activities of the UNLLO. In effect, the financial liability of a member of the UNLLO is limited to a fixed sum, usually the value of the member's contribution to the UNLLO. Limited liability plays an important role to assist MSMEs in that it provides the members of an UNLLO with a convenient means for defensive asset partitioning, separating a member's personal assets from those owned by the UNLLO, thus protecting a member's personal assets from exposure in the event that the business does not thrive or becomes involved in legal disputes. In addition, as noted above, limited liability of members and distinct legal personality of the organization often go hand in hand (see draft recommendation 3). Granting both attributes to the UNLLO will assist in promoting the stability of the organization and access by it to lower cost credit.

41. Of course, the UNLLO itself has unlimited liability to its creditors and all of the assets of the UNLLO are available to satisfy those claims. In addition, it is important to note that the limitation on the liability of the member for the obligations of the UNLLO refers to liability that results solely from that person's status as a member of the UNLLO. Members of the UNLLO may still have personal liability (including tort liability), or liability to other members of the UNLLO, or for example, a member may be liable for a personal guarantee that has been undertaken in respect of the obligations of the UNLLO.

42. Draft recommendation 4 establishes the default rule that members of the UNLLO will enjoy limited liability for the obligations of the UNLLO in the ordinary course of business. It would also be possible under the draft recommendation for members to agree in the members' agreement that one or more of them would forego the limited liability protection offered by the default rule, or that a member's limited liability for the losses of the UNLLO would be greater than the value of that member's contribution.

43. Of course, it will remain open for courts to lift the limited liability protection of an UNLLO ("piercing the corporate veil") and impose personal liability on members and managers in cases of fraud or other wrongful acts done in the name of the UNLLO.[36] Such an abuse of the UNLLO legal form could arise, for example, where a member makes use of UNLLO assets as though they were that member's personal assets.

Recommendation 4: The law should provide that, unless otherwise agreed,[37] a member is not liable for any obligation of the UNLLO solely by reason of being a member of that UNLLO.

44. Some States maintain the view that a minimum capital requirement is a reasonable quid pro quo for members of a privately held business to receive the benefit of limited liability protection. However, even such States have in many instances dramatically reduced minimum capital requirements for privately held businesses to nominal or initially low but progressively increasing sums. There was agreement in the Working Group that the modern trend in simplified business forms

---

[35] As agreed by the Working Group at its previous sessions (paras. 25, 28 to 30, A/CN.9/800; paras. 51, 69 and 71, A/CN.9/825; paras. 51 to 60, A/CN.9/831).

[36] See, also, para. 45(e) in relation to draft recommendation 5, as well as draft recommendations 14, 20 and 21.

[37] If the Working Group is of the view that the draft recommendation would be clearer if these two concepts were separated from each other (see also the discussion of the Working Group reflected in para. 52 of A/CN.9/831), the draft recommendation could appear in two parts as follows:

"Recommendation 4.1: The law should provide that a member is not personally liable for the obligations of the UNLLO solely by reason of being a member of the UNLLO."

"Recommendation 4.2: The law should provide that members may agree that one or more members will be personally liable for the obligations of the UNLLO in the circumstances specified in the members' agreement."

is that a minimum capital requirement is not typically required, or if it is required, it is only for a nominal amount, thus reducing the initial financial burden on smaller entrepreneurs wishing to create legally recognized businesses.[38] Since the minimum capital required to create such a business is often one of the most expensive considerations for new businesses, its elimination or reduction may be expected to be one factor that can positively affect the rate of establishment of legally recognized business entities.[39]

45. Moreover, the Working Group agreed that the issue of minimum capital requirements should be dealt with in the context of general mechanisms for the protection of creditors and other third parties dealing with the UNLLO.[40] The more important of such mechanisms are included in this draft legislative guide as mandatory rules, while others may be found elsewhere in a State's legislative framework. These mechanisms include:[41]

(a) Making members of the UNLLO liable for improper distributions and obliging them to repay the UNLLO for any such distributions (see draft recommendations 20 and 21, which are mandatory rules);

(b) Prescribing standards of conduct including good faith and fiduciary responsibilities (see draft recommendation 14, which is a mandatory rule);

(c) Requiring transparency and accessibility in the keeping and sharing of UNLLO records and information (see recommendations 26 and 27, which are mandatory rules);

(d) Requiring that the entity's business name contain an indicator of its limited liability status (for example, "UNLLO") and that its name be set out in contracts, invoices and other dealings with third parties (see draft recommendation 6, which is a mandatory rule);

(e) Permitting exceptions to the limited liability protection of members of the UNLLO in certain circumstances (a rule on "piercing the corporate veil" is a judicial remedy in respect of corporations that is available in some States but that should not necessarily be imported in respect of the UNLLO, where it might better be characterized in terms of mandatory rules prohibiting a member's abuse of the UNLLO legal form; such mandatory rules are found in draft recommendations 14, 20 and 21);[42]

(f) Establishing requirements in respect of the transparency, quality and public availability of registered information on the UNLLO and its managers (this could be expected to be a function of the business registry law of a State and recommendations in this respect are included in the draft legislative guide on business registration, also under preparation by this Working Group);

---

[38] See paras. 51 to 54 of A/CN.9/800 and paras. 56 and 75 to 76 of A/CN.9/825. It was also observed in the Working Group that in the case of MSMEs, a minimum capital requirement could have serious negative effects on the ability of such businesses to become legally recognized, and that even a low initial capital requirement that increased progressively could present a difficult hurdle for MSMEs for which the first few years of operation were most critical. See Report of Working Group I, A/CN.9/800, paras. 29 and 51 to 59; Working Paper A/CN.9/WG.I/WP.85, paras. 26 to 29; and Working Paper A/CN.9/WG.I/WP.86/Add.1, paras. 10-12.

[39] See para. 30, A/CN.9/WG.I/WP.86.

[40] See paras. 55 to 59 of A/CN.9/800 and paras. 77 to 78 of A/CN.9/825.

[41] See the general discussion of these issues by the Working Group in paragraph 32 of A/CN.9/WG.I/WP.86 and paragraphs 77 to 78 of A/CN.9/825.

[42] The Working Group may also wish to recall that it has previously considered the issue of "piercing the corporate veil", reaching general agreement that "rules on piercing the corporate veil were quite detailed and could vary widely from State to State, such that it might not be productive to attempt to establish such standards in the draft text, outside of noting the potential importance of such a remedy in the commentary and leaving the establishment of standards on it to enacting States." (paras. 56 and 58, A/CN.9/831). In any event, courts may still "pierce the corporate veil" under State law if the UNLLO legal form is abused by its members, and such a tool need not be specifically inserted into the text of the draft legislative guide.

(g) Establishing a supervisory role for commercial registries or specialized agencies (this could also be expected to be a function of the business registry law of the State);

(h) Establishing credit bureaux (this would be a policy decision of the State); and

(i) Requiring corporate governance oversight (this would be a policy decision of the State).

46. In keeping with the nature of the UNLLO as a mechanism to assist MSMEs, as well as the modern trend away from minimum capital requirements and the inclusion of other mechanisms to protect third parties dealing with the UNLLO, this draft legislative guide does not contain a minimum capital requirement for the establishment of an UNLLO. As noted above, the main mechanisms included in the draft legislative guide to provide protection to third parties dealing with the UNLLO is found by way of the mandatory rules in draft recommendations 6, 14, 20, 21, 26 and 27, as outlined in subparagraphs 45 (a) to (e) above.[43]

47. Should a State's policy considerations necessitate the imposition of a minimum capital requirement, even of a nominal or progressively increasing amount, it is not recommended that that requirement be placed on the UNLLO. Instead, such a State may consider other mechanisms, such as the establishment of a maximum size (for example, based upon the number of employees) or level of profitability of the UNLLO, which would then be required to convert to another legal form (of which the State might require minimum capital) upon exceeding that maximum. It should be cautioned, however, that such an approach could unnecessarily restrict the growth of UNLLOs.

Recommendation 5: The law should not contain a minimum capital requirement for the formation of an UNLLO.

48. In order to signal to third parties dealing with the UNLLO that its members, by definition, enjoy limited liability protection (as well as the other features associated with being an UNLLO), the law should require that the name of the UNLLO must include a phrase or abbreviation (such as "UNLLO") that would enable it to be distinguished from other types of business entity.[44] The use of the same or a similar phrase or abbreviation in different States would assist UNLLOs engaging in cross-border trade in that the defining characteristics of the entity would be immediately known upon recognition of the phrase or abbreviation, even in the cross-border context. Since the UNLLO legal form is intended as an innovative legal form specifically tailored to MSMEs and existing independently from a State's existing laws on business associations,[45] the choice of an appropriate identifying phrase or abbreviation need not be dependent on the local legal context. As such, it may be possible and appropriate for the Working Group to agree on a suggested unified term to be used for the identification of the UNLLO.

49. While some States may wish to require the UNLLO to use its distinctive phrase or abbreviation in all correspondence with third parties in order to signal to those parties the UNLLO's limited liability, specifying in the UNLLO legislation that a failure to do so would result in a sanction such as denial of the benefit of limited liability protection might be too harsh a penalty to impose on MSMEs. Instead, States may wish to encourage the UNLLO to use its distinctive phrase or abbreviation in all correspondence in order to enhance legal certainty, but not make it mandatory so as to avoid creating an additional burden on the UNLLO by potentially increasing its administrative costs of compliance and verification.[46] Practically speaking, since the

[43] See also para. 16 of A/CN.9/WG.I/WP.89.

[44] The Working Group agreed on this approach at its previous sessions (see para. 69, A/CN.9/825 and paras. 61 to 63, A/CN.9/831).

[45] As generally agreed upon by the Working Group at its twenty-fourth session (New York, April 2015) (see para. 54, A/CN.9/831).

[46] As agreed by the Working Group at its twenty-fourth session (New York, April 2015) (see para. 62, A/CN.9/831).

distinctive phrase or abbreviation forms part of the name of the UNLLO, it would likely be included in all correspondence involving the UNLLO, in any event.

50. In terms of the name chosen for the UNLLO, some States provide for or require prior registration (and approval) of company names to enable the appropriate commercial registry or other body administering business associations under its law to prevent the proposed name of the UNLLO from conflicting or being confused with the name of another entity or existing trade names.[47]

51. While States may continue to follow the approach of requiring advance reservation of the name of the UNLLO, it should be noted that many of the UNLLOs that will be established will be MSMEs, and care should be taken that such name reservation requirements do not inadvertently create additional hurdles for such enterprises. Further, name reservation may be dealt with by the State's business registration regulations rather than in the UNLLO law itself.

52. States usually also require that the name of a business be sufficiently distinguishable from other business entities. States may wish to include a provision permitting authorities to authorize the use of an UNLLO name that is similar to or even indistinguishable from that of another business entity; this approach may best be understood in the context of MSMEs, where two entities could possess similar names but be engaged in very different industries and/or distant geographical areas, and thus be quite distinguishable in fact.[48] States should, of course, make their own policy choices in respect of how best to determine whether the name of an UNLLO is sufficiently distinguishable for that State's particular context and taking into account the resources required and available to ensure that there is compliance with the State's name requirements.[49]

Recommendation 6: The law should provide that the name of the UNLLO must include a phrase or abbreviation that identifies it as an UNLLO.

B. Formation of the UNLLO

53. In order to accommodate the creation of an UNLLO by a sole member, including by an individual entrepreneur engaged in relatively simple business activities, and to permit the UNLLO legal form to evolve from a very small single member model to a more complex multi-member entity,[50] this draft legislative guide takes a flexible approach and recommends that the law should permit an UNLLO to be established and operated with a single member or with multiple members. Moreover, in keeping with the view expressed by the Working Group, a member of an UNLLO may be any legal or natural person.[51] As an additional feature to enhance the flexibility of the UNLLO, draft recommendation 7 does not specify a maximum number of members for the UNLLO.[52]

54. It should be noted that should a State have strong policy considerations that require it to specify that an UNLLO may have a maximum number of members, or that a legal person may not be a member of an UNLLO, these restrictions should be made clear in the legislation.

55. In addition, the requirement that an UNLLO must have at least one member throughout its life cycle is in line with this draft legislative guide's objective of simplicity, as well as with making the UNLLO transparent and accountable. Indeed, requiring that an UNLLO have at least one member at all times may help prevent the

[49] As agreed by the Working Group at its twenty-fourth session (New York, April 2015) (see para. 63, A/CN.9/831).

[50] As agreed by the Working Group at its previous sessions (see paras. 24, 32 and 42 to 43 of A/CN.9/800, paras. 67 and 74 of A/CN.9/825, and para. 19 of A/CN.9/831).

[51] As agreed by the Working Group at its twenty-fourth session (New York, April 2015) (see para. 64, A/CN.9/831).

[52] See also para. 20 of A/CN.9/WG.I/WP.89.

creation of organizations without active business operations or assets ("shell" organizations) and make transparency and accountability requirements more easily enforceable (see draft recommendation 9).

Recommendation 7: The law should provide that the UNLLO must have at least one member from the time of its formation until its dissolution, and that any person may be a member of the UNLLO.

56. In order to provide legal certainty as to when the UNLLO comes into existence, this draft legislative guide recommends that the law should specify the time of formation of the UNLLO.[53]

57. The draft legislative guide on business registration (also under preparation by the Working Group) considers inter alia the optimal approach for the registration of all businesses, including for an UNLLO.[54] Consequently, this draft legislative guide takes the view that, outside of the specific information required for the valid registration of an UNLLO (see draft recommendation 9), matters relating to the operation of the business registry should be dealt with by legislation prepared on the basis of the dedicated legislative guide on business registration.

58. Regardless of whether an UNLLO is registered using an electronic, paper-based or mixed business registration system, upon fulfilling the necessary requirements, the UNLLO will receive a notice of registration from the designated State authority. The State may choose at which specific time the UNLLO is formed, but in keeping with the view expressed by the Working Group,[55] the State may wish to specify that the time of formation of the UNLLO is at the moment of issuance of the notice of the UNLLO's registration. In order to accommodate the simple nature of the UNLLO, and in keeping with the recommendations of the draft legislative guide on business registration, issuance of the notice of registration should be as fast and as streamlined as possible.

59. In States that do not adhere to the declaratory system of business registration, formation of the UNLLO is coupled with a review of the formal correctness of the formation information as overseen by judicial authorities, an administrative agency or an intermediary,[56] and a notice of registration of the UNLLO could be expected to be issued following that review.[57] While these issues are discussed in greater detail in the draft legislative guide on business registration, they would not affect the recommendation in this draft legislative guide that the law should specify the time of formation of the UNLLO. In effect, regardless of whether or not a State uses a declaratory system of business registration, the most appropriate time of formation is likely to be at the moment of issuance of the UNLLO's notice of registration.

---

[53] The Working Group may wish to note that this draft legislative guide also, of course, deals with the dissolution and winding-up of an UNLLO in draft recommendation 24.

[54] As a consequence, discussion and recommendations on certain business registration issues referred to by the Working Group (for example, using electronic means for registration and providing a single interface for business registration and intergovernmental and cross-border collaboration and information-sharing, see paras. 26 to 27, A/CN.9/800; in respect of keeping delays in the issuance of the notice of registration to a minimum and avoiding arbitrary rejection of an application for formation of a business entity, see para. 65 of A/CN.9/831) are contained in the draft legislative guide on business registration and are not repeated in this draft legislative guide.

[55] As agreed by the Working Group at its twenty-fourth session (New York, April 2015) (see para. 65, A/CN.9/831).

[56] See para. 20 of A/CN.9/WG.I/WP.89.

[57] For further discussion of this issue by the Working Group at its twenty-fourth session (New York, April 2015), see para. 67, A/CN.9/831, which also notes that a business would not be permitted to begin operations until it had obtained the necessary licences, but that such considerations were not related to the legal formation of the business entity.

Recommendation 8: The law should specify the time of formation of the UNLLO.

60. In this draft legislative guide, the "formation information"[58] refers to the whole of the electronic, paper-based or mixed media information that must be submitted to the designated State authority in order to create the UNLLO.

61. States typically require different types and amounts of information to be submitted for the valid formation of a legal business entity usually dependent on the type of business entity being created. In a reflection of the intended simplicity of the UNLLO, this draft legislative guide reduces the required information for its formation to the minimum information necessary for the establishment and operation of the UNLLO, as well as the protection of third parties dealing with it. In addition, draft recommendation 9 respects the principle that it should be as simple as possible for an MSME or individual entrepreneur to provide the information required so as to avoid creating unnecessary burdens and to encourage compliance with the law.[59] Keeping the information required for formation of business entities (including the UNLLO) as current as possible[60] is a matter that is dealt with in some detail in the draft legislative guide on business registration.

62. Paragraph (a) of draft recommendation 9 sets out the information[61] that must be submitted for the formation of the UNLLO and that will be made public by the designated State authority, usually through publication on the State's business register.[62] That information must include the name of the UNLLO as well as its business address. In some cases, where the business does not have a standard form address, a precise description of the geographic location of the business should be inserted instead of the business address. In any event, the business address or geographic location of the UNLLO would be used for service or mailing purposes. The formation information should also include a statement of whether the UNLLO is managed by its member or members ("member-managed"), which may be expected to be the case in most instances, or whether it is to be managed by a designated manager or managers ("manager-managed").[63]

63. The final piece of mandatory information that must be provided for formation of the UNLLO and which will be publicly available is the name of each manager. It is important to disclose this information in order to provide protection for third parties since the manager is the person with legal authority to bind the UNLLO in its dealings with such parties (see also draft recommendation 15, which establishes that each publicly disclosed manager has individual authority to bind the UNLLO).[64] If the business is member-managed, the name of each member must be included; if the business is manager-managed, the name of each designated manager must be included. It should be noted that the term "manager" as used in this draft legislative guide includes both a member-manager and a manager-manager. Further, information on the residential address of each manager is not required; the rationale for this is that public availability of the residential address of a manager may present a risk to

---

[58] The term "formation information" has replaced the previous term "formation document" (see para. 39 and 68, A/CN.9/831) used in the draft texts that the Working Group has considered to date (A/CN.9/WG.I/WP.86/Add.1 and A/CN.9/WG.I/WP.89).

[59] The Working Group reached agreement on this point at its twenty-fourth session (New York, April 2015) (see para. 69, A/CN.9/831).

[60] See the discussion of the Working Group on this issue at para. 73 of A/CN.9/831.

[61] At its twenty-fourth session (New York, April 2015), the Working Group did not come to an agreement on what information should be mandatory and what should be publicly disclosed, but it considered a number of the items of information now found in draft recommendation 9 (see paras. 23 to 27 and 68 to 75, A/CN.9/831).

[62] These and other issues relating to the business register are dealt with in the draft legislative guide on business registration, also under preparation by the Working Group.

[63] As agreed by the Working Group at its twenty-fifth session (Vienna, October 2015) (para. 84(b), A/CN.9/860).

[64] As agreed by the Working Group at its twenty-fifth session (Vienna, October 2015) (para. 83, A/CN.9/860).

personal safety and is not essential to fulfil the objective of protection of third parties.[65]

64. It is thought that the mandatory information set out in paragraph (a) of draft recommendation 9 strikes an appropriate regulatory balance. Because the formation information required pursuant to paragraph (a) is made public, it should provide sufficient legal and commercial certainty for the State and for the protection of third parties dealing with the UNLLO. In addition, because the required information is kept to the minimum necessary, providing it should not be overly burdensome on the MSME or individual entrepreneur that is seeking to form an UNLLO.

65. Paragraph (b) of the draft recommendation sets out the information that must be submitted for the formation of the UNLLO but which will not be made public by the designated State authority, that is, the name and address of each member of the UNLLO. It should be noted that if the UNLLO is member-managed, the list of names of its members will also be the list of its managers, and, as such, that list of members' names only (not including their addresses) will be made public pursuant to paragraph (a). Requiring the UNLLO to submit the names and addresses of its members, but not necessarily to disclose them publicly, fulfils an important role in providing transparency to State authorities in terms of the beneficial ownership of the UNLLO.

66. This approach to the information that an UNLLO must provide to State authorities would be expected to meet the requirements of the international standards on beneficial ownership, and in fact, likely exceeds them in requiring that a list of the names and addresses of members of the UNLLO be submitted to State authorities (but not necessarily be made public, unless the UNLLO is member-managed, in which case only the names of the members would be publicly disclosed). The information requirements in this draft legislative guide[66] should thus assuage any concerns that the UNLLO legal form could be misused for illicit purposes, including money-laundering and terrorist financing.[67]

67. It should also be noted that draft recommendation 9 establishes the minimum mandatory information that must be submitted to State authorities in order to form an UNLLO. Of course, it is open to the UNLLO to include in its formation information any additional information it deems appropriate for inclusion and public disclosure.[68]

---

[65] See para. 24 of A/CN.9/WG.I/WP.89.

[66] See, also, draft recommendations 26 and 27 on record-keeping, inspection and disclosure of UNLLO information to its members.

[67] Financial Action Task Force (FATF) Recommendation 24 in respect of transparency and beneficial ownership of legal persons encourages States to conduct comprehensive risk assessments of legal persons and to ensure that all companies are registered in a publicly available company registry. The basic information required is: (a) the company name; (b) proof of incorporation; (c) legal form and status; (d) the address of the registered office; (e) its basic regulating powers; and (f) a list of directors. In addition, companies are required to keep a record of their shareholders or members. (See International Standards on Combating Money Laundering and the Financing of Terrorism & Proliferation: The FATF Recommendations,
Part E on Transparency and Beneficial Ownership of Legal Persons and Arrangements,
Recommendation 24 (www.fatf-gafi.org/media/fatf/documents/recommendations/pdfs/FATF_Recommendations.pdf). In addition, it should be recalled that business entities, in order to conduct activities, usually must open bank accounts that require the submission of taxation and other identification numbers, and financial institutions may remain the most suitable parties to prevent and combat money-laundering and other illicit activities. For consideration of these issues by the Working Group, see paras. 27 and 41 of A/CN.9/800 and paras. 47 to 55 of A/CN.9/825, as well as information contained in paras. 26 to 32 of A/CN.9/WG.I/WP.82 and paras. 21 and 26 of A/CN.9/WG.I/WP.89.

[68] This approach is in keeping with the view of the Working Group expressed at its twenty-fourth session (New York, April 2015) (see para. 74, A/CN.9/831). See, also, the discussion below in respect of the additional information that an UNLLO might wish to disclose in order to access credit or attract investors, but should not be required to disclose (see, infra, footnote 38, A/CN.9/WG.I/WP.99/Add.1).

Recommendation 9: The law should provide that only the following information is required for valid formation of the UNLLO:

(a) Information that will be made public:

(i) The name of the UNLLO;

(ii) The business address or precise geographical location of the UNLLO;

(iii) A statement of whether the UNLLO is member-managed or manager-managed; and

(iv) The name of each manager;[69] **and**

(b) Information that will not be made public: the name and address of each member.

68. In order to ensure that the formation information of the UNLLO is kept as current as possible,[70] the law should permit each manager to make any necessary amendment to it. While, of course, the business registry law in the State will contain provisions on any requirements for the amendment of the formation information, managers will have an incentive to keep at least the public information of the UNLLO current so as to avoid potentially misleading third parties dealing with the UNLLO. Further, in the case of member-managed UNLLOs, draft recommendation 10 means, of course, that each member has the authority to amend the formation information.

Recommendation 10: The law should provide that the formation information may be amended by any manager, unless otherwise agreed by the members.

[69] Of course, the term "manager" in this draft legislative guide refers to both a member-manager and a manager-manager.

[70] See, also, supra, para. 61, which notes that the draft legislative guide on business registration (under preparation) deals in some detail with the techniques that may be used to keep the business registry as current as possible, without unduly burdening MSMEs or single entrepreneurs.

(A/CN.9/WG.I/WP.99/Add.1) (Original: English)

Note by the Secretariat on a draft legislative guide on an UNCITRAL Limited Liability Organization

ADDENDUM

Contents

II. Draft legislative guide on an UNCITRAL Limited Liability Organisation (UNLLO) (*continued*)

C. Organization of the UNLLO

1. As noted above (in A/CN.9/WG.I/WP.99) in respect of draft recommendation 1,[1] the Working Group has agreed in principle that freedom of contract should be the guiding principle in establishing the internal organization of the UNLLO.[2] As a consequence of that principle, the operation of the UNLLO is governed by the agreement of its members, except for those cases in which the law is mandatory and cannot be modified by member agreement. The agreement between the members of the UNLLO is referred to in this text as the "members' agreement."[3] Where an UNLLO has only one member, the member's agreement will reflect the will of the single member, and may also be oral, in writing or by conduct. When the members' agreement is silent on a non-mandatory issue, resort is had to the default rules in this draft legislative guide in order to fill any rule-making gap.

2. The members' agreement refers to the written or oral agreement among the members of the UNLLO, or an agreement that is established through a course of conduct, that governs the affairs of the UNLLO and the relationships of its members

[1] See, supra, paras. 27-28, A/CN.9/WG.I/WP.99.

[2] Again, as noted above (see, supra, note 24, A/CN.9/WG.I/WP.99), the Working Group also observed that standard forms could be useful to assist MSMEs that might find it difficult to establish rules by agreement (see para. 63, A/CN.9/800 and para. 23 of A/CN.9/WG.I/WP.86). Once the Working Group has advanced its work on this draft legislative guide, it may wish to consider whether it would be useful to prepare standard form members' agreements to assist MSMEs in this regard.

[3] The term "members' agreement" has replaced the previous term "operating document" (see paras. 39 and 68, A/CN.9/831) used in the draft texts that the Working Group has considered to date (A/CN.9/WG.I/WP.86/Add.1 and A/CN.9/WG.I/WP.89).

with each other. The broad flexibility permitted for the form of the members' agreement recognises that in the case of many MSMEs, there may be no formal written agreement at all, and that, in such cases, members should be able to rely on oral agreements and agreement by conduct.[4] It should be cautioned, however, that it may be in the best interests of members to have a written agreement, since oral members' agreements or agreements by conduct are more difficult to prove should there be a dispute.

3. This draft legislative guide does not require that an UNLLO members' agreement be made public, but instead requires sufficient information about the UNLLO to be disclosed in the formation information in order to provide adequate protection to third parties. In addition, this approach protects the privacy of members (unless they are also managers, in which case only their names will be made public) and adds to the ease of the UNLLO's operations by avoiding the need to file amendments with the business registration authorities each time a change is made to the members' agreement.[5]

4. The list of mandatory recommendations that cannot be contracted out of by members in their agreement is included in this draft recommendation. The rules that are mandatory are those that establish the necessary legal framework of the UNLLO and provide legal certainty, or that are necessary to protect the rights of the UNLLO and of third parties dealing with the UNLLO.

Recommendation 11: The law should provide that the members of the UNLLO may adopt a members' agreement in any form, including an agreement that is written, oral or established by way of conduct. The members may agree in their members' agreement on any matter relating to the UNLLO, except in respect of the mandatory rules set out in recommendations 1, 2, 3, 6, 7, 8, 9, 14, 15, 20, 21, 24(c), 26 and 27.

5. The organization of the UNLLO is based on simple default rules that offer a clear solution for the problems that may occur in multi-member privately held companies in which the composition of the entity's membership is likely to be an important characteristic. This is due to the fact that an UNLLO will likely have a relatively small number of members who will have substantial participation in the management and operation of the UNLLO.

6. A professional manager approach (which is common, of course, in public companies) may be poorly tailored to fit the governance needs of many privately held firms, particularly when they are micro and small enterprises, and, as noted above, where members most often take on management roles as well. Draft recommendation 12 thus makes a member-managed UNLLO (i.e. decentralized management) the default approach. Since draft recommendation 13(a) sets out the default rule that the members of an UNLLO have equal rights to manage it, the default rule in draft recommendation 12 that the UNLLO is member-managed means that it is managed by all members.

7. Draft recommendation 12 also permits the members to agree that the UNLLO will be manager-managed (i.e. centralised management), in which case one or more managers will be elected by the members in accordance with the members' agreement (see draft recommendation 16), and those managers will take on the management of the regular operations of the UNLLO.

8. Where there is only one member of an UNLLO, that member will be the manager, unless the member appoints a manager.

Recommendation 12: The law should provide that the UNLLO is member-managed by all members, unless otherwise agreed.

9. When the UNLLO is member-managed, its member-managers will have joint and equal management and control rights, unless they agree otherwise in the

[4] The Working Group has made reference to the likelihood of such oral agreements in the past (see para. 52, A/CN.9/831).

[5] See also para. 12, A/CN.9/WG.I/WP.89.

members' agreement. This is also reflected in draft recommendation 15 below, which grants each publicly disclosed manager the authority to bind the UNLLO in its dealings with third parties.[6]

10. Further, unless there is agreement to the contrary, matters that arise in the ordinary course of business of the UNLLO will be decided by a simple majority of its members, and decisions that are outside of the ordinary course of business of the UNLLO would require the unanimous approval of its members. Decisions outside of the ordinary course of business would include decisions such as those relating to dissolution and winding-up of the UNLLO, to its conversion to another business form, or to changing its organization from a member-managed to a manager-managed model, or vice versa.[7] This default approach to member-management of the UNLLO is reflected in draft recommendation 13.

11. This draft legislative guide takes the view that it is unnecessary for the UNLLO legislation to specify every aspect of the UNLLO's operations, and instead leaves it to members to decide in their members' agreement on the details concerning the management of the UNLLO. In order to manage the UNLLO fairly, effectively and transparently, members may wish to agree in the members' agreement on rules in respect of the following issues:[8]

(a) That as is reasonable in the circumstances, timely records should be kept of the members' decisions, both inside and outside of the ordinary course of business of the UNLLO, as well as the form in which those records should be maintained;[9]

(b) Any requirement in respect of members' meetings, including their frequency and location, as well as any limitation thereon;

(c) Any requirement in terms of who can call a members' meeting;

(d) The conduct of members' meetings, including whether they may be held by technological means or by written consent;

(e) Any notice period required prior to the holding of a members' meeting;

(f) In what form any required notice of the members' meeting should be provided (for example, in writing or in any other form), and what information (if any) should be attached to the notice (for example, the UNLLO's financial information);

(g) Whether waiver of any required notice is permitted and what form that waiver may take; and

(h) Any decisions that would require a majority that differs from the default rule of simple majority for decisions in the ordinary course of business or unanimity for decisions outside of the ordinary course of business of the UNLLO.

Recommendation 13: The law should provide that, unless otherwise agreed:

(a) The members of the UNLLO have equal rights to manage the UNLLO;

(b) Any difference arising between members as to matters in the ordinary course of the activities and affairs of the UNLLO shall be decided by simple majority; and

(c) Any difference arising between members as to matters outside of the ordinary course of the activities and affairs of the UNLLO shall require unanimous consent.

---

[6] Permitting members to vary their equal management rights will not adversely affect third parties, since the UNLLO will be bound by any decision by a publicly disclosed manager (see draft recommendations 9 and 15).

[7] See, also, para. 21 of A/CN.9/WG.I/WP.82.

[8] As agreed by the Working Group at its twenty-sixth session (New York, April 2016) (paras. 39 to 47, A/CN.9/866).

[9] As agreed by the Working Group at its twenty-sixth session (New York, April 2016) (para. 44, A/CN.9/866). For additional detail or the form in which such records should be maintained, see paras. 56-57 and draft recommendation 26 below.

D. Managers

12. Fiduciary duties tend to be broad standards of performance that reduce the risk of a member or a manager acting opportunistically, and encourage that person to act instead in favour of promoting the welfare of the UNLLO, and, indirectly, its members. Such duties may be separated into: (1) a duty of care; (2) a duty of loyalty, including a duty to refrain from self-dealing transactions, personal use of business assets, usurpation of enterprise opportunities, and competition with the UNLLO; (3) a duty to disclose information; and (4) a duty of good faith and fair dealing. The inclusion of such duties tend to be a standard feature of business associations law; for example, fiduciary duties are found in each of the simplified corporate forms examined by the Working Group when it first took up its mandate.[10]

13. Fiduciary duties offer protection against a manager's pursuit of personal interest and any excessively negligent behaviour on their part. However, fiduciary duties cannot be used to discipline managers in the performance of their official duties and thus subject their business judgement to criticism after the fact. Members could also agree to include in their members' agreement a provision that they owe fiduciary duties to each other.

14. Since this draft legislative guide is built on the premise that freedom of contract should to a large extent govern the internal governance structure of the UNLLO, the freedom of contract principle also applies to fiduciary duties, but only to an extent: the rule establishing a manager's duties in draft recommendation 14 is mandatory and members cannot contract out of it. Members are free, however, to establish in their members' agreement that a fiduciary duty is owed to each other or that a manager must adhere to a standard that is higher than that established in draft recommendation 14.

15. Similarly, members may specify in their agreement that certain activities are permitted for managers and do not constitute a breach of the duties established in draft recommendation 14. Such agreement, however, would not include eliminating or limiting the liability of a manager: (i) for acts or omissions not in good faith or which involve intentional misconduct or a knowing violation of law; or (ii) for any transaction from which the manager derived an improper personal benefit.[11] Permitting freedom of contract of the members to this extent could be expected to be useful in the context of UNLLOs, since this approach would allow members to derogate from a rigid corporate legal framework which may not be necessary in the UNLLO context, while still requiring appropriate protection for the UNLLO, its members and third parties dealing with it.

16. While this draft legislative guide provides contractual flexibility with respect to clarifying aspects of the fiduciary duties owed, it nonetheless contains broad standards of the performance expected from a manager. The following fundamental aspects of the fiduciary duties owed by a manager are thought to be included in this legislative guide through draft recommendations 14 and 27: (1) a duty to act in good faith and reasonably in the best interests of the UNLLO; (2) a duty to preclude from self-dealing transactions, personal use of assets of the UNLLO, usurpation of opportunities of the UNLLO, and competition with the simplified business entity; and (3) a duty to disclose information to all members of the UNLLO.[12]

---

[10] See paras. 24 and 25 and the corresponding tables in A/CN.9/WG.I/WP.82, considered at the twenty-second session of the Working Group (February 2014).

[11] Similar approaches may be found in various legislative enactments in respect of fiduciary duties. For example, the United States Revised Uniform Limited Liability Act of 2006 clarifies the ability of members to define and limit the duties of loyalty and care that members owe to each other and to the business entity. See, also, the Delaware General Corporation Law, Section 102(b)(7), which allows the members to limit the duty of care by agreeing to eliminate or limit the personal liability of a manager to the business entity or its members in such cases.

[12] These aspects were previously identified as important duties owed by the manager in paragraph 40, A/CN.9/WG.I/WP.89.

Recommendation 14: The law should provide that a manager[13] of the UNLLO must act with the care that a person in a like position would reasonably exercise under similar circumstances and in a manner that the manager reasonably believes to be in the best interests of the UNLLO.

17. Each manager of the UNLLO, whether member-managed or manager-managed, has the authority to legally bind the UNLLO. It is for that reason that the name of each manager must be included in the publicly disclosed information required for the formation of the UNLLO under draft recommendation 9. The disclosure of such information provides important protection to third parties dealing with the UNLLO. In most cases, the UNLLO will be member-managed, and each member will be authorised to legally bind the UNLLO.[14]

18. Restrictions may be agreed upon in the members' agreement in respect of the extent to which each manager can bind the UNLLO (for example, only up to a certain monetary threshold), or to vary the default rule that each manager can legally bind the UNLLO. Such modifications of the default rules will be effective as between the members of the UNLLO. However, such restrictions or variations will not be effective as against third parties dealing with the UNLLO unless those third parties have notice of that restriction or variation of the manager's authority. If third parties dealing with the UNLLO do not have notice of any limitation that a members' agreement has placed on the authority of a publicly disclosed manager, the UNLLO will nonetheless be bound by a decision in the ordinary course of that manager regardless of whether that decision exceeds the manager's authority as limited by the members' agreement.

Recommendation 15: The law should provide that each publicly disclosed manager[15] individually has the authority to bind the UNLLO.

19. The members may establish rules in their members' agreement for the appointment and removal of a manager.[16] In the absence of such agreement, draft recommendation 16 provides a default rule that such decisions should be made by a simple majority of the members.

20. In the case of a manager-managed UNLLO, should a manager become unavailable (through death or otherwise), the members would be required to appoint another manager under the terms of the members' agreement. Appointing another manager would be important to ensure that amendments to the UNLLO's formation information, including the name of each manager (draft recommendation 9(a)(iv)) can validly be made pursuant to draft recommendation 10.

Recommendation 16: The law should provide that, unless otherwise agreed by the members, a manager or managers may be elected and removed by a simple majority decision of the members.

E. Contributions

21. Since the UNLLO is not required to have a capital structure, it is not necessary that members make contributions to it in order for it to exist. The UNLLO need not necessarily have assets at its formation, since assets would be generated through its operations. As such, the default rule in this draft legislative guide is that members are not required to make contributions to the UNLLO.

22. Of course, members may contract out of the default rule established in draft recommendation 17, and in their members' agreement they may choose to establish

---

[13] Again, it should be recalled that the term "manager" refers to both a member-manager and a manager-manager.

[14] Clearly, it is not necessary for the members to name a board of management, but they may do so according to the members' agreement as agreed by the Working Group at its twenty-fifth session (Vienna, October 2015) (para. 84(a), A/CN.9/860).

[15] Once more, it should be noted that the term "manager" refers to both a member-manager and a manager-manager.

[16] As agreed by the Working Group at its twenty-fifth session (Vienna, October 2015) (para. 84(d), A/CN.9/860).

what each member will provide to the UNLLO by way of contribution (see draft recommendation 18 below).[17]

Recommendation 17: The law should provide that, unless otherwise agreed, a member of the UNLLO is not required to make a contribution to it in order to be a member.

23. Draft recommendation 18 of the legislative guide further elaborates on draft recommendation 17 by requiring the law to permit members maximum flexibility to decide upon the amount and type of their agreed contributions to the UNLLO.[18] It is recommended that members maintain a central record of the amount and type of contribution of each member to ensure that the rights of the members are respected (see also draft recommendations 26 and 27 below).

24. In specifying in their members' agreement the types of contribution that members of the UNLLO may make, members may wish to consider the following possibilities: tangible or intangible property or other benefits to the UNLLO, including money, services performed, promissory notes, other binding agreements to contribute money or property and contracts for services to be performed. Although it is generally encouraged that members should be permitted great flexibility in determining for themselves what type of contributions to the UNLLO would be appropriate, in some cases, local law may restrict the types of contribution that may be made. For example, in some States, it is not permitted to use the provision of services as a contribution to the establishment of a business entity. In such cases, those restrictions may be specified in the law prepared on the basis of this draft legislative guide.[19]

25. Where members agree to make contributions to the UNLLO, but do not specify the amount of the contributions, draft recommendation 18 provides that, in keeping with the general approach to ownership[20] and management of the UNLLO, contributions should be made by each member in an equal amount.[21]

26. Moreover, determination of the value of each contribution should be left to the members of the UNLLO, as they are in the best position to determine the value of their contributions.[22] Should members wish to include duties to each other in terms of the accurate value of their contribution, this may be accomplished in the members' agreement; any other mechanism, such as requiring an audit or other external valuation method, is likely to be too burdensome for MSMEs.[23]

27. It should also be noted that more complex ownership[24] structures could be established by the members in their agreement, including by way of agreement on

---

[17] As considered generally and agreed by the Working Group at its twenty-fourth session (New York, April 2015) (see para. 29, A/CN.9/831).

[18] As agreed by the Working Group at its previous sessions (para. 29 of A/CN.9/831 and para. 34, A/CN.9/866).

[19] As agreed by the Working Group at its twenty-sixth session (New York, April 2016) (paras. 34 to 35, A/CN.9/866).

[20] The Working Group agreed at its twenty-sixth session (New York, April 2016) that in order to achieve a common understanding, the next draft of the text should explain what was meant by the term "share", and should present possible alternatives for more neutral terms (para. 25, A/CN.9/866). Since this draft legislative guide attempts to create a system for a legal business form that is not dependent on the corporate model, it refers to "interest" and "ownership" to indicate that portion of the UNLLO that is owned by a particular member.

[21] As agreed by the Working Group at its twenty-sixth session (New York, April 2016) (para. 34, A/CN.9/866).

[22] As agreed by the Working Group at its twenty-sixth session (New York, April 2016) (para. 34, A/CN.9/866).

[23] As agreed by the Working Group at its twenty-sixth session (New York, April 2016) (para. 37, A/CN.9/866).

[24] The Working Group agreed at its twenty-sixth session (New York, April 2016) that in order to achieve a common understanding, the next draft of the text should explain what was meant by the term "share", and should present possible alternatives for more neutral terms (para. 25, A/CN.9/866). Since this draft legislative guide attempts to create a system for a legal business form that is not dependent on the corporate model, it refers to "interest" and "ownership" to indicate that portion of the UNLLO that is owned by a particular member.

different classes and types of membership,[25] as well as on special rights that might attach to such different classes of membership.

Recommendation 18: The law should provide that members are permitted to agree upon contributions made to the UNLLO, including the amount and type of such contributions, but that in the absence of such agreement, contributions that are made to the UNLLO should be made in equal amounts by the members.

F. Distributions

28. In keeping with the general default approach of the UNLLO, this draft legislative guide provides that unless the members of an UNLLO have otherwise agreed in their members' agreement, members will share equally in the ownership of the UNLLO and in any distributions made by it.[26]

29. The members of the UNLLO may also agree on the type of distribution (for example, including cash or property of the UNLLO) as well when such distributions may be made. It is important to note, however, that some States may not permit non-monetary distributions and that, in such cases, States should specify those restrictions in the UNLLO law enacted on the basis of this draft legislative guide.

Recommendation 19: The law should provide that, unless otherwise agreed, any distribution by the UNLLO shall be made equally among its members.

30. Although the amount, type and timing of distributions may be subject to the members' agreement, this draft legislative guide includes mandatory provisions governing distributions aimed at protecting third parties dealing with the UNLLO. In order to protect such parties, the members of the UNLLO cannot contract out of the rule prohibiting distributions from being made by the UNLLO when such a distribution would violate either an insolvency test, as reflected in draft recommendation 20(a), or a balance sheet test, as reflected in draft recommendation 20(b). Under the insolvency test, the UNLLO must still be able to pay its debts upon giving effect to the distribution, while the balance sheet test ensures that distributions can only made if the UNLLO's remaining assets exceed its total liabilities. At previous sessions of the Working Group, a concern was expressed as to whether the insolvency and balance sheet tests were appropriate for MSMEs or if they might be too complex, but no decision was reached in that regard.[27] The Working Group may wish to note that, on their face, these tests may appear to be more complex than they are, since most MSMEs are able to track their financial status quite accurately, and may even rely on the many simple mobile applications that exist for such purposes.

31. This mandatory rule, in conjunction with the clawback provision in draft recommendation 21, is intended to protect third parties and creditors who are dealing with the UNLLO from any dissipation of the UNLLO's assets through improper distributions to its members.

32. This draft legislative guide does not contain a specific provision holding managers liable for making improper distributions.[28] In most cases, the UNLLO will

---

[25] The Working Group agreed at its twenty-sixth session (New York, April 2016) that this draft legislative guide should start with the simplest model and should establish the default rule to be one of equal voting rights and equal distributions, unless otherwise agreed in the members' agreement. The Working Group also agreed that this legislative guide should permit the establishment of more complex ownership structures, including special rights, which could be mentioned in the commentary (paras. 27 and 29, A/CN.9/866).

[26] The Working Group agreed at its twenty-sixth session (New York, April 2016) that this draft legislative guide should start with the simplest model and should establish the default rule to be one of equal voting rights and equal distributions, unless otherwise agreed in the members' agreement (para. 27, A/CN.9/866). See, also, the discussion of including a default rule for distributions at para. 32 of A/CN.9/831.

[27] See para. 31, A/CN.9/831 and para. 30, A/CN.9/866.

[28] See the discussion of the Working Group at its previous sessions (para. 32 of A/CN.9/831 and para. 33, A/CN.9/866).

be member-managed, and it is submitted that holding each member liable in draft recommendation 21 to return the entire amount of the improper distribution should act as an adequate disincentive for the member-managed situation. Where the UNLLO is manager-managed, the duties set out draft recommendation 14 along with draft recommendations 20 and 21 should provide an adequate basis on which to find managers liable should they make improper distributions.

Recommendation 20: The law should prohibit distributions from being made to any member if upon giving effect to such distribution:

(a) The UNLLO would not be able to pay its debts as they become due in the usual course of business; or

(b) The UNLLO's total assets would be less than the sum of its total liabilities.

33. In keeping with the rule on improper distributions established in draft recommendation 20, draft recommendation 21 provides an operative provision that permits the entire amount of any such distribution to be clawed back from each member who received that distribution, or any portion of it. Such a rule is intended both to protect third parties dealing with the UNLLO and to provide an incentive to members to ensure that any distributions made to them would not leave the UNLLO insolvent or with greater liabilities than assets.

34. It should be noted that payments of reasonable compensation for services rendered[29] and for bona fide debt owed by the UNLLO to a member should not be considered as distributions, and would thus not be subject to the clawback provision in draft recommendation 21.

35. In addition, as noted in para. 32 above, managers that make distributions in violation of one of the tests in draft recommendation 20 could also be held liable for that decision pursuant to the managers' duties set out in draft recommendation 14.

Recommendation 21: The law should provide that each member who received a distribution, or any portion of a distribution, made in violation of recommendation 20 is liable to reimburse the UNLLO for the entire amount of that distribution.

G. Transfer of rights

36. Because of the nature of the UNLLO as a micro or small business that is privately held, its members are likely to value the composition of its membership and to resist transfers of ownership without the approval of other members. In addition, there is unlikely to be a ready market for the sale and transfer of an ownership interest in an UNLLO.

37. The ownership stake of an UNLLO member entitles it to exercise two sets of rights: financial rights to share in the profits and losses of the UNLLO and to receive distributions, and governance rights to participate in the management and control of the UNLLO, including fiduciary rights and information rights. Moreover, the default rule for most aspects of the UNLLO as established in this draft legislative guide is that members share in rights on an equal basis.

38. Consistent with this general approach, and in light of the likely context of the UNLLO, the default rule should be that members of the UNLLO are permitted to transfer their financial rights, unless they have agreed otherwise in their members' agreement. Also bearing in mind the general nature of UNLLOs, the default rule in respect of the transfer of governance rights in the UNLLO should be that such rights are not transferable by members unless they have agreed otherwise in their members' agreement. This latter rule in respect of governance rights reflects the idea that, given the particular characteristics of the UNLLO, non-transferring members must consent

[29] See para. 30, A/CN.9/866.

to changes in the management and control of the UNLLO. These rules are reflected in draft recommendation 22.

39. In the situation of the death of a single member of the UNLLO, complications could arise in that the member's financial rights might be transferable, but not the member's governance rights. The members' agreement should contain appropriate provisions to provide any necessary clarity in that circumstance.

Recommendation 22: The law should provide that members may transfer their financial rights in the UNLLO, but that they may not transfer their non-financial rights in the UNLLO. Members of the UNLLO may vary this rule by agreement.

H. Restructuring or conversion

40. As noted above (in para. 53, A/CN.9/WG.I/WP.99) in respect of draft recommendation 7, this draft legislative guide is intended to permit the UNLLO to evolve from a very small single member enterprise to a more complex multi-member business entity,[30] and possibly to convert into another legal business form altogether. That approach is reflected in draft recommendation 23, which permits the members of the UNLLO to agree to restructure the UNLLO or to convert it into a different legal form.

41. As noted above in para. 10 in connection with draft recommendation 13, a decision on the restructuring or conversion of the UNLLO would be a decision outside of the ordinary course of business, and would thus require unanimous consent, unless otherwise agreed by the members.[31]

42. The State in which the UNLLO would restructure or convert to another legal form may wish to ensure that adequate safeguards are in place to protect third parties dealing with the UNLLO from any adverse effects on their rights that could arise from such a restructuring or conversion. Such safeguards may already exist in legislation providing for conversion into other legal business forms,[32] and could consist, for example, of notice periods, publication requirements or rules on the transfer of third party rights to the new business form.

Recommendation 23: The law should provide that the members of an UNLLO may restructure it or convert it into another business form by agreement.

I. Dissolution and winding-up

43. Draft recommendation 24, paragraph (a), establishes that the members of the UNLLO may decide in their members' agreement that the UNLLO will be dissolved and wound up on the occurrence of an event specified in that agreement. Should the members of the UNLLO not have established terms under which the UNLLO would be dissolved and wound up, they may decide by unanimous consent to dissolve and wind up the entity as indicated in paragraph (b) of draft recommendation 24. This level of required consent is commensurate with that required in respect of a decision by members on restructuring the UNLLO or converting it into another legal form, as well as reflecting the default rule for decisions made by members on matters outside of the ordinary course of business.[33]

44. Draft recommendation 24, paragraph (c), is a mandatory rule that members are not entitled to vary by agreement. A judicial or administrative decision made pursuant

[30] See paras. 24 and 32 of A/CN.9/800, paras. 67 and 74 of A/CN.9/825, and para. 19 of A/CN.9/831.

[31] As agreed by the Working Group at its twenty-fifth session (Vienna, October 2015), the level of agreement among members for restructure and conversion of the UNLLO should be commensurate with that required for dissolution and winding-up of the UNLLO (para. 90, A/CN.9/860).

[32] As agreed by the Working Group at its twenty-fifth session (Vienna, October 2015) (para. 91, A/CN.9/860).

[33] As agreed by the Working Group at its twenty-fifth session (Vienna, October 2015) (para. 87, A/CN.9/860).

to the law of the State that the UNLLO is dissolved must be respected by the members of the UNLLO, and could include, for example, a decision by a bankruptcy court.[34]

45. Again, the State in which the UNLLO would be dissolved or wound up may wish to ensure that adequate safeguards are in place to protect third parties dealing with the UNLLO from any adverse effects that could arise from its dissolution or winding-up. Such safeguards may already exist in other legislation providing for dissolution or winding-up of legal business forms.[35]

Recommendation 24: The law should provide that the UNLLO shall be dissolved and wound up in the following circumstances:

(a) On the occurrence of any event that is specified in the members' agreement as causing the dissolution of the UNLLO;

(b) On the unanimous consent of the members; or

(c) Upon the rendering of a judicial or administrative decision that the UNLLO is dissolved.

J. Dissociation or withdrawal

46. Members of an UNLLO will often have equal financial and managerial control rights; indeed, that is the default rule that runs throughout this legislative guide. It is further reflected in the fact that the default rule is that decisions made outside of the ordinary course of the activities and affairs of the UNLLO require the unanimous consent of the members (draft recommendation 13(c)). As noted above, such extraordinary matters would include issues relating to the very existence of the UNLLO, such as its restructuring, conversion to a different legal business form, dissolution and winding-up. Similarly, the default rule for resolving differences among members on matters in the ordinary course of business of the UNLLO is that such matters may be decided by a simple majority of members (draft recommendation 13(b)), thus providing a convenient way to resolve more routine differences of view amongst the UNLLO members. These two default rules provide a reasonable, coherent and stable decision-making system for members to resolve basic disputes and to continue to conduct the affairs of the UNLLO, as well as effectively providing a veto for any member that does not agree with important decisions that could affect the very existence of the UNLLO.

47. However, once dissatisfaction or distrust disrupts their relationship, members of the UNLLO may not find these default decision-making mechanisms to be adequate and they may be unable to negotiate their way out of the dispute. Members may not have foreseen the possibility of such an intractable dispute, and may not have provided a mechanism for its resolution in their members' agreement. As such, the UNLLO legislation should include a default rule for dealing with such disputes.

48. One approach could be to permit one or more dissatisfied members to compel the dissolution of the UNLLO and the liquidation of its assets. This approach, however, could create uncertainty and instability for the members and the UNLLO. Most importantly, perhaps, it would not permit the UNLLO to continue its existence and would thus result in a net loss in economic value.

49. A second approach to dealing with such intractable member disputes would be to facilitate the continued existence of the UNLLO, instead permitting members to withdraw or to be expelled from the UNLLO and to receive the fair value of their ownership interest. However, the disadvantage of permitting members to expel another member is that such an arrangement could be subject to abuse and result in minority oppression. In the scenario in which a conflict among members could result in a majority of members expelling a minority, the minority would be left to keep its

[34] As agreed by the Working Group at its twenty-fifth session (Vienna, October 2015) (para. 85, A/CN.9/860).

[35] As agreed by the Working Group at its twenty-fifth session (Vienna, October 2015) (para. 86, A/CN.9/860). See, also, para. 42 above.

ownership or to sell it back to the majority members for whatever price the majority was willing to offer.

50. Draft recommendation 25 suggests that the preferred approach in creating a default rule to resolve intractable disputes is to permit members to withdraw from the UNLLO and to be paid the fair value of their interest over a reasonable time. In this outcome, unless the members vote unanimously otherwise, the UNLLO continues to exist, thus preserving both economic stability and value. Moreover, permitting the payment of the fair value of the withdrawing member's ownership interest over time avoids a situation where the withdrawing member could hold the UNLLO and its remaining members to ransom by demanding immediate payment of the entire amount. Complying with an immediate demand of that sort might not be possible for the UNLLO or its remaining members, and could effectively force the dissolution of the UNLLO by rendering it insolvent.

51. The default rule suggested in draft recommendation 25 may still present challenges in terms of assessing the fair value of the withdrawing member's interest. The starting point for that valuation should obviously be that the dissociating members would receive the same amount in a buyout as that member would receive if the UNLLO were dissolved. However, fair value dictates that the value of the UNLLO's goodwill should also be included in the calculation, and the buyout price for the member withdrawing should thus be the greater of that member's share of the liquidation value of the UNLLO or a value based on the sale of the entire UNLLO as a going concern.

52. It would also be prudent for members to decide in their members' agreement to use alternative dispute resolution (including arbitration and mediation) for matters that cannot be resolved through the application of the members' agreement or the default rules.[36] Agreement on the fair valuation of a withdrawing member's interest could be one of the issues that might be referred for alternative dispute resolution.

Recommendation 25: The law should provide that, unless otherwise agreed, members may withdraw from the UNLLO and be paid over a reasonable period of time the fair value of their interest in the UNLLO.

K. Record-keeping, inspection and disclosure

53. Open communication and transparency are important issues for any business entity, but they are arguably of even greater importance in respect of the UNLLO. Members of the UNLLO are likely to share equal ownership and management rights, and establishing and maintaining trust among them is of great importance. Access to and proper dissemination of information to all members will further enhance trust among members and will permit them to be meaningfully involved in decision-making processes, thus providing a strong basis for the positive performance of the UNLLO.

54. Mandatory rules for the establishment of these principles are set out in draft recommendation 26, which requires the UNLLO to keep certain information, and draft recommendation 27, which ensures that each member has the right to inspect the information kept by the UNLLO, as well as the right to access any other reasonable information regarding the UNLLO, including information on its activities,

[36] This approach would cover disputes arising between members of the UNLLO, but it might not sufficiently cover the issue of disputes involving the UNLLO and third parties. As discussed by the Working Group at its twenty-second session (New York, February 2014), various other models could be considered for dispute resolution involving UNLLOs and third parties, including the establishment of special dispute resolution bodies, or examining ways to make existing dispute resolution mechanisms more accessible for MSMEs, for example, in respect of arbitration, mediation and insolvency (see paras. 60 to 62, A/CN.9/800 and paras. 38 to 40, A/CN.9/WG.I/WP.82). It is suggested that in order to avoid unnecessary complexity in this draft UNLLO legislative guide, such issues could be considered in relation to matters as they may arise in other UNCITRAL Working Groups, for example, in respect of the MSME work of Working Group V on insolvency, as already mandated by the Commission.

operations and financial situation.[37] The importance of sharing and disseminating information on the UNLLO among its members is emphasised in that the members cannot contract out of the mandatory rules established in draft recommendations 26 and 27. However, members can agree by contract that the UNLLO should retain information in addition to that required in draft recommendation 26.

55. While the focus of the UNLLO is on MSMEs and facilitation of their growth, disclosure and transparency of information are naturally important issues facing any business entity. While some States apply broad disclosure requirements to privately held entities (but allow exceptions to be made for MSMEs), others restrict mandatory disclosure to public business entities. The approach taken in this legislative guide is that only the information required for formation of the UNLLO in draft recommendation 9(a) must be made public, and that the information that must be retained by the UNLLO further to draft recommendation 26 need not be publicly disclosed,[38] although it should be shared with all members and subject to their inspection.

56. The list of records that must be kept pursuant to draft recommendation 26 should not be particularly burdensome for UNLLOs, even when they are MSMEs, in that it consists of the most basic information necessary for entrepreneurs of all levels of sophistication to run their business. Moreover, the records that must be kept need only be "reasonable records", i.e. recorded in a timely fashion and in a medium that could be expected of a similar business operating in a comparable context. The draft recommendation does not specify when or how that information must be kept, and it would be open to the UNLLO to simply rely on electronic or other records that are reasonable for a business of its size and complexity.

57. For example, many MSMEs use various mobile applications that are available on electronic devices to run their commercial enterprises, and are thus able easily to track and access all types of information relevant to the business, including inventory, simple balance sheets, and even tax returns. An UNLLO operating in that context could then satisfy the requirements of draft recommendations 26 and 27 through retaining and permitting access to the information electronically available via that mobile application.

Recommendation 26: The law should provide that the UNLLO must keep reasonable records in respect of:

(a) Its formation information;

(b) Any record of the members' agreement;

(c) A current list of managers and members, as well as their contact details;

(d) Financial statements (if any);

(e) Tax returns or reports; and

(f) The activities and operations of the UNLLO, as well as its financial information.

---

[37] As agreed by the Working Group at its twenty-fifth session (Vienna, October 2015) (para. 93(b), A/CN.9/860).

[38] While privately held businesses, like UNLLOs, are not required to provide the same flow and rate of information as publicly held firms generally, they may have strong incentives for doing so, particularly as they develop and progress. Indeed, businesses wishing to improve their access to credit or to attract investment may wish to signal their accountability by supplying information about: (1) the business' objectives; (2) principal changes; (3) balance sheet and off-balance sheet items; (4) its financial position and capital needs; (5) the composition of any management board and its policy for appointments and remuneration; (6) forward-looking expectations; and (7) profits and dividends. Such considerations are not likely to trouble the smaller enterprises contemplated as the main users of the UNLLO, but could be important for those businesses as they grow. See, also, the agreement of the Working Group at its twenty-fifth session (Vienna, October 2015) (para. 84(d), A/CN.9/860).

Recommendation 27: The law should provide that each member has the right to inspect and copy any of the records required to be kept by the UNLLO in recommendation 26, and to obtain from the UNLLO information concerning its activities, operations and financial information, as well as any other reasonable information in respect of the UNLLO.[39]

[39] As agreed by the Working Group at its twenty-fifth session in respect of its financial information (Vienna, October 2015) (para. 93(b), A/CN.9/860).

Annex I

Draft recommendations on an UNLLO

I. General Provisions

Recommendation 1: The law should provide that an UNCITRAL Limited Liability Organisation ("UNLLO") is governed by this law and by the members' agreement, if any.

Recommendation 2: The law should provide that an UNLLO may be organised for any lawful activity.

Recommendation 3: The law should provide that the UNLLO has a legal personality.

Recommendation 4: The law should provide that, unless otherwise agreed,[40] a member is not liable for any obligation of the UNLLO solely by reason of being a member of that UNLLO.

Recommendation 5: The law should not contain a minimum capital requirement for the formation of an UNLLO.

Recommendation 6: The law should provide that the name of the UNLLO must include a phrase or abbreviation that identifies it as an UNLLO.

II. Formation of the UNLLO

Recommendation 7: The law should provide that the UNLLO must have at least one member from the time of its formation until its dissolution, and that any person may be a member of the UNLLO.

Recommendation 8: The law should specify the time of formation of the UNLLO.

Recommendation 9: The law should provide that only the following information is required for valid formation of the UNLLO:

(a) Information that will be made public:

(i) The name of the UNLLO;

(ii) The business address or precise geographical location of the UNLLO;

(iii) A statement of whether the UNLLO is member-managed or manager-managed; and

(iv) The name of each manager;[41] and

(b) Information that will not be made public: the name and address of each member.

Recommendation 10: The law should provide that the formation information may be amended by any manager, unless otherwise agreed by the members.

---

[40] If the Working Group is of the view that the draft recommendation would be clearer if these two concepts were separated from each other (see also the discussion of the Working Group reflected in para. 52 of A/CN.9/831), the draft recommendation could appear in two parts as follows:
"Recommendation 4.1: The law should provide that a member is not personally liable for the obligations of the UNLLO solely by reason of being a member of the UNLLO."
"Recommendation 4.2: The law should provide that members may agree that one or more members will be personally liable for the obligations of the UNLLO in the circumstances specified in the members' agreement."

[41] Of course, the term "manager" in this draft legislative guide refers to both a member-manager and a manager-manager.

III. Organization of the UNLLO

Recommendation 11: The law should provide that the members of the UNLLO may adopt a members' agreement in any form, including an agreement that is written, oral or established by way of conduct. The members may agree in their members' agreement on any matter relating to the UNLLO, except in respect of the mandatory rules set out in recommendations 1, 2, 3, 6, 7, 8, 9, 14, 15, 20, 21, 24(c), 26 and 27.

Recommendation 12: The law should provide that the UNLLO is member-managed by all members, unless otherwise agreed.

Recommendation 13: The law should provide that, unless otherwise agreed:

(a) The members of the UNLLO have equal rights to manage the UNLLO;

(b) Any difference arising between members as to matters in the ordinary course of the activities and affairs of the UNLLO shall be decided by simple majority; and

(c) Any difference arising between members as to matters outside of the ordinary course of the activities and affairs of the UNLLO shall require unanimous consent.

IV. Managers

Recommendation 14: The law should provide that a manager[42] of the UNLLO must act with the care that a person in a like position would reasonably exercise under similar circumstances and in a manner that the manager reasonably believes to be in the best interests of the UNLLO.

Recommendation 15: The law should provide that each manager[43] individually has the authority to bind the UNLLO.

Recommendation 16: The law should provide that, unless otherwise agreed by the members, a manager or managers may be elected and removed by a simple majority decision of the members.

V. Contributions

Recommendation 17: The law should provide that, unless otherwise agreed, a member of the UNLLO is not required to make a contribution to it in order to be a member.

Recommendation 18: The law should provide that members are permitted to agree upon contributions made to the UNLLO, including the amount and type of such contributions, but that in the absence of such agreement, contributions that are made to the UNLLO should be made in equal amounts by the members.

VI. Distributions

Recommendation 19: The law should provide that, unless otherwise agreed, any distribution by the UNLLO shall be made equally among its members.

---

[42] Again, it should be recalled that the term "manager" refers to both a member-manager and a manager-manager.

[43] Once more, it should be noted that the term "manager" refers to both a member-manager and a manager-manager.

Recommendation 20: The law should prohibit distributions from being made to any member if upon giving effect to such distribution:

(a) The UNLLO would not be able to pay its debts as they become due in the usual course of business; or

(b) The UNLLO's total assets would be less than the sum of its total liabilities.

Recommendation 21: The law should provide that each member who received a distribution, or any portion of a distribution, made in violation of recommendation 20 is liable to reimburse the UNLLO for the entire amount of that distribution.

VII. Transfer of rights

Recommendation 22: The law should provide that members may transfer their financial rights in the UNLLO, but that they may not transfer their non-financial rights in the UNLLO. Members of the UNLLO may vary this rule by agreement.

VIII. Restructuring or conversion

Recommendation 23: The law should provide that the members of an UNLLO may restructure it or convert it into another business form by agreement.

IX. Dissolution and winding-up

Recommendation 24: The law should provide that the UNLLO shall be dissolved and wound up in the following circumstances:

(a) On the occurrence of any event that is specified in the members' agreement as causing the dissolution of the UNLLO;

(b) On the unanimous consent of the members; or

(c) Upon the rendering of a judicial or administrative decision that the UNLLO is dissolved.

X. Dissociation or withdrawal

Recommendation 25: The law should provide that, unless otherwise agreed, members may withdraw from the UNLLO and be paid over a reasonable period of time the fair value of their interest in the UNLLO.

XI. Record-keeping, inspection and disclosure

Recommendation 26: The law should provide that the UNLLO must keep reasonable records in respect of:

(a) Its formation information;

(b) Any record of the members' agreement;

(c) A current list of managers and members, as well as their contact details;

(d) Financial statements (if any);

(e) Tax returns or reports; and

(f) The activities and operations of the UNLLO, as well as its financial information.

Recommendation 27: The law should provide that each member has the right to inspect and copy any of the records required to be kept by the UNLLO in recommendation 26, and to obtain from the UNLLO information concerning its activities, operations and financial information, as well as any other reasonable information in respect of the UNLLO.[44]

[44] As agreed by the Working Group at its twenty-fifth session in respect of its financial information (Vienna, October 2015) (para. 93(b), A/CN.9/860).

D. Report of the Working Group on MSMEs on the work of its twenty-eighth session (New York, 1-9 May 2017)

(A/CN.9/900)

[Original: English]

Contents

I. Introduction

1. At its forty-sixth session, in 2013, the Commission requested that a working group should commence work aimed at reducing the legal obstacles encountered by micro, small and medium-sized enterprises (MSMEs) throughout their life cycle.[1] At that same session, the Commission agreed that consideration of the issues pertaining to the creation of an enabling legal environment for MSMEs should begin with a focus on the legal questions surrounding the simplification of incorporation.[2]

2. At its twenty-second session (New York, 10 to 14 February 2014), Working Group I (MSMEs) commenced its work according to the mandate received from the Commission. The Working Group engaged in preliminary discussion in respect of a number of broad issues relating to the development of a legal text on simplified incorporation[3] as well as on what form that text might take,[4] and business registration was said to be of particular relevance in the future deliberations of the Working Group.[5]

3. At its forty-seventh session, in 2014, the Commission reaffirmed the mandate of Working Group I, as set out above in paragraph 1.[6]

4. At its twenty-third session (Vienna, 17 to 21 November 2014), Working Group I continued its work in accordance with the mandate received from the Commission. Following a discussion of the issues raised in working paper A/CN.9/WG.I/WP.85 in respect of best practices in business registration, the Working Group requested the Secretariat to prepare further materials based on parts IV and V of that working paper for discussion at a future session. In its discussion of the legal questions surrounding

[2] For a history of the evolution of this topic on the UNCITRAL agenda, see A/CN.9/WG.I/WP.97, paras. 5-20.
[3] A/CN.9/800, paras. 22-31, 39-46 and 51-64.
[4] Ibid., paras. 32-38.
[5] Ibid., paras. 47-50.
[6] *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 134.

the simplification of incorporation, the Working Group considered the issues outlined in the framework set out in working paper A/CN.9/WG.I/WP.86, and agreed that it would resume its deliberations at its twenty-fourth session beginning with paragraph 34 of that document.

5. At its twenty-fourth session (New York, 13 to 17 April 2015), the Working Group continued its discussion of the legal questions surrounding the simplification of incorporation. After initial consideration of the issues as set out in Working Paper A/CN.9/WG.I/WP.86, the Working Group decided that it should continue its work by considering the first six articles of the draft model law and commentary thereon contained in Working Paper A/CN.9/WG.I/WP.89, without prejudice to the final form of the legislative text, which had not yet been decided. Further to a proposal from several delegations, the Working Group agreed to continue its discussion of the issues included in A/CN.9/WG.I/WP.89, bearing in mind the general principles outlined in the proposal, including the "think small first" approach, and to prioritize those aspects of the draft text in A/CN.9/WG.I/WP.89 that were the most relevant for simplified business entities. The Working Group also agreed that it would discuss the alternative models introduced in A/CN.9/WG.I/WP.87 at a later stage.

6. At its forty-eighth session, in 2015, the Commission noted the progress made by the Working Group in the analysis of the legal issues surrounding the simplification of incorporation and to good practices in business registration, both of which aimed at reducing the legal obstacles encountered by MSMEs throughout their life cycle. After discussion, the Commission reaffirmed the mandate of the Working Group under the terms of reference established by the Commission at its forty-sixth session in 2013 and confirmed at its forty-seventh session in 2014.[7] In its discussion in respect of the future legislative activity, the Commission also agreed that document A/CN.9/WG.I/WP.83 should be included among the documents under consideration by Working Group I for the simplification of incorporation.[8]

7. At its twenty-fifth session (Vienna, 19 to 23 October 2015), the Working Group continued its preparation of legal standards aimed at the creation of an enabling legal environment for MSMEs, exploring the legal issues surrounding the simplification of incorporation and on good practices in business registration. In terms of the latter, following a presentation by the Secretariat of documents A/CN.9/WG.I/WP.93, A/CN.9/WG.I/WP.93/Add.1 and A/CN.9/WG.I/WP.93/Add.2 on key principles of business registration and subsequent consideration by the Working Group of A/CN.9/WG.I/WP.93, it was decided that a document along the lines of a concise legislative guide on key principles in business registration should be prepared, without prejudice to the final form that the materials might take. To that end, the Secretariat was requested to prepare a set of draft recommendations to be considered by the Working Group when it resumed its consideration of Working Papers A/CN.9/WG.I/WP.93, A/CN.9/WG.I/WP.93/Add.1 and A/CN.9/WG.I/WP.93/Add.2 at its next session.[9] In respect of the legal issues surrounding the simplification of incorporation, the Working Group resumed its consideration of the draft model law on a simplified business entity as contained in working paper A/CN.9/WG.I/WP.89, starting with Chapter VI on organization of the simplified business entity, and continuing on with Chapter VIII on dissolution and winding up, Chapter VII on restructuring, and draft article 35 on financial statements (contained in Chapter IX on miscellaneous matters).[10] The Working Group agreed to continue discussion of the draft text in Working Paper A/CN.9/WG.I/WP.89 at its twenty-sixth session, commencing with Chapter III on shares and capital, and continuing with Chapter V on shareholders' meetings.

[10] Ibid., paras. 76 to 96.

8. At its twenty-sixth session (New York, 4 to 8 April 2016), Working Group I continued its consideration of the legal issues surrounding the simplification of incorporation and on key principles in business registration. In respect of the former, the Working Group resumed its deliberations on the basis of working paper A/CN.9/WG.I/WP.89. Following its discussion of the issues in Chapters III and V,[11] the Working Group decided that the text being prepared on a simplified business entity should be in the form of a legislative guide, and requested the Secretariat to prepare for discussion at a future session a draft legislative guide that reflected its policy discussions to date (see A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1).[12] In respect of key principles in business registration, the Working Group considered recommendations 1 to 10 of the draft commentary (A/CN.9/WG.I/WP.93, A/CN.9/WG.I/WP.93/Add.1 and A/CN.9/WG.I/WP.93/Add.2) and recommendations (A/CN.9/WG.I/WP.96 and A/CN.9/WG.I/WP.96/Add.1) for a legislative guide, and requested the Secretariat to combine those two sets of documents into a single draft legislative guide for discussion at a future session.[13] In addition, the Working Group also considered the general architecture of its work on MSMEs, and agreed that its MSME work should be accompanied by an introductory document along the lines of A/CN.9/WG.I/WP.92, which would form a part of the final text and would provide an overarching framework for current and future work on MSMEs.[14] The Working Group also decided at its twenty-sixth session[15] that it would devote its 27th session to deliberations on a draft legislative guide on a simplified business entity, and its deliberations at its twenty-eighth session (New York, 1 to 9 May 2017) to a consideration of a draft legislative guide reflecting key principles and good practices in business registration.

9. At its forty-ninth session (New York, 27 June to 15 July 2016), the Commission commended the Working Group for its progress in the preparation of legal standards in respect of the legal issues surrounding the simplification of incorporation and to key principles in business registration, both of which aimed at reducing the legal obstacles faced by MSMEs throughout their life cycle. The Commission also noted the decision of the Working Group to prepare a legislative guide on each of those topics and States were encouraged to ensure that their delegations included experts on business registration so as to facilitate its work.[16]

10. At its twenty-seventh session (Vienna, 3 to 7 October 2016), the Working Group continued its deliberations. As decided at its twenty-sixth session,[17] the Working Group spent the entire twenty-seventh session considering a draft legislative guide on a simplified business entity, leaving consideration of the draft legislative guide on key principles of a business registry for the first week of its twenty-eighth session (New York, 1-9 May 2017). The Working Group considered the issues outlined in working papers A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1 on an UNCITRAL limited liability organization (UNLLO), beginning with section A on general provisions (draft recommendations 1 to 6), section B on the formation of an UNLLO (draft recommendations 7 to 10), and section C on the organization of an UNLLO (draft recommendations 11 to 13). The Working Group also heard a short presentation of working paper A/CN.9/WG.I/WP.94 of the French legislative approach known as an "Entrepreneur with Limited Liability" (or EIRL), which represented a possible alternative legislative model applicable to micro and small businesses.

II. Organization of the session

11. Working Group I, which was composed of all States Members of the Commission, held its twenty-eighth session in New York from 1 to 9 May 2017. The session was attended by representatives of the following States Members of the Working Group: Austria, Argentina, Brazil, Burundi, Canada, China, Colombia, Cote d'Ivoire, Czechia, El Salvador, France, Germany, India, Indonesia, Israel, Italy, Japan, Kenya, Kuwait, Libya, Mexico, Namibia, Nigeria, Poland, Republic of Korea, Romania, Russian Federation, Sierra Leone, Singapore, Spain, Switzerland, Thailand, Turkey and United States of America.

12. The session was attended by observers from the following States: Congo, Croatia, Finland, Iraq, Netherlands, Niger, Saudi Arabia, Syrian Arab Republic and Tunisia.

13. The session was also attended by observers from the Holy See.

14. The session was also attended by observers from the following international organizations:

Invited international non-governmental organizations: American Society of International Law (ASIL); Conseil des Notariats de l'Union Europeene (CNUE); Fondation pour le droit continental (FDC); Grupo Latinoamericano de Abogados para el Derecho del Comercio Internacional (GRULACI); Jerusalem Arbitration Centre (JAC); the National Law Center for Inter-American Free Trade (NLCIFT); the European Law Students' Association (ELSA) and the Law Association for Asia and the Pacific (LAWASIA).

15. The Working Group elected the following officers:

Chair: Ms. Maria Chiara Malaguti (Italy)

Rapporteur: Ms. Andrea Laura Mackielo (Argentina)

16. In addition to documents presented at its previous sessions, the Working Group had before it the following documents:

(a) Annotated provisional agenda (A/CN.9/WG.I/WP.100);

(b) Note by the Secretariat on a draft legislative guide on key principles of a business registry (A/CN.9/WG.I/WP.101);

(c) Proposal by the Government of Italy on contractual networks (A/CN.9/WG.I/WP.102);

(d) Note by the Secretariat on compilation of draft recommendations on key principles of a business registry (A/CN.9/WG.I/WP.103); and

(e) Observations and model provisions from the Government of Colombia on the dissolution and liquidation of MSMEs (A/CN.9/WG.I/WP.104).

17. The Working Group adopted the following agenda:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Preparation of legal standards in respect of micro, small and medium-sized enterprises.
5. Other business.
6. Adoption of the report.

III. Deliberations and decisions

18. The Working Group engaged in discussions in respect of the preparation of legal standards aimed at the creation of an enabling legal environment for MSMEs, in particular, on a draft legislative guide on key principles of a business registry on the basis of Secretariat documents A/CN.9/WG.I/WP.101 and A/CN.9/WG.I/WP.103. The Working Group also continued its consideration of a draft legislative guide on an UNCITRAL limited liability organization on the basis of Secretariat documents A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1. In addition, the Working Group considered the proposals by States in documents A/CN.9/WG.I/WP.102 and A/CN.9/WG.I/WP.104. The deliberations and decisions of the Working Group on these topics are reflected below.

IV. Preparation of legal standards in respect of micro, small and medium-sized enterprises

A. Draft legislative guide on key principles of a business registry

1. Presentation of A/CN.9/WG.I/WP.101 and A/CN.9/WG.I/WP.103 and introductory observations

19. The Working Group was reminded that the draft legislative guide in A/CN.9/WG.I/WP.101 was a compilation of documents that had previously been before the Working Group, i.e. the draft commentary on key principles of business registration in A/CN.9/WG.I/WP.93, A/CN.9/WG.I/WP.93/Add.1 and A/CN.9/WG.I/WP.93/Add.2 (A/CN.9/860, paras. 17 to 68), and the draft recommendations on key principles of business registration in A/CN.9/WG.I/WP.96 and A/CN.9/WG.I/WP.96/Add.1 (A/CN.9/866, paras. 51 to 85). Decisions made by the Working Group in respect of those documents were reflected in A/CN.9/WG.I/WP.101, as were the original locations of the consolidated paragraphs and the original numbering of the draft recommendations. Moreover, it was noted that document A/CN.9/WG.I/WP.103 merely reproduced the draft recommendations in A/CN.9/WG.I/WP.101 in order to facilitate the reading and consideration of the latter text, which included a number of cross-references.

20. The Working Group recalled a number of the themes underlying the draft legislative guide, including: (a) that encouraging MSMEs to operate in the legally regulated economy was a key goal; (b) that the primary conduit through which businesses might enter the legally regulated economy was through registration, particularly if an approach based on the "one-stop shop" was adopted; (c) that all businesses should be permitted to register, but it was left to the State to determine which businesses were required to register; (d) that registration would permit the State to identify MSMEs and to provide them with assistance and incentives; (e) that the draft legislative guide was intended to be aspirational and meant for those economies engaging in major reforms and those that wished to improve their business registries; (f) that although the focus of the work was on MSMEs, any improvements to a State's business registry system would also assist businesses of other sizes; (g) that three key factors in the draft text were to recommend a fully electronic registry, the use of a "one-stop shop", and the use of unique business identifiers; and (h) that since the text was a legislative guide, it was intended to be a highly flexible text that States could refer to according to their needs.

21. It was further highlighted that throughout the draft recommendations, the term "Regulation" had been used to indicate the body of rules adopted by the enacting State with respect to the business registry, whether such rules were found in administrative guidelines or in the specific law governing business registration. The term "law of the enacting State", on the other hand, had been used to denote those provisions of domestic law in the broader sense that were somehow relevant to and touched upon issues related to business registration. The Working Group was of the view that it was not necessary to distinguish in the legislative guide between the law specific to the business registry and the broader applicable law that might touch upon business

registration, nor between primary or secondary legislation. Instead, it was suggested that the term "law" might be sufficient, leaving other aspects to the enacting State to decide, but that the Secretariat might have regard to recent treatment of a similar issue in the draft guide to enactment of the UNCITRAL model law on secured transactions in order to identify an appropriate solution. It was further observed that consequential changes would need to be made to the relevant definitions in paragraph 12 of the draft text.

2. Objectives of a Business Registry

Purposes of the business registry: paragraphs 25 and 26 and recommendation 1

22. It was again suggested that draft recommendation 12 on a single interface for business registration and registration with other authorities ("one-stop shops") should be moved to the beginning of the legislative guide (see also para. 54 of A/CN.9/866, when the Working Group had decided to leave structural considerations to be discussed at a later stage). After discussion, the Working Group agreed that the commentary related to recommendation 1 should instead refer to the concept of "one-stop shops", focusing on the importance of the concept, particularly in terms of assisting MSMEs.

23. A suggestion was made that the commentary to recommendation 1 should contain greater emphasis on the importance of MSMEs and the underlying reasons for the work being undertaken by Working Group I. It was noted that paragraphs 2 (and the introduction generally) and 26 of the draft legislative guide contained such information. In addition, the Working Group was reminded that it had agreed in general terms with the approach set out in A/CN.9/WG.I/WP.92 (see paras. 86 to 88 of A/CN.9/866), wherein a document along the lines of A/CN.9/WG.I/WP.92 would establish the overarching reasons for the MSME work and the policy support that States could provide to MSMEs, while the draft legislative guides being prepared by Working Group I and other working groups represented the legal pillars that would support that overarching policy approach. The Working Group agreed to add any necessary detail to the commentary on the importance of assisting MSMEs.

24. A concern was expressed that draft recommendation 1(a) did not sufficiently clarify that it should be left for enacting States to decide which businesses should be required to register (see also para. 56 of A/CN.9/866), and that businesses in some States operated in the legally regulated economy without registering. A suggestion to add the phrase "that is required to register" to recommendation 1(a) was not supported by the Working Group. It was also observed that paragraphs 125 to 128 and recommendation 19 of the draft legislative guide focused in detail on this issue and the Working Group decided that any necessary clarification or cross-reference in this respect could be made to the commentary, possibly as an additional paragraph, and that adjustments might be made to assist the understanding of recommendation 1, such as substituting the word "facilitates" for "entitles".

25. A suggestion was made to add the phrase "and/or public institutions" after the word "public" in recommendation 1(b) in order to ensure that information relevant for public procurement initiatives was available to public entities. The Secretariat was requested to consider whether an adjustment could be made to the commentary to ensure clarity on that point.

26. Another suggestion was made to add to recommendation 1(b) the phrase "receiving, storing and" before the phrase "making accessible" so as to mirror the definition of "business registry" in paragraph 12. That suggestion was not taken up by the Working Group.

Simple and predictable legislative framework permitting registration for all businesses: paragraphs 27 to 30 and recommendation 2

27. In light of its earlier discussion in respect of clarifying the concept that the draft legislative guide left it to the enacting State to decide which businesses should be required to register (see para. 24 above), the Working Group agreed that the second sentence in paragraph 28 should be modified by deleting the phrase "may wish to

consider requiring or enabling" and replacing it with "should enable". Further, the Working Group agreed to add the phrase "or type of business" at the end of paragraph 29.

28. A suggestion was made to clarify recommendation 2(a) by including in it a cross-reference to the section in the legislative guide dealing with the correction of errors by registry staff and to the fact that electronic filings might be automatically rejected if the information was incorrectly completed. Those proposals were not taken up by the Working Group.

29. It was suggested that recommendation 2(b) should include reference to MSMEs, as well as to "businesses of all sizes and legal forms". It was observed that the emphasis of the legislative guide on MSMEs was already evident in the introduction and ought not be unnecessarily repeated, and the Working Group did not support the suggested addition. Another proposal was made to add to the end of recommendation 2(b) the phrase "stipulated under the legislation of the enacting State", but the Working Group agreed that that concept was already reflected in the introductory portion of the guide, which could be amplified, if necessary.

30. The Working Group supported a suggestion to delete as redundant the closing phrase of recommendation 2(c) "except where such a business is subject to additional requirements under the law of the enacting State as a consequence of its particular legal form."

Key features of a business registration system: paragraphs 31 to 35 and recommendation 3

31. A delegation suggested the deletion of paragraphs 32 and 33 from the draft legislative guide, because it was of the view that the concept of reliability was adequately defined in paragraph 12 of the text and by way of the examples provided in paragraph 34, subparagraphs (a) to (d). It was further suggested that the square brackets around subparagraph (d) of recommendation 3 could then be deleted and the text retained.

32. Other delegations were of the view that recommendation 3(d) should be retained in the text without eliminating paragraphs 32 and 33. It was observed that retaining the discussion of reliability in paragraphs 32 and 33 could be helpful for States that might consider reforming their business registry systems based upon the recommendations of the draft legislative guide. It was suggested that if the discussion in paragraph 32 in respect of the term "reliability" caused confusion in being too similar to the definition in paragraph 12, paragraph 32 might instead include text along the lines of "according to the definition of reliable in paragraph 12". Further, it was noted that the term "reliable" might appear in other places throughout the legislative guide and that care should be taken to ensure that it was used consistently. After discussion, the Working Group agreed that paragraphs 32 and 33 should remain in the legislative guide and requested the Secretariat to adjust paragraph 32 based on the guidance provided by the delegations and to eliminate any duplication of the definition of "reliable".

33. Although it was suggested that the phrase "of good quality and" could be deleted from paragraph 34 as it already appeared in the definition of "reliable" in paragraph 12, the Working Group agreed to retain it in order to ensure that adequate emphasis was given to the concept. A suggestion made to insert the phrase "good quality" into recommendation 3(d) to be consistent with the language of paragraph 34 was also accepted by the Working Group.

34. Several delegations expressed the view that subparagraph 34(c), which noted the example in some jurisdictions that businesses might be required to re-register at certain intervals to keep the registry reliable, should be deleted because the example was not considered to be good practice. In addition, it was thought that such a practice could be viewed as unduly burdensome on MSMEs. Although it was noted that certain jurisdictions required some process of periodic renewal of a business's registration in order to ensure the accuracy of information in the registry, the Working Group agreed to delete subparagraph 34(c).

35. Further to a question regarding whether updating the registry in subparagraph 34(d) would be a task for the registry or for the registered business, it was clarified that the text was intended to refer to the registry. Some concern was expressed about the frequency of the updates to the registry and it was observed that technology might not always be available in all States to update the registry in real time. Nevertheless, it was thought that it would be useful to encourage regular updates in the draft legislative guide.

36. There was support in the Working Group for a suggestion to redraft paragraph 34 and focus on the general concepts of verification and security of information as well as on best practices for updating the registry. The Secretariat was also encouraged to include cross-references to later sections of the legislative guide that considered those aspects, including a reference to recommendation 28(a) on automated periodic update requests, and to recommendations 40 and 41 on recourses available to the State when businesses did not provide reliable information to the registry.

37. The Working Group agreed to delete the square brackets around recommendation 3(d) and to retain the text.

3. Establishment and functions of the business registry

Responsible authority: paragraphs 37 to 39 and recommendation 4

38. There was agreement in the Working Group that the reference to the enacting State retaining "ownership" of the registry record in paragraph 39 might not be sufficiently accurate, and that the Secretariat should consider the use of alternative text, possibly referring instead to "responsibility" or "rights".

39. After discussion, the Working Group agreed that recommendation 4 should be clarified to indicate that the State should retain responsibility over the organization of the business registry, but that it could entrust the operation of the registry to an authority established for that purpose. There was support in the Working Group for a drafting suggestion of the recommendation along the following lines: "The law should establish that the organization of the business registry is within the competence of the enacting State. The business registry should be operated by the enacting State or by an authority appointed by that State".

40. The Working Group further agreed to request the Secretariat to clarify the meaning of the term "authority" (as used in recommendations 4 and 5) and the term "designated authority" (as used in recommendations 6 and 8) and possibly to include a definition of both terms in paragraph 12 of the draft legislative guide.

Appointment of the registrar: paragraphs 40 and 41 and recommendation 5

41. The Working Group agreed with the substance of paragraphs 40 and 41 and recommendation 5 of the legislative guide as drafted.

Transparency in the operation of the business registration system and accountability of the registrar: paragraphs 42 to 44 and recommendation 6

42. There was support in the Working Group for the suggestion that paragraph 44 should cross-refer to the principles of liability of the registrar and registry staff, discussed in paragraphs 196 to 200 of the draft legislative guide.

Use of standard registration forms: paragraph 45 and recommendation 7

43. A comment was made that use of standard registration forms may not be the only way through which States could implement a transparent registration system. There was agreement in the Working Group that in the commentary to recommendation 7, it could be added that States may allow the submission of instruments of incorporation or contracts other than the standardized registration form.

Capacity-building for registry staff: paragraphs 46 to 49 and recommendation 8

44. There was agreement in the Working Group that the phrase "any improvement of the registry's standing in international rankings" in paragraph 47 should be deleted and replaced with the notion that States pursued capacity-building for registry staff in order to be meet "global best practices and trends".

45. The Working Group also expressed its support for the suggestion to include the phrase "service standards" in the third line of recommendation 8 after the phrase "business registration procedures".

Core functions of business registries: paragraphs 50 to 58 and recommendation 9

46. In accordance with its deliberation at its twenty-sixth session in April 2016 (para. 82 of A/CN.9/866), the Working Group agreed to postpone the review of this draft recommendation until it had reviewed the rest of the draft recommendations and commentary.

Structure of the business registry: paragraphs 59 and 60 and recommendation 10

47. A concern was expressed that centralized registration systems might not be appropriate for developing States that needed to facilitate access to registration services for businesses in remote locations and possibly through multiple off-site access points. It was, however, noted that in many States, centralized and decentralized approaches to business registration coexisted, since the registration systems were structured as central systems accessible from multiple decentralized access points.

48. After discussion, the Working Group agreed to request the Secretariat to redraft the commentary in paragraphs 59 and 60 to focus less on the contrast between centralized and decentralized systems, and more on how the registry system should be interconnected, regardless of its structure, and have multiple access points.

4. Operation of the business registry

Electronic, paper-based or mixed registry: paragraphs 62 to 65

49. A question was raised in the Working Group whether any delegation was aware of a jurisdiction that had implemented blockchain technology in its business registry system. It was observed that Dubai may be introducing the use of blockchain technology into its registry systems, but that no information on additional jurisdictions was available. It was noted that the issue of blockchain technology was increasingly under discussion globally and that it was on the programme of UNCITRAL's 50th Anniversary Congress (4 to 6 July 2017, Vienna). The Working Group agreed that the technology and its potential impact would be of interest in its current work on MSMEs and should be considered, but decided to defer discussion of it until a later stage.

50. The Working Group agreed with the substance of paragraphs 62 to 65 of the legislative guide as drafted.

Features of an electronic registry: paragraphs 66 to 70

51. The Working Group agreed with the substance of paragraphs 66 to 70 of the legislative guide as drafted.

Phased approach to the implementation of an ICT-based registry: paragraphs 71 to 79

52. A question was raised whether the term "Internet penetration", found in paragraphs 72 and 75 of the draft legislative guide, was the proper terminology in light of the increasing levels of Internet access globally. The view was expressed that other factors, such as cost, might also be relevant to how an ICT-based registry was appropriately phased in. The experience of some delegations indicated that in developing States in particular, additional factors may be of importance, including

literacy rates, infrastructure issues (e.g. power outages), the types of intended users, and access to and reliance on mobile payment systems. The Working Group requested the Secretariat to review the commentary to ensure that such issues were adequately reflected. In addition, it was observed that business registries should also have contingency plans, and while reference to such plans appeared later in the text, the Working Group agreed to include a cross reference in this section of the draft.

53. Other than the adjustments noted in the paragraph above, the Working Group agreed with the substance of paragraphs 71 to 79 of the legislative guide as drafted.

Other registration-related services supported by ICT solutions: paragraphs 80 to 83 and recommendation 11

54. The Working Group agreed with the substance of paragraphs 80 to 83 and recommendation 11 of the legislative guide as drafted.

A single interface for business registration and registration with other authorities ("one-stop shop"): paragraphs 84 to 93 and recommendation 12

55. Several States informed the Working Group of legislative reforms they had enacted which had adopted a single interface for business registration and registration with other authorities ("one-stop shops"), and of the overall positive impact of those reforms in facilitating the registration of businesses. There was broad agreement in the Working Group on the benefits of establishing a "one-stop shop" and of the important advantages that could be gained by users of that single interface.

56. A suggestion was made that reference could be made in the last sentence in paragraph 86 to access for MSMEs to public and private banking as additional services that could be linked to the "one-stop shop", and reference was also made to obtaining municipal licences through the "one-stop shop". Another suggestion was made to add to the commentary, possibly in paragraph 87, reference to the practice of using mobile offices (i.e. offices on wheels) as additional access points for the "one-stop shops", particularly in States with remote areas.

57. A reference was made to the section entitled "B. Definitions" from a document (A/CN.9/WG.I/WP.98) by the United Nations Conference on Trade and Development (UNCTAD) secretariat, and a suggestion was made that that section of the paper should be included in the draft legislative guide as a definition for "business registration". There was support in the Working Group for concerns that were expressed that adopting the passage from the UNCTAD paper as a definition for "business registration" might not be appropriate, and that such an approach could have a negative impact on the remainder of the text and its scope in general. Further, it was indicated that the content of the passage from the UNCTAD paper was already found in the "one-stop shop" section of the legislative guide. The Working Group decided to delay its decision on the suggestion until it had had an opportunity to consider the consequences that such an approach might have on the legislative guide and the overall approach of the project.

58. Some concern was expressed that draft recommendation 12 should ensure clarity that it was not advocating the establishment of a single government agency with authority over all of the other agencies related to the "one-stop shop", but rather that it was recommending that a single agency should have authority over the single integrated interface; government agencies would retain their autonomy.

59. Following discussion in the Working Group, the Secretariat was requested to make the necessary adjustments to clarify the commentary. Decisions in respect of the suggestion to move recommendation 12 to the beginning of the legislative guide (see para. 22 above) and to include a definition of "business registration" along the lines of the UNCTAD paper were deferred to a later stage.

Use of unique business identifiers: paragraphs 94 to 102 and recommendation 13

60. The Working Group was reminded that the purpose of a unique business identifier was to provide each business with a single identifier that the business could use for identification purposes across various agencies within a jurisdiction. At the

same time, it was recognized that an agency might still assign a separate identifier to be used for internal purposes.

61. A suggestion was made by some delegations that paragraph 100 might refer to the fact that a State could assign a separate business identifier to a sole proprietor in both a business and an individual capacity.

62. A concern was raised that recommendations 13 and 14 had an inherent contradiction with respect to the time at which an identifier would be assigned because recommendation 13 provided that a "unique business identifier should be allocated to each registered business" whereas recommendation 14 contemplated that a unique business identifier could also be allocated before registration. It was noted that in some jurisdictions, a public agency might provide a unique identifier for businesses that were permitted to operate before registration, but that States could make it possible for the same identifier to be used as its unique business identifier after registration. It was also noted that in some jurisdictions the registry and the issuer of the unique business identifier might not be the same agency.

63. It was agreed by the Working Group that it would be left to the enacting State to determine the format of the unique business identifier and which agency would have the authority to assign it. The Secretariat was requested to make any necessary adjustments to the commentary.

Allocation of unique business identifiers: paragraphs 103 and 104 and recommendation 14

64. The Working Group agreed with the substance of paragraphs 103 and 104 and recommendation 14 of the legislative guide as drafted.

Implementation of a unique business identifier: paragraphs 105 to 109 and recommendation 15

65. The Working Group agreed with the substance of paragraphs 105 to 109 and recommendation 15 of the legislative guide as drafted. The Working Group also supported a suggestion to combine recommendations 13 through 15 into three consecutive recommendations after one single commentary.

Sharing of private data between public agencies: paragraph 110 and recommendation 16

66. Concern was expressed with respect to the use of the term "private data" in paragraph 110 and in recommendation 16, noting that the concept was unknown in some jurisdictions, or referred to as "personal data" in others. It was suggested that the text might use the term "protected data" as a possible alternative in order to be more precise. There was, however, general agreement in the Working Group that enacting States should establish and adhere to their own rules for the sharing and use of such protected data among public agencies.

67. In addition, it was noted that although the commentary and recommendation were intended to regulate the sharing of data between government agencies, there were several confusing references to disclosure of information to the public. It was suggested that such issues should instead be considered in connection with draft recommendations 32 and 33 of the legislative guide.

68. After discussion, the Working Group agreed that the text of the recommendation should be amended (in particular, the chapeau and subparagraph (a)) so that it referred to "protected data" and recommended that such data should be shared among public authorities only in conformity with the law of the enacting State. There was further agreement that any necessary adjustments should also be made to paragraph 110, and that issues related to disclosure should be considered in relation to recommendations 32 and 33.

Exchange of information among business registries: paragraphs 111 to 116 and recommendation 17

69. Concern was raised whether paragraphs 111 to 116 and recommendation 17 should focus on the exchange of information among business registries, or whether the issue was instead one of cross-border access to information on businesses. It was observed that while the regional examples of information-sharing set out in paragraph 112 and footnote 229 were interesting and ambitious, both were examples of information-sharing as a component of larger projects involving significant economic integration among States. It was suggested that that aspect should be clarified in the text since most States would not share that characteristic, and that the more practical recommendation might be to recommend methods through which different jurisdictions could promote the cross-border accessibility of the information on their registry, for example through providing it in a widely understood language. There was support in the Working Group for that view and to remove references in the entire text to specific States or regional economic integration organizations. As a solution, it was suggested that recommendation 17 could be amended by adding the phrase "access to the" after the word "facilitate", and the phrase "by foreign businesses" after the word "information", and deleting the phrase "exchange between registries from different jurisdictions".

70. In addition, it was suggested that the example included in the closing sentence of paragraph 111 described an interesting use of shared information, but that the example might be more properly considered in conjunction with business entity law rather than with business registration.

71. In general, there was agreement in the Working Group that the approach in paragraphs 111 to 116 and recommendation 17 should be adjusted to one focusing more on cross-border access to information than of information-sharing. To that end, there was support for the suggestion that those issues might best be considered in conjunction with part VI of the draft legislative guide on accessibility and information-sharing.

5. Registration of a business

Scope of examination by the registry: paragraphs 117 to 119

72. A suggestion was made to delete paragraphs 117 through 119 because the discussion of the scope of examination by the registry was said to not be a necessary inclusion in a legislative guide. However, it was noted that an examination of the different types of registry systems would be useful for States which have not yet made a determination as to which system to select. Moreover, the Working Group recalled that it had discussed the advantages and disadvantages of the approval and declaratory systems of business registration at several previous sessions (see, for example, paras. 62 to 65 of A/CN.9/866 and paras. 31, 35 and 61 of A/CN.9/860), and that the Working Group had consistently agreed that the text should be very clear to avoid appearing to favour either system. There was support in the Working Group for the view that paragraphs 117 to 119 respected that view that the main goal of either system should be to simplify registration and thus to encourage the number of registered businesses.

73. It was observed that the approval and declaratory systems represented two distinct approaches, but that many jurisdictions actually used a more nuanced or hybrid approach somewhere between the two extremes and incorporating aspects of both systems. For example, not all approval systems were judicial in nature, and there were variations in the level and type of verification done in the various systems. There was support in the Working Group for the suggestion to include descriptions of such hybrid systems in paragraphs 117 through 119.

74. As a matter of drafting, it was observed that the phrase "verification of an event's legal status is made after it has taken place" in the final sentence of paragraph 118 might not be appropriate. A suggestion was made that the legislative guide could provide information on the minimum amount of information required for each system.

A proposal to define "approval systems" and "declaratory systems" was not taken up by the Working Group.

75. After discussion, the Working Group agreed that paragraphs 117 through 119 should remain in the legislative guide and requested the Secretariat to redraft those paragraphs of the commentary based on the guidance provided. Recalling previous discussions, it was determined by the Working Group that the legislative guide should not be viewed as endorsing one system over another and that care should be taken to draft the characterization of each system neutrally.

Accessibility of information on how to register: paragraphs 120 to 124 and recommendation 18

76. A suggestion was made to make a reference to the earlier discussion of "one-stop shops" in paragraphs 120 to 124. The Secretariat was encouraged to consider providing an appropriate cross reference to the discussion of "one-stop shops" found previously in the legislative guide. With that adjustment, the Working Group agreed with the substance of paragraphs 120 to 124 and recommendation 18 of the legislative guide as drafted.

Businesses required or permitted to register: paragraphs 125 to 128 and recommendation 19

77. The Working Group was reminded that the text of paragraph 125 should be adjusted to be consistent with the agreed text of paragraph 28 (see para. 27 above), in deleting the phrase "may wish to consider requiring or enabling" and replacing it with "should enable".

78. A suggestion was made to clarify in recommendation 19 that businesses could be required to register based on their legal form or the type of business in which they were engaged in paragraph 125.

79. Concerns were expressed regarding the clarity of the final phrase of the first sentence in paragraph 128 that "the separation of personal assets from assets devoted to business or limiting the liability of the owner of the business", since those advantages would be offered to businesses not simply as a result of their registration, but by virtue of them registering as a specific legal form. The Working Group agreed that the commentary should be clarified in that regard, either through deleting that phrase or through noting that such advantages were subject to the legal form chosen by the business.

80. In addition, it was observed that the final phrase of paragraph 126, "for example, because they are not economic entities or because they are not engaged in business activities" and the last sentence in paragraph 128 might need to be clarified.

81. After discussion, the Working Group agreed that clarifications were required to the commentary, and requested the Secretariat make the appropriate adjustments to the text.

Minimum information required for registration: paragraphs 129 to 132 and recommendation 20

82. There was support in the Working Group for the proposal to delete subparagraph 130(b). It was also suggested that reference could be made in the commentary to additional information that the registry might require for the purposes of controlling any illicit purposes or activities of the business that is being registered.

83. Concern was expressed that recommendation 20(b) was not sufficiently clear, in that the "person or persons registering the business" could be either the owner of the business or simply an agent registering a business. A strong preference was expressed that the identity of the owner(s) of the business be added to the list of information in recommendation 20. While there was some support for that suggestion, it was observed that since the legislative guide applied to all types of business, the identity of the owners could change frequently. In addition, it was observed that recommendation 20 merely listed the minimum information required for registration,

and that, in any event, paragraph 131 made it clear that enacting States could require additional information, including the identity of the owner(s) or beneficial owner(s). The Working Group did not support the addition of the identity of the owner(s) to recommendation 20, but it agreed to clarify recommendation 20(b) by referring to the defined term "registrant(s)" rather than to "person or persons registering the business". The Secretariat was also requested to make any necessary changes to paragraph 132 to reflect the view of those States that considered the identity of the business owner to be a key requirement for business registration.

Language in which information is to be submitted: paragraphs 133 to 135 and recommendation 21

84. The Working Group agreed with the substance of paragraphs 133 to 135 and recommendation 21 of the legislative guide as drafted.

Notice of registration: paragraph 136 and recommendation 22

85. It was observed that the translation of the phrase "as soon as practicable, and, in any event, without undue delay" in recommendations 22 and 25 needed to be standardized in the French text. The Working Group agreed with the substance of paragraph 136 and recommendation 22 of the legislative guide as drafted.

Content of notice of registration: paragraph 137 and recommendation 23

86. The Working Group agreed to add the phrase "at least" after the phrase "should contain" in recommendation 23 in order to clarify that reference was being made to a minimum requirement. With that adjustment, the Working Group agreed with the substance of paragraph 137 and recommendation 23 of the legislative guide as drafted.

Period of effectiveness of registration: paragraphs 138 to 141 and recommendation 24

87. It was proposed that the commentary should be clarified, particularly in paragraph 139, to indicate that simply because a business registry did not require businesses to renew their registration it did not mean that the information in the registry was any less reliable, since there were several other methods that were employed to ensure that businesses kept their registered information current, including the imposition of sanctions. A drafting suggestion was made to delete the phrase at the beginning of the second sentence, replacing it with text along the lines of "When the enacting State is taking this approach, it should take care to keep the information current" and including a reference to part V on "Maintaining a current registry". There was support in the Working Group for those suggestions and the Secretariat was requested to make the necessary adjustments.

88. It was also observed that the Working Group had previously agreed (see para. 34 above) that, although some jurisdictions required businesses to periodically renew their registration, requiring businesses to re-register might not be considered a good practice, particularly in terms of the potential burden that could be placed on businesses having to meet that requirement. There was support in the Working Group for the suggestion that the Secretariat be requested to ensure that the commentary in the legislative guide be consistent with that approach.

89. It was noted that recommendation 24 could cause uncertainty as drafted, since registries that required businesses to renew their registration would likely offer a grace period to businesses to complete that requirement prior to deregistering them, and the period of effectiveness might thus be uncertain. It was suggested that that uncertainty could be remedied by deleting the final phrase of the recommendation "or until such time as a renewal of the registration is required". There was support in the Working Group for that suggestion. It was also suggested that the definition of the term "deregistration" should be amended accordingly.

Time and effectiveness of registration: paragraphs 142 to 144 and recommendation 25

90. It was observed that in some jurisdictions, businesses may apply for the protection of certain rights, in particular, in the provisional registration of the trade name of the business in the period prior to registration. Such provisional registration protected that name from being used by any other entity until the registration of the business was effective. The Working Group agreed that a reference to such a pre-registration matter could be added to the text, bearing in mind paragraph 52, and that with that adjustment, the substance of paragraphs 142 to 144 and recommendation 25 of the draft legislative guide were agreed as drafted.

Refusal to register: paragraphs 145 to 148 and recommendation 26

91. It was recalled that, as noted in the commentary, the purpose of recommendation 26 was to prevent registries from arbitrarily rejecting businesses that had requested to be registered. The importance of requiring a clear and legally permissible justification for refusal to register a business was raised by several delegations along with a suggestion to include such language in recommendation 26(a). In addition, several delegations were of the view that translations of the English word "basis" in recommendation 26(a) were not strong enough to ensure that registrars would be required to provide to the company a clear rationale if the application were rejected. A suggestion was noted to consider adding commentary on the effect of instances when an application for registration should have been rejected but was not.

92. It was suggested that just as registrars could have the authority to correct application errors on their own, electronic forms could automatically require correction if submitted with an error. A proposal to further differentiate between electronic and paper registry systems in the commentary and recommendation 26 was not supported by the Working Group, but the Secretariat was encouraged to review the commentary to ensure that it would take into account paper, electronic and mixed systems, as well as the treatment of similar issues in the UNCITRAL Guide on the Implementation of a Security Rights Registry.

93. A concern was raised that the text of recommendation 26(a) referred to refusals to register on both formalistic and substantive grounds. The Working Group determined that recommendation 26 should focus solely on refusal to register based on the formalistic ground of error in the application. A proposal to modify the title of recommendation 26 to refer specifically to errors in the application was also approved by the Working Group, possibly adopting text along the lines of "Rejection of an application for registration".

94. A suggestion was made to create a second recommendation for instances when refusal to register was based on substantive grounds of the business being in violation of the laws of the State. That proposal was not taken up by the Working Group, due to the fact that errors of substance would be governed by other sets of laws in each jurisdiction. Instead, the Secretariat was asked to modify the commentary to elaborate on the difference between formalistic and substantive refusals.

Registration of branches: paragraphs 149 to 151 and recommendation 27

95. The Working Group agreed that the commentary should be clear in establishing that each State had its own requirements governing the rules for the operation of foreign businesses. In that respect, particular regard might be had to adjusting the final sentence of paragraph 149.

96. In addition, a number of proposals were made in order to make paragraphs 149 to 151 and recommendation 27 more consistent with the approach taken in the draft legislative guide including the following:

(a) The commentary should ensure proper use of terminology to indicate that in some States registration of branches of domestic companies was also required or permitted;

(b) Recommendation 27(c)(i) and (ii) should be redrafted. With regard to subparagraph (c)(i), a view was expressed that the issue of the time and registration of businesses was already covered in recommendation 25(b) and therefore recommendation 27(c)(i) should indicate when a branch was registered. As to recommendation 27(c)(ii), it was observed that the legal form of the foreign company that registered the branch should be included among the disclosure requirements listed there. In addition, the reference in recommendation 27(c)(ii) to "the copy of the notice of registration of the foreign company" should be replaced with a reference to any current proof of existence of the foreign company issued by the authority dealing with such matters in the State in which that company was registered; and

(c) Recommendation 27(c)(iv) should be deleted, since the issue of the language in which the information was to be submitted was dealt with in recommendation 21.

97. After discussion, the Working Group agreed to take up those proposals and requested the Secretariat to modify the commentary and recommendation 27 accordingly.

6. Post-registration

Maintaining a current registry: paragraphs 152 to 154 and recommendation 28

98. It was noted that recommendation 28(b) used the phrase "immediately … or as soon and practicable thereafter" whereas recommendations 22 and 25 used the phrase "as soon as practicable, and, in any event, without undue delay" and also provided greater detail on the meaning of the phrase in the commentary. It was agreed that a consistent approach should be taken in the text and commentary of recommendation 28(b).

99. It was also noted that paragraph 153 contained the word "re-register". It was observed that the Working Group had previously agreed (see paras. 34 and 88 above) that requiring businesses to re-register might not be considered good practice and the Secretariat was requested to ensure that the commentary in this section of the legislative guide be consistent with that approach.

100. As an additional method of keeping the information on the registry current, it was proposed that possible sanctions on businesses failing to comply would be more effective than sending reminders, and could be added to the commentary in paragraph 154. There was some support for that proposal, but concerns were expressed that not all errors should be subject to sanctions, particularly because a failure to update information could be inadvertent, and that applying strict sanctions for a relatively minor issue might inhibit MSMEs from registering and entering the legally regulated economy. It was also noted that such sanctions would be challenging to enforce as a practical matter. After discussion, it was determined that appropriate reference to the possibility of establishing sanctions on businesses failing to update their information could be added to the commentary to recommendations 40 and 41, and possibly in the recommendation as well, taking into account the concerns expressed in the Working Group the likelihood that such failures could be inadvertent.

Information required after registration: paragraphs 155 and 156 and recommendation 29

101. The Working Group determined to insert the phrase "at least" into the chapeau of recommendation 29 so that the text read "the registered business must file with the business registry at least the following information".

102. A proposal to eliminate recommendation 29(b) was not taken up by the Working Group, but it was agreed that because periodic returns were not required in all jurisdictions, the order of the clauses should be reversed along the lines of "When the law of the enacting State so requires, periodic returns …". It was suggested by several delegations to remove the reference to "annual accounts" as they might not be required from MSMEs and could be required to be filed with authorities other than registries. In that regard, the Working Group was encouraged to consider the definitions

of "annual accounts" and "periodic reports" in paragraph 12. A suggestion was also noted to make reference to the effect that a "one-stop shop" might have on the preceding obligations.

103. The Working Group agreed to switch the order of recommendations 28 and 29, and to reverse the order of recommendation 28(a) and (b), so that the legislative guide would focus first on the obligation of the business to update information and then on the obligation of the registry. A proposal to combine recommendations 28 and 29 was not taken up by the Working Group.

Time and effectiveness of amendments to registered information: paragraphs 157 and 158 and recommendation 30

104. It was observed that registries usually retained historical information on the business (see, for example, para. 205 in A/CN.9/WG.I/WP.101) and that changes to previously registered information should be added to the registry record. It was proposed that that aspect should be reflected in the commentary to recommendation 30.

105. In addition, a proposal was made to redraft recommendation 30(a) to reflect the order in which a registry actually proceeded when receiving and processing amendments to registered information. It was suggested that the text could reflect that the registry first processed the amendments received from a business in the order in which they were received (which could be dealt with as a subparagraph of recommendation 30(a)) and then entered such amendments into the registry record and informed the business (which could become a second subparagraph of recommendation 30(a)). Finally, it was observed that the phrase "time and date stamp" in subparagraph (a) of recommendation 30 applied to both electronic and paper media, and it was suggested that the text might clarify that point.

106. The Working Group agreed to those proposals and to making a consequential change to the title of recommendation 30 to text along the lines of "process of introducing amendments in the register".

7. Accessibility and information-sharing

Public access to the business registry: paragraphs 159 to 162 and recommendation 31

107. There was agreement in the Working Group to add the term "more" between the words "make" and "informed" in the penultimate sentence of paragraph 159 and to delete the last sentence of that paragraph.

108. It was observed that section A (Public access to the business registry) and section B (Public availability of information) of Chapter VI dealt with two different aspects of accessibility to information: the provision of a service for prospective registrants and access to registered information by the public. In this regard, paragraphs 159 to 162 were said to be more relevant to section B and recommendation 32 and should be moved to that part of the text, while new commentary should be prepared for recommendation 31 dealing with access to the registry by the registrant. It was further noted that paragraph 162 should be redrafted to make it clear whether it referred to access to the registry by the registrant or by the public.

109. There was support in the Working Group for those suggestions and for the suggestion that the phrase "and the information contained in the registry" in recommendation 31 could be deleted to be consistent with the new structure.

Public availability of information: paragraphs 163 to 169 and recommendation 32 and where information is not made public: paragraphs 170 and 171 and recommendation 33

110. It was observed that the general approach of the legislative guide was that in order to facilitate access to the public information on the business registry, users should not be required to provide personal or other details in order to gain access to that information. A suggestion that that principle should be reflected in

recommendation 32 was not supported. A proposal was made that the commentary in paragraph 167 should be clarified to state that a user should not be requested to provide additional information, such as the reason for desiring the information, prior to being granted access to it. The Working Group acknowledged that such an approach would be open to the enacting State in its domestic law.

111. It was suggested that the phrase "or for reasons of personal security" in recommendation 32 was too subjective and should be deleted. A proposal to move that phrase after the word "confidentiality" in order to make it subject to the law of the enacting State was accepted.

112. A suggestion made to delete reference to access to information by public authorities as having been already treated in recommendation 16 received some support. There was also support for a further drafting proposal to delete the final sentence of paragraph 170, since the sharing of such information should be dependent on the law of the enacting State rather than on the consent of the business or the registry. The Working Group agreed to those suggested amendments.

Hours of operation: paragraphs 172 to 174 and recommendation 34

113. A proposal to delete the reference in recommendation 34(a) to the days and hours of opening did not receive support. The Working Group agreed to reverse the order of subparagraphs (a) and (b) and with that change, agreed to the substance of paragraphs 172 to 174 and recommendation 34 of the legislative guide as drafted.

Direct electronic access to submit registration, to search and to request amendments: paragraphs 175 to 178 and recommendation 35

114. There was support for the strong concern expressed that the commentary in paragraphs 175 to 178 and recommendation 35 did not sufficiently take into account the important role of intermediaries in the business registry systems of some States. Although direct electronic access to search the business registry was said to be uncontroversial in the current text, recommending direct electronic access to submit business registrations and request amendments was thought to inappropriately recommend that intermediaries should not have a role in those processes. For example, the statement in paragraph 176 that "users bear the sole responsibility for any errors and omissions" and the statement in paragraph 177 that the registrant has "direct control over the timing of the business registration" were not thought to be representative of a system involving intermediaries. While the Working Group did not agree that the use of intermediaries should be recommended, there was agreement that resort to their services was an important facet of business registration and domestic legal systems in a number of economies and should be recognized in the legislative guide as an option. There was also agreement in the Working Group that the intention of the text had been to promote direct electronic access for business registration and registration services as opposed to requiring a physical presence in the registry premises, not in order to exclude intermediaries, but rather to ensure a reduction in opportunities for corruption or misconduct and to improve overall efficiency.

115. After discussion of various proposals to achieve the appropriate tone in the text, it was agreed that the Secretariat should revise the commentary in order to rebalance it, perhaps through reducing the emphasis on the verification aspects in paragraphs 176 and 177, and in possibly referring to paragraphs 117 to 119 of the text. In addition, the Working Group agreed that the recommendation could be redrafted along the following lines: "The submission of the application and information to register a business should be permitted using information and communication technology, where available, without requiring physical presence in the business registry office, and subject to the laws of the enacting State."

116. The Working Group further agreed that a separate recommendation on direct electronic access to search the business registry should also be included in the text.

Facilitating access to information: paragraphs 179 to 184 and recommendation 36

117. There was support in the Working Group for the suggestion that the final phrase in recommendation 36 ("or unduly limiting the languages in which the information on the registration process is available") should be deleted. It was observed that in some jurisdictions it would not be possible to make available information on the registration process in a non-official language of the State.

8. Fees

Paragraphs 185 and 186

118. The Working Group agreed with the substance of paragraphs 185 to 186 of the legislative guide as drafted.

Fees charged for registry services: paragraphs 187 to 189 and recommendation 37

119. There was broad agreement in the Working Group that registration should be provided free of charge to MSMEs or that fees for such businesses should be established at the lowest level possible. Several delegations noted that in their jurisdictions businesses could register at no cost. A suggestion was made to slightly redraft recommendation 37 so that it highlighted such an approach and there was support in the Working Group to insert the phrase "in particular of MSMEs" between the terms "registration" and "and that" in recommendation 37.

Fees charged for information: paragraph 190 and recommendation 38

120. A proposal was made that the drafting of recommendations 37 and 38 should be made more consistent by including the notion of cost recovery in recommendation 38, since services provided by the registry should be governed by the same principles. The Working Group took up that suggestion.

Publication of fee amounts and methods of payment: paragraph 191 and recommendation 39

121. The Working Group agreed with the substance of paragraph 191 and recommendation 39 of the legislative guide as drafted.

9. Sanctions and liability

Sanctions: paragraphs 192 to 194 and recommendation 40

122. It was noted that the Working Group had agreed during the discussion of recommendation 28 (see para. 100 above) to include within recommendation 40 or 41 a reference to the responsibility of a business to update its registry information. Concerns about the use of fines, particularly to sanction MSMEs, and a range of possible sanctions for different degrees of violation were also recalled.

123. It was suggested that since the final sentence in paragraph 192 addressed the liability of businesses, it could be moved to paragraph 195. There was a proposal to place paragraph 194 elsewhere in the legislative guide, and other delegations were of the view that notices, warnings, and education should be considered alongside sanctions, particularly when dealing with MSMEs.

Liability for submission of misleading, false or deceptive information: paragraph 195 and recommendation 41

124. The Working Group agreed with a proposal to eliminate the word "incomplete" from the text of recommendation 41, as it did not appear in the title and because incomplete information should lead to a rejection of the application.

125. A proposal to delete the word "knowingly" led to a discussion of legal codes and standards of liability under various legal systems. The text of recommendation 41 would be too restrictive in some legal systems while it would need to be stricter in others.

Similarly, concern was raised about the inclusion of "the registrant or the registered business" as the parties liable for misleading, false or deceptive information. The Working Group determined that the Secretariat should draft the recommendation in a manner that would be compatible with all legal systems. The following proposed text was approved by the Working Group: "The law of the enacting state should establish [appropriate] liability for any misleading, false, or deceptive information that is submitted to the registry", and the Secretariat was encouraged to modify the commentary based on the guidance provided by the delegations.

126. The Working Group also agreed to reverse the order of recommendations 40 and 41 in the legislative guide so that liability would be discussed before sanctions.

Liability of the business registry: paragraphs 196 to 200 and recommendation 42

127. It was suggested that, while a security rights registry was quite different from a business registry, the UNCITRAL Model Law on Secured Transactions might provide a model for discussing the liability of the business registry. The Secretariat was encouraged to consider that text in its consideration of possible adjustments to the legislative guide.

128. A proposal to include the second sentence from paragraph 197 into a recommendation was not taken up by the Working Group, which agreed with the text of the recommendation as drafted.

10. Deregistration

Deregistration: paragraphs 201 to 205 and recommendations 43 to 45

129. The definition of deregistration in paragraph 201 was discussed in light of the practice in many jurisdictions not to remove the business from the register, but rather to change its status on the register. It was noted that the term "deregistration" was defined in paragraph 12 and the Secretariat was requested to ensure that commentary throughout the text was consistent with the definition, including the footnote to it. A reference to "one-stop shops" was encouraged to be included in paragraph 201.

130. The Working Group agreed to modify the sixth sentence of paragraph 202 along the lines of: "Such a situation may arise, for example, when the State requires periodic reports or annual accounts, including renewal of registration and a business has failed to do so …". A suggestion to delete paragraph 204 was not supported by the Working Group, but it was observed that the section on deregistration should take care to differentiate "striking off" by the registrar from winding-up and dissolution of a business, since the latter would be a matter of company law and would vary by jurisdiction. The Working Group agreed that the Secretariat should clarify that difference throughout the entire deregistration section of the legislative guide.

131. It was noted that the practice of determining when a business was no longer in operation was difficult for a registrar to determine, but might be necessary in order to achieve the important goal that the registry was not cluttered with such businesses, and that each jurisdiction could determine how best to achieve that goal. A suggestion to delete the phrase "or when the business is no longer in operation" in recommendation 44(a) was not taken up by the Working Group, but it was agreed to amend the phrase to make such action subject to the law of the enacting State or possibly to use terminology such as "when a business is no longer registered".

132. It was suggested to remove the word "written" from recommendation 45(a) or to ensure that the term applied to both electronic and paper notices.

133. There was a concern expressed that recommendations 43 and 44 suggested that registries have independent decision-making ability to deregister businesses. The Secretariat was encouraged to ensure that the commentary reflected that the registry did not have discretion to deregister businesses outside of that stated in the applicable law, as well as to clarify the purpose and scope of the entire section.

Reinstatement of registration: paragraph 206 and recommendation 46

134. In keeping with the discussion in respect of recommendation 45 and its commentary, the Secretariat was requested to redraft paragraph 206 and recommendation 46 to clearly state what pertained to the processes and law of the business registry and what pertained to other areas of the law.

135. A suggestion was made to adjust the Spanish text in paragraph 206 and use the phrase "dejar sin efecto" rather than "restablecer la inscripción".

Time and effectiveness of deregistration: paragraph 207 and recommendation 47

136. The Secretariat was requested to make amendments as necessary recalling the discussion the Working Group had in respect of recommendations 45 and 46 and the relevant commentary.

11. Preservation of records

Preservation of records: paragraphs 208 to 210 and recommendation 48

137. While it was highlighted that the last two sentences of paragraph 210 referred to the ability of States to apply their general rules on preservation of public documents to the business registry, the Secretariat was asked to address concerns expressed in respect of the recommendation's reference to "perpetuity" and the difference between the time requirements for print and electronic preservation. It was suggested that it was important to stress that the preservation of information was important, and that the preservation of electronic records might be easier and less costly than that of paper records, but to avoid suggesting a time period for either type.

Amendment or deletion of information: paragraphs 211 and 212 and recommendation 49

138. In response to a concern about the use of the word "amendment" in recommendation 49 versus its use in recommendation 30, the Working Group agreed to change the text of paragraphs 211 and 212 and recommendation 49 to "alteration." The Secretariat was also asked to consider adding "limits to" to the title.

139. There was some concern expressed about whether subparagraphs (b) and (c) were properly placed within the context of paragraph 212 because the rest of the section pertained to the alteration of information. The Secretariat was requested to consider a cross-reference to recommendation 42 or to move the text. It was agreed to retain subparagraph 212(a), and to consider a cross-reference to paragraph 233 and recommendation 56.

Protection against loss of or damage to the business registry record: paragraphs 213 and 214 and recommendation 50

140. The Working Group agreed with the substance of paragraphs 213 and 214 and recommendation 50 as drafted.

Safeguard from accidental destruction: paragraph 215 and recommendation 51

141. The Working Group agreed with the substance of paragraph 215 and recommendation 51 as drafted.

12. The underlying legislative framework

Changes to underlying laws and regulations: paragraphs 216 to 218; Clarity of the law: paragraphs 219 to 221 and recommendation 52; Flexible legal entities: paragraphs 222 to 225 and recommendation 53; Primary and secondary legislation to accommodate the evolution of technology: paragraph 226 and recommendation 54

142. The Working Group agreed with the substance of paragraphs 216 to 226 and recommendations 52 to 54, but decided to move them into an annex to the legislative guide.

Electronic documents and electronic authentication methods: paragraphs 227 to 230; Dispatch and receipt of electronic messages: paragraph 231; UNCITRAL Model Laws: paragraph 232 and recommendation 55; Electronic payments: paragraph 233 and recommendation 56

143. The Working Group agreed with the substance of recommendations 55 and 56 and the relevant commentary and to retain them in the legislative guide, locating an appropriate position for them in the text. The Secretariat was requested to consider whether it was necessary to include paragraph 231 in the text and to ensure that it had considered all relevant UNCITRAL e-commerce texts.

13. Structure of the legislative guide

144. A proposal was made to include text in the legislative guide along the following lines, but not to change the structure of the overall text:

> "I. Objectives of a simplified registration system and the Purposes of the business registry
>
> "Business registration is, in practice, a series of registration processes involving multiple public agencies. To enter the formal legal economy an enterprise has to register with various registries. In most countries these registries are:
>
> - Business registry (declaration of legal existence)
> - National tax administration (registration as a tax payer)
> - Social Security (registration as an employer)
>
> "The enacting State should look at simplified business registration holistically from the user's standpoint. When implementing the reforms to create a business registry, States should keep in mind that this is just one of elements of creating a legal environment to enable MSMEs to enter into the formal legal sector. (Make cross reference to recommendation 12.)
>
> "The following overarching principles should govern an effective system of business registration: (a) the goals at all times should be simple, efficient, low cost registration, and simple, cost-effective procedures, as seen from the user's point of view; (b) enabling businesses of all sizes and legal forms to be visible in the marketplace and to operate in the legally regulated commercial environment; and (c) enabling MSMEs to increase their business opportunities and to improve the profitability of their businesses.
>
> "Recommendation 1
>
> "The Regulation should provide that the business registry is established for the purposes of (a) providing to the business an identity that is recognized by the enacting State and (b) making accessible to the public information in respect of the registered business.
>
> "The enacting State should bear in mind that one key purpose of reforming the business registry system would be to facilitate the movement of businesses from the informal sector to the legally regulated economy, as part of the system of all mandatory registries, which also include tax, and social security authorities."

145. That proposal received some support in the Working Group, but concerns were reiterated similar to those raised in respect of an earlier suggestion regarding "one-stop shops" (see para. 57 above). The Working Group decided that the concepts expressed in the suggested inclusion and its general approach could be included in the commentary, along with a reference in recommendation 1 to the importance of "one-stop shops", and requested the Secretariat to prepare an appropriate draft, as well as to insert appropriate references in the remainder of the text.

B. Draft legislative guide on an UNCITRAL Limited Liability Organization (UNLLO)

1. Introductory observations

146. The Working Group was reminded of the work it had completed at its twenty-seventh session in considering the draft legislative guide on an UNCITRAL limited liability organization (UNLLO) contained in A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1 (see A/CN.9/895), noting that its discussion should start at the current session with the commentary in paragraphs 12 to 16 and recommendation 14 of A/CN.9/WG.I/WP.99/Add.1. The Working Group recalled that support had been expressed to use the term "UNLLO" on an interim basis on the understanding that it would be considered again at a later stage (para. 43 of A/CN.9/895) and that it had expressed support for the commentary in A/CN.9/WG.I/WP.99 to more fully discuss the list of considerations found in footnote 19 of that document and other sources (subpara. 20(c) of A/CN.9/895).

2. Section D. Managers

Paragraphs 12 to 16 and recommendation 14

147. After discussion of the "opt-in" nature of the final sentence of paragraph 13, a proposal to reverse the proposition to require members to owe fiduciary duties to other members unless otherwise agreed was accepted by the Working Group. Although some concern was expressed that the term "fiduciary duty" was not used in all legal traditions, it was observed that the term was commonly used internationally in discussions of company law. The Working Group agreed to continue to use "fiduciary duty" in the legislative guide as a means to conveniently express the principles encompassed by the term, possibly noting in the text that using the term was by no means intended to import law from one legal tradition into another.

148. It was observed that, as noted in the first sentence of paragraph 15, the prohibition against self-dealing in subparagraph 12(2) (and subpara. 16(2)) was not ordinarily absolute. Text along the lines of "unless there was authorization from an independent body" was suggested to the Secretariat in order to adjust the text, taking into consideration the specific situation of MSMEs and the fact that an independent body might not be an appropriate mechanism to obtain such approval. There was some support for that suggestion.

149. The Working Group further agreed that the commentary to recommendation 14 should also include a paragraph on the enforcement of such fiduciary duties. The Secretariat was requested to include a discussion of how legal claims could be brought against managers in breach of their fiduciary duties (through actions brought individually or collectively, as a derivative action on behalf of the UNLLO), regardless of whether the action was brought before a court or by way of an alternative dispute settlement mechanism. The Working Group also agreed to include a separate recommendation in the legislative guide encouraging the use of alternative dispute settlement in respect of the UNLLO, bearing in mind existing references in the current text (para. 52 and footnote 36) and in previous texts (for example, in draft art. 38 of A/CN.9/WG.I/WP.89).

150. A concern was also expressed that the use of a subjective standard such as that currently in recommendation 14 might not be appropriate and that the sole standard used should be that the manager must act in the best interests of the UNLLO. Several delegations expressed concern that the text of recommendation 14 did not include enough detail from the commentary, particularly in respect of the duties described in paragraph 12. Text along the lines of adding "good faith and loyalty" was suggested for inclusion in recommendation 14, but a problem of linking the concepts of good faith and loyalty was noted, in that the relevant duties were thought to be a duty of care and a duty of loyalty, but that good faith should be the standard for both duties.

151. In addition to the various amendments agreed to above, the Working Group also agreed that recommendation 14 should be redrafted by including the detail found in

paragraph 12 of the commentary, possibly linking the duty of disclosure to recommendation 27.

Paragraphs 17 and 18 and recommendation 15

152. The Working Group recalled that recommendation 9 required that the name of each manager of the UNLLO be publicly disclosed, and that the intention of recommendation 15 was to provide a default rule that each manager could individually bind the UNLLO in its dealings with third parties. Moreover, it was observed that the commentary as drafted in paragraph 18 envisaged that members could agree to restrictions on the authority of managers to bind the UNLLO, or to limit that authority to certain managers, but that such a members' agreement would only be binding on third parties who had notice of it.

153. The Working Group agreed that deletion of the phrase "publicly disclosed" from recommendation 15 was necessary to reflect the intention of recommendation 15 and to avoid suggesting that the names of some managers might not be made public. In addition, it was agreed that the content of the commentary in paragraph 18 should be reflected in the recommendation itself, so as to clarify that members could agree to vary the default rule, but that providing notice of such a change to third parties dealing with the UNLLO was mandatory in order to be effective against them.

Paragraphs 19 and 20 and recommendation 16

154. A previous decision generally to replace the phrase "simple majority" with "majority" in the legislative guide was recalled by the Working Group (para. 63 of A/CN.9/895). With that correction, the Working Group agreed with the substance of paragraphs 19 and 20 and recommendation 16 as drafted.

3. Section E. Contributions

Paragraphs 21 and 22 and recommendation 17; paragraphs 23 to 27 and recommendation 18

155. The Working Group commenced its discussion on paragraphs 21 and 22 and recommendation 17. Some delegations were of the view that recommendation 17 was inappropriate since membership in an UNLLO without making a contribution ought not to be permitted, and that at least a contribution in kind, in provision of services or a future contribution was necessary. Other delegations were of the view that contributions, regardless of their type, should not be required from members of the UNLLO, even over time, and it was further noted that that practice was already established in the domestic law of some jurisdictions. In addition, it was recalled that "freedom of contract" was the guiding principle of the entire draft legislative guide, and that members of the UNLLO should be granted the freedom to determine whether a contribution was required to become a member, as well as deciding on the value of a contribution, if any.

156. In order to introduce the principles discussed in the paragraph above into recommendation 18, the Working Group agreed to ensure maximum flexibility for enacting States by inserting the qualifier "if any" into recommendation 18 after the phrase "agree upon contributions", as well as to include the term "value", so that recommendation 18 would read, in part, "including the amount, type and value of such contributions …". In addition, there was support in the Working Group to delete recommendation 17 as unnecessary in light of recommendation 18, and to incorporate the content of paragraphs 21 and 22 into the commentary for recommendation 18.

4. Section F. Distributions

Paragraphs 28 and 29 and recommendation 19

157. It was suggested that distributions by an UNLLO should be governed according to the amount of a member's contribution, but it was noted that the Working Group should instead consider recommendation 19 in light of the decisions it had made in respect of recommendations 13, 17 and 18 in order to retain consistency with its

earlier approach. It was recalled that that approach relied on a default rule of equality, which could be varied by the agreement of the members of the UNLLO. Moreover, it was suggested that relying on a member's contribution to assess distributions and other rights could be unfair for those that made no contribution or for members that joined the UNLLO at different times and whose proportionate contribution might thus be valued differently.

158. Following discussion, there was support for the suggestion that it might be clearer for recommendation 13 to refer to the percentage or ratio of a member's ownership to assess its rights of control, rather than referring to the proportion of the member's contribution as had been decided at the last session of the Working Group (para. 67 of A/CN.9/895). To that end, a proposal was made to replace recommendations 13 and 18 with text along the following lines, and to provide the new text along the following lines for recommendation 17 (which had been deleted) as the overarching principle:

> "Recommendation 13 (a)
>
> "The members of the UNLLO have rights of control in proportion to their respective amount/percentage of the ownership of the UNLLO, as stated in the formation document or members' agreement. When the amount/percentage of the ownership of the UNLLO is not stated in the formation document or members' agreement, the members of the UNLLO have equal rights of control.
>
> "E. Amount/percentage of the ownership of the UNLLO and contribution by members
>
> "Recommendation 17
>
> "The law should provide that members of the UNLLO should agree upon their respective amount/percentage of the ownership of the UNLLO in the formation document or members' agreement. When the amount/percentage of the ownership of the UNLLO is not stated in the formation document or members' agreement, it is deemed that the formation document or members' agreement states that the members of the UNLLO share the ownership of the UNLLO equally.
>
> "Recommendation 18
>
> "The law should provide that, when deciding the members' respective amount/percentage of the ownership of the UNLLO, the members of the UNLLO are permitted to agree upon contributions, if any, made to the UNLLO, including the amount, type and value of such contributions."

159. Following discussion, there was support in the Working Group for that proposal, and the following additional suggestions were made:

(a) Text could be inserted into recommendation 13(a) or (b) to indicate that voting rights of members should be proportionate to ownership;

(b) The closing phrase of recommendation 18 in the current legislative guide could be retained for greater clarity ("but that in the absence of such agreement, contributions that are made to the UNLLO should be made in equal amounts by the members");

(c) Recommendation 19 should then follow the logic of recommendation 13 and indicate that distributions would be made to members in proportion to their ownership unless the members had agreed otherwise;

(d) Any need for the establishment of more complex ownership structures or voting rights could be established by the members in their agreement according to the overarching freedom of contract principle, and in any event, was contemplated in paragraph 27;

(e) The use of the term "ownership" might not be sufficiently clear, as it required the identification of the rights that members had (which could include rights to vote, to participate in management, to distribution and to income);

(f) The drafting of the recommendations under discussion should be coordinated with the text in recommendation 9, for example, choosing to refer to either "members' agreement" or "formation document"; and

(g) The Working Group was reminded that the legislative guide made a conscious attempt to use neutral terminology rather than corporate-related terminology such as "shares" (para. 23 of A/CN.9/WG.I/WP.99).

160. Following discussion, there was support in the Working Group for the proposal and the Secretariat was requested to adjust the commentary and recommendations in order to reflect that agreement. The Working Group also agreed that the text of recommendation 19 should reflect the approach taken in the revised version of recommendation 13.

Paragraphs 30 to 32 and recommendation 20; paragraphs 33 to 35 and recommendation 21

161. Support was expressed for paragraphs 30 to 32 and recommendation 20 and for paragraphs 33 to 35 and recommendation 21 as drafted. It was suggested that the word "knowingly" should be inserted after the phrase "each member who …", but it was observed that that could make the burden of proof too onerous. In response to a suggestion that managers should be held responsible for improper distributions, it was observed that drawing the distinction between managers and members (where they were not the same person) could make the text too complex and that since the legislative guide made the members rather than the managers responsible for making decisions regarding distributions, that care should be taken to be consistent in approach. It was further suggested that the insolvency and balance sheet tests in recommendation 20 were linked to the issue of financial statements in recommendation 26, but that any necessary link could be dealt with in discussing that recommendation in due course.

162. Additional comments were made that paragraphs 32 and 35 dealt with the liability of managers when an UNLLO made improper distributions, and that recommendations 20 and 21 were concerned with the protection of creditors. It was suggested that reference should thus not be made to recommendation 14 in paragraph 35 (since that recommendation was intended to protect the UNLLO), and that the phrase "to the UNLLO" should be inserted after the phrase "also be held liable" in paragraph 35. Further, in response to a suggestion to ensure that distributions did not include payments of reasonable compensation for services or for bona fide debt owed to a member, the attention of the Working Group was drawn to paragraph 34.

163. The Secretariat was requested to consider those suggestions and to make any appropriate clarification to the commentary to recommendations 20 and 21.

V. Proposals by States

Proposal by the government of Italy (A/CN.9/WG.I/WP.102)

164. The Working Group heard a short introduction of working paper A/CN.9/WG.I/WP.102 which included a proposal of the Italian delegation on a topic that might be considered for future work to support development of MSMEs. It was noted that participation of MSMEs in global trade was made difficult by fragmented legal frameworks and that an international legal instrument, structured as a multiparty contract between MSMEs located in the same or in different jurisdictions may assist in facilitating collaboration among businesses with a relatively low level of initial capital, low entry and exit costs, and a light governance infrastructure. It was further noted that such a multiparty contract may facilitate access: (a) to capital by providing joint collateral to credit institutions; (b) to new technologies with the creation of common technological platforms, where common intellectual property rights may be used; and (c) to a qualified labour force through the possibility of sharing employees who may rotate among the businesses participating in the network.

165. It was also observed that a legislative text with a similar scope had been enforced in Italy since 2009 under the definition of business network contract (or *contratto di rete)* and the main features of such text, outlined in greater detail in A/CN.9/WG.I/WP.102, were highlighted. In response to questions, it was clarified that the networks, as established in Italian legislation, were legal entities resulting from contracts, whose governance was left to contractual freedom, that they needed to be registered, they might allow for segregation of assets and that they facilitated MSMEs accessing global trade and global supply chains of transnational corporations. It was further noted that such networks would differ from cooperatives as they were more flexible and wider in scope (for instance, in several jurisdictions cooperatives may be established only for non-profit purposes) and could also be established just to exchange information or services among the participating entities. It was also observed that contractual networks differed from contract farming, a topic discussed by the International Institute for the Unification of Private Law (Unidroit), in that contractual networks were wider in scope as they did not just address farming issues (although such networks could be widely used in agriculture, or agrifood industry) and they were not limited to the contract aspect but also considered the organizational structure and functioning of the network.

166. Finally, it was noted that the Italian delegation would submit the proposal to the attention of the Commission at its 50th session in July 2017.

Observations and model provisions from the Government of Colombia (A/CN.9/WG.I/WP.104)

167. The Working Group heard a presentation of A/CN.9/WG.I/WP.104 containing observations and model provisions from the Government of Colombia on the dissolution and liquidation of MSMEs. Such businesses were said to need simplified processes to ensure that their liquidation and dissolution could be carried out clearly and rapidly, and that the model provisions in the working paper had been drafted with that aim. It was suggested that detailed provisions on the liquidation and dissolution of MSMEs could complement and expand on the principles expressed in recommendation 24 of the UNLLO draft legislative guide, and might be attached as an annex to the legislative guide. There was some support for the proposal submitted in the working paper. Some concern was expressed that the current text of A/CN.9/WPI/WG.104 seemed to use terminology that focused on corporate business forms rather than the neutral terms adopted in the UNLLO text, and that such model provisions presented in the paper could be too detailed to be attached to the legislative guide when compared with the general approach taken in that text.

168. After discussion, the Working Group agreed that any further consideration of the proposal should be first subject to domestic consultation by delegations and that the Working Group would consider the proposal in conjunction with its future discussion of recommendation 24 of the legislative guide.

VI. Other matters

169. The Working Group recalled that its twenty-ninth session was tentatively scheduled to be held in Vienna from 16 to 20 October 2017. The Working Group confirmed that it would consider the draft legislative guide on key principles of business registration at its twenty-ninth session, with a view to its possible adoption by the Commission at its fifty-first session in 2018.

E. Note by the Secretariat on draft legislative guide on key principles of a business registry

(A/CN.9/WG.I/WP.101)

[Original: English]

Contents

I. Introduction

1. The present legislative guide has been prepared on the understanding that, for the reasons described in document A/CN.9/WG.I/WP.92, it is in the interests of States and of micro, small and medium-sized enterprises (MSMEs) that such businesses migrate to or be created in the legally regulated economy. In addition, this guide is also intended to reflect the idea that entrepreneurs that have not yet commenced a business may be persuaded to do so in the legally regulated economy if the requirements for formally starting their business are not considered overly burdensome. Finally, these materials are prepared on the understanding that, regardless of the particular nature or legal structure of the business, the primary means for an MSME to enter the legally regulated economy in most cases is through registration of their business.[1]

2. As the Working Group may recall, document A/CN.9/WG.I/WP.92 was prepared as an introductory document that, once adopted, was intended to form a part of the final text and provide an overarching framework for current and future work by UNCTRAL to assist MSMEs in overcoming the legal barriers faced by them during their life cycle. Underpinning that contextual framework would be a series of legal pillars, which would include both legislative guides currently under preparation by the Working Group — the present guide on key principles of a business registry and the other guide on an UNCITRAL limited liability organization[2] — as well as any other materials adopted by UNCITRAL in respect of MSMEs. In summary,

[1] Para. 1, A/CN.9/WG.I/WP.93.
[2] See A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1.

A/CN.9/WG.I/WP.92 currently outlines the following themes as key to UNCITRAL's approach to its MSME work:

(a) The importance of MSMEs in the global economy;

(b) Each State should decide what constitutes a micro, small or medium-sized business in its own economic context, the common factor being that the smallest and most vulnerable businesses require assistance;

(c) Although MSMEs are incredibly disparate in their size, goals, the commercial sector in which they operate and their general nature, they usually face a number of common obstacles;

(d) Improving the business environment assists businesses of all sizes, not only MSMEs;

(e) Participation by MSMEs in the legally regulated economy can assist them in successfully negotiating the obstacles they face;

(f) States should make it simple and desirable for MSMEs to participate in the legally regulated economy by:

(i) Explaining what it means and by setting out the advantages for entrepreneurs, as well as by ensuring appropriate communication and education on those advantages and opportunities;

(ii) Making it desirable for MSMEs to enter the legally regulated economy, for example, by offering them incentives for doing so; and

(iii) Making it easy for MSMEs to enter the legally regulated economy through:

a. Creating flexible and simplified business forms for MSMEs;[3] and

b. Ensuring that business registration is accessible, simple and streamlined.

3. In light of that general approach, in order to encourage entrepreneurs to start their business in, or to migrate their business into, the legally regulated economy, States may wish to take steps to rationalize and streamline their system of business registration. The recommendations in this legislative guide are intended to be implemented by States that are reforming or improving their system of business registration. Further, as noted above, the present guide takes the approach that since business registration is the primary conduit through which MSMEs can become visible in the legally regulated economy and be able to access programmes intended to assist them, the business registry should continue to *require* only certain types of businesses to register, but it should enable all businesses to register. Moreover, general improvements made by a State to its business registration system may be expected to assist not only MSMEs, but businesses of all sizes, including those already operating in the legally regulated economy. Many studies support the approach that faster and simpler procedures to start a business will assist in business formation and migration to the legally regulated economy. For these reasons, simplification and streamlining of business registration has become one of the most pursued reforms by States in all regions and at all levels of development. This trend has generated several good practices, whose features are shared among the best performing economies.[4] In order to assist States wishing to reform their business registration procedures so as to take into consideration the particular needs of MSMEs, or simply to adopt additional good practices to streamline existing procedures, this guide sets out key principles and good practices in respect of business registration, and how to achieve the necessary reforms.[5]

---

[3] The Working Group is currently preparing a draft legislative guide aimed at this goal, see A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1.

[4] See also A/CN.9/WG.I/WP.85, which provides information on several best practices in respect of business registration.

[5] Para. 2, A/CN.9/WG.I/WP.93.

4. Further to discussion in the Working Group and decisions made at its twenty-fifth (October 2015) and twenty-sixth sessions (April 2016)[6] of the Working Group, the Secretariat has prepared this draft legislative guide, which addresses legal, technological, administrative and operational issues involved in the creation and implementation of a business registration system. It combines into a single text the draft commentary (A/CN.9/WG.I/WP.93, Add.1 and Add.2) and recommendations (A/CN.9/WG.I/WP.96 and Add.1) considered by the Working Group at its twenty-fifth and twenty-sixth sessions. In addition, the Secretariat has made certain light editorial adjustments necessary to facilitate the creation of a single text, as well as including changes to the text arising from decisions made by the Working Group in those sessions. The footnotes contained throughout the text guide the reader in identifying where each paragraph appeared in the previous texts, as well as changes made as a result of decisions made by the Working Group. Further, although this text has in some cases changed the order of the recommendations, in order to avoid confusion, each recommendation in the present draft guide bears the same number that it did in document A/CN.9/WG.I/WP.96 and Add.1. Once the Working Group has settled upon the preferred order of the recommendations, they will be renumbered consecutively and any cross-references will be adjusted accordingly.

A. Purpose of the present guide

5. Business registries are public entities, established by law, that record and update information on new and existing businesses that are operating in the jurisdiction of the registry, both at the outset and throughout the course of their lifespan.[7] This process not only enables such businesses to comply with their obligations under the domestic legal and regulatory framework applicable to them, but it empowers them to participate fully in the legally regulated economy, including enabling them to benefit from legal, financial and policy support services not otherwise available to unregistered businesses. Moreover, when information is appropriately maintained and shared by the registry, it allows the public to access business information, thus facilitating the search for potential business partners and/or clients and reducing risk when entering into business partnerships.[8] In performing its functions, the registry can thus play a key role in the economic development of a State.[9] In addition, since businesses, including MSMEs, are increasingly expanding their activities beyond national borders, registries efficiently performing their functions can play an important role in a cross-border context[10] by facilitating access to business information of interested users from foreign jurisdictions (see also paras. 111-116 below).[11]

6. Business registration systems vary greatly across States and regions, but a common thread to all is that the obligation to register can apply to businesses of all sizes depending on the legal requirements applicable to them under domestic legislation. Approaches to business registration reforms are most often “neutral” in that they aim at improving the functioning of the registries without differentiating between large scale business activities and much smaller business entities. Evidence suggests, however, that when business registries are structured and function in accordance with certain features, they are likely to facilitate the registration of MSMEs, as well as operating more efficiently for businesses of all sizes.[12] These features are reflected as recommendations in this legislative guide.

[11] Council of the European Union, Council conclusions on the interconnection of business registers, 25 May 2010.

[12] Para. 5, A/CN.9/WG.I/WP.93.

7. This draft legislative guide draws on the lessons learned through the wave of reforms of business registration systems implemented since 2000 by various developed and developing economies.[13] Through this approach, the guide intends to facilitate not only efficient domestic business registration systems, but also cooperation among registries in different national jurisdictions, with a view to facilitating cross-border access to the registries by all interested users. Promoting the cross-border dimension of business registration contributes to foster transparency and legal certainty in the economy and significantly reduces the cost of businesses operating beyond their national borders (see also paras. 111-116 below).[14]

8. This guide supports the view that transitioning to an electronic or mixed (i.e. paper and electronic) registration system, providing registration and post-registration services at no cost or at low cost, and collecting and maintaining high quality information on registered businesses greatly contribute to promote the registration of MSMEs. Establishing a single interface for business registration and registration with other authorities such as tax authorities, social services and the like also increases the likelihood that MSMEs will enter the legally regulated economy. In this regard, it should be noted that the terms "business registry" and "single interface for business registration" (or "one-stop shop") as used in this draft guide are not intended to be interchangeable. When these materials refer to the "business registry", it means the system for receiving, storing and making accessible to the public certain information about business entities. When the term "single interface" (or "one-stop shop") is used, it refers to a single entry point, physical or electronic, that a business can use to achieve not only its registration as a business, but a single entry point to all other regulatory functions in the State that relate to starting and operating a business, including, for example, registering for tax purposes and for social services associated with the operation of a business.[15]

9. These materials have benefitted from various tools prepared by international organizations that have supported those reform processes, in particular, in developing and middle income economies. Data made available through the activity of international networks of business registries that, among other activities, survey and compare the practices of their affiliates in various States around the world have also been referenced. The main sources used in the preparation of this draft legislative guide include:[16]

- How Many Stops in a One-Stop Shop? (Investment Climate World Bank Group, 2009vestment Climate World Bank Group, 2009)
- Innovative Solutions for Business Entry Reforms: A Global Analysis (Investment Climate, World Bank Group, 2012)
- Reforming Business Registration: A Toolkit for the Practitioners (Investment Climate, World Bank Group, 2013)
- The annual International Business Registers Report (prepared previously by ECRF, and currently by ASORLAC, CRF, ECRF and IACA)[17]

---

[13] The opening sentence of this paragraph is the opening sentence of para. 6, A/CN.9/WG.I/WP.93. For further reference, see para. 8, A/CN.9/WG.I/WP.85.

[14] See European Commission, Green Paper, The interconnection of business registers, 4 November 2009, pages 2 ff.

[15] At its twenty-sixth session, the Working Group requested that the Secretariat clarify the meaning of "business registry" and "single interface for business registration" and should clearly establish the overall approach of providing a single interface for all businesses to enter the legally regulated economy in the introductory paragraphs of the draft legislative guide (see para. 55, A/CN.9/866).

[16] Para. 6, A/CN.9/WG.I/WP.93 (the second part of the paragraph has been slightly modified by inserting the sentence "in various States around the world" between the terms "their affiliates" and "referenced").

[17] The report is prepared by the following registry organizations: Association of Registrars of Latin America and the Caribbean (ASORLAC); Corporate Registers Forum (CRF); European Commerce Registers' Forum (ECRF); and International Association of Commercial Administrators (IACA). These organizations include State registry officials from around the globe.

[*The Working Group may wish to note that other resources may be added as the materials are further developed*.]

10. This legislative guide is addressed to States interested in the reform or improvement of their business registry systems, including all stakeholders in the State that are interested or actively involved in the design and implementation of business registries, as well as to those that may be affected by or interested in the establishment and operation of such a registry, such as:

(a) Policymakers;

(b) Registry system designers, including technical staff charged with the preparation of design specifications and with the fulfilment of the hardware and software requirements for the registry;

(c) Registry administrators and staff;

(d) Registry clientele, including business persons, consumers, and creditors, as well as the general public and all others with an interest in the appropriate functioning of the business registry;

(e) Credit agencies and other entities that will provide credit to a business;

(f) The general legal community, including academics, judges, arbitrators and practising lawyers; and

(g) All those involved in company law reform and the provision of technical assistance in the simplification of business registration, such as international organizations, bilateral donors, multilateral development banks and non-governmental organizations active in the field of business registration.[19]

11. The present guide uses neutral and generic legal terminology so that its recommendations can be adapted easily to the diverse legal traditions and drafting styles of different States. This draft legislative guide also takes a flexible approach, which will allow its recommendations to be implemented in accordance with local drafting conventions and legislative policies regarding which rules must be incorporated in principal legislation and which may be left to subordinate regulation or to ministerial or other administrative rules.[20]

B. Terminology

12. The following paragraphs explain the meaning and use of certain expressions that appear frequently in this draft legislative guide:[21]

- *Annual accounts*: The term “annual accounts” means financial information on the business’ activities prepared at the end of a financial year of the business.[22]

- *Periodic returns*: The term “periodic returns” means a statement provided annually or at other prescribed intervals which gives essential information about a business’ composition, activities, and financial status, and which, subject to applicable law, active registered businesses may be required to file with an appropriate authority.

- *Branch*: The term “branch” means an entity carrying on business in a new location either within the jurisdiction in which it was formed or in another

[18] UNCTAD is the United Nations Conference on Trade and Development. See http://businessfacilitation.org/index.html.
[19] Para. 7, A/CN.9/WG.I/WP.93.
[20] Para. 8, A/CN.9/WG.I/WP.93.
[21] Para. 9, A/CN.9/WG.I/WP.93.
[22] See Guide to the International Business Registers Surveys 2015, page 2.

jurisdiction.[23] The branch is not a subsidiary and does not have a separate legal personality from the original or main business.[24]

- *Business name*: The term "business name" means a name registered on behalf of a business.[25]

- *Business registry or business registration system*: The term "business registry or business registration system" means a State's system for receiving, storing and making accessible to the public certain information about businesses; and "business" does not include those professions otherwise regulated by professional bodies.

- *Deregistration*: The term "deregistration" means the removal of a business from the registry, or an indication that the business is no longer registered, once that business, for whatever reason, has permanently ceased to operate, including as a result of a merger or forced liquidation due to bankruptcy.[26]

- *Electronic signature*: The term "electronic signature" means data in electronic form in, affixed to or logically associated with, a data message, which may be used to identify the signatory in relation to the data message and to indicate the signatory's approval of the information contained in the data message.[27]

- *ICT*: The term "ICT" means information and communications technology.

- *Jurisdiction*: The term "jurisdiction" means the territory over which a State exercises its authority.

- *Law of the enacting State*: The term "the law of the enacting State" means the applicable law in the enacting State and is intended to include the broader body of domestic law that may be relevant to issues related to the business registry outside of the specific law or regulation establishing the business registry (referred to below as the "Regulation").

- *Micro, small and medium-sized enterprises (MSMEs)*: The term "MSMEs" means micro, small and medium-sized enterprises as they are defined in the laws and regulations of the State undertaking the business registration reforms.

- *One-stop shop*: The term "one-stop shop" means a physical office, an electronic platform (see "single interface") or an organization that carries out more than one function relating to register a business with the business registry and other government agencies (e.g. the taxation and social services authorities and the pension fund).

- *Registered business*: The term "registered business" means those businesses that, further to filing an application for registration, have been officially registered in the business registry.

- *Registered information*: The term "registered information" means information contained in the registry.

- *Registrant*: The term "registrant" means the natural or legal person that submits the prescribed application form and documents to a business registry.

- *Registrar*: The term "registrar" means the person appointed pursuant to domestic law to supervise and administer the operation of the registry.

- *Registration*: The term "registration" means the entry of information required by domestic law into the registry.

---

[23] This draft legislative guide deals with the registration of branches of foreign companies.

[24] See The International Business Registers Report, 2015, page 43.

[25] See Guide to the International Business Registers Surveys 2015, page 2.

[26] When a business is deregistered, the public details about the business usually remain visible on the register, but the current status of the business indicates that it has been "removed".

[27] See UNCITRAL Model Law on Electronic Signatures (2001), article 2.

- *Registration number*: The term "registration number" means a unique number assigned by the business registry to a registered business and that is associated with that business during its life cycle.

- *Regulation*: The term "Regulation" means the body of rules adopted by the enacting State to establish the business registry, whether such rules are found in specific legislation or in administrative regulations or guidelines.

- *Reliable*: A business registry system and the information it contains is "reliable" when the data and the system may be considered positively in terms of quality and performance. "Reliable" does not refer to the system used pursuant to the legal tradition of the State to ensure quality and performance, nor to whether the information is legally binding on the registry, the registrant or third parties.

- *Single interface*: A single interface is the electronic version of a one-stop shop.

- *Unregistered business*: The term "unregistered business" means those businesses that are not included in the business registry.

- *Unique identifier*: The term "unique identifier" means a uniform and unique identifier that is used consistently by the public agencies of a State, and may be used internationally, and that consists of a set of characters (numeric or alphanumeric) that is allocated only once to a business and that will not change throughout the lifetime of that business.

[*The Working Group may wish to note that the list of defined terms will be adjusted as the materials are further developed*.]

C. Legislative drafting considerations

13. States implementing the principles contained in this legislative guide should consider whether to include them in a law, in a subordinate regulation, in administrative guidelines or in more than one of those texts. This matter would be for enacting States to decide in accordance with their own legislative drafting conventions.[28] However, it should be noted that this guide distinguishes between those concepts by referring to "the Regulation" and the "law of the enacting State". As noted in the section on terminology, the "Regulation" is intended to mean the body of rules adopted by the enacting State with respect to the business registry, whether such rules are found in administrative guidelines or in the law of the enacting State governing business registration. The term "law of the enacting State" is intended to denote those provisions of domestic legislation in the enacting State in the broader sense that are somehow relevant to and touch upon issues related to business registration.[29]

D. The reform process[30]

14. Streamlining business registration in order to meet the key objective of simplifying the registration process as well as making it time and cost efficient and user friendly (both for registrants and stakeholders searching the registry) usually requires undertaking reforms that address the enacting State's legal and institutional framework. It may also be necessary to reform the business processes that support the registration system. Sometimes reforms are needed in all of these areas. The approach taken in these reforms may vary considerably among States as the design and features of a registration system are influenced by the State's level of development, priorities and legal framework. There are, however, several common issues that States should

[28] Para. 31, A/CN.9/WG.I/WP.93.
[29] Para. 3, A/CN.9/WG.I/WP.96.
[30] The Working Group agreed at its twenty-fifth session that subject to future deliberation, the section formerly called "Implementation considerations" might be moved to a more prominent position in the text, such as to the introduction (see para. 64, A/CN.9/860).

consider and several similar recommended steps for reform regardless of jurisdictional differences that may exist. These issues are examined below.[31]

1. The reform catalysts

15. Business registration reform is a multifaceted reform process that addresses various aspects of the State apparatus; its implementation requires the participation of a broad range of stakeholders and a thorough understanding of the State's legal and economic conditions, as well as of the practical needs of registry personnel and the intended users of the registry. To be successful, the reform must be driven by the need to improve private sector development and, for this reason, it is advisable that the reform be part of a larger private sector development or public sector modernization programme.[32] It is thus essential to gain an understanding of the importance of business registration in relation to other business environment challenges and of its relationship to other potential reforms. This analysis will require, as crucial preliminary steps, ensuring that domestic circumstances are amenable to a business reform programme, that incentives for such a reform exist and that there is support for such initiatives in the government and in the private sector prior to embarking on any reform effort.[33]

(a) Relevance of a reform advocate

16. Support or even leadership from the highest levels of the State's government is of key importance for the success of the reform process. The engagement of relevant government ministries and political leadership in the reform effort facilitates the achievement of consensus on the steps required. This can be particularly important to facilitate access to financial resources, to make and implement decisions or when it is necessary to move business registry functions from one branch of government to another or to outsource them.[34]

(b) The reform committee

17. In order to oversee the day-to-day progress of the reform and to manage difficulties as they may arise, it is advisable that a steering committee be established to assist the State representative or body leading the reform. In addition to experts with technological, legal and administrative expertise, this committee should be composed of representatives of the public and private sector and should include a wide range of stakeholders, including those who can represent the perspectives of intended users. It may not always be necessary to create such a committee, since it may be possible to use existing mechanisms; in any event, a proliferation of committees is to be avoided, as their overall impact will be weakened.[35]

18. Experience indicates that reform committees should have clearly defined functions and accountability; it is advisable that their initial setup be small and that they grow progressively as momentum and stakeholder support increase. Although linked to the high level government body spearheading and advocating for the reform, the committee should operate transparently and independently from the executive branch. In certain jurisdictions, regulatory reform bodies have later been transformed into more permanent institutions that drive ongoing work on regulatory governance and regulatory impact analysis.[36]

19. The reform committee must nurture the reform process and consider how to address concerns raised in respect of it.[37] Concerns could include those arising from

[35] Para. 38, A/CN.9/WG.I/WP.93. For further reference, see World Bank Group, Small and Medium Enterprise Department, Reforming Business Registration Regulatory Procedures at the National Level, A Reform Toolkit for Project Teams, 2006, page 39.

[36] Para. 39, A/CN.9/WG.I/WP.93.

[37] See Investment Climate, (World Bank Group) Reforming Business Registration: A Toolkit for the

bureaucratic inertia, or fears that registry employees may lose their jobs if their ICT skills are weak or if technology replaces human capital. Thus, it is likely to be important for the body overseeing the reform to be able to consider diverse interests and fully inform potential beneficiaries and political supporters.[38]

(c) The project team

20. In collaboration with the reform committee, it is advisable that a project team be assigned the task of designing a reform programme tailored to an enacting State's circumstances and providing technical expertise to implement the reforms. A successful reform will require a team of international and local specialists, with expertise and experience in business registration reform, in legal and institutional reform, and in a variety of ICT matters (for example, software design, hardware, database and Web specialists).[39]

(d) Awareness-raising strategies

21. States embarking on a reform process should consider appropriate communication strategies aimed at familiarizing businesses and other potential registry users with the operation of the registry and of the legal and economic significance of business registration. This effort should include informing business about the benefits of registration and participation in the legally regulated economy (e.g. visibility to the public, the market and the banking system; opportunity to participate in public procurement; legal validation of the business; access to flexible business forms and asset partitioning; possibility to protect the business' unique name and other intangible assets; opportunities for the business to grow and to have access to a specialized labour force and access to government assistance programmes). The awareness-raising strategy should also ensure that information on compliance with the law, fulfilment of obligations taken on by registration (e.g. payment of taxes) and penalties for non-compliance is similarly clear and easily available.[40]

22. Effective communication may also be expected to encourage the development of new enterprises and the registration of existing unregistered businesses, as well as providing signals to potential investors about the enacting State's efforts towards improvement of the business environment. Awareness-raising strategies should commence early in the reform process and should be maintained throughout it, including after the enactment of the legal infrastructure and implementation of the new business registry system. In coordination with the reform committee, the project team should determine which cost-effective media can best be used: these can include private-public dialogues, press conferences, seminars and workshops, television and radio programmes, newspapers, online and print advertisements, and preparing detailed instructions on submitting registration information and conducting searches.[41] In order to raise MSME awareness of the reforms to the business registry system, it may be advisable to consider communication strategies tailored specifically to that audience (see, for example, paras. 36 to 38, A/CN.9/WG.I/WP.92).[42]

(e) Incentives for businesses to register

23. In addition to an efficient awareness-raising campaign, States should consider adding incentives for MSMEs and other businesses to register through the provision of ancillary services for registered businesses (see para. 2(f)(ii) above). The types of incentives will clearly vary according to the specific economic, business and regulatory context. By way of example they may include: promoting access to credit for registered businesses; offering accounting training and services as well as

---

practitioners, 2013, page 25.

[38] Para. 40, A/CN.9/WG.I/WP.93.

[39] Para. 41, A/CN.9/WG.I/WP.93.

[40] For a more detailed presentation of these issues see para. 35, A/CN.9/WG.I/WP.92 and A/CN.9/WG.I/WP.98, Section D.2. See also para. 128 of this working paper.

[41] See Investment Climate, (World Bank Group) Reforming Business Registration: A Toolkit for the practitioners, 2013, pages 26-27.

[42] Para. 42, A/CN.9/WG.I/WP.93.

assistance in the preparation of a business plan; providing credits for training costs; establishing lower and simplified taxation rates and tax mediation services; providing business counselling services; providing monetary compensation, government subsidies or programmes to foster MSME growth and providing low-cost technological infrastructure.[43]

2. Phased reform process

24. The duration of a reform process can vary considerably, depending on the types of reforms implemented and on other circumstances relevant to the particular economy. While the most comprehensive approach may entail a complete reform of the business registry and the legislation establishing it, this may not be realistic in all cases and enacting States may wish to consider a phased implementation of their reform. Lessons learned from experience in various jurisdictions demonstrate, for instance, that in States with a large number of unregistered businesses, a reform process that adopts a "think small" approach at the outset of the reform process, might be more effective than a reform with a broader focus, which could be introduced at a later stage.[44] For example, if the main objective is to promote the registration of MSMEs at the outset, simple solutions addressing the needs of MSMEs operating at the local level may be more successful than introducing sophisticated automated systems that require high-level technological infrastructures, changes in the legal and institutional framework and that may be more appropriate to larger businesses or businesses operating in the international market. Even when the reform is carried out in more developed jurisdictions, it may be advisable to "start small" and pilot the reforms at a local level (for example, in a district or the capital) before extending them state-wide. Success in a pilot stage can have a strong demonstration effect, and is likely to build support for continued reform.[45]

I. Objectives of a business registry

A. Purposes of the business registry

25. The opening provisions of the law or regulation which set the foundation of a business registry should provide for the establishment of the registry and set out explicitly the purpose of a system for the registration of businesses.[46]

26. The following overarching principles should govern an effective system of business registration: (a) enabling businesses[47] of all sizes and legal forms to be visible in the marketplace and to operate in the legally regulated commercial environment; and (b) enabling MSMEs to increase their business opportunities and to improve the profitability of their businesses.[48]

---

[43] For a more comprehensive list of incentives, see para. 42, A/CN.9/WG.I/WP.92 and A/CN.9/WG.I/WP.98, Section C.6(c).

[44] See Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 26.

[45] Para. 43, A/CN.9/WG.I/WP.93. For further reference, see World Bank Group, Small and Medium Enterprise Department, Reforming Business Registration Regulatory Procedures at the National Level,
A Reform Toolkit for Project Teams, 2006, page 45.

[46] Para. 5, A/CN.9/WG.I/WP.96.

[47] The Working Group suggested at its twenty-fifth session (para. 32, A/CN.9/860) that the term "commercial entities" would be broad enough to cover different types of enterprises, and that it would be for domestic legislation to decide which business forms must be registered. The Secretariat has suggested using the word "business" in order to be consistent throughout the draft guide.

[48] These concepts were formerly found in subparas. 10(a) and (b), A/CN.9/WG.I/WP.93. At its twenty-fifth session, the Working Group considered those subparagraphs and made slight drafting suggestions (to change "the key" to "a key" in (a) and to delete "particularly" from (b) (para. 30, A/CN.9/860). Those subparagraphs have been rephrased in the current text.

Recommendation 1: Purposes of the business registry[49]

The Regulation should provide that the business registry is established for the purposes of:

(a) Providing to a business an identity that is recognized by the enacting State and entitles the business to participate in, and receive the benefits of participating in, the legally regulated economy of the State;[50] and

(b) Making accessible to the public information in respect of registered businesses.

B. Simple and predictable legislative framework permitting registration for all businesses[51]

27. States should set the foundations of their business registry either by way of law or regulation.[52] In order to foster a transparent and reliable business registration system, with clear accountability of the registrar (see also paras. 43-44 below), such law or regulation should be simple and straightforward. Care should be taken to limit or avoid any unnecessary use of discretionary power, and to provide for appropriate safeguards against its arbitrary use.[53] However, some discretion should be permitted to the registry in order to ensure the smooth functioning of the system. For instance, subject to the requirements of the law or the regulation and prior notice to the registrant, the registrar may be allowed to correct material errors in the information registered (see also paras. 146 and 211 below).

28. The applicable law in each State should determine which business forms are required to register, and which additional conditions they may have to fulfil as part of that requirement.[54] Since business registration is considered the key means through which all businesses, including MSMEs, can participate effectively in the legally regulated economy,[55] States may wish to consider requiring or enabling businesses of all sizes and legal forms to register in an appropriate business registry, or creating a single business registry that is tailored to accommodate registration by a range of different sizes and different legal forms of business.[56]

29. The law or regulation[57] governing business registration should also provide for simplified registration and post-registration procedures in order to promote registration of MSMEs.[58] The goal should be for States to establish registration procedures with only the minimum necessary requirements for MSMEs and other businesses to operate in the legally regulated economy. Of course, businesses with more complex legal forms would be subject to additional information requirements under the law of the enacting State as a consequence of their particular legal form.[59]

---

[49] Former recommendation 2, A/CN.9/WG.I/WP.96.

[50] At its twenty-sixth session (para. 59, A/CN.9/866), the Working Group requested the Secretariat to clarify recommendation 2 as set out in A/CN.9/WG.I/WP.96, in particular subpara. (a) thereof, which read: "(a) Providing an identity recognized by the enacting State to a business that fulfils the requirements established by law".

[51] As decided by the Working Group at its twenty-sixth session (paras. 56 to 58, and 70, 71 and 74, A/CN.9/866), this section combines recommendations 7, 1 and 4 of A/CN.9/WG.I/WP.96 (and the accompanying commentary found in paras. 10 and 33, A/CN.9/WG.I/WP.93; paras. 5, 13, 22 and 28, A/CN.9/WG.I/WP.93/Add.1; and paras. 24, 25 and 59 to 71, A/CN.9/WG.I/WP.93/Add.2).

[52] Opening sentence of para. 33, A/CN.9/WG.I/WP.93.

[53] This sentence is based on former recommendation 7.

[54] Second and third sentences of para. 33, A/CN.9/WG.I/WP.93.

[55] Para. 4, A/CN.9/WG.I/WP.96.

[56] Para. 5, A/CN.9/WG.I/WP.93/Add.1.

[57] This paragraph and the following one referred to former recommendation 4 now merged in new recommendation 1.

[58] See also paras. 61-67, A/CN.9/WG.I/WP.99.

[59] Para. 13, A/CN.9/WG.I/WP.93/Add.1.

30. Further, regardless of the approach chosen to maintain updated information in the business registry, it would be advisable that updating MSME records be made as simple as possible. This could involve a number of different approaches examined in greater detail below, such as extending the period for such businesses to declare a change; harmonizing the information needed when the same information is repeatedly required; or exempting MSMEs from certain obligations in specific cases.[60]

Recommendation 2[61]: Simple and predictable legislative framework permitting registration for all businesses

The Regulation or the law of the enacting State should:

(a) Adopt a simple structure for rules governing the business registry and avoid the unnecessary use of exceptions or granting of discretionary power; [former recommendation 7]

(b) Establish a system for the registration of businesses that permits[62] registration of businesses of all sizes and legal forms; and [first half of former recommendation 1]

(c) Ensure that micro, small and medium-sized enterprises (MSMEs) are subject to the minimum procedural requirements except where such a business is subject to additional requirements under the law of the enacting State as a consequence of its particular legal form. [former recommendation 4]

C. Key features of a business registration system

31. To be effective in registering businesses of all sizes, a business registration system should ensure that, to the extent possible,[63] the registration process is simple, time and cost efficient, user-friendly and publicly accessible. Moreover, care should be taken to ensure that the registered information on businesses is easily searchable and retrievable, and that the process through which the registered information is collected and maintained as well as the registry system are kept as current, reliable and secure as possible.[64]

32. The concept of "reliable" business registry systems and the information contained in the registry is a recurring theme in the present guide. In the context of this legislative guide, the "reliability" of information or the system used to collect and store it refers to information or systems in which the data are consistently good in quality or performance and are able to be trusted. The term does not refer to the method that a State uses to ensure such reliability, and leaves it to each enacting State to determine how best to ensure the reliability of that information or system in light of its own context and legal tradition. "Reliability" in this guide does not refer to whether or not the information in the business registry is legally binding on the registry, on registrants or on third parties, nor to whether the enacting State relies upon a declaratory or approval approach in respect of its business registration system; however, the extent to which information in the registry is legally binding and whether the State

---

[60] Para. 28, A/CN.9/WG.I/WP.93/Add.1. See also paras. 152-154 in this working paper on "Maintaining a current registry".

[61] Former recommendations 7, 1 and 4 of A/CN.9/WG.I/WP.96. See also footnote 51 above.

[62] The Working Group agreed at its twenty-sixth session that the phrase "and facilitates" should be deleted and the concept of facilitation expressed elsewhere (A/CN.9/866, para. 58). The Secretariat suggests that the concept of facilitation may be adequately reflected in subpara. (c) of former recommendations 7, 1 and 4, as consolidated in current recommendation 2.

[63] The phrase "as … as possible" has been removed from its previous placement in subpara. 10(c), A/CN.9/WG.I/WP.93 and replaced with "to the extent possible". The Working Group agreed at its twenty-fifth session that it was important to retain in the text the concept that different levels of development could result in some States not achieving the highest levels of effectiveness (A/CN.9/860, para. 33).

[64] Para. 10(c), A/CN.9/WG.I/WP.93.

uses a declaratory or approval system are aspects that should be made clear by the enacting State in its business registry legislation and on the business registry itself.[65]

33. Regardless of which registration system is adopted, maintaining high quality, current and reliable information is imperative for the business registry in order to make the information useful for the registry users and to establish users' confidence in business registry services. This applies not only to the information provided when applying to register a business, but also to the information that the entrepreneur submits during the lifetime of the business.[66] It is thus important that the information meet certain requirements in the way it is submitted to the registry and then made available to the public. For these reasons, States should devise provisions that allow the registry to operate according to principles of transparency and efficiency in the way information is collected, maintained and released.[67]

34. The registry can implement certain actions in order to ensure that the information maintained in the registry is of good quality and reliable. By way of example, those actions, which will be further discussed in the following sections of the present guide, may include:

(a) The prevention of corporate identity theft[68] through the use of monitoring systems, checks by an intermediary, or establishing access through the use of passwords;

(b) The adoption of identity verification methods for those who deliver information to the business register and secure signature requirements for the provision of that information (such as through the use of electronic signatures or electronic certificates);[69]

(c) Requiring businesses to reregister at certain intervals, which would provide a means of confirming whether the information in the register is up to date;[70] and

(d) Updating the registry in real time or where this is not possible, ensuring daily updates of the registry.[71]

35. Moreover, in order to enhance the quality and reliability of the information deposited in the registry, enacting States should preserve the integrity and security of the registry record itself. Steps to achieve those goals include: (a) requiring the registry to request and maintain the identity of the registrant; (b) obligating the registry to notify promptly the applicant business about the registration and any changes made to the registered information; and (c) eliminating any discretion on the part of registry staff to deny access to registry services.[72]

Recommendation 3: Key features of a business registration system

The Regulation should ensure that the system for business registration contains the following key features:

---

[65] This paragraph has been inserted in order to address a concern that had been raised in the Working Group at its twenty-fifth and twenty-sixth sessions in respect of the meaning of "reliability" (A/CN.9/860, paras. 18, 22, 27, 31, 35, 42 and 61 and A/CN.9/866, paras. 60 to 64).

[66] Para. 21, A/CN.9/WG.I/WP.93/Add.1.

[67] The last sentence of this paragraph is from para. 21, A/CN.9/WG.I/WP.93/Add.1.

[68] See para. 30, A/CN.9/WG.I/WP.93/Add.2.

[69] See paras. 27 to 30, A/CN.9/WG.I/WP.93/Add.2.

[70] See The International Business Registers Report 2015, page 134.

[71] Para. 78, A/CN.9/WG.I/WP.93/Add.1. For further reference, see The International Business Registers Report 2015, pages 119 ff.

[72] Para. 39, A/CN.9/WG.I/WP.93/Add.1; the paragraph has been edited as follows: the opening sentence "Other steps to ensure the integrity and security of the registry record include …" has been replaced with the sentence "Moreover, in order to enhance … and security of the registry record itself" and the final sentence ("With regard to (b), however, it can be noted … it is considered to be registered") has been removed. Para. 38, A/CN.9/WG.I/WP.93/Add.1 has been deleted since it appeared to be a duplication of previous paragraphs.

(a) The registration process is publicly accessible, simple, user-friendly and time- and cost-efficient;

(b) The registration process is adapted to the needs of MSMEs;

(c) The registered information on businesses is easily searchable and retrievable; and

[(d) The registry system and the registered information are kept as current, reliable and secure as possible.][73]

II. Establishment and functions of the business registry[74]

36. In order to establish an effective business registration system, several approaches may be taken. However, despite the fact that approaches vary in different States, there is broad agreement on certain key objectives of effective business registration systems. Regardless of differences in the way business registries may operate, efficient business registries have a similar structure and perform similar functions when carrying out the registration of a new business or in recording the changes that may occur in respect of an existing business.[75]

A. Responsible Authority

37. In establishing or reforming a business registry, enacting States will have to decide how the business registry will be organized and operated. Different approaches can be taken to its form,[76] the most common of which is based on oversight by the government. In such States, a government department or agency, staffed by civil servants, and usually established under the authority of a particular government department or ministry, operates the registration system. As previously noted, another type of organization of a business registry is one that is subject to administrative oversight by the judiciary. In such contexts, the registration body might be a court or a judicial registry whose function, usually specified in the applicable commercial code, is strictly concerned with verifying the business requisites for registration but does not require prior judicial approval of a business seeking to register.[77]

---

[73] At its twenty-fifth session, there was support in the Working Group for the view that three important themes running through the draft business registry materials formed an appropriate foundation for the continuation of work in the area: efficiency, reliability and transparency (para. 27, A/CN.9/860). At its twenty-sixth session (para. 65, A/CN.9/866), the Working Group agreed that subpara. (d) should be placed in square brackets for inclusion in a future iteration of the text, along with additional information in the commentary (see para. 32 of this working paper) referring to the consideration of the issues in respect of "reliability" as set out in paras. 60 to 64, A/CN.9/866 and 31, 35 and 61, A/CN.9/860. In light of the inclusion of a definition of "reliable" in para. 12 of this working paper and a discussion of this issue generally in para. 32 above, the Working Group may wish to revisit that decision. The Working Group also reiterated its agreement (para. 65, A/CN.9/866) that the text should be very clear so as to avoid appearing to favour either the declaratory system or the approval system of business registration.

[74] A section titled "Minimum regulatory burden on micro, small and medium-sized enterprises (MSMEs) was previously placed before this chapter of the draft and contained recommendation 4 from A/CN.9/WG.I/WP.96 which read: "The Regulation should ensure that micro, small and medium-sized enterprises (MSMEs) are subject to the minimum obligations necessary pursuant to the Regulation, except where such a business is subject to additional requirements under the law of the enacting State as a consequence of its particular legal form." The Working Group decided at its twenty-sixth session (para. 66, A/CN.9/866) that the principle should be retained but that the recommendation should be deleted, ultimately agreeing that it should be included along with recommendations 1 and 7 from A/CN.9/WG.I/WP.96 in a new recommendation (paras. 71 and 74, A/CN.9/866), included as recommendation 2 in the present text.

[75] Para. 14, A/CN.9/WG.I/WP.93.

[76] According to The International Business Registers' Report 2015, registries are organized in the following ways: 82 per cent of business registries are state-governed; 7 per cent are organized as public-private partnerships; 5 per cent are governed by the judiciary; and 1 per cent are operated by privately owned companies.

[77] Para. 23, A/CN.9/WG.I/WP.93.

38. States may also decide to outsource some or all of the registry operations through a contractual or other legal arrangement that may involve public-private partnerships or the private sector.[78] When registration is outsourced to the private sector, it remains a function of the government, but the day-to-day operation of the system is entrusted to privately-owned companies. In one jurisdiction, for instance, such an outsourcing was accomplished by way of appointing a private company, in accordance with the law, as the assistant registrar with full authority to run the registration function.[79] However, operating the registry through public-private partnerships or private sector companies does not yet appear to be as common as the operation of the registry by a government agency. One reason might be that arrangements involving contracting with the private sector to provide business registration services require careful consideration of several legal and policy issues, such as the responsibilities of the government and the private provider, the form of the arrangements, the allocation of risk, and dispute resolution.[80] States may also decide to form entities with separate legal personality, such as chambers of commerce, with the object of managing and developing the business registry,[81] or to establish by law registries as autonomous or quasi-autonomous agencies, which can have their own business accounts and operate in accordance with the applicable regulations governing public agencies. In one State, for example, the business registry is a separate legal person that acts under the supervision of the Ministry of Justice,[82] while in another State the registry is an administratively separate executive agency of a government department, but does not have separate legal status.[83] In deciding which form of organization to adopt, States will have to consider their specific domestic circumstances, evaluate the challenges and trade-offs of the various forms of organization and then determine which one best meets the State's priorities and its human, technological and financial resources.[84]

39. While the day-to-day operation of the registry may be delegated to a private sector firm, the enacting State should always retain the responsibility of ensuring that the registry is operated in accordance with the applicable law or regulation. For the purposes of establishing public trust in the business registry and preventing the unauthorized commercialization or fraudulent use of information in the registry record, the enacting State should retain ownership of the registry record.[85] Furthermore, the State should also ensure that, regardless of the daily operation or the structure of the business registry, the State retains the right to control the access to and use of the data in the registry.

[79] For instance, Gibraltar, cited in Investment Climate (World Bank Group), Outsourcing of Business Registration Activities, Lessons from Experience, 2010, pages 55 ff.

[80] The Working Group may wish to consider whether further details on the implications of operating the registry by way of private-public partnership should be included in a future annex to this draft legislative guide.

[81] See Luxembourg, cited in Investment Climate (World Bank Group), Outsourcing of Business Registration Activities, Lessons from Experience, 2010, pages 52 ff. In Luxembourg, the State, the Chamber of Commerce and the Chamber of Crafts formed an economic interest grouping, i.e. an entity with separate legal personality, with the object of managing and developing the business registry.

[82] See Latvia; for further reference see also A. Lewin, L. Klapper, B. Lanvin, D. Satola, S. Sirtaine, R. Symonds, Implementing Electronic Business Registry (e-BR) Services, Recommendations for policymakers based on the experience of the EU Accession Countries, 2007, page 44.

[83] See the United Kingdom of Great Britain and Northern Ireland; for further reference see also Lewin and others, cited above, page 44.

[84] Para. 24, A/CN.9/WG.I/WP.93.

[85] Para. 44, A/CN.9/WG.I/WP.93, the paragraph has been slightly edited: the opening sentence ("It will be necessary at an early stage to determine whether the registry is to be operated by a State entity, such as governmental agency or the judicial system, or whether it will be operated in partnership with a private sector firm with demonstrated technical experience and a proven record of financial accountability (see para. 24 above). However …") has been deleted.

Recommendation 4[86]: Responsible authority[87]

The Regulation should establish that the organization and operation of the business registry is a function of the enacting State.[88]

B. Appointment of the registrar

40. The law or the regulation established by the State should set out, either directly or by reference to the relevant primary or secondary legislation (for further discussion on the topic of primary and secondary legislation, see para. 216 below),[89] the procedure to appoint and dismiss the registrar, as well as the duties of the registrar, and the authority empowered to supervise the registrar in the performance of those duties.[90]

41. To ensure flexibility in the administration of the business registry, the term "registrar" should be understood as referring to a natural or legal person appointed to administer the business registry. States should permit the registrar to delegate its powers to persons appointed to assist the registrar in the performance of its duties.[91]

Recommendation 5[92]: Appointment of the registrar[93]

The Regulation should:

(a) provide that [*the person or entity authorized by the enacting State or by the law of the enacting State*] has the authority to appoint and dismiss the registrar and to monitor the registrar's performance; and

(b) determine the registrar's powers and duties and the extent to which those powers and duties may be delegated.

---

[86] Former recommendation 5, A/CN.9/WG.I/WP.96.

[87] The Secretariat has considered merging former recommendations 5 and 6 as requested by the Working Group at its twenty-sixth session (para. 69, A/CN.9/866), but was of the view that those two recommendations should remain separate as they addressed different aspects that ought to be considered when establishing or reforming the business registry.

[88] As decided by the Working Group at its twenty-sixth session (para. 67, A/CN.9/866), subparas. (a) and (b) have been removed from the previous version of recommendation 5 (in A/CN.9/WG.I/WP.96) but their content has been retained in para. 35 of the present text.

[89] Primary legislation concerns texts such as laws and codes that must be passed by the legislative bodies of a State. Secondary legislation is that body of texts composed of regulations, directives and other similar acts made by the executive branch within the boundaries laid down by the legislature.

[90] Para. 34, A/CN.9/WG.I/WP.93. At its twenty-fifth session, the Working Group observed that care should be taken not to appear to dictate who the State might name as registrar by specifying too restrictively a registrar's attributes. The Working Group expressed agreement on the principles expressed in the paragraph and suggested that additional insight might be gained from additional work undertaken by Working Group VI on similar provisions in the secured transactions materials (see para. 62, A/CN.9/860).

[91] As requested by the Working Group at its twenty-fifth session, the Secretariat has amended para. 34, A/CN.9/WG.I/WP.93 in order to avoid any restrictive specifications of the registrar's attributes, which should be left to the discretion of the State (See para. 62, A/CN.9/860 and footnote 90 above).

[92] Former recommendation 6, A/CN.9/WG.I/WP.96.

[93] While some drafting suggestions in respect of former recommendation 6 were made by the Working Group at its twenty-sixth session (paras. 68 and 69, A/CN.9/866), there was no agreement on how to proceed. The Secretariat has left the text untouched from the version in A/CN.9/WG.I/WP.96, but for the insertion of square brackets so as to better mirror recommendation 2 of the UNCITRAL Guide on the Implementation of a Security Rights Registry (on which recommendation 6 was based) which reads as follows: "The Regulation should provide that [the person authorized by the enacting State or by the law of the enacting State] appoints the registrar, determines the registrar's duties and monitors the registrar's performance."

C. Transparency in the operation of the business registration system and accountability of the registrar

42. A legal framework that fosters the transparent and reliable operation of the system for business registration has a number of features. It should allow registration to occur with a limited number of steps, and it should require limited interaction with registry authorities, as well as provide short and specified turn-around times, be inexpensive, result in registration of a long-term or unlimited duration, apply throughout the jurisdiction and make registration very accessible for registrants.[94]

43. In addition, the legal framework should clearly set out the functions of the registrar in order to ensure the registrar's accountability in the operation of the registry and the minimization of any potential for corruption. In this regard, it should be ensured that the applicable law of the enacting State establishes principles for the liability of the registrar and the registry staff to ensure their appropriate conduct in administering the business registry.

44. Registries should also establish "service standards" that would define the services to which users are entitled and may expect to receive, while at the same time providing the registry with performance goals that the registry should aim to achieve. Such service standards could include, for example, rules on the correction of errors (see paras. 27 above, and 146 and 211 below), rules governing the maximum length of time for which a registry may be unavailable (such as for electronic servicing) and providing advance notice of any expected down time. Service standards contribute to ensure further transparency and accountability in the administration of the registry, as such standards provide benchmarks to monitor the quality of the services provided and the performance of the registry staff.

Recommendation 6[95]: Transparency of the business registration system and accountability of the registrar

The designated authority should ensure that rules or criteria that are developed are made public to ensure transparency of the registration procedures and the accountability of the registrar in terms of respecting those procedures.[96]

D. Use of standard registration forms

45. Another approach that is often used in association with the previous one to promote transparency and reliability in the operation of the business registry, is the use of standard registration forms paired with clear guidance to the registrant on how to complete them. Such forms can easily be filled out by businesses without the need to seek the assistance of an intermediary, thus reducing the cost and de facto contributing to the promotion of business registration among MSMEs. These forms also help prevent errors in entering the data by business registry personnel, thus speeding up the overall process. In some jurisdictions, the adoption of standardized registration forms has been instrumental in streamlining the registration requirements and disposing of unnecessary documents.[97]

---

[94] Para. 62, A/CN.9/WG.I/WP.93/Add.2.

[95] Former recommendation 8, A/CN.9/WG.I/WP.96.

[96] At its twenty-sixth session, the Working Group expressed concern (para. 75, A/CN.9/866) in respect of the meaning of "accountability", and the phrase "in terms of respecting those procedures" has been added to the recommendation to clarify the meaning of the term. See Working Group decision para. 75, A/CN.9/866. See also Working Group decision para. 79, A/CN.9/866. In addition, after considering whether recommendation 8 should also include the availability of online information to registrants, the Working Group observed that recommendation 17 or other recommendations might adequately cover that aspect, and that no decision should be made in this regard until the Working Group had further examined the text (para. 79, A/CN.9/866).

[97] Para. 64, A/CN.9/WG.I/WP.93/Add.2. In regard to this paragraph, the Working Group may wish to note its decision to prepare standard forms in respect of its work on a legislative text on simplified business entities (see para. 63, A/CN.9/800).

Recommendation 7[98]: Use of standard registration forms

The Regulation should provide that standard registration forms are introduced to request the registration of a business and that guidance is available to registrants on how to complete those forms.[99]

E. Capacity-building for registry staff

46. Once a reform of the business registration system has been initiated, developing the capacity of the personnel entrusted with business registration functions is an important aspect of the process. Poor service often affects the efficiency of the system and can result in errors or necessitate multiple visits to the registry by users.[100] Capacity development of registry staff could not only focus on enhancing their performance and improving their knowledge of the new registration processes, ICT solutions and client orientation, but staff could also be trained in new ways of improving business registration.[101]

47. As seen in various States, different approaches to capacity-building can be followed, from the more traditional training methods based on lectures and classroom activities, to more innovative ways that can be driven by the introduction of new business registration systems. In some jurisdictions, team-building activities and role-playing have been used with some success, since reforms often break barriers between various government departments and require the improvement of the flow of information among them, as well as an understanding of different aspects of the procedures with which specific registry staff may not be familiar.[102] In other cases, States have opted for developing action plans with annual targets for improvement of the registry's standing in international rankings, and linking promotions and bonuses for staff to the achievement of the action plan's goals. In still other cases, States have decided to introduce new corporate values in order to enhance the public service system, including business registration.[103] Although the relevant governmental authority will usually take the lead in organizing capacity development programmes for the registry staff, the expertise of local legal and business communities could also be enlisted to assist.[104]

48. Peer-to-peer learning as well as national and international networks are also effective approaches to build capacity to operate the registry. These tools enable registry staff to visit other jurisdictions and States with efficient and effective business registration systems. In order to maximize the impact of such visits, it is important that they occur in jurisdictions familiar to the jurisdiction undergoing the reform. This approach has been followed with success in several jurisdictions engaging in business registration reform. International forums and networks also

---

[98] Former recommendation 7 (from A/CN.9/WG.I/WP.96), titled "Simple and predictable legislative framework" has been deleted. It read: "The Regulation should adopt a simple structure for rules governing the business registry and should avoid the unnecessary use of exceptions or discretionary power." The Working Group decided at its twenty-sixth session (paras. 70, 71 and 74, A/CN.9/866) that that principle should be retained and combined along with recommendations 1 and 4 from A/CN.9/WG.I/WP.96 in a new recommendation which appears in the present text as recommendation 2.

[99] The Working Group requested at its twenty-sixth session (para. 77, A/CN.9/866) that the Secretariat prepare a recommendation on the use of standard registration forms.

[100] The technical assistance experience of international organizations, in particular of the World Bank, has provided most of the background material upon which section "E" is based. See, in particular, Investment Climate (World Bank Group), Reforming Business Registration: A Toolkit for the practitioners, 2013, page 37.

[101] Para. 81, A/CN.9/WG.I/WP.93/Add.2. For further reference, see para. 60, A/CN.9/WG.I/WP.85.

[102] See K. Rada and U. Blotte, Improving business registration procedures at the sub-national level: the case of Lima, Peru, 2007, page 3.

[103] See para. 60, A/CN.9/WG.I/WP.85 and Investment Climate (World Bank Group), Reforming Business Registration: A Toolkit for the practitioners, 2013, page 21.

[104] Para. 82, A/CN.9/WG.I/WP.93/Add.2.

provide platforms for sharing knowledge and exchanging ideas among registry personnel around the world for implementing business registration reform.[105]

49. In order to facilitate business registration, it may be equally important to build capacity on the part of intermediaries in States where the services of those professionals are required to register a business (see paras. 118 and 119 below).

Recommendation 8: Capacity-building for registry staff[106]

The designated authority should ensure that appropriate programmes are established to develop and/or strengthen the knowledge of the registry staff on business registration procedures and the operation of ICT supported registries, as well as the ability of registry staff to deliver requested services.

F. Core functions of business registries

50. There is no standard approach in establishing a business registry or in streamlining an existing one: models of organization and levels of complexity can vary greatly depending on a State's level of development, its priorities and its legal framework. However, regardless of the structure and organization of the registry, certain core functions can be said to be common to all registries.[107]

51. In keeping with the overarching principles governing an effective business registration system (see para. 26 above), the core functions of business registries are to:[108]

(a) Facilitate trade and interactions between business partners, the public and the State, including when such interactions take place in a cross-border context, through the publication of reliable (see paras. 32 and 33 above), current and accessible information that business must provide in order to be registered;[109]

(b) Record the identity and disclose the existence of a business to other businesses, to the public and to the State (ideally in a comprehensive database);

(c) Provide a legal form to a business which, depending on the applicable law of a State, may include legal personality and limited liability; and

(d) Provide a commercial identity recognized by the State[110] to enable a business to interact with business partners, the public and the State.

52. In a standard registration process, the entry point for entrepreneurs to business registries may be the support provided to them in choosing a unique name for the new business that they wish to establish. When registering, businesses are usually required to have a name which must be sufficiently distinguishable from other business names within that jurisdiction so that the business will be recognized and identifiable under that name.[111] Enacting States are likely to establish their own criteria for determining how to decide whether business names are sufficiently distinguishable from other business names, and in any event, the assignment of a unique business identifier will assist in ensuring the unique identity of the business within and across jurisdictions (see also paras. 94 to 116 below).[112] Business registries usually assist entrepreneurs

---

[105] Para. 83, A/CN.9/WG.I/WP.93/Add.2.

[106] At its twenty-sixth session (para. 76, A/CN.9/866), the Working Group requested the Secretariat to reflect the concepts in paras. 81 to 83 of A/CN.9/WG.I/WP.93/Add.2 as a new draft recommendation. This is now reflected in paras. 41 to 43 and recommendation 8.

[107] Para. 11, A/CN.9/WG.I/WP.93.

[108] Para. 12, A/CN.9/WG.I/WP.93.

[109] In keeping with the suggestion of the Working Group at its twenty-fifth session (para. 34, A/CN.9/860), subpara. (d) of this paragraph was thought to be a more general statement and has been moved to become the first subparagraph.

[110] At its twenty-fifth session, there was support in the Working Group for the suggestion that the phrase "provide authority" should be replaced with a different term that did not imply the exercise of State power (see para. 34, A/CN.9/860).

[111] Para. 15, A/CN.9/WG.I/WP.93.

[112] At its twenty-fifth session, the Working Group agreed that registration of a business name should

at this stage with a procedure that can be optional or mandatory, or they may provide business name searches as an information service. Registries may also offer a name reservation service prior to registering a new business, so that no other business can use that name. Such a name reservation service may be provided either as a separate procedure (again, which can be optional or mandatory), or as a service integrated into the overall business registration procedure.[113]

53. Business registries also provide forms (either in paper or electronic form) and various types of guidance to entrepreneurs preparing the application and other necessary documents for registration. Once the application is submitted, the registry performs a series of checks and control procedures to ensure that all the necessary information and documents are included in the application. In particular, a registry verifies the chosen business name as well as any requirements for registration that have been established in the State's applicable law, such as the legal capacity of the entrepreneur to operate the business. Some legal regimes may require the registry to perform simple control procedures (such as establishing that the name of the business is sufficiently unique), which means that if all of the basic administrative requirements are met, the registry must accept the information as filed and record it. Other legal regimes may require more thorough verification of the information filed, such as ensuring that the business name does not violate any intellectual property requirement or that the rights of businesses with similar names are not infringed before the registry can allocate a business name (in those regimes where the registry is mandated to do so). All such information is archived by the registry, either before or after the registration process is complete.[114]

54. Payment of a registration fee (if any — see paras. 185 to 191 below) must usually be made before the registration is complete. Once a business registration is complete, the registry issues a certificate that confirms the registration and contains information about the business. Since the registered information must be disclosed to interested parties, registries make it publicly available through various means, including through publication on a website, or in publications such as the National Gazette or newspapers. Where the infrastructure permits, registries may offer, as an additional non-mandatory service, subscriptions to announcements of specific types of new registrations.[115]

55. Registered information made available to the public can include basic information about the business, such as the telephone number and address, or, depending on the requirements of applicable law, more specific[116] information on the business structure, such as who is authorized to sign on behalf of the business or who serves as the enterprise's legal representative.[117] In some States, public access to certain information in the business registry is provided free of charge (in respect of fees for information, see para. 185 below).[118]

56. A new business must usually register with several government agencies, such as taxation and social services authorities, which often require the same information as that gathered by the business registry. In certain States, the business registry provides to entrepreneurs information on the necessary requirements of other agencies and

---

be mandatory, and that States should determine on what basis names would be distinguishable, such as on the basis of the type of business being conducted. It was further observed that assigning a unique business identifier to a business would enhance its distinguishability, particularly across jurisdictions and borders (paras. 38 to 39, A/CN.9/860).

[113] Para. 16, A/CN.9/WG.I/WP.93. For further reference, see paras. 50-52, A/CN.9/WG.I/WP.99.

[114] Para. 17, A/CN.9/WG.I/WP.93. For further reference, see Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 9.

[115] Para. 18, A/CN.9/WG.I/WP.93.

[116] At its twenty-fifth session, the Working Group agreed to change the word "sophisticated" to "specific" (para. 41, A/CN.9/860).

[117] See, for instance, paras. 62-67, A/CN.9/WG.I/WP.99.

[118] At the twenty-fifth session of the Working Group, it was suggested that at least some information be provided to the public free of charge (para. 41, A/CN.9/860).

refers them to the relevant agencies.[119] In States with more developed registration systems, businesses may be assigned a registration number that also functions as a unique identifier across public agencies (see paras. 94 to 116 below), which can then be used in all of the interactions that the business has with government agencies, other businesses and banks. This greatly simplifies business start-up since it allows the business registry to exchange more easily information with the other public institutions involved in the process. In several States that have reformed their registration systems, business registries function as "one-stop shops" to support registration with other authorities. The services operated by such outlets may include providing any necessary licensing, or they may simply provide information on the procedures to obtain such licences and refer the entrepreneur to the relevant agency.[120] This legislative guide takes the view (see paras. 84 to 93 below) that establishing such "one-stop shops" for business registration and registration with other public authorities is the best approach for States wishing to streamline their business registration system.[121]

57. One important aspect that States should take into account when establishing a business registration system is whether the registry should also be required to record certain procedures that affect the status of the business, for example bankruptcy, merger, winding up, or liquidation. The approach to such changes in status appears to vary from State to State.[122] For instance, in some States, registries are often also entrusted with the registration of bankruptcy cases. In developing States or economies in transition, registries tend not to perform this function. In certain jurisdictions, registries are also given the task of registering mergers as well as the winding-up and liquidation of businesses.[123] In any event, business registries naturally also record the end of the life span of any business that has permanently ceased to do business by deregistering it.[124]

58. The opening provisions of the law or regulation governing business registration may include a provision that lists the various functions of the registry, with cross references to the relevant provisions of the law or the regulation in which those functions are addressed in detail. The advantage of this approach is clarity and transparency as to the nature and scope of the issues that are dealt with in detail later in the law or regulation. The possible disadvantage is that the list may not be comprehensive or may be read as implying unintended limitations on the detailed provisions of the law or regulation to which cross reference is made. Accordingly, implementation of this approach requires special care to avoid any omissions or inconsistencies[125] as well as to allow for the registry's interoperability with other registries in the jurisdiction, and for access to the information maintained in the registry.[126]

---

[119] The original sentence read: "The business registry normally provides to entrepreneurs information on the necessary requirements of other agencies and refers them to the relevant agencies." Changes were made in response to a concern raised in the Working Group: see para. 44, A/CN.9/860.

[120] Para. 20, A/CN.9/WG.I/WP.93.

[121] This sentence reflects the broad view of the Working Group as expressed at its twenty-fifth session (para. 44, A/CN.9/860).

[122] Para. 18, A/CN.9/WG.I/WP.93/Add.1.

[123] Para. 19, A/CN.9/WG.I/WP.93/Add.1. For further reference, see European Commerce Registers' Forum, International Business Registers Report 2014, pages 33 ff.

[124] See paras. 201-205 of this working paper.

[125] Para. 35, A/CN.9/WG.I/WP.93.

[126] At its twenty-fifth session, the Working Group supported the suggestion that care should be taken in drafting this paragraph so that it was not seen as imposing excessive limitations on the registry, which could make it more difficult to establish the registry's interoperability with other registries in the jurisdiction and to access the information maintained in the registry (see para. 63, A/CN.9/860).

Recommendation 9: Core functions of business registries

The Regulation should establish that the functions of the business registry include:[127]

(a) Publicizing the means of access to the services of the business registry, and the opening days and hours of any office of the registry (see paras. 122 to 124 and 172 to 174, and recommendations 18 and 34);

(b) Providing access to the services of the business registry (see paras. 179 to 184 and recommendation 36);

(c) Providing guidance on choosing the appropriate legal form for the business, on the registration process and on the business's rights and obligations in connection thereto (see para. 45 and recommendation 7);

(d) Listing all the information that must be submitted in support of an application to the registry (see paras. 129 to 132 and recommendation 20);

(e) Assisting businesses in searching and reserving a business name (see para. 52);

(f) Providing the basis for any rejection of an application for business registration (see paras. 145 to 148 and recommendation 26);

(g) Registering the business when the business fulfils the necessary conditions established by the law of the enacting State (see para. 136 and recommendation 22);

(h) Ensuring that any required fees for registration have been paid (see paras. 185 to 189 and recommendation 37);

(i) Assigning a unique business identifier to the registered business (see paras. 103 to 104 and recommendation 14);

(j) Ensuring the entry of the information contained in the application submitted to the registry, any amendments thereto and any filing related to that business into the registry record, and indicating the time and date of each registration (see paras. 144, 157 and 158, and recommendations 25 and 30);

(k) Providing the person identified in the application as the registrant of the business with a copy of the notice of registration (see para. 136 and recommendation 22);

(l) Providing public notice of the registration in the means specified by the enacting State (see para. 137 and recommendation 23);

(m) Indexing or otherwise organizing the information in the registry record so as to make it searchable (see paras. 182 and 183 and recommendation 36);

(n) Providing information on the point of contact of the business as established by the law of the enacting State (see paras. 130 and 151 and recommendations 20 and 27);

(o) Sharing information among the requisite public agencies (see para. 110 and recommendation 16);

---

[127] Para. 1, A/CN.9/WG.I/WP.93/Add.1 has been deleted from the text as its elements are already reflected in this recommendation. The Working Group may wish to note that this recommendation is based upon recommendation 3 of the UNCITRAL Guide on the Implementation of a Security Rights Registry, which similarly lists the functions of the registry that the law establishing the registry is recommended to include, without designating them as more or less mandatory. The Working Group considered at its twenty-sixth session (paras. 81 to 82, A/CN.9/866) whether to divide the recommendation into a list of mandatory and less mandatory functions, but decided that that decision should be postponed until the Working Group had considered the entire draft text.

(p) Monitoring that a registered business has fulfilled and continues to fulfil any obligation to file information with the registry throughout the lifetime of the business (see paras. 155 to 158 and recommendations 29 and 30);[128]

(q) Ensuring the entry of information on the declaration of deregistration of a business from the registry record, including the date of and any reasons for the deregistration (see paras. 201 to 205 and recommendations 43 to 45);

(r) Ensuring that the information in the registry is kept as current as possible (see paras. 152 to 153 and recommendation 28);

(s) Promoting compliance with the Regulation (see paras. 42 to 44 and recommendation 6);

(t) Protecting the integrity of the information in the registry record (see paras. 213 to 215 and recommendations 50 and 51);

(u) Ensuring that information from the registry record is archived as necessary (see paras. 208 to 210 and recommendation 48); and

(v) Offering services incidental to or otherwise connected with business registration (see paras. 80 to 83 and recommendation 11).

G. Structure of the business registry[129]

59. When organizing the storage of and access to the information contained in the business registry, it may be structured in one of two ways. The first approach would be to adopt a centralized registration system with an electronic format. Such a registry allows for consistency in identifying and classifying businesses, which usually permits more efficient collection of data from business and avoids duplication of procedures. In order to function efficiently, an electronic central registry should be accessible by terminals in the various regions and/or cities of a State, where other registry offices are located. This central system should also be able to process and store information from the local registries, even if this information is provided to those registries in paper format. Centralized registry systems with such features will allow equality of access for users in remote locations who otherwise might be at a great disadvantage, assuming they have Internet or other electronic access. In one State, for instance, registration is conducted at the local commercial courts which are connected via a network to the central registry.[130] Recent international experience of States that have undertaken a reform of their business registration system shows that maintaining a central registry (in electronic format) is the most common approach.[131]

60. When the establishment of an electronic central registry is not possible, States may turn to a decentralized structure where registries can be organized as either autonomous or non-autonomous local offices (although autonomous local offices in a jurisdiction are not common and organizing the registry through such an arrangement does not facilitate access to information).[132] However, decentralization of the registration system may pose problems. In States where the conduct of the registration process and its regulatory oversight are delegated to the local level,

---

[128] At its twenty-fifth session, the Working Group requested the Secretariat to clarify that subpara. (p) of the list did not intend to grant discretion to the business registry to arbitrarily delay the registration of a business (para. 34, A/CN.9/860).

[129] The Secretariat suggests that the original title ("Storage of and access to information contained in the registry") be changed to "Structure of the business registry" which is thought to better reflect the content of the commentary and the recommendation.

[130] See Austria in A. Lewin, L. Klapper, B. Lanvin, D. Satola, S. Sirtaine, R. Symonds, Implementing Electronic Business Registry (e-BR) Services, Recommendations for policymakers based on the experience of the EU Accession Countries, 2007, page 46.

[131] Para. 25, A/CN.9/WG.I/WP.93.

[132] The International Business Registers Report 2015, shows that while in all of the observed regions (i.e. Africa and Middle East, Asia-Pacific, Europe and the Americas) there are a few decentralized business registry systems, a very low percentage of those systems are organized as autonomous local offices. See the Report at pages 16 and 17.

confusion can arise if each locality follows its own approach rather than adhering to a central vision. In States with a federal system that requires companies to register in the locality where they regularly conduct their business, companies may have to undertake the cumbersome process of registering in every locality where they would like to open an office.[133] While it is possible to imagine the physical integration of decentralized registries, the goals of efficiency, accessibility and transparency in the registration system are more fully achieved through consolidation and centralization of an electronic-form registry through the interconnection of those registries. This approach has the advantage of combining simplified access to registry services with the rapid exchange of information among the interconnected business registries.[134] Regardless of the chosen architecture of the business registration system, however, it is advisable that information on registered businesses be stored and made accessible in digital format through a single jurisdictional database that would allow the exchange of such information, possibly in real time, among different government agencies.[135]

Recommendation 10: Structure of the registry

The Regulation should establish an interconnected registry system that would process and store all information received from registrants and/or entered by registry staff. Where such a system of interconnected business registries is set up, the registries should possess mutually consistent technical features so that stored information is accessible throughout the system.[136]

III. Operation of the business registry

61. As previously noted, business registration can be implemented through many different organizational tools that vary according to jurisdiction. States embarking on a reform process to simplify registration will have to identify the most appropriate and efficient solutions to deliver the service, given the prevailing domestic conditions. Regardless of the approach chosen by the State, aspects such as the general legal and institutional framework affecting business registration, the legal foundation and accountability of the entities mandated to operate the system and the budget needed by such entities should be carefully taken into account. Evidence[137] shows that reform efforts rely to a different extent on a core set of tools, including: establishment of single interfaces for business start-up (better known as "one-stop shops"); the use of ICT; and ensuring interconnectivity between the different authorities involved in the registration process (with the possible adoption of a unique business identifier). Other important components include a domestic legal framework that is generally supportive of business registration, establishing appropriate pricing policies for the use of business registry services and developing the capacity of registry operators.[138]

---

[133] See L. Klapper, R. Amit, M. F. Guillén, J. M. Quesada, Entrepreneurship and Firm Formation Across Countries, 2007, page 11.

[134] Para. 26, A/CN.9/WG.I/WP.93. The phrase "through the interconnection of those registries." and the final two sentences have been added to the text in this current draft.

[135] At its twenty-sixth session, the Working Group expressed support for the view that reference to interconnected registries should be included in the draft paragraph and that the need for such registries to be mutually consistent should be emphasized. Furthermore, support was also expressed for the comment that information on registered businesses should be stored and made accessible in digital format through a single jurisdictional database (see para. 84, A/CN.9/866).

[136] Adjustments have been made to the text of recommendation 10 as originally set out in A/CN.9/WG.I/WP.96 in order to accommodate the views the Working Group expressed at its twenty-sixth session (paras. 83 to 86, A/CN.9/866).

[137] See J. Olaisen, Business Registration Reform Case Studies, Malaysia, 2009, page 3.

[138] Para. 1, A/CN.9/WG.I/WP.93/Add.2.

A. Electronic, paper-based or mixed registry

62. An important aspect to consider when streamlining a business registration system is the form in which the application for registration should be filed and the form in which information contained in the registry should be stored. Paper-based registration requires sending the documents (usually completed in handwritten form) by mail or delivering them by hand to the registry for manual processing. Hand delivery and manual processing are not unusual in developing States due to a lack of advanced technological infrastructure. In such States, entrepreneurs must personally visit registration offices that are usually located in municipal areas which may not be easily reachable for many MSME entrepreneurs, particularly for those in rural areas.[139] In addition, any copies of the documents required must usually be provided on paper. Paper-based registry systems can facilitate "face-to-face" communication between the registrant and the registry, and thus may offer an opportunity to clarify aspects of the requirements for registration.[140] However, the labour-intensive nature of this procedure normally results in a time-consuming and expensive process (for example, it may require more than one visit to the business registry), both for the registry and for users, and it can easily lead to data entry errors. Furthermore, paper-based registry systems require considerable storage space as the documents with the registered information may have to be stored as hard copies (although some States using a mixed system may also scan documents and then destroy the paper versions after the expiry of a minimum legal period for their preservation, in this regard see paras. 208 to 210 below). Finally, business registrations transmitted by paper or fax also give rise to delays, since registrants must wait until registry staff manually carry out the business registration and certify it.[141]

63. In comparison, ICT-supported registration systems allow for improved efficiency of the registry and for more user-friendly services. This approach requires, at a minimum, that the information provided by the registrant be stored in electronic form in a computer database; the most advanced electronic registration systems, however, permit the direct electronic submission of business registration applications and relevant information as well as searches of the registry data over the Internet or via direct networking systems as an alternative to paper-based submissions. The adoption of such systems enhances data integrity, information security, registration system transparency, and verification of business compliance, as well as permitting the avoidance of unnecessary or redundant information storage. Furthermore, when electronic submission of applications is allowed, business registries can produce standard forms that are easier to understand and therefore easier to complete correctly. Although the use of ICT solutions can carry with them risks of software errors, electronic systems do more to reduce those risks by providing automated error checks and other appropriate solutions. ICT is also instrumental in the development of integrated registration systems and the implementation of unique identification numbers.[142]

64. In addition to these features, which result in a more streamlined process and user-friendly services, electronic business registration and access to the business registry also offer the following advantages:

(a) Improved access for smaller enterprises that operate at a distance from the registrar's offices;

(b) A very significant reduction in the time and cost required of the entrepreneur to perform the various registration steps, and consequently in the time

---

[139] See para. 43, A/CN.9/WG.I/WP.85.

[140] At its twenty-fifth session, the Working Group agreed that a balanced presentation of paper-based and mixed paper and electronic registries should be presented in the draft materials and that the materials should recognize that in several developing States, paper-based registries might be the only option available due to a lack of advanced technological infrastructure (see para. 67, A/CN.9/860).

[141] Para. 47, A/CN.9/WG.I/WP.93 and para. 11, A/CN.9/WG.I/WP.93/Add.2.

[142] Para. 48, A/CN.9/WG.I/WP.93. For further information, see also paras. 38-49, A/CN.9/WG.I/WP.93/Add.2.

and cost required before successful registration of a business, as well as in the day-to-day cost of operating the registry;

(c) It permits the handling of increasing demands for company information from other government authorities;

(d) A reduction in the opportunity for fraudulent or corrupt conduct on the part of registry staff;

(e) A reduction in the potential liability of the registry to users who otherwise might suffer loss as a result of the failure of registry staff to enter accurately registration information;

(f) When direct electronic registration and access to an electronic public registry are allowed, it provides the possibility for the user to access registration and information services outside of normal business hours; and

(g) It provides possible revenue opportunities from other businesses and financial institutions that seek company information to inform their risk analysis of potential trading counterparties and borrowers.[143]

65. Introducing ICT-based registration processes, however, often requires an in-depth re-engineering of the way the service is delivered, which may involve several core aspects of the State's apparatus in addition to their level of technological infrastructure, including: financial capability, organization and human resources capacity, legislative framework (e.g. commercial code and company law)[144] and institutional setting. Therefore, States launching a reform process aiming at the automation of business registries would be advised to carry out a careful assessment of the legal, institutional and procedural dimensions (such as legislation to allow for electronic signatures or information security laws, or establishing complex e-government platforms or other ICT infrastructure) in order to identify those areas where reforms are needed and to adopt those technology solutions that are most appropriate to their current needs and capabilities.[145] In several developing States and mid-level economies, only information about registering a business is currently available online, and a functioning electronic registry has not yet been implemented. Making information electronically available is certainly less expensive and less difficult to achieve than is the establishment of an electronic registry, and it does not require any legislative reform or specialized ICT.[146] While the adoption of a mixed registration system that combines electronic processing and paper-based manual submission and processing (see para. 79 below) might thus be an appropriate interim solution, it does involve higher maintenance costs, and the ultimate goal should remain the progressive development of fully ICT-based registration systems (see section C below).[147]

B. Features of an electronic registry

66. When the business registry record is computerized, the hardware and software specifications should be robust and should employ features that minimize the risk of data corruption, technical error and security breaches. Even in a paper-based registry, measures should be taken to ensure the security and integrity of the registry record, but this is more efficiently and easily accomplished if the registry record is electronic. In addition to database control programs, software will also need to be developed to manage such aspects as user communications, user accounts, payment of any required

---

[143] Para. 49, A/CN.9/WG.I/WP.93; subparas. (a), (c), and (g) are from para. 29, A/CN.9/WG.I/WP.93.

[144] At its twenty-fifth session, the Working Group reiterated its support for the use of ICT technology as a good practice in business registration and for the suggestion that reference to changes that could be required to the commercial code and company law of a State could be included in the draft (see para. 57, A/CN.9/860).

[145] Para. 30, A/CN.9/WG.I/WP.93.

[146] Para. 13, A/CN.9/WG.I/WP.93/Add.2.

[147] See footnote 140 above.

fees, financial accounting, computer-to-computer communication, internal workflow and the gathering of statistical data. Software applications enabling data collection would also assist the registry in making evidence-based decisions which would facilitate efficient administration of the system (for example, the collection of data on more frequent requests by registry users would enable evidence-based decisions on how to allocate registry resources).[148] When the State's technological infrastructure is not sufficiently advanced to allow the features mentioned above to be implemented, it is nevertheless important that the software put in place be flexible enough to accommodate additional and more sophisticated features as they become more feasible in the future.[149]

67. Implementing an online business registration system will require defining the technical standards of the online system, a careful evaluation of the hardware and software needs of the business registry to make those standards operational in the context of the national technological infrastructure, and deciding whether it is feasible to develop the necessary hardware and software in-house or whether it must be purchased from private suppliers. In making that determination, it will be key to investigate whether a ready-made product is available that can easily be adapted to the needs of the State. If different suppliers are used for the hardware and the software, it is important that the software developer or provider is aware of the specifications for the hardware to be supplied, and vice versa.[150]

68. Following more recent technological advances, one option States may want to consider is whether to rely on traditional software or to move to more sophisticated applications such as cloud computing, which is an Internet-based system that allows the delivery of different services, such as storing and processing of data, to an organization's computers through the Internet. The use of cloud computing allows for considerable reduction in the resources needed to operate an ICT-supported registration system, since the registry does not have to maintain its own ICT infrastructure. However, data and information security can represent an issue when introducing such a system and it would be advisable for States to conduct a careful risk analysis before establishing a system exclusively based on cloud applications.[151]

69. Additional aspects that States may consider when adopting an ICT-supported registry should include:

(a) Scalability of the ICT infrastructures, so that the system can handle an increasing volume of clientele over time as well as traffic peaks that may occasionally arise;

(b) Flexibility: the ICT infrastructure of the registry should be easily adaptable to new user and system requirements, and the migration of data from one technology to another may require data-cleansing aspects;

(c) Interoperability: the registry should be designed to allow (even at a later stage) integration with other automated systems, such as other governmental registries operating in the jurisdiction[152] and online or mobile payment portals;

(d) Costs: the ICT infrastructure should be financially sustainable both in term of initial and operating costs; and

(e) Intellectual property rights: in order to avoid risks deriving from adverse circumstances affecting the intellectual property rights owner, for example, if the

---

[148] For example, "application programming interfaces" (APIs) may be adopted. APIs have a wide variety of possible uses, such as enabling the submission of applications to the registry through simplified procedures, for instance by pre-filling certain fields by default, or allowing users, and equipping systems with the proper software to connect directly to the registry and retrieve information automatically.

[149] Para. 51, A/CN.9/WG.I/WP.93.

[150] Para. 52, A/CN.9/WG.I/WP.93.

[151] Para. 53, A/CN.9/WG.I/WP.93. For further reference see International Finance Corporation (World Bank Group), Task Manager's ICT Toolkit for Designing and Implementing Online Registry Applications (draft 8/3/2015), page 28.

[152] See, for instance, paras. 105 to 109 of this working paper.

owner ceases to operate or is prohibited from doing business with the government, the State should always either be granted ownership of the system or an unrestricted licence to the source code. [153]

70. With regard to the cost of the ICT infrastructure, it should be noted that the level of security needed by an electronic registration system and its relevant cost must be carefully addressed. In particular, it is important to align the risk attached to a specific interaction (between the registry and the business or the registry and other public agencies) with the costs and administration required to make that interaction secure. Low security may deter parties from using electronic services (unless it is mandatory), but costly high security measures could have the same effect. [154]

C. Phased approach to the implementation of an ICT-based registry [155]

71. The methods used to establish the online system should be consistent with the reforms required as they would determine the success or the failure of the initiative. Moving directly to a full online solution before reengineering registry business processes would be a mistake in many cases, as the solutions designed would not be able to capture the technology's full benefits. [156] Moreover, subject to the level of development of the implementing State, technical and capacity-building assistance programmes coordinated by international organizations might be necessary in order to progress towards the goal of a fully automated electronic registry. [157]

72. In locations where Internet penetration is not extensive, a phased-in approach may be an appropriate way forward. Automation would start with the use of simple databases and workflow applications for basic operations, such as name searches or the sharing of information with other government agencies, and then would progress to more sophisticated web-based systems that would enable customers to conduct business with the registry entirely online. These web-based systems could be quite convenient for smaller businesses operating at a distance from the registry, provided that those entrepreneurs were able to access the system. The final phase of the approach would be to accommodate ICT interoperability between those agencies involved in business registration. [158]

73. The simplest approach for States beginning their activity in this area would be to develop a content-rich website that consolidates registration information, provides downloadable forms, and enables users to submit feedback. This simple resource would allow users to obtain information and forms in one place and would make registries more efficient by enabling users to submit e-mail inquiries before going to registry offices with the completed forms. Since this solution does not require a stable Internet connection, it may appeal to States with limited Internet access.

74. If only limited Internet bandwidth is available, then automating front-counter and back-office operations prior to moving online would be a suitable approach. If

---

[153] Para. 54, A/CN.9/WG.I/WP.93. For further reference see International Finance Corporation (World Bank Group), Task Manager's ICT Toolkit for Designing and Implementing Online Registry Applications (draft 8/3/2015), page. 29.

[154] Para. 37, A/CN.9/WG.I/WP.93/Add.2. For further reference see also supra, note 153, page 12.

[155] At its twenty-fifth session, the Working Group supported comments on the importance of the implementation of a phased-in approach (which should start with the adoption of more simple electronic solutions and then progress to more sophisticated solutions) and on the importance for developing States to receive technical and capacity-building assistance in order to move from paper-based to electronic registries (see para. 68, A/CN.9/860).

[156] The technical assistance experience of international organizations, in particular of the World Bank, has provided most of the background material upon which sections "C" and "D" are based. See, in particular, Investment Climate (World Bank Group), Reforming Business Registration: A Toolkit for the practitioners, 2013, pages 12 ff.

[157] Para. 15, A/CN.9/WG.I/WP.93/Add.2. It may be noted that at its twenty-fifth session, the Working Group supported the view that achieving a completely electronic system was the goal to which all registries could aspire (see para. 67, A/CN.9/860).

[158] Para. 14, A/CN.9/WG.I/WP.93/Add.2.

the registry has sub-offices outside its main location (for instance, in rural areas), it would be important to establish a dedicated Internet connection with them. This approach would still require entrepreneurs to visit the registry, but at least it would establish a foundation on which the registry could later develop a more sophisticated web platform. A key factor even at this basic stage would be for the system to be able to digitize historical records and capture key information, such as the names of members or owners and directors, in the registry database.

75. Once the State's capacity in ICT and Internet penetration allows for digital commerce, then platforms that enable businesses to apply and pay for registration online as well as to file annual accounts and update registration details as operations change can be developed. With regard to online payment of a registration fee, it should be noted that ICT supported solutions would depend on a State's available modes of payment and on the regulatory framework that establishes the modes of payment a public authority can accept. When the jurisdiction has enacted laws that allow for online payment, experience shows that the most efficient option is to combine the filing of the electronic application and the fee payment into one step. ICT systems incorporating this facility should include error checks, so that applications are not submitted before payments are completed and registry officials can see payment information along with the application.[159] When fee payment is required before registration of the business, this constitutes a separate procedural step and the use of ICT solutions in order to be user-friendly would require streamlining the procedures for filing the applications and for payment.[160]

76. As noted above (see para. 65) when introducing ICT-based registration systems, States should adopt legislation that facilitates the implementation of these electronic solutions, although the obligation to use these solutions should be considered only when the various stakeholders concerned with the registration process (including the registrant, government agencies, and other relevant authorities) are prepared to comply. Furthermore, when developing such legislation, States should take into account that while certain elements of a legal framework can be checked electronically, the most complex aspects of the process may need to be addressed by a registry official.[161]

77. Enacting States should also be aware that establishing an ICT-supported registration system requires a well-designed legal and regulatory framework that supports simplicity and flexibility and avoids, to the greatest extent possible, discretionary power and the making of exceptions (see para. 27 above). For instance, provisions requiring the interpretation of several documents and the collection of several pieces of information are difficult to adapt to electronic processing; the same applies to the use of discretionary power and complex structures of rules and exceptions.[162]

78. When a State has developed the ICT infrastructure to achieve full business registry automation, integration of other online registration processes for taxation, social services and other purposes could be considered. Even if no integration with other registrations is built into the system, it would nevertheless be advisable that States implement data interchange capabilities so that the relevant company information could be shared across government agencies (see para. 69 above). A final improvement would be the development of mechanisms for disseminating business information products to interested parties. Such products could substantially contribute to the financial sustainability of the registry; in States with highly developed online registration systems, registries can derive up to 40 per cent of their operating revenues by selling such information.[163]

[160] Para. 18, A/CN.9/WG.I/WP.93/Add.2.

[161] Para. 25, A/CN.9/WG.I/WP.93/Add.2. For further reference, see Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 14.

[162] Para. 24, A/CN.9/WG.I/WP.93/Add.2.

[163] Para. 19, A/CN.9/WG.I/WP.93/Add.2. For further reference, see Investment Climate (World Bank Group), Reforming Business Registration: A Toolkit for the practitioners, 2013, page 13.

79. One issue that would likely arise when the online registry is able to offer full-fledged ICT services would be whether to abolish any paper-based submission or to maintain both paper-based and online registration. In many jurisdictions, registries choose to have mixed solutions with a combination of electronic and paper documents or electronic and manual processing during case handling.[164] This approach may result in considerable cost for registries,[165] since the two systems require different tools and procedures. Moreover, if this option is chosen, it is important to establish rules to determine the time of registration as between paper-based and electronic submissions. Finally, paper applications must be processed in any case, so that the information included in a hard document can be transformed into data that can be processed electronically; this can be done by scanning the paper-based application for registration (possibly using optical character recognition technology so to make the scanned document electronically searchable). However, in order to ensure that the record made by scanning correctly represents the paper application, the registry will likely have to employ staff to check that record, thus adding a step that increases costs and reduces the benefits of using an online system.[166]

D. Other registration-related services supported by ICT solutions

80. Automation should enable the registry to perform other functions in addition to the processing of applications. Where jurisdictions require user-friendly electronic filing and repopulated forms,[167] for instance, it can assist businesses in the mandatory filing of periodic returns and/or annual accounts. Electronic filing and automated checks also help reduce processing time by the registry.[168]

81. ICT supported registration could also assist the registry in deregistration procedures, i.e. notations on the registry that a particular business is no longer registered (see paras. 201 to 205 below). Such procedures usually require an official announcement that a business will be deregistered.[169] ICT can provide for automation of such announcements, from initiating the process to producing a standard notice, thus helping registries to ensure that businesses are not deregistered before any time limit has elapsed and to reduce processing time. In order to be fully effective, however, adoption of an ICT-based system needs to be supported by streamlined procedures that enable the deregistration of businesses in a simplified and quick way.[170]

82. Further, ICT solutions could be applied to assist in the filing of financial information in machine-readable format (such as eXtensible Business Reporting Language, or XBRL). For example, a platform could be provided to assist in the conversion of paper-based financial statements to XBRL format. Machine-readable financial data facilitates the aggregation and analysis of financial information, which could be of significant value to users of the registry.

83. ICT solutions could also support follow-up and enforcement procedures of business registries when businesses fail to comply with registration requirements. In one jurisdiction, for instance, the back-office system of the registry monitors the records of businesses and detects whether certain circumstances suggest that the

[167] Repopulated forms allow selected fields to be automatically filled based on information previously provided by the registrant or maintained in their user account. When changes in the registrant's information occur, the registrant is not required to fill out the entire form again, but only to enter the relevant changes. Information included in the repopulated form is stored and may be made accessible to and exchangeable with other relevant agencies.

[168] Para. 20, A/CN.9/WG.I/WP.93/Add.2. For further reference, see Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 15.

[170] Para. 22, A/CN.9/WG.I/WP.93/Add.2. For further reference, see Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 16.

business is not in compliance with statutory requirements. An automatic notice to the business is then produced in order for it to remedy the situation. Should the business fail to do so within the statutory deadline, the ICT solution starts a new procedure to forward the case to the district court, which may make a decision on the compulsory liquidation of the business. Upon an order for compulsory liquidation, the court notifies the registry which deregisters the business.[171]

Recommendation 11: Electronic, paper-based or mixed registry

The Regulation should provide that the optimal medium to operate an efficient business registry is electronic. Should full adoption of electronic services not yet be possible, such an approach should nonetheless be implemented to as great an extent as permitted by the current technological infrastructure of the enacting State, as well as its institutional and legal framework, and expanded as that infrastructure improves.

E. One-stop shop: a single interface for business registration and registration with other authorities

84. As discussed above (see para. 56), a business is usually required to register with several different government agencies, which often require the same information that has already been gathered by the business registry. Entrepreneurs must often personally visit each agency and fill out multiple forms. Taxation, justice, employment and social services agencies are usually involved in this process; other administrative offices and institutions, specific to each jurisdiction, may also be involved. This often results in multiple procedures governed by different applicable laws, duplication of information and lack of ownership or full control of the process by the agencies involved. Possibly worse for MSMEs wishing to register, the overall process can require weeks, if not months.[172]

85. Establishment of "one-stop shops" has thus become one of the most popular reforms to streamline business registration in recent years. One-stop shops are single interfaces where entrepreneurs receive all of the information and forms they need in order to complete the necessary procedures to establish their business rather than having to visit several different government agencies.[173]

86. Beyond this general definition, the scope of one-stop shops can vary according to the services offered. Some one-stop shops only provide business registration services, which may still be an improvement if the registration process previously involved a number of separate visits to the relevant authorities; others carry out other functions related to business start-up.[174] The most common of these other functions is tax registration, although there are also examples of one-stop shops dealing with registration for social services and statistical purposes. In rare cases,[175] one-stop shops assist entrepreneurs not only with business licences and permits but also with investment, privatization procedures, tourism-related issues and State-owned property management.[176]

87. The functions of one-stop shops can be carried out through physical offices or an electronic platform. Physical premises, when in rural areas, are particularly

---

[176] Para. 4, A/CN.9/WG.I/WP.93/Add.2.

appropriate for businesses with limited access to municipal centres. Of course, online business registration can also be offered as one option available for registering, the other being visiting the one-stop shop (or the registration office). Online one-stop shops, or single interfaces, take advantage of solutions supported by ICT, which allows for rapid completion of several formalities due to the use of dedicated software. Such online portals may provide a fully integrated facility or may still entail separate registration in respect of some requirements, for example taxation services.[177]

88. When establishing one-stop shops, in particular those performing functions in addition to business registration, States can choose among different approaches. In the "one door" approach, representatives of different government agencies involved in registration are brought together in one physical place, but the applicant must deal separately with each representative (for example, the business registry official dealing with the approval of the business name, the clerks checking the documents, and the taxation official), although the different agencies liaise among themselves.[178] As may be apparent, this solution is relatively uncomplicated and would normally not require any change in legislation or ministerial responsibilities, but it would involve establishing effective cooperation between the different government ministries. One issue States should consider when opting for this approach would be how much authority the representatives of each agency should have; for example, should they have the discretion to process the registration forms on site or would they simply be acting on behalf of their agencies and be required to take the documents to their home agencies for further processing?[179] Similarly, it is also important to consider clarifying the lines of accountability of the various representatives from the different agencies to the one-stop shop administrator.[180]

89. Another form of one-stop shop is the so-called "one window" or "one table" version, which offers a higher level of integration of the different agencies involved in the start-up of a business.[181] In this case, the one-stop shop combines the process for obtaining business and other registrations, such as for taxation and social services, with other arrangements, like publishing the registration in a National Gazette or newspapers, when required. All relevant documents are submitted to the one-stop shop administrator who is authorized, and properly trained, to accept them on behalf of the various government agencies involved. Documents are then dispatched, electronically or by hand or courier, to the competent agency for processing. This type of one-stop shop requires detailed coordination between the different government agencies, which must modify their procedures to ensure an effective flow of information. A memorandum of understanding between the key agencies involved may be needed in order to establish the terms in respect of the sharing of company information.[182] In some cases, taking such an approach may also require a change in legislation.[183]

90. A third approach, which is less common, is based upon the establishment of a separate entity to coordinate the business registration function and to deal with other requirements that entrepreneurs must meet, such as making tax declarations, obtaining the requisite licences, and registering with social services authorities. Pursuant to this model, the entrepreneur would apply to the coordinating entity after having registered with the business registry in order to fulfil the various additional

---

aspects of the procedures necessary prior to commencing business. Although this approach results in adding a step, it could be useful to some States since it avoids having to restructure the bodies with the main responsibility for business registration. On the other hand, the adoption of such a structure could involve an increase in the cost of the administrative functions and may only reduce timeframes to the extent that it allows the various functions to take place successively or enables participants in the one-stop shop to network with the other agencies to speed up their operations. From the registrant's perspective, however, the advantage of being able to deal with a single organization remains.[184]

91. Finally, in States with developed ICT infrastructures, the functions of the agencies concerned with registration could be fully integrated through the use of a common database, which is operated by one of the agencies involved and provides simultaneous registration for various purposes, i.e. business registration, taxation, social services, etc. In some jurisdictions, a public agency (such as the tax administration) is responsible for the registration of business entities, or ad hoc entities have been set up to perform such simultaneous registration.[185]

92. One issue that States should consider when establishing a one-stop shop is its location. It is usually advisable for the one-stop shop to be directly connected to the business registry office, either because it is hosted there or because the registry is part of the one-stop shop. The organization(s) responsible for the one-stop shop could thus be the same as that/those which oversee(s) the business registration process. This approach should take into account whether such organizations are equipped to administer the one-stop shop. Examples from various jurisdictions indicate that where authorities such as executive agencies are responsible for business registration, they possess the skills to perform one-stop shop functions as well. The same can be said of chambers of commerce, government commissions, and regulatory authorities.[186] There are very few examples of courts that have adopted a one-stop shop approach in those States where business registration is court-based.[187]

93. Although one-stop shops do not necessarily require changes in the domestic legal framework, as seen in the paragraphs above, it is important for the operation of such mechanisms to be legally valid, which may involve adapting existing laws to the new structure and method of proceeding. For instance, effective functioning of the one-stop shops may require provisions governing the collection of information by public authorities as well as the exchange of information among such authorities. The extent of the changes will thus vary according to the different needs of States. In addition, one-stop shops should be given a sufficient budget, since they can be quite expensive to establish and maintain, they should be staffed with well-trained personnel, and they should have their performance regularly monitored by the supervising authority in accordance with client feedback.[188]

Recommendation 12: One-stop shop: a single interface for business registration and registration with other authorities

The Regulation or the law of the enacting State should establish a single interface for business registration and registration with other public agencies, including designating which public agency should have overall authority for the single interface. Such an interface:

(a) May consist of a web platform or physical offices; and

[184] Para. 8, A/CN.9/WG.I/WP.93/Add.2. For further reference, see Benin and France, supra, note 183, page 4.
[185] Para. 9, A/CN.9/WG.I/WP.93/Add.2. For further reference, see Albania's National Registration Center in Investment Climate (World Bank Group), supra, note 183, page 7.
[186] Supra, note 177, page 7.
[187] Para. 10, A/CN.9/WG.I/WP.93/Add.2.
[188] Para. 11, A/CN.9/WG.I/WP.93/Add.2.

(b) Should integrate the services of as many public agencies requiring the same information as possible, but at a minimum should include taxation and social services agencies.

F. Use of unique business identifiers

94. As discussed above (see paras. 56 and 84), in those jurisdictions where the government agencies with which businesses are required to register (for example, for taxation and social services) operate in isolation from each other, it is not unusual for this procedure to result in duplication of systems, processes and efforts. This approach is not only expensive but may also cause errors. Moreover, if agencies assign registration numbers to the businesses they register, and the use and uniqueness of those numbers is restricted to the authority assigning them, information exchange among the agencies requires each authority to map the different identification numbers applied by the other agencies. When electronic solutions are used, they can facilitate such mapping, but even they cannot exclude the possibility that different entities will have the same identifier, thus reducing the benefits (in terms of cost and usefulness) obtained from the use of such tools.[189]

95. In recent years, several jurisdictions have thus adopted integrated registration systems in which the application submitted for business registration includes all of the information required by the different agencies. Once completed, the information in the application for business registration is transmitted by the registry to all relevant authorities. Information and any necessary approvals from the other agencies are then communicated back to the registry, which immediately forwards the information and approvals to the entrepreneur.[190] While this is beneficial for all businesses, regardless of their size, it is particularly valuable for MSMEs, which may not have the resources necessary to cope with the compliance requirements of multiple government authorities in order to establish their business.[191]

96. States aiming at fostering such integration among different agencies may wish to consider that in recent years some international organizations have developed tools that facilitate inter-agency cooperation. For instance, one international organization has developed an online system that allows for the interoperability of the various public agencies involved in business registration with minimal or no change at all in the internal processes of the participating agencies nor in their computer systems.[192]

97. Some developed States have introduced a more sophisticated approach, which considerably improves information exchange throughout the life cycle of a business. This approach requires the use of a single unique business identification number or unique identifier, which ties information to a given business and allows for information in respect of it to be shared among different public and private agencies.[193]

98. A unique identifier is structured as a set of characters (they may be numeric or alphanumeric) which distinguishes registered entities from each other. When designing a unique identifier, it may be advisable to build some flexibility in the structure of the identifier (for instance, by allowing the addition of new characters to the identifier at a later stage) so that the identifier can be easily adaptable to new system requirements in a national or international context, or both (see also para. 69 above). The unique identifier is allocated only once (usually upon establishment) to

[191] Para. 39, A/CN.9/WG.I/WP.93/Add.2.

[192] Para. 40, A/CN.9/WG.I/WP.93/Add.2. The UNCTAD Business Facilitation Programme provides for an online tool designed to computerize simple or complex administrative procedures (eRegistration) and that can handle simultaneous operations involving multiple agencies (such as the business registry, tax office, and social services) thus promoting interoperability among these different agencies. See http://businessfacilitation.org/ and para. 40, A/CN.9/WG.I/WP.81.

[193] Para. 41, A/CN.9/WG.I/WP.93/Add.2.

a single business and does not change during the existence of that business,[194] nor after its deregistration. The same unique identifier is used for that business by all agencies, which permits information about that particular registered entity to be shared within or between the public and private sectors.[195]

99. The experience of States that have adopted unique identifiers has demonstrated their usefulness. As noted above, they permit all government agencies to identify easily new and existing businesses, and cross-check information in respect of them. In addition, the use of unique identifiers improves the quality of the information contained in the business registry, since the identifiers ensure that information is linked to the correct entity even if its identifying attributes (for example name, address, and type of business) change. Moreover, unique identifiers prevent the situation where, intentionally or unintentionally, businesses are assigned the same identification; this can be especially significant where financial benefits are granted to legal entities or where liability to third parties is concerned.[196] Unique identifiers have been found to produce benefits for businesses as well, in that they considerably simplify business administration procedures: entrepreneurs do not have to manage different identifiers from different authorities, nor are they required to provide the same or similar information to different authorities.[197]

100. One issue a State may have to consider when introducing unique identifiers is that of individual businesses that do not possess a separate legal status from their owners. In such cases, taxation or other authorities (such as social services) may prefer to rely on the identifier for the individual, who may be a natural person, rather than on the business identifier.[198]

101. Situations may arise in which different agencies in the same jurisdiction allocate identifiers to businesses based on the particular legal form of the enterprise. States should thus consider adopting a verification system to avoid multiple unique identifiers being allocated to the same business by different public agencies.[199] If the identifier is assigned through a single jurisdictional database the risk of several identifiers allocated to one business or several businesses receiving the same identifier is considerably reduced.[200]

102. The effective use of unique identifiers is enhanced by the adoption of full electronic solutions which do not require manual intervention. However, electronic solutions are not a mandatory prerequisite to introducing unique identifiers, as they can also be effective in a paper-based environment.[201] When unique identifiers are connected to an online registration system, it is important that the solution adopted fits the existing technology infrastructure.[202]

Recommendation 13: Use of unique business identifiers

The Regulation should provide that a unique business identifier should be allocated to each registered business and should:

---

[194] While the unique identifier does not change throughout the lifetime of a business, if the business changes its legal form a new unique identifier must be allocated.

[195] Para. 42, A/CN.9/WG.I/WP.93/Add.2. For further reference, see Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 20.

[196] Ibid., page 22.

[197] Para. 43, A/CN.9/WG.I/WP.93/Add.2.

[198] Para. 50, A/CN.9/WG.I/WP.93/Add.2.

[199] Para. 51, A/CN.9/WG.I/WP.93/Add.2. For further reference, see A/CN.9/WG.I/WP.85, paras. 36 ff. and Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 21.

[200] This paragraph and the previous one were the commentary to former recommendation 16: Unique business identifiers and individual businesses, which read as follows: "The Regulation or the law of the enacting State should adopt a verification system to avoid multiple unique business identifiers being allocated to the same business by different public agencies". In preparing this consolidated draft of the legislative guide, the Secretariat has deleted former recommendation 16 and incorporated the commentary under current recommendation 13.

[201] Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 22.

[202] Para. 44, A/CN.9/WG.I/WP.93/Add.2.

(a) Be structured as a set of numeric or alphanumeric characters;

(b) Be unique to the business to which it has been allocated; and

(c) Remain unchanged and not be reallocated following any deregistration of the business.

G. Allocation of unique business identifiers

103. The use of unique identifiers requires sustained cooperation and coordination among the authorities involved, and a clear definition of their roles and responsibilities, as well as trust and collaboration between the public and business sectors. Since the introduction of a unique identifier does not of itself prevent government agencies from asking a business for information that has already been collected by other agencies, States should ensure that any reform process in this respect start with a clear and common understanding of the reform objectives among all the stakeholders involved. Moreover, States should ensure that a strong political commitment is in place. Potential partners ideally include the business registry, the taxation authority, the statistics office, the social services agency, the pension fund, and any other relevant agencies. If agreement among these stakeholders is elusive, at a minimum, the business register and taxation authority should be involved. Information on the identifiers in use by the other authorities and within the business sector is also a prerequisite for reform, as is a comprehensive assessment to identify the needs of all stakeholders.[203]

104. In order to permit the introduction of a unique identifier, the domestic legal framework should include provisions on a number of issues including:

(a) Identification of the authority charged with allocating the unique identifier;

(b) Allocation of the unique identifier before or immediately after registration with the authorities involved in business entry;

(c) Listing of the information that will be related to the identifier, including at least the name, address and type of business;

(d) The legal mandate of the public authorities to use the unique identifier and related information, as well as any restrictions on requesting information from businesses;

(e) Access to registered information by public authorities and the private sector;

(f) Communication of business registrations and amendments among the public authorities involved; and

(g) Communication of deregistration of businesses that cease to operate.[204, 205]

Recommendation 14: Allocation of unique business identifiers

The Regulation or the law of the enacting State should specify that the allocation of a unique business identifier should be carried out either by the business registry upon registration of the business, or before registration by a legally-designated authority. In either case, the unique business identifier should then be made available to all other public agencies sharing the information associated with that identifier, and should be used in all official communication in respect of that business.

---

[203] Para. 45, A/CN.9/WG.I/WP.93/Add.2.

[204] Para. 46, A/CN.9/WG.I/WP.93/Add.2.

[205] See Investment Climate (World Bank Group), Reforming Business Registration: A Toolkit for the practitioners, 2013, page 32.

H. Implementation of a unique business identifier

105. Adoption of a unique business identifier normally requires a centralized database linking the businesses to all relevant government agencies whose information and communication systems must be interoperable. This requirement can be a major obstacle when implementing this in practice if the technological infrastructure of the State is not sufficiently advanced.[206]

106. States can introduce the unique business identifier in one of two ways. In the first approach, business registration is the first step and includes the allocation of a unique identifier, which is made available (together with the identifying information) to the other authorities involved in the registration process (for instance, taxation and social services authorities), and which is re-used by those authorities. In the second approach, the allocation of a unique business identifier represents the beginning of the process. The unique identifier and all relevant information are then made available to the government agencies involved in business registration, including the business registry, and is then re-used by all agencies.[207] Either of these two approaches can be followed by the authority entrusted with allocating unique business identifiers, regardless of whether the authority is the business registry, a facility shared by public agencies or the taxation authority. It is important to note that in some States, the use of a unique identifier may be restricted: in some jurisdictions, certain government agencies still allocate their own identification number[208] although the business carries a unique identifier.[209]

107. Introducing a unique business identifier usually requires adaptation both by public authorities in processing and filing information and by businesses in communicating with public authorities or other businesses. A unique business identifier requires the conversion of existing identifiers, which can be accomplished in various ways. Taxation identifiers are often used as a starting point in designing a new identifier, since the records of the taxation authorities cover most types of businesses and are often the most current.[210] Examples also exist in which, rather than introducing a completely new number, the taxation number itself is retained as the enterprise's unique number. New identification numbers can also be created using other techniques according to a country's registration procedures. In such a situation, it is important that each business, once assigned a new number, verifies the related identifying information, such as name, address, and type of activity.[211]

108. In some jurisdictions, advanced interconnectivity among the different agencies involved in the registration process has resulted in a single form for registration with all agencies. Examples exist of consolidated (electronic) registration forms that can be repopulated [212] with information from the different authorities concerned. Integration of registration functions can be facilitated by the use of one common database. In jurisdictions where this approach has been developed, agencies perform regular file transfers to update the database as well as their own records; they have direct access to the common database and use the same back-office systems to update it; and the information registered is regularly verified by trusted staff of the agencies. Such strong coordination among the concerned agencies is often based on regulatory

---

[206] Para. 47, A/CN.9/WG.I/WP.93/Add.2.

[207] See Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 20 and A/CN.9/WG.I/WP.85, paras. 34 ff.

[208] In certain cases, agencies may keep their own numbering system in addition to using the unique identifier because of "legacy data", i.e. an obsolete format of identifying the businesses which cannot be converted into unique identifiers. In order to access such information the registry must maintain the old identification number for internal purposes. In dealing with the public, however, the government agency should use for all purposes the unique identifier assigned to the business.

[209] Para. 48, A/CN.9/WG.I/WP.93/Add.2. For further reference, see Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 20.

[210] See Belgium in para. 35, A/CN.9/WG.I/WP.85.

[211] Para. 49, A/CN.9/WG.I/WP.93/Add.2. For further reference, see Norway, in para. 35, A/CN.9/WG.I/WP.85.

[212] For details on repopulated forms, see footnote 167 above.

provisions that allocate roles and responsibilities among the various agencies involved. Appropriate funding should also be allocated from the State's budget.[213]

109. As discussed above (see paras. 70 and 96), the interoperability of the different agencies' ICT systems could be a major obstacle when implementing unique business identifiers. The ability of different information technology infrastructures to exchange and interpret data, however, is only one aspect of interoperability that States should consider. Another issue is that of semantic interoperability, which can also pose a serious threat to a successful exchange of information among the agencies involved as well as between relevant agencies and users in the private sector. For this reason, it is important to ensure that the precise meaning of the information exchanged is understood and preserved throughout the process and that semantic descriptions are available to all of the stakeholders involved. Measures to ensure interoperability would thus require State action on a dual level: agreement on common definitions and terminology on one hand, and development of appropriate technology standards and formats on the other. This approach should be based on a mutual understanding of the legal foundation, responsibilities and procedures among all those involved in the process.[214]

Recommendation 15: Implementation of a unique business identifier

The Regulation or the law of the enacting State should ensure that, when adopting a unique business identifier across different public agencies:

(a) There is interoperability between the technological infrastructure of the business registry and of the other public agencies sharing the information associated with the identifier; and

(b) That existing identifiers are linked to the unique business identifier.

I. Sharing of private data between public agencies

110. While facilitating information-sharing, it is important that unique business identifiers protect sensitive data and privacy. Legislation in each State often includes provisions on data protection and privacy and in some States, registered information related to businesses is considered private and is not publicly available. However, a major trend towards increased transparency in order to avoid misuse of corporate vehicles for illicit purposes[215] has resulted from international efforts to fight money-laundering and terrorist and other illicit activities, as well as from the adoption of policies to know your customers and business counterparts. Such an enhanced quest for transparency has an impact on the way the information retained in the registry is shared among the different authorities. When a State introduces interoperability among different authorities, it should address issues of individual privacy[216] so that no protected information about the business is made public, but that information that must be made public by the registry can legally be made public (see also paras. 170 to 171 below).[217]

Recommendation 16[218]: Sharing of private data between public agencies

The Regulation should ensure that rules for the sharing of private data between public agencies pursuant to the unique business identifier system adopted:

[214] Para. 53, A/CN.9/WG.I/WP.93/Add.2. For further reference, see supra, note 213, page 23.

[215] See also para. 75, A/CN.9/WG.I/WP.93/Add.1.

[216] See para. 37, A/CN.9/WG.I/WP.85.

[217] Para. 52, A/CN.9/WG.I/WP.93/Add.2. For further reference, see A. Lewin, L. Klapper, B. Lanvin, D. Satola, S. Sirtaine, R. Symonds, Implementing Electronic Business Registry (e-BR) Services, Recommendations for policymakers based on the experience of EU Accession Countries, 2007, page 50.

[218] Former recommendation 36, A/CN.9/WG.I/WP.96/Add.1.

(a) Conform with the applicable rules in the enacting State on public disclosure of private data;

(b) Enable public agencies to access private data included in the unique business identifier system only in order to carry out their statutory functions; and

(c) Enable public agencies to access private data included in the unique business identifier system only in relation to those businesses with respect to which they have statutory authority.

J. Exchange of information among business registries

111. Introducing unique business identifiers that enable different public authorities to exchange information about the business among themselves is relevant not only at the national level, but also in an international context. Unique identifiers allow interoperability among business registries located in different States as well as between business registries and public authorities in different States. Implementation of cross-border exchange of data can result in more reliable information for consumers and existing or potential business partners, including small businesses that provide cross-border services. [219] Moreover, enhanced interoperability among business registries, coupled with appropriate national legislation, may result in enhanced protective measures for businesses, for example, by preventing business owners or managers sanctioned in one jurisdiction for "unfit conduct" in running a business from being allowed to become business owners or managers in other jurisdictions (see also paras. 50-58 above).[220]

112. In the European Union (EU), EU-Directive 2012/17[221] requires member States to ensure that companies have a unique identifier "to be unequivocally identified" in the new system of interconnected business registries that the Directive aims to establish.[222] The intention is to facilitate exchanging information between the registry of a company and those of its branches in other member States on the opening and termination of any winding-up or insolvency proceedings of the company and on the deregistration of the company from the business registry. As a result, when a company has been dissolved or otherwise stricken from the registry, its foreign branches are likewise removed from the business register without undue delay.[223]

113. There are, at present, no other examples of similar initiatives[224] in other regions of the world. However, the adoption of unique identifiers by non-EU States could lay the groundwork for future coordination in the regulatory community in order to create international standards for a global unique identifier.[225]

114. Introducing unique identifiers does not only benefit businesses that have branches outside their State. It is also beneficial for local entrepreneurs since it enables those entrepreneurs to establish commercial relationships with multinationals or other foreign businesses that are active in the domestic markets where the local entrepreneurs operate. In a global economy, it is often difficult for a micro-entrepreneur to become a supplier or a customer of larger companies since it may not be easy for those companies to obtain information on the existence and the reliability (for instance, in terms of their financial situation) of the small businesses. A unique identifier, recognizable worldwide, would assist in creating a safe and reliable

---

[219] Para. 55, A/CN.9/WG.I/WP.93/Add.2.

[220] For instance, in Singapore if a business director is disqualified by a foreign court from managing a business, that director can no longer be involved in the management of any company in the territory of the State unless certain requirements of domestic company law are satisfied. Available at: https://support.rikvin.com/faq/who-are-disqualified-directors/.

[221] See Directive 2012/17/EU of the European Parliament and of the Council of 13 June 2012.

[223] Para. 56, A/CN.9/WG.I/WP.93/Add.2.

[224] However, see the collaboration between Australia and New Zealand reported in footnote 228.

[225] Para. 57, A/CN.9/WG.I/WP.93/Add.2.

"connection" between a business and all of the information that relates to it, thus making it possible for the small business to obtain visibility in bigger markets.[226]

115. The internationalization of businesses of all sizes creates an increasing demand for access to information on companies operating outside their national borders. Making the exchange of such information across borders as simple and fast as possible is of key importance in order to ensure the traceability of companies, the transparency of their operations and to create a more business-friendly environment. However, official information on registered businesses is not always readily available on a cross-border basis and business clients and other interested parties must search the register on a State-by-State basis when in need of information. This can result in a time-consuming and expensive effort that many interested users of the business registry may not be able to undertake due to travel distances, high costs and other potential obstacles.[227]

116. States are increasingly aware of the importance of improving the cross-border exchange of data between registries,[228] and sustained progress in respect of ICT now allows this aspect to be addressed. Accordingly, States implementing reforms to streamline their business registration system may wish to consider adopting solutions that will, in future, facilitate such information exchanges between registries from different jurisdictions and to consult with States that have already implemented approaches[229] that allow for such interoperability.[230] By way of example, one such reform could include developing a system of business prefixes that would make the legal form of the business immediately recognizable across jurisdictions.

Recommendation 17[231]: Exchange of information among business registries

The designated authority should ensure that systems for the registration of businesses should adopt solutions that facilitate information exchange between registries from different jurisdictions.

IV. Registration of a business

A. Scope of examination by the registry

117. The method through which a business is registered varies from State to State,[232] ranging from those that tend to regulate less and rely on the legal framework that governs business behaviour, to States that opt for ex ante screening of businesses before the business may be registered (see also para. 53 above).[233] In this regard, a jurisdiction aiming at reforming the registration system must first decide which approach it will take so as to determine the scope of the examination that will have to be carried out by the registry. The jurisdiction may thus choose to have a system where the registry only records facts or a system where the registry is required to

[226] Para. 58, A/CN.9/WG.I/WP.93/Add.2.
[227] Para. 27, A/CN.9/WG.I/WP.93.
[228] For instance, Australia and New Zealand have agreed to mutual exchanges of data and documents. The two States have also amended their legislation to help reduce duplicate entries for New Zealand companies operating in Australia. See the section "New Zealand companies registered as foreign companies with ASIC" at https://www.companiesoffice.govt.nz.
[229] See paras. 55-58, A/CN.9/WG.I/WP.93/Add.2. Australia and New Zealand have developed an application (NZAU Connect app) that allows users to carry out simultaneous searches of both the Australian and the New Zealand registries by using their smartphones or mobile devices. See the section "NZAU Connect App" in http://asic.gov.au/online-services.
[230] Para. 28, A/CN.9/WG.I/WP.93.
[231] Former recommendation 37, A/CN.9/WG.I/WP.96/Add.1.
[232] See para. 6, A/CN.9/WG.I/WP.85.
[233] See World Bank Group, Small and Medium Enterprise Department, Reforming Business Registration Regulatory Procedures at the National Level, A Reform Toolkit for Project Teams, 2006, page 2.

perform legal verifications and decide whether the business meets the criteria to register.[234]

118. Jurisdictions opting for ex ante verification of legal requirements and authorization before businesses can register often have court-based registration systems in which the judiciary, notaries and lawyers perform a key role in the registration process.[235] Other States structure their business registration as a declaratory system, in which no ex ante approval is required before business start-up and where registration is an administrative process. In such declaratory systems, verification of an event's legal status is made after it has taken place, and registration is under the oversight of a government department or agency,[236] which can choose whether to operate the business registry system itself or to adopt other arrangements (see paras. 38 to 39 above).[237]

119. Both the approval and the declaratory systems have their advantages and disadvantages. Approval systems are usually said to help prevent errors or omissions prior to registration. Notaries and/or lawyers and courts exercise a formal review and, when appropriate, also a substantive review of the pre-requirements for the registration of business. By contrast, declaratory systems are said to be easier to manage and better-suited to deter corruption by avoiding opportunities for official decisions to be made with a view towards personal gain; furthermore, they may reduce costs for registrants by negating the need to hire an intermediary and appear to have lower maintenance costs.[238]

B. Accessibility of information on how to register

120. In order for the business registry to facilitate trade and interactions between business partners, the public and the State, easy access to business services should be provided both to businesses that want to register and to interested stakeholders who want to search registered information.[239]

121. For businesses wanting to register, surveys often show that many microbusinesses operating outside of the legally regulated economy are not aware of the process of registering or of its costs: often they overestimate time and cost, even after efforts to simplify the registration process.[240] Easily retrievable information on the registration process (such information could include: a list of the steps needed to achieve the registration; the necessary contacts; the data and documents required; the results to be expected; how long the process will take; methods of lodging complaints; and possible legal recourse)[241] and the relevant fees can reduce compliance costs, and make the outcome of the application more predictable, thus encouraging entrepreneurs to register. Restricted access to such information, on the contrary, might require meetings with registry officials in order to be apprised of the registration requirements, or the involvement of intermediaries to facilitate the registration process.[242]

122. In jurisdictions with developed ICT infrastructures, information on the registration process and documentation requirements should be available on the registry website or the website of the government agency overseeing the process. As discussed below, States should consider whether the information included on the

---

[242] Para. 55, A/CN.9/WG.I/WP.93/Add.1.

website should be offered in a foreign language in addition to official and local languages. States with more than one official language should make the information available in all such languages (see para. 135 below).[243]

123. Lack of advanced technology, however, should not prevent access to information that could be ensured through other means, such as the posting of communication notes at the relevant agency or dissemination through public notices. In some jurisdictions, for instance, it is required to have large signs in front of business registry offices stating their processes, time requirements and fees.[244] In any event, information for businesses that want to register should be made available at no cost.[245]

124. It is equally important that potential registry users are given clear advice on the practical logistics of the registration and the public availability of the information on the business registry, for example, through the dissemination of guidelines and tutorials (ideally in both printed and electronic form) and the availability of in-person information and training sessions.[246] In some States, for instance, prospective users of the system are referred to classroom-based and/or eLearning opportunities available through local educational institutions or professional associations.[247]

Recommendation 18[248]: Accessibility of information on how to register[249]

The designated authority should ensure that information on the business registration process and the applicable fees, if any, should be widely publicized, readily retrievable, and available free of charge.

C. Businesses required or permitted to register[250]

125. States must also define which businesses are required to register under the applicable law. One of the key objectives of business registration is to permit businesses of all sizes and legal forms to be visible in the marketplace and to operate in the legally regulated commercial environment.[251] This objective is of particular importance in assisting MSMEs to participate effectively in the economy, and States may wish to consider requiring or enabling businesses of all sizes and legal forms to register in an appropriate business registry, or creating a single business registry that is tailored to accommodate registration by a range of different sizes and different legal forms of business.[252]

126. Laws requiring the registration of businesses vary greatly from State to State, but one common aspect is that they all require registration of a particular legal form of business. The nature of the legal forms of economic entity that are required or permitted to register in a given jurisdiction is, of course, determined by the applicable law.[253] In some legal traditions, it is common to require registration of all businesses, including sole proprietorships, professionals, and government bodies, since they are

---

[243] Para. 56, A/CN.9/WG.I/WP.93/Add.1.
[244] See Bangladesh and Guinea cited in para. 31, A/CN.9/WG.I/WP.85.
[245] Para. 57, A/CN.9/WG.I/WP.93/Add.1.
[246] See also para. 7, A/CN.9/WG.I/WP.93/Add.1.
[247] Para. 84, A/CN.9/WG.I/WP.93/Add.2. For further reference, see Service Alberta, Canada, at www.servicealberta.com/1005.cfm.
[248] Former recommendation 17, A/CN.9/WG.I/WP.96.
[249] The Working Group requested (see para. 79, A/CN.9/866) verification of any overlap between recommendation 8 and 17 as they appeared in A/CN.9/WG.I/WP.96. In this regard, the content of recommendation 8, which has been renumbered as recommendation 6 in this working paper, has been slightly modified to differentiate between the two. See footnote 96 above.
[250] The Working Group may wish to consider whether recommendation 18 and paras. 120 to 122 of the commentary should be added to recommendation 2 (i.e. combined former recommendations 1, 4 and 7) and to the commentary in paras. 27 to 30 above.
[251] Para. 12, A/CN.9/WG.I/WP.93.
[252] Para. 5, A/CN.9/WG.I/WP.93/Add.1.
[253] See L. Klapper, R. Amit, M. F. Guillén, J. M. Quesada, Entrepreneurship and Firm Formation Across Countries, 2007, pages 6 ff.

all said to constitute an economic entity;[254] while in other legal traditions, only corporations and similar entities (with legal personality and limited liability) are required to register.[255] This approach can exclude businesses like partnerships and sole proprietorships from mandatory registration. However, variations on these regimes also exist, and some jurisdictions permit voluntary registration for businesses that would not otherwise be required to register, for example, because they are not economic entities or because they are not engaged in business activities.[256]

127. In several jurisdictions, when entrepreneurs decide to establish and to register their business, they tend to choose the simplest legal form available to them in order to minimize the regulatory and financial burden, as well as the expense of establishing the business. A sole proprietorship or similar type of business with low legal and regulatory requirements is thus often the most popular business form. Some jurisdictions require that even simple business forms such as these be registered, and some jurisdictions have carried out reforms to facilitate the registration process for sole proprietorships or for simplified new types of limited liability entities.[257]

128. As noted above (see para. 21), enabling the registration of businesses that would not otherwise be required to register allows such businesses to benefit from a number of services offered by the State and by the registry, including the protection of a business or a trade name, the separation of personal assets from assets devoted to business or limiting the liability of the owner of the business.[258] Businesses that voluntarily register must, however, fulfil the same obligations and will be subject to the same penalties for non-compliance with obligations taken on by registration as those businesses that are required to register.

Recommendation 19[259]: Businesses required or permitted to register[260]

The Regulation or the law of the enacting State should specify:

(a) Which businesses are required to register; and

(b) That all businesses are permitted to register.

D. Minimum information required for registration

129. As a general rule, businesses must meet certain requirements in order to be registered; those requirements are determined by the State based on its legal and economic framework. In addition, the registered information required usually varies depending on the legal form of business being registered — for example, sole proprietorships and simplified business entities may be required to submit relatively simple details in respect of their business,[261] while businesses such as public and private limited liability companies will be required to provide more complex and detailed information. Although the requirements for registration of each legal form of business will vary according to the applicable law of the relevant jurisdiction, there are, however, some requirements that can be said to be common for many businesses

---

[256] Para. 6, A/CN.9/WG.I/WP.93/Add.1. For further reference, see L. Klapper, R. Amit, M. F. Guillén,
J. M. Quesada, Entrepreneurship and Firm Formation Across Countries, 2007, pages 6 ff.

[257] Para. 7, A/CN.9/WG.I/WP.93/Add.1. For further reference, see para. 51, A/CN.9/WG.I/WP.85.

[258] See para. 35, A/CN.9/WG.I/WP.92 and Section D.2, A/CN.9/WG.I/WP.98.

[259] Former recommendation 18, A/CN.9/WG.I/WP.96.

[260] The Working Group may wish to consider whether this recommendation should instead be included as a subparagraph in recommendation 2 of the present text (which combines former recommendations 1, 4 and 7 from A/CN.9/WG.I/WP.96), along the following lines: "The Regulation or the law of the enacting State should: … (d) Specify which businesses are required to register."

[261] On this matter, see also paras. 61-67, A/CN.9/WG.I/WP.99.

in most States, both during the initial registration process and throughout the business life of the enterprise.[262]

130. General requirements for the registration of all legal forms of enterprise are likely to include the following:[263]

(a) Providing information in respect of the business and its founders, such as:

(i) The name and address at which the business can be deemed to receive correspondence (such an address can be a "service address" and need not be the residential address of the registrants or the managers of the business);

(ii) The name(s) and contact details of the registrant(s);

(iii) The identity of the person or persons who may legally bind the business; and

(iv) The legal form of business that is being registered; and[264]

(b) Payment of any required fees to the registry.

131. Other information that may be required for registration, depending on the jurisdiction of the registry and the legal form of the business being registered, can include:

(a) The names and addresses of the persons associated with the business, which may include managers, directors and officers of the business;

(b) The name and the address of the owner(s) or the beneficial owner(s);

(c) The rules governing the organization or management of the business; and

(d) Information relating to the capitalization of the business.[265]

132. Depending on the legal form of the business being registered, other details may be required in order to finalize the registration process. In some jurisdictions, proof of the share capital, the name of the chairperson, information on the type of commercial activities engaged in by the business, and agreements in respect of non-cash property constitute information that may also be required by registries in respect of certain legal forms of business.[266] In addition, in several jurisdictions, registration of shareholder details and any changes therein may be required; in a few cases, registration of shareholder details is carried out by a different authority.[267] In some other jurisdictions, it is now practice to register beneficial ownership details and changes in those details,[268] although the business registry is not always the authority entrusted with this task.[269] Transparency in the beneficial ownership of businesses can help prevent the misuse of corporate vehicles, including MSMEs, for illicit purposes.[270]

---

[262] Para. 8, A/CN.9/WG.I/WP.93/Add.1. It should be noted that information required for the registration of a simplified business is likely to be a less comprehensive list, and that this portion of the materials should be made consistent with what the Working Group agrees in respect of the requirements for a simplified business.

[263] See also paras. 60-67, A/CN.9/WG.I/WP.99.

[264] Para. 9, A/CN.9/WG.I/WP.93/Add.1.

[265] Para. 10, A/CN.9/WG.I/WP.93/Add.1.

[266] See The International Business Registers Report 2015, pages 26 ff.

[267] See European Commerce Registers' Forum, International Business Registers Report 2014, page 26.

[268] See The International Business Registers Report 2015, page 37.

[269] A "beneficial owner" is the natural person(s) who ultimately owns or controls a legal person or arrangement even when the ownership or control is exercised through a chain of ownership or by means of control other than direct control. These vehicles may include not only corporations, trusts, foundations, and limited partnerships, but also simplified business forms, and may involve the creation of a chain of cross-border company law vehicles created in order to conceal their ownership. See also, paras. 47 to 55, A/CN.9/825. The Working Group may wish to consider whether further details on this topic should be included in these materials, possibly as an annex.

[270] Para. 12, A/CN.9/WG.I/WP.93/Add.1. For further reference, see also paras. 65-66, A/CN.9/WG.I/WP.99.

Recommendation 20[271]: Minimum information required for registration

The Regulation or the law of the enacting State should establish the minimum information and supporting documents required for the registration of a business, including at least:

(a) The name and address at which the business can be deemed to receive correspondence or, in cases where the business does not have a standard form address, the precise description of the geographical location of the business;

(b) The identity of the person or persons registering the business;

(c) The identity of the person or persons who are authorized to act on behalf of the business; and

(d) The legal form of the business being registered.

E. Language in which information is to be submitted

133. When requiring the submission of information for business registration, one important issue for the State to consider is the language in which the required information must be submitted. Language can be a barrier and can cause delays in registration if documents need to be translated into the language of the registry.[272] On the other hand, a business can be registered only if the content of the information is legible to the registry staff. For this reason, it is not common for jurisdictions to allow documents or electronic records to be submitted in a non-official language. States, however, may consider whether such documents can be accepted. There are some States that allow all or some of the information relating to the business registration to be submitted in a non-official language. Should States opt for this approach, it would be advisable to establish that the documents or electronic records must be accompanied by a sworn-in court interpreter's translation into the registry's national language(s) or any other form of authenticating the documents or electronic records that is used in the State.[273]

134. Another issue is whether the documents submitted to the business registry include information, such as names and addresses, which uses a set of characters different from the characters used in the language of the registry. In this case, the State should provide guidance on how the characters are to be adjusted or transliterated to conform to the language of the registry.[274]

135. A number of States have more than one official language. In these States, registration systems are usually designed to accommodate registration in all official languages. To ensure that information on businesses operating in the State is available to all registrants and searchers, different approaches can be adopted. States may require parties to make their registration in all official languages; or they may permit filing in one language only, but then require the registry to prepare and register duplicate copies in all official languages. Both these approaches, however, may be quite costly and invite error. A more efficient way of dealing with multiple official languages, any one of which may be used to register, would be to allow registrants to carry out registration in only one of those official languages. Such a language could be that of the province or the region where the registry office or the registry sub-office is located and where the registrant has its place of business. This approach would also take into account the financial constraints of MSMEs and, according to circumstances, possible literacy issues, as entrepreneurs may not be equally fluent in all official languages spoken in a State. When such an approach is chosen, however, States should ensure that the registration and public information relating to the registry are available in all official languages of the registry. Whatever approach is

---

[271] Former recommendation 19, A/CN.9/WG.I/WP.96.

[272] See European Commerce Registers' Forum, International Business Registers Report 2014, page 23.

[273] Para. 51, A/CN.9/WG.I/WP.93/Add.1. For further reference, see also European Commerce Registers' Forum, International Business Registers Report 2014, page 24.

[274] Para. 52, A/CN.9/WG.I/WP.93/Add.1.

taken, however, States will have to consider ways to address this matter so as to ensure that the registration and any subsequent change can be carried out in a cost effective way for both the registrant and the registry and, at the same time, ensure that information can be understood by the registry's users.[275]

Recommendation 21[276]: Language in which information is to be submitted[277]

The Regulation should provide that the information and documents submitted to the business registry must be expressed in the language or languages specified by the enacting State, and in the character set as determined and publicized by the business registry.

F. Notice of registration

136. The enacting State is to choose the shortest possible appropriate time period within which the registrant should be notified of the effectiveness of the business registration.[278] Obligating the registry to promptly notify the applicant business about the registration helps to ensure the integrity and security of the registry record.[279],[280] In States where online registration is used, the registrant should receive an online notification of the registration of the business immediately after all of the requirements for the registration of that business have been successfully fulfilled.

Recommendation 22[281]: Notice of registration

The Regulation should establish that the business registry should notify the registrant whether or not its registration is effective as soon as practicable, and, in any event, without undue delay.

G. Content of notice of registration

137. The notice of registration should include the minimum information in respect of the registered business necessary to provide conclusive evidence that all requirements for registration have been complied with and that the business is duly registered according to the law of the enacting State.

Recommendation 23[282]: Content of notice of registration

The Regulation should provide that the notice of registration may be in the form of a certificate, notice or card, and that it should contain the following information:

(a) The unique business identifier of the business;

---

[275] Para. 53, A/CN.9/WG.I/WP.93/Add.1.

[276] Former recommendation 20, A/CN.9/WG.I/WP.96.

[277] The Working Group may wish to note that this recommendation mirrors recommendation 22 of the UNCITRAL Guide on the Implementation of a Security Rights Registry, which reads as follows: "The Regulation should provide that the information in a notice must be expressed in [the language or languages to be specified by the enacting State], and in the character set determined and publicized by the registry." The Working Group may wish to insert square brackets into the recommendation to reflect fully the text on which it is based.

[278] Para. 24, A/CN.9/WG.I/WP.96.

[279] Para. 39, A/CN.9/WG.I/WP.93/Add.1. See also paras. 58-59, A/CN.9/WG.I/WP.99.

[280] The Secretariat suggests that para. 63, A/CN.9/WG.I/WP.93/Add.2 might best be placed in a footnote. The text of that paragraph is therefore reproduced as follows, with some editorial modifications: "In some cases, jurisdictions have introduced statutory time limits on business registration procedures and/or 'silence is consent' rules. As a result of the 'silence is consent' rule, when a business fails to receive a decision on its application for registration within the time limit established by law or regulation, the business is nonetheless considered to have been duly registered."

[281] Former recommendation 21, A/CN.9/WG.I/WP.96.

[282] Former recommendation 22, A/CN.9/WG.I/WP.96.

(b) The date of its registration;

(c) The name of the business;

(d) The legal form of the business; and

(e) The legislation under which the business has been registered.

H. Period of effectiveness of registration

138. States may adopt one of two approaches in terms of determining the period of effectiveness of the registration of a business. Under the first approach, the registration of the business is subject to a maximum period of duration established by law. It follows that unless the registration is renewed, the registration of the business will expire on the date stated in the certificate of registration or upon the termination of the business.[283] While this approach provides certainty as to the existence of the business and the reliability of the information provided, it imposes a burden on the registrant to regularly re-register or risk termination of the business. This danger could be particularly problematic for MSMEs, which often operate with minimal staff and limited knowledge of the applicable rules. Further, if additional information is required and not furnished by the applicant, renewal of the registration could also be refused, thus further threatening the existence of the business.[284]

139. Under the second approach, no maximum period of validity is established for the registered business and the registration is effective until the business ceases to operate and is deregistered. While this approach may provide less certainty in terms of the currency of the information in the registry, it simplifies the intake process and both encourages registration and reduces its burden on businesses, and in particular on MSMEs.[285]

140. In some cases, both approaches have been adopted: a maximum period of registration, subject to renewal, may apply to registered businesses that are of a legal form that does not have legal personality, while an unlimited period of registration may apply to businesses that have legal personality. This duality of approach reflects the fact that the consequences of the expiry of registration of a business that possesses legal personality are likely to be more serious and may affect the very existence of the business and the limited liability protection afforded its owners.[286]

141. When a registered business that is required to renew its registration fails to do so, the registry may be given the authority to deregister the business (see also para. 202 below) subject to providing an official notice to the business in accordance with the applicable law or regulation.

Recommendation 24[287]: Period of effectiveness of registration

The Regulation should clearly establish that the registration is valid until the business is deregistered or until such time as a renewal of the registration is required.

---

[283] It should be noted that the general law of the enacting State for calculating time periods would apply to the calculation of the period of effectiveness, unless the applicable law or regulation provides otherwise. For example, if the general law of the enacting State provides that, if the applicable period is expressed in whole years from the day of registration, the year runs from the beginning of that day.

[284] Para. 29, A/CN.9/WG.I/WP.93/Add.1.

[285] Ibid., para. 30.

[286] See, for example, Singapore at http://www.guidemesingapore.com/incorporation/other/singapore-sole-proprietorship-registration-guide.

[287] Former recommendation 23, A/CN.9/WG.I/WP.96.

I. Time and effectiveness of registration

142. In the interests of transparency and predictability of a business registration system, States should determine the moment at which the registration of a business or any later change made to the registered information is effective. States usually determine that a business registration or any subsequent change made to it is effective either at the time of the entry of that information into the registry record or when the application for registration or a change of registered information is received by the registry. Whichever approach is chosen, the most important factor is that the State makes it clear at which moment the registration or change is effective. In addition, the effective time of registration of the business or any later change to the registered information should be indicated in the registry record relating to the relevant business.[288]

143. If the registry is designed to enable users to submit information electronically in respect of an application for registration or an amendment without the intervention of registry staff and to use online payment methods for the registration, the registry software should ensure that the information becomes effective immediately or nearly immediately after it is transmitted. As a result, any delay between the time of the electronic transmission of the information and the effective time of registration of the business will be eliminated.[289]

144. In registry systems that allow or require registration information to be submitted to the registry using a paper form, registry staff must enter the information on the paper form into the registry record on behalf of registrant. In such systems, there will inevitably be some delay between the time when the paper form is received in the registry office and the time when the information set out on the form is entered into the registry record. In these cases, the domestic legislative or regulatory framework should provide that the registry must enter the information received into the registry record as soon as practicable and possibly set a deadline by which the application or the changes should be registered. In a mixed registry system which allows information to be submitted in both paper and electronic form, registrants who elect to use the paper form should be alerted that this method may result in some delay in the time of effectiveness of registration.[290]

Recommendation 25[291]: Time and effectiveness of registration[292]

The Regulation should:

(a) Require the business registry to time and date stamp applications for registration and to process them in the order in which they are received and as soon as practicable, and, in any event, without undue delay;

(b) Establish clearly the moment at which the registration of the business is effective; and

(c) Specify that the registration of the business must be entered into the business registry as soon as practicable thereafter, and in any event without undue delay.

J. Refusal to register

145. A series of checks and control procedures are required to ensure that the necessary information and documentation is provided in order to register the business, however, the extent of such controls varies according to the jurisdiction. In those legal

[288] Para. 31, A/CN.9/WG.I/WP.93/Add.1.
[289] Ibid., para. 32.
[290] Ibid., para. 33.
[291] Former recommendation 24, A/CN.9/WG.I/WP.96.
[292] The Working Group may wish to note recommendation 11 of the UNCITRAL Guide on the Implementation of a Security Rights Registry on "Time of effectiveness of the registration of a notice."

regimes where the registry performs simple control procedures, if all of the basic legal and administrative requirements established by the domestic legal and regulatory framework are met, the registry must accept the information as filed, record it, and register the business. When the legal regime requires a more thorough verification of the information filed, registries may have to check whether mandatory provisions of the law are met by the content of the application and information submitted, or any changes thereto. Whichever approach is chosen, States should define in their legislative or regulatory framework which requirements the information to be submitted to the registry must meet. In certain jurisdictions, the registrar is given the authority to impose requirements as to the form, authentication and manner of delivery of information to be submitted to the registry.[293] When registration concerns an MSME, it would be advisable that such requirements be kept at a minimum in order to facilitate the registration process for MSMEs. This will reduce administrative hurdles and help in promoting business registration among such businesses.[294]

146. Registration of MSMEs may also be facilitated if the registry is granted the power to accept and register documents that do not fully comply with the requirements for proper submission and to rectify clerical errors, including its own incidental errors, in order to bring the entry in the business registry into conformity with the documents submitted by the registrant. This will avoid imposing the potentially costly and time-consuming burden of requiring the registrant to resubmit an application for registration. Entrusting the registry with these responsibilities, may be of particular importance if registrants do not have direct access to electronic submission of documents and where their submission, or the entry of data, requires the intervention of the registry staff. In States where it is possible for registrants to submit applications for registration directly online, the ICT-based registration system is usually designed so as to allow built-in data error checks (see also paras. 175 to 178) and to reject automatically an application or a request if it does not comply with the prescribed requirements. When the registry is granted the authority to correct its own errors as well as any incidental errors that may appear in the information submitted in support of the registration of the business, the law or the regulation should strictly determine under which conditions those responsibilities may be discharged (see also para. 211 below). Clear rules in this regard will ensure the integrity and security of the registry record and minimize any risk of abuse from or corruption by the registry staff (see also paras. 196 to 200 below). The Regulation should thus establish that the registry may only exercise its discretion to correct errors upon having provided prior notification of the intended corrections to the registrant and having received the consent of the registrant in return, although this approach could create a delay in the registration of the business while the registry seeks the consent of the registrant. When the information provided by the business is not sufficient to comply with the requirements for registration, the registry should be granted the authority to request from the business additional information in order to finalize the registration process.[295] The Regulation or the applicable law of the enacting State should specify an appropriate length of time within which the registry should make such a request.

147. States should provide that registries may reject the registration of a business if its application does not meet the requirements prescribed by the legislative and regulatory framework for registration. This approach is implemented in several jurisdictions regardless of their legal tradition. In order to prevent any arbitrary use of such power, however, the registry must provide, in writing, a notice of the rejection of an application for registration and the basis on which it was rejected, and the registrant must be allowed time to appeal against that decision.[296]

148. In cases where the application for business registration is submitted in paper form and the reason for its rejection is that the application was incomplete or illegible, there might be some delay between the time of receipt of the application by the

[293] See, for instance, Section 1068, UK Companies Act 2006.
[294] Para. 22, A/CN.9/WG.I/WP.93/Add.1.
[295] Para. 23, A/CN.9/WG.I/WP.93/Add.1.
[296] Para. 24, A/CN.9/WG.I/WP.93/Add.1.

registry and the time of communication of its rejection, and the reasons therefor, to the registrant. In a registry system that allows registrants to submit applications electronically and the relevant information directly to the registry, the system should be designed, when permitted by the State's technological infrastructure, so as to automatically reject the submission of incomplete or illegible applications and to display the basis of the rejection on the registrant's screen.[297]

Recommendation 26[298]: Refusal to register[299]

The Regulation should provide that the business registrar:

(a) Must refuse registration of the business if the application does not meet the requirements specified in the Regulation or the law of the State and is required to provide to the registrant the basis for refusal in written form; and

(b) Is granted the authority to correct its own errors as well as any incidental errors that may appear in the information submitted in support of the registration of the business, provided that the conditions under which the registrar may exercise this authority are clearly established.

K. Registration of branches

149. Most States require the registration of national branches of a foreign company in order to permit those branches to operate in their jurisdiction and to ensure the protection of domestic creditors, businesses and other interested parties that deal with those branches. Registration of a company branch might not appear to be immediately relevant for MSMEs, whose main concern is more likely to be to consolidate their business without exceeding their human and financial capacity. However, this issue is relevant for those slightly larger business entities that, being of a certain size and having progressed to a certain volume of business, look to expand beyond their local or domestic market. In addition, even micro and very small businesses may be highly successful and may wish to expand their operations. For such businesses, establishing branches abroad may be both an attractive goal and a realistic option. Although it may seem to be a daunting prospect, in fact, when a business expands to another State, it may find that setting up a foreign branch is cheaper and requires fewer formalities than establishing a local subsidiary.[300]

150. There may be considerable differences among those jurisdictions that register foreign company branches in terms of what triggers the obligation of those companies to register their branches. Some approaches are based on a wide interpretation of the concept of foreign establishment, for example, those which include not only a branch, but also any establishments with a certain degree of permanence or recognizability, such as a place of business in the foreign State.[301] Other approaches define more precisely the elements that constitute a branch that needs to be registered. They may include the presence of some sort of management, the maintenance of an independent bank account, the relation between the branch and the parent company, or the requirement that the parent company has its main office registered abroad.[302] Not all States define the notion of branch in their legislation, or state under which circumstances a foreign establishment in the State should be registered: laws may simply refer to the existence of a foreign branch. In these cases, registries may fill the gap by issuing guidelines that clarify the conditions under which such a registration should be carried out.[303] When this occurs, the guidelines should not be seen as an

[297] Para. 25, A/CN.9/WG.I/WP.93/Add.1.
[298] Former recommendation 25, A/CN.9/WG.I/WP.96.
[299] The Working Group may wish to note recommendation 8 of the UNCITRAL Guide on the Implementation of a Security Rights Registry on "Rejection of the registration of a notice".
[300] Para. 15, A/CN.9/WG.I/WP.93/Add.1. For further reference, see K. E. Sørensen, Branches of companies in the EU: balancing the Eleventh Company Law Directive, national company law and the right of establishment, 2013, page 9.
[301] K. E. Sørensen, ibid., page 12.
[302] Ibid., page 12.
[303] Ibid., page 13.

attempt to legislate by providing their own definition of branch, but rather as a tool to explain the features required by a branch of a foreign business in order to be registered.[304]

151. When simplifying or establishing their business registration system, States should consider enacting provisions governing the registration of branches of foreign companies. Those provisions should address, at minimum, issues such as timing of registration, disclosure requirements, information on the persons who can legally represent the branch and the language in which the registration documents should be submitted.[305] Duplication of names could represent a major issue when registering foreign company branches, and it would be important to ensure the identity of a business across jurisdictions. In this regard, an optimal approach could be for a business registry to use unique identifiers to ensure that the identity of a business remains consistent and clear within and across jurisdictions (see paras. 94 to 104 above).[306]

Recommendation 27[307]: Registration of branches

The Regulation should ensure that:

(a) Registration of a branch of a business is required or permitted;

(b) Any definition of "branch" for registration purposes is consistent with the definition provided in the law of the enacting State; and

(c) Provisions regarding branch registration should address the following issues:

(i) Time and date of registration of the branch;

(ii) Disclosure requirements, such as name, address of the person or persons registering the branch; name and address of the branch and copy of the notice of registration of the foreign company;

(iii) Information on the person or persons who can legally represent the branch; and

(iv) The language in which the registration documents should be submitted.

V. Post-registration

A. Maintaining a current registry

152. In addition to the function performed in the registration of an enterprise, business registries typically support businesses throughout their life cycle. Once the information is collected and properly recorded in the business registry, it is imperative that it be kept current in order to be of value to users of the registry. As noted above (see paras. 33 to 34), it would thus be advisable for States to have in place provisions that enable the registration system to achieve this purpose.

153. One approach through which information in the business registry may be kept current is for the State to require that the business re-register at regular intervals. A similar approach is to require the business to file at regular intervals, for example once a year, an updating declaration stating that certain core information contained in the register concerning the business is accurate or, as applicable, stating what changes should be made. Although these approaches may be valuable as a means of identifying

[304] Para. 16, A/CN.9/WG.I/WP.93/Add.1.

[305] Ibid., para. 17. The Working Group may wish to consider whether further details on this topic should be included in a future annex to these materials.

[306] The Working Group agreed at its twenty-fifth session that the duplication of business names could be a problem in the cross-border context and that the use of unique identifiers could assist in ensuring the identity of a business within and across jurisdictions (para. 39, A/CN.9/860).

[307] Former recommendation 26, A/CN.9/WG.I/WP.96.

companies that have permanently ceased to operate and may be deregistered, and may not necessarily be burdensome for larger business with sufficient human resources, they could be quite demanding for less generously staffed MSMEs, in particular if there is a cost associated with making such submissions. A third approach, which seems preferable as it better takes into account the needs of MSMEs, and in particular the less experienced ones, is for the business to update the information in the registry whenever a change in any of the registered information occurs. The risk of this approach, which is largely dependent on the business complying with the rules, may be that the filing of changes is delayed or does not occur. To prevent this, States could adopt a system pursuant to which regular prompts are sent, usually electronically, to businesses to request updated information. In order to minimize the burden for the registries and help them make the most effective use of their resources, prompts that registries regularly send out to remind businesses of the periodic returns required of them could also include generic reminders to update registered information. For the same reason, it would be desirable that prompts be sent in electronic format. If the registry is operated in a paper-based or mixed form, it would be desirable for the registry to identify appropriate means to perform this task: sending paper-based prompts to individual businesses would be time and resource consuming and may not be a sustainable approach. In one State, for instance, where the registry is not operated electronically, reminders to registered businesses to update the information contained in the registry are routinely published in newspapers.[308] Regardless of the approach chosen to ensure that businesses promptly inform the registry of any changes in their registered information, States could also adopt provisions declaring the liability of the registrant to a fine on conviction if changes are not filed with the business registry within the time prescribed by the law or the Regulation.

154. Other methods to help mitigate any potential deterioration of the information collected in the business registry would include enhancing the interconnectivity and the exchange of information between business registries and other public registries.[309]

Recommendation 28: Maintaining a current registry[310]

The Regulation should require the registrar to ensure that the information in the business registry is kept current, including through:

(a) Sending an automated request to registered businesses at periodic intervals requiring them to report whether the information maintained in the registry continues to be accurate or stating which changes should be made; and

(b) Updating the registry immediately upon receipt of the amending information or as soon as practicable thereafter.

B. Information required after registration

155. In many jurisdictions, entrepreneurs have a legal obligation to inform the registry of any changes occurring in the business, whether these are factual changes (for example, address or telephone number) or whether they pertain to the structure of the business (for example, a change in the legal form of business). Information exchange between business registries and different government agencies operating in the same jurisdiction also serves the same purpose. In some cases, registries publish annual accounts, financial statements or periodic returns[311] of enterprises that are useful sources of information on businesses in that jurisdiction for investors, clients, potential creditors and government agencies.[312] Although the submission and

[308] This is the practice in Sri Lanka. See, for example, http://www.sundaytimes.lk/090503/FinancialTimes/ft322.html.

[309] Para. 27, A/CN.9/WG.I/WP.93/Add.1.

[310] At its twenty-fourth session, there was broad agreement in the Working Group that information maintained in the registry should be kept as current as possible. Different views were expressed on how to accomplish that goal (para. 73, A/CN.9/831).

[311] It was noted in the twenty-fifth session of the Working Group (para. 45, A/CN.9/860) that annual returns should be included; the term "periodic returns" is a defined term and has been used here.

[312] Para. 21, A/CN.9/WG.I/WP.93.

publication of detailed financial statements might be appropriate for public companies, depending on their legal form, MSMEs should be required to submit far less detailed financial information, if any at all, and such information should only be submitted to the business registry and thus made public if desired by the MSME. However, to promote accountability and transparency and to improve their access to credit or attract investment, MSMEs may wish to submit and make public their financial information.[313] In order to encourage MSMEs to do so, States should allow MSMEs to decide on an annual basis whether to opt for disclosure of such information or not.

156. Once a business has been registered, in order for it to remain registered, certain information is typically required by the registry throughout the course of the life of the business. This information may be prompted by periodic returns that are required by the registry at regular intervals in order to keep the information on the registry current or it may be submitted by the business as changes to its registered information occur. Information required in this regard may include:

(a) Changes in any of the information that was initially required for the registration of the business as set out in recommendation 20;[314]

(b) Changes in the name(s) and address(es) of the person(s) associated with the business;

(c) The submission of financial information in respect of the business, depending on its legal form; and

(d) Depending on the jurisdiction, information concerning insolvency proceedings, liquidation or mergers (see para. 57 above).[315]

Recommendation 29[316]: Information required after registration

The Regulation should specify that after registration, the registered business must file with the business registry the following information:

(a) Any changes or amendments to the information that was initially required for the registration of the business pursuant to recommendation 20 or to the current information in the business registry as soon as those changes occur; and

(b) Periodic returns, which may include annual accounts, as required by the law of the enacting State.[317]

C. Time and effectiveness of amendments to registered information

157. In keeping with the previous discussion (see paras. 142 to 144 above), States should also determine the time when changes to the information recorded is effective in order to promote transparency and predictability of the business registration system. It would be advisable for the changes to become effective when the information contained in the notification of changes is entered into the registry record

[313] See Working Group comments in paras. 45-47, A/CN.9/860. See also paras. 62-67, A/CN.9/WG.I/WP.99 and paras. 53-55, A/CN.9/WG.I/WP.99/Add.1.

[314] See L. Klapper, R. Amit, M. F. Guillén, J. M. Quesada, Entrepreneurship and Firm Formation Across Countries, 2007, page 7.

[315] Para. 11, A/CN.9/WG.I/WP.93/Add.1.

[316] Former recommendation 27, A/CN.9/WG.I/WP.96.

[317] The Secretariat suggests that former subpara. (b) of recommendation 27 (with some minor edits) be included in a footnote, which would read: "In order to comply with international standards promoting disclosure of the beneficial ownership of a business, States may wish to consider whether the business should also be required to provide information on the identity of the owner of the business if the owner is a person other than the registrant." See also paras. 132 and 180 of this working paper.

rather than when the information is received by the registry, and that the time of the change should be indicated in the registry record relating to the relevant business.[318]

158. As in the case of business registration, if the registry allows users to submit information electronically without the intervention of the registry staff, the information should become effective immediately or nearly immediately after it is transmitted, to avoid delay.[319] If the registry allows or requires paper-based information to be submitted to it and the registry staff enters the information into the registry on behalf of the registrant, it should be ensured that the registry enter the information received into the registry record as soon as practicable and possibly set a deadline by which the changes should be registered. In a mixed registry system which allows information to be submitted using both paper and electronic means, registrants who elect to use the paper form should be alerted that this method may result in some delay in the time of effectiveness of registration.[320]

Recommendation 30[321]: Time and effectiveness of amendments to registered information

The Regulation should:

(a) Require the business registry to time and date stamp amendments to registered information and to process them in the order in which they are received;

(b) Require the business registry to notify the registered business as soon as practicable that its registered information has been amended; and

(c) Establish when amendments to the registered information are effective.

VI. Accessibility and information-sharing

A. Public access to the business registry

159. In keeping with its functions as a collector and disseminator of business-related information, the registry should make publicly available all information on a registered business that is relevant for those that interact with the business (whether they be public authorities or private entities) to be fully aware of the business identity and status of that enterprise. This will allow interested users to make informed decisions about who they wish to do business with, and for organizations and other stakeholders to gather business intelligence. This function of a business registry is demonstrably valuable to the economy of a State.[322]

160. While providing public disclosure of the registered information is an approach followed in most States, the way in which stakeholders access information, the format in which the information is presented and the type of information available, varies greatly from State to State. This variation is not only a function of the technological development of a State, but of an efficient accessing framework, including that provided by national legislation.[323] For instance, an aspect on which States may differ concerns the criteria that may be used to search the registry.[324]

---

[318] Para. 31, A/CN.9/WG.I/WP.93/Add.1.
[319] Ibid., para. 32.
[320] Ibid., para. 33.
[321] Former recommendation 29, A/CN.9/WG.I/WP.96.
[322] Ibid., para. 64. The Secretariat suggests that what was formerly the last sentence of para. 159 should instead be included in a footnote, which would read as follows: "[Moreover], in several States certain information deposited in the registry is of a legal nature and has third-party effectiveness, so that users of the registry can rely upon the information as it appears on the registry, and assert that information against third parties."
[323] See L. Klapper, R. Amit, M. F. Guillén, J. M. Quesada, Entrepreneurship and Firm Formation Across Countries, 2007, page 8.
[324] Para. 65, A/CN.9/WG.I/WP.93/Add.1.

161. Further, in order to facilitate dissemination of the information, it should be made available at no cost or for a low cost. This approach may be greatly facilitated by the development of ICT supported registries that allow users to submit applications or make searches electronically without the need to rely on intermediation by registry personnel. Such an approach is also much cheaper for the registry. Where registration systems are paper-based, users must either visit the registry office and conduct the research on site (whether manually or using ICT facilities that are available) or the information is sent to them on paper. In both cases, registry staff may need to assist the user to locate the information and prepare it for disclosure. Again, paper-based information access is associated with delay, higher costs, and the potential for error and for information to be less current.[325]

162. The rules relating to access to business registry services are typically set out either in the applicable law or regulation, or both. They may also be addressed in the "terms and conditions of use" established by the registry. For example, the terms and conditions of access may address the concerns of registrants regarding the security and confidentiality of their financial and other data or the risk of changes being made to registered information without the authority of the registrant.[326] Assigning a unique user name and a password to the registrant, or employing other modern security techniques would help reduce such risks (see paras. 34 and 35 above),[327] as would require the registry to notify the registrant of any changes made by others in the deposited information. Since access to the registered information by the general users also enhances certainty of and transparency in the way the registry operates, the principle of public access to the information deposited in the registry should be stated in the law or the regulation governing business registration.[328]

Recommendation 31[329]: Public access to business registry services[330]

The Regulation should permit any person to access the services of the business registry and the information contained in the registry.

B. Public availability of information

163. Evidence shows that in most States, public access to the information on the registry is generally unqualified. Allowing full public access does not compromise the confidentiality of certain registered information, which can be protected by allowing users to access only certain types of information.[331]

164. It is not recommended that States restrict access to search the information on the business registry or that users be required to demonstrate a reason to request access. Such a policy could seriously compromise the core function of the registry to publish and disseminate information on registered entities. Moreover, if a discretionary element is injected into granting an information request, equal public access to the information in the registry could be impeded, and some potential users might not have access to information that was available to others.[332]

165. For these reasons, it is recommended that the registry should be fully accessible to the public, subject only to necessary confidentiality restrictions in respect of certain registered information.[333] In the same vein, States should be encouraged to abolish or

[325] Ibid., para. 67. See above, paras. 62 and 63.

[328] Para. 66, A/CN.9/WG.I/WP.93/Add.1.
[329] Former recommendation 30, A/CN.9/WG.I/WP.96/Add.1.
[330] The Working Group may wish to note recommendation 4 of the UNCITRAL Guide on the Implementation of a Security Rights Registry on "Public access".
[331] Para. 68, A/CN.9/WG.I/WP.93/Add.1.
[332] Ibid., para. 69.
[333] Ibid., para. 70. See also paras. 62-67, A/CN.9/WG.I/WP.99.

keep to a bare minimum fees to access basic information on the registered entities (see para. 54 above and paras. 185 to 186 below).[334]

166. The applicable business registration law or regulation can however make access to the registry subject to certain procedural requirements, such as requiring users to submit their information request in a prescribed form and pay, or make arrangements to pay, any prescribed fee. If a user does not use the prescribed registry form or pay the necessary fee, the user may be refused access to the search services of the registry. As in the case of refusing access to registration services, the registry should be obliged to give the specific reason for refusing access to information services as soon as practicable so that the user can remedy the problem.[335]

167. Unlike the approach adopted for registrants, the registry should not request and maintain evidence of the identity of a user as a precondition to obtaining access to the information on the business registry since a user is merely retrieving information contained in registered information from the public registry record. Accordingly, identification evidence should be requested of users only if it is necessary for the purposes of collecting information retrieval fees, if any.[336]

168. The applicable law or regulation should also provide that the registry may reject an information request if the user does not enter a search criterion in a legible manner in the designated field but that the registry must provide the grounds for any rejection as soon as practicable. In registry systems that allow registrants to submit information requests electronically to the registry, the software should be designed to prevent automatically the submission of information requests that do not include a legible search criterion in the designated field and to display the basis for the refusal on the electronic screen.[337]

169. Simply because information is made available for use does not necessarily equate with that information being used. It would be useful for the State to devise effective means that encourage customers actually to use the information services of the registry. Adoption of ICT supported registries that allow direct and continuous access for stakeholders (except for periods of scheduled maintenance) will promote the actual use of the information. Communication campaigns[338] on the services available at the registry will also contribute to the active take-up of registry services by potential users.[339]

Recommendation 32[340]: Public availability of information

The Regulation should specify that all registered information is available to the public unless it is restricted for reasons of confidentiality as set out in the law of the enacting State, or for reasons of personal security.

C. Where information is not made public

170. To maintain the integrity and reputation of the registry as a trusted collector of information that has public relevance and while access to the registries should be granted to all interested entities and to the public at large, access to sensitive data should be controlled to avoid any breach of confidentiality. States should thus put in place proper disclosure procedures. They can do so by adopting provisions that list which information is not available for public disclosure or they can follow the opposite approach and adopt provisions that list the information that is publicly accessible and at the same time state that information that is not listed cannot be

[334] At its twenty-fifth session, the Working Group expressed its support for the adoption of policies by business registries of no or of low registration fees (para. 40, A/CN.9/860).
[335] Para. 71, A/CN.9/WG.I/WP.93/Add.1.
[336] Ibid., para. 72.
[337] Ibid., para. 73.
[338] See para. 42, A/CN.9/WG.I/WP.93.
[339] Para. 77, A/CN.9/WG.I/WP.93/Add.1.
[340] Former recommendation 34, A/CN.9/WG.I/WP.96/Add.1.

disclosed.[341] States might also wish to determine to which public authorities or private entities (such as banks or credit bureaux) the registry may disclose information on the registered business that is not made public. When this approach is followed, information should only be shared subject to the authorization of the registrar and the prior consent of the business.

171. As previously noted (see para. 110 above), when establishing an ICT-supported registry, States must consider issues concerning the treatment of personal data that is included in the application for registration[342] and its protection, storage and use. Appropriate legislation should be in place to ensure that such data are protected. In the European Union, for instance, several Directives apply when data concerning individuals (for example, information on officers or directors) are included in the application for business registration.[343]

Recommendation 33[344]: Where information is not made public

In cases where information in the business registry is not made public, the Regulation should:

(a) Establish which information concerning the registered business is subject to the applicable rules in the enacting State on public disclosure of private data and require the registrar to list the types of information that cannot be publicly disclosed; and

(b) Specify the circumstances in which the registrar may use or disclose information that is subject to confidentiality restrictions.

D. Hours of operation

172. The approach to the operating days and hours of the registry depends on whether the registry is designed to allow direct electronic registration and information access by users or whether it requires their physical presence at an office of the registry. In the former case, electronic access should be available continuously except for brief periods to undertake scheduled maintenance; in the latter case, registry offices should operate during reliable and consistent hours that are compatible with the needs of potential registry users. In view of the importance of ensuring ease of access to registry services for users, these recommendations should be incorporated in the law or regulation governing business registration or in administrative guidelines published by the registry, and the registry should ensure that its operating days and hours are widely publicized.[345]

173. If the registry provides services through a physical office, the minimum hours and days of operation should be the normal business days and hours of public offices in the State. To the extent that the registry requires or permits the registration of paper-based submissions, the registry should be aimed at ensuring that the paper-based information is entered into the registry record and made available to searchers as soon as practicable, but preferably on the same business day that the information is received by the registry. Information requests submitted in paper form should likewise be processed on the same day they are received. To achieve this goal, the deadline for submitting paper-based information requests may be set independently from the business hours.[346] Alternatively, the registry office could continue to receive paper forms (regardless if they are applications for registration or for changes) and

[341] Para. 50, A/CN.9/WG.I/WP.93/Add.1.
[342] See also para. 8, A/CN.9/WG.I/WP.93/Add.1.
[343] Para. 33, A/CN.9/WG.I/WP.93/Add.2.
[344] Former recommendation 35, A/CN.9/WG.I/WP.96/Add.1.
[345] Para. 58, A/CN.9/WG.I/WP.93/Add.1.
[346] For example, the law, regulation or administrative guidelines of the registry could stipulate that, while the registry office is open between 9 a.m. and 5 p.m., all applications, changes and search requests must be received by an earlier time (for example, by 4 p.m.) so as to ensure that the registry staff has sufficient time to enter the information included in the application into the registry record or conduct the searches.

information requests throughout its business hours, but set a "cut off" time after which information received may not be entered into the registry record, or information searches performed, until the next business day. A third approach would be for the registry to undertake that information will be entered into the registry record and searches for information will be performed within a stated number of business hours after receipt of the application or information request.[347]

174. The law, regulation or administrative guidelines of the registry could also enumerate, in either an exhaustive or an indicative way, the circumstances under which access to registry services may temporarily be suspended. An exhaustive list would provide more certainty, but there is a risk that it might not cover all possible circumstances. An indicative list would provide more flexibility but less certainty. Circumstances justifying a suspension of registry services would include any event that makes it impossible or impractical to provide those services (such as force majeure, for example, fire, flood, earthquake or war, or where the registry provides users with direct electronic access, a breakdown in the Internet or network connection).[348]

Recommendation 34[349]: Hours of operation[350]

The designated authority should provide that:

(a) If access to the services of the business registry is provided through a physical office:

(i) Each office of the registry is open to the public during [the days and hours to be specified by the enacting State]; and

(ii) Information about any registry office locations and their opening days and hours is publicized on the registry's website, if any, or otherwise widely publicized, and the opening days and hours of registry offices are posted at each office;

(b) If access to the services of the business registry is provided electronically, access is available at all times; and

(c) Notwithstanding subparagraphs (a) and (b) of this recommendation, the business registry may suspend access to the services of the registry in whole or in part in order to perform maintenance or provide repair services to the registry, provided that:

(i) The period of suspension of the registration services is as short as practicable;

(ii) Notification of the suspension and its expected duration is widely publicized; and

[347] Para. 59, A/CN.9/WG.I/WP.93/Add.1.

[348] Ibid., para. 60.

[349] Former recommendation 31, A/CN.9/WG.I/WP.96/Add.1.

[350] The Working Group may wish to note that this recommendation mirrors recommendation 5 of the UNCITRAL Guide on the Implementation of a Security Rights Registry which provides as follows: "The Regulation should provide that: (a) If access to the services of the registry is provided through a physical office: (i) Each office of the registry is open to the public during [the days and hours to be specified by the enacting State]; and (ii) Information about any registry office locations and their opening days and hours is publicized on the registry's website, if any, or otherwise widely publicized, and the opening days and hours of registry offices are posted at each office; (b) If access to the services of the registry is provided through electronic means of communication, electronic access is available at all times; and (c) Notwithstanding subparagraphs (a) and (b) of this recommendation: (i) The registry may suspend access to the services of the registry in whole or in part for a period of time that is as short as practicable; and (ii) Notification of the suspension and its expected duration is published on the registry's website, if any, or otherwise widely publicized, in advance when feasible and, if not feasible, as soon thereafter as reasonably practicable, and, if the registry provides access to its services through physical offices, the notification is posted at each office".

(iii) Such notice should be provided in advance and, if not feasible, as soon after the suspension as is reasonably practicable.

E. Direct electronic access to submit registration, to search the registry and to request amendments

175. If the State opts to implement an electronic registration system, the registry should be designed, if possible, to allow registry users to submit directly and to conduct searches from any private computer, as well as from computer facilities made available to the public at sub-offices of the registry or other locations. To further facilitate access to business registry services, the registry conditions of use may allow intermediaries (for instance, lawyers, notaries or private sector third-party service providers) to carry out registration and information searches on behalf of their clients when the applicable law allows or requires the involvement of such intermediaries. If the technological infrastructure of the State allows, or at a later stage of the reform, States should also consider adopting systems that allow registration to be carried out through the use of mobile technology. This solution may be particularly appropriate for MSMEs in developing economies where mobile services are often easier to access than electronic services.[351]

176. When the registry allows for direct electronic access, users bear the sole responsibility for any errors or omissions they make in the registration or in their information searches and carry the burden of making the necessary corrections or amendments. Consequently, the potential for corruption or misconduct on the part of registry staff is greatly minimized, since their duties are essentially limited to managing and facilitating electronic access by users, processing any fees, overseeing the operation and maintenance of the registry system and gathering statistical data.[352]

177. In addition, direct electronic access significantly reduces the costs of operation and maintenance of the system and also enhances the efficiency of the registration process by putting direct control over the timing of the business registration into the hands of the registrant. Direct electronic access also eliminates any time lag between submission of the information to the registry and the actual entry into the database of that information. In some States,[353] electronic access (either from a client's premises or from a branch office of the registry) is the only available mode of access for both registration and information searches. While in many States, where the registration system is both paper-based and ICT-based, electronic submission is by far the most prevalent mode of data submission and it is used in practice for the vast majority of registrations. As the data to be registered are submitted in electronic form, no paper record is ever generated. A fully electronic system of this kind places the responsibility for accurate data entry directly on registrants. As a result, staffing and operational costs of the registry are minimized and the risk of registry personnel making an error in transcribing documents is eliminated (see also para. 63 above).[354]

178. It is thus recommended that, to the extent possible, States should establish a business registry that is computerized and that allows direct electronic access by registry clientele. Nonetheless, given the practical considerations involved in establishing an electronic registry, multiple modes of access should be made available to registry clientele at least in the early stages of implementation in order to reassure users who are unfamiliar with the system. Finally, to facilitate use, the registry should be organized to provide for multiple points of access for both electronic and paper submissions and information requests. However, even where States continue to use paper-based registries, the overall objective is the same: that is, to make the registration and information retrieval process as simple, transparent, efficient, inexpensive and publicly accessible as possible.[355]

[352] Para. 45, A/CN.9/WG.I/WP.93/Add.1.
[353] See para. 44, A/CN.9/WG.I/WP.85.
[354] Para. 61, A/CN.9/WG.I/WP.93/Add.1.
[355] Ibid., para. 63.

Recommendation 35[356]: Direct electronic access to submit registration, to search and to request amendments

The Regulation should establish that, where information and communication technology is available, registrants should be allowed to enter and submit their information, and the public should be allowed to access the information on the business registry, without requiring the physical presence of the user in the business registry office or the intermediation of the registry staff.

F. Facilitating access to information

1. Type of information provided

179. Information can be of particular value to stakeholders if it is available to the public, although the type of registered information that is available will depend on the legal form of the business being searched. Information available from the business registry that may be of value includes: the profile of the business and its officers (directors, auditors); annual accounts (in both electronic and paper formats); a list of the business's divisions or places of business; the certificate of registration or incorporation; the publication of the business's memoranda, articles of association, or other rules governing the operation or management of the business; existing names and history of the business; insolvency-related information; information on the business registration process; any share capital; certified copies of registry documents; notifications of events (late filing of annual accounts, newly submitted documents, etc.) related laws and regulations; information on registry fees; and information on the expected turnaround time for the registry services.[357] In addition, some registries prepare reports relating to the operation of the business registry that may provide registry designers, policymakers and academic researchers with useful data (for example, on the volume of registrations and searches, operating costs, or registration and search fees collected over a given period).[358] According to a recent survey, information on business data, annual accounts and periodic returns, as well as information about fees for registry services, are the most popular pieces of information and the most requested by the public.[359]

180. If the State is one in which member or shareholder details must be registered, access to such information may also be advisable, as most States that register such details make the relevant information available to the public.[360] A similar approach can be recommended with regard to information on beneficial ownership, although, as previously noted, to date, not many jurisdictions collect information on beneficial ownership. A State may also consider making information on beneficial ownership available to the public in order to allay concerns over the potential misuse of business entities. However, the sensitive nature of the information on beneficial ownership may require the State to exercise caution before opting for disclosure of beneficial ownership without any limitation.[361]

[359] Para. 74, A/CN.9/WG.I/WP.93/Add.1. For further reference, see European Commerce Registers' Forum, International Business Registers Report 2014, page 131.

[360] Supra, note 359, [2014], pages 30 ff, and [2015] pages 35-36.

[361] Para. 75, A/CN.9/WG.I/WP.93/Add.1. For further reference, see para. 65, A/CN.9/WG.I/WP.99.

181. Some States not only provide for electronic registration and information searches but also give clients the option of submitting a registration or information search request in other forms. The information is distributed through other channels that can complement the use of the Internet or that may even represent the main method of distribution if an online registration system is not yet fully developed. The following means of sharing information are also used in some States:

(a) Telephone services to provide information on registered businesses and product ordering;

(b) Subscription services to inform subscribers about events pertaining to specified businesses or for announcements of certain kinds of business registrations;

(c) Ordering services to enable access to various products, most often using an Internet browser; and

(d) Delivery services to convey various products, such as transcripts of registered information on a business, paper lists, or electronic files with selected data.[362]

2. Unnecessary barriers to accessibility

182. The registry needs to ensure that searchable information is easily accessible. Even though the information is available, it does not always mean that it is easy for stakeholders to access. There are often different barriers to accessing the information, such as the format in which the information is presented: if special software is required to read the information, or if it is only available in one particular format, it cannot be said to be broadly accessible. In several States, some information is made available in paper and electronic formats; however, information available only on paper likely entails reduced public accessibility. Other barriers that may make information less accessible are charging fees for it, requiring users to register prior to providing access to the information, and if there is a fee connected to the user registration. States should find the most appropriate solutions according to their needs, their conditions and their legal framework.[363]

183. One often overlooked barrier to accessing information, whether in order to register a business or to review data on the registry, is a lack of knowledge of the official language(s). Providing forms and instructions in other languages is likely to make the registry more accessible to users. However, recent evidence shows that, with the exception of Europe, business registries seldom offer such services in languages additional to the official language(s).[364] Although making all information available in additional languages may incur some expense for the registry, a more modest approach may be to consider making information on only core aspects of registration, for instance in respect of instructions or forms, available in a non-official language. In deciding which non-official language would be most appropriate, the registry may wish to base its decision on historical ties, the economic interests of the jurisdiction and the geographic area in which the jurisdiction is situated.[365]

3. Bulk information

184. In addition to making information on individual business entities available, business registries in some jurisdictions also offer the possibility of obtaining “bulk” information,[366] i.e. a compilation of data on selected, or all, registered businesses. Such information can be requested for commercial or non-commercial purposes and is often used by public agencies as well as private organizations (such as banks) that deal with businesses and perform frequent data processing on them. Distribution of

[363] Para. 79, A/CN.9/WG.I/WP.93/Add.1.

[364] See The International Business Registers Report 2015, page 141.

[365] Para. 80, A/CN.9/WG.I/WP.93/Add.1. For further reference, see also paras. 122 and 133 to 135 of this working paper.

[366] See Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 14. See also The International Business Registers Report 2015, pages 140-141.

bulk information varies according to the needs and capability of the receiving entity. In performing this function, one approach would be for the registry to ensure the electronic transfer of selected data on all registered entities, combined with the transfer of data about all new registrations, amendments, and deregistration during a specified period. Another option for the registry would be to make use of web-based or similar services for system-to-system integration that provides both direct access to selected data on specific entities and name searches. Direct access avoids unnecessary and redundant storage of information by the receiving organization and States where such services are not yet available should consider it as a viable option when streamlining their business registration system.[367] Distribution of bulk information[368] can represent a practicable approach for the registry to derive self-generated funds (see para. 190 below).[369]

Recommendation 36[370]: Facilitate access to information

The Regulation should ensure the facilitation of access to business registration and registered information by avoiding the creation of unnecessary barriers such as requirements for the installation of specific software; charging prohibitively expensive access fees; requiring users of information services to register or otherwise provide information on their identity; or unduly limiting the languages in which information on the registration process is available.

VII. Fees

185. Payment of a fee in order to receive registration services can be said to be a standard procedure across jurisdictions. As previously noted, in return for that fee, registered businesses receive access to business registry services and to the many advantages that registration offers them, including receipt of a commercial identity recognized by the State that allows them to interact with business partners, the public and the State (see paras. 50 to 51 above). The most common types of fees are those payable for registration of a business and for the provision of information products, while fines may also generate funding to a lesser extent. In some jurisdictions, registries may also charge an annual fee to keep a company in the registry (these fees are unrelated to any particular activity), as well as fees to register annual accounts or financial statements.[371]

186. Although they generate revenue for the registries, fees can affect a business's decision whether to register, since such payments may impose a burden on businesses, in particular on MSMEs. Fees for new registration, for instance, can prevent businesses from registering, while annual fees to keep a company in the registry or to register annual accounts could discourage businesses from maintaining their registered status. States should take these and other indirect effects into consideration when establishing fees for registration services. A registration system aiming to support MSMEs and increase the number of them that register should thus consider the adoption of policies where registration and post-registration services, including access to the information on the business registry, are provided free of charge. Where it might be too onerous on States to implement such policies, States should adopt a balanced approach between recovering capital and operational costs within a reasonable period of time and encouraging MSMEs to register.[372] For instance, in several States that consider business registration as a public service intended to encourage enterprises to enter the legally regulated economy rather than as a revenue-generating mechanism, registration fees are often set at a level that encourages

[367] Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 14.

[369] Para. 76, A/CN.9/WG.I/WP.93/Add.1.
[370] Former recommendation 33, A/CN.9/WG.I/WP.96/Add.1.
[371] Para. 72, A/CN.9/WG.I/WP.93/Add.2. For further reference, see European Commerce Registers' Forum Report 2013, page 72.
[372] Para. 73, A/CN.9/WG.I/WP.93/Add.2.

businesses to register. In such States, the use of flat fee schedules for registration, regardless of the size of the business, is the most common approach. There are also examples of States that provide business registration free of charge. [373]

A. Fees charged for registry services

187. Striking a balance between the sustainability of the registry operations and the promotion of business registration is a key consideration when setting fees, regardless of the type of fee. One recommended approach, followed in many States, is to apply the principle of "cost recovery" according to which there should be no profit from fees generated in excess of cost. When applying such a principle, States would be required to first assess the level of revenue needed from registry fees to achieve cost recovery. In carrying out that assessment, account should be taken not only of the initial start-up costs related to the establishment of the registry but also of the costs necessary to fund its operation. By way of example, these costs may include: (a) the salaries of registry staff; (b) upgrading and replacing hardware and software; (c) ongoing staff training; and (d) promotional activities and training for registry users. In the case of ICT supported registries, if the registry is developed in partnership with a private entity, it may be possible for the private entity to make the initial capital investment in the registry infrastructure and recoup its investment by taking a percentage of the service fees charged to registry users once the registry is operational.[374]

188. Evidence shows, however, that even when the cost-recovery approach is followed, there is considerable room for variation among States, as that approach requires a determination of which costs should be included, which can be interpreted in many different ways. In one jurisdiction, for instance, fees for new registrations are calculated according to costs incurred by an average business for registration activities over the life cycle of the business. In this way, potential amendments, apart from those requiring official announcements, are already covered by the fee that companies pay for new registration. This approach is said to result in several benefits, such as: (a) rendering most amendments free of charge, which encourages compliance among registered businesses; (b) saving resources related to fee payment for amendments for both the registry and the businesses; and (c) using the temporary surplus produced by advance payment for amendments to improve registry operations and functions. In other cases, jurisdictions have decided to charge fees below the actual costs registries incur in order to promote business registration. In these cases, however, the services provided to businesses would likely be subsidized with public funds.[375]

189. In setting fees in a mixed registry system, it may be reasonable for the State to decide to charge higher fees to process applications and information requests submitted in paper form because they must be processed by registry staff, whereas electronic applications and information requests are directly submitted to the registry and are less likely to require attention from registry staff. Charging higher fees for paper-based registration applications and information requests will also encourage the user community to eventually transition to using the direct electronic registration and information request functionalities. However, in making this decision, States may wish to consider whether charging such fees may have a disproportionate effect on MSMEs that may not have easy access to electronic services.[376]

Recommendation 37[377]: Fees charged for registry services

The Regulation should establish fees for registration and post-registration services, if any, at a level that is low enough that it encourages business

[373] Ibid., para. 74.
[374] Ibid., para. 77.
[375] Ibid., para. 78.
[376] Ibid., para. 80.
[377] Former recommendation 38, A/CN.9/WG.I/WP.96/Add.1.

registration, and that, in any event, does not exceed a level that enables the business registry to cover the cost of performing those services.

B. Fees charged for information

190. In various jurisdictions, fees charged for the provision of information products are a more viable option for registries to derive self-generated funding. Such fees also motivate registries to provide valuable information to their clients, to maintain the currency of their records and to offer additional information services. A recommended good practice for jurisdictions aiming at improving this type of revenue generation would be to avoid charging fees for basic information services such as name or address searches, but to charge for more sophisticated information services (for example, direct downloading or providing bulk information). Since fees charged for information products are likely to influence users in their choice of products, such fees should be set at a level low enough to make the use of less expensive products attractive to users; otherwise, users may request information products that are more costly for the registry to produce (for example, ordering printed versions by telephone) and for which their cost recovery falls short.[378]

Recommendation 38[379]: Fees charged for information

The Regulation should establish that information contained in the business registry should be available to the public free of charge, but should permit modest fees to be charged for value-added information products produced or developed by the registry.

C. Publication of fee amounts and methods of payment

191. Regardless of the approach taken to determine the applicable fees, if any, States should clearly establish the registration and information fees charged to registry users, as well as acceptable methods of payment. Such methods of payment should include allowing users to enter into an agreement with the business registry to establish a user account for the payment of fees. States in which businesses can register directly online should also consider developing electronic platforms that enable businesses to pay online when filing their application with the registry (see para. 233 below). When establishing registration and information fees, one approach would be for the State to set out the fees in a "regulation", which could be either a formal regulation or more informal administrative guidelines that the registry can revise according to its needs. If administrative guidelines are used, this approach would provide greater flexibility to adjust the fees in response to subsequent events, such as the need to reduce the fees once the capital cost of establishing the registry has been recouped. The disadvantage of this approach, however, is that this greater flexibility could be abused by the registry to adjust the fees upwards unjustifiably. Alternatively, a State may choose not to specify the registry fees in such a regulation, but rather to designate the administrative or other authority that is mandated to set the registry fees.[380] The State may also wish to consider specifying in the law or the regulation on business registration the types of service that the registry may or must provide free of charge.[381]

---

[378] Para. 76, A/CN.9/WG.I/WP.93/Add.2. For further reference, see Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 17.

[379] Former recommendation 39, A/CN.9/WG.I/WP.96/Add.1.

[380] For instance, in the United Kingdom registry fees are set by statutory fee regulations and confirmed by the Parliament. See https://www.gov.uk/government/organisations/companies-house/about/about-our-services#about-fees.

[381] Para. 79, A/CN.9/WG.I/WP.93/Add.2.

Recommendation 39[382]: Publication of fee amounts and methods of payment

The designated authority should ensure that fees payable for registration and information services should be widely publicized, as should acceptable methods of payment.

VIII. Sanctions and liability

A. Sanctions

192. The State should have the ability to enforce proper compliance with initial and ongoing registration requirements. States with high quality registration systems usually possess enforcement mechanisms that may be used on businesses in respect of the information that the business is required to file throughout its life cycle (as well as additional required reporting).[383] In some jurisdictions, for instance, the law establishes sanctions on businesses that fail to submit timely or accurate and complete information.[384]

193. Fines for breaching obligations related to business registration, such as late filing of periodic returns, can represent a means of revenue generation. Their collection, however, again requires a balanced approach. Several jurisdictions use fines as disincentives for businesses to operate outside of the legally regulated economy. In some cases, legislative provisions link the company's enjoyment of certain benefits to the timely filing of required submissions; in others, a series of increasing fines for late filing is enforced that can ultimately result in compulsory liquidation. However, if fines are used as the main source of funding for the registry, as occurs in some jurisdictions, it can have a detrimental effect on the efficiency of the registry. Since registries in such jurisdictions lose revenue as a result of improved business compliance, they may have weak motivation to improve the level of compliance. It is thus recommended that States should not consider fines as the main source of revenue of a business registry, but that they determine fines at a level that encourages business registration without negatively affecting the funding of registries when compliance improves.[385]

194. One remedy States may wish to consider is to include in the registry information on sanctions imposed by a court or other designated public authority on directors that have breached their legal duties in managing the business, which may include barring a director from taking part in the management of the business. Recording information on a director's disqualification in the business registry not only may deter potential abuses by that director, but it may also represent a protective measure for third parties interacting with the business. As noted above, (see para. 111), the availability of such information in the business registry, in addition to enhanced interconnection among registries from different jurisdictions, may result in preventing disqualified directors from being appointed as directors of a business in another jurisdiction.

Recommendation 40[386]: Sanctions

The Regulation should establish and ensure broad publication of sanctions (including fines, deregistration and loss of access to services) that may be imposed on a business for a breach of its obligations under the Regulation. Such rules may include provisions pursuant to which a breach of obligation may be forgiven provided it is rectified within a specified time.

---

[382] Former recommendation 40, A/CN.9/WG.I/WP.96/Add.1.

[383] See L. Klapper, R. Amit, M. F. Guillén, J. M. Quesada, Entrepreneurship and Firm Formation Across Countries, 2007, page 8.

[384] Para. 14, A/CN.9/WG.I/WP.93/Add.1. For further reference, see Ireland, in D. Christow, J. Olaisen, Business Registration Reform Case Studies, Ireland, 2009, pages 15 ff. Failure to notify the information required after registration, however, will not affect the validity of the registration, but will have legal consequences on the business pursuant to the applicable law of the enacting State.

[385] Para. 75, A/CN.9/WG.I/WP.93/Add.2.

[386] Former recommendation 41, A/CN.9/WG.I/WP.96/Add.1.

B. Liability for submission of misleading, false or deceptive information

195. In order to ensure that reliable information is submitted to the business registry, States should adopt provisions, whether of an administrative or legal nature, that establish the responsibility of the registrant for any misleading, false or deceptive information that the registrant has knowingly or recklessly submitted to the registry. Adoption of such provisions could be of particular importance in States that chose business registration systems in which the registry only records facts and does not perform any ex ante legal verification.[387]

Recommendation 41[388]: Liability for submission of misleading, false or deceptive information

The Regulation or the law of the enacting State should establish the liability of the registrant or the registered business for any misleading, false, incomplete or deceptive information that the registrant or business has knowingly submitted to the business registry.

C. Liability of the business registry

196. The State, by way of law or regulation, should provide for the allocation of responsibility for loss or damage caused by an error or through negligence in the administration or operation of the business registration and information system.[389]

197. As noted above, registrants or users bear the responsibility for any errors or omissions in the information contained in an application for registration or an amendment request they submit to the registry, and carry the burden of making the necessary corrections. If applications and amendment requests are directly submitted by users electronically without the intervention of registry staff, the potential liability of the enacting State would, therefore, be limited to system malfunction, since any other error would be attributable to users. However, if paper-based application forms or amendment requests are submitted, the State must address the existence or the extent of its potential liability for the refusal or failure of the registry to enter correctly information contained in the application into the registry record or to register correctly the amendment.[390]

198. Further, it should be made clear to registry staff and registry users, inter alia, that registry staff are not allowed to give legal advice on the legal requirements for effective registration and amendment requests, or on their legal effects, nor should staff make recommendations on which intermediary (if any) the entrepreneur should choose to perform its registration or any amendments thereto. However, registry staff should be able to give practical guidance with respect to the registration and amendment request processes. In States that opt for a judiciary-based registry system, this measure should of course not be applicable to the judges, notaries and lawyers entrusted with the registration procedures.[391]

199. While it should be made clear that registry staff are not allowed to give legal advice (subject to the type of registration system of the State), the State will also need to address whether and to what extent it should be liable if registry staff nonetheless

---

[387] Para. 26, A/CN.9/WG.I/WP.93/Add.1.

[388] Former recommendation 42, A/CN.9/WG.I/WP.96/Add.1.

[389] Para. 46, A/CN.9/WG.I/WP.93/Add.1. In Norway, for instance, the registrar may be liable if it supplies incorrect information in transcripts, certificates or public notices, which causes damage to persons who relied on the incorrect information. See The Business Enterprise Registration Act (Act of 15 June 2001, No. 59 and Act of 19 December 2003, No. 120), § 10-3, available at www.brreg.no. In some legal traditions, the liability of the registrar for causing damage through the negligent performance of its obligations is usually dealt with under a general legal doctrine requiring a duty of care.

[390] Para. 47, A/CN.9/WG.I/WP.93/Add.1.

[391] Ibid., para. 44.

provide incorrect or misleading information on the requirements for effective registration and amendment requests or on the legal effects of registration.[392]

200. If States accept legal responsibility for loss or damage caused by system malfunction or error or misconduct by registry staff, they may consider whether to allocate part of the registration and information fees collected by the registry to a compensation fund to cover possible claims, or whether the claims should be paid out of general revenue. States might also decide to set a maximum limit on the monetary compensation payable in respect of each claim. [393]

Recommendation 42[394]: Liability of the business registry

The Regulation or the law of the enacting State should establish whether the business registry may be held liable for loss or damage caused by error or negligence in the registration of businesses or the administration or operation of the registry.

IX. Deregistration

A. Deregistration

201. Deregistration is the removal of a business from the register once the business, for whatever reason, has permanently ceased to operate, including in cases of merger, winding-up, forced liquidation due to bankruptcy, or in cases where applicable law permits the registrar to deregister the business for failing to fulfil certain legal requirements.[395]

202. States should consider the role of the registry in deregistering a business. In most jurisdictions, deregistration of a business is included as one of the core functions of the registry. It appears to be less common, however, to entrust the registry with the decision whether or not a business should be deregistered.[396] In jurisdictions where this function is included, statutory provisions determine the cause of the deregistration and the procedures to follow in carrying it out. In order to deregister a business, registries are generally required to have reasonable cause to believe that a registered enterprise has not carried on business or that it has not been in operation for a certain period of time. Such a situation may arise, for example, when a business has failed to submit its statutory periodic reports or annual accounts, including renewal of its registration when required (see para. 141 above), within a certain period following the filing deadline. In any case, the ability of the registrar to deregister a business should be limited to ensuring compliance with clear and objective legal requirements for the continued registration of a business. In several States, before commencing deregistration procedures, the registrar must inform the business in writing of its intended deregistration and allow time for the business to reply. Only if the registrar receives a reply that the business is no longer active or if no reply is received within the time prescribed by the law, will the business be deregistered.[397] A common requirement for a deregistration to become effective is that notice of it be published.[398]

203. Deregistration may also be carried out upon the request of the business (referred to here as "voluntary deregistration"), usually if the business ceases to trade or has

[397] See note 26 above for a short description of deregistration.
[398] Para. 20, A/CN.9/WG.I/WP.93/Add.1. For further reference, see Lexis PSL Corporate, Striking off and dissolution overview, www.lexisnexis.com/uk/lexispsl/corporate/document/391387/55YB-2GD1-F186-H4MP-00000-00/Strikingoffanddissolutionoverview. See also T. F. MacLaren, in Eckstrom's Licensing in Foreign and Domestic Operations: Joint Ventures, 2015 [as it appears in Westlaw], page 30.

never traded; or by court order, as a consequence of proceedings to wind up the business. In cases of voluntary deregistration of a business, States should specify in which circumstances businesses can apply for deregistration (an alternative approach may be to specify in which circumstances the business cannot apply for deregistration) and which persons associated with the business are authorized to request deregistration on behalf of the business.

204. The registrar, upon receiving notification of a business dissolution, shall issue an announcement stating that creditors have a certain length of time during which to advance their claims. After that period has passed, a notation is made on the registry that the business is deregistered.[399] This procedure ensures that businesses are not deregistered without providing creditors the opportunity to protect their rights.[400] It should be noted that pending completion of the deregistration procedure, the business remains in operation and will continue to carry on its activities.

205. Registries should retain historical information on businesses that have been deregistered, leaving it to the State to decide the appropriate length of time for which such information should be preserved (see paras. 208 to 210).[401] The length of the period of preservation is likely to be influenced by the way in which the registry is structured and operated. ICT-based registries usually allow for the information to be preserved in perpetuity, if the registries have been developed according to technical standards of scalability and flexibility (see paras. 66 to 70 above). When the registry is paper-based or mixed, preserving documents indefinitely may not be a feasible approach, due to the high costs of storage involved. It may thus be desirable for States to establish a minimum period of time for the retention of such documents (see paras. 208 to 210 below). When the State has adopted a unique identifier system, the information related to the business will remain linked to that identifier even if the business is deregistered.[402]

Recommendation 43[403]: Voluntary deregistration

The Regulation should require the registrar to deregister a business on the application of the business for deregistration that fulfils the requirements according to the law of the enacting State**.**

Recommendation 44[404]: Compulsory deregistration

The Regulation should:

(a) Require the registrar to deregister a business when it is ordered to do so by a specified competent authority or the court or when the business is no longer in operation; and

(b) Provide that the decision or order for deregistration of the business must be placed on the registry.

Recommendation 45[405]: Process of deregistration

The Regulation or the law of the enacting State should provide that:

(a) A written notice of the deregistration is sent to the registered business; and

(b) The deregistration is publicized in accordance with the legal requirements of the enacting State.

---

[399] See footnote 26 above.
[400] Para. 22, A/CN.9/WG.I/WP.93.
[401] At its twenty-fifth session, the Working Group agreed that historical information on businesses that had been deregistered should be maintained (para. 49, A/CN.9/860).
[402] This observation was made during the twenty-fifth session of the Working Group (para. 49, A/CN.9/860).
[403] Former recommendation 44, A/CN.9/WG.I/WP.96/Add.1.
[404] Former recommendation 45, A/CN.9/WG.I/WP.96/Add.1.
[405] Former recommendation 46, A/CN.9/WG.I/WP.96/Add.1.

B. Reinstatement of registration

206. In several States, it is possible to reinstate the registration of a business that has been deregistered either by way of a court order or upon request to the registrar when certain conditions are met (in some States this latter procedure is defined as "administrative restoration"). In certain States, both procedures are available and choosing either of them usually depends on why the business was deregistered and/or the purpose of restoring the business. The two procedures usually differ in some key aspects such as who can apply to have the business restored, which business entities are eligible for restoration and the time limit on filing an application for restoration. The requirements for "administrative restoration" in States which provide for both procedures are often stricter than those for restoration by court order. For instance, in such States, only an aggrieved person, which may include a former director or member, can submit an application to the registrar,[406] and the time limit within which the application can be submitted to the registry may be shorter than the time granted to apply for a court order.[407] Regardless of the method(s) chosen by the State to permit reinstatement of the registration of a business, once the registration has been reinstated, the business is deemed to have continued its existence as if it had not been deregistered, which includes maintaining its former business name. In cases where the business name is no longer available as having been assigned to another business registered in the interim, procedures are usually established by the State to govern the change of name of the reinstated business.

Recommendation 46[408]: Reinstatement of registration

The Regulation or the law of the enacting State should specify the circumstances under which and the time limit within which the registrar is required to reinstate a business that has been deregistered.

C. Time of effectiveness of business deregistration

207. The time of effectiveness of the deregistration should be established by way of law or regulation, which should distinguish between deregistration on the registrar's initiative, deregistration upon court order and deregistration at the request of the business. While the requirements for these three types would vary, in all cases it would be advisable that the notation of deregistration states the date of effect of the deregistration in addition to the reasons therefor. Moreover, in cases where deregistration is decided by the registrar, the registrant should be given sufficient time to oppose that decision. As in the case of the application for registration or a subsequent change, the effective date and time of registration of a notice of deregistration should be indicated on the registry record relating to that deregistration. If the notice of deregistration is provided electronically, the time between receipt of that notice and amendment of the information on the registry record should be very short. If the request for deregistration is provided in paper form, there will be a greater time lag before it is published in the business registry.[409]

Recommendation 47[410]: Time and effectiveness of deregistration

The Regulation should:

(a) Specify when the deregistration of a business has legal effect;

---

[406] See, for instance, UK in Companies House, Strike off, dissolution & restoration, 2015, pages 12 and 17.

[407] See, for instance, Ireland, in https://www.cro.ie/Termination-Restoration/Overview.

[408] Former recommendation 47, A/CN.9/WG.I/WP.96/Add.1.

[409] Para. 34, A/CN.9/WG.I/WP.93/Add.1.

[410] Former recommendation 48, A/CN.9/WG.I/WP.96/Add.1.

(b) Specify that any required notice of the deregistration for that legal form of business has been publicized in accordance with the law of the enacting State; and

(c) Specify the legal effects of deregistration.

X. Preservation of records

A. Preservation of records

208. As a general rule, the information in the business registry is kept indefinitely. However, as noted in paragraph 205 above, the length of the preservation period for records is most often influenced by the way the registry operates, and whether the registry is ICT-supported, paper-based or a mixed system. Those States with paper-based or mixed registration systems, should adopt rules that specify a minimum period of time for which documents submitted in hard copy should be kept by the registry.[411]

209. In the case of ICT-supported registries, original documents submitted in hard copy could be kept for a short period (for example, not over 5 years after they were received by the registry) providing that the information contained in such documents has been recorded in the registry[412] or that the paper documents have been digitized (through scanning or other electronic processing).

210. In the case of a paper-based registry which cannot convert the documents received into an electronic form or other non-paper forms (for instance, microfilm) that allow transmission, storage, reading, and printing of the documents, the records should be preserved until the business is deregistered and for an appropriate period of time after deregistration has occurred (see also para. 205 above). The enacting State should decide on the appropriate length of time for such a period. States may also choose to apply their general rules on preservation of public documents.[413]

Recommendation 48[414]: Preservation of records[415]

The Regulation should provide that:

(a) Documents and information submitted electronically by the registrant and the registered business, including information in respect of deregistered businesses, should be preserved by the registry in perpetuity so as to enable the information to be retrieved by the registry and other interested users;

(b) Where paper documents have been submitted and the information contained in them has been entered into an electronic registry that meets the reliability standards established by the State, a minimum period of preservation of such documents should be specified by the enacting State; and

(c) Where paper documents have been submitted and the information contained in them has not been entered into an electronic registry the period of preservation of such documents should be specified by the enacting State, and should be for at least the life of the business, plus a reasonable time after any deregistration of that business.

411 Para. 35, A/CN.9/WG.I/WP.93/Add.1.
412 Ibid., para. 36.
413 Ibid., para. 37.
414 Former recommendation 49, A/CN.9/WG.I/WP.96/Add.1.
415 The Working Group may wish to note recommendation 21 of the UNCITRAL Guide on the Implementation of a Security Rights Registry on "Archiving of information removed from the public registry record".

B. Amendment or deletion of information

211. By way of law or regulation, it should be established that registry staff may not alter or remove registered information, except as specified in the law or the regulation and that any change can be made only in accordance with the law or the regulation. However, to ensure the smooth functioning of the registry, in particular when registrants submit registration information using paper forms, it would be advisable that registry staff be authorized to correct clerical errors (see paras. 27, 44 and 146 above) made by registry staff in entering the registration information from the paper forms into the registry record. If this approach is adopted, notice of this or any other correction should promptly be sent to the registrant (and a notification of the nature of the correction and the date it was effected should be added to the public registry record linked to the relevant business). Alternatively, the State could require the registrar to notify the registrant of its error and that person could then submit an amendment free of charge.[416]

212. Further, the potential for misconduct by registry staff should be minimized by: (a) designing the registry system to make it impossible for registry staff to alter the time and date of registration or any registered information entered by a registrant; (b) instituting financial controls that strictly monitor staff access to cash payments of fees and to the financial information submitted by clients who use other modes of payment; and (c) instituting audit mechanisms which regularly assess the efficiency and the financial and administrative effectiveness of the registry.[417]

Recommendation 49[418]: Amendment or deletion of information[419]

The Regulation should provide that the registrar does not have the authority to amend or delete information contained in the business registry record except in those cases specified in the Regulation or elsewhere in the law of the enacting State.

C. Protection against loss of or damage to the business registry record

213. To protect the business registry from the risk of loss or physical damage or destruction, the State should maintain back-up copies of the registry record. Any rules governing the security of other public records in the enacting State might be applicable in this context.[420]

214. The threats that can affect an ICT-supported registry also include criminal activities that may be committed through the use of ICT. Providing effective enforcement remedies would thus be an important part of a legislative framework aimed at supporting the use of electronic solutions for business registration. Typical issues that should be addressed by enacting States would include unauthorized access or interference with the electronic registry; unauthorized interception of or interference with data; misuse of devices; fraud and forgery.[421]

---

[416] Para. 41, A/CN.9/WG.I/WP.93/Add.1.

[417] Ibid., para. 43, A/CN.9/WG.I/WP.93/Add.1. The Secretariat suggests that the current formulation of subpara. (c) is more consistent with the purpose of the section. In the former version, subpara. (c) read: "… designing the registry infrastructure so as to ensure that it can preserve the information and the documents concerning any business for as long as prescribed by the law or the regulation."

[418] Former recommendation 50, A/CN.9/WG.I/WP.96/Add.1.

[419] The Working Group may wish to note recommendation 17 of the UNCITRAL Guide on the Implementation of a Security Rights Registry on "Integrity of the registry record".

[420] Para. 42, A/CN.9/WG.I/WP.93/Add.1.

[421] Para. 35, A/CN.9/WG.I/WP.93/Add.2. For further reference, see Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 49.

Recommendation 50[422]: Protection against loss of or damage to the business registry record[423]

The Regulation or the law of the enacting State should:

(a) Require the business registry to protect the registry records from the risk of loss or damage; and

(b) Establish and maintain back-up mechanisms to allow for any necessary reconstruction of the registry record.

D. Safeguard from accidental destruction

215. An aspect that may warrant consideration by States is that of natural hazards or other accidents that can affect the processing, collection, transfer and protection of the data housed in the electronic registry and under the responsibility of the registry office. Given user expectations that the business registry will function reliably, the registrar will want to ensure that any interruptions in operations are brief, infrequent and minimally disruptive to users and to States.[424] For this reason, States should devise appropriate measures to facilitate protection of the ICT-based registry.[425] One such measure could be to develop a business continuity plan that sets out the necessary arrangements for managing disruptions in the operations of the registry and ensures that services to users can continue. In one State, for instance, the registry has established a "risk register", i.e. a dynamic document that is updated as changes in the operation of the registry occur. Such a "risk register" allows the registry staff to identify possible risks for the registration service as well as the appropriate mitigation measures. Designated staff are required to report on an annual basis the threats to the registry and the relevant actions taken to mitigate such threats.[426]

Recommendation 51[427]: Safeguard from accidental destruction

The Regulation or the law of the enacting State should provide that appropriate procedures should be established to mitigate risks from force majeure, natural hazards, or other accidents that can affect the processing, collection, transfer and protection of data housed in electronic or paper-based business registries.

XI. The underlying legislative framework[428]

A. Changes to underlying laws and regulations

216. As noted above (see para. 40), business registration reform can entail amending either primary legislation or secondary legislation or both. Primary legislation concerns texts such as laws and codes that must be passed by the legislative bodies of a State. Reforms that consider this type of legislation thus require the involvement of the legislature and, for this reason, can be quite time-consuming. Secondary legislation is that body of texts composed of regulations, directives and other similar acts made by the executive branch within the boundaries laid down by the legislature. Reform of secondary legislation does not need to be reviewed by the legislature and thus it can be carried out in a shorter time frame. Therefore, when domestic

[425] Para. 34, A/CN.9/WG.I/WP.93/Add.2.

[426] For instance, this is the practice in the United Kingdom Companies' House.

[427] Former recommendation 52, A/CN.9/WG.I/WP.96/Add.1.

[428] The Working Group may wish to consider moving Chapter XI from the main text into an Annex to the draft legislative guide, since the chapter highlights best practices in legal reform that contribute to improving business registration, but that would have broader application in the State.

circumstances allow, the use of secondary legislation may be a more attractive option than the reform of primary legislation.[429]

217. In addition to legislation that is meant to prescribe the conduct of business registration, States may need to update or change laws that may simply affect the registration process in order to ensure that such laws respond to the needs of MSMEs. There is no single solution in this process that will work for all States, since the reforms will be influenced by the State's legislative framework. However, the reforms should aim at developing a domestic legal framework that supports business registration with features such as: transparency and accountability, clarity of the law and use of flexible legal entities.[430]

218. Regardless of the approach chosen, i.e. whether to implement a reform using primary or secondary legislation, and the extent of the reform, changes in the domestic legal framework should carefully consider the potential costs and benefits of this process, as well as the capacity and the will of the government and the human resources available. An important preparatory step of a reform programme involves a thorough inventory and analysis of the laws that are relevant to business registration[431] with a view to evaluating the need for change, the possible solutions, and the prospects for effective reform. In some cases, this assessment could result in deferring any major legislative reform, particularly if significant gains to the process of simplification can be achieved by the introduction of operational tools[432] or, as mentioned above, by adopting or reforming secondary legislation. Once it has been decided what changes should be made and how, ensuring their implementation is equally important. In order to avoid the possible risk of unimplemented reforms, the government, the reform steering committee and the project teams should carefully monitor the application of the new legal regime. The following paragraphs offer some examples of approaches that can be taken to streamline domestic laws and regulations with a view to simplifying business registration and to making it more accessible to MSMEs.[433]

B. Clarity of the law

219. For jurisdictions wishing to facilitate business start-up, in particular of MSMEs, it is important to review the existing legal framework so as to identify possible impediments to the simplification of the registration process. The nature of the reform would depend on the status of the domestic legal framework and a variety of examples, based on States' experiences, are available.[434]

220. These reforms may include decisions by States to shift the focus of the law towards private companies (such as the simplified business entities being considered by the Working Group), as opposite to public limited companies, particularly if the former currently account for the majority of the firms in the State. Reforms could also include the decision to move the legal provisions pertaining to small companies to the beginning of any new company law in order to make them easier to find or to use simpler language in any updated company law.[435]

221. One particularly relevant reform that would especially serve the purpose of clarity of the law would be a comprehensive review of the legal framework on business registration and a resulting unification of the various rules into a single piece of legislation. This could also allow for some flexibility to be built into the system, with the adoption of certain provisions as regulations or simply providing for the

development of the necessary legal basis in order to introduce legal obligations by way of regulation at a later stage.[436]

Recommendation 52[437]: Clarity of the law

The law of the enacting State should, to the extent possible, consolidate legal provisions pertaining to business registration in a single legislative text, which is clearly written and uses simple language that can be easily understood.

C. Flexible legal entities[438]

222. Evidence suggests[439] that entrepreneurs tend to choose for their business the simplest legal form available when they decide to register and that States with rigid legal forms have an entry rate considerably lower than States with more flexible requirements. In States that have introduced new and simplified legal forms for business, the registration process for those new business types is much simpler. Entrepreneurs are not required to publish the articles of association (or other rules governing the operation or management of the business) in the Official Gazette; instead, these can be posted online through the business registry; and the involvement of a lawyer, notary or other intermediary is not obligatory for the preparation of documents or conducting a business name search.[440]

223. Legislative changes to abolish or reduce the minimum paid in capital requirement[441] for businesses also tend to facilitate MSME registration, since micro and small businesses may have limited funds to meet a minimum capital requirement, or they may be unwilling or unable to commit their available capital in order to establish their business. Instead of relying on a minimum capital requirement to protect creditors and investors, States have implemented alternative approaches such as the inclusion of provisions on solvency safeguards in their legislation; conducting solvency tests; or preparing audit reports that show that the amount a company has invested is enough to cover the establishment costs.[442]

224. Introducing new simplified forms of limited liability and other enterprises is often coupled with a considerable reduction or complete abolition of the minimum capital requirements that other legal forms of enterprise are required to deposit upon formation. In several States that have adopted simplified business entities, the minimum capital requirement has been abolished completely, and in other cases, initial registration or incorporation has been allowed upon deposit of a nominal amount of capital. In other States, progressive capitalization has been introduced, requiring the business to set aside a certain percentage of its annual profits until its reserves and the share capital jointly total a required amount.[443] In other cases, progressive capitalization is required only if the simplified limited liability enterprise intends to graduate into a full-fledged limited liability company, for which a higher share capital would be required. There is however no obligation to do so.[444]

[441] For a more thorough discussion on minimum capital requirements and simplified business entities, see paras. 75-79, A/CN.9/825 as well as paras. 46-47, A/CN.9/WG.I/WP.99/Add.1.

[442] Para. 69, A/CN.9/WG.I/WP.93/Add.2. For further reference, see para. 28, A/CN.9/WG.I/WP.85.

[443] See Italy, para. 29, A/CN.9/WG.I/WP.85.

[444] Para. 70, A/CN.9/WG.I/WP.93/Add.2. For further reference, see, for instance, Germany, by Dr. Leif Boettcher, Federal Ministry of Justice, “Simplified business forms in the context of small and medium enterprises, the German approach”, presentation at the UNCITRAL

225. Another reform that would be conducive to improved business registration is to provide freedom to entrepreneurs to conduct all lawful activities without requiring them to specify the scope of their venture.[445] This is particularly relevant in those jurisdictions where entrepreneurs are required to list in their articles of association the specific activity or activities in which they intend to engage so as to restrain firms from acting beyond the scope of their goals and, according to certain literature, to protect shareholders and creditors. Allowing for the inclusion in the articles of association (or other rules governing the operation or management of a business) of a so-called "general purpose clause" which states that the company's aim is to conduct any trade or business and grants it the power to do so, facilitates business registration. This approach is far less likely to require additional or amended registration in the future, as enterprises may change their focus since entrepreneurs could change activities without amending their registration, provided that the new business activity is a lawful one and that the appropriate licences have been obtained. Additional options to the inclusion of a general purpose clause, which would support the same goal, could be passing legislation that makes unrestricted objectives the default rule in the jurisdiction, or abolishing any requirement for businesses, in particular privately held companies, to state objectives for registration purposes.[446]

Recommendation 53[447]: Flexible legal forms

The law of the enacting State should permit flexible and simplified legal forms for business in order to facilitate and encourage registration of businesses of all sizes, including those forms considered in the [UNCITRAL legislative guide on an UNCITRAL limited liability organization].

D. Primary and secondary legislation to accommodate the evolution of technology

226. Since information technology is a field marked by rapid technological evolution, it would be advisable to establish guiding legal principles in the primary legislation, leaving secondary legislation to stipulate the specific provisions regulating the detailed functioning and the requirements of the system.[448] Once the business registration process is fully automated, States should establish provisions (preferably in the secondary legislation) or policies that discipline government-to-government data exchange in order to avoid any lack of cooperation among different agencies.[449]

Recommendation 54[450]: Primary and secondary legislation to accommodate the evolution of technology

The law of the enacting State should establish guiding legal principles in relation to electronic registration in primary legislation, and should set out specific provisions on the detailed functioning and requirements of the electronic system in secondary legislation.

E. Electronic documents and electronic authentication methods

227. Entering information into an ICT-supported registry is a business-to-government transaction that should be subject to the same treatment, under domestic

[449] Para. 26, A/CN.9/WG.I/WP.93/Add.2.

[450] Former recommendation 55, A/CN.9/WG.I/WP.96/Add.1.

legislation, as any other electronic transaction.[451] Therefore, if an appropriate domestic legislative framework for electronic transactions is not in place, a preliminary step for a reform aimed at supporting electronic business registration would be to recognize and regulate the use of such electronic transactions. Among other things, States should adopt laws permitting electronic signatures and the submission of electronic documents.[452] In some States, for instance, the use of an advanced electronic signature is mandatory when transmitting information to a business registry. When laws on electronic communication are enacted, they should establish, at minimum, principles of non-discrimination, technological neutrality and functional equivalence allowing for equal treatment of paper-based and electronic information. The principle of non-discrimination ensures that a document would not be denied legal effect, validity or enforceability solely on the grounds that it is in electronic form. The principle of technological neutrality mandates the adoption of provisions that are neutral with respect to the technology used. The principle of functional equivalence lays out criteria under which electronic communications and electronic signatures may be considered equivalent to paper-based communications and hand-written signatures.[453]

228. Further, it would be advisable that the laws include provisions to mitigate the risks that the use of ICT can carry with it and that can affect the validity, and in certain jurisdictions the legal validity, of the information transmitted through the electronic means. The most common risks include: confirming the identity of the entrepreneur filing for registration (referred to as "authentication"); preventing conscious or unconscious alteration of information during transmission (referred to as "integrity"); ensuring that sending and receiving parties cannot deny having sent or received the transferred message (referred to as "non-repudiation") and preventing disclosure of information to unauthorized individuals or systems (referred to as "confidentiality").[454] In those States where the law does not require business registries to check the veracity of the information submitted during the registration process, these risks may be more problematic as it can be relatively easy to manipulate registration systems and filing processes.[455]

229. Verifying the identity of the registrant and ensuring the integrity of the application and the supporting information are key elements to ensure trust in ICT supported registration systems and their corresponding use. Consequently, States should carefully consider the requirements that electronic signatures and electronic documents should have in order to minimize any risk of corporate identity theft[456] and the transmission of invalid information.[457]

230. Whether or not the adoption of legislation on electronic signatures is premature due to the technological infrastructure of the State, various other techniques can prevent corporate identity theft and ensure security. The experience of several States has laid the groundwork for practices that may be replicated in other regions. Simple methods include the use of appropriate user names and passwords; electronic certificates; biometric verification (for example, fingerprints); monitoring systems

[451] See A. Lewin, L. Klapper, B. Lanvin, D. Satola, S. Sirtaine, R. Symonds, Implementing Electronic Business Registry (e-BR) Services, Recommendations for policymakers based on the experience of EU Accession Countries, 2007, page 47.

[452] UNCITRAL has adopted several texts dealing with electronic commerce. Those texts and relevant information on them can be found on the UNCITRAL website at: http://www.uncitral.org/uncitral/uncitral_texts/electronic_commerce.html.

[453] Para. 27, A/CN.9/WG.I/WP.93/Add.2.

[454] See Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 12.

[455] Para. 28, A/CN.9/WG.I/WP.93/Add.2.

[456] Corporate identity theft can occur through the theft or misuse of key business identifiers and credentials, manipulation or falsification of business filings and records, and other related criminal activities. Despite the use of the term "corporate", corporations are not the only business entities that are victimized by this crime. Any type of business or organization of any size or legal structure, including sole proprietorships, partnerships and limited liability companies can be targets of business identity theft.

[457] Para. 29, A/CN.9/WG.I/WP.93/Add.2. For further reference, see para. 78, A/CN.9/WG.I/WP.93/Add.1.

and/or e-mail systems that notify registered users about changes or whenever documents are filed on their business record; and the implementation or increase of penalties for false and/or misleading information submitted to the commercial registries. An approach followed in some jurisdictions is to require the identity of the person registering the business to be checked by a notary public or by another designated authority. Where this is not possible, entrepreneurs may be required to visit the registry office in order for their identity to be verified. Another approach, employed in other jurisdictions, allows only those individuals expressly identified in the law to submit an application for entry into the register or to change an entry in the register. This application must then be legalized by a public notary or another designated authority (if submitted in paper form). However, recourse to a notary or other intermediary or personal visits to the registry office may present expensive and time-consuming barriers for businesses wishing to register, in particular for MSMEs. Therefore, in order to facilitate MSME registration, States may wish to opt for the adoption of simpler ways to ensure the authentication of business entrepreneurs, such as the use of appropriate user names and passwords. This could be particularly appropriate in the case of micro-businesses or in cases where MSMEs intend to register but choose a simplified business form.[458]

F. Dispatch and receipt of electronic messages[459]

231. Another issue to consider when implementing a business registry through the use of ICT solutions is that electronic registries may make it difficult to ascertain the time and place of dispatch and receipt of information. This is an aspect that may acquire relevance due to the time sensitivity of certain submissions, such as establishing the exact time and place at which a business has been registered. For this reason, it is important to have clear rules that define the time of "dispatch" and "receipt" of electronic messages. If such rules are not clearly defined in a State's legislative framework, or if they are not defined with the specificity required for the purposes of time-sensitive registration applications, then ad hoc laws addressing the issues of dispatch and receipt may be required.[460]

G. UNCITRAL Model Laws

232. States that enact legal regimes on electronic communications and electronic signatures may wish to consider the UNCITRAL Model Law on Electronic Commerce and the UNCITRAL Model Law on Electronic Signatures.[461] These two legislative texts establish those principles of reliability, noted above, that are needed to ensure equal treatment between paper-based and electronic communications and deal extensively with provisions covering the issues of legal validity of electronic documents and signatures, authentication, and the time and place of dispatch and receipt of electronic messages. Because of the way these Model Laws, as well as all other UNCITRAL legislative texts, are negotiated and adopted, they offer solutions appropriate to different legal traditions and to States at different stages of economic development. Furthermore, domestic legislation based on the UNCITRAL Model Laws will greatly facilitate cross-border recognition of electronic documents and signatures.[462]

---

[458] Para. 30, A/CN.9/WG.I/WP.93/Add.2.

[459] See A. Lewin, L. Klapper, B. Lanvin, D. Satola, S. Sirtaine, R. Symonds, Implementing Electronic Business Registry (e-BR) Services, Recommendations for policymakers based on the experience of EU Accession Countries, 2007, page 48.

[460] Para. 31, A/CN.9/WG.I/WP.93/Add.2.

[461] See http://www.uncitral.org/uncitral/uncitral_texts/electronic_commerce.html.

[462] Para. 32, A/CN.9/WG.I/WP.93/Add.2.

Recommendation 55[463]: Electronic documents and electronic authentication methods

The law of the enacting State should:

(a) Permit and encourage the use of electronic documents as well as of electronic signatures and other equivalent identification methods;

(b) Regulate such use pursuant to the following principles:

(i) Documents cannot be denied legal effect, validity or enforceability solely on the grounds that they are in electronic format, or that they are signed electronically;

(ii) The place of origin of the electronic signature should not determine whether and to what extent the electronic signature is legally effective;

(iii) Different technologies that may be used to communicate, store and/or sign information electronically should be subject to the same legal treatment; and

(iv) Electronic documents and electronic signatures have the same purpose and function as their paper-based counterparts and are thus functionally equivalent to them; and

(c) Establish criteria to reliably identify the person submitting an electronic document and/or using an electronic signature or equivalent authentication method.

H. Electronic payments

233. Once States have reached a certain level of technological maturity,[464] they could consider developing electronic platforms that enable businesses to pay online when filing their application with the registry. This will require enacting appropriate legislation concerning electronic payments in order to enable the registry to accept online payments. By way of example, such laws should address issues like who should be allowed to provide the service and under which conditions; access to online payment systems; liability of the institution providing the service; customer liability and error resolution. Furthermore, such laws should be consistent with the general policy of the country on financial services.[465]

Recommendation 56[466]: Electronic payments

The law of the enacting State should include legislation to enable and facilitate electronic payments.

F. Note by the Secretariat: proposal by the Government of Italy: contractual networks

(A/CN.9/WG.I/WP.102)

[Original: English]

The Government of Italy has submitted to the Secretariat of the United Nations Commission on International Trade Law (UNCITRAL) the following proposal for future work to support development of micro, small and medium-sized enterprises. The text of the proposal is reproduced as an annex to this note in the form in which it was received by the Secretariat, with formatting changes.

Contents

Annex

Contractual networks and economic development: a proposal for future work by Italy on alternative forms of organization to corporate-like models

I. Introduction

1. At the twenty-third session of Working Group I, held in Vienna on 17 to 21 November 2014, Italy and France submitted observations on Possible Alternative Legislative Models for Micro and Small Businesses (A/CN.9/WG.I/WP.87). Such observations aimed at presenting domestic legislative models applicable to micro and small businesses that could provide for the segregation of business assets without requiring the creation of an entity with legal personality, but that could offer limited liability protection. In particular, as for the Italian model, reference was made to cooperation among micro, small and medium-sized enterprises (MSMEs) through the so-called "network contract" (*contratto di rete*). This model not only offers the possibility of segregation of assets and consequently limited liability protection, but also facilitates internationalization of MSMEs and cross-border cooperation. Moreover, it provides a tool to link MSMEs to larger companies by permitting MSMEs to be connected to the supply chain of such companies.

2. Working Group I is currently working on two separate instruments, one on business registration (A/CN.9/WG.I/WP.101 — Draft legislative guide on key principles of a business registry) and another on the statute of a limited liability organization (A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1 — Draft Legislative Guide on an UNCITRAL Limited Liability Organization). At its twenty-seventh session (Vienna, 3 to 7 October 2016), the Working Group agreed to devote some time at its twenty-eighth session (New York, 1 to 9 May 2017) on possible future work once the two mentioned instruments are completed. To complement the observations by Italy and France (A/CN.9/WG.I/WP.87), and being convinced that models to segregate business assets by entrepreneurs as well as to permit internationalization and cross-border cooperation between MSMEs would complement the texts the Working Group is currently working on, Italy submits the present observations to illustrate possible future work on alternative forms of organization to limited-liability entities, and its foreseen benefits for MSMEs. The aim is to fill a gap between issues of business registration, on the one hand, and the establishment of a limited-liability entity, on the other hand, with a flexible contractual instrument. As it will be explained, such a model would particularly fit those economies whose economic environment heavily relies on MSMEs.

3. It is the intention of Italy to submit a more articulated note on alternative forms of organization to the Commission at its 50th session, in July 2017, taking into consideration comments and recommendations that the Italian delegation will receive from Working Group I. Italy welcomes delegations that would like to join it in submitting such a note.

II. Business landscape

1. Global value chains offer many opportunities to small and medium-sized enterprises

4. Economic development is increasingly aimed at driving local economies towards global markets. Recent statistics show that, between 1995 and 2011, most developed and developing countries have significantly increased their contributions to global value chains (GVCs), taking advantage of lower trade costs and improved

communication technology.[1] Competitiveness of GVCs does not mirror one single national economy but builds on "*bundle of labor, capital and technology*".[2]

5. In this landscape, foreign investments have played a major role. However, even greater prominence has been achieved by the so called "non-equity modes" (NEMs) of international production, such as contract manufacturing, services outsourcing, contract farming, franchising, licensing, management contracts, and other types of "*contractual relationship through which transnational corporations (TNCs) coordinate the activities of host-country firms, without owning a stake in those firms*".[3] Indeed, participation in GVCs requires more and more explicit coordination and, through such coordination, developing countries are called upon to facilitate the upgrading of local economies.[4]

6. What is the role of MSMEs in this context? GVCs offer important opportunities to small and medium-sized enterprises, including those operating in low income and developing countries.[5] By learning from and interacting with other actors in the chain, these businesses can access new technologies and new markets, thereby contributing to the creation of value not only for the benefit of local economies but also for society at large.[6]

2. However, MSMEs experience a number of serious hurdles in accessing global trade and global supply chains

7. One of these is the lack of an appropriate common legal framework. Both micro enterprises (MiE) and SMEs[7] constitute the skeleton of domestic industrial and agricultural production systems.[8] They experience serious hurdles to access global trade and global supply chains.[9] These hurdles concern in particular: (1) access to capital, (2) access to technology, intellectual property rights, and know how, and (3) access to a qualified and well-trained labour force.[10] In order to ensure the participation of SMEs in global trade, access to critical resources has to be facilitated by promoting an appropriate common legal framework and new industrial policies.

---

[1] See WTO, International trade statistics 2015: "In 2011, nearly half (49 per cent) of world trade in goods and services took place within GVCs, up from 36 per cent in 1995. The tendency of countries to specialize in particular stages of a good's production (known as vertical specialization), brought about by foreign direct investment, has created new trade opportunities, especially for small developing countries and eastern European economies. As a result, world trade in intermediate goods has grown with the rise of vertical specialization".

[2] R. Baldwin, Multilateralising 21st Century Regionalism, OECD Global Forum on Trade, February 2014, at 22.

[3] See UNCTAD, World Trade Investment Report, 2011, explaining that cross-border NEM activity worldwide is estimated to have generated over $2 trillion in sales in 2009. Contract manufacturing and services outsourcing accounted for $1.1-1.3 trillion, franchising for $330-350 billion, licensing for $340-360 billion, and management contracts for around $100 billion.

[4] See OECD, WTO and World Bank Group Report, Global Value Chains: Challenges, Opportunities and Implications for Policy, prepared for submission to the G20 Trade Ministers Meeting Sydney, Australia, 19 July 2014

[5] See OECD and World Bank Group Report, Inclusive Global Value Chains Policy options in trade and complementary areas for GVC Integration by small and medium enterprises and low-income developing countries, prepared for submission to G20 Trade Ministers Meeting Istanbul, Turkey, 6 October 2015.

[6] See Inclusive Global Value Chains Policy options, cit.

[7] The differences between micro-enterprises and SMEs suggest that specific policies are required to support their activities and foster their growth both at the national and global levels. Whereas we believe that the objectives are similar, we maintain that legal instruments might differ depending on the size and capacity of the firms and the scope of their activities (whether global or local).

[8] In Italy, with regard to industry, services and construction sectors (no analogous data is available for agriculture), micro enterprises (0-9 employees) make up 95.3 per cent of the total, SMEs with 10-249 employees comprise 4.6 per cent and with 250+ employees represent 0.1 per cent of the total; in terms of value added, the ration is the following: micro enterprises 30.6%, SMEs 38.4%, large firms 31 per cent. In terms of the total number of firms, microenterprises are 83 per cent in the industrial sector, 96.7 per cent in services, and 96.1 per cent in construction; the percentage of SMEs is: 16.7 per cent in the industrial sector, 3.2 per cent in services, 3.9 in construction.

[9] See Inclusive Global Value Chains Policy options, cit.

[10] See ILO, Decent work global chains, International conference, 2016 available at www.ilo.org.

8. The participation of SMEs in global trade is made even more difficult by a fragmented legal framework. National legal systems have developed various instruments, primarily in company law, to promote the integration of SMEs but relatively little has been done to favour contractual collaboration both among SMEs and between them and global chain leaders like transnational corporations (TNCs). Fragmentation is even more problematic when considering national tax legislation, state aids and foreign direct investment (FDI) policies where differences are remarkable and regulatory arbitrage substantial. Harmonization of the law governing interfirm contractual collaboration may reduce regulatory fragmentation and help SMEs taking part in global trade to access resources and opportunities.

3. Complementarity between the establishment of companies and contractual collaboration

9. SMEs' growth is driven, among other factors, by the adoption of an appropriate legal framework to promote their coordination in order to favour economic growth and specialization. Such growth can occur through integration in corporate entities or via contractual collaboration in various degrees.

10. These two families of legal instruments are complementary. The corporate-like family (company, cooperative) supports the integration of existing different enterprises when the level of mutual trust and reciprocal knowledge is high and the industrial project is well defined from the very beginning. The contractual family provides a set-up for enterprises to start new collaborations, in particular when they might not otherwise enter into a demanding and burdensome common industrial project. Lack of steady availability of physical capital or uneven access to financial resources among potential partners may also discourage SMEs from entering into corporate-like forms of integration. The complementarity between corporate-like and contractual modes might establish a process whereby SMEs start with contractual collaboration and end with the creation of new companies that integrate some of their activities.

11. When SMEs have relative little knowledge about their partners, the degree of risk and uncertainty stemming from potential collaboration is higher, and the incentives to invest might initially be lower. In that case, the contractual approach is more appropriate than the creation of a new company. What is needed is a more flexible instrument that maximizes the benefits of cooperation while reducing the costs of conflict and opportunism.

12. Collaboration is a process that might require various steps. The first is through contractual collaboration that may or may not translate into the creation of a company with a higher degree of ownership integration of different types of assets including both tangible and intangible ones. Hence, the evolution of a contractual collaboration over time should be compatible with dissolution, preservation or transformation of the contract into a corporate entity. Contractual networks (i.e.: multiparty contracts between SMEs located in the same or in different jurisdictions) may provide such an instrument with a relatively low level of initial capital, low entry and exit costs, and a light governance infrastructure. Multiparty contracts may facilitate access to capital by providing joint collateral to credit institutions; they can facilitate access to new technologies with the creation of common technological platforms, where common intellectual property rights may be used. Access to qualified labour force may be enabled through the possibility of sharing employees who may rotate among the enterprises participating in the network, thus increasing specialization and the effective use of human capital.

4. Existing types of Contractual networks

13. Contractual networks include different existing forms of multiparty contracts ranging from joint ventures to consortia, franchises or patent pools; they can take the form of either a single contract with several parties, or of a set of interlinked bilateral contracts with high levels of coordination and interdependence. These contractual models include production and distribution and can be domestic or international. They can provide SMEs with the legal infrastructure to trade (for example, through

e-commerce platforms and payment systems like "Pay-pal"). Legal frameworks exhibit a great degree of differentiation between jurisdictions that make international SME collaboration very difficult. In addition, choice of law and forum rules are unclear for multiparty contracts;[11] and even less clear for interlinked contracts.

14. Essentially two forms of contractual networks are currently in place. **Vertical networks** operate along supply chains that include different stages of production/distribution. Participants in vertical networks (e.g. suppliers) perform activities (e.g. production of intermediate goods, supply of services) to be incorporated into the activity of another chain participant (e.g. an assembler) and the network is aimed at coordinating their interdependent activity along the lines of a chain project, often developed by a chain leader. TNCs often face high transaction costs when investing in developing countries because local enterprises operate in isolation and conventional local intermediaries (such as local leaders, trade associations, or local chambers of commerce, governmental agencies) do not operate very effectively. TNCs look for stable relationships that decrease coordination costs and increase the stability of the supply required by global markets. In order to stabilize the supply chain governance they need stronger coordination between local suppliers of inputs and intermediate goods and chain leaders. This process is reinforced by the increasing number of regulatory requirements, as on safety, environmental and social protection, to be applied along the global chain. In order to facilitate access to global trade, cross border contractual collaboration is necessary and specific legal forms tailored to SMEs are needed. Such forms may contribute to the process of the internationalization of SMEs through or independently from existing global chains. Consolidated international instruments related to sales and distribution currently provide an excellent toolkit for bilateral relationships but do not allow the promotion of multiparty coordination among SMEs contributing to the same production process but located in different jurisdictions.[12] Multiparty contracts linking several SMEs involved in global supply chains can provide a useful collaborative instrument as long as they are designed to make access to critical resources easier and cheaper.

15. **Horizontal networks** are networks in which various SMEs contribute to a common project with their *products or services*, playing a similar role along the supply chain or having similar expectations from the network programme (e.g. new trade opportunities for the sale of final products). The latter may, for example, concern the construction industry, where suppliers of electrical infrastructure may collaborate with plumbers and carpenters to complement the work of the main contractor, or the fashion and garment industry where product design and software in the initial stage of the production process have to be integrated. Horizontal networks can also be found in agriculture, or agri-food industry, where, for example, producers of different final products (such as wines) or commodities (e.g. rice, soy, or corn) collaborate to comprise a richer portfolio of products to enter a new foreign market.

16. Vertical networks of SMEs are part of broader supply chains that include one or multiple chain leaders. For example, in the agri-food industry supply chains, both a producer of the final product and a large retailer may share the leadership. The contractual relationships between the leader(s) and the SMEs are generally characterized by strong asymmetric power between enterprises located in different jurisdictions. The choice of applicable law and forum becomes very important and may influence the effectiveness of collaboration. Horizontal networks may include SMEs of the same jurisdiction (the majority) or different jurisdictions (more common in the high tech industry or e-commerce). Horizontal networks feature lower asymmetric power distribution.

---

[11] See Hague Conference on Private International Law, Principles on choice of law in international commercial contracts (approved on 19 March 2015), available at https://assets.hcch.net/docs/5da3ed47-f54d-4c43-aaef-5eafc7c1f2a1.pdf.

[12] There is some debate about revising the United Nations Convention on Contracts for the International Sale of Goods (CISG) in order to correlate sales contracts into global chains. UNCITRAL Working Group I might contribute to this debate by coordinating the proposal on contractual networks with proposals to revise existing international contractual instruments.

17. A third relevant dimension of contractual networks is their sheer number. Small collaborative networks (from 2 to 10 enterprises) of SMEs require a different governance structure than those encompassing hundreds or even thousands of SMEs (as it is the case for transnational e-commerce platforms devoted to SMEs).

18. Finally, creativity and innovation with intellectual property protection and management are among the key drivers of competitiveness, growth and development. This underscores the importance of network contracts in giving rise to platforms with a view to jointly exploit intellectual property rights. In particular, SMEs can share existing technology provided by one or more platform members, directly co-produce new technology within the platform itself or acquire technology licensed/transferred by subjects that are not party to the platform. Network contracts may also ease the provision of technical assistance given to SMEs related to intellectual property by business and government bodies, by facilitating the transfer of information and knowledge to a single collective subject and its subsequent dissemination among the network members.

5. Specific issues for micro enterprises

19. Compared to SMEs, MiEs exhibit financial, technological, trade weaknesses that are greater than for other types of enterprises. The role played by public institutions, non-governmental organizations (NGOs), trade or financial intermediaries and even MNCs is often pivotal to determine MiEs' chance to access GVCs. Such access requires a long-lasting process in which strategic collaboration, capacity-building and fair value allocation are key components. Networks aim at this type of collaboration, which is mostly focused on services rather than the mere exchange of goods.

20. Indeed, several types of networks may be distinguished among those involving MiEs:

(a) Those involving only MiEs;

(b) Those involving MiEs and non-business actors such as public entities, NGOs and the like;

(c) Those involving MiEs and business actors such as MNCs and/or trade intermediaries; and

(d) Various combinations of the above.

21. When dealing with networks involving MiEs, a uniform legal instrument should specifically address issues concerning the fairness on which network relations should be based and the guarantees that MiEs should enjoy vis à vis other GVC participants, regardless of whether these members belong to the same contractual network. Whereas such an instrument may envisage the adoption of mechanisms monitoring the fairness of contractual terms and practices in case (c), in the first two instances it could aim at empowering contracting parties (e.g. by establishing common negotiating platforms) in order to reduce power asymmetries along the chain.

22. A legal instrument facilitating collaboration among MiEs should focus on collective capacity-building in order to favour both individual and collective economic growth.

III. Legal framework

23. In light of the above, an international legal instrument could eliminate legal barriers and accommodate the specific needs arising from this model of cooperation. With the sole intent of presenting to the Working Group the issues that may be considered, and in the hope of making it easier to assess the potential use of such an instrument, Italy will discuss some of the main issues to be included in a legal framework. These are broad and preliminary considerations to be intended for discussion, with no intention of being exhaustive, nor by any means to suggest a specific policy choice to the Working Group.

1. Possible legal approaches to Contractual networks

24. The above-noted differences suggest that a legal framework to address contractual networks might be organized around some functional distinctions:

(a) Horizontal *versus* vertical;

(b) Domestic *versus* international;

(c) Small *versus* large networks;

(d) Networks of MiEe *versus* networks of SMEs; and

(e) For profit *versus* non-profit networks.

2. An integrated modular proposal of an international instrument on Contractual networks

25. Whereas we believe that instruments for MiEs might differ from those for SMEs and that the latter should definitely be part of global trade, we would envisage a modular legal instrument with common general principles and possibly two specific sections, one devoted to MiEs and one to SMEs.

26. These principles might be drafted having in mind a multilevel system: i.e., whatever is not explicitly regulated would be supplemented by national legislation, leaving scope for a certain level of differentiation in legal architecture. The international instrument would define the specific principles and provide the relevant definitions but some aspects (for example, mistake, fraud, or avoidance) could be left to applicable contract law.

27. Most importantly, the structure of such principles should identify the new roles of contract beyond pure exchange, focusing on organizational and regulatory functions in order to ensure that network contracts can also promote compliance with global standards related to environmental, social, and data protection requirements, and should be applicable to both domestic and transnational networks.

28. These rules should ensure both the stability and the flexibility of the contractual network, and distinguish between internal relationships among members and relationships between the network and third parties, in particular, with creditors. Such rules could provide for different degrees of complexity with increasingly structured forms of governance, which could take place inside the network or could use companies controlled by the network to perform specific activities that require limited liability and asset partitioning.

3. Governance, knowledge transfer and innovation

29. When defining a uniform legal framework, strategic importance might be devoted to knowledge transfers and innovation among the enterprises of the network and between the network and third parties. Contract rules become extremely important when knowledge cannot be “propertized” (i.e. cannot be made proprietary) either because no legal devices are available, or because the benefits of sharing are such that individual or even collective ownership would be inappropriate. In particular, two problems usually emerge within network governance: (1) Proportionality between investments, contributions and revenues, since lack of proportionality often emerges between individual investments and profits, and opportunistic behaviour by some members of the network might arise; and (2) The interest of the contractual networks might require protection against behaviour such as unfair competition, violations of trade secrets, or unauthorized transfers to third parties external to the network.

30. A special regime concerning trade secrets and intellectual property rights might also need to be devised so as to maximize incentives to produce innovation inside the network, but, at the same time, to generate strong safeguards against knowledge leaking outside the network. Since creation and use of intellectual property rights might be too expensive for individual MSMEs, forms of collective ownership and

licensed use might be regulated by multiparty contracts making innovation also possible for firms with limited capital.

31. Further, consideration should be given to instruments that permit the segregation of assets and the establishment of limited liability protection for the activities covered by the contractual network (or parts thereof), in order to offer an additional instrument to MSMEs.

32. Finally, specific rules concerning private international law might be appropriate in this context.[13] In multiparty contracts, when enterprises located in different jurisdictions want to collaborate there is a need to identify the applicable law to fill the gaps that are not explicitly regulated by the contract. Freedom of choice of applicable law should be encouraged along the lines of other initiatives established at the international level.[14] The international dimension may also require forms of mutual recognition when enterprises are registered in national registries with different requirements. To this latter extent, it would be advisable that the proposed international instrument permit coordination among the different business registration regimes in the countries of the network's members.

Annex

I. Italian Law on Network Contracts[15]

1. Main features

1. The business network contract (*contratto di rete*) was recently introduced into the Italian legal system by Law Decree No. 5 of 10 February 2009, converted into Law No. 33 of 9 April 2009 and further amended.[16] This is an agreement by which "*more entrepreneurs pursuing the objective of enhancing, individually and collectively, their innovative capacities and competitiveness in the market, undertake a joint programme of collaboration in the forms and specific clusters as they agree in the network contract, or to exchange information or services of an industrial, commercial, technical or technological nature, or to engage in one or more common activities within the scope of their business*" (Article 3).[17] The scope of business network contracts can thus broadly differ, and kind and degree of cooperation are left to the free agreement of parties, as long as, through the determination of a common programme, strategic goals are shared that allow either the improvement of innovative capacity or the growth of competitiveness.

2. Cooperation can range from a plain undertaking to exchange information or services, to the organization of cooperation, up to the joint exercise of economic activities. In addition, the two mentioned goals of cooperation are widely interpreted: improvement of innovative capacity is understood to include any new opportunities that firms may have access to by virtue of belonging to a network, such as the development of new technical or technological opportunities.

3. With regard to the growth of competitiveness, this is generally meant to increase the competitiveness of the members of the network or the network itself at both the national and international level, in the sense of creating business opportunities otherwise precluded to a single firm. Competitiveness is increased thanks to measures (such as — but not limited to — access to funding, existing fiscal facilitations, participation in public bids and labour law measures for companies in contractual

[13] The above considerations are without any prejudice to the competence of The Hague Conference on Private International Law.

[14] See The Hague Conference on Private International Law, Principles on choice of law in international commercial contracts (approved on 19 March 2015), available at https://assets.hcch.net/docs/5da3ed47-f54d-4c43-aaef-5eafc7c1f2a1.pdf.

[15] This Annex is a slightly adjusted version of paras. 8 to 17, A/CN.9/WG.I/WP.87.

[16] This has been further amended in 2009-2010 (Law No. 99/2009 and Law No. 122/2010) and in 2012 (Law No. 134/2012 and Law No. 221/2012).

[17] As of 3 January 2017, 3,320 of such contracts have been established, involving almost 17,000 entrepreneurs (http://contrattidirete.registroimprese.it).

networks) and from endogenous growth factors (such as the overcome of dimensional limits, the creation of marketing opportunities, knowledge exchange etc.). This leaves the door open to vertical (coordination of suppliers with shared standards of production, distribution or franchise chains) or horizontal integration (research and development, centralized point of sale or of acquisition). Under the most recent amendment to the relevant legislation, business networks can also take part in public bids.[18]

4. Whatever categories can be abstractly drawn in respect of the business functions of network contracts, there is no specific type of network agreement for any of these entities: it is up to the parties to decide the organizational structure and functioning of their network. The sole requirement to enter into a business network contract is to be an entrepreneur, irrespective of the nature and the activities performed. This includes sole ownership, companies of all kinds and public entities, including those of a non-commercial nature, as well as for profit and non-profit entities (mixed networks do not seem to be precluded, where there are for profit and non-profit participants). Business networks, although factually mainly used as a scheme for cooperation of small and medium-sized enterprises, are thus generally open to any businesses, including corporations and groups.

2. Minimum content of the contract and registration

5. A business network contract must specify at a minimum: (i) The business or corporate name of each participant, as well as that of the network in the event that a common fund is constituted; (ii) Indication of the strategic objectives of the cooperation and the procedures agreed upon to measure progress towards these objectives; (iii) Description of the network programme, spelling out rights and obligations of each participant, the means of implementation of the common purpose, and, in the case of a common fund, the measure and standards of evaluation of participants' contributions, as well as its management regulation; (iv) Duration of the contract and rules for adhesion. Rules for early termination or withdrawal of a participant may also be inserted (in whose absence, general principles on termination of multiparty agreements with a common purpose apply); (v) Name of the entity, if any, appointed to act as the body responsible for the administration of the execution of the contractor of individual parts or stages thereof; (vi) Rules for decision-making of participants on any subject or aspect of common interest (not delegated to the body responsible for administration, if appointed).

6. The contract must be in writing, either by public deed or authenticated by a public notary, and be registered with the Business Registry of the place of registration of each of its members. Effectiveness of the contract runs from when the last of the prescribed registrations occurs, both among the contracting parties[19] and against third parties: registration is thus a necessary and essential prerequisite for the legal validity of the contract (*pubblicità costitutiva*). Modifications to the network and the contract need also to be registered in the Business Registry of the member directly involved and must be directly communicated by the manager of the relevant Business Registry to all other Registries involved so as to have the change automatically included in each of them. The contract may also provide for the establishment of a capital fund (*fondo patrimoniale*) and the appointment of a common body responsible for the management, in the name and on behalf of the participants, of activities for the execution of the contract or of individual parts or stages thereof.

3. Separate fund

7. In order to carry out the programme of the business network, contracting parties may establish a common fund. This is a separate fund exclusively devoted to implement the programme of the network and then to the pursuit of its strategic objectives. Creditors of individual participants to the network cannot rely on the fund,

[18] Italian Authority for the Oversight of Public Contracts for Works, Services and Supplies (AVCP), Resolution No. 3/2013.

[19] However, some scholars are of the view that registration only affects enforceability against third parties, the network contract being valid among parties irrespective of its registration.

which only serves to satisfy claims deriving from the activities performed within the scope of the network. Provisions in the civil code on the constitution and effects of a fund in consortia apply, although the exact scope of such reference has to be assessed taking into account that a business network contract, as described above, might involve a much looser cooperation among members, where activities might be carried out individually albeit for a common purpose and under a common programme.

8. As mentioned above, the relevant contract must establish the extent and criteria for the evaluation of contributions. These can be either in cash or in goods and services. The contribution may also consist of a separate fund. In separate legislation, a common fund has also been foreseen for agricultural enterprises establishing a business network, which can in turn contribute to a national mutual fund for the stabilization of returns of this category of entrepreneurs.[20]

4. Governance

9. Governance of the network is left to contractual freedom. If a common body is appointed for the management of the activities of the fund, it will act in the name and on behalf of the network when it has legal personality, or in the name and on behalf of the members of the network if it has none.

5. Legal personality

10. Business networks do not normally have legal personality. However, the most recent amendments to relevant legislation (as of 2012) permit these to also be established with legal personality.[21]

[20] DL 22 June 2012, No. 83 as converted into Law No. 134/2012.

[21] As of 3 January 2017, 474 business networks were established with legal personality (http://contrattidirete.registroimprese.it).

G. Note by the Secretariat on compilation of draft recommendations on key principles of a business registry

(A/CN.9/WG.I/WP.103)

[Original: English]

In order to assist the Working Group in its consideration of the draft legislative guide on key principles of a business registry (A/CN.9/WG.I/WP.101), the Secretariat has prepared this reference document consisting of a compilation of only the draft recommendations contained in that text. The draft recommendations in this document are the same as those in A/CN.9/WG.I/WP.101, but without footnotes. References to paragraph numbers in this compilation are to the paragraphs of the commentary in A/CN.9/WG.I/WP.101.

Contents

Draft recommendations on key principles of a business registry

I. Objectives of a business registry

Recommendation 1: Purposes of the business registry

The Regulation should provide that the business registry is established for the purposes of:

(a) Providing to a business an identity that is recognized by the enacting State and entitles the business to participate in, and receive the benefits of participating in, the legally regulated economy of the State; and

(b) Making accessible to the public information in respect of registered businesses.

Recommendation 2: Simple and predictable legislative framework permitting registration for all businesses

The Regulation or the law of the enacting State should:

(a) Adopt a simple structure for rules governing the business registry and avoid the unnecessary use of exceptions or granting of discretionary power; [former recommendation 7]

(b) Establish a system for the registration of businesses that permits registration of businesses of all sizes and legal forms; and [first half of former recommendation 1]

(c) Ensure that micro, small and medium-sized enterprises (MSMEs) are subject to the minimum procedural requirements except where such a business is subject to additional requirements under the law of the enacting State as a consequence of its particular legal form. [former recommendation 4]

Recommendation 3: Key features of a business registration system

The Regulation should ensure that the system for business registration contains the following key features:

(a) The registration process is publicly accessible, simple, user-friendly and time- and cost-efficient;

(b) The registration process is adapted to the needs of MSMEs;

(c) The registered information on businesses is easily searchable and retrievable; and

[(d) The registry system and the registered information are kept as current, reliable and secure as possible.]

II. Establishment and functions of the business registry

Recommendation 4: Responsible authority

The Regulation should establish that the organization and operation of the business registry is a function of the enacting State.

Recommendation 5: Appointment of the registrar

The Regulation should:

(a) Provide that [*the person or entity authorized by the enacting State or by the law of the enacting State*] has the authority to appoint and dismiss the registrar and to monitor the registrar's performance; and

(b) Determine the registrar's powers and duties and the extent to which those powers and duties may be delegated.

Recommendation 6: Transparency of the business registration system and accountability of the registrar

The designated authority should ensure that rules or criteria that are developed are made public to ensure transparency of the registration procedures and the accountability of the registrar in terms of respecting those procedures.

Recommendation 7: Use of standard registration forms

The Regulation should provide that standard registration forms are introduced to request the registration of a business and that guidance is available to registrants on how to complete those forms.

Recommendation 8: Capacity-building for registry staff

The designated authority should ensure that appropriate programmes are established to develop and/or strengthen the knowledge of the registry staff on business registration procedures and the operation of ICT-supported registries, as well as the ability of registry staff to deliver requested services.

Recommendation 9: Core functions of business registries

The Regulation should establish that the functions of the business registry include:

(a) Publicizing the means of access to the services of the business registry, and the opening days and hours of any office of the registry (see paras. 122 to 124 and 172 to 174, and recommendations 18 and 34);

(b) Providing access to the services of the business registry (see paras. 179 to 184 and recommendation 36);

(c) Providing guidance on choosing the appropriate legal form for the business, on the registration process and on the business's rights and obligations in connection thereto (see para. 45 and recommendation 7);

(d) Listing all the information that must be submitted in support of an application to the registry (see paras. 129 to 132 and recommendation 20);

(e) Assisting businesses in searching and reserving a business name (see para. 52);

(f) Providing the basis for any rejection of an application for business registration (see paras. 145 to 148 and recommendation 26);

(g) Registering the business when the business fulfils the necessary conditions established by the law of the enacting State (see para. 136 and recommendation 22);

(h) Ensuring that any required fees for registration have been paid (see paras. 185 to 189 and recommendation 37);

(i) Assigning a unique business identifier to the registered business (see paras. 103 to 104 and recommendation 14);

(j) Ensuring the entry of the information contained in the application submitted to the registry, any amendments thereto and any filing related to that business into the registry record, and indicating the time and date of each registration (see paras. 144, 157 and 158, and recommendations 25 and 30);

(k) Providing the person identified in the application as the registrant of the business with a copy of the notice of registration (see para. 136 and recommendation 22);

(l) Providing public notice of the registration in the means specified by the enacting State (see para. 137 and recommendation 23);

(m) Indexing or otherwise organizing the information in the registry record so as to make it searchable (see paras. 182 and 183 and recommendation 36);

(n) Providing information on the point of contact of the business as established by the law of the enacting State (see paras. 130 and 151 and recommendations 20 and 27);

(o) Sharing information among the requisite public agencies (see para. 110 and recommendation 16);

(p) Monitoring that a registered business has fulfilled and continues to fulfil any obligation to file information with the registry throughout the lifetime of the business (see paras. 155 to 158 and recommendations 29 and 30);

(q) Ensuring the entry of information on the declaration of deregistration of a business from the registry record, including the date of and any reasons for the deregistration (see paras. 201 to 205 and recommendations 43 to 45);

(r) Ensuring that the information in the registry is kept as current as possible (see paras. 152 to 153 and recommendation 28);

(s) Promoting compliance with the Regulation (see paras. 42 to 44 and recommendation 6);

(t) Protecting the integrity of the information in the registry record (see paras. 213 to 215 and recommendations 50-51);

(u) Ensuring that information from the registry record is archived as necessary (see paras. 208 to 210 and recommendation 48); and

(v) Offering services incidental to or otherwise connected with business registration (see paras. 80 to 83 and recommendation 11).

Recommendation 10: Structure of the registry

The Regulation should establish an interconnected registry system that would process and store all information received from registrants and/or entered by registry staff. Where such a system of interconnected business registries is set up, the registries should possess mutually consistent technical features so that stored information is accessible throughout the system.

III. Operation of the business registry

Recommendation 11: Electronic, paper-based or mixed registry

The Regulation should provide that the optimal medium to operate an efficient business registry is electronic. Should full adoption of electronic services not yet be possible, such an approach should nonetheless be implemented to as great an extent as permitted by the current technological infrastructure of the enacting State, as well as its institutional and legal framework, and expanded as that infrastructure improves.

Recommendation 12: One-stop shop: a single interface for business registration and registration with other authorities

The Regulation or the law of the enacting State should establish a single interface for business registration and registration with other public agencies, including designating which public agency should have overall authority for the single interface. Such an interface:

(a) May consist of a web platform or physical offices; and

(b) Should integrate the services of as many public agencies requiring the same information as possible, but at a minimum should include taxation and social services agencies.

Recommendation 13: Use of unique business identifiers

The Regulation should provide that a unique business identifier should be allocated to each registered business and should:

(a) Be structured as a set of numeric or alphanumeric characters;

(b) Be unique to the business to which it has been allocated; and

(c) Remain unchanged and not be reallocated following any deregistration of the business.

Recommendation 14: Allocation of unique business identifiers

The Regulation or the law of the enacting State should specify that the allocation of a unique business identifier should be carried out either by the business registry upon registration of the business, or before registration by a legally-designated authority. In either case, the unique business identifier should then be made available to all other public agencies sharing the information associated with that identifier, and should be used in all official communication in respect of that business.

Recommendation 15: Implementation of a unique business identifier

The Regulation or the law of the enacting State should ensure that, when adopting a unique business identifier across different public agencies:

(a) There is interoperability between the technological infrastructure of the business registry and of the other public agencies sharing the information associated with the identifier; and

(b) That existing identifiers are linked to the unique business identifier.

Recommendation 16 : Sharing of private data between public agencies

The Regulation should ensure that rules for the sharing of private data between public agencies pursuant to the unique business identifier system adopted:

(a) Conform with the applicable rules in the enacting State on public disclosure of private data;

(b) Enable public agencies to access private data included in the unique business identifier system only in order to carry out their statutory functions; and

(c) Enable public agencies to access private data included in the unique business identifier system only in relation to those businesses with respect to which they have statutory authority.

Recommendation 17: Exchange of information among business registries

The designated authority should ensure that systems for the registration of businesses should adopt solutions that facilitate information exchange between registries from different jurisdictions.

IV. Registration of a business

Recommendation 18: Accessibility of information on how to register

The designated authority should ensure that information on the business registration process and the applicable fees, if any, should be widely publicized, readily retrievable, and available free of charge.

Recommendation 19: Businesses required or permitted to register

The Regulation or the law of the enacting State should specify:

(a) Which businesses are required to register; and

(b) That all businesses are permitted to register.

Recommendation 20: Minimum information required for registration

The Regulation or the law of the enacting State should establish the minimum information and supporting documents required for the registration of a business, including at least:

(a) The name and address at which the business can be deemed to receive correspondence or, in cases where the business does not have a standard form address, the precise description of the geographical location of the business;

(b) The identity of the person or persons registering the business;

(c) The identity of the person or persons who are authorized to act on behalf of the business; and

(d) The legal form of the business being registered.

Recommendation 21: Language in which information is to be submitted

The Regulation should provide that the information and documents submitted to the business registry must be expressed in the language or languages specified by the enacting State, and in the character set as determined and publicized by the business registry.

Recommendation 22: Notice of registration

The Regulation should establish that the business registry should notify the registrant whether or not its registration is effective as soon as practicable, and, in any event, without undue delay.

Recommendation 23: Content of notice of registration

The Regulation should provide that the notice of registration may be in the form of a certificate, notice or card, and that it should contain the following information:

(a) The unique business identifier of the business;

(b) The date of its registration;

(c) The name of the business;

(d) The legal form of the business; and

(e) The legislation under which the business has been registered.

Recommendation 24: Period of effectiveness of registration

The Regulation should clearly establish that the registration is valid until the business is deregistered or until such time as a renewal of the registration is required.

Recommendation 25: Time and effectiveness of registration[1]

The Regulation should:

(a) Require the business registry to time and date stamp applications for registration and to process them in the order in which they are received and as soon as practicable, and, in any event, without undue delay;

(b) Establish clearly the moment at which the registration of the business is effective; and

(c) Specify that the registration of the business must be entered into the business registry as soon as practicable thereafter, and in any event without undue delay.

Recommendation 26: Refusal to register

The Regulation should provide that the business registrar:

(a) Must refuse registration of the business if the application does not meet the requirements specified in the Regulation or the law of the State and is required to provide to the registrant the basis for refusal in written form; and

(b) Is granted the authority to correct its own errors as well as any incidental errors that may appear in the information submitted in support of the registration of the business, provided that the conditions under which the registrar may exercise this authority are clearly established.

Recommendation 27: Registration of branches

The Regulation should ensure that:

(a) Registration of a branch of a business is required or permitted;

(b) Any definition of “branch” for registration purposes is consistent with the definition provided in the law of the enacting State; and

[1] The Working Group may wish to note recommendation 11 of the UNCITRAL Guide on the Implementation of a Security Rights Registry on “Time of effectiveness of the registration of a notice”.

(c) Provisions regarding branch registration should address the following issues:

(i) Time and date of registration of the branch;

(ii) Disclosure requirements, such as name, address of the person or persons registering the branch; name and address of the branch and copy of the notice of registration of the foreign company;

(iii) Information on the person or persons who can legally represent the branch; and

(iv) The language in which the registration documents should be submitted.

V. Post-registration

Recommendation 28: Maintaining a current registry

The Regulation should require the registrar to ensure that the information in the business registry is kept current, including through:

(a) Sending an automated request to registered businesses at periodic intervals requiring them to report whether the information maintained in the registry continues to be accurate or stating which changes should be made; and

(b) Updating the registry immediately upon receipt of the amending information or as soon as practicable thereafter.

Recommendation 29: Information required after registration

The Regulation should specify that after registration, the registered business must file with the business registry the following information:

(a) Any changes or amendments to the information that was initially required for the registration of the business pursuant to recommendation 20 or to the current information in the business registry as soon as those changes occur; and

(b) Periodic returns, which may include annual accounts, as required by the law of the enacting State.

Recommendation 30: Time and effectiveness of amendments to registered information

The Regulation should:

(a) Require the business registry to time and date stamp amendments to registered information and to process them in the order in which they are received;

(b) Notify the registered business as soon as practicable that its registered information has been amended; and

(c) Establish when amendments to the registered information are effective.

VI. Accessibility and information-sharing

Recommendation 31: Public access to business registry services

The Regulation should permit any person to access the services of the business registry and the information contained in the registry.

Recommendation 32: Public availability of information

The Regulation should specify that all registered information is available to the public unless it is restricted for reasons of confidentiality as set out in the law of the enacting State, or for reasons of personal security.

Recommendation 33: Where information is not made public

In cases where information in the business registry is not made public, the Regulation should:

(a) Establish which information concerning the registered business is subject to the applicable rules in the enacting State on public disclosure of private data and require the registrar to list the types of information that cannot be publicly disclosed; and

(b) Specify the circumstances in which the registrar may use or disclose information that is subject to confidentiality restrictions.

Recommendation 34: Hours of operation

The designated authority should provide that:

(a) If access to the services of the business registry is provided through a physical office:

(i) Each office of the registry is open to the public during [the days and hours to be specified by the enacting State]; and

(ii) Information about any registry office locations and their opening days and hours is publicized on the registry's website, if any, or otherwise widely publicized, and the opening days and hours of registry offices are posted at each office;

(b) If access to the services of the business registry is provided electronically, access is available at all times; and

(c) Notwithstanding subparagraphs (a) and (b) of this recommendation, the business registry may suspend access to the services of the registry in whole or in part in order to perform maintenance or provide repair services to the registry, provided that:

(i) The period of suspension of the registration services is as short as practicable;

(ii) Notification of the suspension and its expected duration is widely publicized; and

(iii) Such notice should be provided in advance and, if not feasible, as soon after the suspension as is reasonably practicable.

Recommendation 35: Direct electronic access to submit registration, to search and to request amendments

The Regulation should establish that, where information and communication technology is available, registrants should be allowed to enter and submit their information, and the public should be allowed to access the information on the business registry, without requiring the physical presence of the user in the business registry office or the intermediation of the registry staff.

Recommendation 36: Facilitate access to information

The Regulation should ensure the facilitation of access to business registration and registered information by avoiding the creation of unnecessary barriers such as requirements for the installation of specific software; charging prohibitively expensive access fees; requiring users of information services to register or otherwise provide information on their identity; or unduly limiting the languages in which information on the registration process is available.

VII. Fees

Recommendation 37: Fees charged for registry services

The Regulation should establish fees for registration and post-registration services, if any, at a level that is low enough that it encourages business registration, and that, in any event, does not exceed a level that enables the business registry to cover the cost of performing those services.

Recommendation 38: Fees charged for information

The Regulation should establish that information contained in the business registry should be available to the public free of charge, but should permit modest fees to be charged for value-added information products produced or developed by the registry.

Recommendation 39: Publication of fee amounts and methods of payment

The designated authority should ensure that fees payable for registration and information services should be widely publicized, as should acceptable methods of payment.

VIII. Sanctions and liability

Recommendation 40: Sanctions

The Regulation should establish and ensure broad publication of sanctions (including fines, deregistration and loss of access to services) that may be imposed on a business for a breach of its obligations under the Regulation. Such rules may include provisions pursuant to which a breach of obligation may be forgiven provided it is rectified within a specified time.

Recommendation 41: Liability for submission of misleading, false or deceptive information

The Regulation or the law of the enacting State should establish the liability of the registrant or the registered business for any misleading, false, incomplete or deceptive information that the registrant or business has knowingly submitted to the business registry.

Recommendation 42: Liability of the business registry

The Regulation or the law of the enacting State should establish whether the business registry may be held liable for loss or damage caused by error or negligence in the registration of businesses or the administration or operation of the registry.

IX. Deregistration

Recommendation 43: Voluntary deregistration

The Regulation should require the registrar to deregister a business on the application of the business for deregistration that fulfils the requirements according to the law of the enacting State.

Recommendation 44: Compulsory deregistration

The Regulation should:

(a) Require the registrar to deregister a business when it is ordered to do so by a specified competent authority or the court or when the business is no longer in operation; and

(b) Provide that the decision or order for deregistration of the business must be placed on the registry.

Recommendation 45: Process of deregistration

The Regulation or the law of the enacting State should provide that:

(a) A written notice of the deregistration is sent to the registered business; and

(b) The deregistration is publicized in accordance with the legal requirements of the enacting State.

Recommendation 46: Reinstatement of registration

The Regulation or the law of the enacting State should specify the circumstances under which and the time limit within which the registrar is required to reinstate a business that has been deregistered.

Recommendation 47: Time and effectiveness of deregistration

The Regulation should:

(a) Specify when the deregistration of a business has legal effect;

(b) Specify that any required notice of the deregistration for that legal form of business has been publicized in accordance with the law of the enacting State; and

(c) Specify the legal effects of deregistration.

X. Preservation of records

Recommendation 48: Preservation of records[2]

The Regulation should provide that:

(a) Documents and information submitted electronically by the registrant and the registered business, including information in respect of deregistered businesses, should be preserved by the registry in perpetuity so as to enable the information to be retrieved by the registry and other interested users;

(b) Where paper documents have been submitted and the information contained in them has been entered into an electronic registry that meets the reliability standards established by the State, a minimum period of preservation of such documents should be specified by the enacting State; and

(c) Where paper documents have been submitted and the information contained in them has not been entered into an electronic registry the period of preservation of such documents should be specified by the enacting State, and should be for at least the life of the business, plus a reasonable time after any deregistration of that business.

Recommendation 49: Amendment or deletion of information

The Regulation should provide that the registrar does not have the authority to amend or delete information contained in the business registry record except in those cases specified in the Regulation or elsewhere in the law of the enacting State.

Recommendation 50: Protection against loss of or damage to the business registry record[3]

The Regulation or the law of the enacting State should:

(a) Require the business registry to protect the registry records from the risk of loss or damage; and

---

[2] The Working Group may wish to note recommendation 21 of the UNCITRAL Guide on the Implementation of a Security Rights Registry on "Archiving of information removed from the public registry record".

[3] The Working Group may wish to note recommendation 17 of the UNCITRAL Guide on the Implementation of a Security Rights Registry on "Integrity of the registry record".

(b) Establish and maintain back-up mechanisms to allow for any necessary reconstruction of the registry record.

Recommendation 51: Safeguard from accidental destruction

The Regulation or the law of the enacting State should provide that appropriate procedures should be established to mitigate risks from force majeure, natural hazards, or other accidents that can affect the processing, collection, transfer and protection of data housed in electronic or paper-based business registries.

XI. The underlying legislative framework

Recommendation 52: Clarity of the law

The law of the enacting State should, to the extent possible, consolidate legal provisions pertaining to business registration in a single legislative text, which is clearly written and uses simple language that can be easily understood.

Recommendation 53: Flexible legal forms

The law of the enacting State should permit flexible and simplified legal forms for businesses in order to facilitate and encourage registration of businesses of all sizes, including those forms considered in the [UNCITRAL legislative guide on an UNCITRAL limited liability organization].

Recommendation 54: Primary and secondary legislation to accommodate the evolution of technology

The law of the enacting State should establish guiding legal principles in relation to electronic registration in primary legislation, and should set out specific provisions on the detailed functioning and requirements of the electronic system in secondary legislation.

Recommendation 55: Electronic documents and electronic authentication methods

The law of the enacting State should:

(a) Permit and encourage the use of electronic documents as well as of electronic signatures and other equivalent identification methods;

(b) Regulate such use pursuant to the following principles:

(i) Documents cannot be denied legal effect, validity or enforceability solely on the grounds that they are in electronic format, or that they are signed electronically;

(ii) The place of origin of the electronic signature should not determine whether and to what extent the electronic signature is legally effective;

(iii) Different technologies that may be used to communicate, store and/or sign information electronically should be subject to the same legal treatment; and

(iv) Electronic documents and electronic signatures have the same purpose and function as their paper-based counterparts and are thus functionally equivalent to them; and

(c) Establish criteria to reliably identify the person submitting an electronic document and/or using an electronic signature or equivalent authentication method.

Recommendation 56: Electronic payments

The law of the enacting State should include legislation to enable and facilitate electronic payments.

H. Note by the Secretariat: observations and model provisions from the Government of Colombia: dissolution and liquidation of MSMEs

(A/CN.9/WG.I/WP.104)

[Original: English]

Contents

Annex

Observations by the Government of Colombia

I. Introduction

1. The Government of the Republic of Colombia would like to submit the following observations concerning the dissolution and winding up of MSMEs. As a point of departure it must be highlighted that during its forty-sixth session in 2013, the United Nations Commission on international Trade Law (UNCITRAL) requested that work be initiated aimed at reducing the legal obstacles and barriers encountered by micro, small and medium-sized enterprises (MSMEs) *throughout their life cycle*, with a particular focus on their context in developing countries.[1] The life cycle of a business could be said to consist of several stages, which may be summarized as starting a business, operating it, undergoing its restructuring and dissolving and winding up a business.[2]

2. At its most recent sessions (Twenty-Sixth Session, New York, 4 to 8 April 2016 and Twenty-Seventh Session, Vienna, 3-7 October 2016), Working Group I continued its consideration of two main topics, namely, a discussion regarding a legislative guide on Simplified Business Entities as well as the key principles of business registration. These deliberations have taken place on the basis of the framework of issues drawn from the key features of simplified business regimes (outlined in A/CN.9/WG.I/WP.86), and as illustrated in the draft model law on simplified business entities (A/CN.9/WG.I/WP.89), as well as other possible models (such as the one contained in the annex to A/CN.9/WG.I/WP.83).

3. Until recently, most efforts by the WG have been focused on the useful simplification of business incorporation and registration. In that sense, the WG1 discussions have covered specifically the initial stages of business formation, registration and operation of an MSME.[3] Marginal discussions have also taken place on the topics related to the end stages of a corporation, which relate specifically to its dissolution and winding up. The Government of Colombia respectfully submits that it could be useful for the Working Group to consider an additional evaluation of the above-referred topic. For that purpose it is also suggested the possible adoption of an Annex to the draft legislative guide (A/CN.9/WG.I/WP.99/

---

[1] *Official Records of the General Assembly, Sixty-eighth Session, Supplement No. 17* (A/68/17), para. 321; reiterated at subsequent sessions of the Commission: ibid., *Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 321 and Seventieth Session, Supplement No. 17 (A/70/17), paras. 220, 225, 340 and 321.

[2] The Commission stated that "such work should start with a focus on the legal questions surrounding the simplification of incorporation" and has confirmed Working Group I's approach that such work should proceed on two relevant issues: legal questions surrounding the creation of a simplified business entity and key principles in business registration. Supra, note 1, and ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), under preparation.

[3] Report of Working Group I (MSMEs) on the work of its twenty-sixth session, A/CN.9/866, paras. 22 to 47.

and A/CN.9/WG.I/WP.99/Add.1) in order to include a few provisions that could be used to illustrate the manner in which the winding up process could be regulated.

II. Observations on Dissolution and Liquidation of MSMEs

4. The observations of Colombia are based on the premise that a vast majority of businesses in both the developing and the developed world are MSMEs,[4] and that it is important to consider both the legal framework for their formalization, as well as the rules relating to their dissolution and winding up.[5] Therefore, it would be useful to thoroughly evaluate the entire cycle of a business, so that it can be formalized at the outset in accordance with up-to-date legal provisions and also be able to close its operations and resolve all relations with creditors and shareholders at the end of such a cycle. This is particularly relevant in light of the obvious fact that many of the business entities will not be successful and therefore will need to close their operations and resolve all outstanding legal situations before extinction. In that sense, it could be useful to provide a set of suggested rules to govern its dissolution and liquidation. The Colombian Government believes that Recommendation 24 of the draft legislative guide could be expanded and further regulated by means of some legislation provisions as herein developed.

5. The global financial crisis of 2007-2008, that led to a recession in many parts of the world during the following 4 years is still being felt in many nations around the globe, and its effects will probably last for several more years. Many businesses were pushed into a state of instability and although some countries have slowly but greatly recovered, the annual number of business failures still remains above the levels that existed before the crisis in several countries.[6] Businesspeople, and entrepreneurs alike are now facing important decisions that need to be taken with regard to the viability of the business entity that they have created. This situation is particularly relevant in developing nations.

6. As mentioned before the proposed Annex provides provisions governing the stages of dissolution and winding up of a corporation. These rules, which could be particularly useful for corporations that have gone out of business, but need not resort to an insolvency proceeding to close their operations and resolve all situations with creditors and shareholders. This situation frequently takes place in MSMEs in cases in which the corporation's liabilities do not exceed the value of available assets after dissolution. In these situations it is necessary for those responsible for the business venture to provide publicity concerning the state of liquidation, appoint liquidators, prepare inventories and other financial statements, sell corporate assets, pay liabilities according to legal priorities and eventually return any remaining assets to the shareholders. Furthermore, it is also relevant to have access to mechanisms for the reactivation of a dissolved corporation and the reopening of the liquidation process after it has been completed when new assets are found. Pursuant to a contemporary approach, it would also be useful to provide a legal framework that allows for a corporation undergoing a winding up process to participate in restructuring proceedings such as mergers and divestitures.

7. Finally, it is important to note that the observations of Colombia on the topics of dissolution and winding up of corporations are drawn from best practices reflected in recent legislation, model acts, and directives including: Spanish Law 25/2011, which amended the Capital Companies Act Title X, Dissolution and Liquidation; the OHADA Uniform Act Relating to Commercial Companies and Economic Interest Groups; Regulation 1346/2000 of the European Union, which was updated by Regulation 2015/848, which will come into effect on June 26 of 2017; South Africa's

[4] 2nd OECD Conference Of Ministers Responsible For Small And Medium-Sized Enterprises (SMES) Promoting Entrepreneurship And Innovative SMES In A Global Economy: Towards A More Responsible And Inclusive Globalization Istanbul, Turkey 3-5 June 2004, Page 5.

[5] As it was done by means of Chapter 6 of document A/CN.9/WG.I/WP.83 as well as Recommendation 24, contained in A/CN.9/WG.I/WP.99/Add.1.

Companies Act 71 of 2008, the Colombian Commercial Code, as well as Colombian Law 1429 of 2010.

8. Of course, as has been usual with discussions within the Working Group, the Colombian Delegation encourages all delegations that would like to comment on this Annex and welcomes those who would like to join it in supporting the proposal.

Annex

Draft Model Provisions on Dissolution and Liquidation of MSMEs

Article 1. **Dissolution as per the law, by laws or by a mandatory court decision**

1. Corporations shall be wound up as per the law upon the expiration of the term of duration set forth in the by-laws, provided that it has not been extended and provided further, that extension is duly registered before the Mercantile Registry, prior to such expiration.

2. The initiation of an insolvency process of a corporation shall not, necessarily, result in a cause of dissolution, unless liquidation in bankruptcy proceeding is instituted.

3. Corporations shall also be dissolved for the causes provided under the by-laws or the law, as follows:

(a) The termination or impossibility to fulfill the objects set forth in the corporation's purpose clause;

(b) The situation in which the corporation fails to carry out the objects set forth in the corporation's purpose clause for two consecutive years;

(c) When the general meeting of shareholders comes to a deadlock in a manner that it becomes impossible to carry out the objects set forth in the corporation's purpose clause;

(d) The occurrence of any other cause set forth in the corporation's by-laws.

4. Dissolution as a result of a court decision

(a) If the general meeting of shareholders shall not be called upon, or the meeting cannot take place or the decision is not adopted, any interested party may file a motion before a court that has jurisdiction over the corporation.

Article 2. **Winding up decisions**

In any of the causes of dissolution referred to above, the liquidation of the corporation shall be subject to a decision adopted by the general meeting of shareholders. During the same meeting, the shareholders, by majority vote, shall appoint one or more liquidators who can be legal or natural persons.

Article 3. **Public disclosure of dissolution**

The dissolution of the corporation shall have legal effects before third parties as of the moment of its publication by the notice in the corporation's official website. In the absence of such a website, the notice shall be published in a newspaper of broad circulation in the city where the corporation has its domicile. Furthermore, the dissolution of a corporation shall be filed before the Mercantile Registry.

Article 4. **Corporation in liquidation**

1. Any corporation that has been dissolved shall retain its legal personality during the liquidation proceedings. Furthermore it shall add the expression "in liquidation" to their corporate name whilst the winding up process takes place.

2. The name of the liquidator shall, as well, appear on all instruments and documents issued by the corporations to third parties, including letters, invoices, notices and various publications.

3. During the liquidation period, all provisions set forth in the by-laws concerning the manner in which general meetings of shareholders shall be conducted will continue to be in place.

Article 5. **Directors and Liquidators**

1. As of the date in which the dissolution has been declared by a decision rendered by the general meeting of shareholders or by court order the following legal consequences shall ensue:

(a) Except for the provision contained in article 13, the legal capacity of the corporation shall be restricted to carrying out acts aimed at the immediate liquidation of the corporation;

(b) The directors will cease in their duties and all powers of representation shall continue to be carried out by the liquidator who shall act as the sole legal representative of the corporation and its powers shall extend to all operations necessary for the corporation's liquidation, unless a different provision is set forth in the corporation's by-laws.

2. In the event of death or dismissal of any of the liquidators, the general meeting of shareholders shall appoint the natural or legal person who will replace the deceased or dismissed liquidator. Unless otherwise provided in the by-laws, liquidators shall be appointed for an indefinite tenure.

Article 6. **Duties of the Liquidators**

1. Within three months of starting the liquidation proceedings, the liquidator shall prepare the inventory and balance sheet as of the date of dissolution.

The liquidators shall finalize any operations outstanding and conduct new transactions as necessary for the winding up of the corporation. In particular, the liquidators shall be bound to sell all the corporate assets, irrespective of their nature, except for those that according to the by-laws shall be distributed in kind.

2. Within six months of the liquidators appointment, he or she shall convene a general meeting of shareholders in order to present a report on the current status, the corporations assets and liabilities, the liquidation process and the time needed to complete it. The liquidator shall also request, where appropriate, any authorizations that shall be needed for the purposes of the liquidation.

3. The liquidators shall collect any outstanding amounts on shares subscribed by shareholders before the initiation of the winding up proceeding.

4. The liquidators shall keep company accounts, books and records and keep custody of relevant documentation and correspondence.

5. Upon completion of the liquidation proceedings, the liquidators shall submit before the general meeting of shareholders, for its approval, the following documents:

(a) A final balance sheet;

(b) A complete report on the operations performed during the liquidation;

(c) A proposal for distribution of the remaining assets among shareholders;

(d) The above-mentioned documents shall be approved by an absolute majority of shares represented in the meeting;

(e) Dissenting shareholders may challenge the decision referred to in number 5, above, within two months from the date in which it was taken.

Article 7. **Liability of Liquidators**

The liquidators shall be liable to the corporation and third parties for damages arising from violation of his or her duties of care and loyalty. Shareholders' derivative lawsuits or individual suits for civil liability against the liquidators shall be timed-barred after two years, from the date of the damaging fact or, from the date of its disclosure, in case it was concealed. Nonetheless, when the damaging fact is subject to criminal liability, any legal action shall be time-barred after a period of 6 years.

Any lawsuit against shareholders, who did not act in their capacity as liquidators, shall be time-barred after three years from the date of the registration of the dissolution before the Mercantile Registry.

Article 8. **Payments and Distributions**

1. The liquidators shall proceed to the payment of liabilities with third parties in accordance with the priorities established under the law. For this purpose the liability of the liquidators shall be restricted by the assets and liabilities included in the balance sheet and inventory referred to in subsection 1, article 6.

2. After all liabilities with third parties have been paid in full, any remaining assets shall be distributed according to the provisions set forth under the corporation's by-laws or, in the absence of a specific provision in such by-laws, the distribution shall be made on a pro-rata basis.

3. Any amount allocated for distribution among the shareholders shall be paid to them within the following eight days after the meeting described in subsection 5 of article 6 of this law.

Article 9. **Right to payment of the liquidation dividend in cash**

Unless the shareholders, unanimously, decide otherwise in the meeting set forth in subsection 5 of article 6, they shall be entitled to receive their share of the remaining corporate assets in cash.

Article 10. **Simplified Liquidation Proceeding**

If it becomes clear that the corporation lacks liabilities with third parties once the inventory referred to in subsection 1 of article 6 has been approved, the liquidators shall convene a general meeting of shareholders to approve, along with the balance sheet and inventory, the documents referred to in subsection 5 of article 6. Approval of these decisions shall be taken by the absolute majority of the shares present or represented in the meeting, as soon as the approval has taken place, the liquidators shall proceed to the distribution of remaining assets among the shareholders.

If it is determined by the court that there are outstanding liabilities with third parties, that were not included in the inventory, the shareholders and liquidators, will be jointly and severally liable to the creditors.

This liability shall be time-barred after five years from the moment of the filing before the Mercantile Registry of the decisions set forth under subsections 5 of article 6.

Article 11. **Reopening of a Liquidation Process**

If, after filing of the documents provided under subsections 1 and 5 of article 6 of this law, new assets of the company shall appear, or by means of a judicial decision rendered after such a date, or due to any other circumstance, a reopening of the liquidation will take place.

Article 12. **Reactivation of a wound-up company**

1. The general assembly of shareholders may agree to revoke the solution in order to reactivate a wound-up company provided that the cause for which it was dissolved

has been remedied. A reactivation decision shall not be made where dissolution was instituted as per the law.

2. The decision on reactivation shall be adopted pursuant to the requirements established for any amendment of the by-laws.

3. Shareholders not voting in favor of reactivation shall be entitled to a dissenters remedy. By means of such remedy they will be allowed to demand their share of the corporate assets at the fair market value.

Article 13. **Restructuring Operations**

Any corporation which is undergoing a corporate liquidation shall have legal capacity to participate in restructuring operations such as mergers, sale of all or substantially all assets and corporate divestitures.

II. DISPUTE SETTLEMENT

A. Report of the Working Group on Dispute Settlement on the work of its sixty-fifth session (Vienna, 12-23 September 2016)

(A/CN.9/896)

[Original: English]

Contents

I. Introduction

1. At its forty-eighth session, the Commission mandated the Working Group to commence work on the topic of enforcement of settlement agreements to identify relevant issues and develop possible solutions, including the possible preparation of a convention, model provisions or guidance texts. The Commission agreed that the mandate of the Working Group with respect to that topic should be broad to take into account the various approaches and concerns.[1]

2. At its sixty-third (Vienna, 7-11 September 2015) and sixty-fourth (New York, 1-5 February 2016) sessions, the Working Group considered that topic on the basis of notes by the Secretariat (A/CN.9/WG.II/WP.190 and A/CN.9/WG.II/WP.195, respectively). At its sixty-fourth session, the Working Group requested the Secretariat to prepare a document outlining the issues considered at the session and setting out draft provisions without prejudice to the final form of the instrument, grouping provisions into broad categories.[2]

3. At its forty-ninth session, the Commission had before it the report of the Working Group on the work of its sixty-third and sixty-fourth sessions (A/CN.9/861 and A/CN.9/867, respectively). After discussion, the Commission commended the Working Group for its work on the preparation of an instrument dealing with enforcement of international commercial settlement agreements resulting from conciliation and confirmed that the Working Group should continue its work on the topic.[3]

---

[1] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), paras. 135-142.

[2] A/CN.9/867, para. 15.

[3] *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), paras. 162-165.

4. At that session, the Commission also held a preliminary discussion regarding possible future work in the area of international dispute settlement. The Commission considered the topics of (i) concurrent proceedings; (ii) code of ethics/conduct for arbitrators; and (iii) possible reform of the investor-State dispute settlement system.[4] After deliberation, the Commission decided to retain the three topics on its agenda for further consideration at its next session. It requested that the Secretariat, within its existing resources, continue to update and conduct preparatory work on all the topics so that the Commission would be in a position to make an informed decision whether to mandate its Working Group II to undertake work in any of the topics, following the current work on the enforcement of settlement agreements resulting from conciliation. In that context, it was reaffirmed that priority should be given to the current work by Working Group II so that it could expeditiously complete its work on the preparation of an instrument on the topic.[5]

II. Organization of the session

5. The Working Group, which was composed of all States members of the Commission, held its sixty-fifth session in Vienna, from 12-23 September 2016. The session was attended by the following States members of the Working Group: Argentina, Armenia, Australia, Austria, Brazil, Bulgaria, Cameroon, Canada, Chile, China, Colombia, Czechia, Denmark, Ecuador, El Salvador, France, Germany, Hungary, India, Indonesia, Israel, Italy, Japan, Kuwait, Mexico, Nigeria, Pakistan, Panama, Republic of Korea, Romania, Russian Federation, Sierra Leone, Singapore, Spain, Sri Lanka, Switzerland, Thailand, Turkey, Uganda, United Kingdom of Great Britain and Northern Ireland, United States of America and Venezuela (Bolivarian Republic of).

6. The session was attended by observers from the following States: Algeria, Belgium, Croatia, Cyprus, Democratic Republic of the Congo, Dominican Republic, Egypt, Finland, Malta, Netherlands, Norway, Portugal, Qatar, Republic of Moldova, Saudi Arabia, Slovakia, South Africa, Sweden and Viet Nam.

7. The session was also attended by observers from the European Union.

8. The session was also attended by observers from the following international organizations:

(a) *Intergovernmental organizations*: Asian-African Legal Consultative Organization (AALCO) and Hague Conference on Private International Law (HCCH);

(b) *Invited non-governmental organizations*: American Arbitration Association/International Centre for Dispute Resolution (AAA/ICDR), American Society of International Law (ASIL), Arbitrators' and Mediators' Institute of New Zealand (AMINZ), Belgian Center for Arbitration and Mediation (CEPANI), Chartered Institute of Arbitrators (CIARB), China International Economic and Trade Arbitration Commission (CIETAC), Construction Industry Arbitration Council (CIAC), Energy Community Secretariat, European Law Institute (ELI), Florence International Mediation Chamber (FIMC), Forum for International Conciliation and Arbitration (FICACIC), International Academy of Mediators (IAM), International Council for Commercial Arbitration (ICCA), International Insolvency Institute (III), International Mediation Institute (IMI), Korean Commercial Arbitration Board (KCAB), Law Association for Asia and the Pacific (LAWASIA), Madrid Court of Arbitration, Miami International Arbitration Society (MIAS), P.R.I.M.E. Finance Foundation (PRIME), Queen Mary University London School of International Arbitration (QMUL), *Union Internationale des Huissiers de Justice et Officiers Judiciaires* (UIHJ) and Vienna International Arbitral Centre (VIAC).

[4] Ibid., paras. 174-194.
[5] Ibid., para. 195.

9. The Working Group elected the following officers:

Chairperson: Ms. Natalie Yu-Lin Morris-Sharma (Singapore)

Rapporteur: Mr. Alejandro Márquez García (Colombia)

10. The Working Group had before it the following documents: (a) provisional agenda (A/CN.9/WG.II/WP.197); and (b) note by the Secretariat regarding the preparation of an instrument on enforcement of international commercial settlement agreements resulting from conciliation (A/CN.9/WG.II/WP.198).

11. The Working Group adopted the following agenda:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. International commercial conciliation: enforceability of settlement agreements.
5. Organization of future work.
6. Adoption of the report.

III. Deliberations and decisions

12. The Working Group considered agenda item 4 on the basis of the note prepared by the Secretariat (A/CN.9/WG.II/WP.198). The deliberations and decisions of the Working Group with respect to item 4 are reflected in chapter IV. The Secretariat was requested to prepare draft provisions, based on the deliberations and decisions of the Working Group (see para. 213 below).

IV. International commercial conciliation: preparation of an instrument on enforcement of international commercial settlement agreements resulting from conciliation

13. The Working Group continued its deliberations on the preparation of an instrument on enforcement of international settlement agreements resulting from conciliation ("instrument") on the basis of document A/CN.9/WG.II/WP.198. The Working Group agreed to consider the draft provisions contained therein without prejudice to the final form of the instrument to be prepared, a matter that would be discussed at a later stage (for discussion on the form of the instrument, see paras. 135-143 and 211-213 below).

A. Scope of application, definitions and exclusions

Draft provision 1 (Scope of Application)

14. The Working Group considered draft provision 1, which dealt with the scope of application, as contained in paragraph 4 of document A/CN.9/WG.II/WP.198. It was generally agreed that draft provision 1 provided clear and simple criteria for determining whether or not a settlement agreement would fall under the scope of the instrument, and no further elaboration on the territorial scope would be required.

15. The following questions were left for consideration at a later stage of the current session: (i) whether draft provision 1 would be redundant with draft provision 6, which sets forth the substantive obligations for recognition and enforcement (see para. 81 below); (ii) whether the term "settlement agreement" was broad enough to encompass various forms of such agreements in different jurisdictions (see para. 38 below); and (iii) whether the notion of "recognition" should be omitted (see paras. 77-81, 145-157, and 200-204 below).

16. The Working Group confirmed the understanding that the instrument should apply to "commercial" settlement agreements, without providing for any limitation as to the nature of the remedies or contractual obligations. Yet, with regard to the suggestion that the instrument should contain a definition of the term "commercial" in the form of an illustrative list similar to footnote 2 of the Model Law on International Commercial Conciliation ("Model Law on Conciliation"), it was agreed that that should be further considered in light of the form of the instrument. It was clarified that a footnote could be included if the instrument were to take the form of model legislative provisions, but would not be appropriate in a convention.

Draft provision 2 (International)

17. The Working Group considered draft provision 2, which dealt with the notion of internationality, as contained in paragraph 7 of document A/CN.9/WG.II/WP.198.

Chapeau

18. As a matter of drafting, it was pointed out that draft provision 2 should be better aligned with draft provision 1.

19. As a matter of substance, it was suggested that the definition of "international" should apply to the conciliation process, rather than to the settlement agreement. It was said that the international nature of the settlement agreement would be derived from the international nature of the conciliation process. It was suggested that such an approach would be consistent with article 1(4) of the Model Law on Conciliation (see paras. 158-163 below).

Paragraph 1

20. Wide support was expressed to retain paragraph 1, as it provided for a clear criteria of the notion of "international" by referring to situations where the places of business of the parties were in different States.

Paragraph 2, subparagraphs (a) and (b)

21. Divergent views were expressed on whether to retain subparagraphs (a) and (b), which aimed at providing a further elaboration of the criteria to determine whether a settlement agreement was "international". Support was expressed to retain those provisions for the sake of consistency with article 1(4)(b) of the Model Law on Conciliation. However, views were expressed that those subparagraphs might result in expanding the scope of the instrument to settlement agreements concluded by parties that had their places of business in the same State. It was suggested that limiting the definition of "international" to paragraph 1 would be preferable for the sake of clarity and simplicity.

22. After discussion, it was widely felt that subparagraphs (a) and (b) could be retained provided that they were better aligned with article 1(4)(b) of the Model Law on Conciliation. Further, it was agreed that the form of the instrument might have an impact on whether to retain those subparagraphs in the instrument and that that matter should be left for further consideration.

Paragraph 2, subparagraph (c)

23. The Working Group agreed that the instrument should not apply to the enforcement of a settlement agreement concluded by parties that had their places of business in the same State, even if the enforcement were sought in another State. Therefore, it was agreed that subparagraph (c) should be deleted.

Paragraph 2, suggestions for additional subparagraphs

24. Suggestions were made to insert additional subparagraphs in paragraph 2 so that a settlement agreement or a conciliation would be international: (i) if the location of the conciliation institution where the settlement was reached was different from the places of business of the parties; or (ii) where the settlement agreement dealt with

matters of international trade. These proposals did not receive support for the reasons that they would unnecessarily broaden the scope of application of the instrument and create uncertainty.

Paragraph 3

25. The Working Group took note that paragraph 3 was based on article 1(6) of the Model Law on Conciliation, which aimed at expanding the notion of internationality and providing flexibility to parties. In the context of the preparation of the instrument, concerns were expressed that parties should not be in a position to determine whether or not the settlement agreement or the conciliation process was international, in particular if the instrument were to take the form of a convention. Furthermore, it was noted that such a provision, which amounted to an opt-in by parties could expand the scope of the instrument to purely domestic conciliation and settlement agreements.

26. After discussion, the Working Group agreed that paragraph 3 should be deleted if the instrument were to take the form of a convention. However, it was also noted that the matter might need to be considered further if the instrument were to take the form of model legislative provisions, which would complement the Model Law on Conciliation.

Paragraph 4

27. Paragraph 4 aimed at providing guidance on the determination of a party's place of business, where a party had more than one place of business or had none. With respect to that paragraph, a suggestion was made that the instrument could provide further guidance on, or a clear definition of, the term "place of business", possibly referring to the place where the party had substantive physical or economic presence or conducted substantial economic activity. It was further mentioned that subparagraph (a), in a sense, provided an indication of the meaning of that term and that it should be set out in a clearer fashion.

28. In response, it was suggested that there was no need for further guidance as the term was well-known and often used in the commercial law context and one that was acceptable in different legal traditions. It was also mentioned that it would be for the competent enforcing authority to determine the place of business and not for the instrument to elaborate further. It was also said that defining the "place of business" would fall outside the scope of the instrument.

29. It was generally felt that subparagraph (a) appropriately provided the link between the settlement agreement and the relevant place of business, in case a party had more than one place of business. Along the same lines, there was general support to retain the words "the dispute resolved by" and to delete the square brackets.

30. A question was raised whether the term "*établissement*" in the French version of draft provision 2 reflected situations where a party had representations in different locations. In response, it was recalled that the term "*établissement*" had been used consistently in the Model Law on Conciliation as well as in other UNCITRAL texts to translate the term "place of business".

31. After discussion, it was agreed that paragraph 4 could be retained, including the words "the dispute resolved by" outside square brackets.

Draft provision 3 (Settlement agreement)

32. A number of suggestions were made with respect to draft provision 3, which provided a definition of the term "settlement agreement", as contained in paragraph 13 of document A/CN.9/WG.II/WP.198.

33. One was to remove the requirement that settlement agreements be in writing ("writing requirement") in draft provision 3, yet the arguments were based on different grounds.

34. One argument was that the writing requirement would introduce an obstacle in the operation of the instrument, as it was often the case that settlement agreements

were concluded or amended orally, by conduct and also using electronic and other means. It was mentioned that the instrument should reflect such changes in trade usage and provide that the written form of a settlement agreement was mere proof of the existence of the agreement and not a requirement for its validity. In that context, reference was made to the deliberations at the thirty-ninth session of the Commission, when it adopted the amendments to article 7 (Definition and form of arbitration agreement) of the Model Law on International Commercial Arbitration ("Model Law on Arbitration").[6]

35. Yet another argument was that the writing requirement would not need to be repeated in both the definitions and the form requirements (draft provision 5). One view was that it would be better dealt with only as a form requirement. In response, it was said that there was merit in retaining the writing requirement in both the definitions and the form requirements, for the sake of clarity.

36. In general, there was significant opposition to removing the writing requirement entirely from the instrument. It was stated that because the purpose of the instrument was to facilitate enforcement of settlement agreements, it would be essential for the enforcing authority to be presented with a settlement agreement in writing in order to proceed with the enforcement process.

37. Another suggestion was to replace the words "that results from conciliation" with the words "after they have engaged in conciliation", as the former could be interpreted to require a strict causality between the conciliation process and the resulting settlement agreement. There was no support for that suggestion. Yet another suggestion was that retaining the words "in writing" in draft provision 3 and adding the words "is intended to" between the words "that" and "resolves" would eliminate the need for draft provision 5(1). That suggestion did not receive support because draft provision 5(1) dealt with form requirements and not with the objectives of the parties in concluding the settlement agreement. Another suggestion was that the definition of settlement agreement should in itself contain an international element, possibly defining it as an agreement concluded by international parties. That suggestion did not receive support, as the instrument already referred to the notion of "international" in both draft provisions 1 and 2.

38. After discussion, it was generally agreed that draft provision 3 could be retained without modification, with the understanding that whether the writing requirement was to be addressed in draft provision 3 or 5 or in both would be addressed at a later stage.

Draft provision 4 (Conciliation)

39. The Working Group considered draft provision 4, which dealt with the definition of conciliation, as contained in paragraph 15 of document A/CN.9/WG.II/WP.198. It was noted that draft provision 4 reflected the understanding of the Working Group at its sixty-third and sixty-fourth sessions that the scope of the instrument should be limited to settlement agreements resulting from conciliation, and that it was based on the definition of "conciliation" in article 1(3) of the Model Law on Conciliation.

40. One suggestion was made that the process whereby parties reached a settlement agreement should be defined more broadly so that the assistance of a third person would not be a requirement or a precondition. It was pointed out that such involvement could, in certain instances, be costly and burdensome. In response, it was stated that such an approach would broaden the scope of the instrument and be contrary to the understanding that the enforcement mechanism envisaged under the instrument should apply only to the extent that a settlement agreement resulted from conciliation, thus with the assistance of a third person (see also para. 70 below).

[6] Ibid., *Sixty-first Session, Supplement No. 17* (A/61/17), paras. 146-176.

41. Nonetheless, the possibility of providing some flexibility to States was discussed. For example, if the instrument were to take the form of a convention, it could provide for a reservation whereby a State party could declare that it would either extend its application to settlement agreements reached without the assistance of a third person, or limit its application to only when a third person assisted the parties. It was also mentioned that if the instrument were to take the form of model legislative provisions, that possibility could be elaborated further, for instance, in a footnote. It was agreed that that matter could be discussed at a later stage in light of the deliberations on the form of the instrument.

42. A suggestion was made that "conciliation" should be qualified as a "structured/organized" process to emphasize that conciliation needed to be reliable and trustworthy. It was explained that such a qualification would rule out processes which took place in purely informal settings or mere negotiations. It was further explained that the objective of that suggestion was not to prescribe a specific technique of conciliation nor to introduce rigidity in the instrument, but to encompass processes that were: (i) governed by a legal framework; (ii) administered by an institution; or (iii) regulated in some manner (for example, conducted under specific conciliation rules), all of which could bring more confidence and certainty to the enforcing authority tasked with the enforcement procedure.

43. In that context, the Working Group recalled its discussion at its sixty-fourth session, where it had been stated that referring to a "structured/organized" conciliation process would constitute a departure from the definition contained in the Model Law on Conciliation (see A/CN.9/867, para. 117). It was reiterated that the terms "structured/organized" were not commonly used to qualify the conciliation process and could be understood differently. It was further stated that such qualification would likely introduce domestic requirements, which would reduce the attractiveness of the instrument. It was also mentioned that most provisions of the Model Law on Conciliation as well as the UNCITRAL Conciliation Rules were subject to party autonomy, providing much flexibility to the parties, and even in circumstances where those instruments were applicable, it would be difficult to determine whether the process had been structured or not.

44. Taking account of the divergence of views on the matter, the Working Group agreed to consider at a later stage of its current session: (i) whether to include such qualification in the instrument (for example, in draft provision 4, 5, or 6); (ii) if so, how to define "structured/organized"; and (iii) whether it should only be reflected in explanatory material accompanying the instrument. After discussion, it was agreed that draft provision 4 would be retained without such qualification until further consideration (see paras. 164-167 below).

45. Another suggestion with respect to draft provision 4 was that independence of the third person involved in the conciliation process should be highlighted (see also para. 168 below). No support was expressed for that suggestion because that matter would be better addressed in substantive provisions of the instrument, for example, draft provision 8(1)(e). It was pointed out that if the instrument were to take the form of model legislative provisions complementing the Model Law on Conciliation, that reference would be superfluous, as article 6(3) of the Model Law addressed the need for the conciliator to keep a fair treatment among the parties.

46. Regarding the words in square brackets in draft provision 4 ("irrespective of the basis upon which the conciliation is carried out"), it was clarified that they intended to address the question whether the instrument would apply to instances where the basis of conciliation was not an agreement by the parties to conciliate but for example, an obligation established by law or a suggestion of a court. There was general support for retaining those words outside square brackets, possibly including the additional wording as contained in article 1(8) of the Model Law on Conciliation.

47. As a drafting point, it was agreed that the words "(the "conciliator")" should be inserted after the words "third person or persons" in draft provision 4. Another general drafting point was that if the instrument were to take the form of model legislative

provisions complementing the Model Law on Conciliation, efforts should be made to not depart, to the extent possible, from the existing definitions in that Model Law.

Settlement agreements concluded in the course of judicial or arbitral proceedings

48. The Working Group considered whether the instrument should also apply to instances where parties had concluded a settlement agreement in the course of judicial or arbitral proceedings. Recalling its discussion at its sixty-fourth session, the Working Group confirmed its understanding that settlement agreements reached during judicial or arbitral proceedings but not recorded in a judicial decision or an arbitral award should fall within the scope of the instrument (see A/CN.9/867, para. 125).

49. The Working Group then considered whether settlement agreements concluded in the course of judicial or arbitral proceedings, and recorded as court judgments or arbitral awards should fall within the scope of the instrument, or be excluded in order to avoid possible overlap with existing and future conventions, namely the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958) (the "New York Convention"), the Convention on Choice of Court Agreements (2005) (the "Choice of Court Convention"), and the 2016 preliminary draft convention on judgments, under preparation by the Hague Conference on Private International Law.

50. Views were expressed that exclusion of those settlement agreements from the scope of the instrument would result in depriving the parties of the opportunity to utilize the enforcement regime envisaged by the instrument, and that possible complications resulting from multiple enforcement regimes could be handled by the competent enforcing authority. It was suggested that if the instrument were to take the form of a convention, States parties could be given the flexibility, through a reservation, to exclude settlement agreements recorded as court judgments or arbitral awards to the extent enforcement would be provided under another international instrument to which they were party. It was further suggested that if the instrument were to take the form of model legislative provisions, possible ways to articulate enforcement of settlement agreements recorded as court judgments or arbitral awards in relation to other relevant international instruments could be addressed.

51. Concerns were raised that such an approach might not be sufficient to guide the competent enforcing authorities regarding which instrument to apply in cases of overlap. Therefore, it was suggested to expressly exclude from the scope of the instrument settlement agreements recorded as court judgments or arbitral awards. The Working Group then undertook to consider the various options provided for in paragraph 21 of document A/CN.9/WG.II/WP.198.

52. Preference was expressed for option 2 in paragraph 21 (ii), which excluded settlement agreements concluded in the course of judicial or arbitral proceedings and recorded as court judgments or arbitral awards. It was further suggested that the language should be aligned with that in article 12 of the Choice of Court Convention, which dealt with judicial settlements (*transactions judiciaires*). It was underlined that the language used in the Choice of Court Convention could encompass procedures akin to homologation of settlement agreements, which were not necessarily rendered in the form of a judgment. It was noted that the 2016 preliminary draft convention on judgments, under preparation by the Hague Conference on Private International Law, used similar terminology (see paras. 169-176 and 205-210 below).

53. In that connection, the Working Group then considered whether settlement agreements not concluded in the course of judicial or arbitral proceedings but recorded as court judgments or arbitral awards should fall within the scope of the instrument. Divergent views were expressed and the Working Group deferred consideration of that question to a later stage of its current session (see para. 169 below). Similarly, the Working Group agreed to consider at a later stage whether that matter could be dealt with in draft provision 1, 3 or 4.

54. The Working Group confirmed the understanding that the mere involvement of a judge or an arbitrator in the conciliation process should not result in the settlement agreement being excluded from the scope of the instrument (see also A/CN.9/867, para. 131), and agreed to revisit that question in light of its decision on matters discussed in paragraph 53 above.

Exclusions (consumer, family and employment matters)

55. The Working Group considered draft formulations on exclusions of settlement agreements dealing with consumer, family and employment law matters, as contained in paragraph 23 of document A/CN.9/WG.II/WP.198. It was generally felt that the provision on exclusions should become part of draft provision 1 on the scope of application.

56. Nonetheless, it was questioned whether express exclusion of family and employment law matters was necessary, taking into account that a settlement agreement dealing with those matters would not be considered commercial. It was suggested that, if those exclusions were retained in the instrument, they should be presented as an illustrative list of possible exclusions. That suggestion did not receive support.

57. With respect to the words “for personal, family, or household purposes”, a suggestion was made that the instrument should instead refer to “consumers”, “consumption purposes”, or “consumer protection law”. In a similar context, a suggestion was made to delete the word “household”.

58. In response, it was recalled that the Working Group had considered the issue at its sixty-fourth session and the fact that the use of the term “consumer” might be too generic and could be understood differently in various jurisdictions was reiterated (see A/CN.9/867, para. 107). It was further recalled that those words were initially used in the Convention on the Limitation Period in the International Sale of Goods (New York, 1974) (art. 4 (a)) as well as in the United Nations Convention on Contracts for the International Sale of Goods (Vienna, 1980) (article 2(a)) to provide an objective criterion for excluding from their scope sale of goods for consumer purposes.

59. While there was general support for retaining the current descriptive wording, it was suggested that the instrument could include explicit reference to “consumers”. Article 2 of the Choice of Court Convention was cited as an example that included both descriptive language and a reference to consumers in parentheses.

60. It was also agreed that subparagraph (b) in both formulations should be revised to make it clear that settlement agreements relating to “inheritance” or “succession” were excluded from the scope of the instrument.

Settlement agreements involving public entities

61. The Working Group then considered the provisions addressing the questions of liability of a State for its acts or omissions in the exercise of its authority (*Acta jure imperii*) and state immunity, as contained in paragraph 24 of document A/CN.9/WG.II/WP.198. The Working Group confirmed its understanding that the instrument would not have any impact or interfere with the public international law aspects of state liability or state immunity. As to the latter, a suggestion was made that that point could be explicitly stated in the instrument and reference was made to article 2(6) of the Choice of Court Convention as a possible basis for formulation.

62. The Working Group also reaffirmed its decision that settlement agreements involving States and other public entities should not be automatically excluded from the scope of the instrument. Suggestions were made to the possible formulations for a declaration on the basis of option 2 in paragraph 24 of document A/CN.9/WG.II/WP.198. One was that the possible exclusion should be broader, so that it not only dealt with settlement agreements where the declaring State or the government agency or any person acting on behalf of that State was a party, but rather where any State or a government agency or any person acting on behalf of a State was

a party to the settlement agreement. Another was to delete the reference to "or any person acting on its behalf" as that phrase could be interpreted broadly. While it was generally agreed that flexibility should be provided to States on the matter, the Working Group decided to consider that question further in light of its deliberations on the form of the instrument.

B. Form requirements of settlement agreements

Draft provision 5 (Form of settlement agreement)

63. The Working Group considered draft provision 5, which dealt with form requirements of settlement agreements, as contained in paragraph 25 of document A/CN.9/WG.II/WP.198.

Paragraph 1

64. The Working Group generally agreed that settlement agreements should be in writing, and be signed by the parties, so as to provide certainty in the enforcement procedure. The Working Group agreed to delete the phrase in the first square brackets, which referred to the intent of the parties to be bound by the terms of the agreement, as it would be redundant.

Paragraph 3

65. The Working Group agreed to delete the phrase in square brackets in subparagraph (a).

66. As a drafting point, it was suggested that subparagraphs (b) and (c) could be simplified or replaced by a cross reference to article 9(2) of the United Nations Convention on the Use of Electronic Communications in International Contracts (New York, 2005). After discussion, it was agreed that those subparagraphs provided for a functional equivalence rule for writing and signature requirements and should remain unchanged for the sake of consistency among UNCITRAL standards.

Other form requirements

A single document

67. A suggestion was made that the instrument should require that the settlement agreement should be a single document. In that respect, it was recalled that the Working Group had discussed the matter at its sixty-fourth session (see A/CN.9/867, para. 134). Doubts were expressed about introducing such a requirement as it would not necessarily reflect the current practice where the form and content of settlement agreements varied greatly. It was mentioned that settlement agreements might consist of more than one document including annexes, and might comprise of different forms which might not necessarily be captured in a single document. It was pointed out that introducing such a requirement would make the process rigid, putting additional burden on parties.

68. In response, it was said that introducing such a requirement would enhance certainty and make it possible to expedite the enforcement procedure, as the content of what was to be enforced would be fully set out in a single document.

69. After discussion, the Working Group agreed to further consider at a later stage of the current session whether the instrument would require that a settlement agreement should be in the form of "a complete set of documents" and whether that reference should be contained in draft provision 5 on form of settlement agreements or in draft provision 7 on application for enforcement (see paras. 177-185 below).

Paragraph 2

70. With regard to paragraph 2, while some doubts were expressed about including additional form requirements to those stipulated in paragraph 1, it was generally felt that the instrument would need to provide, in some fashion, that the settlement

agreement should indicate that a conciliator was involved in the process and that the settlement agreement resulted from conciliation. It was generally felt that that indication would distinguish a settlement agreement from other contracts and provide for legal certainty, facilitate the enforcement procedure and prevent possible abuse. However, it was also emphasized that the additional requirement should not be burdensome and should be kept simple to the extent possible (see also paras. 40 and 41 above).

71. As to how to formulate the additional requirement, it was noted that a mere indication of the conciliator's identity in the settlement agreement would not be sufficient. Therefore, one view was that the conciliator should be required to sign the settlement agreement. In response, it was mentioned that requiring the conciliator to sign the settlement agreement posed difficulties, both legal and practical. It was said that, in certain jurisdictions, conciliators were advised not to sign such agreements as it could lead to liability issues, conflicts with professional obligations and questions about the intent of the parties to the settlement agreement.

72. It was suggested that the instrument should provide more flexibility in the means for a party to demonstrate that a conciliator was involved in the process and that the settlement agreement resulted from conciliation. As an alternative to requiring the signature of a conciliator in the settlement agreement, it was suggested that a declaration, by which the conciliator would attest its involvement in the conciliation process, could suffice. It was explained that such a declaration would usually be attached to the settlement agreement, but not become part of it. Another suggestion was that the agreement to conciliate would provide sufficient evidence of the involvement of the conciliator in the process. However, that suggestion did not receive support.

73. During the discussion, attention was drawn to the fact that the Model Law on Conciliation did not include any provisions on form requirements of settlement agreements, and that introducing form requirements in the instrument would create a discrepancy with the Model Law. Along the same lines, suggestions were made that requiring a signature or an attestation need not necessarily be formulated as a form requirement in draft provision 5 but rather could be formulated as a requirement in the application process in draft provision 7. In support of that view, it was stated that the involvement of a conciliator should be a question of proof at the stage of application for enforcement and that parties should be left to provide evidence thereof. Based on similar grounds, it was mentioned that the requirement could be construed as a defence, where the party resisting enforcement would have the burden of proving that a conciliator was not involved in the process or that the settlement agreement had not resulted from conciliation.

74. During the discussion, a suggestion was made that in preparing the instrument, it would be useful to include standard forms or model declarations by conciliators. That suggestion did not receive support.

75. Recognizing the need to balance the necessity for certainty and to preserve flexibility, the Working Group agreed to provide that a settlement agreement should indicate that it had resulted from conciliation. It was further agreed that that indication could be achieved by the conciliator signing the settlement agreement or providing a separate declaration, which would attest its involvement in the conciliation process. In that context, it was also clarified that a signature or an attestation by the conciliator would simply be to prove its involvement in the process and should not be construed as an endorsement of the settlement agreement nor as an indication that the conciliator was a party to the agreement. The Working Group decided to consider the placement of such a provision at a later stage of its current session in light of the suggestion made in paragraph 73 above (see paras. 186-190 below).

C. Direct enforcement and application for recognition and enforcement

Draft provisions 6 (Recognition and enforcement) and 7 (Application for enforcement)

76. The Working Group considered draft provision 6, which addressed the principle of enforcement, as well as draft provision 7 on application for enforcement, both of which were contained in paragraph 31 of document A/CN.9/WG.II/WP.198.

77. Focusing on the notion of "recognition" of settlement agreements by courts, the Working Group recalled its discussion at its sixty-third and sixty-fourth sessions where divergent views were expressed on whether the instrument should address recognition of settlement agreements (see A/CN.9/861, paras. 71-79 and A/CN.9/867, para. 146).

78. At the current session, it was generally felt that in the interest of flexibility, the text of the instrument would not necessarily include a reference to "recognition" in light of the different procedures akin to recognition and the effects attached thereto in various jurisdictions. It was said that settlement agreements did not have res judicata effect, and if recognition were to be provided for in the instrument, it might, in certain jurisdictions, confer such res judicata or preclusive effect. In addition, it was said that recognition usually meant giving legal effect to a public act emanating from another State, such as court decisions, rather than to private agreements between parties.

79. Instead of using the term "recognition", it was suggested that the instrument could incorporate wording based on article 14 of the Model Law on Conciliation which referred to settlement agreements being "binding and enforceable", acknowledging the private nature of the settlement agreement to be enforced, and providing for neutral language. It was recalled that when the Commission adopted article 14 at its thirty-fifth session, it carefully considered the implications of using the words "binding and enforceable". At that session, the Commission agreed that: (i) those words were intended to reflect the common understanding that conciliation settlements were contractual in nature; and (ii) while the word "binding" reflected the creation of a contractual obligation as between the parties to the settlement agreement, the word "enforceable" reflected the nature of that obligation as susceptible to enforcement by courts, without specifying the nature of such enforcement.[7]

80. It was generally felt that the reference in the instrument to the binding nature of settlement agreements would accommodate various procedures that existed in different national procedural laws prior to enforcement, and that aimed at protecting or acknowledging rights of the parties. Noting that the non-binding nature of settlement agreements was a ground for resisting enforcement in draft provision 8(1)(b), it was agreed to consider at a later stage of the current session articulation between those provisions (see para. 87 below).

81. After discussion, the Working Group generally felt that draft provision 7(2) should provide that settlement agreements should be treated as binding and should be enforced or enforceable in accordance with the rules of procedures of the enforcing State, under the conditions laid down in the instrument. The Working Group agreed to delete draft provision 6, as it would be redundant with draft provision 7(2). It was also agreed that draft provision 7(3) could be retained in its current form (see paras. 147-157 and 200-204 below).

82. Suggestions were made that draft provision 7 could also provide that the enforcing authority (i) should act expeditiously, and (ii) should have the right to request any further documents from the parties to proceed with the enforcement, along the lines of article 13(2) of the Choice of Court Convention (see also para. 183 below).

83. In the context of those discussions and in relation to the question of direct enforcement of settlement agreements as indicated in paragraph 33 of document

[7] Ibid., *Fifty-seventh Session, Supplement No. 17* (A/57/17), para. 124.

A/CN.9/WG.II/WP.198, it was recalled that the notion of recognition in the context of international commercial arbitration found its origin in both the Convention on the Execution of Foreign Arbitral Awards (Geneva, 1927) ("Geneva Convention") and the New York Convention. In particular, it was recalled that the Geneva Convention required as a condition for recognition and enforcement of an award that proof be supplied that the award had become final in the country in which it was made (article 4(2) of the Geneva Convention). The omission of that requirement in the New York Convention, thereby permitting direct enforcement of awards in the country of enforcement, was considered as an important step to facilitating enforcement of arbitral awards. Along the same lines, it was reiterated that the instrument should provide a mechanism where a party to a settlement agreement would be able to seek enforcement directly in the State of enforcement without a review or control mechanism in the State where the settlement agreement originated from as a precondition.

D. Defences to recognition and enforcement

Draft provision 8 (Grounds for refusing enforcement)

84. The Working Group considered draft provision 8, which addressed possible defences to enforcement, as contained in paragraph 35 of document A/CN.9/WG.II/WP.198.

Paragraph 1, subparagraph (a)

85. There was a general agreement in the Working Group to retain subparagraph (a), without the text in square brackets "[under the law applicable to it]". It was recalled that that phrase which had been initially contained in the New York Convention was omitted from the Model Law on Arbitration because it was viewed as providing an incomplete and potentially misleading conflict-of-laws rule.

Paragraph 1, subparagraph (b)

86. The Working Group considered the various grounds listed in subparagraph (b).

87. Regarding the ground that the settlement agreement was not binding on the parties, it was suggested that inclusion of that ground would be contrary to draft provision 7(2) as revised by the Working Group (see paras. 80 and 81 above) and should be deleted.

88. Regarding the ground that the settlement agreement was not a final resolution of the dispute, it was said that such a ground might be useful to retain, in particular to avoid situations where parties would submit a draft agreement, or a text that would not be considered as a final determination of the dispute by a party. It was questioned whether the finality of the settlement agreement should be dealt with in the definitions.

89. In relation to the phrase in square brackets "[or relevant part thereof]", it was said that that phrase should be retained without square brackets since a settlement agreement was defined as an agreement that might solve all or part of a dispute in draft provision 3. It was suggested to clarify the operation of that provision in complex settlements where parties would settle parts of their dispute over time but might wish to enforce the entire agreement after all matters had been resolved.

90. Regarding the ground that the settlement agreement had been subsequently modified by the parties, there was general agreement that that ground should be retained, and could possibly be merged with the grounds in subparagraph (c). It was suggested that that ground resonated with the form requirement that settlement agreements should be submitted in one complete set of documents for enforcement, and that, therefore, it might be further considered in light of that form requirement (see paras. 67-69 above and 177-185 below).

91. Regarding the ground that the settlement agreement contained conditional or reciprocal obligations, it was said that those terms had legal connotations, and could be interpreted differently in different jurisdictions. It was suggested that a more descriptive language could be used to refer to those obligations. Further, it was pointed out that it was usual for settlement agreements to contain such types of obligations. Therefore, the ground for refusing enforcement should not be that settlement agreements contained such obligations, but that the conditions stipulated in the agreement were not met or that the obligations had not been performed or complied with. It was suggested to clarify that the party either requesting or resisting enforcement should be given the right to avail itself of that ground. After discussion, the Working Group agreed to retain the ground "contains reciprocal or conditional obligations" with adequate modifications reflecting its deliberations. The Working Group agreed to consider at a later stage whether subparagraph (b) as amended should be merged with subparagraph (c).

Paragraph 1, subparagraph (c)

92. The Working Group considered the first ground provided in subparagraph (c) ("the enforcement of the settlement agreement would be contrary to its terms and conditions"). It was noted that that ground was based on party autonomy, meaning that the enforcement of the settlement agreement should not run contrary to what the parties had agreed in the settlement agreement, including any dispute resolution clause.

93. While there was support for retaining the text as currently drafted, a concern was raised that the text would need to be further clarified as it could open doors for a wide range of defences.

94. With regard to the question whether a party would be able to resist enforcement based on that ground if the settlement agreement contained a dispute resolution clause (see A/CN.9/WG.II/WP.198, para. 38), it was said that the purpose of a dispute resolution clause was generally to address matters pertaining to the performance of obligations in the settlement agreement and not those pertaining to enforcement.

95. It was also stated that the existence of a dispute resolution clause in the settlement agreement should not be a ground for resisting enforcement in the instrument, as there were existing mechanisms to address those issues. For example, it was mentioned that if there was an arbitration clause in the settlement agreement, the enforcing authority would generally refer the parties to arbitration in accordance with article II(3) of the New York Convention.

96. A suggestion was made that the ground should be limited to instances where the manner in which the enforcement was carried out would be contrary to the terms of the settlement agreement.

97. In response to a suggestion to add the words ", including any provision limiting the application of this instrument" at the end of that ground, questions were raised on how that would operate if the instrument were to require opt-in by the parties.

98. After discussion, it was agreed that the latter two grounds contained in subparagraph (c) ("the obligations in the settlement agreement have been performed" and "the party applying for enforcement is in breach of its obligations under the settlement agreement") should be retained. As to the first ground contained in subparagraph (c) ("the enforcement of the settlement agreement would be contrary to its terms and conditions"), it was agreed that the wording was acceptable but might need further elaboration to provide a clear meaning and scope in accordance with the deliberations, as it should not inadvertently introduce defences not contemplated.

Paragraph 1, subparagraph (d)

99. It was noted that subparagraph (d) was based on article II(3) and article V(1)(a) of the New York Convention. It was recalled that subparagraph (d) sought to reflect the understanding of the Working Group that the instrument should not give the enforcing authority the ability to interpret the validity defence to impose

requirements in domestic law, and that consideration of the validity of settlement agreements by the enforcing authority should not extend to form requirements (see A/CN.9/867, paras. 159-161).

100. A suggestion was made to add the words "voidable, or legally voided" after the word "void" to put it beyond doubt that the scope of subparagraph (d) covered instances of fraud, mistake, misrepresentation, duress and deceit. That suggestion did not receive support, as it was agreed that the current draft was sufficiently broad to encompass those elements.

101. Another suggestion was to delete the words "under the law to which the parties have subjected it" as it would be preferable to leave the determination of the applicable law to the enforcing authority. In support of that suggestion, it was said that mandatory laws, not necessarily the law chosen by the parties, could apply thereby limiting party autonomy. In response, it was said article V(1)(a) of the New York Convention contained a similar provision and that it would be preferable not to depart from such language. It was clarified that in any case party autonomy operated within the limits of mandatory laws and public policy. Therefore, it was agreed that those words would be retained in subparagraph (d).

102. In the context of the consideration of subparagraph (d), a question was raised whether the instrument should more clearly differentiate between the procedure for enforcement of settlement agreements on the one hand, and the procedure regarding the validity of the settlement agreement on the other, which might be carried out by a different authority.

Paragraph 1, subparagraph (e)

103. The Working Group considered subparagraph (e), which addressed the possible impact of the conciliation process, and of the conduct of conciliators, on the enforcement process. The Working Group recalled that when it considered that matter at its sixty-fourth session, the emerging view was that serious misconduct by the conciliator during the conciliation process, which had an impact on its outcome, could probably be covered by other defences in the instrument (see A/CN.9/867, para. 175).

104. At the current session, diverging views were expressed on that provision. In support of including, as a separate ground, failure to maintain fair treatment of the parties as well as failure to disclose circumstances likely to give rise to justifiable doubts about impartiality and independence of the conciliator, it was said that such defence would ensure consistency with articles 5(4), 5(5) and 6(3) of the Model Law on Conciliation, and that such elements were usually found in codes of ethics for conciliators. It was underlined that subparagraph (e) would underscore the importance of compliance with due process in the conciliation. Those in support of retaining subparagraph (e) clarified that the provision did not necessarily require the conciliator to be independent and impartial, but required it to disclose to the parties circumstances likely to give rise to justifiable doubts about impartiality and independence.

105. In the context of those discussions, the Working Group was referred to paragraphs 52 and 55 of the Guide to Enactment and Use of the Model Law on Conciliation. Paragraph 52 clarified that failure by the conciliator to disclose information likely to raise doubts as to its impartiality or independence did not, in and of itself, create a ground for setting aside a settlement agreement that would be additional to the grounds already available under applicable contract law. Paragraph 55 provided that the reference in the Model Law to maintaining fair treatment of the parties was intended to govern the conduct of the conciliation process and not the contents of the settlement agreement.

106. Doubts were expressed about subparagraph (e) on the basis that: (i) misconduct by the conciliator during the conciliation process, which had an impact on its outcome, could probably be covered by other defences in the instrument, such as those in subparagraph (d); (ii) conciliation was a voluntary process, from which parties were free to withdraw at any time, and therefore the misconduct of the

conciliator should not have an impact at the enforcement stage; (iii) subparagraph (e) could lead to many litigations, making the enforcement cumbersome, which would run contrary to the purpose of the instrument; and (iv) the court at the place of enforcement might not be best placed to consider issues pertaining to the conciliation process which, in most cases, would have taken place in a different State. On a practical note, views were expressed that it was rare for conciliators to make disclosures referred to in subparagraph (e), as conciliators did not have the power to impose any outcome on the parties.

107. To address those concerns, it was suggested to limit the scope of subparagraph (e) to instances where the conciliator's misconduct had a direct impact on the settlement agreement (see also para. 194 below). A further suggestion was to limit the scope to situations where the conciliator "manifestly" failed to maintain fair treatment of the parties. Another suggestion was to describe objectively, and give examples of, situations that were meant to be covered under subparagraph (e) in any explanatory material, or in a footnote to the provision if the instrument were to take the form of model legislative provisions.

108. As a matter of drafting, it was suggested that subparagraph (e) should be split into two separate subparagraphs: one dealing with fair treatment and the other dealing with disclosure.

109. After discussion, the Working Group agreed to further consider issues mentioned above at a later stage of its current session (see paras. 191-194 below).

Paragraph 2

110. With respect to the chapeau of paragraph 2, it was clarified that the wording of the chapeau covered situations where the enforcing authority would consider the defences on its own initiative (ex officio) and that it was based on language used in the New York Convention and the Model Law on Arbitration.

111. With respect to paragraph 2(a), a suggestion was made that the applicable law for considering whether the subject matter of the dispute was capable of settlement by conciliation should be the law chosen by the parties rather than the law of the State where enforcement was sought. Another suggestion was made to place paragraphs 1(a) and 1(e) in paragraph 2. Those suggestions did not receive support.

112. After discussion, the Working Group agreed to retain paragraph 2 in its current form.

Additional defences

Scope and other form requirements

113. As a general point, a suggestion was made that the instrument should clarify that parties would be able to raise issues with regard to the scope of application of the instrument as well as the non-compliance of form requirements at the enforcement stage.

114. It was generally agreed that if a settlement agreement did not fall within the scope or did not meet the form requirements, it would not be enforceable under the regime envisaged under the instrument. However, there were divergent views on how to reflect that understanding in the instrument.

115. One was that the different sections of the instrument (such as scope, definitions, form requirements, application to enforcement, grounds for refusal to enforcement) should be construed as being interrelated and therefore it would not be necessary to import elements in those sections into the defences.

116. Another was that it could be clearly stipulated in draft provision 7 on the application for enforcement that, to be admissible for enforcement, the settlement agreement must fall within the scope of the instrument and meet the requirements in the instrument. The possible inclusion in draft provision 7 of cross references to draft provision 5 on form requirements was mentioned. It was also mentioned that any

controversy on those matters would be addressed through rules of procedure of the State where enforcement was sought in accordance with draft provision 7(2). It was also noted that those matters should be treated differently from the defences provided in draft provision 8. Yet another view was that the parties would be able to raise them along with the defences provided in draft provision 8.

117. After discussion, a suggestion to introduce a term in the scope provision to be used throughout the instrument, which would include all of the components relating to the settlement agreement in the instrument (such as that it was commercial, international and resulting from conciliation), received support (see paras. 145-146 below).

Enforcement of the settlement agreement contrary to a decision of another court or competent authority

118. While it was suggested that the instrument could provide that the enforcing authority might refuse enforcement if it found that the enforcement would be contrary to a decision of another court or competent authority, it was generally felt that there was no need to include such a defence, as it would inadvertently complicate the enforcement procedure, invite forum shopping by parties and would generally be covered through the defences already provided in draft provision 8 (para. 8(1)(d) or 8(2)(b)).

Set-off

119. It was also agreed that there was no need to include a separate provision to deal with instances where the settlement agreement might be used for set-off purposes.

E. Other aspects

Confidentiality and the enforcement process

120. The Working Group then considered whether the instrument would need to address the possible contradiction that might arise between the confidential nature of conciliation and the need to disclose information during the enforcement process.

121. It was mentioned that articles 9 and 10 of the Model Law on Conciliation dealt with the matter in an appropriate manner, including possible exceptions to confidentiality (agreement by the parties, to the extent required by the law, or for the implementation or enforcement of a settlement agreement). It was suggested that if the instrument were to be a convention, those articles could be incorporated with some adjustments, as that would also provide guidance to less experienced practitioners and users of conciliation. However, the overwhelming view was that there was no need to include a provision on confidentiality in the instrument, as it was a matter that would be covered by the domestic legislation in the respective enforcing jurisdictions. After discussion, it was agreed that the instrument would not include a separate provision on confidentiality.

Relationship of the enforcement process with judicial or arbitral proceedings

122. The Working Group then considered draft provision 9, which addressed how an enforcing authority would treat a situation where an application (or claim), which might impact the enforcement, had been made to a court, an arbitral tribunal or any other competent authority, as provided for in paragraph 47 of document A/CN.9/WG.II/WP.198. It was recalled that draft provision 9 was based on article VI of the New York Convention which dealt with an application for setting aside or suspension of an arbitral award.

123. It was generally agreed that it would be appropriate for the enforcing authority to be given the discretion to adjourn the enforcement process, if an application (or claim) relating to the settlement agreement had been made to a court, arbitral tribunal or any other competent authority, which might affect the enforcement process.

124. Noting that the heading of the draft provision included the word "substantive", the Working Group considered three broad categories of applications (or claims), which the enforcing authority would have to take into account. The first category would be an application (or claim) about the substance or content of the settlement agreement. The second category would be an application (or claim) to annul the settlement agreement. The third category would be an additional application for enforcement of the same settlement agreement (in another State or in the same State) or an application by another party to the settlement agreement to enforce the same settlement agreement ("parallel enforcement applications"). A suggestion was made that if the draft provision were to include instances of parallel enforcement applications, the latter part of draft provision 9 in square brackets would need to be revised as the enforcing authority might also order the party applying for enforcement to give suitable security.

125. After deliberation, it was agreed that the discretion provided to the enforcing authority in draft provision 9 should be retained in the instrument and that the first square bracketed texts should remain outside square brackets. It was also agreed that draft provision 9 should not differentiate among the categories of applications (or claims), and the word "substantive" in the heading should be deleted. It was also agreed that the second square bracketed text should be revised to indicate that any party might be ordered to give security.

Parties' choice regarding the application of the instrument

126. A wide range of views were expressed on whether the application of the instrument would depend on the consent of the parties to the settlement agreement.

127. One view was that the parties' choice should not have any impact on the application of the instrument and therefore, the instrument should apply provided that the requirements therein were met and no grounds for resisting enforcement existed.

128. Another view was that parties should be given the choice to decide whether the settlement agreement would be enforceable under the instrument. In that context, the opt-in approach (which would require consent by the parties for the application of the instrument) and the opt-out approach (which would allow parties to exclude the application of the instrument) were discussed.

129. In support of the opt-in approach, it was mentioned that the enforceability of the settlement agreement would be a novel feature which parties might not be aware of, and that providing for mandatory enforceability could harm the amicable nature of the conciliation process. Further, it was said that the opt-in approach would be in line with the voluntary nature of the conciliation process. It was suggested that an opt-in mechanism could be incorporated in draft provision 8, as provided in paragraph 51 of document A/CN.9/WG.II/WP.198. As a practical suggestion, it was mentioned that the instrument could include standard forms for the parties to use when opting-in.

130. During the discussion on the opt-in approach, it was suggested that whether to require parties' consent to the application of the instrument was not necessarily a question to be dealt with in the instrument, but a question that could be addressed by each State when adopting or implementing the instrument. Therefore, it was suggested that each State party to the instrument should be given the flexibility to declare (if the instrument were to be a convention) that it would treat settlement agreements as binding and enforce them to the extent that the party applying for enforcement indicated the parties' agreement to enforcement under the instrument.

131. Views were expressed that the opt-in approach would run contrary to the underlying objective of widely promoting the use of international conciliation in trade, as it would narrow the use of the instrument. Further, it was pointed out that efforts to carefully define the scope, the form requirements, the application process as well as possible defences were on the basis that if those elements were fulfilled, a settlement agreement would be enforceable cross-border. If, at the end, enforceability was left to the discretion of the parties, it would have been possible to adopt a more

lenient approach in those provisions. In addition, it was said that an opt-in mechanism would be difficult for parties to implement as they would have to assess the various legal consequences of such a choice. It was further pointed out that when parties concluded a settlement agreement, they would generally expect the obligations therein to be performed, in accordance with the principle of pacta sunt servanda, and requiring an opt-in would run contrary to that expectation.

132. It was said that article 6 of the United Nations Convention on Contracts for the International Sale of Goods (Vienna, 1980) was a good example of a convention that provided parties to an international sale contract the autonomy to exclude the application of the Convention, and would be a good model for an opt-out approach.

133. A question that arose during the discussion was with regard to the means to record the possible opt-in or opt-out by the parties, including whether it could be done in the agreement to conciliate, in the settlement agreement itself or in a separate document (see para. 198 below).

134. It was also mentioned that the issue at hand was not free-standing but one that needed to be considered in a broader context, including the form of the instrument as well as the different approaches explored by the Working Group throughout the instrument. Therefore, the Working Group agreed to consider the matter further once it had discussed the form of the instrument, including the possible relation of the opt-in and opt-out approaches with other provisions in the instrument and the manner in which the consent of the parties would be captured (see paras. 195-199 below).

F. Form of the instrument

135. The Working Group had a preliminary discussion about the form of the instrument. While support was expressed for preparing either a convention or model legislative provisions, there was little support for preparing a guidance text.

136. Those in support of preparing a convention highlighted the cross-border nature of the enforcement process and the need for a binding instrument, which would bring certainty. It was mentioned that, compared to model legislative provisions, a convention would underscore the importance of conciliation as an alternative dispute resolution method and thus, greatly contribute to its promotion in international trade.

137. It was mentioned that the New York Convention had paved the path for cross-border enforcement of arbitral awards and that a similar path should be followed for enforcement of settlement agreements. It was also stated that the absence of a text similar to the New York Convention for conciliation was one of the reasons why conciliation was not so often used in commercial disputes. It was also stated that even if the instrument were to be a convention, States could be provided flexibility through declarations or reservations.

138. Those in support of preparing a convention also noted the possibility of preparing model legislative provisions that could support States in domestic implementation of the convention. It was further mentioned that while a convention would aim at cross-border aspects of enforcement, model legislative provisions could provide guidance to States in implementing a domestic legislative framework for enforcement of settlement agreements. In that context, it was stated that such model legislative provisions would not aim at harmonizing respective legislative frameworks on conciliation as its focus would be on enforcement aspects.

139. Those in support of preparing model legislative provisions highlighted the fact that there was currently a lack of a harmonized approach to enforcement of settlement agreements, both in legislation and in practice. It was further mentioned that the notion of conciliation, more so the concept of enforcement of settlement agreements resulting from conciliation, was quite new in certain jurisdictions and that providing a uniform regime through the preparation of a convention might not be desirable nor feasible. In short, it was argued that the current divergence and, in some cases, non-existence of practice did not lend itself to harmonization efforts through the preparation of a convention, but rather required a more flexible approach. It was

mentioned that model legislative provisions would be desirable in order to be consistent with the work previously developed by UNCITRAL in the field of conciliation. Further, it was mentioned that the aim should be to identify additional common denominators which would either add substance to article 14 of the Model Law on Conciliation or provide for a stand-alone legislative regime for enforcement.

140. It was said that model legislative provisions would also highlight the usefulness of conciliation in international trade and could effectively lead to harmonization. It was mentioned that a convention could be prepared at a later stage, reflecting how the model legislative provisions were adopted in various jurisdictions and addressing any difficulties that might arise in that practice. It was also stated that a convention once adopted would be of a normative nature and would be difficult to amend for reflecting possible developments.

141. Differing views were expressed as to whether model legislative provisions would take the form of amendments to the Model Law on Conciliation expanding its article 14 or a stand-alone text dealing with enforcement issues. It was said that if the Working Group were to adopt model legislative provisions, which would not be compatible with the provisions of the Model Law on Conciliation, that might require further confirmation from the Commission.

142. The Working Group also discussed the suggestion to possibly consider preparing two separate but parallel instruments, which would be complementary in nature. While some doubts were expressed about the effectiveness of such an approach, it was noted that there would not be significant difference in those two instruments and that it would be worth pursuing it.

143. After discussion, it was agreed that various options could be explored, including, for example, preparing both types of texts in parallel or preparing model legislative provisions first to be followed by a convention. Recognizing the divergence in views on the form of the instrument, the Working Group agreed to continue its discussion on the substantive provisions of the instrument and to revisit the issue of the form at a later stage of its current session (see paras. 211-213 below).

G. Further consideration of issues

144. After completion of its first reading of document A/CN.9/WG.II/WP.198, the Working Group continued its deliberation on issues left for further consideration.

Draft provision 1 (Scope of application)

Generic term to refer to settlement agreements covered by the instrument

145. The Working Group recalled its decision to possibly introduce a generic term to refer to settlement agreements that would fall under the scope of the instrument and that would include all of the relevant components mentioned in the instrument (see para. 117 above). A suggestion to use the term “covered settlement” did not receive support, as it would be introducing new terminology which would have to be further explained.

146. After discussion, the Working Group agreed that, subject to further consideration on the form of the instrument, draft provision 1 should introduce a generic term “settlement agreement”, which would refer to “an agreement in writing, that is concluded by parties to a commercial dispute, that results from international conciliation, and that resolves all or part of the dispute” (see para. 152 below).

“Treatment as binding”

147. On the use of the term “recognition” in the instrument, there was a suggestion to retain it in the instrument as it would provide for consistency with existing instruments including the New York Convention and as it would be broader than the term “binding”. The Working Group recalled its discussion on the use of the term “recognition”, and its decision to further consider whether to provide, in line

with article 14 of the Model Law on Conciliation, that settlement agreements should be treated as binding, thereby avoiding the use of the term "recognition" (see paras. 77-81 above).

148. The Working Group considered whether draft provision 1 should refer to the notion of treatment of settlement agreements as binding, in addition to enforcement. It was suggested that the instrument should not delve into the conditions for treating settlement agreements as binding, and therefore the scope provision should be limited to enforcement. However, it was said that if such an approach were to be adopted, the instrument would not cover, in certain jurisdictions, situations where settlement agreements were used, for instance, as a defence against a claim.

149. It was pointed out that article 14 of the Model Law on Conciliation already referred to settlement agreements being "binding and enforceable" and if the instrument were to take the form of model legislative provisions, it would not need to repeat those terms. However, it was pointed out that article 14 merely expressed that a contractual obligation, "binding" on the parties, should be "enforceable" by State courts, and only represented the smallest common denominator among States.

150. A suggestion was made to avoid referring to the notions of "recognition", "treatment as binding", or "enforcement" in draft provision 1 and to deal with those notions in a separate provision. It was suggested that that provision would state that a party might apply to have a settlement agreement enforced or treated as binding between the parties in accordance with the instrument.

151. However, it was felt that the purpose of the instrument would need to be clearly spelled out, preferably in draft provision 1. Further, it was pointed out that the notion of an agreement being binding between the parties would not necessarily mean that parties could use the agreement as a defence, as the term "binding" merely referred to a characteristic of a settlement agreement. A suggestion was made to refer to the legal effect of settlement agreements that could be used in defence against a claim to the same extent as in enforcement proceedings.

152. Accordingly, it was suggested draft provision 1 could read along the following lines: "(1) The [instrument] applies to an agreement in writing that is concluded by parties to a commercial dispute, that results from international conciliation and resolves all or part of the dispute ("settlement agreement"). (2) A settlement agreement shall be enforced in accordance with the rules of procedure of [this State][the State where enforcement is sought] and shall be given effect in defence against any claim to the same extent as in enforcement proceedings".

153. It was pointed out that a settlement agreement could be raised as a defence in different procedural contexts, which would be addressed differently in various jurisdictions, and that draft provision 1(2) was not comprehensive enough to cover all such possibilities. Therefore, it was suggested to indicate in draft provision 1(2) that the use of settlement agreements in defence against a claim should be in accordance with the national procedural framework of the State where the claim was brought, so as to comprehensively cover the various national procedural frameworks in relation thereto. In addition, as draft provision 1(2) addressed the modalities for enforcement, it was questioned whether draft provision 1(2) would be better placed under draft provision 7, which dealt with the applications for enforcement.

154. A different proposal was made to address the issue more generally, if the form of the instrument were to be a convention, by introducing text similar to article VII (1) of the New York Convention with relevant adjustments. It was said that such a provision would retain the reference to national procedural frameworks, with the added benefit of allowing States that would have more favourable conditions in their national legislation for enforcement than those provided under the instrument to apply such more favourable legislation.

155. After having heard a number of suggestions, the Working Group considered the following proposal in relation to draft provision 1(2): "A settlement agreement shall be enforced and shall be given effect in defence against any claim made by either party to the settlement agreement [as far as the defence is available in national law]

to the same extent as in enforcement proceedings [in accordance with the rules of procedure of the State where enforcement is sought and subject to (the provisions on defences in the instrument)]."

156. The Working Group also considered the proposal to add a new provision in the instrument along the following lines: "The [instrument] shall not deprive any interested party of any right it may have to avail itself to a settlement agreement in the manner and to the extent allowed by the law or the treaties of the State where such settlement agreement is sought to be relied upon."

157. The Working Group agreed to further consider those two proposals at a later stage of its current session (see paras. 200-204 below).

Draft provision 2 (international)

158. The Working Group considered the suggestion that the definition of "international" should apply to the conciliation process, rather than to the settlement agreement (see para. 19 above). It was said that the internationality of the settlement agreement would be derived from the international nature of the conciliation process. In support of that suggestion, it was said that that approach would be consistent with the Model Law on Conciliation.

159. However, it was noted that article 1(4) of the Model Law on Conciliation referred to the parties to "an agreement to conciliate", whereas the definition of "international" in draft provision 2 referred to the parties to "a settlement agreement". Support was expressed to refer to the parties to a "settlement agreement", as that approach would be more appropriate in light of the purpose of the instrument. It was further said that: (i) there were situations where a settlement agreement would be reached without necessarily an agreement to conciliate in the first place; (ii) the parties to the agreement to conciliate might be different from the parties to the settlement agreement; and (iii) places of business of parties might differ at the time of conclusion of the agreement to conciliate and at the time of conclusion of the settlement agreement. After discussion, it was agreed to address the internationality of "settlement agreements" and not of the "conciliation process", which shall be determined by reference to mainly the place of business of parties at the time of conclusion of the settlement agreement (see para. 161 below).

160. In that context, it was mentioned that the place where a substantial part of the obligation under the settlement agreement was to be performed (see draft provision 2(2)(a)) might not be known at the time of conclusion of the settlement agreement and therefore, it might raise uncertainty as to whether the instrument would apply.

161. With respect to internationality, the Working Group agreed to further consider draft provision 2 along the following lines: "A settlement agreement is international if: (1) At least two parties to a settlement agreement resulting from the conciliation have, at the time of the conclusion of that agreement, their places of business in different States; or (2) One of the following places is situated outside the State in which the parties have their places of business: (a) The place where a substantial part of the obligation under the settlement agreement is to be performed; or (b) The place with which the subject matter of the settlement agreement is most closely connected. For the purpose of this article: (a) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement; (b) If a party does not have a place of business, reference is to be made to the party's habitual residence."

162. As a result of the discussion, it was agreed that draft provision 1(1) (see para. 152 above) should be adjusted along the following lines: "The [instrument] applies to an agreement in writing, that is international, that is concluded by parties to a commercial dispute, that results from conciliation and that resolves all or part of the dispute ("settlement agreement")."

163. At the close of the discussion, a suggestion was made that even if the instrument were to refer to the internationality of "settlement agreements", there was a need to qualify that the conciliation process was also international in accordance with article 1(4) of the Model Law on Conciliation, as the time when the parties agreed to or began conciliation would be of great significance and there was a need to consider the process that eventually led to the settlement agreement. It was further reiterated that internationality of the settlement agreement should derive from the international nature of the conciliation process.

Draft provision 4 (Conciliation)

164. The Working Group recalled its discussion on whether "conciliation" should be qualified as a "structured/organized" process (see paras. 42-44 above). A suggestion was made that the word "organized" might be an appropriate term to qualify the process to distinguish it from a purely informal process (see para. 42 above).

165. It was mentioned that if the term "organized" were to be included, its meaning would need to be further clarified in the instrument, as it was not a legal term and would be open to interpretation. In that context, suggestions were made to qualify the word "organized" with additional words such as "formal or informal" or "ad hoc or institutional".

166. However, doubts were expressed about qualifying the process as "organized" as that term: (i) was ambiguous; (ii) could be subject to interpretation by the enforcing authority possibly imposing domestic standards on conciliation during the enforcement procedure; (iii) could make it burdensome for the enforcing authority to determine whether the process was organized or not; (iv) could be used by parties as an additional ground to resist enforcement; and (v) would be a departure from the definition of "conciliation" in the Model Law on Conciliation (see para. 43 above). It was generally felt that such inclusion would unduly complicate the enforcement procedure and there was strong support for not including any term to qualify the process.

167. Recalling its discussion at the sixty-fourth session on the same issue (see A/CN.9/867, paras. 117 and 121), the Working Group agreed not to add any qualification to the word "process" in draft provision 4 and to revisit the issue once it had considered the form requirements of settlement agreements, including whether the need to qualify the process might be sufficiently handled in those requirements.

168. During that discussion, it was suggested that the independence and qualifications of the conciliator should also be highlighted in the definition of the conciliation process (see also para. 45 above). That suggestion did not receive support.

Settlement agreements concluded in the course of judicial or arbitral proceedings

169. The Working Group continued its consideration on whether to exclude from the scope of the instrument settlement agreements concluded in the course of judicial or arbitral proceedings and recorded as court judgments or arbitral awards and how it should be formulated in the instrument (see also paras. 48-52 above). Further, the Working Group was also invited to consider whether settlement agreements not concluded in the course of judicial or arbitral proceedings but recorded as court judgments or arbitral awards should fall within the scope of the instrument (see also para. 53 above).

170. Views were expressed that it was not necessary for the instrument to provide for such exclusions and that the matter could be left to practice. Nevertheless, there was willingness to accommodate concerns about possible overlaps, or gaps, between the instrument and other conventions. In that context, it was noted that article 26 (4) of the Choice of Court Convention allowed for more favourable recognition and enforcement to be pursued under another treaty.

171. A number of drafting suggestions were made, taking into account that the provision should be clear and simple, possibly providing enforcing authorities with some degree of flexibility.

172. Some support was expressed for providing that the instrument would not apply to settlement agreements concluded in the course of judicial or arbitral proceedings that were approved by a judicial authority or recorded as an arbitral award.

173. Another approach was to provide that the instrument would apply to settlement agreements concluded in the course of judicial or arbitral proceedings, as long as they were not recorded as court judgments or arbitral awards but that were capable of enforcement under the draft convention on the recognition and enforcement of foreign judgments currently being prepared by the Hague Conference or the New York Convention, respectively.

174. With respect to that approach, it was suggested that reference to specific conventions should be avoided in the instrument as a matter of simplification and to take into consideration other bilateral or regional instruments. Along that line, it was suggested that the instrument could provide that it would apply to settlement agreements concluded in the course of judicial or arbitral proceedings, as long as these were not enforceable as court judgments or arbitral awards. It was said that such an approach would take account of whether the State where enforcement was sought was a party to any other convention that provided for enforcement of court judgments or arbitral awards. It was further mentioned that that approach would allow a party to resort to multiple remedies in case the settlement agreement would not be enforceable as court judgments or arbitral awards.

175. Yet another approach was that the instrument would not apply to settlement agreements approved by a court or which had been concluded before a court, in the course of proceedings, and which were enforceable in the same manner as a judgment at the State of origin, or concluded in the course of arbitral proceedings and recorded as an arbitral award. While it was suggested that such an approach would clarify the scope of application of the instrument, providing clear guidance to the enforcing authority, it was also stated that the interpretation of such a provision could be complex. As a matter of drafting, it was suggested to delete the reference to "State of origin".

176. After discussion, the Working Group heard two drafting suggestions. The first formulation read as follows: "This instrument does not apply to settlement agreements approved by a court or which have been concluded before a court in the course of proceedings and which are enforceable in the same manner as a judgment, or concluded in the course of arbitral proceeding and recorded as an arbitral award." The second formulation read as follows: "This instrument also applies to settlement agreements concluded in the course of judicial or arbitral proceedings, as long as these are not enforceable as judgments or arbitral awards in the State where enforcement is sought". The Working Group agreed to consider those drafting suggestions at a later stage of its current session (see paras. 205-210 below).

Draft provision 5 (Form requirements)

A single document

177. The Working Group recalled its discussion on whether settlement agreements, to benefit from the enforcement procedure envisaged under the instrument, should be in the form of a complete set of documents (see paras. 67-69 above). A wide range of views were expressed about introducing such a requirement, including some doubts about the meaning of the words "a complete set of documents".

178. In that context, the suggestion that the settlement agreement should be in the form of a "single" document (rather than "a complete set of documents") was reiterated (see paras. 67-68 above). It was explained that such a requirement would make the enforcement easier from the perspective of the enforcing authority and would expedite enforcement, as it would avoid the procedure turning into one where parties would dispute the substantive contents of the settlement agreement. It was

further mentioned that an analogy with contracts would not necessarily be appropriate given that the instrument addressed enforcement of settlement agreements.

179. In response, a parallel was drawn with developments regarding form requirements of arbitration agreements. It was said that the New York Convention and the 1985 version of the Model Law on Arbitration provided for strict form requirements of arbitration agreements or clauses, which had the unintended effect of preventing their enforcement due to non-conformity with form requirements. It was further explained that the Commission had adopted amendments to the Model Law on Arbitration in 2006, responding to calls of the international business community to ensure that where the willingness of parties to arbitrate was not in question, the validity of the agreement would be recognized. The Working Group was cautioned not to follow the same pattern for settlement agreements and to provide relaxed form requirements in line with business practices. In line with that suggestion, views were expressed that the instrument should not include any such form requirement.

180. In response, it was mentioned that a comparison between arbitration and conciliation, as well as between an arbitration agreement and a settlement agreement had its limits as, first, the process of arbitration was adjudicative with an award being the result of that process, whereas the process of conciliation was facilitative with the settlement agreement recording the terms and conditions agreed by the parties and, second, the subject of enforcement in the context of the arbitration would be an arbitral award, of which form requirements had not been amended in 2006.

181. It was pointed out that agreements were usually formed by an exchange of offer and acceptance, and such meeting of the minds would not necessarily be materialized in a single document. Furthermore, it was said that requiring settlement agreements to be in a single document would be burdensome for the parties and contrary not only to business practices, but also to the flexibility that characterized conciliation. However, in response, it was noted that as the instrument would be introducing a novel mechanism for enforcing settlement agreements, it could suggest new practice as a condition for enforcement.

182. It was generally felt that the issue underlying the proposal that the settlement agreement be in a single document was the need for clarity of what the terms of the settlement agreement were, so that they could be expeditiously enforced by the competent authority. To accommodate such concerns without referring to a single document, it was suggested that the instrument could provide that the settlement agreement should include all the terms and conditions of the settlement, irrespective of whether those terms would be in a single document or multiple documents. It was also suggested that an appropriate placement for such a provision might be in draft provision 7 on application for enforcement. However, it was pointed out that those requirements were usually set out in the procedural rules of the State where enforcement was sought and requiring such elements in the instrument might have an inadvertent impact on domestic rules governing enforcement. It was suggested that a simple reference in the relevant provision to "the rules of procedure at the State where enforcement was sought" would be sufficient.

183. As a drafting matter, it was suggested that the provision on form requirements should not include any reference to a "single" document or a "complete set of documents" but alternatively the provision dealing with the application for enforcement (draft provision 7) could read as follows: "A party […] shall, at the time of application, supply the settlement agreement, subject to requirements of (provision on form requirements), together with any necessary document that the competent enforcing authority may require" (see also para. 82 above). There was general support for including such wording. It was suggested that the language could be adjusted to ensure that the competent authority would only require from the parties documents that were strictly necessary.

184. During the deliberation, it was reiterated that if the instrument were to provide for opt-in by the parties, there would be no need for such strict formal requirements (see also para. 131 above).

185. After discussion, it was generally felt that no additional form requirement would need to be included in draft provision 5(1) other than that the settlement agreement should be in writing and signed by the parties. The Working Group agreed to further consider the proposal in paragraph 183 above in the context of its deliberations on application for enforcement (draft provision 7).

Paragraph 2, Indication that the settlement agreement resulted from conciliation

186. The Working Group then considered the question of how the settlement agreement would indicate that it resulted from conciliation (see paras. 70-75 above).

187. As a drafting suggestion, the following was proposed: "A settlement agreement shall indicate that a conciliator was involved in the process and that the settlement agreement resulted from conciliation, either by (1) including the conciliator's signature on the settlement agreement or (2) including a separate statement by the conciliator attesting to his or her involvement in the conciliation process." It was explained that such drafting aimed at accommodating diverse practices. In that context, a suggestion to simplify the chapeau by replacing the words "a conciliator was involved in the process and that the settlement agreement" by the word "it" received support.

188. During the discussion, the need to address circumstances where the conciliator might not be available to sign or provide a separate statement was mentioned. In that context, it was suggested that the two options in the drafting suggestion in paragraph 187 above should not be construed as an exhaustive list. The possibility of an attestation by an institution that administered the conciliation process (or by a witness) was mentioned. Therefore, it was suggested that if specific examples were to be provided in draft provision 5(2), a third subparagraph should be added, which would be broad enough to encompass any other method that a party could use to demonstrate that the settlement agreement resulted from conciliation, particularly when the conciliator was not available to sign the settlement agreement. It was further mentioned that the questions regarding acceptability should be left to the discretion of the enforcing authority. The following drafting suggestion was made: "A settlement agreement shall indicate that it resulted from conciliation, by including the conciliator's signature on the settlement agreement or if not possible, by any other evidence, for example, a separate statement by the conciliator or an institution attesting to its involvement in the conciliation process."

189. Another suggestion was to simply require an indication by the parties that a conciliator had been involved, unless the domestic legislation where enforcement was sought required otherwise. It was mentioned that such a provision would only be acceptable if the instrument were to take the form of a convention and similar comments were made that the instrument should not make reference to domestic laws of States concerning substantive matters as the aim of the instrument was to provide uniform rules.

190. During the discussion, a question was raised about the possible legal consequences of non-compliance with the form requirements in draft provision 5(2). It was said that there was no sanction in case of non-compliance with those conditions on form and that the consequence of non-compliance with such conditions should rather be assessed in relation to the acceptability of the application for enforcement (see also para. 73 above). It was mentioned that the enforcing authority could have flexibility in determining such acceptability as long as the parties were able to show that the settlement agreement resulted from conciliation. In that context, it was suggested that the requirement as set out in paragraph 188 above might be better placed in the provision on application for enforcement.

Draft provision 8 (Grounds for refusing enforcement)

Paragraph 1, subparagraph (e) (conciliation process and conduct of conciliators)

191. The Working Group turned its attention to draft provision 8, paragraph 1 (e), which addressed the possible impact of the conciliation process, and of the conduct

of conciliators, on the enforcement procedure. It was recalled that divergent views were expressed on whether to include that subparagraph and whether the grounds mentioned therein were covered by other defences in draft provision 8 (see paras. 103-109 above). Views both in support of (see para. 104 above) and against (see para. 106 above) retaining that subparagraph were reiterated.

192. During that discussion, the differences between conciliation and arbitration process were underlined and a wide range of examples of practices and conduct of conciliators, such as confidential ex parte communication, were given to highlight how difficult it would be to assess whether the parties were treated fairly. It was also noted that compared to arbitration, there were a limited number of procedural rules that governed conciliation providing a basis for assessing "fair treatment". It was said that subparagraph (e) would be superfluous as conciliators were already subject to terms of the agreement to conciliate and codes of conduct. It was further stated that inclusion of such a defence might inadvertently restrict the selection process of a conciliator and the manner in which conciliation was conducted.

193. In response, it was said that, as the settlement agreement resulted from conciliation, the significant role of the conciliator in the conclusion of the settlement agreement needed to be acknowledged, and that that defence needed to be retained, even if it might be difficult to prove that a party had been treated unfairly in the process. It was stated that parties should be informed of any conflict of interest and if the parties were not fully informed or there had been some misconduct by a conciliator, it should have some legal consequences, particularly at the enforcement stage. Unlike arbitration, there was no means to challenge the process or the conduct of the conciliator, particularly if the misconduct or unfair treatment was not known to the parties. It was also stated that parties might not necessarily be in a situation to withdraw from the process.

194. To find a compromise solution, the suggestion to limit the scope of subparagraph (e) to instances where the conciliator's misconduct had a direct impact on the settlement agreement was reiterated (see para. 107 above). It was also suggested that any revised draft of subparagraph (e) should separate the questions of fair treatment and disclosure. Further, it was said that the language of subparagraph (e) would need to be adjusted, for instance, to highlight the exceptional circumstances in which the defence could be raised, or to refer to notions such as impropriety of, or severe misconduct by, the conciliator, which had a material impact or undue influence on a party, without which the party would not have entered into the settlement agreement.

Parties' choice regarding the application of the instrument

195. The Working Group recalled its discussion on whether the application of the instrument would depend on the consent of the parties, during which a wide range of views were expressed (see paras. 126-134 above). Similarly, views were reiterated regarding opt-in (requiring parties' express consent for the application of the instrument) and opt-out (providing that parties may exclude the application of the instrument) approaches. As an alternative, it was suggested that the instrument could be silent on the matter as it would be counter-intuitive to request parties to confirm their consent to enforce their obligations under a settlement agreement. Reservations were expressed that the appropriate approach would depend on the form of the instrument.

196. The suggestion was reiterated to include in the instrument a declaration to the effect that each State would treat settlement agreements as binding and enforce them to the extent that the party applying for enforcement indicated the parties' agreement to enforcement under the instrument (see para. 130 above). It was explained that if the instrument were to take the form of model legislative provisions, it would also be possible to include such an opt-in mechanism as an option for States to consider when enacting such legislative provisions. In response to concerns expressed, it was stated that such a provision would not necessarily lead to forum shopping as parties to the

settlement agreement would, in any case, apply for enforcement at the place where assets were located.

197. Noting that it might be difficult to reach a consensus on the topic, some interest was expressed for that suggestion. However, it was pointed out that it would be preferable to set out the opt-in or opt-out rule in the instrument and subsequently allow States to deviate or to make a declaration. It was also mentioned that the application of such a declaration could become complex, might give rise to uncertainty as to whether a settlement agreement would be enforceable, and could result in imbalance between jurisdictions as a settlement agreement might be enforceable in one but not in another. With respect to the last point, it was suggested that a solution could be to provide for a reciprocal application of such a declaration.

198. During the discussion, some preliminary suggestions were made that: (i) with regard to the means to record the opt-in or opt-out by the parties, it should be in writing; (ii) with regard to the time when opt-in or opt-out would be expressed, it could be at any time including after the conclusion of the settlement agreement; (iii) with regard to the placement in the instrument, the provision on defences would be appropriate; and (iv) to assist the parties, a standard form should be prepared for parties to use to indicate their consent to the application of the instrument as an accompanying document.

199. After discussion, the Working Group agreed to further discuss the various options, taking account of the impact of the form of the instrument on the possible formulations.

Draft provision 1 (Scope of application)

Treatment as binding

200. The Working Group recalled its discussion on the possible use of the term "binding" to replace the notion of "recognition" of settlement agreements in the instrument, as the use of that notion could pose problems in a number of jurisdictions (see paras. 77-81 and 147-157 above).

201. The suggestion that the term "recognition" should be retained in the instrument as it would provide for consistency with existing treaties including the New York Convention was reiterated. However, it was recalled that the Working Group considered at length the issues that could be raised by the use of the term "recognition" and had decided to consider a different formulation (see para. 155). In relation to the first square bracketed text in that formulation, it was questioned which law was being referred to, and whether that reference would have the effect of limiting the application of defences in draft provision 8.

202. In response to a suggestion to delete the reference to national law or to clarify which national law would apply, it was recalled that a settlement agreement could be raised as a defence in different procedural contexts and that the first square bracketed text sought to indicate that the use of settlement agreements in defence against a claim should be in accordance with the national procedural framework so as to cover the various national procedural frameworks. It was further said that the provision should not result in precluding the enforcing authority to consider the grounds for refusing enforcement in draft provision 8.

203. After discussion, it was generally felt that the formulation contained in paragraph 155 above should be considered further, in conjunction with draft provision 8 on defences. It was agreed that the text should be revised to better express the idea that a settlement agreement could be used as a defence, and would produce effects between the parties.

204. In relation to the formulation in paragraph 156 above, it was recalled that it was inspired by article VII(1) of the New York Convention, and would permit application of more favourable national legislation to enforcement. There was general support for including such a provision in the instrument, as a separate provision, even though reservation was expressed.

Settlement agreements concluded in the course of judicial or arbitral proceedings

205. The Working Group resumed its deliberation on the treatment of settlement agreements concluded in the course of judicial or arbitral proceedings (see paras. 48-52 and 169-176 above), on the basis of the two formulations contained in paragraph 176 above.

206. With respect to the first formulation, it was explained that it was based on the fact that settlement agreements were private agreements and deserved a different treatment than court judgments (including judicial settlements) and arbitral awards. It was further explained that that formulation would clarify the scope of the instrument and avoid any overlap with other instruments. In support, it was stated that: (i) the grounds for refusing enforcement in the instrument were not appropriate for application to court judgments or arbitral awards; (ii) it would be inappropriate for the instrument to deal with issues on how such judgments and arbitral awards were to be treated; and (iii) the formulation expressed that once a court judgment or an arbitral award was rendered with regard to a settlement agreement, it should not be enforceable under the instrument. In that context, the need to take into account the existence of treaties giving cross-border effect to court judgments and the fact that a court judgment could be appealed was mentioned.

207. It was said that if the instrument were to include a provision along the lines provided in paragraph 156 above, States would be able to apply a more favourable treatment to settlement agreements concluded in the course of judicial or arbitral proceedings and recorded as court judgments or arbitral awards.

208. It was mentioned that the second formulation could be further developed to take into account concerns about possible overlap. A suggestion was made to amend that formulation as follows: "This instrument applies to settlement agreements concluded in the course of judicial or arbitral proceedings, or which are approved as an order of court, as long as they are not enforceable as judgments or awards in the State where enforcement is sought [under an applicable instrument to which the State is a party]." It was suggested that the phrase "under an applicable instrument to which the State is a party" could be omitted so as to refer to all cases of enforcement of foreign judgments and arbitral awards including enforcement on the basis of applicable domestic law. A further suggestion was made to add the words ", recorded as court judgments or arbitral awards," after the words "arbitral proceedings."

209. In comparing the two formulations, it was said that both excluded from the scope of the instrument a settlement agreement that had been converted into a court judgment or an arbitral award. One of the differences between them arose when the conversion did not have effect or was not acceptable in the State where enforcement was sought. It was said that, according to the first formulation, the effectiveness of settlement agreements would be extinguished once they were converted, whereas the effectiveness of settlement agreements would be preserved under certain circumstances in the second formulation.

210. After discussion, it was reiterated that the objective of any provision on the matter should be to avoid any overlap and gap. It was noted that the first formulation in paragraph 176 above could achieve that objective, while the second formulation in paragraph 208 above provided multiple opportunities for parties to seek enforcement of settlement agreements under certain circumstances at the State where enforcement was sought. It was generally felt that the first formulation was preferable, although elements of the second formulation might deserve further consideration. The Working Group agreed to further consider the provision, including how to express inclusions and exclusions in the scope provision.

Form of the instrument

211. Recalling its previous discussion on the form of the instrument, the Working Group then considered how to proceed with the various options considered

(see paras. 135-143 above). Views were reiterated in support of preparing a convention or model legislative provisions.

212. One alternative was to prepare a convention and model legislative provisions in parallel to preserve flexibility, with a decision on the form to be made at a later stage. It was suggested that a document that set out how each of the provisions would be reflected in a convention and in model legislative provisions would make it possible to discuss the issues simultaneously. There was support for that suggestion. However, it was mentioned that such an approach had practical drawbacks because without a decision on the form, it would be difficult to resolve some of the outstanding issues. Therefore, it was suggested that model legislative provisions could be prepared first, which would form a basis for preparing a convention at a later stage. There was also support for that suggestion.

213. After discussion, it was generally felt that it would be premature for the Working Group to make a decision on the final form of the instrument, as well as whether work should commence first on a convention or on model legislative provisions. To accommodate the divergence in views, it was agreed that work would proceed with the aim of preparing a uniform text on the topic of enforcement of international commercial settlement agreements resulting from conciliation. The Secretariat was requested to prepare draft provisions showing how they would be adjusted depending on whether the instrument would take the form of a convention or model legislative provisions. It was reaffirmed that such work should be without any prejudice to the final form of the instrument. In that context, it was generally agreed that, for the next session, in respect of model legislative provisions, the aim was to prepare provisions to supplement the Model Law on Conciliation and therefore, the need to align relevant provisions was highlighted.

B. Note by the Secretariat on settlement of commercial disputes: international commercial conciliation: preparation of an instrument on enforcement of international commercial settlement agreements resulting from conciliation

(A/CN.9/WG.II/WP.198)

[Original: English]

Contents

I. Introduction

1. At its forty-seventh session, in 2014, the Commission considered a proposal to undertake work on the preparation of a convention on the enforceability of settlement agreements reached through international commercial conciliation (A/CN.9/822).[1] The Commission agreed that the Working Group should consider at its sixty-second session the issue of enforcement of international settlement agreements resulting from conciliation and should report to the Commission, at its forty-eighth session, in 2015, on the feasibility and possible form of work in that area.[2]

2. At its forty-eighth session, in 2015, the Commission took note of the consideration of the topic of enforcement of international settlement agreements resulting from conciliation by the Working Group at its sixty-second session (A/CN.9/832, paras. 13-59) and agreed that the Working Group should commence work at its sixty-third session on that topic to identify relevant issues and develop possible solutions, including the preparation of a convention, model provisions, or guidance texts. The Commission also agreed that the mandate of the Working Group with respect to that topic should be broad to take into account the various approaches and concerns.[3]

3. Accordingly, at its sixty-third and sixty-fourth sessions, the Working Group undertook work on the preparation of an instrument on enforcement of international settlement agreements resulting from conciliation.[4] As requested by the Working Group at its sixty-fourth session, this note outlines the issues considered so far by the Working Group and sets out draft provisions to be included in a possible instrument on enforcement of settlement agreements resulting from conciliation (referred to below as the "instrument"). The draft provisions have been prepared without prejudice to the final form of the instrument (A/CN.9/867, para. 15) and on the working assumption that the instrument would be a stand-alone legislative text (i.e.,

[2] Ibid., para. 129.

[3] Ibid., *Seventieth Session, Supplement No. 17* (A/70/17), para. 142.

[4] The reports of the Working Group on the work of its sixty-third and sixty-fourth sessions are contained in documents A/CN.9/861 and A/CN.9/867, respectively.

a convention or a model law). If a decision is made that the work should instead complement the UNCITRAL Model Law on International Commercial Conciliation ("Model Law on Conciliation"), the draft provisions would need to be adjusted accordingly. Similarly, if a decision is made that the work should focus on preparing guidance texts, the draft provisions contained in this note may serve as possible examples, and the overall drafting style would need to be adjusted accordingly.

II. Preparation of an instrument on enforcement of international commercial settlement agreements resulting from conciliation: annotated draft provisions

A. Scope of application, definitions and exclusions

1. Scope of application

4. The Working Group may wish to consider the following formulation regarding the scope of application of the instrument:

Draft provision 1 (Scope of application)[5]

The [instrument] applies to the [recognition and] enforcement of international commercial settlement agreements resulting from conciliation.

5. Draft provision 1 reflects the understanding that the instrument should apply to the enforcement of international commercial settlement agreements resulting from conciliation (A/CN.9/861, paras. 19, 39 and 40; A/CN.9/867, paras. 92, 94, 102 and 115). Definitions contained in paragraphs 7 to 22 below aim at providing clear and simple criteria for determining whether or not a settlement agreement would fall under the scope of the instrument (A/CN.9/867, para. 94). The Working Group may wish to consider whether the territorial scope of application, if the instrument were to take the form of a convention, should be further elaborated. For example, it may include a provision stating that regardless of any other possible criteria (place of business of the parties or place of origin of the settlement agreement), the instrument applies to enforcement of settlement agreements if the enforcement is sought in the State Party to the convention.

6. The term "commercial" is not defined separately, reflecting the preference expressed by the Working Group that the instrument should apply to "commercial" settlement agreements, without providing for any limitation as to the nature of the remedies or contractual obligations (A/CN.9/861, paras. 47 to 50), and without necessarily defining the term (A/CN.9/867, para. 103). The Working Group may wish to confirm this understanding (see A/CN.9/867, paras. 104 and 105).

2. Definitions/terminology

(1) "International"

7. The Working Group may wish to consider the following formulation for the definition of the term "international":

Draft provision 2 (International)

A settlement agreement is international if:

(1) At least two parties to a settlement agreement have, at the time of the conclusion of that agreement, their places of business in different States; or

(2) [The State in which the parties have their places of business is different from]/[One of the following places is situated outside the State in which the parties have their places of business]:

[5] See paras. 21, 23 and 52 for possible additional formulations.

(a) The [State][place] where a substantial part of the obligation under the settlement agreement is to be performed; or

(b) The [State][place] with which the subject matter of the [dispute][settlement agreement] is most closely connected; or

[(c) [This State][The [State][place] where enforcement of the settlement agreement is sought]].

(3) The parties to a settlement agreement have expressly agreed that [the subject matter of the agreement relates to more than one State][the settlement agreement is international].

(4) For the purpose of this article:

(a) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to [the dispute resolved by] the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement;

(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

8. Draft provision 2 reflects the understanding that the scope of the instrument should be limited to "international" settlement agreements (A/CN.9/867, paras. 93-96). The definition of the term "international" as provided in draft provision 2 is based on article 1(4) of the Model Law on Conciliation as well as article 1(3) of the UNCITRAL Model Law on International Commercial Arbitration ("Model Law on Arbitration").

9. Draft provision 2(1) takes into account situations where there are more than two parties to a settlement agreement. The Working Group may wish to consider whether a similar drafting formulation should be adopted in other provisions (for example, draft provision 2(2)).

10. Draft provision 2(2) provides a further elaboration of the criteria to determine whether a settlement agreement is "international". It is partly based on article 1(4)(b) of the Model Law on Conciliation as well as article 1(3)(b) of the Model Law on Arbitration. It should, however, be noted that those articles deal with the "international" nature of the conciliation or arbitration process rather than the outcome of that process. Subparagraph (c) of draft provision 2(2) is in square brackets because the Working Group generally felt that the instrument should not apply to the enforcement of a settlement agreement concluded by parties that have their places of business in the same State, even if the enforcement was sought in another State (A/CN.9/867, para. 98). In that context, the Working Group may wish to consider whether subparagraphs (a) and (b) could also result in expanding the scope of the instrument to settlement agreements concluded by parties that have their places of business in the same State.

11. Draft provision 2(3) provides that the internationality criteria could be met when the parties have expressly agreed that the subject matter of the settlement agreement relates to more than one State or that the settlement agreement is international, similar to article 1(6) of the Model Law on Conciliation and article 1(3)(c) of the Model Law on Arbitration (A/CN.9/867, para. 99).

12. Draft provision 2(4) is intended to supplement other paragraphs of draft provision 2 by providing guidance on the determination of a party's place of business (A/CN.9/867, paras. 100-101).

(2) "Settlement agreement"

13. The Working Group may wish to consider the following formulation for the definition of "settlement agreement":

Draft provision 3 (Settlement agreement)[6]

"Settlement agreement" means an agreement in writing that is concluded by parties to a commercial dispute, that results from conciliation, and that resolves all or part of the dispute.

14. Draft provision 3 is based on a suggestion made during the sixty-fourth session of the Working Group (A/CN.9/867, para. 132). Questions for consideration include how this definition would articulate with form requirements (see draft provision 5 in para. 25 below), and whether it is necessary to qualify a settlement agreement as one concluded by "parties to a commercial dispute" and one "resulting from conciliation", if those elements were to be expressly stipulated in the scope provision (see draft provision 1 in para. 4 above). It may be noted that the finality of the settlement agreement is not mentioned in draft provision 3. Rather the non-finality of the settlement agreement is presented as a possible defence to enforcement (see draft provision 8 (1)(b) in para. 35 below).

(3) "Conciliation"

15. The Working Group may wish to consider the following formulation for the definition of the term "conciliation":

Draft provision 4 (Conciliation)[7]

"Conciliation" means a process, regardless of the expression used, whereby parties attempt to reach an amicable settlement of their dispute with the assistance of a third person or persons lacking the authority to impose a solution upon the parties to the dispute[, irrespective of the basis upon which the conciliation is carried out].

16. Draft provision 4 reflects the understanding that the scope of the instrument should be limited to settlement agreements that result from conciliation (A/CN.9/861, para. 19; A/CN.9/867, para. 115), and that the definition of "conciliation" in article 1(3) of the Model Law on Conciliation should be used as a basis (A/CN.9/861, para. 21; A/CN.9/867, paras. 116, 119 and 121). It should be noted that a suggestion that the instrument should apply to settlement agreements regardless whether they resulted from conciliation or not, as long as the parties to the settlement agreement expressly agreed to the application of the instrument, did not receive support (A/CN.9/867, para. 115).

17. The Working Group may wish to consider whether the term "mediation" should replace the term "conciliation" throughout the instrument and, if so, the possible implications on existing UNCITRAL texts, which had been prepared using the term "conciliation" (A/CN.9/867, para. 120).

(4) Settlement agreements concluded in the course of judicial or arbitral proceedings

18. The Working Group considered whether the instrument should also apply to instances where the parties had concluded a settlement agreement in the course of judicial, arbitral or any other proceedings (A/CN.9/861, paras. 24-28; A/CN.9/867, paras. 122-131).

19. With respect to settlement agreements concluded in the course of judicial or arbitral proceedings but not recorded in a judicial decision or an arbitral award, it was widely felt that they should fall within the scope of the instrument (A/CN.9/867, para. 125). The Working Group may wish to confirm that understanding.

20. With respect to settlement agreements concluded in the course of judicial or arbitral proceedings and recorded as a judicial decision or an arbitral award, differing views were expressed. One view was that such agreements should not fall within the scope of the instrument as inclusion could lead to overlap or conflict with the Judgments Project of the Hague Conference on Private International Law as well as

[6] See also paras. 21, 23 and 30 for possible additional formulations.

[7] See also paras. 21 and 22 for possible additional formulations.

the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (the ''New York Convention'') (A/CN.9/867, para. 123). Another view was that exclusion of those settlement agreements from the scope of the instrument would result in depriving the parties of the opportunity to utilize the enforcement regime envisaged by the instrument, and that possible complications resulting from multiple enforcement regimes could be handled by the competent authority where enforcement is sought (A/CN.9/867, para. 124). One approach to implement the latter view would be to not address this issue in the instrument (A/CN.9/867, paras. 124 and 130).

21. The Working Group may wish to determine the approach to be taken in the instrument with regard to settlement agreements concluded in the course of judicial or arbitral proceedings, on the basis of the following optional formulations:

(i) Additional paragraph in draft provision 1 (Scope of application) (A/CN.9/867, para. 127):

"The [instrument] also applies to settlement agreements concluded in the course of judicial or arbitral proceedings [as long as the settlement agreements are not recorded as court judgments or arbitral awards]."

(ii) Additional paragraph in draft provision 3 (Settlement agreement) (A/CN.9/867, paras. 118 and 128):

Option 1: *"This definition includes settlement agreements concluded in the course of judicial or arbitration proceedings [as long as the settlement agreements are not recorded as court judgments or arbitral awards]."*

Option 2: *"This definition excludes settlement agreements concluded in the course of judicial or arbitral proceedings and recorded as court judgments or arbitral awards."*

(iii) Additional paragraph in draft provision 4 (Conciliation) (A/CN.9/867, para. 127):

"This definition includes instances where the conciliation took place in the course of judicial or arbitral proceedings[, as long as the settlement agreement is not recorded as a court judgment or an arbitral award]."

(iv) If the instrument were to take the form of a convention, as possible declarations (A/CN.9/867, para. 129):

Option 1: *"A Party may declare that it shall apply this Convention to the [recognition and] enforcement of settlement agreements concluded in the course of judicial or arbitral proceedings as long as the settlement agreement is not recorded as a court judgment or an arbitral award."*

Option 2: *"A Party may declare that it shall not apply this Convention to the [recognition and] enforcement of settlement agreements concluded in the course of judicial or arbitral proceedings[, and recorded as court judgments or arbitral awards]."*

22. The Working Group may wish to confirm the understanding that the mere involvement of a judge or an arbitrator in the conciliation process should not result in the settlement agreement being excluded from the scope of the instrument (A/CN.9/867, para. 131). The Working Group may wish to consider whether to include an additional paragraph in draft provision 4 (Conciliation) clarifying that the instrument would apply to instances: (i) where a judge or an arbitrator initiated the conciliation process with a third party acting as the conciliator, and (ii) where the judge or the arbitrator initiated the conciliation process and facilitated an amicable settlement. The Working Group may wish also to confirm that court judgments or arbitral awards in the formulations provided in paragraph 21 above, refer to those that were rendered during the judicial or arbitral proceedings that led to the settlement.

3. Exclusions

23. The Working Group generally agreed that settlement agreements dealing with consumer, family and employment law matters should be excluded from the scope of the instrument, and that there was no need to mention any other exclusions in the instrument (A/CN.9/867, para. 106). In that light, the Working Group may wish to consider the following optional formulations:

(i) Additional paragraph in draft provision 1 (Scope of application):

"The [instrument] does not apply to settlement agreements: (a) concluded by one of the parties for personal, family or household purposes; or (b) relating to family or employment law."

(ii) Additional paragraph in draft provision 3 (Settlement agreement):

"This definition does not include settlement agreements: (a) concluded by one of the parties for personal, family or household purposes; or (b) relating to family or employment law."

24. The Working Group may wish to further consider the suggestion that the instrument should not apply to liability of a State for its acts or omissions in the exercise of its authority (*Acta jure imperii*) and that the instrument should not refer to notions of State immunity (A/CN.9/867, para. 113). In line with the decision of the Working Group that settlement agreements involving public entities (States, government entities and other entities acting on their behalf) should not be automatically excluded from the scope of the instrument (A/CN.9/861, para. 46; and A/CN.9/867, paras. 109-112 and 114; see also para. 36 below), the formulation below provides States the flexibility to decide whether to exclude such agreements from the scope of the instrument, if the instrument were to take the form of a convention:

Option 1: *"A Party may declare that it shall not apply this Convention to settlement agreements to which it is a party, or to which any of its governmental agencies or any person acting on its behalf is a party [unless otherwise indicated in the declaration]."*

Option 2: *"A Party may declare that it shall apply this Convention to settlement agreements to which it is a party, or to which any of its governmental agencies or any person acting on its behalf is a party, only to the extent specified in the declaration."*

B. Form requirements of settlement agreements

25. The Working Group may wish to consider the following formulation regarding the form requirements of settlement agreements, should it decide to include a stand-alone provision on the matter:

Draft provision 5 (Form of settlement agreement)[8]

(1) A settlement agreement shall be in writing and [indicate the intent of the parties to be bound by the terms of the agreement][shall be signed by the parties].

[(2) A settlement agreement shall indicate that a conciliator was involved in the process and that the settlement agreement resulted from conciliation.]

(3) For the purposes of this article:

(a) A settlement agreement is in writing if its content is recorded in any form, [whether or not the agreement has been concluded orally, by conduct or by other means]; and

(b) The requirement that a settlement agreement be in writing is met by an electronic communication if the information contained therein is accessible

[8] See also paras. 13, 29 and 30 for possible alternative formulations.

so as to be useable for subsequent reference; "electronic communication" means any communication that the parties make by means of data messages; "data message" means information generated, sent, received or stored by electronic, magnetic, optical or similar means, including, but not limited to, electronic data interchange (EDI), electronic mail, telegram, telex or telecopy; and

(c) The requirement that a settlement agreement be signed by a party [or a conciliator] is met in relation to an electronic communication if: (a) a method is used to identify the party and to indicate that party's intention in respect of the information contained in the electronic communication; and (b) the method used is either: (i) as reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or (ii) proven in fact to have fulfilled the functions described in subparagraph (a) above, by itself or together with further evidence.

1. Minimum form requirements

26. Draft provision 5(1) reflects the understanding of the Working Group that form requirements of settlement agreements in the instrument should not be prescriptive and should be set out in a brief manner preserving the flexible nature of the conciliation process. It also reflects the understanding that settlement agreements should be in writing and indicate the agreement of the parties to be bound by the terms of the settlement agreement (A/CN.9/867, para. 133).

27. Draft provision 5(3) supplements other paragraphs of draft provision 5 and incorporates the principle of functional equivalence embodied in UNCITRAL texts on electronic commerce, allowing for the use of electronic and other means of communication to meet the form requirements therein (A/CN.9/867, para. 133). It should be noted that draft provision 5(3)(c) would only be relevant if the draft provision 5 requires settlement agreements to be signed by the parties or the conciliator.

2. Other form requirements

28. Regarding other form requirements, the Working Group considered whether there should be some indication in the settlement agreement that (i) a conciliator was involved in the process; and (ii) the settlement agreement resulted from conciliation (A/CN.9/867, paras. 136 and 137). During the deliberations at the Working Group, the need to find a balance between, on the one hand, the formalities that would be required to ascertain that the settlement agreement resulted from conciliation and, on the other, the need for the instrument to preserve the flexible nature of the conciliation process, was underlined (A/CN.9/867, para. 144).

29. Draft provision 5(2) reflects the view that additional form requirements should be provided for in the instrument (such as that the conciliator should indicate his or her identity in the settlement agreement or sign the settlement agreement certifying that conciliation took place, or submit a separate document for that purpose) (A/CN.9/867, paras. 138-140). An alternative approach would be to address the matter in the provision on application for enforcement (see draft provision 7 (1)(b) and (c) in para. 31 below), requiring the parties to show through appropriate means when applying for enforcement that a conciliator was involved in the process and that the settlement agreement resulted from conciliation. This approach may allow for more flexibility, while giving the necessary level of certainty as to the process that led to the settlement agreement (A/CN.9/867, para. 140).

30. The Working Group may wish to further consider whether minimum and other form requirements discussed above could be formulated as part of the definition of settlement agreements (to complement draft provision 3 above).

C. Direct enforcement and application for recognition and enforcement

31. The Working Group may wish to consider the following formulation regarding application for enforcement:

Draft provision 6 (Recognition and enforcement)

Option 1: *International commercial settlement agreements resulting from conciliation shall be recognized and be given legal effect under the conditions laid down in this [instrument].*

Option 2 (if the instrument were to take the form of a convention): *A Party to this Convention shall recognize international commercial settlement agreements resulting from conciliation and give legal effect to them under the conditions laid down in this Convention.*

Draft provision 7 (Application for enforcement)

(1) To obtain the [recognition and] enforcement of a settlement agreement, the party applying for [recognition and] enforcement shall, at the time of the application, supply:

(a) The settlement agreement;

[(b) [Proof][Evidence] that a conciliator was involved in the process; and

(c) [Proof][Evidence] that the settlement agreement resulted from conciliation.]

(2) A settlement agreement shall be [recognized and] enforced in accordance with the rules of procedure of [this State][the State where [recognition and] enforcement is sought], under the conditions laid down in this [instrument].

(3) If the settlement agreement is not in the official language(s) of [this State][the State where [recognition and] enforcement is sought], the party applying for the [recognition and] enforcement shall produce a certified translation of the settlement agreement into such language.

32. Draft provision 6 sets out the principle that settlement agreements within the scope of the instrument are to be given legal effect. Option 1 is a general formulation regardless of the form of the instrument, while option 2 is a formulation if the instrument were to take the form of a convention, obliging States parties to the convention to recognize settlement agreements and give them legal effect. A similar approach can be found, for instance, in article II of the New York Convention (A/CN.9/861, paras. 71-79; A/CN.9/867, para. 146).

33. Draft provision 7 mirrors article IV of the New York Convention and reflects the understanding that the instrument should provide a mechanism where a party to a settlement agreement would be able to seek enforcement directly in the State of enforcement (referred to as "direct enforcement") without a review or control mechanism in the State where the settlement agreement originated from as a pre-condition (A/CN.9/861, para. 80; A/CN.9/867, para. 147).

D. Defences to recognition and enforcement

34. The Working Group agreed that defences to recognition and enforcement in the instrument should: (i) be limited and not cumbersome for the enforcing authority to implement; (ii) allow for a simple and efficient verification of the grounds for refusing recognition and enforcement; (iii) be exhaustive and be stated in general terms, giving flexibility to the enforcing authority with regard to their interpretation (A/CN.9/861, para. 93, A/CN.9/867, para. 148). As a general comment, it was said that the standard for recognition and enforcement, including the defences to be provided in the instrument, should not be less favourable than that provided for recognition and

enforcement of arbitral awards under the New York Convention (A/CN.9/867, para. 148).

35. The Working Group may wish to note that draft provision 8 below differentiates defences that could be raised by the parties and those that could be raised by the enforcing authority at its own initiative (A/CN.9/867, para. 148). Defences have also been broadly categorized into those relating to the parties (draft provision 8(1)(a)), to the settlement agreement (draft provisions 8(1)(b) to (d)), to the conciliation process (draft provision 8(1)(e)) and to mandatory laws and public policy at the place of enforcement (draft provision 8(2)).

Draft provision 8 (Grounds for refusing [recognition and] enforcement)

(1) [Recognition and] enforcement of a settlement agreement may be refused only at the request of the party against whom it is invoked, if that party furnishes to the competent authority of [this State][the State where [recognition and] enforcement is sought], proof that:

(a) A party to the settlement agreement was under some incapacity [under the law applicable to it]; or

(b) The settlement agreement is not binding on the parties; is not a final resolution of the dispute [or relevant part thereof]; has been subsequently modified by the parties; or contains conditional or reciprocal obligations; or

(c) The enforcement of the settlement agreement would be contrary to its terms and conditions; the obligations in the settlement agreement have been performed; or the party applying for [recognition and] enforcement is in breach of its obligations under the settlement agreement;

(d) The settlement agreement is null and void, inoperative or incapable of being enforced under the law to which the parties have subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority of [this State][the State where [recognition and] enforcement is sought]; or

(e) The conciliator failed to maintain fair treatment of the parties, or did not disclose circumstances likely to give rise to justifiable doubts as to its impartiality or independence.

(2) [Recognition and] enforcement of a settlement agreement may be refused, by the competent authority of [this State][the State where [recognition and] enforcement is sought], if it finds that:

(a) The subject matter of the settlement agreement is not capable of settlement by conciliation under the law of [this State][that State]; or

(b) [Recognition or] enforcement of the settlement agreement would be contrary to the public policy of [this State][that State].

36. Paragraph (1)(a) reflects the general understanding that incapacity should be retained in the list of defences (A/CN.9/867, paras. 151-152). The Working Group may wish to consider that, in jurisdictions where public entities are not authorized to conclude settlement agreements, paragraph (1)(a) may provide a defence to enforcement of settlement agreements involving such entities (A/CN.9/861, para. 44; see also para. 24 above). The words “under the law applicable to it” are placed in square brackets for consideration by the Working Group, whether they should be deleted in line with article 36(1)(a)(i) of the Model Law on Arbitration.

37. Paragraph (1)(b) reflects the understanding that recognition and enforcement may be refused if the settlement agreement is not binding on the parties, is not final, or has been subsequently modified (A/CN.9/867, para. 162).

38. Paragraph (1)(c) includes as a defence where the recognition and enforcement would be contrary to the terms and conditions of the settlement agreement (A/CN.9/867, para. 158). In this context, the Working Group may wish to consider whether that defence could be raised when the settlement agreement contains a

dispute resolution clause (such as an arbitration clause or a choice of court provision) (A/CN.9/867, para. 177-179). If a party were to seek recognition and enforcement of a settlement agreement which contains a dispute resolution clause, a question for consideration is whether the party against whom the recognition and enforcement is invoked would be able to resist recognition and enforcement on that basis under paragraph (1)(c).

39. Paragraph (1)(d) seeks to reflect the view of the Working Group that the instrument should not give the enforcing authority the ability to interpret the validity defence to impose requirements in domestic law, and that consideration of the validity of settlement agreements by the enforcing authority should not extend to form requirements (A/CN.9/867, paras. 159-161). The drafting is based on article II(3) and article V(1)(a) of the New York Convention. The Working Group may wish to consider whether the formulation of paragraph (1)(d) would be sufficiently broad to cover instances of fraud (A/CN.9/867, para. 153), mistake, misrepresentation, duress and deceit (A/CN.9/867, para. 167).

40. Paragraph 1(e) addresses the possible impact of the conciliation process and of the conduct of conciliators on the enforcement process with the purpose of protecting the parties' right to self-determination through a fair process. When the Working Group considered that question, it recalled article 6(3) of the Model Law on Conciliation, which requires the conciliator to maintain fair treatment of the parties (A/CN.9/867, para. 174). The emerging view in the Working Group was that serious misconduct by the conciliator during the conciliation process, which had an impact on its outcome, could probably be covered by the other defences in the instrument (A/CN.9/867, para. 175). During the discussions, the voluntary nature of the conciliation process, as well as the freedom of the parties to withdraw from the process at any time were underlined (A/CN.9/867, para. 172). In that light, the Working Group may wish to consider whether paragraph (1)(e) should be retained.

41. Paragraph (2)(a) deals with instances where the subject matter of the settlement agreement is not capable of settlement in the State where enforcement is sought (A/CN.9/867, para. 154). The Working Group indicated that this defence could be considered by the enforcing authority ex officio.

42. Paragraph (2)(b) deals with instances where the enforcement of the settlement agreement would be contrary to public policy (A/CN.9/867, paras. 155-157). It was noted that public policy covered both substantive and procedural aspects. There was general agreement that public policy as a defence could be considered by the enforcing authority ex officio.

Additional defences for possible consideration

- *Absence of conciliation and non-commercial settlement agreements*

43. The scope provision (draft provision 1) and the provision on application for enforcement (draft provision 7) require that the settlement agreement result from conciliation. Therefore, including the absence of conciliation process to the list of defences might be redundant. The same would apply to non-commercial settlement agreements not falling within the scope of the instrument.

- *Enforcement of the settlement agreement contrary to a decision of another court or competent authority*

44. The Working Group may wish to consider whether the fact that the enforcement of the settlement agreement would be contrary to a decision of another court or competent authority should also be construed as a defence in the instrument. Diverging views were expressed with respect to whether such a defence should be provided (A/CN.9/867, paras. 163-166). One view was that there was merit in providing such a defence, if it were to be presented in a permissive manner ("may be refused") and it could accommodate the interest of States that have obligations under certain treaties regarding recognition of decisions by foreign courts (A/CN.9/867, para. 165). Another view was that there was no need to provide such a defence in the

instrument as that might invite forum shopping by parties and inadvertently expand the principle of res judicata to those decisions that did not have such effect. In addition, it was stated that a refusal of enforcement by a court or competent authority in another State should not have an impact on the decision to be made by an enforcing authority (A/CN.9/867, para. 166).

Set-off

45. This note does not include formulations for a provision dealing with instances where the settlement agreement might be used for set-off purposes. That matter was left open by the Working Group for further consideration (A/CN.9/867, para. 176).

E. Other aspects

1. Confidentiality and the enforcement process

46. During the enforcement process, certain information in the settlement agreement as well as the process that led to it might have to be disclosed. Such disclosure may be at odds with the confidential nature of the conciliation process (article 9 of the Model Law on Conciliation) and the confidentiality obligation arising from that process (article 10 of the Model Law on Conciliation).[9] The Working Group may wish to consider how this should be addressed in the instrument including whether a specific provision is necessary.

2. Relationship of the enforcement process with judicial or arbitral proceedings

47. The Working Group may wish to consider the following formulation regarding parallel applications:

Draft provision 9 (Enforcement of a settlement agreement and substantive claim before a court or an arbitral tribunal)

If an application relating to the settlement agreement has been made to a court, arbitral tribunal or any other competent authority [which may affect recognition or enforcement of the settlement agreement], the competent authority of the State where the enforcement of the settlement agreement is sought may, if it considers it proper, adjourn the decision on the enforcement of the settlement agreement [and may also, on the application of the party claiming enforcement of the settlement agreement, order the other party to give suitable security].

48. The draft provision reflects the proposal that the instrument could include a provision similar to article VI of the New York Convention (A/CN.9/867, paras. 168 and 169).

3. Parties' choice in the application of the instrument

49. The issue of whether the application of the instrument should depend on the consent of parties to the settlement agreement was left open for further consideration, as it would largely depend on the form of the instrument and the mechanism envisaged therein (A/CN.9/867, paras. 142, 180-182). The Working Group may wish to consider the following possible approaches: (i) an opt-in approach, requiring parties' express consent for the application of the instrument (which could be formulated as a requirement in the application process or as a defence by a party refusing enforcement); or (ii) an opt-out approach, providing that parties may exclude the application of the instrument, which is the approach taken, for instance, in article 6 of the United Nations Convention on Contracts for the International Sale of Goods

[9] In particular, article 10(3), which provides as follows: "The disclosure of the information referred to in paragraph 1 of this article shall not be ordered by an arbitral tribunal, court or other competent governmental authority and, if such information is offered as evidence in contravention of paragraph 1 of this article, that evidence shall be treated as inadmissible. Nevertheless, such information may be disclosed or admitted in evidence to the extent required under the law or for the purposes of implementation or enforcement of a settlement agreement."

(CISG), and article 1(7) of the Model Law on Conciliation. It should be noted that if an opt-in or opt-out approach were to be included in the instrument, the latter would be more usual. Indeed, parties can exclude the application of a legislative text which is not of an imperative nature; and it is rare that parties confirm the application of an existing legislative text. For instance, if the instrument were to be a model legislative text, the provisions could be drafted as default rules ("unless otherwise agreed by the parties, …").

50. During the discussion, those in support of the opt-in mechanism argued that it would provide parties with a choice, highlight the voluntary nature of the conciliation process and raise the parties' awareness on the enforceability envisaged in the instrument. Those not in favour stated that requiring an opt-in would substantively limit the scope of the instrument and that it would be very unlikely for parties to agree to the expedited enforcement envisaged in the instrument at the final stages of the conciliation process (A/CN.9/867, para. 142).

(1) Opt-in

51. The Working Group may wish to consider the following formulations for requiring an opt-in:

(i) Additional paragraph in draft provision 7 (Application for enforcement)

"(1) To obtain enforcement of the settlement agreement, …:

…

(d) [proof]/[evidence] that the parties to the settlement agreement consented to the application of the [instrument]."

(ii) Additional paragraph in draft provision 8 (Grounds for refusing recognition and enforcement)

"(1) Enforcement of a settlement agreement may be refused …:

(f) The parties to the settlement agreement did not consent to the application of the [instrument]."

(2) Opt-out

52. The Working Group may wish to consider the following formulations for an opt-out mechanism:

(i) Additional paragraph in draft provision 1 (Scope of application)

"The parties to the settlement agreement may exclude the application of this [instrument]. Subject to articles ---, the parties to the settlement agreement may derogate from or vary the effect of any provision in the [instrument]."

(ii) Additional paragraph in draft provision 8 (Grounds for refusing recognition and enforcement)

"(1) Enforcement of a settlement agreement may be refused …:

(f) The parties to the settlement agreement have agreed to exclude the application of the [instrument]."

53. Another approach, if the instrument were to take the form of a Convention, would be for the instrument to not provide any opt-in or opt-out mechanism but allow States that wish to incorporate such a mechanism to make a declaration to that effect. The Working Group may, however, wish to consider the possible complications that might arise from allowing such declaration. The Working Group may wish to consider the following formulations:

Option 1: *A Party may declare that it shall apply this Convention only to the extent that the parties to the settlement agreement have agreed to the application of the Convention.*

Option 2: *A Party may declare that it shall apply this Convention unless the parties to the settlement agreement have agreed to exclude the application of the Convention.*

F. Form of the instrument

54. The Working Group may wish to consider the final form of the instrument. At its sixty-third session, the Working Group considered possible forms of the instrument, which could be a convention, model legislative provisions (either as a stand-alone text or as a complement to article 14 of the Model Law on Conciliation) or a guidance text (for instance, expanding paragraphs 87 to 92 of the Guide to Enactment on article 14 of the Model Law). The prevailing view was that there were a number of issues that would require further consideration before a decision could be made on the form of the instrument. Nonetheless, a number of delegations expressed preference for preparing a convention, as a convention could more efficiently contribute to the promotion and harmonization of conciliation (A/CN.9/861, para. 108).

C. Report of the Working Group on Dispute Settlement on the work of its sixty-sixth session (New York, 6-10 February 2017)

(A/CN.9/901)

[Original: English]

Contents

I. Introduction

1. At its forty-eighth session, the Commission mandated the Working Group to commence work on the topic of enforcement of settlement agreements to identify relevant issues and develop possible solutions, including the possible preparation of a convention, model provisions or guidance texts. The Commission agreed that the mandate of the Working Group should be broad to take into account the various approaches and concerns.[1]

2. At its sixty-third (Vienna, 7-11 September 2015) and sixty-fourth (New York, 1-5 February 2016) sessions, the Working Group considered that topic on the basis of notes by the Secretariat (A/CN.9/WG.II/WP.190 and A/CN.9/WG.II/WP.195, respectively). At its sixty-fourth session, the Working Group requested the Secretariat to prepare a document outlining the issues considered at the session and setting out draft provisions without prejudice to the final form of the instrument, grouping provisions into broad categories.[2]

3. At its forty-ninth session, the Commission had before it the report of the Working Group on the work of its sixty-third and sixty-fourth sessions (A/CN.9/861 and A/CN.9/867, respectively). After discussion, the Commission commended the Working Group for its work on the preparation of an instrument dealing with enforcement of international commercial settlement agreements resulting from conciliation ("instrument"), and confirmed that the Working Group should continue its work on the topic.[3]

4. At that session, the Commission also held a preliminary discussion regarding possible future work in the area of international dispute settlement. The Commission

considered the topics of (i) concurrent proceedings; (ii) code of ethics/conduct for arbitrators; and (iii) possible reform of investor-State dispute settlement system.[4] After deliberation, the Commission decided to retain the three topics on its agenda for further consideration at its next session. It further requested that the Secretariat, within its existing resources, continue to update and conduct preparatory work on all the topics so that the Commission would be in a position to make an informed decision whether to mandate its Working Group II to undertake work in any of the topics, following the current work on the enforcement of settlement agreements resulting from conciliation. In that context, it was reaffirmed that priority should be given to the current work by Working Group II so that it could expeditiously complete its work.[5]

5. At its sixty-fifth session (Vienna, 12-23 September 2016), the Working Group continued its deliberations on the basis of a note by the Secretariat (A/CN.9/WG.II/WP.198), and agreed that work would proceed with the aim of preparing a uniform text on enforcement of international commercial settlement agreements resulting from conciliation. It requested the Secretariat to prepare draft provisions showing how they would be adjusted depending on whether the instrument would take the form of a convention or model legislative provisions. It was reaffirmed that such work should be without any prejudice to the final form of the instrument.[6]

II. Organization of the session

6. The Working Group, which was composed of all States members of the Commission, held its sixty-sixth session in New York, from 6-10 February 2017. The session was attended by the following States members of the Working Group: Argentina, Armenia, Australia, Austria, Bulgaria, Burundi, Cameroon, Canada, Chile, China, Colombia, Czech Republic, Denmark, France, Germany, Greece, Honduras, Hungary, India, Indonesia, Israel, Italy, Japan, Kuwait, Lebanon, Malaysia, Mexico, Namibia, Nigeria, Pakistan, Republic of Korea, Romania, Russian Federation, Singapore, Spain, Switzerland, Thailand, Turkey, United Kingdom of Great Britain and Northern Ireland, United States of America and Venezuela (Bolivarian Republic of).

7. The session was attended by observers from the following States: Algeria, Belgium, Croatia, Cyprus, Democratic Republic of the Congo, Dominican Republic, Estonia, Ethiopia, Iraq, Finland, Luxembourg, Malta, Netherlands, Norway, South Africa, South Sudan, Sweden, Syrian Arab Republic and Viet Nam.

8. The session was also attended by observers from the Holy See and the European Union.

9. The session was also attended by observers from the following international organizations:

(a) *Intergovernmental organizations*: International Cotton Advisory Committee (ICAC) and International Institute for the Unification of Private Law (UNIDROIT);

(b) *Invited non-governmental organizations*: Alumni Association of the Willem C. Vis International Commercial Arbitration Moot (MAA), American Arbitration Association/International Centre for Dispute Resolution (AAA/ICDR), American Bar Association (ABA), American Society of International Law (ASIL), Arbitrators' and Mediators' Institute of New Zealand (AMINZ), Beijing Arbitration Commission/Beijing International Arbitration Center (BAC/BIAC), Belgian Center for Arbitration and Mediation (CEPANI), Centro de Arbitraje Cámara de Comercio de Lima (CCL), Chartered Institute of Arbitrators (CIARB), China International Economic and Trade Arbitration Commission (CIETAC), China Society of Private International Law (CSPIL), Comité Français de l'Arbitrage (CFA), Construction

Industry Arbitration Council (CIAC), Corporate Counsel International Arbitration Group (CCIAG), European Law Students' Association (ELSA), Florence International Mediation Chamber (FIMC), Forum for International Conciliation and Arbitration (FICA), G.C.C. Commercial Arbitration Centre (GCCAC), Hong Kong Mediation Centre (HKMC), Institute of International Commercial Law (IICL), Inter-American Bar Association (IABA), Inter-American Commercial Arbitration Commission (IACAC), International Academy of Mediators (IAM), International Bar Association (IBA), International Chamber of Commerce (ICC), International Council for Commercial Arbitration (ICCA), International Law Association (ILA), International Mediation Institute (IMI), Jerusalem Arbitration Center (JAC), Kuala Lumpur Regional Centre for Arbitration (KLRCA), Law Association for Asia and the Pacific (LAWASIA), Miami International Arbitration Society (MIAS), Milan Club of Arbitrators (MCA), New York International Arbitration Center (NYIAC), P.R.I.M.E. Finance Foundation (PRIME), Queen Mary University of London School of International Arbitration (QMUL), Swedish Arbitration Association (SAA), The World Association of Former United Nations Interns and Fellows (WAFUNIF), and Union Internationale des Huissiers de Justice (UIHJ).

10. The Working Group elected the following officers:

Chairperson: Ms. Natalie Yu-Lin Morris-Sharma (Singapore)

Rapporteur: Ms. Petra Peer (Austria)

11. The Working Group had before it the following documents: (a) provisional agenda (A/CN.9/WG.II/WP.199); and (b) note by the Secretariat regarding the preparation of an instrument on enforcement of international commercial settlement agreements resulting from conciliation (A/CN.9/WG.II/WP.200 and addendum).

12. The Working Group adopted the following agenda:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Preparation of an instrument on enforcement of international commercial settlement agreements resulting from conciliation.
5. Organization of future work.
6. Adoption of the report.

III. Deliberations and decisions

13. The Working Group considered agenda item 4 on the basis of the note prepared by the Secretariat (A/CN.9/WG.II/WP.200 and addendum). The deliberations and decisions of the Working Group with respect to this item are reflected in chapter IV. The Working Group requested the Secretariat to prepare draft model legislative provisions complementing the UNCITRAL Model Law on International Commercial Conciliation ("Model Law on Conciliation" or "Model Law") and a draft convention, both addressing enforcement of international settlement agreements resulting from conciliation, based on the compromise proposal (see para. 52 below) and reflecting the deliberations and decisions of the Working Group.

IV. International commercial conciliation: preparation of an instrument on enforcement of international commercial settlement agreements resulting from conciliation

14. The Working Group continued its deliberations on the preparation of an instrument on enforcement of international settlement agreements resulting from conciliation ("instrument") on the basis of document A/CN.9/WG.II/WP.200 and its addendum. The Working Group agreed to consider the draft provisions contained therein without prejudice to the final form of the instrument to be prepared.

15. The Working Group began its preliminary deliberation on some of the outstanding issues as provided in paragraphs 4 to 14 of document A/CN.9/WG.II/WP.200.

A. Legal effect of settlement agreements

16. The Working Group recalled its deliberations on how the instrument would express that settlement agreements could or should be given legal effect, for instance, as a prerequisite for enforcement or in defence against a claim, without using the expression "recognition", which raised concerns in some jurisdictions.

17. It was questioned whether there was a need for the instrument to include provisions to that effect as the main objective of the instrument was to envisage an enforcement mechanism. Along the same lines, it was suggested that the instrument should not address the legal effect of a settlement agreement between the parties. It was also argued that there was no need for the instrument to address that point as the legal effect of a settlement agreement as binding on the parties was implicit in the notion of an agreement.

18. In response, it was said that it would be appropriate for the instrument to address situations where a party might not be necessarily seeking enforcement of a settlement agreement but instead would be seeking to rely on the settlement agreement as a defence or for other procedural purposes. In that context, the Working Group recalled the drafting suggestion made at its sixty-fifth session (A/CN.9/896, para. 155), which read: "A settlement agreement shall be enforced and shall be given effect in defence against any claim made by either party to the settlement agreement [as far as the defence is available in national law] to the same extent as in enforcement proceedings [in accordance with the rules of procedure of the State where enforcement is sought and subject to (the provisions on defences in the instrument)]."

19. With regard to the proposed wording in draft provisions 1(1), 3(1) and 4(1), a concern was raised about the meaning of the phrase "legal effect", as it was ambiguous, including whether it referred to the substantive or procedural legal effect.

20. To address that concern, the following alternative text was suggested: "In case of a dispute concerning a matter which a party claims to have already been settled by a settlement agreement, the interested party may invoke the existence of the settlement agreement in accordance with the law of the State where the settlement agreement is sought to be relied upon and under the conditions laid down in this instrument to prove that the dispute has been settled."

21. It was explained that the alternative text would make it clear that a settlement agreement could be used as a defence in court proceedings, if the conditions set out in draft provision 3 were met and there were no grounds for refusing enforcement under draft provision 4. It was explained that, as a settlement agreement might have different legal effects depending on the jurisdiction, the alternative text would not address the legal effect of a settlement agreement. Instead, the effect would be deferred to the law of the State where the settlement agreement was sought to be relied upon. As to the placement of the alternative text, it was suggested that it could be placed in draft provision 3 with corresponding revisions made to other parts of the instrument.

22. Some questions were raised regarding the alternative text. One question related to the consequences on enforcement when the law of the State where the settlement agreement was sought to be relied upon prohibited a party from invoking the settlement agreement. It was understood that the alternative text should not be read as allowing a State which implemented the instrument to prohibit a party from invoking the settlement agreement in accordance with this provision. It was also mentioned that reference to the law of the State where the settlement agreement was sought to be relied upon might be understood to refer also to the substantive law of that State and thus, would be broader than the "rules of procedure" provided in draft provision 3. It was further questioned whether the conditional phrase in the alternative text ("In case of a dispute concerning a matter which a party claims to have already been settled by a settlement agreement") was necessary.

23. To address some of those questions, it was suggested that the alternative text could be further revised to read: "In case of a dispute concerning a matter which a party claims to have already been settled by a settlement agreement, that party may invoke the existence of the settlement agreement in the State where the settlement agreement is sought to be relied upon in accordance with the law of that State and under the conditions laid down in this instrument to prove that the dispute has been settled."

24. After discussion, the Working Group agreed to further consider the above-mentioned drafting proposals (see paras. 18, 20 and 23) in addition to draft provisions 1(1) and 3(1).

B. Settlement agreements concluded in the course of judicial or arbitral proceedings

25. The Working Group recalled its understanding that: (i) settlement agreements reached during judicial or arbitral proceedings but not recorded as judicial decisions or arbitral awards should fall within the scope of the instrument; and (ii) the mere involvement of a judge or an arbitrator in the conciliation process should not result in the settlement agreement being excluded from the scope of the instrument.

26. The Working Group further recalled its deliberations on the exclusion of settlement agreements concluded in the course of judicial or arbitral proceedings, in light of the objective to avoid possible gap or overlap with existing and future conventions, namely the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958) (the "New York Convention"), the Convention on Choice of Court Agreements (2005) (the "Choice of Court Convention"), and the 2016 preliminary draft convention on judgments, under preparation by the Hague Conference on Private International Law.

27. While some preference was expressed for option 1 in draft provision 1(3), it was suggested that settlement agreements recorded as judgments should be excluded from the scope of the instrument only to the extent that they would be enforceable in the same manner as judgments. It was further suggested to clarify that settlement agreements concluded before a court in the course of proceedings but not recorded as judgments would fall under the scope of the instrument to the extent that they were not enforceable in the same manner as a judgment. In that context, the Working Group considered the following drafting suggestion: "The instrument does not apply to settlement agreements approved by a court, or which have been concluded before a court in the course of proceedings, and which are enforceable in the same manner as a judgment, or recorded as an arbitral award."

28. With respect to that drafting suggestion, it was pointed out that additional burden would be put on the enforcing authority as it would need to determine enforceability under conventions or domestic law applicable to judgments. Therefore, it was suggested that it would be preferable not to include the additional criteria of enforceability in draft provision 1(3).

29. Concerns were raised that the drafting suggestion (see para. 27 above) might create a gap, if it did not provide that a settlement agreement recorded as an arbitral award but not enforceable as an arbitral award would fall under the scope of the instrument (for example, when the enforceability of a consent award is denied under the New York Convention due to the lack of an underlying dispute). It was further questioned whether the assessment of enforceability should be made in accordance with the law of the State where the settlement agreement was recorded as a judgment (the originating State) or in accordance with the law of State where enforcement was sought. In response, it was said that reference to the law of the originating State would be consistent with the approach adopted in the 2016 preliminary draft convention on judgments under preparation.

30. Concern was expressed that parties might be deprived of the opportunity to enforce a settlement agreement in instances where the settlement was recorded as a judgment or an arbitral award, but the law of the State where enforcement was sought did not permit enforcement under those regimes. It was therefore suggested that option 2 in draft provision 1(3) would be preferable as it would permit application of the instrument to settlement agreements recorded as judgments or arbitral awards, to the extent that they cannot be relied upon for enforcement as judgments or arbitral awards.

31. It was noted that, in certain jurisdictions, it was typical for parties to request a court to record a settlement agreement as a judgment. It was highlighted that in such circumstances, a large number of settlement agreements would be excluded from the scope of the instrument under option 1 of draft provision 1(3). In order to avoid such negative consequences, it was suggested that the instrument could provide for some flexibility to the enacting or implementing State to expand the scope of the instrument (possibly through declarations if the instrument were to be a convention). Support was expressed for that suggestion. It was noted that an alternative approach might be for the instrument to provide States with the flexibility to limit the scope of application, rather than to expand it, through declarations.

32. However, it was pointed out that uncertainties might result from such declarations, and therefore, doubts were expressed on the need to adopt an open and flexible approach to the matter. It was suggested that if the parties to a settlement agreement decided to record their settlement agreements in the form of a judgment or an arbitral award, there would be little need for allowing enforcement under the instrument.

33. The Working Group then considered whether settlement agreements not concluded in the course of judicial or arbitral proceedings but afterwards recorded as judgments or arbitral awards should fall within the scope of the instrument. It was widely felt that such situations could be addressed along the same lines as settlement agreements concluded in the course of judicial or arbitral proceedings and recorded as judgements or arbitral awards.

34. After discussion, the Working Group agreed to consider the matter further at a later stage of its deliberations.

C. Opt-out or opt-in for the parties to the settlement agreement; declaration by States regarding the effect of an opt-in by the parties

35. The Working Group considered whether the application of the instrument would depend on the consent of the parties to the settlement agreement. The wide range of views that had been expressed at the previous sessions of the Working Group were reiterated.

36. One view was that the parties' choice should not have any impact on the application of the instrument and, therefore, the instrument should apply generally and automatically provided that the requirements therein were met and no grounds for resisting enforcement existed. It was said that such an approach would provide an

enforcement regime comparable to that of the New York Convention for arbitral awards. That approach would avoid potential conflicts between the parties regarding the application of the enforcement regime envisaged in the instrument. It was further mentioned that requiring an opt-in would run contrary to the underlying objective of the instrument, which was to make it easier for businesses to enforce settlement agreements. Requiring an opt-in would also be contrary to the expectations of the parties as they would generally expect the other party to comply with the settlement agreement and thus its possible enforcement.

37. A different view was that parties should decide whether the instrument would be applicable in light of the importance of party autonomy, and that this could be achieved by providing for an opt-in or opt-out mechanism in the instrument. It was argued that parties needed to be fully aware of the consequences of the instrument becoming applicable and the opt-in or opt-out mechanism would provide a gradual introduction to the new enforcement regime.

38. The Working Group considered draft provision 4(1)(f) which dealt with the question of opt-out or opt-in by the parties to the settlement agreement as a ground for refusing enforcement. It was suggested that such a provision, if kept in the instrument, would be better placed under draft provision 4(2). Another suggestion was to require opt-in or opt-out by the parties in the provision on the scope or on application requirements.

39. Considering the divergence in views, the Working Group heard the suggestion also made at its sixty-fifth session that the question whether the application of the instrument would depend on the consent of the parties to the settlement agreement could be left to States when adopting or implementing the instrument. For example, if the instrument were to be a convention, a State could be given the flexibility to declare that that it would apply the convention only to the extent that the parties to the settlement agreement agreed to its application (as provided in option 1 in paragraph 52 of document A/CN.9/WG.II/WP.200). If the instrument were to take the form of model legislative provisions, an opt-in mechanism could be included as an option for States to consider when enacting such legislative provisions. In that context, reference was made to articles 1(6) and 1(7) of the Model Law on Conciliation.

40. The suggestion in paragraph 39 above was considered as one possible means to address the divergence of approaches on the question of opt-in or opt-out mechanisms. However, it was pointed out that providing flexibility to States to formulate declarations to that effect might give rise to uncertainty as to whether a settlement agreement would be enforceable, and could result in imbalance between parties in different jurisdictions as a settlement agreement might be enforceable in one but not in another.

D. Impact of the conciliation process, and of the conduct of conciliators, on the enforcement procedure

41. The Working Group recalled its discussion at its previous sessions on the impact of the conciliation process, and the conduct of conciliators, on the enforcement procedure. In that context, diverging views were expressed regarding the inclusion of defences for resisting enforcement of settlement agreements as formulated in draft provision 4(1)(d), which addressed manifest failure of the conciliator to maintain fair treatment of the parties, and draft provision 4(1)(e), which addressed non-disclosure by the conciliator of circumstances likely to give rise to justifiable doubts as to its impartiality or independence.

42. One view was that draft provisions 4(1)(d) and 4(1)(e) struck an appropriate balance providing an efficient mechanism for enforcement of settlement agreements and assuring legal certainty. It was explained that draft provisions 4(1)(d) and 4(1)(e) would contribute to ensuring that the process leading to a settlement agreement was conducted in an appropriate manner and provide a review mechanism by a court or an enforcing authority through which the parties could be protected. It was also noted

that the inclusion of draft provisions 4(1)(d) and 4(1)(e) would highlight the importance of ethics and conduct of conciliators.

43. In support of that view, it was mentioned that draft provision 4(1)(d) introduced objective standards. With regard to the term "manifest", it was said that the inclusion of that term raised the threshold, adding to the objectiveness of the standard and suggesting that only serious irregularities or failure by the conciliator would be grounds for refusing enforcement. On the other hand, views were also expressed that the "manifest" threshold was too high a standard and one which would be difficult to prove. A proposal was made to replace the notion of "manifest failure to maintain fair treatment" with "impropriety".

44. With regard to the notion of "fair treatment", it was mentioned that the notion was included in article 6(3) of the Model Law on Conciliation, which justified the inclusion in the instrument. It was mentioned that paragraph 55 of the Guide to Enactment and Use of the Model Law further provided guidance on the meaning of that term. In response, it was said that paragraph 55 was not meant to provide guidance on the issue under consideration, and that paragraph 55 further stated that the reference in the Model Law to maintaining fair treatment of the parties was intended to govern the conduct of the conciliation process and not the contents of the settlement agreement.

45. With regard to draft provision 4(1)(e), a suggestion was made to insert the words "in the eyes of the parties", but there was little support as that phrase would be introducing a subjective criteria. A further suggestion was made to introduce in draft provision 4(1)(e) language similar to that in draft provision 4(1)(d) which would require that non-disclosure by a conciliator had a material impact or undue influence on the parties entering into the settlement agreement.

46. Another view was that draft provisions 4(1)(d) and 4(1)(e) would run contrary to the objective of the instrument and were not necessary. It was stated that those matters were covered under other grounds for resisting enforcement in draft provision 4, such as paragraph 1(c), which referred to the settlement agreement being null and void, and paragraph 2(a), which addressed violation of public policy. It was suggested that any material accompanying the instrument could clarify that paragraphs 1(c) and 2(a) were intended to include circumstances dealt with in paragraphs 1(d) and 1(e). In response, the view was expressed that there was merit in retaining paragraphs 1(d) and 1(e) as explicit defences.

47. It was further said that draft provisions 4(1)(d) and 4(1)(e) might be problematic, as they would require the enforcing authority to take into consideration relevant domestic standards on conduct of the conciliator and the conciliation process. It was also mentioned that as the instrument was being prepared to allow for cross-border enforcement, the enforcing authority might have to inquire about a misconduct or a process which did not necessarily take place in that jurisdiction, which also posed problems.

48. In addition, it was underlined that manifest failure by a conciliator to maintain fair treatment would, in most cases, be very difficult to establish due to the confidential or informal nature of the process and the confidentiality obligation of the conciliator. Proving such failure might result in the parties violating the terms of confidentiality, which was a core characteristic of conciliation. In response, it was said that article 9 of the Model Law on Conciliation provided exceptions to confidentiality obligation, where disclosure would be required under the law or for the purposes of implementation or enforcement of a settlement agreement.

49. With respect to draft provision 4(1)(e), it was pointed out that in the preparation of the Model Law on Conciliation, a suggestion had been made to address the consequences that might result from non-disclosure by the conciliator. Reference was made to paragraph 52 of the Guide to Enactment and Use of the Model Law on Conciliation which read: "… the prevailing view was that the consequences of failure to disclose such information should be left to the provisions of law in the enacting State … In particular, a failure to disclose facts that might give rise to justifiable doubts … does not, in and of itself, create a ground for setting aside a settlement

agreement that would be additional to the grounds already available under applicable contract law." It was said that including non-disclosure by a conciliator as a defence to resist enforcement would run contrary to the approach adopted in the Model Law on Conciliation. In that context, a suggestion was made that draft provision 4(1)(e) could be merged with draft provision 4(1)(d) (see para. 76 below).

50. It was further pointed out that from practitioners' standpoint, inclusion of draft provisions 4(1)(d) and 4(1)(e) would deter the utility of the instrument, as it could create ancillary disputes. It was also mentioned that the standards in draft provision 4(1)(d) were subjective and could be interpreted differently. It was highlighted that conciliators were bound by ethical duties and professional standards and those provisions would be superfluous. In that context, a suggestion was made that work to prepare ethical standards for conciliators could be undertaken.

E. Proposal

51. With a view to make progress on the preparation of the instrument, a possible compromise proposal (hereinafter referred to as "compromise proposal") was made in relation to the following issues: legal effect of settlement agreements (issue 1); settlement agreements concluded in the course of judicial or arbitral proceedings (issue 2); declaration on opt-in by the parties (issue 3); impact of the conciliation process, and of the conduct of conciliators, on the enforcement procedure (issue 4); and the form of the instrument (issue 5).

52. The compromise proposal read as follows:

"*Issue 1*

"Draft provision 3: In case of a dispute concerning a matter that a party claims to have already been settled by a settlement agreement, the party may invoke the existence of the settlement agreement in the State where the settlement agreement is sought to be relied upon in accordance with the rules of procedure of the State and under the conditions laid down in this instrument to prove that the dispute has been settled.

"Draft provision 1(1): This instrument applies to international agreements resulting from conciliation and concluded in writing by parties to resolve a commercial dispute ('settlement agreement').

"Draft provision 4 (chapeau): The competent authority of the State where the application under article 3 is made may refuse to grant relief under article 3 at the request of the party against whom it is invoked, only if that party furnishes to the competent authority proof that: …

"*Issue 2*

"Draft provision 1(3): This instrument does not apply to settlement agreements: (a) approved by a court; or (b) that have been concluded before a court in the proceedings, either of which are enforceable in the same manner as a judgment; or (c) recorded and enforceable as an arbitral award.

"Issue 3

*"*A Party may declare that it shall apply this Convention only to the extent that the parties to the settlement agreement have agreed to the application of the Convention.

"*Issue 4*

"Draft provision 4(1)(d): Gross misconduct by the conciliator that violated applicable standards and that had, in light of the circumstances of the case, a material impact or undue influence on a party, without which the party would not have entered into the settlement agreement.

"Draft provision 4(1)(e): The conciliator did not disclose circumstances unknown to the parties that were likely to give rise to justifiable doubts as to its

impartiality or independence and such lack of disclosure had, in light of the circumstances of the case, a material impact or undue influence on a party, without which the party would not have entered into the settlement agreement.

"Report to give examples of applicable standards of conduct, such as paragraph 55 of the Guide to Enactment and Use of the Model Law on Conciliation, and codes of conduct.

"*Issue 5*

"Model Law and Convention prepared simultaneously. Some have suggested use of the formula from the Transparency Convention."

53. The Working Group undertook the consideration of the compromise proposal, which was supported as providing a sound basis for further deliberations. It was generally felt that the drafting could be improved.

Issue 1, draft provision 3

54. It was explained that draft provision 3 aimed at addressing situations where a settlement agreement might be raised in defence against a claim. It was clarified that draft provision 3 would not replace draft provision 3(1) in document A/CN.9/WG.II/WP.200 but rather would be an additional paragraph. Further, it was underlined that that provision would permit a party to rely on a settlement agreement in different procedural contexts.

55. It was questioned whether the phrase "to prove that the dispute has been settled" was necessary as a defence would not always be limited to that aspect. It was further questioned whether requiring proof at the stage of application that a matter had been settled was appropriate. In addition, it was pointed out that the notion of a dispute having been settled was unclear. Therefore, it was suggested to either delete that phrase or revise it along the following lines: "to prove that the dispute has been conclusively settled, subject only to review under draft provision 4". It was further suggested that draft provision 3 should refer to the specific provisions in the instrument containing conditions (for example, draft provisions 3 and 4). A suggestion was made that draft provision 3 should clarify which State was being referred to in the phrase "rules of procedure of the State". It was suggested that draft provision 3 would be open to flexible application in the light of the different judicial systems.

Issue 1, draft provision 1

56. A comment was made that draft provision 1 no longer referred to "enforcement" and therefore did not define the objective or scope of the instrument. It was suggested that draft provision 1 should at least include a reference to "enforcement", indicating the key purpose of the instrument and following the approach in the New York Convention. In response, it was explained that it might be difficult to refer to the concept embodied in draft provision 3 and that including only "enforcement" might unintentionally limit the scope of the instrument. On that point, it was suggested that draft provision 3 was ancillary to the main purpose of the instrument and need not be referred to in draft provision 1. It was therefore suggested that reference to "enforcement" should be retained in draft provision 1.

Issue 1, draft provision 4

57. A comment was made that the phrase "grant relief" in draft provision 4 might convey a wider meaning than "enforcement", possibly referring to substantive relief. In response, it was clarified that the phrase "granting relief" intended to encompass both the right of a party to seek enforcement and to invoke a settlement agreement under draft provision 3.

Issue 2, draft provision 1(3)

58. In relation to draft provision 1(3), questions were raised regarding: (i) which authority would determine the enforceability in the same manner as a judgment and on what basis, whether it would be the law of the State where enforcement was sought

or that of the State where the settlement agreement was approved or court proceedings took place; (ii) the implications of the reference to the "enforceable as an arbitral award"; and (iii) the difference between the notions of a settlement agreement being "approved" by a court in paragraph (a), and being "concluded" before a court in paragraph (b).

59. In relation to question (i) in paragraph 58 above, it was explained that it would be the enforcing authority that would determine enforceability. With regard to a settlement agreement approved by a court or concluded before a court, that determination would be based on the standard (or law) of the State where the settlement agreement was approved or court proceedings took place, for the sake of consistency with the 2016 preliminary draft convention on judgments under preparation. With respect to a settlement agreement recorded as an arbitral award, that determination would be based on the law of the State where enforcement was sought in light of existing enforcement frameworks including the New York Convention. It was explained that draft provision 1(3) was silent on the matter as the basis for determination might vary depending on whether settlement agreements were approved by a court or concluded before a court, or recorded as arbitral awards. In response, it was said that the applicable standard for the determination of enforceability should be clarified, in particular as the law of different jurisdictions might be applicable, for example, the law of the place where the conciliation took place, where the settlement agreement was concluded and where the court approved the settlement agreement.

60. In relation to question (ii) in paragraph 58 above, it was explained that the addition of the phrase "enforceable as an arbitral award" in paragraph (c) was intended to address the gap that might arise from non-enforceability of a consent award in certain jurisdictions. Questions were raised on practical implications of that provision, in particular whether it might create an overlap with existing enforcement frameworks for arbitral awards.

61. In relation to question (iii) in paragraph 58 above, it was explained that paragraphs (a) and (b) were intended to cover a wide range of different circumstances, as in some jurisdictions, a settlement agreement that was approved by a court was not necessarily enforceable as a judgment. It was further clarified that they were meant to refer to situations, such as where parties would proceed with out-of-court conciliation and then seize a court to have the settlement approved and where parties would start court proceedings and settle out of court.

62. It was clarified that the phrase "of which are enforceable in the same manner as a judgment" would apply to both paragraphs (a) and (b). As a matter of drafting, it was suggested that paragraphs (a) and (b) could be combined.

63. The Working Group heard a number of additional comments and questions on draft provision 1(3). On a practical note, it was cautioned that the enforcing authority would need to inquire about the enforceability at the State where the settlement agreement was approved or court proceedings took place. Such a process was said to be costly and potentially lead to complications and delays. It was highlighted that that procedure would be an additional burden on the enforcing authority.

64. It was questioned whether a party denied enforcement of a settlement agreement, which was approved by a court or concluded before a court, could then apply for enforcement of the settlement agreement itself. It was explained that the purpose of draft provision 1(3) was to avoid overlap and therefore a party would not be able to enforce a settlement agreement in such circumstances. In response, it was said that overlaps among various enforcement regimes would be unavoidable and could be beneficial to parties. Therefore, reservations were expressed on draft provision 1(3), in particular in light of the complications that might result therefrom. Along the same lines, a further suggestion was made to leave it entirely to the enforcing authority to decide the applicable enforcement regime.

65. It was suggested that a State could provide a more favourable regime than that provided in draft provision 1(3) by applying the more-favourable-right provision (see para. 48 of document A/CN.9/WG.II/WP.200 and article 7 under paragraph 2 of

document A/CN.9/WG.II/WP.200/Add.1). It was suggested that draft provision 1(3) should be considered in conjunction with that more-favourable-right provision.

66. However, it was pointed out that the more-favourable-right provision would not solve issues arising from multiple enforcement regimes. It was said that where a settlement agreement survived the transformation into a judgment or an arbitral award, a solution could be sought to allow their co-existence. In that context, it was suggested to replace draft provision 1(3) by the following text: "This instrument does not apply to a settlement agreement which, in the State where enforcement is sought, can be enforced as a judgment or an award."

67. A different suggestion was to address the matter as a defence to resist enforcement, leaving the determination to the enforcing authority. It was suggested that an additional ground for refusing enforcement could read along the following lines: "The settlement agreement has been approved by a court, concluded before a court or recorded as an arbitral award, and the enforcing authority finds that its enforcement can be satisfactorily pursued outside the instrument."

68. With a view to provide more flexibility in the application of the provision, a drafting suggestion was made to replace the words "either of which are enforceable in the same manner as a judgment" by the words "to the extent that the judgment is enforceable".

69. It was pointed out that the involvement of a judge might vary from merely recording parties' settlement agreement to taking an active role in the settlement. It was questioned whether the different types of court decisions that would result therefrom would have an impact on the operation of draft provision 1(3).

70. It was suggested that draft provision 1(3) should indicate that the party against whom the application was being invoked should bear the proof that the settlement agreement in question did not fall within the scope of the instrument.

71. After discussion, it was understood that draft provision 1(3) could operate in the following manner: (i) the competent authority where enforcement was sought would determine the application of the instrument; (ii) whether a settlement agreement was enforceable in the same manner as a judgment under paragraphs (a) and (b) would be determined in accordance with the law of the State where the settlement agreement was approved or court proceedings took place; (iii) the determination on that enforceability would be made by the competent authority where enforcement was sought; (iv) the more-favourable-right provision would allow States to apply the instrument, for example, to a settlement agreement approved by a court and enforceable in the same manner as a judgement; and (v) with regard to paragraph (c), the competent authority would determine the enforceability in accordance with the law where enforcement was sought and if the arbitral award fell outside the scope of the relevant enforcement regime, such as the New York Convention, the settlement agreement would survive and be considered for enforcement under the instrument.

Issue 4, draft provisions 4(1)(d) and 4(1)(e)

72. With regard to issue 4, it was explained that the proposed draft provisions 4(1)(d) and 4(1)(e) sought to reflect a compromise among the divergence in views expressed.

73. A question was raised whether there was a need for draft provision 4(1)(e) when the substance of that provision could sufficiently be covered by draft provision 4(1)(d). In response, it was said that draft provisions 4(1)(d) and 4(1)(e) addressed different issues, the former concerning the conduct of the conciliator based on applicable standards and the latter concerning non-disclosure by the conciliator.

74. With regard to draft provision 4(1)(d), it was mentioned that terms such as "gross misconduct", "violate", "material impact" and "undue influence" were ambiguous, unknown in certain legal traditions and might introduce uncertainties. In that context, a few drafting suggestions were made, for example, deleting reference to "gross misconduct" and referring to the violation of applicable standards by the conciliator or reinstating the terms "manifest failure" or "fair treatment."

75. In response, it was explained that the introduction of those terms in the compromise proposal was an attempt to incorporate more objective standards with a higher threshold, balancing the different views expressed in the Working Group on the need for such a provision in the instrument. It was stated that while those terms might be novel, the enforcing authorities would not have much difficulty in interpreting them.

76. With regard to draft provision 4(1)(e), a number of concerns were expressed. It was mentioned that it would be difficult for a party to prove the failure of a conciliator to disclose circumstances likely to give rise to justifiable doubts. It was further mentioned that draft provision 4(1)(e) still retained subjective standards and did not have much practical implication. It was reiterated that grounds for refusing enforcement should focus on the conduct of the parties and not on the conduct of the conciliators. It was emphasized that failure of disclosure by a conciliator should not constitute a ground for refusing enforcement. It was also said that draft provision 4(1)(e) should be merged with draft provision 4(1)(d) (see also para. 49 above).

77. In addition, it was also questioned why the disclosure obligation would apply only to circumstances unknown to the parties. In response, it was explained that there might be situations where a conciliator did not disclose circumstances giving rise to justifiable doubts as the parties were already aware of such circumstances. It was stated that in such instances, non-disclosure by a conciliator should not be construed as a ground for resisting enforcement, thus explaining why draft provision 4(1)(e) was limited to those circumstances "unknown" to the parties.

78. In support of retaining draft provision 4(1)(e), it was said that disclosure requirements were common in relevant applicable standards including in domestic legislation. It was also said that by qualifying the situation to where the non-disclosure by a conciliator had a material impact or undue influence on the parties, it achieved a balance between an oversight mechanism and the interest of the parties.

79. To address some of the concerns, it was suggested that draft provisions 4(1)(d) and 4(1)(e) could be combined to read: "a material breach of applicable standards by the conciliator but for which a reasonable party would not have entered into a settlement agreement". It was explained that the word "material" would ensure that only serious (non-trivial) breach constitute grounds for refusal, the word "reasonable" would provide for objective standards, the words "applicable standards" would encompass the various standards on conduct (including fair treatment) as well as disclosure, and the "but for" phrase would ensure that the ground could be invoked only when the consent of the parties to enter into a settlement agreement had been vitiated. There was support for this drafting proposal as providing a more objective standard compared to that of draft provisions 4(1)(d) and 4(1)(e).

80. It was questioned which standards would be applicable in draft provision 4(1)(d), whether standards applicable at the place where the conciliation took place or at the place where enforcement was sought. As to the comment in the compromise proposal that the report should give examples of applicable standards of conduct, delegations were invited to provide such examples. However, a note of caution was expressed that it was likely that such applicable standards might change over time and that providing examples might not be appropriate.

81. The Working Group continued its deliberation on the following drafting proposal:

> Draft provision 4(1)(d): There was a serious breach by the conciliator of standards applicable to the conciliator or the conciliation, without which breach that party would not have entered into the settlement agreement.
>
> Draft provision 4(1)(e): The conciliator failed to disclose circumstances to the parties that raise justifiable doubts as to the conciliator's impartiality or independence and such failure to disclose had a material impact or undue influence on that party, without which failure that party would not have entered into the settlement agreement.

82. It was said that draft provisions 4(1)(d) and 4(1)(e) should be understood as an extension of draft provision 4(1)(c), where a conduct by the conciliator had an impact on the parties entering into the agreement, which could lead to the settlement agreement being null and void. It was explained that there was merit in retaining draft provisions 4(1)(d) and 4(1)(e). It was further explained that draft provisions 4(1)(d) and 4(1)(e) would not impact the confidential nature of conciliation and that the enforcing authority would generally not be expected to inquire into the details of the process.

83. With respect to that proposal, a number of questions were raised including: (i) the meaning of "serious" breach and on what basis a breach would be considered "serious"; (ii) the need for the qualification that a breach had to be "serious" considering that the breach was further qualified as having a certain impact on a party; (iii) whether the non-inclusion of a reference to a "reasonable" party in draft provision 4(1)(d) (which reference was originally in draft provision 4(1)(d) of the compromise proposal, see above para. 52) made the ground subjective; (iv) whether the non-inclusion of the word "unknown" in draft provision 4(1)(e) (which word was originally in draft provision 4(1)(e) of the compromise proposal, see above para. 52) might lower the threshold; (v) the need and purpose of including the words "undue influence" in addition to "material impact" in draft provision 4(1)(e); and (vi) whether the phrase "and such failure to disclose had a material impact or undue influence on the party" in draft provision 4(1)(e) was necessary.

84. It was explained that the drafting proposal in paragraph 81 aimed at providing for an objective criteria. It was further explained that by limiting the grounds to when a breach or a failure to disclose had an impact on the parties entering into the agreement, the draft provisions provided for an objective threshold. It was mentioned that the term "serious breach" was used instead of the terms "gross misconduct", which was less known in civil law jurisdictions, and "manifest failure", which was considered ambiguous. It was also explained that the word "unknown" from the compromise proposal was deleted, not because a party would be able to rely on circumstances known to that party to resist enforcement, but rather because such knowledge would not have had a material impact on that party and thus would not construe ground for refusing enforcement under draft provision 4(1)(e). As to the word "reasonable" from the compromise proposal, it was explained that that word introduced subjective elements, which should be avoided, and that it was therefore not retained in the drafting proposal.

85. On the question about the need to retain draft provision 4(1)(e) in addition to draft provision 4(1)(d), it was said that draft provision 4(1)(e) would allow an enforcing authority to refuse enforcement even when the applicable standard did not necessarily include a disclosure obligation, yet subject to the conditions mentioned in that draft provision.

86. Concerns were raised that the inclusion of draft provisions 4(1)(d) could open doors for the enforcing authority to refuse enforcement based on diverse grounds, which would run contrary to the flexible nature of conciliation. It was pointed out that the responsibilities and obligations of an arbitrator and those of a conciliator differed, and that this should be taken account of when applying the relevant standards.

87. It was mentioned that there was a need to clarify the scope and the meaning of the "standards applicable" in draft provision 4(1)(d). In response, it was explained that the standards applicable were not only those applicable to the conciliator but those applicable to the process. It was mentioned that such standards took different forms such as the law governing conciliation and codes of conduct, including those developed by professional associations. Therefore, it was suggested that the *travaux preparatoires* or any explanatory material accompanying the instrument could provide examples of standards applicable. It was further suggested that reference should be made not only to the different types of standards but also to elements contained in those standards, such as independence, impartiality, fair treatment referred to in article 6(3) of the Model Law on Conciliation and in paragraph 55 of its Guide to Enactment and Use, and confidentiality. A different suggestion was to

retain those notions in the text of the instrument. Another proposal was for the Commission to consider preparing a separate code of conduct for conciliators.

88. After discussion, the Working Group agreed to continue its discussion based on the drafting proposal contained in paragraph 81 above at a later stage of its deliberations. It was generally felt that the Secretariat should be given flexibility in improving the draft taking into account suggestions made. It was also agreed that any explanatory material accompanying the instrument could include a reference to different types of, and elements in, standards applicable to conciliators and conciliation.

Issue 5

89. The Working Group considered issue 5 of the compromise proposal, which stated that a model legislative text and a convention should be prepared simultaneously and that a "formula" similar to that in the General Assembly resolution 69/116 of 10 December 2014 accompanying the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration should be used.

90. It was clarified that the "formula" was intended to refer to the preamble of that resolution which read: "Recalling … that the Commission decided to prepare a convention that was intended to give those States that wished to make the Rules on Transparency applicable to their existing investment treaties concluded before 1 April 2014 an efficient mechanism to do so, without creating any expectation that other States would use the mechanism offered by the Convention."

91. It was recalled that that wording was adopted in light of the application in time of the UNCITRAL Rules on Transparency in Treaty-based Investor-Sate Arbitration. It was suggested that any similar formula would need to be adapted to the specific characteristic of the work on conciliation. In that context, it was suggested that, as the Commission would be developing a model legislative text and a convention in parallel, it should be clarified that States would not be expected to adopt both instruments.

92. During the discussion, views were expressed in preference for preparing only model legislative provisions. It was noted that the preparation of a convention on the topic would allow States that adopt the model legislative provisions in their domestic laws to become a party to the convention at a later stage.

93. After discussion, in a spirit of compromise and to accommodate the different levels of experience with conciliation in different jurisdictions, it was agreed that the Working Group would continue to prepare both a model legislative text complementing the Model Law on Conciliation, and a convention, on enforcement of international commercial settlement agreements resulting from conciliation. It was further agreed that a possible approach to address the specific circumstance of preparing both types of instrument could be to suggest that the General Assembly resolution accompanying those instruments would express no preference on the type of instrument to be adopted by States.

D. Note by the Secretariat on settlement of commercial disputes: international commercial conciliation: preparation of an instrument on enforcement of international commercial settlement agreements resulting from conciliation

(A/CN.9/WG.II/WP.200 and Add.1)

[Original: English]

Contents

I. Introduction

1. At its forty-seventh session, in 2014, the Commission considered a proposal to undertake work on the preparation of a convention on the enforceability of settlement agreements reached through international commercial conciliation (A/CN.9/822).[1] It requested the Working Group to consider the feasibility and possible form of work in that area.[2] At its forty-eighth session, in 2015, the Commission took note of the consideration of the topic by the Working Group at its sixty-second session (A/CN.9/832, paras. 13-59)[3] and agreed that the Working Group should commence work at its sixty-third session to identify relevant issues and develop possible solutions, including the preparation of a convention, model provisions, or guidance texts. The Commission also agreed that the mandate of the Working Group with respect to that topic should be broad to take into account the various approaches and concerns.[4] At its forty-ninth session, in 2016, the Commission confirmed that the Working Group should continue its work on the topic.[5]

2. Accordingly, at its sixty-third to sixty-fifth sessions, the Working Group undertook work on the preparation of an instrument on enforcement of international settlement agreements resulting from conciliation.[6]

3. This note, which consists of document A/CN.9/WG.II/WP.200 and its addendum, reflects the deliberations of the Working Group at its sixty-fifth session. Document A/CN.9/WG.II/WP.200 outlines the issues considered so far by the Working Group and sets out draft provisions to be included in a possible instrument on enforcement of international settlement agreements resulting from conciliation (referred to in this note as the "instrument"). The draft provisions have been prepared without prejudice to the final form of the instrument (A/CN.9/896, paras. 12 and 213). Document A/CN.9/WG.II/WP.200/Add.1 illustrates how the draft provisions could be adjusted if the instrument were to take the form of a convention or of model legislative provisions supplementing the UNCITRAL Model Law on International Commercial Conciliation ("Model Law on Conciliation" or "Model Law").

II. Draft instrument on enforcement of international commercial settlement agreements resulting from conciliation

A. General remarks

1. Legal effect of settlement agreements

4. The Working Group considered how the instrument would express that settlement agreements could or should be given legal effect, for instance, as a prerequisite for enforcement or in defence against a claim, without using the expression "recognition" which, in certain jurisdictions, might be understood to confer *res judicata* or preclusive effect (A/CN.9/896, paras. 77-81, 147-155 and 200-203).

In further considering this matter, the Working Group may wish to take into account that: (i) parties may rely on a settlement agreement in different procedural contexts; (ii) the legal effect given to a settlement agreement varies depending on the national procedural framework; and (iii) any provision on that matter should not result in precluding a competent authority's consideration of the grounds for refusing enforcement (A/CN.9/896, para. 202).

5. Draft provisions 1 (1) and 3 (1) below address that issue by referring to the "legal effect between the parties" of a settlement agreement, and to a party "seeking to rely upon a settlement agreement" (see paras. 15, 29 and 30 below; see also A/CN.9/896, paras. 155 and 203).

2. Settlement agreements concluded in the course of judicial or arbitral proceedings

6. The Working Group confirmed its understanding that: (i) settlement agreements reached during judicial or arbitral proceedings but not recorded as judicial decisions or arbitral awards should fall within the scope of the instrument (A/CN.9/867, para. 125 and A/CN.9/896, para. 48); and (ii) the mere involvement of a judge or an arbitrator in the conciliation process should not result in the settlement agreement being excluded from the scope of the instrument (A/CN.9/867, para. 131 and A/CN.9/896, para. 54).

7. The Working Group may wish to further consider whether settlement agreements concluded in the course of judicial or arbitral proceedings, and recorded as judicial decisions or arbitral awards should fall within the scope of the instrument (A/CN.9/896, paras. 49-52, 169-176, 205-210). The objective of any provision on the matter would be to avoid any overlap and gap between possible applicable regimes (A/CN.9/896, paras. 49 and 210). The Working Group, at its sixty-fifth session, considered two possible formulations to address this matter (A/CN.9/896, paras. 176 and 205-209). While both formulations exclude from the scope of the instrument settlement agreements recorded as judicial decisions or arbitral awards, one difference is the treatment of settlement agreements when the conversion (as court decisions or arbitral awards) does not have effect or is not acceptable in the State where enforcement is sought (A/CN.9/896, para. 209). Draft provision 1 (3) contains those two formulations as options 1 and 2 (see paras. 15 and 20 below).

8. A further matter that the Working Group may wish to consider is whether settlement agreements not concluded in the course of judicial or arbitral proceedings but afterwards recorded as judicial decisions or arbitral awards should fall within the scope of the instrument (A/CN.9/896, paras. 53 and 169).

3. Opt-out or opt-in for the parties to the settlement agreement; declaration by States regarding the effect of an opt-in by the parties

9. The Working Group may wish to further consider whether the application of the instrument would depend on the consent of the parties to the settlement agreement (A/CN.9/896, paras. 126-134 and 195-199). At its sixty-fifth session, a wide range of views were expressed. One view was that the parties' choice should not have any

impact on the application of the instrument and, therefore, the instrument should apply provided that the requirements therein were met and no grounds for resisting enforcement existed (A/CN.9/896, para. 127). A different view was that parties should be given the choice to decide whether the instrument would apply, and that this could be achieved by providing for an opt-out or opt-in mechanism in the instrument (A/CN.9/896, para. 128).

10. During these discussions, it was suggested that the question whether the application of the instrument would depend on the consent of the parties to the settlement agreement need not necessarily be dealt with in the instrument, but could be left to States when adopting or implementing the instrument. For example, if the instrument were to be a convention, a State could be given the flexibility to declare that it would require the parties' agreement to the application of the convention (A/CN.9/896, paras. 130 and 196). If the instrument were to take the form of model legislative provisions, an opt-in mechanism could be included as an option for States to consider when enacting such legislative provisions (A/CN.9/896, para. 196). On this last point, it may be noted that article 1 (6) of the Model Law on Conciliation provides that the parties may "agree to the applicability of this Law", as a means to widen the scope of application of the Model Law; article 1 (7) of the Model Law provides that "the parties are free to agree to exclude the applicability of this law".

11. In relation to the suggestion referred to in paragraph 10 above, it was pointed out that: (i) it would be preferable to set out the opt-in or opt-out rule in the instrument and subsequently allow States to deviate or to make a declaration; and (ii) the application of such a mechanism could become complex, might give rise to uncertainty as to whether a settlement agreement would be enforceable, and could result in imbalance between jurisdictions as a settlement agreement might be enforceable in one but not in another. With respect to the last point, it was suggested that a solution could be to provide for a reciprocal application (A/CN.9/896, para. 197).

12. With a view to reflect the various views expressed, draft provision 4 (1)(f) deals with the question of opt-out or opt-in by the parties to the settlement agreement as a ground for refusing enforcement (see paras. 37, 43 and 44 below). The suggestion of a possible declaration by States if the instrument were to take the form of a convention (see para. 10 above) is addressed at paras. 50 to 52 below.

4. Impact of the conciliation process, and of the conduct of conciliators, on the enforcement procedure

13. The Working Group may wish to further consider whether to include, as separate grounds for refusing enforcement, failure to maintain fair treatment of the parties as well as failure to disclose circumstances likely to give rise to justifiable doubts as to the impartiality and independence of the conciliator (A/CN.9/896, paras. 103-109 and 191-194). Draft provision 4 (1)(d) and (e) deals with that matter (see paras. 37, 41 and 42 below).

5. Form of the instrument

14. The Working Group had a preliminary discussion about the form of the instrument (A/CN.9/896, paras. 135-143 and 211-213). While support was expressed for preparing either a convention or model legislative provisions, there was little support for preparing a guidance text (A/CN.9/896, para. 135). It was generally felt that it would be premature for the Working Group to make a decision on the final form of the instrument, as well as whether work should commence first on a convention or on model legislative provisions. To accommodate the divergence in views, it was agreed that work would proceed with the aim of preparing a uniform text on the topic of enforcement of international commercial settlement agreements resulting from conciliation (A/CN.9/896, para. 213). Document A/CN.9/WG.II/WP.200/Add.1 shows how the draft provisions in section B below would appear if the instrument were to take the form of a convention or of model legislative provisions supplementing the Model Law.

B. Annotated draft provisions

1. Scope of the instrument

15. The Working Group may wish to consider the following formulation regarding the scope of the instrument:

Draft provision 1 (Scope of application)

"1. This [instrument] applies to the legal effect between the parties, and to the enforcement, of international agreements resulting from conciliation and concluded in writing by parties to resolve a commercial dispute ('settlement agreement(s)').

"2. This [instrument] does not apply to settlement agreements:

"(a) Concluded for personal, family or household purposes by one of the parties (a consumer); or

"(b) Relating to family, inheritance or employment law.

"3. Option 1: [*This [instrument] does not apply to settlement agreements which have been:*

"(a) Approved as court orders, concluded before a court in the course of proceedings, or recorded as judgments or judicial settlements; or

"(b) Concluded before an arbitral tribunal in the course of proceedings, and recorded as arbitral awards.]

Option 2: [*This [instrument] applies to settlement agreements:*

"(a) Approved as court orders, concluded before a court in the course of proceedings, or recorded as judgments or judicial settlements, to the extent that they cannot be relied upon, including for enforcement, as judgments or judicial settlements under the law of [option 1, legislative provision: *this State*][option 2, convention: *the State where the settlement agreement is sought to be relied upon*]*; or*

"(b) Concluded before an arbitral tribunal in the course of proceedings, and recorded as arbitral awards, to the extent that they cannot be relied upon, including for enforcement, as arbitral awards under the law of [option 1, legislative provision: *this State*][option 2, convention: *the State where the settlement agreement is sought to be relied upon*].]

Option 3: [*This [instrument] does not apply to settlement agreements which have been:*

"(a) Approved as court orders, concluded before a court in the course of proceedings, or recorded as judgments or judicial settlements if they can be relied upon, including for enforcement, as judgments or judicial settlements under the law of [option 1, legislative provision: *this State*][option 2, convention: *the State where the settlement agreement is sought to be relied upon*]*; or*

"(b) Concluded before an arbitral tribunal in the course of proceedings, and recorded as arbitral awards if they can be relied upon, including for enforcement, as arbitral awards under the law of [option 1, legislative provision: *this State*][option 2, convention: *the State where the settlement agreement is sought to be relied upon*]*."*]

Comments on draft provision 1

16. Draft provision 1 sets forth the scope of the instrument. Paragraph 1 reflects the discussion of the Working Group that the purpose of the instrument would need to be clearly spelled out, preferably in draft provision 1 (A/CN.9/896, paras. 151-155 and 200-203). It also provides a definition of the term "settlement agreement" (see A/CN.9/896, paras. 32, 64, 117, 145, 146 and 152). The different elements of

such agreement are further elaborated in draft provision 2. The formal requirement that the settlement agreement shall be in writing is contained in draft provision 1 (1), with draft provision 2 (2) defining how that requirement is met, in particular in relation to electronic communications (see A/CN.9/896, paras. 64 and 66).

17. The Working Group may wish to note that the definition of settlement agreements in paragraph 1 no longer refers to the resolution of "all or part of" a dispute. As one of the grounds for refusing enforcement is the non-finality of the settlement agreement, a settlement agreement resolving part of a dispute would not be enforceable (for the reason that it is not a final resolution of the dispute). Moreover, it would be difficult for a competent authority to assess whether the dispute resolved by the settlement agreement is part of a wider range of disputes. Therefore, it is suggested to refer to "a dispute" or to the notion of "a dispute covered by the settlement agreement" (see also draft provisions 4 (1)(b) in para. 37 below).

18. Paragraphs 2 and 3 deal with exclusions from the scope of the instrument.

19. Paragraph 2 contains draft formulation on exclusion of settlement agreements dealing with consumer, family and employment law matters, in accordance with the discussion of the Working Group (see A/CN.9/896, paras. 55-60).

20. Paragraph 3 deals with the exclusion from the scope of the instrument of agreements concluded in the course of judicial or arbitral proceedings (A/CN.9/896, paras. 48-54, 169-176, 205-210; see also above, paras. 6-8). Options 1 and 2 reflect draft suggestions made at the sixty-fifth session of the Working Group (A/CN.9/896, paras. 176 and 208). According to option 1, the effectiveness of settlement agreements would be extinguished once they are converted, whereas their effectiveness would be preserved under certain circumstances in option 2. The Working Group generally felt that option 1 would be preferable, although elements of option 2 might deserve further consideration (A/CN.9/896, para. 210). Option 3 seeks to take elements from both options. The term "judicial settlement" is used in these options together with the word "judgment" in order to align the language with that of article 12 of the Convention on Choice of Court Agreements (2005) (the "Choice of Court Convention") (see A/CN.9/896, para. 52). Options 2 and 3 mention "the law of the State" so as to refer to enforcement of foreign judgments and arbitral awards on the basis of both conventions to which the State concerned is party and applicable domestic law (A/CN.9/896, para. 208).

Additional matter — Settlement agreements involving States and other public entities

21. Regarding settlement agreements involving States and other public entities, the Working Group reaffirmed its decision that such agreements should not be automatically excluded from the scope of the instrument (see A/CN.9/896, paras. 61 and 62), and could be addressed through a declaration if the instrument were to take the form of a convention (see para. 48 below). If the instrument were to take the form of model legislative provisions, it would be for each State enacting legislation to decide the extent to which such agreements would fall under the enacting legislation.

2. Definitions

22. The Working Group may wish to consider the following formulation regarding the definitions:

Draft provision 2 (Definitions)

"1. A settlement agreement is 'international' if:

"(a) At least two parties to the settlement agreement have, at the time of the conclusion of that agreement, their places of business in different States; or

"(b) The State in which the parties to the settlement agreement have their places of business is different from either:

"(i) The State in which a substantial part of the obligations under the settlement agreement is to be performed; or

"(ii) The State with which the subject matter of the settlement agreement is most closely connected.

"(c) For the purposes of this article:

"(i) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement;

"(ii) If a party does not have a place of business, reference is to be made to the party's habitual residence;

"2. A settlement agreement is 'in writing' if its content is recorded in any form. The requirement that a settlement agreement be 'in writing' is met by an electronic communication if the information contained therein is accessible so as to be useable for subsequent reference; 'electronic communication' means any communication that the parties make by means of data messages; 'data message' means information generated, sent, received or stored by electronic, magnetic, optical or similar means, including, but not limited to, electronic data interchange (EDI), electronic mail, telegram, telex or telecopy.

"3. 'Conciliation' means a process, regardless of the expression used and irrespective of the basis upon which the conciliation is carried out, whereby parties attempt to reach an amicable settlement of their dispute with the assistance of a third person or persons ('the conciliator') lacking the authority to impose a solution upon the parties to the dispute."

Comments on draft provision 2

23. Paragraph 1 contains a definition of "international" settlement agreement. Upon considering whether the international nature of a settlement agreement should be derived from the international nature of the conciliation (as defined in article 1 (4) of the Model Law on Conciliation), the Working Group agreed that the instrument should instead refer to the internationality of "settlement agreements" (A/CN.9/896, paras. 19 and 158-163). The Working Group may wish to consider whether to maintain the definition of "international" in relation to both the conciliation as provided in the Model Law and the settlement agreement as provided in draft provision 2 (1) if the instrument were to take the form of legislative provisions supplementing the Model Law (see document A/CN.9/WG.II/WP.200/Add.1, para. 4). The Working Group may wish to consider whether the international character of the conciliation could be derived from the internationality of the settlement agreement.

24. Paragraph 1 is modelled on article 1 (4) of the Model Law on Conciliation (A/CN.9/896, paras. 17-31 and 161). Subparagraph (b) has been closely aligned with article 1 (4)(b) of the Model Law (A/CN.9/896, para. 22).

25. Paragraph 1 does not include a provision similar to that found in article 1 (6) of the Model Law on Conciliation that "*This Law also applies to a commercial conciliation when the parties agree that the conciliation is international or agree to the applicability of this Law*". The Working Group agreed that the instrument should not contain a similar provision if it were to take the form of a convention, but that the matter might need to be considered further if the instrument were to take the form of model legislative provisions supplementing the Model Law (A/CN.9/896, para. 26). This matter might need to be considered also in light of the question of opt-out or opt-in mechanism for the parties (see para. 10 above).

26. Paragraph 2 addresses the requirement found in draft provision 1 (1) that settlement agreements should be in writing (A/CN.9/896, paras. 33-38 and 64-66). As the purpose of the instrument is to facilitate enforcement of settlement agreements, it was stated during the fifty-fifth session of the Working Group that it would be essential for the competent authority to be presented with a settlement agreement in writing in order to proceed with the enforcement process (A/CN.9/896, para. 36). It may be recalled that the definition of the written requirement incorporates the

principle of functional equivalence embodied in UNCITRAL texts on electronic commerce.

27. Paragraph 3 contains a definition of "conciliation", based on article 1, paragraphs (3) and (8) of the Model Law (A/CN.9/896, paras. 39-47 and 164-168). If the instrument were to take the form of model legislative provisions supplementing the Model Law, that definition would not be necessary (see A/CN.9/WG.II/WP.200/Add.1, para. 3).

Additional matter — Commercial

28. The Working Group confirmed the understanding that the instrument should apply to "commercial" settlement agreements without providing for any limitation as to the nature of the remedies or contractual obligations (see A/CN.9/896, para. 16). As to the formulation, the Working Group considered that the instrument should apply to settlement agreements concluded by parties to a "commercial" dispute (see A/CN.9/896, paras. 146 and 152). It may be noted that the Model Law on Conciliation already includes, in footnote 2, an illustrative list of the interpretation to be given to the term "commercial" (see A/CN.9/WG.II/WP.200/Add.1, para. 3).

3. Application requirements

29. The Working Group may wish to consider the following formulation regarding the application to the competent authority:

Draft provision 3 (Application)

"1. A settlement agreement shall be given legal effect between the parties and enforced in accordance with the rules of procedure of [option 1, legislative provision: *this State*][option 2, convention: *the State where the settlement agreement is sought to be relied upon*], *and under the conditions laid down in this [instrument].*

"2. A party relying on a settlement agreement, including for its enforcement, under this [instrument] shall supply:

"(a) The settlement agreement signed by the parties;

"(b) [Evidence][Indication] that the settlement agreement resulted from conciliation, such as by including the conciliator's signature on the settlement agreement, by providing a separate statement by the conciliator attesting to its involvement in the conciliation process or by providing an attestation by an institution that administered the conciliation process; and

"(c) Such other necessary document as the competent authority may require.

"3. The requirement that a settlement agreement shall be signed by the parties or, where applicable, the conciliator, is met in relation to an electronic communication if:

"(a) A method is used to identify the parties or the conciliator and to indicate that parties' or conciliator's intention in respect of the information contained in the electronic communication; and

"(b) The method used is either:

"(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

"(ii) Proven in fact to have fulfilled the functions described in article 2 (2) above, by itself or together with further evidence.

"4. If the settlement agreement is not in an official language of [option 1, legislative provision: *this* State][option 2, convention: *the State where the application is made], the competent authority may request the party making the application to supply a translation thereof into such language.*

"5. When considering the application, the competent authority shall act expeditiously."

Comments on draft provision 3

30. Paragraph 1 reflects the principle that the instrument should provide a mechanism whereby a party to a settlement agreement would be able to seek enforcement directly in the State of enforcement without a review or control mechanism in the State where the settlement agreement originated from as a pre-condition (see A/CN.9/896, para. 83). The Working Group may wish to consider whether paragraph 1 sufficiently clarifies that settlement agreements could be relied upon by a party in any procedure, whether akin to, for example, homologation before enforcement or in defence proceedings, and would produce effect between the parties (A/CN.9/896, paras. 155 and 203; see also paras. 4 and 5 above).

31. Paragraphs 2 and 3 deal with the requirements for an application under the instrument. Paragraph 2 (a) provides that a settlement agreement shall be signed by the parties (A/CN.9/896, para. 64), and paragraph 3 determines how that requirement could be met in relation to a settlement agreement concluded through electronic communication, in line with UNCITRAL texts on electronic commerce.

32. Paragraph 2 (b) corresponds to the understanding of the Working Group that the instrument would need to provide, in some fashion, that the settlement agreement should indicate that a conciliator was involved in the process and that the settlement agreement resulted from conciliation (A/CN.9/896, paras. 70-75 and 186-190). It was generally felt by the Working Group that that indication would distinguish a settlement agreement from other contracts and provide for legal certainty, facilitate the enforcement procedure and prevent possible abuse. However, it was also emphasized that the additional requirement should not be burdensome, should be kept simple to the extent possible (see A/CN.9/896, paras. 40 and 70) and that the means of proving that a conciliator was involved should not be construed as an exhaustive list (A/CN.9/896, para. 188).

33. Paragraphs 2 (c) and 5 correspond to suggestions that the competent authority should have the ability to require additional documents that would be necessary and should act expeditiously (A/CN.9/896, paras. 82 and 183). By way of background, the Working Group considered whether the instrument should provide that the settlement agreement should be in one single document, or in a complete set of documents. After discussion, there was general support for not including such a requirement in the instrument, but instead providing that the competent authority should have, at the stage of the application, the ability to require from the parties documents that would be strictly necessary (A/CN.9/896, paras. 67-69 and 177-185).

34. The Working Group may wish to note that the consequences of non-compliance with the application requirements are to be assessed in relation to the acceptability of the application for enforcement (A/CN.9/896, para. 190).

Additional matter — Informal processes

35. The Working Group may wish to consider whether the form requirements of settlement agreements in draft provisions 1 (1) and 2, as well as the application process in draft provision 3, sufficiently ensures that settlement agreements resulting from informal processes are excluded (A/CN.9/867, paras. 117 and 121; A/CN.9/896, paras. 42-44 and 164-167).

36. The Working Group may wish to consider further the suggestion that flexibility should be provided to States to broaden the scope of the instrument to include agreements between the parties not necessarily reached through conciliation. For example, a reservation (if the instrument were to take the form of a convention), or a footnote (if it were to take the form of model legislative provisions) could indicate that the application of the instrument extends to agreements settling a dispute reached without the assistance of a third person (A/CN.9/896, paras. 40 and 41; see also para. 49 below).

4. Defences

37. The Working Group may wish to consider the following formulation regarding the defences:

Draft provision 4 (Grounds for refusing to give legal effect to, or to enforce, a settlement agreement)

"*1. The competent authority of [*option 1, legislative provision: *this State][*option 2, convention*: the State where the application under draft provision 3 is made] may refuse to give legal effect to, or to enforce, a settlement agreement at the request of the party against whom it is invoked, only if that party furnishes to the competent authority proof that:*

"(a) A party to the settlement agreement was under some incapacity; or

"(b) The settlement agreement is not binding or is not a final resolution of the dispute covered by the settlement agreement; or the obligations in the settlement agreement have been subsequently modified by the parties or have been performed; or the conditions set forth in the settlement agreement have not been met for a reason other than a failure by the party against whom the settlement agreement is invoked, and therefore, have not yet given rise to the obligations of that party; or

*"(c) The settlement agreement is null and void, inoperative or incapable of being enforced under the law to which the parties have subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority of [*option 1, legislative provision*: this State][*option 2, convention*: the State where the application under draft provision 3 was made]; or*

"(d) A manifest failure by the conciliator to maintain a fair treatment of the parties had, in light of the circumstances of the case, a material impact or undue influence on a party, without which the party would not have entered into the settlement agreement; or

"(e) The conciliator did not disclose circumstances likely to give rise to justifiable doubts as to its impartiality or independence; or

"[(f) [Option 1 - opt-out*: The parties to the settlement agreement have agreed to exclude the application of the [instrument] in accordance with article* -] [Option 2 - opt-in*: The parties to the settlement agreement did not consent to the application of the [instrument] as provided for in article* -].]

*"2. The competent authority of [*option 1, legislative provision*: this State][*option 2, convention*: the State where the application under draft provision 3 was made] may also refuse to give legal effect to, or to enforce, a settlement agreement if it finds that:*

"(a) Giving legal effect to, or enforcing, the settlement agreement would be contrary to the public policy of that State; or

"(b) The subject matter of the settlement agreement is not capable of settlement by conciliation under the law of that State."

Comments on draft provision 4

- *Paragraph 1, subparagraph (a)*

38. Subparagraph (a) reflects the agreement in substance by the Working Group (A/CN.9/896, para. 85).

- *Paragraph 1, subparagraph (b)*

39. Subparagraph (b) contains various grounds for resisting enforcement that relate to the settlement agreement. Regarding the ground that the settlement agreement is not binding or is not a final resolution of the dispute covered by the settlement agreement, the Working Group agreed to retain that ground, in particular to avoid situations where parties would submit a draft agreement, or a text that would not be a

final resolution between the parties of the dispute (A/CN.9/896, paras. 88 and 89). Regarding the ground that the settlement agreement had been subsequently modified by the parties, the Working Group generally agreed that that ground should be retained, and could possibly be merged with the ground that the obligations in the settlement agreement have been performed (A/CN.9/896, paras. 90 and 98). Regarding the ground that the settlement agreement contained conditional or reciprocal obligations, it is clarified that the ground would apply only if the conditions stipulated in the agreement were not met or if the obligations had not been performed or complied with by the applicant (A/CN.9/896, paras. 91 and 98).

- *Paragraph 1, subparagraph (c)*

40. Subparagraph (c) is based on article II (3) and article V (1)(a) of Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958) (the "New York Convention"). It seeks to reflect the understanding of the Working Group that the instrument should not give the competent authority the ability to interpret the validity defence to impose requirements in domestic law, and that consideration of the validity of settlement agreements by the competent authority should not extend to form requirements (A/CN.9/896, paras. 99-102).

- *Paragraph 1, subparagraph (d)*

41. Subparagraph (d) addresses the impact of serious misconduct by the conciliator at the enforcement stage (A/CN.9/896, paras. 103-109 and 191-194), in line with the decision of the Working Group that the scope of that subparagraph should be limited to instances where the conciliator's misconduct had a direct impact on the settlement agreement (A/CN.9/896, paras. 107 and 194). The Working Group agreed to further consider the matter in light of the fact that maintaining fair treatment of the parties relates to the conduct of the conciliation process (which is not addressed in the instrument) and does not apply to the content of the settlement agreement (see above, para. 13).

- *Paragraph 1, subparagraph (e)*

42. Subparagraph (e) addresses failure by the conciliator to disclose information on circumstances likely to give rise to justifiable doubts regarding impartiality or independence (A/CN.9/896, paras. 104, 105, 108 and 194).

- *Paragraph 1, subparagraph (f)*

43. Subparagraph (f) is dealing with possible opt-in or opt-out by the parties (see paras. 9-12 above). Preliminary suggestions were made that the provision on defences would be the right place for dealing with that question (A/CN.9/896, para. 198). Subparagraph (f) also aims at clarifying a ground in the previous version of the draft which stated that "*the enforcement of the settlement agreement would be contrary to its terms and conditions*" (see A/CN.9/WG.II/WP.198, para. 34) with more clear and specific wording (A/CN.9/896, paras. 92-98; 126-134; and 195-199).

44. If paragraph 1 (f) is retained, the Working Group may wish to consider whether to include a provision addressing the possibility of opt-out or opt-in by the parties to the settlement agreement. In that respect, the Working Group may wish to consider article 1, paragraphs (6) and (7) of the Model Law, as well as the following possible formulations: (i) for an opt-out by the parties: *"The parties to the settlement agreement may exclude, by agreement in writing, the application of this [instrument]. Subject to articles ---, the parties to the settlement agreement may derogate from or vary the effect of any provision in the [instrument]."*; (ii) for an opt-in by the parties: "*This [instrument] shall apply only if the parties to the settlement agreement have consented in writing to its application*.". The Working Group may wish to consider how to ensure that such provisions would not be interpreted as a waiver or exclusion by parties of recourse regarding the settlement agreement.

- *Paragraph 2*

45. Paragraph 2 covers situations where the competent authority would consider the defences on its own initiative, and reflects the agreement in substance by the Working Group (A/CN.9/896, paras. 110-112).

5. Relationship of the enforcement process to judicial or arbitral proceedings

46. The Working Group may wish to consider the following formulation regarding parallel applications:

Draft provision 5 (Parallel applications or claims)

> *"If an application or a claim relating to a settlement agreement has been made to a court, an arbitral tribunal or any other competent authority which may affect enforcement of that settlement agreement, the competent authority of [*option 1, legislative provision*: this State][*option 2, convention*: the State where the enforcement of the settlement agreement is sought] may, if it considers it proper, adjourn the decision on the enforcement of the settlement agreement and may also, on the request of a party, order the other party to give suitable security."*

Comments on draft provision 5

47. Draft provision 5 addresses how a competent authority would treat a situation where an application (or claim), which might impact the enforcement, has been made to a court, an arbitral tribunal or any other competent authority. The Working Group generally agreed that it would be appropriate for the competent authority to be given the discretion to adjourn the enforcement process, if an application (or claim) relating to the settlement agreement had been made to a court, arbitral tribunal or any other competent authority, which might affect the enforcement process (A/CN.9/896, paras. 122-125). It may be noted that draft provision 5 does not deal with applications that would affect procedures for giving legal effect to the settlement agreement.

6. Other matters

(a) "More-favourable-right" provision

48. The proposal for a provision mirroring article VII(1) of the New York Convention, which would permit application of more favourable national legislation or treaties to enforcement, was considered by the Working Group. There was general support for including such a provision in the instrument, as a separate provision, even though reservation was expressed (A/CN.9/896, paras. 154, 156, and 204). The Working Group may wish to consider the following draft formulation: *"This [instrument] shall not deprive any interested party of any right it may have to avail itself of a settlement agreement in the manner and to the extent allowed by the law or the treaties of the State where such settlement agreement is sought to be relied upon."*

(b) States and other public entities

49. The Working Group may wish to consider the following formulation for a declaration on the application of the instrument to settlement agreements concluded by States and other public entities if the instrument were to take the form of a convention (see para. 21 above; see also A/CN.9/862, para. 62): *"A Party may declare that [*option 1: *it shall apply][*option 2: *it shall not apply] this Convention to settlement agreements to which it is a party, or to which any governmental agencies or any person acting on behalf of a governmental agency is a party, only to the extent specified in the declaration."*

(c) Conciliation process; involvement of a third person

50. The possibility of providing some flexibility to States who may wish to apply the instrument to agreements settling a dispute, regardless whether they resulted from conciliation, was considered by the Working Group (A/CN.9/896, paras. 40 and 41; see also para. 36 above). It was suggested that if the instrument were to take the form of a convention, it could provide for a reservation whereby a State party could declare that it would extend its application to settlement agreements reached without the assistance of a third person. Such a reservation could read as follows: "*A Party may declare that it shall apply this Convention to agreements settling a dispute regardless*

of whether [a conciliator assisted the parties in resolving their dispute][the agreements resulted from conciliation].” If the instrument were to take the form of model legislative provisions, that possibility could be indicated, for instance, in a footnote (A/CN.9/896, para. 41).

(d) Declaration by States regarding the effect of an opt-in by the parties

51. The Working Group may wish to consider further the suggestion to include in the instrument a declaration to the effect that each State would treat settlement agreements as binding and enforce them to the extent that the party applying for enforcement indicated the parties’ agreement to enforcement under the instrument (A/CN.9/896, paras. 130, 196 and 197; see also para. 10 above).

52. If the instrument were to take the form of a convention, it may be envisaged that States that wish to incorporate such a mechanism could make a declaration to that effect. The Working Group may wish to consider the following formulations:

Option 1: “*A Party may declare that it shall apply this Convention only to the extent that the parties to the settlement agreement have agreed to the application of the Convention.”*

Option 2: “*A Party may declare that it shall apply this Convention unless the parties to the settlement agreement have agreed to exclude the application of the Convention.”*

53. The Working Group may wish to consider the impact of such reservation (see para. 11 above).

(A/CN.9/WG.II/WP.200/Add.1) (Original: English)

Note by the Secretariat on settlement of commercial disputes: international commercial conciliation: preparation of an instrument on enforcement of international commercial settlement agreements resulting from conciliation

ADDENDUM

Contents

II. Draft instrument on enforcement of international commercial settlement agreements resulting from conciliation

C. Form of the draft instrument

1. As requested by the Working Group at its sixty-fifth session, this section illustrates how the draft uniform provisions presented in document A/CN.9/WG.II/WP.200 would be adjusted depending on whether the instrument would take the form of a convention or of model legislative provisions supplementing the Model Law on Conciliation (A/CN.9/896, paras. 12 and 213). The purpose is to merely facilitate consideration by the Working Group of the form of the instrument (A/CN.9/896, paras. 135-143 and 211-213; see also A/CN.9/WG.II/WP.200, paras. 3 and 14). An annex to this note contains a table of concordance between the provisions of the two possible forms of instrument.

1. Convention

2. Should the Working Group decide that a convention should be prepared, possible provisions might read as follows.

"**Article 1 — Scope of application**

"1. This Convention applies to the legal effect between the parties, and to the enforcement, of international agreements resulting from conciliation and concluded in writing by parties to resolve a commercial dispute ('settlement agreement(s)').

"2. This Convention does not apply to settlement agreements:

"(a) Concluded for personal, family or household purposes by one of the parties (a consumer); or

"(b) Relating to family, inheritance or employment law.

"3. Option 1: [This Convention does not apply to settlement agreements which have been:

"(a) Approved as court orders, concluded before a court in the course of proceedings, or recorded as judgments or judicial settlements; or

"(b) Concluded before an arbitral tribunal in the course of proceedings, and recorded as arbitral award.]

Option 2: [This Convention applies to settlement agreements:

"(a) Approved as court orders, concluded before a court in the course of proceedings, or recorded as judgments or judicial settlements, to the extent that they cannot be relied upon, including for enforcement, as judgments or judicial settlements under the law of the State where the settlement agreement is sought to be relied upon; or

"(b) Concluded before an arbitral tribunal in the course of proceedings, and recorded as arbitral awards, to the extent that they cannot be relied upon, including for enforcement, as arbitral awards under the law of the State where the settlement agreement is sought to be relied upon.]

Option 3: [This Convention does not apply to settlement agreements which have been:

"(a) Approved as court orders, concluded before a court in the course of proceedings, or recorded as judgments or judicial settlements if they can be relied upon, including for enforcement, as judgments or judicial settlements under the law of the State where the settlement agreement is sought to be relied upon; or

"(b) Concluded before an arbitral tribunal in the course of proceedings, and recorded as arbitral awards if they can be relied upon, including for enforcement, as arbitral awards under the law of the State where the settlement agreement is sought to be relied upon."]

"**Article 2 — Definitions**

"1. A settlement agreement is 'international' if:

"(a) At least two parties to the settlement agreement have, at the time of the conclusion of that agreement, their places of business in different States; or

"(b) The State in which the parties to the settlement agreement have their places of business is different from either:

"(i) The State in which a substantial part of the obligations under the settlement agreement is to be performed; or

"(ii) The State with which the subject matter of the settlement agreement is most closely connected.

"(c) For the purposes of this article:

"(i) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement;

"(ii) If a party does not have a place of business, reference is to be made to the party's habitual residence.

"2. A settlement agreement is 'in writing' if its content is recorded in any form. The requirement that a settlement agreement be 'in writing' is met by an electronic communication if the information contained therein is accessible so as to be useable for subsequent reference; 'electronic communication' means any communication that the parties make by means of data messages; 'data message' means information generated, sent, received or stored by electronic, magnetic, optical or similar means, including, but not limited to, electronic data interchange (EDI), electronic mail, telegram, telex or telecopy.

"3. 'Conciliation' means a process, regardless of the expression used and irrespective of the basis upon which the conciliation is carried out, whereby parties attempt to reach an amicable settlement of their dispute with the assistance of a third person or persons ('the conciliator') lacking the authority to impose a solution upon the parties to the dispute.

"**Article 3 — Application**

"1. A settlement agreement shall be given legal effect between the parties and enforced in accordance with the rules of procedure of the State where the settlement agreement is sought to be relied upon, and under the conditions laid down in this Convention.

"2. A party relying on a settlement agreement, including for its enforcement, under this Convention shall supply:

"(a) The settlement agreement signed by the parties;

"(b) [Evidence][Indication] that the settlement agreement resulted from conciliation, such as by including the conciliator's signature on the settlement agreement, by providing a separate statement by the conciliator attesting to its involvement in the conciliation process or by providing an attestation by an institution that administered the conciliation process; and

"(c) Such other necessary document as the competent authority may require.

"3. The requirement that a settlement agreement shall be signed by the parties or, where applicable, the conciliator, is met in relation to an electronic communication if:

"(a) A method is used to identify the parties or the conciliator and to indicate that parties' or conciliator's intention in respect of the information contained in the electronic communication; and

"(b) The method used is either:

"(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

"(ii) Proven in fact to have fulfilled the functions described in article 2(2) above, by itself or together with further evidence.

"4. If the settlement agreement is not in the official language(s) of the State where the application is made, the competent authority may request the party making the application to supply a translation thereof into such language.

"5. When considering the application, the competent authority shall act expeditiously.

"**Article 4 — Grounds for refusing to give legal effect to, or to enforce, a settlement agreement**

"1. The competent authority of the State where the application under draft provision 3 is made may refuse to give legal effect to, or to enforce, a settlement agreement at the request of the party against whom it is invoked, only if that party furnishes to the competent authority proof that:

"(a) A party to the settlement agreement was under some incapacity; or

"(b) The settlement agreement is not binding or is not a final resolution of the dispute covered by the settlement agreement; or the obligations in the settlement agreement have been subsequently modified by the parties or have been performed; or the conditions set forth in the settlement agreement have not been met for a reason other than a failure by the party against whom the settlement agreement is invoked, and therefore, have not yet given rise to the obligations of that party; or

"(c) The settlement agreement is null and void, inoperative or incapable of being enforced under the law to which the parties have subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority of the State where the application under draft provision 3 was made; or

"(d) A manifest failure by the conciliator to maintain a fair treatment of the parties had, in light of the circumstances of the case, a material impact or undue influence on a party, without which the party would not have entered into the settlement agreement; or

"(e) The conciliator did not disclose circumstances likely to give rise to justifiable doubts as to its impartiality or independence; or

"[(f) [*Option 1 — opt-out*: The parties to the settlement agreement have agreed to exclude the application of this Convention in accordance with article -] [*Option 2 — opt-in*: The parties to the settlement agreement did not consent to the application of this Convention as provided for in article -].]

"2. The competent authority of the State where the application under draft provision 3 was made may also refuse to give legal effect to, or to enforce, a settlement agreement if it finds that:

"(a) Giving legal effect to, or enforcing, the settlement agreement would be contrary to the public policy of that State; or

"(b) The subject matter of the settlement agreement is not capable of settlement by conciliation under the law of that State.

"**Article 5 — Parallel applications or claims**

"If an application or a claim relating to a settlement agreement has been made to a court, an arbitral tribunal or any other competent authority which may affect enforcement of that settlement agreement, the competent authority of the State where the enforcement of the settlement agreement is sought may, if it considers it proper, adjourn the decision on the enforcement of the settlement agreement and may also, on the request of a party, order the other party to give suitable security.

"**Article 6 — Parties' choice regarding the application of the Convention**

[*Option 1, Opt-out*: "The parties to the settlement agreement may exclude, by agreement in writing, the application of this Convention. Subject to articles ---, the parties to the settlement agreement may derogate from or vary the effect of any provision in the Convention.]

[*Option 2, Opt-in*: "This Convention shall apply only if the parties to the settlement agreement have consented in writing to its application.]

"**Article 7 — Other laws or treaties**

"This Convention shall not deprive any interested party of any right it may have to avail itself of a settlement agreement in the manner and to the extent allowed by the law or the treaties of the State where such settlement agreement is sought to be relied upon.

"**Article 8 — Reservations**

"1. A Party may declare that:

"(a) [Option 1: It shall apply][Option 2: It shall not apply] this Convention to settlement agreements to which it is a party, or to which any governmental agencies or any person acting on behalf of a governmental agency is a party, only to the extent specified in the declaration;

"(b) It shall apply this Convention to agreements settling a dispute regardless of whether [a conciliator assisted the parties in resolving their dispute][the agreements resulted from conciliation];

"(c) [Option 1: It shall apply this Convention only to the extent that the parties to the settlement agreement have agreed to the application of the Convention.] [Option 2: It shall apply this Convention unless the parties to the settlement agreement have agreed to exclude the application of the Convention.]

"2. No reservations are permitted except those expressly authorized in this article.

"3. Reservations may be made by a Party at any time. Reservations made at the time of signature shall be subject to confirmation upon ratification, acceptance or approval. Such reservations shall take effect simultaneously with the entry into force of this Convention in respect of the Party concerned. Reservations made at the time of ratification, acceptance or approval of this Convention or accession thereto shall take effect simultaneously with the entry into force of this Convention in respect of the Party concerned.

"4. Reservations and their confirmations shall be deposited with the depositary.

"5. Any Party that makes a reservation under this Convention may withdraw it at any time. Such withdrawals are to be deposited with the depositary, and shall take effect upon deposit."

[**Final provisions**: Depositary — Signature, ratification, acceptance, approval accession — Entry into force — Amendments — Denunciation]

2. Legislative provisions supplementing the Model Law on Conciliation

3. If the Model Law on Conciliation were to be complemented by provisions on enforcement of settlement agreements, the Working Group may wish to consider whether the provisions of the Model Law could possibly be presented in three sections, as follows: Section 1 on General Provisions would contain articles 1 to 3 of the Model Law, as completed by new definitions;[1] Section 2 on Conciliation Procedure would contain articles 4 to 13 of the Model Law; and Section 3 on Legal Effect and Enforcement
of Settlement Agreements would contain the new provisions on enforcement of settlement agreements, replacing article 14. The Working Group may wish to note that additional adjustments to the Model Law might be required based on further consideration of issues that remain to be decided, and that the presentation below is not exhaustive regarding the amendments that might need to be made to the Model Law.

4. Section 1, article 1, paragraphs (4) and (5) of the Model Law could be amended as follows:

"1.4 A conciliation or a settlement agreement is international if:

(a) At least two parties to the conciliation have, at the time of the conclusion of the settlement agreement, their places of business in different States; or

(b) The State in which the parties have their places of business is different from either:

(i) The State in which a substantial part of the obligations of the commercial relationship is to be performed; or

(ii) The State with which the subject matter of the dispute is most closely connected.

"1.5 For the purposes of this article:

"(a) If a party has more than one place of business, the place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement;

---

[1] Article 1(1) of the Model Law includes a footnote on the term "commercial" (A/CN.9/896, para. 16 and A/CN.9/WG.II/WP.200, para. 28); the word "conciliation" is defined in article 1(3) (A/CN.9/896, paras. 39-47, 164-168, and A/CN.9/WG.II/WP.200, para. 27); and article 1, paragraphs (6) and (7) provide for a opt-in and opt-out for the parties (A/CN.9/WG.II/WP.200, paras. 10 and 44).

"(b) If a party does not have a place of business, reference is to be made to the party's habitual residence."

5. Section 1, article 1(9) of the Model Law could be supplemented as follows:

"1.9 This Law does not apply to:

"(a) [Cases where a judge or an arbitrator, in the course of judicial or arbitral proceedings, attempts to facilitate a settlement];[2]

"(b) Settlement agreements concluded for personal, family or household purposes by one of the parties (a consumer);

"(c) Settlement agreement relating to family, inheritance or employment law; and

"[(d) Settlement agreements concluded by a State or any governmental agencies or any person acting on behalf of a governmental agency]."

6. An alternative to listing the exclusions would be to provide more generally that: "This Law shall not affect any other law of this State by virtue of which certain disputes may not be submitted to conciliation or may be submitted to conciliation only according to provisions other than those of this Law". A similar provision can be found in article 1(5) of the UNCITRAL Model Law on International Commercial Arbitration.

7. Section 1, article 1, of the Model Law could be complemented with a definition of "settlement agreements", as follows:

"1.10 A 'settlement agreement' is an international agreement resulting from conciliation and concluded in writing by parties to resolve a commercial dispute ('settlement agreement(s)').

"1.11 For the purposes of this article, a settlement agreement is 'in writing' if its content is recorded in any form. The requirement that a settlement agreement be 'in writing' is met by an electronic communication if the information contained therein is accessible so as to be useable for subsequent reference; "electronic communication" means any communication that the parties make by means of data messages; "data message" means information generated, sent, received or stored by electronic, magnetic, optical or similar means, including, but not limited to, electronic data interchange (EDI), electronic mail, telegram, telex or telecopy."

8. Article 14 of the Model Law would be replaced by section 3, which could read as follows:

"**Article 14 — General principles**

"14.1 A settlement agreement shall be given legal effect between the parties and enforced in accordance with the rules of procedure of this State, and under the conditions laid down in this Section.

"14.2 Option 1: [The procedure in this section does not apply to settlement agreements which have been:

"(a) Approved as court orders, concluded before a court in the course of proceedings, or recorded as judgments or judicial settlements; or

"(b) Concluded before an arbitral tribunal in the course of proceedings, and recorded as arbitral awards.]

Option 2: [The procedure in this section applies to settlement agreements:

"(a) Approved as court orders, concluded before a court in the course of proceedings, or recorded as judgments or judicial settlements, to the extent that

[2] Article 1(9)(a) might need to be adjusted to take account of the decision of the Working Group on the matter of settlement agreements concluded in the course of judicial or arbitral proceedings (see A/CN.9/WG.II/WP.200, paras. 6-8, 15 and 20).

they cannot be relied upon, including for enforcement, as judgments or judicial settlements under the law of this State; or

"(b) Concluded before an arbitral tribunal in the course of proceedings, and recorded as arbitral awards, to the extent that they cannot be relied upon, including for enforcement, as arbitral awards under the law of this State.]

Option 3: [The procedure in this section does not apply to settlement agreements which have been:

"(a) Approved as court orders, concluded before a court in the course of proceedings, or recorded as judgments or judicial settlements if they can be relied upon, including for enforcement, as judgments or judicial settlements under the law of this State]; or

"(b) Concluded before an arbitral tribunal in the course of proceedings, and recorded as arbitral awards if they can be relied upon, including for enforcement, as arbitral awards under the law of this State."]

"14.3 The functions referred to in this Section shall be performed by … (referred to as the "competent authority") [Each State enacting the Model Law specifies the court, courts or other competent authorities to perform the functions].

[Footnote to the title of section 3 or to article 14:

"*A State may consider applying this Section to agreements settling a dispute, irrespective of whether they resulted from conciliation.]

"**Article 15 — Application**

"15.1 A party relying on a settlement agreement, including for its enforcement, under this Section shall supply:

"(a) The settlement agreement signed by the parties;

"(b) [Evidence][Indication] that the settlement agreement resulted from conciliation, such as by including the conciliator's signature on the settlement agreement, by providing a separate statement by the conciliator attesting to its involvement in the conciliation process or by providing an attestation by an institution that administered the conciliation process; and

"(c) Such other necessary document as the competent authority may require.

"15.2 The requirement that a settlement agreement shall be signed by the parties or, where applicable, the conciliator is met in relation to an electronic communication if:

"(a) A method is used to identify the parties or the conciliator and to indicate that parties' or conciliator's intention in respect of the information contained in the electronic communication; and

"(b) The method used is either:

"(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

"(ii) Proven in fact to have fulfilled the functions described in article 1(11) above, by itself or together with further evidence.

"15.3 If the settlement agreement is not in the official language(s) of this State, the competent authority may request the party making the application to supply a translation thereof into such language.

"15.4 When considering the application, the competent authority shall act expeditiously.

"**Article 16 — Defences**

"16.1 The competent authority of this State may refuse to give legal effect to, or to enforce, a settlement agreement at the request of the party against whom it is invoked, only if that party furnishes to the competent authority proof that:

"(a) A party to the settlement agreement was under some incapacity; or

"(b) The settlement agreement is not binding or is not a final resolution of the dispute covered by the settlement agreement; or the obligations in the settlement agreement have been subsequently modified by the parties or have been performed; or the conditions set forth in the settlement agreement have not been met for a reason other than a failure by the party against whom the settlement agreement is invoked, and therefore, have not yet given rise to the obligations of that party; or

"(c) The settlement agreement is null and void, inoperative or incapable of being enforced under the law to which the parties have subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority of this State; or

"(d) A manifest failure by the conciliator to maintain a fair treatment of the parties had, in light of the circumstances of the case, a material impact or undue influence on a party, without which the party would not have entered into the settlement agreement; or

"(e) The conciliator did not disclose circumstances likely to give rise to justifiable doubts as to its impartiality or independence as provided for in article 8; or

["(f) [*Option 1 — opt out*: The parties to the settlement agreement have agreed to exclude the application of this Law in accordance with article 1(7)] [*Option 2 — opt in*: The parties to the settlement agreement did not consent to the application of this Law as provided for in article 1(6)].[3]

"16.2 The competent authority of this State may also refuse to give legal effect to, or to enforce, a settlement agreement if it finds that:

"(a) Giving legal effect to, or enforcing, the settlement agreement would be contrary to the public policy of this State; or

"(b) The subject matter of the settlement agreement is not capable of settlement by conciliation under the law of this State.

"16.3 If an application or a claim relating to a settlement agreement has been made to a court, an arbitral tribunal or any other competent authority which may affect enforcement of that settlement agreement, the competent authority of this State may, if it considers it proper, adjourn the decision on the enforcement of the settlement agreement and may also, on the request of a party, order the other party to give suitable security."

[3] It may be noted that article 1(6) of the Model Law aims at permitting application of the Model Law where other criteria for its application are not met, so its purpose and effect are different compared to the opt-in provision under the convention.

III. ELECTRONIC COMMERCE

A. Report of the Working Group on Electronic Commerce on the work of its fifty-fourth session (Vienna, 31 October-4 November 2016)

(A/CN.9/897)

[Original: English]

Contents

I. Introduction

1. At its forty-fourth session, in 2011, the Commission mandated Working Group IV to undertake work in the field of electronic transferable records.[1]

2. At its forty-fifth session (Vienna, 10-14 October 2011), the Working Group began its work on various legal issues relating to the use of electronic transferable records, including possible methodology for future work by the Working Group (A/CN.9/737, paras. 14-88).

3. At its forty-fifth session, in 2012, the Commission reaffirmed the mandate of the Working Group relating to electronic transferable records and requested the Secretariat to continue reporting on relevant developments relating to electronic commerce.[2]

4. At its forty-sixth session (Vienna, 29 October-2 November 2012), the Working Group continued its examination of the various legal issues that arose during the life cycle of electronic transferable records (A/CN.9/761, paras. 24-89). At its forty-seventh session (New York, 13-17 May 2013), the Working Group had the first opportunity to consider the draft provisions on electronic transferable records. It was reaffirmed that the draft provisions should be guided by the principles of functional equivalence and technology neutrality, and should not deal with matters governed by the underlying substantive law (A/CN.9/768, para. 14).

5. At its forty-sixth session, in 2013, the Commission reaffirmed the mandate of the Working Group and agreed that work towards developing a legislative text in the field of electronic transferable records should continue.[3]

---

[1] *Official Records of the General Assembly, Sixty-sixth Session, Supplement No. 17* (A/66/17), para. 238.
[2] Ibid., *Sixty-seventh Session, Supplement No. 17* (A/67/17), para. 90.
[3] Ibid., *Sixty-eighth Session, Supplement No. 17* (A/68/17), paras. 230 and 313.

6. At its forty-eighth session (Vienna, 9-13 December 2013), the Working Group continued its work on the preparation of draft provisions on electronic transferable records. The Working Group also took into consideration legal issues related to the use of electronic transferable records in relationship with the Convention Providing a Uniform Law for Bills of Exchange and Promissory Notes (Geneva, 7 June 1930) and the Convention Providing a Uniform Law for Cheques (Geneva, 19 March 1931) (A/CN.9/797, paras. 109-112). At its forty-ninth session (New York, 28 April-2 May 2014), the Working Group continued its work on the preparation of draft provisions on the basis of document A/CN.9/WG.IV/WP.128 and Add.1.

7. At its forty-seventh session, in 2014, the Commission reaffirmed the mandate of the Working Group to develop a legislative text on electronic transferable records that would greatly assist in facilitating electronic commerce in international trade.[4]

8. At its fiftieth session (Vienna, 10-14 November 2014), the Working Group continued its work on the preparation of draft provisions on the basis of document A/CN.9/WG.IV/WP.130 and Add.1. Subject to a final decision to be made by the Commission, the Working Group agreed to proceed with the preparation of a draft model law on electronic transferable records (A/CN.9/828, para. 23). At its fifty-first session (New York, 18-22 May 2015), the Working Group continued its work on the preparation of draft provisions on the basis of document A/CN.9/WG.IV/WP.132 and Add.1.

9. At its forty-eighth session, in 2015, the Commission encouraged the Working Group to finalize the current work in order to submit its results at the Commission's forty-ninth session bearing in mind that an UNCITRAL model law on electronic transferable records would be accompanied by explanatory materials.[5]

10. At its fifty-second session (Vienna, 9-13 November 2015), the Working Group continued its work on the preparation of draft provisions on the basis of document A/CN.9/WG.IV/WP.135 and Add.1. The Working Group proceeded with its deliberations of the notions of electronic transferable records and of control as functional equivalent of possession as well as of a general reliability standard.

11. At its fifty-third session (New York, 9-13 May 2016), the Working Group continued its work on the preparation of draft provisions on the basis of document A/CN.9/WG.IV/WP.137 and Add.1.

12. At its forty-ninth session, in 2016, the Commission agreed that priority should be given to completing the preparation of the draft Model Law on Electronic Transferable Records and the accompanying explanatory note, so that they could be finalized and adopted by the Commission at its next session. It was generally felt that the topics of identity management and trust services as well as of cloud computing should be retained on the work agenda and that it would be premature to prioritize between the two topics. The Commission confirmed its decision that the Working Group could take up work on those topics upon completion of the work on the draft Model Law on Electronic Transferable Records. In that context, the Secretariat, within its existing resources, and the Working Group were asked to continue to update and conduct preparatory work on the two topics including their feasibility in parallel and in a flexible manner and report back to the Commission so that it could make an informed decision at a future session, including the priority to be given to each topic. It was also mentioned that priority should be based on practical needs rather than on how interesting the topic was or the feasibility of work.[6]

II. Organization of the session

13. The Working Group, composed of all States members of the Commission, held its fifty-fourth session in Vienna from 31 October to 4 November 2016. The session was attended by representatives of the following States members of the Working

[4] Ibid., *Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 149.
[5] Ibid., *Seventieth Session, Supplement No. 17* (A/70/17), para. 231.
[6] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), paras. 235 and 353.

Group: Argentina, Austria, Brazil, Canada, China, Colombia, Czechia, El Salvador, France, Germany, Honduras, India, Indonesia, Italy, Japan, Kenya, Kuwait, Mexico, Pakistan, Panama, Philippines, Republic of Korea, Romania, Russian Federation, Singapore, Spain, Thailand, United Kingdom of Great Britain and Northern Ireland, United States of America, and Venezuela (Bolivarian Republic of).

14. The session was also attended by observers from the following States: Algeria, Belgium, Bolivia (Plurinational State of), Costa Rica, Cyprus, Dominican Republic, Paraguay, Republic of Moldova, Slovakia, Sweden, and Tunisia.

15. The session was also attended by observers from the Holy See and the European Union.

16. The session was also attended by observers from the following international organizations:

(a) *United Nations system*: World Bank;

(b) *Intergovernmental organizations*: Caribbean Court of Justice (CCJ);

(c) *International non-governmental organizations*: Centre for Commercial Law Studies (Queen Mary University of London), European Law Students' Association (ELSA), GSM Association (GSMA), Institute of Law and Technology (Masaryk University), International Bar Association (IBA), International Federation of Freight Forwarders Associations (FIATA), Law Association for Asia and the Pacific (LAWASIA) and The European Ecommerce & Omni-Channel Trade Association (EMOTA).

17. The Working Group elected the following officers:

Chairperson: Ms. Giusella Dolores FINOCCHIARO (Italy)

Rapporteur: Ms. Nadiah Faisal AL-DABBOUS (Kuwait)

18. The Working Group had before it the following documents: (a) annotated provisional agenda (A/CN.9/WG.IV/WP.138); and (b) a note by the Secretariat entitled "Draft Model Law on Electronic Transferable Records" (A/CN.9/WG.IV/WP.139 and its addenda).

19. The Working Group adopted the following agenda:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Draft Model Law on Electronic Transferable Records.
5. Legal issues related to identity management and trust services.
6. Contractual aspects of cloud computing.
7. Technical assistance and coordination.
8. Other business.
9. Adoption of the report.

III. Deliberations and decisions

20. The Working Group engaged in discussions on the draft Model Law on Electronic Transferable Records contained in document A/CN.9/WG.IV/WP.139 and its addenda (the "draft Model Law"). The deliberations and decisions of the Working Group thereon are reflected in chapter IV below. The Secretariat was requested to revise the draft Model Law and the explanatory materials to reflect those deliberations and decisions and transmit the revised text to the Commission for consideration at its fiftieth session. The Working Group recalled that UNCITRAL practice was to circulate the text as recommended by an UNCITRAL working group to all

Governments and relevant international organizations for comment. It was noted that the same practice would be followed with respect to the draft Model Law, so that the comments would be received before the Commission at its fiftieth session.

21. In addition, the Working Group engaged in discussions on legal issues related to identity management and trust services as well as on contractual aspects of cloud computing. The deliberations and decisions of the Working Group thereon are reflected in chapters V and VI respectively below.

IV. Draft Model Law on Electronic Transferable Records

A. General (Draft articles 1-5)

Draft article 1. Scope of application

Footnote

22. It was suggested to delete the footnote to paragraph 3, since paragraph 23 of A/CN.9/WG.IV/WP.139 was viewed as sufficiently explaining the exclusions possible under paragraph 3. In response, it was indicated that the footnote provided enacting States with the desired guidance on the possible scope of draft article 1 and was in line with the drafting style used for other UNCITRAL model laws.

23. After discussion, it was agreed to retain the footnote to paragraph 3 unchanged.

24. It was noted that, while States could create new types of transferable documents or instruments, including in electronic form, by enacting laws, parties to contractual obligations related to electronic transferable records could not do so by agreement.

25. Accordingly, the Working Group agreed that paragraph 18 of A/CN.9/WG.IV/WP.139 should be redrafted so that (a) the words "is not intended to" replaced the words "may not" in the first sentence; and (b) the second sentence should read "Allowing such creation by freedom of contract would circumvent the principle of numerus clausus of transferable documents or instruments, where that principle is applicable."

26. The Working Group agreed that the chapeau of paragraph 19 of A/CN.9/WG.IV/WP.139 should include the words "the requirements and legal effects of", in order to better clarify its meaning.

27. The Working Group further agreed to delete the words "if so believed" at the end of paragraph 23, subparagraph (b) of A/CN.9/WG.IV/WP.139 as not appropriate.

28. In addition, the Working Group also agreed that paragraph 23, subparagraph (b) of A/CN.9/WG.IV/WP.139 should indicate that jurisdictions could exclude documents or instruments falling under the scope of the Convention Providing a Uniform Law for Bills of Exchange and Promissory Notes (Geneva, 1930) and the Convention Providing a Uniform Law for Cheques (Geneva, 1931) (the "Geneva Conventions"), regardless of whether the Geneva Conventions were in force in those jurisdictions.

29. With regard to paragraph 27 of A/CN.9/WG.IV/WP.139, the Working Group agreed that the words "functional equivalents of" should be replaced with the word "legally", since electronic transferable records existing only in an electronic environment might fulfil the same functions as documents or instruments falling under the scope of the Geneva Conventions.

Draft article 2. Definitions

"electronic transferable record"

30. It was observed that the definition of "electronic transferable record" consisted solely of a reference to draft article 9. In that light, it was suggested to redraft that definition following the approach adopted in the definition of "transferable document or instrument". In response, it was recalled that such proposal had already been

discussed by the Working Group (see A/CN.9/869, paras. 24 and 25; see also A/CN.9/WG.IV/WP.137, paras. 20-26).

31. In view of the content of the definition of "electronic transferable record", the Working Group agreed that the comments contained in paragraphs 32 to 34 of A/CN.9/WG.IV/WP.139 should be presented as comments to draft article 9.

32. The Working Group also agreed that the words "of straight bills of lading" at the end of the second sentence of paragraph 34 of A/CN.9/WG.IV/WP.139 should be replaced with the words "of straight or nominative instruments, such as promissory notes, bills of lading, and bills of exchange" in order to provide for a broader range of nominative or straight documents or instruments.

"transferable document or instrument"

"issued on paper"

33. A proposal was made to delete the words "issued on paper" from the definition of "transferable document or instrument" as they were viewed as excluding tangible media other than paper. In response, it was indicated that the deletion of the words "issued on paper" would render the definition of "transferable document or instrument" medium-neutral. It was added that such revised definition could have unintended consequences on the fundamental structure of the Model Law, which aimed at establishing functional equivalence between paper-based transferable documents or instruments and electronic transferable records. It was also said that draft article 7, on writing, could refer to tangible media other than paper.

34. After discussion, the Working Group agreed to retain the definition of "transferable document or instrument" unchanged.

35. The Working Group also agreed that the second sentence in paragraphs 32 and 36 of A/CN.9/WG.IV/WP.139 should read "It does not aim at affecting the fact that substantive law shall determine the rights of the person in control." because the substantive law determined who was necessarily entitled to the rights referred to in the electronic transferable record.

36. The Working Group further agreed to delete the word "cargo" from paragraph 37 of A/CN.9/WG.IV/WP.139.

"electronic record"

37. The Working Group agreed to retain the definition of "electronic record" unchanged.

Draft article 3. Interpretation

General principles

38. With respect to the reference to "general principles on which this Law is based" contained in paragraph 2, it was indicated that identification of those principles would be useful, in particular, to provide guidance to readers not yet fully familiar with the Model Law. In that line, it was confirmed that the three fundamental principles underlying the Model Law were the principles of non-discrimination against electronic communications, functional equivalence and technological neutrality.

39. It was indicated that additional principles applicable to the Model Law, including some common to other uniform law texts, could be identified. It was added that the principle of good faith could be one of those principles, subject to the qualifications already expressed by the Working Group (A/CN.9/WG.IV/WP.139, para. 44).

40. It was further said that, while those general principles were already present in the Model Law, their exact content and operation could be identified progressively in light of the increasing level of use, application and interpretation of the Model Law. It was explained that such approach would provide needed flexibility in the interpretation of the Model Law. It was suggested that the explanatory materials

should be amended accordingly. In response, it was stated that the Model Law could not be based on general principles that did not yet exist.

41. After discussion, the Working Group agreed to (a) retain draft article 3 unchanged; (b) highlight in the explanatory materials that the principles of non-discrimination against electronic communications, functional equivalence and technological neutrality were the three fundamental principles underlying the Model Law; and (c) indicate in paragraph 46 of A/CN.9/WG.IV/WP.139 that: "The clarification of the exact content and operation of those general principles may take place progressively in light of the increasing level of use, application and interpretation of the Model Law."

Draft article 4. Party autonomy [and privity of contract]

42. It was recalled that the purpose of the Model Law was to promote international trade by enabling the use of electronic transferable records. It was added that the principle of party autonomy pursued the same purpose and that explanatory materials to the Model Law should reflect that.

43. It was explained that paragraph 1 referred to parties to contractual obligations related to the electronic transferable records. It was added that those parties needed to take full advantage of party autonomy, in particular, to support the rapid development of business practices.

44. In response, it was said that party autonomy was a notion adequate for contractual relations, but that substantive law applicable to transferable documents or instruments was often of mandatory application. It was added that functional equivalence rules aimed at enabling the use of electronic equivalents of transferable documents or instruments should likewise not be derogable.

45. It was indicated that the creation of dual or multiple functional equivalence regimes, based on different contractual agreements, was to be avoided, as it was with respect to transferable documents or instruments.

46. It was also indicated that the open list of provisions that could be derogated from contained in paragraph 1 did not provide sufficient guidance and that variance in its enactment could significantly disrupt uniformity. It was added that the Model Law should provide additional guidance on which provisions could be derogated from. As an example, it was indicated that draft articles 1 to 10, 12, 16, 17 and 20 of the Model Law could be identified as not derogable.

47. After discussion, the Working Group agreed to (a) retain draft article 4 unchanged; (b) retain the words "and privity of contract" outside square brackets in the title of draft article 4; (c) indicate in paragraph 50 of A/CN.9/WG.IV/WP.139 that: "Limiting party autonomy could hinder international trade as well as technological innovation and the development of new business practices."; (d) delete the word "broad" in paragraph 54 of A/CN.9/WG.IV/WP.139; and (e) reflect in the explanatory materials to the Model Law that enacting jurisdictions should carefully consider the possibility of allowing derogation of general principles underlying the Model Law and, in particular, functional equivalence rules, and the consequences thereof.

Draft article 5. Information requirements

48. The Working Group agreed to retain draft article 5 unchanged.

49. The Working Group agreed that draft article 15 should be placed after draft article 5, as both articles related to information requirements.

B. Provisions on electronic transactions (Draft articles 6-8)

Draft article 6. Legal recognition of an electronic transferable record

50. The Working Group agreed that draft article 6 should be placed in the first section of the Model Law, while functional equivalence related provisions should be

placed in the second section of the Model Law, and asked the Secretariat to make editorial changes accordingly.

51. A question was raised whether the word "consent" in paragraph 69 of A/CN.9/WG.IV/WP.139 referred to an agreement on the use of an electronic transferable record between the parties to contractual obligations related to electronic transferable records, or to an agreement on the use of system rules between the user of an electronic transferable records management system and the centralized operator of that system.

52. In that respect, it was explained that in certain types of systems based on the distributed ledger model there was no centralized operator and that therefore, while consent to the use of an electronic transferable record could be expressed, including implicitly, that may not be possible for system rules. In view of that observation as well as of the rapidly-evolving practice in the use of distributed ledgers, it was proposed to replace the words "do not require prior acceptance" in paragraph 69 of A/CN.9/WG.IV/WP.139 with the words "may not require prior acceptance".

53. After discussion, the Working Group agreed to (a) retain draft article 6 unchanged; (b) replace the words "enacting jurisdictions may decide to mandate" in paragraph 66 of A/CN.9/WG.IV/WP.139 with the words "this does not preclude enacting jurisdictions from mandating" as more appropriate for explanatory materials; and (c) revise paragraph 69 of A/CN.9/WG.IV/WP.139 to clarify the concept of consent referred to therein.

Techniques of enactment of draft articles 7 and 8

54. The Working Group agreed that provisions indicating the requirements for functional equivalence of the notions of "writing" and "signature" in an electronic environment were of fundamental importance for the application of UNCITRAL texts on electronic commerce. It was added that, while the enactment of the Model Law on Electronic Transferable Records required the adoption of those functional equivalence standards, such adoption could take place with different techniques.

55. In that respect, it was noted that a general law on electronic transactions was likely to contain such functional equivalence provisions, which could be based on UNCITRAL uniform texts. However, it was added, the case could also be that those functional equivalence provisions did not exist in a jurisdiction wishing to enact the Model Law on Electronic Transferable Records. In that case, the adoption of draft articles 7 and 8 would address the legislative need.

56. It was further explained that if those functional equivalence provisions already existed in a jurisdiction enacting the Model Law, a policy decision would have to be made on whether existing functional equivalence provisions contained in the general law on electronic commerce would apply also with regard to electronic transferable records, or, alternatively, draft articles 7 and 8 would apply. In that latter case, it was indicated that, while each enacting jurisdiction would be best placed to choose the most appropriate legislative approach, particular attention should be paid to avoid establishing a dual regime that sets forth different functional equivalence requirements for electronic records and electronic transferable records.

57. The Working Group agreed that the above considerations (see paras. 54-56 above) should be reflected in explanatory materials so as to provide guidance to enacting jurisdictions.

Relationship with other UNCITRAL texts on electronic commerce

58. A question was raised on the relationship between the Model Law on Electronic Transferable Records and the UNCITRAL Model Law on Electronic Commerce (1996).[7] In particular, it was suggested that paragraphs 3 and 4 of article 17 of the

[7] UNCITRAL Model Law on Electronic Commerce with Guide to Enactment (New York, 1999), United Nations Publication Sales No. E.99.V.4.

UNCITRAL Model Law on Electronic Commerce and certain provisions of the Model Law on Electronic Transferable Records could be incompatible.

59. A suggestion was made that additional guidance could be provided on the interaction of the different UNCITRAL texts on electronic commerce. It was recalled that those texts reflected evolving electronic commerce practice and that therefore certain provisions had been complemented, amended or updated by subsequent texts. It was added that such guidance would be particularly useful in technical cooperation activities.

60. After discussion, the Working Group agreed to (a) give further consideration to the relationship between the UNCITRAL Model Law on Electronic Commerce and the Model Law on Electronic Transferable Records; and (b) defer any consideration on the possibility of providing additional guidance on the interaction of the different UNCITRAL texts on electronic commerce to a future session.

Draft article 7. Writing

61. The Working Group agreed to retain draft article 7 unchanged.

Draft article 8. Signature

62. It was indicated that draft article 8 was meant to apply only to electronic transferable records and not to electronic records (see A/CN.9/WG.IV/WP.139, para. 75). After discussion, the Working Group agreed that reference be made to "electronic transferable record" instead of "electronic record".

63. It was said that a signature could relate to a voluntary decision rather than the need to meet a legal requirement. In order to reflect that possibility, the Working Group agreed that the words "or permits" should be included after the word "requires" and that the explanatory materials on that issue should reflect the content of paragraphs 4 and 29 of A/CN.9/WG.IV/WP.139/Add.2.

64. It was indicated that paragraph 79 of A/CN.9/WG.IV/WP.139 was not accurate since it could be read as not taking into account that the link between pseudonyms and real names could be based on factual elements to be found outside distributed ledger systems. In that light, the Working Group agreed that paragraph 79 of A/CN.9/WG.IV/WP.139 should be redrafted, taking also into account paragraph 39 of A/CN.9/WG.IV/WP.139/Add.1.

C. Use of electronic transferable records (Draft articles 9-19)

Draft article 9. Transferable document or instrument

65. Different views were heard with respect to the title. After discussion, the Working Group agreed on the title "Requirements for the use of an electronic transferable record" as best illustrating the content of draft article 9.

66. It was indicated that the comments to draft article 9 in A/CN.9/WG.IV/WP.139/Add.1 could be misinterpreted as the notion of "singularity" was to be understood as referring to singularity of claims and not to singularity of documents. It was explained that, while singularity of an electronic transferable record was possible, it was not necessary under the Model Law and might not be possible to achieve in registry-based systems, whose use the Model Law should also enable. It was suggested to review the explanatory materials to the Model Law accordingly.

67. In response, it was said that the matter had been discussed extensively and that the commentary reflected accurately the Working Group's discussions and deliberations. In particular, it was said that singularity of documents and singularity of claims were two distinct notions that both found adequate illustration in the explanatory materials. It was added that the suggested revision would require amending the text of draft article 9, since the article "the" in the English language

version of draft article 9, paragraph 1 (b)(i) and its corresponding translations were meant to reflect singularity of documents.

68. After discussion, the Working Group agreed to leave the explanatory materials to draft article 9 unchanged with respect to the references to singularity.

69. The Working Group agreed that the words "(or singularity)" should be deleted from paragraph 7 of A/CN.9/WG.IV/WP.139/Add.1 to avoid any confusion between the notions of "uniqueness" and "singularity".

70. It was suggested that paragraph 11 of A/CN.9/WG.IV/WP.139/Add.1 could be misread as authorizing replication of electronic transferable records and should be deleted. In response, it was said that, while replication of electronic transferable records could be technically possible, the electronic transferable records management system should prevent such replication, as indicated in paragraph 11 of A/CN.9/WG.IV/WP.139/Add.1. It was added that the possibility of producing non-transferable copies of electronic transferable records was not excluded under the Model Law.

71. It was indicated that the text of paragraph 13 of A/CN.9/WG.IV/WP.139/Add.1 could be misunderstood as implying a formal requirement of identification of the electronic transferable record as functional equivalent of a transferable document or instrument. In that light, the Working Group agreed to revise paragraph 13 of A/CN.9/WG.IV/WP.139/Add.1 as follows: "The information that would be required to be contained in a transferable document or instrument allows determining the substantive law applicable to the electronic transferable record (e.g., the law applicable to a bill of lading, rather than the law applicable to a promissory note). Nevertheless, one electronic transferable record may contain information that would be required to be contained in more than one type of transferable document or instrument."

72. It was indicated that the text of paragraph 21 of A/CN.9/WG.IV/WP.139/Add.1 could be misleading. It was further indicated that draft article 9 required that the electronic transferable record was capable of being controlled rather than being actually controlled. The Working Group agreed that paragraph 21 of A/CN.9/WG.IV/WP.139/Add.1 should be deleted.

73. It was said that the first sentence of paragraph 25 of A/CN.9/WG.IV/WP.139/Add.1 could be interpreted as indicating that only system designers could authorize changes, while those changes would be actually agreed upon by the parties to contractual obligations related to electronic transferable records. In light of that observation, the Working Group agreed to draft the first sentence of paragraph 25 of A/CN.9/WG.IV/WP.139/Add.1 as follows: "'Authorized' changes are those changes agreed upon by the parties to contractual obligations related to electronic transferable records throughout the life cycle of an electronic transferable record and permitted by the electronic transferable records management system."

74. It was suggested that the explanatory materials should provide guidance on the words "apart from any change which arises in the normal course of communication, storage and display" in draft article 9, paragraph 2. In that respect, it was recalled that the same words were used in article 8, paragraph 3 (a) of the UNCITRAL Model Law on Electronic Commerce, and that useful guidance could be found in the Guide to Enactment to that Model Law, subject to any adjustment needed in relation to the use of electronic transferable records.

75. The Working Group agreed that the explanatory materials should provide guidance on the words "apart from any change which arises in the normal course of communication, storage and display" in draft article 9, paragraph 2.

Draft article 10. Control

76. It was indicated that the notions of logical and physical control contained in paragraph 28 of A/CN.9/WG.IV/WP.139/Add.1 were not particularly relevant for the operation of the Model Law and could be easily misinterpreted. It was further said that the reference to the notion of "control" as implementing the requirement

contained in draft article 9, paragraph 1(b)(ii) was obscure. The Working Group agreed to retain the following draft of paragraph 28 of A/CN.9/WG.IV/WP.139/Add.1: "The notion of "control" is closely related to article 9, paragraph 1(b)(ii) (A/CN.9/869, para. 103)."

77. It was said that, although possession was a factual situation, and control was the functional equivalent of possession, the first sentence of paragraph 30 of A/CN.9/WG.IV/WP.139/Add.1 was not appropriate. The Working Group agreed to substitute the first sentence of paragraph 30 of A/CN.9/WG.IV/WP.139/Add.1 with the following: "The Model Law is concerned with identifying a functional equivalent to the fact of possession."

78. The Working Group agreed that the words "an electronic transferable record" in paragraph 37 of A/CN.9/WG.IV/WP.139/Add.1 should be replaced with the words "a transferable document or instrument". However, a view was expressed that the entities able to control an electronic transferable record may not necessarily be the same entities able to possess a transferable document or instrument, and that further consideration should be given to the possibility that physical and digital objects could, under certain circumstances, control electronic transferable records.

Draft article 11. General reliability standard

79. Broad support was expressed for the view that the concept of "reliability" in draft article 11 referred to the reliability of the method, and that reference to a method would include any system used to implement that method. It was suggested that draft article 11 should be revised accordingly. In that light, the Working Group agreed that subparagraph (a)(i) should read "Any operational rules relevant to the assessment of reliability"; and subparagraph (a)(iv) should read "The security of hardware and software".

80. The Working Group agreed that the words "illustrative and as such" should be included in paragraph 47 of A/CN.9/WG.IV/WP.139/Add.1 before the words "not exhaustive" to align the content of that paragraph with that of paragraph 50 of A/CN.9/WG.IV/WP.139/Add.1.

81. The Working Group also agreed that the words "parties, including" should be included before the words "third parties" in the first sentence of paragraph 54 of A/CN.9/WG.IV/WP.139/Add.1 to reflect that "authorized access and use of the system" was a notion relevant to all parties.

Draft article 12. Indication of time and place in electronic transferable records

82. It was indicated that the third sentence of paragraph 2 of A/CN.9/WG.IV/WP.139/Add.2 placed unnecessary importance on the indication of time and place in electronic transferable records. It was suggested that the sentence could be revised as follows: "Article 12 allows for that indication in electronic transferable records."

83. It was indicated that paragraph 7 of A/CN.9/WG.IV/WP.139/Add.2 could create the impression of the existence of an evidentiary rule in the Model Law. In response, it was explained that paragraph 7 aimed to clarify that, when substantive law allowed for agreement on the determination of time, that possibility should not be hindered by the technical features of the electronic transferable records management system.

84. After discussion, the Working Group agreed to (a) retain draft article 12 unchanged; (b) revise the third sentence of paragraph 2 of A/CN.9/WG.IV/WP.139/Add.2 as suggested; and (c) delete paragraph 7 of A/CN.9/WG.IV/WP.139/Add.2.

Draft article 13. Determination of place of business

85. After discussion, the Working Group agreed to retain draft article 13 unchanged.

86. It was indicated that, while the elements listed in draft article 13 did not, per se, determine the location of a place of business, those elements could be used together

with other elements to determine the location of a place of business. It was recalled that such interpretation was consistent with that of article 6, paragraphs 4 and 5 of the the United Nations Convention on the Use of Electronic Communications in International Contracts (New York, 2005) ("Electronic Communications Convention").[8] The Working Group agreed that explanatory materials should reflect that interpretation.

87. The Working Group also agreed to delete the reference to "of business" in the last sentence of paragraph 11 of A/CN.9/WG.IV/WP.139/Add.2 since the notion of "place of business" was not relevant for draft article 12.

Draft article 14. Issuance of multiple originals

88. It was suggested to delete draft article 14, since draft article 1, paragraph 2 of the Model Law already enabled the issuance of multiple originals when permitted under applicable substantive law. It was added that the use of a single electronic transferable record could satisfy the functions pursued with the use of multiple original transferable documents or instruments.

89. In response, it was said that draft article 14 should be retained, as it provided guidance on a practice that existed in the paper environment. It was indicated that enacting jurisdictions would be in the best position to decide on the enactment of the provision taking into consideration whether substantive law permitted issuance of multiple originals for transferable documents or instruments.

Issuance of multiple originals on different media

90. The Working Group considered whether a provision dealing with the coexistence of multiple originals issued simultaneously on different media should be included in the Model Law (A/CN.9/WG.IV/WP.139/Add.2, paras. 14-16). It was said that the inclusion of such provision would provide additional clarity. In reply, it was said that such matter, although specifically covered by that provision, could be addressed in substantive law. It was also said that in practice issuing multiple originals on different media was not a common feature given the potential for competing claims for performance.

91. After discussion, the Working Group agreed to (a) retain draft article 14 unchanged; and (b) indicate in the explanatory materials that the Model Law did not prevent the possibility of issuing multiple originals on different media, when permitted by applicable substantive law.

Draft article 15. Additional information in electronic transferable records

92. The Working Group recalled its agreement to place draft article 15 in the general section of the Model Law (see para. 49 above).

Draft article 16. Endorsement

93. The Working Group agreed to retain draft article 16 unchanged.

Draft article 17. Amendment

94. It was suggested that draft article 17 introduced requirements that were not present in draft articles 7, 8 and 16, namely with respect to the use of a reliable method and to identification of the amendment. It was added that such different treatment of similar articles was inconsistent and could lead to interpretative challenges. In response, it was said that the scope of draft article 17 was different from those of draft articles 7, 8 or 16 and that, in particular, draft article 17 aimed at ensuring that amendments of an electronic transferable record, which needed not to be evident in the electronic environment, could be identified as such.

[8] United Nations Convention on the Use of Electronic Communications in International Contracts (New York, 2005), United Nations Publication Sales No. E.07.V.2.

95. It was indicated that draft article 17 referred to amendments of a legal nature (A/CN.9/804, para. 86). It was also said that the notion of "change which arises in the normal course of communication, storage and display" contained in draft article 9, paragraph 2 could be relevant to illustrate the difference between amendments of a legal and of a technical nature.

96. After discussion, the Working Group agreed to retain draft article 17 unchanged.

Draft article 18. Replacement of a transferable document or instrument with an electronic transferable record; Draft article 19. Replacement of an electronic transferable record with a transferable document or instrument

97. The Working Group confirmed that, in case a transferable document or instrument or an electronic transferable record were invalidated on the wrong assumption of the validity of the replacing record, document or instrument, substantive law would apply to the reissuance of the invalidated document, instrument or record, or to the issuance of the replacing record, document or instrument.

98. It was noted that an electronic transferable record could contain information that could not be included in a transferable document or instrument, e.g. metadata. In that case, it was added, the requirement contained in draft article 19, paragraph 2 (a), indicating that the replacing transferable document or instrument shall include all the information contained in the replaced electronic transferable record, might not be satisfied. It was therefore suggested to delete draft article 19, paragraph 2 (a), and, for consistency, draft article 18, paragraph 2 (a). It was added that substantive law would identify the information requirements to be satisfied by the replacing record, document or instrument.

99. It was further indicated that the purpose of draft articles 18 and 19 was to ensure that the change of medium would not affect the rights and obligations of the concerned parties. Accordingly, it was explained that the replacing record, document or instrument should contain all the information necessary in order not to affect those rights and obligations, regardless of the nature of that information. To clarify that point, it was suggested to replace the words "does not" with the words "shall not" in paragraph 4 of draft articles 18 and 19.

100. After discussion, the Working Group agreed to (a) delete paragraph 2 (a) of draft articles 18 and 19; (b) replace "does not" with "shall not" in paragraph 4 of draft articles 18 and 19; and (c) reflect the discussion in the explanatory materials.

D. Cross-border recognition of electronic transferable records (Draft article 20)

Draft article 20. Non-discrimination of foreign electronic transferable records

101. The Working Group agreed to retain draft article 20 unchanged.

102. The Working Group agreed that a reference should be added in the explanatory materials to clarify that the words "issued or used" in paragraph 1 included endorsement and amendment of an electronic transferable record.

103. It was indicated that, while the adoption of the Model Law would provide an adequate legal framework and therefore promote the use of electronic transferable records, other techniques could be available to pursue that goal.

104. In particular, it was noted that, if the rules of private international law as enacted in national law, pointed to a law applicable to electronic transferable records, it could be an effective manner to enable the use of those records, including in States that did not adopt dedicated legislation enabling that use. It was suggested that the following paragraphs could be added to the explanatory materials to draft article 20:

> "71bis. Recourse to private international law rules can be used to uphold the validity of an electronic transferable record. This is the case, for example, where the applicable conflict of law rules point to the law of the jurisdiction where the

electronic transferable record was issued as the law applicable to that record. Similarly, if an electronic transferable record contains a clause on governing law which is recognized under domestic law, including by private international law rules, the validity of that record may be determined by application of the law selected by the parties, and not of the substantive domestic law otherwise applicable to that record. The law of the electronic transferable record is not necessarily the law applicable to transfers or endorsements as transfers or endorsements are often governed by other laws, such as the law where those transactions take place. Mandatory rules under domestic law may also require that a transferable document or instrument be issued or presented on paper. Where this is the case, reference to foreign law by application of private international law rules might not allow a court of the jurisdiction where those mandatory rules exist to recognize the legal validity of an electronic transferable record in the absence of the Model Law.

"71ter. Paragraph 2 preserves the ability for a party to seek recognition of the validity of an electronic transferable record through the application of rules of private international law, which can be used as a separate and independent ground for upholding the validity of the electronic transferable record. An electronic transferable record issued in accordance with the law of a State that permits or requires the use of electronic transferable records may be recognized in another State by application of that other State's private international law rules or by application of the Model Law. The content and effect of existing domestic private international law rules are relevant considerations for deciding whether to implement the Model Law."

105. It was indicated that the suggested paragraphs should be used as explanatory materials to provide additional guidance and therefore included between paragraphs 71 and 72 of A/CN.9/WG.IV/WP.139/Add.2.

106. It was recalled that the Working Group had agreed that the Model Law should not displace existing private international law rules, including by avoiding the creation of a dual regime applying a special set of private international law rules for electronic transferable records (A/CN.9/869, paras. 125 and 128). It was also said that private international law was a complex matter and caution should be exercised when providing guidance on its interpretation and application. The importance of not contradicting draft article 20 was stressed. It was indicated that encouraging the enactment of the Model Law should be the main vehicle for its promotion.

V. Legal issues related to identity management and trust services

107. Broad consensus was expressed on the fundamental importance of identity management ("IdM") and trust services for all types of electronic transactions. In that respect, it was indicated that the overall goal of the proposed work on IdM should be to promote trade, especially across borders, by removing legal obstacles to mutual recognition of IdM systems and trust services (A/CN.9/854, para. 17). A reference was made to the impact of IdM on regional economic integration.

108. The Working Group heard a brief description of several national and regional IdM experiences. In conclusion, it was noted that current IdM practice was fragmented and that different legislative approaches were emerging. It was added that the preparation and adoption of the eIDAS Regulation[9] was an encouraging precedent with respect to establishing an enabling environment for IdM and trust services that operated in States with different legal backgrounds and IdM approaches.

[9] Regulation (EU) No. 910/2014 of the European Parliament and of the Council of 23 July 2014 on electronic identification and trust services for electronic transactions in the internal market and repealing Directive 1999/93/EC.

Scope of work

109. With respect to the scope of the future work, it was suggested that, while IdM services could be used for both commercial and non-commercial services, in light of the mandate of UNCITRAL future work should focus on IdM systems used for commercial purposes, regardless of the private or public nature of the IdM services provider. It was also suggested that future work should take into account that cooperation between private and public entities in the delivery of IdM services was common and could take place in different forms.

110. It was recalled that the mandate received from the Commission referred to both IdM and trust services. It was suggested that work should be conducted simultaneously on both topics as they were closely related. In response, it was noted that work on IdM could assist in identifying and defining notions and issues that were relevant also for the work on trust services, and that therefore work on IdM should take place first.

111. The importance of taking into account the existence of technical standards was stressed. It was explained that the availability of a harmonized enabling legal framework for IdM and, in particular, the preparation of widely-accepted definitions of the different reliability levels would in turn facilitate the work on technical standards carried out by other organizations.

112. A reference was made to the distinction between two-party IdM systems, where the IdM services provider coincided with the relying party (e.g., the employer providing credentials to the employee for access to a network and then relying on the authentication of the employee with those credentials) and multi-party identity systems (often referred to as "federated identity systems"), where the relying party relied on credentials issued by a third-party services provider. It was suggested that, while use of two-party IdM systems was common and therefore those systems should not be excluded from future work, focus should be placed on multi-party identity systems.

113. The Working Group considered whether its future work on IdM should be limited to natural and legal persons or also include physical and digital objects. It was indicated that there was increasing interest for legislative aspects of the authentication of objects. In response, it was said that only natural and legal persons could have legal capacity, and that for that reason reference to natural or legal persons controlling the objects would suffice. In turn, it was explained that authentication of objects and liability for objects were two separate issues requiring different legal treatment.

Principles applicable to future work on IdM

114. It was indicated that the fundamental principles underpinning UNCITRAL texts on electronic commerce, namely the principles of technology neutrality, non-discrimination against the use of electronic means, functional equivalence and party autonomy, should be relevant also for future work on IdM and trust services.

115. It was added that additional principles could be identified, such as the principle of proportionality in the choice of IdM systems and trust services, which was already present in UNCITRAL texts on electronic commerce. The question was asked whether a principle of identity system neutrality could be identified independently of that of technology neutrality.

116. It was indicated that it could be desirable to identify additional general principles guiding future work. In that respect, reference was made to the possible inclusion of the principle of "transparency".

117. It was stressed that definitions of terms and concepts relevant for IdM and trust services should be provided in order to have a common understanding and basis for discussion.

118. After discussion, the Working Group agreed that its future work on IdM and trust services should be limited to the use of IdM systems for commercial purposes

and that it should not take into account the private or public nature of the IdM services provider.

119. The Working Group also agreed that work on IdM could take place on a priority basis. It further agreed that focus should be placed on multi-party identity systems and on natural and legal persons, without excluding consideration of two-party identity systems and of physical and digital objects when appropriate.

120. In addition, it was agreed that the Working Group should continue its work by further clarifying the goals of the project, specifying its scope, identifying applicable general principles and drafting necessary definitions.

121. Several views were expressed with respect to the use of legislative and contractual provisions in the assessment of reliability of IdM and trust services. It was indicated that, in certain conditions, a need could arise to identify in the legislation some elements relevant for that assessment, which therefore would not be left entirely to the agreement of the parties. However, it was also indicated that only party autonomy provided the flexibility necessary to best accommodate different business needs. It was suggested that such discussion, which was of significant relevance for future work, would greatly benefit from prior agreement on key terms and their definition.

122. In that respect, the Working Group agreed that, while priority could be given to work on IdM, the identification and definition of terms relevant for IdM and trust services should take place simultaneously given the close relationship between the two.

123. In response to a question, it was said that, at the current stage, it was not advisable to make a decision on whether future work should include IdM and trust services provided by private entities when used for non-commercial purposes.

VI. Contractual aspects of cloud computing

124. The Working Group heard that preparatory work on contractual aspects of cloud computing was being conducted at the expert level with a view to providing a draft document for the consideration of the Working Group. It was added that, in light of its content, that document was being drafted in the tentative form of a legal guide, subject to future decisions of the Commission on the final form of that document.

125. It was recalled that the proposal to conduct work on contractual aspects of cloud computing had been formulated based on a number of considerations, including that the provision of cloud computing services, which were of fundamental importance for economic development, had often a cross-border component (A/CN.9/823). Reference was made to the relevance of an adequate, predictable and enforceable contractual framework to support the development of cloud computing services.

126. It was noted that the preparation of a descriptive document listing issues relevant when reviewing contracts for cloud computing services could be particularly useful in assisting small and medium-sized enterprises. It was added that such document should reflect contractual practices and, where available, legislation, and should refer to relevant technical standards, but should not have a legislative nature, without prejudice to future deliberations and decisions of the Commission.

VII. Technical assistance and coordination

127. With respect to technical assistance and coordination, it was indicated that the United Nations Economic and Social Commission for Asia and the Pacific (UN/ESCAP) had adopted the Framework Agreement on Facilitation of Cross-border Paperless Trade in Asia and the Pacific (the “Framework Agreement”) on 19 May 2016 and that the Framework Agreement had opened for signature by UN/ESCAP member States on 1 October 2016.

128. It was explained that the Framework Agreement aimed at facilitating technical interoperability and enabling mutual legal recognition of trade-related electronic transactions, as well as at establishing a technical cooperation mechanism. It was noted that the Framework Agreement relied on the adoption of uniform international legal standards, in particular UNCITRAL texts, for the establishment of a legal framework enabling electronic commerce across borders and that in that respect it was consistent with other recent regional agreements (see A/CN.9/863, para. 107).

B. Note by the Secretariat on a Draft Model Law on Electronic Transferable Records

(A/CN.9/WG.IV/WP.139 and Add.1-2)

[Original: English]

Contents

I. Introduction

1. At its forty-fourth session, in 2011, the Commission mandated the Working Group to undertake work in the field of electronic transferable records.[1]

2. At its forty-sixth session (Vienna, 29 October-2 November 2012), broad support was expressed by the Working Group for the preparation of draft provisions on electronic transferable records, to be presented in the form of a model law without prejudice to the decision on the final form of its work (A/CN.9/761, paras. 90-93).

3. At its forty-seventh session (New York, 13-17 May 2013), the Working Group began reviewing the draft provisions on electronic transferable records as provided in document A/CN.9/WG.IV/WP.122 and noted that while it was premature to start a discussion on the final form of work, the draft provisions were largely compatible with different outcomes that could be achieved.

4. At its forty-eighth session (Vienna, 9-13 December 2013), the Working Group continued its consideration of the draft provisions as contained in document A/CN.9/WG.IV/WP.124 and Add.1.

5. At its forty-ninth session (New York, 28 April-2 May 2014), the Working Group continued its work on the preparation of draft provisions as presented in document A/CN.9/WG.IV/WP.128 and Add.1. The Working Group focused its discussion on concepts of original, uniqueness, and integrity of an electronic transferable record.

6. At its fiftieth session (Vienna, 10-14 November 2014), the Working Group continued its work on the preparation of draft provisions as presented in document A/CN.9/WG.IV/WP.130 and Add.1. Subject to a final decision to be made by the Commission, the Working Group agreed to proceed with the preparation of a Model Law on Electronic Transferable Records (A/CN.9/828, para. 23). It was agreed that priority should be given to the preparation of provisions dealing with electronic equivalents of paper-based transferable documents or instruments, and that those provisions should be subsequently reviewed and adjusted, as appropriate, to accommodate the use of transferable records that existed only in an electronic environment (A/CN.9/828, para. 30).

7. At its fifty-first session (New York, 18-22 May 2015), the Working Group continued its work on the preparation of the draft Model Law as presented in document A/CN.9/WG.IV/WP.132 and Add.1. The Working Group focused its discussion on the definitions of electronic transferable record, possession and control.

[1] *Official Records of the General Assembly, Sixty-sixth Session, Supplement No. 17* (A/66/17), para. 238.

8. At its fifty-second session (Vienna, 9-13 November 2015), the Working Group continued its work on the preparation of draft provisions as presented in document A/CN.9/WG.IV/WP.135 and Add.1. In particular, the Working Group discussed the relation between draft articles referring to a "reliable method" and a general reliability standard, as well as the elements relevant for assessing reliability.

9. At its fifty-third session, (New York, 9-13 May 2016), the Working Group continued its work on the preparation of the draft Model Law as presented in document A/CN.9/WG.IV/WP.137 and Add.1.

10. Part II of this note contains the draft provisions of the Model Law reflecting the deliberations and decisions of the Working Group during its fifty-third session (A/CN.9/869, paras. 19-131) as well as comments to be used for an Explanatory Note to the Model Law on Electronic Transferable Records.

II. Draft Model Law on Electronic Transferable Records

A. General

"**Draft article 1. Scope of application**

"1. This Law applies to electronic transferable records.

"2. Other than as provided for in this Law, nothing in this Law affects the application to an electronic transferable record of any rule of law governing a transferable document or instrument including any rule of law applicable to consumer protection.

"3. This Law does not apply to securities, such as shares and bonds, and other investment instruments, and to […].[2]"

Remarks

11. At its fifty-third session, the Working Group confirmed its understanding that paragraph 3 included an open-ended exclusion list that permitted application of the draft Model Law according to the needs of each enacting jurisdiction so as to provide both flexibility and clarity on the scope of application of the Model Law (A/CN.9/869, paras. 19-23). At that session, the Working Group identified three possible types of exclusions (A/CN.9/869, para. 23), referred to in the footnote inserted at the end of paragraph 3.

Comments

12. As indicated in the definition of "transferable document or instrument", the words "transferable document or instrument" refer to a transferable document or instrument issued on paper (as opposed to an electronic transferable record) in the Arabic, Chinese, English and Russian language versions of the Model Law (A/CN.9/863, para. 93 and A/CN.9/WG.IV/WP.137, para. 28). The words "paper-based" are used for linguistic clarity before the words "transferable document or instrument" in the French and Spanish language versions of the Model Law.

[2] The enacting State may consider including a reference to: (i) documents and instruments that may be considered transferable, but that should not fall under the scope of the Model Law; (ii) documents and instruments falling under the scope of the Convention Providing a Uniform Law for Bills of Exchange and Promissory Notes (Geneva, 1930) and the Convention Providing a Uniform Law for Cheques (Geneva, 1931); and (iii) electronic transferable records existing only in electronic form.

Paragraph 1

13. The Model Law provides for generic rules that may apply to various types of electronic transferable records based on the principle of technology neutrality and a functional equivalence approach. The principle of technology neutrality entails adopting a system-neutral approach, enabling the use of models based on registry, token, distributed ledger and other technology.

14. Article 2, paragraph 2 of the United Nations Convention on the Use of Electronic Communications in International Contracts (New York, 2005) (the "Electronic Communications Convention") provided a starting point for defining the scope of application of the Model Law. That provision excludes from the scope of application of the Electronic Communications Convention "bills of exchange, promissory notes, consignment notes, bills of lading, warehouse receipts or any transferable document or instrument that entitles the bearer or beneficiary to claim the delivery of goods or the payment of a sum of money". That exclusion is due to the fact that at the time of the adoption of the Convention "finding a solution for this problem [of the legal treatment of electronic transferable records] required a combination of legal, technological and business solutions, which had not yet been fully developed and tested".[3]

15. The Model Law focuses on the transferability of the record and not on its negotiability on the understanding that negotiability relates to the underlying rights of the holder of the instrument, which fall under substantive law (A/CN.9/761, para. 21).

16. Certain documents or instruments, which are generally transferable, but whose transferability is limited due to other agreements, do not fall under the definition of "transferable document or instrument" contained in the Model Law (see below, para. 34). The Model Law would therefore not apply to those documents or instruments (A/CN.9/797, paras. 27 and 28). However, that conclusion should not be interpreted as preventing the issuance of those documents or instruments in an electronic transferable records management system since such prohibition is likely to result in unnecessary multiplication of systems and increase of costs (A/CN.9/869, para. 24).

Paragraph 2

17. Paragraph 2 sets forth the general principle that the Model Law does not affect substantive law, including rules of private international law, applicable to transferable documents or instruments. Hence, the same substantive law applies to a transferable document or instrument and to the electronic transferable record containing the same information as that transferable document or instrument. The principle applies to each step of the life cycle of an electronic transferable record.

18. One consequence of the rule contained in paragraph 2 is that the Model Law may not be used to create electronic transferable records that do not have an equivalent transferable document or instrument. Allowing such creation would circumvent the principle of numerus clausus of transferable documents or instruments, where that principle is applicable.

19. During the preparation of the Model Law, UNCITRAL agreed that certain issues related to electronic transferable records did not require a dedicated provision, since those issues were matters of substantive law. Such matters include:

(a) The definition of "performance of an obligation" (A/CN.9/863, para. 90);

(b) The issuance of an electronic transferable record to bearer (A/CN.9/797, para. 65);

[3] United Nations Convention on the Use of Electronic Communications in International Contracts (New York, 2005), Explanatory Note, United Nations Publication Sales No. E.07.V.2, para. 81.

(c) The change of the modalities for circulation of an electronic transferable record issued to bearer in an electronic transferable record to the order of a named person and the reverse case ("blank endorsement") (A/CN.9/828, paras. 81-84);

(d) The reissuance of an electronic transferable record (A/CN.9/869, para. 115);

(e) Division and consolidation of electronic transferable records (A/CN.9/869, para. 123); and

(f) The use of an electronic transferable record, including as collateral for security rights purposes (see below, para. 21).

20. The explicit reference to consumer protection law aims at clarifying the interaction between that law and the Model Law (A/CN.9/863, paras. 20 and 22) and represents an application of the general principle that the Model Law does not affect the substantive law applicable to transferable documents or instruments.

Paragraph 3

21. Paragraph 3 clarifies that the Model Law does not apply to securities and other investment instruments. The term "investment instrument" is understood to include derivative instruments, money market instruments and any other financial product available for investment (A/CN.9/797, para. 19). The term "securities" does not refer to the use of electronic transferable records as collateral and therefore the Model Law does not prevent the use of electronic transferable records for security rights purposes (A/CN.9/834, para. 73).

22. The purpose of paragraph 3 is to permit the exclusion of certain documents or instruments from the scope of the Model Law. To that end, paragraph 3 includes an open-ended exclusion list that permits application of the Model Law according to the needs of each enacting jurisdiction, thus providing both flexibility and clarity on the scope of application of the Model Law.

23. The footnote to paragraph 3 highlights three possible types of exclusions and does not prevent States from adding other types of exclusions according to their needs:

(a) Certain instruments or documents, such as letters of credit, which may be considered transferable documents or instruments in some jurisdictions but not in others. In that respect, it should be noted that national legislation does not define transferable documents and instruments in a uniform manner (A/CN.9/869, para. 19);

(b) State parties to the Convention Providing a Uniform Law for Bills of Exchange and Promissory Notes (Geneva, 1930) and the Convention Providing a Uniform Law for Cheques (Geneva, 1931) (the "Geneva Conventions") may consider excluding documents or instruments falling under the scope of those Conventions in order to avoid possible conflicts between the Geneva Conventions and the Model Law, if so believed (see below, paras. 24-28);

(c) Electronic transferable records that exist only in an electronic environment. Such exclusion could be useful in jurisdictions allowing for the use of both electronic transferable records that are functional equivalent of transferable documents or instruments and of electronic transferable records that exist only in an electronic environment. In that respect, it should be noted that a provision allowing for the application of the Model Law to purely electronic transferable records on a residual basis, so that in case of conflict the Model Law would not prevail over the law applicable to such electronic transferable records, was not inserted in the Model Law due to concerns on the interaction between the general principles contained in the Model Law and the general principles contained in laws of a different nature (A/CN.9/869, para. 22).

The Geneva Conventions

24. During the preparation of the Model Law, different views have been expressed on the interaction between the Model Law and the Geneva Conventions (see, for example, A/CN.9/768, paras. 20-22; A/CN.9/WG.IV/WP.125; A/CN.9/797, paras. 109-112).

25. One view expressed was that formalism was a fundamental principle underpinning the Geneva Conventions that prevented the use of electronic means and therefore the instruments falling under the scope of those Conventions should always be excluded from the scope of the Model Law (A/CN.9/797, para. 110).

26. In order to accommodate that view, the Model Law allows for exclusion of the documents and instruments falling under the scope of the Geneva Conventions (see above, para. 23(b)).

27. Jurisdictions adhering to that view and wishing to enable the use of electronic versions of the documents and instruments falling under the scope of the Geneva Conventions may consider introducing electronic transferable records existing only in an electronic environment, which will not be functional equivalents of the documents and instruments falling under the scope of the Geneva Conventions and will not fall under the scope of the Model Law.[4]

28. Another view expressed was that the scope of the Model Law should include instruments falling under the scope of the Geneva Conventions on the understanding that the Model Law generally aimed at overcoming obstacles to the use of electronic means arising from form requirements relating to the use of paper-based transferable documents or instruments (A/CN.9/768, para. 21).

> "**Draft article 2. Definitions**
>
> '*electronic transferable record*' is an electronic record that complies with the requirements of article 9."

Remarks

29. The definition of "electronic transferable record" reflects the modifications agreed upon in light of the information requirements contained in draft article 9 pursuant to the Working Group's decision at its fifty-third session (A/CN.9/869, para. 25).

30. It has been suggested that the definition of "electronic transferable record" should be reviewed upon completion of the consideration of all articles of the Model Law to evaluate its appropriateness for each instance where the defined term is used (A/CN.9/869, para. 25).

31. The definition of "electronic transferable record" does not cover electronic transferable records that exist only in an electronic environment (A/CN.9/863, para. 91; see also A/CN.9/797, para. 23).

---

[4] For an example, see the Electronically Recorded Monetary Claims Act (Act No. 102 of 2007) of Japan.

Comments

32. The definition of "electronic transferable record" reflects the functional equivalent approach (A/CN.9/863, paras. 91 and 92) and refers to electronic transferable records that are equivalent to transferable documents or instruments. It does not aim at affecting the fact that substantive law shall determine whether the person in control is the rightful person in control as well as the substantive rights of the person in control. Likewise, it does not aim at describing all the functions possibly related to the use of an electronic transferable record. For instance, an electronic transferable record may have an evidentiary value; however, the ability of that record to discharge that function will be assessed under law other than the Model Law.

33. In line with the general approach and the scope of the Model Law, the definition of "electronic transferable record" is meant to apply to electronic transferable records that are functionally equivalent to transferable documents or instruments. Yet, the Model Law does not preclude the development and use of electronic transferable records that do not have a paper equivalent as those records are not governed by the Model Law (A/CN.9/863, para. 91).

34. The definition of "electronic transferable record" does not cover certain documents or instruments, which are generally transferable, but whose transferability may be limited due to other agreements. This could be the case, in certain jurisdictions, of straight bills of lading. Substantive law shall determine which documents or instruments are transferable. Moreover, this limitation of the definition of "electronic transferable record" should not be interpreted as preventing the issuance of those documents or instruments in an electronic transferable records management system (see also above, para. 16).

> "*transferable document or instrument*" means a document or instrument issued on paper that entitles the holder to claim the performance of the obligation indicated in the document or instrument and to transfer the right to performance of the obligation indicated in the document or instrument through the transfer of that document or instrument.

Remarks

35. The definition of "transferable document or instrument" reflects the editorial changes agreed to by the Working Group at its fifty-third session (A/CN.9/869, para. 27).

Comments

36. The definition of "transferable document or instrument" focuses on the key functions of transferability and of providing a title or right to performance. It does not affect the fact that substantive law shall determine whether the person in control is the rightful person in control as well as the substantive rights of the person in control.

37. Applicable substantive law shall determine which documents or instruments are transferable in the various jurisdictions (A/CN.9/863, para. 94). An indicative list of transferable documents or instruments, inspired by article 2, paragraph 2, of the United Nations Convention on the Electronic Communications Convention includes: bills of exchange; cheques; promissory notes; consignment notes; bills of lading, warehouse receipts, cargo insurance certificates and air waybills.

> "*electronic record*" means information generated, communicated, received or stored by electronic means, including, where appropriate, all information logically associated with or otherwise linked together so as to become part of the record, whether generated contemporaneously or not.

Comments

38. The definition of "electronic record" is based on the definition of "data message" contained in the UNCITRAL Model Law on Electronic Commerce (1996)[5] and in the Electronic Communications Convention and aims to clarify that electronic records may, but do not need to, include a set of composite information (A/CN.9/797, paras. 43-45). It highlights the fact that information may be associated with the electronic transferable record at the time of issuance or at any time thereafter (e.g., information related to endorsement). For example, the generation of metadata does not necessarily take place after the generation of a record, but could also precede it. The composite nature of an electronic transferable record is particularly relevant for the notion of "integrity" contained in article 9, paragraph 2 of the Model Law (A/CN.9/863, para. 96).

39. Moreover, the definition of "electronic record" provides also for the possibility that in certain electronic transferable records management systems data elements may, taken together, provide the information constituting the electronic transferable record, but with no discrete record constituting in itself the electronic transferable record (A/CN.9/804, para. 71). The word "logically" refers to computer software and not to human logic (A/CN.9/863, para. 97).

"**Draft article 3. Interpretation**

"1. This Law is derived from a model law of international origin. In the interpretation of this Law, regard is to be had to the international origin and to the need to promote uniformity in its application.

"2. Questions concerning matters governed by this Law which are not expressly settled in it are to be settled in conformity with the general principles on which this Law is based."

Remarks

40. The words "and the observance of good faith" have been deleted from paragraph 1 pursuant to the Working Group's decision at its fifty-third session on the understanding that the principle of good faith, as a general principle of international law, could be included in the general principles on which the draft Model Law is based under paragraph 2 (A/CN.9/869, para. 30).

41. With regard to paragraph 2 the Working Group may wish to discuss which are the general principles underlying the Model Law (see below, paras. 45-46).

Comments

International origin and promotion of uniform interpretation

42. Article 3 is intended to draw the attention of courts and other authorities to the fact that domestic enactments of the Model Law should be interpreted with reference to their international origin and the need to promote their uniform interpretation in light of that origin. The uniform interpretation of UNCITRAL texts is a key element

[5] UNCITRAL Model Law on Electronic Commerce with Guide to Enactment (New York, 1999), United Nations Publication Sales No. E.99.V.4.

to ensure predictability of the law applicable to commercial transactions across borders.

43. Similar wording appears in several UNCITRAL texts, including in article 3 of the UNCITRAL Model Law on Electronic Commerce and article 4 of the UNCITRAL Model Law on Electronic Signature, and was first introduced in article 7 of the Convention on the Limitation Period in the International Sale of Goods (New York, 1974).[6] The words "This Law is derived from a model law of international origin" emphasize that the law constitutes an enactment of a model law with international origin (A/CN.9/768, para. 35) and are not contained in other UNCITRAL texts.

44. Article 3, unlike other provisions contained in UNCITRAL texts and dealing with their international origin and uniform interpretation, does not refer to the notion of "good faith". That exclusion is due to the fact that the principle of "good faith" has a specific meaning with respect to transferable documents or instruments, which is distinct from the general principle of good faith in international trade law (A/CN.9/869, para. 29). The principle of "good faith" as a general principle of international law could be included in the general principles on which the Model Law is based (A/CN.9/869, para. 30).

General principles

45. The notion of "general principles" has been used in several UNCITRAL texts. Article 7 of the United Nations Convention on Contracts for the International Sale of Goods (Vienna, 1980) ("CISG")[7] is the provision containing that notion that has been most interpreted by case law.[8]

46. The notion of "general principles" contained in paragraph 2 refers to the general principles of the law governing electronic communications (A/CN.9/797, para. 29), including those already identified and stated in UNCITRAL texts such as the principles of non-discrimination against electronic communications, technological neutrality and functional equivalence. The identification of those general principles and of their exact content and operation may take place progressively in light of the increasing level of use, application and interpretation of the Model Law. Such progressive determination provides flexibility in the interpretation of the Model Law useful to ensure its ability to accommodate evolving commercial practices and business needs.

[7] United Nations, *Treaty Series*, vol. 1489, No. 25567, p. 3.
[8] See also the UNCITRAL Digest of Case Law on the United Nations Convention on Contracts for the International Sale of Goods, comment under article 7.

Remarks

47. Paragraph 1 has been modified pursuant to the decision of the Working Group at its fifty-third session, so as to enable enacting States to identify which provisions could be derogated from, since each enacting jurisdiction may allow derogation of different provisions (A/CN.9/869, paras. 37, 42 and 43).

48. The Working Group may wish to consider paragraph 2, whose consideration was deferred to a future session at the Working Group's fifty-third session (A/CN.9/869, para. 44).

49. In light of its deliberations on paragraph 2, the Working Group may wish to consider the title of draft article 4. The words in square brackets, "privity of contract", were included to emphasise that draft article 4 dealt not only with party autonomy but also with privity of contract (A/CN.9/797, para. 30).

Comments

50. Party autonomy is a fundamental principle underpinning commercial law and UNCITRAL texts. Limiting party autonomy could hinder technological innovation and the development of new business practices. Moreover, party autonomy may provide desired flexibility in the implementation of the Model Law.

51. However, the implementation of the principle of party autonomy has found some limits in UNCITRAL texts on electronic commerce in order to avoid conflicts with rules of mandatory application, such as those on public policy.

52. In particular, article 4 of the UNCITRAL Model Law on Electronic Commerce allows variation by agreement of the provisions on electronic communications, but sets limits to variation by agreement of functional equivalence rules, also to avoid circumventing form requirements of mandatory application. Moreover, party autonomy may not affect rights and obligations of third parties.[9]

53. Moreover, article 5 of the UNCITRAL Model Law on Electronic Signatures indicates that parties may derogate from all provisions of that Model Law, unless derogation would not be valid or effective under applicable law, i.e. it would affect rules of mandatory application such as those relating to public policy.[10] A similar approach is adopted in article 3 of the Electronic Communications Convention.[11]

54. Similarly, the Model Law provides broad party autonomy within the limits of mandatory law and without affecting rights and obligations of third parties. In particular, it should be noted that certain jurisdictions, in particular those belonging to the civil law tradition, recognize the principle of numerus clausus of transferable documents or instruments (A/CN.9/768, para. 36). The Model Law does not aim at offering manners to circumvent by agreement that principle, in line with the general principle that the Model Law does not affect substantive law provisions. At the same time, and based on the same general principle, the Model Law does not limit in any manner the ability of the parties to derogate from or vary substantive law.

55. Therefore, a careful analysis is necessary to ascertain which provisions of the Model Law could be derogated from or varied. The Model Law leaves this assessment to the enacting State, in order to accommodate differences in legal systems. To that end, paragraph 1 contains square brackets, in which the enacting State could identify the provisions which could be derogated from or varied (A/CN.9/869, paras. 37, 42 and 43).

A/CN.9/WG.IV/WP.137, paras. 36-39; A/CN.9/869, paras. 32-44

"**Draft article 5. Information requirements**

"Nothing in this Law affects the application of any rule of law that may require a person to disclose its identity, place of business or other information, or relieves a person from the legal consequences of making inaccurate, incomplete or false statements in that regard."

Comments

56. Article 5, inspired by article 7 of the Electronic Communications Convention, highlights the need to comply with possible disclosure obligations that might exist under other law. Examples of those information requirements include information to be provided under consumer protection law and to prevent money-laundering and other criminal activities.

57. The obligation to comply with those information requirements arises from the principle that the Model Law does not affect substantive law contained in article 1, paragraph 2 of the Model Law. The reference to other law containing the information requirements provides desirable flexibility since those requirements are likely to change over time (A/CN.9/869, paras. 45-47). Article 5 does not deal with the legal consequences attached to violating information requirements, which are contained, like the information requirement itself, in other law.

58. Article 5 does not prohibit the issuance of an electronic transferable record to bearer when permitted under substantive law (A/CN.9/768, para. 38). In that respect, it should be noted that an electronic transferable records management system may allow to identify the person in control of an electronic transferable record for regulatory purposes (e.g., anti-money-laundering) but not for commercial law purposes (e.g., for an action in recourse).

B. Provisions on electronic transactions

Remarks

59. Subject to further decisions of the Working Group, the Model Law is divided in four sections ("General", articles 1-5; "Provisions on electronic transactions", articles 6-8; "Use of electronic transferable records", articles 9-19; and "Cross-border recognition of electronic transferable records", article 20).

60. The Working Group at its forty-eighth session decided to retain draft articles 6-8 as a separate section (A/CN.9/797, para. 34; see also A/CN.9/768, para. 40). The Working Group may wish to review its decision in light of the progress made in the preparation of the Model Law and of the fact that articles 6-8 relate to the use of electronic transferable records and not to electronic transactions. In that respect, the Working Group may also wish to consider whether article 6 should be included in the "General" section of the Model Law in light of its content.

Comments

61. Any reference to a legal requirement contained in the provisions of the Model Law setting forth functional equivalence rules implies a reference to the consequences arising when a legal requirement is not met, making it not necessary to explicitly refer to those consequences (A/CN.9/834, paras. 43 and 46). Accordingly, the Model Law does not contain the words "or provides consequences" after the words "when the law requires".

"**Draft article 6. Legal recognition of an electronic transferable record**

"1. An electronic transferable record shall not be denied legal effect, validity or enforceability on the sole ground that it is in electronic form.

"2. Nothing in this Law requires a person to use an electronic transferable record without that person's consent.

"3. The consent of a person to use an electronic transferable record may be inferred from the person's conduct."

Remarks

62. Draft article 6 reflects the decisions made by the Working Group at its fifty-third session (A/CN.9/869, paras. 93 and 94), namely, to include the provisions on consent, priorly contained in a separate article, in this article.

Comments

Paragraph 1

63. Paragraph 1 restates the general principle of non-discrimination against the use of electronic means that is contained in article 5 of the UNCITRAL Model Law on Electronic Commerce and in article 8, paragraph 1, of the Electronic Communications Convention.

64. By stating that information "shall not be denied validity or enforceability on the sole ground that it is in electronic form", paragraph 1 merely indicates that the form in which an electronic transferable record is presented or retained cannot be used as the only reason for which that transferable record would be denied legal effectiveness, validity or enforceability. However, the provision should not be misinterpreted as establishing the legal validity of an electronic transferable record or any information therein.[12]

Paragraphs 2 and 3

65. Paragraphs 2 and 3 are inspired by article 8, paragraph 2 of the Electronic Communications Convention.

66. Paragraph 2 clarifies that legal recognition of electronic transferable records does not imply a requirement to use or accept them. However, enacting jurisdictions may decide to mandate the use of electronic transferable records, at least with respect

[12] See also United Nations Convention on the Use of Electronic Communications in International Contracts, Explanatory Note, para. 129.

to some categories of users and some types of transferable documents and instruments, in light of the policy goals pursued.[13]

67. The requirement of "consent" is a general one and applies to all instances where an electronic transferable record is used under the Model Law and to all parties involved in the life cycle of the electronic transferable record (A/CN.9/768, para. 57). Therefore, other provisions of the Model Law do not contain an explicit reference to consent (A/CN.9/768, para. 57, see also A/CN.9/WG.IV/WP.124, para. 41).

68. The consent to use an electronic transferable record does not need to be expressly indicated or given in any particular form. While absolute certainty can be accomplished by obtaining an explicit consent before using an electronic transferable record, such an explicit consent should not be mandated as it would create an unreasonable barrier to the use of electronic means.

69. The consent to using electronic transferable records may be inferred from all circumstances, including parties' conduct. While certain systems used for electronic transferable records management, such as registry-based systems, may require acceptance of system rules, which include or imply consent to the use of electronic transferable records, other systems, such as token-based and distributed ledger-based systems, do not require prior acceptance of contractual rules, and therefore consent may be inferred by circumstances such as exercise of control on the electronic transferable record or performance of the obligation contained in the electronic transferable record.

"**Draft article 7. Writing**

"Where the law requires that information should be in writing, that requirement is met with respect to an electronic transferable record if the information contained therein is accessible so as to be usable for subsequent reference."

Remarks

70. In its future deliberations on a law applicable to electronic transferable records existing only in electronic form, the Working Group may wish to confirm that the law governing those records should set forth the same requirements contained in draft article 7, i.e. that information should be accessible so as to be usable for subsequent reference (A/CN.9/768, para. 42).

71. At the Working Group's forty-ninth session, it was suggested that draft article 7 might not be necessary as the fulfilment of the functional equivalence of the "writing" requirement was implied in the definition of "electronic transferable record" in draft article 2. In response, it was stated that a rule on the "writing" requirement was necessary in light of the other rules on functional equivalence contained in the draft provisions (A/CN.9/804, para. 18). In light of that discussion, the Working Group may wish to clarify the relationship between draft article 7 and

[13] See, for instance, article 6-2 of the Act on Issuance and Negotiation of Electronic Bills of Exchanges and Promissory Notes (Law 7197 of 22 March 2004, as amended) of the Republic of Korea.

draft article 9, setting forth information and integrity requirements for the functional equivalence of transferable documents or instruments.

Comments

72. Article 7 establishes the requirements for the functional equivalence of the written form with respect to information contained in or related to electronic transferable records (A/CN.9/797, para. 37). It is inspired by article 6, paragraph 1 of the UNCITRAL Model Law on Electronic Commerce.[14] However, article 7 refers to the notion of "information" instead of "communication" as not all relevant information might necessarily be communicated (A/CN.9/797, para. 37), depending on the system chosen for electronic transferable records management.

73. Article 7 sets forth a functional equivalence rule for the notion of "writing" with respect to electronic transferable records only. The use of writing is instrumental in performing several actions that may occur during the life cycle of an electronic transferable record, such as endorsement (A/CN.9/768, para. 46).

74. The general rule on functional equivalence between electronic and written form contained in the law on electronic transactions (A/CN.9/797, para. 38) applies to all electronic records that are not transferable. If the Model Law on Electronic Transferable Records is enacted by consolidation with an enactment of the UNCITRAL Model Law on Electronic Commerce or similar text, the enacting jurisdiction may consider adopting a single provision for the functional equivalence of written and electronic form, which will apply to both transferable and non-transferable electronic records.

A/CN.9/WG.IV/WP.132, paras. 47-49;
A/CN.9/WG.IV/WP.135, paras. 57-60;
A/CN.9/WG.IV/WP.137, paras. 44-47;

"**Draft article 8. Signature**

"Where the law requires a signature of a person, that requirement is met by an electronic transferable record if a reliable method is used to identify that person and to indicate that person's intention in respect of the information contained in the electronic record."

Remarks

75. At its fifty-third session, the Working Group agreed that draft article 8 is meant to apply only to electronic transferable record and not to electronic records that are not transferable, though used in connection with electronic transferable records (A/CN.9/869, paras. 48-49). In light of that conclusion, the Working Group may wish to further consider its decision that draft article 8 should refer to the information contained in the "electronic record" and not to the "electronic transferable record" as that article deals with a general signature requirement in the substantive law (A/CN.9/804, para. 20).

Comments

76. Article 8 establishes the requirements for the functional equivalence of "signature" (A/CN.9/804, para. 20) when substantive law either contains an explicit signature requirement or provides consequences for the absence of a signature

[14] For comments on that provision, see UNCITRAL Model Law on Electronic Commerce with Guide to Enactment, paras. 47-50.

(implicit signature requirement) (A/CN.9/797, para. 46; see also A/CN.9/834, para. 43).

77. Article 8 is inspired by article 7, subparagraph 1(b) of the UNCITRAL Model Law on Electronic Commerce. Moreover, following the text of article 9, paragraph 3 of the Electronic Communications Convention, it refers to the "intention" of the party so as to better capture the different functions that may be pursued with the use of an electronic signature. The reliability of the method referred to in article 8 shall be assessed according to the general reliability standard contained in article 11.

78. The reference to the signature requirement being fulfilled "by" an electronic transferable record is meant to clarify that article 8 applies to electronic transferable records only and not to other electronic records that are not transferable but are somehow related to an electronic transferable record (A/CN.9/869, paras. 48-49). Hence, article 8 sets forth a functional equivalence rule for the notion of "signature" with respect to electronic transferable records only.

79. Certain electronic transferable records management systems, such as those based on distributed ledger, may use pseudonyms rather than real names. In that case, the requirement to identify the signatory may be satisfied by linking pseudonym and real name as needed.

80. The general rule on functional equivalence of electronic and handwritten signatures contained in the law on electronic signatures applies to signatures used in relation to all electronic records that are not transferable. If the Model Law on Electronic Transferable Records is enacted by consolidation with an enactment of the UNCITRAL Model Law on Electronic Signatures or similar text, the enacting jurisdiction may consider adopting a single provision for the functional equivalence of electronic and handwritten signatures, which will apply to both transferable and non-transferable electronic records.

Notion of "Original"

Comments

81. Unlike other UNCITRAL texts on electronic commerce, the Model Law does not contain a functional equivalence rule for the paper-based notion of "original" (A/CN.9/804, para. 40). In that respect, it should be noted that article 8 of the UNCITRAL Model Law on Electronic Commerce refers to a static notion of "original" while electronic transferable records are meant, by their own nature, to circulate. Therefore, the notion of "original" in the context of electronic transferable records is different from that adopted in previously-adopted UNCITRAL texts (A/CN.9/797, para. 47). Accordingly, the Model Law refers to integrity of the electronic transferable record as one of the requirements that need to be fulfilled in order to achieve functional equivalence with a transferable document or instrument (art. 9, subpara. 1(b)(iii)) (see A/CN.9/WG.IV/WP.139/Add.1, para. 24).

82. Hence, while the notion of "original" of transferable documents or instruments is particularly relevant to prevent multiplicity of claims, the Model Law achieves that goal with the use of the notions of "singularity" and "control" that allow identifying both the person entitled to performance and the object of control.

Note by the Secretariat on a Draft Model Law on Electronic Transferable Records

ADDENDUM

Contents

II. Draft Model Law on Electronic Transferable Records

C. Use of electronic transferable records

"Draft article 9. Transferable document or instrument

"1. Where the law requires a transferable document or instrument, that requirement is met by an electronic record if:

(a) The electronic record contains the information that would be required to be contained in a transferable document or instrument; and

(b) A reliable method is used:

(i) To identify that electronic record as the electronic transferable record;

(ii) To render that electronic record capable of being subject to control from its creation until it ceases to have any effect or validity; and

(iii) To retain the integrity of the electronic transferable record.

"2. The criterion for assessing integrity shall be whether information contained in the electronic transferable record, including any authorized change that arises from its creation until it ceases to have any effect or validity, has remained complete and unaltered apart from any change which arises in the normal course of communication, storage and display."

Remarks

1. Draft article 9 reflects the deliberations of the Working Group at its fifty-third session (A/CN.9/869, paras. 50-68). At that session the Working Group agreed that (i) the title of draft article 9 should refer to "transferable document or instrument" to be in line with the drafting style used for other articles providing for a functional equivalent in the draft Model Law; and (ii) subparagraph 1(a) should refer to a transferable document or instrument without any qualifier such as "equivalent" to avoid uncertainty on the understanding that an electronic transferable record should contain the same information as the transferable document or instrument of the same type.

2. With regard to subparagraph 1(b)(i), the Working Group confirmed that paragraph 1 was based on both the "singularity" and the "control" approaches. The Working Group also agreed that the use of the word "the" to identify the electronic transferable record was adequate in the English, French and Spanish languages (A/CN.9/869, paras. 54 and 58).

3. The Working Group may wish to note that, upon consultation with the relevant translation units, adequate translation for subparagraph 1(b)(i) have been sought in the Arabic, Chinese and Russian languages.

4. With regard to paragraph 1(b)(ii), the Working Group agreed that the reference to a reliable method therein was appropriate and that it referred to the reliability of

the system used to render the electronic record capable of being subject to control (A/CN.9/869, para. 64).

5. With regard to paragraph 2, the Working Group agreed that it related to system integrity and that therefore reference should be made to "authorized" changes (A/CN.9/869, paras. 61-62). The Working Group also agreed to delete the second sentence of paragraph 2 referring to the assessment of the standard of reliability as redundant, since it repeated in part draft article 11, subparagraph (1)(a) on the assessment of the reliability standard, which is applicable also to draft article 9 (A/CN.9/869, paras. 65-66).

Comments

6. Article 9 provides a functional equivalence rule for the use of transferable documents or instruments by setting forth the requirements to be met by an electronic record. It aims at preventing the possibility of multiple requests to perform the same obligation by combining two approaches, i.e. "singularity" and "control" (A/CN.9/834, para. 86). The reliability of the method referred to in article 9 shall be assessed according to the general reliability standard contained in article 11 (A/CN.9/863, paras. 66 and 73).

7. Article 9 represents the outcome of discussions originating from the notion of "uniqueness". Uniqueness of a transferable document or instrument aims to prevent the circulation of multiple documents or instruments relating to the same performance (A/CN.9/WG.IV/WP.118, para. 39) and thus to avoid multiple claims (A/CN.9/761, para. 33; A/CN.9/768, para. 51). Providing a guarantee of uniqueness (or singularity) in an electronic environment equivalent to possession of a document of title or negotiable instrument has long been considered a peculiar challenge (A/CN.9/WG.IV/WP.90, para. 95; A/CN.9/WG.IV/WP.115, paras. 12-18).

8. Uniqueness is a relative notion that poses technical challenges in an electronic environment, as providing an absolute guarantee of non-replicability may not be technically feasible. In fact, the notion of uniqueness poses challenges also with respect to transferable documents or instruments, since paper does not provide an absolute guarantee of non-replicability. However, centuries of use of paper in business transactions have provided sufficient information to commercial operators for an assessment of the risks associated with the use of that medium while practices on the use of electronic transferable records are not yet equally well-established.

9. With respect to electronic transferable records, resorting to the notions of "singularity" and "control" suffices to provide reliable assurance that the debtor will not be exposed to multiple requests for performance (A/CN.9/804, paras. 38, 71 and 74; see also A/CN.9/797, paras. 48 and 50 and A/CN.9/869, para. 55).

10. The "singularity" approach requires reliable identification of the electronic transferable record that entitles its holder to request performance of the obligation indicated in it, so that multiple claims of the same obligation would be avoided, while the "control" approach focuses on the use of a reliable method to identify the person in control of the electronic transferable record (A/CN.9/834, para. 86; A/CN.9/869, para. 56).

11. One effect of the adoption of the notions of "singularity" and "control" in the Model Law is the prevention of unauthorized replication of an electronic transferable record by the system (see also A/CN.9/834, paras. 105-107).

Subparagraph 1(a)

12. Subparagraph 1(a) states that the electronic record should contain the information required to be in a transferable document or instrument. Since that information is contained in writing in a transferable document or instrument, its inclusion in an electronic transferable record must comply with article 7 of the Model Law. The definition of "electronic record" contained in article 2 of the Model Law clarifies that the electronic record may, but does not need to have a composite nature (see A/CN.9/WG.IV/WP.139, paras. 38-39).

13. The electronic transferable record must contain the information identifying it as the functional equivalent of a transferable document or instrument. That identification is necessary also to determine the substantive law applicable to the electronic transferable records (e.g., the law applicable to a bill of lading, rather than the law applicable to promissory note).

14. A law that does not contain a provision akin to subparagraph 1(a) of article 9, but sets forth directly the information requirements to be contained in an electronic transferable record, is likely to provide for electronic transferable records that are not functionally equivalent to transferable documents or instruments, but exist only in an electronic environment.

15. Accordingly, an electronic transferable record existing only in electronic form would not satisfy the requirements of article 9 and would, thus, not fall under the definition of electronic transferable record contained in article 2. Namely, while an electronic transferable record existing only in electronic form could satisfy other requirements set forth in the Model Law, that record would define autonomously the information requirements and therefore would not satisfy the requirements of article 9, paragraph 1(a) (A.CN.9/869, para. 67).

16. Subparagraph 1(a) does not contain any qualifier as "equivalent", "corresponding" or "as having the same purpose" given that under that provision an electronic transferable record must indicate the same information required for a transferable document or instrument of the same type. Insertion of a further qualifier might create uncertainty (A/CN.9/869, paras. 50-51).

Subparagraph 1(b)(i)

17. Subparagraph 1(b)(i) sets forth the requirement to identify an electronic record as the record containing the information necessary to establish that record as the electronic transferable record. That requirement implements the "singularity" approach (A/CN.9/834, para. 86; A/CN.9/869, para. 52).

18. The purpose of the provision is to identify the electronic transferable record as opposed to other electronic records that are not transferable. Identification alone suffices to express the singularity approach (A/CN.9/869, paras. 52, 55 and 59; A/CN.9/828, para. 32; see also A/CN.9/WG.IV/WP.137, para. 57). The article "the" in the English, French and Spanish languages suffices to point at the singularity approach, thus avoiding the use of any qualifier and related challenges (A/CN.9/869, para. 58). Other language versions are intended to convey the same notion.

19. Unlike certain domestic legislation,[1] subparagraph 1(b)(i) does not refer to a qualifier such as "authoritative", "operative" or "definite" to identify the electronic record as the electronic transferable record (A/CN.9/869, paras. 52, 57-60; A/CN.9/834, paras. 101-104; A/CN.9/828, paras. 32). The reason for that omission is that a qualifier could create interpretative challenges, especially in certain languages, could be interpreted as referring to the notion of "uniqueness" that had been abandoned, and could ultimately foster litigation.

Subparagraph 1(b)(ii)

20. Subparagraph 1(b)(ii) sets forth the requirement that the electronic transferable record should be capable of being controlled from its creation until it ceases to have any effect or validity, particularly in order to allow for its transfer. That requirement implements the "control" approach (A/CN.9/834, para. 86; A/CN.9/869, para. 64).

21. The provision takes into account the possibility that an electronic transferable record might not necessarily be actually subject to control (A/CN.9/804, para. 61). This could happen, for instance, when a token-based electronic transferable record is lost.

[1] Section 7-106 of the Uniform Commercial Code (UCC).

22. The reference to a reliable method with respect to subparagraph 1(b)(ii) refers to the reliability of the system used to render the electronic record capable of being subject to control (A/CN.9/869, para. 64).

Subparagraph 1(b)(iii)

23. The notion of integrity is an absolute one (A/CN.9/863, para. 42). It refers to a fact, and as such, is objective, i.e. either an electronic transferable record retains integrity or not. The reference to the reliable method used to retain integrity is relative or subjective and the assessment of that method is subject to the general reliability standard contained in article 11 (A/CN.9/869, para. 63).

Paragraph 2

24. Paragraph 2 sets forth a provision on the assessment of the notion of integrity (A/CN.9/828, paras. 48 and 49). It indicates that an electronic transferable record retains integrity when any set of information related to authorized changes (as opposed to changes of purely technical nature) remains complete and unaltered from the time of the creation of the electronic transferable record until it ceases to have any effect or validity (A/CN.9/804, para. 29). It is inspired by article 8, paragraph 3, of the UNCITRAL Model Law on Electronic Commerce (A/CN.9/828, para. 45). However, it should be noted that article 8, paragraph 3(a) of the Model Law on Electronic Commerce refers to a notion of integrity with respect to the use of the notion of "original" that may be more appropriate for electronic contracting. On the other hand, the notion of integrity contained in article 9, paragraph 2 of the Model Law necessarily takes into account the fact that the life cycle of electronic transferable records implies a number of events that need to be accurately reflected in those records.

25. "Authorized" changes are those changes permitted by the system designers throughout the life cycle of an electronic transferable record (A/CN.9/828, para. 44; A/CN.9/834, paras. 27-28). The term "authorized" does not refer to whether the changes are legitimate, which would introduce a standard presupposing a legal assessment under substantive law (A/CN.9/804, para. 32). For instance, unauthorized changes would be those performed by a hacker who must compromise the integrity of the electronic transferable record in order to have access to it (A.CN.9/869, paras. 61-62).

"Draft article 10. Control

"1. Where the law requires the possession of a transferable document or instrument, that requirement is met with respect to an electronic transferable record if a reliable method is used:

(a) To establish exclusive control of that electronic transferable record by a person; and

(b) To identify that person as the person in control.

"2. Where the law requires or permits transfer of possession of a transferable document or instrument, that requirement is met with respect to an electronic transferable record through the transfer of control over the electronic transferable record."

Remarks

26. Draft article 10 reflects the Working Group's deliberations at its fifty-third session (A/CN.9/869, paras. 103-110) to (i) place the draft article consecutively after draft article 9 in view of their logical relation; (ii) use as title the word "control" since it refers to a particularly relevant notion in the draft Model Law and best highlights its content; and (iii) use the word "identify" in subparagraph 1(b) in light of its clear meaning.

Comments

27. Article 10 provides a functional equivalence rule for the possession of a transferable document or instrument. Functional equivalence of possession is achieved when a reliable method is employed to establish control of that record by a person and to identify the person in control.

28. The notion of "control" is closely related to article 9 subparagraph (b)(ii) (A/CN.9/869, para. 103) and actually implements the requirement contained in that subparagraph. "Control" could refer to control of the information relating to the electronic transferable record ("logical control") or to control of the physical object containing that information ("physical control"), depending on the system used to manage the electronic transferable record (A/CN.9/768, para. 78).

29. The notion of "control" is not defined in the Model Law since it is the functional equivalent of the notion of "possession", which, in turn, may vary in each jurisdiction (A/CN.9/834, para. 83).

30. Both control and possession are factual. In line with the general principle that the Model Law does not affect substantive law, the notion of control does not affect or limit the legal consequences arising from possession. Consequently, parties may agree on the modalities for the exercise of possession, but may not modify the notion of possession itself (A/CN.9/863, para. 101).

31. The title of article 10 refers to "control" and not to "possession", thus departing from the naming style of other articles of the Model Law, since the notion of "control" is particularly relevant in the Model Law. While a notion of "control" may exist in national legislation,[2] the notion of "control" contained in article 10 needs to be interpreted autonomously in light of the international character of the Model Law.

Paragraph 1

32. The reliability of the method referred to in article 10 shall be assessed according to the general reliability standard contained in article 11 (A/CN.9/863, paras. 66 and 73).

Subparagraph 1(a)

33. Subparagraph 1(a) refers to "exclusive" control for reasons of clarity (A/CN.9/834, para. 93), since the notion of "control", similarly to that of "possession", implies exclusivity in its exercise (A/CN.9/797, para. 74). Yet, control, like possession, could be exercised concurrently by more than one person in control. The concept of "control" does not refer to "legitimate" control, since this is a matter of substantive law (A/CN.9/797, para. 76).

34. Although both the notion of "control" and the notion of "singularity" aim at preventing multiple requests of performance of the same obligation, the two notions operate independently and should be distinguished. For instance, it is possible to conceive exclusive control over a multiple record, i.e. a record that does not meet the

[2] E.g., Section 7-106 of the Uniform Commercial Code.

requirements of singularity. Conversely, it is also possible to conceive non-exclusive control over a single record (A/CN.9/804, para. 69; see also A/CN.9/797, paras. 48-50; and paragraphs 9-10 above).

Subparagraph 1(b)

35. Subparagraph 1(b) requires to reliably identify the person in control as the holder of the electronic transferable record (A/CN.9/768, paras. 77 and 85). The person in control of an electronic transferable record is in the same legal position as the holder of an equivalent transferable document or instrument.

36. The reference to the "person in control" of the electronic transferable record in subparagraph 1(b) does not imply that the person is also the rightful person in control of that record as this is for substantive law to determine (A/CN.9/828, para. 61). Further, the reference to the person in control does not exclude the possibility of having more than one person exercising control (A/CN.9/828, para. 63) or of attributing selectively control on one electronic transferable record to multiple entities on the basis of the legal rights attributed to each entity (e.g., title to property of goods, security interests, etc.).

37. The person in control may be a natural or a legal person (A/CN.9/869, paras. 109-110) or other entity able to possess an electronic transferable record under substantive law. The use of the services of a third party to exercise exclusive control does not affect exclusivity of control or imply that the third party service provider or any other intermediary is a person in control (A/CN.9/804, para. 59).

38. The requirement to identify the person in control does not imply that an electronic transferable record in itself shall contain the identification of the person in control. Rather, that requirement demands that the method or system employed to establish control as a whole shall perform the identification function (A/CN.869, paras. 106-108; A/CN.9/828, para. 63). Moreover, identification should not be understood as implying an obligation to name the person in control, as the Model Law allows for the issuance of electronic transferable records to bearer, which implies anonymity (A/CN.9/828, para. 51).

39. Certain electronic transferable records management systems, such as those based on distributed ledgers, may identify the person in control by referring to pseudonyms rather than to real names. That identification, and the possibility to link pseudonym and real name, if need be, would satisfy the requirement to identify the person in control. In any case, anonymity for commercial law purposes may not preclude the possibility of identifying the person in control for other purposes, such as law enforcement.

40. Article 10 will also assist in carrying out those necessary steps occurring in the life cycle of the electronic transferable record that require demonstration of control of that record. For instance, the notion of "presentation" in the paper environment relies on demonstration of possession of a transferable document or instrument as its core element. That demonstration may be given by identifying the person in control. In practice, the electronic transferable records management system may rely on the requirement to identify the person in control contained in article 10 when dealing with presentation of a record. Accordingly, the Model Law does not contain a separate provision on presentation (A/CN.9/863, paras. 27-36).

Paragraph 2

41. Transferable documents or instruments, and therefore also electronic transferable records, may circulate by delivery and by endorsement. Paragraph 2 sets forth that transfer of control over an electronic transferable record is the functional equivalent of delivery, i.e. transfer of possession, of a transferable document or instrument (A/CN.9/834, paras. 31-33; see also the comments on article 16 on endorsement).

42. Paragraph 2 includes the words “or permits” in order to clarify its application to cases in which the law merely permits, but does not require transfer of possession of a transferable document or instrument.

43. The delivery of a transferable document or instrument may be a necessary step in the life cycle of that document or instrument. For instance, the request for delivery of goods typically requires surrendering a bill of lading. The Model Law does not contain specific provisions on surrender as paragraph 2, on transfer of control as functional equivalent of delivery, would apply also to those cases.

“Draft article 11. General reliability standard

“For the purposes of articles [8, 9, 10, 11, 17, 18, 19] the method referred to shall be:

(a) As reliable as appropriate for the fulfilment of the function for which the method is being used, in the light of all relevant circumstances, which may include:

(i) The operational rules relevant to the assessment of reliability governing the system;

(ii) The assurance of data integrity;

(iii) The ability to prevent unauthorized access to and use of the system;

(iv) The security of hardware and software systems;

(v) The regularity and extent of audit by an independent body;

(vi) The existence of a declaration by a supervisory body, an accreditation body or a voluntary scheme regarding the reliability of the method;

(vii) Any applicable industry standards; or

(b) Proven in fact to have fulfilled the function by itself or together with further evidence.

Remarks

44. Draft article 11 reflects the deliberations of the Working Group at its fifty-third session (A/CN.9/869, paras. 69-78) to (i) replace the word “quality” in subparagraph (a)(iv) with the word “security” since quality did not lend itself easily to an objective assessment and the notion of security is more directly relevant for assessing the reliability of the method; (ii) delete the words “agreed to” in subparagraph (b) since the provision does not relate only to functions that had been agreed upon contractually; and (iii) delete the second paragraph referring to party agreement with regard to the purposes of assessing reliability between the parties on the understanding that the draft Model Law does not prevent parties from contractually allocating some liability.

45. The Working Group may wish to consider whether subparagraph (a)(vi) should refer to the reliability of the system, of the methods used in the system, or of both. In that respect, the Working Group may wish to confirm that the term "system" is used in the Model Law to refer to the electronic transferable records management system, upon the understanding that reference to that system does not imply the existence of a system administrator or other form of centralized control. In that line, the Working Group may also wish to consider whether subparagraph (a)(iv) should refer to "hardware and software used in the system".

Comments

46. Article 11 provides a consistent and technology neutral general standard on the assessment of reliability that applies whenever a provision of the Model Law requires the use of a "reliable method" for the fulfilment of its functions (A/CN.9/863, para. 44).

47. Article 11 aims to increase legal certainty by indicating elements that may be relevant in assessing reliability (A/CN.9/804, para. 47). The list of circumstances contained in article 11 is not exhaustive and does not prevent the parties from allocating liability contractually (see also paras. 62-63 below). The general reliability standard is applicable to all electronic transferable records management system providers and not only to third-party service providers (A/CN.9/804, para. 48).

48. Though the provision aims at providing guidance on the assessment of the reliability of the electronic transferable records management system in case of dispute ("ex post" reliability assessment), its content will necessarily also influence the design of the system ("ex ante" reliability assessment) (A/CN.9/863, para. 44) since system designers pursue offering reliable systems.

49. Each provision of the Model Law referring to the use of a reliable method aims at fulfilling a different function (A/CN.9/863, para. 54). Accordingly, the reference to "the purposes of articles" contained in the chapeau of article 11 aims to clarify that the assessment of the reliability of each relevant method should be carried out separately in light of the function specifically pursued with the use of that method (A/CN.9/863, para. 39). That approach provides needed flexibility when assessing the application of the reliability standard in practice (A/CN.9/828, para. 47) as it allows customizing the reliability assessment to each function fulfilled by the system.

Subparagraph (a)

50. Subparagraph (a) contains a list of circumstances to assist in determining reliability. The words "which may include" clarify that the list is not exhaustive and has an illustrative nature only (A/CN.9/863, paras. 46 and 66). The words "all relevant circumstances" include the purpose for which the information contained in the electronic transferable record was generated (A/CN.9/863, para. 67).

51. The list of circumstances aims at achieving a balance between providing guidance on the assessment of reliability and imposing requirements that may result in excessive costs on business, ultimately hampering electronic commerce and leading to increased litigation on complex technical matters (A/CN.9/863, para. 46). Additional possibly relevant circumstances include: quality of staff, sufficient financial resources and liability insurance, existence of a notification procedure for security breaches and of reliable audit trails (A/CN.9/804, paras. 44-45).

"operational rules"

52. Subparagraph (a)(i) refers to "operational rules" that are usually contained in an operating manual whose application could be monitored by an oversight body and that, as such, may not have a purely contractual nature. The words "relevant to the assessment of" clarify that only operational rules regarding the reliability of the system, and not operational rules in general, should be considered (A/CN.9/863, paras. 57 and 68).

"assurance of data integrity"

53. Subparagraph (a)(ii) refers to the "assurance of data integrity" as an absolute notion, since data integrity cannot be expressed by reference to a level (A/CN.9/863, para. 42). Though the notion of "integrity" of the electronic transferable record is already contained in article 9, it is included also as an element in the assessment of the general reliability standard. More precisely, the reference to integrity contained in article 10 is relevant also to articles that do not mention integrity when integrity is in fact relevant to assess the reliability of the method used and, ultimately, the achievement of functional equivalence (A/CN.9/863, paras. 69 and 70).

"prevent unauthorized access to and use of the system"

54. The circumstance refers to the ability to prevent access to and use of the system by third parties not authorized to do so. In that respect, it should be noted that the notion of integrity in the Model Law refers to "authorized" changes. A reliable method shall therefore prevent unauthorized changes. Moreover, the notion of control is based on exclusivity which presupposes the ability to exclude third parties without authorized access to the system.

"security of hardware and software systems"

55. Reference to "security of hardware and software systems" is included in the list of criteria for the assessment of the general reliability standard for electronic transferable records, since security of hardware and software systems has a direct impact on the reliability of the method used. That reference is found also in article 10, subparagraph (b) of the UNCITRAL Model Law on Electronic Signatures, which refers to the "quality of hardware and software systems" as one of the factors to be regarded for the determination of trustworthiness of any systems, procedures and human resources utilized by a certification service provider. The term "security" is used in subparagraph (a)(iv) instead of "quality" since the notion of security lends itself more easily to an objective assessment of the method used (A/CN.9/869, para. 69).

"regularity and extent of audit by an independent body"

56. The existence of regular accurate audits carried out by an independent body may be seen as evidence of validation of the reliability of the system by a third party. Similarly, article 10, subparagraph (e) of the UNCITRAL Model Law on Electronic Signatures refers to the "regularity and extent of audit by an independent body" as one of the factors to be considered for the determination of trustworthiness of any systems, procedures and human resources utilized by a certification service provider.

"declaration by a supervisory body, an accreditation body or a voluntary scheme regarding the reliability of the method"

57. The criteria of "regularity and extent of audit by an independent body" is inspired by article 10, subparagraph (f) of the UNCITRAL Model Law on Electronic Signatures, which refers to the "declaration by the State, an accreditation body or the certification service provider regarding compliance with or existence of the foregoing" as one of the factors to be regarded for the determination of trustworthiness of any systems, procedures and human resources utilized by a certification service provider. A declaration by such body may guarantee a certain level of objectivity in the assessment of the reliability of the method.

"Any applicable industry standard"

58. The reference to "any applicable industry standard" stems from a suggestion to refer to internationally accepted standards and practices to avoid increased litigation based on complex technical matters (A/CN.9/804, para. 46) and to allow flexibility in technology choice while providing guidance, in light also of the fact that electronic

transferable records management systems are likely to be designed and maintained by highly-specialized professionals (A/CN.9/863, para. 56).

59. During the discussions on article 11, the term "any applicable industry standard" was preferred to "industry best practices" since the former can be more easily ascertained (A/CN.9/863, para. 71). Applicable industry standards should preferably be internationally recognized (A/CN.9/863, para. 56). In fact, the use of international standards may promote the emergence of a common notion of reliability across jurisdictions. Reference to industry standards shall not be interpreted so as to violate the principle of technology neutrality (A/CN.9/863, para. 71).

Subparagraph (b)

60. Subparagraph (b) provides a "safety clause" with the purpose of preventing frivolous litigation by validating methods that have in fact achieved their function regardless of any assessment of their reliability (A/CN.9/863, para. 43). It refers to the fulfilment of the function in the specific case under dispute and does not aim at predicting future reliability based on past performance of the method (A/CN.9/863, para. 51). The provision may operate with respect to any of the functions pursued with the use of electronic transferable records (A/CN.9/869, para. 71). A similar mechanism is contained in article 9, subparagraph (3)(b)(ii), of the Electronic Communications Convention, relating to the functional equivalence of electronic signatures.

61. In practice, the fact that the method used has in fact achieved the function pursued with its use will prevent any discussion on the assessment of its reliability according to subparagraph (b).

Party autonomy

62. The Model Law does not contain an explicit reference to the relevance of an agreement of the parties when assessing reliability in article 11. That omission is due to the desire to set forth an objective reliability standard and therefore not to make it dependent on party autonomy. In particular, the inclusion of a reference to party autonomy could have been read as: (a) introducing different standards for the assessment of reliability whose application would depend on the parties involved; (b) leading to inconsistent findings in respect of the validity of the electronic transferable record, and (c) circumventing substantive law, especially provisions of mandatory application, and ultimately affect third parties. Hence, party autonomy with respect to the assessment of reliability is limited to allocation of liability under the limits set forth in applicable law (A/CN.9/869, para. 75; see also A/CN.9/863, paras. 40 and 59).

63. The relevance of party agreements may be particularly significant in the context of closed systems or when referring to industry standards, since those agreements often contain useful guidance on technical details and may promote technological innovation within the limits of mandatory substantive law (A/CN.9/869, para. 77; see also A/CN.9/863, paras. 58 and 74).

Note by the Secretariat on a Draft Model Law on Electronic Transferable Records

ADDENDUM

Contents

II. Draft Model Law on Electronic Transferable Records (*continued*)

C. Use of electronic transferable records (Articles 12-19)

> "**Draft article 12. Indication of time and place in electronic transferable records**
>
> "Where the law requires or permits the indication of time or place with respect to a transferable document or instrument, a reliable method shall be used to indicate that time or place with respect to an electronic transferable record."

Remarks

1. Draft article 12 reflects the Working Group's deliberations at its fifty-third session (A/CN.9/869, paras. 79-82).

Comments

2. Significant legal consequences are attached to the indication of time and place in transferable documents and instruments. For instance, recording the time of an endorsement is necessary to establish the sequence of the obligors in the action of recourse. Article 12 points at the importance of indicating that information in electronic transferable records. In the case of endorsements, this is particularly important given that the dematerialized nature of electronic transferable records does not make their temporal sequence apparent as in transferable documents or instruments (A/CN.9/834, para. 38).

3. Provisions relating to the indication of time and place, if any, are to be found in substantive law, which may indicate to what extent and which parties may agree on it. If the indication of time and place is mandatory under substantive law, that requirement must be complied with in accordance with article 9 of the Model Law, mandating that the electronic transferable record shall contain the information "required to be contained in a transferable document or instrument".

4. The words "or permits" clarify that article 12 shall apply also to cases when the law permits, but does not require the indication of time or place with respect to a transferable document or instrument (A/CN.9/834, para. 42). In line with the general rule that the Model Law does not impose any additional information requirement, article 12 does not require the indication of time and place when that information is not mandatory under applicable law.

5. Methods available to indicate time and place in electronic transferable records may vary with the system used. Therefore, article 12 is based on a technology-neutral approach compatible with systems based on registry, token, distributed ledger or other technology (A/CN.9/863, para. 24). The reference to the use of a reliable method in indicating time points at the possibility of using trust services such as trusted time stamping (A/CN.9/869, para. 81).

6. The nature of the electronic transferable record may enable automation of certain steps in the life cycle of the record related to time. For instance, promissory notes may be presented for payment automatically on due date.

7. In registry systems, the system is likely to time-stamp automatically the events occurring in the life cycle of the electronic transferable records. However, automatic time-stamping should not prevent parties from determining otherwise the time of their actions, when possible under substantive law.

8. The provisions on time and place of dispatch and receipt of data messages (article 15 of the UNCITRAL Model Law on Electronic Commerce) and of electronic communications (article 10 of the Electronic Communications Convention) are relevant for contract formation and management but may not be appropriate with respect to the use of electronic transferable records (A/CN.9/834, para. 36).

"**Draft article 13. Determination of place of business**

"1. A location is not a place of business merely because that is:

(a) Where equipment and technology supporting an information system used by a party in connection with electronic transferable records are located; or

(b) Where the information system may be accessed by other parties.

"2. The sole fact that a party makes use of an electronic address or other element of an information system connected to a specific country does not create a presumption that its place of business is located in that country."

Remarks

9. Draft article 13 reflects the deliberations of the Working Group at its fifty-third session to retain the article with the title "Determination of place of business" (A/CN.9/869, paras. 83-92).

Comments

10. The law may attach a number of consequences to the place of business. In particular, the place of business may be relevant for the cross-border use of electronic transferable records (A/CN.9/869, para. 83). Substantive law shall indicate how to identify the relevant place of business, which, in principle, does not need to be different only because of the use of electronic or paper medium. The scope of article 13 is limited to clarifying that the location of an information system, or parts thereof, is not an indicator of a place of business as such (A/CN.9/863, para. 25). That clarification may be particularly useful in light of the likelihood that third parties providing services relating to the management of electronic transferable records will use equipment and technology located in various jurisdictions, or whose location may change regularly, such as in the case of use of cloud computing.

11. Article 13, whose text is inspired by article 6, paragraphs 4 and 5 of the Electronic Communications Convention,[1] aims at providing guidance on the determination of a place of business when electronic means are used by indicating

[1] See also United Nations Convention on the Use of Electronic Communications in International Contracts (New York, 2005), Explanatory Note, United Nations Publication Sales No. E.07.V.2, paras. 116-121.

that certain elements do not per se identify a place of business (A/CN.9/869, para. 90). Its scope is therefore different from that of article 12, which relates to the indication of the place of business in the electronic transferable record, and not to its determination.

12. Substantive law may allow parties to identify the place of business by agreement. In that case, article 13 may provide a set of suppletive rules on the determination of the place of business that could usefully complement parties' agreements (A/CN.9/869, para. 84). Reference to "place of business" shall be interpreted as reference to the various notions related to geographic location (e.g., residence, domicile, etc.) that may be relevant during the life cycle of the electronic transferable record.

References to preparatory work

A/CN.9/WG.IV/WP.135/Add.1, paras. 5-6; A/CN.9/863, paras. 25-26; A/CN.9/WG.IV/WP.137/Add.1, paras. 5-8; A/CN.9/869, paras. 83-92.

"**Draft article 14. Issuance of multiple originals**

"Where the law permits the issuance of more than one original of a transferable document or instrument, this may be achieved with respect to electronic transferable records by the issuance of multiple electronic transferable records."

Remarks

13. Draft article 14 reflects the Working Group's deliberations at its fifty-third session (A/CN.9/869, paras. 95-99). Accordingly, paragraph 2 on the indication of the total number of originals issued has been deleted from draft article 14 as redundant, since draft article 9, subparagraph 1(a) already requires that the electronic transferable record should contain an indication of the issuance of multiple originals whenever substantive law set forth that requirement.

14. The Working Group may wish to consider whether a provision dealing with the coexistence of multiple originals issued simultaneously on different media should be inserted in the draft Model Law. This provision may be useful in promoting the use of electronic transferable records while addressing special needs of some parties who may not be in the position of handling those records.

15. In particular, in case the Working Group wishes to insert a provision indicating that multiple originals may be issued simultaneously on different media, such provision could be drafted along the following lines:

"1. Where the law permits the issuance of more than one original of a transferable document or instrument, this may be achieved with the simultaneous issuance of one or more electronic transferable records and of one or more transferable documents or instruments.

"2. [When one or more electronic transferable records and one or more transferable documents or instruments relating to the same obligation are simultaneously issued] [In case of issuance of one or more electronic transferable records and one or more transferable documents or instruments according to paragraph 1], the electronic transferable records and the transferable documents or instruments shall indicate so."

16. If, on the contrary, the Working Group wishes to insert a provision indicating that multiple originals may not be issued simultaneously on different media, such provision could be drafted along the following lines:

"Where the law permits the issuance of more than one original of a transferable document or instrument, this may not be achieved with the simultaneous issuance of one or more electronic transferable records and of one or more transferable documents or instruments."

Comments

17. The possibility of issuing multiple originals of a transferable document or instrument exists in several fields of trade (A/CN.9/WG.IV/WP.124, para. 49). Examples of legal provisions recognizing that practice may be found in article 47, paragraph 1(c) of the United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea (New York, 2008) (the "Rotterdam Rules")[2] and in article e8 of the Supplement to the Uniform Customs and Practice for Documentary Credits for Electronic Presentation ("eUCP"). It has been reported that the practice of issuing multiple originals exists also in the electronic environment.

18. Article 14 aims to enable the continuation of that practice with respect to the use of electronic transferable records (A/CN.9/797, para. 68) when that practice is permitted under applicable law. In that respect, it should be noted that the Model Law does not contain a functional equivalent of the paper-based notion of "original". Instead, the functions fulfilled by the original of a transferable document or instrument with respect to requesting performance are satisfied in an electronic environment by the notions of "singularity" and "control" (see A/CN.9/WG.IV/WP.139, paras. 81-82). Hence, the transposition of the practice of issuing multiple original transferable documents or instruments in an electronic environment requires the issuance of multiple electronic transferable records relating to the performance of the same obligation.

19. However, caution should be exercised when issuing multiple electronic transferable records. In fact, that practice may expose to the possibility of multiple claims for the same performance based on the presentation of each original (A/CN.9/WG.IV/WP.130/Add.1, para. 9). Moreover, the same functions pursued with the issuance of multiple original transferable documents or instruments may be achieved in an electronic environment by attributing selectively control on one electronic transferable record to multiple entities on the basis of the legal rights attributed to each entity (e.g., title to property of goods, security interests, etc.). In practice, for instance, a registry could record multiple claims having different objects and relating to the same electronic transferable record.

20. Article 14 does not contain an obligation to indicate whether multiple originals have been issued. If substantive law contains that obligation, the electronic transferable record must comply with it in accordance with the information requirements contained in article 9, subparagraph 1(a) of the Model Law (A/CN.9/869, paras. 97 and 99).

21. Similarly, article 14 does not specify whether one or all originals must be presented to request the performance of the obligation contained in the electronic transferable record as this matter is determined by applicable law or, where possible, contractual agreement (for additional information on substantive law, see A/CN.9/WG.IV/WP.132/Add.1, paras. 14-16).

"**Draft article 15. Additional information in electronic transferable records**

"Nothing in this Law precludes the inclusion of information in an electronic transferable record in addition to that contained in a transferable document or instrument."

[2] General Assembly resolution 63/122, annex.

Comments

22. As a general rule, the electronic transferable record shall contain all the information contained in the transferable document or instrument (article 9, subparagraph 1(a) of the Model Law). The Model Law does not require the insertion of information additional to that contained in a transferable document or instruments for the issuance and use of an electronic transferable record. Requiring that additional information would create a legal requirement that does not exist with respect to the issuance and use of transferable documents or instruments and therefore could constitute discrimination against the use of electronic means.

23. Adding to that general rule, article 15 clarifies that the electronic transferable record may, but does not need to contain information additional to that contained in the transferable document or instrument. In other words, while the Model Law does not impose any additional information requirement for electronic transferable records, it also does not prevent the inclusion in those records of additional information that may not be contained in a transferable document or instrument due to the different nature of the two media (A/CN.9/869, paras. 101 and 102).

24. Examples of such additional information include information necessary due to technical reasons, such as metadata or a unique identifier (A/CN.9/761, para. 32). Moreover, such additional information could consist of dynamic information, i.e. information that may change periodically or continuously based on an external source, which may be included in an electronic transferable record due to its nature but not in a transferable document or instrument. The price of a publicly-traded commodity and the position of a vessel are examples of dynamic information (A/CN.9/768, para. 66 and A/CN.9/797, para. 73).

> "**Draft article 16. Endorsement**
>
> "Where the law requires or permits the endorsement in any form of a transferable document or instrument, that requirement is met with respect to an electronic transferable record if the information required for the endorsement is included in the electronic transferable record and that information is compliant with the requirements set forth in articles 7 and 8."

Remarks

25. Draft article 16 has been recast pursuant to the Working Group's deliberations at its fifty-third session (A/CN.9/869, paras. 111-114) on the understanding that the words "included in" encompass instances when the information was logically associated with or otherwise linked to the electronic transferable record.

Comments

26. Transferable documents or instruments may be transferred by delivery and by endorsement (for comments on delivery, see A/CN.9/WG.IV/WP.139/Add.1, paras. 41-43). Substantive law sets forth the conditions for the circulation of transferable documents or instruments, which apply to functionally equivalent electronic transferable records. Article 16 identifies the requirements that need to be complied with in order to achieve functional equivalence of endorsement in addition

to the requirements for functional equivalence of written form and signature (A/CN.9/768, para. 46; A/CN.9/WG.IV/WP.128/Add.1, para. 23).

27. While national laws may contain a wide range of formal prescriptions for endorsement in a paper-based environment, article 16 aims to achieve functional equivalence of the notion of endorsement regardless of those requirements and in line with the approach taken for other functional equivalence rules in the Model Law. Hence, article 16 adds to the functional equivalence rules for writing, signature and transfer already contained in the Model Law by providing also for specific forms of endorsement required under substantive law, such as endorsements on the back of a transferable document or instrument or by affixing an *allonge* (A/CN.9/828, para. 76).

28. Inserting in article 16 specific references to certain form requirements, but not to others, might be interpreted as excluding those other requirements from the scope of the article, thus ultimately frustrating its purpose (A/CN.9/804, para. 80). Hence, article 16 does not refer to any specific form of requirement, but includes all of them.

29. The words "or permits" are included in article 16 to provide for instances when substantive law allows for, but does not require endorsement (A/CN.9/828, para. 77).

30. The words "included in" have been chosen as reflecting more accurately current practice (A/CN.9/828, para. 78) and to encompass instances when the information is logically associated with or otherwise linked to the electronic transferable record (A/CN.9/869, para. 114), thus enabling the use of different models for electronic transferable records management systems in line with the principle of technology neutrality.

"**Draft article 17. Amendment**

"Where the law requires or permits the amendment of a transferable document or instrument, that requirement is met with respect to an electronic transferable record if a reliable method is used for amendment of information in the electronic transferable record so that the amended information is identified as such."

Comments

31. Substantive law or contractual agreements may allow for the amendment of a transferable document or instrument and specify who has the authority to amend the electronic transferable record, under what circumstances and whether a duty to notify third parties of the amendment exists (A/CN.9/761, para. 49 and A/CN.9/768, para. 95). Article 17 provides a functional equivalence rule for instances in which an electronic transferable record may be amended. The amendments referred to in article 17 are of legal and not technical nature.

32. Article 17 sets forth an objective standard, as indicated by the use of the word "identified" (A/CN.9/828, paras. 86 and 87), for the identification of amended information in an electronic environment. The rationale for requesting the identification of the amended information lies in the fact that, while amendments may be easily identifiable in a paper-based environment due to the nature of that medium, that may not be the case in an electronic environment. Qualifiers to identification, such as "accurately" or "readily", do not provide an objective standard while introducing an additional burden and imposing cost on system operators (A/CN.9/828, para. 88 and A/CN.9/863, para. 84).

33. Thus, article 17 aims to provide evidence of and trace all (A/CN.9/828, para. 88) amended information (A/CN.9/828, para. 85). The article is in line with the general obligation to preserve the integrity of the electronic transferable record contained in article 9 of the Model Law (A/CN.9/WG.IV/WP.139/Add.1, para. 23). It does, however, go beyond that general obligation, as the amended information shall not only be recorded but also identified as such and therefore recognizable.

34. Article 17 requires that a reliable method shall be used to identify the amended information, but does not set out the method to be employed to identify the amendment or the amended information, as that could impose an additional burden on the management of the electronic transferable record (A/CN.9/828, paras. 89 and 90). The reliability of the method shall be assessed according to the general reliability standard contained in article 11 (A/CN.9/863, paras. 66 and 73).

35. The words "or permits" aim at capturing those instances in which applicable substantive law allows for amendment of the electronic transferable record but does not require it (A/CN.9/WG.IV/WP.130/Add.1, para. 42).

"**Draft article 18. Replacement of a transferable document or instrument with an electronic transferable record**

"1. An electronic transferable record may replace a transferable document or instrument if a reliable method for the change of medium is used.

"2. For the change of medium to take effect, the following requirements shall be met:

(a) The electronic transferable record shall include all the information contained in the transferable document or instrument; and

(b) A statement indicating a change of medium shall be inserted in the electronic transferable record.

"3. Upon issuance of the electronic transferable record in accordance with paragraphs 1 and 2, the transferable document or instrument shall be made inoperative and ceases to have any effect or validity.

"4. A change of medium in accordance with paragraphs 1 and 2 does not affect the rights and obligations of the parties."

Remarks

36. Draft article 18 has been recast to reflect the deliberations of the Working Group at its fifty-third session (A/CN.9/869, paras. 116-120). Accordingly, paragraph 1 is drafted in the active voice. Paragraph 3 now contains a reference to paragraph 1 in addition to paragraph 2 to clarify that the electronic transferable record has to be issued in accordance with both paragraphs.

37. The Working Group may wish to note that a transferable document or instrument may be invalidated on the wrong assumption of the validity of the electronic transferable record replacing it. In that case, the Working Group may wish to confirm that substantive law would apply to the reissuance of the transferable document or instrument, or, alternatively and if possible, that the electronic transferable record shall be issued in compliance with draft article 18.

38. The Working Group may wish to consider whether the comments to draft articles 18 and 19 should be combined, since the structure of the two articles is similar.

Comments

39. If the law recognizes the use of both transferable documents or instruments and electronic transferable records, the need for a change of medium may arise during the life cycle of those documents, instruments or records. Enabling change of medium is critical for the wider acceptance and use of electronic transferable records, especially when used across borders, given the different levels of acceptance of electronic means and readiness for their use in different States and business communities (A/CN.9/761, para. 72).

40. While modern legal texts based on medium neutrality may recognize the possibility of change of medium,[3] laws dealing exclusively with transferable documents or instruments are unlikely to foresee it. Articles 18 and 19 of the Model Law aim to fill that gap.

41. Articles 18 and 19 have a substantive nature and aim at satisfying two main goals: enabling change of medium without loss of information; and ensuring that the replaced transferable document or instrument will not further circulate (A/CN.9/828, para. 95) so as to prevent the coexistence of two claims to performance of the same obligation and, more generally, not to affect in any manner the rights and obligations of any party (A/CN.9/834, para. 54).

42. Article 18 omits the reference to substantive legal notions such as “issuer”, “obligor”, “holder” and “person in control” in order to accommodate the variety of schemes used in the various transferable documents or instruments, thus providing the flexibility needed to accommodate business practice (A/CN.9/834, paras. 57 and 64 and A/CN.9/WG.IV/WP.135/Add.1, para. 44).

43. Substantive law, including parties’ agreement, identifies those parties whose consent is relevant for the change of medium (A/CN.9/834, para. 62) and which parties, if any, need to be notified of the change.

44. Paragraph 1 requires that a reliable method shall be used for the change of medium. The reliability of the method shall be assessed according to the general reliability standard contained in article 11 (A/CN.9/863, paras. 66 and 73).

45. The word “replace” in paragraph 1 does not refer to the notion of reissuance, since reissuance and change of medium are distinct concepts and article 18 is clearly meant to refer to the latter (A/CN.9/869, para. 116).

46. The requirements set forth in paragraph 2 (a) and (b) are concurrent but not sequential. The electronic transferable records management system will in practice determine the steps in which they are implemented. The legal consequence for non-compliance with any of them is the invalidity of the change of medium and, consequently, of the electronic transferable record (A/CN.9/834, para. 58).

47. Paragraph 3 sets forth that, when the change of medium has taken place, the transferable document or instrument ceases to have any effect or validity. This is necessary to avoid multiple claims for performance. The word “upon” indicates that there should be no interval between the issuance of the replacement and the termination of the replaced document or record (A/CN.9/828, paras. 97 and 102).

48. The words “shall be made inoperative and” before the word “ceases” reflect that the transferable document or instrument could not be further transferred after change of medium. They leave sufficient flexibility on the choice of the method to render the transferable document or instrument inoperative (A/CN.9/869, para. 118).

49. A transferable document or instrument could fulfil other functions besides transferability, such as providing evidence of a contract for the carriage of goods and of receipt of the goods, or, with respect to transferable documents or instruments,

[3] See article 17 of An Act to Establish a Legal Framework for Information Technology, CQLR c C-1.1 (Québec); see also article 10 of the Rotterdam Rules.

providing evidence of the chain of endorsements for an action in recourse. The ability to fulfil those additional functions may continue after the document or instrument has been made inoperative (A/CN.9/869, para. 118).

50. Paragraph 3 refers to the issuance of the electronic transferable record in accordance with paragraphs 1 and 2, to clarify that the electronic transferable record has to be issued in accordance with both paragraphs (A/CN.9/869, para. 119).

51. Paragraph 4 is intended to clarify as a statement of law that the rights and obligations of the parties are not affected by the change of medium (A/CN.9/834, para. 61). Though a general principle already contained in the Model Law, the paragraph was retained in view of its declaratory function (A/CN.9/828, paras. 101 and 102).

> "**Draft article 19. Replacement of an electronic transferable record with a transferable document or instrument**
>
> "1. A transferable document or instrument may replace an electronic transferable record if a reliable method for the change of medium is used.
>
> " 2. For the change of medium to take effect, the following requirements shall be met:
>
> (a) The transferable document or instrument shall include all the information contained in the electronic transferable record; and
>
> (b) A statement indicating a change of medium shall be inserted in the transferable document or instrument.
>
> "3. Upon issuance of the transferable document or instrument in accordance with paragraphs 1 and 2, the electronic transferable record shall be made inoperative and ceases to have any effect or validity.
>
> "4. A change of medium in accordance with paragraphs 1 and 2 does not affect the rights and obligations of the parties."

Remarks

52. Pursuant to the Working Group's decision at its fifty-third session (A/CN.9/869, paras. 121, 116-120), draft article 19 reflects the changes agreed upon for draft article 18 since the two draft articles share the same structure.

53. Accordingly, paragraph 1 is drafted in the active voice on the basis of the alternative draft contained in A/CN.9/WG.IV/WP.137/Add.1, paragraph 47. Paragraph 3 now contains a reference to paragraph 1 in addition to paragraph 2 to clarify that the transferable document or instrument had to be issued in accordance with both paragraphs.

54. Further, paragraph 3 includes the words "shall be made inoperative and" before the word "ceases" to reflect that the electronic transferable record could not be further transferred after change of medium leaving sufficient flexibility to industry on the choice of the method to render the electronic transferable record inoperative.

Comments

55. Article 19 provides for the replacement of an electronic transferable record with a transferable document or instrument. A survey of business practice indicates that such replacement is more frequent than the reverse case due to the fact that a party whose involvement was not envisaged at the time of the creation of the electronic transferable record does not wish or is not in a position to use electronic means (A/CN.9/WP.137/Add.1, para. 44).

56. Under certain national laws, a paper-based print-out of an electronic record may be considered as equivalent to an electronic record.[4] Under article 19 a print-out of an electronic transferable record needs to meet the requirements of that article in order to have effect as a transferable document or instrument replacing the corresponding electronic transferable record.

57. The content of article 19 mirrors that of article 18 on the replacement of a transferable document or instrument with an electronic transferable record (A/CN.9/834, para. 64). Therefore, the comments in paragraphs 39-51 above also apply, mutatis mutandis, to article 19.

A/CN.9/WG.IV/WP.135/Add.1, paras. 49-51;
A/CN.9/WG.IV/WP.137/Add.1, paras. 44-47; A/CN.9/869, paras. 121-122.

Third-party service providers

58. Depending on the model chosen, electronic transferable records management systems may require the use of services provided by third parties. The Model Law is technology neutral and therefore compatible with all models. Reference in the Model Law to electronic transferable record management systems does not imply the existence of a system administrator or other form of centralized control.

59. UNCITRAL texts on electronic commerce have sometimes dealt with the conduct of third-party service providers. In particular, articles 9 and 10 of the UNCITRAL Model Law on Electronic Signatures provide guidance on the assessment of the conduct of a third-party service provider and of the trustworthiness of its services.

60. However, the enabling scope of the Model Law is not compatible with regulatory concerns, which should be addressed in other legislation. Moreover, expected developments in technology and business practice recommend a flexible approach when assessing the conduct of third-party service providers. Hence, the Model Law leaves freedom of choice of third-party service providers as well as of the type of services requested and of their technology (A/CN.9/834, para. 78).

61. In that respect, it should be noted that the general reliability standard set forth in article 11 of the Model Law, and specific standards such as the criterion to assess integrity contained in article 9, paragraph 2 of the Model Law provide parameters to assess the reliability of an electronic transferable record and of its management system. Designers of those management systems need to comply with those standards in order to set up commercially viable enterprises.

[4] See, e.g., Electronic Transactions Act, 2007 of Saint Vincent and the Grenadines, Section 11(2): "Where a rule of law requires or permits a person to provide a certified copy of a document and the document exists in electronic form, the requirement is met if the person provides a print-out certified to be a true reproduction of the document or information."

D. Cross-border recognition of electronic transferable records (Article 20)

"**Draft article 20. Non-discrimination of foreign electronic transferable records**

"1. An electronic transferable record shall not be denied legal effect, validity or enforceability on the sole ground that it was issued or used abroad.

"2. Nothing in this Law affects the application to electronic transferable records of rules of private international law governing a transferable document or instrument."

Remarks

62. Draft article 20 reflects the deliberations of the Working Group at its fifty-third session (A/CN.9/869, paras 124-131). Accordingly, paragraph 1 aims to provide only for non-discrimination of foreign electronic transferable records (A/CN.9/869, para. 128).

Comments

63. Article 20 aims at eliminating obstacles to cross-border recognition of an electronic transferable record arising exclusively from the fact that it was issued or used abroad and without affecting private international law rules (A/CN.9/869, paras. 125 and 129).

64. The need for an international regime to facilitate the cross-border use of electronic transferable records was already recognized at the outset of the work and reiterated throughout the deliberations on the Model Law (A/CN.9/761, paras. 87-89; A/CN.9/863, para. 77). That need was also emphasized by the Commission at its forty-fifth session (A/67/17, para. 83).

65. However, different views were expressed on how to achieve that goal. On the one hand, there was the desire not to displace existing private international law rules and to avoid the creation of a dual regime applying a special set of conflict of laws provisions for electronic transferable records. On the other hand, there was awareness of the importance of dealing adequately with aspects relating to the international use of the Model Law for its success and expression of the desire to favour its cross-border application regardless of the number of enactments (A/CN.9/863, paras. 77-82).

Paragraph 1

66. Paragraph 1 aims at eliminating obstacles to cross-border recognition of an electronic transferable record arising exclusively from the place of origin or of use of the electronic transferable record. In other words, paragraph 1 aims to prevent that the place of origin or of use of the electronic transferable record could be considered in themselves reasons to deny legal validity or effect to an electronic transferable record. A provision similar in scope may be found in article 12, paragraph 1 of the UNCITRAL Model Law on Electronic Signatures.

67. The words "issued or used" aim at covering all events occurring during the life cycle of an electronic transferable record. In determining the location of the place of business, article 13 of the Model Law may also be relevant.

68. Paragraph 1 does not affect substantive law, including private international law (A/CN.9/869, para. 125). Thus, for instance, paragraph 1 could not per se lead to the recognition of an electronic transferable record issued in a jurisdiction that does not recognize the legal validity of electronic transferable records (A/CN.9/869, para. 125). However, paragraph 1 also does not prevent that an electronic transferable record issued or used in a jurisdiction that does not allow the issuance and use of electronic transferable records, and that otherwise complies with the requirements of

applicable substantive law, could be recognized in a jurisdiction enacting the Model Law (see also A/CN.9/863, para. 79).

69. The word “abroad” is used to refer to a jurisdiction other than the enacting one, including a different territorial unit in States comprising more than one.

70. Paragraph 2 reflects the understanding that the Model Law should not displace existing private international law applicable to transferable documents or instruments (A/CN.9/768, para. 111). The introduction of dedicated provisions would lead to a dual private international law regime, which is not desirable (A/CN.9/869, para. 78).

71. Paragraph 2 implements the general principle already contained in article 1, paragraph 2 of the Model Law (A/CN.9/WG.IV/WP.139, para. 17). It clarifies that private international law rules are considered substantive law for the purposes of that article (A/CN.9/869, para. 129).

72. Since paragraph 1 refers only to non-discrimination while paragraph 2 relates to private international law, the two paragraphs operate on different levels and do not interfere.

C. Report of the Working Group on Electronic Commerce on the work of its fifty-fifth session (New York, 24-28 April 2017)

(A/CN.9/902)

[Original: English]

Contents

I. Introduction

1. At its forty-ninth session, in 2016, the Commission confirmed its decision that the Working Group could take up work on the topics of identity management and trust services as well as of cloud computing upon completion of the work on the draft Model Law on Electronic Transferable Records. The Commission was of the view that it would be premature to prioritize between the two topics. It was mentioned that priority should be based on practical needs rather than on how interesting the topic was or the feasibility of work. The Secretariat, within its existing resources, and the Working Group were asked to continue to update and conduct preparatory work on the two topics including their feasibility in parallel and in a flexible manner and report back to the Commission so that it could make an informed decision at a future session, including the priority to be given to each topic.[1]

2. At its fifty-fourth session (Vienna, 31 October-4 November 2016), the Working Group held a preliminary exchange of views on a possible future work on cloud computing, without reaching any decision (A/CN.9/897, para. 126). On identity management and trust services, it was agreed that the Working Group should continue clarifying the goals of the project, specifying its scope, identifying applicable general principles and drafting necessary definitions (A/CN.9/897, paras. 118-120 and 122). (For further background information, see A/CN.9/WG.IV/WP.140, paras. 6-10.)

[1] *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), paras. 235 and 353.

II. Organization of the session

3. The Working Group, composed of all States members of the Commission, held its fifty-fifth session in New York from 24 to 28 April 2017. The session was attended by representatives of the following States members of the Working Group: Argentina, Austria, Brazil, Canada, China, Colombia, Czech Republic, El Salvador, France, Germany, Honduras, Hungary, India, Indonesia, Israel, Italy, Japan, Kenya, Kuwait, Libya, Mexico, Namibia, Pakistan, Poland, Republic of Korea, Romania, Russian Federation, Singapore, Spain, Thailand, Turkey, United Kingdom of Great Britain and Northern Ireland and United States of America.

4. The session was also attended by observers from the following States: Belgium, Cambodia, Congo, Dominican Republic, Iraq, Paraguay, Saudi Arabia, Sweden, Syrian Arab Republic, Ukraine and Zimbabwe.

5. The session was also attended by observers from the Holy See and the European Union.

6. The session was also attended by observers from the following international organizations:

(a) *United Nations system*: World Bank;

(b) *Intergovernmental organizations*: International Institute for the Unification of Private Law (Unidroit);

(c) *International non-governmental organizations*: Alumni Association of the Willem C. Vis International Commercial Arbitration Moot (MAA), American Bar Association (ABA), Center for International Legal Education (CILE), China Society of Private International Law (CSPIL), CISG Advisory Council, European Law Students' Association (ELSA), European Multi-Channel and Online Trade Association (EMOTA), Grupo Latinoamericano de Abogados para el Derecho del Comercio Internacional (GRULACI), GSM Association (GSMA), International Bar Association (IBA), International Federation of Freight Forwarders Associations (FIATA), Jerusalem Arbitration Center (JAC), Law Association for Asia and the Pacific (LAWASIA) and World Association of Former United Nations Interns and Fellows (WAFUNIF).

7. The Working Group elected the following officers:

Chairperson: Ms. Giusella Dolores FINOCCHIARO (Italy)

Rapporteur: Mr. Kyoungjin CHOI (Republic of Korea)

8. The Working Group had before it the following documents: (a) annotated provisional agenda (A/CN.9/WG.IV/WP.140 and Add.1); (b) a proposal by the Russian Federation on improving the identity management system through the use of a transboundary trust environment and a common trust infrastructure for cross-border electronic transactions (A/CN.9/WG.IV/WP.141); (c) a note by the Secretariat on contractual aspects of cloud computing (A/CN.9/WG.IV/WP.142); (d) a note by the Secretariat containing terms and concepts relevant to identity management and trust services (A/CN.9/WG.IV/WP.143); (e) a proposal by Austria, Belgium, France, Italy, the United Kingdom, and the European Union on legal issues relating to electronic identity management and trust services (A/CN.9/WG.IV/WP.144); (f) a paper by the United States on legal issues relating to identity management and trust services (A/CN.9/WG.IV/WP.145); and (g) a proposal by the United Kingdom on outcome based standards and international interoperability (A/CN.9/WG.IV/WP.146).

9. The Working Group adopted the following agenda:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.

4. Contractual aspects of cloud computing.
5. Legal issues related to identity management and trust services.
6. Technical assistance and coordination.
7. Other business.
8. Adoption of the report.

III. Deliberations and decisions

10. The Working Group engaged in the discussion of contractual aspects of cloud computing on the basis of a note by the Secretariat (A/CN.9/WG.IV/WP.142) and legal issues related to identity management and trust services on the basis of a note by the Secretariat (A/CN.9/WG.IV/WP.143) and proposals by States (A/CN.9/WG.IV/WP.141, A/CN.9/WG.IV/WP.144, A/CN.9/WG.IV/WP.145 and A/CN.9/WG.IV/WP.146). The deliberations and decisions of the Working Group on contractual aspects of cloud computing are reflected in chapter IV of this report, and the deliberations and decisions of the Working Group on legal issues related to identity management and trust services are reflected in chapter V of this report.

IV. Contractual aspects of cloud computing

11. The Working Group discussed contractual aspects of cloud computing on the basis of document A/CN.9/WG.IV/WP.142. The value of an UNCITRAL guidance text on cloud computing, especially for micro, small and medium-sized enterprises, was recognized. In light of the evolving range of cloud computing services, of the variety in types of cloud services contracts and of rapid developments in technology and business practices, it was suggested that general and flexible guidance should be offered.

12. With respect to the drafting approach, there was agreement that the guidance document should aim at explaining the main features of cloud services contracts without attempting to address exhaustively all potential issues arising from all types of such contracts. The desirability of focusing on unique cloud-specific aspects was noted. It was added that existing work by other international organizations, including on technical standards, should be taken into account.

13. As regards the form of the guidance text, there was agreement that at this stage the preparation of a legislative guide or other legislative text or of a detailed legal guide was not desirable. The prevailing view was that a work product should take a form of a checklist of issues to be taken into account when drafting a cloud services contract (the “checklist”). The checklist should describe contractual issues without favouring any particular party and should uphold the principle of party autonomy.

14. The other view was that model contractual clauses or a guide should be prepared on particularly relevant aspects such as data portability and data security. Another view was that the Working Group should start with defining terms relevant to cloud services and prepare a legal guide once definition of those terms had been clarified.

15. After discussion, the Working Group decided to recommend to the Commission the preparation of a checklist of major issues that contracting parties might wish to address in cloud services contracts. In light of its nature, the checklist should not offer best practice guidance or recommendations. The need for preparation of guidance materials or model contractual clauses could be considered at a later stage.

16. As regards the scope of the work, the Working Group was of the view that only issues arising from business-to-business cloud services contracts should be addressed, while government-to-business and business-to-consumer contexts should be excluded. Issues arising from business-to-government relations would be addressed only incidentally. It was added that the guidance document should not address the use of cloud computing in specific sectors, such as education, health-care and financial

services, since those sectors posed peculiar challenges addressed by dedicated regulation.

17. It was understood that all clusters of issues listed in paragraph 24 of document A/CN.9/WG.IV/WP.142 should be retained. However, it was added, a detailed discussion should be offered only for those issues specific to cloud computing. Highlighted issues included data portability, data security, subcontracting and risk allocation. Certain matters, such as regulatory ones, including privacy and data protection, and intellectual property rights, should be only mentioned in order to alert contracting parties.

18. It was indicated that providing guidance on choice of law and forum in cloud services contracts would be useful, particularly in developing countries. It was recalled that the various jurisdictions provided different levels of recognition of party autonomy in choice of law and forum, which could have particularly relevant impact on the enforceability of cloud services contracts.

19. It was further indicated that general contract law could address a number of issues arising from cloud services contracts. It was added that providing a reference to general contract law could have a significant impact on familiarizing less sophisticated concerned parties, including in developing countries, with cloud services contracts. Moreover, it could be useful to distinguish between matters addressed in general contract law and matters addressed in service contracts law. After discussion, it was agreed that the checklist should list relevant issues, including those that could be addressed in general contract law or in other law.

20. It was explained that, since the content of cloud services contracts could vary significantly, it was for applicable law to qualify those contracts in light of their actual content. That qualification would then allow the parties to deal appropriately with issues such as: formation and form of the contract; price and payment; duration, renewal and termination; amendments of contractual terms; and dispute resolution. Hence, it was suggested, it would be particularly useful to provide a detailed description of possible services offered.

21. It was agreed that pre-contractual aspects within contract law could be discussed but that the existence of pre-contractual obligations should not be implied. It was suggested that it could be useful to address separately issues arising from standard contracts for the provisions of off-the-shelf cloud services, which were usually concluded by adhesion, and custom-tailored contracts. In response, it was stated that, as with other types of contracts, cloud computing contracts might involve parties with different levels of sophistication.

22. It was indicated that risk allocation and liability were particularly relevant when considering entering into cloud services contracts and therefore should be included in the checklist. It was added that for the time being that discussion should be limited to liability of contractual parties and should not extend to third-party liability.

23. After discussion, the Working Group suggested that the Commission could ask the Secretariat to prepare, with the help of experts, a draft checklist reflecting the above preliminary considerations, and to submit it to the consideration of the Working Group.

24. As regards the timing of work, one view was that the work could be undertaken in parallel with work on another topic assigned by the Commission to the Working Group. In response, concern was expressed that parallel work on more than one topic could affect the quality of the outcome of that work. Priority should be allocated to work on contractual aspects of cloud computing in light of timeliness and importance of that work. The Working Group deferred a recommendation to the Commission on that aspect until after consideration of other topics on its agenda. (For further discussion, see chapter VI below).

25. The Working Group considered whether the checklist should define the concept of cloud computing, for example with reference to its main features, benefits and risks listed in paragraphs 1 and 2 and 17 to 23 of the annex in document A/CN.9/WG.IV/WP.142. It was observed that, while the annex might assist in the

drafting of the checklist, the draft would not necessarily utilize the text or approach contained in the annex. The understanding was that the checklist should describe but not define cloud computing and related concepts. Paragraph 2 of the annex would need to be amended to reflect that point and to explain that cloud services contracts could be qualified as variants of contracts for provision of services and of other types of contracts depending on the actual content of the contract. It was agreed that an explanation of the contracts covered by the checklist would need to be provided from the outset.

26. With reference to paragraph 8 of the annex, it was recalled that the Working Group had decided not to discuss in the checklist the involvement of cloud service partners, such as cloud auditors and cloud service brokers. The checklist could alert contracting parties about issues related to third parties, other than cloud auditors and cloud service brokers, only to the extent that those issues might need to be addressed in a cloud services contract.

27. With reference to paragraph 10, it was explained that the provision of cloud services might raise cross-border issues even in domestic cloud services contracts. Accordingly, it was confirmed that cross-border issues should be duly reflected in the checklist in addition to private international law matters. With reference to paragraph 13 of the annex, it was understood that it would need to be redrafted to reflect the deliberations of the Working Group not to include specific clauses in the checklist. It was agreed that, although the checklist should be as broad and complete as possible, it should not convey to a reader that it dealt exhaustively with all possible pre-contractual and contractual issues related to cloud computing. With reference to paragraph 15 of the annex, the understanding was that, in light of the nature of the checklist, the text would use such expressions as “the parties may wish to consider” or “the parties might wish to provide”.

28. With those preliminary suggestions for a redraft of the annex in document A/CN.9/WG.IV/WP.142, the Working Group completed its consideration of agenda item 4 (for the recommendation of the Working Group to the Commission on the timing of work on cloud computing, see chapter VI below).

V. Legal issues related to identity management and trust services

A. General comments

29. A question was asked on whether the work on identity management (“IdM”) and trust services should consider also their use in relation to government services. In response, it was explained that, while non-commercial matters were outside the mandate of UNCITRAL, commercial applications often relied on identity schemes or credentials originating in the public sector. It was recalled that the Working Group had agreed that its future work on IdM and trust services should be limited to the use of IdM systems for commercial purposes and that it should not take into account the private or public nature of the IdM services provider (A/CN.9/897, para. 118). The Working Group reaffirmed that decision.

30. It was recalled that the mandate received from the Commission referred to both IdM and trust services (A/71/17, para. 235).

31. The value of UNCITRAL’s work in identifying and addressing legal obstacles to the commercial use of IdM and trust services, including in the broader framework of the work conducted by the United Nations and other international organizations on legal identity, was emphasized. Such work would signal to the international community that legally enabling electronic identification at the global level was possible.

B. Objectives of the project

32. It was suggested that the main goal of work on IdM and trust services should be to enable their cross-border recognition. It was noted that the achievement of that goal would require defining elements of mutual legal recognition such as the recognizing entity, the object of the recognition, the purpose of the recognition and under which circumstances recognition might occur.

33. In order to achieve cross-border recognition, it was suggested that the Working Group could prepare a legal toolbox that would: identify the various solutions relating to IdM and trust services; define their levels of reliability; and specify the legal consequences attached to each reliability level, including liability for failure to provide the specified level of reliability. The benefits of that toolbox would include providing parties with different options for managing risks on an informed basis and ensuring interoperability.

34. Another view was that the main goal of the proposed work was to address fundamental issues related to the legal recognition of identity in electronic form. It was suggested that work could commence with identifying cases when identification was required by law. Subsequently, the conditions under which identity information in electronic form could satisfy identification requirements would be defined. Similarly, the circumstances under which a commercial operator could rely on identity information in electronic form would be specified.

35. Support was expressed for the formulation of a functional equivalence rule for identification. It was indicated that when doing so the distinction between foundational identity and transactional identity would need to be taken into account.

36. Another proposal was to compile existing models for IdM, ranging from self-assertion schemes to dedicated legislation, identify those models that were more appropriate for commercial purposes and prepare related sets of rules.

37. It was suggested that any work should take into consideration ongoing efforts to promote technical and legal interoperability and not override, but enable existing schemes. Efforts to create new identities and IdM systems instead of using existing ones were questioned.

38. A question was asked on the relationship between IdM and trust services. Support was expressed for the view that the two notions were closely interlinked, and that work on IdM entailed work on trust services since IdM was a means to an end, and not an end in itself. Hence, it was suggested that work on IdM alone would not suffice. It was added that IdM was a precondition of trust services and that therefore work should begin on IdM aspects.

39. The view that work should start on trust services was also expressed. In particular, a suggestion was to identify specific trust services intended to be covered by an UNCITRAL instrument and describe the features of those trust services. In response, it was indicated that trust services should be addressed only in the context of IdM and not in a broader context or discretely.

40. Support was also expressed for the view that, while IdM was necessary for certain trust services as well as for other purposes, it was a fundamental notion with autonomous relevance and should therefore be dealt with separately and on a priority basis. It was added that, on the basis of the work carried out on IdM it could be possible to identify at a later stage which trust services were relevant for IdM and conduct further work limited to those trust services.

41. It was suggested to consider identifying common fundamental issues relevant to both IdM and trust services in light of general guiding principles. The Working Group was invited to consider to that end paragraphs 15 and 16 of document A/CN.9/WG.IV/WP.144.

42. In response to a query on the relationship between IdM and trust services, several jurisdictions reported that the two were separate and distinct notions although closely interrelated. It was explained that IdM was an enabler of trust services. Examples of

the interaction between IdM and trust services in various contexts and at various levels, including with respect to anti-money laundering and know-your-customer regulations, were provided. Different views were expressed on the desirability of carrying out work on IdM and trust services simultaneously or sequentially.

43. A query was raised on whether attribution of identity information would pertain to the domain of trust services, in particular electronic signatures as addressed in UNCITRAL instruments, rather than to that of IdM. Reference was made to the distinction between identification required by law and identification in a business environment for enforcement purposes.

44. To make a more informed decision on the objectives of UNCITRAL work in the area of IdM, a proposal was made to identify gaps and practical needs that UNCITRAL could address through its work in the area of IdM.

45. In light of the general mandate of UNCITRAL to reduce or remove legal barriers to international trade, the Working Group agreed that it would be appropriate to identify the legal recognition and mutual recognition of IdM and trust services as the goals of the work of UNCITRAL in that area.

46. It was indicated that reference to the notion of mutual recognition could be more appropriate in a legal context than reference to interoperability, which might have technical implications falling outside the mandate of UNCITRAL.

47. It was suggested that the notion of mutual recognition in a commercial context should not necessarily refer to cross-border recognition. Rather, it should refer to recognition of identity credentials created for commercial purposes across IdM systems regardless of their national or international nature. It was added that mutual recognition should be voluntary rather than mandatory. It was also indicated that legal recognition and mutual recognition could have similar or different meaning depending on the context but would always refer to the concept of identification.

C. Introduction of proposals submitted by States with respect to the scope of work and general principles

48. The delegation of the Russian Federation introduced a paper contained in document A/CN.9/WG.IV/WP.141. It was highlighted that, despite the importance and breadth of IdM, an appropriate legal framework was still missing, and that therefore UNCITRAL should focus on defining the legal regime for IdM, addressing in particular the legal significance of identification. It was added that the scope of the suggested work should focus on clarifying issues specific to electronic IdM and should not touch upon IdM regimes well-established in a paper-based environment. The importance of not excluding any particular system model, especially decentralized ones, was stressed. It was suggested that, in light of the relevance and diversity of the issues to be addressed, work should initially focus on IdM, and that trust services should be addressed thereafter. That work should be based on existing UNCITRAL e-commerce texts and their well-recognized underlying general principles. The desirability of developing adequate terminology, taking into account International Telecommunications Union standards, was mentioned.

49. The delegation of the United Kingdom introduced a paper contained in document A/CN.9/WG.IV/WP.146. It was indicated that the use of cross-border IdM was an enabler of the digital economy and that that use required interoperability among national schemes, which could be established by defining outcome-based standards. Bearing in mind that IdM schemes could vary significantly both nationally and internationally, the goal of the suggested work would be to establish a common understanding of levels of assurance. Reference was made to the relevance of the principle of technological neutrality and of other general principles applicable in the area of e-commerce.

50. The observer delegation of Belgium introduced a paper contained in document A/CN.9/WG.IV/WP.144. The objective of the suggested work was to increase legal certainty of electronic transactions through IdM and trust services, tools enabling

international trade actors to conduct risk management. Goals to pursue included: achieving clarification and harmonization of legal terms; establishing legal interoperability as a precursor of technical interoperability; increasing awareness of relevant legal issues; and operationalizing and concretising existing UNCITRAL texts. That work would be based on existing UNCITRAL texts, including general principles, in the area of e-commerce. Additional principles specific to IdM and trust services and listed in paragraph 16 of the paper would be applicable, such as: different levels of assurance and security defined on the basis of objective criteria; distinct legal effects, including burden of proof, according to the level of assurance; and liability according to the level of assurance.

51. The delegation of the United States introduced a paper contained in document A/CN.9/WG.IV/WP.145, outlining governing principles and substantive topics for discussion by the Working Group. It was clarified that the paper was not a proposal and did not express United States' position on issues listed in the paper. It was indicated that the paper focused on IdM-related issues on the understanding that work on trust services would take place after work on IdM. In addition to referring to the already established e-commerce general principles that inspire UNCITRAL's work, the paper identified issues specific to IdM such as: system model neutrality; the relationship between IdM law and privacy law and between IdM law and data security law; and contract-based system rules. It was indicated that the obligation to identify would be found in other law or in contractual agreement. Therefore, IdM law should not aim at imposing any new identification obligation.

D. General principles applicable to the work on IdM and trust services

52. The Working Group agreed that the following four fundamental principles would guide its work in the area of IdM: party autonomy, technological neutrality, functional equivalence and non-discrimination. The understanding was that those principles would be equally applicable to both IdM and trust services but the way in which they apply might differ.

53. It was explained that the principle of proportionality considered by the Working Group at its fifty-fourth session (A/CN.9/897, para. 115) referred to freedom of the parties in the choice of the IdM solution, in particular with respect to the desirable level of assurance. It was indicated that proportionality should not be treated as a separate guiding principle but rather as an aspect of the application of the principle of party autonomy.

54. With respect to technological neutrality, it was indicated that that notion should include reference to economic model neutrality (referred to in document A/CN.9/WG.IV/WP.144) and system model neutrality (as described in document A/CN.9/WG.IV/WP.145), so as not to preclude the use of or discriminate against any existing or future system model.

55. In response to a question on whether the centralized, decentralized or distributed architecture of a mutual recognition mechanism would be relevant for future discussions, it was explained that issues related to model architecture should be addressed according to the principle of technological neutrality and, in particular, its application to neutrality of system models.

56. With reference to the concept of functional equivalence, the Working Group considered it premature to identify functions that IdM would purport to fulfil. The terms related to identification defined in document A/CN.9/WG.I/WP.143 were found unhelpful for such purpose.

57. It was noted that IdM services could go beyond services available in a paper-based environment. The concern was raised that adopting a functional equivalence approach might have the unintended consequence of limiting IdM services to only those existing in a paper-based environment.

58. It was recalled that the goal of the work on IdM was to identify legal obstacles to the use of electronic identity credentials and to formulate provisions to overcome them. In that respect, it was also recalled that identification was a process involving interaction of at least two persons and the presentation of an identity document. Moreover, it was stated that the identification process required the following steps: (a) verification of the validity and accuracy of the identity document; (b) verification of whether the person presenting the document was the person identified in that document; and (c) correctness of the steps undertaken and judgment used in identifying the person. It was added that the use of IdM would not alone satisfy identification requirements. In particular, it was observed that IdM would not purport and be able to verify questions of fact such as forgery, hacking and good faith of a relying party.

59. Those concerns were shared by other delegations. Reference in that context was made to the notion of attribution of identity information described in document A/CN.9/WG.IV/WP.145.

60. It was noted that under a functional equivalence approach the legal effects of identification would arise from substantive law. However, it was also noted that the law could set forth identification requirements without making reference to a paper-based document, and that in that case a functional equivalence approach would not be applicable.

61. Another point was that a wide variety of identification methods existed and that therefore it would be impossible to achieve functional equivalence for all of them. On the other hand, it was observed that harmonizing substantive rules could interfere with existing law.

62. Other delegations questioned the prudence of focusing on functional equivalence requirements for identification as opposed to IdM as a process. It was noted that IdM may or may not involve the use of paper-based identification documents. It was also explained that, while identification could be a function of certain trust services such as electronic signatures and seals, it would be difficult to identify a function of identification.

63. After discussion, the Working Group agreed that the principle of functional equivalence would be relevant for the work of UNCITRAL on IdM but cases could arise where it would not be applicable. The Working Group deferred consideration of possible approaches to those cases, in particular whether any substantive rules would need to be formulated for such situations.

64. As regards the principle of non-discrimination, the Working Group's attention was drawn to various formulations of that principle found in documents A/CN.9/WG.IV/WP.144 and A/CN.9/WG.IV/WP.145. Support was expressed for the formulation found in document A/CN.9/WG.IV/WP.145 since it closely followed the formulation found in UNCITRAL texts in the area of e-commerce. The alternative view was that that formulation did not refer to trust services, and that therefore the formulation found in paragraph 15 of document A/CN.9/WG.IV/WP.144 was preferable.

65. The Working Group agreed that certain fundamental issues identified for discussion in document A/CN.9/WG.IV/WP.145, in particular the relationship between IdM law and privacy law, between IdM law and data security law, and between contract-based system rules and other law, should also be considered by the Working Group. It was indicated that those issues could be either considered in substance or by deferral to other applicable law.

E. Subjects to be addressed in the work on IdM and trust services

66. The Working Group continued consideration of topics and issues that need to be addressed in discussing IdM and trust services based on paragraph 16 of document A/CN.9/WG.IV/WP.144 and the chapter entitled "Substantive topics" of document A/CN.9/WG.IV/WP.145. The convergence between the two documents, in particular

on issues of legal recognition, levels of assurance and risk allocation, was highlighted. However, it was reiterated that the considerations found in document A/CN.9/WG.IV/WP.145 were applicable only to IdM.

67. The Working Group was invited to identify principles, issues and topics equally applicable to IdM and trust services.

1. Legal recognition

68. It was indicated that legal recognition might be understood as referring to the use of IdM to satisfy legal requirements for identification. It was specified that those requirements might be set forth in the law or agreed upon. Moreover, that notion could refer to a presumption of identity attributed to the use of credentials in certain circumstances. Other meanings were also possible. A number of issues, such as who provides recognition and for which purpose, would need to be clarified.

69. It was explained that the notion would also be relevant when parties used IdM and trust services for risk management in the absence of a formal legal obligation but for purely contractual reasons. It was indicated that instances when the law provided for consequences in the absence of proper identification should also be captured.

70. The view was reiterated that work should aim at enabling legal recognition instead of creating binding requirements. It was clarified that that would mean that no additional standard should be established; instead, interoperability between existing standards should be assured.

2. Mutual recognition

71. The Working Group was invited to consider the notion of mutual recognition addressing such questions as who would perform recognition, what would be recognized, how, and the legal effects. It was explained that the notion referred to the acceptance of identity credentials created in one IdM system by another IdM system regardless of the use of different technology, rules or business model.

72. It was indicated that eIDAS was an example of federated IdM system based on standards of the International Organization for Standardization (ISO) that should be considered by UNCITRAL given that it had already been accepted by 28 States with different IdM systems in place and it was referred to in negotiations with more States. In response, the view was expressed that solutions designed for enabling access to online public services would not necessarily be appropriate in a commercial context. The alternative view was that commercial parties were already able to use those solutions on a voluntary basis as long as they met their identification needs. It was said that examples existed of commercial entities such as banks and other financial institutions using public trust frameworks for their commercial needs.

73. Reference was made to the Intra-ASEAN Secure Transactions Framework, applicable to both public and private sectors and also based on the ISO 29115 standard. It was explained that the goal of that non-regulatory scheme was to promote legal recognition of identification and authentication across ASEAN countries. There were however many challenges encountered in that respect, and UNCITRAL was well placed to address them by developing a global mechanism.

74. The view was reiterated that the scope of the work of UNCITRAL on IdM and trust services was not to impose particular solutions on commercial parties but rather to provide a set of options to satisfy their risk management needs. It was added that commercial parties should be free to attribute various effects to different levels of assurance. However, it was noted that the value of ensuring a common understanding of the assertion of identity by an IdM scheme against a set of uniform assurance levels should not be questioned. It was observed that the availability of a shared reference framework to which IdM systems could be mapped was considered essential for international trade.

3. Attribution of identity information to a subject

75. It was explained that the notion of attribution referred to two aspects: the determination that the person using the identity credential was the person purported to be; and how a relying party could carry out that determination.

76. It was indicated that attribution could be addressed with the use of credentials bound to identity and with reference to levels of assurance. It was added that attribution was also related to risk management. It was explained that a discussion of the mechanics of attribution processes would require in-depth reference to technical details.

77. In response, it was noted that the ability to attribute identity was not necessarily related to the level of assurance. It was also noted that a discussion on the legal effects of attribution, such as presumptions associated with levels of assurance and the possibility to rebut them, did not necessarily imply reference to technical details. The use of pseudonyms and anonymization were considered relevant issues for future consideration.

4. Reliance/attribution of action, data message or signature to a subject

78. It was explained that reliance was a notion related to, but distinct from attribution, since reliance on identity credentials might be inappropriate even in case of successful attribution of those credentials. It was added that reliance had relevance also for the allocation of liability and for broader issues such as fraud and good faith.

5. Liability/Risk allocation

79. It was indicated that liability and risk allocation had a fundamental role in the work on IdM and trust services. It was stressed that commercial operators would greatly benefit from clarity on liability and risk allocation as currently applicable laws had often been drafted without taking into account IdM and trust services. Examples were provided of how liability for IdM and trust services had been addressed in legislative texts. It was added that liability matters could also be addressed contractually.

80. A question was put on whether addressing liability and risk allocation would imply work on a legislative text. The prevailing view was that, irrespective of the form of the work on IdM and trust services, liability and risk allocation would need to be addressed.

6. Transparency

81. It was explained that the notion of transparency had two distinct aspects. The first aspect was to what extent users should be informed about methods and processes used to deliver IdM and trust services. The second aspect related to duties to inform concerned parties in case of security breaches. The relevance of that information in the choice of IdM and trust services was highlighted.

82. Examples of transparency mechanisms, including through certification and peer review, were provided. Sanctions, disclosure obligations under applicable law and respect for confidentiality, commercially sensitive information and secrecy were mentioned among the issues to be considered in the context of transparency.

7. Other issues

83. While deferring its consideration of the nature of the text to be prepared, the Working Group recognized that that aspect might dictate certain approaches. A view was expressed that, for the Working Group to be productive in its work on IdM, the Commission would need to clarify the nature of the text to be prepared. If a non-legislative text was envisaged, certain issues would not need to be discussed in such depth as for a legislative text. The application of the four fundamental principles identified by the Working Group (see para. 52 above) might also vary.

84. On a preliminary basis, some delegations expressed their reservations on the formulation of substantive rules on IdM. On the other hand, other delegations indicated that the intended goal of the project required a higher level of legal harmonization, which could only be achieved with the preparation of a legislative text.

8. Conclusions

85. The Working Group agreed that the notions of legal recognition, mutual recognition, attribution, reliance, liability and risk allocation, and transparency were relevant for its work on IdM and trust services and suggested that those notions should be further considered, taking into account the above considerations, at a future session.

F. Possible definitions of main terms and concepts

86. It was suggested that the Working Group could further clarify the scope of the suggested work on the basis of the non-exhaustive list of concepts and definitions provided in paragraph 20 of document A/CN.9/WG.IV/WP.144. It was indicated that such additional clarification could greatly assist the Commission in its consideration of the matter.

87. In response, it was said that a discussion of concepts and definitions could be premature, since they would need to be considered in a specific context and they were likely to be modified in light of the progress of work. It was therefore suggested that that list should be retained for future reference. It was added that reference to the information contained in the documents submitted to the current session of the Working Group would suffice to inform the Commission.

88. The prevailing view was that the list of concepts should be considered, if not in detail, at least in general terms.

89. In introducing concepts and definitions contained in paragraph 20 of A/CN.9/WG.IV/WP.144, it was explained that those concepts and definitions were a reduced set of the definitions contained in the eIDAS Regulation[2] selected on the basis of their relevance to UNCITRAL work on IdM and trust services. It was explained that those concepts and definitions could be applied to a large number of different schemes.

90. The suggestion was made that those definitions and concepts listed in paragraph 20 of document A/CN.9/WG.IV/WP.144 and not yet appearing in document A/CN.9/WG.IV/WP.143 should be added to a revised set of defined terms. Subject to confirmation of the mandate, such revised tentative and non-binding list would provide a basis for future deliberations by the Working Group without any implication on the future direction of those deliberations. It was added that at the current stage of deliberations, in the absence of the specific context, any agreement on definitions would not be possible.

91. In response, a concern was reiterated that the current list of defined terms in document A/CN.9/WG.IV/WP.143 was unnecessarily technical and therefore difficult to understand. In that line, it was suggested that the list of defined terms should contain legal definitions found in national, regional and international legal texts and should be as broad as possible to offer an adequate basis to future deliberations. The view was also expressed that the definitions contained in paragraph 20 of document A/CN.9/WG.IV/WP.144 should actually provide a basis to determine the future direction of work.

92. Subject to the deliberations of the Commission with respect to future mandate, the Working Group asked the Secretariat to revise document A/CN.9/WG.IV/WP.143 by including definitions and concepts listed in paragraph 20 of document

[2] Regulation (EU) No. 910/2014 of the European Parliament and of the Council of 23 July 2014 on electronic identification and trust services for electronic transactions in the internal market and repealing Directive 1999/93/EC.

A/CN.9/WG.IV/WP.144, without prejudice to the future direction of possible work by UNCITRAL on IdM and trust services.

VI. Recommendations on priority of work

93. It was recalled that the Commission had asked the Working Group to continue to update and conduct preparatory work on the topics of cloud computing and IdM and trust services so that it could make an informed decision at a future session, including on the priority to be given to each topic.

94. There was general agreement on the view that the suggested work on the two topics was different in scope and content. It was suggested that work on the two topics could continue in parallel, taking into account that differences between the two projects could lead to different paces in their development. However, the view was reiterated (see para. 24 above) that parallel work on both topics could pose excessive demands on the Working Group, in particular at a more advanced stage, to the detriment of the quality of the final products.

95. It was indicated that work on cloud computing had made more progress towards a specific direction and that therefore it could be finalised sooner than work on IdM and trust services. Therefore, the preference was expressed for commencing work on cloud computing on a priority basis. It was added that the outcome of that work could provide useful guidance, in particular, to users in developing countries and to small and medium-sized enterprises.

96. On the other hand, it was indicated that significant progress had been made in better defining the scope and general principles underlying future work on IdM and trust services. The foundational importance of that work for enabling electronic commerce was stressed. It was indicated that, in light of that importance, including vis-à-vis the more limited scope of work on cloud computing, priority should be given to work on IdM and trust services, in particular, in case the resources of the Secretariat would not allow to conduct work in parallel on the two topics.

97. The Working Group submitted the above considerations to the Commission for its determination.

VII. Technical assistance and coordination

98. The Working Group heard an oral report on technical assistance and coordination activities undertaken by the Secretariat related to the promotion of UNCITRAL texts in the area of electronic commerce.

99. Reference was made to the work being carried out inter-sessionally on legal issues relating to electronic single window facilities and paperless trade facilitation. It was recalled that UNCITRAL had provided input in the preparation of the Framework Agreement on Facilitation of Cross-border Paperless Trade in Asia and the Pacific (Bangkok, 19 May 2016).[3] It was indicated that that work had highlighted the importance of fully appreciating the interaction between UNCITRAL texts and e-commerce chapters of global and regional trade agreements. Reference was made to the fact that those chapters often contained provisions on mutual recognition of authentication methods on a technologically neutral basis.

100. Reference was also made to work on enactment of UNCITRAL texts on electronic commerce. It was mentioned that new enactments of those texts were taking place in Southern Africa, thanks to their transposition in a regional model law. It was added that some States had concluded the domestic procedures for the adoption of the United Nations Convention on the Use of Electronic Communications in International

[3] Available at https://treaties.un.org/pages/ViewDetails.aspx?src=TREATY&mtdsg_no=X-20&chapter=10&clang=_en.

Contracts (New York, 2005),[4] and that therefore additional treaty actions relating to that Convention could be expected in the near future.

101. It was indicated that, pending adoption of the Model Law on Electronic Transferable Records by the Commission, some States had already started considering actively the adoption of that text, in particular, in light of its possible impact on enabling technological innovation, including through the use of distributed ledgers, in the banking and financial sector.

VIII. Other business

102. The Working Group took note that its fifty-sixth session is tentatively scheduled to be held in Vienna from 20 to 24 November 2017, those dates being subject to confirmation by the Commission at its fiftieth session, scheduled to be held in Vienna from 3 to 21 July 2017.

D. Note by the Secretariat on legal issues related to identity management and trust services

(A/CN.9/WG.IV/WP.141)

[Original: Russian]

The Russian Federation submitted to the Secretariat a paper for consideration at the fifty-fifth session of the Working Group. The text received by the Secretariat is reproduced as an annex to this note.

Annex

Proposal by the Russian Federation

Improving the identity management system through use of a transboundary trust environment and a common trust infrastructure for cross-border electronic transactions

Introduction

The Framework Agreement on Facilitation of Cross-border Paperless Trade in Asia and the Pacific was adopted on 24 May 2016 at the seventy-second session of the Economic and Social Commission for Asia and the Pacific (ESCAP).

The objective of the Framework Agreement is "to promote cross-border paperless trade by enabling the exchange and mutual recognition of trade-related data and documents in electronic form and facilitating interoperability among national and subregional single windows and/or other paperless trade systems, for the purpose of making international trade transactions more efficient and transparent while improving regulatory compliance."

Article 5 of the Framework Agreement establishes "improving transboundary trust environment" (paragraph 1 (g)) as one of the general principles guiding the Agreement.

This document is aimed at continuing the work of improving the transboundary trust environment in electronic commerce (e-commerce), an important agenda item for ESCAP and for the United Nations Commission on International Trade Law (UNCITRAL).

An earlier version of the proposal, contained in document A/CN.9/WG.III/WP.136, was submitted to UNCITRAL Working Group III (Online Dispute Resolution) for consideration at its thirty-second session in Vienna (30 November-4 December 2015). On the recommendation of Working Group participants, the document was transmitted to Working Group IV (Electronic Commerce) for consideration owing to its relevance to that Working Group's agenda. The main areas of focus are the technical, organizational and legal mechanisms for strengthening the transboundary trust environment for e-commerce in the Asia and the Pacific region. At the fifty-third session of Working Group IV, the delegation of the Russian Federation expressed its intention to submit a proposal on identity management for the consideration of the Working Group at its next session, subject to confirmation by the Commission that identity management would be included on the agenda of the Working Group at that session. Delegations were invited to submit information on identity management with a view to facilitating consideration of the topic.

Ensuring the security of the cross-border exchange of electronic documents is a highly relevant issue that has been highlighted in global and regional declarations, specifically:

- "Promote research and cooperation enabling effective use of data and software, in particular electronic documents and transactions, including electronic means of authentication, and improve security methods. (World Summit on the Information Society document "WSIS+10 Vision for WSIS Beyond 2015. C5. Building confidence and security in the use of ICTs", subparagraph (f));

- "[…] promoting confidence and trust in electronic environments globally by encouraging secure cross-border flows of information, including electronic documents[, and promoting] efforts to expand and strengthen the Asia-Pacific Information Infrastructure and to build confidence and security in the use of ICT" (Vladivostok Declaration (Asia-Pacific Economic Cooperation (APEC) leaders' declaration, 2012): "Integrate to Grow, Innovate to Prosper").

Worldwide, there are currently several examples of good practice in addressing the issue:

- In the European Commission: on the basis of Regulation (EU) No. 910/2014 of the European Parliament and the Council of the European Union on electronic identification and trust services for electronic transactions in the internal market (eIDAS Regulation);[1]

- In the Eurasian Economic Union: on the basis of the Treaty on the Eurasian Economic Union and the Framework for the use of services and legally significant electronic documents in inter-State informational interaction;[2]

- In the Asia and the Pacific region: on the basis of the Pan-Asian e-commerce Alliance (PAA).[3]

The development of the global economy requires, particularly in times of crisis, enhanced integration processes in various economic and social areas, including through the innovative use of current information and communications technologies (ICT).

One of the main issues that arises with respect to cross-border trade is the security and confidentiality of information transmitted via the Internet. An identity management (IdM) system is used to address that issue. IdM is a set of functions and capabilities (e.g., administration, management and maintenance, discovery, communication exchanges, correlation and binding, policy enforcement, authentication and assertions) used for:

- Assurance of identity information (e.g., identifiers, credentials, attributes);
- Assurance of the identity of an entity (for example: users/subscribers, groups, user devices, organizations, network and service providers, network elements and objects, and virtual objects); and
- Supporting business and security applications.[4]

The objectives of IdM are:

- Access control (hardware should be accessed only by authorized users and for the purposes that the owners intend);
- Confidentiality of access;
- IdM system integrity.

In order to achieve those objectives, an IdM system should:

- Ensure the necessary system performance with established resilience indicators;
- Ensure the function of identification data management (creation, alteration, freezing, archiving or deletion of identification information);

[1] http://ec.europa.eu/dgs/connect/en/content/electronic-identification-and-trust-services-eidas-regulatory-environment-and-beyond.

[3] www.paa.net/.
[4] https://www.itu.int/rec/T-REC-X.1252-201004-I/en.

- Ensure the protection of identification data;
- Ensure the use of secure identification and authentication mechanisms (such as an electronic signature, two-step password protection and biometric authentication);
- Ensure the interoperability of the security solutions used;
- Ensure the integrity of the IdM system and of identification information.

There are two types of IdM system: application-centric and user-centric.[5]

In large-scale IdM systems, the application-centric IdM system means that identity services and policies are designed to satisfy requirements for identity providers and optimized for the requirements of applications, e.g. provisioning a user's account information. There is an identity provider and a relying party in the application-centric IdM system. When an identity service is provided for the user, the identity exchange usually takes place between these two entities. “Identity” should be understood as the representation of an entity in the form of one or more information elements which allow the entity or entities to be sufficiently distinguished within context. For IdM purposes the term “identity” is understood as contextual identity (subset of attributes) i.e., the variety of attributes is limited by a framework with defined boundary conditions (the context) in which the entity exists and interacts. Historically, the identity and access management technologies have focused mainly on the authentication of end users for federated access to applications and services (in the federated access model there are multiple identity providers that can be trusted by a user and that can manage the partial identity information of users if required. Identity information of the user in each identity provider can be shared). Therefore, the security requirement is limited to the perimeter of its application domains.

The user-centric IdM is mainly focused on end users and optimized for the requirement of those end users. It means that the main objective of an IdM system is to provide convenient and comprehensive identity services for users. The main feature is to give the user full control over his identity. When a user's identity information is disseminated, it must pass through the user to give the user a chance to enforce some personal policy if necessary; for example, a choice of personal preferences in relation to confidentiality or personal authorization. In the user-centric IdM system, a client program that interacts with the IdM server to retrieve identity information has to be installed in the user's computing environment, Therefore, easy and comprehensive security guidelines are required to guide the user to securely install and deploy any relevant software. The software must manage some of the user's security-related information. User-centricity distinguishes itself from other models of IdM by emphasizing that the user and not an authority maintains control over how a user's identity attributes are created, disseminated, updated and terminated. It means that the user has full authority for the life cycle of their identity. The level of control can be determined by the user's privacy requirements.

IdM issues were first considered within the framework of the International Telecommunication Union (ITU) and its Telecommunication Standardization Sector (ITU-T) in 2006, when the Focus Group on Identity Management was established by ITU-T Study Group 17, which works on telecommunication and ICT security issues. The objective of the Focus Group was to consider IdM questions and common principles in telecommunications and ICT. The Focus Group’s activities evolved into an ITU global IdM initiative which was implemented in 2008. Study groups 2, 9, 11, 13, 16 and 17 of ITU-T collaborated on this initiative. The Joint Coordination Activity for Identity Management (JCA-IdM) has been led by Study Group 17 since 2009. Through the Activity, a road map of IdM standards has been developed, which includes relevant input by the following organizations: the Alliance for Telecommunications Industry Solutions (ATIS), the European Telecommunications Standards Institute (ETSI),the Internet Engineering Task Force (IETF), the International Organization for Standardization (ISO)/International Electrotechnical Commission (IEC), ITU, the National Institute of Standards and Technology (NIST),

[5] https://www.itu.int/rec/T-REC-X.1253-201109-I/en.

the Organization for the Advancement of Structured Information Standards (OASIS), the Kantara Initiative and the Third Generation Partnership Project (3GPP) (a description of the IdM activities and standards issued by the ITU and these organizations can be found on the ITU website: http://www.itu.int/en/ITU-T/studygroups/2013-2016/17/ict/Pages/ict-part06.aspx).

The establishment of a transboundary trust environment (TTE) in the area of e-commerce will contribute to the simplification of procedures and to the development of international trade, and will make it possible to simplify the identification process and IdM for participating countries. The term "trust" in the context of security can be understood to mean certainty with regard to the reliability and veracity of information or with regard to the ability and willingness of an entity to act appropriately in a given situation. Creating a trust environment between States will thus help to harmonize the use of security mechanisms (for example, all countries will use a common approach to the selection of such mechanisms as electronic signatures and two-step password protection) and will also make it possible to increase the level of trust (continuing, measurable confidence in the reputation, capabilities, validity or authenticity of someone or something) between participants in e-commerce.

A transboundary trust environment in e-commerce is proposed to mean a combination of legal, organizational and technical conditions recommended by the relevant United Nations specialized agencies and international organizations with the aim of ensuring trust in the international exchange of electronic documents and data between parties (entities) that interact electronically when conducting e-commerce. Its main purpose is to provide users with various levels of trust services (basic, medium, high) with the help of an IdM system during the course of their electronic interaction. This will make it possible for electronic interaction to be given legal significance at users' discretion, regardless of their geographical location and jurisdiction. One of the most important areas of research in this area will be the analysis of possible IdM mechanisms.

It is proposed that "electronically interacting parties (entities)" in e-commerce be understood to mean all public authorities and natural and legal persons interacting within the framework of a relationship resulting from the creation, sending, transmission, receiving, storage and use of electronic documents and data when conducting e-commerce.

These proposals are intended to identify approaches and issues to be discussed in the context of the elaboration of a set of recommendations on the establishment and functioning of a transboundary trust environment (e-commerce TTE recommendations) in relevant United Nations organizations. They are designed to facilitate the establishment of technological, institutional and legal infrastructure for the application of e-commerce TTE recommendations and, in particular, to simplify the IdM system for e-commerce transaction security.

Conceptual approaches

1. It is proposed that e-commerce TTE recommendations be focused on guaranteeing the rights and legal interests of citizens and organizations under the jurisdiction of United Nations Member States in relation to the performance of legally significant information transactions in electronic form using the Internet and other open mass-usage ICT systems.

2. These institutional guarantees would be provided within the framework of the commercial activities of specialized operators that:

- Provide users with a set of trusted ICT services for IdM implementation;
- Operate within the framework of established legal regimes that include, but are not limited to, restrictions concerning personal data processing.

3. It is proposed that a description be given of the various possible legal regimes:

- Those based on international agreements (conventions) and/or directly applicable international regulations;
- Those based on commercial agreements and/or common trade practice;
- Those without special international regulation.

Legal regimes can receive additional support from traditional institutions (government bodies, settlement through the courts, risk insurance, notaries public and others) through the mutual recognition of electronic documents authenticated by trusted ICT services.

Established legal regimes may also provide for the introduction of special requirements concerning material and financial support for the commercial activities of specialized operators in case of damage caused by them to users, including instances in which personal data are compromised.

It is proposed that institutional guarantee- and legal regime-related issues with respect to the establishment and operation of regional and global e-commerce TTE clusters and to the functional services provided within the framework of those clusters be addressed in a separate UNCITRAL recommendation.

4. It is suggested that a description be given of possible sets of trusted ICT infrastructure services according to the level of importance of the functional applications. One of the most important areas of research in that regard will be the analysis of possible IdM mechanisms. ICT services and the current level of trust in those services can be determined by functional operators of information systems (operators that organize and/or carry out identity data storage and processing in an information system and that define the objectives and actions (operations) implemented using the identity data in that information system) on the basis of threats, risks, legal regimes and user needs. In order to ensure the necessary level of trust, IdM operators could function in a neutral international environment as defined by specific legal regimes. It is proposed that a description be given of the organizational structures needed in order to establish and maintain such a neutral international environment.

Common provisions on the establishment and functioning of regional and global e-commerce TTE clusters, functional services provided within the framework of those clusters and sets of trusted ICT infrastructure services could be considered within the framework of the United Nations Centre for Trade Facilitation and Electronic Business (CEFACT) and Economic Commission for Europe (ECE) joint "Recommendation for ensuring legally significant trusted transboundary electronic interaction".

IdM implementation and the description of specific trusted ICT services could be the subject of technical standards and recommendations of ITU, the ISO/IEC Joint Technical Committee 1 (JTC 1), the European Telecommunications Standards Institute and other bodies.

5. Sets of attributes for IdM purposes should be defined by the legal regimes that regulate the commercial activities of operators specializing in performing identification tasks and of functional operators, and can be supported by the appropriate trusted ICT services. The activities of operators may be regulated by special organizational and technical requirements focused, inter alia, on the protection of personal data.

Sets of attributes for IdM purposes and the identification procedures themselves may serve as the basis for the definition of trust levels in identification systems. Such trust levels could be of the utmost importance in the regulation of interaction between different trust clusters (see section 9).

6. It is proposed that descriptions be provided of the interaction mechanisms of individual States and their international alliances with other international bodies within the framework of establishment of a common e-commerce TTE:

6.1. On the basis of accession to an existing legal regime that provides institutional guarantees to electronically interacting entities:

- The complete accession of a State to an existing legal regime on the basis of international treaties and/or directly applicable international regulations in which the establishment of a regional e-commerce TTE, including functional services provided in that e-commerce TTE, is either envisaged or provided for.
- The partial accession of a State to an existing legal regime on the basis of international treaties and/or directly applicable international regulations through the adoption of specific provisions relating to the establishment of a regional and/or functional e-commerce TTE;

6.2. On the basis of interaction between various international alliances:

- In the first phase, a group of States creates an isolated regional e-commerce TTE cluster, including functional e-commerce TTE services provided within the framework of that TTE, providing institutional guarantees for electronically interacting entities under the legal regime specified by those States and ensuring the security of e-commerce transactions;
- In the second phase, the protocols and mechanisms for trusted interaction with other international alliances are defined in relation to the mutual recognition of different legal regimes. Such mutual recognition should take into account the institutional guarantees and information security requirements relevant to each of those international bodies, possibly on the basis of information security gateways (ISG) operating under special legal regimes and responsible for IdM;

6.3. On the basis of interaction between a State and other States or international alliances:

- In the first phase, a State creates an isolated national e-commerce TTE cluster operating under a national legal regime determined by that State;
- In the second phase, the protocols for trusted interaction with other States and/or international alliances are defined in relation to the mutual recognition of different legal regimes. Such mutual recognition should take into account the institutional guarantees and information security requirements relevant to those States and international bodies, possibly on the basis of ISGs operating under special legal regimes and responsible for IdM.

7. It is proposed that a description be given of cluster-forming mechanisms, similar to those described in section 6, for legal regimes based on commercial agreements and/or common trade practice.

8. It is proposed that a description be given of the mechanisms for establishing a global e-commerce TTE on the basis of integration of the various clusters into a single matrix constructed according to the following parametric input information:

- Types of functional services and regional scope;
- Types of legal regimes and their variants.

9. It is proposed that a description be given of approaches to the establishment of several types of ISG as key elements of building a global matrix for an e-commerce TTE in order to ensure the security of e-commerce transactions.

Ensuring that the conditions for interaction between different global e-commerce TTE clusters are met and that that interaction is secure could be one of the objectives of establishing such ISGs. All the necessary technological, organizational and legal aspects could be considered when establishing the ISGs.

Approaches to establishing generic ISGs should take into account the various possible levels of interaction between different e-commerce TTE clusters. The establishment of ISGs that perform IdM, for example, can be achieved either at the legal and organizational levels alone or at a more complex level: legal, organizational and technological.

Approaches to establishing generic ISGs should take into account the use of transition profiles that describe and define the transition from one cluster to another. Such transition profiles could take into account the level of trust in the identification systems used within interacting clusters (see section 5).

A description of several types of ISG could be the subject of ITU and JTC-1 technical standards and recommendations.

Establishing an e-commerce TTE through a unified trust infrastructure

As stated above, the main objective in establishing an e-commerce TTE is to provide users with various levels (basic, medium and high) of trust services with the help of an IdM system during the course of their electronic interaction.

The e-commerce TTE is a fundamental, easily scalable platform that provides unified and secure access to electronic trust services by using IdM. Since existing electronic IdM systems and mechanisms are taken into account, it is expected that any requirements for the upgrading of those systems and mechanisms in order for them to be included in the e-commerce TTE would be minimal.

During the development of the e-commerce TTE system, a common trust infrastructure (CTI) architecture was proposed, the interconnections between its various components and their interaction with users were described and work was simultaneously carried out in three areas: technological, organizational and legal. An analysis of options for practical implementation and scenarios for CTI use made it possible to produce a list of the documentation required for a complete specification of the system. The CTI architecture was designed in such a way that it would be easy to adjust to scale. It can be expanded easily at any level through the addition of new components, such as new legal systems, new supranational participants or new operators of trust and identity data services.

Technical and technological aspects of the CTI

There may be many technological mechanisms for IdM and trust service delivery. The main requirement applicable to CTI elements is that they ensure interoperability. Regulation at this level would be facilitated by various standards and instructions, as would be provided for by the documentation of a coordination council of regulators of trusted electronic data interchange (CCRTEDI). The use of an IdM mechanism such as an electronic signature in transboundary electronic interaction is an example of the technological operation of trust services. For comparison, two CTI implementation options are given: a decentralized system with a notionally low level of trust between the participants in informational interaction (see figure 1) and a centralized system with a medium level of trust between those participants (see figure 2).

Table 1 sets out the features of the decentralized and centralized CTI systems. The procedure for using an electronic signature as an IdM system mechanism for the two CTI implementation schemes is described in table 2.

Table 1

Use of an IdM mechanism in a CTI for informational interaction, with low and medium trust levels

Low trust level (figure 3)	Medium trust level (figure 4)
1. Apostille services (AS) are provided by national operators of apostille services. These operators may also provide other IdM services. 2. International organizations (operators and regulators) are not involved. 3. National regulators interact directly, exchanging security certificates. 4. National regulators ensure the operation of national trust service operators in their jurisdiction with regard to their certificates and those of national regulators under other jurisdictions.	1. Apostille services (AS) are provided by international operators of apostille services. These operators may also provide other IdM services. 2. International organizations are involved: an international CTI regulator and international trust service operators. 3. National CTI regulators communicate only through the supranational CTI regulator. National trust service operators also communicate only through their respective international operators. 4. The international CTI regulator provides centralized certification of national trust service operators and national CTI regulators. 5. National regulators ensure the operation of national trust service operators in their jurisdiction with regard to their certificates and the international regulator's certificates.

Table 2

Procedure for the use of electronic signatures as an IdM system mechanism in schemes with low and medium trust levels

Low trust level (figure 3)	Medium trust level (figure 4)
1. Natural/legal person I sends documents with an electronic signature (ES) in jurisdiction J, selecting the required level of trust services provided by the CTI (basic, medium or high). 2. A request to verify the electronically signed documents in jurisdiction J is sent to the national apostille service operator under jurisdiction Q. 3. The verification request is forwarded to the national apostille service operator under jurisdiction J. 4. The mathematical verification of the electronic signature is carried out in jurisdiction J. 5/6. A request/response regarding the certificate status is sent to the national signature service (SS) operator under jurisdiction J. 7. The national apostille service operator under jurisdiction Q receives confirmation that the electronic signature is correct within jurisdiction J. 8. The national apostille service operator under jurisdiction Q certifies the request and forwards it to natural/legal person 2.	1. Natural/legal person I sends documents with an electronic signature (ES) in jurisdiction J, selecting the required level of trust services provided by the CTI (basic, medium or high). 2. A request to verify the electronically signed documents in jurisdiction J is sent to the international apostille service operator I-J-Q. 3. The mathematical verification of the electronic signature is carried out in jurisdiction J. 4/5. A request/response regarding the certificate status is sent to the national signature service (SS) operator under jurisdiction J. 6. The international apostille service operator I-J-Q certifies the request and forwards it to natural/legal person 2.

Fig. 1

Electronic signature verification within the framework of a TTE with a low trust level (decentralized option)

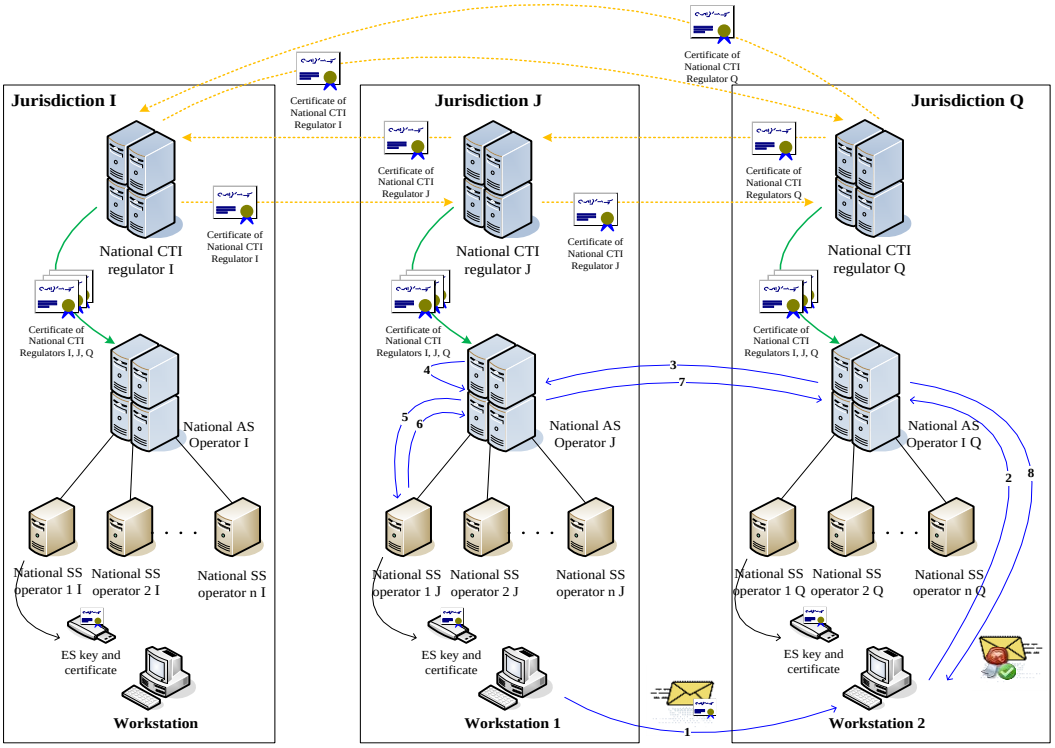

Fig. 2
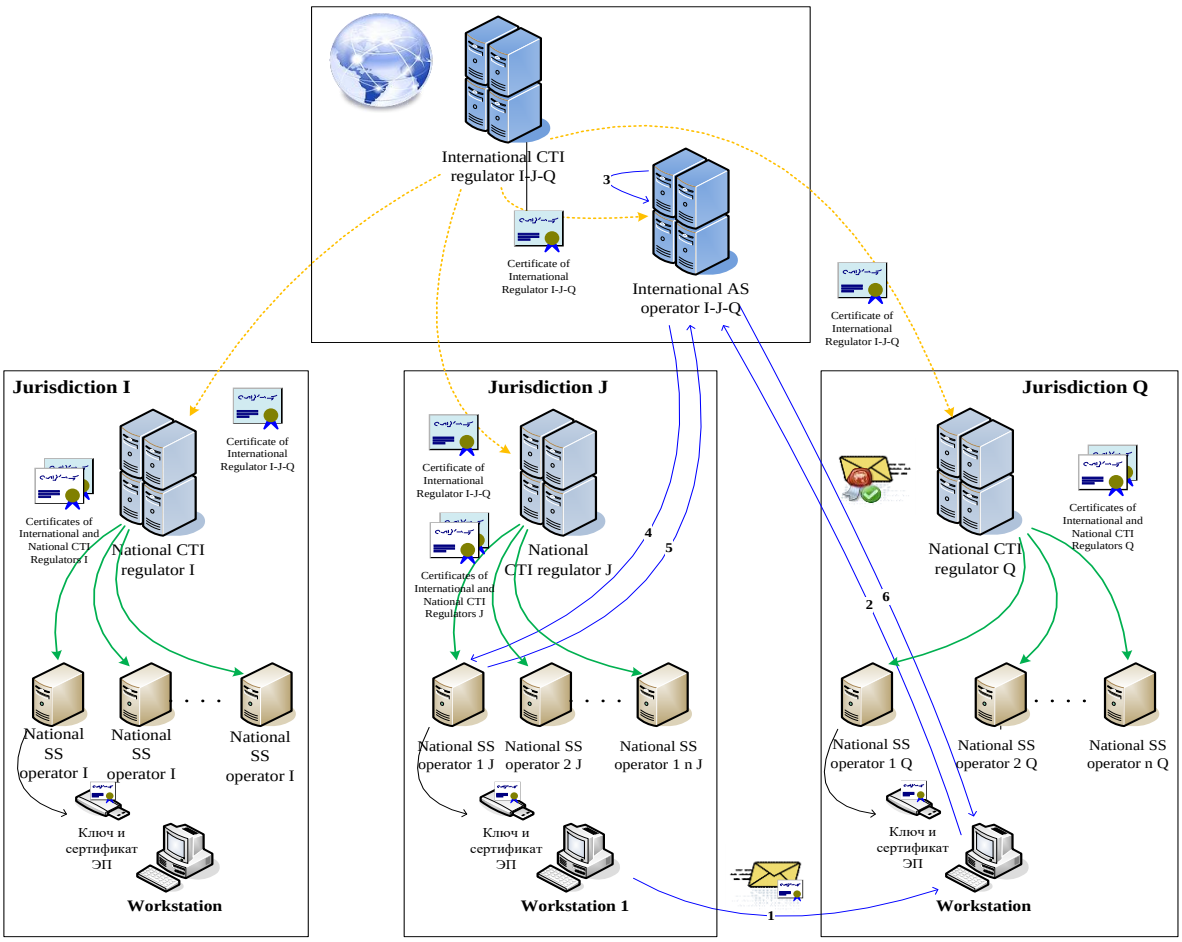
Electronic signature verification within the framework of a TTE with a medium trust level (decentralized option)

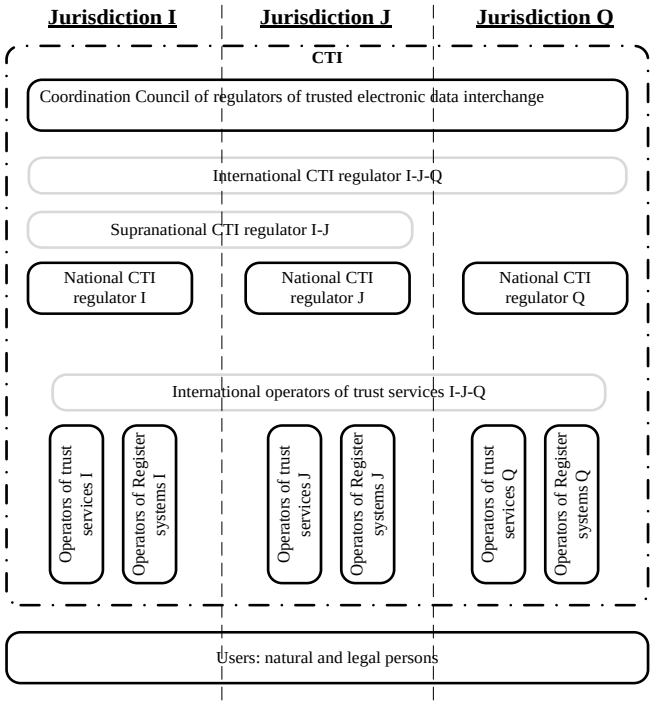


Organizational aspects

Mutual legal recognition of IdM and trust services provided under the jurisdictions of various States would be achieved through the establishment and operation of a coordination council of regulators of trusted electronic data interchange (CCRTEDI). The activities of such a coordination council would be regulated by its statutes, which would be recognized and signed by all its authorized members, that is, the bodies responsible for regulating electronic data interchange, represented in the first instance by national CTI regulators.

Organizational regulation is illustrated in the following diagram (see figure 3):

Fig. 3
Organizational regulation of the transboundary trust environment
(optional elements are indicated by the grey text boxes)



The coordination council would issue a set of documents, its power to do so being enshrined in its statutes:

- Requirements for coordination council members, compliance with which would be a prerequisite for full membership of the coordination council;
- Guidelines for conducting preliminary "shadow" supervision for admission to the coordination council and periodic mutual audits in order to maintain voluntary membership;
- Compliance criteria for CTI service operators and for IdM and trust service operators, and the methodology for applying those criteria;
- A system for assessing/verifying the compliance of CTI service operators and IdM and trust service operators with those criteria.

In an e-commerce TTE, each legal system is represented by a national CTI regulator (see figure 3, national CTI regulators I, J and Q), which regulates the activities of trust service and IdM operators within its jurisdiction.

It is likely that closely integrated groups of States (such as the Eurasian Economic Community or the European Union) would establish a supranational CTI regulator (see figure 3, "Supranational CTI regulator I-J"). A single supranational CTI regulator I-J would therefore replace the group of national CTI regulators I and J.

The procedure for admitting new members to the coordination council (new legal systems and supranational participants) and the system for verifying the compliance of CTI service and IdM operators with the criteria published by the coordination council (for new operators of IdM and trust services) give the CTI natural scalability.

If members of the coordination council (see below) have achieved a nominally "medium" level of trust, they can initiate the establishment of an international CTI regulator and international IdM and trust service operators (see figure 3, "International CTI regulator I-J-Q" and "International operators of trust services I-J-Q"). The international CTI regulator would coordinate interaction among international trust service operators, national CTI regulators (under the coordination council statutes) and/or supranational CTI regulators.

In order to become a national trust service operator or register system operator, a provider of those services would have to obtain accreditation through the national CTI regulator in the same State. International trust service operators would be required to obtain accreditation through the international CTI regulator. The accreditation requirements for trust service and register system operators and the requirements applicable to their activities would be regulated by compliance criteria published by the coordination council and possibly by national supplements issued by the appropriate regulator.

Both natural and legal persons may be users of electronic services within the framework of the e-commerce TTE. Users would select the required level of trust service at their discretion or by agreement.

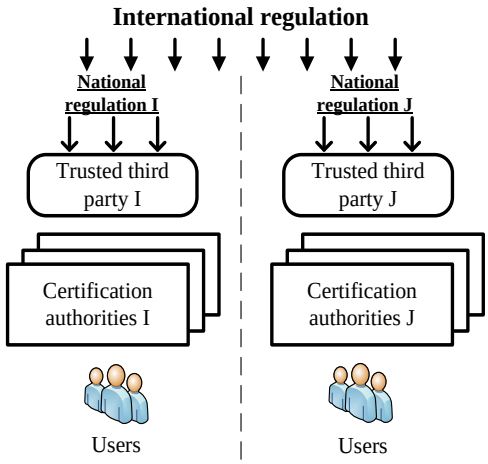
The services would be provided by the appropriate trust service providers/operators. In some cases, services may also be provided by register system operators. Trust service and register system operators would be united by a common trust infrastructure.

There may be various implementation options for trust services forming part of the e-commerce TTE, depending on the level of trust between participants in informational interaction. For example, at nominally high and medium levels of mutual trust between members of the coordination council, centralized international services provided in accordance with agreed standards may be used effectively. In the case of a nominally low trust level, the provision of trust services would be organized according to the principle of decentralization, that is, on the basis of national services in each State.

Legal aspects

An e-commerce TTE can be constructed on the basis of a single domain or multiple domains. A multi-domain basis is the more complex option from a legal and organizational point of view. A multi-domain system requires the use of the technical resources of a trusted third party. Figure 4 shows a general schematic representation of legal regulation.

Fig. 4
Legal regulation of the transboundary trust environment



The legal regulation of transboundary informational interaction can be divided into two parts: international and national. International legal regulation would be carried out on the basis of the following types of document:

- International treaties/agreements;
- Instruments of various international organizations;
- International standards and rules;
- Agreements between participants in transboundary informational interaction on specific issues;

• Model legislation.

National legal regulation would similarly be based on a set of regulatory instruments specific to each individual legal system.

Summary

The material presented above shows that the establishment of an e-commerce TTE offers the optimal means of enhancing the IdM system, for the following reasons:

- The establishment of national, regional and international trust clusters would ensure greater interoperability of IdM mechanisms such as electronic signatures;
- Mutual legal recognition of IdM and trust services provided under the jurisdiction of various States would make it possible to formulate a common approach to IdM system standardization;
- The adoption of international treaties and agreements and international standards and regulations on the use of a TTE would make it possible to enhance the trust level of participants in e-commerce, which in turn would make it possible to simplify IdM implementation;
- The activities of the coordination council (CCRTEDI) would make it possible to draw up unified compliance criteria to be met by IdM and trust service operators, and the methodology for applying those criteria.

IdM system improvement would in turn create secure conditions for transboundary international commercial activities. The establishment of an e-commerce TTE requires the implementation of a number of system-related measures, namely:

- The implementation of technical solutions to ensure the security and confidentiality of information;
- The implementation of organizational solutions through the establishment of a coordinating body;
- The implementation of legal and regulatory solutions through the drawing up of international treaties on the use of an e-commerce TTE.

The organization of an e-commerce TTE will also require coordination among organizations whose work involves issues relating to IdM and cross-border trade (including ISO, ITU, CEFACT, ECE, UNCITRAL and APEC) with a view to developing a common approach both to standardization of the use of an e-commerce TTE as an IdM mechanism and to the use of an e-commerce TTE for transboundary electronic interaction and commercial activities.

The next step in moving this process forward would be the discussion of experience and expertise with various partners (experts and organizations) interested in facilitating, simplifying and at the same time giving legal effect to transboundary electronic services.

Such interested partners might in the first instance be political or economic organizations.[6] Political bodies already partially involved in work in this area include both supranational organizations (such as the Commonwealth of Independent States (CIS), APEC, the European Union and the Shanghai Cooperation Organization) and bodies established within the framework of bilateral relations between certain States. Economic bodies interested in achieving that goal include, for example, the relevant United Nations bodies, such as CEFACT, ECE, UNCITRAL (Working Groups III and IV), ECE, the European Economic Area and the Eurasian Economic Community. It can be assumed that, owing to the specific natural characteristics (including the historical, cultural, political, economic and technical characteristics) of the various

[6] Other humanitarian organizations may also be interested in this product – for example, in the field of law, the Hague Conference on Private International Law – as well as organizations in the fields of medicine and education; however, in our view, such organizations are more likely to use an established TTE than to support the development of a new product.

regions of the world, various international or regional organizations of countries will establish their own coordination bodies (coordination councils of regulators of trusted electronic data interchange) and CTI architecture, depending on the level of trust within each format and the aforementioned characteristics.

We therefore believe that during the initial stages of implementation of this project there will not be a single global "trust domain" (for example, at the level of one of the United Nations organizations), but rather several trust domains at the regional level or even at the country level.[7] Nonetheless, even the establishment of separate trust domains would improve the IdM system, given the need to ensure interoperability within trust domains.

Once the CTI architecture has been determined (in the relevant trust domain), work can begin on the drafting of a further set of organizational, regulatory and technical documents negotiated within the framework of the coordination council. Interoperability would thus be ensured within the framework of the relevant trust domain.

The adoption of that set of documents by coordination council members (in the relevant trust domain) would facilitate transition to the final stage of practical implementation of the systems for legally significant transboundary electronic interaction.

Comments for the attention of the experts of UNCITRAL Working Group IV on Electronic Commerce

The problem of ensuring security and the identification of entities and objects in e-commerce can be addressed through the model proposed above (model for the establishment and functioning of an e-commerce TTE in the form of a matrix constructed on the basis of interconnected regional and global clusters that include the functional services provided within the framework of that e-commerce TTE) in the following way:

- A functional e-commerce TTE cluster specializing in the creation of a trust zone for IdM in relation to transboundary e-commerce transactions would be established;
- In geographical terms, all United Nations Member States could be included in that cluster;
- The operation of the cluster would be ensured through the commercial activities of a specialized operator or group of interlinked operators;
- The provision of packages of IdM trust services based on a set of identification schemes adopted within the framework of e-commerce platforms could be an area of the commercial activities of specialized operators;
- The legal regime for the specialized operators' commercial activities would be established under agreements with e-commerce platforms.

[7] An informational and legal environment in which the same CTI is used.

E. Note by the Secretariat on contractual aspects of cloud computing

(A/CN.9/WG.IV/WP.142)

[Original: English]

Contents

I. Introduction

1. At its forty-seventh session, in 2014, the Commission had before it a proposal by the Government of Canada entitled "Possible future work on electronic commerce — legal issues affecting cloud computing" (A/CN.9/823). The proposal explained the concept of cloud computing and why it would be useful for UNCITRAL to carry out work on the legal issues affecting parties to a cloud computing arrangement. The preparation of "a document outlining the cloud computing contractual relationships and legal issues that arise in that context" was suggested (A/CN.9/823, para. 5). The proposal illustrated a number of such possible legal issues, explicitly excluding intellectual property (IP) and privacy from the scope of the suggested work (A/CN.9/823, paras. 5-11). A checklist or a more detailed list of considerations for cloud users were mentioned as options for a possible form of the document, and a specific reference was made to UNCITRAL documents in other fields, such as the *Notes on Organizing Arbitral Proceedings* (1996),[1] *Recognizing and Preventing Commercial Fraud: Indicators of Commercial Fraud* (2013)[2] and the *Legal Guide on International Countertrade Transactions* (1992)[3] (A/CN.9/823, para. 5). Possible steps by the Commission as regards the proposal were suggested, in particular a request from the Commission to the Secretariat to gather information relating to cloud computing and prepare a document outlining exising practices, which "could then be used by the Working Group to identify issues in need of practical legislative or other solutions and to discuss possible future work" (A/CN.9/823, para. 12).

2. At that session, there was wide support in the Commission for the proposal recognizing the implication of cloud computing, particularly for small and medium-sized enterprises. However, it was suggested that caution should be taken not to engage in issues such as data protection, privacy and IP, which might not easily lend themselves to harmonization and might raise questions as to whether they fell within the mandate of the Commission. It was also stressed that work already undertaken by other international organizations in that area should be taken into consideration so as

[1] Available at www.uncitral.org/uncitral/en/uncitral_texts/arbitration/2016Notes_proceedings.html.
[2] Available at www.uncitral.org/uncitral/en/uncitral_texts/payments.html.
[3] United Nations publication, Sales No. E. 93.V.7 (A/CN.9/SER.B/3), available at www.uncitral.org/uncitral/en/uncitral_texts/sale_goods.html.

to avoid any overlap and duplication of work. It was also suggested that compilation of best practices might be premature at the current stage. Subject to those comments, it was generally agreed that the mandate given to the Secretariat should be broad enough to enable it to gather as much information as possible for the Commission to consider cloud computing as a possible topic at a future session. It was noted that the scope of any future work would, in any case, have to be determined by the Commission at a later stage. After discussion, the Commission requested the Secretariat to compile information on cloud computing, including by organizing, co-organizing or participating in colloquia, workshops and other meetings within available resources, and to report at a future session of the Commission.[4]

3. At its forty-eighth session, in 2015, the Commission had before it a proposal by Canada entitled "Contractual issues in the provision of cloud computing services" (A/CN.9/856). The information provided therein was "aimed at advancing the review of legal issues affecting the provision of cloud computing services so that a Working Group can use this preparatory work in developing recommendations" (A/CN.9/856, the last paragraph before the annex). The proposal expanded on the issues identified in document A/CN.9/823 (see para. 1 above), in particular on the concept of cloud computing and its various existing models, characteristics, benefits and risks (economic, security and legal) (A/CN.9/856, paras. 4-47). A number of legal issues additional to those listed in document A/CN.9/823 were identified (A/CN.9/856, paras. 48-75). An annex to the proposal provided information on international organizations that had covered issues relating to cloud computing in their work. As a possible step by the Commission, it was suggested that the Commission may mandate a Working Group to review legal issues arising from cloud computing and to recommend best practices where needed based on evidence of absence of legal recourses, perceived imbalance between the rights and obligations of cloud computing participants or other evidence. It was further suggested that the Secretariat, in order to assist the Working Group, could conduct research on contractual issues that arise in the provision of cloud computing services and explore possible solutions in relation to some or all of these issues with the view of fostering international trade. Experts meetings and consultations could also be used to gather additional information (A/CN.9/856, the last paragraph before the annex).

4. At that session, broad consensus was expressed in the Commission for undertaking work in the field of cloud computing. It was suggested that that work could take the form of guidance material or as otherwise appropriate, and should cover the perspectives of all parties involved, i.e. service providers, users and concerned third parties. It was further suggested that private international law aspects should be discussed, possibly in cooperation with the Hague Conference on Private International Law. After discussion, the Commission instructed the Secretariat to conduct preparatory work on cloud computing, including through the organization of colloquia and expert group meetings, for future discussion at the Working Group level. The Commission also asked the Secretariat to share the result of that preparatory work with Working Group IV, with a view to seeking recommendations on the exact scope, possible methodology and priorities for the consideration of the Commission.[5]

5. At its forty-ninth session, in 2016, the Commission was informed that work on contractual aspects of cloud computing had started at the expert level on the basis of the proposal A/CN.9/856. The Commission was also informed about preparatory work on the other topic allocated by the Commission to the Working Group (identity management and trust services). It was suggested that work should commence on legal issues relating to cloud computing based on preparatory work already conducted. However, the view was also expressed that additional preparatory work was necessary, which should aim at compiling relevant information. Preference was expressed for work to commence instead on identity management and trust services. After discussion, it was generally felt that the topics of identity management and trust

[4] *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), paras. 146, 147 and 150.

[5] Ibid., *Seventieth Session, Supplement No. 17* (A/70/17), paras. 354, 356 and 358.

services as well as of cloud computing should be retained on the work agenda and that it would be premature to prioritize between the topics. The Commission confirmed its decision that the Working Group could take up work on those topics upon completion of the work on the Model Law on Electronic Transferable Records. The Commission requested the Secretariat, within its existing resources, and the Working Group to continue to update and conduct preparatory work on the two topics including their feasibility in parallel and in a flexible manner and report back to the Commission so that it could make an informed decision at a future session, including the priority to be given to each topic. In that context, it was mentioned that priority should be based on practical needs rather than on how interesting the topic was or the feasibility of work.[6]

6. At its fifty-fourth session (Vienna, 31 October-4 November 2016), the Working Group held a preliminary exchange of views on a possible future work on cloud computing. While no decision was made, it was noted that the preparation of a descriptive document listing issues relevant when reviewing contracts for cloud computing services could be particularly useful in assisting small and medium-sized enterprises. It was added that such document should reflect contractual practices and, where available, legislation, and should refer to relevant technical standards, but should not have a legislative nature, without prejudice to future deliberations and decisions of the Commission (A/CN.9/897, para. 126).

7. As requested by the Commission (see para. 4 above), the Secretariat in this note shares with the Working Group results of the preparatory work accomplished so far in the area of cloud computing. The Secretariat is expected to report on those aspects to the Commission as well (see para. 5 above).

II. Results of preparatory work

A. Summary of steps taken by the Secretariat

8. The Secretariat used the proposals of Canada (A/CN.9/823 and A/CN.9/856; see paras. 1 and 3 above) as the basis for its preparatory work.

9. In addition to reviewing relevant reports, standards and publications, the Secretariat has undertaken informal consultations with experts. As broad participation in informal expert consultation as possible has been sought to ensure representation of views from all regions, principal economic and legal systems of the world and of developed and developing countries.

10. The Secretariat first sought comments from experts on the proposed outline of issues to be addressed in a text to be prepared by UNCITRAL or its secretariat in the area of cloud computing. The feedback received informed the structure and content of the text that was eventually circulated for comments by experts in the form of a draft legal guide on contractual aspects of cloud computing.

11. The draft legal guide elicited numerous comments, summarized in the sections below. There was consensus on many issues of technical nature and disagreement on some issues, mostly of policy nature, such as desirability and feasibility of preparing a detailed legal guide on contractual issues of cloud computing similar to existing UNCITRAL legal guides.[7] The policy issues summarized in section B below need to be resolved before any further preparatory work by the Secretariat in the area of cloud computing is undertaken. Sample chapters prepared by the Secretariat and annexed to this note are presented to the Working Group to facilitate the discussion of those issues.

[7] See the *UNCITRAL Legal Guide on Drawing Up International Contracts for the Construction of Industrial Works* (1987), United Nations publication, Sales No. E.87.V.10 (A/CN.9/SER.B/2), available at www.uncitral.org/uncitral/en/uncitral_texts/procurement_infrastructure/1988Guide.html, and the *UNCITRAL Legal Guide on International Countertrade Transactions* (1992) referred to in paragraph 1 of this note.

B. Policy issues

1. Form of work

12. The consultations revealed preference for a non-legislative text that would analyse contractual issues relating to cloud computing and possible approaches to them. It was considered unfeasible and undesirable to prepare a legislative text (e.g. a model law or legislative guide) given sensitive policy issues, such as personal data protection and jurisdictional aspects, that cloud computing raised.

13. Divergent views were expressed on the form of a possible non-legislative text. It was questioned whether legal issues arising from cloud computing contractual relationships were so distinct from other types of contracts, for example IT outsourcing, renting, services and licensing contracts, as to justify the preparation of a detailed legal guide on cloud computing akin to the existing UNCITRAL legal guides.[8] In addition, concern was expressed that a detailed legal guide could become quickly outdated in light of the rapid evolution of cloud computing contract practices.

14. Furthermore, in some jurisdictions cloud computing might be made subject to the principles applicable to public utilities (e.g. provision of safe and adequate service to all who apply for services without undue discrimination and for just and reasonable prices), which would considerably constrain the cloud services providers' freedom of contract. The value of a contractual legal guide in such cases would be doubtful.

15. The preparation of a short guidance text, which would be easier to agree upon and more user-friendly, was suggested. However, it was also stated that the length of a guidance text should be a secondary consideration since a text would need to be sufficiently detailed to provide useful guidance to contracting parties.

16. It was suggested that the main beneficiaries of a guidance text would be users of cloud computing services with a weaker bargaining position. It was therefore recommended that a guidance text should be prepared keeping that group of contracting parties in mind.

2. Scope of work and drafting approaches

17. Based on the understanding that, to remain relevant, a guidance text should avoid time-bound terms and concepts, a question was raised on whether a guidance text should nevertheless refer to existing types of cloud computing services (such as infrastructure as a service (IaaS), platform as a service (PaaS), etc.) and their deployment models (public, private, etc.). The unanimous view was that different types of services and different deployment models raised different legal issues and might justify different contract drafting approaches. It would therefore be unavoidable to describe in a guidance text the main characteristics of the existing types of cloud computing services and their deployment models. It was proposed that a guidance text should differentiate legal issues common to any cloud computing contract, regardless of the types of services involved and their deployment model, from those specific to a particular contract type.

18. Another question was whether it would be reasonable to expect that a guidance text could exhaustively deal with all legal issues arising from all possible types of cloud computing services (existing or future), their different deployment models and diverse business circumstances in which cloud computing contracts could operate. If not, restrain would need to be exercised in the choice of issues to be covered and the breadth and depth of their analysis in a guidance text, to make the project manageable. The text could for example focus only on data portability, interoperability, data breach, risks of multi-tenancy and other issues of most concern to contracting parties in cloud computing relationships.

19. The need to discuss issues of the general contract law if they do not raise any cloud-specific considerations was particularly questioned. Risks of intervening into the existing contract law framework and constraining the freedom of parties to

[8] Ibid.

contract by doing so were highlighted. Concern was also expressed about risks of touching upon issues of potentially regulatory concern: although a guidance text would not intend to provide guidance to policymakers considering the adoption of regulatory or legislative provisions dealing directly or indirectly with cloud computing services, a UNCITRAL text could nevertheless be considered reflecting a minimum internationally accepted standard of practice in contract dealings related to cloud computing services and thus a reference for good practice.

20. Another view was to adopt a more comprehensive approach, following examples of the existing UNCITRAL legal guides dealing with contract drafting issues.[9] The value of a more comprehensive guidance text for users in a weaker bargaining position was particularly highlighted.

21. Advisability of focusing on cloud-specific issues only in the business-to-business (B2B) context and excluding the business-to-consumer (B2C), government-to-business (G2B) and business-to-government (B2G) contexts was questioned. It was not clear from consultations whether, if the B2G context was to be covered,[10] a guidance text should provide any recommendations on such pre-tendering issues as the selection of a method or tool and award criteria for procurement of cloud computing services. (See the annex to this note for a sample chapter of a possible guidance text addressing specific legal issues arising from public cloud services contracts).

22. Views also differed on whether a guidance text should deal only with contracts between cloud service providers and cloud service customers or also cover contracts involving intermediaries, such as cloud services brokers or integrators. The extent of coverage of subcontracting issues was not clear either. Divergent views were also expressed on whether a guidance text should deal with sector-specific (e.g. healthcare or financial services) cloud services contracts. Neither was a common view on the extent of discussion of legal issues arising from possible infringement of third parties' rights (i.e. issues of privacy and personal data protection, consumer protection law) or from behaviour of users of cloud computing services other than the cloud services customer (e.g. the customer's employees).[11]

23. The careful assessment of risks arising from the use of cloud computing services before entering into binding commitments was considered particularly important. That assessment should cover not only contract performance but also post-contractual issues. The views however differed on whether a detailed legal guidance from UNCITRAL on pre-contractual due diligence would be feasible or desirable in light of the diverse factors that influence pre-contractual considerations. It was considered that a guidance text could highlight essential pre-contractual aspects, such as pre-contractual risk assessment, audits, service performance trials and verification of (sub)licensing status. Post-contractual issues would need to be discussed in detail in conjunction with relevant contractual clauses, such as on portability and export of data, post-contractual services, IP rights and post-contractual audits.

C. Possible contents and structure of a future text

24. In addition to the issues raised above and in the annexed sample chapters, the following issues, listed in a possible order of treating them, might be addressed in a chapter of a possible guidance text dealing with contract drafting aspects:

---

[9] Ibid.

[10] A related question is raised in document A/CN.9/823, para. 11: "Is the cloud computing and related legal issues different in the government context versus in the business context and should different standards apply?"

[11] Similar issues are raised in document A/CN.9/823, para. 8: "How are third parties and third parties-related information affected by cloud computing agreements?"

(a) *Freedom of contract and the applicable legal framework*: choice of law considerations specific to cloud computing, in particular how private international law would identify the governing law in the absence of parties' choice of law;[12]

(b) *Formation and form of the contract*: specifics of cloud services contract formation; and solutions for identification and authentication of the parties and users of cloud services (link to identity management and trust services);[13]

(c) *Description of services and performance parameters*: description of core, ancillary and optional services; explicit and implied warranties; consents and rights related to the performance of services; such service performance parameters as availability of services, response time, maintenance and upgrades; application of, and compliance with, technical standards; service performance monitoring and audits;[14]

(d) *Risk allocation*: description of risks in general and how to allocate them best in cloud services arrangements (e.g. data security, data protection and data breach risks). In that context, differing legal consequences may arise depending on the nature of the data placed on the cloud, the type of contract and other circumstances. Any minimum requirements for handling security and data breach would need to be discussed;[15]

(e) *Government access to data*: the extent to which a guidance text should address relationships of the contracting parties with government authorities in national or cross-border context would need to be clarified (e.g. reporting requirements to state agencies under data protection law, disclosure orders and preservation and production of evidence in criminal investigations and other contexts);[16]

---

[12] Similar issues are raised in document A/CN.9/823, para. 10: "would a choice of applicable law and jurisdiction between the service provider and the service applicant pointing to State A validly oust jurisdiction of the national courts in State B where a user is located?"; and in document A/CN.9/856, para. 56: "where was the contract negotiated and signed in a virtual environment? Where is the contract expected to be performed? Where is the cloud computing service provider located?"; and ibid., para. 57: "should there be some guidance for cases where the parties accidentally or knowingly did not select a governing law? Should there be limits to the choice of governing law?"

[13] Similar issues are raised in document A/CN.9/823, para. 7: "is any contractual framework acceptable or should best practices be established [for identity management to ensure secured access to cloud data]? … how does States' domestic legislation apply to accepted identity management protocols? What do courts accept as reasonable practices and what do they consider being negligent practices?"

[14] Similar issues are raised in document A/CN.9/856, para. 65: "In the absence of any term in the contract for service, a person contracting to do work and supply materials warrants that the materials or services will be a sufficient quality and reasonably fit for the purpose for which they are contracted, unless the circumstances of the contract are such as to exclude any such warranty. Are there implied terms under a cloud contractual relationship? For example, does the cloud service provider warrant that it will comply with any applicable local laws where the data could be located? If the parties agree that the data should be hosted in specific geographic locations, does the cloud service provider warrant that it will be the case and that servers used for storage or computing purposes will be located exclusively in the designated jurisdiction?"

[15] Similar issues are raised in document A/CN.9/823, para. 6: "What duties does the service provider have towards preserving the integrity of the data? What remedies are available in cases where the integrity of the data has been compromised?" "…what duties does the service provider have in relation to business losses due to the unavailability of the service?"; and in document A/CN.9/856, para. 63: "What are the duties of the parties to a cloud computing agreement? Do they include the obligation to preserve data and redundancy? Are the parties limited to duties specifically mentioned in the cloud agreement? Do cloud service providers have the obligation to perform the contract according to recognized business practices and if so, what is the content of these practices?"; and ibid., para. 66: "Is it an implied term of the contract that the cloud provider is required to maintain control over data?"

[16] Similar issues are raised in document A/CN.9/823, paras. 10 and 11: "should the host be subject to disclosure requirements even though it has very limited connection to the jurisdiction ordering disclosure?" and "Should the service provider be required to disclose that access to the data can be granted to a given State authority in the conduct of special investigative powers?" and in document A/CN.9/856, para. 61: "This clearly brings up the question of whether the encrypted information is subject to the other country's law and, if so, what practical effect this has. This practice raises the question of whether a court in the jurisdiction where the data is located may require the disclosure of the encryption key."; ibid., para. 62: "In civil and commercial matters, courts can issue an order

(f) *IP issues*: proprietary licenses vs. open standards issues; limits on reproduction of content and communication to public; rights to applications that customers developed or deployed on the cloud; IP issues arising from modifications of the customer data; ownership rights on cloud-processed data (e.g. metadata); rights to improvements arising from the customer's suggestions; other scenarios of sharing IP; and intersection between IP developments and duty of care.[17] The extent to which a guidance text should discuss any IP issues would need to be clarified. Some experts echoed the already expressed views that IP issues should be excluded (see paras. 1 and 2 above). Others suggested highlighting in a guidance text risks of exploiting IP rights through cloud computing arrangements;

(g) *Price and payment*: mechanisms for price calculation and price adjustments; methods for measuring services;

(h) *Liability*: possible exemptions from, or limitations of, liability; remedies; damages; and liability insurance;[18]

(i) *Duration, renewal and termination*: fixed or indefinite duration; mechanisms for renewal; causes for termination; partial or complete termination; and handling of customer data upon termination.[19] The extent to which a guidance text should address the impact of insolvency of the cloud service provider or the customer on the cloud services contract would need to be clarified;

(j) *Amendments of contractual terms*: what would constitute amendments and what would be the result of routine maintenance and upgrades would need to be clarified; and

(k) *Dispute resolution*: alternative dispute resolution mechanisms, commercial arbitration and choice of jurisdiction considerations specific to cloud computing environment.[20] The extent of discussion of preventive injunctions, online dispute resolution issues and class and collective actions would need to be clarified.

---

for the production of documents actually in the possession and control of a party to the dispute. Should a cloud service provider be required to produce electronic documents falling under its control? If not, is domestic legislation providing clear guidance to that effect? Is this situation exacerbated in cross border situations?"

[17] Similar issues are raised in document A/CN.9/823, para. 8: "Who owns the data under these agreements?" and in document A/CN.9/856, para. 69: "In many systems of law, the public and peaceful possession of personal property amounts to a presumption of ownership. Does this presumption cause difficulties in the world of cloud computing? Is the cloud service provider in possession of the data of its customers? What happens in situations where the proprietary rights over data or software have not been clearly established by the parties to the cloud agreement in particular in situation where IA's is being supplied?"; ibid., para. 70: "Given the proprietary rights of customers over data maintained by the cloud service provider, should the service provider be required to surrender data to its legitimate owner upon demand? Would this obligation also include the obligation to erase or otherwise eliminate any back-up copies of the data?"

[18] Similar issues are raised in document A/CN.9/823, para. 11: "what practical and effective measures to limit risks should be put in place by service providers? For example should service providers be encouraged to offer multi-tiered access with varying access privileges (i.e., not all personal information about an entity is accessible to all users)? Should they be required to inform potential clients of the availability or unavailability of such safeguards and multi-tiered access functions? Should they contract liability insurance and who should be responsible for insuring a particular risk? … Is the existence of legislation on the protection of personal information and compliance by the service provider with the legislation sufficient to exonerate the provider from liability?"; and in document A/CN.9/856, para. 67: "Are limitations of liability for data losses or corruption enforceable or are they considered unconscionable or unenforceable because contrary to the purpose of the contract?"

[19] Similar issues are raised in document A/CN.9/823, para. 6: "Under what terms can a cloud agreement be terminated? What happens to the data when the contract is terminated?"

[20] Similar issues are raised in document A/CN.9/823, para. 10: "would a choice of applicable law and jurisdiction between the service provider and the service applicant pointing to State A validly oust jurisdiction of the national courts in State B where a user is located?"; and in document A/CN.9/856, para. 56: "For example, where was the contract negotiated and signed in a virtual environment? Where is the contract expected to be performed? Where is the cloud computing service provider located?"; ibid., para. 74: "What constitutes a sufficient connection to a given jurisdiction for a court to entertain a contractual claim arising out of a cloud computing agreement? To what extent should an exclusive choice of jurisdiction be recognized and enforced?"; and ibid., para. 75: "In the absence of a clause on jurisdiction where can the parties to the contract bring an

25. The extent of relying on and reflecting in a guidance text cloud computing standards, such as those of the International Organization for Standardization (ISO), would need to be clarified.[21] For example, ISO standards in the area of cloud computing, elaborated in cooperation with other international organizations, do not only define cloud computing terms and provide technical standards in that area. They often contain guidance on what and how should be addressed in cloud services relationships.

III. Issues for consideration by the Working Group

26. The Working Group is expected to formulate recommendations for the consideration of the Commission on the feasibility and practical needs for the work on cloud computing, the exact scope of that work, possible methodology and priority to be allocated to that work (see paras. 4 and 5 above). In so doing, it may wish to address in particular:

(a) The form that a work product on cloud computing would take, i.e. whether a legal guide giving explanations concerning cloud services contract drafting, or another text would be prepared. In considering that aspect, the Working Group may wish to recall the diverse spectrum of texts that UNCITRAL has adopted, which could be broadly divided into: (i) legislative texts (conventions, model laws, legislative guides and recommendations, and model legislative provisions); [22] (ii) uniform contractual clauses and rules (such as the *UNCITRAL Arbitration Rules*[23]); and (iii) explanatory texts (such as legal guides, informational notes and recommendations);

(b) If a legal guide is to be prepared, whether it would be similar as regards the level of detail, arrangement and drafting approaches to the existing UNCITRAL legal guides,[24] or a different template would need to be followed;

(c) Scope of the work, in particular, whether a text to be prepared would purport to address all possible cloud computing contracts or only a particular group thereof or particular issues of cloud computing. Other important considerations related to the scope of the work and drafting approaches that the Working Group may wish to address are raised in paragraphs 17-23 above;

(d) The timing of the work in the area of cloud computing, i.e. whether the work should be undertaken before, after or in parallel with the work on the other topic

---

action or seek provisional protection measures? What should be the basis for such exercise of jurisdiction?"

[21] Similar issues are raised in document A/CN.9/856, para. 33: "In recent years, the emergence of 'international standards' put forward by trade associations and non-governmental membership organizations have contributed to addressing and limiting legal risks associated with the Cloud. These standards are incorporated by reference in contracts between the cloud service provider and customers and represent an off-the-shelf solution to a number of cloud computing risks."; and ibid., para. 68: "The emergence of 'international standards' put forward by trade associations and non-governmental membership organizations may have contributed to addressing and limiting risks associated with the Cloud in particular for small and medium-sized enterprises which may not always have the resources or the expertise to consider all possible cloud-related issues. Should UNCITRAL consider whether such standards can be incorporated into best practices? Are these standards referred to in contracts between cloud service providers and customers effective and binding in the various systems of law?"

[22] Such UNCITRAL legislative texts as conventions and model laws are usually accompanied by explanatory materials (guides to enactment (and interpretation) or explanatory notes), prepared by UNCITRAL or its secretariat to assist with the use of the text. Explanatory materials are based on the records of the relevant legislative process in UNCITRAL. They may be adopted by the Commission (see e.g. the *Guide to Enactment of the Model Law on Public Procurement (Official Records of the General Assembly, Sixty-seventh Session, Supplement No. 17* (A/67/17), para. 46. The text of the Guide is available at www.uncitral.org/uncitral/en/uncitral_texts/procurement_infrastructure/2012Guide.html) or issued as a work product of the Secretariat (see e.g. the *Explanatory Note by the UNCITRAL secretariat on the 1985 Model Law on International Commercial Arbitration as amended in 2006* (United Nations publication, Sales No. E.08.V.4). Available at www.uncitral.org/uncitral/en/uncitral_texts/arbitration/1985Model_arbitration.html).

[23] Available at www.uncitral.org/uncitral/en/uncitral_texts/arbitration/2010Arbitration_rules.html.

[24] See above, footnote 7.

assigned by the Commission to the Working Group (identity management and trust services); and

(e) A method of work, which is closely related to the preceding point. The Working Group may wish to make a recommendation to the Commission on whether the work should take place in the Working Group or in the Commission in plenary or handled by the Secretariat with the involvement of experts. In the latter case, the role of the Commission and the Working Group would need to be clarified. Different implications of the decision on a method of work on expert representation from States and on resources of the Secretariat necessary to provide substantive and conference management services should be taken into account.

27. In considering the most appropriate method of work, the Working Group may wish to recall that all legislative texts and most non-legislative texts were prepared by UNCITRAL either in a working group or at annual sessions of UNCITRAL. In their pre-adoption form, they were subject to comments by Governments and relevant international organizations. That was the case also with such non-legislative texts as the *UNCITRAL Legal Guide on Drawing up International Contracts for the Construction of Industrial Works*,[25] which was prepared by the Working Group on the New International Economic Order working on it from 1981 to 1987, and the *UNCITRAL Legal Guide on International Countertrade Transactions*,[26] whose draft chapters were prepared by the Secretariat and discussed in the Commission and in a working group from 1990 to 1992. Some non-legislative texts, although prepared by the UNCITRAL secretariat, were nevertheless subject to review and approval by UNCITRAL that authorized their publications as a product of the work of the Secretariat.[27]

28. Non-legislative texts vary significantly not only by subject but also by purpose, structure and presentation style. They may deal with issues not addressed in any other UNCITRAL text[28] or be linked to other UNCITRAL texts.[29] Reference to non-legislative texts in this context excludes explanatory materials that may accompany a UNCITRAL legislative text.[30]

[27] See e.g. the *UNCITRAL Legal Guide on Electronic Funds Transfers* (1987) (United Nations publication, Sales No. E.87.V.9 (A/CN.9/SER.B/1), available at www.uncitral.org/pdf/english/texts/payments/transfers/LG_E-fundstransfer-e.pdf), *Promoting confidence in electronic commerce: legal issues on international use of electronic authentication and signature methods* (2007) (United Nations publication, Sales No. E.09.V.4, available at www.uncitral.org/pdf/english/texts/electcom/08-55698_Ebook.pdf), *UNCITRAL Practice Guide on Cross-Border Insolvency Cooperation* (2009) (United Nations publication, Sales No. E.10.V.6, available at www.uncitral.org/uncitral/en/uncitral_texts/insolvency/2009PracticeGuide.html) and *Recognizing and Preventing Commercial Fraud: Indicators of Commercial Fraud* (2013) (see above, footnote 2).

[28] E.g. the *UNCITRAL Legal Guide on International Countertrade Transactions* (see above, footnote 3) is the only text of UNCITRAL on that subject. The same can be said about *Recognizing and Preventing Commercial Fraud: Indicators of Commercial Fraud* (2013) (see above, footnote 2).

[29] See e.g. *UNCITRAL Model Law on Cross-Border Insolvency: The Judicial Perspective* (2011) (available from www.uncitral.org/uncitral/uncitral_texts/insolvency.html); or *Recommendations to assist arbitral institutions and other interested bodies with regard to arbitration under the UNCITRAL Arbitration Rules as revised in 2010* (2012) (*Official Records of the General Assembly, Sixty-seventh Session, Supplement No. 17* (A/67/17), annex I).

[30] See above, footnote 22.

Annex

Sample chapters of a possible guidance text on contractual aspects of cloud computing, prepared by the Secretariat[31]

Introduction

Origin and Purpose

1. The guidance text covers cloud services contracts in which one party (the cloud service provider) provides to the other party (the customer) cloud services in the form of one or more capabilities via cloud computing. Capabilities may vary from the provision and use of simple connectivity and basic computing services (such as storage, emails, office applications) to the provision and use of the whole range of physical and virtual resources needed to build own information technology (IT) platforms, or deploy, manage and run customer-created or customer-acquired applications or software.

2. Cloud computing can generally be defined as supply and use of computing services (e.g., data hosting or data processing) through open or closed network. Cloud services contracts are thus a variation of contracts for provision of services. Depending on data involved in cloud computing, they could be subject to various legal regimes, inluding those on privacy protection, banking law and anti-money-laundering regulations. An international or cross-border dimension in this type of contracts is prevalent but cloud computing could be confined by law or practice to a single jurisdiction as well.

3. The Commission decided to undertake work in the area of cloud computing in recognition of a significant potential of cloud computing solutions for economic growth, in particular for small and medium enterprises (SMEs). [*to be elaborated drawing on future UNCITRAL records*]

…

4. The guidance text does not intend to express the position of UNCITRAL on the desirability of concluding cloud services contracts. It is intended merely to assist potential parties to a cloud services contract in identifying issues that they should consider before entering into, and while negotiating and drafting, a cloud services contract. The various solutions to issues discussed in the guidance text will not govern the relationship between the parties unless they expressly agree upon such solutions, or unless the solutions result from provisions of the applicable law.

5. The guidance text has been designed to be of use to persons regardless of their legal background. It is emphasized however that the guidance text should not be regarded by the parties as a substitute for obtaining legal and technical advice and services from competent professional advisers. Nor is the guidance text intended to be used for interpreting cloud services contracts.

6. The guidance text does not interfere with mandatory domestic rules; nor does it intend to provide a model for, or encourage the adoption, of special legislation on cloud computing. Apart from relevant local, national and international legal rules and the provisions of the contract, local, national and international standards or codes of practice may exist, which this guidance text does not purport to replace.

Scope of the guidance text

7. The guidance text highlights main considerations usually involved in concluding cloud services contracts regardless of the type of services and their deployment model. At the same time, the guidance text recognizes that cloud services

[31] The sample chapters do not reflect views of UNCITRAL or its working group. They are the result of the Secretariat's research and consultations with experts and also draw on documents A/CN.9/823 and A/CN.9/856. They presented in a draft form for consideration by the Working Group.

contracts could take a variety of forms and display differing features depending upon the particular circumstances of the transaction. The guidance text highlights commonly encountered issues arising from particular types of cloud services and their deployment models [*to be confirmed*].

8. [The guidance text touches upon issues arising from the involvement of cloud service partners that may be engaged in support of, or auxiliary to, activities of either the cloud service provider or the customer or both. Examples of cloud service partners include cloud auditors and cloud service brokers. The guidance text addresses rights and remedies available to users of cloud services other than the customer (e.g. customers' clients, employees) only to a limited extent, in the context of possible clauses that could be considered for inclusion into a cloud service contract between the cloud service provider and the customer. [*The extent of coverage of third party aspects (subcontracting, brokers, auditors, rights of data subjects, consumers, other users of cloud services, etc.) in the guidance text is to be clarified.*]]

9. The guidance text may not be applicable to arrangements for the use of cloud services between cloud services providers and consumers to the extent that those arrangements would be subject to mandatory consumer protection law and regulations. [*Other exclusions from the scope, such as B2G, G2B, specific sectors, etc., are to be discussed.*]

10. Cloud computing and cloud services could involve cross-border operations or could be confined to a particular region or country. This guidance text could be used by the parties regardless of a cross-border factor. For most standardized simple cloud services, that factor would not matter; under some circumstances, cross-border aspects may add an additional layer of complexity discussed in this guidance text.

11. The guidance text is not dealing with issues of licensing and outsourcing arrangements although some aspects of cloud services may resemble those relationships.

Arrangement of the guidance text

12. The guidance text is arranged in several parts. The first part introduces a reader to contracts covered by the guidance text and benefits and risks of cloud computing. The second part deals with certain matters arising prior to the time when the contract is drawn up and describes possible contracting approaches to structuring a cloud services contract depending on the type and deployment model chosen by the contracting parties. The discussion of these subjects has two aims: to direct the attention of the parties to important matters which they should consider prior to commencing the negotiation and drawing up of a cloud services contract, and to provide a setting for the discussion of the legal issues involved in the contract.

13. The third part discusses possible types of contract clauses that parties may use. The discussion in the guidance text is restricted to those types of clauses that are specific to or of special importance for cloud computing services. Some of the clauses described in the guidance text are essential for concluding a cloud services contract. Other clauses discussed in the guidance text may be useful in the context of the particular commercial circumstances, in particular in the light of the type of services and their deployment model. Throughout the guidance text, whenever appropriate, the discussion points out that different solutions may apply under different contracting approaches. In view of the great variety of circumstances in which cloud services contracts are concluded, the guidance text does not contain a general suggestion as to the types of clauses that parties should agree upon. It is for the parties to each contract to judge the extent to which the issues considered in the guidance text are relevant to their contract.

14. [The last part deals with specific legal issues that cloud services contracts raise in the G2B and B2G contexts and in sectors subject to special regulation, such as healthcare and financial services.] [*to be confirmed*]

Approach to drafting

15. Given its purpose to help contracting parties to identify pitfalls, limitations and other difficulties in the negotiation or execution of cloud services contracts, recommendations are made in the guidance text aimed at suggesting ways in which certain issues in a cloud services contract might be settled. Three levels of suggestion are used. The highest level is indicated by a statement to the effect that the parties "should" take a particular course of action. It is used sparingly in the guidance text and only when a particular course of action is a logical or legal necessity. An intermediate level is used when it is "advisable" or "desirable", but not logically or legally required, that the parties adopt a particular course of action. The lowest level of suggestion is expressed by formulations such as "the parties may wish to consider" or "the parties might wish to provide" or the agreement by the parties "might" contain a particular solution. The wording used for a particular suggestion may be, for drafting reasons, varied somewhat from that just indicated; however, it should be clear from the wording what level of suggestion is intended.

16. Since a prevailing terminology has been developed by various international and regional institutions active in the area of cloud computing, including the International Organization for Standardization (ISO), the guidance text uses the established terminology for the purpose of ensuring consistency, harmonization and legal clarity.

Part One. Cloud services contracts

Distinct features of cloud services contracts[32]

17. Distinct features common for all cloud services contracts are derived from the following typical characteristics of cloud computing via which the cloud services are provided:

(a) **Broad network access** means that capabilities can be accessed over the network from any place where the network is available (e.g. through Internet), using a wide variety of devices, such as mobile phones, tablets and laptops;

(b) **Measured service** means metered delivery of cloud services like in public utilities sector (gas, electricity, etc.), allowing monitoring the usage of the resources and charging by usage (on a pay-as-you-go basis);

(c) **Multi-tenancy** means that physical and virtual resources are allocated to multiple users whose data is isolated and inaccessible to one another;

(d) **On-demand self-service** means that services are used by the customer as needed, automatically or with minimal interaction with the cloud service provider;

(e) **Rapid elasticity and scalability** means the capability for rapid scaling, up or down, of the access or services provided in accordance with customer's requirements;

(f) **Resource pooling** means that physical or virtual resources can be aggregated by the cloud service provider in order to serve one or more customers without their control or knowledge over the processes involved.

18. There are various ways in which cloud computing can be organized based on the control and sharing of physical or virtual resources (deployment models), including:

(a) **Community cloud** where cloud services exclusively support a specific group of related cloud service customers with shared requirements, and where resources are controlled by at least one member of that group;

(b) **Private cloud** where cloud services are used exclusively by a single cloud service customer and resources are controlled by that cloud service customer;

[32] ISO/IEC 17788: 2014 and document A/CN.9/856 were used for drafting this section.

(c) **Public cloud** where cloud services are potentially available to any cloud service customer and resources are controlled by the cloud service provider;

(d) **Hybrid cloud** using at least two different cloud deployment models.

19. The extent of management and control by the customer of resources provided under the cloud services contract would depend on the type of capabilities provided to the customer and the cloud deployment model. In some cases, the customer would not manage or control the underlying physical and virtual resources, but would have control over operating systems, storage, and deployed applications that use the physical and virtual resources. The cloud service customer may also have limited ability to control certain networking components (e.g., host firewalls). In other cases, the customer would not have any control over the resources other than devices connecting it to the network.

Benefits and risks[33]

20. The economic benefits of using cloud computing arise from economy of scale achieved by pooling computing resources within the control of one cloud service provider who then offers them at discounted prices to multiple customers. The economic benefits at the microeconomic level may produce the positive impact at a macroeconomic level on businesses and international trade.

21. Reduced need for the capital investment in IT infrastructure and savings of operational costs associated with IT governance are cited among attractive features of cloud computing especially for start-ups and SMEs. Another important consideration is access to enhanced IT security, specialized staff, increased data storage capacity, improved data preservation and other state-of-the-art computing services features. Cloud computing may also be more user friendly than traditional IT services and allow for more flexibility, productivity and innovation.

22. At the same time, cloud computing is not risk-free. It involves outsourcing and associated risks. Financial losses may result from incomplete or inaccurate assessment of business needs, cloud computing risks and potential cost savings. They may also result from business interruption or loss of revenues because of reputational damage.

23. Specific cloud computing risks stem in particular from:

(a) **Loss of control**. The customer's decision to migrate all or part of its activities and data to cloud computing leads to the loss of exclusive control over them. The extent of the loss of control depends on the type of cloud service. The customer's ability to deploy the necessary measures to guarantee data integrity and confidentiality or verify whether data processing and retention are being handled adequately may be particularly affected;

(b) **Inherent features of cloud computing**. Inadequate security practices of the cloud service provider will raise risks for the customer. They may relate to inadequate silo architecture, isolation of resources and data segregation, insufficient identity management procedures, and the absence of special precautions to prevent attacks on the cloud computing infrastructure. Such inherent features of cloud computing as multi-tenancy and virtualization may exacerbate security risks;

(c) **Remote access to services** that provides opportunities for cyber attacks such as interception of communications, including passwords, phishing, fraud and the exploitation of software vulnerabilities;

(d) **Cross-border data flows**. Protecting personal and other sensitive data as well as respecting the right to privacy is particularly difficult in infrastructures that are shared and potentially accessible to governments. The lack of information about the location of the data and the number of stakeholders involved in the provision of cloud computing services accentuates data breach risks;

[33] Document A/CN.9/856 was used for drafting this section.

(e) **The loss or compromise of credentials for access to cloud computing services**, which is one of the common causes of data loss or data disclosure to unauthorized persons;

(f) **Vagueness in sharing roles and responsibilities**. Various stakeholders are involved in a cloud solution model: the cloud service provider, the customer, third parties whose information is held by the customer, etc. Any ambiguity in defining the roles and responsibilities related to data ownership, access control, maintenance of infrastructure, etc. may result in security and other risks. The failure to clearly assign responsibilities will have a higher impact where a third party's IT resources are used.

[Part two. Pre-contractual aspects]

[*the extent of discussion, if any, of relevant issues in the guidance text is to be clarified*]

…

Part three. Contract drafting

…

[*for possible contents of this chapter, see paragraph 24 of the main part of this note*]

[Part four. Specific legal issues of cloud services contracts in … [*areas, if any, are to be identified*]

[*Below is a sample chapter prepared by the Secretariat to illustrate a possible approach to drafting chapters on specific legal issues that cloud services contracts raise in contexts other than the B2B context and in sectors subject to special regulation, such as healthcare and financial services. The B2G context is used for illustration.*

If B2G transactions are to be covered in a guidance text, the list of issues set out below is for consideration by the Working Group. In addition, it is to be decided whether any guidance should be provided on such pre-contractual issues as defining specifications or performance requirements and selection of the appropriate procurement method or tool.]

Public cloud services contracts

24. Public entities entering into a cloud service contract would face similar issues about service performance levels, data security, protection and privacy to those discussed in the context of business-to-business (B2B) contracts. Additional or distinct complexities would arise because of the public nature of customers of cloud services and the role of public entities in implementing a public procurement function and socio-economic policies of a State.

25. Usually public entities are subject to various layers of laws that are not applicable to private entities, such as on freedom of information, State records and State archives, public queries, investigation, etc. Those laws would become applicable to cloud service providers by virtue of their contractual relationships with a public entity. Public entities and their employees would nevertheless remain subject to criminal, civil and administrative liability for the failure to exercise properly public functions entrusted to them, including if public data placed on the cloud containing protected information (e.g. classified information, personally identifiable information, commercially sensitive information) is misused or erroneously disclosed. The reputation of the government and public trust will thus be closely tied to the quality of cloud services.

26. Statutory requirements applicable to public entities may in particular dictate:

(a) With whom a public contract for cloud services could be concluded (cloud service providers may need to be certified by State agencies or there could be limits to contract with foreign entities);

(b) Which data could be migrated to cloud platforms (the move of data of a sensitive nature to the cloud may be prohibited);

(c) Under which terms and according to which standards cloud services could be used (law may dictate higher standards for security, privacy, confidentiality, accessibility, authentication, continuity of service, interoperability and portability, data breach notification obligations, restrictions on the geographical location of data in motion and data at rest and data centres, servers and redundant servers);

(d) Special rules on subcontracting. The advance consent of the procuring entity may be required for any subcontracting that was not announced in tender documents. No blanket consent for subcontracting would be acceptable since this could interfere with the principles of good governance and competition (unchecked subcontracting may promote collusion). There could be therefore mandatory verification of subcontractors and the obligation to replace the existing ones if compulsory grounds for that exist. In addition, it is common for subcontractors to be subject to the same terms of procurement as those imposed on the main contractor. The cloud service provider would therefore be required to reflect those terms in any existing or future subcontracting arrangements;

(e) Warranties, adequate capital or insurance coverage to be provided by the cloud service provider;

(f) Mandatory training for the cloud service provider's personnel handling sensitive information;

(g) State records management rules, in particular features allowing e-discovery and evidence preservation, the obligation to retain public data and related metadata in a certain form, including after the contract, disposition of records according to the State approved record schedules, and transfer of permanent records to the State archive in a prescribed form;

(h) Other additional functionalities, such as for implementing social policies of a State, e.g. accessibility of public data to disabled, and for interacting with individuals and legal entities, e.g. adherence to statutory deadlines for actions.

27. Public entities may also face significant restrictions on their ability to indemnify cloud service providers, agree on some dispute resolution clauses (e.g. on arbitration or jurisdiction of a foreign State) and accept click-through arrangements. They may also be required to include non-disclosure provisions and modify such standard clauses usually found in standard cloud services contracts in the B2B and business-to-customer (B2C) environments as broad downtime or other rights of cloud service providers, the absence of liability of cloud service providers for service failures and no obligation to indemnify customers in such cases. They may also be required to ensure that contractual clauses prohibit the cloud service provider from using the data for any of the providers' own purposes (such as advertising or other commercial activities). They would also not be able to agree on the transfer of any intellectual property (IP) ownership to the provider in any data stored on behalf of the public entity.

28. Grounds for termination by the Government of the contract in the business-to-government (B2G) context could also be broader, including for convenience. Law may also require termination of the contract by a public entity for corruption, fraud and other reasons specified in law and impose unlimited liability of a cloud service provider in such cases.

29. Procuring entities must be aware of any statutory requirements applicable to a cloud service contract in question. Those requirements may vary depending on the type of services to be provided and deployment model. Specifics of procurement of on-demand services as opposed to fixed price purchases would also need to be

considered in light of State budgeting processes. All those issues would dictate approaches to formulating eligibility, qualification, examination and evaluation criteria and selecting the most appropriate method or tool for procurement of required cloud computing services. They would therefore need to be considered at the procurement planning stage.

30. Carefully considering all those issues already at the procurement planning stage is especially important for public procuring entities since, unlike private entities, they would not have much freedom to negotiate the terms of the contract at the stage of the conclusion of the contract and to renegotiate contractual terms in response to problems at the contract implementation stage. The public procurement contract would have to incorporate the terms and conditions of the procurement as specified in the solicitation documents at the outset of the procurement and as set out in the terms and conditions of the winning tender. Any material changes to those terms and conditions at the conclusion of the contract or during its implementation would violate the key principles of transparency, competition and objectivity in public procurement. Any changes that would affect the nature of the contract, the pool of potential participants in the procurement proceedings or the result of the selection would be considered material. The right of the cloud service provider to unilaterally change the terms of the contract, often included in standard cloud services contracts in the B2B and B2C environments, would therefore need to be substantially modified, if not excluded altogether.]

F. Note by the Secretariat on legal issues related to identity management and trust services: terms and concepts relevant to identity management and trust services

(A/CN.9/WG.IV/WP.143)

[Original: English]

Contents

I. Introduction

1. At its forty-eighth session, in 2015, the Commission instructed the Secretariat to conduct preparatory work on identity management and trust services, cloud computing and mobile commerce, including through the organization of colloquia and expert group meetings, for future discussion at the Working Group level. The Commission also asked the Secretariat to share the result of that preparatory work with Working Group IV, with a view to seeking recommendations on the exact scope, possible methodology and priorities for the consideration of the Commission at its forty-ninth session.[1]

2. At its forty-ninth session, in 2016, the Commission had before it a note by the Secretariat on legal issues related to identity management and trust services (A/CN.9/891) summarizing the discussions during the UNCITRAL Colloquium on Legal Issues Related to Identity Management and Trust Services held in Vienna on 21 and 22 April 2016 and complemented by other material. The Commission was also informed that work on contractual aspects of cloud computing had started at the expert level on the basis of a proposal (A/CN.9/856) submitted at the forty-eighth session of the Commission, in 2015.[2]

3. At its fifty-fourth session (Vienna, 31 October-4 November 2016), the Working Group agreed that its future work on identity management and trust services should be limited to the use of identity management systems for commercial purposes and that it should not take into account the private or public nature of the identity management services provider. The Working Group also agreed that, while work on identity management could be taken up before work on trust services, the identification and definition of terms relevant for identity management and trust services should take place simultaneously given the close relationship between the two. It was further agreed that focus should be placed on multi-party identity systems and on natural and legal persons, without excluding consideration of two-party identity systems and of physical and digital objects when appropriate. In addition, it was agreed that the Working Group should continue its work by further clarifying the goals of the project, specifying its scope, identifying applicable general principles and drafting necessary definitions (A/CN.9/897, paras. 118-120 and 122).

4. This note contains the definition of a number of terms relevant for identity management and trust services. The terms are presented with a view to enabling discussions based on a common understanding of fundamental notions; they are not presented in order to suggest a discussion on legally binding definitions of those notions. Similarly, the terms are not intended to provide an indication on the scope of the future work of UNCITRAL in the field of identity management and trust services.

5. The source of the defined terms, where available, is explicity indicated. Due to different sources, the same term may include more than one definition. If no source is

[1] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), para. 358.

[2] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), para. 229.

indicated, the definition was suggested during expert consultations. Preference was given to terms defined internationally. Additional sources of defined terms are available, especially at the national level.

6. The defined terms are listed in different sections for ease of presentation only and without prejudice to the determinations of the Working Group on their relevance for discussions on the legal aspects of identity management or of trust services.

7. The defined terms have different origins and therefore should not be read as a coherent set of interconnected terms. Rather, each term should be read separately as a stand-alone definition and as such is presented as a possible reference for the discussions of the Working Group. When available, the source of the defined term is indicated so that additional information could be gathered from the original source document.

8. Synonyms are indicated for convenience only in light of usage. Not all synonyms are terms defined in this note.

9. The terms are listed in alphabetical order in the English language version of this note. The same order is maintained in other language versions to ensure correspondence of paragraphs and therefore facilitate reference during the Working Group discussions.

II. Terms and concepts relevant to identity management and trust services

A. Definitions relevant to identity management

10. “Assurance level” means a level of confidence in the binding between an entity and the presented identity information. Source: Rec. ITU-T X.1252. Synonyms: identity assurance, level of assurance.

11. “Attribute” means an item of information or data associated with a subject. Examples of attributes include information such as name, address, age, gender, title, salary, net worth, driver’s license number, social security number, e-mail address, mobile number, and data such as the subject’s network presence, the device used by the subject, the subject’s usual home location as known by a network, etc. (for a human being); corporate name, principal office address, registration name, jurisdiction of registration, etc. (for a legal entity); make and model, serial number, location, capacity, device type, etc. (for a device). Synonym: identity attribute.

12. “Attribute provider” means a business or government entity that acts as a source of one or more attributes of a subject’s identity. An attribute provider is often the entity responsible for assigning, collecting, or maintaining such attributes. Examples of attribute providers include a government agency that maintains a birth registry or title registry, a national credit bureau, a business that maintains a commercial marketing database or a corporate registry, and entities such as mobile operators, banks, utilities and healthcare providers that hold verified user data and that either verify or provide these attributes to third parties (possibly, subject to user consent).

13. “Authentication” means (a) a process used to achieve sufficient confidence in the binding between the entity and the presented identity. Source: Rec. ITU-T X.1252; (b) the process of associating the claimed identity of a subject with the actual subject by confirming the subject’s association with a credential either directly (active authentication) or through the environment in which the subject is interacting (“passive authentication” or “adaptive authentication”). For example, entering a secret password that is associated with a username is assumed to authenticate that the individual entering the secret password is the person to whom the username was issued. Likewise, comparing a person presenting a passport to the picture appearing on the passport is used to authenticate (i.e., confirm) that that person is the person described in the passport.

14. “Authentication assurance” means the degree of confidence reached in the authentication process that the communication partner is the entity that it claims to be or is expected to be. Note: the confidence is based on the degree of confidence in the binding between the communicating entity and the identity that is presented. Source: Rec. ITU-T

X.1252. Note: in some cases, the notions of "identity assurance" and "authentication assurance" are viewed as separate components of the overall concept of "level of assurance".

15. "Authentication factor" means a piece of information and process used to authenticate or verify the identity of an entity. Source: ISO/IEC 19790. Note: authentication factors are divided into four categories: (a) something an entity has (e.g., device signature, passport, hardware device containing a credential, private key); (b) something an entity knows (e.g., password, PIN); (c) something an entity is (e.g., biometric characteristic); or (d) something an entity typically does (e.g., behaviour pattern). Source: Rec. ITU-T X.1254.

16. "Authenticator" means something that is used to verify the relationship between a subject and a credential. An active authenticator is usually something the subject knows (such as a secret password), something the subject has (such as a smartcard), or something the subject is (such as a photo or other biometric information), and is used to tie the subject to an identity credential. For example, a password functions as an authenticator for a username, a picture functions as an authenticator for a passport or driver's license. A passive authenticator is usually something the environment knows, e.g. the mobile network knows that the user is connected to the network, is in the usual location, is using the usual mobile device, has not been barred from using the network, etc.

17. "Authoritative source" means a repository which is recognized as being an accurate and up-to-date source of information. Source: Rec. ITU-T X.1254.

18. "Authorization" means (a) a process of granting rights and privileges to an authenticated subject based on criteria usually determined by the relying party. For example, once a subject is authenticated, he or she might be granted access to a confidential database. Source: A/CN.9/WG.IV/WP.120, annex; (b) the granting of rights and, based on these rights, the granting of access. Source: Rec. ITU-T Y.2720 and Rec. ITU-T X.800.

19. "Credential" means: (a) a set of data presented as evidence of a claimed identity and/or entitlements. Source: Rec. ITU-T X.1252; (b) data in digital or tangible form presented as evidence of a claimed identity of a subject. Examples of paper-based credentials include passports, birth certificates, driver's licenses, and employee identity cards. Examples of digital credentials include usernames, smart cards, mobile identity and digital certificates. Source: A/CN.9/WG.IV/WP.120, annex. Synonyms: electronic identification means, identity credential.

20. "Credential provider" or "Credential service provider" means (a) an entity that issues credentials to subjects; (b) a trusted actor that issues and/or manages credentials. Note: the Credential Service Provider (CSP) may encompass Registration Authorities (RAs) and verifiers that it operates. A CSP may be an independent third party, or it may issue credentials for its own use. Source: Rec. ITU-T X.1254.

21. "Enrolment" means (a) the process of inauguration of an entity into a context. Note 1: enrolment may include verification of the entity's identity and establishment of a contextual identity. Note 2: also, enrolment is a pre-requisite to registration. In many cases, the latter is used to describe both processes. Source: Rec. ITU-T X.1252; (b) the process by which credential providers (or their agents) verify the identity claims of a subject before issuing a credential to such subject.

22. "Entity" means something that has separate and distinct existence and that can be identified in a context. Note: an entity can be a physical person, an animal, a juridical person, an organization, an active or passive thing, a device, a software application, a service, etc., or a group of these entities. In the context of telecommunications, examples of entities include access points, subscribers, users, network elements, networks, software applications, services and devices, interfaces, etc. Source: Rec. ITU-T X.1252. An entity may have multiple identifiers.

23. "Federation" means (a) an association of users, service providers, and identity service providers. Source: Rec. ITU-T X.1252; (b) a group of identity providers, relying parties, subjects and others that agree to operate under compatible policies, standards, and technologies specified in system rules (or a trust framework) in order that subject identity information provided by identity providers can be understood and trusted by relying parties. Synonyms: identity federation, multi-party identity system.

24. "Identification" means the process of collecting, verifying, and validating sufficient identity attributes about a specific subject to define and confirm its identity within a specific context. Synonyms: identity proofing, registration.

25. "Identifier" means (a) one or more attributes used to identify an entity within a context. Source: Rec. ITU-T X.1252; (b) one or more attributes that uniquely characterize an entity in a specific context. Source: Rec. ITU-T X.1254.

26. "Identity" means (a) a set of attributes related to an entity. Source: ISO/IEC 24760; (b) information about a specific subject in the form of one or more attributes that allow the subject to be sufficiently distinguished within a particular context; (c) a set of the attributes about a person that uniquely describes the person within a given context. Synonym: digital identity.

27. "Identity assertion" means an electronic record originating with an identity provider and sent to a relying party that contains the subject's identifier (e.g., name, account number, mobile number, location, etc.), authentication status, and applicable identity attributes. The attributes are typically personal and non-personal information about the subject that is relevant to the transaction required by the relying party.

28. "Identity assurance" means the degree of confidence in the process of identity validation and verification used to establish the identity of the entity to which the credential was issued, and the degree of confidence that the entity that uses the credential is that entity or the entity to which the credential was issued or assigned. Source: Rec. ITU-T X.1252. Synonyms: assurance level; level of assurance. Note: in some cases, the notions of "identity assurance" and "authentication assurance" are viewed as separate components of the overall concept of "level of assurance".

29. "Identity federation" means a group of identity providers, relying parties, subjects and others that agree to operate under compatible policies, standards, and technologies specified in system rules (or a trust framework) in order that subject identity information provided by identity providers can be understood and trusted by relying parties. See also: federation; multi-party identity system.

30. "Identity management" means (a) a set of processes to manage the identification, authentication, and authorization of individuals, legal entities, devices, or other subjects in an online context. Source: A/CN.9/854, paragraph 6; (b) a set of functions and capabilities (e.g., administration, management and maintenance, discovery, communication exchanges, correlation and binding, policy enforcement, authentication and assertions) used for: (i) assurance of identity information (e.g., identifiers, credentials, attributes); (ii) assurance of the identity of an entity; and (iii) enabling business and security applications. Source: Rec. ITU-T Y.2720.

31. "Identity proofing" means (a) the process of collecting, verifying, and validating sufficient identity attribute information about a specific subject (a person, legal entity, device, digital object, or other entity) to define and confirm its identity within a specific context. Identity proofing may be carried out through self-assertion or against existing records; (b) a process which validates and verifies sufficient information to confirm the claimed identity of the entity. Source: Rec. ITU-T X.1252; (c) a process by which a registration authority (RA) captures and verifies sufficient information to identify an entity to a specified or understood level of assurance. Source: Rec. ITU-T X.1254. Synonyms: identification; registration.

32. "Identity provider" means (a) an entity responsible for the identification of persons, legal entities, devices, and/or digital objects, the issuance of corresponding identity credentials, and the maintenance and management of such identity information for subjects. Source: A/CN.9/WG.IV/WP.120, annex; (b) an entity that creates, maintains and manages trusted identity information of other entities (e.g., users/subscribers, organizations and devices) and offers identity-based services based on trust, business and other types of relationship. Source: Rec. ITU-T Y.2720. Synonym: credential service provider; identity service provider.

33. "Identity system" means an online environment for identity management transactions governed by a set of system rules (also referred to as a trust framework) where individuals, organizations, services, and devices can trust each other because authoritative sources

establish and authenticate their identities. Source: A/CN.9/WG.IV/WP.120, annex. An identity system involves (a) a set of rules, methods, procedures and routines, technology, standards, policies, and processes, (b) applicable to a group of participating entities, (c) governing the collection, verification, storage, exchange, authentication, and reliance on identity attribute information about an individual person, a legal entity, device, or digital object, (d) for the purpose of facilitating identity transactions. Synonyms: identity management system ("IdM system"); identity federation; electronic identification scheme.

34. "Identity transaction" means any transaction involving two or more participants which involves establishing, verifying, issuing, asserting, revoking, communicating, or relying on identity information.

35. "Identity verification" means the process of confirming that a claimed identity is correct by comparing the offered claims of identity with previously proven information. Source: Rec. ITU-T X.1252.

36. "Level of assurance" means a designation of the degree of confidence in the identification and authentication processes — i.e., (a) the degree of confidence in the vetting process used to establish the identity of an entity to whom a credential was issued, and (b) the degree of confidence that the entity using the credential is the entity to whom the credential was issued. The assurance reflects the reliability of methods, processes and technologies used. Some level of assurance schemes define levels of assurance by number, i.e., Levels 1 to 4, where Level 1 is the lowest assurance level, and Level 4 is the highest. Other schemes designate assurance levels as "low," "substantial" and "high". Synonyms: assurance level; identity assurance; trust level.

37. "Multifactor authentication" means authentication with at least two independent authentication factors. Note: authentication factors are divided into four categories: (a) something an entity has (e.g., device signature, passport, hardware device containing a credential, private key); (b) something an entity knows (e.g., password, PIN); (c) something an entity is (e.g., biometric characteristic); or (d) something an entity typically does (e.g., behaviour pattern). Source: ISO/IEC 19790; Rec. ITU-T X.1254

38. "Multi-party identity system" means an identity system, also referred to as an identity federation, in which a subject can use an identity credential issued by any one of several identity providers to authenticate multiple unrelated relying parties; An identity system that allows the use of identity credentials issued, and identity information asserted, by one or more identity providers with multiple relying parties. Source: A/CN.9/WG.IV/WP.120, annex. Synonym: identity federation.

39. "Participant" means any person or legal entity that participates in an identity system or an identity transaction using such system. Participants include subjects, identity providers, attribute providers, credential providers, relying parties, identity system operators, and others. Like participants in a credit card system, participants in an identity system typically agree contractually to a set of system rules (often referred to as a trust framework) applicable to their role.

40. "Proofing" means the verification and validation of information when enrolling new entities into identity systems. Source: Rec. ITU-T X.1252. Synonyms: identity proofing, identification.

41. "Pseudonym" means an identifier whose binding to an entity is not known or is known to only a limited extent, within the context in which it is used. Note: a pseudonym can be used to avoid or reduce privacy risks associated with the use of identifier bindings which may reveal the identity of the entity. Source: Rec. ITU-T X.1252.

42. "Registration" means a process in which an entity requests and is assigned privileges to use a service or resource. Note: enrolment is a pre-requisite to registration. Enrolment and registration functions may be combined or separate. Source: Rec. ITU-T X.1252.

43. "Registration authority" means an entity that provides enrolment and/or identity proofing services in the context of a federated (i.e., multi-party) identity system, usually for an identity provider.

44. "Relying party" means (a) the person or legal entity that relies on an identity credential or identity assertion to make a decision as to what action to take in a given application

context, such as to process a transaction or grant access to information or a system. Source: A/CN.9/WG.IV/WP.120, annex; (b) an entity that relies on an identity representation or claim by a requesting/asserting entity within some request context. Source: Rec. ITU-T X.1252; (c) a natural or legal person that relies upon an electronic identification or a trust service. Source: Regulation (EU) No. 910/2014 of the European Parliament and of the Council of 23 July 2014 on electronic identification and trust services for electronic transactions in the internal market and repealing Directive 1999/93/EC ("eIDAS"), article 3(6).

45. "Repository" means an interface that accepts deposits of digital entities, enables their retention, and provides secure access to the digital entities via their identifiers. Source: Rec. ITU-T X.1255.

46. "Role" means a type (or category) of participant in an identity system, such as a subject, identity provider, credential provider, relying party, etc. A participant may have multiple roles. For example, with respect to the identification of its employees, an employer may function as both an identity provider and a relying party.

47. "Self-asserted identity" means an identity that an entity declares to be its own. Source: Rec. ITU-T X.1252.

48. "Subject" means the person, legal entity, device, or digital object (i.e., the entity) that is identified in a particular identity credential and that can be authenticated and vouched for by an identity provider. Source: A/CN.9/WG.IV/WP.120, annex. Synonyms: user; data subject.

49. "System rules": see trust framework.

50. "Trust" means the firm belief in the reliability and truth of information or in the ability and disposition of an entity to act appropriately, within a specified context. Source: Rec. ITU-T X.1252.

51. "Trust framework" means (a) the system rules for an identity system consisting of the business, technical, and legal rules that govern the participation in and operation of a specific identity system. They are typically privately developed (e.g., by the identity system operator of a specific identity system), and made binding and enforceable on the participants via contract. Source: A/CN.9/WG.IV/WP.120, annex; (b) a set of requirements and enforcement mechanisms for parties exchanging identity information. Source: Rec. ITU-T X.1254; (c) an IdM system where a set of verifiable commitments made by each of the various parties in a transaction to their counter parties, and these commitments necessarily include: (i) controls to help ensure commitments are met and (ii) remedies for failure to meet such commitments. Source: Rec. ITU-T X.1255. Synonyms: system rules; operating rules; scheme rules.

52. "Trust framework provider" means the entity or organization that creates or adopts the system rules and associated contractual structure for a specific identity system. The trust framework provider may also certify the participants that are in compliance with those system rules. For example, credit and debit card issuers may fulfill a similar role in the credit and debit card world; they set forth the system rules and enforce compliance.

53. "Trusted third party" means (a) an authority or its agent, trusted by other actors with respect to other activities (e.g., security related activities). Source: Rec. ITU-T X.1254; (b) an entity accepted by all parties to a transaction as an impartial and trustworthy intermediary to facilitate interactions between and among the parties.

54. "User" means (a) a subject of a credential; a consumer of the services offered by a relying party; (b) any entity that makes use of a resource, e.g., system, equipment, terminal, process, application, or corporate network. Source: Rec. ITU-T X.1252.

55. "Validation" means the process of verifying and confirming that an identity credential is valid (e.g., that it has not expired or been revoked).

56. "Verification" means (a) the process of checking information by comparing the provided information with previously corroborated information. Source: Rec. ITU-T X.1254; (b) the process or instance of establishing the authenticity of something. Note: verification of (identity) information may encompass examination with respect to validity, correct source, original, (unaltered), correctness, binding to the entity, etc. Source: Rec. ITU-T X.1252.

B. Definitions relevant to trust services

57. The following definitions may be particularly relevant in discussions on the legal aspects of trust services. However, a number of the definitions listed as relevant to the discussions on legal aspects of identity management may also be relevant for the discussions on the legal aspects of trust services (see above, para. 6).

58. "Certification service provider" means a person that issues certificates and may provide other services related to electronic signatures; Source: UNCITRAL Model Law on Electronic Signatures, article 2(e).[3]

59. "Electronic registered delivery service" means a service that makes it possible to transmit data between third parties by electronic means and provides evidence relating to the handling of the transmitted data, including proof of sending and receiving the data, and that protects transmitted data against the risk of loss, theft, damage or any unauthorized alterations. Source: eIDAS, article 3(36).

60. "Electronic seal" means data in electronic form, which is attached to or logically associated with other data in electronic form to ensure the latter's origin and integrity. Source: eIDAS, article 3(25).

61. "Electronic signature" means (a) data in electronic form which is attached to or logically associated with other data in electronic form and which is used by the signatory to sign. Source: eIDAS, article 3(10); (b) data in electronic form in, affixed to or logically associated with, a data message, which may be used to identify the signatory in relation to the data message and to indicate the signatory's approval of the information contained in the data message. Source: UNCITRAL Model Law on Electronic Signatures, article 2(a). Note: article 9(3)(a) of the United Nations Convention on the Use of Electronic Communications in International Contracts (New York, 2005)[4] refers to indication of the signatory's intention in respect of the information contained in the electronic communication.

62. "Electronic time stamp" means data in electronic form which binds other data in electronic form to a particular time establishing evidence that the latter data existed at that time. Source: eIDAS, article 3(33).

63. "Relying party" means a person that may act on the basis of a certificate or an electronic signature. Source: UNCITRAL Model Law on Electronic Signatures, article 2(f).

64. "Trust service" means an electronic service normally provided for remuneration which consists of: (a) the creation, verification, and validation of electronic signatures, electronic seals or electronic time stamps, electronic registered delivery services and certificates related to those services, or (b) the creation, verification and validation of certificates for website authentication; or (c) the preservation of electronic signatures, seals or certificates related to those services. Source: eIDAS, article 3(16).

65. "Trust service provider" means a natural or a legal person who provides one or more trust services [either as a qualified or as a non-qualified trust service provider]. Source: eIDAS, article 3(19).

66. "Time stamp" means a reliable time variant parameter which denotes a point in time with respect to a common reference. Source: Rec. ITU-T X.1254.

67. "Validation" means the process of verifying and confirming that an electronic signature or a seal is valid. Source: eIDAS, article 3(41).

G. Note by the Secretariat on work in the field of electronic commerce: legal issues relating to electronic identity management and trust services: proposal by Austria, Belgium, France, Italy, the United Kingdom and the European Union

(A/CN.9/WG.IV/WP.144)

[Original: English/French]

The governments of Belgium, France, Italy and the United Kingdom, from the Austrian delegation and the European Union submitted to the Secretariat a paper for consideration at the fifty-fifth session of the Working Group. The text received by the Secretariat is reproduced as an annex to this note.

Annex

Proposal by Austria, Belgium, France, Italy, the United Kingdom and the European Union

Date: 26 January 2017

Proposal from the Governments of Belgium, France, Italy and the United Kingdom of Great-Britain and Northern-Ireland, from the Austrian delegation and the European Union : work in the field of electronic commerce — legal issues relating to electronic identity management and trust services.

I. Introduction

1. Pursuant to the mandate of the 44th Session of the Commission in 2011, the Working Group IV on electronic commerce (hereinafter Working Group IV) undertook work in the field of electronic transferable records.[1] During the 49th session of the Commission, Working Group IV reported on its work undertaken during its 52nd and 53rd sessions. Work on the provisions of the draft Model Law on Electronic Transferable records is being finalised.

2. At its 44th session in 2011, the Commission also noted that some support was also expressed for dealing with legal issues relating to identity management (IdM) as a possible topic in the mandate of Working Group IV.[2] At its 48th session in 2015, the Commission instructed the Secretariat to conduct preparatory work on IdM and trust services, cloud computing and mobile commerce, including through the organization of colloquia and expert group meetings, for future discussion at the Working Group level following the current work on electronic transferable records. The Commission also asked the Secretariat to share the result of that preparatory work with Working Group IV, with a view to seeking recommendations on the exact scope, possible methodology and priorities for the consideration of the Commission at its forty-ninth session.[3]

3. Further to this request, at its forty-ninth session, the Secretariat submitted to the Commission a note on the legal issues related to IdM and trust services, which

[1] Report of the United Nations Commission on International Trade Law, forty-fourth session (27 June-8 July 2011) - A/66/17, para. 238.
[2] Ibid., para. 236.
[3] Report of the United Nations Commission on International Trade Law on the work of its forty-eighth session (2015), UN document A /70/17, para. 358.

provided a summary of the discussions held at the colloquium and at other relevant meetings on this subject.[4]

4. The Commission, at its forty-ninth session in 2016, reaffirmed the mandate given to Working Group IV to complete the preparation of the draft Model Law on Electronic Transferable Records and the accompanying explanatory note, and to consider the topics of IdM and trust services as well as of cloud computing upon completion of work on the draft Model Law.[5]

5. In accordance with the reaffirmation of this mandate, during the 54th session of Working Group IV the draft model law on electronic transferable records was finalised and work on IdM and trust services started. Following fruitful discussions on the latter subject,[6] Working Group IV decided that the following session would be devoted in particular to clarifying the objectives of the project on IdM and trust services, to stressing its scope, identifying the applicable general principles, listing the concepts to be defined and making a first draft definition of these.[7]

6. In this context, this proposal aims to provide the Working Group IV with a contribution on the above mentioned elements with a view to supporting the discussions during the 55th session of this Group, while remaining open to additional proposals aimed at fuelling the discussions.

II. Context, scope and objectives of the project

7. The proposed work in the field of IdM and trust services is directly linked to the work carried out by Working Group IV (1) in the past (in particular with reference to the model law on electronic commerce, the model law on Electronic Signatures and the Convention on the Use of Electronic Communications in International Contracts), (2) currently (work on electronic transferable records), and (3) in the future, on other topics that have been discussed, such as cloud computing or mobile payments.

8. De facto, IdM is a fundamental requirement underpinning most of the work that has been (or is being) undertaken by Working Group IV. In addition, many requirements provided for in UNCITRAL texts which are applicable to e-commerce can be facilitated by the use of one or more trust services provided by trust service providers. A “trust service” may include electronic signatures, electronic seals to ensure the origin and integrity of a document, electronic time stamps to provide a document with a specific date, secure communication of a document between parties (electronic registered delivery service), or website authentication.

9. Reliable IdM and the use of reliable trustworthy services have become essential requirements for e-commerce activities because of the increasing importance and sensitivity of online transactions.

10. In many Internet transactions, verifying the identity of a website’s owner is needed to ensure that the website belongs and is effectively managed by the legal person who claims to be behind it. Similarly, it is often important that parties identify themselves when starting interacting online. In addition, the electronic signature of a final agreement may also require identifying the different signatories, to ensure that they have expressed their consent to a content that will maintain its integrity, and stamping the document to provide it with a specific date and time. Finally, in some cases it is important that documents are transmitted to the other party through a secure channel that ensures the date of sending and receiving the document.

11. Identity authentication and trust services contribute significantly to a paperless commerce environment, since the daily operations of public administrations and businesses can be performed faster, more efficiently and at a lower cost. In this

[4] Document A/CN.9/891.
[5] Report of the United Nations Commission on International Trade Law on the work of its forty-ninth session (2016), UN document A/71/17, para. 353.
[6] Report of the 54th session of the Working Group IV on electronic commerce (16 November 2016), A/CN.9/897, para. 107 to 123.
[7] Ibid., para. 120.

context, many entities, both public and private, develop (or would like to develop) economic models that provide, or make use of, IdM and trust services.

12. Today national and regional reflections and initiatives in the field of IdM and/or trust services are numerous and have now reached maturity. While sometimes adopting contradictory approaches, they allow identifying relevant issues and can guide the discussion on devising the appropriate legal frameworks at international level that could be transposed into the existing different legal systems.

13. Work in the field of IdM and trust services aims at:

- Facilitating the development of international trade law and addressing the need to provide economic players with the tools to ensure the legal certainty of their electronic transactions.
- Contributing to harmonising emerging legal aspects of the projects which are currently addressing in silos these questions at national or international level. The objective would be to provide for a general legal framework applicable to both IdM and trust services, including the appropriate provisions to foster international cross-border legal and technical interoperability.
- Raising public administrations' and businesses' awareness — who are not always aware of the legal issues at stake -, with a view to boosting trust in electronic commerce and transactions.
- Completing and providing practical solutions to existing documents produced by UNCITRAL. More specifically, work in this field would aim at drafting legal provisions with a view to making the "abstract" requirements drafted in the above mentioned UNCITRAL texts more "concrete and operational". Businesses would therefore take advantage of clear legal rules to better manage their risk in the context of the international electronic commerce and to ensure the legal certainty of their transactions in a simple and efficient manner.

14. Given the close relationship between the two topics, the work should be focusing from the outset on both IdM and trust services. The definition of the scope of the work and of the concepts should therefore include these two closely related topics. Such an approach does not prevent from working on these topics in a sequential manner at a later stage.

III. Identification of applicable general principles and possible orientations

15. The fundamental principles underpinning UNCITRAL texts should guide the work on IdM and trust services. These include:

- *The principle of party autonomy*. The use of the provided tools should remain optional and fully respect party autonomy. Parties should also remain free to decide the level of assurance/security to be used. Providers should remain free to offer one or more IdM and trust services, and among them to provide one or more levels of assurance/security. To sum up, the set legal rules should be considered as a "legal toolbox" to be put at the disposal of the market players.
- *The principle of neutrality both technological and of economic models*. Providing a legal framework should in no way hamper innovation and business opportunities by introducing strict rules that would favour a technical solution or an economic model over another.
- *The principle of non-discrimination*. The legal effect and admissibility as evidence in legal proceedings of an electronic identification (eID) or a trust service should not be denied solely on the grounds that such service is in an electronic form or that it does not meet the requirements of the assurance/security levels.
- *The principle of functional equivalence* aiming at ensuring comparable legal functions, whether we act in the physical or in the electronic environment.

16. The issues that should be addressed when drafting the legal provisions, both for IdM and for trust services, are the following:

(a) The definition of different levels of assurance/security on the basis of objective criteria: assurance/security of IdM and trust services is often a critical element. Defining and measuring assurance/security can be fundamental in some cases. What is the assurance/security of an identity service or management system or of a trust service? The absence of objective evidence to judge the actual quality and assurance of a service may be a significant problem for stakeholders, in particular as part of their risk management policy. A flexible model providing for different levels of requirements for IdM and/or trust services and identity and/or trust service providers would respect the diversity of the systems around the world.

(b) Distinct legal effects associated to the level of assurance: The legal effects of electronic identification and authentication as well as those of a number of trust services should be defined. The objective is to determine the legal effects stemming from electronic identification and trust services according to each defined level of assurance. Stakeholders could thus effectively manage their legal risks by opting for the most appropriate level of assurance and legal effect in line with their needs. In order to define these different legal effects, one could, in particular, take account — when appropriate — of the principle of non-discrimination, the principle of assimilation, the principle of mutual recognition, particular presumptions and/or mechanisms for reversing the burden of proof. The higher the level of assurance, the more favourable the legal effect would be to the user of the service.

(c) Liability regimes according to the level of assurance: Defining the liability regime of the providers of electronic identification systems and of trust services in order to foster the required clarity and predictability. This regime would vary depending on the provided level of assurance.

17. For the services of IdM in particular, the following guidelines should be followed:

- By applying the principle of the party autonomy, providers of an online service can decide whether to require an electronic identification and authentication to access their service and which level of assurance is required.
- Cross-border mutual recognition of electronic identification means which have an assurance level equal to or higher than the assurance level required for the online access. This principle would be based on the definition of the different assurance levels of electronic identification means. Each level would be characterised by harmonised objective criteria.
- In order to determine which systems for IdM should be taken into account in our work, the purpose/aim of the use of the electronic identification means should first be identified, i.e. whether this is intended to be used -fully or partially — for commercial transactions or not, and later to understand who has issued the electronic identification means (whether it is the public or private sector or both). Since the purpose of using eID means may be commercial, all eID means — even those fully or partially issued by the public sector — should be considered in our work.
- Our work should first focus on identification of natural and legal persons, initially leaving out the question of identifying material (e.g. servers, smartphones, terminals ...) or digital objects (software ...). Since we need to establish rules of law, priority should be given to identifying the subject of law (whether natural or legal person) who has **rights and obligations and takes liability** (e.g. a website, a **copyright or a server owner**). Material or digital objects will always be linked to a natural or legal person. The identification of objects is essentially a technical and security issue rather than a legal one.
- eID means of a higher level should at least be attached to person identification data issued/managed by an **authoritative source**.

- For the higher assurance levels, an obligation should be established for the providers of eID means to notify any security breach to their system and, where necessary, to suspend it. The provider should notify in accordance with the provisions laid down in national law and, given the cross-border context, make the information publicly available.

- A presumption could be established by which objective criteria defining the assurance levels as well as the legal requirements should be respected if the provider is in line with the technical standards defined by an international authority.

18. For IdM, three assurance levels could be set: (a) low ; (B) substantial; And (C) high.

- Assurance levels would be based on technical specifications, standards and procedures related thereto.

- A cooperation mechanism and an interoperability framework could be foreseen to define the criteria underpinning the assurance levels as well as to exchange the information related to eID means and their assurance levels.

- A principle of cross-border mutual recognition would be envisaged for those eID means having an equivalent (or higher) assurance level (from the substantial level).

19. For trust services, the following guidelines should be followed:

- with a view to defining and harmonising security levels of trust services, there should be at least two levels:

  1. non-qualified trust services;

  2. Qualified trust services.

- The legal effects differ according to the security level of the trust service:

  1. If the trust service is NOT qualified: the legal effect is limited to the non-discrimination clause.

  2. If the trust service is QUALIFIED: the legal effect would include assimilation, presumption, reversal of the burden of proof.

- A principle of cross-border mutual recognition for trust services having an equivalent security level would be established.

- A general requirement on security, which is commensurate to the degree of risk, would be set for all providers (qualified or not).

- Specific requirements for qualified trust service providers and for the qualified trust services they provide would be provided for to ensure a high level of reliability/security.

- Liability regime would depend on whether the trust service provider is qualified or not.

- A requirement could be established for all trust service providers (at least qualified) to notify any breach of security to their system and, where necessary, to suspend it. The provider should notify in accordance with the provisions laid down in national law and, given the cross-border context, make the information publicly available.

- A presumption could be established by which objective criteria defining the security levels as well as the legal requirements should be respected if the provider is in line with the technical standards defined by an international authority.

IV. Identification of concepts and proposed draft definitions

20. In view of the forthcoming discussions on IdM and trust services, the following (non-exhaustive) list of concepts and definitions is proposed:

- ***Electronic identification:*** means the process of using person identification data in electronic form uniquely representing either a natural or legal person, or a natural person representing a legal person;
- ***Electronic identification means:*** means a material and/or immaterial unit containing person identification data and which is used for authentication for an online service;
- ***Person identification data*** means a set of data enabling the identity of a natural or legal person, or a natural person representing a legal person to be established;
- ***Electronic identification scheme*** means a system for electronic identification under which electronic identification means are issued to natural or legal persons, or natural persons representing legal persons;
- ***Authentication*** means an electronic process that enables the electronic identification of a natural or legal person, or the origin and integrity of data in electronic form to be confirmed;
- ***Authoritative source*** means any source irrespective of its form that can be relied upon to provide accurate data, information and/or evidence that can be used to prove identity;
- ***Trust service*** means an electronic service (normally provided for remuneration) which consists of:
  1. the creation, verification, and validation of electronic signatures, electronic seals or electronic time stamps, electronic registered delivery services and certificates related to those services, or
  2. the creation, verification and validation of certificates for website authentication; or
  3. the preservation of electronic signatures, seals or certificates related to those services;
- ***Qualified trust service*** means a trust service that meets the applicable requirements laid down in this text [Convention, Model Law];
- ***Electronic signature*** means data in electronic form which is attached to or logically associated with other data in electronic form and which is used by the signatory to sign;
- ***Signatory*** means a natural person who creates an electronic signature;
- ***Electronic seal*** means data in electronic form, which is attached to or logically associated with other data in electronic form to ensure the latter's origin and integrity;
- ***Electronic time stamp*** means data in electronic form which binds other data in electronic form to a particular time establishing evidence that the latter data existed at that time;
- ***Electronic registered delivery service*** means a service that makes it possible to transmit data between third parties by electronic means and provides evidence relating to the handling of the transmitted data, including proof of sending and receiving the data, and that protects transmitted data against the risk of loss, theft, damage or any unauthorised alterations;
- ***Certificate for website authentication*** means an attestation that makes it possible to authenticate a website and links the website to the natural or legal person to whom the certificate is issued;

- ***Electronic document*** means any content stored in electronic form, in particular text or sound, visual or audiovisual recording;
- ***Validation*** means the process of verifying and confirming that an electronic signature or a seal is valid;
- ***Relying party*** means a natural or legal person that relies upon an electronic identification or a trust service.

V. Linkages with practice

In order to better understand the scope of the work, concepts and links with practice, concrete projects set up in different countries or regions may be presented during the session(s) of Working Group IV. A presentation of CEF eID DSI and of the eIDAS node could be provided in order to illustrate how this works and is being implemented by the EU Member States.

H. Note by the Secretariat on legal issues related to identity management and trust services: proposal by the United States of America

(A/CN.9/WG.IV/WP.145)

[Original: English]

The United States of America submitted to the Secretariat a paper for consideration at the fifty-fifth session of the Working Group. The paper is reproduced as an annex to this note in the form in which it was received by the Secretariat.

Annex

I. Introduction

At its 54th session, Working Group IV (Electronic Commerce) began its discussions on the topic of identity management (IdM) and trust services. The tentative initial conclusions of the Working Group were as follows:

> 118. After discussion, the Working Group agreed that its future work on IdM and trust services should be limited to the use of IdM systems for commercial purposes and that it should not take into account the private or public nature of the IdM services provider.
>
> 119. The Working Group also agreed that work on IdM could take place on a priority basis. It further agreed that focus should be placed on multi-party identity systems and on natural and legal persons, without excluding consideration of two-party identity systems and of physical and digital objects when appropriate.
>
> 120. In addition, it was agreed that the Working Group should continue its work by further clarifying the goals of the project, specifying its scope, identifying applicable general principles and drafting necessary definitions.

(A/CN.9/897 at paras. 118-120).

To help focus the discussion for the 55th session of the Working Group and thereafter, the delegation of the United States of America has prepared this paper in an attempt to provide an outline of issues for the Working Group to consider. While there are undoubtedly many other issues that the Working Group will need to consider, the following initial list can hopefully be used as a starting point to guide initial discussions and to help focus the efforts of the Working Group. It is our hope the discussion of these issues, and other issues that may be identified by the Working Group, may provide direction to the Secretariat for the preparation of a Working Paper on IdM.

We understand that experts have engaged in an informal discussion of relevant terminology during the intersessional period. Although we believe that it will ultimately be necessary to carefully consider the wording of the definitions of the terminology to be used in this project, at this initial stage we recommend that the Working Group consider using initial definitions simply as the basis for facilitating its discussion. We recognize, however, that agreement on more detailed legal and technical definitions may ultimately be required.

II. Project Goals and Objectives

As a starting point, the Working Group may want to give consideration to the overall goals and objectives for the project. In light of the initial decision to focus on the use

of IdM systems for commercial purposes, the Working Group may want to consider which of the following goals and objectives might be appropriate for this project:

- Promote the development of a private sector identity ecosystem;
- Identify and remove legal barriers to commercial identity transactions;
- Remove ambiguities regarding the applicability of existing law to commercial identity transactions;
- Encourage the commercial use of and reliance on third party digital identity credentials;
- Facilitate the trust needed for commercial online identity transactions;
- Assist private parties by providing a basis for deciding whether to trust digital identity information in commercial transactions;
- Identify and remove cross-border obstacles to e-authentication;
- Facilitate cross-border recognition of digital identity information; and
- Foster confidence in electronic commerce.

III. Nature of the Proposed WG IV Work Product

It might be useful to begin consideration of the type of product the Working Group would like to develop in the field of commercial identity management.

IV. Governing Principles

Regardless of the ultimate form of the work product to be produced by the Working Group, there are several general principles that the Working Group may want to consider, and where appropriate adopt, to guide its work with respect to IdM. As with the Model Law on Electronic Commerce and the UN Convention on the Use of Electronic Communications in International Contracts, such general principles can be used to guide the Working Group in its deliberations. Moreover, governing principles can be useful to help clarify the scope of work. Possible governing principles the Working Group may want to consider include the following:

A. Source of Legal Duty to Identify

As a starting point, the Working Group may want to consider whether any IdM legislation should contain obligations to identify a party in a commercial transaction independent of those that apply as a result of other legislation. If IdM legislation does not contain any obligations to identify a party, legal requirements to identify a party in a commercial transaction would be left to other existing laws such as laws governing notarization, “know your customer” requirements, anti-money laundering laws, or laws governing access to personal data. This was the approach the Working Group took with respect to electronic signatures when it developed the Model Law on Electronic Commerce and the UN Convention on the Use of Electronic Communications in International Contracts.

B. Party Autonomy

Because IdM systems will typically be governed by contract-based system rules agreed to by the participants in such systems, it may be important to consider whether, and the extent to which, any law governing IdM transactions should recognize and defer to such system rules.

Thus, the Working Group may want to consider whether the principle of party autonomy should apply to commercial identity systems to allow the parties to an

identity system to vary by agreement the provisions of any legal rule, or of certain legal rules.

C. Technology Neutrality

Many different types of identity systems may be developed and implemented for use in commercial transactions. Such systems may use a wide variety of technologies. These may include simple usernames and passwords, more complex systems based on the PKI x.509 standard or other standards such as SAML or OpenID Connect. Additionally, systems are currently being developed using new technologies, such as Blockchain.

Thus, the Working Group may want to consider whether any work product relating to IdM should make clear that any IdM rules should not require the use of any particular technology.

The Working Group may want to further consider how UNCITRAL might best address the existence and use of multiple commercial identity systems.

Legislation other than that specific to IdM may, of course, require that parties use identity systems that meet certain requirements. And parties themselves may insist that the persons and entities with which they do business use a particular identity system. For example, a commercial entity could restrict access to its services to users that use one or more specific identity systems of which it is a member.

D. System Model Neutrality

In addition to variations among technologies deployed, commercial identity systems are currently the subject of a great deal of experimentation with respect to organizational and business structures and approaches deployed. We can probably expect to see quite a wide variation among identity system models in the future, even if they use the same underlying technology. These include broker or hub type arrangements, single identity provider models, single relying party models, organizational models, and many other different approaches.

Accordingly, the Working Group may want to consider whether it should adopt as a principle the concept of system model neutrality -- that is, a recognition that any work product developed should not be written in a way that assumes or requires the use of any particular identity system business, organizational, or structural model, and that can readily accommodate future changes in identity system approach, structure, and business model.

E. Non-Discrimination

The Working Group may also want to consider the applicability of the principle of non-discrimination in the context of the use of identity systems for commercial purposes. Under such a principle, for example, the legal effect (e.g., satisfaction of a legal requirement for identification) and admissibility as evidence in legal proceedings of an electronic identification should not be denied solely on the grounds that such identification was made in electronic form.

F. Relationship between Identity Management Law and Privacy Law

Commercial identity transactions involving the issuance or use of an identity credential will frequently involve some personal data. In such cases, privacy of such personal data may be important.

Privacy laws usually address the protection of personal data in accord with relevant public policy. Accordingly, the Working Group may want to consider the relationship between these laws and IdM systems.

G. Relationship between Identity Management Law and Data Security Law

Data security is critical to the proper functioning and trustworthiness of identity transactions, both from the perspective of protecting the confidentiality of the personal data involved in such transactions and for ensuring the proper functioning and trustworthiness of the credentials communications comprising the transaction itself.

Data protection laws often address the security of personal data in accord with relevant public policy. Similarly, other data security laws may do the same with respect to protecting other aspects of identity transaction communications. Accordingly, the Working Group may want to consider the relationship between these laws and IdM systems.

H. Relationship between Contract-Based System Rules and Other Law

Because IdM systems will typically be governed by contract-based system rules (i.e., trust frameworks) agreed to by the participants in such systems, the Working Group may want to discuss the relationship b5,etween these rules and applicable laws that are not directly related to identity.

V. Substantive Topics

A. Legal Recognition

The Working Group may want to consider the topic of legal recognition of identity information authenticated in a commercial transaction. In this regard, the Working Group may want to address what legal recognition is, what it seeks to achieve, and the requirements to obtain it; who provides legal recognition; the purposes for which legal recognition is provided; the relationship between legal recognition and laws that require some form of identification, such as laws governing notarization, “Know Your Customer,” anti-money laundering, access to personal data; and how, if at all, legal recognition applies to the identity of legal entities, devices, or digital objects.

B. Cross-Border Mutual Recognition.

The concept of mutual recognition is important to facilitate the commercial use of identity credentials, and reliance on those credentials, both across identity systems and across jurisdictional boundaries.

There are numerous issues that the Working Group may want to consider with respect to the subject of mutual recognition. Some of the more obvious issues include addressing: (a) whether there should be a requirement to recognize credentials, (b) if there is requirement to recognize credentials, who should be required to recognize the credentials, (c) if there is a requirement to recognize credentials, which party’s credentials should be recognized, (d) what is the purpose of such mutual recognition, (e) what exactly does “mutual recognition” mean, (f) what characteristics (e.g., levels of assurance) should be present for mutual recognition, (g) should there be limits on when mutual recognition applies, and (h) should mutual recognition apply to identity of legal entities, devices, or digital objects?

C. Attribution of Identity Information to a Subject

Attribution of identity information to a subject (for inclusion in an identity credential) is often a critical element of identity management systems. A fundamental question

governing attribution is when and under what circumstances is identity data in a credential to be attributed to a specific subject.

The Working Group may want to consider this issue from two perspectives. First, how should an identity provider ensure that the information about a subject that it includes in an identity credential does in fact describe the subject named in the credential? Second, when an identity credential is used, how can a relying party ensure that the information in the credential relates to the subject presenting the credential?

D. Reliance / Attribution of Action, Data Message, or Signature to a Subject

A key question for all participants in an identity system is when, and under what circumstances, reliance on an identity credential by a party is appropriate and reasonable. The reasonableness of reliance by a party can affect a variety of issues, including when an erroneous identity credential is relied upon.

For example, in the context of electronic signatures, this issue was addressed in Article 13 of the Model Law on Electronic Commerce.

E. Liability / Risk Allocation

Issues of liability and risk allocation are frequently cited as major barriers to the implementation of commercial identity systems. Issues include (a) concerns by identity providers and other participants in identity systems that the liability risk allocated to them under existing law is inappropriate or simply too onerous to allow them to proceed, as well as (b) concerns by participants in identity systems that the law is too vague, ambiguous or uncertain to allow them to properly assess their risks of participating.

The Working Group may want to consider whether it should address the issue of liability, and if so, for which identity system roles, and how. Examples of laws which address liability in the context of IdM systems include the European Union eIDAS regulation and the Virginia Electronic Identity Management Act.

F. Transparency

The processes, procedures, and technology used by an identity provider to issue and validate identity credentials can have a significant impact on the trustworthiness of any identity transaction using those credentials. Accordingly, it may be important that other participants in an identity system understand how those processes, procedures, and technology are implemented, so that they can make their own assessment as to the reliability and trustworthiness of the resulting identity transactions. To that end, the Working Group may want to consider whether there is an appropriate level of transparency on the part of certain participants within an identity system. Likewise, in the event of a breach or compromise in any of the processes, procedures, technology, databases, or identity credentials maintained by a party in the context of an identity system, the Working Group may want to consider whether information regarding such compromise should be disclosed.

In some cases, transparency requirements have also been used as a substitute for regulation mandating certain processes, procedures, or technology. An approach based on transparency allows parties to make their own decisions regarding trustworthiness based on more complete information.

G. Trustworthiness/Levels of Assurance

Many identity systems define so-called “levels of assurance” to help the participants to address concerns regarding the trustworthiness of identity credentials and identity

transactions. Several levels of assurance schemes exist, and they often involve differing gradations of assurance. For example, the EU defines three levels of assurance in its eIDAS Regulation (designated as “low,” “high,” and “substantial”), whereas four levels of assurance are utilized in the United States and elsewhere.

The Working Group may want to consider how best to facilitate trust by the participants in an identity system. While the concept of levels of assurance is commonly used, the Working Group may also want to consider whether other mechanisms, such as mandated transparency, third-party certification, or other approaches can be used to help facilitate trust.

I. Note by the Secretariat on legal issues related to identity management and trust services: proposal by the United Kingdom of Great Britain and Northern Ireland

(A/CN.9/WG.IV/WP.146)

[Original: English]

The United Kingdom of Great Britain and Northern Ireland submitted to the Secretariat a paper for consideration at the fifty-fifth session of the Working Group. The paper is reproduced as an annex to this note in the form in which it was received by the Secretariat.

Annex

Outcome Based Standards and International Interoperability

Enabling International Interoperability

Over the past decade the necessity of electronic identity (eID) to underpin an expanding digital economy has become apparent. Many countries have brought their residents and businesses online through the use of trusted electronic ID, enabling them to transact with their government and with private sector organizations, promptly, efficiently and securely.

While this has been a successful catalyst within countries, eID can only support substantial and sustained economic growth for a digital economy when that eID can operate across borders and jurisdictions. For this to be a reality those countries and jurisdictions need to be able to understand and trust the issuance and security of the issuing country's eID.

It is unlikely that all countries will adopt similar or the same eID scheme. Therefore the only realistic solution is to accept another country's eID on the basis of mutual recognition of equivalent schemes.

Mutual Recognition

Mutual recognition of standards, eID schemes and trust frameworks makes it possible for a user to prove their identity anywhere in the world; users can securely assert their identity to digital services; and an international identity ecosystem can give users and services confidence.

However, for this to be effective there has to be well understood internationally recognized standards by which an eID scheme can be measured. Countries can then express the capabilities of their schemes against such standards, and consumers of the eID issued by that country have assurance about its quality and trust.

Existing Internationally Recognized eID Standards

Many countries already have functioning eID schemes and standards bodies and supra-national organizations have already created a number of standardization frameworks in order to enable mutual recognition. The most prominent frameworks in this area are:

- ISO/IEC 29115 Entity Authentication Assurance Framework
- EU regulation N°910/2014 on Electronic Identification and Trust Services for Electronic Transactions in the Internal Market
- Draft ISO/IEC 29003 Identity Proofing
- NIST SP 800-63-3 Digital Identity Guidelines

Countries can express their capabilities in terms of these frameworks, including through independent certification. To accelerate the growth of the digital economy the UNCITRAL Working Group should look at how to create a structure to determine equivalence between existing international standards, eID schemes and trust frameworks.

There is ongoing bilateral work in this area between the UK, USA and Canada, as well as between some EU Member States as a precursor to notification under EU regulation N°910/2014. Some learnings could be taken from these activities to help inform what further action could be taken at a UNCITRAL working group level.

An Outcome Based Standardization Approach

An outcome based standard clearly describes the outcome that is going to be measured without favouring any specific technology or product. By taking an outcome based approach it is possible to react to new threats, take advantage of new technologies and reduce costs without impacting quality. These changes can be applied in a timely fashion yet remain compliant because the outcome based standard would not require amendment.

An outcome based approach makes it easier to reach a common agreement on the assurance required and to be technology neutral. If the assurance level specifies exactly the solution to be implemented, this creates a "lock-in" to a certain process and/or technology which discourages innovation, prevents evolution and alienates other implementations that deliver the same levels of assurance.

Outcome based assurance can ensure that potential providers have scope to design and develop different methods to achieve the same objective and encourage those providers to compete on cost and capability. Providers are then incentivized to maintain their product, replacing and improving this over time in order to maintain the capabilities and reduce cost. Outcome based levels are not a new concept in European law. To give just one example, by requiring "*a 40% offset deformable barrier test conducted at 56km/h*", EU vehicle safety legislation allows manufacturers to innovate with new physical materials/alloys to change or redesign their vehicle as long as the resulting vehicle continues to meet the frontal impact outcome based standard.

Example of Mutual Recognition for an Outcome Based Assurance Standard for Electronic Identity — eIDAS

EU regulation N°910/2014 on electronic identification and trust services for electronic transactions in the internal market (eIDAS) created a uniform understanding of the assurance and trust frameworks that are to accepted at an intra member state level. The Regulation sets out several levels of assurance (low, substantial and high) for electronic identity that define the outcomes that a national eID scheme must be able to demonstrate in order to be considered equivalent.

The principal is that the outcome based approach sets out the objective to be achieved for reaching the different LoAs for each of the different elements of the electronic identification scheme. The more rigorous the objective, controls or process, the higher the level of confidence and therefore the higher the LoA. How the objective is achieved is determined by the scheme operator within the member state. It does not require that a member state alter or harmonize their existing national eID schemes, it is a way to measure the equivalence of a scheme against a set benchmark.

Furthermore, in addition to the substantial work on eIDAS, the U.K. is presently running initial standards mapping exercises with the US and Canada; and scoping similar themed work through its membership of the Digital 5 group of nations Estonia, Israel, New Zealand, South Korea and the U.K.

Summary

The U.K. sees international interoperability of eID as a key driver for the growth of digital economies around the world, which would support sustainable and secure

economic growth globally in the future. We support further work being carried out in this area by UNCITRAL, whilst emphasizing the need to ensure that international interoperability, mutual recognition and an outcome based approach are considered, and that any output is aligned to existing internationally recognized eID standards.

J. Note by the Secretariat on a draft Model Law on Electronic Transferable Records with explanatory notes

(A/CN.9/920)

[Original: English]

Contents

Draft Model Law on Electronic Transferable Records

CHAPTER I. GENERAL PROVISIONS

Article 1. Scope of application

1. This Law applies to electronic transferable records.

2. Other than as provided for in this Law, nothing in this Law affects the application to an electronic transferable record of any rule of law governing a transferable document or instrument including any rule of law applicable to consumer protection.

3. This Law does not apply to securities, such as shares and bonds, and other investment instruments, and to […].[1]

Article 2. Definitions

For the purposes of this Law:

"*Electronic record*" means information generated, communicated, received or stored by electronic means, including, where appropriate, all information logically associated with or otherwise linked together so as to become part of the record, whether generated contemporaneously or not;

[1] The enacting jurisdiction may consider including a reference to: (a) documents and instruments that may be considered transferable, but that should not fall under the scope of the Model Law; (b) documents and instruments falling under the scope of the Convention Providing a Uniform Law for Bills of Exchange and Promissory Notes (Geneva, 1930) and the Convention Providing a Uniform Law for Cheques (Geneva, 1931); and (c) electronic transferable records existing only in electronic form.

"*Electronic transferable record*" is an electronic record that complies with the requirements of article 10;

"*Transferable document or instrument*" means a document or instrument issued on paper that entitles the holder to claim the performance of the obligation indicated in the document or instrument and to transfer the right to performance of the obligation indicated in the document or instrument through the transfer of that document or instrument.

Article 3. Interpretation

1. This Law is derived from a model law of international origin. In the interpretation of this Law, regard is to be had to the international origin and to the need to promote uniformity in its application.

2. Questions concerning matters governed by this Law which are not expressly settled in it are to be settled in conformity with the general principles on which this Law is based.

Article 4. Party autonomy and privity of contract

1. The parties may derogate from or vary by agreement the following provisions of this Law: […].[2]

2. Such an agreement does not affect the rights of any person that is not a party to that agreement.

Article 5. Information requirements

Nothing in this Law affects the application of any rule of law that may require a person to disclose its identity, place of business or other information, or relieves a person from the legal consequences of making inaccurate, incomplete or false statements in that regard.

Article 6. Additional information in electronic transferable records

Nothing in this Law precludes the inclusion of information in an electronic transferable record in addition to that contained in a transferable document or instrument.

Article 7. Legal recognition of an electronic transferable record

1. An electronic transferable record shall not be denied legal effect, validity or enforceability on the sole ground that it is in electronic form.

2. Nothing in this Law requires a person to use an electronic transferable record without that person's consent.

3. The consent of a person to use an electronic transferable record may be inferred from the person's conduct.

CHAPTER II. PROVISIONS ON FUNCTIONAL EQUIVALENCE

Article 8. Writing

Where the law requires that information should be in writing, that requirement is met with respect to an electronic transferable record if the information contained therein is accessible so as to be usable for subsequent reference.

Article 9. Signature

[2] The enacting jurisdiction may consider which provisions of the Model Law, if any, the parties may derogate from or vary by agreement.

Where the law requires or permits a signature of a person, that requirement is met by an electronic transferable record if a reliable method is used to identify that person and to indicate that person's intention in respect of the information contained in the electronic transferable record.

Article 10. Requirements for the use of an electronic transferable record

1. Where the law requires a transferable document or instrument, that requirement is met by an electronic record if:

(a) The electronic record contains the information that would be required to be contained in a transferable document or instrument; and

(b) A reliable method is used:

(i) To identify that electronic record as the electronic transferable record;

(ii) To render that electronic record capable of being subject to control from its creation until it ceases to have any effect or validity; and

(iii) To retain the integrity of the electronic transferable record.

2. The criterion for assessing integrity shall be whether information contained in the electronic transferable record, including any authorized change that arises from its creation until it ceases to have any effect or validity, has remained complete and unaltered apart from any change which arises in the normal course of communication, storage and display.

Article 11. Control

1. Where the law requires the possession of a transferable document or instrument, that requirement is met with respect to an electronic transferable record if a reliable method is used:

(a) To establish exclusive control of that electronic transferable record by a person; and

(b) To identify that person as the person in control.

2. Where the law requires or permits transfer of possession of a transferable document or instrument, that requirement is met with respect to an electronic transferable record through the transfer of control over the electronic transferable record.

CHAPTER III. USE OF ELECTRONIC TRANSFERABLE RECORDS

Article 12. General reliability standard

For the purposes of articles 9, 10, 11, 13, 17, 18, and 19, the method referred to shall be:

(a) As reliable as appropriate for the fulfilment of the function for which the method is being used, in light of all relevant circumstances, which may include:

(i) Any operational rules relevant to the assessment of reliability;

(ii) The assurance of data integrity;

(iii) The ability to prevent unauthorized access to and use of the system;

(iv) The security of hardware and software;

(v) The regularity and extent of audit by an independent body;

(vi) The existence of a declaration by a supervisory body, an accreditation body or a voluntary scheme regarding the reliability of the method;

(vii) Any applicable industry standard; or

(b) Proven in fact to have fulfilled the function by itself or together with further evidence.

Article 13. Indication of time and place in electronic transferable records

Where the law requires or permits the indication of time or place with respect to a transferable document or instrument, a reliable method shall be used to indicate that time or place with respect to an electronic transferable record.

Article 14. Determination of place of business

1. A location is not a place of business merely because that is:

(a) Where equipment and technology supporting an information system used by a party in connection with electronic transferable records are located; or

(b) Where the information system may be accessed by other parties.

2. The sole fact that a party makes use of an electronic address or other element of an information system connected to a specific country does not create a presumption that its place of business is located in that country.

Article 15. Issuance of multiple originals

Where the law permits the issuance of more than one original of a transferable document or instrument, this may be achieved with respect to electronic transferable records by the issuance of multiple electronic transferable records.

Article 16. Endorsement

Where the law requires or permits the endorsement in any form of a transferable document or instrument, that requirement is met with respect to an electronic transferable record if the information required for the endorsement is included in the electronic transferable record and that information is compliant with the requirements set forth in articles 8 and 9.

Article 17. Amendment

Where the law requires or permits the amendment of a transferable document or instrument, that requirement is met with respect to an electronic transferable record if a reliable method is used for amendment of information in the electronic transferable record so that the amended information is identified as such.

Article 18. Replacement of a transferable document or instrument with an electronic transferable record

1. An electronic transferable record may replace a transferable document or instrument if a reliable method for the change of medium is used.

2. For the change of medium to take effect, a statement indicating a change of medium shall be inserted in the electronic transferable record.

3. Upon issuance of the electronic transferable record in accordance with paragraphs 1 and 2, the transferable document or instrument shall be made inoperative and ceases to have any effect or validity.

4. A change of medium in accordance with paragraphs 1 and 2 shall not affect the rights and obligations of the parties.

Article 19. Replacement of an electronic transferable record with a transferable document or instrument

1. A transferable document or instrument may replace an electronic transferable record if a reliable method for the change of medium is used.

2. For the change of medium to take effect, a statement indicating a change of medium shall be inserted in the transferable document or instrument.

3. Upon issuance of the transferable document or instrument in accordance with paragraphs 1 and 2, the electronic transferable record shall be made inoperative and ceases to have any effect or validity.

4. A change of medium in accordance with paragraphs 1 and 2 shall not affect the rights and obligations of the parties.

CHAPTER IV. CROSS-BORDER RECOGNITION OF ELECTRONIC TRANSFERABLE RECORDS

Article 20. Non-discrimination of foreign electronic transferable records

1. An electronic transferable record shall not be denied legal effect, validity or enforceability on the sole ground that it was issued or used abroad.

2. Nothing in this Law affects the application to electronic transferable records of rules of private international law governing a transferable document or instrument.

Explanatory Notes to the Model Law on Electronic Transferable Records

I. Introduction [*to be inserted*]

II. Article-by-article commentary

Chapter I. General provisions

Article 1. Scope of application

Paragraph 1

1. The Model Law provides for generic rules that may apply to various types of electronic transferable records based on the principle of technological neutrality and a functional equivalence approach. The principle of technological neutrality entails adopting a system-neutral approach, enabling the use of models based on registry, token, distributed ledger and other technology.

2. Article 2, paragraph 2, of the United Nations Convention on the Use of Electronic Communications in International Contracts (New York, 2005) [1] (the "Electronic Communications Convention") provided a starting point for defining the scope of application of the Model Law. That provision excludes from the scope of application of the Electronic Communications Convention "bills of exchange, promissory notes, consignment notes, bills of lading, warehouse receipts or any transferable document or instrument that entitles the bearer or beneficiary to claim the delivery of goods or the payment of a sum of money". That exclusion is due to the fact that at the time of the adoption of the Convention "finding a solution for this problem [of the legal treatment of electronic transferable records] required a combination of legal, technological and business solutions, which had not yet been fully developed and tested".[2]

3. The Model Law focuses on the transferability of the record and not on its negotiability on the understanding that negotiability relates to the underlying rights of the holder of the instrument, which fall under substantive law.

4. Certain documents or instruments, which are generally transferable, but whose transferability is limited due to other agreements, do not fall under the definition of "transferable document or instrument" contained in the Model Law (see below, para. 19). The Model Law would therefore not apply to those documents or instruments. However, that conclusion should not be interpreted as preventing the issuance of those documents or instruments in an electronic transferable records management system since such prohibition is likely to result in unnecessary multiplication of systems and increase of costs.

Paragraph 2

5. Paragraph 2 sets forth the general principle that the Model Law does not affect substantive law, including rules of private international law, applicable to transferable documents or instruments. Hence, the same substantive law applies to a transferable document or instrument and to the electronic transferable record containing the same information as that transferable document or instrument. The principle applies to each step of the life cycle of an electronic transferable record.

6. One consequence of the rule contained in paragraph 2 is that the Model Law is not intended to be used to create electronic transferable records that do not have an equivalent transferable document or instrument. Allowing such creation by party

---

[1] General Assembly resolution 60/21, annex.

[2] United Nations Convention on the Use of Electronic Communications in International Contracts (New York, 2005), Explanatory Note, United Nations Publication Sales No. E.07.V.2, para. 81.

autonomy would circumvent the principle of *numerus clausus* of transferable documents or instruments, where that principle is applicable (see para. 33 below).

7. During the preparation of the Model Law, UNCITRAL agreed that certain issues related to electronic transferable records did not require a dedicated provision, since those issues were matters of substantive law. Such matters include the requirements and legal effects of:

(a) The definition of "performance of an obligation";

(b) The issuance of an electronic transferable record to bearer;

(c) The change of the modalities for circulation of an electronic transferable record issued to bearer in an electronic transferable record to the order of a named person and the reverse case ("blank endorsement");

(d) The reissuance of an electronic transferable record (see also below, paras. 155 and 159);

(e) Division and consolidation of electronic transferable records; and

(f) The use of an electronic transferable record, including as collateral for security rights purposes (see below, para. 9).

8. The explicit reference to consumer protection law aims at highlighting the interaction between that law and the Model Law and represents an application of the general principle that the Model Law does not affect the substantive law applicable to transferable documents or instruments.

Paragraph 3

9. Paragraph 3 clarifies that the Model Law does not apply to securities and other investment instruments. The term "investment instrument" is understood to include derivative instruments, money market instruments and any other financial product available for investment. The term "securities" does not refer to the use of electronic transferable records as collateral and therefore the Model Law does not prevent the use of electronic transferable records for security rights purposes.

10. The purpose of paragraph 3 is to permit the exclusion of certain documents or instruments from the scope of the Model Law. To that end, paragraph 3 includes an open-ended exclusion list that permits application of the Model Law according to the needs of each enacting jurisdiction, thus providing both flexibility and clarity on the scope of application of the Model Law.

11. The footnote to paragraph 3 highlights three possible types of exclusions and does not prevent enacting jurisdictions from adding other types of exclusions according to their needs:

(a) Certain instruments or documents, such as letters of credit, which may be considered transferable documents or instruments in some jurisdictions but not in others. In that respect, it should be noted that national legislation does not define transferable documents and instruments in a uniform manner;

(b) Documents or instruments falling under the scope of the Convention Providing a Uniform Law for Bills of Exchange and Promissory Notes (Geneva, 1930) and of the Convention Providing a Uniform Law for Cheques (Geneva, 1931) (the "Geneva Conventions") in order to avoid possible conflicts between the Geneva Conventions and the Model Law, regardless of whether the Geneva Conventions are in force or not in the jurisdiction enacting the Model Law (see below, paras. 12-15);

(c) Electronic transferable records that exist only in an electronic environment. Such exclusion could be useful in jurisdictions allowing for the use of both electronic transferable records that are functional equivalent of transferable documents or instruments and of electronic transferable records that exist only in an electronic environment. In that respect, it should be noted that a provision allowing for the application of the Model Law to purely electronic transferable records on a residual basis, so that in case of conflict the Model Law would not prevail over the

law applicable to such electronic transferable records, was not inserted in the Model Law due to concerns on the relationship between the general principles contained in the Model Law and the general principles contained in laws of a different nature.

The Geneva Conventions

12. During the preparation of the Model Law, different views have been expressed on the interaction between the Model Law and the Geneva Conventions.

13. One view expressed was that formalism was a fundamental principle underpinning the Geneva Conventions that prevented the use of electronic means and therefore the instruments falling under the scope of those Conventions should always be excluded from the scope of the Model Law. In order to accommodate that view, the Model Law allows for exclusion of the documents and instruments falling under the scope of the Geneva Conventions (see above, subpara. 11(b)).

14. Jurisdictions adhering to that view and wishing to enable the use of electronic versions of the documents and instruments falling under the scope of the Geneva Conventions may consider introducing electronic transferable records existing only in an electronic environment, which will neither be legally the documents and instruments falling under the scope of the Geneva Conventions nor fall under the scope of the Model Law.

15. Another view expressed was that the scope of application of the Model Law should include instruments falling under the scope of the Geneva Conventions on the understanding that the Model Law generally aims at overcoming obstacles to the use of electronic means arising from form requirements relating to the use of paper-based transferable documents or instruments.

Article 2. Definitions

16. The definition of "electronic record" builds upon the definition of "data message" contained in the UNCITRAL Model Law on Electronic Commerce (1996)[3] and in the Electronic Communications Convention and aims to clarify that electronic records may, but do not need to, include a set of composite information. It highlights the fact that information may be associated with the electronic transferable record at the time of issuance or at any time before or after (e.g., information related to endorsement). In particular, the generation of metadata does not necessarily take place after the generation of a record, but could also precede it. The composite nature of an electronic transferable record is particularly relevant for the notion of "integrity" contained in article 10, paragraph 2, of the Model Law.

17. Moreover, the definition of "electronic record" allows for the possibility that in certain electronic transferable records management systems data elements may, taken together, provide the information constituting the electronic transferable record, but with no discrete record constituting in itself the electronic transferable record. The word "logically" refers to computer software and not to human logic.

18. The Model Law contains a definition of "electronic transferable record". For comments on the definition of "electronic transferable record" (see below, paras. 68-70).

19. The definition of "transferable document or instrument" focuses on the key functions of transferability and of providing a title to performance. It does not aim at

[3] UNCITRAL Model Law on Electronic Commerce with Guide to Enactment (New York, 1999), United Nations Publication Sales No. E.99.V.4.

affecting the fact that substantive law shall determine the rights of the person in control.

20. Applicable substantive law shall determine which documents or instruments are transferable in the various jurisdictions. An indicative list of transferable documents or instruments, inspired by article 2, paragraph 2, of the Electronic Communications Convention, includes: bills of exchange; cheques; promissory notes; consignment notes; bills of lading; warehouse receipts; insurance certificates; and air waybills.

21. As indicated in the definition of "transferable document or instrument", the words "transferable document or instrument" refer to a transferable document or instrument issued on paper (as opposed to an electronic transferable record) in the Arabic, Chinese, English and Russian language versions of the Model Law. The words "paper-based" are used for linguistic clarity before the words "transferable document or instrument" in the French and Spanish language versions of the Model Law (A/CN.9/863, para. 93).

Article 3. Interpretation

International origin and promotion of uniform interpretation

22. Article 3 is intended to draw the attention of courts and other authorities to the fact that domestic enactments of the Model Law should be interpreted with reference to their international origin and the need to promote their uniform interpretation in light of that origin. The uniform interpretation of UNCITRAL texts is a key element to ensure predictability of the law applicable to commercial transactions across borders.

23. Similar wording appears in several UNCITRAL texts, including in article 3 of the UNCITRAL Model Law on Electronic Commerce and article 4 of the UNCITRAL Model Law on Electronic Signatures,[4] and was first introduced in article 7 of the Convention on the Limitation Period in the International Sale of Goods (New York, 1974).[5] The words "This Law is derived from a model law of international origin" emphasize that the law constitutes an enactment of a model law with international origin and are not contained in other UNCITRAL texts.

24. Article 3, unlike other provisions contained in UNCITRAL texts and dealing with their international origin and uniform interpretation, does not refer to the notion of good faith. That exclusion is due to the fact that the principle of good faith has a specific meaning with respect to transferable documents or instruments, which is distinct from the general principle of good faith in international trade law. The principle of good faith as a general principle of international law could be included in the general principles on which the Model Law is based.

General principles

25. The notion of "general principles" has been used in several UNCITRAL texts. Article 7 of the United Nations Convention on Contracts for the International Sale of Goods (Vienna, 1980)[6] is the provision containing that notion that has been most interpreted by case law.

26. The general principles of the law governing electronic communications, namely the principles of non-discrimination against electronic communications, technological neutrality and functional equivalence that have already been identified

[4] UNCITRAL Model Law on Electronic Signatures with Guide to Enactment (New York, 2002), United Nations Publication Sales No. E.02.V.8.

[6] United Nations, *Treaty Series*, vol. 1489, No. 25567, p. 3.

and formulated in other UNCITRAL texts, are the fundamental principles underlying the Model Law.

27. The clarification of the exact content and operation of the notion of general principles referred to in paragraph 2 may take place progressively in light of the increasing level of use, application and interpretation of the Model Law (for the principle of good faith, see above, para. 24). Such progressive clarification provides flexibility in the interpretation of the Model Law useful to ensure its ability to accommodate evolving commercial practices and business needs.

A/CN.9/768, paragraph 35; A/CN.9/797, paragraph 29; A/CN.9/869, paragraphs 28-31.

Article 4. Party autonomy and privity of contract

28. Party autonomy is a fundamental principle underpinning commercial law and UNCITRAL texts that aims to promote international trade as well as technological innovation and the development of new business practices. Moreover, party autonomy may provide desired flexibility in the implementation of the Model Law.

29. However, the implementation of the principle of party autonomy has found some limits in UNCITRAL texts on electronic commerce in order to avoid conflicts with rules of mandatory application, such as those on public policy.

30. In particular, article 4 of the UNCITRAL Model Law on Electronic Commerce allows variation by agreement of the provisions on electronic communications, but sets limits to variation by agreement of functional equivalence rules, also to avoid circumventing form requirements of mandatory application. Moreover, party autonomy may not affect rights and obligations of third parties.[7]

31. In addition, article 5 of the UNCITRAL Model Law on Electronic Signatures indicates that parties may derogate from all provisions of that Model Law, unless derogation would not be valid or effective under applicable law, i.e. it would affect rules of mandatory application such as those relating to public policy.[8] A similar approach is adopted in article 3 of the Electronic Communications Convention.[9]

32. Similarly, the Model Law provides party autonomy within the limits of mandatory law and without affecting rights and obligations of third parties. The Model Law does not indicate which provisions may be derogated from or varied by agreement; it is for enacting jurisdictions to identify them. In doing so, it may be useful to consider that variance in the enactment of the Model Law may significantly disrupt uniformity. In that respect, enacting jurisdictions should carefully consider the possibility of allowing derogation of the fundamental principles underlying the Model Law (see above, para. 26) and, in particular, functional equivalence rules, and the consequences thereof.

33. Certain jurisdictions, in particular those belonging to the civil law tradition, recognize the principle of *numerus clausus* of transferable documents or instruments. The Model Law does not aim at offering manners to circumvent by agreement that principle, in line with the general principle that the Model Law does not affect substantive law provisions. At the same time, and based on the same general principle, the Model Law does not limit in any manner the ability of the parties to derogate from or vary substantive law.

34. Therefore, a careful analysis is necessary to ascertain which provisions of the Model Law could be derogated from or varied by the parties. The Model Law leaves this assessment to the enacting jurisdiction, in order to accommodate differences in legal systems. To that end, paragraph 1 contains square brackets, in which the enacting

jurisdiction could identify the provisions which could be derogated from or varied (see also below, paras. 119-120).

Article 5. Information requirements

35. Article 5, inspired by article 7 of the Electronic Communications Convention,[10] highlights the need to comply with possible disclosure obligations that might exist under other law. Examples of those information requirements include information to be provided under consumer protection law and to prevent money-laundering and other criminal activities.

36. The obligation to comply with those information requirements arises from the principle that the Model Law does not affect substantive law that is contained in article 1, paragraph 2, of the Model Law. The reference to other law containing the information requirements provides desirable flexibility since those requirements are likely to change over time. Article 5 does not deal with the legal consequences attached to violating information requirements, which are to be found, like the information requirement itself, in other law.

37. Article 5 does not prohibit the issuance of an electronic transferable record to bearer when permitted under substantive law. In that respect, it should be noted that an electronic transferable records management system may allow to identify the person in control of an electronic transferable record for regulatory purposes (e.g., anti-money-laundering) but not for commercial law purposes (e.g., for an action in recourse).

References

A/CN.9/768, paragraph 38; A/CN.9/797, paragraph 33; A/CN.9/869, paragraphs 45-47.

Article 6. Additional information in electronic transferable records

38. As a general rule, according to article 10, subparagraph 1(a) of the Model Law an electronic transferable record shall contain the information required to be contained in a transferable document or instrument (see below, paras. 71-75; see also below, paras. 151 and 166). The Model Law does not require the insertion of information additional to that contained in a transferable document or instruments for the issuance and use of an electronic transferable record. Requiring that additional information would create a legal requirement that does not exist with respect to the issuance and use of transferable documents or instruments and therefore could constitute discrimination against the use of electronic means.

39. Adding to that general rule, article 6 clarifies that the electronic transferable record may, but does not need to contain information additional to that contained in the transferable document or instrument. In other words, while the Model Law does not impose any additional information requirement for electronic transferable records, it also does not prevent the inclusion in those records of additional information that may not be contained in a transferable document or instrument due to the different nature of the two media.

40. Examples of such additional information include information necessary due to technical reasons, such as metadata or a unique identifier. Moreover, such additional information could consist of dynamic information, i.e. information that may change periodically or continuously based on an external source, which may be included in an electronic transferable record due to its nature but not in a transferable document

[10] United Nations Convention on the Use of Electronic Communications in International Contracts, Explanatory Note, paras. 122-128.

or instrument. The price of a publicly-traded commodity and the position of a vessel are examples of dynamic information.

Article 7. Legal recognition of an electronic transferable record

Paragraph 1

41. Paragraph 1 restates the general principle of non-discrimination against the use of electronic means that is set forth in article 5 of the UNCITRAL Model Law on Electronic Commerce [11] and in article 8, paragraph 1, of the Electronic Communications Convention.[12]

42. By stating that information "shall not be denied validity or enforceability on the sole ground that it is in electronic form", paragraph 1 merely indicates that the form in which an electronic transferable record is presented or retained cannot be used as the only reason for which that record would be denied legal effectiveness, validity or enforceability. However, the provision should not be misinterpreted as establishing the legal validity of an electronic transferable record or any information therein.

Paragraphs 2 and 3

43. Paragraphs 2 and 3 are inspired by article 8, paragraph 2, of the Electronic Communications Convention.[13]

44. Paragraph 2 clarifies that legal recognition of electronic transferable records does not imply a requirement to use or accept them. However, this does not preclude enacting jurisdictions from mandating the use of electronic transferable records, at least with respect to some categories of users and some types of transferable documents and instruments, in light of the policy goals pursued.

45. The requirement of consent to the use of an electronic transferable record is a general one and applies to all instances where an electronic transferable record is used under the Model Law and to all parties involved in the life cycle of the electronic transferable record. Therefore, other provisions of the Model Law do not contain an explicit reference to consent.

46. The consent to using electronic transferable records does not need to be expressly indicated or given in any particular form and may be inferred from all circumstances, including parties' conduct. While absolute certainty can be accomplished by obtaining an explicit consent before using an electronic transferable record, such an explicit consent should not be mandated as it would create an unreasonable barrier to the use of electronic means.

47. Certain systems used for electronic transferable records management, such as registry-based systems, may require acceptance of system rules prior to authorizing access to the system. Those system rules may include or imply consenting to the use of electronic transferable records.

48. Consent to the use of an electronic transferable record in systems that lack a centralized operator, such as token-based and distributed ledger-based systems, may be implicit and inferred by circumstances such as exercise of control on the record or performance of the obligation contained in the record.

References

A/CN.9/768, paragraphs 39, 57-58; A/CN.9/797, paragraphs 34-35, 62-63; A/CN.9/804, paragraph 17; A/CN.9/869, paragraphs 93 and 94.

CHAPTER II. PROVISIONS ON FUNCTIONAL EQUIVALENCE

49. Any reference to a legal requirement contained in the provisions of the Model Law setting forth functional equivalence rules implies a reference to the consequences arising when a legal requirement is not met, making it not necessary to explicitly refer to those consequences. Accordingly, the Model Law does not contain the words "or provides consequences" after the words "when the law requires" (A/CN.9/834, paras. 43 and 46).

Techniques of enactment of articles 8 and 9

50. Provisions indicating the requirements for functional equivalence of the notions of "writing" and "signature" in an electronic environment are of fundamental importance for the application of UNCITRAL texts on electronic commerce. While the enactment of the Model Law on Electronic Transferable Records requires the adoption of those functional equivalence standards, such adoption could take place with different techniques.

51. A law on electronic transactions is likely to contain such functional equivalence provisions, possibly based on UNCITRAL uniform texts. The general rules on functional equivalence between electronic and written form contained in the law on electronic transactions apply to all electronic records that are not transferable.

52. If the Model Law on Electronic Transferable Records is adopted by consolidation with an enactment of the UNCITRAL Model Law on Electronic Commerce or other text providing general rules on functional equivalence, it may be possible to adopt provisions for the functional equivalence of the paper-based notions of "writing" and "signature" that will apply to both transferable and non-transferable electronic records.

53. However, it may also be that those functional equivalence provisions do not exist in a jurisdiction wishing to enact the Model Law on Electronic Transferable Records. In that case, the adoption of articles 8 and 9 would address the legislative need.

54. In any case, careful consideration should be given to the consequences of establishing a dual regime setting forth different functional equivalence requirements for electronic records and electronic transferable records.

Reference

A/CN.9/897, paragraphs 54-57.

Article 8. Writing

55. Article 8 establishes the requirements for the functional equivalence of the written form with respect to information contained in or related to electronic transferable records. It is inspired by article 6, paragraph 1, of the UNCITRAL Model Law on Electronic Commerce.[14] Article 8 refers to the notion of "information" rather than "communication" as not all relevant information might necessarily be communicated, depending on the system chosen for electronic transferable records management.

56. Article 8 sets forth a functional equivalence rule for the notion of "writing" with respect to electronic transferable records only. The use of writing is instrumental in

[14] UNCITRAL Model Law on Electronic Commerce, Guide to Enactment, paras. 47-50.

performing several actions that may occur during the life cycle of an electronic transferable record, such as endorsement (see below, para. 138). The general rule on functional equivalence of written and electronic form contained in the law on electronic transactions applies to all electronic records that are not transferable.

References

A/CN.9/768, paragraphs 40-44; A/CN.9/797, paragraphs 36-39; A/CN.9/804, paragraphs 18-19.

Article 9. Signature

57. Article 9 establishes the requirements for the functional equivalence of "signature" when substantive law either contains an explicit signature requirement or provides consequences for the absence of a signature (implicit signature requirement). The words "or permits" clarify that article 9 shall apply also to cases when the law permits, but does not require a signature.

58. Article 9 is inspired by article 7, subparagraph 1(a), of the UNCITRAL Model Law on Electronic Commerce.[15] Moreover, following the text of article 9, paragraph 3, of the Electronic Communications Convention, it refers to the "intention" of the party so as to better capture the different functions that may be pursued with the use of an electronic signature.[16] The reliability of the method referred to in article 9 shall be assessed according to the general reliability standard contained in article 12.

59. The reference to the signature requirement being fulfilled "by" an electronic transferable record is meant to clarify that article 9 applies to electronic transferable records only and not to other electronic records that are not transferable but are somehow related to an electronic transferable record. Hence, article 9 sets forth a functional equivalence rule for the notion of "signature" with respect to electronic transferable records only.

60. Certain electronic transferable records management systems, such as those based on distributed ledgers, may identify the signatory by referring to pseudonyms rather than to real names. That identification, and the possibility to link pseudonym and real name, including based on factual elements to be found outside distributed ledger systems, could satisfy the requirement to identify the signatory.

61. The general rule on functional equivalence of electronic and handwritten signatures contained in the law on electronic signatures applies to signatures used in relation to all electronic records that are not transferable.

References

A/CN.9/768, paragraphs 41 and 43; A/CN.9/797, paragraphs 40-47; A/CN.9/804, paragraph 20; A/CN.9/869, paragraphs 48-49.

Article 10. Requirements for the use of an electronic transferable record

62. Article 10 provides a functional equivalence rule for the use of transferable documents or instruments by setting forth the requirements to be met by an electronic record. The reliability of the method referred to in article 10 shall be assessed according to the general reliability standard contained in article 12.

63. Article 10 represents the outcome of discussions originating from the notion of "uniqueness". Uniqueness of a transferable document or instrument aims to prevent the circulation of multiple documents or instruments relating to the same performance and thus to avoid multiple claims. Providing a guarantee of uniqueness in an electronic environment equivalent to possession of a document of title or negotiable instrument has long been considered a peculiar challenge.

---

[15] UNCITRAL Model Law on Electronic Commerce, Guide to Enactment, paras. 53-56.

[16] United Nations Convention on the Use of Electronic Communications in International Contracts, Explanatory Note, para. 160.

64. Uniqueness is a relative notion that poses technical challenges in an electronic environment, as providing an absolute guarantee of non-replicability may not be technically feasible. In fact, the notion of uniqueness poses challenges also with respect to transferable documents or instruments, since paper does not provide an absolute guarantee of non-replicability. However, centuries of use of paper in business transactions have provided sufficient information to commercial operators for an assessment of the risks associated with the use of that medium while practices on the use of electronic transferable records are not yet equally well-established.

65. Article 10 aims at preventing the possibility of multiple requests to perform the same obligation by combining two approaches, i.e. "singularity" and "control".

66. The "singularity" approach requires reliable identification of the electronic transferable record that entitles its holder to request performance of the obligation indicated in it, so that multiple claims of the same obligation would be avoided, while the "control" approach focuses on the use of a reliable method to identify the person in control of the electronic transferable record (see also below, paras. 87-102).

67. One effect of the adoption of the notions of "singularity" and "control" in the Model Law is the prevention of unauthorized replication of an electronic transferable record by the system.

68. The definition of "electronic transferable record" reflects the functional equivalent approach and refers to electronic transferable records that are equivalent to transferable documents or instruments. It does not aim at affecting the fact that substantive law shall determine the rights of the person in control. Likewise, it does not aim at describing all the functions possibly related to the use of an electronic transferable record. For instance, an electronic transferable record may have an evidentiary value; however, the ability of that record to discharge that function will be assessed under law other than the Model Law.

69. In line with the general approach and the scope of the Model Law, the definition of "electronic transferable record" is meant to apply to electronic transferable records that are functionally equivalent to transferable documents or instruments. Yet, the Model Law does not preclude the development and use of electronic transferable records that do not have a paper equivalent as those records are not governed by the Model Law.

70. The definition of "electronic transferable record" does not cover certain documents or instruments, which are generally transferable, but whose transferability may be limited due to other agreements. This could be the case, in certain jurisdictions, of straight or nominative instruments, such as promissory notes, bills of lading and bills of exchange. The definition of "electronic transferable record" should not be interpreted as preventing the issuance of those documents or instruments in an electronic transferable records management system (see also above, para. 4). Substantive law shall determine which documents or instruments are transferable.

Subparagraph 1(a)

71. Subparagraph 1(a) states that the electronic record should contain the information required to be in a transferable document or instrument. Since that information is contained in writing in a transferable document or instrument, its inclusion in an electronic transferable record must comply with article 8 of the Model Law. The definition of "electronic record" contained in article 2 of the Model Law clarifies that the electronic record may, but does not need to, have a composite nature.

72. The information that would be required to be contained in a transferable document or instrument allows determining the substantive law applicable to the electronic transferable record (e.g., the law applicable to a bill of lading, rather than the law applicable to a promissory note). Nevertheless, one electronic transferable record may contain information that would be required to be contained in more than one type of transferable document or instrument.

73. A law that does not contain a provision akin to that contained in article 10, subparagraph 1(a), but sets forth directly the information requirements to be contained

in an electronic transferable record, is likely to provide for electronic transferable records that are not functionally equivalent to transferable documents or instruments, but exist only in an electronic environment.

74. Accordingly, an electronic transferable record existing only in electronic form would not satisfy the requirements of article 10 and would not fall under the definition of electronic transferable record contained in article 2. Namely, while an electronic transferable record existing only in electronic form could satisfy other requirements set forth in the Model Law, that record would define autonomously the information requirements and therefore would not comply with article 10, subparagraph 1(a).

75. Subparagraph 1(a) does not contain any qualifier as "equivalent", "corresponding" or "as having the same purpose" given that under that provision an electronic transferable record must indicate the same information required for a transferable document or instrument of the same type. Insertion of a further qualifier might create uncertainty.

Subparagraph 1(b)(i)

76. Subparagraph 1(b)(i) sets forth the requirement to identify an electronic record as the record containing the information necessary to establish that record as the electronic transferable record. That requirement implements the "singularity" approach.

77. The purpose of the provision is to identify the electronic transferable record as opposed to other electronic records that are not transferable. Identification alone suffices to express the singularity approach. The article "the" in the English, French and Spanish language versions of the Model Law suffices to point at the singularity approach, thus avoiding the use of any qualifier and related challenges. The Arabic, Chinese and Russian language versions of the Model Law intend to convey the same notion.

78. Unlike other legislation on electronic transferable records, subparagraph 1(b)(i) does not refer to a qualifier such as "authoritative", "operative" or "definite" to identify the electronic record as the electronic transferable record. The reasons for that omission are that: insertion of a qualifier could create interpretative challenges, especially in certain languages; it could be interpreted as referring to the notion of "uniqueness", which has been abandoned; and it could ultimately foster litigation.

Subparagraph 1(b)(ii)

79. Subparagraph 1(b)(ii) sets forth the requirement that the electronic transferable record should be capable of being controlled from its creation until it ceases to have any effect or validity, particularly in order to allow for its transfer. That requirement implements the "control" approach.

80. The reference to a reliable method with respect to subparagraph 1(b)(ii) refers to the reliability of the system used to render the electronic record capable of being subject to control.

Subparagraph 1(b)(iii)

81. The notion of integrity is an absolute one. It refers to a fact, and as such, is objective, i.e. either an electronic transferable record retains integrity or not. The reference to the reliable method used to retain integrity is relative or subjective and the general reliability standard contained in article 12 applies to the assessment of that method.

Notion of "Original"

82. Unlike other UNCITRAL texts on electronic commerce, the Model Law does not contain a functional equivalence rule for the paper-based notion of "original". In that respect, it should be noted that article 8 of the UNCITRAL Model Law on Electronic Commerce refers to a static notion of "original" while electronic transferable records are meant, by their own nature, to circulate. Therefore, the notion

of "original" in the context of electronic transferable records is different from that adopted in other UNCITRAL texts. Accordingly, article 10, subparagraph 1(b)(iii), of the Model Law refers to integrity of the electronic transferable record as one of the requirements that needs to be fulfilled in order to achieve functional equivalence with a transferable document or instrument.

83. Hence, while the notion of "original" of transferable documents or instruments is particularly relevant to prevent multiplicity of claims, the Model Law achieves that goal with the use of the notions of "singularity" and "control" that allow identifying both the person entitled to performance and the object of control (see above, paras. 65-67).

Paragraph 2

84. Paragraph 2 sets forth a provision on the assessment of the notion of integrity. It indicates that an electronic transferable record retains integrity when any set of information related to authorized changes (as opposed to changes of purely technical nature) remains complete and unaltered from the time of the creation of the electronic transferable record until it ceases to have any effect or validity. It is inspired by article 8, paragraph 3, of the UNCITRAL Model Law on Electronic Commerce. However, it should be noted that article 8, subparagraph 3(a), of the Model Law on Electronic Commerce refers to a notion of integrity with respect to the use of the notion of "original" that may be more appropriate for electronic contracting. On the other hand, the notion of integrity contained in article 10, paragraph 2, of the Model Law necessarily takes into account the fact that the life cycle of electronic transferable records implies a number of events that need to be accurately reflected in those records.

85. "Authorized" changes are those changes agreed upon by the parties to contractual obligations related to electronic transferable records throughout the life cycle of an electronic transferable record and permitted by the electronic transferable records management system. The term "authorized" does not refer to whether the changes are legitimate, which would introduce a standard presupposing a legal assessment under substantive law. For instance, unauthorized changes would be those performed by a hacker who must compromise the integrity of the electronic transferable record in order to have access to it.

86. The words "apart from any change which arises in the normal course of communication, storage and display" refer to information added to an electronic transferable record for purely technical purposes. For instance, that could be the case of changes necessary to store the electronic transferable records in a dedicated repository. The same words are used in article 8, subparagraph 3(a), of the UNCITRAL Model Law on Electronic Commerce. However, the notion of purely technical change should be evaluated against the notion of integrity contained in the Model Law, which differs from the notion of original contained in the Model Law on Electronic Commerce (see above, para. 82). The fact that information may be added automatically by the electronic transferable records management system, for instance in form of metadata, is not per se evidence that that information is of purely technical nature.

A/CN.9/768, paragraphs 48-56, 75-76 and 85; A/CN.9/797, paragraphs 47-60; A/CN.9/804, paragraphs 21-40, 70-75; A/CN.9/828, paragraphs 31-40, 42-49; A/CN.9/834, paragraphs 21-30, 85-90, 92, 99-108; A/CN.9/869, paragraphs 50-68.

Article 11. Control

87. Article 11 provides a functional equivalence rule for the possession of a transferable document or instrument. Functional equivalence of possession is achieved when a reliable method is employed to establish control of that record by a person and to identify the person in control.

88. The notion of "control", which is closely related to the requirement contained in article 10, subparagraph 1(b)(ii), is not defined in the Model Law since it is the functional equivalent of the notion of "possession", which, in turn, may vary in each jurisdiction.

89. The Model Law is concerned with identifying a functional equivalent to the fact of possession. In line with the general principle that the Model Law does not affect substantive law, the notion of control does not affect or limit the legal consequences arising from possession. Consequently, parties may agree on the modalities for the exercise of possession, but may not modify the notion of possession itself.

90. The title of article 11 refers to "control" and not to "possession", thus departing from the naming style of other articles of the Model Law, since the notion of "control" is particularly relevant in the Model Law. While a notion of "control" may exist in national legislation, the notion of "control" contained in article 11 needs to be interpreted autonomously in light of the international character of the Model Law.

Paragraph 1

91. The reliability of the method referred to in article 11 shall be assessed according to the general reliability standard contained in article 12.

Subparagraph 1(a)

92. Subparagraph 1(a) refers to "exclusive" control for reasons of clarity, since the notion of "control", similarly to that of "possession", implies exclusivity in its exercise. Yet, control, like possession, could be exercised concurrently by more than one person in control. The concept of "control" does not refer to "legitimate" control, since this is a matter of substantive law.

93. Although both the notion of "control" and the notion of "singularity" aim at preventing multiple requests of performance of the same obligation, the two notions operate independently and should be distinguished (see above, paras. 65-67). For instance, it is possible to conceive exclusive control over a multiple record, i.e. a record that does not meet the requirement of singularity. Conversely, it is also possible to conceive non-exclusive control over a single record.

Subparagraph 1(b)

94. Subparagraph 1(b) requires to reliably identify the person in control as the holder of the electronic transferable record. The person in control of an electronic transferable record is in the same legal position as the holder of an equivalent transferable document or instrument.

95. The reference to the "person in control" of the electronic transferable record in subparagraph 1(b) does not imply that the person is also the rightful person in control of that record as this is for substantive law to determine (A/CN.9/828, para. 61). Further, the reference to the person in control does not exclude the possibility of having more than one person exercising control or of attributing selectively control on one electronic transferable record to multiple entities on the basis of the legal rights attributed to each entity (e.g., title to property of goods, security interests, etc.).

96. The person in control may be a natural or a legal person or other entity able to possess a transferable document or instrument under substantive law. The use of the services of a third party to exercise exclusive control does not affect exclusivity of control or imply that the third party service provider or any other intermediary is a person in control.

97. The requirement to identify the person in control does not imply that an electronic transferable record in itself shall contain the identification of the person in control. Rather, that requirement demands that the method or system employed to establish control as a whole shall perform the identification function. Moreover, identification should not be understood as implying an obligation to name the person in control, as the Model Law allows for the issuance of electronic transferable records to bearer, which implies anonymity.

98. Certain electronic transferable records management systems, such as those based on distributed ledgers, may identify the person in control by referring to pseudonyms rather than to real names (see above, para. 60). That identification, and the possibility to link pseudonym and real name, if need be, would satisfy the requirement to identify the person in control. In any case, anonymity for commercial law purposes may not preclude the possibility of identifying the person in control for other purposes, such as law enforcement (see above, para. 37).

99. Article 11 will also assist in carrying out those necessary steps occurring in the life cycle of the electronic transferable record that require demonstration of control of that record. For instance, the notion of "presentation" in the paper environment relies on demonstration of possession of a transferable document or instrument as its core element. That demonstration may be given by identifying the person in control. In practice, the electronic transferable records management system may rely on the requirement to identify the person in control contained in article 11 when dealing with presentation of a record. Accordingly, the Model Law does not contain a separate provision on presentation.

Paragraph 2

100. Transferable documents or instruments, and therefore also electronic transferable records, may circulate by delivery and by endorsement. Paragraph 2 sets forth that transfer of control over an electronic transferable record is the functional equivalent of delivery, i.e. transfer of possession, of a transferable document or instrument (see also below, paras. 137-141).

101. Paragraph 2 includes the words "or permits" in order to clarify its application to cases in which the law merely permits, but does not require transfer of possession of a transferable document or instrument.

102. The delivery of a transferable document or instrument may be a necessary step in the life cycle of that document or instrument. For instance, the request for delivery of goods typically requires surrendering a bill of lading. The Model Law does not contain specific provisions on surrender as paragraph 2, on transfer of control as functional equivalent of delivery, would apply also to those cases.

CHAPTER III. USE OF ELECTRONIC TRANSFERABLE RECORDS

Article 12. General reliability standard

103. Article 12 provides a consistent and technology neutral general standard on the assessment of reliability that applies whenever a provision of the Model Law requires the use of a "reliable method" for the fulfilment of its functions. The concept of reliability refers to the reliability of the method used. In turn, reference to the method implies reference to any system used to implement that method.

104. Article 12 aims to increase legal certainty by indicating elements that may be relevant in assessing reliability. The list of circumstances contained in article 12 is illustrative and, as such, not exhaustive and does not prevent the parties from allocating liability contractually (see also paras. 119-120 below). The general reliability standard is applicable to all electronic transferable records management system providers and not only to third-party service providers.

105. Though article 12 aims at providing guidance on the assessment of the reliability of the electronic transferable records management system in case of dispute ("ex post"

reliability assessment), its content will necessarily also influence the design of the system ("ex ante" reliability assessment) since system designers pursue offering reliable systems.

106. Each provision of the Model Law referring to the use of a reliable method aims at fulfilling a different function. Accordingly, the reference to "the purposes of articles" contained in the chapeau of article 12 aims to clarify that the assessment of the reliability of each relevant method should be carried out separately in light of the function specifically pursued with the use of that method. That approach provides needed flexibility when assessing the application of the reliability standard in practice as it allows customizing the reliability assessment to each function fulfilled by the system.

Subparagraph (a)

107. Subparagraph (a) contains a list of circumstances that may assist in determining reliability. The words "which may include" clarify that the list is not exhaustive and has an illustrative nature only. The words "all relevant circumstances" include the purpose for which the information contained in the electronic transferable record was generated.

108. The list of circumstances aims at achieving a balance between providing guidance on the assessment of reliability and imposing requirements that may result in excessive costs on business, ultimately hampering electronic commerce and leading to increased litigation on complex technical matters. Additional possibly relevant circumstances include: quality of staff; sufficient financial resources and liability insurance; and existence of a notification procedure for security breaches and of reliable audit trails.

"Operational rules"

109. Subparagraph (a)(i) refers to "operational rules" that are usually contained in an operating manual whose application could be monitored by an oversight body and that, as such, may not have a purely contractual nature. The words "relevant to the assessment of" clarify that only operational rules regarding the reliability of the system, and not operational rules in general, should be considered.

"Assurance of data integrity"

110. Subparagraph (a)(ii) refers to the "assurance of data integrity" as an absolute notion since data integrity cannot be expressed by reference to a level. The notion of "integrity" as an element in the assessment of the general reliability standard is different from that contained in article 10. More precisely, the notion of integrity contained in subparagraph (a)(ii) applies when integrity is in fact relevant to assess the reliability of the method used and, ultimately, the achievement of functional equivalence. As such, that notion is relevant also to articles other than article 10.

"Prevent unauthorized access to and use of the system"

111. The circumstance refers to the ability to prevent access to and use of the system by parties, including third parties not authorized to do so, as authorization of access to and use of the system is a notion relevant to all parties. In that respect, it should be noted that the notion of integrity in the Model Law refers to "authorized" changes. A reliable method shall therefore prevent unauthorized changes. Moreover, the notion of control is based on exclusivity, which presupposes the ability to exclude parties without authorized access to the system.

"Security of hardware and software"

112. Reference to "security of hardware and software" is included in the list of criteria for the assessment of the general reliability standard for electronic transferable records, since security of hardware and software has a direct impact on the reliability of the method used. That reference is found also in article 10, subparagraph (b), of the UNCITRAL Model Law on Electronic Signatures, which

refers to the "quality of hardware and software systems" as one of the factors to be regarded for the determination of trustworthiness of any systems, procedures and human resources utilized by a certification service provider. The term "security" is used in subparagraph (a)(iv) instead of "quality" since the notion of security lends itself more easily to an objective assessment of the method used.

"Regularity and extent of audit by an independent body"

113. The existence of regular accurate audits carried out by an independent body may be seen as evidence of validation of the reliability of the system by a third party. Similarly, article 10, subparagraph (e), of the UNCITRAL Model Law on Electronic Signatures refers to the "regularity and extent of audit by an independent body" as one of the factors to be considered for the determination of trustworthiness of any systems, procedures and human resources utilized by a certification service provider.

"Declaration by a supervisory body, an accreditation body or a voluntary scheme regarding the reliability of the method"

114. The criteria of "regularity and extent of audit by an independent body" is inspired by article 10, subparagraph (f), of the UNCITRAL Model Law on Electronic Signatures, which refers to the "declaration by the State, an accreditation body or the certification service provider regarding compliance with or existence of the foregoing" as one of the factors to be regarded for the determination of trustworthiness of any systems, procedures and human resources utilized by a certification service provider. A declaration by such body may guarantee a certain level of objectivity in the assessment of the reliability of the method.

"Any applicable industry standard"

115. The reference to "any applicable industry standard" stems from a suggestion to refer to internationally accepted standards and practices in order to avoid increased litigation based on complex technical matters and to allow flexibility in technology choice while providing guidance, in light also of the fact that electronic transferable records management systems are likely to be designed and maintained by highly-specialized professionals.

116. Reference to "any applicable industry standard" is more suitable than reference to "industry best practices" since the former can be more easily ascertained. Applicable industry standards should preferably be internationally recognized. In fact, the use of international standards may promote the emergence of a common notion of reliability across jurisdictions. Reference to industry standards shall not be interpreted so as to violate the principle of technological neutrality.

Subparagraph (b)

117. Subparagraph (b) provides a "safety clause" with the purpose of preventing frivolous litigation by validating methods that have in fact achieved their function regardless of any assessment of their reliability. It refers to the fulfilment of the function in the specific case under dispute and does not aim at predicting future reliability based on past performance of the method. The provision may operate with respect to any of the functions pursued with the use of electronic transferable records. A similar mechanism is contained in article 9, subparagraph (3)(b)(ii), of the Electronic Communications Convention, relating to the functional equivalence of electronic signatures.

118. In practice, the fact that the method used has achieved the function pursued with its use will prevent any discussion on the assessment of its reliability according to subparagraph (a).

Party autonomy

119. Article 12 does not contain an explicit reference to the relevance of an agreement of the parties when assessing reliability. That omission is due to the desire to set forth an objective reliability standard and therefore not to make it dependent on

party autonomy. In particular, the inclusion of a reference to party autonomy could be read as: (a) introducing different standards for the assessment of reliability whose application would depend on the parties involved; (b) leading to inconsistent findings in respect of the validity of the electronic transferable record; and (c) circumventing substantive law, especially provisions of mandatory application, and ultimately affecting third parties. Hence, party autonomy with respect to the assessment of reliability is limited to allocation of liability under the limits set forth in applicable law.

120. The relevance of party agreements may be particularly significant in the context of closed systems or when referring to industry standards, since those agreements often contain useful guidance on technical details and may promote technological innovation within the limits of mandatory substantive law.

Article 13. Indication of time and place in electronic transferable records

121. Significant legal consequences are attached to the indication of time and place in transferable documents and instruments. For instance, recording the time of an endorsement is necessary to establish the sequence of the obligors in the action of recourse. Article 13 allows for that indication in electronic transferable records. In the case of endorsements, this is particularly important given that the dematerialized nature of electronic transferable records does not make their temporal sequence apparent as in transferable documents or instruments.

122. Provisions relating to the indication of time and place, if any, are to be found in substantive law, which may indicate to what extent and which parties may agree on it. If the indication of time and place is mandatory under substantive law, that requirement must be complied with in accordance with article 10, subparagraph 1(a), of the Model Law, mandating that the electronic transferable record shall contain the information "required to be contained in a transferable document or instrument".

123. The words "or permits" clarify that article 13 shall apply also to cases when the law permits, but does not require, the indication of time or place with respect to a transferable document or instrument. In line with the general rule that the Model Law does not impose any additional information requirement, article 13 does not require the indication of time and place when that information is not mandatory under applicable law.

124. Methods available to indicate time and place in electronic transferable records may vary with the system used. Therefore, article 13 is based on a technology-neutral approach compatible with systems based on registry, token, distributed ledger or other technology. The reference to the use of a reliable method in indicating time points at the possibility of using trust services such as trusted time stamping.

125. The nature of the electronic transferable record may enable automation of certain steps in the life cycle of the record related to time. For instance, promissory notes may be presented for payment automatically on due date.

126. The provisions on time and place of dispatch and receipt of data messages (article 15 of the UNCITRAL Model Law on Electronic Commerce) and of electronic communications (article 10 of the Electronic Communications Convention) are relevant for contract formation and management but may not be appropriate with respect to the use of electronic transferable records.

A/CN.9/797, paragraph 61; A/CN.9/834, paragraphs 36-46; A/CN.9/863, paragraphs 23-24, 26; A/CN.9/869, paragraphs 79-82.

Article 14. Determination of place of business

127. The law may attach a number of consequences to the place of business. In particular, the place of business may be relevant for the cross-border use of electronic transferable records. Substantive law shall indicate how to identify the relevant place of business, which, in principle, does not need to be different only because of the use of electronic or paper medium. The scope of article 14 is limited to clarifying that the location of an information system, or parts thereof, is not an indicator of a place of business as such. That clarification may be particularly useful in light of the likelihood that third parties providing services relating to the management of electronic transferable records will use equipment and technology located in various jurisdictions, or whose location may change regularly, such as in the case of use of cloud computing.

128. Article 14, whose text is inspired by article 6, paragraphs 4 and 5, of the Electronic Communications Convention, [17] aims at providing guidance on the determination of a place of business when electronic means are used by indicating that certain elements do not per se identify a place of business. Its scope is therefore different from that of article 13, which relates to the indication of the place in the electronic transferable record, and not to its determination.

129. Reference to "place of business" shall be interpreted as reference to the various notions related to geographic location (e.g., residence, domicile, etc.) that may be relevant during the life cycle of the electronic transferable record. While the elements listed in article 14 do not, per se, determine the location of a place of business, those elements may be used together with other elements to determine that location.

130. Substantive law may allow parties to identify the place of business by agreement. In that case, article 14 may provide a set of suppletive rules on the determination of the place of business that could usefully complement parties' agreements.

A/CN.9/863, paragraphs 25-26; A/CN.9/869, paragraphs 83-92.

Article 15. Issuance of multiple originals

131. The possibility of issuing multiple originals of a transferable document or instrument exists in several fields of trade. An example of legal provisions recognizing that practice may be found in article e8 of the Supplement to the Uniform Customs and Practice for Documentary Credits for Electronic Presentation. It has been reported that the practice of issuing multiple originals exists also in the electronic environment.

132. Article 15 aims to enable the continuation of that practice with respect to the use of electronic transferable records when that practice is permitted under applicable law. Similarly, the Model Law does not prevent the possibility of issuing multiple originals on different media (e.g., one on paper and one in electronic form), when this is permitted under applicable law.

133. As noted (see above, para. 82), the Model Law does not contain a functional equivalent of the paper-based notion of "original". Instead, the functions fulfilled by the original of a transferable document or instrument with respect to requesting performance are satisfied in an electronic environment by the notions of "singularity" and "control" (see above, paras. 65-67). Hence, the transposition of the practice of issuing multiple original transferable documents or instruments in an electronic environment requires the issuance of multiple electronic transferable records relating to the performance of the same obligation.

134. However, caution should be exercised when issuing multiple electronic transferable records. In fact, that practice may expose to the possibility of multiple claims for the same performance based on the presentation of each original. Moreover,

[17] United Nations Convention on the Use of Electronic Communications in International Contracts, Explanatory Note, paras. 116-121.

the same functions pursued with the issuance of multiple original transferable documents or instruments may be achieved in an electronic environment by attributing selectively control on one electronic transferable record to multiple entities on the basis of the legal rights attributed to each entity (e.g., title to property of goods, security interests, etc.). In practice, for instance, an electronic transferable records management system could provide information on multiple claims having different objects and relating to the same electronic transferable record.

135. Article 15 does not contain an obligation to indicate whether multiple originals have been issued. If substantive law contains that obligation, the electronic transferable record must comply with it in accordance with the information requirements contained in article 10, subparagraph 1(a), of the Model Law.

136. Similarly, article 15 does not specify whether one or all originals must be presented to request the performance of the obligation contained in the electronic transferable record as this matter is determined by applicable law or, where possible, by contractual agreement.

A/CN.9/768, paragraphs 71-74; A/CN.9/797, paragraphs 47, 68-69; A/CN.9/804, paragraph 50; A/CN.9/834, paragraphs 47-52; A/CN.9/869, paragraphs 95-99.

Article 16. Endorsement

137. Transferable documents or instruments may be transferred by delivery and by endorsement. Substantive law sets forth the conditions for the circulation of transferable documents or instruments, which apply to functionally equivalent electronic transferable records. Article 16 identifies the requirements that need to be complied with in order to achieve functional equivalence of endorsement in addition to the requirements for functional equivalence of written form and signature.

138. While national laws may contain a wide range of formal prescriptions for endorsement in a paper-based environment, article 16 aims to achieve functional equivalence of the notion of endorsement regardless of those requirements and in line with the approach taken for other functional equivalence rules in the Model Law. Hence, article 16 adds to the functional equivalence rules for writing, signature and transfer already contained in the Model Law by providing also for specific forms of endorsement required under substantive law, such as endorsements on the back of a transferable document or instrument or by affixing an *allonge*.

139. Inserting in article 16 specific references to certain form requirements, but not to others, might be interpreted as excluding those other requirements from the scope of the article, thus ultimately frustrating its purpose. Hence, article 16 does not refer to any specific form of requirement, but includes all of them.

140. The words “or permits” are included in article 16 to provide for instances when substantive law allows for, but does not require endorsement.

141. The words “included in” have been chosen as reflecting more accurately current practice and to encompass instances when the information is logically associated with or otherwise linked to the electronic transferable record, thus enabling the use of different models for electronic transferable records management systems in line with the principle of technological neutrality.

References

A/CN.9/768, paragraphs 46, 102; A/CN.9/797, paragraphs 95-97; A/CN.9/804, paragraphs 80-81; A/CN.9/828, paragraphs 76-80; A/CN.9/869, paragraphs 111-114.

Article 17. Amendment

142. Substantive law or contractual agreements may allow for the amendment of a transferable document or instrument and specify who has the authority to amend, under what circumstances and whether a duty to notify third parties of the amendment

exists. Article 17 provides a functional equivalence rule for instances in which an electronic transferable record may be amended.

143. The amendments referred to in article 17 are of legal nature. Amendments of purely technical nature do not fall under the scope of article 17. (See also above, para. 86, on the reference to "any change which arises in the normal course of communication, storage and display" contained in article 10, paragraph 2, of the Model Law.)

144. Article 17 sets forth an objective standard, as indicated by the use of the word "identified", for the identification of amended information in an electronic environment. The rationale for requesting the identification of the amended information lies in the fact that, while amendments may be easily identifiable in a paper-based environment due to the nature of that medium, that may not be the case in an electronic environment. Qualifiers to identification, such as "accurately" or "readily", do not provide an objective standard while introducing an additional burden and imposing cost on system operators.

145. Thus, article 17 aims to provide evidence of and trace all amended information. The article is in line with the general obligation to preserve the integrity of the electronic transferable record contained in article 10, paragraph 2, of the Model Law. It does, however, go beyond that general obligation, as the amended information shall not only be recorded but also identified as such and therefore recognizable.

146. Article 17 requires that a reliable method shall be used to identify the amended information, but does not set out the method to be employed to identify the amendment or the amended information, as that could impose an additional burden on the management of the electronic transferable record. The reliability of the method shall be assessed according to the general reliability standard contained in article 12.

147. The words "or permits" aim at capturing those instances in which applicable substantive law allows for amendment of the electronic transferable record but does not require it.

Article 18. Replacement of a transferable document or instrument with an electronic transferable record

148. If the law recognizes the use of both transferable documents or instruments and electronic transferable records, the need for a change of medium may arise during the life cycle of those documents, instruments or records. Enabling change of medium is critical for the wider acceptance and use of electronic transferable records, especially when used across borders, given the different levels of acceptance of electronic means and readiness for their use in different States and business communities.

149. While legal texts based on the principle of medium neutrality may recognize the possibility of change of medium, laws dealing exclusively with transferable documents or instruments are unlikely to foresee it. Articles 18 and 19 of the Model Law aim to fill that gap.

150. Articles 18 and 19 have a substantive nature and aim at satisfying two main goals: enabling change of medium without loss of the information required by substantive law; and ensuring that the replaced transferable document or instrument will not further circulate so as to prevent the coexistence of two claims to performance of the same obligation and, more generally, not to affect in any manner the rights and obligations of any party.

151. As a general rule, according to article 10, subparagraph 1(a), of the Model Law an electronic transferable record shall contain the information required to be contained in a transferable document or instrument (see above, paras. 71-75).

However, article 18 does not require that all information contained in a transferable document or instrument shall be contained in the replacing electronic transferable record. Substantive law determines the information necessary to be contained in the replacing electronic transferable record in order to preserve rights and obligations of all concerned parties.

152. Article 18 omits the reference to substantive legal notions such as “issuer”, “obligor”, “holder” and “person in control” in order to accommodate the variety of schemes used in the various transferable documents or instruments, thus providing the flexibility needed to accommodate business practice.

153. Substantive law, including parties’ agreement, identifies those parties whose consent is relevant for the change of medium and which parties, if any, need to be notified of the change.

154. Paragraph 1 requires that a reliable method shall be used for the change of medium. The reliability of the method shall be assessed according to the general reliability standard contained in article 12.

155. The word “replace” in paragraph 1 does not refer to the notion of reissuance, since reissuance and change of medium are distinct concepts and article 18 is clearly meant to refer to the latter.

156. The legal consequence for non-compliance with the requirement set forth in paragraph 2 is the invalidity of the change of medium and, consequently, of the electronic transferable record.

157. Paragraph 3 sets forth that, when the change of medium has taken place, the transferable document or instrument ceases to have any effect or validity. This is necessary to avoid multiple claims for performance. The word “upon” indicates that there should be no interval between the issuance of the replacement and the termination of the replaced document or instrument.

158. The words “shall be made inoperative and” before the word “ceases” reflect that the transferable document or instrument cannot be further transferred after change of medium. They leave sufficient flexibility on the choice of the method to render the transferable document or instrument inoperative.

159. If a transferable document or instrument or an electronic transferable record is invalidated on the wrong assumption of the validity of the replacing record, document or instrument, substantive law would apply to the reissuance of the invalidated document, instrument or record, or to the issuance of the replacing record, document or instrument.

160. A transferable document or instrument or an electronic transferable record could fulfil other functions besides transferability, such as providing evidence of a contract for the carriage of goods and of receipt of the goods, or, with respect to transferable documents or instruments, providing evidence of the chain of endorsements for an action in recourse. The ability to fulfil those additional functions may continue after the document, instrument or record has been made inoperative.

161. Paragraph 3 refers to the issuance of the electronic transferable record in accordance with paragraphs 1 and 2, to clarify that the electronic transferable record has to be issued in accordance with both paragraphs.

162. Paragraph 4 is intended to clarify as a statement of law that the rights and obligations of the parties are not affected by the change of medium. In particular, the replacing record should contain all the information necessary in order not to affect those rights and obligations, regardless of the nature of that information. Though restating a general principle already contained in the Model Law, the paragraph was retained in view of its declaratory function.

Article 19. Replacement of an electronic transferable record with a transferable document or instrument

163. Article 19 provides for the replacement of an electronic transferable record with a transferable document or instrument. A survey of business practice indicates that such replacement is more frequent than the reverse case due to the fact that a party whose involvement was not envisaged at the time of the creation of the electronic transferable record does not wish or is not in a position to use electronic means.

164. Under certain national laws, a paper-based print-out of an electronic record may be considered as equivalent to an electronic record. Under article 19 a print-out of an electronic transferable record needs to meet the requirements of that article in order to have effect as a transferable document or instrument replacing the corresponding electronic transferable record.

165. The content of article 19 mirrors that of article 18 on the replacement of a transferable document or instrument with an electronic transferable record. Therefore, the comments in paragraphs 148-162 above also apply, mutatis mutandis, to article 19.

166. Article 19 does not require that all information contained in an electronic transferable record shall be contained in the replacing transferable document or instrument. In particular, an electronic transferable record could contain information, e.g. metadata, that cannot be reproduced in a transferable document or instrument (see also above, paras. 38-40). Substantive law determines the information necessary to be contained in the replacing transferable document or instrument in order to preserve rights and obligations of all concerned parties.

Third-party service providers

167. Depending on the model chosen, electronic transferable records management systems may require the use of services provided by third parties. The Model Law is technology neutral and therefore compatible with all models. Reference in the Model Law to electronic transferable records management systems does not imply the existence of a system administrator or other form of centralized control.

168. UNCITRAL texts on electronic commerce have sometimes dealt with the conduct of third-party service providers. In particular, articles 9 and 10 of the UNCITRAL Model Law on Electronic Signatures provide guidance on the assessment of the conduct of a third-party service provider and of the trustworthiness of its services.[18]

169. However, the Model Law has an enabling nature and does not deal with regulatory matters, which should be addressed in other legislation. Moreover, expected developments in technology and business practice recommend a flexible approach when assessing the conduct of third-party service providers. Hence, the Model Law leaves freedom of choice of third-party service providers as well as of the type of services requested and of their technology.

170. In that respect, it should be noted that the general reliability standard set forth in article 12 of the Model Law, and specific standards such as the criterion to assess integrity contained in article 10, paragraph 2, of the Model Law provide parameters

[18] UNCITRAL Model Law on Electronic Signatures, Guide to Enactment, paras. 142-147.

to assess the reliability of an electronic transferable record and of its management system. Designers of those management systems need to comply with those standards in order to set up commercially viable enterprises.

CHAPTER IV. CROSS-BORDER RECOGNITION OF ELECTRONIC TRANSFERABLE RECORDS

Article 20. Non-discrimination of foreign electronic transferable records

171. Article 20 aims at eliminating obstacles to cross-border recognition of an electronic transferable record arising exclusively from the fact that it was issued or used abroad. It does not affect private international law rules.

172. The need for an international regime to facilitate the cross-border use of electronic transferable records was already recognized at the outset of the work and reiterated throughout the deliberations on the Model Law. That need was also emphasized by the Commission at its forty-fifth session (A/67/17, para. 83).

173. However, different views were expressed on how to achieve that goal. On the one hand, there was the desire not to displace existing private international law rules and to avoid the creation of a dual regime applying a special set of conflict of laws provisions for electronic transferable records. On the other hand, there was awareness of the importance of dealing adequately with aspects relating to the international use of the Model Law for its success and expression of the desire to favour its cross-border application regardless of the number of enactments.

Paragraph 1

174. Paragraph 1 aims at eliminating obstacles to cross-border recognition of an electronic transferable record arising exclusively from the place of origin or of use of the electronic transferable record. In other words, paragraph 1 aims to prevent that the place of origin or of use of the electronic transferable record could be considered in itself the reason to deny legal validity or effect to an electronic transferable record. A provision similar in scope may be found in article 12, paragraph 1, of the UNCITRAL Model Law on Electronic Signatures.

175. The words “issued or used” aim at covering all events occurring during the life cycle of an electronic transferable record. In particular, they include endorsement and amendment of the electronic transferable record. In determining the location of the place of business, article 14 of the Model Law may also be relevant.

176. Paragraph 1 does not affect substantive law, including private international law. Thus, for instance, paragraph 1 could not per se lead to the recognition of an electronic transferable record issued in a jurisdiction that does not recognize the legal validity of electronic transferable records. However, paragraph 1 also does not prevent that an electronic transferable record issued or used in a jurisdiction not allowing the issuance and use of electronic transferable records, and that otherwise complies with the requirements of applicable substantive law, could be recognized in a jurisdiction enacting the Model Law.

177. The word “abroad” is used to refer to a jurisdiction other than the enacting one, including a different territorial unit in States comprising more than one.

178. Paragraph 2 reflects the understanding that the Model Law should not displace existing private international law applicable to transferable documents or instruments, which is considered substantive law for the purposes of the Model law (see para. 5 above). The introduction of a special set of private international law provisions for electronic transferable records would lead to a dual private international law regime, which is not desirable.

179. Since paragraph 1 refers only to non-discrimination while paragraph 2 relates to private international law, the two paragraphs operate on different levels and do not interfere.

K. Draft Model Law on Electronic Transferable Records: compilation of comments by Governments and international organizations

(A/CN.9/921 and Add.1-3)

[Original: English/Spanish]

Contents

I. Introduction

1. At its forty-fourth session, in 2011, the Commission mandated its Working Group IV (Electronic Commerce) to undertake work on electronic transferable records. At its forty-ninth session in 2016, the Commission, expressing its appreciation to Working Group IV (Electronic Commerce) for the progress made in the preparation of a draft Model Law on Electronic Transferable Records, indicated that it expected that the Model Law would be adopted at the Commission's fiftieth session, in 2017.

2. At its fifty-fourth session (Vienna, 31 October-4 November 2016), the Working Group requested the Secretariat to revise the draft Model Law on Electronic Transferable Records and explanatory materials contained in document A/CN.9/WG.IV/WP.139 and its addenda to reflect the deliberations and decisions at that session and transmit the revised text to the Commission for consideration at its fiftieth session. The Working Group recalled that UNCITRAL practice was to circulate the text as recommended by an UNCITRAL working group to all Governments and relevant international organizations for comment. It was noted that the same practice would be followed with respect to the draft Model Law, so that the comments would be before the Commission at its fiftieth session (A/CN.9/897, para. 20).

3. By a note verbale dated 16 February 2017, the Secretariat transmitted the text of the draft Model Law with explanatory notes (A/CN.9/920) to States and to invited international organizations. The present document reproduces the first comments received by the Secretariat on the draft Model Law and the explanatory notes. Comments are reproduced as received by the Secretariat with some formatting changes. Comments received by the Secretariat after the issuance of the present document will be published as addenda thereto in the order in which they are received.

II. Compilation of comments

A. States

1. Colombia

[Original: Spanish]
[3 April 2017]

1. The model law should state that electronic transferable records should take into account States' domestic regulations relating to the protection of personal data.

2. Article 18, paragraphs 3 and 4: These provisions establish that upon issuance of an electronic transferable record replacing a transferable document, that document ceases to be valid. In that regard, it is suggested that such a document should not cease to be valid but, rather, it should be considered as another original, since legally it would be possible to have one or more originals of that document. Accordingly, there should be notes referring to the existence of both paper-based and electronic originals.

3. Article 19, paragraph 1: The model law should clarify what is considered a "reliable method". This can be done by establishing the criteria that determine such characteristics or by formulating a definition that standardizes the term.

4. It is important that the storage of electronic data should be taken into account. While the draft model law focuses on the transferability of an electronic record, it should stipulate that the processing of personal data, and in particular the storage of such data, should be carried out in accordance with relevant local regulations.

5. While the draft model law seeks to ensure technological neutrality, it is also important to clarify what would be considered a "reliable method" for member States. It is suggested that generic criteria or a clarificatory definition should be included.

6. The minimum metadata to be included in an electronic transferable record should be specified, as should the minimum technical characteristics with respect to format.

7. Since it is often the case that, rather than a single document, an electronic file is transferred, it might be useful to describe such situations and the specific characteristics of such files.

2. Germany

[Original: English]
[4 April 2017]

Chapter III. Use of electronic transferable records

Article 12 (a):

Although we agree that a functional approach should generally be followed in defining the reliability standard, and we support flexible criteria in order to avoid the excessive costs that would be incurred by business if requirements were too narrowly defined, we are strongly convinced, that at least (ii) "The assurance of data integrity", (iii) "The ability to prevent unauthorized access to and use the system" and (iv) "The security of hardware and software" are mandatory requirements for the reliability of transferable electronic records, especially insofar as cross-border recognition is concerned. These three requirements should be made mandatory for example by way of an "at least" clause so that they feature in all assessments of reliability. We therefore suggest revising Article 12 (a) to that effect.

Article 15:

We suggest revising the notion of "originals" in order to reflect the outcome of discussions surrounding the notion of "uniqueness" in Article 10. We take the view that Article 15 refers to copies and duplications of transferable documents as is the case in Article e8 of the Supplement to the Uniform Customs and Practice for

Documentary Credits for Electronic Presentation. This should be expressly clarified in Article 15 in order to avoid the possibility of multiple claims.

Explanatory Notes to the Model Law on Electronic Transferable Records

Article 1:

Para. 9:

We suggest deleting in the first sentence the words "securities and other" insofar as it specifies that only financial securities, e.g. mid- and long-term securities traded on capital markets, are excluded. The general determination as to which instruments are to be counted as securities is a matter of substantive law.

Suggestion:

> "Paragraph 3 clarifies that the Model Law does not apply to investment instruments."

Article 2:

Para. 19:

Since the second sentence of paragraph 19 refers to transferable records or instruments, i.e. the "paper-world", the reference to the "person in control" should be replaced by a reference to the "paper-world" equivalent, i.e. the "possessor". In order to make this statement more comprehensive, the sentence could be drafted as follows:

> "It does not aim at affecting the fact that substantive law shall determine the rights of the possessor and determine who is considered as the (rightful) holder."

Article 10:

General Remark:

The explanatory notes on Article 10 are key to the functioning of the Model Law. Article 10 is a central provision in ensuring the "uniqueness" of an electronic transferable record. Uniqueness is an essential feature that contributes to prevent the existence of multiple claims for performance of the same obligation. Another requirement that prevents multiple and repeated requests for performance of the same obligation is, with regard to bills of exchange, for example, the requirement of presentment and surrender for payment. We take the view that uniqueness (in the same way as authenticity) pertains to the document or instrument, and therefore also the electronic record thereof. The singularity of claims is a consequence of uniqueness (and authenticity) of the record that incorporates the performance obligation. Control (the functional equivalent of possession) is something different and not necessarily linked to these notions. The person in control may change throughout the life cycle of an electronic transferable record, for example, by transfer thereof. However, the singularity of the right to claim performance of the obligation is not affected by a change of the person in control. To provide for uniqueness in an electronic environment does not mean establishing full equivalence to the paper document, which, as a physical object, is by nature unique. That may not be technically feasible. Rather, uniqueness should provide for a functional equivalent of the effects linked to an original/authentic paper document in the paper world. Since the distinction between transferability and negotiability and the distinction between financial instruments and documents of title is not known to all jurisdictions (it is unknown to German law) and since the Model Law focuses on transferability (see in particular para. 3 of the Explanatory Notes), it does not seem useful to refer to the terms "document of title or negotiable instrument" in the last sentence of paragraph 63.

Para. 63:

We suggest: (a) adding in the second sentence "the existence of" before the words "multiple claims"; (b) adding the words "for performance of the same obligation" after the word "claims"; and (c) for clarity and correctness, we suggest revising the last sentence as follows:

> "Providing a guarantee of uniqueness in an electronic environment functionally equivalent to an original or authentic document or instrument in the paper world has long been considered a peculiar challenge".

Suggestion:

> "Uniqueness of a transferable document or instrument aims to prevent the circulation of multiple documents or instruments relating to the same performance and thus to avoid the existence of multiple claims for performance of the same obligation."

Para. 64:

We suggest: (a) revising the first sentence as follows: "Uniqueness is a relative notion that poses technical challenges in an electronic environment, as providing an absolute guarantee of non-replicability may not be technically feasible and as the identification of the specific record that is supposed to constitute the equivalent to a respective transferable document or instrument is not obvious due to the lack of a tangible medium."; (b) in the third sentence adding the words "a paper document, as a physical object, is by nature unique and, furthermore" after the word "However".

Suggestion:

> "Uniqueness is a relative notion that poses technical challenges in an electronic environment, as providing an absolute guarantee of non-replicability may not be technically feasible and as the identification of the specific record that is supposed to constitute the equivalent to a respective transferable document or instrument is not obvious due to the lack of a tangible medium. In fact, the notion of uniqueness poses challenges also with respect to transferable documents or instruments, since paper does not provide an absolute guarantee of non-replicability. However, a paper document as a physical object is by nature unique and, furthermore, centuries of use of paper in business transactions have provided sufficient information to commercial operators for an assessment of the risks associated with the use of that medium while practices on the use of electronic transferable records are not yet equally well-established."

Para. 65:

We suggest: (a) adding "the existence of" before the word "multiple"; (b) replacing the word "requests" with the word "claims"; and (c) deleting the text after the word "obligation".

Suggestion:

> "Article 10 aims at preventing the possibility of the existence of multiple claims to perform the same obligation."

Para. 67:

For the same reason, we suggest deleting the words "and control".

Suggestion:

> "One effect of the adoption of the notion of "singularity" in the Model Law is the prevention of unauthorized replication of electronic transferable record by the system."

Para. 68:

We take the view that this Model Law applies only to electronic equivalents of what may generally be referred to as "securities". It does not apply to instruments with a mere evidentiary function that do not meet the requirements of transferable records or instruments as defined in Article 2. This should be clearly expressed. We therefore support adding the word "also" in the last sentence after the words "electronic transferable record may".

Suggestion:

> "For instance, an electronic transferable record may also have an evidentiary value […]".

Para. 70:

We take the view that paragraph 70 should be made subject only to paragraph 4. If so, "if these are issued as instruments not to order" should be added to the second sentence.

Suggestion:

> "This could be the case, in certain jurisdictions, of straight or nominative instruments, such as promissory notes, bills of lading or bills of exchange, if these are issued as instruments not to order."

Para. 82:

The provisions of the Model Law do not use the term "original". Nevertheless, its provisions aim at establishing an electronic transferable record that is finally functionally equivalent to what is considered an original or authentic transferable document or instrument in the paper-world. The first and the fourth sentence should therefore be drafted as follows:

> "Unlike other UNCITRAL texts on electronic commerce, the Model Law does not use the term "original" in the provisions that contain the requirements for establishing functional equivalence to the paper-based notion of "original". […] With regard to the dynamic notion of "original" in the context of electronic transferable records, Article 10, subparagraph 1(b)(iii), […]."

Para. 83:

We suggest revising the text in light of the proposed changes above (para. 65), following the line that control must be distinguished from uniqueness. In any case consideration must be given to the fact that "singularity" allows a specific electronic record to be identified as the electronic transferable record entitling the person in control to claim to performance.

Para. 83 should be drafted as follows:

> "Hence, while the notion of "original" of transferable documents or instruments is particularly relevant to prevent multiplicity of claims, the Model Law achieves that goal with the use of the notions of "singularity" and "control" that allow identifying both a specific electronic record as the electronic transferable record to entitle the person in control to claim performance and that is the object of control (see above paras. 65-76)."

Article 11:

Para. 94:

We take the view that the text, as it is currently drafted, does not precisely reflect the statement of Article 11, paragraph 1 (b) and, furthermore, does not reflect the consensus in the Working Group. It should therefore be revised carefully in accordance with the statements contained in paragraph 101 of document A/CN.9/863 (report of the 52nd session): "It was stated that both control and possession were factual situations and that the person in control of an electronic transferable record was in the same position as the possessor of an equivalent transferable document or instrument. It was also stated that control could not affect or limit the legal consequences arising from possession and that those legal consequences would be determined by applicable substantive law. Broad consensus was expressed on those statements. It was further stated that parties could agree on the modalities for the exercise of possession, but not modify the notion of possession itself." Therefore, we suggest: (a) replacing the words "the holder of the electronic transferable record" in the first sentence by the words "as such", since reference to "the holder" at this point would imply a statement about the substantive-law effects of being identified as the

person in control (if an explanatory element is needed, we suggest using the wording of paragraph 101 of document A/CN.9/863); (b) replacing the word "holder" in the second sentence with "possessor" in order to clarify that control in the electronic world is equivalent (only) to possession in the paper world. "Holder" has substantive-law implications, possibly referring to whether the person is a "rightful" holder or not.

Suggestion:

> "Subparagraph 1 (b) requires to reliably identify the person in control as such of the electronic transferable record. The person in control of an electronic transferable record is in the same legal position as the possessor of an equivalent transferable document or instrument."

Para. 96:

We suggest revising the text after the first sentence along the following lines: "The use of the services of a third party to exercise exclusive control does not affect exclusivity of control. It does neither imply nor excludes that the third-party service provider or any other intermediary is a person in control. Rather this is to determine by the applicable substantive law". This would make it clear that the Model Law neither excludes nor contradicts the underlying factual and legal assumptions of intermediate securities holding models, which are reliant on the notion that intermediaries have (indirect or mediate) possession of the securities registered in the securities accounts they maintain and operate (for other intermediaries or the ultimate account holder).

Para. 102:

We suggest revising the last sentence as follows:

> "The Model Law does not contain specific provisions on surrender since paragraph 2, which governs transfer of control as the functional equivalent of transfer of possession and thus of delivery, would apply also to those cases."

Article 12:

General remark:

We are convinced that the reasonable reliability requirements are important for a well-functioning Model Law, especially in cross-border contexts. Article 12 and the corresponding explanatory notes are essential for the common interpretation and therefore the effectiveness of this standard. As mentioned above, we suggest that a mandatory assessment of (at least) data integrity, access protection and hard- and software security, are necessary in order to implement a general reliability standard for electronic transferable records. We therefore suggest revising the explanatory notes in paras. 103-111. It should be clarified that party agreements cannot derogate from these minimum requirements.

Para. 104:

We suggest, for example, revising the text after the words "elements that" to underline the fact that the above (Art. 12) indicated elements contained in Article 12 are "conditio sine qua non" for the reliability of transferable electronic records.

Para. 119:

We suggest adding a text after the words "not to make it dependent on party autonomy" that highlights that the requirements: (ii) "The assurance of data integrity", (iii) "The ability to prevent unauthorized access to and use the system" and (iv) "The security of hardware and software", listed in Article 12, are mandatory.

Article 15:

Para. 133:

We suggest revising the second sentence with regard to the changes proposed above (para. 65) to the effect that control must be distinguished from uniqueness.

3. Hungary

[Original: English]
[4 April 2017]

Article 2 of the draft defined the expression "electronic record" as "information generated, communicated, received or stored by electronic means". Storing and archiving electronic data has encountered several difficulties lately from the aspect of commerce in Hungary: the system and method of e-invoicing is developing rapidly, but the legal framework of archiving the invoices (Hungarian Ministerial Decree 114/2007 (XIJ.29.) on the rules of digital archiving) is no longer applicable to all cases. In the last ten years, e-invoicing, and in general, digitalization became a much more complex and developed area than it was in 2007. Because of this, a modernization and reform of the framework is urgently needed: with a new, more flexible, transitive and business-friendly legal background, the storing and archiving of e-invoices would be quicker and easier (it would significantly help the enforcement of the principle of technology neutrality too). It would also help decreasing the number of regular, paper-based invoices, thus decreasing the administrative burden, and, as a collateral effect, it would increase competition between parties providing archiving services, decrease the prices of such services, and improve their quality as well.

The draft, however does not have an article about storing and archiving any kind of electronic transferable record. With the process of storing is an essential and inevitable part of managing electronic data, Hungary would respectfully suggest the Working Group to include some general provisions about the reliable method and know-how about it in the Model Law.

4. United States of America

[Original: English]
[4 April 2017]

Paragraph 65 of the Explanatory Notes indicates that "singularity" and "control" are intended to prevent the possibility of multiple requests to perform the same obligation. Paragraph 67 of the Explanatory Notes states that an effect of "singularity" and "control" is the prevention of unauthorized replication of an electronic transferable record. In this regard, it is important to recognize that, while unauthorized replication is to be prevented, there may still be multiple versions of the data that constitute the electronic transferable record. It is "control" that will prevent multiple claims for performance.

Unfortunately, there has been confusion between singularity of document or record and singularity of claim. The model law seeks to achieve the latter. As systems may retain copies of data, there might not be a singular record. However, "control" should address concerns stemming from this possibility, because the concept of control in the draft model law specifically deals with the singularity of the claim and thereby eliminates the need to identify a singular record to prevent multiple claims. By definition, control limits the parties that may make a claim on an electronic transferable record without having to design a system that provides for a singular record.

Paragraphs 76-78 of the Explanatory Notes are misguided in this regard. While Article 10(1)(b)(i) of the Model Law contemplates utilization of a reliable method to identify an electronic record as the electronic transferable record that will be relevant to parties to a transaction, it cannot contemplate that this electronic record will necessarily be unique. Instead, working with the concepts of "control" found in Article 10(1)(b)(ii) and Article 11, Article 10(1)(b)(i) operates to identify the relevant electronic record for the transaction to be undertaken. For this reason, the Explanatory Notes should be revised to state instead that the provision will assist in identifying the electronic transferable records for the purpose of the relevant transaction.

In a purely drafting matter, the title of Article 14 does not accurately characterize the text that is contained in the article. While the title refers to the "[d]etermination" of

the place of business, the operative text identifies bases that are not alone sufficient for the determination. Nowhere in the text of that article are there rules for the determination of the place of business. For this reason, the title could be simplified to "Place of business".

B. Intergovernmental organizations

1. World Trade Organization (WTO)

[Original: English]
[3 April 2017]

Facilitating the use of electronic documentation is without question an important feature of the enabling environment for electronic commerce, in which the WTO has pursued a Work Programme since 1998.

The WTO's key area of interest concerns the possible implications of the Draft Model Law for international trade and, in particular, for the WTO's multilateral rules. Among the pillars of the multilateral trade regime are the principles of transparency (making measures public), non-discrimination among Member countries (most favoured nation treatment), and non-discrimination against foreign imports of goods and of services or their suppliers (national treatment). These principles apply both in terms of cross-border transactions, commercially present juridical or natural persons in the case of services trade, and domestic regulatory measures that may haven such effects. In reviewing the provisions of the Draft Model Law, we found no provisions that would explicitly contradict the WTO principles noted above.

Due to its perhaps more direct link to trade concerns, we gave particular attention to Article 20, on non-discrimination of foreign electronic transferable records, as well as the Explanatory Notes and negotiating history, as cited in the Notes. The wording of Article 20, paragraph 1, stating "electronic transferable record shall not be denied legal effect, validity or enforceability on the sole ground that it was issued or used abroad" is certainly consistent with the most favoured nation trade principle and broader non-discrimination principles. However, we would like to call your attention to jurisprudence in international trade that de facto discrimination would be relevant, for example, in implementation, even where, on a de jure basis, a law's provisions do not explicitly discriminate based on origin.

In this respect, we note with interest the observations in the Explanatory Notes regarding Article 20, paragraph 1, where it is indicated that:

> "paragraph 1 could not per se lead to the recognition of an electronic transferable record issued in a jurisdiction that does not recognize the legal validity of electronic transferable records. However, paragraph 1 also does not prevent that an electronic transferable record issued or used in a jurisdiction not allowing the issuance and use of electronic transferable records, and that otherwise complies with the requirements of applicable substantive law, could be recognized in a jurisdiction enacting the Model Law."

Given this interpretation, and in terms of governments' exercise of the flexibility that is implied, it might be useful to recall that the underlying domestic criteria concerning acceptance or non-acceptance of electronic transferable records issued or used in a jurisdiction not allowing the issuance and use of such records should not only be made public (transparency) but also be non-discriminatory. Therefore, the relevant implementing measures in such cases should be objective in nature and also not, in themselves, based "solely" on origin. This assumes that acceptance of such records from jurisdictions that do allow their issuance or use would normally not raise these issues.

Draft Model Law on Electronic Transferable Records: compilation of comments by Governments and international organizations

ADDENDUM

Contents

II. Compilation of comments

A. States

5. Kuwait

[Original: Arabic]
[4 April 2017]

1. It should be noted that most of the provisions contained in the draft Model Law are taken from other model laws issued by the United Nations Commission on International Trade Law (UNCITRAL), such as the UNCITRAL Model Law on Electronic Commerce (1996) and the UNCITRAL Model Law on Electronic Signatures (2001), in addition to the United Nations Convention on the Use of Electronic Communications in International Contracts (New York, 2005) (the Electronic Communications Convention). As a member of the United Nations, Kuwait has acceded to these international instruments, which have been incorporated into Kuwaiti law through, for example, the Electronic Transactions Act (Act No. 20 of 2014), the Anti-Money Laundering and Combating the Financing of Terrorism Act (Act No. 106 of 2013) and the Anti-Cybercrime Act (Act No. 63 of 2015).

2. Article 1 of the draft Model Law sets out the scope of the law. Under paragraph 3, which lists the exclusions to the law, we wish to include reference to all documents and instruments deemed by the national legislature to fall outside the scope of the Model Law, such as:

(a) Transactions and matters related to personal status, endowment and wills;

(b) Real estate title deeds and the resulting original or consequential real rights;

(c) Promissory notes and negotiable bills of exchange;

(d) Any event that the law requires to be expressed in a written document or to be documented or the making of which is subject to a specific provision in another law.

These exclusions are provided for under article 2 of the Electronic Transactions Act. This exclusion list extends to all other documents and instruments that may not be converted into or issued in electronic record format according to Kuwaiti law.

3. Article 3 on interpretations provides that, when interpreting the law, regard is to be had to the international origin of the law. It is imperative that this interpretation

should not conflict with the provisions set out in the relevant domestic legislation that has already been adopted and implemented, such as the Electronic Transactions Act, in particular given that the provisions of the Act are based on international instruments to which Kuwait has already acceded. The interpretation must also not conflict with the rules of public order and morals in Kuwait as understood when interpreting the law in accordance with the general principles on which it is based.

4. As regards article 5 on information requirements, it is imperative that the law explicitly exempt all persons from liability in the event that they provide incorrect, incomplete, false or non-original information with regard to their personal electronic records or the records held by governmental security agencies or in the electronic processing systems of such agencies. The purpose of this reservation is to respect the sanctity of private life and the interests of the State, both of which are protected under Kuwaiti legislation. These exemptions are provided for in articles 23 and 32 of the Electronic Transactions Act.

5. As regards article 7 on the legal recognition of transferable electronic records, we reiterate the reservations made with regard to article 1 on the scope of the Model Law, namely that it should exclude all documents and instruments that may not be converted into electronic records pursuant to Kuwaiti law, as provided for in article 2, paragraph d, of the Electronic Transactions Act and in all other Kuwaiti legislation pursuant to which certain documents or instruments may not be converted into electronic records.

6. As regards article 8 on the legal recognition of electronic writing in transferable electronic records and article 9 on the legal validity of electronic signatures in electronic records, subject to the relevant legal requirements, we reiterate that all documents and instruments not recognized by the Kuwaiti legislature in electronic record format must be exempt from the provisions set out in those articles and that any electronic writing or signatures on such documents or instruments may not be recognized, in accordance with the references provided in paragraph 5.

7. As regards article 10 on the conditions for the use of transferable electronic records and article 11 on control over the possession of electronic records, we request that these two articles be merged on the grounds that they both deal with the same issue, namely the conditions applicable to electronic records or documents effective at law. Merging these articles would be better legal drafting practice.

The Kuwaiti legislature has combined the content of these articles into a single article, namely article 9 of the Electronic Transactions Act on the conditions applicable to electronic records or documents effective at law.

8. Article 13 on indicating the time and place in electronic transferable records provides that consideration must be paid to any provisions of national law that require an indication to be provided of the time and place at which the electronic record in question was created, on the condition that a secure and electronically documented method is used to indicate the time and place.

No further details are provided with regard to this provision, however. Furthermore, this matter has already been elaborated in various other model laws, such as the UNCITRAL Model Law on Electronic Commerce and the UNCITRAL Model Law on Electronic Signatures.

The Kuwaiti national legislature has issued detailed provisions concerning the requirements regarding the need to indicate the time and place at which the transaction referred to in electronic record in question was carried out, drawing on the provisions set out in the UNCITRAL Model Law on Electronic Commerce and the UNCITRAL Model Law on Electronic Signatures. Article 13 should therefore provide further details regarding the conditions under which an indication must be given of the time and date at which the legal transaction referred to in a transferrable electronic record was performed, as has been provided in similar international model laws.

9. As regards article 14 on determining the place of business of the creator or addressee party to the legal transactions recorded in the electronic record in question,

it is imperative that commonly accepted and definitive standards be used, namely the headquarters and place of residence of the persons involved.

This was the approach taken by the Kuwaiti legislature when drawing up article 16 of the Electronic Transactions Act:

> "The electronic document or record shall be deemed sent from the place where the creator's headquarter is located, and shall be deemed received in the place where the addressee's headquarter is located.
>
> "If either has a headquarter, his place of residence shall be deemed his headquarter unless the creator of the electronic document or record and the addressee have agreed otherwise.
>
> "If the creator or the addressee had more than one headquarter, the headquarter more relevant to the transaction shall be deemed the place of sending or receipt."

The draft Model Law uses the negative form to indicate what cannot be accepted as the headquarters or the place of business of the creator or addressee of the electronic record, known as definition by exclusion. The legislative method used by the Kuwaiti legislature in this regard is superior, as it provides great precision during legislative drafting. Article 13 should therefore define the place of business of the parties to an electronic record based on their precise location or place of residence, in particular given that Kuwaiti legislature has already issued precise, detailed provisions on these criteria under previous model laws.

10. Article 15 concerning the issuance of multiple originals of an electronic record should include provisions that require that, where the paper document or record had one original source based on which identical originals were made, the transferable electronic record and any identical originals thereof must comply with the requirement that they bear verified, legally recognized electronic signatures and that a certificate of authenticity for the signature must be provided by the authority authorized to issue electronic signatures.

The Electronic Transactions Act contains provisions on the need for legally recognized electronic signatures and the relevant certificates of authenticity, drawing on provisions set out in the UNCITRAL Model Law on Electronic Commerce and the UNCITRAL Model Law on Electronic Signatures.

11. Article 16 provides for the endorsement of transferable documents and instruments on the condition that they comply with the provisions set out in articles 8 and 9. It is imperative that all transactions that cannot, under Kuwaiti law, be transferred into electronic record format be excluded from the provisions of this article, in accordance with the Electronic Transactions Act, pursuant to which transactions related to personal status, endowment, wills and real estate title deeds may not be converted into electronic records.

12. Article 17 provides that a transferable electronic document or instrument may be amended on the provision that a reliable method is used. The criteria for reliability of electronic records are set out in article 12 of the draft Model Law. In that regard, and with the aim of adhering to best drafting practice, the following wording should be inserted at the end of article 17: "provided that the amended electronic record meets the standards for reliability set out in article 12 of this Law."

13. As regards articles 18 and 19 on replacing a transferable document or instrument with a transferable electronic record and vice versa, it is imperative to include requirements that must be met before the replacement can be made, for example:

(a) The method or format through which the electronic documents must be created, deposited, saved, submitted or issued without prejudice to the provisions on data privacy and protection;

(b) The type of electronic signature required;

(c) The method and format in which the electronic signature must be inserted into the electronic document or record;

(d) The conditions that must be met by the authentication service provider responsible for issuing certificates of authenticity for electronic signatures on electronic documents and records;

(e) The oversight processes and procedures that must be carried out to ensure the integrity, security and confidentiality of electronic documents, instruments and records.

Most of these requirements are set out in articles 26 and 27 of the Electronic Transactions Act, which draws on the provisions of international law laid down in the UNCITRAL Model Law on Electronic Commerce and the UNCITRAL Model Law on Electronic Signatures.

14. Article 20 on non-discrimination of foreign electronic transferable records provides that the validity of all electronic transferable records issued or used abroad must be recognized.

The article should, however, provide for the principle of reciprocity, a well-known principle rooted in international law. It is illogical and inconsistent with considerations of national sovereignty as embodied in their national legislation, that States recognize the validity of foreign electronic records in their national legislation without any assurances that their own electronic records will be treated similarly in other States. Each State should understand that recognition of its electronic records is dependent on whether it treats records issued in Kuwait with reciprocity.

This reservation draws on the provisions set out in Arab domestic legislation on electronic commerce and electronic signatures, which is, in turn, based on the UNCITRAL Model Law on Electronic Commerce and the UNCITRAL Model Law on Electronic Signatures. These model laws both underscore the importance of upholding the principle of reciprocity in the context of electronic commerce and electronic signatures, in particular with regard to foreign electronic records and to certificates of authenticity for electronic signatures in such records. This principle is upheld in a number of domestic laws, for example:

- 2002 Electronic Commerce Act, Tunisia
- 2002 Electronic Commerce and Electronic Signatures Act, Emirate of Dubai
- 2006 Federal Electronic Transactions and Commerce Act, United Arab Emirates
- 2004 Electronic Signatures Act, Egypt
- 2007 Electronic Commerce Act, Kingdom of Saudi Arabia

On that basis, it is imperative that article 20 of the draft Model Law provide for the principle of reciprocity with regard to recognizing the validity of foreign electronic records. The Kuwaiti legislature has already inscribed this principle in the Electronic Transactions Act, exceptions to which are detailed in article 24 thereof concerning reciprocal treatment regarding electronic signatures on foreign certificates of authenticity.

B. Intergovernmental organizations

2. Caribbean Court of Justice

[Original: English]
[7 April 2017]

1. Stemming from debates on the earlier UNCITRAL model laws it has been observed by several commentators that one of the greatest contributors to the legal barriers to the development of electronic commerce in international instruments relating to international trade was the difficulty in arriving at uniform definitions of the terms “writing”, “signature” and the “notion of the uniqueness or guarantee of

singularity" so as to become legally viable substitutes for paper negotiable instruments and enable the transfer of rights in conditions of legal certainty.[1]

2. In this regard, the Model Law attempts to establish the functional equivalence of transfer of rights and title in an electronic environment. To that end, focus is placed on the notion of control for the transfer of rights and the formal allocation of title to reliably ensure the integrity of the transferable instrument or document. While the Model Law has effectively addressed the main issues identified above, the following articles of the Model Law are of particular concern and will accordingly be addressed.

Article 2 — Definitions

3. The definition of the Electronic Transferable Record ("ETR") in Draft Article 2 provides that an ETR is an electric record that complies with article 10(1) of the Model Law. Draft Article 10 provides (in part) as follows:

> "1. Where the law requires a transferrable document or instrument, that requirement is met by an electronic record if…".

This definition implies the pre-existence of regulatory scheme under the substantive laws of the different jurisdictions. The fact that ETR refers to the substantive laws of the different jurisdictions could lead to varying interpretations and an uneven application of the model law. Such an occurrence would be the exact opposite of what should be achieved by the model law as an instrument of unification.[2]

Article 4 — Party Autonomy and Privity of Contract

4. Draft article 4 of the draft Model Law provides as follows:

> **Article 4. Party autonomy and privity of contract**
>
> "1. The parties may derogate from or vary by agreement the following provisions of this Law: […].
>
> 2. Such an agreement does not affect the rights of any person that is not a party to that agreement."

Draft Article 4 allows the enacting jurisdiction to derogate from the provisions of the Model Law. However, it leaves open the list of provisions that could be derogated from contained in paragraph 1. This variance in its enactment could significantly disrupt uniformity. Similar criticisms were directed at the UNCITRAL Model Law on electronic Signatures (2001) and the UNCITRAL Model Law on Electronic Commerce, (1996). It was noted that many countries around the world including the United States of America, Canada, Australia and China enacted national laws to address legal obstacles faced in electronic commerce. However, the lack of uniformity and harmonization across the enacting jurisdictions "was perceived as a barrier to trade by electronic means".[3]

5. The explanatory notes address the issue of the lack of uniformity, and emphasizes that it's for the enacting jurisdiction to assess which provisions should be derogated from to accommodate the different legal systems. Be that as it may, having a carte blanche on the provisions that can be derogated from poses a greater threat to the successful application of the Model Law. It is recommended that there should be some restrictions on the provisions that may be derogated from.

---

A/CN.9/681/Add.1 — Possible future work on electronic commerce — Proposal of the United States of America on electronic transferable records available at: http://repository.un.org/handle/11176/138448; See also: Zvonimir Safranko — The Notion of Electronic Transferable Records, available at: http://hrcak.srce.hr/174364?lang=en.

[2] UNCITRAL is the core legal body of the United Nations system in the field of trade law and its mandate is to remove legal obstacles to international trade by progressively modernizing and harmonizing trade law by preparing and promoting the use and adoption of legislative and non-legislative instruments in a number of key areas of commercial law.

[3] Wei, C. K. and Suling, J. C. (2006) "United Nations Convention on the Use of Electronic Communications in International Contracts — A New Global Standard", Singapore Academy of law Journal 18:116.

Article 11 — Control

6. Under the existing national and international laws, legal rights are attached to the physical possession of the paper document. The possession of the traditional paper bill of lading represents constructive possession of the goods, and the right to delivery of the goods is based on the physical possession of an original document. In this regard, the model law has equated "control" with "possession" thereby providing a "functional equivalence rule for the possession a transferable document or instrument." Additionally, it rests the burden of ascertainability of factual control on a third-party electronic transferable records management systems provider.

7. All that is required is that it can be reliably established that a person has control and that that person can be identified. The model law is silent on who is the person that is required to have control, whether a third-party service provider or one of the parties involved in the creation of the transfer record. The provision as drafted is sufficiently vague and allows for inconsistent interpretations among adopting countries.

C. Non-governmental organizations

1. Comité Maritime International

[Original: English]
[12 April 2017]

1. Introduction

The Comité Maritime International (CMI) is a non-governmental, not-for-profit international organization established in Antwerp in 1897 with the object of contributing, by all appropriate means and activities, to the unification of maritime law in all its aspects. To achieve its end, CMI has promoted the establishment of national associations of maritime law and cooperated with other international organizations. Because the international regime for the carriage of goods by sea is one of the most important areas of maritime law, CMI participated as an Observer in all the sessions of Working Group III (WG III) of the United Nations Commission on International Trade Law (UNCITRAL) at which the rules, which were finally adopted as the "United Nations Convention on Contracts for the International Carriage of Goods by Sea" (New York, 2008), known as the "Rotterdam Rules", were negotiated.

CMI has carefully continued to watch the development of the "Draft Model Law on Electronic Transferable Records" (Draft Model Law, currently in A/CN.9/920) since Working Group IV (WG IV) commenced a study on "electronic transferable records" in October 2011. CMI has always been conscious of the possible inconsistencies between the text of the Draft Model Law and the Rotterdam Rules' e-commerce related provisions, inter alia, those on negotiable electronic transport records.

CMI wishes to express its concern on the Draft Model Law as approved by WG IV at its 54th session (31 October-4 November 2016, Vienna), and in particular with Article 15, which allows for the issuance of multiple original electronic transferrable records. CMI is particularly interested in the issue because shipping is virtually the only industry that has the practice of issuing more than one original negotiable instruments (i.e., bills of lading) and CMI wishes to submit to the Commission relevant information regarding the custom and practice of the industry before UNCITRAL adopts the final text of the Draft Model Law.[4]

[4] The Report of the 48th session of WG IV (9-13 December 2013) reads as follows: "It was also indicated that the draft provisions should facilitate the continuation of existing practices and therefore it would be prudent to include a provision on the issuance of multiple originals, ***unless the industry requested that such practice should not be permitted to continue in an electronic environment.***" (A/CN.9/797, para. 68. Emphasis added). The present submission demonstrates that CMI sees it is not only as unnecessary but also as undesirable to continue the practice of issuing multiple originals in an electronic environment.

This document explains why the Rotterdam Rules do not contemplate the issuance of more than one original negotiable electronic transport record and points out a possible inconsistency between the Draft Model Law and the Rotterdam Rules. It also proposes possible alternatives to resolve the problem. Section 2 of this paper reviews the treatment of electronic transport records under the Rotterdam Rules, with special attention paid to the possibility of issuing multiple originals. Section 3 identifies the policy decision on which the Rotterdam Rules rest. The possible inconsistency between the Draft Model Law and the Rotterdam Rules is addressed in Section 4. Section 5 will explain some possible solutions. CMI sincerely hopes that this submission will assist in the discussion of the Draft Model Law at the upcoming Commission Session.

2. Electronic Transport Records under the Rotterdam Rules

(1) Equal treatment of transport documents and electronic transport records under the Rotterdam Rules

Codifying the rules on electronic transport records, the Rotterdam Rules seek the full equalization of an electronic document to its paper equivalent. Article 8 of the Rotterdam Rules declares the legal basis for the approach as follows:

> "Article 8. Use and effect of electronic transport records
>
> Subject to the requirements set out in this Convention:
>
> (a) Anything that is to be in or on a transport document under this Convention may be recorded in an electronic transport record, provided the issuance and subsequent use of an electronic transport record is with the consent of the carrier and the shipper; and
>
> (b) The issuance, exclusive control, or transfer of an electronic transport record has the same effect as the issuance, possession, or transfer of a transport document."

Based on the full equalization approach, the Rotterdam Rules, except for provisions that are necessary for technical reasons, such as security requirements for negotiable electronic transport records (Article 9), include parallel provisions for transport documents and electronic transport records. But there is one exception: *the issuance of multiple originals*.

(2) Issuance of more than one original: Negotiable transport documents

Article 36(2)(d) of the Rotterdam Rules requires that negotiable transport documents (such as bills of lading) should state the number of originals when more than one original negotiable transport document is issued.

Article 36(2):

> "The contract particulars in the transport document or electronic transport record referred to in article 35 shall also include: ……
>
> (d) If the transport document is negotiable, the number of originals of the negotiable transport document, when more than one original is issued."

Early drafts of the Convention did not require the carrier to include this information,[5] because most of the delegates agreed that the practice of issuing multiple original transport documents was outdated and should not be encouraged in any way. Historically, there was once a custom to issue three original bills of lading — one for the consignor, one for the consignee, and one for the carrier "following the goods" — and each had a different function.[6] It facilitated dealings in cargoes afloat at a time

[5] See, e.g., Draft Convention, A/CN.9/WG.III/WP.56, art. 38.
[6] See, e.g., KURT GRÖNFORS, TOWARDS SEA WAYBILLS AND ELECTRONIC DOCUMENTS, GOTHENBURG MARITIME LAW ASSOCIATION, 1991, pp. 12, 20-22.

when communications were slow.[7] But that custom lost its rational reason long ago.[8] The practice of issuing multiple originals is not only unnecessary but also harmful because it would cause unnecessary disputes if different originals were negotiated to different persons.[9]

Although UNCITRAL Working Group III maintained its reluctance to endorse the practice,[10] it finally decided that it must address existing practices, however irrational they might be, and that a rule was necessary to protect innocent holders who might otherwise be unable to protect their own interests.[11] It should be emphasized that the reference to the issuance of more than one original in Article 36(2)(d) should not be regarded as an endorsement of such a practice by the Rotterdam Rules.

(3) Issuance of more than one original: Negotiable electronic transport records

Although the Rotterdam Rules do not explicitly prohibit a carrier from issuing more than one original electronic transport record, it is clear that they do not intend to allow such issuance. The possibility of issuing more than one original of a negotiable electronic transport record does not conform with the provisions of the Rotterdam Rules on electronic transport records. For example, Article 36(2)(d) refers only to a negotiable transport document, and not to a negotiable electronic transport record. Because the number of originals would be one of the most relevant pieces of information to include in the contract particulars if more than one negotiable electronic transport record were issued, it is obvious that the Rotterdam Rules assume that multiple negotiable electronic transport records will never be issued.

Furthermore, the provisions on the right of control and delivery of the goods would not work properly if more than one negotiable electronic transport record were issued. Article 51(3) requires the holder to present all original negotiable transport documents when it wishes to exercise the right of control. Article 51(4), corresponding to the provision for a negotiable transport record, does not include such a requirement; it simply provides that the holder should prove that he or she is the holder according to the method that Article 9(1) provides.[12] Accordingly, if more than one original electronic transport record were issued, a holder of each original would be entitled to exercise the right of control. However, besides being highly undesirable from the perspective of legal certainty, such an interpretation is not consistent with the framework devised by the Rotterdam Rules on negotiable electronic transport records.

---

[7] See, e.g., GRÖNFORS, *ibid*, G. H. TREITEL AND FRANCIS MARTIN BAILLIE REYNOLDS, CARVER ON BILLS OF LADING 4TH ED., SWEET & MAXWELL, 2017, P. 385 ET SEQ.

[8] Lord Blackburn observed more than a century ago as follows: "I have never been able to learn why merchants and ship owners continue the practice of making out a bill of lading in parts. I should have thought that, at least since the introduction of quick and regular communication by steamers, and still more since the establishment of the electric telegraph, every purpose would be answered by making one bill of lading only which should be the sole document of title, and taking as many copies, certified by the Master to be true copies, as it is thought convenient; those copies would suffice for every legitimate purpose for which the other parts of the bill can now be applied, but could not be used for the purpose of pretending to be holder of a bill of lading already parted with. However, whether because there is some practical benefit of which I am not aware, or because, as I suspect, merchants dislike to depart from an old custom for fear that the novelty may produce some unforeseen effect, bills of lading are still made out in parts, and probably will continue to be so made out." (*Glyn Mills Currie & Co v East and West India Dock Co*, (1882) 7 App. Cas. 591).

[9] See, Carver, supra note 4. At the CMI Colloquium on Bills of Lading in Venice 30 May-1 June, 1983, CMI adopted eight recommendations on bills of lading, which were endorsed by the CMI Assembly. The first states: "The practice of issuing bills of lading in sets of two or more originals should cease." CMI News Letter, June 1983, p. 1 It was explained that "the Colloquium could not find any real practical need for maintaining the practice — or rather malpractice — to issue bills of lading in more than one original." Ibid.

[10] See the Report of the 17th Session of Working Group III, A/CN.9/594, para. 230. ["It was noted that, while the practice of issuing multiple originals of negotiable transport documents *should be discouraged*, the suggested provision could nevertheless be useful as long as the ***undesirable practice* continued**."](emphasis added).

[11] See the Report of the 17th Session of Working Group III, A/CN.9/594, paras. 230 and 233.

[12] Article 9(1) is the corresponding provision to Article10 of the Model Law.

The issuance of more than one original would prevent compliance with the requirements of these and other provisions on negotiable electronic transport records.

For the same reasons, Article 47(1) would also fail to operate properly if multiple original negotiable electronic transport records were issued. It provides that, when the goods are delivered at the place of delivery, it is sufficient to present one of the multiple original negotiable transport documents and, once the goods are delivered upon the presentation, the remaining documents become void (Article 47(1)(c)). There is no corresponding reference to negotiable electronic transport records in Article 47(1). The holder of a negotiable electronic transport record is required to show only that it is a holder, pursuant to the method used for the record (Article 47(1)(a)(ii)). No provision clarifies what would happen to the remaining original records if goods were delivered in accordance with the above procedure.[13]

3. Why do the Rotterdam Rules not provide for the Issuance of Multiple Original Electronic Transport Records?

As is explained in Section 2, it is arguable that the Rotterdam Rules implicitly do not allow the issuance of more than one original negotiable electronic transport record while they, reluctantly, allow for negotiable transport documents. Although the travaux préparatoires are not explicit in this regard, the context in which the Rotterdam Rules were negotiated explains why they do not provide the same rule for negotiable electronic transport records as they do for negotiable electronic transport documents.[14] Because there is no custom or practice for carriers to issue electronic transport records in multiple originals, it was thought neither necessary nor desirable to develop or to encourage such a practice in the electronic environment which was outdated and undesirable even for paper documents. The issuance of multiple original bills of lading may barely be explained on the grounds that merchants could avoid the risk of possible loss by sending separate originals. That explanation, which is unconvincing even for paper documents, would never apply to negotiable electronic transport records. Although the e-commerce provisions of the Rotterdam Rules were intensively discussed in Working Group III, no voice was heard from industry in support of enabling the issuance of multiple original negotiable electronic transport records.

The situation has not changed. Although the explanatory note to the Draft Model Law states, "It has been reported that the *practice of issuing multiple originals exists* also in the electronic environment" (emphasis added),[15] CMI is not aware of any such practice in the shipping industry.

The explanatory note also cites Article e8 of the Supplement to the Uniform Customs and Practice for Documentary Credits for Electronic Presentation ("eUCP") in support of the commercial practice of or demand for issuing multiple electronic originals.[16] That reference is, to say the least, misleading. Article e8 of eUCP, titled "Originals and Copies", provides: "Any requirement of the UCP or an eUCP credit for presentation of one or more originals or copies of an electronic record is satisfied by the presentation of one electronic record." The commentary to that article by the International Chamber of Commerce (ICC)[17] notes that "In the world of eCommerce,

---

[13] Article 9(1)(d) requires that the procedures for the use of a negotiable electronic transport record should provide "the manner of providing confirmation that delivery to the holder has been effected, or that, pursuant to ... article 47(1)(a)(ii) and (c), the electronic transport record has ceased to have any effect or validity." It is not clear how the provision would apply if multiple original negotiable transport records were issued.

[14] See, for example, MICHAEL F. STURLEY, TOMOTAKA FUJITA AND GERTJAN VAN DER ZIEL, ROTTERDAM RULES: THE UN CONVENTION ON CONTRACTS FOR THE INTERNATIONAL CARRIAGE OF GOODS WHOLLY OR PARTLY BY SEA, SWEET & MAXWELL, 2010, p. 217, footnote 110.

[15] A/CN.9/920, para. 131.

[16] A/CN.9/920, para. 131 states "An example of legal provisions recognizing that practice may be found in article e8 of the Supplement to the Uniform Customs and Practice for Documentary Credits for Electronic Presentation."

[17] JAMES E. BYRNE AND DAN TAYLOR, ICC GUIDE TO THE EUCP: UNDERSTANDING THE ELECTRONIC SUPPLEMENT TO THE UCP 500 (ICC PUBLICATION, NO. 639), 2002, P. 122. The commentary was

the concept of originality is anachronistic and virtually without meaning." The commentary continues that "*The concept of the full set of bills of lading, is similarly anachronistic in the world of electronic commerce*" and that any requirement for the presentment of the full sets of bills of lading would be satisfied by the presentment of the required electronic record under eUCP, unless the credit expressly provided otherwise with sufficient specificity to indicate what was wanted. (emphasis added) The reference to multiple originals in eUCP indicates the industry's reluctance (or even its aversion) to the use of multiple original bills of lading in the electronic environment rather than supporting or requiring the development of such a practice.

The relevant provisions of the Rotterdam Rules are based on a policy decision that the issuance of multiple originals is not desirable even for negotiable transport documents and that there is no reason to allow such practice for negotiable electronic transport records. The policy decision is clearly incompatible with Article 15 of the current Draft Model Law, which allows the issuance of multiple negotiable electronic transport records. CMI is not aware of any custom or practice of industry that justifies a change to the policy decision underlying the Rotterdam Rules.

4. The Possible Inconsistency between the Current Draft Model Law and the Rotterdam Rules

Even if it were accepted that the Draft Model Law is based on a different policy decision than the Rotterdam Rules and should allow the issuance of multiple original electronic transferrable records, the current text seems problematic for the following reason.

An electronic transport record under the Rotterdam Rules may, if not always,[18] fall within the definition of an "electronic transferable record" in Article 2 of the Draft Model Law.

One may argue that negotiable electronic transport records under the Rotterdam Rules are "electronic transferable records existing only in electronic form" (See footnote 1 to Article 3 of the Draft Model Law) to which the Draft Model Law does not apply. Unfortunately, that is far from clear. As is noted above in Section 2(1), because the Rotterdam Rules adopt a full equalization approach to transport documents and electronic transport records and electronic transport records are equivalent to transport documents under the Rotterdam Rules, it may be questioned whether electronic transport records under the Rotterdam Rules exist only in electronic form.

If an electronic transport record under the Rotterdam Rules is an "electronic transferable record" under the Draft Model Law, and if a Contracting State to the Rotterdam Rules enacts domestic legislation on electronic transferable records based on the Draft Model Law, which allows the issuance of multiple electronic transferable records, it would cause an inconsistency with the provisions of the Rotterdam Rules.

One may argue that this is not problematic, on the theory that in many jurisdictions the provisions of the Rotterdam Rules would supersede the national legislation of the Contracting States to the extent there are conflicts. Nevertheless, it would be most advisable for UNCITRAL to avoid outright inconsistency between its recent texts, even if the conflict could be resolved by the superiority of a convention over national legislation.

---

cited in the Note by Secretariat prepared for the 51st session of Working Group IV in 2015 (see para. 12 of A/CN.9/WGIV/WP.130/Add.1).

[18] Since the conditions for the reliability of the system are provided in different wording (compare Article 9 of the Rotterdam Rules with Articles 10 and 12 of the Draft Model Law), it is, at least in theory, possible that negotiable electronic transport records under the Rotterdam Rules will not constitute electronic transferable records under the Model Law and vice versa.

5. Possible Solutions

CMI suggests two alternative ways to solve the problem.

(1) Alternative 1: Delete Article 15 of the Draft Model Law

The simplest solution is to delete Article 15, so that the Draft Model Law does not authorize the issuance of multiple electronic transferable records as the electronic equivalent of multiple original documents or instruments. As far as negotiable transport documents (e.g., bills of lading) are concerned, the situation has not changed since the Rotterdam Rules were adopted in 2008: there is no custom or practice from the industry to issue multiple original negotiable electronic transport records. We see no practice or custom of multiple issuance of transferable or negotiable documents or instruments in the area other than the contract for the carriage of goods although some laws refer to the possibility of the issuance of multiple originals.[19]

If the Commission preserves its previously expressed reluctance to endorse the practice of issuing multiple bills of lading and does not wish to replicate that practice in the electronic environment, this is the most preferred option.

One might argue that multiple issuance is useful to create rights for different persons for different purposes; say, one for transfer and the other for security. But that result can be achieved more easily either by providing access to an electronic transferable record for a qualified purpose (e.g., exercising a security interest) or by attributing specific rights to different persons on the basis of the contents of the record.

(2) Alternative 2: Add references in footnote 1 to Article 1(3)

Article 1(3) of the Draft Model Law provides "This Law does not apply to securities, such as shares and bonds, and other investment instruments, and to [....]." The footnote to the provision currently refers to "(a) documents and instruments that may be considered transferable, but that should not fall under the scope of the Model Law; (b) documents and instruments falling under the scope of the Convention Providing a Uniform Law for Bills of Exchange and Promissory Notes (Geneva, 1930) and the Convention Providing a Uniform Law for Cheques (Geneva, 1931); and (c) electronic transferable records existing only in electronic form." UNCITRAL may wish to add an explicit reference to the Rotterdam Rules in the same footnote. Alternatively, it is also possible to make a reference in a more generic form, such as "electronic transferable records that are governed by international conventions [or national law]."

UNCITRAL may also wish to add another footnote along the following lines to Article 15: "The enacting jurisdiction may/must consider the possibility that the issuance of multiple electronic transferrable records that embody the contract for carriage of goods wholly or partly by sea might give rise to inconsistencies in the operation of relevant provisions of the United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea."

6. Conclusion

When it approved the Rotterdam Rules in 2008, UNCITRAL relied on an important policy decision: the issuance of more than one original negotiable electronic transport record should not be allowed (see, Section 3). CMI firmly believes that there is no reason for UNCITRAL to change that policy decision. This would lead to the deletion of Article 15 of the Draft Model Law (see, Section 5(1)).

If UNCITRAL wishes to adopt a new policy and to allow the issuance of transferable record in multiple originals, it would be best to avoid a possible conflict with the provisions of the Rotterdam Rules. (See, Section 4) This would require explicit reference to the Rotterdam Rules in footnote 1 to Article 3 of the Draft Model Law (See, Section 5(2)).

---

Appendix: The Relevant Provisions in the United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea (New York, 2008).

Article 1. Definitions

For the purposes of this Convention:

……

18. "Electronic transport record" means information in one or more messages issued by electronic communication under a contract of carriage by a carrier, including information logically associated with the electronic transport record by attachments or otherwise linked to the electronic transport record contemporaneously with or subsequent to its issue by the carrier, so as to become part of the electronic transport record, that:

(a) Evidences the carrier's or a performing party's receipt of goods under a contract of carriage; and

(b) Evidences or contains a contract of carriage.

19. "Negotiable electronic transport record" means an electronic transport record:

(a) That indicates, by wording such as "to order", or "negotiable", or other appropriate wording recognized as having the same effect by the law applicable to the record, that the goods have been consigned to the order of the shipper or to the order of the consignee, and is not explicitly stated as being "non-negotiable" or "not negotiable"; and

(b) The use of which meets the requirements of article 9, paragraph 1.

20. "Non-negotiable electronic transport record" means an electronic transport record that is not a negotiable electronic transport record.

21. The "issuance" of a negotiable electronic transport record means the issuance of the record in accordance with procedures that ensure that the record is subject to exclusive control from its creation until it ceases to have any effect or validity.

22. The "transfer" of a negotiable electronic transport record means the transfer of exclusive control over the record.

Article 8. Use and effect of electronic transport records

Subject to the requirements set out in this Convention:

(a) Anything that is to be in or on a transport document under this Convention may be recorded in an electronic transport record, provided the issuance and subsequent use of an electronic transport record is with the consent of the carrier and the shipper; and

(b) The issuance, exclusive control, or transfer of an electronic transport record has the same effect as the issuance, possession, or transfer of a transport document.

Article 9. Procedures for use of negotiable electronic transport records

1. The use of a negotiable electronic transport record shall be subject to procedures that provide for:

(a) The method for the issuance and the transfer of that record to an intended holder;

(b) An assurance that the negotiable electronic transport record retains its integrity;

(c) The manner in which the holder is able to demonstrate that it is the holder; and

(d) The manner of providing confirmation that delivery to the holder has been effected, or that, pursuant to articles 10, paragraph 2, or 47, subparagraphs 1 (a)(ii) and (c), the electronic transport record has ceased to have any effect or validity.

.....

Article 36. Contract particulars

1. The contract particulars in the transport document or electronic transport record referred to in article 35 shall include the following information, as furnished by the shipper:

(a) A description of the goods as appropriate for the transport;

(b) The leading marks necessary for identification of the goods;

(c) The number of packages or pieces, or the quantity of goods; and

(d) The weight of the goods, if furnished by the shipper.

2. The contract particulars in the transport document or electronic transport record referred to in article 35 shall also include:

(a) A statement of the apparent order and condition of the goods at the time the carrier or a performing party receives them for carriage;

(b) The name and address of the carrier;

(c) The date on which the carrier or a performing party received the goods, or on which the goods were loaded on board the ship, or on which the transport document or electronic transport record was issued; and

(d) If the transport document is negotiable, the number of originals of the negotiable transport document, when more than one original is issued.

……

Article 47. Delivery when a negotiable transport document or negotiable electronic transport record is issued

1. When a negotiable transport document or a negotiable electronic transport record has been issued:

(a) The holder of the negotiable transport document or negotiable electronic transport record is entitled to claim delivery of the goods from the carrier after they have arrived at the place of destination, in which event the carrier shall deliver the goods at the time and location referred to in article 43 to the holder:

(i) Upon surrender of the negotiable transport document and, if the holder is one of the persons referred to in article 1, subparagraph 10 (a)(i), upon the holder properly identifying itself; or

(ii) Upon demonstration by the holder, in accordance with the procedures referred to in article 9, paragraph 1, that it is the holder of the negotiable electronic transport record;

(b) The carrier shall refuse delivery if the requirements of subparagraph (a)(i) or (a)(ii) of this paragraph are not met;

(c) If more than one original of the negotiable transport document has been issued, and the number of originals is stated in that document, the surrender of one original will suffice and the other originals cease to have any effect or validity. When a negotiable electronic transport record has been used, such electronic transport record ceases to have any effect or validity upon delivery to the holder in accordance with the procedures required by article 9, paragraph 1.

Article 51. Identity of the controlling party and transfer of the right of control

3. When a negotiable transport document is issued:

(a) The holder or, if more than one original of the negotiable transport document is issued, the holder of all originals is the controlling party;

(b) The holder may transfer the right of control by transferring the negotiable transport document to another person in accordance with article 57. If more than one original of that document was issued, all originals shall be transferred to that person in order to effect a transfer of the right of control; and

(c) In order to exercise the right of control, the holder shall produce the negotiable transport document to the carrier, and if the holder is one of the persons referred to in article 1, subparagraph 10 (a)(i), the holder shall properly identify itself. If more than one original of the document was issued, all originals shall be produced, failing which the right of control cannot be exercised.

4. When a negotiable electronic transport record is issued:

(a) The holder is the controlling party;

(b) The holder may transfer the right of control to another person by transferring the negotiable electronic transport record in accordance with the procedures referred to in article 9, paragraph 1; and

(c) In order to exercise the right of control, the holder shall demonstrate, in accordance with the procedures referred to in article 9, paragraph 1, that it is the holder.

Draft Model Law on Electronic Transferable Records: compilation of comments by Governments and international organizations

ADDENDUM

Contents

II. Compilation of comments

A. States

6. Côte d'Ivoire

[Original: French]
[4 May 2017]

1. As is known, international commercial transactions now require the use of alternatives to paper documents for the purposes of communicating, recording, authenticating and substantiating information and rights that are to be preserved.

2. I [the Minister of Justice] note that review of the draft Model Law and its explanatory notes highlights:

- The desire to increase legal certainty in electronic commerce
- A legislative framework for the use of modern technologies to foster international trade
- The desired degree of flexibility and clarity in terms of its scope of application on the basis of the needs of each enacting State
- The absence of impact on the substantive law applicable to paper documents or instruments
- Lastly, the proposed legal framework does not prevent the preparation or use of electronic transferable records that have no paper-based equivalent.

3. Therefore, I have the honour to inform you that I have no particular comments regarding this innovative legal framework.

7. Qatar

[Original: Arabic]
[3 May 2017]

1. According to paragraph 3 of article 7, the consent of a person to use an electronic transferable record may be inferred from the person's conduct. This could, however,

give rise to disagreement concerning the nature of the conduct required to prove consent. **We are therefore of the view that consent to use an electronic transferable record may be considered to have been given when provided in writing or in any other reliable form**. This would prevent any disagreement with regard to the matter of consent.

2. According to paragraph 2 of article 10, the criterion for assessing the integrity of an electronic transferable record shall be "whether information contained in the electronic transferable record […] has remained complete and unaltered apart from any change which arises in the normal course of communication, storage and display." The exception provided for could give rise to disagreement regarding the nature of such a change and the extent of its impact on the original information contained in the record. Any change which arises in the course of communication, storage and display should not affect any part of the original information contained in the record. **We therefore propose that this exception be deleted**.

3. The draft Model Law does not address situations in which an electronic transferable record is issued outside the country in which the record has been authorized and in which the person in control of the record is located while similar records exist in another country or other countries, nor does it address the extent to which information contained in such records may diverge. **We therefore consider it necessary to insert a provision to address the existence of conflicting information in records issued by more than one country**.

4. The draft Model Law does not address whether electronic transferable records can be traded, despite the importance of this issue, its relevance to the purpose of such records and its impact on the fundamental rights of the holder of the record. **We are therefore of the view that provisions on the tradability of records must be included**.

5. "Investment instruments" is not a commonly used term in law, unlike "financial securities". **We consider that a definition of the term should be provided**.

8. Russian Federation

[Original: Russian]
[27 April 2017]

1. According to subparagraph 1 (b)(i) of article 10 of the draft model law on electronic transferable records, a reliable method of identifying an electronic record as an electronic transferable record is a method that makes it possible to identify that electronic record as the electronic transferable record.

2. In accordance with decisions taken at previous sessions of UNCITRAL Working Group IV (Electronic Commerce), the word "authoritative", which represented an identifying feature of an electronic record, was deleted from that draft provision and replaced in the English-language version of the draft model law with the definite article "the".

3. However, as already indicated by the delegation of the Russian Federation, in the Russian language there is no equivalent of the definite article, and consequently the word "authoritative" cannot be deleted without being replaced with another word.

4. Paragraph 1 of draft article 20 enshrines the principle of non-discrimination of foreign electronic transferable records, in accordance with which an electronic record cannot be denied legal effect, validity or enforceability on the ground that it was issued or used abroad.

5. While that principle is fully in line with the policy framework of the draft model law, we believe that the manner in which it is formulated or the manner in which it is explained in the notes might require clarification. In particular, the draft model law and the explanatory notes should not allow the broad interpretation of that principle, which could result in restriction of the right of States to control the validity of electronic transferable records if they have been issued or used abroad.

6. For example, if no control system ensuring a high level of reliability and authenticity of electronic transferable records is established in a foreign State, the State enacting the model law (if the model law is adopted) must reserve the right to deny enforceability of electronic transferable records issued in the territory of such a foreign State. Any other approach could lead to significant abuse in financial and commodity markets through the use of unreliable electronic transferable records issued or used abroad.

7. It would therefore be appropriate to supplement draft article 20 and (or) the explanatory notes with the following provision: "The principle of non-discrimination of electronic transferable records may not in itself constitute a ground for recognizing the legal effect, validity or enforceability of foreign electronic transferable records if such records do not meet the criteria determining the reliability of the method used, as set out in article 12."

8. Moreover, it is noteworthy that all of the criteria determining the reliability of the method used with respect to an electronic record, as set out in draft article 12, are non-mandatory, which would appear not to be correct in all cases. Criteria relating to technical security (such as assurance of data integrity, prevention of unauthorized access and security of hardware and software) should be applied to all types of electronic transferable record.

9. Furthermore, the note regarding the non-mandatory nature of certain provisions of the draft also applies to the draft as a whole: the draft does not set out any restrictions with respect to the application of reservations and exceptions by States enacting the model law, which could disrupt the uniformity of its application, including with regard to such fundamental matters as identification of the persons who have signed a document and the reliability of the methods used to create and transfer electronic transferable records.

[Original: Russian]
[24 May 2017]

PROPOSED AMENDMENTS TO THE DRAFT MODEL LAW ON ELECTRONIC TRANSFERABLE RECORDS

The draft Model Law is aimed at harmonizing States' legislation with respect to the legal aspects of actions carried out using electronic means. In that regard, the idea of the law is very timely, useful and relevant. In view of the subject matter and objectives of the Model Law, the following comments and proposals regarding the draft text of the Model Law are considered appropriate.

The definition of "electronic transferable record"

Within the meaning of the Model Law, this term is a broader equivalent of the term "electronic document" used in the legal systems of many countries, including the Russian Federation; the scope of application and legal consequences with respect to an electronic transferable record are identical to those with respect to an electronic document in Russian legislation. Given that an electronic document constitutes a form of electronic transferable record and, moreover, is the form most frequently encountered in business practice, it would be useful to include in the definition of "electronic record" the words "including an electronic document".

Article 6

This article suggests that an electronic transferable record is a transferable document in electronic form. However, the inclusion in an electronic transferable record of information other than that contained in a transferable document makes the

electronic document an independent document, as a result of which the provisions on the equivalent legal force of a transferable document and an electronic transferable record where the document and the record are assumed to be identical for the purposes of a commercial transaction cannot be applied. If article 6 is to provide for the inclusion in the electronic transferable record of information necessary for the process of electronic transfer of data, or if it is to provide for changes to the original format of the record as viewed by the sender or to the final format of the record as viewed by the recipient, this should be duly clarified in the text of the draft article.

Article 7, paragraph 3

It would appear that, for the purposes of determining the voluntariness of use of an electronic transferable record, the general provisions of civil law should be applied in order to verify the voluntariness and reasonableness of a person's actions. One of the means of achieving such a determination might be to analyse the conduct of that person, that is, to consider any statement to the effect that those actions have not been taken voluntarily, together with the necessary proof of the validity of such a statement.

Article 9

It is necessary to establish that the method used to identify a person must be provided for by national legislation and, in the cases specified by national legislation, must be duly authenticated (certified). This provision, for example, is applicable to electronic signature, which is the most common and trusted means of authenticating electronic documents in business practice. Alternative means of identification may be provided for in an agreement between the parties or by national legislation, for example, a login and password (for example, for facilities providing e-government or banking services) or identification through an SMS sent to a mobile telephone.

Article 11

It appears that a definition of control of an electronic transferable record is needed, including a definition of control over the integrity and inalterability of an electronic transferable record.

Article 13

There appears to be a need for a more detailed definition of the concept of reliability of the determination of date and time with respect to an electronic transferable record.

Article 14

The provisions of this article should cover not only businesses, given that entities that carry out electronic transactions may be non-commercial organizations.

Articles 18 and 19

It is proposed that paragraph 3 of each article be deleted, because in many jurisdictions the availability of an electronic document does not mean that a paper document ceases to be legally valid. Also, a definition of "a reliable method for the change of medium" is needed in both articles.

Article 20

It may be that paragraphs 1 and 2 contradict one another to some extent, since, according to the provisions of paragraph 2, any legal requirements that must be met in order for a document issued abroad to be considered legally valid continue to apply, as a result of which paragraph 1 cannot be meaningfully applied in practice.

We kindly request that these comments and proposals be taken into account in the course of further work on the draft Model Law.

C. Non-governmental organizations

2. International Federation of Freight Forwarders Associations

[Original: English]
[2 May 2017]

A. Need and approach of the Draft Model Law on Electronic Transferable Records

1. The International Federation of Freight Forwarders Associations (FIATA) is a non-governmental international organization that represents and unites the freight forwarding industry worldwide. It currently relies on the contribution and active participation of the international forwarders associations in more than 100 countries, comprising more than 40,000 member companies. As such, FIATA is concerned with any practices and legal rules or instruments that may directly or indirectly affect the transportation intermediation or the international freight forwarding industry.

2. FIATA very much welcomes the efforts undertaken by UNCITRAL and its Secretariat to finalize an instrument that addresses the issuance of electronic transferable records in order to provide them with certain and predictable legal effects. The transportation and the freight forwarding industry intensively rely on the issuance of paper and electronic documents. The industry increasingly relies on the use of electronic documents for several different purposes and is slowly migrating documentary processes to the electronic environment, given the many advantages that the use of electronic means brings about in terms of time, security and cost. Among the documents traditionally used in the context of transportation activities prominently stand bills of lading issued as negotiable documents. FIATA perceives that negotiable or transferable electronic records lack a proper legal regime in most of the countries whose industry is involved in international trade and relies or depends on the international transportation network. In FIATA's and FIATA members' experience, it is also clear that in the very few countries that have addressed the issuance and use of electronic negotiable documents, such as bills of lading, the industry has quickly abandoned the use of paper for this purpose and moved to the use of electronic documents and tools.

3. It is FIATA's view that the Draft Model Law on Electronic Transferable Records (DMLETR) may potentially make a valuable contribution to the progress of the law in this field, and to the spread of the use of negotiable records in safe conditions. As a Model Law, the chosen instrument, in the first place and like in previous experiences in the field of electronic commerce, will allow enough flexibility to induce a wider adoption of the proposed set of rules. Also, the basic goal of the DMLETR seems to be to essentially set the conditions for the valid issuance in electronic form of the paper-based documents that existing law currently addresses and regulates, by exclusively setting formal requirements on the basis of the functional equivalent and the technology neutrality principles, among others. FIATA considers that this is a modest and yet balanced approach, which may potentially make an important contribution since, other than opening the door to the use in electronic form of documents that current practice is familiar with, it may help to set the legal basis for the development of new practices and documentary processes akin to those based on the use of negotiable or transferable instruments or documents.

4. Likewise, and in terms of the scope of application of the proposed instrument, the DMLETR builds on the existing rules that allow the use of electronic documents or records, which already provide the basis for their validity and evidentiary effect in all those respects that do not strictly depend on, or relate to their transferable or negotiable character. The freight forwarding industry heavily relies on the use of documents, such as waybills or cargo receipts, which in most countries may already be issued in electronic form and which are not affected by the provisions of the DMLETR.

B. Particular concerns regarding the proposed draft

5. The foregoing being said, FIATA wishes to express certain specific particular concerns as regards some of the provisions that the DMLETR contains in its current wording, and which in FIATA's view may limit or distort the expected or potential usefulness of the proposed framework.

6. The first issue relates to the mandatory or, alternatively, non-mandatory character of the model law, and consequently to whether its provisions (or the national law provisions that enact or implement them) may be modified by contract. The DMLETR wisely reflects, and existing practice clearly shows that the use of electronic transferable or negotiable records requires that the parties involved in their issuance or transfer agree on the technology and the method to be used for that purpose. This being the starting point, the main concern of the DMLETR seems to be to lay down the proper formal requirements that set the threshold for recognition of an electronic transferable record and its effects as such, on the basis of several different elements. Current draft article 4, paragraph 1 does however foresee that the scheme of the DMLETR allows the parties to vary its provisions by contract, and leaves to enacting states to identify the provisions that would fall under this rule. It is the view of FIATA that formal requirements of the kind of those addressed by the DMLETR, which provide the core value of the law, are of a mandatory character in currently existing paper-based law, and it should probably be the same under the DMLETR, in order to make sure that an important part of the goals of negotiable or transferable instruments law in its present state (with a strong formal basis) are preserved. Introducing freedom of contract in too many of the elements of the DMLETR would also undermine another of the important goals of the instrument, which should be ensuring a minimum level of harmonization in the field. Whether it is addressed in the black letter rules or in the explanatory notes of the DMLETR, in FIATA's opinion the provisions that ought to be made or recommended as mandatory should include[20] draft articles 8 to 12 (inclusive) which deal with writing and signature requirements, requirements for the existence of an electronic transferable record, control of an electronic transferable record and the standard for the assessment of reliability. If this issue is addressed in the black letter rules, a revised text for draft article 4, paragraph 1 may be:

> "Except for articles 1 to 3, 5 to 12 and 20, para. 2, the parties may derogate from or vary by agreement the provisions of this law."

7. The DMLETR grounds recognition of the existence and effects of electronic transferable records, as defined by its provisions, on the level of reliability of the method employed by the parties for the use thereof (reliability, therefore, provides the reference to determine compliance — or non-compliance — with formal requirements in the model law that refer to the legal effectiveness of the method used by the parties). A second point of concern for FIATA relates to the elements that may be taken into account in the assessment of the level of reliability of such method. Current draft article 12, paragraph 1 lists several factors that may be relevant in the said context, and seems to intentionally leave outside such list, and deprive of any relevance for these purposes, contractual agreements between the parties relating to the technology or method chosen and its agreed validity or reliability.[21] Such a policy option seems to be based on the assumption that the legal regime of transferable or negotiable instruments or documents is specifically targeted at the protection of the interests of third parties, and consequently allowing the parties to agree on the standard of reliability would fundamentally depart from such basic principle and leave third parties unprotected. It is submitted that such a view may not be completely well grounded, and the deletion of any reference to the agreements of the parties in this context may well deprive the Model Law of some of its potential usefulness.

8. Third parties protected in negotiable instruments' or documents' law are the ones involved in the transfer or circulation of the document itself (e.g., the

---

[20] Along with those that relate to the scope of application and interpretation of the law itself (draft articles 1 to 3, and 5 to 7, and 20, para. 2).

[21] See comments in the draft Explanatory Note, para. 119.

third-party transferee/holder in good faith/due course). In light of FIATA's understanding of existing practice, such third parties would not be unprotected by giving relevance to contractual agreements between the parties (to the contrary, they would be protected through contractual arrangements providing a specification of what is considered reliable — and may be relied upon — by contract, something that is otherwise left undetermined in the law). In the said context, other third parties may deserve protection, but such protection would have to be sought in other legal rules. This is what FIATA sees in other UNCITRAL instruments, where the validity of, e.g., an electronic signature is made dependent on whether the method used for signing a document reliably ensures the fulfilment of the functions deemed to be performed by a handwritten signature (and correspondingly required for an electronic one to be valid). For this purpose, relevance is given also to the agreements of the parties, thereby leaving the door open to the recognition of legal effects to signatures between two parties provided they meet the agreed standards, whether the resulting acts indirectly affect third parties or not.[22] The standard of reliability in DMLETR provides an objective reference, whose contents are also and nonetheless fulfilled by the parties involved in transactions through their contracts, as a way to avoid the uncertainty attached to undetermined notions. The exclusion of contractual agreements of the parties from the list in draft article 12, paragraph 1 DMLETR, as well as from the elements that, if relevant, may be considered for the purpose to assess reliability, in current practice will simply and precisely reopen that area of uncertainty, should the Model Law be widely enacted with the terms described.

9. FIATA is aware that Working Group IV has made an effort to reach a consensus on this issue, which is currently reflected in draft article 12 and the accompanying explanatory notes. However, should the foregoing remarks merit any consideration, FIATA would recommend that:

(a) An additional section to paragraph (a) or draft article 12 be added with the following wording: "any relevant agreement existing between the parties"; or

(b) Paragraph 119 in document A/CN.9/920 be deleted, so that no express indication as to the feasible relevance of contractual agreements is made, thus leaving the question to the interpreter under the general wording of draft article 12.

10. Finally, FIATA finds some difficulties in the provision in draft article 15 of the DMLETR. On the basis of the functional equivalence principle, this provision (combined with other provisions of the draft Model Law) allows the issuance of multiple transferable records (provided a reliable method is employed for that purpose) in order to meet requirements of paper-based law relating to the valid issuance of multiple originals of a paper transferable document. FIATA's concerns with regard to this provision focus on whether it is strictly needed and on how it should be interpreted.

11. In FIATA's experience, paper bills of lading started to be issued in more than one original (normally three, one for the shipper, one for consignee and one for the banker/broker, or alternatively three for the banker providing the documentary credit) essentially with the purpose to manage and mitigate travel and delivery risks. The various originals are meant to function as a single bill of lading (all originals must expressly state for this purpose that they are part of a set). The said practice has always been approached with caution, as the mere fact that more than one original is issued entails an increased risk of fraud, theft or unauthorized or otherwise wrongful release of the goods. FIATA finds that all purposes covered in paper-based practice through the use of multiple originals may be achieved in the electronic environment without the need to issue more than one original, or more than one electronic transferable record, a reason for which the provision in draft article 15 is not clearly needed.

12. In addition to the foregoing, the provision in the draft article, as it currently stands, creates in FIATA's view some problems of interpretation, as it seems to equate the issuance of a transferable or negotiable document in more than one original with the issuance of more than one electronic transferable record. Although the logic of the

[22] See, e.g., Art. 6, para. 1 of the UNCITRAL Model Law on Electronic Signatures (2001).

DMLETR seems to indicate that each of these electronic transferable records must be treated as one of the originals of a single set (thus being also necessary under applicable law that each of the electronic transferable records indicates that it is one of a single set to benefit from the principle in draft article 15), from a literal point of view this is not entirely clear, and the provision raises many questions as to its relation with other provisions, including in particular draft articles 2, second paragraph, and 10 (on the notion of electronic transferable record) and draft article 11 (on control). FIATA finds that, whereas there are already several examples in practice of how electronic transferable records are being used on the basis of different systems and methods, there is no indication for the time being of whether such records are issued in more than one "original" or independent copy (with the purpose to replicate the practice based on the issuance of more than one paper original), and consequently there is no useful example that may be taken into account to shape the rule in draft article 15. Until that circumstance changes, FIATA would advise that this provision not be included in the Model Law.

9. China

[Original: Chinese]
[28 June 2017]

Proposed Changes to Draft Model Law on Electronic Transferable Records

On the Model Law

1. Article 4

It is suggested to clarify the provisions in the Model Law that can be derogated, in light of the mandatory nature of most national laws on transferable documents or instruments.

2. Article 6

It is suggested that the words "as permitted by law" be inserted after the word "information", so that the article would read as follows: "Nothing in this Law precludes the inclusion of information *as permitted by law* in an electronic transferable record in addition to that contained in a transferable document or instrument." Such qualification is justified on possibilities that substantive laws might not allow certain entries in some transferable documents or instruments, for example, in some countries where cheques are not allowed to have entries on interests and would be considered invalid if such entries are made. Without the proposed qualifier "*as permitted by law*", this article might induce an interpretation that is in conflict with substantive laws.

3. Article 10

(1) It is suggested that the title for article 10 be changed to "Transferable documents or instruments". First, that would be in line with the naming style of other articles in the Model Law. This article is about an electronic record to be functional equivalent to a transferable document or instrument when the law requires a transferable document or instrument, therefore, it should be named after what is to be equivalent to. Furthermore, its current title "Requirements for the use of an electronic transferable record" is easily to be confounded with the title of Chapter III, which is "Use of electronic transferable record".

(2) It is suggested that the different language versions of article 10, subparagraph 1(b)(i) be aligned in order to express the notion of "single" with an explicit term in all six languages. Currently, a specific term is used in three language versions, and the "singular noun prefixed with the definite article" approach is applied in three other language versions, for the expression of that notion. The latter approach

creates two problems. First，the "article plus noun" formulation does not underscore the explicit requirement for "singleness", and may result in confusing interpretation; second, it leads to inconsistency between different language versions. It is already the common understanding among different countries, as well as a core requirement throughout the Model Law, that for each corresponding right there could be only one electronic transferable record. Therefore, it is justified, and proved possible, to find a right term to express that requirement in the former three language versions. The word "single" used in the Explanatory Note might be an option.

It might be necessary to point out that the "exclusive control" is not a substitute for the "single electronic transferable record" (single ETR) requirement. While the single ETR ensures the right ensuing from control that is exercised over the only object (i.e. ETR)，the exclusive control ensures that only one subject is given the right deriving from its control over the ETR. In any case there must be an object to control, and it is not possible to talk about control but not about what to control. In the case of Model Law, the object to control is ETR. Apparently, control over one ETR when there are more than one cannot ensure it is the single right, because other people could have control over the rest ETRs and obtain rights therefrom. For this reason, the singularity of ETR is a core requirement indispensable under the Model Law.

(3) It is suggested to insert the word "exclusive" before the word "control" in article 10, subparagraph 1(b)(ii), so as to be aligned with the wording "exclusive control" in article 11.

4. Article 11

(1) It is suggested to change the title of article 11 to "Possession", in that this article is about functional equivalence of "possession", and its current title "Control" deviates from the naming style of other articles in the Model Law, failing to reflect the substance of this article correctly. Under this article, equivalence for "possession" is fulfilled only when a method meets the two requirements set out in paragraph 1. To use "Control" as its title would trigger discussion on the interactions between "control" and the two requirements set out in paragraph 1 and between "control" and "exclusive control".

(2) It is suggested to insert the word "publicly" before the word "identify" in subparagraph 1 (b), in that "possession", in addition to being the factual state of transferable documents or instruments, also serves as a way to publicize rights. The functions of "possession" cannot be fully fulfilled without making the fact of exclusive control publicly known.

(3) It is suggested to insert the word "exclusive" before the word "control" in paragraph 2, so as to be aligned with paragraph 1.

5. Article 12

It is suggested to include reliability of method in the list of factors which, as currently drafted, are mainly about reliability of computer systems, even though a reliable computer system does not lent itself to a reliable method. "Wide applicability of a method", "maturity of the technology in use" and "rationality of a technical route" are examples of factors to be considered for possible inclusion.

6. Article 13

It is suggested to formulate along the line of "functional equivalence", that is, "Where the law requires or permits the indication of time or place with respect to a transferable document or instrument, that requirement is met if a reliable method is used to indicate that time or place with respect to an electronic transferable record". Current formulation is not in line with the formulation of other articles, which may give rise to questions about what consequences will result from not meeting the requirements of this article.

On the Explanatory Notes

1. It is suggested to reverse the order of "technological neutrality" and "functional equivalence", as already agreed, which would accurately reflect their inter-relations.

2. It is suggested to delete paragraph 78, in which reference to "other legislation on electronic transferable records" may lead to difficulties in understanding what it specifically refers to. In the case that the paragraph will be retained, it is suggested to confine its discussion to the difference between "single" and "unique".

3. It is suggested to delete paragraph 80, in which the specific reference to a reliable method in subparagraph 1(b)(ii) may create an assumption that the reliable method mentioned in that subparagraph is different from the reliable methods in other articles.

4. It is suggested to change "the holder of the electronic transferable record" mentioned in paragraph 94 to "the person in control of the electronic transferable record". This is because a "holder" is vis-à-vis a transferable document or instrument, not an electronic transferable record, which only has a "person in control". During the discussion of the Model Law, there was a definition of "a person in control of an electronic transferable record", but it was decided later to delete it and to change "holder" throughout the Model Law to "person in control" (A/CN.9/804, para. 85).

L. Note by the Secretariat on a Draft Model Law on Electronic Transferable Records with explanatory notes: proposed amendments to the draft explanatory notes and additional issues for consideration by the Commission

(A/CN.9/922)

[Original: English]

Contents

I. Introduction

1. At its fiftieth session, in 2017, the Commission will have before it a draft model law on electronic transferable records with explanatory notes (A/CN.9/920) (referred to below as the "draft Model Law" and the "draft Explanatory Notes") that reflects the deliberations and decisions of Working Group IV (Electronic Commerce) at its fifty-fourth session (Vienna, 31 October-4 November 2016). The Working Group, at that session, requested the Secretariat to revise the draft model law and the explanatory materials contained in document A/CN.9/WG.IV/WP.139 and its addenda to reflect those deliberations and decisions and transmit the revised text to the Commission for consideration at its fiftieth session. The Working Group recalled that UNCITRAL practice was to circulate the text as recommended by an UNCITRAL working group to all Governments and relevant international organizations for comment. It was noted that the same practice would be followed with respect to the draft model law, so that the comments would be received before the Commission at its fiftieth session (A/CN.9/897, para. 20). The comments of Governments and invited international organizations received by the Secretariat on the draft Model Law and the draft Explanatory Notes are contained in document A/CN.9/921 and addenda (the "comments").

2. Chapter II of this note proposes amendments to the draft Explanatory Notes. The draft Explanatory Notes refer to an introduction whose content was to be inserted by the Secretariat at a later stage. The Secretariat, in section A of chapter II of this note, proposes a draft introduction, which has not been before the Working Group, for consideration by the Commission. Section B of chapter II of this note reflects additional considerations that the Commission may wish to consider in finalizing the draft Model Law and the draft Explanatory Notes, which could be reflected in the article-by-article commentary of what will become the Explanatory Note to the UNCITRAL Model Law on Electronic Transferable Records. Those considerations are not raised in the comments or the report of the Working Group on the work of its fifty-fourth session (A/CN.9/897). They were brought to the attention of the Secretariat on the occasion of consultations held by experts around the world on the draft Model Law and the draft Explanatory Notes, including the Roundtable organized by the Centre for Commercial Law Studies at Queen Mary University of London on 15 February 2017, which the Secretariat attended remotely.

3. Finally, chapter III of this note raises issues of enactment of what will become the UNCITRAL Model Law on Electronic Transferable Records (the "Model Law") and the relationship of that model law with other UNCITRAL texts in the area of electronic commerce. The Working Group, at its earlier sessions, only briefly

discussed those issues (most recently, at its fifty-fourth session A/CN.9/897, paras. 54-60).

II. Proposed amendments to the draft Explanatory Notes

A. Proposed introduction

"A. Purpose of this explanatory note

4. In preparing and adopting the UNCITRAL Model Law on Electronic Transferable Records (hereinafter referred to as "the Model Law"), the United Nations Commission on International Trade Law (UNCITRAL) was mindful that the Model Law would be a more effective tool for States modernizing their legislation if background and explanatory information would be provided. This Explanatory Note, drawn from the travaux préparatoires of the Model Law, is intended to be helpful to legislators, to providers and users of services related to electronic transferable records as well as to academics.

5. In the preparation of the Model Law, it was assumed that it would be accompanied by explanatory materials. For example, it was decided in respect of certain issues not to settle them in the Model Law but to address them in the explanatory materials so as to provide guidance to States enacting the Model Law. Such information might assist States also in considering which, if any, of the provisions of the Model Law might have to be varied to take into account particular national circumstances.

B. Objectives

6. The increased use of electronic means improves the efficiency of commercial activities, including by allowing reuse and analysis of data, enhances trade connections and allows new access opportunities for previously remote parties and markets, thus playing a fundamental role in promoting trade and economic development both domestically and internationally. However, certainty is needed as to the legal value of the use of those electronic means. In order to address that need, UNCITRAL has prepared a number of texts aimed to remove obstacles to the use of electronic means in commercial activities such as the UNCITRAL Model Law on Electronic Commerce,[1] the UNCITRAL Model Law on Electronic Signatures[2] and the United Nations Convention on the Use of Electronic Communications in International Contracts (the "Electronic Communications Convention").[3] Those texts have been adopted in a large number of jurisdictions so that a uniform law of electronic commerce has effectively been established.

7. Transferable documents and instruments are essential commercial tools. Their availability in electronic form may be greatly beneficial for facilitating electronic commerce in international trade as it could allow for their faster and more secure transmission, among other benefits. Moreover, a fully paperless trade environment may not be established without their use. Electronic equivalents of transferable documents and instruments may be particularly relevant for certain business areas such as transport and logistics, and finance. Finally, the introduction of electronic transferable records may offer an opportunity to review existing commercial practices and introduce new ones. At the same time, the dematerialisation of transferable documents and instruments may pose peculiar challenges given the established practice of employing various paper-based precautions in order to reduce risks associated with the unauthorized duplication of those documents and instruments.

[2] UNCITRAL Model Law on Electronic Signatures with Guide to Enactment (New York, 2002), United Nations Publication, Sales No. E.02.V.8.

[3] General Assembly resolution 60/21, annex.

8. UNCITRAL dealt with the subject of transferable documents and instruments in electronic forms before the adoption of the Model Law. The possibility of issuing bills of lading electronically is envisaged in article 14(3) of the United Nations Convention on the Carriage of Goods by Sea (the "Hamburg Rules").[4] Articles 16 and 17 of the UNCITRAL Model Law on Electronic Commerce provide rules on actions related to contracts of carriage of goods and to transport documents that enable the dematerialization, among others, of documents incorporating a claim to delivery of goods.[5] The United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea (the "Rotterdam Rules")[6] devotes a chapter to electronic transport records. In particular, article 8 of the Rotterdam Rules provides for the use and effect of electronic transport records, article 9 indicates the procedures for use of negotiable electronic transport records and article 10 sets out rules for the replacement of negotiable transport documents with negotiable electronic transport records and vice versa. Moreover, the Rotterdam Rules define both the notion of electronic transport record (article 1(18))[7] and that of negotiable electronic transport record (article 1(19)).[8]

9. Unlike those instruments, the Electronic Communications Convention excludes from its scope of application "bills of exchange, promissory notes, consignment notes, bills of lading, warehouse receipts or any transferable document or instrument that entitles the bearer or beneficiary to claim the delivery of goods or the payment of a sum of money" (article 2(2)). That exclusion was based on the view that finding a solution to the challenges posed by the potential consequences of unauthorized duplication of those documents and instruments required a combination of legal, technological and business solutions, which had not yet been fully developed and tested.[9]

10. In 2011, when the Commission decided to undertake work in the field of electronic transferable records, support was expressed for that work in light of benefits that the formulation of uniform legal standards in that field could bring to the promotion of electronic communications in international trade generally as well as to the implementation of the Rotterdam Rules and to other areas of transport business specifically.[10] UNCITRAL decided to prepare a model law to enable the use of electronic transferable records on the basis of their functional equivalence with transferable documents or instruments, building upon the fundamental principles underlying existing UNCITRAL texts in the area of electronic commerce, namely non-discrimination against the use of electronic communications, functional equivalence and technological neutrality.

11. Facilitating the cross-border use of electronic transferable records is of significant practical importance. In that respect, it should be noted that national legislation predating the adoption of the Model Law and dealing with specific types of electronic transferable records did not address cross-border aspects. Moreover, to

---

[5] Those provisions have been enacted in national laws. However, details on their application in business practice are not available.

[6] General Assembly resolution 63/122, annex.

[7] Rotterdam Rules, article 1(18): "Electronic transport record" means information in one or more messages issued by electronic communication under a contract of carriage by a carrier, including information logically associated with the electronic transport record by attachments or otherwise linked to the electronic transport record contemporaneously with or subsequent to its issue by the carrier, so as to become part of the electronic transport record, that: (a) Evidences the carrier's or a performing party's receipt of goods under a contract of carriage; and (b) Evidences or contains a contract of carriage.

[8] Ibid., article 1(19): "Negotiable electronic transport record" means an electronic transport record: (a) That indicates, by wording such as "to order", or "negotiable", or other appropriate wording recognized as having the same effect by the law applicable to the record, that the goods have been consigned to the order of the shipper or to the order of the consignee, and is not explicitly stated as being "non-negotiable" or "not negotiable"; and (b) The use of which meets the requirements of article 9, paragraph 1.

[9] *Official Records of the General Assembly, Sixtieth Session, Supplement No. 17* (A/60/17), para. 27.

[10] Ibid., *Sixty-sixth Session, Supplement No. 17* (A/66/17), para. 235.

the extent that that legislation adopted specific models and technologies, the use of those models and technologies could create additional obstacles to the cross-border use of electronic transferable records. The Model Law aims at facilitating the cross-border use of transferable documents and instruments by providing not only a uniform and neutral text for adoption by all jurisdictions but also a dedicated provision addressing cross-border aspects of electronic transferable records.

12. UNCITRAL intends to continue monitoring the technical, legal and commercial developments that underline the Model Law. It may, if advisable, decide to add new model provisions to the Model Law or modify the existing ones.

C. Scope

13. The Model Law applies to electronic transferable records that are functional equivalent to transferable documents or instruments. Transferable documents or instruments are paper-based documents or instruments that entitle the holder to claim the performance of the obligation indicated therein and that allow the transfer of the claim to that performance by transferring the document or instrument. The law of each jurisdiction will determine which documents or instruments are transferable. Consequently, the Model Law does not apply to electronic transferable records existing only in electronic form and to medium-neutral electronic transferable records as those records do not need a functional equivalent to operate in the electronic environment.

14. The Model Law does not aim to affect in any manner existing law applicable to transferable documents or instruments, which is referred to as "substantive law" and includes rules on private international law.

D. Structure

15. The Model Law is divided in four chapters. The first chapter contains general provisions relating to the scope of application of the Model Law and to certain general principles. The second chapter contains provisions on functional equivalence. The third chapter contains provisions on the use of electronic transferable records. The fourth chapter deals with the cross-border recognition of electronic transferable records.

E. Background and drafting history[11]

16. The possibility of future work by UNCITRAL with regard to issues of negotiability and transferability of rights in goods in an electronic environment was first mentioned at the Commission's twenty-seventh session, in 1994, [12] and subsequently discussed in various sessions of the Commission and its working groups, in particular in the context of electronic commerce and transport law. [13] In that framework, two documents have dealt in depth with substantive aspects of the topic:

(a) Document A/CN.9/WG.IV/WP.69 discussed both paper-based and electronic bills of lading and other maritime transport documents. In particular, that document provided an overview of the attempts to deal with bills of lading in the electronic environment, and made suggestions for model legislative provisions which were eventually adopted as articles 16 and 17 of the UNCITRAL Model Law on Electronic Commerce. Furthermore, that document contained a preliminary analysis of the conditions for establishing the functional equivalence of electronic and paper-based bills of lading. In this respect, it highlighted as a key issue the possibility to identify with certainty the holder of the bill, which would be entitled to delivery of

[11] References to specific documents and paragraphs are provided in this section of the note for ease of reference. The editorial style of the section will be aligned with that applied to the rest of the draft Explanatory Notes after their approval.

[13] Ibid., *Fifty-sixth Session, Supplement No. 17* (A/56/17), paras. 291-293. See also A/CN.9/484, paras. 87-93. For an historical record of previous sessions, see A/CN.9/WG.IV/WP.90, paras. 1-4.

the goods. Such issue brought into focus the need to ensure the uniqueness of the electronic record incorporating the title to the goods;[14]

(b) Document A/CN.9/WG.IV/WP.90 discussed in general legal issues relating to transfer of rights in tangible goods and other rights. It offered a comparative description of the methods used for the transfer of property interests in tangible property and for the perfection of security interests, and of the challenges posed by the transposition of those methods in the electronic environment. It also provided an update on ongoing efforts for the use of electronic means in transfer of rights in tangible goods. With respect to documents of title and negotiable instruments, that document stressed the desirability to ensure control over the electronic transferable record in a manner equivalent to physical possession, and suggested that a combination of a registry system and adequately secure technology could assist in addressing issues relating to the singularity and authenticity of the electronic record.[15]

17. At its forty-first and forty-second sessions, in 2008 and 2009, respectively, the Commission received proposals from States for work on electronic transferable records.[16] After preparatory work,[17] the Commission mandated Working Group IV to undertake work in the field of electronic transferable records.[18]

18. The Working Group worked in that field from its forty-fifth session (Vienna, 10-14 October 2011) to its fifty-fourth session (Vienna, 31 October-4 November 2016).[19] At its forty-seventh session (New York, 13-17 May 2013), the Working Group reached the general understanding that its work should be guided by the principles of functional equivalence and technological neutrality, and should not deal with matters governed by the substantive law (A/CN.9/768, para. 14). At its fiftieth session (Vienna, 10-14 November 2014), the Working Group agreed to proceed with the preparation of a draft model law on electronic transferable records (A/CN.9/828, para. 23) with priority given to the preparation of provisions dealing with electronic equivalents of paper-based transferable documents or instruments (A/CN.9/828, para. 30). At its fifty-fourth session (Vienna, 31 October-4 November 2016), the Working Group completed its work on the preparation of a draft model law on electronic transferable records with accompanying explanatory materials. It authorized the transmission of the text (a) for comments by Governments and international organizations invited to sessions of the Working Group and (b) to the Commission for consideration at its fiftieth session, in 2017, together with any comments from Governments and international organizations (A/CN.9/897, para. 20).

19. At its forty-fifth to forty-ninth sessions, in 2012 to 2016, respectively, the Commission considered the progress report of the Working Group, reaffirming its mandate and endorsing its decision to prepare a model law with explanatory materials.[20] At its forty-ninth Commission session, in 2016, it was noted that the draft model law being prepared by the Working Group focused on domestic aspects of the use of electronic transferable records equivalent to paper-based transferable documents or instruments, and that international aspects of the use of those records,

as well as the use of transferable records existing only in electronic form, would be addressed at a later stage.[21]

20. At its fiftieth session, in 2017, the Commission … [*to be added by the Secretariat in due course*]

21. The General Assembly, by its resolution … [*to be added by the Secretariat in due course*]"

B. Proposed amendments to the article-by-article commentary

Article 1. Scope of application

Paragraph 3

22. Paragraph 11(c) of the draft Explanatory Notes indicates that the possible types of exclusion from the scope of application of the Model Law include electronic transferable records existing only in an electronic environment. The Commission may wish to consider whether electronic transferable records whose substantive law is medium neutral should be added as a possible type of exclusion. Negotiable electronic transport records issued under the Rotterdam Rules provide an example of such electronic transferable records. The rationale for such exclusion could be that in both cases the need for a functional equivalent of transferable documents or instruments does not arise.

23. The Commission may also wish to consider whether it should be further explained that the possible exclusion of electronic transferable records existing only in an electronic environment and of electronic transferable records whose substantive law is medium neutral from the scope of application of the Model Law should not be interpreted as preventing the use of the Model Law or of some of its provisions, by contractual integration or as otherwise appropriate, in relation to the use of those electronic transferable records.

Article 2. Definitions

24. The Commission may wish to consider whether a clarification should be added that the reference to insurance certificates contained in paragraph 20 of the draft Explanatory Notes should not be understood as referring to various types of certificates and other documents required and issued under certain treaties concluded by the International Maritime Organization (IMO). Those documents are not "transferable documents or instruments" in the meaning of article 2 of the draft Model Law and therefore the Model Law would not be applicable.

25. In particular, "insurance certificates" issued to fulfil obligations contained in certain IMO treaties do not fall under the definition of "transferable documents or instruments". For instance, the 1992 International Convention on Civil Liability for Oil Pollution Damage,[22] the 2007 Nairobi International Convention on the Removal of Wrecks[23] and other so-called "civil liability conventions" contain the requirement that the shipowner shall maintain insurance in place covering the civil liability and impose an obligation on the government of the ships' flag to issue a certificate confirming that the insurance is in place. That certificate is issued on the basis of an insurance policy, which very often in the shipping industry is called a "Blue Card". The underlying insurance may be considered to be "transferable", but the certificate is an administrative document confirming that the relevant government body has verified that the insurance policy is in place.

Article 4. Party autonomy and privity of contract

26. In light also of the considerations expressed in paragraph 32 of the draft Explanatory Notes, the Commission may wish to consider whether additional

---

[21] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), para. 226.
[22] United Nations, *Treaty Series*, vol. 1956, p. 255.
[23] IMO document LEG/CONF.16/19; 46 International Legal Materials 694 (2007).

guidance should be provided in identifying provisions of the Model Law from which the parties may derogate. In that respect, the suggestion has been made that derogations should be allowed only with respect to chapter III of the Model Law and as permitted by substantive law.

Article 7. Legal recognition of an electronic transferable record

27. The Commission may wish to consider whether paragraph 48 of the draft Explanatory Notes should be revised to reflect that not all token-based and distributed ledger-based systems lack a centralized operator. The revised paragraph could read: "… such as some token-based and distributed ledger-based systems, …".

Article 9. Signature

28. The Commission may wish to consider whether a clarification should be added to the draft Explanatory Notes that an electronic record could be signed by a legal person when permissible under substantive law and that therefore reference to electronic signatures in article 9 of the draft Model Law is intended also as reference to electronic seals or other methods used to enable the signature of a legal person electronically.

Article 10. Requirements for the use of an electronic transferable record

Subparagraph 1(b)(iii)

29. In paragraph 81 of the Explanatory Note it is explained that, while integrity is a fact and, as such, is objective, the reliable method used to retain integrity is relative or subjective. In that paragraph it is also explained that the general reliability standard contained in article 12 of the draft Model Law applies to the assessment of the method used to retain integrity. However, paragraph 119 of the Explanatory Note indicates that the general reliability standard contained in article 12 is objective. The Commission may wish to consider whether the relationship between the notion of integrity and the application to that notion of a general reliability standard should be further clarified.

Paragraph 2

30. The Commission may wish to consider whether a clarification should be inserted in the draft Explanatory Notes that the notion of integrity would allow, among others, a reliable assurance of the link between any electronic signature affixed on the electronic transferable record and the content of that record at the time the electronic signature was affixed so that, in practice, that link could permit verification of the content of the record that was actually signed.

Article 12. General reliability standard

31. The Commission may wish to consider whether a clarification should be added to the draft Explanatory Notes indicating that the operational rules referred to in subparagraph (a)(i) of article 12 of the draft Model Law may contain an agreement on reliability and that, in that case, that agreement would not be relevant for third parties.

32. The Commission may also wish to consider whether a clarification should be added to the draft Explanatory Notes indicating that reference to "industry standard" in subparagraph (a)(vii) of article 12 of the draft Model Law should not be interpreted in a manner that could hinder supply chain management. In that respect, the Commission may wish to note that applicable standards are often understood as accepted standards, but that the acceptance of those standards may be limited to a specific business field (e.g. banking or maritime transport). Moreover, the Commission may wish to consider whether a clarification should be added to the draft Explanatory Notes indicating that reference to "industry standard" should not be interpreted in a manner that could hinder competition.

Article 15. Issuance of multiple originals

33. The Commission may wish to consider whether a clarification should be inserted in the draft Explanatory Notes that the issuance of multiple originals does not affect the implementation of the notion of singularity, reflected in article 10, paragraph (1)(b)(i), of the draft Model Law, as each original would be identified as the electronic transferable record. It may further wish to consider whether it should also clarify that, in the case of issuance of multiple originals, control may be exercised on each electronic transferable record by different entities, and therefore it does not need to be necessarily exercised simultaneously on all of the records by the same entity.

34. With respect to paragraph 131 of the draft Explanatory Notes, the Commission may wish to note that, further to enquiry, it was indicated that the practice of issuing multiple originals in an electronic environment did not exist yet, but its implementation had been requested by business. It is therefore suggested to replace the words “the practice of” with the words “a business demand for”.

35. With respect to paragraph 132 of the draft Explanatory Notes, it has been observed that applicable law designed to operate in a paper-based environment is unlikely to provide explicitly for the case of issuance of multiple originals on different media. The Commission may therefore wish to consider whether to further clarify that the Model Law does not prevent the issuance of multiple originals on different media when applicable law permits the issuance of multiple originals on paper.

III. Relationship of the draft Model Law with other UNCITRAL texts in the area of electronic commerce

36. Preliminary work on the enactment of the Model Law has highlighted certain issues relating to the interplay between the draft Model Law and pre-existing UNCITRAL texts on electronic commerce as well as to some issues relating to legislative techniques in the enactment of the Model Law. Those issues may be particularly relevant for jurisdictions that have already enacted UNCITRAL texts in the area of electronic commerce.
