37. The Working Group has discussed the relationship between the draft model law and the existing UNCITRAL texts in the area of electronic commerce (most recently, at its fifty-fourth session (A/CN.9/897, paras. 58-60)), and specifically with respect to draft article 9 on electronic signatures (A/CN.9/797, para. 40, and A/CN.9/WG.IV/WP.124, para. 34).

Relationship with articles 16 and 17 of the Model Law on Electronic Commerce

38. UNCITRAL has dealt with electronic transferable records used in conjunction with the carriage of goods in articles 16 and 17 of the UNCITRAL Model Law on Electronic Commerce.[24]

39. Articles 16 and 17 of the Model Law on Electronic Commerce are based on an approach different from that adopted in the draft Model Law. For instance, article 17, paragraph 3, of the Model Law on Electronic Commerce refers to the notion of “uniqueness” as a requirement to establish the functional equivalence of “possession”. On the other hand, article 10 of the draft Model Law relies on the notions of “control” and “singularity” to achieve that result.

40. Hence, jurisdictions having enacted articles 16 and 17 of the UNCITRAL Model Law on Electronic Commerce may need guidance on the relationship between those articles and the Model Law when reviewing their legislation with a view to modernizing it. The Commission may wish to consider whether it should recommend that those jurisdictions should consider replacing those articles with an enactment of the Model Law.

[24] UNCITRAL Model Law on Electronic Commerce with Guide to Enactment (New York, 1999), United Nations Publication, Sales No. E.99.V.4.

41. The Commission may also wish to consider whether it should recommend that jurisdictions intending to enact articles 16 and 17 of the Model Law on Electronic Commerce should consider instead enacting the Model Law.

Methods of enactment of the Model Law and their effect on functional equivalence standards

42. In national law, provisions on the functional equivalence of the notions of "writing" and "signature" are usually contained in the general law on electronic transactions. They are often based on the corresponding provisions of the Model Law on Electronic Commerce and of the UNCITRAL Model Law on Electronic Signatures.[25]

43. Article 8 of the draft Model Law is inspired by article 6, paragraph 1, of the Model Law on Electronic Commerce. Unlike article 9, paragraph 2, of the United Nations Convention on the Use of Electronic Communications in International Contracts (the "Electronic Communications Convention"),[26] draft article 8 refers to the notion of "information" instead of "communication" as not all relevant information might necessarily be communicated (A/CN.9/797, para. 37).

44. Article 9 of the draft Model Law, on electronic signatures, is inspired by article 7, paragraph 1(b), of the Model Law on Electronic Commerce, as amended by article 9, paragraph 3, of the Electronic Communications Convention. Draft article 9 does not follow the two-tier approach adopted in article 6 of the Model Law on Electronic Signatures (A/CN.9/797, para. 40).

45. Regardless of whether the Model Law is enacted as a stand-alone piece of legislation or as part of the general law on electronic transactions, the enacting jurisdiction may indicate that the general law on electronic transactions will apply to electronic transferable records, unless the law on electronic transferable records provides otherwise.

46. In that case, if articles 8 and 9 of the Model Law are enacted, a special functional equivalence regime would apply to electronic transferable records. However, if articles 8 and 9 of the Model Law are not enacted, the same functional equivalence standard for the notions of "writing" and "signature" would be applicable to transferable and non-transferable electronic records.

47. In light of the above, the Commission may wish to provide guidance on techniques of enactment of the Model Law, in particular, as part of the general legislation on electronic transactions. In doing so, it may wish to indicate whether it would be preferable that different or a single functional equivalence standard for the notions of "writing" and "signature" should apply to transferable and non-transferable electronic records, taking into account that the Model Law may provide a more modern approach with respect to electronic signatures.

48. Moreover, the Commission may wish to clarify the relationship, if any, between article 12 of the draft Model Law, on a general reliability standard, and article 10 of the UNCITRAL Model Law on Electronic Signatures, on trustworthiness of systems, procedures and human resources used by a certification service provider.

Possible compilation of consolidated UNCITRAL model provisions on electronic commerce

49. Although electronic communications have already been used in commercial transactions for some time, increased familiarity of the business community constantly improves the understanding of their possible use. In turn, that additional knowledge leads to the development of new business models and practices, which may require adequate legal treatment.

---

[25] UNCITRAL Model Law on Electronic Signatures with Guide to Enactment (New York, 2002), United Nations Publication, Sales No. E.02.V.8.

[26] General Assembly resolution 60/21, annex.

50. Such evolution suggests verifying periodically the continuing suitability of UNCITRAL texts on electronic commerce for modern commercial operations conducted with electronic means. For instance, article 10 of the Electronic Communications Convention on time and place of dispatch and receipt of electronic communications, modifies certain aspects of article 15 of the Model Law on Electronic Commerce. [27] The introduction of the Model Law may bring an additional layer of complexity in light also of the considerations expressed above (paras. 38-48).

51. In that respect, it should be further noted that a significant amount of jurisdictions have enacted domestically provisions contained in the Electronic Communications Convention without formally adopting the treaty, while others have done so in conjunction with or in preparation for formal adoption of that Convention.

52. Moreover, chapters on electronic commerce contained in free trade agreements and paperless trade facilitation agreements increasingly refer to the Model Law on Electronic Commerce or to the Electronic Communications Convention as desirable legislative standards. However, given the variations introduced with the evolution of those texts, it may not be assured that jurisdictions would always enact the most recent uniform legislative model.

53. In light of the above, the Commission may wish to consider whether the consolidation and compilation of the provisions of the UNCITRAL model laws in the area of electronic commerce and of the substantive provisions of the Electronic Communications Convention could be desirable and useful. That work would exclude the preparation of new legislative provisions. Its outcome would offer a coherent and convenient uniform model to jurisdictions wishing to adopt or modernize laws in that area.

IV. INSOLVENCY LAW

A. Report of the Working Group on Insolvency Law on the work of its fiftieth session (Vienna, 12-16 December 2016)

(A/CN.9/898)

[Original: English]

Contents

Paragraphs

I. Introduction

A. Facilitating the cross-border insolvency of multinational enterprise groups

1. At its forty-fourth session (December 2013), the Working Group agreed to continue its work on cross-border insolvency of multinational enterprise groups[1] by developing provisions on a number of issues, some of which would extend the existing provisions of the UNCITRAL Model Law on Cross-Border Insolvency (the Model Law) and part three of the UNCITRAL Legislative Guide on Insolvency Law (the Legislative Guide) and involve reference to the UNCITRAL Practice Guide on Cross-Border Insolvency Cooperation. The Working Group discussed this topic at its forty-fifth (April 2014) (A/CN.9/803), forty-sixth (December 2014) (A/CN.9/829), forty-seventh (May 2015) (A/CN.9/835), forty-eighth (December 2015) (A/CN.9/864) and forty-ninth (May 2016) (A/CN.9/870) sessions and continued its deliberations at the fiftieth session.

B. Recognition and enforcement of insolvency-related judgments

2. At its forty-seventh session (May 2014), the Commission approved a mandate for Working Group V to develop a model law or model legislative provisions providing for the recognition and enforcement of insolvency-related judgments. The Working Group discussed this topic at its forty-sixth (December 2014) (A/CN.9/829), forty-seventh (May 2015) (A/CN.9/835), forty-eighth (December 2015) (A/CN.9/864) and forty-ninth (May 2016) (A/CN.9/870) sessions and continued its deliberations at the fiftieth session.

[1] A/CN.9/763, paras. 13-14; A/CN.9/798, para. 16; see the mandate given by the Commission at its forty-third session (2010): *Official Records of the General Assembly, Sixty-fifth Session, Supplement No. 17* (A/65/17, para. 259 (a)).

II. Organization of the session

3. Working Group V, which was composed of all States members of the Commission, held its fiftieth session in Vienna from 12-16 December 2016. The session was attended by representatives of the following States Members of the Working Group: Argentina, Austria, Brazil, Bulgaria, Canada, Chile, China, Colombia, Côte D'Ivoire, Czechia, Denmark, El Salvador, France, Germany, Greece, Hungary, Indonesia, Iran (Islamic Republic of), Israel, Italy, Japan, Kenya, Libya, Mexico, Nigeria, Pakistan, Panama, Philippines, Poland, Republic of Korea, Romania, Russian Federation, Singapore, Spain, Switzerland, Thailand, Uganda, United Kingdom of Great Britain and Northern Ireland, United States of America and Venezuela (Bolivarian Republic of).

4. The session was attended by observers from the following States: Algeria, Croatia, Cyprus, Dominican Republic, Estonia, Iraq, Lithuania, Malta, Morocco, Netherlands, Portugal, Republic of Moldova, Slovakia, Tunisia and Viet Nam.

5. The session was attended by observers from the European Union.

6. The session was also attended by observers from the following international organizations:

(a) *Organizations of the United Nations system*: World Bank;

(b) *Intergovernmental organizations:* Asian-African Legal Consultative Organization (AALCO); and

(c) *Invited international non-governmental organizations*: American Bar Association (ABA), European Investment Bank (EIB), European Law Institute (ELI), Fondation pour le Droit Continental (FDC), INSOL Europe, INSOL International, International Bar Association (IBA), International Insolvency Institute (III), International Women's Insolvency and Restructuring Confederation (IWIRC), Law Association for Asia and the Pacific (LAWASIA) and Union Internationale des Avocats (UIA).

7. The Working Group elected the following officers:

Chairman: Wisit Wisitsora-At (Thailand)

Rapporteur: Hugo Sánchez (Chile)

8. The Working Group had before it the following documents:

(a) Annotated provisional agenda (A/CN.9/WG.V/WP.141);

(b) A note by the Secretariat on facilitating the cross-border insolvency of multinational enterprise groups: draft legislative provisions (A/CN.9/WG.V/WP.142);

(c) A note by the Secretariat on facilitating the cross-border insolvency of multinational enterprise groups: commentary and notes on the draft legislative provisions (A/CN.9/WG.V/WP.142/Add.1);

(d) A note by the Secretariat on the recognition and enforcement of insolvency-related judgments: draft model law (A/CN.9/WG.V/WP.143); and

(e) A note by the Secretariat on the recognition and enforcement of insolvency-related judgments: commentary and notes on the draft model law (A/CN.9/WG.V/WP.143/Add.1).

9. The Working Group adopted the following agenda:

1. Opening of the session.

2. Election of officers.

3. Adoption of the agenda.

4. Consideration of: (a) the recognition and enforcement of insolvency-related judgments; and (b) facilitating the cross-border insolvency of multinational enterprise groups.

5. Other business.

6. Adoption of the report.

III. Deliberations and decisions

10. The Working Group decided to commence its deliberations on the recognition and enforcement of insolvency-related judgments on the basis of documents A/CN.9/WG.V/WP.143 and A/CN.9/WG.V/WP.143/Add.1, followed by the cross-border insolvency of multinational enterprise groups on the basis of documents A/CN.9/WG.V/WP.142 and A/CN.9/WG.V/WP.142/Add.1. The deliberations and decisions of the Working Group on these topics are reflected below.

IV. Recognition and enforcement of insolvency-related judgments (A/CN.9/WG.V/WP.143 and Add.1)

Article 1. Scope of application

11. The Working Group approved the substance of draft article 1.

Article 2. Definitions

12. The Working Group agreed to defer its consideration of the definitions in draft article 2 until it had reviewed the remaining text of the draft model law.

Article 3 and 3 bis. International obligations of this State

13. The Working Group supported the substance of draft article 3.

14. The Working Group expressed support in favour of retaining draft article 3 bis with the square brackets around the phrase “in force” removed and the text retained.

15. A proposal was made to add the following additional paragraph to article 3 bis: “A treaty applies [to a judgment] for the purposes of paragraph 1 if it is a treaty to which this State is a party, and is one which is open to accession to the State in which the judgment was rendered.” That new language was proposed with a view to clarifying that the disconnection clause in the draft model law would apply if only the receiving State was a party to the overlapping international treaty, but the State of origin had the opportunity to accede to that treaty. It was further suggested that such a solution would preserve the integrity of the systems of recognition and enforcement adopted in possible conflicting international treaties without posing an insurmountable obstacle for the actual implementation of those systems in relation to the two States concerned by the cross-border enforcement of the judgment. That proposal received some support, however, in response several reservations were expressed, including that the treaty would have to be in force and it would not suffice for the originating State to have the opportunity to accede to the treaty that was thought to be overlapping. It was further observed that since a treaty would take priority over a model law in any event, article 3 would be sufficient to prevent any such conflicts.

16. A proposal was made to merge draft articles 3 and 3 bis into one. That proposal received some support, but no specific text was suggested.

17. After discussion, the Working Group agreed that both draft articles 3 and 3 bis should be retained, that the square brackets surrounding the phrase “in force” should be removed and the text retained, and that the proposed text for an additional paragraph in article 3 bis be retained in square brackets.

Article 4. Competent court or authority

18. The issue was raised as to whether article 4 should be worded in the form of a traditional attributive clause of competence, for example: "A request or application for recognition or enforcement of an insolvency-related judgment shall be submitted to the [*insert name of court*]."

19. The Working Group agreed that the text of article 4 should be retained as drafted, but that further consideration would need to be given to how the article would apply in cases where the foreign judgment was raised as a defence or other incidental matter in a court other than a court specified as competent to deal with these matters in draft article 4.

20. A proposal was made to add a second element to article 4 along the following lines: "A court shall also have jurisdiction in proceedings where the outcome depends on the determination of an incidental question of recognition or where that question is raised as a defence." The Working Group agreed in principle to that text as an addition to the existing text of draft article 4.

Article 5. Authorization to seek recognition and enforcement of an insolvency-related judgment in a foreign State; Article 6. Additional assistance under other laws; and Article 7. Public policy exception

21. The Working Group approved the substance of draft articles 5, 6 and 7.

Article 8. Interpretation

22. Although a proposal to delete the phrase "and the observance of good faith" was made, the Working Group agreed to retain article 8 as drafted.

Article 9. Affect and enforceability of an insolvency-related judgment in the originating State

23. The Working Group agreed to revise paragraph 1 in line with article 4 (3) of the most recent draft of the Hague Conference Special Commission on the Recognition and Enforcement of Foreign Judgments (the draft Hague Conference text), which read as follows: "A judgment shall be recognized only if it has effect in the State of origin, and shall be enforced only if it is enforceable in the State of origin."

24. With respect to paragraph 2, after discussion, the prevailing view was that variant 1 should be retained.

Article 10. Application for recognition and enforcement of an insolvency-related judgment

25. With respect to paragraph 1, various views were expressed regarding the phrase "including by way of defence" at the end of the paragraph. One view was that that drafting was sufficient to enable the issue of recognition to be raised by way of defence before both a court of insolvency jurisdiction and of civil jurisdiction. Another view was that it might be better to delete that phrase and reflect its contents in a separate provision along the lines of: "The recognition of an insolvency-related judgment may be raised by an insolvency representative or any other person entitled under the law of the originating State to seek recognition and enforcement of an insolvency-related judgment by way of defence in the course of proceedings taking place in the court referred to in article 4 or in another court of this State, and should be accompanied by the documents specified in article 10 (2)." Support was expressed in favour of having such a separate provision and limiting it to recognition of the insolvency-related judgment. It was observed that such a provision would have to be aligned with article 4 or that text along the lines of article 11 (d) might be appropriate in resolving the issue. The Working Group agreed that such a provision needed further consideration.

26. The Working Group expressed its support for variant 2 of subparagraph 2 (b). Support was also expressed in favour of deleting the square brackets and retaining the

text "as required by the law of this State" in subparagraph 2 (c) and retaining subparagraph 2 (d) without square brackets.

Article 11. Decision to recognize and enforce an insolvency-related judgment

27. Some support was expressed in favour of replacing subparagraph (a) with a cross-reference to article 9 and for aligning subparagraph (b) with the definition of "foreign representative" in article 2 (b) and thus broadening the reference to "person or body."

28. With respect to subparagraph (d), there was support for retaining the phrase in square brackets, but keeping it in square brackets subject to resolving the drafting of article 4, as noted above.

29. A question was raised as to whether recognition of the proceeding to which the insolvency judgment was related should be a prerequisite for recognition of that insolvency-related judgment. In response, it was observed that such a prerequisite was not required and that any question concerning the legitimacy of the proceeding to which the insolvency judgment was related should be addressed in terms of the grounds for refusal in article 12. It was also observed that there should be the possibility of refusing recognition if the proceeding to which the insolvency judgment was related raised issues of public policy in the receiving State. After discussion, it was agreed that such a prerequisite ought not to be required for recognition of the insolvency-related judgment.

Article 12. Grounds to refuse recognition and enforcement of an insolvency-related judgment

30. A proposal to use mandatory rather than permissive text in the chapeau was not taken up by the Working Group.

Subparagraph (a)

31. There was support for retaining subparagraph (a) as drafted on the basis that it reflected the equivalent provisions of the draft Hague Conference text. It was agreed that explanations in respect of the scope and meaning of the subparagraph, in particular relating to "notification" and "appearance", should be included in the guide to enactment of the model law.

Subparagraph (b)

32. One view was that the words in square brackets should be deleted, while another view was that that phrase should be retained. Although it was noted that that phrase had been deleted in the most recent version of the draft Hague Conference text, after discussion, there was no agreement by the Working Group, and subparagraph (b) was retained as drafted, but placed in square brackets for future consideration.

Subparagraphs (c) and (d)

33. The Working Group agreed to delete the word "prior" in subparagraph (c), and in subparagraph (d) to retain all of the text in square brackets and delete the brackets, and to align the drafting with article 7 (1)(f) of the draft Hague Conference text, that is, "between the same parties on the same subject matter." A suggestion to add a reference to "the same subject matter" in subparagraph (c) was not supported, nor was a proposal to delete the reference to "the same subject matter" in subparagraph (d).

Subparagraph (e)

34. Support was expressed in favour of the substance of subparagraph (e), and of retaining all of the text without square brackets. It was observed that one issue to be kept in mind was how the current draft text would operate in the context of enterprise groups, where there might be a question not only of interference with the debtor's insolvency proceedings, but also with planning proceedings in which the debtor may be participating in order to develop a group solution.

Subparagraph (f)

35. Some concerns were expressed both with respect to whether the subparagraph was too broadly or too narrowly drafted. An additional concern expressed was that the subparagraph should be deleted in the interests of limiting possible exclusions to recognition in order to achieve the goal of the draft text; reference was made to the limited grounds for refusal in Article V (2) of the New York Convention (1958). Although those concerns received some support, the Working Group agreed after discussion to retain the text of subparagraph (f) as drafted. It was observed that the guide to enactment might clarify that different treatment of creditors did not necessarily equate with unfair treatment of creditors.

Subparagraphs (g)(i) to (iii)

36. The Working Group agreed that those provisions should be redrafted as proposed in note 34 of A/CN.9/WG.V/WP.143/Add.1 so as to avoid the use of a double negative in the chapeau. A proposal to delete subparagraphs (g)(i) to (iii) did not receive sufficient support.

37. Concern was expressed regarding the meaning of the phrase "express consent" in subparagraph (g)(i), and whether it meant, for example, that there was explicit consent prior to the proceedings, explicit consent during the proceedings, tacit consent, or submission to the proceedings. A proposal to clarify the meaning of "express consent" was to adopt drafting based upon article 12 (a)(i), along the following lines: "exercise jurisdiction based on the party entering an appearance and presenting their case without contesting jurisdiction in the originating court, provided that the law of the originating State permitted jurisdiction to be contested." Although it was noted that article 5 (1)(e) of the draft Hague Conference text referred to express consent, the drafting proposal received some support. After discussion, it was agreed that the word "express" should be placed in square brackets pending further consideration, including of how that term might be explained in the guide to enactment.

38. A proposal was made to amend subparagraph (g)(ii) to read: "Exercised jurisdiction on a basis on which a court in this State may recognize and enforce the insolvency-related judgment." Although some support was expressed for that proposal, after discussion, it was agreed that it should not be adopted, and that subparagraph (g)(ii) should be retained as drafted.

39. Although there was some concern that subparagraph (g)(iii) might appear somewhat redundant in light of subparagraph (g)(ii), there was support for retaining them as distinct subparagraphs, even if there was a degree of overlap between them. A view was expressed that subparagraph (g)(iii) granted States a separate ground to refuse recognition of decisions based on exorbitant grounds of jurisdiction. A different view was that subparagraph (g)(iii) did not provide grounds for refusal additional to those in subparagraph (g)(ii).

Subparagraphs (g)(iv) to (v)

40. A number of concerns were expressed with respect to subparagraphs (g)(iv) and (v) including: their relationship with articles 21 (g) and 25 of the Model Law on Cross-Border Insolvency; that subparagraph (g)(iv) was limited to the party against whom the judgment was issued when there could be situations where the judgment related to insolvency proceedings concerning the judgment creditor and not only the judgment debtor; and that the subparagraphs might be better expressed as a separate provision rather than as part of subparagraph (g). One solution to clarify the relationship of these subparagraphs with the Model Law might be to preface the subparagraphs with a qualification along the lines of: "Without limiting any form of cooperation under the Model Law on Cross-Border Insolvency". No clear preference was expressed as between variants 1 and 2 of subparagraph (g)(v). The Working Group was encouraged to develop a proposal on how the two subparagraphs might be redrafted to reflect those concerns.

41. After further discussion, there was support for a proposal to delete both subparagraphs and insert a separate draft article along the following lines: "For greater certainty, the relief available under [*insert a cross-reference to the legislation enacting article 21 of the Model Law on Cross-Border Insolvency*] includes recognition and enforcement of a judgment. It was observed that clarification might be required of whether the reference to "judgment" was to an insolvency-related judgment.

Subparagraph (h)

42. There was support for a proposal to adopt and revise the first sentence of subparagraph (h) as follows: "The judgment is related to a proceeding that has not been, could not be or could not have been recognized under the [*the law of the enacting State giving effect to the Model Law on Cross-Border Insolvency*]."

Article 13. Equivalent effect

43. The Working Group agreed to retain article 13 as drafted.

Article 14. Severability

44. A proposal to replace "shall" with "may" did not receive support and article 14 was retained as drafted.

Article 15. Provisional relief

45. The Working Group agreed to remove the square brackets and to retain article 15 as drafted.

Additional matters

46. The issue raised at the end of A/CN.9/WG.V/WP.143/Add.1 relating to article 12 of the draft Hague Conference text was not taken up by the Working Group.

47. A proposal to add an article establishing a procedure for a party in interest to object to an application for recognition and for the receiving court to request additional information from, and to hear, that party on the merits was not taken up.

Article 2. Definitions

(a) "Foreign proceeding"

48. The Working Group agreed that the text should recognize a foreign judgment related to both a foreign insolvency proceeding and an insolvency proceeding taking place in the receiving State. To give effect to that decision, the definition of "foreign proceeding" was to be changed along the lines noted in note 2 (i) of A/CN.9/WG.V/WP.143/Add.1.

(b) "Foreign representative" and (d) "Foreign court"

49. The Secretariat was requested to consider the two definitions in the context of the change made to article 2 (a), as well as the implications of that change throughout the text, and to suggest appropriate revisions for future consideration by the Working Group.

(c) "Judgment"

50. A number of proposals were made with respect to the definition of "judgment": (a) to delete "whatever it may be called"; (b) to delete the language in square brackets at the end of the definition; (c) to add "on the merits" after "any decision"; and (d) to add a specific exclusion to the end of the definition in the following terms: "An interim measure of protection is not a judgment."

51. In support of the proposal to include "on the merits" and to expressly exclude interim measures, reference was made to the decision of the Working Group at its forty-ninth session to "delete all references to provisional or protective

and conservatory measures" (A/CN.9/870, para. 55) from the draft text. It was suggested that although all such references had been deleted from the text contained in A/CN.9/WG.V/WP.143, specific language was required in the text to ensure that such measures were not included. A further reason for excluding provisional measures was said to be that their inclusion might be inconsistent with the Model Law on Cross-Border Insolvency and might operate to discourage States from enacting that text.

52. Although some support was expressed in favour of including "on the merits", concerns were expressed that many judgments issued in the course of insolvency proceedings might not be considered to be judgments on the merits, but would nevertheless be judgments that were important to the conduct of the insolvency proceedings and that should be recognized under this draft instrument. In addition, the term "on the merits" was thought not to provide sufficient legal clarity to avoid litigation.

53. As to the addition of text specifically excluding interim measures, while there was some support for including it, there was considerable support for not adding that phrase to the definition. In support of not including the text, it was observed that many key judgments issued in the course of insolvency proceedings might be considered to be of a provisional nature rather than final judgments; and excluding such decisions from this draft instrument would greatly reduce its usefulness. Further, it was observed that, in any event, in accordance with article 9 (1), such a decision could have no greater effect in the receiving State than it had in the originating State.

54. The Working Group agreed that there was no clear support to delete "whatever it may be called" but that the phrase in square brackets at the end of the definition should be deleted. After discussion, the Working Group agreed that in order to facilitate further consideration at a future session, both the phrase "on the merits" and the sentence concerning interim measures should be added to the text and placed in square brackets. The Working Group did not take up a proposal to consider a definition of "judgment" as follows: "Judgment means any decision or order issuing from a foreign court in a duly recognized foreign proceeding."

(e) "Insolvency-related judgment"

55. To reflect the change made to the definition in subparagraph (a), it was proposed that this definition should be of "an insolvency-related foreign judgment". That proposal received some support.

56. Another proposal was to replace subparagraph (e) with the following:

> "(e) 'Insolvency-related judgment', in respect of a judgment, has the meaning given by Article 2A.
>
> "Article 2A
>
> "1. A judgment is 'insolvency-related' if it satisfies the following conditions:
>
> "(a) It has a connection with a foreign proceeding;
>
> "(b) It was given on or after the commencement of the foreign proceeding to which it is connected;
>
> "(c) It serves the interests of the general body of creditors; and
>
> "(d) The proceedings from which the judgment derives could not have been brought but for the insolvency or those proceedings find their source in rules specific to insolvency law.
>
> "2. Insolvency-related judgments include, inter alia, judgments:
>
> "(i) *(insert subparagraphs 2 (e)(i)-(v) in A/CN.9/WG.V/WP.143)*."

57. After discussion, the proposal set out in the paragraph above was amended as follows: (a) replacing "general body of creditors" in subparagraph (c) with "insolvency estate" and (b) replacing "rules specific to insolvency law" in subparagraph (d) with "the law related to insolvency." A further amendment to the

proposal was to add text to allow States the flexibility to add other examples of insolvency-related judgments to the non-exhaustive list referred to in paragraph 2 of that proposal.

58. In reviewing the text of the definition in A/CN.9/WG.V/WP.143 and the proposal, a number of questions were raised with respect to the criteria for a judgment to be insolvency-related: (a) should the connection to insolvency proceedings be a close one?; (b) were judgments issued on commencement (e.g. the decision commencing insolvency proceedings), as well as after commencement to be included?; (c) which insolvency estate was being referred to in subparagraph (c) of the revised proposal?; and (d) should those criteria be formulated as conditions or factors to be taken into account in determining whether the definition was satisfied?

59. After further consideration, the Working Group heard a proposal for a new approach to the definition of "insolvency-related judgment" in article 2 (e), which provided for two alternatives as follows:

"2 (e): 'Insolvency-related judgment' means:

[***"Alternative A*:**

"a judgment that is related to an insolvency proceeding and was issued after the commencement of that proceeding.

"Insolvency-related judgments include, inter alia, judgments determining whether:

"(i) An asset is part of, should be turned over to, or was properly disposed of by the insolvency estate;

"(ii) A transaction involving the debtor or assets of its insolvency estate should be avoided because it upset the principle of equitable treatment of creditors or improperly reduced the value of the estate;

"(iii) A representative of the debtor is liable for action taken when the debtor was insolvent or in the period approaching insolvency, and the cause of action relating to that liability was one that could be pursued by or on behalf of the debtor's insolvency estate;

"(iv) Sums not covered by (i) or (ii) are owed to or by the debtor or its insolvency estate; or

"(v) A plan of reorganization or liquidation should be confirmed, a discharge of the debtor or of a debt should be recognized, or a voluntary restructuring agreement should be approved.

"For the purposes of this definition, an 'insolvency-related judgment' includes instances in which the cause of action was pursued by:

"(i) A creditor with approval of the court, based upon the insolvency representative's decision not to pursue that cause of action; or

"(ii) The party to whom it has been assigned by the insolvency representative in accordance with the applicable law;

"and the judgment on that cause of action would otherwise be enforceable under this Law.]"

[***"Alternative B*:**

"a judgment that satisfies the following conditions:

"(i) It has a connection with an insolvency proceeding;

"(ii) It was given on or after the commencement of the insolvency proceeding to which it is connected;

"(iii) It affects the interests of the insolvency estate; and

"(iv) The proceedings from which the judgment derives could not have been brought but for the insolvency or those proceedings find their source in law related to insolvency.

"Insolvency-related judgments include, inter alia, judgments determining whether:

"(i) An asset is part of, should be turned over to, or was properly disposed of by the insolvency estate;

"(ii) A transaction involving the debtor or assets of its insolvency estate should be avoided because it upset the principle of equitable treatment of creditors or improperly reduced the value of the estate;

"(iii) A representative of the debtor is liable for action taken when the debtor was insolvent or in the period approaching insolvency, and the cause of action relating to that liability was one that could be pursued by or on behalf of the debtor's insolvency estate;

"(iv) Sums not covered by (i) or (ii) are owed to or by the debtor or its insolvency estate, and the cause of action relating to the recovery or payment of those sums arose after insolvency proceedings commenced in respect of the debtor; or

"(v) A plan of reorganization or liquidation should be confirmed, a discharge of the debtor or of a debt should be recognized, or a voluntary restructuring agreement should be approved.

"For the purposes of this definition, an 'insolvency-related judgment' includes instances in which the cause of action was pursued by:

"(i) A creditor with approval of the court, based upon the insolvency representative's decision not to pursue that cause of action; or

"(ii) The party to whom it has been assigned by the insolvency representative in accordance with the applicable law;

"and the judgment on that cause of action would otherwise be enforceable under this Law.]"

60. Although the view was expressed that including those two alternatives could provide a basis for the future deliberations of the Working Group, concerns were also expressed that the Working Group should continue to attempt to resolve the differences between the two alternatives and seek to achieve consensus on a single definition. After discussion, there was support to add the two proposals and to request the Secretariat to analyse the differences between them with a view to providing a consolidated alternative text for future consideration.

V. Cross-border insolvency of multinational enterprise groups: draft legislative provisions (A/CN.9/WG.V/WP.142 and Add.1)

61. The Working Group agreed to commence its discussions on Chapter 2 of the text contained in A/CN.9/WG.V/WP.142.

Chapter 2. Cooperation and coordination

Article 3. Cooperation and direct communication between a court of this State and foreign courts, foreign representatives and a group representative

62. The Working Group expressed a preference for variant 2 of draft article 3, and supported the substance of the text.

Article 4. Cooperation to the maximum extent possible under article 3

63. It was noted that subparagraph (f) would need to be considered in the context of the Working Group's conclusion on draft article 21. It was proposed that some additional matters might be added to the draft article, including: (a) recognition of the cross-filing of claims by or on behalf of enterprise group members and their creditors; and (b) approval of the treatment of intergroup member claims, including the possibility of mediation or arbitration to resolve such claims.

64. Support was expressed for including a reference to mediation and arbitration, for variant 2 of subparagraph (g) and for removing the square brackets in subparagraph (b) and retaining the text. A reference to cross-filing and intergroup member claims was also supported, with the suggestion that reference to those matters might be more appropriate in a guide to enactment.

Article 5. Effect of communication under article 3

65. The Working Group supported the substance of draft article 5 with the second sentence of subparagraph (f) being moved to the chapeau. A suggestion was made that the title might be adjusted to include the words "limitation of the".

Article 6. Coordination of hearings

66. The Working Group supported the substance of draft article 6.

Article 7. Cooperation and direct communication between a group representative, foreign representatives and foreign courts

67. The Working Group supported the substance of draft article 7.

Article 7 bis. Cooperation and direct communication between a [*insert the title of a person or body administering a reorganization or liquidation with respect to any enterprise group member under the law of the enacting State*]**, foreign courts, foreign representatives and a group representative**

68. The Working Group supported the substance of draft article 7 bis, with removal of the square brackets, noting that the reference to article 1 might need to be reconsidered when the substance of article 1 had been agreed.

Article 8. Cooperation to the maximum extent possible under articles 7 [and 7 bis]

69. The Working Group adopted the substance of draft article 8, agreeing to remove the square brackets in the chapeau and subparagraph (e), and adopting variant 2 of subparagraph (b). With respect to subparagraph (c), it was observed that that matter was typically addressed in cross-border insolvency agreements and might not be required in article 8. Since no further comment was made, the substance of subparagraph (c) was retained and the square brackets removed.

Article 9. Authority to enter into agreements concerning the coordination of proceedings

70. The Working Group agreed to the substance of variant 2 of draft article 9.

Article 10. Appointment of a single [or the same] insolvency representative

71. The Working Group agreed to delete the remainder of paragraph 1 after the words "different States"; to retain "or the same" without square brackets; and to redraft paragraph 2 in language appropriate for a model law.

Chapter 3. Conduct and recognition of a planning proceeding

Article 11. Participation by enterprise group members in a proceeding under [*identify laws of the enacting State relating to insolvency*]

72. There was agreement in the Working Group that the text should not use the terms "solvent" or "insolvent" (thus the phrase "whether solvent or insolvent" should be deleted in paragraph 1), but should rather focus on group members with respect to which insolvency proceedings had commenced and would thus be, in keeping with the language of part 3 of the Legislative Guide, "subject to insolvency proceedings". It was further agreed that the text should focus on forms of participation available to those subject to insolvency proceedings and to those not subject to insolvency proceedings; in the case of the latter, they should not be prevented from taking part in a group insolvency solution, but the text should clarify the manner in which other provisions of the text might apply to them, particularly draft articles 13, 15 and 17.

73. There was support for variant 2 of paragraph 2 with the following changes: (a) "merely implies" should be replaced with "merely means"; and (b) the word "otherwise" should be deleted. Other proposals were: (a) to retain the formulation from variant 1 that "participation does not subject the group member to the jurisdiction of the courts of this State"; and (b) that the phrase "unless otherwise provided in this law" should be added to the beginning of variant 2.

74. With respect to paragraph 3, there was agreement to delete the word "insolvent" and to revise the drafting along the following lines: "may participate in a proceeding under paragraph 1 unless a court in that other State precludes it from so doing."

Article 12. Appointment of a group representative

75. Some preference was expressed by the Working Group in favour of variant 2. Suggestions were made to improve that text including by: (a) clarifying the procedure through which the group representative was appointed; (b) ensuring that the group representative was authorized to not only seek recognition and participate in a foreign proceeding, but also to seek relief; and (c) expanding the text to enable a group representative to be able to participate in a foreign proceeding relating to a group member not participating in the planning proceeding.

76. The Secretariat was requested to provide a revised text of draft article 12 for future deliberations.

Article 13. Relief available to a planning proceeding

77. In terms of paragraph 1, it was agreed that the two square bracketed phrases in the opening lines should both be retained and the brackets removed, and that the references to insolvent and solvent group members should be deleted. In discussing the group member to which the provision should apply, the Working Group considered the broader question of what constituted participation for the purposes of the draft text. It was observed that the two main issues to be examined were what participation would entail and which group members could participate and in what manner.

78. On the first issue, it was observed that participation should be voluntary (including the right to opt out at a later stage) and should not involve submission to the jurisdiction of the planning court. Further, participation should include the following rights: (a) to appear; (b) to make submissions; (c) to be heard; (d) to participate in negotiations; (e) to be notified of progress made in proceedings; (f) to enter into agreements or settlements, including a group insolvency solution; and (g) to seek approval of a group insolvency solution in the relevant jurisdiction.

79. On the second issue, it was observed that there were at least three modes of participation: (a) as a group member not subject to insolvency proceedings anywhere, including as part of the group insolvency solution process; (b) as a group member for which the insolvency proceedings commenced become the planning proceeding; and (c) as a group member for which insolvency proceedings are commenced in another State (e.g. based on centre of main interests (COMI) or establishment). For those in

(a), participation might entail the rights set out in paragraph 76 above. Those in (b) would be subject to the jurisdiction of the court conducting the planning proceeding. For those in (c), the group member would have various rights as outlined above, but the court of the planning proceeding may be able to stay both individual enforcement actions against the assets of that group member, as well as continuation or commencement of insolvency proceedings sought to be opened with respect to that group member in the State of the planning proceeding, where required to assist the development of the group insolvency solution. With respect to (c), it was observed that additional measures may be required in chapter 2 to enable the foreign court in the COMI State to accede to the relief suggested in the State of the planning proceeding.

80. There was agreement that relief under article 13 was available exclusively in the planning proceeding State.

81. In order to clarify the group members covered by article 13, a suggestion was made to revise paragraph 1 by including the phrase "subject to and participating in" before both references to "planning proceeding". A different view was that paragraph 1 should only refer to group members subject to insolvency proceedings.

82. A question was raised as to whether another group member with its COMI in the State of the planning proceeding would be considered to be subject to or participating in the planning proceeding. It was observed that, to some extent, the answer may depend upon the availability of procedural coordination as recommended in part 3 of the Legislative Guide.

83. In respect of subparagraph 1 (c), support was expressed in favour of retaining the word "any" without square brackets and deleting the phrase "in this State". Further, in respect of subparagraph 1 (g), there was support for the suggestion to delete the word "existing" and the word "continued".

84. In respect of paragraph 2, some support was expressed in favour of retaining the text in the second set of square brackets on the basis that it would be easier to determine than the test in the first option. It was observed that the notion of relief interfering with the administration of a proceeding from article 15 (4) might provide a better test for paragraph 2.

85. With respect to the structure of the text, it was suggested that it might be preferable to arrange the provisions to focus first on the planning proceeding and the provision of relief in the State of that proceeding, as well as the ability of the group representative to seek relief in support of that proceeding, then to deal with recognition issues and, separately, with the rights of other group members in the State of the planning proceeding and in foreign States. A related proposal was to prepare a separate provision dealing with those group members not subject to insolvency proceedings.

Article 14. Recognition of a planning proceeding

86. In respect of paragraph 1, there was support for removing the brackets and retaining the phrase "in this State".

87. With regard to paragraph 2 (a), some slight preference was expressed for retaining the phrase "designated as a planning proceeding" and deleting the square brackets.

88. In paragraph 3 (a), it was suggested that "has agreed to participate" should be changed to "is participating or has participated"; another view was that the more flexible standard of "has agreed to participate" should be retained in order to accommodate situations such as where recognition was required as a matter of urgency to preserve assets before group members had actually participated. A concern was expressed with regard to paragraph 3 (b) that such a requirement could become burdensome and the information outdated. In respect of paragraph 3 (c), it was agreed to retain the text at the end of the paragraph and remove the square brackets.

89. After discussion, it was agreed that the focus should be upon providing evidence of which group members were participating in the planning proceeding at the time of the application for recognition without that affecting the question of whether such a participating member might opt out at some future point. The evidence might relate to agreement to participate and the exercise of some other element of participation, such as the right to appear and be heard. It was also agreed that the question of group members opting in and out of participation might need to be addressed separately.

Article 15. Interim relief that may be granted upon application for recognition of a planning proceeding

90. The Working Group agreed to return to article 15 after considering the articles on the substance of the recognition process.

Article 16. Decision to recognize a planning proceeding

91. Noting that there was no specific public policy exception in the draft text, and that the need for such an article might depend on the form in which the text was adopted, the Working Group agreed that the text should be subject to a public policy exception.

92. In response to a question as to whether a planning proceeding and a main proceeding were synonymous, it was recalled that the definition of "planning proceeding" in draft article 2 required that it be a main proceeding. The added element that it was to be the proceeding in which the group insolvency solution was to be developed was noted.

Article 17. Relief that may be granted upon recognition of a planning proceeding

93. There was some support for the suggestion that the phrase "or at any time thereafter" should be added after "planning proceeding" at the end of the first phrase in paragraph 1. Another suggestion was that the party requesting relief should be broader than the "group representative". In addition, so as to align paragraph 1 with the text approved in respect of draft article 13, there was support for retaining both texts in square brackets in paragraph 1 and removing the brackets. It was agreed that appropriate relief under this article would be the relief provided under article 13 and that it might need to be specified in this article rather than relying on the cross-reference as currently drafted. Further, text limiting the available relief to participating group members might need to be added to the provision. In an additional effort to align the text with that of article 13, it was agreed that the words at the end of the chapeau should be adjusted to read, "may grant any of the following relief".

94. It was observed that relief might be required at three different points in the process to develop a group insolvency solution: (a) the point at which the court is aiming to freeze the situation and preserve the integrity of the assets of a participating group member whilst enabling it to carry out normal business activities; (b) the point at which creditors would be notified of the planning proceeding, of the need to make claims and, following development of the group insolvency solution, the seeking of approval; and (c) following voting on a group insolvency solution, its implementation. It was agreed that those three stages should be borne in mind when developing the relief provisions of the draft text.

95. With respect to paragraph 2, concern was expressed that the measures contained in it related only to the time after approval of a group insolvency solution. A different view was that such measures might apply earlier in the proceeding and that to remove the paragraph from article 17 might be premature at this stage. It was observed that paragraph 2 was similar to article 13 (1)(e), and that while 13 (1)(e) was subject to the qualifications present in the chapeau of article 13, article 17 (2), as a separate paragraph, was not subject to those conditions, although they were replicated in the chapeau of article 17. It was agreed to reconsider placement of paragraph 2 once the Working Group had reviewed the remainder of the text. The question of which creditors' interests would need to be protected could also be considered at a later stage.

Article 18. Participation of a group representative in a proceeding [under [*identify laws of the enacting State relating to insolvency*]][in this State]

96. Although there was some support for a suggestion to broaden the ability to participate to any proceeding concerning an enterprise group member by deleting the phrase "that are participating in the planning proceeding", there were concerns that that change might go too far and that further consideration of the proposal was required. The Working Group agreed to retain the text as drafted for future consideration.

97. There was some support for expanding article 18 to include all types of proceeding, although it was noted that, if that were to be done, the article would need to be aligned with article 12.

Article 19. Protection of creditors and other interested persons

98. In respect of paragraph 1, there was support for the suggestion that the phrase "including the debtor" should be replaced by a reference to the group member subject to the relief to be granted. A proposal to add a reference in paragraph 2 to the provision of security as a specific example of the conditions that might be granted was supported.

Article 20. Approval of local elements of a group insolvency solution

99. The Working Group agreed to keep the reference to establishment and remove the square brackets in paragraphs 1 and 4 on the basis that there may be situations where there was a need to approve elements of a group insolvency solution in a jurisdiction where a relevant group member had an establishment; however, that was not to suggest that that approach would be required in all situations. In addition, there was support to add a reference in paragraph 1 to the group member participating in the planning proceeding and to remove the square brackets around that phrase in paragraph 4 and retain the text.

100. With respect to paragraph 4, a proposal was made to replace the phrase "be approved and by whom" at the end of the paragraph with "take effect". A similar proposal was to replace the remainder of the final sentence after the phrase "in that situation" with the following: "the relevant elements of the group insolvency solution may be made binding and effective as required by local law". A third proposal was to delete paragraph 4 entirely. After discussion, there was some support for the second proposal, with further guidance to be provided in a guide to enactment on what that requirement might mean in practice.

Article 15. Interim relief that may be granted upon application for recognition of a planning proceeding

101. There was agreement to align paragraph 1 of article 15 with the text approved in respect of draft articles 13 and 17 by retaining both phrases in square brackets and removing the brackets. It was also agreed that text limiting the available relief to participating group members might need to be added to the provision. With respect to the relevant subparagraphs of article 13 (1), inclusion of all subparagraphs with the exception of subparagraph (e) received varying degrees of support. It was noted that subparagraph (e) was closely related to article 17 (2) and could be further considered in light of the comments made in respect of that article above. The need to ensure the alignment of the relief provisions was noted, as was the need to consider whether additional forms of interim relief might be required.

Chapter 4. Treatment of foreign claims in accordance with applicable law

Article 21. Commitment to and approval of the treatment of foreign claims in accordance with applicable law: non-main proceedings

102. The Working Group was of the general view that the text of draft article 21 was acceptable. There was agreement that, in response to the question raised in note 54 of A/CN.9/WG.V/WP.142/Add.1, the protections included in the Regulation (EU)

2015/848 of the European Parliament and of the Council of 20 May 2015 on insolvency proceedings (recast) were too cumbersome and should not be included in this text. A proposal to add a sentence along the following lines at the end of paragraph 1 received support: "Such undertaking shall be subject to the formal requirements, if any, of the State of the opening of the planning proceeding and shall be enforceable and binding on the insolvency estate." Some concern was expressed as to whether that additional text should be limited to the planning proceeding, since article 21 was intended to apply more broadly.

103. Additional matters were raised in respect of which the text might require more detail, including: (a) the procedures that might be required before the court decided to stay or decline to open the non-main proceedings under paragraph 2; and (b) whether this drafting was sufficiently broad to apply in the case of a debt restructuring in addition to sale of assets in a global distribution.

Article 22. Commitment to and approval of the treatment of foreign claims in accordance with applicable law: main proceedings

104. Concerns were expressed with respect to the scope of article 22 including: (a) whether the commencement of main proceedings could be renounced on the basis of a commitment made in another proceeding concerning the same group member or a different group member; (b) whether the commencement of main proceedings could be renounced on the basis of a commitment made in a proceeding in a non-COMI State; (c) whether the claims of creditors of one group member could be addressed in a proceeding in the COMI of another group member; (d) what standards a court declining to open a main proceeding under paragraph 2 might use to evaluate whether the interests of creditors were properly protected; (e) how a decision made by a non-COMI court would be implemented through the COMI court; (f) outside of the planning proceeding context, which jurisdictions might be eligible to host a proceeding in which such a commitment might be given; and (g) what happened in a situation where the commitment was not respected.

105. It was observed that some of the issues raised might be addressed by reference to other articles of the draft text, such as article 1 (2) which, inter alia, preserved the jurisdiction of the COMI court at all times, and article 19 (1) dealing with the protection of creditors and other interested persons. Moreover, a consideration of how such mechanisms had been used in practice was thought to be instructive and could provide a source of guidance for inclusion in the guide to enactment.

106. Concern was expressed as to the structure of the draft text and the status of articles 22 and 23 as supplemental. It was recalled that the proposal to add those provisions to the draft text had been made on the basis that they should be supplemental and it was emphasized that that had been the basis for their further consideration. The Working Group agreed to continue on the basis of that working assumption.

107. The Working Group agreed that draft article 22 was not acceptable as drafted and the Secretariat was requested to provide a revised text for future deliberations, taking into account the concerns raised.

Article 23. Additional relief

108. There was support in the Working Group for the substance of article 23 as drafted, subject to the following proposals: (a) to delete the reference to paragraph 1 in the first line of article 23 (2); (b) to add in paragraph 1 after the words "planning proceeding" the phrase "particularly where the group representative has made a commitment under article 22"; and (c) in order to create in paragraph 2 a link to that addition in paragraph 1, to add the words "subject to the same condition" at the beginning of paragraph 2. It was acknowledged that article 23 would need to be reconsidered in light of the concerns expressed in respect of article 22 and how they might be addressed in the draft text.

Preamble

109. The Working Group approved the substance of the preamble. There was support for a suggestion to incorporate language addressing the importance of protecting the interests of the creditors of each individual participating group member and not trade those interests off as against the interests of the group members taken together; whether that language should be placed in the preamble or elsewhere in the text could be considered at a later stage.

Article 1. Scope

110. There was agreement to place paragraph 2 in a separate article. Support was expressed for a proposal to simplify the drafting of paragraph 1 and formulate a more typical scope article along the following lines: "This law applies to judicial cooperation in the context of the cross-border insolvency of multinational enterprise groups."

Article 2. Definitions

111. With respect to subparagraphs (a) to (c), it was noted that although they were based on Part 3 of the Legislative guide, they might helpfully be included in this text unless the specific terms were not used.

112. The Working Group approved the substance of subparagraph (d) as drafted. With respect to "group representative" in subparagraph (e), there was agreement to delete the remainder of the definition after "planning proceeding".

113. In respect of subparagraph (f) on "group insolvency solution", proposals were made to change the word "add" in subparagraph (f)(ii) to "preserve", "preserve or enhance" or "preserve and maximize", and to change "that would be likely to" to "with the goal of".

114. In regard to the definition of "planning proceeding" in subparagraph (g), it was recalled that the three requirements of the definition were essential elements of the draft text. It was agreed that the drafting might be revisited to improve it and to remove any ambiguity. A suggestion to add a definition of "participation" was not supported; it was noted that the addition of a substantive provision might be a better approach.

Additional issues — Principles 4 and 5

115. The general view was that those principles were already covered in the draft text and should not be included as additional articles. It was noted that clearer guidance on the procedural mechanisms used under this model law might be developed once the text reached a more advanced state.

B. Note by the Secretariat on facilitating the cross-border insolvency of multinational enterprise groups: draft legislative provisions

(A/CN.9/WG.V/WP.142 and Add.1)

[Original: English]

Contents

I. Introduction

1. At its forty-fourth session in December 2013, following a three-day colloquium, the Working Group agreed to continue its work on the cross-border insolvency of multinational enterprise groups[1] by developing provisions on a number of issues that would extend the existing articles of the UNCITRAL Model Law on Cross-Border Insolvency (UNCITRAL Model Law) and part three of the UNCITRAL Legislative Guide on Insolvency Law (UNCITRAL Legislative Guide), as well as involving reference to the UNCITRAL Practice Guide on Cross-Border Insolvency Cooperation. While the Working Group considered that those provisions might, for example, form a set of model provisions or a supplement to the existing UNCITRAL Model Law, it noted that the precise form they might take could be decided as the work progressed.

2. At its forty-fifth (April 2014), forty-sixth (December 2014) and forty-seventh (May 2014) sessions, the Working Group considered the goals of a text that might be developed to facilitate the cross-border insolvency of multinational enterprise groups; the key elements of such a text, including those that might be based upon part three of the UNCITRAL Legislative Guide on Insolvency Law (the Legislative Guide) and on the UNCITRAL Model Law on Cross-Border Insolvency (the Model Law); and the form that the text might take, noting that some of the key elements lent themselves to being developed as a model law, while others were perhaps more in the nature of provisions that might be included in a legislative guide.

3. At its forty-eighth session, the Working Group agreed a set of key principles for a regime to address cross-border insolvency in the context of enterprise groups and considered a number of draft provisions addressing three main areas: (a) coordination and cooperation of insolvency proceedings relating to an enterprise group; (b) elements needed for the development and approval of a group insolvency solution involving multiple entities; and (c) the use of so-called "synthetic proceedings" in lieu of commencing non-main proceedings. Two additional supplemental areas were also considered. These might include (d) the use of so-called "synthetic proceedings" in lieu of commencing main proceedings, and (e) approval of a group insolvency solution on a more streamlined basis by reference to the adequate protection of the interests of creditors of affected group members.

4. At its forty-ninth session, the Working Group considered a consolidated draft legislative text incorporating the agreed key principles and draft provisions addressing the five areas indicated in paragraph 3.

5. The draft text below reflects the discussion and decisions taken at the forty-ninth session and the revisions the Secretariat was requested to make, together with various suggestions and proposals arising from the Secretariat's work on the

[1] *Official Records of the General Assembly, Sixty-fifth Session, Supplement No. 17* (A/65/17), para. 259 (a); A/CN.9/763, paras. 13-14; *Official Records of the General Assembly, Sixty-eighth Session, Supplement No. 17* (A/68/17), para. 326.

draft text. Notes and commentary to this draft text, indicated by a reference number in square brackets, are contained in A/CN.9/WG.V/WP.142/Add.1.

II. Draft legislative provisions on facilitating the cross-border insolvency of multinational enterprise groups

[Part A]

Chapter 1. General Provisions

[Preamble [1]

The purpose of this Law is to provide effective mechanisms to address cases of cross-border insolvency affecting the members of an enterprise group, so as to promote the objectives of:

(a) Cooperation between courts and other competent authorities of this State and foreign States involved in cases of cross-border insolvency affecting members of an enterprise group;

(b) Cooperation between insolvency representatives appointed in this State and foreign States in cases of cross-border insolvency affecting members of an enterprise group;

(c) Development of a group insolvency solution for the whole or part of an enterprise group and cross-border recognition and implementation of that solution in multiple States;

(d) Fair and efficient administration of cross-border insolvencies concerning enterprise group members that protects the interests of all creditors and other interested persons, including the debtors;

(e) Protection and maximization of the overall combined value of the operations and assets of enterprise group members affected by insolvency and of the enterprise group as a whole;

(f) Facilitation of the rescue of financially troubled enterprise groups, thereby protecting investment and preserving employment.]

[Article 1. Scope [2]

1. This Law applies where:

(a) Assistance is sought in this State by a foreign court, a foreign representative or a group representative in connection with one or more foreign proceedings relating to members of an enterprise group;

(b) Assistance is sought in a foreign State in connection with one or more proceedings under [*identify laws of the enacting State relating to insolvency*] relating to members of an enterprise group;

(c) Assistance is sought in this State by a foreign court, a foreign representative or a group representative in connection with a group insolvency solution for one or more enterprise group members being developed in a planning proceeding in a foreign State;

(d) Assistance is sought in a foreign State in connection with a group insolvency solution for one or more enterprise group members being developed in this State in a planning proceeding under [*identify laws of the enacting State relating to insolvency*];

(e) A foreign proceeding and a proceeding under [*identify laws of the enacting State relating to insolvency*] are taking place concurrently in respect of the same enterprise group member; or

(f) [Foreign] creditors [or other interested persons] have an interest in requesting the commencement of, or participating in, a proceeding under [*identify*

laws of the enacting State relating to insolvency] in respect of an enterprise group member [2.3].

2. Where the centre of main interests of an enterprise group member is located in this State, nothing in this Law is intended to [2.5]:

(a) Limit the jurisdiction of the courts of this State with respect to that enterprise group member; or

(b) Limit any process or procedure (including any permission, consent or approval) required in this State in respect of that enterprise group member's participation [to any extent] in a group insolvency solution being developed in a foreign State; or

(c) Limit the commencement of insolvency proceedings in this State under [*identify laws of the enacting State relating to insolvency*], if required or requested to address the insolvency of an enterprise group member. When proceedings are not required or requested in this State, there is no obligation to commence such proceedings.]

Article 2. Definitions

For the purposes of these provisions

(a) "Enterprise" means any entity, regardless of its legal form, that is engaged in economic activities and may be governed by the insolvency law [3];

(b) "Enterprise group" means two or more enterprises that are interconnected by control or significant ownership;

(c) "Control" means the capacity to determine, directly or indirectly, the operating and financial policies of an enterprise;

(d) "Enterprise group member" means an enterprise referred to in subparagraph (a), which forms part of an enterprise group as defined in paragraph (b) [4];

(e) "Group Representative" means a person or body, including one appointed on an interim basis, authorized to act as a representative of a planning proceeding in which one or more group members are participating for the purpose of developing [and implementing] a group insolvency solution [5];

(f) "Group insolvency solution" means a set of proposals developed in a planning proceeding [6]:

(i) For the reorganization, sale, or liquidation of some or all of the operations or assets of one or more group members;

(ii) That would be likely to add to the overall combined value of the group members involved; and

(iii) That must be approved, insofar as the proposals relate to a particular group member, in the jurisdiction in which that group member has its centre of main interests;

(g) "Planning proceeding" means a main proceeding commenced in respect of an enterprise group member that is a necessary and integral part of a group insolvency solution, in which one or more additional group members are participating for the purpose of developing [and implementing] a group insolvency solution and in which a group representative has been appointed [7].

Chapter 2. Cooperation and coordination

Article 3. Cooperation and direct communication between a court of this State and foreign courts, foreign representatives and a group representative [8]

Variant 1

1. [In the matters referred to in article 1,] the court shall cooperate to the maximum extent possible with foreign courts, foreign representatives and a group representative, either directly or through a [*insert the title of a person or body administering a reorganization or liquidation under the law of the enacting State*] or other person appointed to act at the direction of the court to facilitate the development and implementation of a group insolvency solution [9].

2. The court is entitled to communicate directly with, or to request information or assistance directly from, foreign courts, foreign representatives or a group representative concerning members of the same enterprise group participating in a planning proceeding, and in particular with respect to the development and implementation of a group insolvency solution, including the roles of the different courts with respect to implementation.

Variant 2

1. In the matters referred to in article 1, the court shall cooperate to the maximum extent possible with foreign courts, foreign representatives and a group representative, where appointed, either directly or through a [*insert the title of a person or body administering a reorganization or liquidation under the law of the enacting State*] or other person appointed to act at the direction of the court.

2. The court is entitled to communicate directly with, or to request information or assistance directly from, foreign courts, foreign representatives or a group representative, where appointed.

Article 4. Cooperation to the maximum extent possible under article 3

Cooperation to the maximum extent possible for the purposes of article 3 may be implemented by any appropriate means, including:

(a) Communication of information by any means considered appropriate by the court;

(b) Participation in communication with the foreign court, a foreign representative or a group representative[, where appointed];

(c) Coordination of the administration and supervision of the affairs of the enterprise group members;

(d) Coordination of concurrent foreign proceedings commenced with respect to enterprise group members;

(e) Appointment of a person or body to act at the direction of the court;

[(f) Approval of the treatment in a foreign proceeding of the claims of creditors of the enacting State] [10];

(g) *Variant 1* Approval of agreements concerning the coordination of proceedings [to facilitate the development and implementation of a group insolvency solution] [11];

(g) *Variant 2* Approval and implementation of agreements concerning the coordination of proceedings relating to two or more enterprise group members located in different States, including where a group insolvency solution is being developed;

(h) Cooperation among courts as to how to allocate and provide for the costs associated with cross-border cooperation and communication; and

(i) [*The enacting State may wish to list additional forms or examples of cooperation*].

Article 5. Effect of communication under article 3 [12]

Participation by a court in communication pursuant to article 3, paragraph 2, does not imply:

(a) A waiver or compromise by the court of any powers, responsibilities or authority [13];

(b) A substantive determination of any matter before the court;

(c) A waiver by any of the parties of any of their substantive or procedural rights;

(d) A diminution of the effect of any of the orders made by the court;

(e) Submission to the jurisdiction of other courts participating in the communication; or

(f) Any limitation, extension or enlargement of the jurisdiction of the participating courts. Each court is entitled at all times to exercise its independent jurisdiction and authority with respect to matters presented to it and the conduct of the parties appearing before it.

Article 6. Coordination of hearings [14]

1. The court may conduct a hearing in coordination with a foreign court.

2. The substantive and procedural rights of parties and the jurisdiction of each court may be safeguarded by reaching agreement on the conditions to govern the coordinated hearings.

3. Notwithstanding the coordination of hearings, each court remains responsible for reaching its own decision on the matters before it.

Article 7. Cooperation and direct communication between a group representative, foreign representatives and foreign courts [15]

1. [In the matters referred to in article 1,] a group representative shall, in the exercise of its functions and subject to the supervision of the court, cooperate to the maximum extent possible with foreign courts and foreign representatives of other enterprise group members to facilitate the development and implementation of a group insolvency solution.

2. A group representative is entitled, in the exercise of its functions and subject to the supervision of the court, to communicate directly with or to request information or assistance directly from foreign courts and foreign representatives.

[**Article 7 bis. Cooperation and direct communication between a** [*insert the title of a person or body administering a reorganization or liquidation with respect to an enterprise group member under the law of the enacting State*]**, foreign courts, foreign representatives and a group representative**

[1. In the matters referred to in article 1,] a [*insert the title of a person or body administering a reorganization or liquidation with respect to an enterprise group member under the law of the enacting State*] shall, in the exercise of its functions and subject to the supervision of the court, cooperate to the maximum extent possible with foreign courts, foreign representatives of other enterprise group members and a group representative, where appointed.

[2. A [*insert the title of a person or body administering a reorganization or liquidation with respect to an enterprise group member under the law of the enacting State*] is entitled, in the exercise of its functions and subject to the supervision of the court, to communicate directly with or to request information or assistance directly

from foreign courts, foreign representatives of other group members and a group representative, where appointed.]

Article 8. Cooperation to the maximum extent possible under articles 7 [and 7 bis]

For the purposes of article 7 [and article 7 bis], cooperation to the maximum extent possible may be implemented by any appropriate means, including:

(a) Sharing and disclosure of information concerning enterprise group members, provided appropriate arrangements are made to protect confidential information;

(b) *Variant 1* Negotiation of agreements concerning the coordination of proceedings [to facilitate the development and implementation of a group insolvency solution] [16];

(b) *Variant 2* Negotiation of agreements concerning the coordination of proceedings relating to two or more enterprise group members located in different States, including where a group insolvency solution is being developed;

(c) Allocation of responsibilities between a [[*insert the title of a person or body administering a reorganization or liquidation with respect to an enterprise group member under the law of the enacting State*],] a group representative[, where appointed] and a foreign representative [17];

(d) Coordination of the administration and supervision of the affairs of the enterprise group members; and

(e) Coordination with respect to the development and implementation of a group insolvency solution, [where applicable] [18].

Article 9. Authority to enter into agreements concerning the coordination of proceedings [19]

Variant 1 Agreements concerning the coordination of proceedings may be entered into to facilitate the development and implementation of a group insolvency solution.

Variant 2 Agreements concerning the coordination of proceedings involving two or more enterprise group members located in different States may be entered into, including where a group insolvency solution is being developed.

Article 10. Appointment of a single [or the same] insolvency representative [20]

1. The court may coordinate with foreign courts with respect to the appointment and recognition of a single [or the same] insolvency representative to administer and coordinate insolvency proceedings concerning members of the same enterprise group in different States where a group insolvency solution is being developed, provided the insolvency representative is qualified for appointment in each of the relevant States.

2. To the extent required by applicable law, the insolvency representative is subject to the supervision of each appointing court.

Chapter 3. Conduct and recognition of a planning proceeding

Article 11. Participation by enterprise group members in a proceeding under [*identify laws of the enacting State relating to insolvency*]

1. Subject to paragraph 2, if a proceeding under [*identify laws of the enacting State relating to insolvency*] with respect to an enterprise group member whose centre of main interests is located in this State has commenced, any other group member [(whether solvent or insolvent)] [21] may participate in that proceeding for the purpose of attempting to develop a group insolvency solution.

2. *Variant 1* [22]

[For the purposes of paragraph 1 of this article, participation by a group member does not subject the group member to the [jurisdiction of the courts of this State]

[insolvency law of this State], but the group member has a right to appear and be heard in the proceedings on any issue that affects its rights, obligations or interests and to participate in the development and implementation of a group insolvency solution.]

Variant 2

[For the purposes of paragraph 1 of this article, participation by a group member does not affect whether it is otherwise subject to the insolvency law of this State, but merely implies that it would have the right to appear and be heard in the proceedings and to participate in the development and implementation of a group insolvency solution.]

3. An [insolvent] enterprise group member whose centre of main interests is located in another State may not participate in a proceeding under paragraph 1 if a court in that other State precludes it from so doing.

Article 12. Appointment of a group representative [23]

Variant 1 If one or more enterprise group members participate in a proceeding under article 11, the court may appoint a group representative, who may then seek recognition from foreign courts and may seek to participate in any foreign proceeding related to a participating group member.

Variant 2 If one or more enterprise group members participate in a proceeding referred to in article 11, the court may appoint a group representative. The group representative is authorized to act in a foreign State on behalf of that planning proceeding and to participate in any foreign proceeding relating to a group member participating in the planning proceeding, as permitted by the applicable foreign law [24].

Article 13. Relief available to a planning proceeding [25]

1. To the extent needed to [preserve the possibility of developing a group insolvency solution] [protect the assets of the enterprise group member subject to a planning proceeding or the interests of the creditors], the court may, at the request of the group representative, grant the following relief with respect to the assets or operations located in this State of any [insolvent] [26] enterprise group member [other than a solvent group member] participating in the planning proceeding:

(a) Staying execution against the enterprise group member's assets;

(b) Suspending the right to transfer, encumber, or otherwise dispose of any assets of the enterprise group member;

(c) Suspending [the] [any] proceedings [27] [in this State] temporarily to allow for the development [and implementation] of a group insolvency solution;

(d) Staying the commencement or continuation of individual actions or individual proceedings concerning the enterprise group member's assets, rights, obligations, or liabilities;

(e) Entrusting the administration or realization of all or part of the enterprise group member's assets located in this State to the group representative or another person designated by the court, in order to protect and preserve the value of assets that, by their nature or because of other circumstances, are perishable, susceptible to devaluation, or otherwise in jeopardy;

(f) Providing for the examination of witnesses, the taking of evidence, or the delivery of information concerning the enterprise group member's assets, affairs, rights, obligations, or liabilities;

[(g) [28] Recognizing existing arrangements concerning the funding of enterprise group members participating in the planning proceeding where the funding entity is located in this State and authorizing the continued provision of finance under those funding arrangements, subject to any appropriate safeguards the court may apply]; and

(h) Granting any additional relief that may be available to [*insert the title of a person or body administering a reorganization or liquidation under the law of the enacting State*] under the laws of this State.

2. With respect to the assets or operations located in this State of an enterprise group member that has its centre of main interests in another State, relief under this article may only be granted if that relief is not incompatible [with the laws of that State] [with relief granted in insolvency proceedings taking place in that State] [29].

Article 14. Recognition of a planning proceeding

1. A group representative appointed in a planning proceeding may apply for recognition of that proceeding [in this State] [30].

2. An application for recognition shall be accompanied by:

(a) A certified copy of the decision commencing the [planning] proceeding [designated as a planning proceeding] [31] and appointing the group representative; or

(b) A certificate from the foreign court affirming the existence of the planning proceeding and of the appointment of the group representative; or

(c) In the absence of evidence referred to in subparagraphs (a) and (b), any other evidence acceptable to the court of the existence of the planning proceeding and of the appointment of the group representative.

3. An application for recognition shall also be accompanied by:

(a) Evidence that each group member sought to be represented in a planning proceeding has agreed to participate in that proceeding. Where such a group member is subject to insolvency proceedings in the court of its centre of main interests, evidence shall be procured that any approval which may be required under the domestic law of the State of the commencement of proceedings for participation in the planning proceeding has been obtained [32];

[(b) A statement identifying all members of the enterprise group and all proceedings commenced in respect of enterprise group members participating in the planning proceeding that are known to the group representative] [33];

(c) A statement to the effect that a group member [subject to the planning proceeding] has its centre of main interests in the jurisdiction where the planning proceeding is taking place and that that proceeding is likely to result in added overall combined value for the enterprise group [members involved] [34].

4. The court may require a translation of documents supplied in support of the application for recognition into an official language of this State.

Article 15. Interim relief that may be granted upon application for recognition of a planning proceeding [35]

1. From the time of filing an application for recognition until the application is decided upon, the court may, at the request of the group representative, where relief is urgently needed to [preserve the possibility of developing and implementing a group insolvency solution] [protect the assets of the enterprise group member subject to a planning proceeding or the interests of the creditors] [36], grant appropriate relief of a provisional nature, including the relief specified in article 13, subparagraphs 1 [...] [37].

2. [*Insert provisions of the enacting State relating to notice*.]

3. Unless extended under article 17, subparagraph 1 (a), the relief granted under this article terminates when the application for recognition is decided upon.

4. The court may refuse to grant relief under this article if such relief would interfere with the administration of a [planning proceeding] [proceeding located in the centre of main interests of an enterprise group member participating in the planning proceeding] [38].

Article 16. Decision to recognize a planning proceeding

1. [Subject to any applicable public policy exception] [39], a planning proceeding shall be recognized if:

(a) The application meets the requirements of article 14, paragraphs 2 and 3;

(b) The proceeding is a planning proceeding within the meaning of article 2, subparagraph (g); and

(b) The application has been submitted to the court referred to in article [...] [40];

2. An application for recognition of a planning proceeding shall be decided upon at the earliest possible time.

3. Recognition may be modified or terminated if it is shown that the grounds for granting it were fully or partially lacking or have ceased to exist.

4. For the purposes of paragraph 3, the group representative shall inform the court of changes in the status of the planning proceeding or in the status of their own appointment occurring after the application for recognition is made.

Article 17. Relief that may be granted upon recognition of a planning proceeding [41]

1. Upon recognition of a planning proceeding, where necessary to [preserve the possibility of developing and implementing a group insolvency solution] [protect the assets of the enterprise group member or the interests of creditors] [42] the court, at the request of the group representative and in addition to any relief specified in article 13, subparagraphs 1 […], may grant any appropriate relief including:

(a) Extending of any relief granted under article 13, paragraph 1;

[(b) Subject to article 19, approving of treatment in the foreign proceeding of the claims of creditors located in this State] [43].

2. Upon recognition of a planning proceeding the court may, at the request of the group representative, entrust the distribution of all or part of the enterprise group member's assets located in this State to the group representative or another person designated by the court, provided that the court is satisfied that the interests of creditors in this State are adequately protected. [44]

Article 18. Participation of a group representative in a proceeding [under [*identify laws of the enacting State relating to insolvency*]] **[in this State]**

1. Upon recognition of a planning proceeding, the group representative may participate in any proceeding [45] [under [*identify laws of the enacting State relating to insolvency*]] [in this State] concerning enterprise group members that are participating in the planning proceeding.

Article 19. Protection of creditors and other interested persons [46]

1. In granting or denying relief under article 15 or 17, or in modifying or terminating relief under paragraph 3 of this article, the court must be satisfied that the interests of the creditors and other interested persons, including the debtor, are adequately protected.

2. The court may subject relief granted under article 15 or 17 to conditions it considers appropriate.

3. The court may, at the request of the group representative or a person affected by relief granted under article 15 or 17, or at its own motion, modify or terminate such relief.

Article 20. Approval of local elements of a group insolvency solution [47]

1. Where a group solution affects a group member [48] that has its centre of main interests [or establishment] [49] in this State and a proceeding under [*identify the laws of the enacting State relating to insolvency*] has commenced [in this State], the group insolvency solution shall be submitted to the court [in this State] for approval.

2. The court shall refer the portion of the group solution affecting the group member referred to in paragraph 1 for approval in accordance with [*identify the laws of the enacting State relating to insolvency*].

3. If the approval process referred to in paragraph 2 results in approval of the relevant portion of the group insolvency solution, the court shall [confirm and implement those elements relating to assets or operations in this State] [*specify the role to be played by the court in accordance with the law of the enacting State with respect to approval of a reorganization plan*] [50].

4. Where a group solution affects a group member [participating in the planning proceeding] that has its centre of main interests [or establishment] in this State and no proceeding under [*identify the laws of the enacting State relating to insolvency*] has commenced in this State or article 21 applies, [*specify how, in that situation, the group insolvency solution will be approved and by whom*].

5. The group representative appointed in the planning proceeding is entitled to apply directly to a court in this State to be heard on issues related to [approval and] implementation of the group insolvency solution [51].

Chapter 4. Treatment of foreign claims in accordance with applicable law [52]

Article 21. Commitment to and approval of the treatment of foreign claims in accordance with applicable law: non-main proceedings [53]

1. To facilitate the treatment of claims that could otherwise be brought by creditors in a non-main proceeding in another State, a foreign representative or group representative appointed in this State may commit to, and the court in this State may approve, providing those creditors with the treatment [54] in this State that they would have received in a non-main proceeding in that other State.

2. A court in this State may stay or decline to open a non-main proceeding if a foreign representative or group representative from another State in which a main proceeding is pending has made a commitment under paragraph 1.

[Part B]

Supplemental provisions [55]

Article 22. Commitment to and approval of the treatment of foreign claims in accordance with applicable law: main proceedings

1. To facilitate the treatment of claims that would otherwise be brought by creditors in a proceeding in another State, a foreign representative or group representative appointed in this State may commit to, and the court in this State may approve, providing those creditors with the treatment in this State that they would have received in a proceeding in that other State.

2. A court in this State may stay or decline to open a main proceeding if a foreign representative or group representative from another State in which a proceeding is pending has made a commitment under paragraph 1.

Article 23. Additional relief [56]

1. If, upon recognition of a planning proceeding, the court is satisfied that the interests of creditors of affected enterprise group members would be adequately protected in the planning proceeding, the court, in addition to granting any relief described in article 13, may stay or decline to open insolvency proceedings in this State relating to enterprise group members participating in the planning proceeding.

2. Notwithstanding article 20[, paragraph 1,] [57] if, upon submission of a proposed group insolvency solution by the group representative, the court is satisfied that the interests of creditors of the affected enterprise group member are adequately protected in the planning proceeding, the court may approve the relevant portion of the group insolvency solution and grant any relief described in article 13 that is necessary for implementation of the group insolvency solution.

Additional issues

Principle 4, paragraph 1 [58]

The court located in the centre of main interests of an enterprise group member participating in a planning proceeding can authorize the insolvency representative appointed in insolvency proceedings taking place in the centre of main interests to seek:

(i) To participate and be heard in a planning proceeding taking place in another jurisdiction; and

(ii) Recognition by the planning court of the proceeding in the centre of main interests jurisdiction.

Principle 4, paragraph 2 [59]

The court can receive a request for recognition of the type referred to in paragraph 1 of this principle.

Principle 5, sentence 2 [60]

For those group members whose centre of main interests is located in the same jurisdiction as the planning proceeding, the recommendations of part three of the Legislative Guide on Insolvency Law with respect to joint application and procedural coordination could apply.

(A/CN.9/WG.V/WP.142/Add.1) (Original: English)

Note by the Secretariat on facilitating the cross-border insolvency of multinational enterprise groups: commentary and notes on the draft legislative provisions

ADDENDUM

Contents

I. General drafting notes

1. The articles in the draft text set out in A/CN.9/WG.V/WP.142 have been renumbered. Numbers/letters appearing below in parentheses following the article number indicate the origin of the article in the previous draft of this text (A/CN.9/WG.V/WP.137/Add.1). With respect to the key principles included in the previous draft, where the Working Group was unable to decide how those principles should be treated, they have been retained at the end of these notes; others have been included as draft articles.

2. References to "development of a group insolvency solution" have been replaced with "development *and implementation* of a group insolvency solution".

3. References to insolvency proceedings in the enacting State have been replaced throughout the text by the words "proceeding under [*identify laws of the enacting State relating to insolvency*]", consistent with the drafting of the UNCITRAL Model Law on Cross-Border Insolvency (the Model Law).

4. The terms "foreign proceeding", "foreign representative" and "main proceeding" are used in this text in accordance with the definitions of those terms in the Model Law.

5. The Working Group will recall that this draft text includes both core and supplemental provisions. Accordingly, it has, tentatively, been divided into parts A and B, with part A including the core provisions of articles 1-21 and part B including the supplemental provisions of articles 22 and 23.

6. As previously noted in A/CN.9/WG.V/WP.137, paragraphs 3-4, the supplemental provisions address the effect of the treatment of creditor claims in a foreign insolvency proceeding on the relief that may be ordered in a creditor's home State, as well as an approach to approval of a group insolvency solution based on adequate protection of creditors. Those provisions, which would be optional for a State to enact, go a step further than the core provisions contained in part A. They would permit, in a planning proceeding, treatment of the claims of a group member whose centre of main interests (COMI) is located in a different jurisdiction in accordance with the law applicable to those claims. They would also allow a court to provide additional relief — staying or declining to commence insolvency proceedings, as well as approving the relevant portion of a group insolvency solution without submitting it to the applicable approval procedures under local law — if the court determined that creditors would be adequately protected.

7. The use of the supplemental provisions might result in a group member's insolvency being handled in a manner that was not consistent with the prior expectations of creditors and other third parties, i.e. that the group member would be subject to insolvency proceedings in the jurisdiction of its centre of main interests. As a consequence, any departure from that basic principle of proceedings commenced on the basis of centre of main interests should be limited to exceptional circumstances, namely to cases where the benefit in terms of efficiency outweighed any negative effect on creditors' expectations, in particular, and legal certainty in general. Such a departure would only appear to be justified:

(a) In jurisdictions where courts traditionally hold a large degree of discretion and flexibility in conducting insolvency proceedings;

(b) Where the enterprise group in question was closely integrated and therefore there was an obvious benefit in treating group member claims in the planning proceeding in lieu of commencing main proceedings (conducted at the centre of the group member's main interests); and

(c) Where the use of the provisions of part A (if available) could not achieve a similar result.

II. Notes on draft articles

Part A.

Chapter 1. General provisions

Preamble

[1] 1. The draft preamble is proposed for consideration by the Working Group. It is largely based on the Preamble to the Model Law i.e. subparagraphs (a), (b), (d), (e) and (f), modified to reflect the enterprise group focus of this text. Subparagraph (c) has been added to refer specifically to the development and implementation of a group insolvency solution. The goal of the preamble is to make it clear that this model law is concerned with facilitating cooperation and coordination of insolvency proceedings affecting different members of an enterprise group in order to achieve a solution that might apply to the whole or part of that enterprise group, rather than focusing on multiple proceedings for a single debtor, as covered by the Model Law.

2. The Working Group may wish to consider whether additional paragraphs might be added to the preamble to address, for example, streamlining the procedures for treatment of cross-border enterprise group insolvencies to reflect articles 22-23 of part B of the draft text and the desirability of reducing the impact of multiple proceedings, or whether it might be preferable to address such issues in a preamble to part B (noting the comments in paras. 5-7 of the general drafting notes above with respect to the content of part B).

Article 1. Scope

[2] 1. This draft article is proposed for consideration by the Working Group. A key question to be considered is whether the draft text should apply only where there is to be a planning proceeding and a group insolvency solution or whether, in whole or in part, it might have broader application to group insolvencies in general. As currently drafted, the text attempts to take the broader approach and cover situations where a group insolvency solution cannot be developed, but cooperation and coordination between proceedings affecting group members might nevertheless be useful.

2. Paragraph 1 of draft article 1 draws from the scope article of the Model Law, modified for the enterprise group context. It attempts to cover the different situations in which the provisions of the draft text might be applied, particularly those articles that rely for their scope of application on this article (e.g., arts. 3, 7 and 7 bis). Since they might relate to one or more proceedings affecting members of an enterprise group, subparagraphs (a) and (b) of draft article 1 reflect the more general cooperation elements of the preamble to the Model Law. Subparagraphs (c) and (d) relate specifically to the provisions of chapter 3 of this text concerning development and implementation of a group insolvency solution through a planning proceeding either in the enacting or a foreign State. Subparagraphs (e) and (f) expand upon subparagraphs (c) and (d) of article 1 of the Model Law.

3. With respect to subparagraph (f), it might be noted that although article 1 of the Model Law refers to creditors and other interested persons commencing or participating in local proceedings, the operative articles of the Model Law only provide access to commence and participate in such proceedings for foreign creditors (e.g. art. 13); the interests of interested persons are to be taken into account with respect to relief (art. 22). In other words, although interested persons are referred to in the scope provisions of the Model Law, they are not included in the substantive articles referring to matters mentioned in those scope provisions. The Working Group

may wish to consider the application of subparagraph (f) in this draft text in the light of those observations.

4. Revisions or additions to the draft article might be required, depending on the Working Group's decisions with respect to the articles in chapters 4 and 5 of the draft text, as noted above in note [1]; it may be appropriate to develop a separate scope article for part B (noting the comments in paras. 5-7 of the general drafting notes above with respect to the content of part B).

5. Paragraph 2 is based upon principles 1 and 1 bis of the previous draft of this text (A/CN.9/WG.V/WP.137/Add.1), which the Working Group agreed should be retained and redrafted as articles for future consideration (A/CN.9/870, para. 13). The redrafting focuses on the type of provision that could be included in a model law to be proposed for enactment in a particular State and how the limitations would apply in the enacting State; the drafting of the principles was more universal and potentially unsuitable for inclusion in a model law. In subparagraph (c), a reference to the law of the enacting State has been added to the drafting of the principle to clarify the connection between that State and the enterprise group member referred to.

Article 2. Definitions

[3] The definitions of "enterprise", "enterprise group" and "control" from part three of the UNCITRAL Legislative Guide on Insolvency Law (the Legislative Guide) are included for the information of the Working Group, as agreed at the forty-fifth session (A/CN.9/803, para. 16); if not required in the final text on the basis of the form the Working Group concludes it should take (e.g. if it is to be a part of the Model Law), they can be deleted.

[4] The definition of "enterprise group member" reflects the drafting supported by the Working Group at its forty-ninth session (A/CN.9/870, para. 14).

[5] The definition of "group representative" also reflects the drafting supported by the Working Group at its forty-ninth session (A/CN.9/870, paras. 16-17). The words "and implementing" have been added, as indicated above in the general drafting notes.

Subparagraph (f)

[6] 1. The word "developed" in the chapeau of subparagraph (f) replaces the word "adopted" for reasons of consistency with the usage indicated in the general drafting note; the proposals are not so much adopted as developed in a planning proceeding.

2. Subparagraph (f)(iii) refers to matters that are not strictly definitional in nature, but rather operative i.e. it doesn't describe what a group insolvency solution is, but rather anticipates the manner of its approval. The substance of that subparagraph is currently addressed in draft article 20. The Working Group may wish to consider whether it should be retained in the definition.

Subparagraph (g)

[7] 1. The current revision of the definition of "planning proceeding" reflects the preference of the Working Group at its forty-ninth session (A/CN.9/870, para. 19) for variant 2 of the previous text (A/CN.9/WG.V/WP.137/Add.1, art. 2, subpara. (g)). "Main proceeding" would be defined in accordance with article 2(b) of the Model Law: "'[Foreign] main proceeding' means a [foreign] proceeding taking place in the State where the debtor has the centre of its main interests". Consideration might be given as to whether a definition is required in this draft text (see note [3]).

2. A question that may arise with respect to a planning proceeding is whether that proceeding: (i) is commenced as a planning proceeding; or (ii) becomes a planning proceeding when other group members decide to participate and a group representative is appointed; or (iii) both (i) and (ii) are possible. That issue might be clarified in the drafting or in a guide to enactment.

Chapter 2. Cooperation and coordination

Article 3. (9) Cooperation and direct communication between a court of this State and foreign courts, foreign representatives [and a group representative]

[8] 1. The proposal relating to the structure of this draft text (A/CN.9/864, para. 18) was that it should consist of various chapters, some of which might be regarded as core (chapters 2, 3 and 4) and others as optional (chapter 5). Chapter 2, which is based upon the recommendations of part three, chapter III of the Legislative Guide, might be enacted to improve cooperation and coordination in cross-border insolvency proceedings, in two situations: (i) where a group solution is being developed; and (ii) where there is no group solution, but cooperation and coordination would nevertheless be useful in the conduct of multiple group-related proceedings (see note [2.1] above).

2. As currently drafted, the reference at the beginning of article 3, paragraph 1 to the matters referred to in article 1 may enable the provision to be used in both of the above circumstances. There may be no need to include the references to the development and implementation of a group insolvency solution, e.g. at the end of paragraph 1, as that may serve to narrow the scope of the cooperation provisions. To accommodate the situation where a group solution is to be developed, however, the references to a group representative might be retained, but with the qualification "where appointed" added. This proposal is reflected throughout the draft text. That approach might be explained in a guide to enactment.

[9] 1. Variant 1 of paragraphs 1 and 2 of this article reflects the drafting of the previous version of the text (A/CN.9/WG.V/WP.137/Add.1).

2. Variant 2 of paragraphs 1 and 2 proposes drafting that omits specific reference to a group solution on the basis that it is covered by the reference to draft article 1. A guide to enactment might point out the relevance of these provisions where a group solution is to be developed and implemented. It might be indicated with respect to paragraph 2, for example, that the information or assistance sought may relate, in particular, to the development and implementation of a group solution, including the roles of the different courts with respect to implementation.

Article 4. (10) Cooperation to the maximum extent possible under article 3

Subparagraph (f)

[10] Since it refers to matters addressed in draft article 21, subparagraph (f) may need to be aligned with whatever decision is taken with respect to draft article 21, in particular the application of that article in circumstances where there is no planning proceeding, or it may need to be deleted.

Subparagraph (g)

[11] Although proposed at the forty-ninth session (A/CN.9/870, para. 21), there was no agreement to delete the words at the end of paragraph (g) "to facilitate the development and implementation of a group insolvency solution". However, on the basis of the observation in note [8] above that these provisions might also have application in situations where a group solution is not to be developed, those words at the end of variant 1 of subparagraph (g) might be deleted to broaden the application of the draft article, without losing the essence of the provision. As an alternative, language along the lines of that proposed in draft article 9 might be adopted, as reflected in variant 2.

Article 5. (12) Effect of communication under article 3

[12] Support was expressed at the forty-eighth session (A/CN.9/864, para. 23) in favour of both deleting and retaining draft article 5, but it was ultimately agreed that it should be retained in the text for further consideration. Since no decision was made at the forty-ninth session (A/CN.9/870, para. 22), it remains in the draft text.

Subparagraph (a)

[13] A query was raised at the forty-ninth session as to the meaning of the word "compromise" in the draft article (A/CN.9/870, para. 22). The draft text of subparagraph (a) is based upon recommendation 244 of the Legislative Guide, part three. From the context of that recommendation, it is clear that the word "compromise" refers to a compromise of the court's powers. To remove any possible confusion as to the meaning of that word in this draft text, it is suggested that the order of the words be reversed, as indicated.

Article 6. (13) Coordination of hearings

[14] In response to an observation at the forty-ninth session (A/CN.9/870, para. 23), it may be recalled that an explanation of this draft article is provided in the Legislative Guide, part three, chap. III, paras. 38-40. It is noted, in particular, that coordination of hearings might include a joint hearing. That material could be included in a guide to enactment of this draft text.

Article 7. (14) Cooperation and direct communication between a group representative, foreign representatives and foreign courts

[15] Article 7, as drafted, applies in the context of the development and implementation of a group insolvency solution in the enacting State. It addresses neither the situation where a group solution is being developed in another State and cooperation by local insolvency representatives of group members might be desirable nor the situation where no group solution is being developed, but cooperation between proceedings concerning group members is desirable. Draft article 7 bis aims to address these additional situations to complement the scope of article 7.

Article 8. (15) Cooperation to the maximum extent possible under articles 7 [and 7 bis]

Subparagraph (b)

[16] The words at the end of subparagraph (b) of variant 1 might be deleted to broaden the application of the draft article, as discussed above in note [11], without losing the essence of the provision. As an alternative, language along the lines of that proposed in draft article 9 might be adopted, as reflected in variant 2.

Subparagraph (c)

[17] The drafting of subparagraph (c) might be broadened to provide for allocation of responsibilities between a person appointed in the enacting State, a foreign representative and a group representative, where one has been appointed.

Subparagraph (e)

[18] Draft article 8, subparagraph (e) might be qualified by addition of the words "where applicable".

Article 9. (17) Authority to enter into agreements concerning the coordination of proceedings

[19] The wording of draft article 9 might be broadened, as indicated in variant 2, in line with recommendation 253 of part three of the Legislative Guide to facilitate its use where no group solution is being developed (see notes [11] and [16] above). Reference to a group solution might also be retained, as indicated at the end of the variant.

Article 10. (18) Appointment of a single [or the same] insolvency representative

[20] 1. This draft article has been revised in accordance with the discussion at the forty-ninth session (A/CN.9/870, para. 27). Although the words "where a group insolvency solution is being developed" have been retained, the Working Group may

wish to consider whether (and how) this article could apply in the context of a group solution. To some extent, the appointment of a group representative may reduce the desirability of appointing a single or the same insolvency representative to different group members, particularly with respect to those participating in the development of a group solution. The article may, however, be relevant where no group solution is to be developed. For that reason, the words "where a group insolvency solution is being developed" might be omitted.

2. The drafting of article 10, paragraph 2 may need to be reconsidered in so far as it purports to establish requirements applicable in multiple States, rather than focusing on what should occur under the law of the State enacting this text. Providing, for example, that the insolvency representative is subject to the supervision of each appointing court in different States may be a matter that is difficult to regulate through the law of one enacting State.

Chapter 3. Conduct and recognition of a planning proceeding

Article 11. (B) Participation by enterprise group members in an insolvency proceeding under [*identify laws of the enacting State relating to insolvency*]

Paragraph 1

[21] 1. It may be appropriate to consider whether the reference to "solvent" and "insolvent" group members might be deleted, so that article 11 would focus simply on the participation of "other group members" to avoid the drafting complexities of explaining or defining, in particular, what constitutes an "insolvent" group member. The Working Group may recall that that word is used sparingly, if at all, in the Legislative Guide, where the focus is upon the debtor for which insolvency proceedings can and have commenced under the relevant commencement criteria (recommendations 15 or 16). The phrase used in part three of the Legislative Guide to describe group members that are not solvent is those "subject to insolvency proceedings". While that phrase could be used in this draft, it is implied by draft article 1, subparagraph 2(c) and articles 21 and 22 that insolvency proceedings may not necessarily be commenced for some group members participating in a planning proceeding, even though they might otherwise be eligible for such commencement (this is particularly the case where so-called "synthetic proceedings" are used). If the word "insolvent" is to be retained, a definition might be helpful to explain what is intended.

2. The general principle of draft article 11, paragraph 1 could be that all types of group member might participate in the development of a group solution where they are relevant to that solution (and are not precluded from doing so). The guide to enactment could explain that broad application, without distinguishing between solvent and "insolvent" members. It could also explain that participation by solvent group members would be entirely voluntary on the basis described in part three of the Legislative Guide (rec. 238 and associated commentary), and that solvent group members would not be subject to other provisions of the draft text, for example, those on relief.

Paragraph 2

[22] 1. Variants 1 and 2 of paragraph 2 respond to a request to the Secretariat at the forty-ninth session to reconsider the drafting of that paragraph in the light of the discussion (A/CN.9/870, paras. 28-29). The relevance of the drafting of article 10 of the Model Law might be noted, albeit that it covers a slightly different situation:

> "The sole fact that an application pursuant to this Law is made to a court in this State by a foreign representative does not subject the foreign representative or the foreign assets and affairs of the debtor to the jurisdiction of the courts of this State for any purpose other than the application."

2. For the reasons noted above, the word "insolvent" in paragraph 3 might be omitted, however some explanation may be required with respect to how this

provision would operate with respect to solvent group members, whose decision to participate would be an ordinary business decision and would not require the agreement, for example, of creditors, unless required by applicable company law.

Article 12. (B) Appointment of a group representative

[23] 1. This draft article was previously paragraph 3 of draft article 11. Although closely related to draft article 11, it possibly warrants a separate article and has thus been included as draft article 12. At its forty-ninth session, the Working Group agreed to retain both variants for further consideration (A/CN.9./870, para. 30). It might be noted that this draft article overlaps with draft article 18 (see note [45]).

2. The proceeding referred to in article 11 becomes a planning proceeding once a group representative has been appointed. It may be appropriate to include a statement or note to that effect in draft article 12, since the text subsequently refers to "planning proceedings" (see note [7.2] above).

[24] 1. The Working Group may wish to consider the nature of the proceedings in which the group representative is being authorized to participate under draft article 12: is it limited to a "foreign proceeding" as defined in the Model Law, or should it include other proceedings in which the group member is a party (reflecting the idea of article 24 of the Model Law)? It might be noted that the outbound authorization provided by article 5 of the Model Law refers only to the insolvency representative being authorized "to act" in a foreign State on behalf of a proceeding under the law of the enacting State, as permitted by the applicable foreign law. By way of comparison, and noting that the following provisions of the Model Law apply only following recognition of a foreign proceeding (an inbound application), the word "participate' is used in article 12 of the Model Law to refer to participation (following recognition) by the foreign representative in local insolvency proceedings, as opposed to the word "intervene" in article 24, which refers to intervention (following recognition) by the foreign representative in any local proceeding in which the debtor is a party. The meaning of those two words is explained in the Guide to Enactment and Interpretation of the Model Law (paras. 100-102 and 168-172).

2. If the drafting is intended to authorize the group representative to act in a foreign State in accordance with what is permitted by foreign law, that intention could be reflected in whichever variant the Working Group prefers. Further detail may be provided in draft article 18 (see note [45]).

Article 13. (D) Relief available to a planning proceeding

[25] 1. The Working Group requested the Secretariat to consider whether articles 13, 15 and 17 could be rationalized. Before doing so, the Secretariat considered the overall structure of the relief provisions. As currently drafted, a goal of the relief in this draft text is to facilitate conduct of the planning proceeding and the development and implementation of a group insolvency solution.

2. There are several issues that might be considered, including the relief that should be available to support the development of a group solution and the States in which it might be required.

3. As to the first issue, the relief that should be available would include: (a) relief to support the development of a group solution in the planning proceeding State; (b) relief to support recognition of the planning proceeding and development and implementation of a group solution. The relief might thus be granted: (a) in the State in which the planning proceeding is pending, or (b) in another State, which might include the State in which a relevant group member has its COMI or an establishment and a third State in which that group member has assets. That relief might cover assets and operations of: (a) group members subject to the planning proceeding, and (b) group members participating in the planning proceeding.

A. State in which relief might be granted

(a) In the planning proceeding State

4. As indicated above, relief ordered in the State of the planning proceeding might cover both: (a) the group member (or members) subject to the planning proceeding (in other words, the proceeding that becomes the planning proceeding was commenced with respect to that group member or members); and (b) the group member or members, whether foreign or local, participating in that proceeding.

5. As currently drafted, relief relating to (b) is addressed by draft article 13, and could be sought by the group representative, presumably in so far as the group member in question has assets or operations in the State of the planning proceeding that could be subject to the relief sought and the relief granted was not contrary to the law of the State of the centre of main interests of that group member (as required under draft art. 13, para. 2) or incompatible with relief granted in insolvency proceedings taking place in that State, whichever drafting option is appropriate in draft article 13, paragraph 2. The application of the relief provisions to foreign participating group members under this article may need to be aligned with draft article 11, paragraph 2 concerning application of the law of the planning court to participating group members.

6. Relief relating to (a) would be addressed by the insolvency law of the planning proceeding State and may not need to be addressed in this draft text.

(b) In a foreign State

7. If the structure of the Model Law is to be maintained, relief might be available in a foreign State following an application for recognition of a planning proceeding in that State (interim relief) (addressed by draft article 15) and following recognition of that proceeding (currently addressed by draft article 17). It might cover the assets and operations located in that State of a group member subject to the planning proceeding, as well as any assets and operations of participating group members located in the foreign State (based upon centre of main interests, establishment or the presence of the assets). As currently drafted, article 13 might also cover those participating group members, as it is not specific as to which court it refers to — the planning proceeding court or the foreign recognizing court.

8. Given the complexity of these different situations, it is difficult to see how the different types of relief can be drafted in a single article. Separate articles might therefore be maintained, but some degree of rationalization might be achieved to the extent the specific relief sought is the same or similar in each case. Draft article 13 might set out the types of relief available to the planning proceeding. Draft articles 15 and 17 could then refer to the elements of draft article 13 that might apply and to any other relief that should apply in the situations they refer to. Interim relief, for example, is likely to be more restricted than the relief available under article 13, while relief under article 17 might make reference to extension of the relief granted under article 15.

9. Consideration may need to be given as to whether additional articles might be required to address issues of coordination of relief between the different proceedings, along the lines of article 29 of the Model Law.

B. Assets and operations in respect of which relief might be granted

10. While the first optional text in the chapeaus of articles 13, 15 and 17 focuses solely on the development of a group insolvency solution, the second option (which may be more broadly applied) includes references to different group members — article 13 refers to protecting the assets of group members "participating" in a planning proceeding and article 15 refers to protecting the assets of group members "subject" to a planning proceeding, while article 17 simply refers to protecting the interests of "the" group member; the latter would presumably refer only to the group member subject to the planning proceeding that has been recognized, but that would need to be clarified.

11. It might be noted that the recognizing court may be in a position to order relief with respect to both a group member subject to the planning proceeding that has assets or operations in the recognizing State, as well as one participating in the planning proceeding, if that group member has its centre of main interests (or an establishment or assets and operations) in the recognizing State. Resolving the issue of consistency might not be needed if the first optional text is preferred, although that raises in turn the issue of the scope of the draft text.

Paragraph 1, chapeau

[26] Use of the word "insolvent": the use of that word in draft article 13, paragraph 1 may be slightly problematic, for the reasons outlined above in note [21]. It may suggest only that those group members cannot be considered to be solvent, but not necessarily that they are subject to insolvency proceedings in any State. It may also suggest that, in so far as that usage is consistent with part three of the Legislative Guide, those participating group members are subject to insolvency proceedings that are probably taking place in another State (if they were taking place in the planning proceeding State, we can perhaps assume those group members would be "subject" to the planning proceeding following procedural coordination under part three of the Legislative Guide — see principle 5, note [60]). If the word "insolvent" were to be omitted, the draft article may need to clarify that it is not intended to apply to solvent group members participating in the planning proceeding under article 11, along the lines of the drafting suggested in square brackets.

Subparagraph 1(c)

[27] It may be desirable to add further language to clarify which proceeding or type of proceeding subparagraph 1(c) refers to i.e. the planning proceeding or other proceedings (whether relating to insolvency or some other cause of action) that might be taking place in the enacting State with respect to participating members. If the proceedings are under the insolvency law, the words "under [*identify laws of the enacting State relating to insolvency*]" might be added.

Subparagraph 1(g)

[28] Subparagraph 1(g) reflects the relevant subparagraphs of the previous draft articles on interim relief and relief following recognition (A/CN.9/WG.V/WP.137/Add.1 — art. 6, subpara. 1(d) and art. 7, subpara. 1(h)) and includes the reference to safeguards approved at the forty-ninth session (A/CN.9/870, para. 41)). The guide to enactment might note that the funding entity could be another member of the same group.

Paragraph 2

[29] 1. The language of draft article 13, paragraph 2 is based on a decision at the forty-ninth session (A/CN.9/870, para. 34). The report includes the observation that in the event of a conflict between an order issued by the court of the planning proceeding and an order issued by the State in which the affected debtor had its centre of main interests, the practical solution could be that the court of the centre of main interests, under draft article 14, could decline to recognize or enforce the order issued in the planning proceeding. Such an approach, it was suggested, would preserve the pre-eminence of the centre of main interests principle as reflected in draft article 1, paragraph 2.

2. As noted above in note [25.9], it may be appropriate to consider including an article along the lines of article 29 of the Model Law, which specifically addresses consistency of relief between different proceedings, balancing the main proceeding and the local proceeding, to achieve certainty and clarity as to how the relief granted in different States is to be treated.

3. The Working Group may wish to consider whether the incompatibility referred to in draft article 13, paragraph 2 should be to the law of the foreign State or to relief

granted in the insolvency proceedings taking place in that State; the latter issue may be of a different character and might need to be the subject of a separate article.

Article 14. (3) Recognition of a planning proceeding

Paragraph 1

[30] 1. The words "in this State" were included in the previous draft of this text (A/CN.9/WG.V/WP.137/Add.1).

Subparagraph 2(a)

[31] With respect to subparagraph 2(a), see note [7.2] on the issue of when a proceeding becomes a planning proceeding. For that reason, the draft article might use the words "proceeding designated as a planning proceeding" or some other formulation, rather than "commencing the planning proceeding".

Subparagraph 3(a)

[32] Subparagraph 3(a) reflects drafting suggestions made at the forty-eighth session (A/CN.9/864, para. 33(a)), modified in accordance with suggestions made at the forty-ninth session (A/CN.9/870, para. 37). While the Working Group agreed to retain variant 1 of the previous text (A/CN.9/WG.V/WP.137/Add.1, art. 3), as drafted it is potentially inconsistent with draft article 11, paragraph 3, which refers to preclusion from participation, rather than specifying a requirement for approval to participate. The Working Group may wish to reconsider the drafting.

Subparagraph 3(b)

[33] Subparagraph 3(b) was included in the previous draft of article 14 (A/CN.9/WG.V/WP.137/Add.1, art. 3), but since no comment was made on it at the forty-ninth session, it remains in square brackets.

Subparagraph 3(c)

[34] Subparagraph 3(c), proposed at the forty-ninth session (A/CN.9/870, para. 37(c)), includes suggested drafting to clarify the group member to which it applies i.e. a group member subject to the planning proceeding. The Working Group may wish to consider whether the reference to overall combined value should be to the group as a whole or to the group members involved in the planning proceeding, noting that the definition of "group insolvency solution" refers to the overall combined value of the group members involved in the group insolvency solution (see also subpara. (e) of the Preamble).

Article 15. (6) Interim relief that may be granted upon application for recognition of a planning proceeding

[35] Draft article 15 has been redrafted in accordance with the proposal set forth in note [25] above.

Paragraph 1

[36] The optional drafting in square brackets in paragraph 1 of draft article 15 reflects: (i) the chapeau of draft article 13; and (ii) the chapeau of article 19 of the Model Law. If the second optional text is preferred, an issue to be considered is whether the chapeau should also refer to those group members participating in the planning proceeding that may also have assets in the recognizing State.

[37] The Working Group may wish to consider which subparagraphs of draft article 13, paragraph 1 should be available as interim relief. It may be recalled that article 19 of the Model Law includes the equivalents of subparagraphs (a), (b), (e), (f) and (h) of article 13, paragraph 1.

Paragraph 4

[38] The optional drafting in square brackets at the end of paragraph 4 (which was added at the forty-eighth session (A/CN.9/864, para. 36(e)) may need to be aligned with the text determined to be appropriate in draft article 13, paragraph 2, which refers to the issue of incompatibility of relief (see note [29.2 and 3]).

Article 16. (5) Decision to recognize a planning proceeding

[39] and [40] 1. There is neither a public policy exception nor an article specifying the competent court in the draft text; when the Working Group decides whether this draft text should be part of the existing Model Law or a standalone text, it may be appropriate to consider any additional articles that might be required (or incorporated by reference to the Model Law).

2. In the context of recognition under the Model Law, it might be recalled that article 6 applies to any action governed by the Model Law. Accordingly, it relates not only to the question of recognition, but also to relief, whether interim or discretionary, and any other actions that a court might take under the Model Law. It may be appropriate to consider including a public policy exception in the draft text to the extent it relates to the recognition of foreign proceedings and the granting of relief; to the extent it relates to the conduct of local proceedings, such as a planning proceeding, it may not be relevant.

Article 17. (7) Relief that may be granted upon recognition of a planning proceeding

[41] Draft article 17 has been revised as indicated above in note [25]. The Working Group may wish to specify the relevant subparagraphs of article 13, paragraph 1 and any other relief that should be available following recognition of the planning proceeding.

Paragraph 1

[42] As noted with respect to draft article 15 (note [36]), the optional drafting in paragraph 1 repeats the wording used: (i) in draft article 13; and (ii) in article 21 of the Model Law. It may be appropriate to align whichever drafting is chosen across the three articles i.e. articles 13, 15 and 17.

[43] Subparagraph 1(b) may need to be aligned with draft article 21, paragraph 1 and article 22, paragraph 1, noting that those two articles are intended to apply irrespective of whether a planning proceeding is taking place, or it may need to be deleted.

Paragraph 2

[44] In paragraph 2, it may be helpful to indicate which group member's assets are being referred to — a group member subject to the planning proceeding, one participating in the planning proceeding or both. It may also be helpful to indicate which creditors are being referred to — the creditors of the enterprise group member alone, or any creditor of any group member within the jurisdiction of "this State".

Article 18. (D) Participation of a group representative in a proceeding in this State

[45] As noted above (see notes [23-24]), this provision overlaps with draft article 12. If the proceedings referred to in article 18 are insolvency proceedings, the words "[*identify the laws of the enacting State relating to insolvency*]" might be added, as indicated, by way of clarification. The words "in this State" might then be deleted. If this article should be broader to cover both types of proceeding referred to in note [24] (i.e. insolvency proceedings and other proceedings in which the debtor is a party), appropriate wording along the lines of "and intervene in any proceedings in which the group member is a party" might be added.

Article 19. (8) Protection of creditors and other interested persons

[46] There was general support at the forty-eighth session for inclusion of an article along the lines of article 19 as drafted (A/CN.9/870, para. 48). The Working Group may wish to note that draft article 19 may overlap with other articles, including draft article 23, paragraph 2. As currently drafted, this article is based on article 22 of the Model Law and thus applies only in the context of recognition (i.e. to relief under draft articles 15 and 17). The Working Group may wish to consider whether this article would have any application in the context of draft article 13.

Article 20. (E) Approval of local elements of a group insolvency solution

[47] Draft article 20 has been revised to reflect the understanding of the Working Group at its forty-ninth session (A/CN.9/870, para. 49). The article assumes that there is a proceeding underway in the receiving State in which approval of the group insolvency solution can be obtained. The Working Group may wish to consider how approval of the group insolvency solution would be obtained in the absence of such a proceeding, which may be because draft article 21 (dealing with the so-called "synthetic" treatment of creditor claims) applies or for other reasons. The wording of draft paragraphs 1 and 4 anticipates the need to address that issue. One solution to that issue might be to address approval in the context of recognition of the planning proceeding in the States in which approval is required.

2. A further issue that may need to be considered is how the approval procedure will affect any solvent group member participating in the group solution.

Paragraph 1

[48] 1. The definition of group insolvency solution does not address the question of whether a group member must participate in the planning proceeding in order for it to be affected by the group insolvency solution. If the Working Group considers that that should be the case, words such as "[participating in the planning proceeding]" might be added to the chapeau of draft article 20 after the words "affects a group member". The definition of "planning proceeding" might also require adjustment.

2. Not all of the references to "in this State" might be required in the draft article, as indicated by the use of square brackets.

[49] The reference to "establishment" is included in draft article 20 (paras. 1 and 4) in accordance with a suggestion made at the forty-eighth session (A/CN.9/864, subpara. 48(b)). If retained, the Working Group may wish to consider other articles to which that reference should be added, including the definition of a group insolvency solution.

Paragraph 3

[50] Not all insolvency laws provide that courts play a role in confirmation or implementation of an approved reorganization plan. For that reason, it may be appropriate to indicate that this draft text should adopt the same (or a similar) approach to approval of a group solution as national law takes to the approval of a reorganization plan, rather than including a specific requirement that the court confirm and implement the solution. That possibility is reflected in the drafting.

Paragraph 5

[51] Draft paragraph 5 is based upon principle 8, which the Working Group decided at its forty-ninth session to retain and reassess at a future session (A/CN.9/870, para. 50). If this draft paragraph is to be retained, the Working Group may wish to consider whether it might apply to the approval, as well as the implementation, of the group solution.

Chapter 4. Treatment of foreign claims in accordance with applicable law [51]

[52] No comments of a drafting nature were made with respect to draft articles 21-23 at the forty-ninth session (A/CN.9/870, para. 51).

Article 21. (F) Commitment to and approval of the treatment of foreign claims in accordance with applicable law: non-main proceedings

[53] It may be recalled that draft articles 21 and 22 are not limited to cases where a group solution is being developed through a planning proceeding.

[54] 1. A suggestion was made at the forty-ninth session that additional safeguards might be required in draft articles 21 and 22 (A/CN.9/870, para. 51) and that Regulation (EU) 2015/848 of the European Parliament and of the Council of 20 May 2015 on insolvency proceedings (recast) (the Regulation recast) might provide some guidance.

2. Firstly, with respect to the treatment that creditors might receive as a result of the commitment under draft article 21, paragraph 1 of this text, it may be noted that under article 36 of the Regulation recast the terms of a similar undertaking that may be given by an insolvency representative concern compliance with the distribution and priority rights under the law of the non-main State that creditors would have when the insolvency representative was distributing either assets located in the non-main State or the proceeds received as a result of the realization of those assets.

3. Second, as to safeguards, the Regulation recast (art. 36, para. 5) requires approval of the undertaking by known local creditors in accordance with the rules applicable to approval of a recognition plan in the non-main State. Further detail on the procedure associated with the undertaking and the effect of giving an undertaking are addressed in article 36, paragraphs 6-11.

4. With respect to draft article 20, paragraph 2 of this text, the Regulation recast provides that the court can decline to commence a non-main proceeding if the undertaking adequately protects the general interests of local creditors (art. 38, para. 2). In certain circumstances, it is possible to stay the non-main proceeding for up to 3 months provided suitable measures are taken to protect the interests of local creditors (art. 38, para. 3). An insolvency representative of a main proceeding has a right to be heard on an application for commencement of a non-main proceeding (art. 31, para. 1).

5. The Working group may wish to consider the relevance of this information to the draft text.

Part B

Supplemental provisions

[55] Draft articles 22 and 23 are supplemental components, which would be additional options for a State to enact, and would go a step further than the core provisions in part A, chapters 1-3 and paragraph 1 of article 21.

Article 22. (G) Commitment to and approval of the treatment of foreign claims in accordance with applicable law: main proceedings

Article 23. (H) Additional relief

[56] The type of additional relief referred to in draft article 23, paragraph 1 is potentially covered by draft article 17. The two articles may need to be aligned.

[57] The cross-reference in draft article 23, paragraph 2 to article 20, paragraph 1 may need to be reconsidered in view of the revision of draft article 20.

Additional issues

Principle 4, paragraph 1

[58] The Working Group was unable to decide whether principle 4, paragraph 1 should remain in the draft text or be deleted or redrafted. It may be covered by article 5 of the Model Law, which provides general authorization to act in a foreign State on behalf of local proceedings (an outbound request). Draft article 1, subparagraph 1(b) of this text refers to assistance being sought in such a situation, but although draft articles 12 and 18 provide equivalent outbound authorization in respect of the planning proceeding, the draft text does not include a substantive equivalent to article 5 for proceedings that are not the planning proceeding. It remains for further consideration.

Principle 4, paragraph 2

[59] 1. There was no agreement on the substance of the principle at the forty-ninth session (A/CN.9/870, para. 31), nor on the question of whether it should be redrafted as a substantive provision.

2. Principle 4, paragraph 2 provides that the planning court can receive a request for recognition of the type referred to in paragraph 1 of this principle i.e., recognition by the planning court of a proceeding taking place at the centre of main interests of a group member, along the lines of article 15, paragraph 1 of the Model Law. That issue is not addressed in this draft text, although it is potentially covered by the Model Law. It may be appropriate to consider the purpose for which recognition might be required and in particular, the relationship between recognition and the planning proceeding.

Principle 5, sentence 2

[60] 1. There was no agreement on either the substance of the principle at the forty-ninth session (A/CN.9/870, para. 31) or whether it should be redrafted as a substantive provision.

2. Principle 5 provides that, for those group members whose centres of main interest are located in the same jurisdiction as the planning proceeding, the recommendations of part three of the Legislative Guide with respect to joint application and procedural coordination could apply. This notion is not addressed in the draft text.

C. Note by the Secretariat on recognition and enforcement of insolvency-related judgments: draft model law

(A/CN.9/WG.V/WP.143 and Add.1)

[Original: English]

Contents

I. Introduction

1. At its forty-seventh session (2014), the Commission gave Working Group V (Insolvency Law) a mandate to develop a model law or model legislative provisions to provide for the recognition and enforcement of insolvency-related judgments.[1]

2. At its forty-sixth session in December 2014, Working Group V (Insolvency Law) considered a number of issues relevant to the development of a legislative text on the recognition and enforcement of insolvency-related judgments, including the types of judgments that might be covered, procedures for recognition and grounds to refuse recognition. The Working Group agreed that the text should be developed as a stand-alone instrument, rather than forming part of the UNCITRAL Model Law on Cross-Border Insolvency (the Model Law), but that the Model Law provided an appropriate context for the new instrument.

3. At its forty-seventh session, the Working Group considered the first draft of a model law to be given effect through enactment by a State (A/CN.9/WG.V/WP.130).

[1] *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 155.

The content and structure of the draft text drew upon the Model Law, as suggested by the Working Group at its forty-sixth session (A/CN.9/829, para. 63) and sought to give effect to the conclusions of the Working Group at its forty-sixth session relating to the types of judgment to be included (A/CN.9/829, paras. 54 to 58), procedures for obtaining recognition and enforcement (A/CN.9/829, paras. 65 to 67) and the grounds for refusal of recognition (A/CN.9/829, paras. 68 to 71).

4. At its forty-seventh session, the Working Group had a preliminary exchange of views on draft articles 1 to 10 of the text and made a number of proposals with respect to the drafting (A/CN.9/835, paras. 47-69); draft articles 11 and 12 of that text were not reached due to lack of time and were included as draft articles 12 and 13 of the text considered at the forty-ninth session (A/CN.9/WG.V/WP.138). At its forty-eighth and forty-ninth sessions, the Working Group considered revised versions of the draft text, which reflected the decisions and proposals made at the forty-seventh and forty-eighth sessions respectively (A/CN.9/WG.V/WP.135 and 138).

5. The draft text below reflects the discussion at the forty-ninth session and the revisions the Secretariat was requested to make, together with various suggestions and proposals arising from the Secretariat's work on the draft text. Notes and commentary to this draft text, indicated by a reference number in square brackets, are contained in A/CN.9/WG.V/WP.143/Add.1.

II. Draft model law on the recognition and enforcement of insolvency-related judgments

Article 1. Scope of application

1. [1] This Law applies to the recognition and enforcement of an insolvency-related judgment issued in a proceeding taking place in a State that is different to the State where recognition and enforcement are sought.

2. This Law does not apply to [...].

Article 2. Definitions

For the purposes of this Law:

(a) [2] "Foreign proceeding" means a collective judicial or administrative proceeding in a foreign State, including an interim proceeding, pursuant to a law relating to insolvency in which proceeding the assets and affairs of a debtor are or were subject to control or supervision by a foreign court for the purpose of reorganization or liquidation;

(b) "Foreign representative" means a person or body, including one appointed on an interim basis, authorized in a foreign proceeding to administer the reorganization or the liquidation of the debtor's assets or affairs or to act as a representative of the foreign proceeding;

(c) [3] "Judgment" means [any decision, whatever it may be called, issued by a court [or administrative authority, provided an administrative decision has the same effect as a court decision]. For the purposes of this definition, a decision includes a decree or order, and a determination of costs and expenses by the court [provided that the determination relates to a decision that may be recognized [or] [and] enforced under this Law] [4];

(d) [5] "Foreign court" means a judicial or other authority competent to control or supervise a foreign proceeding;

(e) [6] "Insolvency-related judgment" means a judgment that is closely related to a foreign proceeding and was issued after the commencement of that proceeding. Insolvency-related judgments include, inter alia, judgments determining whether:

(i) An asset is [7] [part of] [included in], should be turned over to, or was properly disposed of by the insolvency estate;

(ii) [8] A transaction involving the debtor or assets of [the] [its] insolvency estate should be [overturned] [avoided] [because it upset the principle of equitable treatment of creditors or improperly reduced the value of the estate] [on the grounds that it had the effect of either reducing the value of the insolvency estate or upsetting the principle of equitable treatment of creditors];

(iii) A [9] [representative] [director] of the debtor is liable for action taken when the debtor was insolvent or in the [10] period approaching insolvency, [11] [and the cause of action relating to that liability was one that could be pursued by or on behalf of the debtor's insolvency estate];

(iv) [Alternative A: Sums [12] [not covered by (i) or (ii)] are owed to or by the debtor or [its insolvency] estate;]

[Alternative B: Sums [not covered by (i) or (ii)] are owed to or by the debtor or [its insolvency] estate, and the cause of action [13] [relating to the recovery or payment of those sums] arose after insolvency proceedings commenced in respect of the debtor]; or

(v) A plan of reorganization or liquidation should be confirmed, a discharge of the debtor or of a debt should be recognized, or a voluntary restructuring agreement should be approved.

For the purposes of this definition, an "insolvency-related judgment" includes instances in which the cause of action was pursued by:

(i) A creditor with approval of the court, based upon the insolvency representative's decision not to pursue that cause of action; or

(ii) The party to whom it has been assigned by the insolvency representative in accordance with the applicable law;

[and the judgment on that cause of action would otherwise be enforceable under this Law].

[Article 3. International obligations of this State [14]

To the extent that this Law conflicts with an obligation of this State arising out of any treaty or other form of agreement to which it is a party with one or more other States, the requirements of the treaty or agreement prevail.]

[Article 3 bis. International obligations of this State

1. [15] This [Law] shall not apply to a judgment where there is a treaty [in force] concerning the recognition or enforcement of civil and commercial judgments (whether concluded before or after [this Law] comes into force), and that treaty applies to the judgment [or where the provisions of the law of this State on recognition [and enforcement] of insolvency proceedings apply to that judgment].

2. A judgment is to be treated for the purposes of paragraph 1 of this article as falling within the class of judgments to which a treaty applies even where the particular judgment is not enforceable under the treaty because of the particular circumstances of the case.

Article 4. Competent court or authority [16]

[17] The functions referred to in this Law relating to recognition and enforcement of insolvency-related judgments shall be performed by [*specify the court, courts, authority or authorities competent to perform those functions in the enacting State*].

Article 5. Authorization to seek recognition and enforcement of an insolvency-related judgment in a foreign State

A [*insert the title of the person or body administering a reorganization or liquidation under the law of the enacting State*] is authorized to seek recognition and enforcement of an insolvency-related judgment, as permitted by the applicable foreign law.

Article 6. Additional assistance under other laws

Nothing in this Law limits the power of a court or a [*insert the title of the person or body administering a reorganization or liquidation under the law of the enacting State*] to provide additional assistance to a foreign representative under other laws of this State.

Article 7. Public policy exception [18]

Nothing in this Law prevents the court from refusing to take an action governed by this Law if the action would be manifestly contrary to the public policy [19] [of this State] including the fundamental principles of procedural fairness of this State.

Article 8. Interpretation

In the interpretation of this Law, regard is to be had to its international origin and to the need to promote uniformity in its application and the observance of good faith.

Article 9. Effect and enforceability of an insolvency-related judgment in the originating State [20]

1. An insolvency-related judgment shall be recognized and enforced only if it has effect and is enforceable in the originating State.

2. *Variant 1 of paragraph 2*

Recognition and enforcement of an insolvency-related judgment may be postponed or refused if the judgment is the subject of review in the originating State or if the time limit for seeking ordinary review in that State has not expired. In such cases, the court may also make enforcement conditional on the provision of such security as it shall determine.

Variant 2 of paragraph 2 [21]

(a) If an insolvency-related judgment is the subject of review in the originating State or if the time limit for seeking ordinary review in that State has not expired, the court may:

(i) Grant recognition and enforcement;

(ii) Postpone recognition and enforcement; or

(iii) Refuse recognition and enforcement;

(b) The court may grant [conditional] recognition and enforcement under paragraph 2 (a) subject to the provision of such security as the court determines.

3. A refusal under paragraph [2] [2 (a)] does not prevent a subsequent application for recognition and enforcement of the judgment.

Article 10. Application for recognition and enforcement of an insolvency-related judgment

1. [22] A foreign representative or other person entitled under the law of the originating State to seek recognition and enforcement of an insolvency-related judgment may apply to the court in this State for recognition and enforcement of that judgment, including by way of defence.

2. An application for recognition and enforcement of an insolvency-related judgment shall be accompanied by:

(a) A certified copy of the insolvency-related judgment;

(b) *Variant 1 of subparagraph (b)* [23]

[Information relating to any current review of the insolvency-related judgment, including whether any notice of intended appeal has been received, the time limit (if any) for seeking review has expired in the originating State, and whether the judgment is enforceable in the originating State];

(b) *Variant 2 of subparagraph (b)*

Any documents necessary to establish that the insolvency-related judgment has effect and is enforceable in the originating State, including information on any current review of the judgment;

(c) Evidence [24] [as required by the law of this State] that the party against whom relief is sought was notified of the application in this State for recognition and enforcement of the insolvency-related judgment; and

(d) [25] [In the absence of evidence referred to in subparagraphs (a) and (b), any other evidence on those matters acceptable to the court].

3. The court may require translation of documents supplied in support of the application for recognition and enforcement of the insolvency-related judgment into an official language of this State.

4. The court is entitled to presume that documents submitted in support of the application for recognition and enforcement of the insolvency-related judgment are authentic, whether or not they have been legalized.

Article 11. Decision to recognize and enforce an insolvency-related judgment

An insolvency-related judgment shall be recognized and enforced provided:

(a) [26] It is effective and enforceable in the originating State;

(b) The person seeking recognition and enforcement of the insolvency-related judgment is a person within the meaning of article 2, subparagraph (b) or another person entitled to seek recognition and enforcement of the judgment under article 10, paragraph 1;

(c) The requirements of article 10, paragraph 2 are met;

(d) The court from which recognition and enforcement is sought is the court referred to in article 4, [27] [unless the requirement for recognition arises by way of a defence in another court]; and

(e) Articles 7 and 12 do not apply.

Article 12. Grounds to refuse recognition and enforcement of an insolvency-related judgment

Recognition and enforcement of an insolvency-related judgment may be refused if:

(a) [28] The party against whom the proceeding giving rise to the insolvency-related judgment was instituted:

(i) Was not notified of the institution of that proceeding in sufficient time and in such a manner as to enable a defence to be arranged, unless the party entered an appearance and presented their case without contesting notification in the originating court, provided that the law of the originating State permitted notification to be contested; or

(ii) Was notified of the institution of that proceeding in a manner that is incompatible with fundamental principles of this State concerning service of documents;

(b) The insolvency-related judgment was obtained by fraud [29] [in connection with a matter of procedure];

(c) [30] The insolvency-related judgment is inconsistent with a [prior] judgment issued in this State in a dispute involving the same parties;

(d) The insolvency-related judgment is inconsistent with an earlier judgment issued in another State [in a dispute] involving the same parties [31] [and the same subject matter], provided that the earlier judgment fulfils the conditions necessary for its recognition [and enforcement] in this State;

(e) [32] Recognition and enforcement would interfere with the administration of the [debtor's] insolvency proceedings or would be inconsistent with a stay or other order issued in insolvency proceedings [relating to the same debtor] commenced in this State or another State;

(f) [33] The judgment falls within article 2, subparagraph (e)(v) and the interests of creditors and other interested persons, including the debtor, were not adequately protected in the proceeding in which the judgment was issued;

(g) [The insolvency-related judgment was not issued by a court that] [The originating court does not satisfy one of the following conditions] [34]:

(i) Exercised jurisdiction based on the basis of the express consent of the party against whom the judgment was issued;

(ii) Exercised jurisdiction on a basis on which a court in this State could have exercised jurisdiction;

(iii) Exercised jurisdiction on a basis that was not inconsistent with the law of this State; [or]

States that have enacted the Model Law on Cross-Border Insolvency might wish to add subparagraphs (g) (iv) and (v) and subparagraph (h) [35]

[(iv) Was supervising a [foreign] main proceeding regarding the insolvency of the [party against whom the judgment was issued] [judgment debtor], or was another court in the State in which that [foreign] main proceeding was being conducted]; or

[(v) *Variant 1 of subparagraph (v)* [36]

Was supervising a [foreign] main proceeding [or was another court in the State in which that foreign main proceeding was being conducted] regarding the insolvency of a debtor for which the party against whom the judgment was issued was serving as a director, if the judgment was based on that party's conduct as a director, including breach of fiduciary duty.]

[(v) *Variant 2 of subparagraph (v)*

Was supervising a foreign main proceeding or was another court in the State in which that foreign main proceeding was being conducted and the judgment was issued against a person who is, or had been, serving as a director of the debtor in the foreign main proceeding and was based on that person's conduct as a director, including any breach of a fiduciary duty.]

(h) [37] [The judgment was not issued in a proceeding that has been, or could have been, recognized under [*identify the law of the enacting State giving effect to the Model Law on Cross-Border Insolvency*],] [The judgment relates to a debtor that had neither the centre of its main interests nor an establishment in the originating State], unless the judgment relates solely to assets that were located in the originating State at the time the foreign proceeding commenced.]

Article 13. Equivalent effect [38]

1. An insolvency-related judgment recognized or enforceable under this Law shall be given the same effect it has in the originating State.

2. If the insolvency-related judgment provides for relief that is not available under the law of this State, that relief shall, to the extent possible, be adapted to relief that is equivalent to, but does not exceed, its effects under the law of the originating State.

Article 14. Severability [39]

Recognition and enforcement of a severable part of an insolvency-related judgment shall be granted where recognition and enforcement of that part is applied for, or where only part of the judgment is capable of being recognized and enforced under this Law.

Article 15. Provisional relief [40]

From the time recognition and enforcement of an insolvency-related judgment is sought until a decision is made, the court may, [at the request of a foreign representative or other person entitled under the law of the originating State to seek recognition and enforcement of an insolvency-related judgment], where relief is urgently needed [to preserve the possibility of recognizing and enforcing an insolvency-related judgment] grant relief of a provisional nature, including:

(a) Staying the disposition of any assets of any party or parties against whom the insolvency-related judgment has been issued; or

(b) Granting other legal or equitable relief, as appropriate, within the scope of the insolvency-related judgment.

2. [*Insert provisions (or refer to provisions in force in the enacting State) relating to notice*.]

3. Unless extended by the court, relief granted under this article terminates when a decision on recognition and enforcement of the insolvency-related judgment is made.

(A/CN.9/WG.V/WP.143/Add.1) (Original: English)

Note by the Secretariat on recognition and enforcement of insolvency-related judgments: commentary and notes on the draft model law

ADDENDUM

Contents

I. General drafting notes

1. The articles of the draft text set forth in A/CN.9/WG.V/WP.143 have been renumbered. Numbers/letters appearing below in parentheses following the article number indicate the origin of the article in the previous drafts of the text (A/CN.9/WG.V/WP.138 and 140). The previous order of the articles has been maintained in this revision of the text, but might need to be reviewed as the text develops.

2. To simplify the drafting, the State in which the judgment was issued is referred to throughout this draft of the text as the “originating State”, while the State in which recognition and enforcement is sought is referred to as the “receiving State”.

3. References to the debtor or the debtor’s insolvency estate should be read as references to the debtor in the insolvency proceeding to which the insolvency judgment is related. The “judgment debtor” refers to the party against whom the insolvency-related judgment was issued, which may be the debtor or another person.

4. The text refers to “recognition and enforcement” — see note [21] on whether a distinction might be drawn in some articles between recognition on the one hand, and enforcement on the other.

5. Articles not referred to in the following notes remain unchanged from the previous draft of this text.

II. Notes on draft articles

Article 1. Scope

[1] At the end of draft paragraph 1 the words "where recognition and enforcement are sought" reflect the decision of the Working Group at its forty-ninth session (A/CN.9/870, para. 52).

Article 2. Definitions

Subparagraph (a) "Foreign proceeding"

[2] As currently drafted, the definitions of "foreign proceeding" and "insolvency-related judgment" mean that the judgments covered by the draft text are only those issued in a proceeding outside the receiving State and closely related to a foreign proceeding; it does not cover judgments issued in a proceeding outside the receiving State, but closely related to an insolvency proceeding (of the type defined in subparagraph (a)),[1] taking place in the receiving State. If the Working Group is of the view that the text should also cover the second type of insolvency-related judgment, there may be several possible drafting solutions, including the following:

(i) To change subparagraph (a) to be a definition of a term such as "insolvency proceeding" and remove any reference to the "foreign" State or the "foreign" court as follows:

> "(a) 'Insolvency proceeding' means a collective judicial or administrative proceeding, including an interim proceeding, pursuant to a law relating to insolvency in which proceeding the assets and affairs of a debtor are or were subject to control or supervision by a court for the purpose of reorganization or liquidation;"

Other definitions would need to be conformed with that definition and the impact on several articles, such as article 12, subparagraph (h) (the only article that refers to "foreign proceeding") and those articles that refer only to the "foreign representative" (e.g. article 10) would need to be considered.

(ii) To change the definition of insolvency-related judgment as follows:

> "(d) 'Insolvency-related judgment' means a judgment that is closely related to a foreign proceeding [or to an insolvency proceeding taking place in the receiving State] and was issued after the commencement of that proceeding;"

If the second solution were to be adopted, the use of the words "insolvency proceeding" in the bracketed text would have to be understood as being "a collective judicial or administrative proceeding, including an interim proceeding, pursuant to a law relating to insolvency in which proceeding the assets and affairs of a debtor are or were subject to control or supervision by a court for the purpose of reorganization or liquidation)". As noted above, other definitions and articles would need to be conformed to that revision if it were to be adopted.

Subparagraph (c) "Judgment"

[3] 1. The definition of "judgment" is based upon the Working Group's preference for variant 2 of the draft text contained in A/CN.9/WG.V/WP.138 as expressed at the forty-ninth session (A/CN.9/870, para. 55). The Secretariat was requested to prepare a revised text, taking into consideration the desirability of focusing on the nature of

[1] Para. (a) provides that a foreign proceeding is "a collective judicial or administrative proceeding, including an interim proceeding, pursuant to a law relating to insolvency in which proceeding the assets and affairs of a debtor are or were subject to control or supervision by a court for the purpose of reorganization or liquidation"; the glossary to the Legislative Guide, introduction, subpara. 12 (u), provides that insolvency proceedings are "collective proceedings, subject to court supervision, either for reorganization or liquidation", where the term "court" means "a judicial or other authority competent to control or supervise insolvency proceedings".

the decision rather than the body issuing it. On that basis, it might be desirable to return to the formulation "a judicial or administrative decision, including a decree …" or to retain the words "any decision issued by a court or administrative authority" and delete the proviso language, which to some extent is addressed in draft article 9.

2. It was suggested at the forty-ninth session that language from the glossary of the UNCITRAL Legislative Guide on Insolvency Law (the Legislative Guide), paragraph 8 might be used, referring to an authority which supports or has specified roles in insolvency proceedings, but which does not have adjudicative functions with respect to those proceedings and would not be regarded as within the meaning of the term "court" as that term is used in this text. That language may be too narrow for the purposes of this text, unless the judgments to be recognized are to be confined to those issued by a foreign court, as defined in article 2, subparagraph (d) i.e. the court competent to control or supervise insolvency proceedings (see also note 2 above). For example, the bankruptcy court in State A supervises and controls insolvency proceedings. Other courts have jurisdiction with respect to matters connected with insolvency proceedings, such as the examples in article 2, subparagraph (e), and those decisions are closely connected with insolvency proceeding, but they do not have jurisdiction to supervise or control insolvency proceedings.

3. If the words "decree or order" are retained in the second sentence, the Working Group may wish to consider whether the words "whatever it may be called" are required in the first sentence.

[4] A guide to enactment might explain that the draft text refers to "recognition and enforcement" notwithstanding that there are judgments that will require only recognition (e.g. declarations as to the existence of rights), and not enforcement (see note [21]). Relevant explanatory material from the 2005 Convention on Choice of Court Agreements (the 2005 Convention) might be included.

Subparagraph (d) "Foreign court"

[5] A review of the draft text indicates that this term is not used and the definition thus not required, unless it is changed to be a note along the lines of the notes on use of the term "court" in the Legislative Guide (Glossary, para. 8).

Subparagraph (e) "Insolvency-related judgment" [art. 2, para. (d) of A/CN.9/WG.V/WP.140]

[6] 1. The drafting of this definition reflects a preference expressed at the forty-ninth session for the drafting of the version contained in A/CN.9/WG.V/WP.140. The drafting and format of the paragraphs has been revised to take account of that preference.

2. A guide to enactment might explain that a judgment may be considered to be "closely related to a foreign proceeding" when it has an effect upon the insolvency estate of the debtor and either is based on a law relating to insolvency or, due to the nature of its underlying claims, would not have been issued without the commencement of the foreign proceeding. A guide could further explain that an insolvency-related judgment would include any equitable relief, including the establishment of a constructive trust, provided in that judgment or required for its enforcement, but would not include a judgment imposing a criminal penalty.

3. A guide might also consider the relevance, if any, to interpretation of this text of the Regulation (EU) 2015/848 of the European Parliament and of the Council of 20 May 2015 on insolvency proceedings (recast) (the EU Regulation recast) (art. 32) which refers to judgments that "derive directly from … and are closely linked to" insolvency proceedings, as well as the examples of judgments held to fall within and outside that category of judgments, as set out in A/CN.9/WG.V/WP.126, paragraphs 21 and 22.

Subparagraph (e)(i)

[7] The Legislative Guide generally refers to assets that are "included in" the insolvency estate; for consistency it may be desirable to use that phrase in this text, rather than the words "part of". "Insolvency estate" is defined in the Legislative Guide, glossary, subparagraph 12(t).

Subparagraph (e)(ii)

[8] 1. The chapeau of recommendation 87 of the Legislative Guide, on which this drafting is based, refers to the overturning of transactions, although what is being referred to in subparagraph (e)(ii) may be more readily apparent if the word "avoided" were to be used.

2. The second optional language in square brackets at the end of the definition is also consistent with drafting of recommendation 87, which it might be noted refers only to reduction of the value of the insolvency estate, rather than "improper" reduction of that value. The Working Group may wish to consider these drafting questions.

Subparagraph (e)(iii)

[9] The Working Group may wish to consider whether the word "representative" requires some further specificity; if what is intended is a person serving as a director, consistent with the usage of that term in recommendation 258 of part four of the Legislative Guide, being "any person formally appointed as a director and any other person exercising factual control and performing the functions of a director", the word "director" might be used in this draft text. A guide to enactment might include or refer to the relevant material in the Legislative Guide.

[10] The words "vicinity of" have been replaced with the words "period approaching" for consistency with the terminology used in part four of the Legislative Guide.

[11] The draft paragraph is based on the definition contained in A/CN.9/WG.V/WP.140. The words in square brackets at the end of the draft paragraph relating to the party pursuing the cause of action were previously included in A/CN.9/WG.V/WP.138, reflecting a proposal made at the forty-eighth session (A/CN.9/864, paras. 68, 69). The words have been included in this draft in square brackets for further consideration.

Subparagraph (e)(iv) [(d)(ii) of A/CN.9/WG.V/WP.138 and (d)(v) of A/CN.9/WG.V/WP.140]

[12] Alternatives A and B have been retained for further consideration, in accordance with the decision of the Working Group at its forty-ninth session (A/CN.9/870, para. 57); the intention of the proposal to include both options was that enacting States could choose whichever was the most appropriate. The words in square brackets are intended to clarify that the sums referred to in this subparagraph are sums not already covered by the other items of subparagraph (e), specifically (i) and (ii). As a matter of drafting, the reference to "the estate" might be expanded to refer to "its insolvency estate" or "the debtor's insolvency estate".

[13] The additional language in alternative B is intended to clarify the reference to "the cause of action".

Article 3. International obligations of this State

[14] At its forty-ninth session (A/CN.9/870, para. 62), the Working Group agreed to retain both article 3 and article 3 bis for further consideration.

Article 3 bis. International obligations of this State

[15] Draft article 3 bis has been revised in accordance with the decisions made at the forty-ninth session (A/CN.9/870, paras. 61-62). The words in square brackets at the

end of paragraph 1 have been included, as proposed, with an added reference to the provisions "of the law of this State" to clarify the reference to "provisions", on the assumption that that was what was intended by the proposal. The Working Group may wish to consider whether the reference to the "enforcement" of insolvency proceedings should be retained.

Articles 4, 5 and 6

[16] 1. Draft articles 4, 5, 6 and 8 are based on articles 4, 5, 7 and 8 of the UNCITRAL Model Law on Cross-Border Insolvency (the Model Law) and have been revised for consistency with the subject matter of this draft instrument. Article 5 has been revised in accordance with a decision at the forty-ninth session (A/CN.9/870, para. 65).

Article 4

2. The Working Group may wish to consider whether a footnote should be included in this draft text, along the lines of the footnote to article 4 of the Model Law (appropriately revised):

> "A State where certain functions relating to insolvency proceedings have been conferred upon government-appointed officials or bodies might wish to include in article 4 or elsewhere in chapter I the following provision:
>
> > "Nothing in this Law affects the provisions in force in this State governing the authority of [*insert the title of the government-appointed person or body*]."

3. A guide to enactment might refer to the material in the Guide to Enactment and Interpretation of the Model Law on articles 4, 5 and 6, revised as appropriate for this instrument.

[17] Given that the chapeau of article 10 refers to the possibility that a judgment may be raised by way of defence, it may be appropriate either to note in any guide to enactment of draft article 4 that a judgment may be raised by way of defence in a court other than the one specified in this draft article or to include some reference to that issue in the drafting of this article.

Article 7 [6 bis]. Public policy exception

[18] 1. Draft article 7 is based upon article 6 of the Model Law, revised in accordance with the decisions of the Working Group at its forty-ninth session (A/CN.9/870, para. 67). As originally formulated, article 6 refers to the "public policy of this State", but does not include the words referring to procedural fairness, which derive from article 9, subparagraph (e) of the 2005 Convention. The addition of those words is intended to focus attention on situations where there are serious procedural failings. The explanatory note to the draft text emanating from the Hague Conference Special Commission on the Recognition and Enforcement of Foreign Judgments (1-9 June 2016) (Prel. Doc. No. 2 of April 2016 — Explanatory Note providing background on the proposed draft text and identifying outstanding issues, para. 167) (the draft Hague Conference text) indicates that the wording relating to procedural fairness was included because not all States regard procedural fairness as part of public policy.

2. A guide to enactment might refer to the material in the Guide to Enactment and Interpretation of the Model Law on public policy, revised as appropriate for this instrument, as well as to any relevant explanatory material from the draft Hague Conference text.

[19] As formulated in article 6 of the Model Law, the words "of this State" refer to public policy. For clarification, given the addition of the final phrase, it may be desirable to retain two references to "this State" so that it is clear that both the public policy and the rules of procedural principles are those "of this State", or to revise the

drafting in some other manner to achieve that result. A reference to procedural fairness without a connection to the enacting State might be too broad and too vague.

Article 9 [7 bis and 8 bis]. Effect and enforceability of an insolvency-related judgment in the originating State

Generally

[20] Draft article 9, which gives effect to revisions agreed by the Working Group at its forty-ninth session (A/CN.9/870, para. 69), also reflects article 4, paragraph 3 of the draft Hague Conference text. It incorporates draft article 8 bis of the previous draft of this text, as contained in A/CN.9/WG.V/WP.138. The final sentence of variant 1 and paragraph 3 of variant 2 have been moved from footnote 24 of the previous draft of this article (A/CN.9/WG.V/WP.138), as decided by the Working Group at its forty-ninth session (A/CN.9/870, para. 72).

Paragraph 2

[21] 1. Variant 2 of draft article 9, paragraph 2 reflects the changes made to draft article 4, paragraph 4 of the draft Hague Conference text and clarifies that conditions might apply only where recognition and enforcement are granted under subparagraph 2(a). While the drafting proposed in variant 2 is essentially the same in substance as that in variant 1, the drafting in variant 1 is somewhat broader and suggests conditions might also apply in the case of postponement, which might seem inappropriate. The Working Group may wish to consider whether some distinction might be made in this draft article between recognition and enforcement e.g. recognition might be granted, but enforcement made subject to conditions, or postponed. As currently drafted, the article makes no such distinction, treating them as a single package.

2. A guide to enactment might include material based upon the explanatory note accompanying the draft Hague Conference text (Prel. Doc. No. 2 of April 2016 — Explanatory Note providing background on the proposed draft text and identifying outstanding issues, paras. 62 and 63).

Article 10 [8]. Application for recognition and enforcement of an insolvency-related judgment

Paragraph 1

[22] The wording of the paragraph 1 of draft article 10 may require some clarification. As previously drafted (A/CN.9/WG.V/135, art. 8, variant 2), there was a second sentence to the effect that: “a judgment may be enforced by pleading the rights created or recognized by the judgment by way of defence.” The drafting change now suggests that the “application for recognition and enforcement may be made … by way of defence”. The Working Group may wish to consider how that would be implemented in practice — e.g. when pleading a judgment by way of defence, is the procedure for applying for recognition and enforcement contained in the remainder of the article to be followed, or is a different procedure required? If the former, the article does not need to specify that an application may be made by way of defence and this matter can be addressed in a guide to enactment. If the latter, further drafting may be required.

Subparagraph 2(b)

[23] Variant 1 of subparagraph 2(b) reflects the previous draft as contained in A/CN.9/WG.V/WP.138, which was felt to be too broad and too detailed. Variant 2 is based upon the discussion at the forty-ninth session (A/CN.9/870, para. 71) and focuses only upon the requirement that the judgment is effective and enforceable and that information about any current review should be provided. The reference to “any documents” reflects the approach taken in article 11 of the draft Hague Conference text.

Subparagraph 2(c)

[24] The addition of the words in square brackets to article 10, subparagraph 2(c) was suggested at the forty-eighth session (A/CN.9/864, para. 74), but since the addition has not been considered by the Working Group, the words remain in square brackets.

Subparagraph 2(d)

[25] Subparagraph 2(d) of draft article 10 is included for the consideration of the Working Group. It repeats the substance of article 15, subparagraph 2(c) of the Model Law and article 11, paragraph 2 of the draft Hague Conference text.

Article 11 [9]. Decision to recognize and enforce an insolvency-related judgment

Subparagraph (a)

[26] If article 11 should refer to all articles relevant to the decision to recognize, a cross-reference to article 9 might be appropriate, in addition to the references to articles 7 and 12. The substance may be repeated as suggested in subparagraph (a) or as a specific reference to article 9, paragraph 2.

Subparagraph (d)

[27] The words in square brackets have been added to draft article 11, subparagraph (d) to take account of the issue noted above in notes [17] and [22].

Article 12 [10]. Grounds to refuse recognition and enforcement of an insolvency-related judgment

The following explanatory notes are included to assist discussion of the various paragraphs of draft article 12. They could be included in any guide to enactment of the draft text.

Subparagraph (a)

[28] Subparagraph (a) permits the court to refuse recognition and enforcement if the defendant in the proceedings giving rise to the judgment was not properly notified of that proceeding. Subparagraph (a)(i) is concerned with the interests of the defendant, while subparagraph (a)(ii) is concerned with the interests of the receiving State, provided that the receiving State is the State in which the defendant was notified of the proceeding giving rise to the judgment.

Subparagraph (b) [art. 10 (c), A/CN.9/WG.V.WP.138]

Subparagraph (b) deals with the situation where the judgment was obtained by fraud in connection with a matter of procedure. While in some legal systems procedural fraud may fall within the scope of the public policy exception, this is not the case for all, hence the inclusion of this provision.

[29] The words “in connection with a matter of procedure” were deleted from the equivalent provision — article 7, subparagraph 1(b) — of the draft Hague Conference text. The basis of that deletion was that the limitation was not necessarily reflected in domestic law or bilateral agreements (although it was noted that it was included in the 2005 Convention), and that fraud should not be restricted to matters of procedure. It was also noted, however, that the originating court may be in a better position than the receiving court to address evidentiary matters related to substantive fraud. The Working Group may wish to consider whether this language should be retained in this draft article.

Subparagraphs (c) and (d) [art. 10 (g), A/CN.9/WG.V.WP.138]

[30] 1. Subparagraphs (c) and (d) are both concerned with the situation where there is a conflict between the judgment for which recognition and enforcement is sought and another judgment given in a dispute between the same parties. Subparagraph (c)

addresses the situation where the inconsistent judgment was issued by a court in the receiving State. As currently drafted, the judgment of the receiving State can only take precedence over the foreign judgment if it was issued before the foreign judgment. It might be noted that the draft Hague Conference text (art. 7, subpara. 1 (e)) refers only to inconsistency between the receiving State judgment and the foreign judgment, irrespective of the time of issue of the two judgments. If the word "prior" were to be deleted from subparagraph (c), the receiving State judgment could always take precedence over the foreign judgment, irrespective of the time of its issue relative to the foreign judgment. The Working Group may wish to consider that issue.

2. The parties to the conflicting judgments must be the same, but that requirement may be satisfied if the parties bound by the judgment are the same, even if the parties to the proceedings are different.

3. Subparagraph (d) is concerned with the situation where both judgments are given by foreign courts. Recognition and enforcement of the later of those judgments may be refused, provided the parties are the same, the subject matter is the same and the earlier conflicting judgment fulfils the conditions necessary for recognition and enforcement.

[31] The requirement in subparagraph (d) that the earlier judgment refer not only to the same parties, but also to the same subject matter, is included in article 7, subparagraph 1(f) of the draft Hague Conference text, as it is in the 2005 Convention. It has been added here for consideration by the Working Group.

Subparagraph (e) [art. 10 (h), A/CN.9/WG.V.WP.138]

[32] 1. The first part of subparagraph (e) deals with the desirability of avoiding interference with the conduct and administration of the foreign proceeding, a concept found in article 19, paragraph 4 of the Model Law and concerning the granting of relief. It is explained in paragraph 175 of the Guide to Enactment and Interpretation of the Model Law as having the objective, in the event there is a foreign main proceeding pending, that any relief granted in favour of a foreign non-main proceeding is consistent (or does not interfere) with the foreign main proceeding.

2. In this draft, however, it is somewhat broader and refers both to interference with administration of the debtor's insolvency proceedings and inconsistency with a stay or other order in the insolvency proceedings. The concept of interference is somewhat broad and may cover instances where recognition of the insolvency-related judgment might upset the cooperation between multiple proceedings or give effect to a judgment that should have been pursued in the jurisdiction of the foreign proceeding (e.g. the foreign proceeding is a main proceeding or the foreign proceeding is taking place in the State in which the assets the subject of the judgment are located). It should not be possible, however, that the drafting could allow selective recognition of foreign judgments on the basis that, for example, the judgment creditor was the debtor in the foreign proceeding and thus the value of the insolvency estate could be increased, while judgments where the judgment creditor was a creditor might deplete the value of the estate and thus be refused recognition on this ground of interference.

3. The second part of subparagraph (e) addresses the situation of concurrent insolvency proceedings, where one of those proceedings is taking place in the receiving State. The concurrent proceedings must relate to the same debtor i.e. the debtor subject to the foreign proceeding to which the insolvency judgment is related. Inconsistency with a stay issued in such proceedings might arise where the stay permitted individual actions to the extent necessary to preserve a claim, but did not permit subsequent recognition or enforcement of that judgment or where the stay did not permit such individual actions and the proceeding giving rise to the judgment was commenced after the issue of the stay.

4. The words "relating to the same debtor" have been added to the subparagraph clarify which insolvency proceedings are being referred to.

Subparagraph (f) [11 (j) A/CN.9/WG.V.WP.138 and 12 (j), A/CN.9/WG.V.WP.140]

[33] 1. Subparagraph (f) applies only to those judgments falling within article 2, subparagraph (e)(v) as those judgments can directly affect the rights of creditors or other stakeholders and their interests should have been taken into account in the proceeding giving rise to the judgment. It is intended to reflect the types of protection available under article 22 of the Model Law. It does not apply more generally to other types of insolvency-related judgments that resolve bilateral disputes; even though creditors and other stakeholders may be affected by those judgments, those effects are indirect (e.g. through the judgment's effect on the size of the estate).

2. At its forty-ninth session, the Working Group expressed a preference for subparagraph (j) as drafted in A/CN.9/WG.V.WP.140. The inclusion of this paragraph replaces draft article 11 as it was included in A/CN.9/WG.V/WP.138: "In recognizing and enforcing an insolvency-related judgment under article .., the court must be satisfied that the interests of the creditors and other interested persons, including the judgment debtor, are adequately protected."

Subparagraph (g) [10 (i), A/CN.9/WG.V.WP.138 and 140]

[34] 1. As currently drafted, article 12 provides a long list of grounds upon which recognition and enforcement might be refused. Several of these grounds, like subparagraph (g), involve complex negatives. To facilitate clarity, an alternative drafting of the chapeau of subparagraph (g) is offered in the second set of square brackets. If drafting along those lines is preferred, the subparagraphs might be drafted, for example, as follows: "(i) The basis of the court's jurisdiction was the express consent of the party against whom the judgment was issued;".

2. Subparagraph (g) permits refusal of recognition and enforcement if the originating court exercised jurisdiction over the judgment debtor on grounds other than those listed; in other words, if the originating court exercised jurisdiction on one of the grounds listed, subparagraph (g) does not apply. As such, subparagraph (g) works differently to the other paragraphs of article 12, each of which create a free-standing discretionary ground on which the court may refuse recognition of a judgment; if one of them is met, the judgment can be refused.

3. Subparagraph (g) can thus be seen as a broad exception, permitting refusal on grounds of inadequate jurisdiction in the originating court (as determined by the receiving court) with four "safe harbours" that render the provision inapplicable if the originating court satisfies any one of them.

Subparagraphs (g)(i)-(iii)

4. The text of subparagraphs (g)(i)-(iii) has been revised in accordance with the discussion at the forty-ninth session (A/CN.9/870, para. 76).

5. Subparagraph (g)(i) provides that the originating court's exercise of jurisdiction must be seen as adequate if the judgment debtor expressly consented to that exercise of jurisdiction; the judgment debtor cannot subsequently resist recognition and enforcement by claiming that the originating court did not have jurisdiction.

6. Subparagraph (g)(ii) provides that the originating court's exercise of jurisdiction must be seen as adequate if it exercised jurisdiction on a basis on which the receiving court could have exercised jurisdiction had an analogous dispute taken place in the receiving State. If the law of the receiving State would have permitted a court to exercise jurisdiction in parallel circumstances, the receiving court cannot refuse recognition and enforcement on the basis that the originating court did not properly exercise jurisdiction.

7. Subparagraph (g)(iii) is similar to subparagraph (g)(ii), but broader. While subparagraph (g)(ii) is limited to jurisdictional grounds explicitly permitted under the law of the receiving State, subparagraph (g)(iii) applies to any additional jurisdictional grounds which, while not explicitly grounds upon which the receiving court could have exercised jurisdiction, are nevertheless not incompatible with the

law of the receiving State. The purpose is to discourage courts from refusing recognition and enforcement under subparagraph (g) in cases in which the originating court's exercise of jurisdiction was not unreasonable, even if the precise basis of jurisdiction would not be available in the receiving State, provided it was not incompatible with the central tenets of procedural fairness in the receiving State.

Subparagraphs (iv)-(v)

[35] 1. Subparagraphs (g)(iv) and (v) are optional provisions intended for enactment in States that have already implemented the Model Law, based as they are upon the concept of foreign main proceedings from the Model Law. In subparagraph (g)(iv), if the originating court or another court in the originating State was supervising a foreign main proceeding concerning the judgment debtor, subparagraph (g) does not apply as a ground to refuse recognition.

2. Subparagraph (g)(v) addresses situations in which a judgment is issued against a director of an insolvent company by a court located at that company's centre of main interests. Provided the judgment was based on the director's conduct as a director, the court's exercise of jurisdiction would not provide grounds for refusal. If the judgment relates to something other than that conduct (e.g. the director as a creditor of the debtor company), subparagraph (g) could provide a basis for refusal of recognition. As in subparagraph (g)(iv), the subparagraph also clarifies that recognition and enforcement should not be refused for jurisdictional reasons solely because the judgment came from a court in the debtor's centre of main interests other than the court actually supervising the main proceeding.

3. The reference to "main proceeding" in subparagraphs (g)(iv) and (v) is based on the definition in the Model Law, article 2, subparagraph (b). Since the defined term is "foreign main proceeding" it may be appropriate to include the word "foreign" in this draft article or to include a definition of "main proceeding" in this draft text.

[36] 1. Variant 1 of subparagraph (g)(v) reflects the draft text as presented in A/CN.9/WG.V/WP.140, with the words "was supervising a main proceeding regarding the insolvency of" removed from the chapeau and placed in the text of the subparagraph. Variant 2 is an attempt to make the text easier to understand. The words "or another court in the State in which that foreign main proceeding was being conducted" have been added to both variants to accommodate the possibility that the insolvency-related judgment might not always be issued by the court that has the power to control or supervise an insolvency proceeding in a particular State.

2. The Working Group may wish to consider subparagraph (g)(v) and the example of an "insolvency-related judgment" in article 2, subparagraph (e)(ii). The latter refers specifically to the period approaching insolvency, the former does not and is thus potentially much broader. It might be recalled that part four of the Legislative Guide focuses on that period approaching insolvency on the basis that such causes of action can be addressed in the insolvency law and pursued once insolvency proceedings commence. Broader aspects of director conduct typically would be covered by law other than insolvency law. It may be helpful for reasons of consistency to align the language of both provisions or to indicate in a guide to enactment why they are not the same or do not need to be the same.

Subparagraph (h) [10 (k), A/CN.9/WG.V/WP.140]

[37] 1. Article 12, subparagraph (h) reflects the drafting as presented to the Working Group in A/CN.9/WG.V/WP.140 and for which a preference was expressed at the forty-ninth session (A/CN.9/870, para. 76). Like subparagraphs (g)(iv) and (v), this paragraph is also intended primarily for use by States that have enacted the Model Law, as it relies upon the Model Law framework of recognition of specific types of foreign proceeding (i.e. main or non-main proceedings). If the judgment was issued in a type of proceeding that cannot be recognized under the Model Law, recognition of the judgment can be refused unless it relates only to assets that were located in the originating State. The provision is designed to help ensure that the Model Law framework is not undermined by the recognition and enforcement of judgments

resolving issues that should have been resolved in the State where the debtor had its centre of main interests or an establishment (i.e. the foreign main or non-main proceedings). In the circumstances where the judgment addresses only assets located in the originating State it may be useful, notwithstanding that that State is not the location of a main or non-main proceeding, for that judgment to be recognized — for example, it may resolve issues of ownership that are relevant to the insolvency estate.

2. The reference to "assets located in the originating State" may be sufficiently broad to cover, for example, intellectual property registered in the originating State where it is neither the centre of the debtor's main interests nor a State in which the debtor has an establishment. The broad definition of "assets of the debtor" in the Legislative Guide might be noted; even though not applicable to all circumstances arising under the current text, it does provide a broad definition of what the reference to "assets" might include.

3. Subparagraph (h) may be a specific example of circumstances that could be covered more generally by subparagraph (e). The Working Group may recall that this subparagraph was originally added to the text as an alternative to restricting the draft text to recognition of judgments originating only from a main or non-main proceeding (see A/CN.9/829, para. 70). If subparagraph (h) can be regarded as a specific example of subparagraph (e), the substance of subparagraph (h) might be included in a guide to enactment, explaining the context in which a State that has enacted the Model Law might wish to interpret draft subparagraph (e).

Article 13 [10 bis]. Equivalent effect

[38] The Working Group agreed at its forty-ninth session (A/CN.9/870, para. 78) to retain this draft article and remove the square brackets.

Article 14 [12]. Severability

[39] Draft article 14 is based on article 14 of the draft Hague Conference text. At its forty-ninth session (A/CN.9/870, para. 80-81), the Working Group agreed to retain the draft article without square brackets.

Article 15 [13]. Provisional relief

[40] 1. The words in square brackets in the chapeau of paragraph 1 respond to some of the requests at the forty-ninth session to add various elements to the draft text (A/CN.9/870, para. 82). Paragraph 2 adopts the approach of the Model Law on provisional relief (art. 19), leaving it to domestic law to address that issue of procedure.

2. The Working Group may wish to consider how the suggestion made at the forty-ninth session (A/CN.9/870, para. 82) to provide additional examples of relief, including orders not addressed to any particular party, but rather in respect of assets, might be addressed in the draft article. The request to address the procedure for obtaining relief, including whether there would be a hearing, is not addressed on the basis that that is a matter of local law, which UNCITRAL texts typically do not cover (see, for example, art. 19 of the Model Law). The request to address requirements for notice is already covered by paragraph 2.

Additional matters

1. In response to a suggestion at the forty-ninth session that an article should be added to the draft text along the lines of article 12 of the draft Hague Conference text, the Working Group felt that it might be addressed in part by article 1, but could be considered further in its deliberations on the revised draft of this text. Article 12 of the draft Hague Conference text provides:

> 1. The procedure for recognition, declaration of enforceability or registration for enforcement, and the enforcement of the judgment are governed by the law of the requested States unless this Convention provides otherwise. The court addressed shall act expeditiously.

2. The court of the requested State shall not refuse the recognition or enforcement of a judgment under this Convention on the ground that recognition or enforcement should be sought in another State.

2. The first sentence of paragraph 1 would appear to be inappropriate for inclusion in a model law which, once enacted, becomes the law of the enacting State. The second sentence of paragraph 1, which echoes article 17, paragraph 3 of the Model Law, is not currently addressed in this draft text. The substance of paragraph 2 is also not addressed in this text, except to the extent it is covered by article 12, subparagraph (h).

D. Report of the Working Group on Insolvency Law on the work of its fifty-first session (New York, 10-19 May 2017)

(A/CN.9/903)

[Original: English]

I. Introduction

A. Facilitating the cross-border insolvency of multinational enterprise groups

1. At its forty-fourth session (December 2013), the Working Group agreed to continue its work on cross-border insolvency of multinational enterprise groups[1] by developing provisions on a number of issues, some of which would extend the existing provisions of the UNCITRAL Model Law on Cross-Border Insolvency and part three of the UNCITRAL Legislative Guide on Insolvency Law and involve reference to the UNCITRAL Practice Guide on Cross-Border Insolvency Cooperation. The Working Group discussed this topic at its forty-fifth (April 2014) (A/CN.9/803), forty-sixth (December 2014) (A/CN.9/829), forty-seventh (May 2015) (A/CN.9/835), forty-eighth (December 2015) (A/CN.9/864), forty-ninth (May 2016) (A/CN.9/870) and fiftieth (December 2016) (A/CN.9/898) sessions and continued its deliberations at the fifty-first session.

B. Recognition and enforcement of insolvency-related judgments

2. At its forty-seventh session (2014), the Commission approved a mandate for Working Group V to develop a model law or model legislative provisions providing for the recognition and enforcement of insolvency-related judgments.[2] The Working Group discussed this topic at its forty-sixth (December 2014) (A/CN.9/829), forty-seventh (May 2015) (A/CN.9/835), forty-eighth (December 2015) (A/CN.9/864), forty-ninth (May 2016) (A/CN.9/870) and fiftieth (December 2016) (A/CN.9/898) sessions and continued its deliberations at the fifty-first session.

C. Insolvency of micro, small and medium-sized enterprises (MSMEs)

3. At its forty-seventh session (2014), the Commission gave Working Group V a mandate to undertake work on the insolvency of MSMEs as a next priority, following completion of the work on facilitating the cross-border insolvency of multinational enterprise groups and recognition and enforcement of insolvency-related judgments.[3]

4. At its forty-ninth session (2016), the Commission clarified that the mandate of Working Group V with respect to the insolvency of MSMEs was to develop appropriate mechanisms and solutions, focusing on both natural and legal persons engaged in commercial activity, to resolve the insolvency of MSMEs. While the key insolvency principles and the guidance provided by the UNCITRAL Legislative Guide on Insolvency Law should be the starting point for discussions, the Working Group should aim to tailor the mechanisms already provided in the Legislative Guide

---

[1] A/CN.9/763, paras. 13-14; A/CN.9/798, para. 16; see the mandate given by the Commission at its forty-third session (2010): *Official Records of the General Assembly, Sixty-fifth Session, Supplement No. 17* (A/65/17, para. 259(a)).

[2] *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 155.

[3] *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 156.

to specifically address MSMEs and develop new and simplified mechanisms as required, taking into account the need for those mechanisms to be equitable, fast, flexible and cost efficient. The form the work might take should be decided at a later time based on the nature of the various solutions that were being developed.[4]

II. Organization of the session

5. Working Group V, which was composed of all States members of the Commission, held its fifty-first session in New York from 10-19 May 2017. The session was attended by representatives of the following States Members of the Working Group: Argentina, Austria, Brazil, Bulgaria, Burundi, Canada, Chile, China, Colombia, Czechia, Denmark, El Salvador, France, Germany, Greece, Indonesia, Israel, Italy, Japan, Kenya, Kuwait, Libya, Mexico, Namibia, Nigeria, Panama, Pakistan, Philippines, Poland, Republic of Korea, Romania, Russian Federation, Sierra Leone, Singapore, Spain, Sri Lanka, Switzerland, Thailand, United Kingdom of Great Britain and Northern Ireland and United States of America.

6. The session was attended by observers from the following States: Congo, Democratic Republic of Congo, Estonia, Iraq, Malta, Netherlands, Saudi Arabia, Syrian (Arab Republic) and Viet Nam.

7. The session was also attended by observers from the Holy See and the European Union.

8. The session was also attended by observers from the following international organizations:

(a) *Organizations of the United Nations system*: International Monetary Fund (IMF); World Bank; World Intellectual Property Organization (WIPO);

(b) *Invited inter-governmental organizations*: International Association of Insolvency Regulators;

(c) *Invited international non-governmental organizations*: American Bar Association (ABA), European Investment Bank (EIB), Fondation pour le Droit Continental (FDC), Grupo Latinoamericano de Abogados para el Derecho del Comercio Internacional (GRULACI), INSOL Europe, INSOL International, Instituto Iberoamericano de Derecho Concursal (IIDC), Inter-Pacific Bar Association (IPBA), International Bar Association (IBA), International Insolvency Institute (III), International Women's Insolvency and Restructuring Confederation (IWIRC), National Law Center for Inter-American Free Trade (NLCIFT), The European Law Students Association (ELSA), The Law Association for Asia and the Pacific (LAWASIA) and Union Internationale des Avocats (UIA).

9. The Working Group elected the following officers:

Chairman: Wisit Wisitsora-At (Thailand)

Rapporteur: Sanjay Rajaratnam (Sri Lanka)

10. The Working Group had before it the following documents:

(a) Annotated provisional agenda (A/CN.9/WG.V/WP.144);

(b) A note by the Secretariat on recognition and enforcement of insolvency-related judgments (A/CN.9/WG.V/WP.145);

(c) A note by the Secretariat on facilitating the cross-border insolvency of multinational enterprise groups (A/CN.9/WG.V/WP.146);

(d) A note by the Secretariat on the insolvency of micro, small and medium-sized enterprises (A/CN.9/WG.V/WP.147); and

[4] *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), para. 246.

(e) Comments by Canada on the draft model law on the recognition and enforcement of insolvency-related judgments (A/CN.9/WG.V/WP.148).

11. The Working Group adopted the following agenda:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Consideration of: (a) the insolvency of micro, small and medium-sized enterprises; (b) the cross-border recognition and enforcement of insolvency-related judgments; and (c) facilitating the cross-border insolvency of multinational enterprise groups.
5. Other business.
6. Adoption of the report.

III. Deliberations and decisions

12. The Working Group commenced its deliberations on the insolvency of micro, small and medium-sized enterprises on the basis of documents A/CN.9/WG.V/WP.147 and A/CN.9/WG.V/WP.121 and a number of presentations by States and other delegations. It then took up the cross-border recognition and enforcement of insolvency-related judgments on the basis of documents A/CN.9/WG.V/WP/145 and A/CN.9/WG.V/WP.148, followed by the cross-border insolvency of multinational enterprise groups on the basis of document A/CN.9/WG.V/WP.146. The Working Group completed its work by considering a revised text of the draft model law on the cross-border recognition and enforcement of insolvency-related judgments, as indicated in the deliberations and decisions of the Working Group reflected below.

IV. Insolvency of micro, small and medium-sized enterprises (A/CN.9/WG.V/WP.147 and A/CN.9/WG.V/WP.121)

13. The Working Group commenced its deliberations on the insolvency of micro, small and medium-sized enterprises (MSME) on the basis of documents A/CN.9/WG.V/WP.147 and A/CN.9/WG.V/WP.121 and a number of presentations by the delegations of the International Monetary Fund and the World Bank on the work they had undertaken in respect of MSME insolvency; by Japan and the Republic of Korea on their legislation specifically addressing MSME insolvency; and by a group of interested experts on a modular approach to the design of MSME insolvency regimes. Those presentations were made available on the dedicated Working Group V webpage on the UNCITRAL website: http://www.uncitral.org/uncitral/en/commission/working_groups/5Insolvency.html. Additional information on the approach to MSME insolvency in other States was provided by various delegations. The Working Group acknowledged the usefulness of the presentations to the manner in which its work might be taken forward and the issues to be covered.

14. Following discussion, the Working Group agreed that the UNCITRAL Legislative Guide on Insolvency Law (the Legislative Guide) provided an appropriate framework for structuring future work on this topic. That work could proceed by examining each of the topics addressed in the Legislative Guide and considering whether the treatment provided was appropriate and necessary for an MSME insolvency regime, building upon the brief outline provided in A/CN.9/WG.V/WP.121. If such treatment was not appropriate, consideration should be given to how it might need to be adjusted for MSME insolvency. Additionally, consideration should be given to issues not covered by the Legislative Guide that should nevertheless be addressed in an MSME insolvency regime. The Working

Group also expressed interest in considering how the modular approach might contribute to the arrangement of the elements required for an effective and efficient insolvency regime for MSMEs.

V. Cross-border recognition and enforcement of insolvency-related judgments (A/CN.9/WG.V/WP.145 and A/CN.9/WG.V/WP.148)

15. The Working Group next addressed the text on cross-border recognition and enforcement of insolvency-related judgments.

Preamble

Article 1. Scope of application; Article 2. Definitions

16. The Working Group agreed to defer its consideration of a possible preamble, the scope of application in article 1 and the definitions in draft article 2 until it had reviewed the remaining text of the draft model law.

Article 3 and 3 bis. International obligations of this State

17. The Working Group approved the substance of draft article 3.

18. It was suggested that a note along the lines of paragraph 93 in the Guide to Enactment and Interpretation of the Model Law on Cross-Border Insolvency (the Model Law), which explained that a provision along the lines of draft article 3 in the current text might not be required in all States, should be included in the guide to enactment for the current text. It was also suggested that that guide to enactment might clarify that binding legal obligations issued by regional economic integration organizations (REIOs) that were applicable in the member States of a REIO could be treated as obligations arising from an international treaty.

19. In respect of draft article 3 bis there was support for both retaining and deleting the article in its entirety and for retaining and deleting certain elements of it.

20. After discussion, it was agreed that paragraphs 1 bis and 2 of article 3 bis should be deleted. The relationship between article 3 and article 3 bis (consisting only of paragraph 1) was questioned and the Working Group agreed that paragraph 1 of article 3 bis should remain in square brackets pending further consideration and clarification of that relationship.

Article 4. Competent court or authority

21. The Working Group considered draft article 4 (WP.145) and the proposal for new article 4.1 (WP.148). With respect to the latter, concerns were raised that it did not include the reference in article 4 (WP.145) to “any other court before which the issue of recognition is raised as a defence or as an incidental question in the course of proceedings”, and that the use of the word “application” might be too narrow. After discussion, the drafting of article 4 (WP.145) was approved.

Article 5. Authorization to [seek recognition and enforcement of an insolvency-related judgment in a foreign State] [act in another States in respect of an insolvency-related judgment issues in this State]

22. As between the two phrases in square brackets, preference was expressed in favour of the second. Proposals to add the phrase “recognition of” after “with respect to” and to delete the final phrase “as permitted by the applicable foreign law” did not receive support. The Working Group approved the substance of draft article 5 with the second alternative text and without square brackets, and agreed to conform the title to those changes.

Article 6. Additional assistance under other laws

23. The Working Group approved the substance of draft article 6.

Article 7. Public policy exception

24. A proposal to add the words "including situations involving the infringement of the security or sovereignty of this State" to article 7 did not receive sufficient support, but it was agreed that the guide to enactment could clarify that those situations would be covered by the public policy exception. It was noted that, in any event, the interpretation of what was covered by public policy was a matter for the enacting State. The Working Group approved the substance of draft article 7.

Article 8. Interpretation

25. Although a proposal to delete the phrase "and the observance of good faith" was made, it did not receive sufficient support. It was observed that since the phrase was used in the Model Law and there was a close relationship between that text and the present text, its deletion might raise questions of interpretation and it would be preferable to maintain conformity between the two texts. The Working Group agreed to retain article 8 as drafted.

Article 9. Effect and enforceability of an insolvency-related [foreign] judgment in the originating State

26. Proposals were made to change "recognition and enforcement" at the beginning of paragraph 2 to "recognition or enforcement" and to add the words "recognition or" before the word "enforcement" at the end of that paragraph. Those proposals were accepted by the Working Group.

27. A question was raised as to whether the "review" in paragraph 2 referred to appellate review or review by the originating court. It was explained that in some jurisdictions, an originating court had a short period before an appeal to a higher court was made in which it could review its own judgment; once the appeal was launched, the lower court no longer had the ability to review its decision. After discussion, article 9 was approved with the revisions noted above and it was agreed that the guide to enactment would include some explanation of the notion of "review."

Article 10. Procedure for seeking recognition and enforcement of an insolvency-related [foreign] judgment

28. Various proposals were made with respect to paragraph 1: (a) to replace the first sentence with New Article [4] (Interest to bring an application) in A/CN.9/WG.V/WP.148 and to make clear the persons who might be entitled to apply for recognition and enforcement of an insolvency-related judgment; (b) to limit the persons able to seek recognition and enforcement to the insolvency representative and avoid reference to any "person entitled under the law of the originating State."; and (c) to retain the second sentence without square brackets and amend it to read: "The issue of recognition may also be raised as a defence or as an incidental question in the course of proceedings."

29. With respect to the proposals in (a) and (b) above, the reference to a "foreign representative or group representative" was not supported and it was agreed that the term "insolvency representative" should be retained. Although there was some support for including a reference to "a creditor whose interests are affected by the judgment", it was the view of the Working Group that they would be covered as a "person entitled under the law of the originating State" to seek recognition and enforcement. It was observed that the persons entitled to seek recognition and enforcement in the receiving State should mirror those entitled to do so in the originating State. After discussion, the proposals in (a) and (b) above did not receive sufficient support and the first sentence of paragraph 1 was retained as drafted. The proposals in (c) above were also agreed.

30. With respect to subparagraph 2(a), it was suggested that the guide to enactment should explain that the meaning of what constituted a "certified copy" should be determined by reference to the law of the State in which the judgment was issued.

31. With respect to subparagraph 2(c), various observations were made: firstly, that since the subparagraph addressed notification of the application, that notification could only be provided after the application had been made and therefore evidence of that notification could not be submitted with the application; secondly, in some legal systems, the notification of the making of the application was given by the court and the applicant would therefore not be in a position to provide the evidence required by subparagraph 2(c); and thirdly, it was not clear whether the standard for notification was that of the law of the originating State or the receiving State. Reference was made to draft article 15(1) of the most recent draft of the Hague Conference Special Commission on the Recognition and Enforcement of Foreign Judgments (the draft Hague Conference text) as a possible approach that might be followed. A question was raised as to the purpose of subparagraph 2(c), and the Working Group agreed that the aim of the provision was to ensure the rights of parties to be heard and to present arguments against recognition and enforcement of the judgment. It was suggested that drafting along the lines of "the court shall ensure that the party against whom relief is sought should be given the right to be heard on the application" could be included as a new paragraph to article 10 and that subparagraph 2(c) could be deleted. That approach was agreed and the Secretariat was requested to propose appropriate drafting.

32. Proposals to change the word "may" in paragraph 3 to "shall" and to delete "whether or not they have been legalized" in paragraph 4 were not taken up by the Working Group. With respect to the latter, the Working Group was of the view that since that phrase was in the existing Model Law and since it provided flexibility to enable the courts of the enacting State to rely upon the presumption or to refer to local rules in the event of any doubt as to the authenticity of documents, that phrase should be retained.

Article 11. Decision to recognize and enforce an insolvency-related [foreign] judgment

33. The Working Group approved the substance of draft article 11 with the deletion of the text in square brackets in subparagraph (d). There was no support to add a provision along the lines of paragraph 2 of New Article [4.2] (Notification of application and summary recognition where not contested) in A/CN.9/WG.V/WP.148. A question was raised as to whether the drafting of subparagraph (e), and in particular, the use of the words "do not apply", was appropriate or sufficiently clear.

Article 12. Grounds to refuse recognition and enforcement of an insolvency-related [foreign] judgment

34. Proposals were made to add new grounds for refusal of recognition based upon public policy and satisfaction of the judgment as set forth in subparagraphs (a.1) and (e.1) of Article [12] (Grounds to refuse recognition and enforcement of an insolvency-related judgment) in A/CN.9/WG.V/WP.148.

35. With respect to the proposal to add a new subparagraph (a.1), a number of suggestions were made: (a) to delete "manifestly"; (b) to adopt a different drafting solution making article 12 subject to article 7 along the lines of the approach of article 17 of the Model Law; and (c) to consider the relationship between subparagraph (a.1), article 9(1) and article 11(e), and whether the public policy question was sufficiently addressed by those other provisions.

36. There was no agreement to delete the word "manifestly". After further discussion, it was agreed that even though the references in articles 9 and 11 might be sufficient to address refusal on the basis of public policy, a further reference should be added at the beginning of the chapeau of article 12 along the lines of "Subject to article 7,".

37. The proposal to add a new subparagraph (e.1) did not receive sufficient support.

Subparagraph (a)

38. The Working Group approved the substance of subparagraph (a) as drafted.

Subparagraph (b)

39. To maintain consistency with the Hague Convention of 30 June 2005 on Choice of Court Agreements, it was suggested that the entire text of subparagraph (b) should be retained without square brackets. A different view was that the subparagraph should be retained without the text in the second set of square brackets to maintain consistency with the most recent draft Hague Conference text. After discussion, the Working Group agreed to remove the square brackets from around the entire subparagraph, and to delete "[in connection with a matter of procedure]".

Subparagraphs (c) and (d)

40. The Working Group approved the substance of subparagraphs (c) and (d) as drafted.

Subparagraph (e)

41. Several concerns were expressed including whether the reference to "the debtor's insolvency proceedings" included proceedings in both the enacting State and foreign proceedings, and how the subparagraph could be applied in a situation where there were competing insolvency proceedings. After discussion, there was strong support in the Working Group to retain the substance of subparagraph (e) as drafted.

Subparagraph (f)

42. It was noted that with the proposed revision of the definition of "insolvency-related judgment" in article 2, the cross-reference to subparagraph (e)(v) was no longer appropriate. Various proposals were made for revision of subparagraph (f), including: (a) to reproduce the content of subparagraph 2(e)(v) in subparagraph 12(f); (b) to delete the limitation and apply the requirement for adequate protection to all judgments to be covered by the draft instrument; and (c) to refer to the types of judgment to which the requirement for adequate protection might apply. It was recalled that there had been extensive discussion as to the judgments that would fall within the scope of subparagraph 12(f), and agreement had been reached on those referred to in subparagraph 2(e)(v). After discussion, it was agreed that the substance of subparagraph 2(e)(v) should be repeated in subparagraph 12(f), subject to conforming it to any revisions that might be agreed by the Working Group when it considered the definition of that term.

Subparagraph (g)

43. After extensive discussion and in order to maintain consistency with the approach in the most recent draft Hague Conference text, noting that if further changes were made to that text the issues might have to be reconsidered, the Working Group agreed that subparagraph (g)(i) should be redrafted as follows:

> "(g) The originating court did not satisfy one of the following conditions:
>
> "(i) The court exercised jurisdiction on the basis of the explicit consent of the party against whom the judgment was issued;
>
> "(i bis) The court exercised jurisdiction on the basis of the submission of the party against whom the judgment was issued, namely that the defendant argued on the merits before the court of origin without contesting jurisdiction within the timeframe provided in the law of the State of origin, unless it was evident that an objection to jurisdiction or to the exercise of jurisdiction would not have succeeded under that law;"

44. The Working Group approved the substance of subparagraphs (g)(ii) and (iii) as drafted.

Subparagraph (h)

45. Text to replace subparagraph (h) was proposed along the following lines:

> "(h) The judgment originates from a proceeding that is not recognizable under the [*insert a reference to the law of the enacting State giving effect to the Model Law on Cross-Border Insolvency*], unless:
>
> "(i) The insolvency representative of a proceeding that could have been recognized under the [*insert a reference to the law of the enacting State giving effect to the Model Law on Cross-Border Insolvency*] participated in the originating proceeding to the extent of engaging in the substantive merits of the claim to which those proceedings related; and
>
> "(ii) The *judgment* relates solely to assets that were located in the originating state at the time that proceeding commenced."

46. A concern was raised regarding the temporal application of "not recognizable", and in particular, how it would be interpreted where the relevant proceeding had concluded prior to the time recognition of the judgment was being considered. In response, it was suggested that that matter might be addressed in the guide to enactment, which would clarify that the drafting was intended to cover a proceeding that had not been, could not be, or could not have been recognized.

47. Another concern was whether the phrase "originates from a proceeding" was narrower than the phrase used in the previous version of subparagraph (h) (A/CN.9/WG.V/WP.145) "is related to an insolvency proceeding". In particular, it was questioned whether a judgment on an avoidance action issued by a court other than the court supervising the insolvency proceeding could be considered to "originate from" an insolvency proceeding; it would clearly have been covered by the phrase "related to an insolvency proceeding". In response, it was observed that there may be circumstances, particularly where there were a number of competing proceedings, in which it would not be clear which of those proceedings the judgment related to, but it would be clear from which proceeding it originated. On that basis, it was felt that the use of the term "originated from" was clearer and would save the court from having to consider the question of relationship.

48. A further issue concerned which proceeding was referred to in the first line of the chapeau. In response, it was noted that while it might be the insolvency proceeding or another proceeding, that distinction was not material for the purposes of the subparagraph. However, it was acknowledged that explanatory material could be included in the guide to enactment. After discussion, it was agreed that the issues raised should be noted, that there was support for the text as drafted, and that the paragraph could be reconsidered if a proposal for revision was made.

Article 13. Equivalent effect

49. The Working Group approved the substance of draft article 13.

Article 14. Severability

50. A proposal was made to replace "shall" with "may" in the draft article in order to provide better protection for creditors and more discretion and flexibility to the court. Although that proposal received some support, it was observed that the change proposed might not accomplish the protection sought; what might be required was language that conferred upon the court the power to enforce the severable part of a judgment on a conditional basis. It was noted that a court should not be able to refuse recognition or enforcement of one part of a judgment only on the basis that another part was not enforceable; the severable part should be treated no differently than a judgment that was not severable. It was also noted that articles 11 and 14 should contain the same mandatory language and it was further noted that the corresponding article of the most recent draft Hague Conference text also used the word "shall". It

was suggested that an approach along the lines of conditional enforcement under article 9 of the present text or the approach of article 22 of the Model Law providing for adequate protection of the interests of creditors and other interested parties might be relevant to this article.

51. After discussion, the Working Group approved the substance of draft article 14. Delegations were encouraged to make proposals relating to any additional language concerning the protection of creditors.

Article 15. Provisional relief

52. Reference was made to the proposal for New Article 4.3 (Interim Protective Relief) in A/CN.9/WG.V/WP.148 that would add express provision for ex parte relief and additional safeguards to article 15. Although there was some support for that proposal, it was observed that the combination of the chapeau of article 15 and paragraph 2 would already enable provisional relief to be sought on an ex parte basis, unless such relief was not permitted in the enacting State. In addition, it was felt that matters of notice were best left to the enacting State as provided in the present article 15 and article 19(2) of the Model Law.

53. A proposal was made to add the phrase "including whether notice would be required under this article" at the end of paragraph 2. After discussion, it was agreed that the question of notice should be addressed in accordance with domestic law, that paragraph 15(1) could encompass ex parte relief and that the proposed text should be added at the end of paragraph 2. Further, it was observed that the guide to enactment could also address the issue.

Article 16. Recognition of an insolvency-related [foreign] judgment under [*insert a cross-reference to the legislation of this State enacting article 21 of the Model Law on Cross-Border Insolvency*]

54. Preference was expressed in favour of Variant 1 with the deletion of the phrases "For greater certainty" and "insolvency-related [foreign]". In response to concerns about the relationship of article 16 to the Model Law, it was confirmed that its sole purpose was to affect the interpretation of article 21 of the Model Law and not to have any effect on the present text. If article 21 was interpreted by an enacting State to cover recognition and enforcement of a judgment as a form of discretionary relief, that relief would be subject to the applicable provisions of the Model Law.

55. As to placement of the provision, it was suggested that it might appear at the end of this text as an unnumbered optional provision with a heading along the lines of "States that have enacted legislation based upon the Model Law may wish to consider the following".

56. After discussion, a proposal was made that the draft article should be revised as follows:

> "*States that have enacted legislation based on the UNCITRAL Model Law on Cross-Border Insolvency will be aware of decisions which may have cast doubt on whether judgments can be recognized and enforced under article 21. States may therefore wish to consider enacting the following provision*:
>
> "*Article X. Recognition of an insolvency-related [foreign] judgment under [insert a cross-reference to the legislation of this State enacting article 21 of the Model Law on Cross-Border Insolvency*]
>
> "Notwithstanding any prior interpretation to the contrary, the relief available under [*insert a cross-reference to the legislation of this State enacting article 21 of the Model Law on Cross-Border Insolvency*] includes recognition and enforcement of a judgment."

57. Although some concern was expressed about the appropriateness of including such an article in this draft text, after discussion, there was support in the Working Group for the proposed text.

Preamble

58. The Working Group agreed that a preamble should be included in the draft text, and a proposal along the following lines was widely supported:

"The purpose of this Law is:

"(a) To create greater certainty for parties in regard to their rights and remedies for *enforcement* of insolvency-related judgments;

"(b) To avoid the duplication of proceedings;

"(c) To ensure timely and cost-effective recognition and enforcement of insolvency-related judgments;

"(d) To promote comity and cooperation between jurisdictions regarding insolvency-related judgments;

"(e) To protect and maximize the value of the insolvency estate; and

"(f) Where legislation based on the Model Law on Cross-Border Insolvency has been enacted, to complement that legislation."

Article 1. Scope of application

59. A proposal to add words to the following effect in paragraph 2 of article 1 was not supported:

"This Law is not intended to apply to the recognition and enforcement of judgments falling under the scope of the 1997 UNCITRAL Model Law on Cross-Border Insolvency."

60. It was indicated that paragraph 2 of article 1 was not intended to contain such material, based as it was upon the same paragraph of article 1 of the Model Law, which was designed to enable States to specify the types of proceeding to which the Model Law would not apply (with examples of such proceedings being provided in that text). It was also observed that to add such words might essentially eviscerate this model law, leaving little that could be subject to recognition under it. Another concern raised was how that proposed language would interact with the text of draft article 16 that had been agreed by the Working Group.

61. Such a limitation, it was suggested, would only have relevance for States that had enacted the Model Law, not States that had only enacted this model law. In the latter case, it was observed, there should be no such limitation to application of this model law. It was observed that this model law was not intended to be a supplement to the Model Law and recalled that the mandate of the Working Group was to develop a model law or model legislative provisions to provide for the recognition and enforcement of insolvency-related judgments, without any reference being made to the relationship of the text to be developed to the Model Law. It was also recalled that the Working Group had itself decided, at its forty-sixth session (2014), that the text should be developed as a stand-alone instrument, rather than forming part of the Model Law.

62. After discussion, a suggestion to add the text proposed in footnote 3 of A/CN.9/WG.V/WP.145 as a second paragraph to the preamble along the following lines received strong support:

"The purpose of this Law is not:

"(a) To displace other provisions of the law of this State with respect to recognition of insolvency proceedings that would otherwise apply to an insolvency-related judgment;

"(b) To replace legislation enacting the Model Law on Cross-Border Insolvency or limit the application of that legislation if it is interpreted as applying to the recognition and enforcement of an insolvency-related [foreign] judgment;

"(c) To apply to the recognition and enforcement in the enacting State of an insolvency-related judgment issued in the enacting State; or

"(d) To apply to the judgment commencing the insolvency proceedings to which the judgment is related."

63. The text of draft article 1 set forth in A/CN.9/WG.V/WP.145 was approved without change.

Article 2. Definitions

(a) "Insolvency proceeding"

64. The substance of the definition of "insolvency proceeding" was approved as drafted.

(b) "Insolvency representative"

65. The substance of the definition of "insolvency representative" was approved as drafted.

(c) "**Judgment**"

66. The Working Group agreed to delete the square brackets surrounding the definition; to delete the words "on the merits"; and to retain without the square brackets the text "or administrative authority, provided an administrative decision had the same effect as a court decision".

67. With respect to the final sentence of the definition concerning interim measures, there was support both for its retention and for its deletion. In support of its retention, it was observed that it was quite possible to have final judgments relating to interim measures issued in insolvency proceedings, as well as pre-trial judgments that were properly insolvency-related. Moreover, the nature of insolvency proceedings often required provisional measures to be issued to protect the insolvency estate and the collective interests of creditors and speed was often a necessity; providing for cross-border recognition of such measures would be of assistance to the insolvency proceedings. In support of deletion, it was observed that such judgments were often issued ex parte and many, such as orders preserving the status quo, could not be considered to be final judgments and thus were not intended to be the subject of foreign recognition. After discussion, the prevailing view was that the sentence should be retained, but revised to read "An interim measure of protection should not be considered to be a judgment for the purposes of this Law."

(d) "Insolvency-related [foreign] judgment"

68. The Working Group agreed that the defined term should be "insolvency-related foreign judgment". The Working Group considered that definition on the basis of the various elements contained in the draft text set forth in A/CN.9/WG.V/WP.145 and the proposed text in A/CN.9/WG.V/WP.148. There was insufficient support in the Working Group to replace subparagraphs (i), (ii) and (iii) of the definition in A/CN.9/WG.V/WP.145 with the chapeau proposed in A/CN.9/WG.V/WP.148. With respect to subparagraph (i) (WP.145), a proposal was made that the words "Is related to" were too broad and should be replaced with the phrase "derives directly from or is closely connected to" an insolvency proceeding. It was noted that because that formulation was used in the European Union and was the subject of substantial interpretative jurisprudence by the European Court of Justice, it established an appropriate standard for the current instrument. Support was expressed, however, in favour of retaining the phrase "Is related to" on the basis that the proposed language was too narrow and that following that jurisprudence might not be appropriate for other jurisdictions not subject to that jurisprudence. After discussion, there was support to retain both formulations in the text in square brackets as optional alternatives for States to choose between and for including an explanation of both alternatives in the guide to enactment.

69. In relation to the definition proposed in A/CN.9/WG.V/WP.148, it was mentioned that it was aimed at ensuring a predictable and simple determination of whether a judgment was covered or not, which was consistent with an expedited recognition and enforcement regime. It was further mentioned that such a definition would facilitate implementation of the text in developing countries.

70. With respect to subparagraph (ii) (WP.145), there was general agreement that the words "[on or]" should be retained and the square brackets removed. With respect to subparagraph (iii) (WP.145), it was generally agreed that the words "[interests of the]" could be deleted without affecting the substance of the subparagraph.

71. A concern was expressed that the cumulative effect of subparagraphs (i), (ii) and (iii) might be to exclude judgments relating to an insolvency proceeding issued after the proceeding had concluded. For example, in some jurisdictions avoidance actions may be pursued after the confirmation of a reorganization plan, which was to be considered conclusion of the proceedings; judgments relating to those avoidance actions should be covered by the present instrument. In order to address that concern, text along the following lines was proposed: "Subparagraphs (i), (ii) and (iii) shall apply irrespective of whether or not the proceeding to which the judgment is related has been concluded." That proposal was agreed and the Secretariat was requested to consider the appropriate placement for its inclusion.

72. The Working Group considered the exclusions provided in subparagraphs (a) to (e) of the text proposed in A/CN.9/WG.V/WP.148. After discussion, there was insufficient support for including the text proposed in those subparagraphs. The Working Group agreed to place the examples set out in footnote 9 of A/CN.9/WG.V/WP.145 in the guide to enactment.

73. A question was raised as to whether paragraph 2 of the definition might need to be extended to exclude other judgments, such as the judgment appointing an insolvency representative. In response, it was observed that recognition of the order appointing the insolvency representative was often a critical factor in demonstrating that the insolvency representative had standing to apply for recognition and enforcement of the judgment and should thus be covered by the definition. After discussion, paragraph 2 was retained as drafted.

Title

74. The Working Group agreed that the title of the draft text should be "Model Law on Cross-Border Recognition and Enforcement of Insolvency-Related Judgments".

Further consideration of the draft model law

75. The Working Group considered a revision of the draft model law reflecting the decisions taken earlier in the session. Amendments were only proposed in respect of the following articles; other provisions were adopted without comment.

Preamble

76. The Working Group agreed to number the two purpose paragraphs and to delete in the second paragraph (b) the phrase "if it is interpreted as applying to the recognition and enforcement of an insolvency-related [foreign] judgment".

Article 2. Definitions

77. In respect of paragraph (d)(i), a proposal was made to replace the two alternative texts with the following: "stems intrinsically from or is materially associated with". After discussion, it was agreed that that proposal should be added to the text as a third alternative in square brackets.

Article 3. International obligations of this State

78. The Working Group agreed to remove the square brackets around paragraph 2 and retain the text.

Article 13. Grounds to refuse recognition and enforcement of an insolvency-related [foreign] judgment

79. The Working Group agreed to delete the phrase "be inconsistent" in paragraph (e) and replace it with "conflict".

80. With respect to paragraph (f), a proposal was made to adjust the existing text as follows:

> "The judgment determines whether:
>
> > "(i) An asset is part of, should be turned over to, or was properly disposed of by the insolvency estate;
> >
> > "(ii) A transaction involving the debtor or assets of its insolvency estate should be avoided because it upset the principle of equitable treatment of creditors or improperly reduced the value of the estate; or
> >
> > "(iii) A plan of reorganization or liquidation should be confirmed, a discharge of the debtor or of a debt should be recognized, or a voluntary or out-of-court restructuring agreement should be approved;
> >
> > "and the interests of creditors and other interested persons, including the debtor, were not adequately protected in the proceeding in which the judgment was issued."

81. Concerns were expressed that such an approach would be problematic in that it would allow re-litigation of many bilateral disputes. The Working Group agreed to place proposed subparagraphs (i) and (ii) in square brackets in paragraph (f).

82. The Working Group preferred Variant 1 of the chapeau of paragraph (h), and supported adding the words "State whose" between "a" and "proceeding", and deleting the word "that" after "proceeding"; deleting Variant 2; and deleting the square brackets around the words "is or" in paragraph (h)(i).

Article 14. Equivalent effect

83. A proposal was made to replace the phrase "has in the originating State" in paragraph 1 with the phrase "would have had if it had been issued by a court of this State". Since some jurisdictions adopted the approach of exporting the effect given to a judgment in the originating State, as reflected in the existing text, while others adopted the approach in the proposed text, the Working Group agreed to include both texts in square brackets for further consideration.

Article X. Recognition of an insolvency-related [foreign] judgment under [*insert a cross-reference to the legislation of this State enacting article 21 of the Model Law on Cross-Border Insolvency*]

84. The Working Group agreed to replace the word "decisions" in the introductory text before the article with the word "judgments". A proposal to delete the phrase "Notwithstanding any prior interpretation to the contrary" did not receive sufficient support.

85. The Working Group agreed that the draft text would be revised to reflect the changes noted above and attached as an annex to this report.

VI. Facilitating the cross-border insolvency of multinational enterprise groups (A/CN.9/WG.V/WP.146)

[Part A]

Chapter 1. General provisions

Preamble

86. The Working Group approved the substance of the preamble as drafted.

Article 1. Scope

87. The Working Group agreed to remove the square brackets and to add the phrase "and the conduct and administration of insolvency proceedings" from footnote 3 after the word "cooperation" in article 1. With that change, the Working Group approved the substance of article 1.

Article 2. Definitions

(a) "Enterprise"; (b) "Enterprise group"; (c) "Control"; (d) "Enterprise group member"; (e) "Group Representative"

88. The Working Group approved the substance of the definitions as drafted.

(f) "Group insolvency solution"

89. In subparagraph (ii), the Working Group expressed a preference for the second text in square brackets, replacing "and" with "or", and agreed to delete the other text in square brackets. Further, there was agreement to delete subparagraph (iii) in line with the suggestion in footnote 6. With those adjustments, the Working Group approved the substance of the definition.

(g) "Planning proceeding"

90. The Working Group approved the substance of the definition as drafted.

Additional definitions

91. The Working Group agreed that no additional definitions were needed at this time, but that they might become necessary at a later stage, for example, in respect of the terms "insolvency representative" and "foreign court".

Article 2 bis. Jurisdiction of the enacting State

92. The Working Group agreed to remove the square brackets around article 2 bis, to delete "[to any extent]" in subparagraph (b), and to move the last sentence of subparagraph (c) to become a separate subparagraph (d) along the following lines: "(d) Create an obligation to commence insolvency proceedings in this State when there is no obligation to commence such proceedings." With those amendments, the Working Group approved the substance of article 2 bis.

Article 2 ter. Public policy exception; Article 2 quater. Competent court or authority

93. The Working Group approved the substance of the articles as drafted.

Chapter 2. Cooperation and coordination

Article 3. Cooperation and direct communication between a court of this State and foreign courts, foreign representatives and a group representative

94. The Working Group approved the substance of the article as drafted.

Article 4. Cooperation to the maximum extent possible under article 3

95. The Working Group agreed to move the phrase "for the purposes of article 3" to the beginning of the chapeau and to delete subparagraph (f) with a view to including its content in chapter 5. With those changes, the Working Group approved the substance of article 4.

Article 5. Limitation of the effect of communication under article 3

96. The Working Group agreed to refer to "the court" rather than "each court" and to insert the phrase "With respect to communication under article 3" at the beginning of article 5(1). With those amendments, the Working Group approved the substance of article 5.

Article 6. Coordination of hearings

97. The Working Group agreed to change "each court" in article 6(2) and (3) to "the court", and in order to clarify who was to reach agreement, to insert "the parties" before "reaching" and the phrase "and the court approving that agreement" at the end of subparagraph 2. With those changes, the Working Group approved the substance of the article.

Article 7. Cooperation and direct communication between a group representative, foreign representatives and foreign courts

98. The Working Group agreed to delete the phrase in square brackets at the beginning of article 7(1), and to include in a guide to enactment a reference to coordination and cooperation between the group representative and an insolvency representative appointed in other proceedings in the State of the planning proceeding. With that amendment, the Working Group approved the substance of article 7.

Article 7 bis. Cooperation and direct communication between a [*insert the title of a person or body administering a reorganization or liquidation with respect to an enterprise group member under the law of the enacting State*]**, foreign courts, foreign representatives and a group representative**

99. The Working Group agreed to delete the phrase in square brackets at the beginning of article 7 bis(1), and with that change, the Working Group approved the substance of the article.

Article 8. Cooperation to the maximum extent possible under articles 7 and 7 bis

100. The Working Group approved the substance of article 8 as drafted.

Article 9. Authority to enter into agreements concerning the coordination of proceedings

101. The Working Group agreed that the article should be drafted to identify the party authorized to enter into agreements concerning coordination proceedings along the following lines: "A [*insert the title of a person or body administering a reorganization or liquidation with respect to an enterprise group member under the law of the enacting State*] may enter into an agreement concerning the coordination of proceedings involving two or more enterprise group members located in different States, including where a group insolvency solution is being developed."

Article 10. Appointment of a single or the same insolvency representative

102. Since it was not an uncommon practice for the appointment referred to in the draft article to be of more than one individual, it was suggested that that point could be addressed in the guide to enactment. If a definition of insolvency representative were to be added to the text, along the lines specified in paragraph 12(v) of the Legislative Guide, the use in that definition of the phrase "person or body" might be sufficient to address that point. Alternatively, it might be clarified as appropriate that references to the singular in the text also referred to the plural. The Working Group approved the substance of article 10.

Chapter 3. Conduct of a planning proceeding in this State

Article 11. Participation by enterprise group members in a proceeding under [*identify laws of the enacting State relating to insolvency*]

103. The Working Group agreed to retain the term "prohibits" in paragraph 2 without square brackets and to delete "[precludes]".

104. Concern was expressed as to the relationship between articles 11 and 12 and the point at which the elements of the definition of "planning proceeding" in article 2 would become applicable. It was explained that article 11 was intended to refer only to the commencement of a main proceeding with respect to at least one group member

in the enacting State in which other group members might participate with a view to, inter alia, developing a group insolvency solution. Such a proceeding did not necessarily become a planning proceeding under article 12 unless required and then only provided that the elements of article 2(g) were fulfilled. As such, it was suggested that article 11 might be better located in chapter 2 as an additional tool for cooperation, with the addition of the word "including" in the closing phrase of paragraph 1 to indicate that the development of a group insolvency solution was only one possible result of the participation referred to.

105. After extensive discussion and a number of different proposals, the Working Group agreed to move article 11 into chapter 2 and add the word "including" in paragraph 1 as indicated above.

106. A question was raised as to whether article 11 addressed the participation of a group member that had its centre of main interests (COMI) in the enacting State. It was explained that paragraph 1 was the general provision with respect to participation by any other group member wherever located; the qualification "subject to paragraph 2" meant that the limitations in paragraphs 2 and 3 applied only in the case of group members with their COMI located in another State.

Article 12. Appointment of a group representative

107. To further clarify the relationship between articles 11 and 12 and to reflect the definition of "planning proceeding" in article 2(g), it was proposed that paragraph 1 be revised along the following lines: to substitute for the phrase after the words "in article 11" the phrase "and the requirements of article 2(g) are otherwise met, the court may appoint a group representative, by which the proceeding becomes a planning proceeding." There was support in the Working Group for that proposal.

108. A question was raised as to the procedure for appointment of a group representative and whether that representative could be the same person as the insolvency representative of the COMI proceeding. It was observed that in practice they were very often the same person, but that there were circumstances in which the tasks of the insolvency representative and of the group representative might be different. In terms of the text, it was noted that with respect to substantive articles such as those dealing with relief, it would be important to ensure that the correct officeholder was referenced. As to article 12(2), it was intended that the procedure for appointment of the group representative was left to the law of the enacting State, as different laws adopted different approaches to that issue.

109. Another question concerned the powers of the group representative. It was noted that the group representative was authorized under article 12 to take various actions with respect to the planning proceeding, but since the COMI proceeding could become the planning proceeding, it was unclear whether the group representative was also authorized to act with respect to the COMI proceeding. In response, it was explained that the group representative's focus was to act as a representative of the planning proceeding, in keeping with articles 2(e) and 12, in order to develop and implement a group insolvency solution.

Article 13. Relief available to a planning proceeding

110. The Working Group agreed: (a) in respect of the chapeau of paragraph 1, to replace "and" with "or" and to retain the text but remove all of the square brackets; (b) in paragraph (c), to delete "temporarily" and to retain "insolvency" without square brackets; and (c) to delete the square brackets and retain the text in paragraph (g).

111. The Working Group agreed to delete the first alternative text and to retain the second alternative text in paragraph 2 without square brackets.

112. In response to a query as to the meaning of the phrase "subject to insolvency proceedings", it was clarified that it referred to the group member in respect of which the proceeding referred to in article 11(1) had commenced. The Working Group agreed that the distinction between group members that were "subject to" or

"participating in" insolvency proceedings should be carefully considered in the articles in which those phrases were used and that the distinction should be explained in the guide to enactment.

Chapter 4. Recognition of a foreign planning proceeding and relief

Article 14. Application for recognition of a foreign planning proceeding

113. With respect to paragraph 2, after extensive discussion, the prevailing view was that the requirements should be as simple as possible and that an application for recognition should be accompanied by evidence of the appointment of the group representative: in subparagraph (a), a certified copy of the decision appointing; in subparagraph (b), a certificate affirming the appointment; or in subparagraph (c), any other evidence of that appointment. The Secretariat was requested to redraft paragraph 2 to reflect that view, ensuring that subparagraphs (a), (b) and (c) were drafted in the alternative.

114. In respect of paragraph 3(a), it was agreed that the second sentence should be deleted. It was also agreed that paragraph 3(b) should be retained without square brackets.

Article 15. Interim relief that may be granted upon application for recognition of a foreign planning proceeding

115. The Working Group agreed that the text of the chapeau of paragraph 1 and the text of paragraph 1(c) should be conformed to the corresponding parts of article 13.

116. With respect to paragraph 1(e), concern was expressed that it might not be appropriate for the group representative to be entrusted with the task set out in that paragraph. It was suggested that, in the first instance, it should be entrusted to the insolvency representative appointed to proceedings in the receiving State, provided that person had the capacity or ability to perform the task; only where that was not the case could it be entrusted to the group representative. Various drafting proposals were made to address that concern. After discussion, a proposal to address the drafting along the following lines received support: "In order to protect and preserve the value of assets that, by their nature or because of other circumstances, are perishable, susceptible to devaluation, or otherwise in jeopardy, entrusting the administration or realization of all or part of the enterprise group member's assets located in this State to an insolvency representative appointed in this State. Where that insolvency representative is not able to administer or realize all or part of the enterprise group member's assets located in this State, the group representative or another person designated by the court may be entrusted with that task."

117. Although there was a proposal to delete paragraph 1(g), the prevailing view was that it should be retained.

118. The Working Group agreed to replace the two alternative texts in square brackets in paragraph 4 with text along the following lines: "Relief under this article may not be granted with respect to the assets and operations located in this State of any group member participating in a planning proceeding if that group member would not be eligible for commencement of insolvency proceedings in the State in which its COMI is located." There was some support for that proposal, and also for retaining the first alternative bracketed text. Some support was also expressed for an additional suggestion to add to that first alternative text along the following lines: "unless not commencing insolvency proceedings was a part of the proposals being developed in the planning proceeding". After discussion, the Working Group agreed to retain the first alternative text without the brackets (and to delete the second alternative) as a basis for further consideration at a future time, and to retain the phrase in square brackets "[in any jurisdiction]".

119. The Working Group agreed to retain in paragraph 5 the second alternative text without square brackets, and to delete the first alternative text.

Article 16. Decision to recognize a foreign planning proceeding

120. A question was raised as to whether changes in the status of the planning proceeding referred to in paragraph 4 would include changes relating to the status of the participating group members and changes that might bear upon the relief granted on the basis of recognition (as noted in paragraph 168 of the Guide to Enactment and Interpretation of the Model Law with respect to article 18). It was also queried why the draft article did not mirror the content of article 18 of the Model Law. Various proposals were made to revise paragraph 4 as follows: (a) to add the word "substantial" or "material" before the word "changes"; (b) to add to the end of the paragraph "and changes that might bear upon the relief granted on the basis of recognition"; and (c) to place paragraph 4 in a separate article. After discussion, the Working Group agreed to place the changes suggested in (a) and (b) in square brackets for discussion at a future time.

Article 17. Relief that may be granted upon recognition of a foreign planning proceeding

121. The Working Group agreed that the text of the chapeau of paragraph 1 and the text of paragraph 1(d) should be conformed to the corresponding parts of articles 13 and 15. The Working Group also agreed that the references "[or at any time thereafter]" and "or […]" in the chapeau of paragraph 1 could be deleted. Further, the reference in footnote 42 to the interpretation of the words "upon recognition" in article 21 of the Model Law should be included in the guide to enactment.

122. It was further agreed that paragraphs 1(f) and 2 should be conformed with the Working Group's decision on article 15(1)(e), that paragraph 3 should be conformed with article 15(4), and that article 15(4) should also be added to article 13. A proposal to insert in article 17 a paragraph along the lines of the text agreed in respect of article 15(5) was supported.

123. With respect to paragraph 1(i), there was support for a proposal that the cross-reference to article 19 was unnecessary. A further proposal was to add the cross-reference "pursuant to article 21(1)" at the end of the paragraph or to add the words "pursuant to a commitment made under article 21" before the word "approving".

124. After discussion, a proposal to delete paragraph 1(i) and to deal with that issue in article 21 (and possibly article 22) was supported.

Article 18. Participation of a group representative in a proceeding under [*identify laws of the enacting State relating to insolvency*]

125. Although there were suggestions to retain the text in square brackets at the end of the article, the prevailing view was that it should be deleted. It was observed that deletion of that text would not prevent an enacting State from allowing such participation in accordance with its law.

Article 19. Protection of creditors and other interested persons

126. To resolve a concern about the need to identify the specific articles in the cross-reference, a drafting proposal along the following lines was made to replace the opening phrase before "the court must" with: "In granting, denying, modifying or terminating relief under this Law". That proposal received support and it was agreed that in paragraphs 2 and 3, the references to articles 15 and 17 should be replaced with "under this Law". It was noted that, since article 21(2) was not designated as a form of relief, its reference to article 19 should be retained.

Article 20. Approval of local elements of a group insolvency solution

127. A proposal was made to clarify the application of paragraphs 4 and 5 as follows:

(a) To replace paragraph 4 with text along the following lines: "Nothing in this article requires the commencement of a proceeding if unnecessary to implement the portion of a group insolvency solution affecting a group member."; and

(b) To add text along the following lines to the end of paragraph 5: "and to request additional assistance under other laws of this State for implementing the group solution."

128. Although some support was expressed for that proposal, support was also expressed in favour of retaining the text as drafted. It was agreed that for future consideration, the proposed text should be added in square brackets to the draft, and square brackets should be placed around the current text of paragraph 4.

129. Following further discussion, the Working Group agreed to insert for future discussion additional text along the following lines:

> "[4. Where a group solution affects a group member participating in the planning proceeding that has its centre of main interests or establishment in this State and no proceeding under [*identify the laws of the enacting state relating to insolvency*] has commenced in this State or article 21 applies, no such proceeding needs to be commenced if unnecessary to implement the portion of the group insolvency solution affecting the group member.]
>
> "[4 bis. Where a group solution affects a group member participating in the planning proceeding that has its centre of main interests or establishment in this State and no proceeding under [*identify the laws of the enacting state relating to insolvency*] has commenced in this State or article 21 applies, the group representative may request additional assistance under other laws of this State to implement the portion of the group insolvency solution affecting the group member.]"

Chapter 5. Treatment of foreign claims

Article 21. Commitment to and approval of the treatment of foreign claims in accordance with applicable law: non-main proceedings

130. Concerns were expressed that because the group representative did not necessarily represent an insolvency estate (unless the group representative and the insolvency representative of the underlying COMI proceeding were the same person), permitting the group representative to make the commitment referred to in paragraph 1 might not be appropriate. Preference was expressed in favour of deleting any reference to the group representative in paragraph 1. Although some support was expressed in favour of that proposal, it was also noted that since the goal of the text was to create a new framework in which the group representative would have some authority, removing that reference in paragraph 1 would effectively reduce the value of the text. There was support for a proposal to require the commitment to be given jointly by the insolvency representative appointed in the main proceeding and the group representative, where such a representative was appointed and was a person different to the insolvency representative. It was felt that such a requirement would address concerns that the group representative did not represent any particular insolvency estate that could provide the assets necessary to support the undertaking.

131. In response to concerns that the drafting was confusing, it was clarified that the main proceeding and the non-main proceeding referred to in paragraph 1 were proceedings relating to the same debtor.

132. A question was raised as to the meaning of "treatment" and it was suggested that article 36 of the European Insolvency Regulation might provide some text to clarify that issue.

133. A number of proposals were made to revise paragraph 1 to address the concerns raised and to provide greater clarity. After extensive discussion, support was expressed by the Working Group in favour of a text for article 21 that included elements along the following lines:

> "To facilitate the treatment of claims that could otherwise be brought by a creditor in a non-main proceeding for an enterprise group member in another State, an insolvency representative of an enterprise group member appointed in the main proceeding taking place in this State may jointly with a group

representative (if any) where another person has been appointed to that role, commit to, and the court in this State may approve, providing that creditor with the treatment in this State that they would have received in a non-main proceeding in that other State. Such undertaking shall be subject to the formal requirements, if any, of this State and shall be enforceable and binding on the insolvency estate."

134. There was some support for retaining the cross reference to article 19 in paragraph 2, although there was concern that the redrafting of article 19 made the cross reference too general. In response, it was observed that the court referred to in paragraph 2 could only be concerned about the creditors located within its jurisdiction, which should be sufficiently specific. Recalling the agreement to address the issue raised in article 17(1)(i) in the context of article 21 (and possibly article 22), it was agreed that appropriate text should be added to paragraph 2. It was also agreed that further consideration needed to be given to the linkage with article 21, and in particular the words "a commitment made under paragraph 1". The Working Group agreed that paragraph 2 should be a separate article, as it addressed a different court to the court referred to in paragraph 1, and that the heading of article 21 needed to be revisited in light of the agreed changes.

135. The Secretariat was requested to provide a revised text of article 21 for future consideration by the Working Group.

[Part B]

Supplemental provisions

Article 22. Commitment to and approval of the treatment of foreign claims in accordance with applicable law: main proceedings

136. It was recalled that while article 21 dealt with the same debtor, article 22 might potentially address the treatment of creditors of different debtors in a group context. Although it was suggested that the changes made to article 21(1) should be reflected in article 22(1), the Working Group was reminded that as a supplemental provision, article 22 was intended to expand upon article 21 and provide solutions for those States wanting greater flexibility than provided in article 21. Accordingly, the changes made to article 21 did not need to be reflected in article 22. After discussion, the Working Group agreed to retain the text of paragraph 1 and delete the square brackets around the second sentence, to reconsider the heading, and to make paragraph 2 a separate article. As noted above, appropriate text should be added to paragraph 2 to address the issue raised in article 17(1)(i).

137. A question was raised as to which insolvency estate was being referred to in the second sentence, and the matter was left for future consideration by the Working Group.

Article 23. Additional relief

138. There was support to change the words "where a group representative has made a commitment under article 21 or 22" in paragraph 1 to "where a commitment under article 21 or 22 has been made" and to delete the text in both sets of square brackets in paragraph 2.

Annex

Draft model law on cross-border recognition and enforcement of insolvency-related judgments: revised text

Preamble

1. The purpose of this Law is:

(a) To create greater certainty for parties in regard to their rights and remedies for enforcement of insolvency-related judgments;

(b) To avoid the duplication of proceedings;

(c) To ensure timely and cost-effective recognition and enforcement of insolvency-related judgments;

(d) To promote comity and cooperation between jurisdictions regarding insolvency-related judgments;

(e) To protect and maximize the value of the insolvency estate; and

(f) Where legislation based on the Model Law on Cross-Border Insolvency has been enacted, to complement that legislation.

2. The purpose of this Law is not:

(a) To displace other provisions of the law of this State with respect to recognition of insolvency proceedings that would otherwise apply to an insolvency-related judgment;

(b) To replace legislation enacting the Model Law on Cross-Border Insolvency or limit the application of that legislation;

(c) To apply to the recognition and enforcement in the enacting State of an insolvency-related judgment issued in the enacting State; or

(d) To apply to the judgment commencing the insolvency proceedings to which the judgment is related.

Article 1. Scope of application

1. This Law applies to the recognition and enforcement of an insolvency-related judgment issued in a proceeding taking place in a State that is different from the State where recognition and enforcement are sought.

2. This Law does not apply to [...].

Article 2. Definitions

For the purposes of this Law:

(a) “Insolvency proceeding” means a collective judicial or administrative proceeding, including an interim proceeding, pursuant to a law relating to insolvency in which proceeding the assets and affairs of a debtor are or were subject to control or supervision by a court for the purpose of reorganization or liquidation;

(b) “Insolvency representative” means a person or body, including one appointed on an interim basis, authorized in an insolvency proceeding to administer the reorganization or the liquidation of the debtor’s assets or affairs or to act as a representative of the insolvency proceeding;

(c) “Judgment” means any decision, whatever it may be called, issued by a court or administrative authority, provided an administrative decision has the same effect as a court decision. For the purposes of this definition, a decision includes a decree or order, and a determination of costs and expenses by the court. An interim measure of protection is not to be considered a judgment for the purposes of this Law;

(d) "Insolvency-related foreign judgment" means a judgment that:

(i) [Is related to] [Derives directly from or is closely connected to] [Stems intrinsically from or is materially associated with] an insolvency proceeding;

(ii) Was issued on or after the commencement of the insolvency proceeding to which it is related; and

(iii) Affects the insolvency estate;

and subparagraphs (i), (ii) and (iii) shall apply irrespective of whether or not the proceeding to which the judgment is related has been concluded.

For the purposes of this definition:

1. An "insolvency-related foreign judgment" includes a judgment issued in a proceeding in which the cause of action was pursued by:

(a) A creditor with approval of the court, based upon the insolvency representative's decision not to pursue that cause of action; or

(b) The party to whom it has been assigned by the insolvency representative in accordance with the applicable law;

and the judgment on that cause of action would otherwise be enforceable under this Law; and

2. An "insolvency-related foreign judgment" does not include a judgment commencing an insolvency proceeding.

Article 3. International obligations of this State

1. To the extent that this Law conflicts with an obligation of this State arising out of any treaty or other form of agreement to which it is a party with one or more other States, the requirements of the treaty or agreement prevail.

2. This Law shall not apply to a judgment where there is a treaty in force concerning the recognition or enforcement of civil and commercial judgments (whether concluded before or after this Law comes into force), and that treaty applies to the judgment.

Article 4. Competent court or authority

The functions referred to in this Law relating to recognition and enforcement of an insolvency-related foreign judgment shall be performed by [*specify the court, courts, authority or authorities competent to perform those functions in the enacting State*] and by any other court before which the issue of recognition is raised as a defence or as an incidental question in the course of proceedings.

Article 5. Authorization to act in another State in respect of an insolvency-related judgment issued in this State

A [*insert the title of the person or body administering a reorganization or liquidation under the law of the enacting State*] is authorized to act in another State with respect to an insolvency-related judgment issued in this State, as permitted by the applicable foreign law.

Article 6. Additional assistance under other laws

Nothing in this Law limits the power of a court or a [*insert the title of the person or body administering a reorganization or liquidation under the law of the enacting State*] to provide additional assistance to a foreign insolvency representative under other laws of this State.

Article 7. Public policy exception

Nothing in this Law prevents the court from refusing to take an action governed by this Law if the action would be manifestly contrary to the public policy, including the fundamental principles of procedural fairness, of this State.

Article 8. Interpretation

In the interpretation of this Law, regard is to be had to its international origin and to the need to promote uniformity in its application and the observance of good faith.

Article 9. Effect and enforceability of an insolvency-related foreign judgment in the originating State

1. An insolvency-related foreign judgment shall be recognized only if it has effect in the originating State and shall be enforced only if it is enforceable in the originating State.

2. Recognition or enforcement of an insolvency-related foreign judgment may be postponed or refused if the judgment is the subject of review in the originating State or if the time limit for seeking ordinary review in that State has not expired. In such cases, the court may also make recognition or enforcement conditional on the provision of such security as it shall determine.

Article 10. Procedure for seeking recognition and enforcement of an insolvency-related foreign judgment

1. An insolvency representative or other person entitled under the law of the originating State to seek recognition and enforcement of an insolvency-related judgment may seek recognition and enforcement of that judgment in this State. The issue of recognition may also be raised as a defence or as an incidental question in the course of proceedings.

2. When recognition and enforcement of an insolvency-related foreign judgment is sought under paragraph 1, the following shall be submitted to the court:

(a) A certified copy of the insolvency-related foreign judgment;

(b) Any documents necessary to establish that the insolvency-related foreign judgment has effect and is enforceable in the originating State, including information on any current review of the judgment; and

(c) In the absence of evidence referred to in subparagraphs (a) and (b), any other evidence on those matters acceptable to the court.

3. The court may require translation of documents submitted pursuant to paragraph 2 into an official language of this State.

4. The court is entitled to presume that documents submitted pursuant to paragraph 2 are authentic, whether or not they have been legalized.

5. The court shall ensure that the party against whom relief is sought should be given the right to be heard on the application.

Article 11. Provisional relief

1. From the time recognition and enforcement of an insolvency-related foreign judgment is sought until a decision is made, where relief is urgently needed to preserve the possibility of recognizing and enforcing an insolvency-related foreign judgment, the court may, at the request of an insolvency representative or other person entitled to seek recognition and enforcement under article 10, paragraph 1, grant relief of a provisional nature, including:

(a) Staying the disposition of any assets of any party or parties against whom the insolvency-related foreign judgment has been issued; or

(b) Granting other legal or equitable relief, as appropriate, within the scope of the insolvency-related foreign judgment.

2. [*Insert provisions (or refer to provisions in force in the enacting State) relating to notice, including whether notice would be required under this article*.]

3. Unless extended by the court, relief granted under this article terminates when a decision on recognition and enforcement of the insolvency-related foreign judgment is made.

Article 12. Decision to recognize and enforce an insolvency-related foreign judgment

Subject to articles 7 and 13, an insolvency-related foreign judgment shall be recognized and enforced provided:

(a) The requirements of article 9, paragraph 1 with respect to effectiveness and enforceability are met;

(b) The person seeking recognition and enforcement of the insolvency-related foreign judgment is a person or body within the meaning of article 2, subparagraph (b) or another person entitled to seek recognition and enforcement of the judgment under article 10, paragraph 1;

(c) The application meets the requirements of article 10, paragraph 2; and

(d) Recognition and enforcement is sought from or arises by way of defence or as an incidental question before a court referred to in article 4.

Article 13. Grounds to refuse recognition and enforcement of an insolvency-related foreign judgment

Subject to article 7, recognition and enforcement of an insolvency-related foreign judgment may be refused if:

(a) The party against whom the proceeding giving rise to the judgment was instituted:

(i) Was not notified of the institution of that proceeding in sufficient time and in such a manner as to enable a defence to be arranged, unless the party entered an appearance and presented their case without contesting notification in the originating court, provided that the law of the originating State permitted notification to be contested; or

(ii) Was notified of the institution of that proceeding in a manner that is incompatible with fundamental principles of this State concerning service of documents;

(b) The judgment was obtained by fraud;

(c) The judgment is inconsistent with a judgment issued in this State in a dispute involving the same parties;

(d) The judgment is inconsistent with an earlier judgment issued in another State in a dispute between the same parties on the same subject matter, provided that the earlier judgment fulfils the conditions necessary for its recognition and enforcement in this State;

(e) Recognition and enforcement would interfere with the administration of the debtor's insolvency proceedings or would conflict with a stay or other order issued in insolvency proceedings relating to the same debtor commenced in this State or another State;

(f) The judgment determines whether:

[(i) An asset is part of, should be turned over to, or was properly disposed of by the insolvency estate;]

[(ii) A transaction involving the debtor or assets of the insolvency estate should be avoided because it upset the principle of equitable treatment of creditors or improperly reduced the value of the estate; or]

(iii) A plan of reorganization or liquidation should be confirmed, a discharge of the debtor or of a debt should be recognized, or a voluntary or out-of-court restructuring agreement should be approved;

and the interests of creditors and other interested persons, including the debtor, were not adequately protected in the proceeding in which the judgment was issued;

(g) The originating court did not satisfy one of the following conditions:

(i) The court exercised jurisdiction on the basis of the explicit consent of the party against whom the judgment was issued;

(ii) The court exercised jurisdiction on the basis of the submission of the party against whom the judgment was issued, namely that the defendant argued on the merits before the court without contesting jurisdiction within the time frame provided in the law of the originating State unless it was evident that an objection to jurisdiction or to the exercise of jurisdiction would not have succeeded under that law;

(iii) The court exercised jurisdiction on a basis on which a court in this State could have exercised jurisdiction; or

(iv) The court exercised jurisdiction on a basis that was not inconsistent with the law of this State;

States that have enacted legislation based on the Model Law on Cross-Border Insolvency might wish to enact subparagraph (h)

(h) The judgment originates from a State whose proceeding is not recognizable under the [*insert a reference to the law of the enacting State giving effect to the Model Law on Cross-Border Insolvency*], unless:

(i) The insolvency representative of a proceeding that is or could have been recognized under the [*insert a reference to the law of the enacting State giving effect to the Model Law on Cross-Border Insolvency*] participated in the originating proceeding to the extent of engaging in the substantive merits of the claim to which those proceedings related; and

(ii) The judgment relates solely to assets that were located in the originating State at the time that proceeding commenced.

Article 14. Equivalent effect

1. An insolvency-related foreign judgment recognized or enforceable under this Law shall be given the same effect it [has in the originating State] [would have had if it had been issued by a court of this State].

2. If the insolvency-related foreign judgment provides for relief that is not available under the law of this State, that relief shall, to the extent possible, be adapted to relief that is equivalent to, but does not exceed, its effects under the law of the originating State.

Article 15. Severability

Recognition and enforcement of a severable part of an insolvency-related foreign judgment shall be granted where recognition and enforcement of that part is sought, or where only part of the judgment is capable of being recognized and enforced under this Law.

States that have enacted legislation based on the UNCITRAL Model Law on Cross-Border Insolvency will be aware of judgments which may have cast doubt on whether judgments can be recognized and enforced under article 21 of the Model Law. States may therefore wish to consider enacting the following provision:

Article X. Recognition of an insolvency-related judgment under *[insert a cross-reference to the legislation of this State enacting article 21 of the Model Law on Cross-Border Insolvency]*

Notwithstanding any prior interpretation to the contrary, the relief available under [*insert a cross-reference to the legislation of this State enacting article 21 of the Model Law on Cross-Border Insolvency*] includes recognition and enforcement of a judgment.

E. Note by the Secretariat on recognition and enforcement of insolvency-related judgments: draft model law

(A/CN.9/WG.V/WP.145)

Contents

I. Introduction

1. At its forty-seventh session (2014), the Commission gave Working Group V (Insolvency Law) a mandate to develop a model law or model legislative provisions to provide for the recognition and enforcement of insolvency-related judgments.[1]

2. At its forty-sixth session in December 2014, Working Group V (Insolvency Law) considered a number of issues relevant to the development of a legislative text on the recognition and enforcement of insolvency-related judgments, including the types of judgments that might be covered, procedures for recognition and grounds to refuse recognition. The Working Group agreed that the text should be developed as a stand-alone instrument, rather than forming part of the UNCITRAL Model Law on

[1] *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 155.

Cross-Border Insolvency (the Model Law), but that the Model Law provided an appropriate context for the new instrument.

3. At its forty-seventh session, the Working Group considered the first draft of a model law to be given effect through enactment by a State (A/CN.9/WG.V/WP.130). The content and structure of the draft text drew upon the Model Law, as suggested by the Working Group at its forty-sixth session (A/CN.9/829, para. 63) and sought to give effect to the conclusions of the Working Group at its forty-sixth session relating to the types of judgment to be included (A/CN.9/829, paras. 54 to 58), procedures for obtaining recognition and enforcement (A/CN.9/829, paras. 65 to 67) and the grounds for refusal of recognition (A/CN.9/829, paras. 68 to 71).

4. At its forty-seventh session, the Working Group had a preliminary exchange of views on draft articles 1 to 10 of the text and made a number of proposals with respect to the drafting (A/CN.9/835, paras. 47-69); draft articles 11 and 12 of that text were not reached due to lack of time and were included as draft articles 12 and 13 of the text considered at the forty-ninth session (A/CN.9/WG.V/WP.138). At its forty-eighth, forty-ninth and fiftieth sessions, the Working Group considered revised versions of the draft text, which reflected the decisions and proposals made at the forty-seventh, forty-eighth and forty-ninth sessions respectively (A/CN.9/WG.V/WP.135, 138 and 143).

5. The draft text below reflects the discussion and conclusions at the fiftieth session and the revisions the Secretariat was requested to make, together with various suggestions and proposals arising from the Secretariat's work on the draft text. Notes to this draft text are included as footnotes. The proposal for revision of the definition of "insolvency-related judgment" made at the fiftieth session of the Working Group has not been repeated in this text, but remains available in the report of the fiftieth session (A/CN.9/898, para. 59); as requested, the Secretariat has prepared a further version for consideration.

II. Draft model law on the recognition and enforcement of insolvency-related judgments

Preamble[2]

Article 1. Scope of application[3]

1. This Law applies to the recognition and enforcement of an insolvency-related judgment issued in a proceeding taking place in a State that is different from the State where recognition and enforcement are sought.

2. This Law does not apply to [...].

---

[2] The Working Group may wish to consider whether a preamble is required. A provision might be included along the lines of: The purpose of this Law is to provide effective mechanisms of the recognition and enforcement of insolvency-related [foreign] judgments so as to promote the objectives of: (a) Efficient conduct of cross-border insolvency proceedings; (b) Protection and maximization of the value of the insolvency estate; and (c) Greater certainty for trade and investment.

[3] A number of concerns have been expressed with respect to the scope of the draft text and what it is not intended to cover. The subparagraphs below, which are intended to capture those concerns, might be included as part of the text or as part of the guide to enactment:
This Law is not intended to:

(a) Displace other provisions of the law of this State with respect to recognition of insolvency proceedings that would otherwise apply to an insolvency-related judgment (previously the second sentence of paragraph 1 of draft article 3bis);

(b) Replace legislation enacting the Model Law on Cross-Border Insolvency or limit the application of that legislation if it is interpreted as applying to the recognition and enforcement of an insolvency-related [foreign] judgment;

(c) Apply to the recognition and enforcement in the enacting State of an insolvency-related judgment issued in the enacting State; or

(d) Apply to the judgment commencing the insolvency proceedings to which the foreign judgment is related.

Article 2. Definitions

For the purposes of this Law:

(a) "Insolvency proceeding" means a collective judicial or administrative proceeding, including an interim proceeding, pursuant to a law relating to insolvency in which proceeding the assets and affairs of a debtor are or were subject to control or supervision by a court for the purpose of reorganization or liquidation;[4]

(b) "Insolvency representative" means a person or body, including one appointed on an interim basis, authorized in an insolvency proceeding to administer the reorganization or the liquidation of the debtor's assets or affairs or to act as a representative of the insolvency proceeding;[5]

(c) "Judgment" means [any decision, [on the merits,] whatever it may be called,[6] issued by a court [or administrative authority, provided an administrative decision has the same effect as a court decision]. For the purposes of this definition, a decision includes a decree or order, and a determination of costs and expenses by the court. [An interim measure of protection is not a judgment];[7]

[*(d) "Foreign court"*];[8]

(e) "Insolvency-related [foreign] judgment"[9] means a judgment that:

---

[4] Revised in accordance with A/CN.9/898, para. 46.

[5] Revised in accordance with A/CN.9/898, para. 47.

[6] The words "whatever it may be called" originate from the definition of "judgment" in the draft text of the Hague Conference Special Commission on the Recognition and Enforcement of Foreign Judgments (the draft Hague Conference text). A proposal at the fiftieth session to delete those words was not supported (A/CN.9/898, paras. 50, 54).

[7] See A/CN.9/898, paras. 51-54. The words "on the merits" and the exclusion contained in square brackets in the third sentence were discussed at the fiftieth session. It was acknowledged that further discussion was required. It may be noted that although such a limitation is included in other instruments addressing recognition and enforcement of judgments more generally, matters related to insolvency are specifically excluded from those instruments. The special nature of insolvency proceedings and the various types of judgment that may be issued in the course of such proceedings, particularly judgments relating to preservation of the insolvency estate, and recognition and enforcement of those judgments, may be crucial to the successful resolution of those proceedings. The Working Group may wish to consider the specific relevance of interim or provisional measures to insolvency.

[8] The term "foreign court" is not used in the draft text, and has thus been deleted.

[9] See also A/CN.9/898, para. 59 for proposals made at the fiftieth session. The word "foreign" has been added to the text in response to a suggestion that received some support at the fiftieth session (A/CN.9/898, para. 55), but is placed in square brackets pending resolution of the final definition. If the word is not retained, the Working Group may wish to consider whether the definition should include a cross-border element along the lines of art. 1, that is, confirming that the judgment was issued in a State other than the State in which recognition and enforcement is sought (see also footnote 3, subpara. (c)).
This version of the definition has been prepared by the Secretariat in response to a request by the Working Group at the fiftieth session to provide an alternative for future consideration.
Subparas. (i) to (iii) establish the basic definition and reflect the characteristics generally agreed upon by the Working Group, with the exception of the words "on or after" in subpara. 2 (e) (ii) and "interests of the" in subpara. 2 (e) (iii), which remain in square brackets. With respect to the latter, it is not clear whether those additional words add anything to the subpara. and the words "affect the insolvency estate" may be sufficient. The substance of draft art. 2, subpara. (e) 1 also reflects general agreement and has been included as an explanatory paragraph of the definition.
Subpara. (e) 2 is included to address concerns that the draft text might overlap with the Model Law on Cross-Border Insolvency if it were to apply to decisions commencing insolvency proceedings (see also footnote 3, subpara. (d)).
It is suggested that the remaining material from the definitions included in A/CN.9/898, para. 59 might usefully be placed in a guide to enactment of the model law, as follows:
"Additional factors that may be relevant to determining whether a judgment is insolvency-related might include consideration of whether the judgment was issued in pursuit of a cause of action that arose under a law related to insolvency or that could not have been pursued but for the commencement of the insolvency proceedings.
Insolvency-related foreign judgments might include, inter alia, judgments determining whether:
(a) An asset is part of, should be turned over to, or was properly disposed of by the insolvency estate;

(i) Is related to an insolvency proceeding;

(ii) Was issued [on or] after the commencement of the insolvency proceeding to which it is related; and

(iii) Affects the [interests of the] insolvency estate.

For the purposes of this definition:

1. An "insolvency-related [foreign] judgment" includes a judgment issued in a proceeding in which the cause of action was pursued by:

(a) A creditor with approval of the court, based upon the insolvency representative's decision not to pursue that cause of action; or

(b) The party to whom it has been assigned by the insolvency representative in accordance with the applicable law;

and the judgment on that cause of action would otherwise be enforceable under this Law; and

2. An "insolvency-related [foreign] judgment" does not include a judgment commencing an insolvency proceeding.

Article 3. International obligations of this State

To the extent that this Law conflicts with an obligation of this State arising out of any treaty or other form of agreement to which it is a party with one or more other States, the requirements of the treaty or agreement prevail.

[Article 3 bis. International obligations of this State

1. This Law shall not apply to a judgment where there is a treaty in force concerning the recognition or enforcement of civil and commercial judgments (whether concluded before or after this Law comes into force), and that treaty applies to the judgment.[10]

[1bis. A treaty applies [to a judgment] for the purposes of paragraph 1 if it is a treaty to which this State is a party, and is one which is open to accession by the State in which the judgment was issued.][11]

2. A judgment is to be treated for the purposes of paragraph 1 of this article as falling within the class of judgments to which a treaty applies even where the

---

(b) A transaction involving the debtor or assets of its insolvency estate should be avoided because it upset the principle of equitable treatment of creditors or improperly reduced the value of the estate;

(c) A representative or director of the debtor is liable for action taken when the debtor was insolvent or in the period approaching insolvency, and the cause of action relating to that liability was one that could be pursued by or on behalf of the debtor's insolvency estate;

(d) Sums not covered by (i) or (ii) are owed to or by the debtor or its insolvency estate — the enacting State may wish to consider adding the following wording to paragraph 3(d): "and the cause of action relating to the recovery or payment of those sums arose after the commencement of insolvency proceedings in respect of the debtor"; or

(e) A plan of reorganization or liquidation should be confirmed, a discharge of the debtor or of a debt should be recognized, or a voluntary or out-of-court restructuring agreement should be approved. With respect to the list of examples, that approach may avoid concerns that including examples in the definition could raise uncertainty as to how the list should be interpreted."

[10] The words previously at the end of para. 1 ("or where the provisions of the law of this State on recognition of insolvency proceedings apply to that judgment"), which did not relate to the international obligations of the enacting State, but rather to the relationship of the draft text to the existing legislation of an enacting State, have been added to the issues addressed in footnote 3.

[11] Para. 1bis has been added to draft art. 3bis and it remains in square brackets following the fiftieth session (A/CN.9/898, paras. 14-17). With respect to this para., it might be noted that other instruments dealing with the recognition and enforcement of judgments, e.g. the draft Hague Conference text, apply only as between States that are contracting parties and not by virtue of the instrument being open for accession, but not acceded to, by one of the relevant States (see the draft Hague Conference text, art. 17).

particular judgment is not enforceable under the treaty because of the particular circumstances of the case.]

Article 4. Competent court or authority

1. The functions referred to in this Law relating to recognition and enforcement of an insolvency-related [foreign] judgment shall be performed by [*specify the court, courts, authority or authorities competent to perform those functions in the enacting State*] and by any other court before which the issue of recognition is raised as a defence or as an incidental question in the course of proceedings.[12]

Article 5. Authorization to [seek recognition and enforcement of an insolvency-related judgment in a foreign State] [act in another State respect of an insolvency-related judgment issued in this State]

A [*insert the title of the person or body administering a reorganization or liquidation under the law of the enacting State*] [is authorized to seek recognition and enforcement of an insolvency-related judgment in another State, as permitted by the applicable foreign law] [is authorized to act in another State with respect to an insolvency-related judgment issued in this State, as permitted by the applicable foreign law].[13]

Article 6. Additional assistance under other laws

Nothing in this Law limits the power of a court or a [*insert the title of the person or body administering a reorganization or liquidation under the law of the enacting State*] to provide additional assistance to a foreign insolvency representative under other laws of this State.

Article 7. Public policy exception

Nothing in this Law prevents the court from refusing to take an action governed by this Law if the action would be manifestly contrary to the public policy, including the fundamental principles of procedural fairness, of this State.

Article 8. Interpretation

In the interpretation of this Law, regard is to be had to its international origin and to the need to promote uniformity in its application and the observance of good faith.

Article 9. Effect and enforceability of an insolvency-related [foreign] judgment in the originating State

1. An insolvency-related [foreign] judgment shall be recognized only if it has effect in the originating State and shall be enforced only if it is enforceable in the originating State.[14]

2. Recognition and enforcement of an insolvency-related [foreign] judgment may be postponed or refused if the judgment is the subject of review in the originating State or if the time limit for seeking ordinary review in that State has not expired. In such cases, the court may also make enforcement conditional on the provision of such security as it shall determine.

---

[12] The words at the end of the paragraph have been added pursuant to a decision at the fiftieth session (A/CN.9/898, para. 19) to broaden art. 4 beyond any specified court to address courts before which recognition may be raised as an incidental question or as a defence.

[13] It has been suggested that the first alternative text in draft art. 5 may not be sufficiently broad to capture all of the acts that might be covered by the draft text. Accordingly, it is suggested that the formulation "authorized to act in another State", based on the language of art. 5 of the Model Law, might resolve that concern in the draft article.

[14] Para. 1 has been revised to align it with the formulation used in art. 4 (3) of the draft Hague Conference text.

Article 10. Procedure for seeking recognition and enforcement of an insolvency-related [foreign] judgment

1. An insolvency representative or other person entitled under the law of the originating State to seek recognition and enforcement of an insolvency-related judgment may seek recognition and enforcement of that judgment in this State. [The issue of recognition may also be raised as a defence by an insolvency representative or [….] or as an incidental question in the course of proceedings taking place in a court referred to in article 4].[15]

2. When recognition and enforcement of an insolvency-related [foreign] judgment is sought under paragraph 1, the following shall be submitted to the court:

(a) A certified copy of the insolvency-related [foreign] judgment;

(b) Any documents necessary to establish that the insolvency-related [foreign] judgment has effect and is enforceable in the originating State, including information on any current review of the judgment;

(c) Evidence as required by the law of this State that the party against whom relief is sought was notified that recognition and enforcement of the insolvency-related [foreign] judgment was being sought in this State; and

(d) In the absence of evidence referred to in subparagraphs (a) and (b), any other evidence on those matters acceptable to the court.

3. The court may require translation of documents submitted pursuant to paragraph 2 into an official language of this State.

4. The court is entitled to presume that documents submitted pursuant to paragraph 2 are authentic, whether or not they have been legalized.

Article 11. Decision to recognize and enforce an insolvency-related [foreign] judgment

An insolvency-related [foreign] judgment shall be recognized and enforced provided:

(a) The requirements of article 9, paragraph 1 with respect to effectiveness and enforceability are met;[16]

(b) The person seeking recognition and enforcement of the insolvency-related [foreign] judgment is a person or body [17] within the meaning of article 2, subparagraph (b) or another person entitled to seek recognition and enforcement of the judgment under article 10, paragraph 1;

(c) The application meets the requirements of article 10, paragraph 2;

(d) Recognition and enforcement is sought from [or arises by way of defence or as an incidental question before][18] a court referred to in article 4; and

(e) Articles 7 and 12 do not apply.

---

[15] A proposal was made at the fiftieth session (A/CN.9/898, para. 25) to add the following as a separate provision: "The recognition of an insolvency-related judgment may be raised by an insolvency representative or any other person entitled under the law of the originating State to seek recognition and enforcement of an insolvency-related judgment by way of defence in the course of proceedings taking place in the court referred to in article 4 or in another court of this State, and should be accompanied by the documents specified in article 10 (2)." A version of that drafting has been added to the chapeau. However, the Working Group may wish to consider who may seek to raise recognition by way of defence or as an incidental question, e.g. whether it would be limited to the insolvency representative or the person authorised to seek recognition and enforcement of the judgment or include other persons. Art. 10 has otherwise been revised in accordance with A/CN.9/898, para. 26.

[16] A/CN.9/898, para. 27.

[17] A/CN.9/898, para. 27.

[18] The words in square brackets in subpara. 11 (d) have been included on the basis that the word "sought" by itself may not be sufficient to include cases where recognition arises by way of defence or as an incidental question.

Article 12. Grounds to refuse recognition and enforcement of an insolvency-related [foreign] judgment

Recognition and enforcement of an insolvency-related [foreign] judgment may be refused if:

(a) The party against whom the proceeding giving rise to the judgment was instituted:

(i) Was not notified of the institution of that proceeding in sufficient time and in such a manner as to enable a defence to be arranged, unless the party entered an appearance and presented their case without contesting notification in the originating court, provided that the law of the originating State permitted notification to be contested; or

(ii) Was notified of the institution of that proceeding in a manner that is incompatible with fundamental principles of this State concerning service of documents;

[(b) The judgment was obtained by fraud [in connection with a matter of procedure]];[19]

(c) The judgment is inconsistent with a judgment[20] issued in this State in a dispute involving the same parties;

(d) The judgment is inconsistent with an earlier judgment issued in another State in a dispute between the same parties on the same subject matter, provided that the earlier judgment fulfils the conditions necessary for its recognition and enforcement in this State;

(e) Recognition and enforcement would interfere with the administration of the debtor's insolvency proceedings or would be inconsistent with a stay or other order issued in insolvency proceedings relating to the same debtor commenced in this State or another State;[21]

(f) The judgment falls within article 2, subparagraph (e) (v) and the interests of creditors and other interested persons, including the debtor, were not adequately protected in the proceeding in which the judgment was issued;

(g) The originating court did not satisfy one of the following conditions:[22]

(i) The court exercised jurisdiction on the basis of the [express] consent [or submission] of the party against whom the judgment was issued; [The court exercised jurisdiction on the basis that the party against whom the judgment was issued entered an appearance and presented their case without contesting jurisdiction, provided that the law of the originating State permitted jurisdiction to be contested;][23]

(ii) The court exercised jurisdiction on a basis on which a court in this State could have exercised jurisdiction;

(iii) The court exercised jurisdiction on a basis that was not inconsistent with the law of this State;[24]

---

[19] Subpara. 12 (b) was placed in square brackets pending further consideration (A/CN.9/898, para. 32).

[20] The word "prior" has been deleted from subpara. 12 (c) (A/CN.9/898, para. 33).

[21] Subpara. 12 (e) has been revised in accordance with A/CN.9/898, para. 32.

[22] Subpara. 12 (g) has been revised in accordance with A/CN.9/898, para. 36.

[23] Additional language has been included in subpara. 12 (g) (i) as decided at the fiftieth session (A/CN.9/898, para. 37), to more clearly explain what is meant by the word "express". It might be noted that the equivalent provision in the draft Hague Conference text (art. 5 (f)) now includes the following drafting: "The defendant argued on the merits before the court of origin without contesting jurisdiction within the timeframe provided in the law of the State of origin, unless it is evident that an objection to jurisdiction or to the exercise of jurisdiction would not have succeeded under that law."

[24] Subparas. previously numbered 12 (g) (iv) and (v) have been deleted in accordance with A/CN.9/898, paras. 40-41.

States that have enacted the Model Law on Cross-Border Insolvency might wish to enact subparagraph (h)

(h) The judgment is related to an insolvency proceeding that [is not recognizable] [has not been, could not be or could not have been recognized] under [*insert a reference to the law of the enacting State giving effect to the Model Law on Cross-Border Insolvency*].[25]

[The judgment relates to a debtor that had neither the centre of its main interests nor an establishment in the originating State, unless the judgment relates solely to assets that were located in the originating State at the time the insolvency proceeding [to which it is related] commenced.]

Article 13. Equivalent effect

1. An insolvency-related [foreign] judgment recognized or enforceable under this Law shall be given the same effect it has in the originating State.

2. If the insolvency-related [foreign] judgment provides for relief that is not available under the law of this State, that relief shall, to the extent possible, be adapted to relief that is equivalent to, but does not exceed, its effects under the law of the originating State.

Article 14. Severability

Recognition and enforcement of a severable part of an insolvency-related [foreign] judgment shall be granted where recognition and enforcement of that part is sought, or where only part of the judgment is capable of being recognized and enforced under this Law.

Article 15. Provisional relief

1. From the time recognition and enforcement of an insolvency-related [foreign] judgment is sought until a decision is made, where relief is urgently needed to preserve the possibility of recognizing and enforcing an insolvency-related [foreign] judgment,[26] the court may, at the request of an insolvency representative or other person entitled to seek recognition and enforcement under article 10, paragraph 1, grant relief of a provisional nature, including:

(a) Staying the disposition of any assets of any party or parties against whom the insolvency-related [foreign] judgment has been issued; or

(b) Granting other legal or equitable relief, as appropriate, within the scope of the insolvency-related [foreign] judgment.

2. [*Insert provisions (or refer to provisions in force in the enacting State) relating to notice*.]

3. Unless extended by the court, relief granted under this article terminates when a decision on recognition and enforcement of the insolvency-related [foreign] judgment is made.

States that have enacted the UNCITRAL Model Law on Cross-Border Insolvency might wish to enact article 16

---

[25] The first sentence of subpara. 12 (h) has been revised in accordance with A/CN.9/898, para. 42 and alternative language proposed to simplify the drafting, referring to a judgment that "is not recognizable" under that Model Law. Since no comment was made with respect to the second sentence it remains in square brackets for further consideration; a few changes to the language of the subpara. have been made to conform it to the changes made to the definitions in art. 2.

[26] The text of draft art. 15, para. 1 has been retained as drafted and the square brackets removed in accordance with A/CN.9/898, para. 45.

Article 16. Recognition of an insolvency-related [foreign] judgment under [*insert a cross-reference to the legislation of this State enacting article 21 of the Model Law on Cross-Border Insolvency*][27]

Variant 1

For greater certainty, the relief available under [*insert a cross-reference to the legislation of this State enacting article 21 of the Model Law on Cross-Border Insolvency*] includes recognition and enforcement of an insolvency-related [foreign] judgment.

Variant 2

Where an insolvency-related [foreign] judgment relates to:

(a) Insolvency proceedings, whether pending or closed, recognized under [*insert a cross-reference to the legislation of this State enacting the Model Law on Cross-Border Insolvency*]; or

(b) The debtor in respect of which those insolvency proceedings commenced, the relief available in respect of those insolvency proceedings under [*insert a cross-reference to the legislation of this State enacting article 21 of the Model Law on Cross-Border Insolvency*] includes recognition and enforcement of that judgment.

[27] This art. was proposed at the fiftieth session (A/CN.9/898, para. 41) to replace subparas. (g) (iv) and (v) of draft art. 12. Since this draft art. does not establish a ground for refusal of recognition, but relates to interpretation of the UNCITRAL Model Law on Cross-Border Insolvency, it has been placed at the end of the draft instrument. Variant 1 reflects the language as proposed at the fiftieth session. Variant 2 attempts to clarify the concerns giving rise to this provision and separate the various elements that might be included in such a provision.

F. Note by the Secretariat on facilitating the cross-border insolvency of multinational enterprise groups: draft legislative provisions

(A/CN.9/WG.V/WP.146)

[Original: English]

Contents

I. Introduction

1. At its forty-fourth session in December 2013, following a three-day colloquium, the Working Group agreed to continue its work on the cross-border insolvency of multinational enterprise groups[1] by developing provisions on a number of issues that would extend the existing articles of the UNCITRAL Model Law on Cross-Border Insolvency (UNCITRAL Model Law) and part three of the UNCITRAL Legislative Guide on Insolvency Law (UNCITRAL Legislative Guide), as well as involving reference to the UNCITRAL Practice Guide on Cross-Border Insolvency Cooperation. While the Working Group considered that those provisions might, for example, form a set of model provisions or a supplement to the existing UNCITRAL Model Law, it noted that the precise form they might take could be decided as the work progressed.

2. At its forty-fifth (April 2014), forty-sixth (December 2014) and forty-seventh (May 2014) sessions, the Working Group considered the goals of a text that might be developed to facilitate the cross-border insolvency of multinational enterprise groups; the key elements of such a text, including those that might be based upon part three of the UNCITRAL Legislative Guide on Insolvency Law (the Legislative Guide) and on the UNCITRAL Model Law on Cross-Border Insolvency (the Model Law); and the form that the text might take, noting that some of the key elements lent themselves to being developed as a model law, while others were perhaps more in the nature of provisions that might be included in a legislative guide (A/CN.9/WG.V/WP.120, 124 and 128 respectively).

3. At its forty-eighth session, the Working Group agreed a set of key principles for a regime to address cross-border insolvency in the context of enterprise groups (A/CN.9/WG.V/WP.133) and considered a number of draft provisions addressing three main areas (A/CN.9/WG.V/WP.134): (a) coordination and cooperation of insolvency proceedings relating to an enterprise group; (b) elements needed for the development and approval of a group insolvency solution involving multiple entities; and (c) the use of so-called "synthetic proceedings" in lieu of commencing non-main proceedings. Two additional supplemental areas were also considered. These might include (d) the use of so-called "synthetic proceedings" in lieu of commencing main proceedings, and (e) approval of a group insolvency solution on a more streamlined basis by reference to the adequate protection of the interests of creditors of affected group members.

4. At its forty-ninth session, the Working Group considered a consolidated draft legislative text incorporating the agreed key principles and draft provisions addressing the five areas indicated in paragraph 3 (A/CN.9/WG.V/WP.137 and

[1] *Official Records of the General Assembly, Sixty-fifth Session, Supplement No. 17* (A/65/17), para. 259 (a); A/CN.9/763, paras. 13-14; *Official Records of the General Assembly, Sixty-eighth Session, Supplement No. 17* (A/68/17), para. 326.

Add.1). That draft text was further considered at the fiftieth session (A/CN.9/WG.V/WP.142 and Add.1)

5. The draft text below reflects the discussion and decisions taken at the fiftieth session and the revisions the Secretariat was requested to make, together with various suggestions and proposals arising from the Secretariat's work on the draft text. Notes and commentary to the draft text are included in this document as footnotes. It may be noted that the draft text has been divided into 5 chapters — chapter 1 deals with general provisions, chapter 2 with cooperation and coordination, chapter 3 with conduct of a planning proceeding in the enacting State, chapter 4 with recognition of a foreign planning proceeding and relief and chapter 5 with treatment of foreign claims.

II. Draft legislative provisions on facilitating the cross-border insolvency of multinational enterprise groups

[Part A]

Chapter 1. General Provisions

Preamble

The purpose of this Law is to provide effective mechanisms to address cases of cross-border insolvency affecting the members of an enterprise group, so as to promote the objectives of:

(a) Cooperation between courts and other competent authorities of this State and foreign States involved in cases of cross-border insolvency affecting members of an enterprise group;

(b) Cooperation between insolvency representatives appointed in this State and foreign States in cases of cross-border insolvency affecting members of an enterprise group;

(c) Development of a group insolvency solution for the whole or part of an enterprise group and cross-border recognition and implementation of that solution in multiple States;

(d) Fair and efficient administration of cross-border insolvencies concerning enterprise group members that protects the interests of all creditors and other interested persons, including the debtors;

(e) Protection and maximization of the overall combined value of the operations and assets of enterprise group members affected by insolvency and of the enterprise group as a whole;

(f) Facilitation of the rescue of financially troubled enterprise groups, thereby protecting investment and preserving employment; and

(g) Adequate protection of the interests of the creditors of each individual group member participating in a group insolvency solution.[2]

[Article 1. Scope

This Law applies to cooperation in the context of the cross-border insolvency of multinational enterprise groups.][3]

Article 2. Definitions

---

[2] Para. (g) has been added to draft art. 1 in response to a proposal at the fiftieth session (A/CN.9/898, para. 109).

[3] Draft art. 1 has been revised as proposed at the fiftieth session (A/CN.9/898, para. 110), with omission of the word "judicial" on the basis the text provides for cooperation that is broader than cooperation between courts. Since the draft text applies to more than cooperation in the context of the cross-border insolvency of enterprise groups, in particular in chapter 3, it may be appropriate to include additional words such as "and the conduct and administration of insolvency proceedings" after the word "cooperation".

For the purposes of these provisions:

(a) "Enterprise" means any entity, regardless of its legal form, that is engaged in economic activities and may be governed by the insolvency law;

(b) "Enterprise group" means two or more enterprises that are interconnected by control or significant ownership;

(c) "Control" means the capacity to determine, directly or indirectly, the operating and financial policies of an enterprise;

(d) "Enterprise group member" means an enterprise referred to in subparagraph (a), which forms part of an enterprise group as defined in subparagraph (b);

(e) "Group Representative" means a person or body, including one appointed on an interim basis, authorized to act as a representative of a planning proceeding;[4]

(f) "Group insolvency solution" means a set of proposals developed in a planning proceeding:

(i) For the reorganization, sale, or liquidation of some or all of the operations or assets of one or more group members;

(ii) With the goal of [preserving] [preserving and enhancing] [preserving and maximizing] the overall combined value of the group members involved;[5] and

(iii) That must be approved, insofar as the proposals relate to a particular group member, in the jurisdiction in which that group member has its centre of main interests;[6]

(g) "Planning proceeding" means a main proceeding:[7]

(i) Commenced in respect of an enterprise group member, which is a necessary and integral part of a group insolvency solution;

(ii) In which one or more additional group members are participating for the purpose of developing and implementing a group insolvency solution; and

(iii) In which a group representative has been appointed.

Additional definitions: foreign representative, insolvency representative, foreign proceeding[8]

---

[4] The definition of "group representative" has been revised as proposed at the fiftieth session (A/CN.9/898, para. 112).

[5] Subpara. (f) (ii) of the definition of "group insolvency solution" includes various alternatives as proposed at the fiftieth session (A/CN.9/898, para. 113).

[6] With respect to subpara. (f) (iii), it might be questioned whether a mandatory requirement for approval should be included in the definition of "group insolvency solution" or whether it might not be more appropriate to leave that requirement to an operative provision (e.g. art. 20) and delete subpara. (iii) from the definition.

[7] At the fiftieth session, it was suggested that the definition of "planning proceeding" as drafted was ambiguous (A/CN.9/898, para. 114). The revised drafting of subpara. (g) (i) is intended to clarify that ambiguity — a planning proceeding is a main proceeding (where main proceeding has the same meaning as art. 2(b) of the UNCITRAL Model Law on Cross-Border Insolvency (the Model Law) commenced with respect to a group member where the group member is a necessary and integral part of the group insolvency solution.

[8] It might be noted that depending on the final form of the text, additional definitions of foreign representative, insolvency representative and foreign proceeding might be required.

Article 2 bis. Jurisdiction of the enacting State[9]

[Where the centre of main interests of an enterprise group member is located in this State, nothing in this Law is intended to:

(a) Limit the jurisdiction of the courts of this State with respect to that enterprise group member;

(b) Limit any process or procedure (including any permission, consent or approval) required in this State in respect of that enterprise group member's participation [to any extent] in a group insolvency solution being developed in another State; or

(c) Limit the commencement of insolvency proceedings in this State under [*identify laws of the enacting State relating to insolvency*], if required or requested to address the insolvency of an enterprise group member. When proceedings are not required or requested in this State, there is no obligation to commence such proceedings.]

Article 2 ter. Public policy exception[10]

Nothing in this Law prevents the court from refusing to take an action governed by this Law if the action would be manifestly contrary to the public policy of this State.

Article 2 quater. Competent court or authority[11]

The functions referred to in this Law relating to the recognition of an insolvency proceeding or a planning proceeding and cooperation with foreign courts shall be performed by *[specify the court, courts, authority or authorities competent to perform those functions in the enacting State]*.

Chapter 2. Cooperation and coordination

Article 3. Cooperation and direct communication between a court of this State and foreign courts, foreign representatives and a group representative

1. In the matters referred to in article 1,[12] the court shall cooperate to the maximum extent possible with foreign courts, foreign representatives and a group representative, where appointed, either directly or through a [*insert the title of a person or body administering a reorganization or liquidation under the law of the enacting State*] or other person appointed to act at the direction of the court.

2. The court is entitled to communicate directly with, or to request information or assistance directly from, foreign courts, foreign representatives or a group representative, where appointed.

---

[9] This draft art. has been included as a separate provision in response to a decision at the fiftieth session (A/CN.9/898, para. 110) to remove it from the scope in art. 1. A new heading is suggested.

[10] Following agreement that the draft text should be subject to a public policy exception, draft art. 2 ter has been added (A/CN.9/898, para. 91). If not ultimately required because of the form the final text takes (i.e. as part of the Model Law), it can be deleted.

[11] Draft art. 2 quater has also been added for the sake of completeness, given the substance of draft art. 16(1)(b). Like draft art. 2bis, it may also be deleted if not required because of the final nature of the text.

[12] Given that revised art. 1 refers only to cooperation, the Working Group may wish to consider whether the opening phrase of art. 3 (as well as arts. 7 and 7bis) — "In the matters referred to in article 1" — remains appropriate or might be modified, for example, to something narrower such as "In the context of article 1", or deleted entirely.

Article 4. Cooperation to the maximum extent possible under article 3

Cooperation to the maximum extent possible for the purposes of article 3 may be implemented by any appropriate means, including:

(a) Communication of information by any means considered appropriate by the court;

(b) Participation in communication with the foreign court, a foreign representative or a group representative, where appointed;

(c) Coordination of the administration and supervision of the affairs of the enterprise group members;

(d) Coordination of concurrent foreign proceedings commenced with respect to enterprise group members;

(e) Appointment of a person or body to act at the direction of the court;

[(f) Approval of the treatment in a foreign proceeding of the claims of creditors of the enacting State];

(g) Approval and implementation of agreements concerning the coordination of proceedings relating to two or more enterprise group members located in different States, including where a group insolvency solution is being developed;

(h) Cooperation among courts as to how to allocate and provide for the costs associated with cross-border cooperation and communication;

(i) Use of mediation or, with the consent of the parties, arbitration, to resolve disputes between members of an enterprise group concerning claims;[13]

(j) Approval of the treatment of claims between members of an enterprise group;

(k) Recognition of the cross-filing of claims by or on behalf of enterprise group members and their creditors; and

(l) [*The enacting State may wish to list additional forms or examples of cooperation*].

Article 5. Limitation of the effect of communication under article 3

1. Each court is entitled at all times to exercise its independent jurisdiction and authority with respect to matters presented to it and the conduct of the parties appearing before it.[14]

2. Participation by a court in communication pursuant to article 3, paragraph 2, does not imply:

(a) A waiver or compromise by the court of any powers, responsibilities or authority;

(b) A substantive determination of any matter before the court;

(c) A waiver by any of the parties of any of their substantive or procedural rights;

(d) A diminution of the effect of any of the orders made by the court;

[13] Subparas. (i), (j) and (k) have been added to draft art. 4 pursuant to agreement at the fiftieth session (A/CN.9/898, paras. 63-64). With respect to subpara. (i), para. 63 of A/CN.9/898 refers to the use of mediation and arbitration to resolve "intergroup claims" (clarified in subpara. (i) to mean claims between members of an enterprise group); the Working Group may wish to consider whether mediation and arbitration might also be used to resolve claims against group members more generally, and not only between group members.

[14] Para. 1 of draft art. 5 is based upon the words previously contained at the end of subpara. 2 (f) and states the general principle of art. 5 (A/CN.9/898, para. 63).

(e) Submission to the jurisdiction of other courts participating in the communication; or

(f) Any limitation, extension or enlargement of the jurisdiction of the participating courts.

Article 6. Coordination of hearings

1. The court may conduct a hearing in coordination with a foreign court.

2. The substantive and procedural rights of parties and the jurisdiction of each court may be safeguarded by reaching agreement on the conditions to govern the coordinated hearings.

3. Notwithstanding the coordination of hearings, each court remains responsible for reaching its own decision on the matters before it.

Article 7. Cooperation and direct communication between a group representative, foreign representatives and foreign courts

1. [In the matters referred to in article 1,][15] a group representative appointed in this State shall, in the exercise of its functions and subject to the supervision of the court, cooperate to the maximum extent possible with foreign courts and foreign representatives of other enterprise group members to facilitate the development and implementation of a group insolvency solution.

2. A group representative is entitled, in the exercise of its functions and subject to the supervision of the court, to communicate directly with or to request information or assistance directly from foreign courts and foreign representatives of other enterprise group members.

Article 7 bis. Cooperation and direct communication between a [*insert the title of a person or body administering a reorganization or liquidation with respect to an enterprise group member under the law of the enacting State*]**, foreign courts, foreign representatives and a group representative**

1. [In the matters referred to in article 1,][16] a [*insert the title of a person or body administering a reorganization or liquidation with respect to an enterprise group member under the law of the enacting State*] shall, in the exercise of its functions and subject to the supervision of the court, cooperate to the maximum extent possible with foreign courts, foreign representatives of other enterprise group members and a group representative, where appointed.

2. A [*insert the title of a person or body administering a reorganization or liquidation with respect to an enterprise group member under the law of the enacting State*] is entitled, in the exercise of its functions and subject to the supervision of the court, to communicate directly with or to request information or assistance directly from foreign courts, foreign representatives of other group members and a group representative, where appointed.

Article 8. Cooperation to the maximum extent possible under articles 7 and 7 bis[17]

For the purposes of article 7 and article 7 bis, cooperation to the maximum extent possible may be implemented by any appropriate means, including:

(a) Sharing and disclosure of information concerning enterprise group members, provided appropriate arrangements are made to protect confidential information;

---

[15] With respect to the opening words, see footnote 12, relating to draft art. 3 (and 7 bis). The words "appointed in this State" have been added in para. 1 to clarify the scope of this draft art.

[16] See footnotes 12 and 15, relating to opening words in square brackets.

[17] Draft art. 8 has been revised in accordance with decisions of the Working Group at its fiftieth session (A/CN.9/898, para. 69).

(b) Negotiation of agreements concerning the coordination of proceedings relating to two or more enterprise group members located in different States, including where a group insolvency solution is being developed;

(c) Allocation of responsibilities between a [*insert the title of a person or body administering a reorganization or liquidation with respect to an enterprise group member under the law of the enacting State*], a foreign representative and a group representative, where appointed;

(d) Coordination of the administration and supervision of the affairs of the enterprise group members; and

(e) Coordination with respect to the development and implementation of a group insolvency solution, where applicable.

Article 9. Authority to enter into agreements concerning the coordination of proceedings[18]

Agreements concerning the coordination of proceedings involving two or more enterprise group members located in different States may be entered into, including where a group insolvency solution is being developed.

Article 10. Appointment of a single or the same insolvency representative[19]

1. The court may coordinate with foreign courts with respect to the appointment and recognition of a single or the same insolvency representative to administer and coordinate insolvency proceedings concerning members of the same enterprise group in different States.

2. The appointment of an insolvency representative in this State and in another State under paragraph 1 does not diminish the obligations of the insolvency representative under the law of this State.

Chapter 3. Conduct of a planning proceeding in this State[20]

Article 11. Participation by enterprise group members in a proceeding under [*identify laws of the enacting State relating to insolvency*]

1. Subject to paragraph 2, if a proceeding under [*identify laws of the enacting State relating to insolvency*] has commenced with respect to an enterprise group member whose centre of main interests is located in this State, any other group member may participate in that proceeding for the purpose of developing and implementing a group insolvency solution.[21]

---

[18] Draft art. 9 has been revised in accordance with decisions of the Working Group at its fiftieth session (A/CN.9/898, para. 70).

[19] Para. 1 of draft art. 10 has been revised as agreed at the fiftieth session (A/CN.9/898, para. 71) by deleting the words at the end of the draft para. and retaining the words "or the same" without square brackets. While it was suggested that para. 2 — "To the extent required by applicable law the insolvency representative is subject to the supervision of each appointing court" — might be redrafted as a model law provision, it is perhaps a matter for consideration by enacting States in the light of their approach to the regulation of insolvency representatives; it might be noted that not all States regulate such professionals. Accordingly, it may be appropriate to address that issue in a guide to enactment, rather than in the draft text. Draft para. 2 proposes addressing slightly different issues, clarifying that the obligations of an insolvency representative under the law of the enacting State are not diminished when they are also appointed in other States.

[20] In accordance with a suggestion at the fiftieth session, draft arts. 11-13 are now included in chapter 3, which addresses the national law elements relevant to the commencement and conduct of a planning proceeding in the enacting State (A/CN.9/898, para. 85). Chapter 4 deals with cross-border provisions on recognition of the planning proceeding and relief.

[21] Draft art. 11 has been revised in accordance with a number of decisions taken at the fiftieth session (A/CN.9/898, paras. 72-78), including removing references to "solvent" and "insolvent" group members.

2. An enterprise group member whose centre of main interests is located in another State may participate in a proceeding referred to in paragraph 1 unless a court in that other State [precludes] [prohibits] it from so doing.[22]

3. Participation in a proceeding referred to in paragraph 1 does not subject an enterprise group member to the jurisdiction of the courts of this State. Participation means that the group member has the right to appear, make written submissions and be heard in that proceeding on matters affecting that group member's interests and to take part in the development and implementation of a group insolvency solution.[23]

4. Participation in a proceeding referred to in paragraph 1 by any other enterprise group member is voluntary. The group member may commence its participation or opt out of participation at any stage of such a proceeding.[24]

5. A participating enterprise group member shall be notified of actions taken with respect to the development of a group insolvency solution.[25]

Article 12. Appointment of a group representative[26]

1. When one or more enterprise group members are participating in a proceeding referred to in article 11, the court may appoint a group representative to that proceeding, which is then a planning proceeding.

2. [*Specify the procedure for appointment of a group representative*].[27]

3. [The group representative is authorized to seek relief in this State to support the development and implementation of a group insolvency solution.][28]

4. The group representative is authorized to act in a foreign State on behalf of a planning proceeding [as permitted by the applicable foreign law] and, in particular, to:

(a) Seek recognition of the planning proceeding and relief to support the development and implementation of the group insolvency solution;

(b) Seek to participate in a foreign proceeding relating to a group member participating in the planning proceeding; and

(c) Seek to participate in a foreign proceeding relating to a group member not participating in the planning proceeding.[29]

---

[22] Draft para. 2 of art. 11 addresses the group members that may participate in a proceeding described in para. 1 — rather than referring to "preclusion", which may have a specific meaning in some jurisdictions, for greater clarity it is suggested that the word "prohibit" might be preferable.

[23] Draft para. 3 of art. 11 seeks to clarify that participation does not involve submission to the jurisdiction of the planning proceeding court, as well as what participation might encompass. The second sentence might be considered as a definition for inclusion in draft art. 2.

[24] Draft para. 4 of art. 11 confirms that participation is voluntary and that it may commence and end at any stage of the planning proceeding.

[25] Draft para. 5 of art. 11 deals with the provision of notice to participating group members; the reference to "actions taken" is intended to indicate that notice might be required of specific steps taken, such as the sale of assets, rather than notice of progress towards the development of the group insolvency solution in some more general manner that might prove difficult to satisfy.

[26] Draft art. 12 reflects a number of agreements at the fiftieth session (A/CN.9/898, para. 75). Para. 1 deals with appointment of a group representative to a proceeding of the type referred to in art. 11, which thus becomes, in accordance with the definition in draft art. 2 (g), a planning proceeding. The definition in draft art. 2 (e) of "group representative" clarifies that that person is authorized to act as representative of that planning proceeding.

[27] Draft para. 2 of art. 12 reflects a suggestion at the fiftieth session that the draft text might address the procedure for appointment of a group representative (A/CN.9/898, para. 75). Since no details were proposed, para. 2 serves to note that the enacting State may wish to specify the procedure in this art.

[28] Draft para. 3 of art. 12 reflects a suggestion at the fiftieth session that the draft text might include authorization for the group representative to seek relief in the enacting State to support the group insolvency solution (A/CN.9/898, para. 75).

[29] Draft para. 4 of art. 12 provides the authorization for the group representative to act in a foreign State for the purposes indicated in subparas. (a) through (c), including as suggested at the fiftieth session that they should be able to participate in a foreign proceeding with respect to a

Article 13. Relief available to a planning proceeding

1. To the extent needed to preserve the possibility of developing a group insolvency solution and to protect the assets of an enterprise group member [subject to or participating in] a planning proceeding or the interests of the creditors [of such a group member], the court, at the request of the group representative, may grant any of the following relief:[30]

(a) Staying execution against the enterprise group member's assets;

(b) Suspending the right to transfer, encumber, or otherwise dispose of any assets of the enterprise group member;

(c) Staying [temporarily] any [insolvency] proceedings concerning a participating enterprise group member;[31]

(d) Staying the commencement or continuation of individual actions or individual proceedings concerning the enterprise group member's assets, rights, obligations, or liabilities;

(e) Entrusting the administration or realization of all or part of the enterprise group member's assets located in this State to the group representative or another person designated by the court, in order to protect and preserve the value of assets that, by their nature or because of other circumstances, are perishable, susceptible to devaluation, or otherwise in jeopardy;

(f) Providing for the examination of witnesses, the taking of evidence, or the delivery of information concerning the enterprise group member's assets, affairs, rights, obligations, or liabilities;

(g) Recognizing arrangements concerning the funding of enterprise group members [participating in the planning proceeding] where the funding entity is located in this State and authorizing the provision of finance under those funding arrangements, subject to any appropriate safeguards the court may apply;[32] and

(h) Granting any additional relief that may be available to [*insert the title of a person or body administering a reorganization or liquidation under the law of the enacting State*] under the laws of this State.

2. With respect to the assets or operations located in this State of an enterprise group member that has its centre of main interests in another State, relief under this article may only be granted if that relief [is not incompatible with relief granted in insolvency proceedings taking place in that State] [does not interfere with the administration of insolvency proceedings taking place in that State].[33]

---

group member not participating in the planning proceeding (A/CN.9/898, para. 75).

[30] The chapeau of draft art. 13 has been aligned with the chapeaux of draft arts. 15 and 17 and revised to reflect suggestions made at the fiftieth session (A/CN.9/898, para. 81) to include references to group members both "subject to" and "participating in" the planning proceeding, noting that the Working Group has not yet reached a clear decision on that issue (A/CN.9/898, para. 81). The draft chapeau also seeks to clarify which creditors are being referred to.

[31] Subpara. 1 (c) of draft art. 13 includes some alternative language to clarify which proceedings concerning which group member are the subject of the temporary stay (to distinguish that subpara. from subparas.1 (a) and (d)) (see also draft arts. 15, subpara. 1(c) and 17, subpara. 1(d).

[32] Subpara. 1 (g) of draft art. 13 reflects agreement to delete certain words (A/CN.9/898, para. 83). In view of the fact that no conclusion has yet been reached with respect to whether the provision applies to group members "subject to" or "participating in" a planning proceeding or both, the limitation in subparagraph (g) to group members "participating in" the planning proceeding has been placed in square brackets and will need to be further considered in the context of the drafting of the chapeau. The equivalent provisions in draft arts. 15, subpara. 1(g) and 17, subpara. 1(h) are limited in scope to participating group members.

[33] Draft para. 2 of draft art. 13 reflects a suggestion that a different standard might be appropriate for assessing the relief to be granted (A/CN.9/898, para. 84), based upon draft art. 15 (5).

Chapter 4. Recognition of a foreign planning proceeding and relief[34]

Article 14. Application for recognition of a foreign planning proceeding

1. A group representative may apply in this State for recognition of the planning proceeding to which the group representative was appointed.[35]

2. An application for recognition shall be accompanied by:

(a) A certified copy of the decision commencing the proceeding designated as a planning proceeding and appointing the group representative;

(b) A certificate from the foreign court affirming the existence of the planning proceeding and of the appointment of the group representative; or

(c) In the absence of evidence referred to in subparagraphs (a) and (b), any other evidence acceptable to the court of the existence of the planning proceeding and of the appointment of the group representative.

3. An application for recognition shall also be accompanied by:

(a) Evidence identifying each enterprise group member participating in the planning proceeding. When a participating group member is subject to insolvency proceedings in the court of its centre of main interests, the application shall be accompanied by evidence that [any approval which may be required under the domestic law of the State of the commencement of proceedings for participation in the planning proceeding has been obtained] [participation has not been precluded in accordance with article 11, paragraph 2];

[(b) A statement identifying all members of the enterprise group and all proceedings commenced in respect of enterprise group members participating in the planning proceeding that are known to the group representative]; and

(c) A statement to the effect that a group member subject to the planning proceeding has its centre of main interests in the jurisdiction where the planning proceeding is taking place and that that proceeding is likely to result in added overall combined value for the enterprise group members involved.

4. The court may require a translation of documents supplied in support of the application for recognition into an official language of this State.

Article 15. Interim relief that may be granted upon application for recognition of a foreign planning proceeding

1. From the time of filing an application for recognition until the application is decided upon, where urgently needed to preserve the possibility of developing and implementing a group insolvency solution and to protect the assets of an enterprise group member participating in a planning proceeding or the interests of the creditors [of such a group member], the court, at the request of the group representative, may grant appropriate relief of a provisional nature, including:[36]

(a) Staying execution against the enterprise group member's assets;

---

[34] Chapter 4 addresses provisions on recognition of a foreign planning proceeding and the relief available to assist that proceeding.

[35] The drafting of para. 1 of draft art. 14 has been revised to streamline the language. Revisions to paras. 2 and 3 reflect decisions taken at the fiftieth session (A/CN.9/898, paras. 87, 88 and 89). The closing words of subpara. 3(a) may need to be aligned with draft art. 11 (2) to focus on preclusion or prohibition, rather than on approval. While it was noted (A/CN.9/898, para. 88), that the test in subpara. 3 (b) might be burdensome, no alternative test was provided.

[36] As noted above, the chapeau of draft art. 15 has been broadly aligned with draft arts. 13 and 17. In accordance with agreement at the fiftieth session (A/CN.9/898, para. 101), language limiting the provision to participating group members has been introduced (see para. 101), and the reference to group members subject to the planning proceeding deleted. The Working Group may wish to confirm the group members in respect of which the relief under draft arts. 15 and 17 should be available. Is the limitation to participating group members intended to indicate, for example, that relief with respect to those group members subject to the planning proceeding is not required or that it should be sought under some other instrument, such as the Model Law?

(b) Suspending the right to transfer, encumber, or otherwise dispose of any assets of the enterprise group member;

(c) Staying [temporarily] any [insolvency] proceedings concerning the enterprise group member;[37]

(d) Staying the commencement or continuation of individual actions or individual proceedings concerning the enterprise group member's assets, rights, obligations, or liabilities;

[(e) Entrusting the administration or realization of all or part of the enterprise group member's assets located in this State to the group representative or another person designated by the court, in order to protect and preserve the value of assets that, by their nature or because of other circumstances, are perishable, susceptible to devaluation, or otherwise in jeopardy;][38]

(f) Providing for the examination of witnesses, the taking of evidence, or the delivery of information concerning the enterprise group member's assets, affairs, rights, obligations, or liabilities;

(g) Recognizing arrangements concerning the funding of enterprise group members participating in the planning proceeding where the funding entity is located in this State and authorizing the provision of finance under those funding arrangements, subject to any appropriate safeguards the court may apply;[39] and

(h) Granting any additional relief that may be available to [*insert the title of a person or body administering a reorganization or liquidation under the law of the enacting State*] under the laws of this State.

2. [*Insert provisions of the enacting State relating to notice*.]

3. Unless extended under article 17, subparagraph 1 (a), the relief granted under this article terminates when the application for recognition is decided upon.

[4. Relief under this article may not be granted with respect to the assets and operations located in this State of any group member participating in a planning proceeding [if that group member is not subject to insolvency proceedings] [if insolvency proceedings with respect to that group member have not commenced] [in any jurisdiction]].[40]

5. The court may refuse to grant relief under this article if such relief would interfere with the administration of a [planning proceeding] [proceeding located in the centre of main interests of an enterprise group member participating in the planning proceeding].

---

[37] Subpara. 1 (c) of draft art. 15 includes some alternative language to clarify which proceedings are the subject of the temporary stay (to distinguish that subpara. from subparas.1 (a) and (d)) (see also draft arts. 13, subpara. 1(c) and 17 subpara. 1(d)).

[38] A further issue to be considered relates to draft art. 17, subpara. 1 (e), which has been placed in square brackets pending further consideration of draft art. 17, para. 2. It might be noted that draft subpara. 1 (e) parallels art. 19 (1)(b) of the Model Law addressing interim relief, while draft art. 17 (2) parallels art. 21 (2) of the Model Law, addressing discretionary relief available following recognition of a foreign proceeding. Draft subpara. 1 (e) focuses on interim relief available to protect assets in jeopardy, but is limited to administration or realization of those assets, while draft art. 17 (2) addresses distribution following recognition and requires the court to be satisfied that the interests of creditors are protected. See draft art. 17, para. 2 below.

[39] See footnote 32 above with respect to subpara. 1 (g) of draft art. 15. Given that draft art. 15, like draft art. 17, applies only to those group members participating in the planning proceeding, it is potentially narrower in scope than draft art. 13. In view of the limitation included in the chapeau to draft art. 15, the words "participating in the planning proceeding" do not need to be repeated in the subpara.

[40] Draft para. 15, para. 4 has been included in the text as a possible means of clarifying that relief is not available with respect to those group members participating in a planning proceeding that are "solvent" or, in other words, not subject to any insolvency proceeding (A/CN.9/898, para. 85).

Article 16. Decision to recognize a foreign planning proceeding

1. Subject to article 2 ter, a planning proceeding shall be recognized if:[41]

(a) The application meets the requirements of article 14, paragraphs 2 and 3;

(b) The proceeding is a planning proceeding within the meaning of article 2, subparagraph (g); and

(c) The application has been submitted to the court referred to in article 2 quater;

2. An application for recognition of a planning proceeding shall be decided upon at the earliest possible time.

3. Recognition may be modified or terminated if it is shown that the grounds for granting it were fully or partially lacking or have ceased to exist.

4. For the purposes of paragraph 3, the group representative shall inform the court of changes in the status of the planning proceeding or in the status of their own appointment occurring after the application for recognition is made.

Article 17. Relief that may be granted upon recognition of a foreign planning proceeding

1. Upon recognition of a planning proceeding [or at any time thereafter], where necessary to preserve the possibility of developing and implementing a group insolvency solution and to protect the assets of an enterprise group member participating in the planning proceeding or the interests of the creditors [of such a group member] the court, at the request of the group representative or […], may grant any of the following relief:[42]

(a) Extending of any relief granted under article 15, paragraph 1;

(b) Staying execution against the enterprise group member's assets;

(c) Suspending the right to transfer, encumber, or otherwise dispose of any assets of the enterprise group member;

(d) Staying [temporarily] any [insolvency] proceedings concerning the enterprise group member;[43]

(e) Staying the commencement or continuation of individual actions or individual proceedings concerning the enterprise group member's assets, rights, obligations, or liabilities;

(f) Entrusting the administration or realization of all or part of the enterprise group member's assets located in this State to the group representative or another person designated by the court, in order to protect and preserve the value of assets

---

[41] It was agreed at the fiftieth session that draft art. 16 should be subject to a public policy exception (A/CN.9/898, para. 91); this exception is now reflected in draft art. 2 ter.

[42] The chapeau of draft art. 17 has been revised to align it generally with draft arts. 13 and 15 and in accordance with suggestions made at the fiftieth session (A/CN.9/898, para. 93) — addition of the words "or at any time thereafter", the place holder for a reference to persons other than the group representative that might apply for such relief (while no indication was provided as to which other persons might be appropriate), the limitation of the provision to group members "participating in the planning proceeding" and the reference to the creditors "of such group members".
By using the words "Upon recognition", the drafting of the chapeau of para. 1 follows that of art. 21 of the Model Law. Art. 21 has been interpreted to mean that recognition is the pre-condition to granting discretionary relief and that that relief may be sought at any time after recognition; its availability is not limited to the time recognition is granted. Accordingly, the words "at any time thereafter" are not required and the availability of relief at any time after recognition might be clarified in the guide to enactment.

[43] Subpara. 1 (d) of draft art. 17 includes some alternative language to clarify which proceedings are the subject of the temporary stay (to distinguish that subpara. from subparas.1 (b) and (e)) (see also draft arts. 13, subpara. 1(c) and 15 subpara. 1(c)).

that, by their nature or because of other circumstances, are perishable, susceptible to devaluation, or otherwise in jeopardy;

(g) Providing for the examination of witnesses, the taking of evidence, or the delivery of information concerning the enterprise group member's assets, affairs, rights, obligations, or liabilities;

(h) Recognizing arrangements concerning the funding of enterprise group members participating in the planning proceeding where the funding entity is located in this State and authorizing the provision of finance under those funding arrangements, subject to any appropriate safeguards the court may apply;[44]

[(i) Subject to article 19, approving the treatment in the foreign proceeding of the claims of creditors located in this State]; and

(j) Granting any additional relief that may be available to [*insert the title of a person or body administering a reorganization or liquidation under the law of the enacting State*] under the laws of this State.

[2. Upon recognition of a planning proceeding the court, at the request of the group representative, may entrust the distribution of all or part of the enterprise group member's assets located in this State to the group representative or another person designated by the court, provided that the court is satisfied that the interests of creditors in this State are adequately protected.][45]

[3. Relief under this article may not be granted with respect to the assets and operations located in this State of any group member participating in a planning proceeding [if that group member is not subject to insolvency proceedings] [if insolvency proceedings with respect to that group member have not commenced] [in any jurisdiction]].[46]

Article 18. Participation of a group representative in a proceeding under [*identify laws of the enacting State relating to insolvency*]

Upon recognition of a planning proceeding, the group representative may participate in any proceeding under [*identify laws of the enacting State relating to insolvency*] concerning enterprise group members that are participating in the planning proceeding [and enterprise group members that are not participating in the planning proceeding].[47]

Article 19. Protection of creditors and other interested persons[48]

1. In granting or denying relief under article 15 or 17 [or 21], or in modifying or terminating relief under paragraph 3 of this article, the court must be satisfied that the interests of the creditors and other interested persons, including the enterprise group member subject to the relief to be granted, are adequately protected.

---

[44] Subpara. 1(h) of draft art. 17 has been revised in accordance with the equivalent provisions in 13 (1) (g) and 15 (1). In view of the limitation included in the chapeau to draft art. 17, the words "participating in the planning proceeding" do not need to be repeated in the subpara. (g). Given that draft art. 17, like draft art. 15, applies only to those group members participating in the planning proceeding, it is potentially narrower in scope than draft art. 13.

[45] With respect to draft art. 17, para. 2, concerns were expressed about the similarity with draft art. 17, subpara. 1(f), and the absence in para. 2 of the protections applicable by virtue of the chapeau to subpara. 1(f). The origin of these provisions in the Model Law might be noted, as explained above in footnote 37.

[46] Draft art. 17, para. 3 has been added to the draft art. in response to a suggestion at the fiftieth session (A/CN.9/898, para. 85) to emphasize that relief cannot be ordered with respect to the assets and affairs of a group member not subject to insolvency proceedings (previously described as a solvent group member.

[47] The phrase in square brackets at the end of draft art. 18 has been added to provide authorization in the receiving State that parallels the authorization provided under draft art. 12 in the originating State.

[48] Revisions to paras. 1 and 2 of draft art. 19 are in accordance with proposals made at the fiftieth session (A/CN.9/898, para. 98); the Working Group may wish to consider whether draft art. 21 should also be subject to the protections of draft art. 19.

2. The court may subject relief granted under article 15 or 17 to conditions it considers appropriate, including the provision of security.

3. The court may, at the request of the group representative or a person affected by relief granted under article 15 or 17, or at its own motion, modify or terminate such relief.

Article 20. Approval of local elements of a group insolvency solution[49]

1. Where a group solution affects a group member participating in a planning proceeding that has its centre of main interests or establishment in this State and a proceeding under [*identify the laws of the enacting State relating to insolvency*] has commenced [in this State], the group insolvency solution shall be submitted to the court [in this State] for approval.

2. The court shall refer the portion of the group solution affecting the group member referred to in paragraph 1 for approval in accordance with [*identify the laws of the enacting State relating to insolvency*].

3. If the approval process referred to in paragraph 2 results in approval of the relevant portion of the group insolvency solution, the court shall [confirm and implement those elements relating to assets or operations in this State] [*specify the role to be played by the court in accordance with the law of the enacting State with respect to approval of a reorganization plan*].

4. Where a group solution affects a group member participating in the planning proceeding that has its centre of main interests or establishment in this State and no proceeding under [*identify the laws of the enacting State relating to insolvency*] has commenced in this State or article 21 applies, [*specify how, in those situations, the relevant elements of the group insolvency solution may be made binding and effective as required by the law of the enacting State*].

5. A group representative is entitled to apply directly to a court in this State to be heard on issues related to approval and implementation of the group insolvency solution.

Chapter 5. Treatment of foreign claims

Article 21. Commitment to and approval of the treatment of foreign claims in accordance with applicable law: non-main proceedings

1. To facilitate the treatment of claims that could otherwise be brought by a creditor in a non-main proceeding in another State, an insolvency representative of an enterprise group member or a group representative appointed in this State may commit to, and the court in this State may approve, providing that creditor with the treatment in this State that they would have received in a non-main proceeding in that other State. [Such undertaking shall be subject to the formal requirements, if any, of this State and shall be enforceable and binding on the insolvency estate.][50]

2. [Subject to article 19], a court in this State may stay or decline to commence a non-main proceeding if a foreign representative of an enterprise group member or a group representative from another State in which a main proceeding is pending has made a commitment under paragraph 1.

---

[49] Draft art. 20 has been revised in accordance with proposals at the fiftieth session (A/CN.9/898, paras. 99-100). The words in square brackets in para. 4 have been revised and redundant language in paragraph 5 deleted (referring to the group representative as "appointed in a planning proceeding").

[50] Draft art. 21, para. 1 has been revised in accordance with A/CN.9/898, paras. 102-103 and to give effect to the changes made to the definitions in draft art. 2. Given the nature of the draft text, the drafting has been amended to indicate that the reference to "formal requirements" is to the requirements "of this State", rather than to the State in which the planning proceeding commenced as previously specified. Draft para. 2 includes a possible reference to the qualifications of draft art. 19. The Working Group may wish to recall and consider the questions raised at the fiftieth session in para. 103 of A/CN.9/898.

[Part B]

Supplemental provisions

Article 22. Commitment to and approval of the treatment of foreign claims in accordance with applicable law: main proceedings

1. To facilitate the treatment of claims that would otherwise be brought by a creditor in a proceeding in another State, an insolvency representative of an enterprise group member or a group representative appointed in this State may commit to, and the court in this State may approve, providing that creditor with the treatment in this State that they would have received in a proceeding in that other State. [Such undertaking shall be subject to the formal requirements, if any, of this State and shall be enforceable and binding on the insolvency estate.][51]

2. Subject to article 19, a court in this State may stay or decline to commence a main proceeding if a foreign representative of an enterprise group member or a group representative from another State in which a proceeding is pending has made a commitment under paragraph 1.

Article 23. Additional relief

1. If, upon recognition of a planning proceeding, the court is satisfied that the interests of the creditors of affected enterprise group members would be adequately protected in the planning proceeding, particularly where a group representative has made a commitment under article 21 or 22, the court, in addition to granting any relief described in article 17, may stay or decline to commence insolvency proceedings in this State relating to enterprise group members participating in the planning proceeding.[52]

2. Notwithstanding article 20 if, upon submission of a proposed group insolvency solution by the group representative, [particularly where a commitment under article 21 or 22 has been made,] the court is satisfied that the interests of the creditors of the affected enterprise group member are adequately protected [in the group insolvency solution], the court may approve the relevant portion of the group insolvency solution and grant any relief described in article 17 that is necessary for implementation of the group insolvency solution.[53]

---

[51] The second sentence of draft art. 22, para. 1 includes the formal requirements from draft art. 21 and subjects the draft art. to the protections of draft art. 19, which might be sufficient to address considerations such as whether local creditors covered by the commitment would be adequately protected in the planning proceeding and whether the protection of those local creditors would be improved by the commencement of a local proceeding. Other considerations a court might take into account could include: whether the realization of assets located in the main jurisdiction would be facilitated by commencement of an insolvency proceeding; the court's ability or preparedness to coordinate and cooperate with the planning proceeding court; and the extent to which commencement of an insolvency proceeding might impede achievement of the purpose of the planning proceeding or might interfere with the administration of that proceeding. The Working Group may wish to consider whether further protections should be included in the drafting or whether the reference to draft art. 19 is sufficient. The Working Group may also wish to recall and consider the questions raised at para. 104 of A/CN.9/898 concerning the scope and operation of draft art. 22.

[52] Draft art. 23, para. 1 reflects proposals made at the fiftieth session (A/CN.9/898, para. 108). The cross-reference should probably be to draft art. 17, which relates to relief available on recognition, rather than to draft art. 13, which refers to relief available in the State of the planning proceeding.

[53] In draft art. 23, para. 2, the first set of words in square brackets has been added to reflect the addition to para. 1 (A/CN.9/898, para. 108). The reference to the protection of the group member's interests in the planning proceeding has been amended to refer to protection of those interests in the group insolvency solution, since it is the approval of that solution that is under consideration. As noted above, the cross-reference in the last part of the draft art. should be to draft art. 17, rather than draft art. 13.

G. Note by the Secretariat on insolvency of micro, small and medium-sized enterprises

(A/CN.9/WG.V/WP.147)

[Original: English]

Contents

I. Introduction

1. At its forty-sixth session (2013), the Commission requested Working Group V to conduct, at its Spring 2014 session, a preliminary examination of issues relevant to the insolvency of MSMEs, and in particular to consider whether the UNCITRAL Legislative Guide on Insolvency Law provided sufficient and adequate solutions for MSMEs. If it did not, the Working Group was requested to consider what further work and potential work product might be required to streamline and simplify insolvency procedures for MSMEs. Its conclusions on those MSME issues were to be included in its progress report to the Commission in 2014 in sufficient detail to enable the Commission to consider what, if any, future work might be required.[1]

2. At its forty-fifth session (April 2014), Working Group V considered the topic as requested and agreed that the issues facing MSMEs were not entirely novel and that solutions for them should be developed in light of the key insolvency principles and the guidance already provided by the Legislative Guide (see A/CN.9/WG.V/WP.121). The Working Group further agreed that it would not be necessary to wait for the results of the work being done by Working Group I in order to commence the study of insolvency regimes for MSMEs. As to the form that work might take, the Working Group agreed that, while such work might form an additional part to the Legislative Guide, no firm conclusion on that point could be reached in advance of undertaking a thorough analysis of the issues at stake.[2]

3. At its forty-seventh session (2014), the Commission gave Working Group V a mandate to undertake work on the insolvency of MSMEs as a next priority, following completion of the work on facilitating the cross-border insolvency of multinational enterprise groups and recognition and enforcement of insolvency-related judgments.[3]

4. At its forty-ninth session (May 2016), Working Group V noted the importance of MSME insolvency and the wide support that had been expressed in favour of work being undertaken on that topic. The Working Group agreed to recommend that the Commission should clarify, at its forty-ninth session (2016), the mandate given at its forty-seventh session to Working Group V as follows: “Working Group V is mandated to develop appropriate mechanisms and solutions, focusing on both natural and legal persons engaged in commercial activity, to resolve the insolvency of MSMEs. While the key insolvency principles and the guidance provided by the UNCITRAL Legislative Guide on Insolvency Law should be the starting point for discussions, the Working Group should aim to tailor the mechanisms already provided in the

[1] *Official Records of the General Assembly, Sixty-eighth Session, Supplement No. 17* (A/68/17), para. 326.
[2] Report of Working Group V on the work of its forty-fifth session, A/CN.9/803, para. 14.
[3] *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 156.

Legislative Guide to specifically address MSMEs and develop new and simplified mechanisms as required, taking into account the need for those mechanisms to be equitable, fast, flexible and cost efficient. The form the work might take should be decided at a later time based on the nature of the various solutions that were being developed."[4]

5. At its forty-ninth session (2016), the Commission noted that report of the Working Group and clarified the mandate of Working Group V with respect to the insolvency of MSMEs in accordance with the wording of the recommendation set forth in paragraph 4.[5]

6. In accordance with that mandate, and in view of the progress of the work on facilitating the cross-border insolvency of multinational enterprise groups and recognition and enforcement of insolvency-related judgments, the Working Group may wish to use some of the additional time allocated to its fifty-first session to hold a preliminary discussion on how the work on MSMEs might be developed.

II. Considerations specific to MSME insolvency

7. Recent work by the World Bank[6], the IMF[7] and others suggest that a properly implemented insolvency regime may help mitigate many of the challenges facing MSMEs, including access to credit, job preservation, facilitating entrepreneurship and reducing the personal risk of individuals who create enterprises. It might be noted, however, that the majority of MSMEs facing insolvency are likely to liquidate, with only a small fraction being able to take advantage of a restructuring regime. Insolvency frameworks for MSMEs thus should not focus solely on restructuring, but also aim to facilitate liquidation in the majority of cases.

A. Specific challenges for MSMEs entering insolvency

8. When MSMEs experience acute financial distress, they often face several challenges relating to access to insolvency procedures, creditor passivity, availability of appropriate and useful information during the insolvency process, difficulty accessing new finance and, potentially, the insufficiency of assets to cover the costs of the proceedings (the so called "no-asset cases" or "insolvent insolvencies").[8]

1. Access to insolvency procedures

9. Many MSMEs are disadvantaged because they lack the skills to identify and react to financial distress, often resulting in them waiting too long before initiating an insolvency process, which may, in any event, prove to be too complex, costly, lengthy and rigid, particularly for small family businesses and unincorporated MSMEs. Some of the features of insolvency regimes that act as a disincentive may include the automatic separation of management from the ordinary administration of the business upon applying for insolvency (including reorganization); the amount and complexity of documentation required to start the process, which often includes the legal requirement to file audited balance sheets; and the uncertainty of costs generated by the numerous participants involved in the process.

[6] World Bank Group, "Report by the Working Group on the Treatment of MSME Insolvency" (2017 forthcoming). Paras. 9 to 24, 26 to 31 and 38 to 42 of this Working Paper are based upon the material provided by that report.

[7] "Tackling Small and Medium Sized Enterprise Problem Loans in Europe", Bergthaler, Kang, Liu and Monaghan, March 2015, SDN/15/04. Paras. 9 to 15 and 25 of this Working Paper draw upon the material contained in that report.

[8] See also para. 14 below under subheading 6, "Overlap between business insolvency and personal insolvency regimes."

2. Availability of a "fresh start"

10. For unincorporated MSMEs, the treatment of individual defaulters (and in some cases their guarantors) in some insolvency regimes is very severe, leaving full personal liability for many years beyond liquidation of the business and, in some cases, limitations on freedom of movement and other such personal restrictions. The lack of a "fresh start" for insolvent owners who have demonstrated good faith in making payments can reduce the incentives to seek protection and restructuring within the courts. Some personal insolvency regimes also fail to clearly distinguish between bona fide and fraudulent default, resulting in stricter standards for a fresh start.

3. Creditor Passivity

11. Creditor passivity often arises when creditors weigh up the amount they estimate they will receive from the parties involved in the insolvency process against the amount of time and money this effort requires. If the costs outweigh the return, creditors are more likely to not become involved. In the case of many MSME insolvencies, particularly where the debtor is towards the "micro" end of the spectrum, the return creditors can expect to receive is insufficient to justify the costs of participating.

4. Limited information during insolvency

12. Insolvency systems work best when debtors provide creditors and other relevant parties with appropriate and pertinent information, particularly financial information. Many MSME debtors, however, may have difficulties collecting and distributing the relevant information because of inefficient or non-existent record keeping systems, whether due to a lack of resources, of formal obligations to maintain such records or of an understanding of any need for them. The lack of such information can make it hard to judge whether an MSME is approaching insolvency, and even if it is, to provide the information required to access insolvency procedures.

5. Accessibility of finance

13. Many insolvency systems do not make it easy for MSMEs to access post commencement financing. Even where legislation does contemplate the possibility for the parties or a court to grant, for example, a super-priority to the creditors who will provide additional finance, the lack of reliable MSME financial data makes it difficult to assess their viability and the feasibility of any restructuring plan. Moreover, MSMEs may lack the assets and resources to make obtaining post-commencement finance feasible, especially where high levels of collateral are a pre-requisite.

6. Overlap between business insolvency and personal insolvency regimes

14. The nature of many MSMEs, particularly microbusinesses, is such that a clear distinction between the business and the operating person does not always exist, making it unclear whether a business or a personal insolvency regime is the one most suited to a particular MSME's financial difficulties. Directors of MSMEs frequently provide not just equity but also debt funding, there will often be poor or non-existent records in respect of transactions and relationships between entrepreneurs and the company, there may be no clearly established ownership of key commercial assets (such as tools or other essential equipment), the entrepreneur and their family members' work for the MSME may not be documented or remunerated in accordance with typical commercial practices, the entrepreneur may use their own finances to fund or support the business without necessarily documenting that expenditure and, where funds are borrowed, the creditor may consider the natural person to be the relevant debtor, rather than the MSME. The personal assets of the entrepreneur may also be of equal or greater value than that of the MSME, which encourages lenders to seek recourse personally from the entrepreneur rather than from the MSME; a personal guarantee will typically extend liability for the debts of the MSME to the entrepreneur, affecting both personal effects (such as the family home) and business

assets. The lack of personal insolvency systems that carve out personal assets and provide a discharge means that financial difficulty can have a significant impact upon entrepreneurs personally.

7. Insufficient assets to fund insolvency proceedings

15. Many MSMEs which meet the criteria for commencement of insolvency proceedings are never formally declared bankrupt and are eventually liquidated. As a result of late filing, many MSME insolvency filings are classified as "no asset cases" and insolvency laws differ in the approach to their administration, including denying the application or ordering termination of the proceedings or providing funding from individual creditor contributions and/or the public budget.[9]

B. Responses to MSME insolvency

16. MSME insolvency has been approached differently around the world. In some jurisdictions, such as Argentina and the 17 countries of the Organization for the Harmonization of Business Laws in Africa (OHADA), certain requirements of the general insolvency law are eliminated for MSME insolvency. In Japan and Korea, in contrast, the insolvency framework for MSMEs differs from the "general" insolvency framework.

1. Mechanisms modifying general insolvency regime

17. As discussed below, some jurisdictions opt to modify certain parts of the "general" insolvency procedures to accommodate some of the needs of MSMEs.

(a) Argentina

18. The law contemplates four differences for small cases that are available to qualified small businesses:[10] (a) there are fewer formalities for commencing the process; (b) establishment of a creditors' committee is not mandatory; (c) special provisions relating to the opportunity for creditors to compete with the debtor in proposing alternative restructuring proposals do not apply; and (d) the insolvency practitioner's functions do not end with the ratification of the agreement, unless creditors determine that it should do so.

(b) Germany

19. The German Insolvency Code (Insolvenzordnung) envisages a simplified pre-packaged procedure for the reorganization of qualifying debtors,[11] which includes three steps:

(i) Extra-judicial settlement of debts

20. Consumers and small debtors are required to attempt an out-of-court settlement before applying for the commencement of formal proceedings. With the application for those formal proceedings, the debtor must submit a certificate issued by a suitable person or authority[12] that, within the last six months before the application, an

---

[9] Greece and Poland are among the countries that have opted not to commence insolvency proceedings if the debtor's assets are insufficient to cover the costs.

[10] In order to qualify for special treatment, the debtor must have one of the following characteristics: (i) liabilities do not exceed 300 minimum wages (approximately US $154,650); (ii) no more than 20 unsecured creditors; or (iii) no more than 20 employees.

[11] Part Nine of the German Insolvency Code (Insolvenzordnung) submits "small insolvencies" to the same process as for consumers (defined as a natural person who does not and has not pursued self-employed business activity) and applies to other debtors who have pursued self-employed activity provided their assets are comprehensible (which means they have less than 20 creditors) and there are no claims from employment contracts against them (Art. 304).

[12] Suitable agencies might include debtor advisory agencies of welfare organizations; suitable persons are mainly lawyers.

unsuccessful attempt has been made to settle out of court with creditors on the basis of a plan, together with an explanation for its failure.[13]

(ii) Judicial settlement plan proceedings

21. If the extra-judicial settlement fails, the debtor can request commencement of insolvency proceedings. A plan for settlement of its debts and records of the debtor's assets, income, creditors and debts together with a certificate from a suitable agency or person are to be submitted. The court can accept what is referred to as a "zero-plan", which is a plan for a debtor with no income and no assets and providing for no payments to the creditors. The effect of the acceptance of a "zero-plan" by the court is that the debtor can be freed from their debts, either in the settlement plan proceedings or following a discharge period. Upon submission of the application, the court suspends proceedings for a maximum of 3 months and communicates the plan to the creditors designated by the debtor. If creditors do not object to the plan, it will be deemed approved and binding upon the parties. If the majority of the creditors object to the plan, the settlement plan proceeding ends and the insolvency proceedings commence, if the insolvency estate covers the costs of the proceedings.

(iii) Insolvency and discharge proceedings

22. Once insolvency proceedings commence, the court appoints a trustee who liquidates the debtor's estate and distributes the proceeds among the creditors. A period of five to six years then starts, during which an attachable part of the debtor's wages is collected and distributed to creditors.

(c) Greece

23. A simplified insolvency procedure had been included in the Insolvency Code, which provided an accelerated process for the verification of creditors' claims and for resolving contested claims, but did not address other aspects of the insolvency process. Since it was found to be inadequate to address the rising number of non-performing loans affecting SMEs in the Greece, a new, voluntary, out-of-court restructuring framework for SMEs was introduced in 2014.[14]

24. The small enterprise or professional[15] needs to fulfil certain requirements to access the framework: (i) they must not be subject to any procedure under the law relating to the restructuring of debts of natural persons; (ii) they must be active in business and not subject to any formal insolvency procedure; and (iii) the person in charge of the business or the professional must not have been convicted of tax evasion, trafficking or racketeering or any form of fraud. The framework allows qualified persons to request lenders to write-down their financial obligations; a write-down cannot exceed EUR 500,000 and must include at least 50 per cent of the credit institution's total claim against the debtor or such an amount that, following the write-down, outstanding debts do not constitute more than 75 per cent of the debtor's net financial position. The credit institution can accept or reject the proposed write-down or offer it under different terms.

(d) Iceland

25. In 2010, the Icelandic Government, banks, and social partners entered into a voluntary debt restructuring scheme based on "joint rules on the financial restructuring of companies" specifically targeting SMEs with less than ISK 1 billion (approximately US $9 million) of liabilities and aimed at writing down debt to the value of the SME (that is, no equity value was created). Viability was determined to exist when the projected liquidation value was less than the going concern value. For SMEs below a certain debt-to-equity ratio threshold, liabilities were restructured

[13] German Insolvency Code, Art. 305.

[14] Law 4307/14.

[15] Small enterprises are identified as businesses that, for the year ending 31/12/2013, had a turnover of less than EUR 2.5 million. Professionals are defined as legal or natural persons, who are registered to conduct their businesses and for the year ending 31/12/2013, had a turnover of less than EUR 2.5 million.

based on the SMEs' capacity to pay. For SMEs with a high debt-to-equity ratio, the feature of "deferred loans" (that is, reduced interest rates for three years) was used. The scheme included an arbitration committee to resolve disputes among parties involved. The Government supported the scheme through various tax incentives and banks were subject to monthly targets to successfully restructure SMEs.

(e) India

26. The 2016 Insolvency and Bankruptcy Code includes a fast track corporate insolvency resolution process for qualified debtors,[16] which envisages shorter deadlines for the completion of proceedings. It may be initiated either by the debtor or its creditors upon submission of the documents that prove the debtor's insolvency as well as its eligibility (under the implementing regulations) to undergo a fast track resolution process. The process needs to be completed within 90 days from commencement, although the insolvency professional can request the deadline to be extended by the court for an additional 45 days if approved by 75 per cent of the creditors. Such an extension may only be requested once and shall only be granted if justified by the complexity of the case. The general provisions of the Insolvency Resolution Procedure apply to other aspects of the fast track process, "as the context may require".[17]

(f) United States of America

27. In 2005, the United States introduced special provisions for SMEs into Chapter 11 of the Bankruptcy Code. The main features of the United States simplified expedited reorganization process for small business debtors[18] are standardized forms, simplified voting requirements, shorter deadlines, no requirement for a creditor committee and more stringent oversight and reporting obligations. The application should include the debtor's most recently prepared balance sheet, statement of operations, cash flow statement and federal tax return. The debtor is under a strict deadline to propose a plan which has to be approved within 45 days of the application. The debtor is not required to file a disclosure statement with the reorganization plan, provided adequate information is included in the plan. The law sets no limit on the duration of the reorganization plan, which may be favourable for small businesses that need additional time to restructure their mortgage or equipment loans. During the course of the proceedings, the debtor's viability, business plan and activities are monitored and the proceedings may be dismissed if the debtor is not viable or otherwise able to confirm a plan. Periodic reporting on financial matters, cash flow and profitability is also required.

(g) OHADA

28. The focus of recent reforms in OHADA was upon establishing simplified, cheaper procedures to attempt the rescue of qualified small businesses.[19] The simplified proceedings apply the following procedures and the simplification relates to formalities concerning applications and hearings.

(i) Règlement Préventif (Preventive Settlement)

29. These procedures are in the form of simplifications of the main or overall *règlement préventif* proceeding. Any qualified small business can apply to commence simplified proceedings before they become insolvent and even if no plan or

[16] Debtors with assets and income below a level prescribed by the Central Government, debtors with a certain number of creditors and a certain amount of debt prescribed by the Central Government and any other type of debtors, as prescribed by the Central Government.

[17] 2016 Insolvency and Bankruptcy Code, art. 58.

[18] Small business debtors are classified in Chapter 11 of the United States Bankruptcy Code on the basis of a two part test: 1) the debtor is engaged in non-real estate activity with total fixed debts of US$2,566,050 or less; and 2) the United States trustee has not appointed a committee of unsecured creditors or the court determines that the committee of unsecured creditors is not sufficiently active.

[19] A "small business" would constitute a proprietorship, partnership or other legal entity having less than or equal to 20 employees and a turnover not exceeding 50 million francs CFA (approximately US$80,000) in the 12 months prior to proceedings.

arrangement is provided; although documents relating to the debtor's financial situation do have to be submitted, those documents do not need to be audited and there is no requirement for comprehensive financial or cash-flow statements, unlike in the general proceedings. Shorter time frames are applicable and the required restructuring plan, to be prepared by the debtor with the assistance of an administrator, can be simpler than under the general proceeding. The procedure is commenced, monitored and closed by a judge.

(ii) *Redressement judiciaire* (reorganization)

30. As with the general proceeding, the application for a simplified reorganization proceeding must be made by an insolvent debtor within 30 days of insolvency (based upon the cash-flow test). Fewer documents are required to support the application and they must include a sworn statement indicating that the conditions for simplified reorganization are met. A reorganization plan must be filed, with the assistance of an administrator, within 45 days of the declaration of insolvency and, unlike the more detailed plan required in the general reorganization process, the plan can be limited to payment terms, debt relief and the possible guarantees that the entrepreneur must give to ensure its execution. Financial statements and records are not required. Conversion is available between general reorganization and the simplified proceeding.

(iii) *Liquidation des biens* (liquidation)

31. The conditions for commencing simplified liquidation are the same as for reorganization. However, as well as being a qualified small business, the debtor must not own any immovable property and must attest to meeting the relevant conditions for a simplified liquidation proceeding. After commencement, the liquidator can, within thirty days of appointment, prepare and file a report with the competent court, on the basis of which the court can apply the procedure, after having heard or summoned the debtor. The court can refuse to apply the procedure even where the conditions are met. Sale of the debtor's property can proceed by way of private agreement, as well as public auction.

(h) European Union

32. In 2014, the European Commission issued a non-binding Recommendation on a new approach to business failure and insolvency, which although not targeting MSMEs specifically, does include provisions for a discharge of individual debtors.[20] The Recommendation essentially addressed two main issues: first, the features of a restructuring mechanism with minimal court intervention (the mechanism); and second, the availability of a discharge for individual entrepreneurs within a short time frame. The mechanism was to be available to distressed entrepreneurs as early as possible, leave the debtor in control and be as informal as possible in order to reduce costs. Court involvement was not required, except where the rights of dissenting creditors were affected, either at the stage of imposing or lifting a stay of individual enforcement actions, or at the stage of validating a restructuring plan which affected such creditors or which provided for new finance directly or indirectly affecting the rights of certain creditors.

33. The mechanism was to include a stay of all creditor actions, limited to four months, but extendable up to twelve months. Creditors would be bound by a restructuring plan if it was approved by a majority of affected creditors in value (as determined under national law) according to separate classes (at a minimum, secured and unsecured creditors). Protective measures for dissenting creditors were to be included, that is, that no dissenting creditor could receive less under the plan than in liquidation. New finance was to be exempt from avoidance actions in any subsequent liquidation and providers of such finance were to be exempt from civil and criminal liability, where it existed.

34. Discharge would be available to all honest entrepreneurs after a maximum of three years from the commencement of liquidation proceedings or, where a repayment

[20] COM (2014) 1500 final.

plan was approved, from the moment the plan took effect. Exemptions were included to, for example, safeguard the livelihood of the debtor and discourage dishonest entrepreneurs from taking advantage of a quick discharge.

35. In 2015, the Commission reviewed implementation of the Recommendation, concluding that, while it had provided a useful focus for Member States undertaking reforms in the insolvency area, it had not had the desired impact on facilitating business rescue and giving a second chance to entrepreneurs due to only partial implementation in a significant number of Member States and the differences in implementation across those States.[21]

36. In November 2016, the Commission announced a proposal for a Directive to focus on three elements: (i) common principles on the use of early restructuring frameworks to help companies continue their activity and preserve jobs; (ii) rules to allow entrepreneurs to benefit from a second chance and be fully discharged of their debt after a maximum period of three years; and (iii) targeted measures for Member States to increase the efficiency of insolvency, restructuring and discharge procedures in order to reduce the excessive length and costs of procedures in many Member States, which results in legal uncertainty for creditors and investors and low recovery rates of unpaid debts.[22]

2. Comprehensive MSME insolvency regimes

37. Some countries, like Japan and the Republic of Korea, have adopted comprehensive laws that are specifically designed to apply to MSMEs and thus significantly different to the regimes applicable to larger enterprises.

(a) Japan

38. Although aimed at the restructuring of MSMEs, the Japanese legislation[23] also contains provisions on the rehabilitation of individuals with small scale debt.[24] The main differences from the general insolvency regime are that: (i) creditors are not generally required to file their claims with the court, as claims are regarded as filed when the schedule of the creditors prepared by the debtor is submitted to the court; (ii) avoidance claims are generally not permitted; and (iii) discrimination among creditors in a reorganization plan is not permitted. Both creditors and the debtor are able to initiate the procedure.

39. The court may appoint an "individual rehabilitation commissioner", who may be assigned one or more of the following tasks: (i) investigating the status of the debtor's property and income; (ii) assisting the court in the valuation of claims; or (iii) making recommendations necessary for the debtor to prepare and propose a proper plan. The commissioner is not significantly involved with the debtor and its business and the costs are thus reduced. The debtor is subject to the duty to act honestly and fairly, and requires court permission to undertake certain actions (for example, liquidate assets, acquire new loans, settle or pursue lawsuits, and hand over collateral).

40. There is no automatic stay, but temporary stays can be imposed by a court to enable negotiation. The consent of shareholders is not required to dispose of the business or reduce capital and post-petition financing has first priority in a class together with administrative expenses. Procedural requirements regarding proof of, and objection to, claims are less stringent than for the general regime and the debtor

[23] Civil Rehabilitation Act of Japan (Act No. 225 of 22 December 1999).

[24] These provisions apply to an individual debtor who is likely to earn income continuously or regularly in the future and whose total claims amount to less than JPY 50 million (approximately US $455,000).

is exempted from the duty to prepare balance sheets. Where an objection is made to a claim by the debtor or creditors, the court reviews the legitimacy or amount of the claim in a summary, rather than a plenary, proceeding.

41. The plan may only provide for an extension of the term of the debt if the creditor is to receive a payment more than once in three months and the extension does not exceed three years from the date of confirmation of the plan. The law also adopts a "negative approval standard" for a plan: a plan is accepted if the creditors rejecting the plan are owed half or less of the total allowed claims and number less than half of all the creditors. Rights of secured creditors cannot be changed without their consent. Following approval, the court will confirm the plan if: (i) creditors receive at least as much as they would in liquidation; and (ii) the minimum payment thresholds prescribed by the law are met.

(b) Republic of Korea

42. The Republic of Korea has introduced a specialized procedure for small businesses,[25] the Small Business Rehabilitation Procedure, which can only be commenced by debtors. Upon the commencement of the court proceedings, the debtor retains the management of its business. An examiner is appointed, usually an experienced deputy court clerk or an accounting firm, who uses a simplified accounting method. No fee is required for the court clerk to perform his or her functions. The small business procedure also simplifies the requirements for the approval of a plan — for secured creditors, approval is required by 3/4 in amount (the same as for ordinary business reorganization), while for unsecured creditors, approval is required by either 2/3 in amount of total claims or 1/2 in amount of total claims and 1/2 in number of total creditors.

3. A modular approach to MSME insolvency

43. A "modular" approach to the design of insolvency regimes has been proposed for MSMEs, whether incorporated or unincorporated entities or sole traders or entrepreneurs. The purpose of the approach is to accommodate differences in the scope of insolvency regimes and to offer options for the allocation of various functions during the insolvency process — management (e.g. to the entrepreneur or an administrative agency), administrative (to a public body or a private sector official) and decision-making (to the court, an administrative agency or an insolvency professional). The following paragraphs provide a very brief summary of some of the elements of the proposal.[26]

44. The core objectives of the approach are the same as those for standard insolvency regimes, that is, preserving and maximizing the value in the insolvency estate, ensuring distribution of the highest feasible proportion of that value to those entitled to it, providing due accountability for any wrongdoing connected with the insolvency, and enabling discharge of over-indebted natural persons. However, the approach differs in the way it pursues those objectives. The basic assumption is that the parties to a particular insolvency case are best placed to select the tools appropriate to that case. The role of the legal regime is to make those tools available in a flexible manner and to create appropriate incentives for their use.

45. Traditionally, insolvency regimes provide particular "packages" or combinations of these tools and label them "liquidation" and "restructuring". The

---

[25] In order to be able to request the opening of this specialized procedure, the debtor: (i) has to be a business income earner (not wage income earner); (ii) may be an individual or a legal entity; and (iii) must have less than 3,000,000,000 KRW (approximately US $2,570,000) in total secured and unsecured debts.

[26] See "The Modular Approach to Micro, Small and Medium Enterprise Insolvency", SSRN 26 January 2017 — The Bowen Island Group (Dr. Ronald Davis, University of British Columbia; Dr. Stephan Madaus, Martin-Luther-University Halle-Wittenberg; Dr. Alberto Mazzoni, Catholic University of Milan, Unidroit; Dr. Irit Mevorach, University of Nottingham; Dr. Riz Mokal, South Square Chambers; University College London; Justice Barbara Romaine, Court of Queen's Bench of Alberta; Dr. Janis Sarra, University of British Columbi; Dr. Ignacio Tirado, Universidad Autonoma De Madrid, European Banking Institute).

modular approach unpacks those combinations. It assumes a core process, geared towards enabling the entrepreneur to propose a restructuring of the business' liabilities and to obtain discharge of any obligations that cannot be repaid. The entrepreneur may access any of the full range of insolvency law mechanisms to enable attainment of these objectives. At the same time, creditors and other stakeholders have the right to adequate notification of each step in the process, coupled with the power to override the entrepreneur's choices where a sufficient proportion of them consider it appropriate to do so. The process may obtain and retain momentum by virtue of the presumptions that failure to take action is interpreted as consent and the failure to exercise procedural rights within the process precludes a stakeholder from objecting to the part of the process to which those rights related.

46. The modular approach provides for processes to liquidate or rescue a small business, with stakeholders being able to adapt the process to their specific needs by employing various modules; the choice of which modules to include in the regime is left to lawmakers to consider in the light of the social, economic and political factors underpinning the local insolvency regime. Modules that can be used by the debtor include: (a) mediation, which requires the agreement of the various parties in dispute to ensure it is not being improperly invoked to delay the proceedings, and (b) a creditor action moratorium, which is available only upon request. It is treated as optional because it may not be required in all cases and it is thus not necessary to incur the associated costs in all cases. The moratorium could affect, for example, creditor claims enforcement, as well as ipso factor clauses and set-off rights.

47. Modules that may be employed by creditors (subject to specific thresholds) include: (a) mediation, to address disputes concerning, for example, admissibility or quantum of claims, plan formulation or treatment of guarantees; (b) a debtor action moratorium, which affects the debtor's rights to remain in possession and allows creditors to veto disposal of assets or the incurring of liabilities; (c) insolvency professional involvement, which allows creditors to seek to veto a debtor's decisions by appointing an insolvency professional to replace the debtor; and (d) "doomed to failure", which allows debtor-initiated rescue to be terminated where it can be demonstrated that the debtor's plan is doomed to failure and to be converted to liquidation.

III. Issues for consideration

48. As previously noted by Working Group V, solutions to the issues facing MSMEs in insolvency could be developed in light of the key principles and guidance already provided by the Legislative Guide.[27]

49. Working Group V may thus wish to approach the insolvency of MSMEs through the issues addressed in the Legislative Guide, taking the topics covered by each chapter as a starting point. If that approach is to be followed, document A/CN.9/WG.V/WP.121 provides a starting point for that task, as it has already identified the relevance to MSMEs of many of the key topics in the Legislative Guide, as well as outlining some of the modifications that might be required in addition to issues not currently covered by the Legislative Guide. That document might be amplified in greater detail to facilitate future discussion.

50. As part of its future discussion of those key issues to be addressed, Working Group V may wish to consider how the various elements could be combined in an insolvency regime for MSMEs and, in particular, the form that its final work product might take (e.g. a legislative guide).

[27] See footnote 2 above.

H. Note by the Secretariat: comments submitted by Canada on a draft model law on recognition and enforcement of insolvency-related judgments (A/CN.9/WG.V/WP.143)

(A/CN.9/WG.V/WP.148)

[Original: English/French]

The Government of Canada has submitted to the Secretariat of the United Nations Commission on International Trade Law (UNCITRAL) the following observations in order to provide the Working Group with additional information for its deliberations. The text of the observations is reproduced as an annex to this note in the form in which it was received by the Secretariat, with formatting changes.

Annex

Introduction

This document contains comments and suggested language in relation to the recognition and enforcement of insolvency-related judgments. Part A describes the guiding principles applicable to the elaboration of model provisions to cover the recognition and enforcement of foreign judgments in the context of insolvency law. Part B contains suggested wording for the Draft Model Law on the Recognition and Enforcement of Insolvency-related Judgments. Each drafting suggestion is followed by a comment explaining the rationale for the suggested change. Part C contains suggested language for a change to the Model Law on Cross-border Insolvency.

In this text, "this Law" means the Draft Model Law on the Recognition and Enforcement of Insolvency-related Judgments.

A. Guiding Principles

Scope of application — Provisional relief

It is expedient that the scope of application of the Draft Model Law on the Recognition and Enforcement of Insolvency-related Judgments covers protective measures, including stays of proceedings, freezing orders and other orders or decrees intended to preserve the value of the estate of the insolvent debtor. When insolvency is imminent, money can flow easily and assets can be dispersed rapidly. The value added of an instrument dealing with the recognition and enforcement of insolvency judgments is precisely to preserve the value of the business in financial distress, to enable a restructuring, thereby avoiding destruction of wealth, to protect creditors' and debtors' rights and to maintain jobs.

Indeed, the value added of the proposed instrument does not rest with the recognition and enforcement of an order confirming a restructuring plan or of a liquidation judgment. When these orders are rendered, creditors usually know what they will be able to obtain given the outcome of the insolvency proceeding and those orders are very seldom the subject of enforcement procedures. Where a restructuring takes place, creditors, the insolvent entity and stakeholders often have entered into agreements with binding effects. The order confirming the restructuring is only an additional element to existing binding obligations.

For these reasons, the scope of the proposed instrument should not be restricted to decisions on the merit or final judgments. Such a limited scope would not allow the recognition and enforcement of a number of interim protective measures essential for the effective resolution of the insolvency. Instead, the scope of the proposed instrument should be responsive to evolving situations insolvency courts commonly face, such as risks that assets be dispersed, the need for stays of proceedings against the insolvent debtor or the need for the orderly treatment of claims.

Simplicity and clarity

We are grateful to the UNCITRAL Secretariat for having drafted provisions that are clear, concise and simple. It will ensure they are applied in a consistent manner in the various jurisdictions choosing to adopt them. Simplicity also reflects the fact that model provisions are designed to be adapted to the various legal systems of both developed and developing countries and common law and civil law jurisdictions. We urge delegations to support choices and provisions that are simple and clear, because they lead to less litigation and better judicial cooperation.

For that reason, the provisions dealing with the preservation of assets in the period where enforcement of the foreign judgment is sought are concise (see new Article 4.3 below). The drafting promotes simplicity and clarity by being consistent with other UNCITRAL instruments. Similarly, insolvency-related judgments on directors' liability in the period leading to insolvency have been excluded from the scope of the instrument. Drawing the line between situations where an insolvency-related duty is involved versus those where there is no such duty can be challenging. For that reason, the deliberate choice of excluding from the scope of application of the model provisions judgments on directors' liability has been made in order to promote simplicity, clarity and consistent applications.

Promoting harmonization of laws

UNCITRAL seeks to facilitate international trade and business through the modernization and harmonization of rules on international commercial law. Harmonized rules lead to a more stable and predictable environment for commercial enterprises. In the case of insolvency law, they also facilitates judicial cooperation and coordination by ensuring the fair and predictable treatment of creditors' rights, by making similar remedies available in the various insolvency courts, and by enabling the mutual recognition of insolvency decisions. Harmonized rules contribute to a functional system of cross-border cooperation and coordination, because the various courts involved in the insolvency of a given economic entity do not issue inconsistent decisions.

For that reason, it is only with great caution that recommendations for the adoption of alternative options for a given provision should be made. In particular, definitions which set the basic requirements for the application of various provisions in a model law should, to the greatest extent possible, not include alternative language or options. The proposal to include variants in relation to the definition of insolvency-related judgment is a major concern in that respect.

The Benefits of increased cooperation

The Model Law on Cross-border Insolvency has been a success. It has been adopted by some 40 states and is operating well in those jurisdictions. Experience has shown that judicial cooperation can significantly contribute to the positive resolution of difficulties that arise in cross-border insolvency proceedings. Although not common at the inception of the Model Law, the form of judicial cooperation encouraged by the Model Law is now recognized and promoted in a large number of jurisdictions.

From a Canadian perspective, judicial cooperation, through the use of cross-border insolvency agreements or protocols setting the parameters to assist in the management of cross-border proceedings and the harmonization of procedural issues, has been very effective and these tools play an important role in the promotion of judicial cooperation to the benefit of creditors and stakeholders. Experience shows that there is mutual benefit to cross-border cooperation and coordination of insolvency proceedings.

B. Drafting Suggestions and Justifications

New Article [2] Definitions

"Foreign main proceeding" means a foreign main proceeding as defined in [*insert reference to provisions implementing the Model Law on Cross-border Insolvency*];

For jurisdictions not having implemented the Model Law on Cross-border Insolvency, but still wishing to exclude decisions rendered from non-COMI jurisdictions, the following definition can be included: **"Foreign main proceeding" means a foreign proceeding taking place in the State where the debtor has the centre of its main interests;**

Comment

This definition is needed because of the reference to foreign main proceeding in the definition of "insolvency-related judgment" proposed in this text.

"Insolvency-related judgment" means a judgment issued by a court supervising a foreign proceeding and which is issued on or after the commencement of that proceeding, but does not include:

(a) a judgment relating to directors' liability;

[(b) a judgment covering transfers at under value in the period prior to insolvency;]

(c) a judgment recognizing contract-based remedies exercised by creditors in the period prior to insolvency; or

(d) a judgment rendered by a court that is not a foreign main proceeding, except if the judgment is issued by a court acting as a planning proceeding[1];

[and]

[(e) a judgment from a jurisdiction that does not recognize insolvency-related judgments issued by a court in this State.]

Comment

Chapeau

To fall within the scope of this Law, a judgment must be issued by a court supervising a foreign insolvency proceeding. As is the case under the Model Law on Cross-border Insolvency, the proceeding needs to possess certain attributes. These include the following: basis in insolvency-related law of the originating State; involvement of creditors collectively; control or supervision of the assets and affairs of the debtor by a court or another official body; and reorganization or liquidation of the debtor as the purpose of the proceeding.[2]

Within those parameters, a variety of collective proceedings would be eligible to qualify as a foreign proceeding, be they compulsory or voluntary, corporate or individual, winding-up or reorganization. It also includes those in which the debtor retains some measure of control over its assets, albeit under court supervision (e.g. suspension of payments, "debtor in possession").[3]

Subparagraph (a)

Judgments dealing with directors' liability are excluded from the definition of insolvency-related judgment as some of these judgments are decided on the basis of corporate law (as well as other laws) and it would be difficult to distinguish between "true" insolvency-related judgments and the others (subparagraph a)).

---

[1] This definition of "planning proceeding" based on the draft Model Law on Corporate Groups is added to this draft.

[2] Paragraph 66, Guide to Enactment to the Model Law on Cross-border Insolvency.

[3] Paragraph 71, Guide to Enactment to the Model Law on Cross-border Insolvency.

Subparagraph (b)

Undervalued transactions are subject to varying standards under insolvency laws depending on the jurisdiction. For example, as illustrated in the Legislative Guide on Insolvency Law, Part II, some jurisdictions might use deeming provisions whereby, a transaction is deemed to be undervalued if below a certain threshold, they might require specific modes to determine the value of the transaction which are not known in other jurisdictions, or they might offer defences that are unknown in other jurisdictions (see paragraphs 175-176). In the domestic context, those transfers are subject to local rules, but one could argue that defendants who relied on legal standards known to them should not be found liable for transactions at undervalue determined against standards of another jurisdiction. For that reason, transactions at undervalue entered into in the period prior to the insolvency are excluded from the definition (subparagraph b)). Note that it is suggested that judgments covering transactions at undervalue entered into after the commencement of the insolvency proceeding be covered. The commencement of an insolvency proceeding constitutes sufficient notice that transactions could be reviewed and that the insolvency laws of the jurisdiction of the insolvent entity will apply. Avoidance transactions, or transactions intended to defeat, hinder or delay creditors, would remained covered by the definition of insolvency-related judgment. These transactions differ from transactions at undervalue because they show an intention to deceive.

Subparagraph (c)

As a general rule, claims based on general contract law, whether determined by an insolvency court or a court of general civil jurisdiction, should not be covered by the definition. Contractual remedies are grounded in the contract to which they relate and, by their nature, can be exercised without the assistance of a court. Contractual remedies covered by this exclusion encompass title reservation agreements, *ipso facto* clauses, set-offs and other forms of legal compensation. The exclusion aims only at contractual remedies exercised in the period prior to the insolvency. This distinction is justified because contract-based remedies exercised under the supervision of the insolvency court are considered to be insolvency judgments.

Subparagraph (d)

By incorporating references to concepts found in the Model Law on Cross-border Insolvency, the definition clarifies the relationship between this Law and the Model Law on Cross-border Insolvency. It means that a judgment from a foreign main proceeding, as defined under the Model Law, can be recognized and enforced in the receiving jurisdiction by application of this Law, both in situations where the receiving jurisdiction is a non-main proceeding or has not open insolvency proceeding in relation to the insolvent debtor (subparagraph d)). The recognition and enforcement of judgments offered under this Law do not prevent the application of relief available under the Model Law on Cross-border Insolvency should those seeking enforcement prefer to follow that approach (The relationship between this Law and the Model Law is also discussed in Part C).

By including judgments from planning proceedings (through the exception to the exclusion for subparagraph d)), the definition recognizes that, in some situations, a planning court may be issuing a judgment in relation to a corporate group member which does not have its center of main interest in the jurisdiction of the planning court. Covering insolvency-related judgments of planning courts enables a better coordination of planning proceedings in a manner that is consistent with the draft Model Law on Enterprise Groups.

Establishing as a principle that only insolvency-related judgments from a foreign main or a planning proceeding fall under the scope of this Law prevents the application of chain recognition of judgments. As such, a judgment issued in state A, subsequently recognized in state B, could only be recognized in state C on the basis of the original judgment in state A, not of the judgment from state B.

Subparagraph (e)

[Subparagraph e) provides a mechanism whereby only a judgment from a reciprocating jurisdiction may be recognized and enforced under this Law. A reciprocating jurisdiction is a place (other than the enacting jurisdiction) that has enacted similar legislation on the recognition and enforcement of insolvency-related judgments. The reciprocating jurisdiction may be limiting the application of its similar legislation to reciprocating jurisdictions or not. Although that provision is not necessary in order to have a functioning law and, therefore, not recommended for adoption, enacting jurisdictions might be concerned about extending the benefit of this Law to jurisdictions that do not cooperate in the same manner. This provision recognizes that, from a policy perspective, some jurisdictions will wish to limit the application of their Law.]

Examples — Guide to Enactment

The illustrative list in [Alternative A] should be found in the Guide to Enactment. It does not add any additional legal foundation for a judgment to qualify as an insolvency judgment. However, it provides useful illustrations of the situations that are intended to be covered.

"Planning proceeding" means a foreign planning proceeding as defined in [*insert the reference to the provisions implementing the draft Model Law on Enterprise Groups*];

For jurisdictions that have not adopted a group solution, but still wish to recognize and enforce decisions from a planning proceeding: **"Planning proceeding" means a main proceeding commenced in respect of an enterprise group member that is a necessary and integral part of a group insolvency solution, in which one or more additional group members are participating for the purpose of developing [and implementing] a group insolvency solution and in which a group representative has been appointed;**

Comment

This definition is necessary because of the reference to planning proceeding in the definition of insolvency-related judgment.

The other definitions in the draft remain unchanged.

New Article [4] Interest to bring an application

A foreign representative, or a group representative in a planning proceeding, appointed in the court where the judgment was issued, a judgment debtor or any creditors whose interest is affected by the judgment [or other persons entitled under the law of the originating State to seek recognition and enforcement of an insolvency-related judgment] may bring an application for recognition of that judgment.

Comment

This provision is based on existing Article [10(1)]. The conditions that need to be met in order to have standing under this Law are brought upfront in the legislation. The proposed drafting also resolves an issue under Article [10] which is the linkage between the foreign representative or the group representative in a planning proceeding, on the one hand, and the court having issued the judgment for which recognition is sought, on the other hand. It would be inappropriate to grant standing to any foreign representative, such as foreign representatives in unrelated-insolvency proceedings, to seek recognition and enforcement of a judgment. In practice, it means that, in a group proceeding, a foreign representative of a group member who sought and obtained a judgment in the planning court would not necessarily be in a position to seek recognition and enforcement of the resulting insolvency-related judgment in a third state. The resulting judgment would have to be recognized and enforced upon

application by the group representative, the judgment debtor or creditors affected by the judgment.

The current text of Article [10(1)] referring to other persons entitled under the law of the originating State to seek recognition and enforcement of an insolvency-related judgment has been maintained. It is understood, however, that applicants will prefer to fall in the other categories of persons listed in the provision if possible, because relying on this last category would require producing evidence on foreign law.

New Article [4.1] Competent court or authority

An application for the recognition and enforcement of an insolvency-related judgment shall be brought to [*specify the court, courts, authority or authorities competent to perform recognition or enforcement in the enacting State*].

Comment

Guidance is needed for the applicant as there will not necessarily be an insolvency proceeding open in the state where enforcement is sought. As opposed to the Model Law on Cross-border Insolvency, which deals with the coordination of opened insolvency proceedings for the same debtor in various jurisdiction, this Law is intended to apply primarily in situations where there is no insolvency proceedings open in the state where enforcement is sought. This provision is intended to specify where the application can be brought.

New Article [4.2] Notification of application and summary recognition where not contested

1. An application for the recognition and enforcement of an insolvency-related judgment shall be notified to the judgment debtor and the insolvency representative, or the group representative of the planning proceeding, of the court where the judgment was obtained and the judgment can only be recognized after the other parties have been given the opportunity to present arguments against the application.

2. Where the application is not contested, the insolvency-related judgment may be recognized summarily, without a formal hearing.

3. An application for the recognition and enforcement of an insolvency-related judgment can be accompanied by a request for provisional relief under Article 15.

4. A request for provisional relief under Article 15 does not prevent a party from seeking any additional provisional relief available under the law of the jurisdiction where enforcement is sought.

Comment

The procedural requirements should clearly spell out that the party seeking recognition should properly notify the judgment debtor of the action taken against him. This procedural requirement is consistent with the ground for refusing recognition and enforcement found in Article [12(a)] dealing with notification in the originating state.

New Article [4.3] Interim Protective Relief

1. A party may, without notice to any other party, make a request for interim protective relief together with an application for recognition and enforcement of an insolvency judgment directing a party not to frustrate the purpose of the provisional relief requested or the judgment, as the case may be.

2. Immediately after the receiving court has made a determination in respect of an application for an interim protective relief ex parte, the court shall order notice to be given to all parties of the request for the interim measure, the application for the interim protective relief, the interim protective order, if any,

and all other communications between any party and the court in relation thereto. At the same time, the court shall give an opportunity to any party against whom a preliminary order is directed to present its case at the earliest practicable time.

3. The court may require any party to disclose promptly any material change in the circumstances on the basis of which the interim or provisional relief was requested or granted.

Comment

Article [15] provides the ability for the receiving court to grant relief of a provisional nature. That provision is needed in order to ensure the protection of assets in the period between the application for recognition and enforcement and the decision by the court to recognize and enforce it. New Article [4.3] empowers receiving courts to issue interim protective measures *ex parte*. Given the nature of the remedy, a number of procedural safeguards are put in place to ensure the party(ies) against whom the measures are issued is (are) adequately protected.

The proposed wording is inspired from the Model Law on International Arbitration.

Article [7] Public policy exception

Comment

Article [7], as currently drafted, only preserves the ability of a court to have recourse to public policy for refusing to take action, if the action that it is requested to be carried out is manifestly contrary to public policy. In order to benefit from the public policy exception, the party relying on the exception must identify elsewhere in the domestic legislation of the enacting state a public policy principle that is applicable. The provision merely preserves existing public policy principles. For that reason, it is suggested that a specific ground for exclusion be included in Article [12] dealing with the grounds to refuse recognition and enforcement of an insolvency-related judgment. No changes to Article [7] are suggested.

Article [8] Interpretation

In the interpretation of this Law, regard is to be had to its international origin and to the need to promote uniformity in its application ~~and the observance of good faith~~.

Comment

The good faith requirement is typically found in substantive international instruments, such as the *United Nations Convention on the International Sale of Goods*, the *United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea*, or the *United Nations Convention on the Use of Electronic Communications in International Contracts*. It is usually not found in instruments dealing with the recognition and enforcement of foreign decisions or in instruments setting procedural mechanisms, such at the *Hague Convention on Choice of Court Agreements*, the *New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards*, or the *ICSID Convention*. One notable exception to that dichotomy is the UNCITRAL Model Law on Cross-border Insolvency.

Article [9] Effect and Enforceability

Comment

It is suggested to consider eliminating redundancies between Articles 9 and 11. In our view, it might be counterproductive to state twice that for a judgment to be enforceable, it needs to have effect and be enforceable in the originating state.

Article [10] Application for recognition and enforcement of an insolvency-related Judgment

~~1. A foreign representative or other person entitled under the law of the originating State to seek recognition and enforcement of an insolvency-related judgment may apply to the court in this State for recognition and enforcement of that judgment, including by way of defence.~~

[…]

Comment

Because of the changes to Article [4], paragraph [10 (1)] should be deleted.

New Article [10.1] Judgment used by way of defence

Nothing in this Law requires a party to seek recognition and enforcement of an insolvency-related judgment where the judgment is used as a defence in a proceeding and the judgment can be received in evidence by the court, without the formal procedural requirements of this Law, by application of its rules of procedure and evidence.

Comment

In some jurisdictions, a foreign judgment is a fact that can be introduced as evidence in a court proceeding and, as a result, be used as a defence in that court proceeding. This provision is intended to preserve this evidentiary rule for enacting states wishing to allow the presentation of judgments as defence without the formal requirement of recognition and enforcement set out in this Law.

Article [12] Grounds to refuse recognition and enforcement of an insolvency-related judgment

Recognition and enforcement of an insolvency-related judgment may be refused if:

[…]

a.1) Recognition and enforcement of the insolvency-related judgment would be manifestly contrary to the public policy of this State;

[…]

[e.1) the judgment has been satisfied or the parties have agreed, by agreement to that effect or through a reorganization or other court-supervised mechanisms, that the obligations found in the judgment have been replaced by new legal obligations].

[…]

Comment

In addition to the subparagraphs found in Article [12], it is proposed to add a new subparagraph a.1) to deal with the public policy exception. The reasons for this inclusion are found in the comment on Article [7].

Some international instruments specifically cover the satisfaction of a judgment as a ground for setting aside the enforcement of a foreign judgment (e.g., Canada-United Kingdom Civil and Commercial Judgments Convention, Article IV).

A number of decisions rendered by insolvency courts are transitory or their legal effect is superseded by subsequent developments, such as reorganization plans. In order to prevent creditors from seeking payment in a foreign jurisdiction of such extinguished or superseded judgments rendered during the insolvency proceeding, subparagraph e.1) prevents a judgment that is either satisfied or the subject of a novation from being recognized and enforced. For example, provisional freezing orders requiring that assets be vested in the insolvency administrator pending a final

decision on priority rights of secured creditors, which is extinguished after the adoption of a reorganization plan, would fall under this exclusion. As a result, a court where recognition and enforcement of the freezing order is sought would refuse recognition and enforcement.

Given the suggested changes to the definitions, in particular to the definition of "insolvency-related judgment" the Working Group might wish to consider whether some of the exclusions are still needed (subparagraphs c) to h)).

Article [14] Severability

Recognition and enforcement of a severable part of an insolvency-related judgment ~~shall~~ may be granted where recognition and enforcement of that part is applied for, or where only part of the judgment is capable of being recognized and enforced under this Law.

Comment

Replacing the word "shall' by "may" allows the protection of creditors' whose interests might be adversely affected by the recognition of only part of a judgment. With this change, a court is not compelled to recognize part of a judgment because the unenforceable portion of the judgment is severable. It may however recognize it.

C. Relationship between this Law on the Model Law on Cross-border Insolvency

An important aspect for the effective operation of this Law is that it applies in a manner that is not inconsistent with the Model Law on Cross-border Insolvency. This means avoiding inconsistencies in the event the receiving state has adopted the Model Law as well as in situations where the receiving state has not adopted the Model Law, but only this Law with the view of recognizing foreign insolvency-related judgments. The latter situation may be chosen by states that have not decided to foster judicial cooperation in the form promoted by the Model Law, but are of the view recognition and enforcement of insolvency-related judgments is an adequate tool in achieving greater cross-border judicial cooperation. The work of UNCITRAL should not *de facto* exclude this form of judicial cooperation. It too may lead to the better coordination of cross-border insolvency proceedings. For that reason, both this Law and its related Guide to Enactment should discuss the options open to enacting states, including for those wishing to enact this Law, but not the Model Law on Cross-border Insolvency.

Some comments in Part B already discussed the relationship between the existing Model Law and this Law (see comments in relation to the definition of "insolvency-related judgment", "foreign main proceeding" and "planning proceeding"). They are designed to ensure a consistent treatment of the same concepts across the various pieces of insolvency legislation.

As discussed above, this Law can be used to ensure recognition and enforcement of an insolvency-related judgment issued by a foreign main proceeding. This Law is therefore complementary to the Model Law on Cross-border Insolvency. However, this Law is not intended to ensure recognition of judgments in the situations where such recognition can be sought under the Model Law.

There is an inconsistency in the interpretation of the Model Law on Cross-border Insolvency that may justify a slight clarification. Domestic courts in some jurisdictions have been tempted to limit the recourses that are available as "relief" under Article 21 of the Model Law. Specifically, some courts have taken the view the recognition and enforcement of a judgment is not a relief available under the Model Law. As this Law does not cover all situations that fall under the scope of the Model Law on Cross-border Insolvency, it is recommended that the following amendment to the Model Law be adopted.

The Model Law on Cross-border Insolvency is amended as follows:

Article 21. Relief that may be granted upon recognition of a foreign proceeding

1. Upon recognition of a foreign proceeding, whether main or non-main, where necessary to protect the assets of the debtor or the interests of the creditors, the court may, at the request of the foreign representative, grant any appropriate relief, including:

[…]

c.1) the recognition or the enforcement of a judgment;

V. SECURITY INTERESTS

A. Report of the Working Group on Security Interests on the work of its thirtieth session (Vienna, 5-9 December 2016)

(A/CN.9/899)

[Original: English]

Contents

Paragraphs

I. Introduction

1. At its present session, Working Group VI (Security Interests) commenced its work on the preparation of a draft guide to enactment (the "draft Guide to Enactment") of the UNCITRAL Model Law on Secured Transactions (the "Model Law"), pursuant to a decision taken by the Commission at its forty-eighth session (Vienna, 29 June-16 July 2015).[1] At that session, the Commission had noted that, in preparing a draft model law, the Working Group was mindful of the fact that it would be a more effective tool for States modernizing their legislation if background and explanatory information were provided to assist States in considering it for enactment. In addition, the Commission noted that, in the preparation of a draft model law, the Working Group had assumed that it would be accompanied by such a guide and referred a number of matters to that guide for clarification.[2]

[1] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), para. 215.
[2] Ibid.

2. The Commission also agreed that the draft Guide to Enactment should: (a) be as short as possible; (b) include cross-references to the UNCITRAL Legislative Guide on Secured Transactions (the "Secured Transactions Guide") and the other texts of the Commission on secured transactions, including the United Nations Convention on the Assignment of Receivables in International Trade (the "Assignment Convention"), the Supplement on Security Rights in Intellectual Property (the "Intellectual Property Supplement") and the UNCITRAL Guide on the Implementation of a Security Rights Registry (the "Registry Guide"); (c) focus on giving guidance to legislators rather than users of the text; (d) explain the thrust of each provision or section of the Model Law and any difference with the corresponding recommendations of the Secured Transactions Guide or the provisions of another UNCITRAL text on secured transactions; and (e) give guidance to States with respect to matters referred to them and in particular explain each option offered in various articles of the Model Law to assist enacting States in choosing one of the options offered.[3]

3. At its forty-ninth session (New York, 27 June-15 July 2016), the Commission adopted the Model Law.[4] At that session, the Commission had before it the draft Guide to Enactment (A/CN.9/885 and Add.1-4). The Commission noted that the draft Guide to Enactment provided background and explanatory information that could assist States in considering the Model Law for adoption. In addition, the Commission noted with appreciation that the draft Guide to Enactment was already at an advanced stage. Moreover, the Commission noted that a number of issues were referred to the draft Guide to Enactment even at its forty-ninth session, and thus the draft Guide to Enactment was an extremely important text for the implementation and interpretation of the Model Law. After discussion, the Commission agreed to give the Working Group up to two sessions to complete its work and submit the draft Guide to Enactment to the Commission for final consideration and adoption at its fiftieth session in 2017.[5]

4. In addition, the Commission agreed that, if the Working Group completed its work in less than two sessions it should use any time remaining to discuss its future work in a session or in a colloquium to be organized by the Secretariat. Moreover, the Commission agreed that, subject to further discussion of the overall future work of the Commission, a colloquium to discuss future work on security interests should be held even if the Working Group used the full time of the two sessions to complete its work on the draft Guide to Enactment.[6]

II. Organization of the session

5. The Working Group, which was composed of all States members of the Commission, held its thirtieth session in Vienna from 5 to 9 December 2016. The session was attended by representatives of the following States members of the Working Group: Australia, Brazil, Bulgaria, Canada, China, Colombia, Côte d'Ivoire, Czechia, El Salvador, France, Germany, Indonesia, Iran (Islamic Republic of), Israel, Italy, Japan, Kenya, Mexico, Pakistan, Panama, Philippines, Poland, Republic of Korea, Romania, Russian Federation, Spain, Switzerland, Thailand, Turkey, United States of America, Venezuela (Bolivarian Republic of) and Zambia.

6. The session was attended by observers from the following States: Croatia, Cyprus, Dominican Republic, Mali, Portugal, Republic of Moldova, Slovakia, Sudan, Syrian Arab Republic and Tunisia. The session was also attended by observers from the Holy See and the European Union.

7. The session was also attended by observers from the following international organizations:

(a) *United Nations system*: World Bank;

[3] Ibid., para. 216.
[4] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), para. 119.
[5] Ibid., paras. 120-122.
[6] Ibid., paras. 122 and 356.

(b) *Intergovernmental organizations*: Asian Clearing Union (ACU) and Asian-African Legal Consultative Organization (AALCO);

(c) *International non-governmental organizations invited by the Commission*: American Bar Association (ABA), Centro de Estudios de Derecho, Economía y Política (CEDEP), Commercial Finance Association (CFA), European Banking Federation (EBF), European Investment Bank (EIB), Factors Chain International and the EU Federation for Factoring and Commercial Finance Industry (FCI and EUF), Forum for International Conciliation and Arbitration (FICACIC), INSOL Europe, International Insolvency Institute (III), Moot Alumni Association (MAA), National Law Centre for Inter-American Free Trade (NLCIFT) and The European Law Students' Association (ELSA).

8. The Working Group elected the following officers:

Chairperson: Ms. Kathryn SABO (Canada)

Rapporteur: Ms. Jennifer Wanjiru NG'ANG'A (Kenya)

9. The Working Group had before it the following documents: A/CN.9/WG.VI/WP.70 (Annotated Provisional Agenda) and A/CN.9/WG.VI/WP.71 and Add.1 to 6 (Draft Guide to Enactment of the UNCITRAL Model Law on Secured Transactions).

10. The Working Group adopted the following agenda:

1. Opening of the session and scheduling of meetings.
2. Election of officers.
3. Adoption of the agenda.
4. Draft Guide to Enactment of the UNCITRAL Model Law on Secured Transactions.
5. Future work.
6. Other business.
7. Adoption of the report.

III. Deliberations and decisions

11. The Working Group considered notes by the Secretariat entitled "Draft Guide to Enactment of the UNCITRAL Model Law on Secured Transactions" (A/CN.9/WG.VI/WP.71 and Add.1-4, and part of 5) and its future work. The deliberations and decisions of the Working Group are set forth below in chapters IV and V respectively. The Secretariat was requested to revise the draft Guide to Enactment to reflect the deliberations and decisions of the Working Group.

IV. Draft Guide to Enactment of the UNCITRAL Model Law on Secured Transactions

A. General part of the draft Guide to Enactment (A/CN.9/WG.VI/WP.71, paras. 1-33)

12. At the outset, it was agreed that the draft Guide to Enactment should be addressed mainly to the executive and legislative branches of Government to assist them in their consideration of the Model Law for enactment, but also secondarily to users of the Model Law. It was also agreed that the draft Guide to Enactment should not attempt to provide transactional advice to parties of secured transactions, which would fit better in any future work on a contractual guide on secured transactions.

13. With respect to paragraphs 1-7, it was agreed that the discussion of the purpose of the draft Guide to Enactment should be shortened and avoid repetition (e.g. para. 6 should be deleted as it repeated a point made in para. 3).

14. With respect to paragraphs 8-20, it was agreed that: (a) the discussion of the purpose of the Model Law should be shortened; (b) the discussion of the earlier project of UNCITRAL on secured transactions should be briefly referred to in a footnote; (c) the preparatory work should be shortened and set out in a preface; and (d) the Commission's decision and the General Assembly resolution with respect to the Model Law should be set out as separate annexes.

15. With respect to paragraphs 26-28, it was agreed that they should be revised to discuss the relationship between the Assignment Convention and the Model Law and the reasons why States that enacted one of those texts should also enact the other. With respect to paragraph 29, it was agreed that it should be revised to discuss: (a) the functional, integrated and comprehensive approach of the Model Law; and (b) coordination with other law in a separate section.

16. Subject to the above-mentioned changes (see paras. 12-15), the Working Group approved the substance of paragraphs 1 to 33 of document A/CN.9/WG.VI/WP.71.

B. Chapter I. Scope of application and general provisions (A/CN.9/WG.VI/WP.71/Add.1, paras. 1-49)

17. With respect to paragraph 2, it was agreed that: (a) reference should be made to an example of an outright transfer of receivables by agreement (e.g. non-recourse factoring); (b) the need to have the same third-party effectiveness and priority rules apply to both outright transfers of receivables by agreement and security rights in receivables should be added to the reasons why the Model Law applied to outright transfers of receivables by agreement; and (c) the possible exclusion of outright transfers of receivables by agreement for collection purposes could be explained by reference to the fact that they were not financing transactions (whether the transferor's interest was transferred or not, which was a matter of other law).

18. With respect to paragraph 9, it was agreed that the last sentence referred to lenders, rather than to consumer grantors or consumer debtors of receivables, and should thus be deleted, unless the indirect benefit to consumer grantors under article 24 of the Model Law could be briefly explained.

19. With respect to paragraph 11, it was agreed that it should be deleted, while the fact that negative pledge agreements did not bind third parties and thus a security right created despite such an agreement might be effective could be discussed in the context of article 3 on party autonomy (see para. 38 below).

20. With respect to paragraph 12, it was agreed that it should be revised to clarify that: (a) the Model Law applied to security rights in attachments (as defined in the Secured Transactions Guide) that were movable assets, but it did not include specific provisions on attachments; (b) the general provisions on security rights in movable assets applied to attachments; and (c) enacting States should be encouraged to implement the relevant recommendations of the Secured Transactions Guide dealing with security rights in attachments.

21. With respect to paragraph 13, it was agreed that it should be revised to clarify that not all terms defined in the Model Law were explained in the draft Guide to Enactment, as they were either self-explanatory or sufficiently explained in the Secured Transactions Guide, and thus cross-references to the relevant sections of the Secured Transactions Guide, if any, would be sufficient.

22. With respect to paragraph 15, it was agreed that it should be revised to clarify that the term that might replace the term "authorized deposit-taking institution" in a particular enacting State might not be a term of the national financial regulatory framework of that State but rather a generic term broad enough to include any

institution authorized to receive deposits in the State whose law might be applicable under article 97 of the Model Law.

23. With respect to paragraph 17, it was agreed that it should be revised to clarify that the term "competing claimant": (a) was principally used in the context of a potential dispute between a secured creditor with a security right in an asset and another person with rights in that asset; and (b) included another creditor of the grantor (secured or not) that had a right in the asset, a buyer or lessee of the asset and the grantor's insolvency representative.

24. With respect to paragraph 18, it was agreed that it should be revised to: (a) briefly refer to the primary purpose for which consumer goods were used or intended to be used (same point in para. 20 of document A/CN.9/WG.VI/WP.71/Add.1 on "equipment"); (b) clarify that, depending on its use or intended use, a tangible asset, might be "consumer goods", "equipment" or "inventory"; and (c) clarify that the terms "consumer goods", "equipment" or "inventory" were relevant mainly for those provisions of the Model Law that dealt with acquisition security rights.

25. With respect to paragraph 19, it was agreed that the last sentence, stating that the term "writing" included electronic communications, should be deleted as that point was already made in the explanation of the definition of the term "writing" (see A/CN.9/WG.VI/WP.71/Add.1, para. 41).

26. In that connection, it was agreed that the draft Guide to Enactment should also include an explanation of the reference to outright transfers of receivables by agreement in the terms "encumbered asset", "grantor", "secured creditor", "security agreement" and "security right". With respect to the commentary on the definitions of the last two terms, it was also agreed that reference should be made to the functional, integrated and comprehensive approach of the Model Law.

27. With respect to paragraph 21, it was agreed that: (a) it need not refer to leases or licences; (b) the point that a lease might be a secured transaction might be addressed in the explanation of the term "security agreement"; and (c) the point that a lessee or licensee might create a security right in its rights under the lease or licence agreement might be made in the part of the draft Guide to Enactment dealing with article 6, paragraph 1 (see A/CN.9/WG.VI/WP.71/Add.1, para. 52).

28. With respect to paragraph 22, it was agreed that it should be revised to refer to the administration or supervision of the administration of the insolvency estate in insolvency proceedings or to use other wording referred to in the UNCITRAL Legislative Guide on Insolvency Law (the "Insolvency Guide"; see part two, chap. III, paras. 11-18 and 25, which referred to the administration of insolvency proceedings or the supervision of the debtor or the activities of the debtor).

29. With respect to paragraph 24, it was agreed that it should be revised to explain that the term "inventory" included tangible assets held by the grantor for lease or licence in the ordinary course of the grantor's business.

30. With respect to paragraph 26, it was agreed that the reference to "banknotes and coins, as well as virtual currency, such as bitcoin" should be deleted, as it was sufficiently clear that banknotes and coins were national currency, while virtual currency was not. It was also explained that, as money was a tangible asset under the Model Law, the provisions of the Model Law on security rights in money would not be appropriate for virtual (i.e. intangible) currency.

31. With respect to paragraph 27, it was agreed that it should be revised to explain that, depending on its legal tradition, an enacting State might use the term "personal property" in the place of the term "movable asset".

32. With respect to paragraph 30, it was agreed that it should be revised to: (a) explain first that the definition of the term "possession" was sufficiently broad to cover situations in which a person held an asset through another person; and (b) refer to the issuer of a negotiable document holding through various persons as a particular example of possession of an asset by a person through another person.

33. With respect to paragraph 31, it was agreed that it should be revised to better explain the differences between the meaning of the term "priority" in the Model Law, the Assignment Convention and the Secured Transactions Guide.

34. With respect to paragraphs 32-35, it was agreed that they should be simplified and clarified, while the issue of the protection of third parties should be discussed in the part of the draft Guide to Enactment dealing with the third-party effectiveness of security rights in proceeds (see A/CN.9/WG.VI/WP.71/Add.1, paras. 86-89). It was also agreed that the term "proceeds of proceeds" should be explained by reference to examples so as to avoid giving the impression that the security right might extend to an excessively broad range of assets.

35. With respect to paragraph 37, it was agreed that it should be revised to explain that the term "secured obligation" included obligations arising from credit extended "by lenders, sellers or lessors", rather than "to finance the operation of a business or the purchase of goods". It was also agreed that the last two sentences of paragraph 37 should be deleted as they repeated a rule of interpretation referred to in paragraph 13.

36. With respect to paragraph 38, it was agreed that it should be revised to explain that a broad definition of the term "securities" could result in an overlap with the terms "money", "receivable" and "negotiable instrument" and thus in uncertainty as to the regime applicable to security rights in those types of asset. It was also agreed that reference should be made to the need to coordinate the definition of the term "securities" in secured transactions law and "law governing the transfer of securities", as a State might not have a "securities transfer law" as such.

37. With respect to paragraph 40, it was agreed that it should be revised to clarify that the term "tangible asset" included money, negotiable instruments, negotiable documents and certificated non-intermediated securities (some of them being intangible assets embodied in a document), except for the purposes of certain articles that contained rules that were not appropriate for those types of asset.

38. With respect to paragraphs 43-45, it was agreed that they should be revised to explain: (a) that a negative pledge agreement could not bind persons that were not parties to that agreement and thus a security right created despite such an agreement would be effective; (b) the reasons why the articles listed in article 3, paragraph 1, were not subject to party autonomy; (c) that article 3, paragraph 3, applied to alternative dispute resolution, including arbitration, mediation, conciliation and online dispute resolution, referring to the discussion of those matters by the Commission at its forty-ninth session.[7]

39. With respect to paragraph 47, it was agreed that it should be revised to explain the term "commercial reasonableness" by reference to a range of steps that might be taken by a reasonable person in circumstances that were similar to those encountered by the grantor or the secured creditor in a particular case.

40. With respect to paragraph 48, it was agreed that reference should also be made to the interpretation of the provisions of the Model Law by courts and arbitral tribunals in States other than the enacting State.

41. Subject to the above-mentioned changes (see paras. 17-40), the Working Group approved the substance of paragraphs 1 to 49 of document A/CN.9/WG.VI/WP.71/Add.1.

C. Chapter II. Creation of a security right (A/CN.9/WG.VI/WP.71/Add.1, paras. 50-83)

42. With respect to paragraph 50, it was agreed that it should be revised to: (a) avoid giving the impression that an enacting State might leave out all asset-specific rules, which included rules that were absolutely necessary for a modern secured transactions law, such as the rules dealing with security rights in receivables; and (b) clarify that

[7] Ibid., paras. 96-98.

an enacting State might wish to include in the general rules cross-references to the relevant asset specific rules or a provision that would state that the general rules would be subject to the asset-specific rules (see Model Law, footnote 4).

43. With respect to paragraph 52, it was agreed that it should be revised to clarify that: (a) the grantor needed to have a right in an asset or the power to encumber it at the time of the conclusion of the security agreement or later; (b) the grantor needed to be in possession of an asset on the basis of an agreement with the owner (such as a lease); and (c) in line with article 13, paragraph 1, the owner/grantor of a receivable had a right in the receivable or the power encumber it despite an anti-assignment agreement with the debtor of the receivable. It was also agreed that paragraph 52 should be revised to clarify that: (a) the transferor in an outright transfer of a receivable continued to have the power to encumber the receivable; (b) that power was implicit in the fact that the third-party effectiveness and priority rules of the Model Law applied to outright transfers of receivables by agreement; and (c) as a practical matter, if the transferee had made its right effective against third parties before a subsequent competing transferee or secured creditor, there would be no value left in the receivable for subsequent transferees or secured creditors.

44. With respect to paragraph 53, it was agreed that: (a) the second sentence should be deleted as it repeated a point already made in the last sentence of paragraph 51; (b) an enacting State should choose in the chapeau of paragraph 3 of article 6 the wording that best fit, not only its contract law, but also its law of evidence. With respect to paragraphs 54 and 55, it was agreed that they should include cross-references to the relevant discussion in the Secured Transactions Guide and the Registry Guide.

45. With respect to paragraph 56, it was agreed that the last sentence that dealt with assets that might be encumbered, rather than with obligations that might be secured, was out of place and should thus be deleted.

46. With respect to paragraph 60, it was agreed that the second sentence should be revised to clarify the reason why the description of encumbered assets in the security agreement was addressed in a separate article of the Model Law, while in the Secured Transactions Guide it had been addressed in paragraph (d) of recommendation 14 that dealt with the minimum content of the security agreement (a matter addressed in art. 6, para. 3, of the Model Law).

47. With respect to paragraph 61, it was agreed that a sentence should be added to clarify that: (a) article 10 did not imply that the secured creditor could only claim a right to proceeds where it could not enforce its security right in the original encumbered asset; and (b) the secured creditor could pursue both alternatives, except where assets were transferred to a person that acquired its rights in the assets free of the security right, which would be a very limited exception (mainly in the case of ordinary course-of-business transactions).

48. With respect to paragraphs 64, 66, 68-74, 81 and 82, a number of drafting suggestions were made. In that connection, the Working Group gave a mandate to the Secretariat to make any necessary drafting or other consequential change to the draft Guide to Enactment as a whole.

49. With respect to paragraph 83, it was agreed that it should be revised to clarify that, for the secured creditor to obtain a security right in both a tangible asset with respect to which intellectual property was used and the intellectual property, the security agreement would need to expressly provide for it (see Model Law, art. 60 and IP Supplement, rec. 243).

50. Subject to the above-mentioned changes (see paras. 42-49), the Working Group approved the substance of paragraphs 50 to 83 of document A/CN.9/WG.VI/WP.71/Add.1.

D. Chapter III. Third-party effectiveness of a security right (A/CN.9/WG.VI/WP.71/Add.1, paras. 84-101)

51. With respect to paragraph 85, it was agreed that it should be revised to refer to the coordination of registries, not only by linking those registries, but also by way of appropriate priority rules dealing with the priority of security rights notices of which were registered in one Registry over security rights notices of which were registered in another Registry.

52. With respect to paragraph 89, it was agreed that it should be revised to clarify that, if a security right in an asset was effective against third parties, the security right in its proceeds should be effective for 20 to 25 days after the proceeds arose (for other suggestions as to time periods, see paras. 53, 68, 76, 88, 90, 97 and 104 below).

53. With respect to paragraph 93, it was agreed that a security right that was effective against third parties should continue to be effective for 45 to 60 days after a change in the applicable law (for other suggestions as to time periods, see para. 52 above, as well as paras. 68, 76, 88, 90, 97 and 104 below).

54. With respect to paragraph 94, it was agreed that it should be revised to elaborate on the criteria to be used for determining what would be a reasonably high price for the exemption from registration of low-value consumer transactions to be meaningful.

55. With respect to paragraph 95, it was agreed that it should be deleted, because the Model Law did not deal with specialized registration or title notation, and dealing with such matters required an analysis of various scenarios and issues, which would be beyond the scope of the draft Guide to Enactment.

56. With respect to paragraphs 100 and 101, it was agreed that they should: (a) be set out in a separate section as they did not deal with certificated non-intermediated securities; (b) refer only to negotiable instruments and certificated non-intermediated securities; and (c) clarify that States parties to the Convention Providing a Uniform Law For Bills of Exchange and Promissory Notes (Geneva, 1930) might wish to consider providing in their enactment of the Model Law for the creation/third-party effectiveness of a security right in negotiable instruments or certificated non-intermediated securities by an endorsement with the statement "value in security", "value in pledge" or any other similar statement and also for the comparative priority of that security right over security rights in those assets made effective against third parties by another method.

57. Subject to the above-mentioned changes (see paras. 51-56), the Working Group approved the substance of paragraphs 84 to 101 of document A/CN.9/WG.VI/WP.71/Add.1.

E. Chapter IV. The registry system (A/CN.9/WG.VI/WP.71/Add.2, paras. 1-5)

58. With respect to paragraph 4, it was agreed that the words "as an alternative to the submission of paper notices and search requests" should be deleted in order to avoid giving the impression that registries, in which notices could be submitted both electronically and in paper, were recommended. With respect to paragraph 5, it was agreed that it should be revised to refer to the fact that the secured transactions laws of some States provided for the registration of notices with respect to non-consensual security rights or preferential claims created by operation of law, rights of judgement creditors and ownership rights of consignors and lessors under commercial consignments of inventory and long-term operating leases of goods. Subject to those changes, the Working Group approved the substance of paragraphs 1 to 5 of document A/CN.9/WG.VI/WP.71/Add.2.

F. Model Registry Provisions

1. A/CN.9/WG.VI/WP.71/Add.2, paras. 6-55

59. With respect to paragraph 7, it was agreed that it should be revised to clarify that: (a) the Registry should not require evidence of authorization of the registration by the grantor since registration did not create the security right; and (b) the grantor's authorization could be given after registration. With respect to paragraphs 7-14, it was agreed that the discussion of the grantor's authorization for registration should be shortened.

60. With respect to paragraphs 15 and 16, it was agreed that examples should be given of situations in which one notice would be sufficient for multiple security rights.

61. With respect to paragraph 18, it was agreed that it should be revised to clarify that advanced registration had priority consequences, referring to the discussion of the relevant priority provisions of the Model Law, rather than discussing priority issues in detail. With respect to paragraph 19, it was agreed that it should be revised to clarify that, to protect the person identified in a registered notice as the grantor where a security agreement was never concluded or was concluded but covered a narrower range of assets than those described in the registered notice, article 20 of the Model Registry Provisions provided a procedure to enable the grantor to obtain the compulsory amendment or cancellation of the registered notice, as the case might be.

62. With respect to paragraph 21, it was agreed that it should be revised to: (a) refer to the "prescribed registry notice form" to avoid giving the impression that the forms would be prescribed by the Registry rather than the rules of law or regulations dealing with registration issues; (b) the discussion of the registrant's identification should be set out in a separate paragraph; and (c) include in the evidence of the registrant's identity its contact details. With respect to paragraph 23, it was agreed that it should be revised to encourage electronic payments without precluding businesses, in particular of the informal sector, from making use of other modes of payment, as long as controls were in place to avoid the risk of staff embezzlement.

63. With respect to paragraph 25, it was agreed that it should be revised to clarify that, where a registry system required the entry of an identity number, entries that did not provide the required number of digits would be rejected as incomplete under article 6, paragraph 1 (a), of the Model Registry Provisions.

64. With respect to paragraph 34, it was agreed that it should be revised to explain that the secured transactions laws of some States provided for a State-issued identity or other official number as the grantor's identifier (same point for legal entities discussed in para. 37 of document A/CN.9/WG.VI/WP.71/Add.1).

65. With respect to paragraph 42, it was agreed that it should be revised to clarify that: (a) an enacting State that would provide for the description of the encumbered assets by serial number would need to revise the priority rules of the Model Law to specify the priority consequences of a registrant's failure to enter the relevant serial number, as well as the registry design and the registry-related provisions to accommodate serial-number-based registration and searching; and (b) using the specific serial number as the description might be risky since any error might render the description insufficient whereas a more generic description (e.g. a description of the grantor's automobile by make and model) might reduce the risk of error.

66. With respect to paragraph 46, it was agreed that it should be revised to further clarify that, where the names and addresses of the grantor and the secured creditor or its representative were expressed in a language that used a different character set than that prescribed by the Registry, they would need to be adjusted or transliterated to conform to the prescribed character set.

67. With respect to paragraph 47, it was agreed that it should clarify that the meaning of the words "without delay" would depend on the particular circumstances and would mean little or no delay in the case of an electronic Registry, and as soon as practically feasible in the case of a Registry that permitted the submission of notices

in paper form. It was also agreed that no specific time limit should be set, as, if the Registry did not comply with it, it could be liable to damages.

68. With respect to paragraphs 50 to 52, it was agreed that they should be revised to clarify that: (a) in option A of article 14, paragraph 1, of the Model Registry Provisions reference should be made to 5 years (to accommodate typical transactions); (b) in options A and C of article 14, paragraph 2, of the Model Registry Provisions reference should be made to 4 to 6 months (to give enough time to the secured creditor to extend the period of effectiveness of a notice); and (c) in option C of article 14, paragraph 1, of the Model Registry Provisions reference should be made to 10 years (which would be enough for most transactions) (for other suggestions as to time periods, see paras. 52 and 53 above, as well as paras. 76, 88, 90, 97 and 104 below).

69. With respect to paragraphs 53 and 54, it was agreed that they should be revised to explain that placing on the secured creditor, rather than on the Registry, the obligation to send a copy of the registered notice to the grantor was the result of a cost-benefit analysis and was also due to the fact the registration did not create any right. With respect to paragraph 55, it was agreed that it should be revised to clarify that: (a) article 15, paragraph 4, of the Model Registry Provisions provided that the secured creditor's liability for failure to send a copy of the notice to the grantor was limited to actual loss or damage resulting from that failure; and (b) how actual loss or damage would be measured was left to the relevant law of the enacting State.

70. Subject to the above-mentioned changes (see paras. 59-69), the Working Group approved the substance of paragraphs 6 to 55 of document A/CN.9/WG.VI/WP.71/Add.2.

2. A/CN.9/WG.VI/WP.71/Add.3, paras. 1-81

71. With respect to paragraphs 1 and 2, it was agreed that they should be revised to clarify that: (a) if a new secured creditor (e.g. an assignee of the secured obligation), or a law firm or other service provider acting on behalf of the new secured creditor, had the secure access code of the person identified in a registered initial notice as the secured creditor, it could register an amendment or cancellation notice; and (b) a new secured creditor would have an interest in registering an amendment notice changing the secured creditor identifier so as to obtain a new access code, thereby ensuring that the person identified in the initial registered notice as the secured creditor would no longer be able to register an amendment or cancellation notice.

72. With respect to paragraph 7, it was agreed that it should be revised to clarify that the "secure access requirements" referred to were those referred to in article 5 of the Model Registry Provisions.

73. With respect to paragraphs 11-18, it was agreed that they should be revised to explain that, in the exceptional case where there was no actual secured creditor or the secured creditor was no longer contactable, the grantor could request the registration of an amendment or cancellation notice from the person identified in the registered notice as the secured creditor.

74. With respect to paragraph 34, it was agreed that it should be revised to clarify that the Model Law did not require the indication of a "currency date" in the search results, as the laws of some States did, because registration under the Model Law was only effective once it was publicly searchable and thus a reference to a "currency date" was not necessary.

75. With respect to paragraph 39, it was agreed that the last sentence should be revised to clarify: (a) the difference between paragraphs 1 and 2 of article 24 of the Model Registry Provisions; and (b) the relationship between the burden created for a searcher by an error made by the registrant in the notice with respect to the grantor's identifier and the seriously misleading test in paragraph 2 of article 24 of the Model Registry Provisions, with appropriate examples, if possible. With respect to paragraph 40, it was agreed that it should be revised to clarify that the person challenging the effectiveness of the registration would be a competing claimant in the context of a

priority conflict with the secured creditor that would have to be resolved by a court, not the Registry.

76. The Working Group considered the various time periods which the Model Law left to each enacting State and agreed that the following time periods should be suggested in the draft Guide to Enactment: (a) for article 15, paragraph 2, of the Model Registry Provisions: 14 days (see A/CN.9/WG.VI/WP.71/Add.2, para. 54); (b) for article 20, paragraph 6, of the Model Registry Provisions: 14 days (A/CN.9/WG.VI/WP.71/Add.3, para. 18); (c) for article 25, paragraph 2 (a): 60-90 days (A/CN.9/WG.VI/WP.71/Add.3, para. 45); (d) for option A of article 26, paragraph 2 (a), of the Model Registry Provisions: 60-90 days (A/CN.9/WG.VI/WP.71/Add.3, para. 49); and (e) for option B of article 26, paragraph 2 (a), of the Model Registry Provisions: 15-30 days (A/CN.9/WG.VI/WP.71/Add.3, para. 50). It was also agreed that the draft Guide to Enactment should explain the reasons for each suggested time period, as well as the reasons why an enacting State should choose one or the other option suggested in the Model Law and the Model Registry Provisions (for other suggested time period, see paras. 52, 53 and 68 above, as well as paras. 88, 90, 97 and 104 below).

77. With respect to paragraph 54, it was agreed that it should be revised to clarify that the duties of the registrar would be determined by the relevant supervising authority in a law, regulation or other act implementing the Model Registry Provisions.[8] With respect to paragraph 55, it was agreed that it should be revised to refer to authorities that typically supervise security rights registries in various States, such as a ministry responsible for secured transactions law, another authority in charge of registries or a central bank.

78. With respect to paragraph 63, it was agreed that it should be revised to clarify how option B of article 30 of the Model Registry Provisions could be enacted by States that adopted option C or D of article 21 of the Model Registry Provisions. With regard to paragraph 64, it was agreed that, together with article 30, paragraph 3, it provided sufficient clarity as to the time period during which the archives of the Registry should be preserved. It was also agreed that paragraph 64 should be revised to clarify that a searcher of the registry archives should follow the procedures for searching archives in the enacting State.

79. With respect to paragraph 66, it was agreed that it should be further aligned with the wording of footnote 31 of the Model Law (which did not use the word “only” and referred to direct entry, rather than transmission, of information). With respect to paragraph 68, it was agreed that it should be revised to explain the relationship between the options of article 21 and those of article 31 of the Model Registry Provisions.

80. With respect to paragraphs 69-73, it was agreed that they should be revised to clarify: (a) the policy underlying the limitation of liability of the Registry (including appropriate references to the Secured Transactions Guide and the Registry Guide); (b) the need for the enacting State to coordinate article 32 of the Model Registry Provisions with its law on liability; (c) the relationship between paragraphs 1 and 2 of article 32 of the Model Registry Provisions; (d) the fact that only the first part of article 32, paragraph 1 (b) was in square brackets; and (e) that the limit of the Registry’s liability should be a maximum monetary amount not related the maximum value of the encumbered assets.

81. With respect to paragraph 74, it was agreed that it should be revised to further clarify that the registry fees under option A of article 33 of the Model Registry Provisions related to all fees for registry services at a cost-recovery level thus avoiding any hidden fees.

82. Subject to the above-mentioned changes (see paras. 71 to 81), the Working Group approved the substance of paragraphs 1 to 81 of document A/CN.9/WG.VI/WP.71/Add.3.

[8] Ibid., para. 49.

G. Chapter V. Priority of a security right (A/CN.9/WG.VI/WP.71/Add.4, paras. 1-73)

83. With respect to paragraph 15, it was agreed that it should be revised to explain further article 33 and its relationship with article 11 with appropriate examples.

84. With respect to paragraphs 16-20, it was agreed that they should be revised to clarify that: (a) they referred to security rights created by a seller, lessor or licensor as opposed to a person who had acquired its rights from the seller, lessor or licensor; (b) the fact that a lessee or licensee acquired its rights free of a security right did not mean that it became an owner, but rather that it could enjoy its rights under the lease or licence agreement; and (c) the "shelter principle" in article 34, paragraphs 7 and 8, according to which subsequent buyers, lessees or licensees would also acquire their rights free of the security right.

85. With respect to paragraph 21, it was agreed that it should be revised to clarify that article 34, paragraph 9, provided that a buyer or lessee of consumer goods acquired its rights free of an acquisition security right if the security right was only effective against third parties by virtue of the operation of the automatic effectiveness rule in article 24, but that the buyer or lessee would take subject to the security right, if it was made effective against third parties in some other way before the buyer or lessee acquired its rights.

86. With respect to paragraph 22, it was agreed that, as the Model Law did not provide for specialized registration, the discussion of issues relating to specialized registries (in that paragraph, as well as in A/CN.9/WG.VI/WP.71/Add.1, para. 85 and A/CN.9/WG.VI/WP.71/Add.6, para. 10) should be moved to the part of the draft Guide to Enactment dealing with article 1, paragraph 3 (e), which addressed security rights in assets that would be subject to specialized registration.

87. With respect to paragraph 25, it was agreed that it should be revised to list typical examples of preferential claims in various legal systems (e.g. tax claims and employee claims), but without recommending their adoption. With respect to paragraph 26, it was agreed that it should be deleted as it was not directly related to article 36.

88. With respect to paragraph 29, it was agreed that it should be revised to clarify that, in article 37, paragraph 2 (a), reference should be made to 15 days (to provide the secured creditor with sufficient time to plan for the cut-off of the credit without excessively disadvantaging the judgment creditor) (for other suggested time periods, see paras. 52, 53, 68 and 76 above, as well as paras. 90, 97 and 104 below).

89. With respect to paragraph 31, it was agreed that it should be revised to clarify (perhaps in a separate paragraph) that: (a) the priority under article 38 could be obtained only if the acquisition secured creditor retained possession of the encumbered assets before delivery of the goods to the grantor; and (b) if the secured creditor gave up possession of the encumbered assets, it would need to register, and it could not obtain the benefit of the priority rule in article 38 by obtaining possession in the context of the enforcement of its security right.

90. With respect to paragraphs 33 and 36, it was agreed that they should be revised to clarify that, in article 38, paragraphs 1 (b) and 4 (b), reference should be made to 15-20 days (for the grantor to be able to obtain credit from another financier without an undue delay) (for other suggested time period, see paras. 52, 53, 68, 76 and 88 above, as well as paras. 97 and 104 below). With respect to paragraphs 34 and 35, it was agreed that they should be revised to: (a) refer to "different" rather than "additional" requirements for an acquisition security right in inventory and its intellectual property equivalent to have super-priority; and (b) explain those different requirements.

91. With respect to paragraph 39, it was agreed that it should be revised to: (a) explain the reasons why lessors and licensors were given the same protection (i.e. priority over general acquisition secured creditors) as suppliers of goods on credit; and (b) clarify that financial lessors were meant and not lessors in true leases.

92. With respect to paragraph 44, it was agreed that it should be revised to: (a) refer to the part of the draft Guide to Enactment where the term "inventory equivalent intellectual property" and similar terms were explained in (see A/CN.9/WP.71/Add.4, para. 32); and (b) delete the last sentence. With respect to paragraph 47, it was agreed that it should be deleted as the third-party effectiveness and priority of security rights (including acquisition security rights) in insolvency were already covered by article 35 (see A/CN.9/WP.71/Add.4, para. 23).

93. With respect to paragraphs 49 to 51, it was agreed that they should be revised to clarify that subordination did not necessarily require an agreement.

94. With respect to paragraph 53, it was agreed that it should be revised to explain that: (a) paragraph 1 of article 44 was subject to article 37; (b) if a State included in its enactment of the Model Law article 6, paragraph 3 (d) (and art. 8, subpara. (e) of the Model Registry Provisions), the secured creditor could enforce its security right only up to the maximum amount set in the security agreement (and the notice); and (c) paragraph 2 of article 44 provided that, whatever priority a security right had under the priority rules in chapter V, it covered both present and future assets described in a registered notice.

95. With respect to paragraph 59, it was agreed that it should be revised to reflect more accurately the rationale for the priority rules in article 47 in line with the discussion in the Secured Transactions Guide (see chap. V, paras. 157-163). With respect to paragraph 61, it was agreed that its last sentence should be revised to clarify that, under article 47, paragraph 5: (a) the rights of set-off of the deposit-taking institution had priority over a secured creditor that had made its security right effective against third parties by a control agreement or registration; and (b) whether the deposit-taking institution had a right of set-off was a matter for other law.

96. With respect to paragraph 64, it was agreed that it should be revised to further explain: (a) the rationale for the rule in article 48, paragraph 1 (i.e. the negotiability of money as explained in the Secured Transactions Guide; see chap. V, para. 164); (b) the notion of "knowledge" in article 48, paragraph 1, and in particular that mere registration of a security right did not necessarily mean that the person in possession of money had knowledge that its possession violated the rights of the secured creditor under the security agreement; and (c) that article 48, paragraph 2, referred to other laws that might provide protection to persons in possession of money beyond that afforded under article 48, paragraph 1.

97. Once again, the Working Group considered the various time periods which the Model Law left to each enacting State and agreed that, for the time period referred to in article 49, paragraph 2, 7 days should be suggested in the draft Guide to Enactment. It was also agreed that: (a) these were suggestions, rather than recommendations, that an enacting State could use for its consideration of what would be appropriate for its own circumstances; and (b) issues relating to the measurement of time (e.g. whether only work days would count) would be left to the relevant law of the enacting State (for other suggestions as to time periods, see paras. 52, 53, 68, 76, 88 and 90 above, as well as para. 104 below).

98. With respect to paragraph 67, it was agreed that it should be revised to clarify that, while the rights of a secured creditor as an owner or licensor under intellectual property law were preserved by article 50, the rights of a secured creditor as a secured creditor under intellectual property law were preserved by article 1, paragraph 3 (b).

99. With respect to paragraph 69, it was agreed that it should be revised to refer to rules in States that had a special regime with respect to security rights in non-intermediated securities, rather than to "customs and practices". With respect to paragraph 71, it was agreed that it should be revised to clarify that: (a) the two methods set out in article 51, paragraph 2, were alternatives for enacting States to choose the one that best fit its law on securities transfer; and (b) if the law of a State provided for both alternatives, both of them could be retained in that State's enactment of article 51, paragraph 2 (and other articles that included a reference to those two alternatives, such as art. 27).

100. With respect to paragraph 73, it was agreed that it should be revised to clarify that, unlike articles 46, paragraph 2, and 49, paragraph 3, article 51, paragraph 5, did not include a rule, but rather deferred to law relating to the transfer of securities because: (a) the requirements of that law for the protection of transferees could be very different from the requirements of the law relating to negotiable instruments and negotiable documents; and (b) national laws diverged widely and the protection of transferees of non-intermediated securities did not lend itself to uniformity at the international level. In addition, it was agreed that paragraph 73 should clarify that, if a State neither had nor was prepared to introduce a law relating to the transfer of securities, it might not need to implement article 51, paragraph 5.

101. Subject to the above-mentioned changes (see paras. 83-100), the Working Group approved the substance of paragraphs 1 to 73 of document A/CN.9/WP.71/Add.4.

H. Chapter VI. Rights and obligations of the parties and third-party obligors (A/CN.9/WG.VI/WP.71/Add.5, paras. 1-47)

102. With respect to paragraphs 1-5 and other paragraphs in chapter VI, it was agreed that they should be revised to clarify whether they were subject to party autonomy or not. With respect to paragraph 4, it was agreed that it should be revised to set out examples of steps that a secured creditor could take to preserve the value of tangible assets, such as precious metals, raw materials and certificated non-intermediated securities. With respect to paragraph 5, it was agreed that it should: (a) refer to other law without specifically identifying it; (b) emphasize that it dealt with the secured creditor's right to use encumbered assets in its possession; and (c) be placed in the commentary to article 55, which dealt with the secured creditor's right to use encumbered assets in its possession.

103. With respect to paragraph 6, it was agreed that it should be revised to clarify that: (a) the grantor was obliged to exercise its right to designate another person to whom the secured creditor should return the encumbered assets, in line with article 4, in good faith and in a commercially reasonable manner (e.g. by avoiding to place on the secured creditor an undue burden); (b) the secured creditor would have a choice as to whether to return the encumbered assets to the grantor or deliver them to a person designated by the grantor but would also be obliged to exercise that option in line with the same standard of conduct; and (c) the same standard of conduct should apply to the additional cost to be borne by the grantor if the grantor requested the secured creditor to deliver the encumbered assets to a person designated by the grantor. With respect to paragraph 7, it was agreed that it should be clarified and avoid references to any specifically identified law.

104. With respect to paragraph 10, it was agreed that it should be revised to explain: (a) the reasons why it did not apply to an outright transfer of receivables by agreement (e.g. the transferor would know what the receivable was and there would not be a secured obligation); (b) the last sentence should be formulated as a question, rather than as a suggestion; (c) leave other matters, such as the legal consequences of the secured creditor's failure to comply or to give accurate information, to other law (A/CN.9/871, para. 71); and (d) suggest 7-14 days for article 56, paragraph 1 and 1 year for article 56, paragraph 2 (for other suggestions as to time periods, see paras. 52, 53, 68, 76, 88, 90 and 97 above).

105. With respect to paragraph 11, it was agreed that its last sentence should be revised to clarify: (a) that article 57 was subject to party autonomy; (b) delete the wording that suggested that the reason for the grantor's representation that the debtor of the receivable would be able to pay was that it was beyond the grantor's control, rather than a balanced risk allocation between the parties; and (c) that, if given, such a representation could refer to the grantor's solvency at the time of the conclusion of the security agreement or at the time the receivable would become payable. With respect to paragraph 12, it was agreed that its last sentence should be revised to clarify that it covered a case where an anti-assignment clause would be included in the terms of the receivable (i.e., in the case of a contractual receivable, in the terms of the

agreement giving rise to the receivable or other agreement between the grantor and the debtor of the receivable).

106. With respect to paragraph 14, it was agreed that subparagraph (b) should be revised to refer to situations in which the parties might have agreed that no notification would be given. With respect to paragraph 15, it was agreed that it should be revised to refer to article 63 and to the commentary on article 63 (see A/CN.9/WG.VI/WP.71/Add.5, paras. 26-33), rather than article 64.

107. With respect to paragraph 16, it was agreed that it should be revised to refer to the fact that article 59 reiterated the right of the secured creditor in the proceeds of an encumbered asset, which was established in article 10. With respect to paragraph 17, it was agreed that it should refer to the secured creditor's right to retain the proceeds of any payment made to the secured creditor and to the payment of any proceeds paid to the grantor or to another person. With respect to paragraph 18, it was agreed that it should be revised to refer to the rule in article 79, paragraph 2, rather than to "normal practice in secured transactions relating to receivables".

108. With respect to paragraph 19, it was agreed that it should be revised to: (a) emphasize that the secured creditor would have the right to take the steps necessary to preserve the encumbered intellectual property "if so agreed with the grantor"; and (b) explain that the result of those steps to preserve the encumbered intellectual property would be the preservation of its value. With respect to paragraph 20, it was agreed that it should be revised to refer to the fact that article 53 did not apply to intangible assets (including intellectual property).

109. With respect to paragraph 21, it was agreed that it should be revised to clarify that the Model Law included in article 90 a rule on the location of a person that was based on article 5, subparagraph (h), of the Assignment Convention, but that rule applied only in the context of chapter VIII on conflict of laws. With respect to paragraph 22, it was agreed that it should be revised to explain the reasons why a payment instruction might change, for example, the person or the address of the debtor of the receivable, but not the currency of payment.

110. With respect to paragraph 30, it was agreed that it should be revised to: (a) explain that both security rights in, and outright transfers of, receivables were covered; and (b) avoid giving the impression that the discharge of the debtor of the receivable was conditional on that debtor making payment to the secured creditor with priority.

111. With respect to paragraph 37, it was agreed that it should be revised to clarify that: (a) the debtor of the receivable might agree not to raise "against the secured creditor" the defences and rights of set-off "that it could otherwise raise against a secured creditor under article 64"; and (b) the rule in paragraph 3 of article 65 was derived, in part, from the defences that might be raised even against a protected holder under article 30 of the United Nations Convention on International Bills of Exchange and International Promissory Notes (the "Bills and Notes Convention").

112. With respect to paragraph 39, it was agreed that its last sentence should be revised to clarify that rights of the grantor or the secured creditor for breach of an agreement between them could arise under other law or under the agreement.

113. With respect to paragraph 41, it was agreed that it should be revised to refer: (a) in its second sentence, to the law of the enacting State relating to negotiable instruments; and (b) in its third sentence, to the Bills and Notes Convention.

114. With respect to paragraph 43, it was agreed that it should be revised to refer to "other laws, such as sanction laws". With respect to paragraph 45, it was agreed that it should be revised to clarify that: (a) the fact that the deposit-taking institution might have a security right in a right to payment of funds credited to a bank account held with the deposit-taking institution would not affect its rights of set-off; and (b) rights of set-off might arise under other law or under an agreement between the deposit-taking institution and the grantor.

115. Subject to the above-mentioned changes (see paras. 102-114), the Working Group approved the substance of paragraphs 1 to 47 of document A/CN.9/WG.VI/WP.71/Add.5.

I. Chapter VII. Enforcement of a security right (A/CN.9/WG.VI/WP.71/Add.5, paras. 48-59)

116. With respect to paragraph 49, it was agreed that it should be revised to: (a) follow more closely the formulation of the definition of the term "default" (see art. 2, subpara. (j)); and (b) clarify that the only relevant example of situations in which rights under article 72 could be exercised before default was the collection of a receivable by the secured creditor before default with the agreement of the grantor (see art. 82, para. 2). With respect to paragraph 51, it was agreed that it should be revised to avoid any reference to outright transferors, while the point should be made in a separate paragraph that articles 72 to 82 did not apply to outright transfers of receivables by agreement.

117. With respect to paragraphs 52-56, the Working Group noted that, at its forty-ninth session in 2016, the Commission had decided to include in article 3, a new paragraph 3, dealing with alternative dispute resolution (ADR) and in the draft Guide to Enactment appropriate explanations that that new provision would not interfere with the way legal systems dealt with arbitrability, the protection of the rights of third parties or access to justice.[9] In addition, the Working Group noted that, while at its twenty-ninth session (New York, 8-12 February 2016) there was general agreement as to the value of ADR, it was agreed that, in view of the complexity of the matter and the need to coordinate with Working Group II (Dispute Settlement) and to discuss the matter on the basis of a detailed proposal, no reference to ADR should be made in article 67 (now art. 73) or other part of the draft Model Law (see A/CN.9/871, para. 85). Moreover, the Working Group noted that the matters addressed in paragraph 55 of document A/CN.9/WG.VI/WP.71/Add.5 had already been addressed in paragraph 45 of document A/CN.9/WG.VI/WP.71/Add.1, which the Working Group at its present session had agreed to revise (see para. 38 above).

118. Differing views were expressed with respect to whether paragraph 52 should refer to arbitration in particular. One view was that paragraph 52 should clarify that the words "other authority" in article 73 covered a court, arbitral tribunal, chamber of commerce or notary public. It was stated that the use of arbitration in particular in the context of enforcement was crucial for many businesses in States where enforcement proceedings were inefficient to be able to obtain credit. It was also observed that the first two sentences of paragraph 58 should be moved to paragraph 53. Another view was that, as a consensual method of dispute resolution, by definition arbitration could not bind third parties. In that connection, it was stated that the rights of the third parties with rights in the encumbered assets were bound to be affected by the enforcement of security right in those assets. The view was also expressed that proceedings before a court and a notary public were of a very different nature and should thus not be presented together as if they were similar.

119. The prevailing view was that paragraph 52 should not refer to an arbitral tribunal as if it were an authority with adjudicating powers to resolve disputes and bind parties other than the parties to the relevant arbitration agreement. It was stated that arbitration was a consensual dispute resolution mechanism and arbitral awards could not bind third parties. It was also observed that article 3, paragraph 3, was sufficient in stating, in the appropriate place in the Model Law (i.e. in article 3 that dealt with party autonomy), the principle that nothing in the Model Law affected any agreement of the parties to use alternative dispute resolution.

120. After discussion, it was agreed that paragraph 52 should be revised to: (a) avoid any reference to arbitral tribunals; (b) distinguish, as it was done in the commentary of the Secured Transactions Guide (see chap. VIII, paras. 29-33), between

[9] Ibid., para. 98.

enforcement by application to a court or other authority vested by the State with adjudicating powers and enforcement without an application to a court or other authority with such powers; (c) give examples of other entities in which some States have vested with adjudicating powers to resolve disputes and issue decisions binding on all parties; and (d) clarify that public notaries, bailiffs, sheriffs or other court enforcement officers might assist in enforcement by a court or other authority or not, but not resolve disputes or issue decisions binding on all parties.

121. With respect to paragraph 53, it was agreed that it should be revised to refer to enforcement without application to a court or other authority, rather than to enforcement "with minimal supervision by a court or other authority". With respect to paragraph 55, it was agreed that it should be deleted, as its substance was already covered in paragraph 45 of document A/CN.9/WG.VI/WP.71/Add.1, as revised at the present session (see para. 38 above). With respect to paragraph 56, it was agreed that it should be revised to explain the rationale for the reference to expeditious proceedings.

122. With respect to paragraph 57, it was agreed that it should be revised to refer to the considerations to be taken into account by enacting States in deciding which of the options offered in article 74 to choose. With respect to paragraph 58, it was agreed that it should be deleted in view of the decision of the Working Group to avoid any reference to arbitral tribunals in paragraph 52 (see para. 120 above). With respect to paragraph 59, it was agreed that it should be revised to elaborate on the types of expeditious proceedings envisaged in article 74.

123. Subject to the above-mentioned changes (see paras. 116-122), the Working Group approved the substance of paragraphs 48 to 59 of document A/CN.9/WG.VI/WP.71/Add.5.

V. Future work

124. At the close of its session, the Working Group noted that, at its forty-ninth session in 2016, the Commission, had placed a number of topics on its future work programme to be discussed at a future session on the basis of notes to be prepared by the Secretariat, after a colloquium or expert group meeting, to be held within existing resources.[10] In that connection, the Working Group noted with appreciation the work of the Secretariat in organizing the Fourth International Colloquium on Secured Transactions, which was scheduled to take place in Vienna from 15 to 17 March 2017. The Working Group also noted that the Commission's Fiftieth Anniversary Congress would take place in Vienna from 4 to 6 July 2017 (in the context of the Fiftieth Commission session, which was scheduled to take place in Vienna from 3 to 21 July 2017) and that the Congress would discuss issues for the long-term work programme of the Commission. Finally, the Working Group noted that its thirty-first session was scheduled to take place in New York from 13 to 17 February 2017.

B. Note by the Secretariat on a draft guide to enactment of the UNCITRAL Model Law on Secured Transactions

(A/CN.9/WG.VI/WP.71 and Add.1-6)

[Original: English]

Contents

I. Purpose of the Guide to Enactment

1. In preparing and adopting the UNCITRAL Model Law on Secured Transactions (the "Model Law"), the United Nations Commission on International Trade Law ("UNCITRAL" or the "Commission") was mindful of the fact that the Model Law would be a more effective tool for States modernizing and harmonizing their legislation, as well as organizations assisting States, if background and explanatory information were provided to executive and legislative branches of Government to assist in their consideration of the Model Law for enactment (the "Guide to Enactment").[1]

2. In addition, the Commission was aware that in the preparation of the Model Law it was assumed that the Model Law would be accompanied by such a Guide to Enactment. For example, it was decided in respect of a number of issues not to settle them in the Model Law but to address them in the Guide to Enactment so as to provide guidance to States enacting the Model Law (see, for example, A/CN.9/WG.VI/WP.71/Add.1, paras. 42 and 101). Thus, the Guide to Enactment also addresses or clarifies matters that were not settled in the Model Law but were referred to in the Guide to Enactment.[2]

3. Moreover, when it referred the task of the preparation of the Guide to Enactment to the Working Group, the Commission agreed that the Guide to Enactment should: (a) be as short as possible; (b) include cross references to the UNCITRAL Legislative Guide on Secured Transactions (the "Secured Transactions Guide")[3] and the other texts of the Commission on secured transactions (see para. 6 below); (c) focus on giving guidance to legislators rather than users of the text; (d) explain the thrust of each provision of the Model Law and any difference with the corresponding recommendations of the Secured Transactions Guide or the provisions of another

[1] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), para. 215.
[2] Ibid.
[3] United Nations publication, Sales No. E.09.V.12.

UNCITRAL text on secured transactions; and (e) give guidance to States with respect to matters referred to them and in particular explain each option offered in various articles of the Model Law to assist enacting States in choosing one of the options offered.[4]

4. Mindful of the fact that the Secured Transactions Guide contains extensive commentary, the Commission decided that the Guide to Enactment should nevertheless be prepared. The reason was that the commentary of the Secured Transactions Guide had a different structure and did not contain a straightforward discussion of each recommendation but rather a discussion of the comparative advantages and disadvantages of various workable approaches with the recommendation being set out as a conclusion of that discussion. At the same time, to avoid repetition, the Commission agreed that the Guide to Enactment should not repeat, but should rather incorporate by reference, those comments contained in the Secured Transactions Guide that could assist in explaining a provision of the Model Law.

5. The Commission was also aware of the likelihood that the Model Law would be used in a number of States with limited familiarity with the type of secured transaction covered in the Model Law. So, the Guide to Enactment, much of which is drawn from the *travaux préparatoires* of the Model Law, is also intended to be helpful to other users of the text, such as judges, arbitrators, practitioners and academics.

6. In view of the above, the information presented in the Guide to Enactment is intended to briefly explain the thrust of each provision of the Model Law and its relationship with the corresponding recommendation(s) of the Secured Transactions Guide or other UNCITRAL texts on secured transactions, including the United Nations Convention on the Assignment of Receivables in International Trade (the "Assignment Convention"),[5] the Supplement on Security Rights in Intellectual Property (the "Intellectual Property Supplement"),[6] and the UNCITRAL Guide on the Implementation of a Security Rights Registry (the "Registry Guide").[7]

7. The Guide to Enactment was prepared by the Secretariat and is based on the considerations of the Working Group and the Commission. [It was considered and approved in principle by the Working Group at its [thirtieth] and [thirty-first] sessions (see […] respectively) and by the Commission at its [fiftieth] session (see […]).[8]]

II. Purpose and origin of the Model Law

A. Purpose of the Model Law

8. The Model Law is designed to assist States in implementing the recommendations of the Secured Transactions Guide, the Intellectual Property Supplement and the Registry Guide with respect to security rights in movable assets. The overall objective of those texts and the Model Law is to promote low-cost credit by enhancing the availability of secured credit (see Secured Transactions Guide, rec. 1 (a)). Like all those texts, the Model Law is intended to be useful to States that do not currently have efficient and effective secured transactions laws, as well as to States that already have workable laws but wish to modernize their laws and harmonize them with the laws of other States whose secured transactions laws are generally consistent with the recommendations of those texts (see Secured Transactions Guide, Introduction, para. 1).

[7] United Nations publication, Sales No. E.14.V.6.

[8] Ibid., [*Seventy-second Session, Supplement No. 17* (A/72/17), para. […].]

9. Thus, the provisions of the Model Law are based on the recommendations of the Secured Transactions Guide, including the Intellectual Property Supplement. The Model Registry Provisions are also based on the Registry Guide. The provisions of the Model Law on security rights in receivables are substantially based on the recommendations of the Secured Transactions Guide, which in turn are based on the Assignment Convention.

B. Background

10. At its first session, in 1968, the Commission included the topic of security interests in goods in its future work programme.[9] From its third session, in 1970, to its thirteenth session, in 1980, the Commission discussed the topic[10] and, at its thirteenth session, in 1980, decided that no further work should be carried out and the subject should no longer be accorded priority as "the worldwide unification of the law of security interests in goods, for the reasons brought out in the discussions, was in all likelihood unattainable".[11]

C. Preparatory work and adoption

11. At its forty-third session, in 2010, the Commission had before it a note by the Secretariat on possible future work in the area of security interests (A/CN.9/702 and Add.1). The Commission agreed that four issues related to secured transactions law listed in document A/CN.9/702, paragraph 2 (a)-(d), were interesting (non-intermediated securities, registration of security rights, a model law and a contractual guide on secured transactions) and should be retained on its future work agenda.[12] At the same time, in view of the limited resources available to it, the Commission agreed that it could not undertake work on all four issues at the same time and that, as a result, it should set priorities. In that regard, there was general agreement that priority should be given to work on registration of security rights in movable assets.

12. At that session, the Commission decided that Working Group VI should be entrusted with the preparation of a text on registration of security rights in movable assets as a matter of priority. It was also agreed that other topics, such as security rights in non-intermediated securities, a model law based on the recommendations of the Guide and a text dealing with the rights and obligations of the parties should be retained in the future programme of Working Group VI for further consideration by the Commission at a future session on the basis of notes to be prepared by the Secretariat within the limits of existing resources.[13]

13. At its forty-fifth session, in 2012, the Commission decided that, upon its completion of the Registry Guide, Working Group VI should undertake work to prepare a simple, short and concise model law on secured transactions based on the Secured Transactions Guide and consistent with all texts prepared by UNCITRAL on secured transactions.[14] At that session, the Commission noted that the Working Group, at its twenty-first session, had agreed to propose to the Commission that the Working Group should develop a model law on secured transactions based on the general recommendations of the Secured Transactions Guide and consistent with all the texts prepared by UNCITRAL on secured transactions. It was also noted that the Working Group had agreed to propose to the Commission that the topic of security

---

[9] Ibid., *Twenty-third Session, Supplement No. 16* (A/72/16), paras. 40-48.
[10] For this project, see www.uncitral.org/uncitral/uncitral_texts/security_past.html.
[11] *Official Records of the General Assembly, Thirty-fifth Session, Supplement No. 17* (A/35/17), para. 28.
[12] Ibid., *Sixty-fifth Session, Supplement No. 17* (A/65/17), para. 264.
[13] Ibid., para. 268.
[14] Ibid., *Sixty-seventh Session, Supplement No. 17* (A/67/17), para. 105.

rights in non-intermediated securities should be retained on its work agenda and be considered at a future session (A/CN.9/743, para. 76).[15]

14. Recalling that, at its forty-third session, in 2010, the Commission had agreed that the above-mentioned topics (see para. 11 above) should be retained on the programme of the Working Group for further consideration, the Commission considered the proposals of the Working Group. It was widely felt that a simple, short and concise model law on secured transactions could usefully complement the Secured Transactions Guide and would be extremely useful in addressing the needs of States and in promoting implementation of the Secured Transactions Guide. While a concern was expressed that a model law might limit the flexibility of States to address the local needs of their legal traditions, it was generally viewed that a model law could be drafted in a sufficiently flexible manner to adapt to various legal traditions. Moreover, there was support for the idea that a model law could greatly assist States in addressing urgent issues relating to access to credit and financial inclusion, in particular for small and medium-sized enterprises.[16]

15. As to the topic of security rights in non-intermediated securities, it was widely felt that the topic merited further consideration. The Commission noted that non-intermediated securities, in the sense of securities other than those credited to a securities account, that were used as security for credit in commercial finance transactions were excluded from the scope of the Secured Transactions Guide (see rec. 4, (c)-(e) of the Guide), the Unidroit Convention on Substantive Rules for Intermediated Securities (Geneva, 2009; the "Unidroit Securities Convention") and the Convention on the Law Applicable to Certain Rights in respect of Securities held with an Intermediary (The Hague, 2006; the "Hague Securities Convention").[17]

16. At its twenty-third session, in 2013, Working Group VI had a general exchange of views on the basis of a note prepared by the Secretariat entitled "Draft Model Law on Secured Transactions" (A/CN.9/WG.VI/WP.55 and Add.1 to 4).[18] The Working Group developed the Model Law in six one-week sessions,[19] the final taking place in February 2016.

17. At its forty-seventh session, in 2014, the Commission expressed its satisfaction for the considerable progress achieved by the Working Group in its work and requested the Working Group to expedite its work so as to complete the draft Model Law, including certain definitions and provisions on non-intermediated securities (see A/CN.9/811), and to submit it to the Commission for adoption together with a guide to enactment as soon as possible.

18. At its forty-eighth session, in 2015, the Commission considered and approved the substance of article 26 of chapter IV of the Model Law and articles 1-29 of the draft Registry Act.[20] At that session, the Commission also agreed that a guide to enactment of the Model Law should be prepared and referred that task to the Working Group.[21]

19. In preparation for the forty-ninth session of the Commission, the text of the Model Law as approved by Working Group VI was circulated to all Governments and to interested international organizations for comment. At that session, the Commission had before it the reports of the Working Group on its twenty-eighth and twenty-ninth sessions (A/CN.9/865 and A/CN.9/871), the Model Law (A/CN.9/884

[16] Ibid., paras. 102 and 103.
[17] Ibid., para. 104.
[18] See A/CN.9/767, paras. 63 and 64.
[19] The reports of the Working Group on its work during these six sessions are contained in documents A/CN.9/796, A/CN.9/802, A/CN.9/830, A/CN.9/836, A/CN.9/865 and A/CN.9/871. During these sessions, the Working Group considered documents A/CN.9/WG.VI/WP.57 and Add.1 to 4, A/CN.9/WG.VI/WP.59 and Add.1, A/CN.9/WG.VI/WP.61 and Add.1 to 3, A/CN.9/WG.VI/WP.63 and Add.1 to 4, A/CN.9/WG.VI/WP.65 and Add.1 to 4, and A/CN.9/WG.VI/WP.68 and Add.1 and 2.
[20] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), para. 214.
[21] Ibid., para. 216.

and Add.1-4), the Guide to Enactment prepared by the Secretariat (A/CN.9/885 and Add.1-4) and the comments received from Governments (A/CN.9/886 and A/CN.9/887). At that session, the Commission considered and adopted the Model Law.[22] The Commission noted that the Guide to Enactment was already at an advanced stage and was an extremely important text for the implementation and interpretation of the Model Law, and gave Working Group VI up to two sessions to complete its work and submit the Guide to Enactment to the Commission for final consideration and adoption at its fiftieth session in 2017.[23]

20. After consideration of the Model Law, the Commission adopted the following decision:

The United Nations Commission on International Trade Law,

Recalling General Assembly resolution 2205 (XXI) of 17 December 1966, which established the United Nations Commission on International Trade Law with the purpose of furthering the progressive harmonization and unification of the law of international trade in the interests of all peoples, in particular those of developing countries,

Recalling also General Assembly resolutions 56/81 of 12 December 2001, 63/121 of 11 December 2008, 65/23 of 6 December 2010 and 68/108 of 16 December 2013 in which the General Assembly recommended that States consider or continue to consider becoming parties to the United Nations Convention on the Assignment of Receivables in International Trade (New York, 2001) and giving favourable consideration to the UNCITRAL Legislative Guide on Secured Transactions (2007), the Supplement on Security Rights in Intellectual Property and the UNCITRAL Guide on the Implementation of a Security Rights Registry, respectively,

Further recalling that, at its forty-sixth session in 2013, it entrusted Working Group VI (Security Interests) with the preparation of a model law on secured transactions based on the recommendations of the UNCITRAL Legislative Guide on Secured Transactions (2007) and consistent with all texts prepared by UNCITRAL on secured transactions,[24]

Noting that the Working Group devoted six sessions, from 2013 to 2016, to the preparation of the draft model law on secured transactions (the 'draft Model Law'),[25]

Further noting that, at its forty-eighth session, in 2015, the Commission approved the substance of the registry-related provisions of the draft Model Law,[26]

Further noting with satisfaction that the draft Model Law is based on the recommendations of the UNCITRAL Legislative Guide on Secured Transactions and consistent with all texts prepared by UNCITRAL on secured transactions, and with those texts thus provides comprehensive guidance to States with respect to legal and practical issues that need to be addressed when implementing a modern secured transactions regime,

Recognizing that an efficient secured transactions regime with a publicly accessible security rights registry of the kind provided for in the draft Model Law is likely to increase access to affordable secured credit and thus promote economic growth, sustainable development, the rule of law and financial inclusion, as well as assist in combating poverty,

Recognizing also that the harmonization of national secured transactions regimes and registries on the basis of the draft Model Law is likely to increase the availability of secured credit across national borders and thus facilitate the

[23] Ibid., paras. 121 and 122.
[24] Ibid., *Sixty-eighth Session, Supplement No. 17* (A/68/17), paras. 194 and 332.
[25] For the reports of those sessions of the Working Group, see A/CN.9/796, A/CN.9/802, A/CN.9/830, A/CN.9/836, A/CN.9/865 and A/CN.9/871.
[26] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), para. 214.

development of international trade, which, if achieved on the basis of equality and mutual benefit to all States, is an important element in promoting friendly relations among States,

Recognizing further that secured transactions law reform could not be effectively implemented without the establishment of an efficient, publicly accessible security rights registry where information about the potential existence of a security right in movable assets may be registered, and that States urgently need guidance with respect to the establishment and operation of such registries,

Expressing its appreciation to international intergovernmental and non-governmental organizations active in the field of secured transactions law reform for their participation in and support for the development of the draft Model Law,

Having considered the draft Model Law at its forty-ninth session, in 2016,

Drawing attention to the fact that the text of the draft Model Law was circulated for comment before the forty-ninth session of the Commission to all Governments invited to attend sessions of the Commission and the Working Group as members and observers and that the comments received were before the Commission at its forty-ninth session,[27]

Considering that the draft Model Law has received sufficient consideration and has reached the level of maturity for it to be generally acceptable to States,

1. *Adopts* the UNCITRAL Model Law on Secured Transactions, consisting of the text contained in documents A/CN.9/884 and addenda 1-4, with amendments adopted by the Commission at its forty-ninth session, and authorizes the Secretariat to edit and finalize the text of the UNCITRAL Model Law on Secured Transactions pursuant to the deliberations of the Commission at that session;

2. *Requests* the Secretary-General to publish the UNCITRAL Model Law on Secured Transactions, including electronically and in the six official languages of the United Nations, and to disseminate it broadly to Governments and other interested bodies;

3. *Recommends* that all States give favourable consideration to the UNCITRAL Model Law on Secured Transactions when revising or adopting legislation relevant to secured transactions, and invites States that have used the Model Law to advise the Commission accordingly;

4. *Also recommends* that, where necessary, States continue giving favourable consideration to the UNCITRAL Guide on the Implementation of a Security Rights Registry when revising relevant legislation, administrative regulations or guidelines, and to the UNCITRAL Legislative Guide on Secured Transactions and the Supplement on Security Rights in Intellectual Property when revising or adopting legislation relevant to secured transactions, and invites States that have used the guides to advise the Commission accordingly;

5. *Also recommends* that all States continue to consider becoming parties to the United Nations Convention on the Assignment of Receivables in International Trade, the principles of which are also reflected in the UNCITRAL Model Law on Secured Transactions, and the optional annex of which refers to the registration of notices with regard to assignments.[28]

III. The Model Law as a tool for modernizing and harmonizing laws

21. The Model Law is in the form of a legislative text that is recommended to States for incorporation into their national law. Unlike an international convention, model legislation does not require the State enacting it to notify the United Nations or other States that may have also enacted it. However, States are strongly encouraged to inform the UNCITRAL secretariat of any enactment of the new Model Law (or any other model law resulting from the work of UNCITRAL). This information may be made available on the UNCITRAL website to send the message that the enacting State has adopted an international standard and, in any case, assist other States in their consideration of the Model Law.

22. In incorporating the text of model legislation into its legal system, a State may wish to consider modifying or leaving out some of its non-fundamental provisions. In the case of a convention, the possibility of changes being made to the uniform text by the States parties (normally referred to as "declarations") is much more restricted; trade law conventions in particular usually either totally prohibit declarations or allow only very few, specific ones. The flexibility inherent in model legislation is particularly desirable in those cases where it is likely that the State would wish to make various modifications to the uniform text before it would be ready to enact it as national law. Some modifications may be expected, in particular when the uniform text is closely related to the national court and procedural system. This, however, also means that the degree of harmonization achieved through model legislation is likely to be lower than that achieved by a convention.

23. However, this relative disadvantage of model legislation may be balanced by the fact that the number of States enacting model legislation is likely to be higher than the number of States adhering to a convention. In order to achieve a satisfactory degree of modernization, harmonization and certainty, it is recommended that States make as few changes as possible in incorporating the new Model Law into their legal systems and that they take due regard of its basic principles, including the unitary, functional and comprehensive approach to secured transactions, notice registration, party autonomy and the international origin of the Model Law. In general, in enacting the Model Law, it is advisable to adhere as much as possible to the uniform text in order to make the national law as efficient as possible for all users and as transparent and familiar as possible for foreign users. This does not deprive enacting States of the necessary flexibility as the Model Law provides options and leaves a number of matters to enacting States (see, for example, arts. 1, para. 3 (e), 2, subparas. (hh) (ii), 6, para. 3, 19, para. 2 (a), 23, para. 1 (b), and 27, subpara. (a)). In particular with respect to terminology, on a number of occasions, the Model Law draws the attention of the enacting State to the need to ensure that the terminology used in its enactment of the Model Law is meaningful in the context of local law (see, for example, A/CN.9/WG.VI/WP.71/Add.1, paras. 15 and 38).

24. While it is recommended that the Model Law should be implemented in one law, depending on its legal tradition and drafting conventions, the enacting State may implement the Model Registry Provisions in its secured transactions law, in a separate statute or other type of legal instrument, such as rules, regulations, orders, by-laws, proclamations or the like adopted by a legislative or executive body, or some of these Provisions in its secured transactions law and the rest in a separate statute or other type of legal instrument. Similarly, the conflict-of-laws provisions may be incorporated in the secured transactions law (at the beginning or at the end of it) or in a separate law (civil code or other law).

25. The enacting State may wish to consider producing an explanatory guide to their version of the Model Law, in a form that its legal practitioners and courts can officially use to interpret the law. Such a guide could flesh out the intent behind particular provisions, and in some cases provide examples. Even more importantly, the guide could explain the unspoken concepts that underlie the Model Law, such as the effect of the functional ("substance over form") approach to the characterization of security rights, and the fact that the Model Law treats the grantor of a security right

as if it were the owner of the encumbered asset, even if it is not the owner for the purposes of the enacting State's other laws (e.g. where the grantor is the lessee under a finance lease, a buyer of goods on a retention-of-title basis or the transferor of a receivable). As the Secured Transactions Guide discusses all these and other relevant issues, the enacting State's guide could refer to the Secured Transactions Guide to allow its courts to look behind their secured transactions law to the international source from which it was derived. Alternatively, a formal statement may be adopted by the enacting State's legislature that the objective of their secured transactions law was to produce the same outcomes as the Model Law (see para. 30 below).

IV. Main features of the Model Law

A. Relationship of the Model Law with the secured transactions texts of UNCITRAL

26. The Secured Transactions Guide, including the Intellectual Property Supplement, and the Registry Guide contain detailed commentary and recommendations on all issues to be addressed in a modern law on secured transactions. However, they are long texts and States will need assistance in implementing their recommendations. Thus, the Model Law was prepared to complement those texts and to assist States in implementing their recommendations.

27. The Model Law reflects the policies embodied in the recommendations of those texts. The difference in the formulation between a provision of the Model Law and the relevant recommendation is generally due to the legislative nature of the Model Law and is briefly explained in the remarks to the relevant provision of the Model Law below.

28. For reasons explained below, the Model Law also addresses matters that were not addressed in a recommendation or even discussed in the Secured Transactions Guide, including the Intellectual Property Supplement, or in the Registry Guide (e.g. security rights in non-intermediated securities and the effectiveness of the registration of an amendment or cancellation notice that has not been authorized by the secured creditor). At the same time, the Model Law does not address certain matters that were addressed in the Secured Transactions Guide (e.g. security rights in the right to receive the proceeds under an independent undertaking and security rights in attachments).

B. Key objectives and fundamental policies of the Model Law

29. The overall objective of the Model Law is the same as that of the Secured Transactions Guide, that is, to promote low-cost credit by enhancing the availability of secured credit (see Secured Transactions Guide rec. 1 and Introduction, paras. 43-59). The fundamental policies of the Model Law are the same as those of the Secured Transactions Guide (see Secured Transactions Guide, Introduction, paras. 60-72). In enacting the Model Law, States may wish to consider issues of harmonization with existing law, legislative method, drafting technique and post-enactment acculturation (see Secured Transactions Guide, Introduction, paras. 73-89).

30. Depending on its drafting method and technique, the enacting State may wish to consider including the key objectives of the Model Law in a preamble or other statement of objectives of the law. That statement could be used for the purpose of the interpretation of, and the filling of gaps in, the Model Law (see A/CN.9/WG.VI/WP.71/Add.1, para. 49).

V. Assistance from the UNCITRAL secretariat

A. Assistance in drafting legislation

31. In the context of its training and assistance activities, the UNCITRAL secretariat assists States with technical consultations for the preparation of legislation based on the Model Law. The same assistance is brought to Governments considering legislation based on other UNCITRAL model laws (e.g. the UNCITRAL Model Law on Cross-Border Insolvency),[29] or considering adhesion to one of the international trade law conventions prepared by UNCITRAL (e.g. the United Nations Convention on Independent Guarantees and Stand-by Letters of Credit (New York, 1995)[30] and the Assignment Convention).

32. Further information concerning the Model Law and other model laws and conventions developed by UNCITRAL, may be obtained from the UNCITRAL secretariat at the address below:

International Trade Law Division, Office of Legal Affairs
United Nations
Vienna International Centre
P.O. Box 500
A-1400 Vienna, Austria
Telephone: (+43-1) 26060-4060 or 4061
Telecopy: (+43-1) 26060-5813
Electronic mail: uncitral@uncitral.org
Internet home page: www.uncitral.org

B. Information on the interpretation of legislation based on the Model Law

33. The UNCITRAL secretariat welcomes comments concerning the Model Law and the Guide to Enactment, as well as information concerning enactment of legislation based on the Model Law. Once enacted, the Model Law will be included in the CLOUT information system, which is used for collecting and disseminating information on case law relating to the conventions and model laws that have emanated from the work of UNCITRAL. The purpose of the system is to promote international awareness of the legislative texts formulated by UNCITRAL and to facilitate their uniform interpretation and application. The UNCITRAL secretariat publishes, in the six official languages of the United Nations, abstracts of decisions and arbitral awards. In addition, upon individual request and subject to any copyright and confidentiality restrictions, the UNCITRAL secretariat makes available to the public all decisions and arbitral awards on the basis of which the abstracts were prepared. The system is explained in a user's guide that is available from the UNCITRAL secretariat in hard copy (A/CN.9/SER.C/GUIDE/1/Rev.2) and on the above-mentioned Internet home page of UNCITRAL.

Note by the Secretariat on a draft guide to enactment of the UNCITRAL Model Law on Secured Transactions

ADDENDUM

Contents

Paragraphs

VI. Article-by-article remarks

Chapter I. Scope of application and general provisions

Article 1. Scope of application

1. Article 1 is based on recommendations 1-7 of the Secured Transactions Guide (see chap. I, paras. 1-4). It is intended to set out the various types of transaction and asset covered by the Model Law (see art. 1, paras. 1-4), as well as to clarify the relationship between the Model Law and other law (see art. 1, paras. 5 and 6). Generally, the Model Law has the same comprehensive scope of application as the Secured Transactions Guide and applies to any property right in any type of movable asset, such as equipment, inventory and receivables, provided that the property right is created by an agreement and secures payment or other performance of an obligation (see art. 1, para. 1, and the definition of the term "security right" in art. 2, subpara. (kk)). However, there are a few differences between the scope of the Model Law and the scope of the Secured Transactions Guide.

2. Like the Secured Transactions Guide (see rec. 3) and the Assignment Convention (see art. 1, para. 1, and art. 2, subpara. (a)), the Model Law also applies to outright transfers of receivables by agreement (see art. 1, para. 2). The main reasons for this approach are that: (a) outright transfers of receivables often take place in the context of financing transactions; and (b) it is often difficult to determine at the outset of a transaction whether an assignment will be held to be an outright or a security assignment (see Secured Transactions Guide, chap. I, paras. 25-31). The enacting State, however, may wish to consider excluding from the scope of the Model Law certain types of outright transfers of receivables that are clearly not financing transactions (e.g. outright transfers of receivables for collection purposes only or as part of a sale of the business out of which they arose; see para. 7 below).

3. In addition, unlike the Secured Transactions Guide which covered security rights in the right to receive payment under an independent undertaking (see rec. 2 (a)), the Model Law excludes from its scope security rights in both the right to receive and the right to request payment under an independent guarantee or letter of credit, whether commercial or standby (see art. 1, para. 3 (a)). The reason is that there are various specialized financing practices in those areas and dealing with them in the Model Law would be unduly complex. States interested in addressing those practices in their general secured transactions law can always implement the relevant recommendations of the Secured Transactions Guide (recs. 27, 50, 107, 127, 176 and 212).

4. Moreover, like the Secured Transactions Guide (see rec. 4 (b)), to the extent that its provisions are inconsistent with law relating to intellectual property, the Model Law defers to law relating to intellectual property (see art. 1, para. 3 (b)). However, this limitation may not be necessary if the enacting State has already coordinated or otherwise addressed the relationship between the Model Law and its law relating to intellectual property.

5. Also, unlike the Secured Transactions Guide (see rec. 4 (c)), the Model Law does not exclude from its scope security rights in non-intermediated securities (see art. 1, para. 3 (c)). The reasons for this approach are that: (a) such securities often are part of commercial finance transactions (in which, for example, it is common for the

lender's security to include in the assets to be encumbered shares of the borrower's wholly-owned subsidiaries or the shares of the borrower itself); (b) there are wide divergences among national regimes in this regard; and (c) such securities are not addressed in any other uniform law text. To the contrary, security rights in intermediated securities are excluded as such securities are typically part of financial market transactions and are addressed in other uniform law texts (see Secured Transactions Guide, chap. 1, paras. 37 and 38).[1]

6. Finally, the Model Law excludes payment rights under or from financial contracts governed by netting agreements (see art. 1, para. 3 (d)), including foreign exchange transactions, because they raise complex issues that require special rules (see Secured Transactions Guide, chap. I, para. 39).

7. Combining the policy of recommendations 4 (a) and 7 of the Secured Transactions Guide, the Model Law permits the enacting State to exclude further types of asset (or transaction), provided that other law governs the matters that are addressed in the Model Law (see art. 1, para. 3 (e)). The reason for this approach is to avoid inadvertently creating gaps (where other law does not govern an issue addressed in the Model Law) or overlaps (where other law governs an issue addressed in the Model Law). In addition, the Model Law provides guidance to States as to possible exclusions, referring to types of asset that are subject to specialized secured transactions and asset-based registration regimes, such as ships and aircraft.

8. Similarly, with respect to the application of the Model Law to proceeds, while the relevant provision of the Model Law (see art. 1, para. 4), is formulated somewhat differently from recommendation 6 of the Secured Transactions Guide, there is no policy difference between the two rules. The policy may be explained as follows. In the case of a security right in an asset covered by the Model Law (e.g. receivables), the security right extends to its identifiable proceeds (see art. 10, para. 1); this rule applies even if the proceeds are of a type of asset that is outside the scope of the Model Law (e.g. intermediated securities), except to the extent that other law applies and governs the matters addressed in the Model Law.

9. With respect to the relationship with consumer-protection law, the Model Law is intended to preserve the application of consumer-protection law that protects a grantor or a debtor of an encumbered receivable (see art. 1, para. 5, of the Model Law, rec. 2 (b), of the Secured Transactions Guide and art. 4, para. 4, of the Assignment Convention). For example, under consumer-protection law, it may not be possible to create a security right in all present and future assets, employment benefits, at least up to a certain amount, or necessary household items of a consumer. Enacting States that do not have a developed consumer-protection law may need to consider whether enactment of the Model Law should be accompanied by the enactment of such special protections for consumers. It should also be noted that the Model Law already includes certain consumer-specific rules. For example, under article 24, an acquisition security right in consumer goods is effective against third parties upon its creation (see para. 94 below).

10. Following the approach of the Secured Transactions Guide (see rec. 18), the Model Law, is intended to preserve limitations on the creation or the enforceability of a security right in certain types of asset (e.g. employment benefits) that are based on any other statutory or case law (see art. 1, para. 6). At the same time, it is intended to ensure that such limitations based on the sole ground that an asset is a future asset, or a part of an asset or an undivided interest in an asset are overridden (see art. 8, subparas. (a) and (b)). However, paragraph 6 does not apply to contractual limitations (also known as negative pledge agreements). The Model Law overrides explicitly contractual limitations on the creation of a security right in receivables (see art. 13) or rights to payment of funds credited to a bank account (see art. 15).

11. With respect to other types of asset, contractual limitations on the creation of a security right are overridden implicitly to the extent that the Model Law allows the owner of an asset to create a security right in that asset, even if the security or other

[1] Such as the Unidroit Securities Convention and the Hague Securities Convention.

agreement expressly restricts that right. That is because the Model Law states that a grantor may encumber an asset if it has rights in the asset (art. 6, para. 1; see para. 52 below), and a person who has rights in an asset does not cease to have those rights merely because it agreed contractually not to dispose of the asset. It should be noted that the position of third-party obligors, such as the debtor of a receivable or a deposit-taking institution is protected by other provisions of the Model Law (see arts. 61-71).

12. Finally, unlike the Secured Transactions Guide, the Model Law does not apply to attachments to movable or immovable property. Thus, the Model Law does not include a provision along the lines of recommendation 5, which provides that, while the law recommended in the Secured Transactions Guide does not apply to immovable property, it does apply to attachments to immovable property. Enacting States are encouraged to consider including in their enactments of the Model Law provisions based on the relevant recommendations of the Secured Transactions Guide (see recs. 21, 25, 43, 48, 87, 88, 164, 165, 184, 195 and 196).

Article 2. Definitions and rules of interpretation

13. Article 2 contains definitions and rules of interpretation with respect to most key terms used in the Model Law. Other terms are defined or explained in various articles of the Model Law. For example, the term "judgment creditor" is defined in article 37, paragraph 1, of the Model Law.[2] Article 2 is based on the terminology and rules of interpretation of the Secured Transactions Guide (see Secured Transactions Guide, Introduction, paras. 15-20). Rules of interpretation include the following: (a) the word "or" is not intended to be exclusive; (b) the singular includes the plural and vice versa; and (c) the words "include" or "including" are not intended to indicate an exhaustive list (see Secured Transactions Guide, Introduction, para. 17).

Acquisition security right

14. An acquisition security right is a security right in a tangible asset that secures the grantor's obligation with respect to credit provided to enable the grantor to acquire that tangible asset (other than reified intangible assets; see art. 2, subparas. (b) and (ll)), intellectual property and the rights of a licensee in intellectual property. This definition, in conjunction with the definition of "security right", results in retention-of-title transactions, conditional sales and financial leases being treated in the Model Law as "acquisition security rights". For a security right to be an acquisition security right, the credit it secures has to be used for that purpose. Where a security right secures obligations in addition to the credit extended and used for the purpose of acquiring the encumbered asset, it is an ordinary security right to the extent of those additional obligations.

Bank account

15. To underline the distinction between a "bank account" and a "securities account", the Model Law defines: (a) the former term as "an account maintained by an authorized deposit-taking institution to which funds may be credited or debited"; (b) the latter term as "an account maintained by an intermediary to which securities may be credited or debited"; and (c) the term "securities" in a manner that clearly excludes funds (see art. 2, subparas. (c), (hh) and (ii) respectively). The term "bank account", therefore, includes any current or checking and savings account. The term does not include a right against the bank to payment evidenced by a negotiable instrument. The enacting State may wish to consider replacing the term "authorized deposit-taking institution" with the corresponding term from its own financial regulatory framework.

[2] Based on the assumption that the Model Registry Provisions may be enacted in a separate statute or other type of legal instrument, the term "registry" is defined both in article 2, subparagraph (ee) of the Model Law and article 1, subparagraph (k), of the Model Registry Provisions. If they are enacted as part of the Model Law, the latter provision will not be necessary.

Certificated non-intermediated securities

16. The term "represented" used in the definition of the term "certificated non-intermediated securities" (see art. 2, subpara. (d)) is intended to be broad enough to cover the approaches taken in different jurisdictions (e.g. "covered" or "embodied"). The term "certificate" means only a tangible document subject to physical possession. Thus, securities represented by an electronic certificate are considered to be uncertificated securities under the Model Law.

Competing claimant

17. A competing claimant may have a security right in the same encumbered asset as an original encumbered asset or as proceeds (see art. 2, subpara. (e)). Other creditors of the grantor with a right in the same encumbered asset include judgment creditors.

Consumer goods

18. Unlike the definition of the term "consumer goods" in the Secured Transactions Guide on which it is based, the definition of the term in the Model Law (see art. 2, subpara. (f)) includes the word "primarily" to ensure that: (a) goods primarily used or intended to be used for personal family or household purposes and only incidentally for business purposes would be treated as consumer goods; and (b) goods primarily used or intended to be used for business purposes and only incidentally for personal, family or household purposes would not be treated as consumer goods.

Control agreement

19. A control agreement can achieve three purposes: (a) render a security right effective against third parties (see arts. 25 and 27); (b) ensure the cooperation of the deposit-taking institution or the issuer of securities in the enforcement of a security right; and (c) establish the priority of the secured creditor that has control. Unlike the definition of this term in the Secured Transactions Guide, on which it is based, the definition of the term in the Model Law does not refer to a "signed writing" (see art. 2, subpara. (g)). This difference does not reflect a policy change but rather a decision that this matter should be left to the authorization requirements of the enacting State. In any case, a control agreement does not need to be in a single writing. It should also be noted that, on the assumption that other law would address this matter, the Model Law does not include a provision implementing the recommendations of the Secured Transactions Guide with respect to electronic communications (see Secured Transactions Guide, recs. 11 and 12).

Equipment

20. Unlike the definition of the term "equipment" in the Secured Transactions Guide on which it is based, the definition of the term in the Model Law includes the word "primarily" to ensure that: (a) goods used or intended to be used by a person primarily in the operation of its business and only incidentally for other purposes would be treated as equipment; and (b) goods used or intended to be used by a person primarily for other purposes and only incidentally in the operation of its business would not be treated as equipment (see art. 2, subpara. (l)). This definition also includes the words "other than inventory or consumer goods" as, depending on their use or intended use, the same tangible assets may be "equipment", "consumer goods" or "inventory" (see art. 2, subparas. (f), (l) and (q)).

Grantor

21. This definition makes clear that a grantor of a security right may be the debtor of the secured obligation or another person (e.g. the parent company of the debtor-subsidiary). A lessee or licensee of an asset may be regarded as a grantor if: (a) it creates a security right in whatever right it has in that asset (see subpara. (i)); or

(b) the effect of the lease or licence is to transfer the encumbered asset to the lessee or licensee (see subpara. (ii)).

Insolvency representative

22. As the term "insolvency representative" is only used in the definition of the term "competing claimant" it is not defined in the Model Law. It is defined though in the Secured Transactions Guide (see Introduction, para. 20) and the UNCITRAL Legislative Guide on Insolvency Law (the "Insolvency Guide"; see Introduction, para. 12 (v)) in a sufficiently broad manner to include the person responsible for administering or supervising insolvency proceedings (see the Insolvency Guide, part two, chap. III, paras. 11-18 and 35). The Secured Transactions Guide and the Insolvency Guide contain definitions of other insolvency-related terms, such as the term "insolvency proceedings" (which is referred to in arts. 2, subpara. (e) (iii), 35 and 94), and the term "insolvency estate".

Intangible asset

23. The term "intangible asset" includes receivables, rights to the performance of obligations other than receivables, rights to payment of funds credited to a bank account and uncertificated non-intermediated securities, as well as any asset that is not a tangible asset (see art. 2, subpara. (p)).

Inventory

24. The term "work in process" includes "semi-processed materials". In States in which a licence of tangible assets is possible, the term "lease of tangible assets" in this definition includes the licence of tangible assets (see art. 2, subpara. (q)).

Mass and product

25. The Model Law distinguishes between a "mass" and a "product". A "mass" is the combination that arises when two or more tangible assets of the same type are commingled in such a way that they lose their separate identity. This could happen, for example, when a shipload of oil is pumped into a storage tanker that already contains some oil from another source, or when a truckload of one farmer's wheat is tipped into a grain silo that already contains wheat from another farmer. In contrast, a "product" arises when one or more tangible assets are transformed into something different, through a production or manufacturing process; for example, when gold is used to make a ring, or when flour is used to make bread. The distinction is relevant to articles 11 and 33 (see paras. 67-70 below and commentary on art. 33 in A/CN.9/WG.VI/WP.71/Add.4).

Money

26. The term "money", whose definition is based on a definition contained in the Secured Transactions Guide, is intended to include not only the national currency (i.e. banknotes and coins, as well as virtual currency, such as bitcoin) of the enacting State but also the currency of another State (see art. 2, subpara. (t)). No reference is made to currency "currently" authorized as a legal tender, because if currency is not "currently" authorized as a legal tender, it would not qualify as a legal tender. Rights to payment of funds credited to a bank account and negotiable instruments are distinct concepts in the Model Law. They are not included in the term "money".

Movable asset

27. The enacting State may wish to ensure that this definition captures anything that its laws consider to be an asset other than immovable property (see art. 2, subpara. (u)). It may also wish to consider replacing the term "immovable property" with a term that has more meaning in the relevant jurisdiction (e.g. "land").

Non-intermediated securities

28. The term "non-intermediated securities" refers to securities (i.e. shares and bonds) that are not held in a securities account (see art. 2, subpara. (w)). The term does not include the rights of an intermediary or a competing claimant in securities held by the intermediary directly against the issuer where equivalent securities are credited by the intermediary to a securities account in the name of the grantor. This definition is structured around the definition of the term "intermediated securities" in the Unidroit Securities Convention (see art. 1(b)). It refers only to "rights", in contrast to the language used in the Unidroit Securities Convention which refers to "rights or interests", for reasons of consistency with the terminology of the Model Law in which rights is a broad term that covers any right or interest.

Notification of a security right in a receivable

29. The definition of the term "notification of a security right in a receivable" is based on the definition of the term "notification of the assignment" in article 5, subparagraph (d) of the Assignment Convention and recommendation 118 of the Secured Transactions Guide (see art. 2, subpara. (y)). The requirement for the identification of the encumbered receivable and the secured creditor was moved to article 62, paragraph 1, as it states a substantive rule on the effectiveness of a notification of a security right, a matter that is already addressed in that article.

Possession

30. The definition of the term "possession" is based on the definition in the Secured Transactions Guide. The words "directly or indirectly" that were included in recommendation 28 of the Secured Transactions Guide were not included in this definition or article 16 (which is based on rec. 28), because the definition is sufficiently broad to cover situations in which the issuer of a negotiable document holds it through various persons responsible to perform parts of a multimodal transport contract.

Priority

31. The definition of the term "priority" is based on the definition in article 5, subparagraph (g), of the Assignment Convention (see art. 2, subpara. (aa)). The difference in its formulation from the formulation of the definition of the term in the Secured Transactions Guide is due to the need to clarify that the person with priority may be a person with a security right or another competing claimant.

Proceeds

32. The term "proceeds" in the Model Law has the same meaning as in the Secured Transactions Guide (see art. 2, subpara. (bb)). It is important to note that it covers: (a) proceeds of the sale or other disposition, lease or licence of an encumbered asset (broadly understood); (b) proceeds of proceeds; and (c) natural or civil fruits. The terms revenues, dividends and distributions, which were included in the definition of this term in the Secured Transactions Guide, have been deleted on the understanding that they are covered by the term "civil fruits".

33. The term is not limited to proceeds received by the grantor but includes proceeds received by a transferee of an encumbered asset (i.e. where A creates a security right in its assets in favour of X and then transfers the assets to B who then creates a security right in them in favour of Y and then transfers the assets to C). The reason for this approach is that, if such a limitation were imposed, a transferee of an encumbered asset that acquired the asset subject to the security right could sell the asset further and keep the proceeds free of the security right. This result would limit the extent to which the first grantor's secured creditor would be actually secured, in particular if the value of the encumbered asset diminished or the proceeds disappeared or were difficult to trace. This does not mean that a transferee would be unprotected in any event (i.e. in the sense that C would search the registry under the name of B and would not be able to find the security right created by A). For example, a buyer or other

transferee may acquire its rights free of a security right (see art. 34, para. 2) and a security right in certain types of proceeds may not be automatically effective against third parties (see. art. 19, para. 2).

34. However, it should be noted that, as a result of the approach of the Model Law, in certain circumstances, third-party transferees would have no way of finding out that the assets were proceeds of another asset in which somebody else had a security right. This would be the case at least where the proceeds would be cash proceeds and a security right in such proceeds would be effective against third parties without the registration of an amendment notice (see art. 19, para. 1, of the Model Law and art. 26, option C, of the Model Registry Provisions). Thus, the enacting State may wish to consider limiting the term "proceeds" to proceeds received by the grantor or consider other ways to avoid a prejudice to third-party financiers (e.g. requiring the registration of an amendment notice in the case of a transfer of an encumbered asset; see art. 26, option A or B, of the Model Registry Provisions or protecting good faith transferees).

35. The term "proceeds" covers situations where funds in a bank account are moved to another bank account, even at the instigation of the deposit-taking institution, and thus art. 10, para. 2, applies to such a situation, as the funds in the second bank account are "proceeds".

Receivable

36. Like the Secured Transactions Guide, the Model Law defines the term "receivable" in a broad way to cover even non-contractual receivables, such as tort receivables (see art. 2, subpara. (dd)). However, the term "receivable" does not include rights to payment evidenced by a negotiable instrument, rights to payment of funds credited to a bank account and rights to payment under a non-intermediated security, as they are treated as distinct types of asset that are subject to different asset-specific rules.

Secured obligation

37. The term "secured obligation" includes any obligation secured by a security right, including obligations arising from credit extended to finance the operation of a business or the purchase of goods (see art. 2, subpara. (gg)). It covers both monetary and non-monetary obligations; obligations already incurred at the time of the extension of the credit, as well as obligations incurred thereafter, if the security agreement so provides. As there is no secured obligation in an outright transfer of a receivable, the provisions that refer to a "secured obligation" do not apply to an outright transfer of a receivable. As in other UNCITRAL texts, in the Model Law also the singular includes the plural and vice versa (see para. 13 above). So, for example, a reference to the secured obligation would be sufficient to cover more than one obligation, including all present and future secured obligations.

Securities

38. The definition of the term "securities" in the Model Law is narrower than the definition of the term in article 1, subparagraph (a), of the Unidroit Securities Convention (see art. 2, subpara. (hh)). The reason is that, while a broad definition is appropriate for the purposes of that Convention, it is overly broad for the purposes of the Model Law and could result in subjecting security rights in receivables, negotiable instruments, money and other generic intangible assets to the special rules applicable to security rights in non-intermediated securities. In any case, the enacting State would need to coordinate the definition of the term "securities" in its secured transactions law with the definition of the term in its securities transfer law.

Securities account

39. The definition of the term "securities account" in the Model Law is derived from article 1, subparagraph (c), of the Unidroit Securities Convention (see art. 2, subpara. (ii)).

Tangible asset

40. The term "tangible asset" in the Model Law includes consumer goods, equipment and inventory (see art. 2, subpara. (ll)). These terms do not refer to particular types of tangible asset but rather to the way in which particular tangible assets are used by the grantor (see art. 2, subparas. (f), (l) and (q)). Thus, the same cars could qualify: (a) as "consumer goods", if they are primarily used or intended to be used by the grantor for personal, family or household purposes; (b) as "equipment", if they are primarily used or intended to be used by the grantor in the operation of its business; or (c) as "inventory", if the grantor is a car dealer or manufacturer. The term also includes the reified intangible assets listed in the definition except for the purposes of certain articles that contain rules that are not appropriate for reified intangible assets. For example, the term "tangible asset' in the definition of the term "mass" (see in art. 2, subpara. (s)) does not include negotiable instruments or negotiable documents. The reason for this approach is that this does not raise an issue with respect to negotiable documents and having, for example, two separate sets of bearer bonds merged into one fungible pile is an exceptional situation that did not need to be addressed.

Writing

41. The definition of the term "writing" is intended to ensure that where the term is referred to in the Model Law (e.g. art. 6, para. 3), this reference will include electronic communication (see art. 2, subpara. (nn)). The definition is based on recommendation 11 of the Secured Transactions Guide, which in turn is based on article 9, paragraph 2, of the United Nations Convention on the Use of Electronic Communications in International Contracts.

International obligations of the enacting State

42. The Model Law leaves to the enacting State the issue whether international treaties (such as the Assignment Convention) prevail over domestic law. For example, in the case of a conflict between a provision of the Model Law and a provision of any treaty or other form of agreement to which an enacting State is a party with one or more other States, the requirements of the treaty or agreement may prevail (see art. 3 of the UNCITRAL Model Law on Cross-Border Insolvency). Such an approach may need to be limited to international treaties that directly address matters governed by the Model Law. In other States, in which international treaties are not self-executing but require internal legislation in order to become enforceable law, such an approach might be inappropriate or unnecessary (see Guide to Enactment and Interpretation of the UNCITRAL Model Law on Cross-Border Insolvency, paras. 91-93).

Article 3. Party autonomy

43. Article 3 is based on article 6 of the Assignment Convention (the first sentence of which is based on art. 6 of the United Nations Convention on Contracts for the International Sale of Goods ("CISG")) and recommendation 10 of the Secured Transactions Guide. Paragraph 1 is intended to reflect the principle that, with the exception of the provisions listed in article 3, parties are free to vary by agreement the effect of the provisions of the Model Law as between them. An agreement referred to in paragraph 1 may be not only between the secured creditor and the grantor but also between the secured creditor or the grantor and other parties whose rights may be affected by the Model Law, such as the debtor of an encumbered receivable, or between the secured creditor and a competing claimant.

44. Paragraph 2 reiterates the general principle that an agreement between two parties cannot affect the rights of a third party. The reason for stating a general principle of contract law is that the Model Law deals with relationships in which an agreement between two parties (e.g. the grantor and the secured creditor) might have or inadvertently appear to have an impact on the rights of third parties (e.g. the debtor of a receivable).

45. Paragraph 3 is intended to ensure that, if other law allows the grantor and the secured creditor to agree to resolve any dispute that may arise between them by arbitration, conciliation or negotiation, nothing in the Model Law is considered as preventing, invalidating or otherwise affecting that agreement. Depending on the efficiency of court proceedings in a particular State, these alternative dispute resolution mechanisms may provide a viable alternative to court proceedings, provided that certain issues are addressed by the relevant law, in particular with respect to arbitration, such as the arbitrability of disputes arising under a security agreement, protection of rights of third parties and the confidentiality of arbitral proceedings (see A/CN.9/WG.VI/WP.71/Add.5, para. 58).

Article 4. General standards of conduct

46. Article 4 is based on recommendation 131 of the Secured Transactions Guide (see chap. VII, para. 15). It is included in chapter I on the scope of application and general provisions, rather than in chapter VII on enforcement, as it states a standard of conduct with which parties should comply when they exercise their rights and perform their obligations under the Model Law, even outside the context of enforcement. Under article 4, any person must exercise all its rights and perform all its obligations under the Model Law in good faith and in a commercially reasonable manner. The violation of this obligation may result in liability in damages and other consequences that are left to the relevant law of the enacting State.

47. The concept of "commercial reasonableness" refers to the commercial transaction context and best practices. Meeting the specific standards referred to in other provisions of the Model Law (e.g. art. 78, para. 4, according to which notice is to be given within a short period of time) should generally be construed as meeting the general standards of conduct referred to in this article. It should be noted that, article 4 is listed in article 3 as a mandatory law rule. As a result, the duty to act in good faith and in a commercially reasonable manner cannot be waived or varied by agreement.

Article 5. International origin and general principles

48. Article 5 is inspired by article 7 of the CISG and based on article 3 of the UNCITRAL Model Law on Electronic Commerce, article 4 of the UNCITRAL Model Law on Electronic Signatures and article 2A of the UNCITRAL Model Law on International Commercial Arbitration. It is intended to limit the extent to which a national law implementing the Model Law would be interpreted only by reference to concepts of national law.

49. The Model Law is a tool not only for modernizing but also for harmonizing secured transactions laws (see A/CN.9/WG.VI/WP.71, paras. 21-25). To promote harmonization, paragraph 1 provides that the provisions of a national law implementing the Model Law should be interpreted with reference to its international origin and the observance of good faith. The term "good faith" is also used in article 4 as an obligation of persons who have rights and obligations under the Model Law. By contrast, in this article, the term identifies a consideration to be taken into account in the interpretation of the Model Law. Paragraph 2 is intended to provide guidance with respect to the filling of gaps in a law implementing the Model Law by reference to the general principles on which the Model Law is based (see A/CN.9/WG.VI/WP.71, para. 30).

Chapter II. Creation of a security right

A. General rules

50. This chapter and several other chapters contain a section A with general rules and a section B with asset-specific rules. This approach is followed to avoid overloading the general rules with asset-specific details. It is also followed to make it easier for States that do not need some of the asset-specific rules to leave them out

of its law, notwithstanding the fact that the Model Law follows the functional, integrated and comprehensive approach to secured transactions. The result of this approach is that general rules apply to all assets, but, in relation to certain types of asset, subject to the asset-specific rules. The enacting State may wish to consider whether the general and the asset-specific rules should be merged. If, however, the enacting State decides to keep those rules in separate sections of the relevant chapters, it may wish to include in its law a provision that addresses their interrelationship along the lines explained above.

Article 6. Creation of a security right and requirements for a security agreement

51. Article 6 is based on recommendations 13-15 of the Secured Transactions Guide (see chap. II, paras. 12-37). Its purpose is to deal with the creation of a security right, as well as the form and the minimum content of a security agreement, so as to enable parties to obtain a security right in a simple and efficient manner (see Secured Transactions Guide, rec. 1, subpara. (c)). A security right is created by agreement, for the content of which there are no requirements other than those listed in paragraphs 3 and 4, and for the conclusion of which no terms of art need be used.

52. Under paragraph 1, an agreement is sufficient to create a security right, provided that at the time of the conclusion of the security agreement the grantor has either a right in the asset to be encumbered or the power to encumber it. This is the case, for example, where: (a) the grantor is the owner of the asset; and (b) the grantor is in possession of the asset on the basis of a security agreement with the owner. In addition, it should be noted that a transferor of a receivable can continue to have a right in or the power to encumber the receivable, even if it has already transferred the receivable. Moreover, it should be noted that, in the case of an anti-assignment agreement between the owner/grantor and the debtor of a receivable, the owner/grantor may not have the right as against the debtor of the receivable to transfer or encumber the receivable, but does have a right in the receivable, and also the power to encumber it. Paragraph 2 clarifies that, in the case of future assets (i.e. assets produced or acquired by the grantor after the conclusion of the security agreement; see definition in art. 2, subpara. (n)), the security right is created when the grantor acquires rights in them or the power to encumber them.

53. Paragraph 3 sets out the requirements that a written security agreement has to meet. Whether written or oral, a security agreement creates a security right but need not use any special words to achieve that result (see art. 2, subpara. (jj)). From the two alternative wordings set out in paragraph 3 within square brackets, the enacting State may wish to select the one that is most fitting to its contract law. If the enacting State retains the words “concluded in”, a security agreement that is not in written form is not effective. If the enacting State retains the words “evidenced by”, a security agreement that is not in written form may still be effective if its terms are evidenced by a writing that is signed by the grantor (e.g. in a written offer by the grantor that the secured creditor accepts by way of its conduct).

54. Depending on what it considers as most efficient financing practices and reasonable assumptions of market participants, the enacting State may wish to consider whether to retain paragraph 3 (d). One approach is to retain paragraph 3 (d) to facilitate the grantor’s access to secured financing from other creditors in situations where the value of the assets encumbered by the prior security right exceeds the maximum amount indicated in the notice registered with respect to that right. Another approach is to leave out paragraph 3 (d) to facilitate the grantor’s access to credit by the first secured creditor (for the comparative advantages and disadvantages of the two approaches, see Secured Transactions Guide, chap. IV, paras. 92-97).

55. Under paragraph 4, there is no need for a written security agreement where the secured creditor is in possession of the encumbered asset. The fact that the secured creditor is in possession of the encumbered asset is itself sufficient evidence of the existence of the security agreement.

Article 7. Obligations that may be secured

56. Article 7 is based on recommendation 16 of the Secured Transactions Guide (see chap. II, paras. 38-48). It is primarily intended to ensure that future, conditional and fluctuating obligations may be secured. The main reason for this approach is to facilitate modern financing transactions, in the context of which financing may be provided at different times depending on the needs of the grantor (e.g. revolving credit facilities for the grantor to buy inventory). This approach does not preclude the introduction of special protections for grantors (e.g. setting a maximum amount for which the security right may be enforced; see art. 6, para. 3 (d); or limiting the creation of a security right in or the transferability of specific types of movable asset, such as employment benefits in general or up to a specific amount; see art. 1, para. 6).

Article 8. Assets that may be encumbered

57. Article 8 is based on recommendation 17 of the Secured Transactions Guide (see chap. II, paras. 49-57 and 61-70). It is primarily intended to ensure that future movable assets, parts of movable assets and undivided rights in movable assets, generic categories of movable assets, as well as all movable assets of a person, may become the subject of a security right.

58. It should be noted that the fact that future movable assets may be subject to a security right does not mean that statutory limitations to the creation or enforcement of a security right in specific types of movable asset (e.g. employment benefits in general or up to a specific amount) are overridden (see art. 1, para. 6).

59. It should also be noted that the fact that all movable assets of a grantor may be subject to a security right so as to maximize the credit that may be available and improve the terms of the credit agreement does not mean that other creditors of the grantor are necessarily unprotected. The protection of other creditors (within and outside insolvency proceedings) is a matter of other law and is foreseen in articles 35 and 36 of the Model Law.

Article 9. Description of encumbered assets and secured obligations

60. Article 9 is based on recommendation 14 (d), of the Secured Transactions Guide (see chap. II, paras. 58-60). In view of their importance, the requirements for the description of encumbered assets in a security agreement are presented in a separate article. Paragraph 1 sets out the general standard that must be met in the description of encumbered assets and the secured obligations for a security agreement to be effective. Paragraph 2 is intended to ensure that a security right may be created in an asset or class of assets even if the description in the security agreement is generic, such as “all inventory” or “all receivables” (see Secured Transactions Guide, chap. II, paras. 58-60). Paragraph 3 sets out the same rule for secured obligations.

Article 10. Rights to proceeds and commingled funds

61. Article 10 is based on recommendations 19 and 20 of the Secured Transactions Guide (see chap. II, paras. 72-89). Paragraph 1 is intended to ensure that, unless otherwise agreed by the parties (as this article is not listed in article 3 as a mandatory law rule), a security right in an asset automatically extends to its identifiable proceeds. The rationale for this rule is that it reflects the normal expectations of the parties and ensures that the secured creditor is sufficiently secured. Otherwise, a grantor could effectively deprive a secured creditor of its security either by disposing of the encumbered assets to a person who would take free of the security right or to a person from whom those assets could not easily be recovered.

62. By way of example, where the original encumbered asset is inventory, the cash or receivables generated from the sale of the inventory are proceeds. If upon payment of the receivables the funds received are deposited in a bank account, the right to payment of the funds credited to the bank account are also proceeds of the inventory.

So is a cheque issued by the holder of that bank account to buy new inventory and a warehouse receipt issued by the warehouse in which new inventory may be stored.

63. Paragraph 2 introduces an exception to the identifiability requirement in paragraph 1. A security right in an asset extends to its proceeds in the form of funds that are commingled with other funds even though the funds that are proceeds cannot be identified separately from the funds that are not proceeds (see para. 2 (a)). Paragraph 2 (b) limits that security right to the value of the proceeds immediately before they were commingled. So, if a sum of €1,000 is deposited in a bank account and at the time of enforcement the bank account has a balance of €2,500, the security right extends only to the sum of €1,000.

64. Paragraph 2 (c) deals with situations in which the balance in the bank account fluctuates and, at some point of time, is less than the value of the proceeds deposited (e.g. less than €1,000). In such a case, the security right extends only to the lowest value between the time when the proceeds were commingled and the time the security right in the proceeds is claimed. So, if in the example given, the balance in the account when the proceeds were deposited was €1,500, then it went down to €500 and at the time of enforcement was €750, the security right extends only to €500 (i.e. the lowest intermediate balance).

65. Where funds in a bank account are original encumbered assets, and the funds are transferred into another bank account and mixed with other funds in that other account, then the funds as transferred into that other account will be "proceeds" of the original funds, and thus the rules in article 10 will apply.

Article 11. Tangible assets commingled in a mass or transformed into a product

66. Article 11 is based on recommendations 22 and 91 of the Secured Transactions Guide (see chap. II, paras. 90-95 and 100-102, and chap. V, paras. 117-123). It accomplishes two related objectives. First, it transforms a security right in a tangible asset commingled in a mass or transformed into a product into a security right in the mass or product. Second, it limits the value of that security right by reference to the tangible asset commingled in the mass or product. Article 33 then addresses situations in which more than one secured creditor has a claim to a mass or product as a result of a security right in its components (see commentary on article 33 in A/CN.9/WG.VI/WP.71/Add.4). Paragraph 1 is intended to ensure that a security right in a tangible asset that is commingled in a mass or transformed into product will continue in the mass or product.

67. Paragraph 2 provides that a security right in a tangible asset that extends to a mass is limited to the same proportion of the mass that the asset bore to the quantity of the entire mass immediately after it was commingled in the mass. So, if a secured creditor has a security right in €100,000 worth of oil (100,000 litres at €1 per litre) that is commingled with €50,000 worth of oil in the same tank and thus the mass has €150,000 worth of oil, the security right is limited to two-thirds of the oil in the tank. This is initially worth €100,000. If the value of the oil in the tank decreases (e.g. because the value of the oil drops or because some of the oil leaks out and cannot be recovered), however, the secured creditor will still have security in two-thirds of the oil in the tank, but the value of that two thirds will be reduced. For example, if one half of the oil leaks out so that only 75,000 litres remain, then the secured creditor will have a security right in two thirds of that 75,000 litres, i.e. over 50,000 litres only. The value of the security right will correspondingly increase, however, if the value of the oil in the tank goes up. This reflects commercial expectations, as it puts the secured creditor in the same position that the secured creditor would have been in, if the oil had not been commingled in the tank with other oil in the first place.

68. Paragraph 3 applies a slightly different rule to products, consistent with the Secured Transactions Guide (see chap. II, para. 94). If the rule in paragraph 2 were to apply to security rights in assets that are transformed into a product, then this might provide the secured creditor with a windfall gain, if the value of the finished product is greater than the value of its components (e.g. because of value that is added by the

debtor's production efforts). For this reason, paragraph 3 provides instead that a security right in an asset that is transformed into a product is limited to the value of the asset immediately before it became part of the product. So, if encumbered flour worth €100 is used to make bread worth €500, the security right is limited to €100.

Article 12. Extinguishment of security rights

69. Article 12 deals with the extinguishment of security rights, which triggers the obligation of a secured creditor to return an encumbered asset or to register an amendment or cancellation notice (see art. 54 of the Model Law and art. 20, para. 3 (c), of the Model Registry Provisions). Under article 12, a security right is extinguished only where there is full payment or other satisfaction of all secured obligations and there is no longer any commitment of the secured creditor to extend further credit secured by the security right. As a result, the security right is not extinguished where temporarily there is a zero balance but there is a contingent secured exposure or an existing commitment of the secured creditor to extend further credit (e.g. on the basis of revolving credit arrangement).

B. Asset-specific rules

Article 13. Contractual limitations on the creation of security rights in receivables

70. Article 13 is based on recommendation 24 of the Secured Transactions Guide (see chap. II, paras. 106-110 and 113), which in turn is based on article 9 of the Assignment Convention. Paragraph 1 provides that an agreement limiting the grantor's right to create a security right in the receivables listed in paragraph 4 (often referred to as "trade receivables") does not prevent the creation of a security right where such an agreement exists. The rationale underlying this approach is to facilitate the use of receivables as security for credit, which is in the interest of the economy as a whole, without unduly interfering with party autonomy. This rule does not affect statutory limitations to the creation or enforcement of a security right in certain types of receivable (e.g. consumer or sovereign receivables; see art. 1, paras. 5 and 6).

71. The agreement referred to in paragraph 1 may be entered into between the initial grantor or, where the initial grantor transfers the asset to a person and that person creates a security right, that person, and the debtor of the receivable or any secured creditor who obtained a security right from the initial grantor or a subsequent grantor.

72. Paragraph 2 makes it clear that, while under paragraph 1 a security right is effective notwithstanding an agreement to the contrary, the grantor is not excused from any liability to its counter-party for damages caused by breach of that contractual provision, if such liability exists under other law. Thus, under paragraph 2, if the debtor of the receivable has sufficient negotiating power to force the creditor/grantor to accept the inclusion of an "anti-assignment clause" in their agreement and a breach of that agreement by the grantor results in a loss to the debtor of the receivable, the grantor is liable to the debtor of the receivable for damages under contract law. However, the debtor of the receivable may not avoid the contract because of that breach or raise against the secured creditor (assignee) any claim it may have against the grantor for that breach; in addition, under paragraph 3, a secured creditor that accepts a receivable as security for credit is not liable to the debtor of the receivable for the grantor's breach just because it had knowledge of the "anti-assignment clause". Otherwise, the anti-assignment agreement would in effect prevent a secured creditor from obtaining a security right in a receivable covered by the anti-assignment agreement.

73. As a result of the rules in paragraphs 1 and 2, a secured creditor does not have to examine each contract from which a receivable might arise to determine whether it contains an anti-assignment clause. This facilitates transactions relating to pools of receivables that are not specifically identified (with respect to which a search of the underlying transactions is possible but not necessarily time- or cost-efficient), as well

as transactions relating to future receivables (with respect to which such a search would not be possible at the time of the conclusion of the security agreement).

74. Paragraph 3 limits the scope of the rule in paragraph 1 to what could broadly be described as trade receivables. It does not apply to so-called "financial receivables", because, where the debtor of the receivable is a financial institution, even partial invalidation of an anti-assignment clause could affect obligations undertaken by the financial institution towards third parties (see Secured Transactions Guide, para. 108).

75. Article 13 (read together with art. 14) is intended to apply also to anti-assignment agreements limiting the creation of a security right in any personal or property rights securing or supporting payment or other performance of an encumbered intangible asset other than a receivable or an encumbered negotiable instrument.

Article 14. Personal or property rights securing or supporting payment or other performance of encumbered receivables or other intangible assets, or negotiable instruments

76. The first sentence of article 14 reflects the thrust of recommendation 25 of the Secured Transactions Guide (see chap. II, paras. 111-122). It is intended to ensure that a secured creditor with a security right in a receivable or another of the assets described therein automatically has the benefit of any personal right that supports payment or other performance of the receivable (e.g. a guarantee) and any property right that secures such payment or other performance (e.g. a security right in another asset). For example, if a receivable is secured by a guarantee or mortgage, the secured creditor with a security right in that receivable obtains the benefit of that guarantee or mortgage. This means that, if the receivable is not paid, the secured creditor may seek payment from the guarantor or enforce the mortgage (which may require that the secured creditor is registered as a mortgagee; see para. 77 below).

77. The first sentence of article 14 does not include recommendation 25 (h), of the Secured Transactions Guide (which was based on art. 10, para. 6, of the Assignment Convention). This is because it should be self-evident that the article does not apply to matters not addressed in it. Thus, to the extent that the automatic effects of the first sentence of article 14 are not impaired, any requirement under other law relating to the form or registration of the creation of a security right in any asset that is not covered in the Model Law (e.g. registration of a mortgage in the relevant immovable property registry) are not affected.

78. Under the second sentence of article 14, which reflects the thrust of article 10 of the Assignment Convention, where the rights securing or supporting payment of a receivable are independent rights under the law governing them (i.e. they are transferable only with a new act of transfer), the grantor is obliged to transfer the benefit of that right to the secured creditor (e.g. an independent guarantee or stand-by letter of credit). The reference in that sentence to the law governing the security or other supporting rights, is intended to ensure, for example, that, where an independent mortgage secures payment of an encumbered receivable, the mortgage is not automatically transferred to the secured creditor with the security right in the receivable.

79. In addition, as this matter is addressed in articles 57-68, article 14 does not affect any duties of the grantor to the debtor of the receivable or other intangible asset, or the obligor of the negotiable instrument.

Article 15. Rights to payment of funds credited to a bank account

80. Article 15 is based on recommendation 26 of the Secured Transactions Guide (see chap. II, paras. 123-125). It is intended to implement the principles underlying article 13 with respect to rights to payment of funds credited to a bank account. As a result of article 15, a security right may be created in a right to payment of funds credited to a bank account without the consent of the deposit-taking institution. However, as a result of article 69, the creation of such a security right does not affect

the rights and obligations of the deposit-taking institution or obligate the deposit-taking institution to provide any information about the bank account to third parties (see commentary on art. 69 in A/CN.9/WG.VI/WP.71/Add.5).

Article 16. Negotiable documents and tangible assets covered by negotiable documents

81. Article 16 is based on recommendation 28 of the Secured Transactions Guide (see chap. II, para. 128). Its purpose is to follow existing law in which a negotiable document is treated as a reified right in the tangible assets it covers. As a result, there is no need separately to create a security right in those tangible assets if there is a security right in the document (e.g. inventory or crops deposited in a warehouse for which the warehouse operator issued a negotiable warehouse receipt).

82. In view of the definition of the term "possession" in article 2, subparagraph (z), possession by the issuer of a negotiable document includes possession by its representative or a person acting on behalf of the issuer (including in the context of multi-modal transport contracts). A security right in a negotiable document extends to the tangible assets covered by the document and will continue to exist (subject to the terms of the security agreement) even after the document no longer covers the assets. However, effectiveness against third parties through possession of the document applies only as long as the document covers the assets and lapses once they are released by the issuer (see art. 26, para. 2, and para. 99 below).

Article 17. Tangible assets with respect to which intellectual property is used

83. Article 17 is based on recommendation 243 of the Intellectual Property Supplement (see paras. 108-112). It is intended to ensure that: (a) unless otherwise agreed (as art. 17 is not listed in art. 3 among the mandatory law provisions of the Model Law), a security right in a tangible asset does not automatically extend to the intellectual property right contained therein; and (b) that a security right in an intellectual property right does not automatically extend to the tangible asset with respect to which the intellectual property right is used (e.g. the copyrighted software included in a personal computer or the trademark on an inventory of clothes).

Chapter III. Effectiveness of a security right against third parties

A. General rules

Article 18. Primary methods for achieving third-party effectiveness

84. Article 18 is based on recommendation 32 of the Secured Transactions Guide (see chap. III, paras. 19-86). It is intended to set out the primary methods for achieving third-party effectiveness (i.e. registration in the general security rights registry and possession of a tangible asset by the secured creditor). Other methods (e.g. control and registration in the books of an issuer of securities) are set out in the asset-specific provisions of this chapter (see paras. 97-101 below).

85. States that have specialized registries with respect to assets covered by the Model Law (e.g. patent or trademark registries) or title notation systems (e.g. with respect to motor vehicles) may wish to consider whether registration with respect to security rights in those types of asset should take place in the security rights registry, in the specialized registry system or both. If registration may take place in both (or, if a security right may also be noted on a title certificate), the enacting State may wish to ensure coordination (with national or international specialized registries), including by way of linking the relevant registries so that information entered in one will also become available in the other and by way of appropriate priority rules (see Secured Transactions Guide, chap. IV, para. 117, and Registry Guide, paras. 64-66). With respect to security rights in attachments to immovable property and receivables

arising from sale or lease of, or secured by, immovable property, the enacting State may wish to consider issues of coordination with immovable property registries (see Registry Guide, paras. 67-69). Finally, the enacting State may wish to consider issues of international coordination among national security rights registries (Registry Guide, para. 70).

Article 19. Proceeds

86. Article 19 is based on recommendations 39 and 40 of the Secured Transactions Guide (see chap. III, paras. 87-96). It is intended to determine the circumstances in which the security right in proceeds that is provided for in article 10 is effective against third parties.

87. Under paragraph 1, a security right in proceeds in the form of money, receivables, negotiable instruments or rights to payment of funds credited to a bank account is automatically effective against third parties, that is, without the need for any further act. For example, upon the sale of inventory that is subject to a security right that is effective against third parties, the security right in any receivable, cash, bank deposit, or negotiable instrument generated by the sale that are proceeds of the originally encumbered inventory is effective against third parties without any further act.

88. Unlike recommendation 39, on which this article is based, paragraph 1 does not refer to the description of the proceeds in the notice. This change is a drafting change and does not constitute a change of policy. The reason for this change is that, if the proceeds are described in the notice (in line with the security agreement), they constitute original encumbered assets, and article 18 is sufficient in dealing with the third-party effectiveness of a security right in those assets.

89. For proceeds other than those covered in paragraph 1, paragraph 2 provides that, if a security right in an asset was effective against third parties, the security right in its proceeds is effective against third parties for a short period of time; thereafter, the security right in the proceeds continues to be effective against third parties only if it is made effective against third parties before the expiry of that short period by one of the methods set out in article 18 or the asset-specific provisions of this chapter. Both paragraphs 1 and 2 refer to “a security right in any proceeds arising under article 10” to ensure that they apply to “identifiable proceeds” according to article 10.

Article 20. Tangible assets commingled in a mass or transformed into a product

90. Article 20 is based on recommendation 44 of the Secured Transactions Guide. Its purpose is to ensure that a security right created in tangible assets commingled in a mass or transformed into a product under article 11 is automatically effective against third parties (for the priority of this security right, see article 42).

Article 21. Changes in the method for achieving third-party effectiveness

91. Article 21 is based on recommendation 46 of the Secured Transactions Guide (see chap. III, paras. 120 and 121). It is intended to ensure that a security right made effective by one method may later be made effective by another method, and that third-party effectiveness is continuous as long as there is no time gap between the two methods.

Article 22. Lapses in third-party effectiveness

92. Article 22 is based on recommendation 47 of the Secured Transactions Guide (see chap. III, paras. 122-127). It is intended to ensure that, if third-party effectiveness lapses, it may be re-established. In such a case, third-party effectiveness dates only from the time it is re-established.

Article 23. Continuity in third-party effectiveness upon a change of the applicable law to this Law

93. Article 23 is based on recommendation 45 of the Secured Transactions Guide (see chap. III, paras. 117-119). Under paragraph 1, if the law enacting the Model Law becomes applicable as a result, for example, of a change in the location of the encumbered asset or the grantor, a security right that was effective against third parties under the previously applicable law continues to be effective against third parties under the law enacting the Model Law for a short period of time, unless its third-party effectiveness under the initially applicable law has already lapsed. Thereafter, the security right is effective against third parties only if, before the expiry of that period, it is made effective against third parties under the relevant provisions of the law enacting the Model Law. Under paragraph 2, if the third-party effectiveness of a security right does not lapse, it dates back to the time it was first achieved under the previously applicable law.

Article 24. Acquisition security rights in consumer goods

94. Article 24 is based on recommendation 179 of the Secured Transactions Guide (see chap. IX, paras. 125-128). An acquisition security right in consumer goods is automatically effective against third parties if the price of the consumer goods is below a value to be specified by the enacting State. While this limitation is intended to exempt from registration only low-value consumer transactions, for it to be meaningful, it must be set at a reasonably high price (for the question whether a buyer acquires its rights free of an acquisition security right, see art. 34, para. 9).

95. If registration in a specialized registry or notation in a title certificate is also possible, such an acquisition security right in consumer goods should not have the special priority of an acquisition security right over a security right registered in a specialized registry. This approach would be necessary to avoid any interference with any specialized registration system (see Secured Transactions Guide, recs. 179 and 181).

B. Asset-specific rules

Article 25. Rights to payment of funds credited to a bank account

96. Article 25 is based on recommendation 49 of the Secured Transactions Guide (see chap. III, paras. 138-148). It adds to the primary methods of article 18 three asset-specific methods of achieving third-party effectiveness of a security right in a right to payment of funds credited to a bank account. First, if the secured creditor is the deposit-taking institution, no additional action is required for a security right to become effective against third parties. Second, the security right is effective against third parties upon conclusion of a control agreement (see art. 2, para. (g) (ii)) among the grantor, the secured creditor and the deposit-taking institution. Third, the security right is effective against third parties if the secured creditor becomes the account holder. The exact action required for the secured creditor to become the account holder depends on the relevant law and practice of the enacting State.

Article 26. Negotiable documents and tangible assets covered by negotiable documents

97. Article 26 is based on recommendations 51-53 of the Secured Transactions Guide (see chap. III, paras. 154-158). It addresses the relationship between the third-party effectiveness of a security right in a negotiable document and the third-party effectiveness of a security right in the tangible assets covered by the document.

98. Under paragraph 1, if a security right in a negotiable document (which extends to the assets covered by the document under article 16) is effective against third parties, the security right in the assets covered by the document is also effective against third parties for as long as the assets are covered by the document. Under paragraph 2, possession of the document is sufficient to make the security right in the

assets covered by the document effective against third parties. Under paragraph 3, the security right referred to in paragraph 2 remains effective against third parties for a short period of time after the secured creditor relinquishes the possession of the document or the assets covered by the document for the purpose of enabling the grantor to deal with the assets covered by it. In paragraph 3, the words "or the asset covered by the document", which did not appear in recommendation 53, were added to reflect actual practices and the words "physical actions like loading and unloading", which appeared in that recommendation, were deleted on the understanding that the words "dealing with the asset" are sufficiently broad to cover not only transactions like sale and exchange but also physical actions like loading and unloading.

Article 27. Uncertificated non-intermediated securities

99. Article 27 is a new provision that does not correspond to any of the recommendations of the Secured Transactions Guide, which did not apply to any type of securities (see rec. 4 (c)). It addresses the methods, other than registration of a notice, by which a security right in uncertificated non-intermediated securities may be made effective against third parties. First, the security right may be made effective against third parties by notation of the security right or entry of the name of the secured creditor as the holder of the securities in the books maintained by the issuer or another person on behalf of the issuer for that purpose (the enacting State should choose the method that best suits its legal system). Second, as in the case of a security right in a right to payment of funds credited to a bank account, the conclusion of a control agreement with respect to the encumbered securities will result in the security right in those securities being effective against third parties.

100. Under article 19 of the Convention Providing a Uniform Law For Bills of Exchange and Promissory Notes (Geneva, 1930; the "Geneva Uniform Law"), "when an endorsement contains the statements 'value in security' ('valeur en garantie'), 'value in pledge' ('valeur en gage'), or any other statement implying a pledge, the holder may exercise all the rights arising out of the bill of exchange, but an endorsement by him has the effects only of an endorsement by an agent" (art. 22 of the United Nations Convention on International Bills of Exchange and International Promissory Notes (the "Bills and Notes Convention") contains a similar rule, according to which such a holder "may endorse the instrument only for purposes of collection").

101. An enacting State that has enacted the Geneva Uniform Law (or the Bills and Notes Convention) may wish to include: (a) this rule in its enactment of the Model Law (as a rule of creation and/or third-party effectiveness of a security right in negotiable instruments, negotiable documents and non-intermediated securities); and (b) a rule dealing with the comparative priority of such a security right. Another option would be to leave the matter to articles 46, paragraph 2, 49, paragraph 3, and 51, paragraph 5, under which such a holder of a negotiable instrument, negotiable document or non-intermediated security would take its rights free of, or unaffected by, any security right. A further option would be to leave the matter to the relevant domestic law rule dealing with the hierarchy between domestic law and an international convention (see para. 42 above).

Chapter IV. The registry system

Article 28. Establishment of the Registry

1. Article 28 is based on recommendations 1 (f), of the Secured Transactions Guide and 1 of the Registry Guide. It provides for the establishment by the enacting State of a public registry to give effect to the provisions of the Model Law relating to the registration of notices with respect to security rights (the "Registry"). In particular, under article 18 of the Model Law, a non-possessory security right in an encumbered asset is effective against third parties, as a general rule, only if a notice with respect to the security right is registered in the Registry (see Secured Transactions Guide, chap. III, paras. 29-46 and the Registry Guide, paras. 20-25). Under article 29 of the Model Law, the time of registration is also, again as a general rule, the basis for determining the order of priority between a security right and the right of a competing claimant (see Secured Transactions Guide, chap. V, paras. 42-50, and the Registry Guide, paras. 36-46).

2. Depending on its drafting conventions, an enacting State may decide to incorporate the provisions relating to the registry system in its secured transactions law implementing the Model Law, in a separate law or other legal instrument, or in a combination thereof. To preserve flexibility for enacting States, all the relevant registry-related provisions are collected in a set of rules presented after article 28 of the Model Law and called the "Model Registry Provisions".[1]

3. These Provisions have been drafted to accommodate flexibility in registry design. The Secured Transactions Guide recommends that, if possible, the Registry should be electronic in the sense of permitting information in registered notices to be stored in electronic form in a single computer database (see Secured Transactions Guide, rec. 54 (j)(i), and chap. IV, paras. 38-41 and 43). An electronic registry record is the most efficient and practical means of enabling enacting States to implement the recommendation of the Secured Transactions Guide that the registry record should be centralized and consolidated (see rec. 54 (e), and chap. IV, paras. 21-24).

4. If possible, access to registry services should also be electronic in the sense of permitting users to directly submit notices and search requests over the Internet or via direct networking systems as an alternative to the submission of paper notices and search requests (see Secured Transactions Guide, rec. 54 (j)(ii), and chap. IV, paras. 23-26 and 43). This approach eliminates the risk of registry staff error in entering the information contained in a paper notice into the registry record, facilitates speedier and more efficient access to registry services by users, and greatly reduces the operational costs of the Registry (for a discussion of these advantages and guidance on implementation, see Registry Guide, paras. 82-89).

5. The scope of application of the Model Law is limited to consensual security rights and outright transfers of receivables (see arts. 1 and 2, subpara. (kk)). Some States provide for the registration of notices of rights in movable assets created by law, such as preferential claims and the rights acquired by creditors who obtain judgments and take steps to have the judgment enforced (see art. 37 of the Model Law), the rights of holders of non-consensual non-possessory security rights, or the non-possessory ownership rights of commercial consignors or long-term lessors (see Registry Guide, paras. 40, 46, 50 and 51). If the enacting State follows this approach, it will need to specify whether registration is necessary for the creation or third-party effectiveness of these other rights and the priority effect of registration, including priority as against rights within the scope of the Model Law.

[1] A reference to an article in this chapter is a reference to an article of the Model Registry Provisions, unless otherwise indicated.

Model Registry Provisions

Section A. General rules

Article 1. Definitions and rules of interpretation

6. Article 1 contains definitions of key terms used in the Model Registry Provisions. These terms are derived in part from the Registry Guide (see Registry Guide, paras. 8 and 9). If the enacting State decides to incorporate the Model Registry Provisions in its enactment of the Model Law, these definitions should be included in the provision implementing article 2 of the Model Law. In general, the definitions are self-explanatory. Where elaboration is needed, it is provided in the commentary on the relevant articles below.

Article 2. Grantor's authorization for registration

7. Article 2 is based on recommendations 71 of the Secured Transactions Guide (see chap. IV, para. 106) and 7 (b), of the Registry Guide (see para. 101). Paragraph 1 provides that the registration of an initial notice is ineffective unless authorized by the grantor in writing (the rule is formulated in the negative, as the effectiveness of a registration is also subject to other requirements). To ensure that this rule does not interfere with the efficiency of the registration process, paragraph 6 confirms that the authorization is to be given off-record; and that the Registry is not entitled to require evidence of the existence of the grantor's authorization as part of the registration process.

8. Paragraphs 4 and 5 confirm that: (a) the grantor's authorization need not be obtained before registration; and (b) the conclusion of a written security agreement with the grantor automatically constitutes authorization without the need to include an express authorization clause. Thus, the post-registration conclusion of a security agreement will constitute retrospective "ratification" of an initially unauthorized registration to the extent of the assets described in the security agreement. If the initial security agreement between the parties covers a narrower range of encumbered assets than that described in the registered notice, the registration would still be unauthorized to the extent of those additional assets. However, if the parties were to later conclude a new security agreement covering the additional assets, this would constitute retroactive authorization.

9. Paragraph 2 requires the grantor's authorization for the registration of an amendment notice that adds encumbered assets to those described in the initial registered notice or any amendment notice. The grantor's authorization is not needed if the amendment notice adds assets that are covered by a security agreement between the parties, since, as already explained (see para. 8 above), under paragraph 5, the conclusion of a security agreement automatically constitutes authorization. Moreover, as also explained (see para. 8 above), authorization may be given under paragraph 4 before the registration of a notice. Consequently, the subsequent conclusion of a security agreement covering the additional assets would constitute retroactive authorization for the registration of the amendment notice.

10. It should be noted that there is no need to register an amendment notice (and thus no need to obtain the authorization of the grantor) with respect to "additional assets" that are proceeds of encumbered assets described in a prior registered notice if the proceeds are: (a) of a type that fall within the existing description (for example, the description covers "all tangible assets" and the grantor exchanges one type of tangible asset for another (see Secured Transactions Guide, rec. 39)); or (b) "cash proceeds", that is, money, receivables, negotiable instruments or funds credited to a bank account (see art. 19, para. 1, of the Model Law).

11. Paragraph 2 contains language within square brackets, which will be necessary if the enacting State implements article 6, paragraph 3 (d) of the Model Law. Under that bracketed language, the grantor's written authorization must also be obtained for the registration of an amendment notice to increase the maximum amount set out in a registered notice for which the security right to which the registration relates may be

enforced. This provision is only needed in systems that require this information to be set out in the security agreement and in the registered notice (see art. 8, subpara. (e), of the Model Registry Provisions and art. 6, para. 3 (d) of the Model Law). In States that adopt this approach, a separate authorization from the grantor is not needed if the grantor has agreed to the new amount in a security agreement, since the conclusion of a security agreement automatically constitutes retrospective authorization under paragraph 5, even if the agreement is concluded after the registration of the amendment notice (see para. 8 above).

12. Where an amendment notice seeks to add a new grantor, paragraph 3 generally requires the additional grantor's written authorization to be obtained in conformity with the general rule in paragraph 1 and in the same manner. The exception expressed in the bracketed wording in paragraph 3 is intended for enacting States that decide to implement option A or option B of article 26. It creates an exception to the requirement to obtain the grantor's written authorization where the new grantor is a buyer of an encumbered asset from the grantor and the purpose of the amendment is to enable the secured creditor to protect its priority status as against secured creditors and buyers that acquire rights in the encumbered asset from that buyer in accordance with these options. It should be noted that, if the identifier of a grantor changes after the registration of a notice, the grantor's authorization is likewise not required for the registration of an amendment notice to disclose its new identifier for the purposes of protecting the priority of the related security right against secured creditors and buyers who deal with the grantor after its identifier has changed pursuant to article 25. In this latter scenario, the purpose of registering the amendment notice is not to add a new grantor in the strict sense contemplated by paragraph 3 but rather to update the registry record in relation to the identifier of the grantor of record.

13. The registration of a notice, whether or not authorized by the grantor, is effective against third parties only to the extent that the assets described in the registered notice are actually covered by a security agreement between the parties. However, third parties have no means of obtaining this information with a search of the public registry record. Consequently, the grantor's ability to sell, or create a security right in, the assets described in a registered notice will be impaired, even if those assets are not subject to a security right, because of the priority risk for subsequent secured creditors and buyers posed by the potential existence of a security right. If the grantor did not authorize the registration of the notice, or only authorized the registration of a notice covering a narrower range of encumbered assets, or has withdrawn an initial authorization, article 20 provides a procedure by which the grantor can compel the secured creditor to register a cancellation or amendment notice, as the case may be, to reflect the terms of the actual security agreement, if any, between the parties.

14. While this point is not directly relevant to the issue of the grantor's authorization in article 2, it should be noted that registration of an amendment notice may affect intervening competing claimants, if it: (a) adds encumbered assets; (b) increases the maximum amount; or (c) adds a new grantor. Thus, it takes effect only from the time when the registration of the amendment notice (not the initial notice) becomes effective (see art. 13, para. 1).

Article 3. One notice sufficient for multiple security rights

15. Article 3 is based on recommendations 68 of the Secured Transactions Guide (see chap. IV, para. 101) and 14 of the Registry Guide (see paras. 125 and 126). It confirms that a single registered notice is sufficient to achieve the third-party effectiveness of security rights arising under one or more security agreements between the parties identified in the notice. This rule applies regardless of whether the agreements are related to one another or are separate and distinct, and regardless of whether the notice relates to security rights in the grantor's current assets or assets in which the grantor acquires rights only after the registration. This is consistent with the notice registration system contemplated by the Model Law, under which a registrant need only submit a standardized notice containing basic information about the parties and the encumbered assets rather than having to register the underlying

security agreements giving rise to the security rights to which the registration relates (see arts. 8 and 17-19).

16. A single registration is effective for security rights arising under one or more security agreements between the parties identified in the notice only to the extent that the information in the registered notice corresponds to the content of the off-record agreements between those parties (see Registry Guide, para. 126). If, for example, the parties enter into a security agreement that extends to assets not covered by the description of the encumbered assets in the registered notice, a new initial notice (or an amendment to the existing notice) will have to be registered for the security right in the additional assets to be effective against third parties, and that notice will take effect against third parties only from the time of its registration (see art. 13, para. 1).

Article 4. Advance registration

17. Article 4 is based on recommendations 67 of the Secured Transactions Guide (see chap. IV, paras. 98-101) and 13 of the Registry Guide (see paras. 122-124). It confirms that a registration may be made before the conclusion of a security agreement to which the notice relates, or the creation of any security right contemplated by any such agreement.

18. Registration in advance of the conclusion of any security agreement between the parties is practically possible under the notice registration system contemplated by the Model Law because, as noted in relation to article 3 (see para. 15 above), the underlying security agreement does not have to be deposited with the Registry or tendered for scrutiny. Where priority among competing secured creditors is determined by the general order of registration or third-party effectiveness rule in article 29 of the Model Law, advance registration is useful because it enables a secured creditor to be sure of its priority ranking even before the security agreement with the grantor is formally concluded. However, for a security right to be effective against other classes of competing claimants, the security right must also have been created (see Registry Guide, paras. 20 and 123). Accordingly, advance registration does not protect a secured creditor against a competing claimant, other than a competing secured creditor that acquires rights in the encumbered assets before the security agreement is actually entered into and the other requirements for creation are satisfied.

19. If a security agreement is never concluded between the parties, or only covers a narrower range of assets than those described in the registered notice, advance registration may have a negative impact on the ability of the person identified in the notice as the grantor to sell or create a security right in the assets described in the notice. As noted in relation to article 2 (see para. 13 above), article 20 provides for a procedure to enable the grantor to obtain the compulsory amendment or cancellation of a registered notice in this scenario.

Section B. Access to registry services

Article 5. Conditions for access to registry services

20. Article 5 is based on recommendations 54, subparagraph (c), (f) and (g), and 55 (b), of the Secured Transactions Guide (see chap. IV, paras. 25-228) and 4, 6 and 9 of the Registry Guide (see paras. 95-97 and 103-105).

21. Paragraphs 1 and 3 confirm that the Registry is public in the sense that any person is entitled to register a notice of a security right or search the registry record subject only to meeting the conditions governing access. For both types of service, the user must submit the (paper or electronic) form of notice or search request prescribed by the registry and pay or make any arrangements to pay the prescribed fees, if any (see art. 33). Under paragraph 1 (b), a registrant, as opposed to a searcher, must identify itself to the Registry in the prescribed manner. This requirement is aimed at assisting the person identified in a registered notice as the grantor to determine the identity of the registrant in the event that the grantor did not authorize

the registration (see Registry Guide, para. 96). This consideration must be balanced against the need to ensure efficiency and speed in the registration process. Accordingly, the evidence of identity required of a registrant should be that which is generally accepted as sufficient in day-to-day commercial transactions in the enacting State (for example, an identity card, driver's licence or other state-issued official document).

22. If access to registry services is refused, paragraph 4 requires the Registry to communicate the specific reason (for example, the user failed to use the prescribed form or to pay the prescribed fee). The reasons must be communicated without delay. What this means in practice depends on the mode by which the notice or search request is submitted to the Registry. If the system is designed to enable users to submit notices and search requests through electronic means of communication directly to the Registry, the system can and should be programmed to automatically communicate the reason during the registration process and display the reason on the registrant's screen. In the case of notices and search requests submitted in paper form, the registry staff will need a reasonable period of time to examine the notice or search request and prepare and communicate a formal response.

23. In order to facilitate access to registry services and avoid unnecessary refusals, the Registry should be organized to accept all modes of payment in common commercial use in the enacting State. However, controls will need to be introduced to avoid the risk of staff embezzlement of cash payments and to ensure the confidentiality of financial information submitted by users (see Registry Guide, para. 138). To facilitate efficient access by frequent users (such as financial institutions, automobile dealers or other suppliers of goods on credit, lawyers and other intermediaries), users should be given the option of setting up a pre-payment account that enables them to deposit funds on an ongoing basis to pay for their ongoing requests for services.

24. To limit the risk of the registration of amendment and cancellation notices not authorized by the person identified as the secured creditor, paragraph 2 requires persons who submit an amendment or cancellation notice to satisfy the secure access requirements specified by the Registry. For example, the Registry might require registrants to set up a password-protected account when submitting an initial notice, and then require all amendment and cancellation notices to be submitted through that account. Alternatively, the system might be designed to assign a unique user code to registrants upon registration of an initial notice and then require entry of that code on all amendment and cancellation notices submitted for registration. Secured access measures of this kind ensure that only the initial registrant and those to whom the registrant chooses to disclose the password or code are able to register an amendment or cancellation notice (with respect to the effectiveness of the registration of unauthorized amendment or cancellation notices, see art. 21).

Article 6. Rejection of the registration of a notice or a search request

25. Article 6 is based on recommendations 8 and 10 of the Registry Guide (see paras. 97-99 and 106). Paragraph 1 obligates the Registry to reject the registration of a notice submitted for registration if no information, or only illegible information, has been entered in one or more of the mandatory designated fields in the notice. As all mandatory fields must be completed for a registered notice to be effective, this provision ensures that the information in submitted notices that clearly do not satisfy the minimum requirements for effectiveness are never entered into the registry record. On the other hand, even if all the mandatory fields in a submitted notice contain legible information and the notice is therefore accepted for registration, it does not follow that the registration is effective if the information that is entered, while being legible, is erroneous or incomplete (with respect to whether and to what extent an error or omission in the information contained in a registered notice renders the registration ineffective, see art. 24; with respect to whether and to what extent a secured creditor is obligated to update the record where the information in a registered notice becomes inaccurate as a result of post-registration events, see arts. 25 and 26).

26. Paragraph 2 obligates the Registry to reject a search request if no information, or only illegible information, has been entered in one of the designated fields for entering a search criterion. Since searchers are entitled to search by either the identifier of the grantor or the registration number assigned to the initial notice (see art. 22), it is sufficient if legible information is entered into at least one of the search criterion fields. The fact that at least one of these fields contains legible information does not necessarily mean that a search result will be accurate since the criterion entered by the searcher may be erroneous or incomplete. To avoid any arbitrary decisions on the part of the Registry, paragraph 3 confirms that the Registry may not reject the registration of a notice or search request where the registrant or searcher satisfies the access conditions set out in paragraphs 1 and 2 respectively.

27. Paragraph 4 obligates the Registry to provide the reason for rejecting the registration of a notice or a search request without delay. What this means in practice depends on the mode by which the notice or search request was submitted to the Registry. If the system is designed to enable users to submit notices and search requests through electronic means of communication directly to the Registry, the system can and should be designed to automatically reject the submission of incomplete or illegible notices during the registration process and display the reasons on the registrant's screen. In the case of notices and search requests submitted in paper form, there will necessarily be some delay between the time of receipt by registry staff and the communication of the refusal and reason to the user; the registry staff will need a reasonable period of time to examine the notice or search request and then prepare and communicate a formal response.

Article 7. Information about the registrant's identity and scrutiny of the form or contents of a notice by the Registry

28. Article 7 is based on recommendations 54 (d), and 55 (b), of the Secured Transactions Guide (see chap. IV, paras. 15-17 and 48) and 7 of the Registry Guide (see paras. 100 and 102). Paragraph 1 obligates the Registry to maintain the identity information submitted by registrants in compliance with article 5, paragraph 1 (b), and to provide that information upon request to the person identified in the registered notice as the grantor. While this information does not form part of the public or archived registry record, it nonetheless must be preserved by the Registry in a manner that enables it to be retrieved in association with the registered notice to which it relates. This is consistent with the rationale for obtaining and preserving this information which is to assist the grantor in identifying the registrant in cases where the registration of the notice was not authorized by the grantor (see para. 21 above). In order to ensure that this objective is balanced against the need to facilitate efficiency of the registration process, paragraph 2 provides that the Registry may not require further verification of the identity information provided by a registrant under article 5, paragraph 1 (b). With the same objective in mind, paragraph 3 generally prohibits the Registry from scrutinizing the form or content of notices and search requests submitted to it except to the extent needed to give effect to articles 5 and 6.

Section C. Registration of a notice

Article 8. Information required in an initial notice

29. Article 8 is based on recommendations 57 of the Secured Transactions Guide (see chap. IV, para. 65) and 23 of the Registry Guide (see paras. 157-160). It sets out the items of information required to be entered in the appropriate designated fields in an initial notice submitted to the Registry for registration. The items of information specified in subparagraphs (a), (b) and (c) are the subject of articles 9, 10 and 11, and the reader is generally referred to the commentary on those articles. It should be noted that where a notice relates to more than one grantor or secured creditor, the required information should be entered separately for each grantor or secured creditor.

30. Subject to its privacy laws, the enacting State may decide to require "additional information" (such as the birth date of the grantor or an identification number issued

by the enacting State) to be entered to assist in uniquely identifying a grantor where there is a risk that many persons may have the same name (see bracketed text in art. 8, subpara. (a)). If this approach is adopted, the form of notice prescribed by the enacting State should provide a separate designated field for entering the "additional information". The enacting State should also specify the type of additional information to be included and make its inclusion mandatory in the sense that it must be entered in the relevant field for a notice to be accepted by the Registry. It will also be necessary to address cases in which the grantor is not a citizen or resident of the enacting State, or for any other reason has not been issued an identification number. Subject to privacy considerations, the enacting State might, for example, provide that the number of the grantor's foreign passport or some other foreign official document is a sufficient substitute (on all these points, see Registry Guide, rec. 23 (a)(i), and paras. 167-169, 171, 181-183, 226, as well Annex II, Examples of registry forms).

31. Subparagraph (d) appears within square brackets, as an indication of the duration of registration on an initial notice is required only if the enacting State adopts options B or C of article 14 (see paras. 50-52 below; see also Registry Guide, paras. 199-204). Subparagraph (e) also appears within square brackets, as an indication of the maximum amount for which the security right may be enforced is required only if the enacting State implements the approach set out in article 6, paragraph 3 (d), of the Model Law, which also appears within square brackets (see para. A/CN.9/WG.VI/WP.71/Add.1, para. 54).

Article 9. Grantor identifier

32. Article 9 is based on recommendations 59 and 60 of the Secured Transactions Guide (see chap. IV, paras. 68-74), as well as recommendations 24 and 25 of the Registry Guide (see paras. 161-183). It provides that the identifier of the grantor is its name. It then sets out separate rules for determining the name of the grantor depending on whether the grantor is a natural person or a legal person or other entity.

33. If the grantor is a natural person, paragraph 1 provides that the grantor's name is the name that appears in the official document specified by the enacting State as the authoritative source. Since not all grantors may possess a common official document (e.g., an identity card or driver's licence), the enacting State will need to specify alternative official documents as authoritative sources and specify the hierarchy of authoritativeness among them (for examples of possible approaches, see Registry Guide, paras. 163-168).

34. As already noted (see para. 30 above), the enacting State may require the entry of a State-issued identity or other official number as additional information to assist in uniquely identifying a grantor. It may also decide to make this number an alternative grantor identifier. Since the grantor identifier is the criterion used to search the registry record, this approach is only feasible if there is a reliable record or other objective source that third-party searchers can consult to determine a person's official number, If this approach is adopted, it will also be necessary for the enacting State to address cases in which the grantor is not a citizen or resident of the enacting State, or for any other reason has not been issued an identification number. The enacting State might, for example, provide that the number in some other foreign official document is a sufficient substitute provided again that the relevant number is accessible to third-party searchers. Otherwise, the name of the foreign grantor will have to be used as the grantor identifier (see Registry Guide, paras. 168 and 169).

35. Paragraph 2 requires the enacting State to indicate which components of the name of a grantor who is a natural person must be entered in the registered notice. The enacting State will need to specify, for example, whether only the given and family name of the grantor is required or whether a middle name or initial must also be included. It will also need to address the scenario where the grantor's name consists of a single word, for example, by providing that that word should be entered in the family name field and by ensuring that the registry system is designed so as not to reject notices that have nothing entered in the other name fields (see Registry Guide, para. 165).

36. Paragraph 3 requires the enacting State to address how the grantor's name is to be determined where the grantor's name has legally changed under applicable law after the issuance of the official document designated in paragraph 1 as the authoritative source of the grantor's name (for example, by reason of marriage or as a result of a formal application for a name change under change of name legislation; see Registry Guide, para. 164 (f)).

37. Paragraph 4 provides that where the grantor is a legal person the name of the grantor is the name that appears in the relevant document, law or decree to be specified by the enacting State constituting the legal person (see Registry Guide, paras. 170-173).

38. Paragraph 5, which appears in square brackets, provides for the possibility that an enacting State may wish to require additional information pertaining to the grantor's status to be entered in a registered notice in special cases, such as where the grantor is subject to insolvency proceedings (see Registry Guide, paras. 174-179).

Article 10. Secured creditor identifier

39. Article 10 is based on recommendations 57 (a) of the Secured Transactions Guide (see chap. IV, para. 81) and 27 of the Registry Guide (see paras. 184-189). It largely replicates the rules in article 9 for determining the identifier of the grantor. Unlike under article 9 (read together with art. 8, subpara. (a)), however, under article 10 (read together with art. 8, subpara. (b)), the registrant may enter the name of a representative of the secured creditor (e.g. a service provider or an agent of a syndicate of lenders). This approach is intended to protect the privacy of the actual secured creditor and facilitate the efficiency of arrangements such as syndicated loans where there are multiple secured lenders whose identity may change over time. This approach does not have a negative impact on the grantor, who would typically know the identity of the actual secured creditor from their dealings, or third parties, as long as the representative is authorized to act on behalf of the actual secured creditor (see Registry Guide, paras. 186 and 187). It should also be noted that, as the security right is created by an off-record security agreement, the entry of the name of a representative as the secured creditor on a registered notice does not make the representative the actual secured creditor.

Article 11. Description of encumbered assets

40. Article 11 is based on recommendations 63 of the Secured Transactions Guide (see chap. IV, paras. 82-86) and 28 of the Registry Guide (see paras. 190-192). The test for the adequacy of a description of the encumbered assets in a registered notice in paragraph 1 parallels the test for the adequacy of a description of the encumbered assets in a security agreement (see art. 9 of the Model Law). The description in a registered notice need not be identical to the description in any related security agreement so long as it reasonably allows identification of the relevant encumbered assets in accordance with the test in paragraph 1. On the other hand, a description in a registered notice that satisfies this test will not make a security right effective against third parties to the extent that the description includes assets that are not covered by any related security agreement, since the requirements for the effective creation of a security right will not have been satisfied.

41. Paragraph 2 confirms that a description in a registered notice that refers to all of the grantor's movable assets or to all of the grantor's assets within a specified generic category (for example, all receivables owing to the grantor) satisfies the test in paragraph 1 that the description reasonably allow identification of the encumbered assets. It follows that a generic description will be sufficient even if any related security agreement only covers a specific asset within that broad generic category (for example, the description in the registered notice refers to all "tangible assets of the grantor", whereas the security agreement only covers a specific tangible asset). However, the effectiveness of the registration in this scenario is dependent on the authorization of the grantor pursuant to article 2; if the grantor only authorized a registration covering a specific asset, the registration will only be effective with

respect to that asset. Moreover, the grantor is entitled, pursuant to article 20, paragraph 1, to compel the secured creditor to register an amendment notice that narrows the description of the assets in the registered notice to correspond to the encumbered assets actually covered by the security agreement between them unless the grantor separately authorized the secured creditor to register a broader description (see para. 8 above) and has not withdrawn that authorization.

42. The secured transactions laws of some States adopt special alphanumerical ("serial number") rules for describing specified classes of high-value assets that have a significant resale market. In States that adopt this approach, entry of the serial number in its own designated field is required in the sense of being necessary to preserve the priority of the security right as against specified classes of third parties that acquire rights in the asset. Enacting States that are interested in adopting this approach are referred to the discussion in the Registry Guide (for the rationale for, and the advantages and disadvantages of this, approach, see Registry Guide, paras. 131-134; for the consequences of a failure of entering the serial number or an error in entering the serial number, see Registry Guide, paras. 193 and 213; and for the registry design and registry provisions needed to implement this approach, see Registry Guide, para. 266). It should be noted that even in legal systems that do not adopt this approach, a registrant may wish to include the serial number in the description it enters in the notice as a convenient method of describing the encumbered asset in a manner that reasonably allows its identification (see Registry Guide, paras. 194 and 212).

43. If proceeds of an encumbered asset are not in the form of money, receivables, negotiable instruments or rights to payment of funds credited to a bank account or are not already covered by the description of the encumbered assets in a registered notice, the secured creditor must register an amendment notice to add a description of the proceeds within a short period of time after the proceeds arise in order to preserve the third-party effectiveness and priority of its security right in the proceeds from the date of the initial registration (see art. 19, para. 2, of the Model Law). An amendment is necessary because otherwise a search result would not disclose the potential existence of a security right in the assets constituting the proceeds (see Registry Guide, paras. 195-197).

44. It should be noted that the inclusion of a description of an encumbered asset in a registered notice does not imply or represent that the grantor has or will have rights in that asset (see art. 6, para. 1, of the Model Law). That is to say, the Registry only provides for the disclosure of potential security rights in assets, not ownership or other rights. Whether the grantor owns or has rights in the relevant asset is determined by other law.

Article 12. Language of information in a notice

45. Article 12 is based on recommendation 22 of the Registry Guide (see paras. 153-156; the Secured Transactions Guide includes a discussion of this matter in chapter IV, paras. 44-46, but does not include a recommendation). Paragraph 1 requires the information contained in a notice to be expressed in the language or languages to be specified by the enacting State with the exception of the names and addresses of the grantor and the secured creditor or its representative. Typically, the enacting State will require registrants to use its officially recognized language or languages. As the names and addresses of the grantor and the secured creditor or its representative generally need not be translated (see para. 46 below), registrants will only need to translate the description of the encumbered assets (as the other items of information required to be entered in a notice may be expressed by numbers). Where the description of the encumbered assets is not expressed in the required language or languages, the registration of the notice would likely seriously mislead a reasonable searcher and thus would be ineffective (see art. 24, para. 4).

46. Paragraph 2 requires all information in a notice to be in the character set prescribed and publicized by the Registry. Where the names and addresses of the grantor and secured creditor or its representative are expressed in a character set

different from the character set used in the language or languages recognized by the enacting State, guidance will need to be given on how the characters are to be adjusted or transliterated to conform to the language of the Registry (see Registry Guide, para. 155). If the information in a notice submitted to the Registry is not in the character set prescribed and publicized by the Registry, the notice will be rejected as illegible under article 6, paragraph 1 (a) (for the same rule with respect to search requests, see art. 6, para. 2).

Article 13. Time of effectiveness of the registration of a notice

47. Article 13 is based on recommendations 70 of the Secured Transactions Guide (see paras. 102-105) and 11 of the Registry Guide (see paras. 107-112). Paragraph 1 provides that the registration of an initial or amendment notice submitted to the Registry becomes effective only once the information in the notice is entered into the public registry record so that it is accessible to searchers (see the definition of the term "registry record" in art. 1, subpara. (l)). If the registry system is designed to enable users to submit information in a notice to the Registry through electronic means of communication directly without the intervention of registry staff, there will be little or no delay between the time when the information in a notice is submitted to the Registry and the time when it becomes available to searchers. But in systems that permit or require the use of paper notice forms, there will inevitably be some time lag since the registry staff must enter the information on the paper notice form into the registry record on behalf of registrants. In view of the importance of the timing and order of registration to the third-party effectiveness and priority of a security right, paragraph 2 obligates the Registry to enter the information into the registry record without delay after the initial or amendment notice is submitted and in the order in which it was submitted. For the same reason, paragraph 3 requires the Registry to record the date and time when the information in the initial or amendment notice was entered in the public registry record so as to be accessible to searchers and to make this information available to searchers of the public registry record.

48. Paragraph 4 deals with the time of effectiveness of the registration of a cancellation notice. Option A provides that the registration of a cancellation notice is effective once the information in the registered notices to which the cancellation notice relates is no longer publicly searchable. Option A should be adopted by enacting States that adopt option A or B of article 21, since in States that adopt one of these options the Registry is obligated to remove information in a registered notice from the public registry record and archive it upon registration of a cancellation notice pursuant to option A of article 30. Option B provides that the registration of a cancellation notice becomes effective once the information in the registered notices to which the cancellation notice is entered into the registry record so as to be accessible to searchers. Accordingly, option B should be adopted by enacting States that adopt option C or D of article 21, since in States that adopt this approach the Registry is obligated to retain the information in all registered notices, including cancellation notices, on the public registry record until the registration lapses pursuant to option B of article 30.

49. Option A and option B of paragraph 5 require the Registry to record the date and time of effectiveness of the registration of a cancellation notice as determined by option A and option B of paragraph 4 respectively. Accordingly, enacting States that adopt option A of paragraph 4 should adopt option A of paragraph 5, while enacting States that adopt option B of paragraph 4 should adopt option B of paragraph 5.

Article 14. Period of effectiveness of the registration of a notice

50. Article 14 is based on recommendations 69 of the Secured Transactions Guide (see chap. IV, paras. 87-91) and 12 of the Registry Guide (see paras. 113-121, 240 and 241). It offers enacting States a choice of three different approaches to the determination of the initial period of effectiveness (or duration) of the registration of a notice. If option A is enacted, an initial notice (and any associated amendment notice) is effective for the period stipulated by the enacting State. If option B is enacted, registrants are permitted to choose the desired period of effectiveness. If

option C is enacted, registrants are likewise permitted to choose the period of effectiveness but only up to the maximum number of years stipulated by the enacting State.

51. All options permit registrants to extend (and re-extend) the period of effectiveness of a notice before its expiry by the registration of an amendment notice. Under option A, the duration of the registration would be extended for an equivalent period. Under option B or option C the registrant is permitted to choose the further period of effectiveness, but only up to the maximum number of years stipulated by the enacting State in the case of option C.

52. If option B or option C is enacted, the period of effectiveness of a registered notice is a mandatory component of the information required to be included in a notice submitted to the registry (see art. 8, subpara. (d)). States that adopt either of these options will also need to indicate on the prescribed notice form how registrants must enter the desired period of effectiveness. The notice form might be designed to enable registrants to simply enter the desired number of whole years. Alternatively, the notice form might permit registrants to enter the specific day, month and year on which the registration is to expire unless renewed.

Article 15. Obligation to send a copy of a registered notice

53. Article 15 is based on recommendations 55 subparagraphs (c), (d) and (e) of the Secured Transactions Guide (see chap. IV, paras. 49-53) and 18 of the Registry Guide (see paras. 145-149). Paragraph 1 obligates the Registry to send a copy of the information in a registered notice to the person identified in the notice as the secured creditor without delay after the registration becomes effective. This enables that person to verify whether the registration was correct and authorized (for the effectiveness of unauthorized registrations, see art. 21; see also Registry Guide, paras. 249-259; for the liability of the Registry for failure to send a copy of a notice, see art. 32).

54. In order to enable the person identified as the grantor in a registered notice to take the steps necessary correct the registry record if the registration was wholly or partially unauthorized (see art. 20), paragraph 2 obligates the person identified as the secured creditor in the copy of the registered notice sent to it by the Registry pursuant to paragraph 1 to forward it to the person identified in the notice as the grantor. The secured creditor has to comply with this obligation before the expiry of the period specified by the enacting State after it receives the notice. The copy must be sent to the grantor at its address set forth in the registered notice or at the grantor's new address, if the secured creditor knows that the grantor has changed its address and knows or could reasonably discover that address.

55. Paragraphs 3 and 4 confirm that non-compliance by the secured creditor with its obligation under paragraph 2 does not by itself affect the effectiveness of its registration but only exposes the secured creditor to liability to the grantor for a nominal amount (to be specified by the enacting State) and any actual loss or damage caused by the non-compliance.

Note by the Secretariat on a draft guide to enactment of the UNCITRAL Model Law on Secured Transactions

ADDENDUM

Contents

Section D. Registration of an amendment or cancellation notice

Article 16. Right to register an amendment or cancellation notice

1. Article 16 is based on recommendations 73 of the Secured Transactions Guide (see chap. IV, paras. 110-116) and 19 (a), of the Registry Guide (see paras. 150 and 225-244). Paragraph 1 gives the person identified in an initial notice as the secured creditor the right to register a related amendment or cancellation notice at any time. In order to limit the risk of the registration of notices not authorized by that person, the registrant must satisfy the secure access requirements that were assigned by the Registry under article 5, paragraph 2, at the time of registration of the initial notice (see A/CN.9/WG.VI/WP.71/Add.2, para. 24) (this right is given to the registrant as the Registry cannot know or have to determine the identity of the actual secured creditor).

2. Paragraph 2 provides that, after an amendment notice changing the secured creditor identifier in an initial or amendment notice has been registered, only the current secured creditor of record is entitled to register an amendment or cancellation notice. The registry system should be designed to assign a new unique secure access code to the new secured creditor where an amendment notice changes the secured creditor of record so as to prevent the previous secured creditor from registering an amendment or cancellation notice (see A/CN.9/WG.VI/WP.71/Add.2, para. 24).

Article 17. Information required in an amendment notice

3. Article 17 is based on recommendation 30 of the Registry Guide (see paras. 221-224; the Secured Transactions Guide does not contain an equivalent recommendation). Paragraph 1 provides that an amendment notice must contain in the designated field the registration number assigned by the Registry to the initial notice to which the amendment relates (see art. 28, para. 1, and para. 56 below). The reason for this requirement is to ensure that the amendment will be associated in the registry record with the initial notice so as to be retrieved and included in a search result (see the definition of the term “registration number” in art. 1, subpara. (j), and art. 22, subpara. (b)).

4. Paragraph 1 (b) requires the amendment notice to set out the information to be “added or changed”. The term “change” should be understood as including an amendment notice that releases an item or kind of encumbered asset or one of several grantors. Although this type of change amounts in effect to a cancellation of the registration as it relates to the relevant asset or grantor, it should be effected by registering an amendment notice and not a cancellation notice. A cancellation notice is to be used only when the purpose is to cancel the effectiveness of the registration of an initial notice and all related notices in their entirety (see the definitions of “amendment notice” and “cancellation notice” in art. 1, subparas. (b) and (c)).

5. Paragraph 2 makes it clear that an amendment notice may relate to more than one item of information in a registered notice. That is to say, a registrant need register only one amendment notice even if it wishes, for example, to add both a description of new encumbered assets and a new grantor. It follows that the form of amendment notice prescribed by the Registry must be designed to enable a registrant to change any and all items of information in an initial notice using a single form (see Registry Guide, Annex II, Examples of registry forms, II. Amendment notice).

Article 18. Global amendment of secured creditor information

6. Article 18 is based on recommendation 31 of the Registry Guide (see para. 242; the Secured Transactions Guide does not contain an equivalent recommendation). It addresses the scenario where there is a change in the identifier or address, or both, of the person identified in multiple registered notices as the secured creditor as a result, for example, of its relocation, its merger with another company or its assignment of all obligations owing to it by its customers to a new secured creditor. Its purpose is to make it possible for the secured creditor of record (option A) or the Registry on the application of that person (option B) to amend the

relevant information in all the notices in which it is contained by the registration of a single global amendment notice.

7. In order to effectuate the amendment of secured creditor information in multiple notices through the registration of a single global amendment notice, the registry record must be organized in a manner that enables the retrieval of all registered notices in which a particular person is identified as the secured creditor. To avoid the risk of the registration of unauthorized global amendment notices, the Registry should institute secure access requirements to ensure that the person requesting or effecting a global amendment is in fact the secured creditor of record (see A/CN.9/WG.VI/WP.71/Add.2, para. 24).

Article 19. Information required in a cancellation notice

8. Article 19 is based on recommendation 32 of the Registry Guide (see paras. 243 and 244; the Secured Transactions Guide does not contain an equivalent recommendation). It requires a cancellation notice to contain in the designated field the registration number assigned by the Registry under article 28, paragraph 1, to the initial notice to which the cancellation notice relates. The registration number is the only item of information required to be included in a cancellation notice form (see Registry Guide, Annex II, Examples of registry forms, III. Cancellation notice).

9. The purpose of assigning a registration number to an initial notice is to ensure that all related amendment and cancellation notices are associated in the registry record with the initial notice (see the definition of the term “registration number” in art. 1, subpara. (j)). The inclusion of the registration number in a cancellation notice ensures that the cancellation notice extends to the information in all registered notices containing that number. To minimize the risk of the inadvertent registration of cancellation notices, the prescribed cancellation notice form should include a note alerting the secured creditor to the effect of a cancellation (see Registry Guide, Annex II, Examples of registry forms, III. Cancellation notice; with respect to the effectiveness of a cancellation notice not authorized by the secured creditor, see paras. 19-27 below).

Article 20. Compulsory registration of an amendment or cancellation notice

10. Article 20 is based on recommendations 72 of the Secured Transactions Guide (see chap. IV, paras. 107 and 108) and 33 of the Registry Guide (see paras. 260-263). It should be read in conjunction with article 2 which requires the person identified as the grantor in a registered notice to authorize its registration.

11. Paragraph 1 (a) obligates the secured creditor identified in a registered notice to register an amendment notice deleting encumbered assets from the description in the notice if the grantor identified in the notice did not authorize the registration of a notice in relation to those assets and informed the secured creditor that it will not do so. For example, the secured creditor may have registered an initial notice covering “all assets” of the grantor but the security agreement between the parties ultimately covers only a specific tangible asset and the grantor informs the secured creditor that it does not contemplate entering into any further security agreement. Even if the grantor separately authorized the registration of a notice covering the relevant assets, paragraph 1 (c) obligates the secured creditor to amend the description in its registered notice if the grantor subsequently withdraws its authorization, provided that no security agreement covering those assets is concluded thereafter (since this would automatically constitute a new authorization under art. 2).

12. Paragraph 1 (b) addresses the scenario where the security agreement to which a registered notice relates is revised to release some of the initially encumbered assets from the security right. In this scenario, the secured creditor is obligated to register an amendment notice to delete the released assets from the description in the registered notice provided that the grantor did not authorize the registration of a notice covering the released assets otherwise than by entering into the initial security agreement. Even if the grantor executed a separate agreement authorizing the secured creditor to make a registration, paragraph 1 (c) obligates the secured creditor to

register an amendment notice deleting the released assets if the grantor subsequently withdraws that authorization, provided that the parties have not entered into a new security agreement covering the released assets.

13. Enacting States that implement article 8, subparagraph (e), will need to adopt paragraph 2 which requires a secured creditor to register an amendment notice reducing the maximum amount specified in a registered notice if: (a) the grantor only authorized the registration of a notice in the reduced amount; or (b) the security agreement to which the notice relates has been revised to reduce the maximum amount.

14. Paragraphs 3 (a) and 3 (b) obligate the secured creditor of record to register a cancellation notice where the grantor identified in a registered notice either did not authorize the registration and informed the secured creditor that it will not do so, or subsequently withdrew its authorization and the parties did not enter thereafter into a security agreement. A cancellation notice must also be registered if the obligation secured by the security right to which the registered notice relates has been extinguished (see para. 3 (c)). It should be noted that, under article 12 of the Model Law, a security right is extinguished upon full payment or other satisfaction of the secured obligation, provided that there is no further commitment by the secured creditor to extend any further secured credit.

15. Paragraph 4 prohibits the secured creditor from charging any fee for complying with its obligations under paragraphs 1 (a), 1 (c), 2 (a), 3 (a) and 3 (b). These provisions require a secured creditor to amend or cancel a registration either because it was never authorized by the grantor or because the grantor's initial authorization was withdrawn owing to the failure of the parties to subsequently conclude a security agreement. In these circumstances, it is appropriate to impose the cost on the secured creditor.

16. To protect grantors against the risk of non-compliance by a secured creditor with its obligation under paragraphs 1, 2 and 3, paragraph 5 gives the grantor the right to send a formal written request to the secured creditor to register the appropriate amendment or cancellation notice. If the secured creditor does not comply with the request before the expiry of the period specified by the enacting State, paragraph 6 entitles the grantor to apply for an order compelling registration of the appropriate notice.

17. Paragraph 6 contemplates that the enacting State will establish a summary judicial or administrative procedure and identify the relevant court or other authority to enable the grantor to exercise this right. Depending on local considerations, the enacting State may decide to use an existing administrative or judicial summary procedure or it may decide to set up a new procedure administered, for example, by the Registrar or registry staff. As noted in the Registry Guide (see para. 262), the process should be speedy and inexpensive while also incorporating appropriate safeguards to protect the secured creditor against an unwarranted demand by the grantor (for example, by requiring the relevant authority to notify the secured creditor of a demand submitted to it and give the secured creditor a reasonable opportunity to respond).

18. Once an order for registration has been issued pursuant to the procedure established by the enacting State under paragraph 6, paragraph 7 requires the Registry to register the appropriate notice "upon receipt of a request with a copy of the relevant order" (if the enacting State decides under para. 6 to designate a court or other external body to administer the procedure) or "upon the issuance of the relevant order" (if the enacting State decides under para. 6 to vest the Registry with the authority to administer the procedure).

Article 21. Effectiveness of the registration of an amendment or cancellation notice not authorized by the secured creditor

19. Article 21 addresses the effectiveness of the registration of an amendment or cancellation notice where the registration was not authorized by the secured creditor

of record. The options set out in article 21 are based on the discussion of the matter in the Registry Guide (see paras. 249-259).

20. An unauthorized registration may occur as a result of the fraud or error of the grantor or a third party, or even a member of the registry staff (for corrections of errors by the Registry, see art. 31). The issue is whether and to what extent conclusive effect should be given to a registered amendment or cancellation notice for the purposes of determining the third-party effectiveness and priority of the related security right as against a competing claimant. It should be noted that the risk of the registration of unauthorized amendment or cancellation notices, regardless of which option is chosen, is greatly reduced by the requirement for the enacting State to put in place secure access procedures for registering amendment and cancellation notices (see art. 5 and A/CN.9/WG.VI/WP.71/Add.2, para. 24).

21. Under option A, the registration of an amendment or cancellation notice is effective whether or not it was authorized by the person identified as the secured creditor in the registered notice to which the amendment or cancellation notice relates.

22. Option B is a variation of option A. While recognizing the general effectiveness of an unauthorized amendment or cancellation notice, it preserves the priority of the security right to which the unauthorized registration relates as against the right of a competing claimant over whom the secured creditor of record had priority prior to the unauthorized registration. This option is predicated on the rationale that such a claimant by definition could not have been prejudiced by relying on the unauthorized registration.

23. If an enacting State decides to adopt option A or option B, it will need to also implement option B of article 30 which obligates the Registry to remove information in a registered notice from the public registry record and archive it upon registration of a cancellation notice. It will also need to implement option A of article 13, paragraphs 4 and 5, dealing with the time of effectiveness of the registration of a cancellation notice.

24. Option C is at the opposite end of the spectrum from option A. It provides that the registration of an amendment or cancellation notice is ineffective, unless authorized by the secured creditor of record. Under this approach, a searcher will need to conduct off-record inquiries to verify whether the registration was in fact authorized by the secured creditor.

25. Option D is a variation of option C. It preserves the effectiveness of an unauthorized registration of an amendment or cancellation notice as against a competing claimant whose right was acquired in reliance on a search of the registry record made after the registration of the amendment or cancellation notice, and who did not have knowledge that the registration was unauthorized when it acquired its right. This qualification differs from the qualification in option B above insofar as it requires the competing claimant to provide factual evidence that it actually searched and relied on the registry record prior to acquiring its right in order to prevail over the secured creditor whose registration was amended or cancelled without authority.

26. If an enacting State decides to adopt option C or option D, it will need to implement option B of article 30, which obligates the Registry to remove information in registered notices from the public registry record and archive it only upon the expiry of the period of effectiveness of the initial notice. Under option C or D, all amendment or cancellation notices need to remain in the public registry record in order for searchers to discover the security right and know whom to contact to verify whether the amendment or cancellation was authorized. If all the relevant notices were instead removed from the public record upon registration of a cancellation notice, searchers would be bound by a security right of whose existence they would be entirely ignorant.

27. Searchers may not necessarily appreciate that registered amendment and cancellation notices may not be legally effective. Accordingly, enacting States that implement options C or D may wish to include a note on search results advising

searchers of the need to conduct off-record inquiries to verify whether the registration of an amendment or cancellation notice was authorized by the secured creditor.

Section E. Searches

Article 22. Search criteria

28. Article 22 is based on recommendation 54 (h) of the Secured Transactions Guide (see chap. IV, paras. 31-36) and 34 of the Registry Guide (see paras. 264-265). It sets out the two criteria according to which any person may conduct a search of the public registry record.

29. Under subparagraph (a), the first and principal search criterion is the identifier of the grantor. The identifier of the grantor is its name, determined according to the rules set out in article 9. If an enacting State decides to require "additional information" to be entered in a separate field to assist in uniquely identifying a grantor, this additional information does not constitute an alternative search criterion (see art. 8, subpara. (a)). Rather it will simply appear as additional information in a search result.

30. Under subparagraph (b), the registration number assigned to an initial notice under article 28, paragraph 1, constitutes an alternative search criterion. A search by registration number gives secured creditors an efficient means of identifying and retrieving a registered notice for the purposes of registering an amendment or cancellation notice. Searches by registration number generally will not be conducted by third parties as they typically will not know the relevant registration number.

31. If the enacting State provides for the entry of the serial number of an asset in a separate designated field, entry of this serial number in its own designated field in the initial or amendment notice is required in the sense of being necessary to achieve the third-party effectiveness and priority of the security right as against the classes of competing claimants specified in its secured transactions law. If an enacting State decides to adopt this approach, it will need to list the serial number of the asset as an additional search criterion in this article. It will also need to provide rules for determining what constitutes the correct serial number, design the registry system so that registered notices can be searched and retrieved by serial number, and specify what categories of subsequent claimants are entitled to priority if the secured creditor fails to include the serial number in its registered notice (see Registry Guide, para. 266, and A/CN.9/WG.VI/WP.71/Add.2, para. 42).

32. To allow the registration of global amendment notices, as provided in article 18, the registry record must be organized to permit registered notices to be identified and retrieved by reference to the relevant secured creditor. For public policy reasons relating to privacy and confidentiality, the name or other identifier of the secured creditor should not be an available criterion for general public searching (see Secured Transactions Guide, chap. IV, para. 81 and Registry Guide, para. 267).

Article 23. Search results

33. Article 23 is based on recommendation 35 of the Registry Guide (see paras. 268-273; the Secured Transactions Guide does not contain an equivalent recommendation). Paragraph 1 sets out the required content of search results provided by the Registry in response to a search request. The search result must first indicate the date and time when the search was performed.

34. Paragraph 1 does not require search results to include a "currency date" indicating that the search result includes only information contained in notices that were registered as of that date (as opposed to the actual date on which the search result was issued). The reason is that registration becomes effective only when the information in a notice submitted to the Registry has been entered into the registry record so as to be accessible to searchers (see art. 13, para. 1). Thus, the "currency date" is always the actual date of the search (see Registry Guide, para. 273).

35. With respect to the substantive content of the search result, paragraph 1 contemplates that an enacting State may adopt one of two options. Option A should be adopted if the enacting State's registry system is designed to only retrieve notices that exactly match the identifier of the grantor entered by the searcher on its search request. Option B should be adopted if the enacting State's registry system is designed to also retrieve notices that closely match the identifier of the grantor entered by the searcher. Which identifiers are considered to constitute a "close match" in States that adopt option B depends on the specific close-match search programme or logic used by the Registry.

36. Option A should be read in conjunction with article 24, paragraph 1, which provides that an error by a registrant in entering the grantor identifier in a notice does not render the registration of the notice ineffective if the information in the notice would be retrieved by a search of the registry record using the grantor's correct identifier as the search criterion. Option B should be read in conjunction with article 24, paragraph 2, under which the registration of a notice that contains an error in the grantor's identifier might still be effective if the name that was entered by the registrant is a sufficiently close match to result in the notice being retrieved on a search using the grantor's correct identifier.

37. Paragraph 2 obligates the Registry to issue an official search certificate setting out a search result upon the request of a searcher. Paragraph 3 minimizes the administrative burden on the Registry in this respect by providing that a printed search result that purports to have been issued by the Registry is proof of its contents in the absence of evidence to the contrary.

Section F. Errors and post-registration changes

Article 24. Registrant errors in required information

38. Article 24 is based on recommendations 58 and 64-66 of the Secured Transactions Guide (see chap. IV, paras. 66-74, and 82-97) and 29 of the Registry Guide (see paras. 205-220). Its overall aim is to provide guidance on when the effectiveness of a registration may be challenged owing to errors or omissions committed by registrants in entering the information in notices submitted to the Registry.

39. Paragraphs 1 and 2 address alleged errors on the part of a registrant in entering the grantor identifier set out in a registered notice. Paragraph 1 provides that the effectiveness of the registration cannot be challenged if the information in the registered notice would be retrieved by a search of the public registry record using the grantor's correct identifier (determined under art. 9) as the search criterion (see option A of art. 23, and para. 36 above). Paragraph 2, which appears in square brackets, should be adopted by enacting States that implement option B of article 23 under which search requests will also retrieve registered notices in which the grantor identifiers closely match the identifier entered by a searcher (see para. 36 above). In enacting States that adopt this option, paragraph 2 provides that an alleged error on the part of a registrant in entering the grantor identifier does not render the registration ineffective if the information in the notice would still be retrieved as a "close match" by a search using the grantor's correct identifier "unless the error would seriously mislead a reasonable searcher." The latter caveat addresses situations where, for example, the list of close matches set out in a search result is so lengthy as to make it unreasonable to expect searchers to determine whether it might include the relevant grantor.

40. Paragraph 4 deals with the impact of errors or omissions committed by registrants in entering the other items of information required to be set out in registered notices under article 8, notably errors in the description of the encumbered assets. It provides that an alleged error does not make the registration ineffective unless it "would seriously mislead a reasonable searcher." This language incorporates an objective test in the sense that a person challenging the effectiveness of the

registration need not show that it was personally misled by the error. It is sufficient to show that a hypothetical reasonable searcher would have been misled.

41. Paragraphs 3 and 5 incorporate the general principle of severability. Thus, an error in entering the identifier of a particular grantor or the description of a particular encumbered asset that would render the registration ineffective under paragraph 1, 2 or 4 does not make the registration of the notice ineffective with respect to other grantors correctly identified or other encumbered assets correctly described in the registered notice.

42. Paragraphs 6 and 7, which appear within square brackets, provide special rules for determining the impact of errors made by a registrant on the effectiveness of a registration in two scenarios. Paragraph 6 addresses the scenario where the enacting State allows a registrant to self-select the period of effectiveness of the registration of a notice pursuant to options B or C of article 14 (and art. 8, subpara. (d)). In this scenario, an error in the entry of the relevant information does not render the registration ineffective even if the error would be seriously misleading from the perspective of a hypothetical reasonable searcher. Rather, the registration will be treated as ineffective only as against a competing claimant who can establish factually that it was personally misled by the error (see Registry Guide, paras. 215 and 217-220). Paragraph 7 addresses the scenario where an enacting State chooses to require a registrant to indicate the maximum amount for which a security right may be enforced pursuant to article 8, subparagraph (e). It provides that while an error in the maximum amount stated in an initial or amendment notice does not render the registration ineffective, the priority of the security right is limited to the maximum amount stated in the notice or in the security agreement, whichever is lower. This rule is consistent with the rationale for requiring the maximum amount to be stated in the security agreement and disclosed in any related registered notice (see A/CN.9/WG.VI/WP.71/Add.2, para. 31).

43. As already observed (see A/CN.9/WG.VI/WP.71/Add.2, para. 42, and para. 31 above), some States provide for the entry of an alphanumerical asset identifier for specified classes of high-value assets that have a significant resale market. In States that adopt this approach, entry of this identifier in its own designated field in the initial notice is required in the sense of being necessary to achieve the third-party effectiveness and priority of the security right as against specified classes of competing third-party claimants. Enacting States that decide to adopt this approach will need to deal with the impact of errors in the serial number on the effectiveness of a registration.

Article 25. Post-registration change of grantor identifier

44. Article 25 is based on recommendation 61 of the Secured Transactions Guide (see chap. IV, paras. 75-77; see also Registry Guide, paras. 226-228). It addresses the impact of a post-registration change in the identifier of the grantor (i.e. its name under art. 9) on the effectiveness of the registration of a notice. Since the grantor's identifier is the principal search criterion (see art. 22, subpara. (a)), a search under the new identifier will not retrieve registered notices in which the grantor is identified by its old identifier. This poses a risk for third-party searchers that acquire rights in the grantor's encumbered assets after the change of the grantor's identifier.

45. To address this risk, paragraphs 2 and 3 give the secured creditor a grace period (the duration of which is to be specified by the enacting State) after the change of identifier occurs to either register an amendment notice adding the new identifier of the grantor or make its security right effective against third parties by a method other than registration (on other methods, see arts. 18 and 25-27 of the Model Law). If neither step is taken before the expiry of the grace period, the security right is subordinated to a competing security right that was made effective against third parties after the change (see para. 2 (a)), and a buyer who acquired its rights in the encumbered asset after the change will acquire them free of the security right (see para. 3 (a)).

46. Under paragraphs 2 and 3, the secured creditor may still register an amendment notice or otherwise make its security right effective against third parties even after the expiry of the grace period. However, it loses the benefit of the grace period with the result that its security right will be subordinated to a competing security right that was made effective against third parties after the change but before the relevant step was taken, even if the competing security right was made effective against third parties before the expiry of the grace period (see para. 2 (b)). A buyer to whom the encumbered assets is sold after the change but before the relevant step was taken likewise acquires its rights free of the security right even if the sale took place before the expiry of the grace period (see para. 3 (b)). Under paragraph 4, paragraphs 2 and 3 do not apply if the information in the notice referred to in paragraph 1 would be retrieved by a search using the new identifier of the grantor as a search criterion (which would be necessary if the enacting State implements option B of article 23, paragraph 1.

47. As against competing claimants other than a competing secured creditor and a buyer whose rights are specifically protected by paragraphs 2 and 3, paragraph 1 confirms that the third-party effectiveness and priority of a security right that was made effective against third parties by registration is not affected by a post-registration change in the identifier of a grantor. Thus, even if the secured creditor does not register an amendment notice or make its security right effective against third parties by a method other than registration, it will still retain whatever priority it has under the Model Law against competing secured creditors and buyers whose rights arose before the change in the identifier of the grantor and as against other classes of competing claimants whether their rights arose before or after the change of the grantor's identifier (for example, the grantor's judgment creditors and insolvency representative).

Article 26. Post-registration transfer of an encumbered asset

48. Article 26 is based on recommendation 62 of the Secured Transactions Guide (see chap. IV, paras. 78-80; see also Registry Guide, paras. 229-232). It addresses the impact of a post-registration sale of an encumbered asset on the effectiveness of the registration of a notice in relation to a security right in that asset where the buyer acquires the asset subject to the security right under article 34, paragraph 1, of the Model Law. This creates a risk for third parties that acquire rights in the encumbered asset from the buyer since a search of the public registry record under the identifier of the buyer will not retrieve registered notices in which the grantor identifier is the name of the seller/grantor. This risk is analogous to that addressed in article 25 in relation to post-registration changes in the grantor identifier. Unlike article 25, article 26 does not provide a uniform rule. Rather, it gives enacting States the option to enact any one of three approaches.

49. The approach in option A is identical to that set out in article 25 for post-registration changes in the grantor identifier. Paragraphs 2 and 3 give the secured creditor a grace period (the duration of which is to be specified by the enacting State) to either register an amendment notice adding the buyer as a new grantor or otherwise make its security right effective against third parties in order to preserve its priority against secured creditors and subsequent buyers who acquire their rights in the encumbered assets from the grantor's buyer (see paras. 2 (a) and 3 (a)). As under paragraph 1 of article 25, paragraph 1 of article 26 confirms that the secured creditor's failure to take either of these steps before the expiry of the grace period, or at all, does not generally prejudice the third-party effectiveness and priority status of its security right. However, its security right will be subordinated to competing security rights created by the buyer from the grantor and made effective against third parties after the sale, and before the relevant step is taken (see para. 2 (b)). A buyer to whom the buyer from the grantor sells the encumbered asset during this same period also acquires its rights free of the security right (see para. 3 (b)).

50. The approach in paragraphs 1-3 of option B is similar to the approach in paragraphs 1-3 of option A, with the important qualification that the grace period under paragraphs 2 and 3 to register the amendment notice or make the security right

effective against third parties by a method other than registration begins only when the secured creditor acquires knowledge that the grantor has sold the encumbered asset and the identity of the buyer, and not simply when the sale takes place, as under paragraphs 2 and 3 of option A.

51. If there are successive sales of an encumbered asset before the secured creditor acquires knowledge of the sale and the identity of the buyer, paragraph 4 of option B confirms that it is sufficient, to protect its rights under paragraphs 2 and 3 against intervening secured creditors and buyers, if the secured creditor registers an amendment notice adding the identifier of the most recent buyer of which it has knowledge.

52. Paragraphs 4 of option A and 5 of option B implement recommendation 244 of the Intellectual Property Supplement. They provide that a security right in intellectual property made effective against third parties by registration retains its third-party effectiveness and priority status notwithstanding a post-registration sale by the grantor even as against subsequent secured creditors and buyers who acquire their rights from the grantor's buyer. The reason for this different approach in the intellectual property context is that, the risks posed for third-party searchers by the grantor's sale of encumbered assets were outweighed by the burden and costs that would be imposed on intellectual property financing if secured creditors were required to register an amendment notice each time intellectual property was sold or licensed to the extent that an exclusive licence is treated as a transfer under intellectual property law (see Intellectual Property Supplement, paras. 158-166).

53. Under option C, the third-party effectiveness and priority of a security right that is made effective against third parties by registration of a notice is not affected by a post-registration sale of an encumbered asset covered by the registered notice. The secured creditor retains whatever priority it otherwise has under the Model Law against all competing claimants, whether their rights arise before or after the sale. This option extends the approach to the impact of post-registration sales of encumbered intellectual property in paragraphs 4 of option A and 5 of option B to all types of encumbered asset.

Section G. Organization of the Registry and the registry record

Article 27. The registrar

54. Article 27 is based on recommendation 2 of the Registry Guide (see para. 74; the Secured Transactions Guide does not contain an equivalent recommendation). Recognizing that these matters may be dealt with differently in each State, article 27 leaves it to the enacting State to specify the authority responsible for the appointment and dismissal of the registrar, and for determining the registrar's duties and monitoring their performance.

55. While an enacting State may decide to have the day-to-day operations of the Registry carried out by either a private or public entity, the Registry and the registrar should always be subject to the ultimate direction of and accountable to the enacting State. Accordingly, the authority specified by the enacting State under this article should be a governmental ministry or other public agency, such as a central bank (see Registry Guide, para. 77).

Article 28. Organization of information in the registry record

56. Article 28 is based on recommendations 15 and 16 of the Registry Guide (see paras. 127-130; the Secured Transactions Guide does not contain an equivalent recommendation). Paragraph 1 requires the Registry to assign a unique registration number to an initial notice and associate all registered amendment or cancellation notices that contain that number with the initial notice in the registry record. The reason for these requirements is to ensure that amendment and cancellation notices are linked to the related initial notice in the registry record so as to be retrievable on

a search (see the definition of the term "registration number" in art. 1, subpara. (j), as well as arts. 17, 19 and 22, subpara. (b)).

57. Option A of paragraph 2 should be adopted by enacting States in which the registry system is designed so that search results will only retrieve information in registered notices that exactly match the grantor identifier entered by the searcher (see option A of art. 23, para. 1). Option B of paragraph 2 should be adopted by enacting States in which the registry system is designed to also retrieve information in registered notices in which the grantor's identifier closely match the identifier entered by the searcher (see option B of art. 23, para. 1). Option A of paragraph 3 is intended for enacting States that permit the secured creditor of record to register a global amendment notice changing its identifier or address or both in all registered notices in which it is identified as the secured creditor (see option A of art. 18). Option B of paragraph 3 is intended for enacting States in which the global amendment must be effected by the Registry at the request of the secured creditor (see option B of art. 18).

58. Paragraph 4 is intended to ensure that the entire registration record relating to an initial notice remains intact. It provides that the registry record must be organized in a manner that preserves the information in all registered notices, notwithstanding the registration of amendment or cancellation notices that purport to change the information contained in previously registered notices.

59. As noted earlier, article 5, paragraph 2 requires a person who submits an amendment or cancellation notice to satisfy the secure access requirements specified by the Registry. It follows that an enacting State may also need to organize the registry record in a manner that facilitates the application of this requirement (see A/CN.9/WG.VI/WP.71/Add.2, para. 24, and para. 2 above). The enacting State may also need to impose additional organizational obligations on the Registry should it decide to provide for: (a) registration and searching according to serial number (see A/CN.9/WG.VI/WP.71/Add.2, para. 42, and para. 31 above); or (b) registration and searching according to a grantor identifier other than the name of the grantor (see A/CN.9/WG.VI/WP.71/Add.2, para. 30).

Article 29. Integrity of information in the registry record

60. Article 29, paragraph 1, is based on recommendation 17 (a), of the Registry Guide (see para. 136; the Secured Transactions Guide does not contain an equivalent recommendation). It prohibits the Registry from unilaterally amending or removing information in the registry record except as authorized in articles 30 and 31.

61. Article 29, paragraph 2, is based on recommendations 55 (f), of the Secured Transactions Guide (see chap. IV, para. 54), and 17 (b), of the Registry Guide (see para. 137). It obligates the Registry to ensure that the information in the registry record is preserved and may be reconstructed in the event of loss or damage. In practice, this obligation requires the Registry to create and maintain a backup copy of the registry record.

Article 30. Removal of information from the public registry record and archival

62. Option A of article 30 is based on recommendations 74 of the Secured Transactions Guide (see chap. IV, para. 109), as well as recommendations 20 and 21 of the Registry Guide (see paras. 151-152). It requires the Registry to remove information in registered notices from the public registry record once the period of effectiveness of the notice expires or a cancellation notice is registered. If the information in cancelled or expired notices remained publicly searchable, this might create legal uncertainty for third-party searchers, potentially impeding the ability of the grantor to grant a new security right in or deal with the assets described in the notice (see Registry Guide, para. 151). Option A should be enacted by States that adopt option A or B of article 21.

63. Option B of article 30 should be enacted by States that adopt options C or D of article 21. Like paragraph 1 of option A, paragraph 1 of option B requires the Registry

to remove information in registered notices from the public registry record once the period of effectiveness of the notice expires. Unlike option A, option B, paragraph 2 requires the Registry to preserve all information in registered notices on the public registry record notwithstanding the registration of a cancellation notice. This is necessary since the registration of an amendment or cancellation notice is wholly or partially ineffective under option C or D of article 21 if it was not authorized by the secured creditor. Since the factual question of whether the secured creditor of record authorized the registration of a cancellation notice can only be answered by conducting off-record inquiries, it is necessary to preserve the information contained in cancellation notices on the public registry record so that searchers have the information needed to conduct those inquiries.

64. Paragraph 3 requires the Registry to archive the information in registered notices removed from the public registry record under paragraph 1 in a manner that enables the information to be retrieved in accordance with the search criteria set out in article 22. This is necessary since the information in notices removed from the public registry record may need to be retrieved in the future, for example, in order to determine the time of registration or the scope of the encumbered assets described in the notice for the purposes of a subsequent priority dispute between the secured creditor and a competing claimant (see Registry Guide, para. 151).

65. As to the duration of the Registry's archival obligation, paragraph 3 leaves this decision to the enacting State (while cautioning that it should minimally be coextensive with the prescription period under local law for disputes arising in relation to a security agreement).

Article 31. Correction of errors made by the Registry

66. Article 31 addresses the effect of errors made by the Registry in two scenarios. The first is where the Registry makes an error or omission in entering into the public registry record information contained in a notice submitted for registration. The need to address this scenario arises only if the registry system implemented by a State allows the submission of notices in paper form as opposed to requiring all registrants to transmit the information in notices directly to the Registry via electronic means of communication. The second scenario addressed by article 31 is where the Registry erroneously removes from the registry record information contained in a registered notice. The need to address this second scenario arises even in systems in which notices may only be submitted directly to the Registry via electronic means of communication.

67. Paragraph 1 of article 31 requires the Registry to takes steps to correct the error or restore the erroneously removed information without delay after discovering the error. Under option A, the Registry is itself entitled to take the necessary corrective action and must then send to the secured creditor of record a copy of the notice it registered to correct the record. Under option B, the Registry is instead required to inform the secured creditor of record of the error so as to enable it to directly register the notice needed to correct the record.

68. Paragraph 2 addresses the impact of the Registry's error on the third-party effectiveness and priority status of the security right in the event of a competition with the right of a competing claimant which arose prior to the registration of the notice correcting the record referred to in paragraph 1. It offers four options which parallel the four options in article 21 with respect to the effectiveness of the unauthorized registration of an amendment or cancellation notice. The enacting State should adopt the option in article 31 that corresponds to the option it selects in article 21. Accordingly, a State that adopts option A, B, C or D of article 21 should adopt the corresponding option of article 31 (i.e. option A, B, C or D, respectively).

Article 32. Limitation of liability of the Registry

69. Article 32 is based on recommendation 56 of the Secured Transactions Guide (see chap. IV, paras. 55-64; see also Registry Guide, paras. 141-144). It offers three options to an enacting State in dealing with the potential liability of the Registry for

loss or damage allegedly caused by errors or omissions allegedly committed by the Registry.

70. Option A leaves the issue of the liability of the Registry to other law of the enacting State. However, if liability is foreseen by that other law, option A restricts any right of recovery to the types of errors or omissions listed in paragraph 1. Thus, any potential liability is limited to: (a) errors or omissions in a search result issued to a searcher (para. 1 (a)); (b) errors or omissions in a copy of information in a registered notice sent to a secured creditor under article 15 or the failure of the Registry to send a copy of a registered notice as required by that article or article 31 (para. 1 (a) and (c)); and (c) the provision of false or misleading information to a registrant or searcher (para. 1 (d)).

71. Paragraph 1 (b) of option A appears within square brackets as it limits any liability that the Registry may have under other law for errors or omissions in registered notices to the scenario where the Registry is responsible for entering into the registry record information submitted by a registrant in a paper notice. Accordingly, paragraph 1 (b) should only be adopted by an enacting State if its registry system permits the submission of notices to the Registry using paper forms.

72. Like option A, option B of article 32 leaves to other law any liability that the Registry may have for loss or damage caused by an error or omission in the administration or operation of the Registry. Unlike option A, option B does not restrict any right of recovery that a person may have under other law to particular types of errors or omissions. But like paragraph 2 of option A, it limits the Registry's liability to the maximum amount specified by the enacting State. As with option A, the enacting State should make it clear whether the maximum monetary limit is based on the specified maximum value of the relevant encumbered asset or is an absolute limit.

73. Option C of article 32 simply excludes any liability of the Registry for an error or omission in the administration or operation of the Registry.

Article 33. Registry fees

74. Article 33 is based on recommendations 54 (i) of the Secured Transactions Guide (see chap. IV, para. 37) and 36 of the Registry Guide (see paras. 274-280). The Secured Transactions Guide recommends, in particular, that registry fees, if any, should be set at cost-recovery level. If the Registry were instead used as an opportunity for the enacting State to generate profit, registrants and searchers might be discouraged from using the registry services.

75. Thus, article 33 presents two options, option A and option B. Under paragraphs 1 and 3 of option A, fees may be charged for the provision of registry services in the amounts specified by the enacting State and the fee schedule must be publicized by the Registry. To ensure that these fees are based on cost recovery, paragraph 2 of option A entitles the authority responsible for the appointment of the registrar under article 27 to modify the fee schedule on an ongoing basis.

76. In setting the fee schedule under paragraph 2 of option A, an enacting State might decide to charge a lower fee for the registration of notices and the execution of search requests transmitted directly to the registry via electronic means of communication given that electronic registration or searching does not require the intercession of registry staff and therefore is less costly. This approach might also encourage users to shift to this more efficient method in preference to continuing to use paper forms.

77. To enhance the efficiency of the payment process for frequent users of registry services, paragraph 4 of option A authorizes the Registry to enter into an agreement with any person to establish a Registry user account for any purpose, including the payment of registry fees. This approach has the additional advantage of facilitating the identification of the registrant for the purposes of article 5 (see A/CN.9/WG.VI/WP.71/Add.2, para. 21).

78. A variant of option A would be to limit the charging of fees to registration services and allow searches to be made free of charge. This variant would encourage and facilitate due diligence by potential secured creditors and buyers and thereby reduce risk and future disputes.

79. Another variant of option A would be for the Registry to not charge any fee for the registration of the types of amendment and cancellation notices contemplated by article 20. This variant would encourage the secured creditor of record to voluntarily register amendment and cancellation notices in the circumstances contemplated by article 20 and relieve grantors from the time and expense of having to initiate formal proceedings to force cancellations or amendments under that article.

80. For enacting States that enact option B or C of article 14 (allowing a registrant to select the duration of a notice), yet another variant of option A would be to charge fees on a sliding scale depending on the period selected by the registrant. This approach would have the advantage of discouraging registrants from selecting an inflated period out of an excess of caution (see Registry Guide, para. 277).

81. Option B provides that the Registry may not charge any fees for its services. Under this approach, the cost of establishing and operating the Registry will be borne by general State revenues. Option B may be attractive for enacting States that seek to encourage secured financing in general and the use of the Registry in particular. Like option A, option B could have several variants. For example, the enacting State may wish to offer free registration services for a limited start-up period in order to facilitate acclimatization to and use of the registry system. Another variant would be for the enacting State to provide that certain types of services should be provided free of charge (e.g., the registration of amendment and cancellation notices in the circumstances contemplated in article 20, and the registration of notices aimed at preserving the third-party effectiveness of a security right arising under prior law during the transition period to the new registry system).

Chapter V. Priority of a security right

A. General rules

Article 29. Competing security rights created by the same grantor

1. Article 29 is based on recommendation 76 of the Secured Transactions Guide (see chap. V, paras. 45-54). It addresses priority as between security rights created by the same grantor. Article 29 divides the priority competitions it addresses into three categories. First, it addresses priority as between competing security rights made effective against third parties by registration of a notice in the Registry. Second, it addresses priority as between competing security rights made effective against third parties by a method other than registration of a notice in the Registry. Third, it addresses priority as between competing security rights, one (or more) of which was made effective against third parties by registration of a notice in the Registry and the other one (or more) was made effective against third parties by a method other than registration of a notice in the Registry.

2. The first category, set out in paragraph 1 (a), addresses the most common situation, that is, priority competitions between security rights made effective against third parties by registration of a notice in the Registry. In that situation, priority is determined by the order of registration. This provides a simple and easy-to-apply rule, in which all of the information necessary for the priority determination is maintained by the Registry and is easily determinable by the parties and competing claimants.

3. It should be noted that the priority rule in paragraph 1 (a) applies even if one or more of the competing security rights had not been created at the time of registration (registration of a notice may precede creation of a security right; see art. 4 of the Model Registry Provisions) and, thus, were not effective against third parties at the time of registration (inasmuch as a security right that has not yet been created cannot be effective against third parties).

4. To illustrate this aspect of the rule in paragraph 1 (a), assume that: (a) on Day 1, Grantor authorized SC 1 to register a notice listing Grantor as the grantor and describing the encumbered assets as all present and future equipment of Grantor, and SC 1 registered the notice; (b) on Day 2, Grantor borrowed money from SC 2 and created in favour of SC 2 a security right in all of Grantor's present and future equipment and SC 2 registered a notice with respect to that security right; and (c) on Day 3, Grantor borrowed money from SC 1 and created in favour of SC 1 a security right in all of Grantor's present and future equipment. In this case, the security right of SC 2 became effective against third parties before the security right of SC 1 (because SC 1's security right did not become effective against third parties until it was created). Yet, as a result of the rule in paragraph 1 (a), in determining the priority between the security rights of SC 1 and SC 2, the time of registration of SC 1's notice, rather than the later time on which SC 1's security right became effective against third parties, is used. Thus, the security right of SC 1 has priority over the security right of SC 2 because the notice with respect to the security right of SC 1 was registered on Day 1 before the security right of SC 2 became effective against third parties on Day 2.

5. The rule in paragraph 1 (a) is beneficial for two reasons. First, as a result of this rule, the priority of security rights that are made effective against third parties by the registration of a notice will always be determined according to the time of registration. The time of registration is maintained by the Registry and is, therefore, easy to demonstrate and easy to search. By way of contrast, the creation of a security right is a private event between the grantor and the secured creditor; the time of creation is not maintained by the Registry and is not publicly available and may be difficult to establish.

6. Second, the results that follow from the application of the rule in paragraph 1 (a) are consistent with the behaviour of prudent secured creditors. For example, assume that SC 2 is considering extending credit to Grantor, secured by a security right in an item of Grantor's equipment. If SC 2 searches the records of the Registry and

discovers that a notice has been registered listing Grantor as the grantor and SC 1 as the secured creditor and indicating that the encumbered asset is the same item of equipment, SC 2 will not know whether SC 1 has a security right or, rather, has registered a notice before creation of the security right. In such a situation, SC 2 would likely make the conservative assumption that the registered notice reflects an existing security right and, accordingly, if SC 2 decides to go forward with the transaction, it will be with the understanding that its rights are subordinate to that of SC 1. The rule in paragraph 1 (a) is consistent with the behaviour of SC 2.

7. The second category of priority competitions is addressed in paragraph 1 (b). In cases in that category, neither security right has been made effective against third parties by registration of a notice in the Registry. In that situation (which is not very common inasmuch as situations in which two different secured creditors are both able to make their security rights effective against third parties by a method other than registration are not common), priority is determined by the order of third-party effectiveness.

8. In the third category of priority competitions, one (or more) security right has been made effective against third parties by registration of a notice in the Registry and the other one (or more) security right has been made effective against third parties by another method (such as by possession of the encumbered asset). In this category, the time of registration of a security right made effective against third parties by registration is compared to the time of third-party effectiveness of a security right made effective against third parties other than by registration, and the security right with the earlier time of registration or third-party effectiveness has priority.

9. The result of the rules in paragraphs 1 (a) and 1 (c) is that the priority of a security right made effective against third parties by registration of a notice in the Registry will be determined by the time of registration (without regard to the time at which the security right was created), whether the competing security right was made effective against third parties by registration or by another method. This means that, once a secured creditor has registered a notice with respect to a security right, that secured creditor will be able to determine its priority with respect to all competing security rights whose priority is determined by the rules in this article.

10. In cases in which a secured creditor has taken steps to make its security right effective against third parties by more than one method (such as when a secured creditor, who has possession of an encumbered asset, subsequently registers a notice with respect to that security right in the Registry, or vice versa), the time of the earlier event should be used in applying the rule in article 29, unless there is a subsequent "gap" during which the security right is neither effective against third parties nor the subject of a notice registered in the Registry (see art. 31).

Article 30. Competing security rights created by different grantors

11. Article 30 addresses priority as between security rights in the same encumbered asset that were created by different grantors. This situation can occur, for example, if a grantor creates a security right in its equipment in favour of a secured creditor and then transfers the equipment to a transferee who creates a security right in it in favour of a different secured creditor. In this situation, article 30 provides that the same rules apply as those that apply when the same grantor has granted both of the competing security rights (see art. 29), except as provided in article 26 of the Model Registry Provisions, which provides three alternatives to States (see A/CN.9/WG.VI/WP.71/Add.3, paras. 48-53).

Article 31. Competing security rights in the case of a change in the method of third-party effectiveness

12. Article 31 addresses situations in which there has been a change in the method of third-party effectiveness. This may happen, for example where a secured creditor in possession of the encumbered asset returns possession of it to the grantor after registering a notice with respect to it in the Registry. In such a case, the priority of the security right is determined by the time at which the security right initially became

effective against third parties so long as there was no time thereafter during which the security right was not effective against third parties.

Article 32. Competing security rights in proceeds

13. Article 32, which is based on recommendation 100 of the Secured Transactions Guide (see chap. V, paras. 144-150), is important because, in many cases in which two secured creditors have a security right in the same asset, one or both of those security rights exist because that asset constitutes proceeds of a different encumbered asset in which the secured creditor had a security right and which the grantor has sold. Situations in which a secured creditor has a security right in proceeds are quite common when the original encumbered asset was inventory or a receivable inasmuch as a grantor will frequently sell the inventory or collect a receivable before satisfaction of the obligation secured by that asset. In such a case, the security right continues in the proceeds as provided in article 10 and the security right in the proceeds is effective against third parties if the conditions in article 19 are satisfied. This article determines the priority of that security right in an encumbered asset as proceeds as against another secured creditor with a security right in the same encumbered asset, whether as original encumbered asset or as proceeds. Under this article, the priority of the security right in the proceeds is the same as the priority of the security right in the original encumbered asset.

14. Thus, for example, assume that: (a) on Day 1, Grantor creates in favour of SC 1 a security right in all of Grantor's present and future inventory and SC 1 registers a notice with respect to that security right; (b) on Day 2, Grantor creates in favour of SC 2 a security right in all of Grantor's present and future receivables and SC 2 registers a notice with respect to that security right; and (c) on Day 3, Grantor sells some of its inventory on credit, generating a receivable. SC 2 has a security right in that receivable because of its security right in present and future receivables, while SC 1 has a security right in that receivable because it is proceeds of the inventory in which SC 1 had a security right. SC 1's security right in the receivable has priority over SC 2's security right because the priority of SC 1's security right in the receivable as proceeds is determined utilizing the time of third-party effectiveness or registration of notice with respect to the security right in the inventory, whichever came first (see art. 29). Thus SC 1's priority in the receivable dates from Day 1, while SC 2's priority in the receivable dates from Day 2 (for security rights in proceeds of acquisition security rights, however, see art. 41).

Article 33. Competing security rights in tangible assets commingled in a mass or transformed into a product

15. Article 33 addresses two priority issues resulting from situations in which one or both of the competing security rights is a security right that continued in (or extended to) a mass or product because the original encumbered asset was commingled in that mass or transformed into that product (see Secured Transactions Guide, chap. V, paras. 117-124 and recs. 90 and 91). First, paragraph 1 addresses situations in which the competing security rights were in the same encumbered asset and that asset became part of a mass or product. In that case, the order of priority of the security rights in the mass or product is the same as the order of priority of the security rights in the original encumbered asset. Second, paragraphs 2 and 3 address situations in which the competing security rights were originally in different encumbered assets and all of those encumbered assets became part of the same mass or product. In such a case, if the value of the two security rights in the mass or product, as determined in article 11 (see A/CN.9/WG.VI/WP.71/Add.1, paras. 66-68), is insufficient to satisfy the secured obligations, the secured parties share the aggregate maximum value of their security rights in same proportion as the ratio of the value of the security rights in the mass or product.

Article 34. Security rights competing with rights of buyers or other transferees, lessees or licensees of an encumbered asset

16. Article 34 is based on recommendations 79-82 of the Secured Transactions Guide (see chap. V, paras. 60-89). It determines the rights of a buyer or other transferee, lessee or licensee of an encumbered asset vis-à-vis the security right. The general rule, which is stated in paragraph 1 and is subject to important exceptions stated in paragraphs 2-6, is that a security right in an encumbered asset that is effective against third parties continues to encumber the asset notwithstanding the sale or other transfer, lease or licence of the encumbered asset. The article provides two types of exceptions to the general principle stated in paragraph 1. Paragraphs 2 and 3 provide exceptions based on the actions of the secured creditor, while paragraphs 4-6 provide exceptions based on the nature of the sale, lease or licence and the knowledge of the buyer, lessee or licensee.

17. Paragraph 2 provides that, if the secured creditor authorizes the sale or other transfer of the encumbered asset free of the security right, the buyer or other transferee acquires its rights in the asset free of that security right. The rule in this paragraph fulfils the intention of the parties inasmuch as the secured creditor has, by its authorization, evidenced intent for the general rule in paragraph 1 not to apply. Such an authorization may be given in the security agreement or separately. It may be given when, for example, a sale or other transfer of an encumbered asset free of the security right would generate proceeds that the grantor can use to satisfy the secured obligation, but a sale or other transfer subject to the security right would generate a smaller amount of proceeds and thus result in the satisfaction of a smaller part of the secured obligation. Paragraph 3 brings about the same result in the case of a lease or licence of the encumbered asset. It is stated differently than the rule in paragraph 2 because some, but not all, States do not characterize the rights of a lessee or licensee as property rights.

18. Paragraphs 4-6 provide that a buyer (not a transferee without consideration), lessee, or licensee of a tangible encumbered asset (but not reified intangibles, such as money, negotiable instruments, negotiable documents and certificated non-intermediated securities; see art. 2, subpara. (ll)) in a transaction in the ordinary course of business of the seller, lessor or licensor acquires its rights in that asset free of the security right that encumbered it while in the hands of the seller, lessor, or licensor. Under paragraph 4, a buyer of a tangible encumbered asset (not a transferee without consideration) acquires its rights free of the security right if two conditions are satisfied. First, the sale must have been in the ordinary course of the seller's business. Thus, for example, the sale of some of a seller's inventory in accordance with the typical business practices of the seller would satisfy this condition, but an atypical sale by that seller of a used item of the seller's equipment would not satisfy this condition. The second condition is that the buyer must have acquired the encumbered asset without knowledge (as of the time of the conclusion of the agreement with the seller pursuant to which the buyer acquired the asset) that the sale violated the rights of the secured creditor under the security agreement.

19. "Knowledge" is defined in article 2, subparagraph (r), as actual knowledge. Therefore, "constructive knowledge" that the sale violated the rights of the secured creditor does not disqualify the buyer from the protection of this provision. It is also important to note that knowledge of the existence of the security right, as opposed to knowledge that the sale violated the secured creditor's rights, is insufficient to disqualify the buyer from the benefits of paragraph 4. If, for example, a buyer knows that the seller has encumbered its inventory, but does not know whether the secured creditor has authorized sales of that inventory free of the security right, the buyer has knowledge of the security right but does not have knowledge of whether the sale violated the rights of the secured creditor.

20. Paragraphs 5 and 6 bring about similar results to those in paragraph 4 in the case of leases of tangible encumbered assets and non-exclusive licences of intellectual property. As with paragraph 3, the formulation of paragraphs 5 and 6 differs from the formulation of paragraph 4, because some, but not all, States do not characterize the

rights of a lessee or licensee as property rights. Paragraphs 7 and 8 state what is often referred to as a "shelter principle". Accordingly, once a buyer or other transferee, lessee, or licensee obtains rights in the encumbered asset free of (or unaffected by) a security right, those that acquire their rights in the encumbered assets from or through the buyer, lessee, or licensee are similarly free of (or unaffected by) that security right.

21. Paragraph 9 protects a buyer or lessee who acquired its rights in consumer goods that are subject to a security right before the security right was made effective against third parties by one of the methods provided in article 18. If the security right was made effective against third parties automatically as provided in article 24, a buyer or lessee of consumer goods acquire its rights subject to or affected by the security right in the goods. It should be noted that article 24 applies to consumer goods with an acquisition price below an amount to be specified by the enacting State (see A/CN.9/WG.VI/WP.71/Add.1, paras. 94 and 95).

Rights of buyers or other transferees, lessees or licensees of an encumbered asset in the case of specialized registration

22. States that provide a specialized registry or title certificate system for achieving third-party effectiveness of a security right in particular types of asset (see A/CN.9/WG.VI/WP.71/Add.1, para. 85, and A/CN.9/WG.VI/WP.71/Add.6, para. 10) may wish to consider whether, in order to enable competing claimants that utilize the specialized registry or title certificate system to determine their rights solely by a search of the specialized registry system or examination of the title certificate, rights of such parties should be superior to the rights of a secured creditor that achieved third-party effectiveness by other means (see Secured Transactions Guide, chap. V, paras. 56 and 57, and rec. 77; for the coordination with specialized movable property registries, see Registry Guide, paras. 64-70).

Article 35. Impact of the grantor's insolvency on the priority of a security right

23. Under article 35, a security right that is effective against third parties remains effective against third parties notwithstanding the commencement of insolvency proceedings against the grantor. Moreover, nothing in the secured transactions law changes the priority of that security right as against the rights of competing claimants merely because insolvency proceedings have been commenced. Thus, unless the applicable insolvency law provides to the contrary, a security right retains the priority it had as against the rights of competing claimants before the commencement of the insolvency proceedings.

Article 36. Security rights competing with preferential claims

24. Article 36 is based on recommendations 83, 85 and 86 of the Secured Transactions Guide (see chap. V, paras. 90-93 and 103-109). It provides a framework by which the enacting State can implement the policy of these recommendations by: (a) listing in a clear and specific way any claims that will have priority over security rights; and (b) indicating a cap on the amount of the claim given priority. Once a State lists any preferential claims and their amounts in article 36, secured creditors will be positively informed and thus can take the preferential claims and their amounts into account before lending (for example, by deducting the amount of the preferential claims from the net worth of a potential grantor that can be used as security for credit). It should be noted that article 36 provides a framework for the enacting State to list claims that will have priority over security rights whether or not insolvency proceedings have been commenced with respect to the grantor. However, it does not address the issue of whether certain preferential claims have a special priority status triggered by the commencement of insolvency (see Secured Transactions Guide, rec. 239).

25. Examples of claims that some States have determined that should have priority over a competing security right and, thus, should be listed in this article, if the enacting State makes the same determination, include: (a) claims of unpaid sellers or suppliers of goods, or those who have rendered services such as repair services with

respect to goods, but only to the extent that they have retained possession of the goods; and (b) claims of employees for employment benefits.

26. It should be noted that secured creditors typically obtain representations from grantors about preferential claims. However, if a grantor does not disclose the existence of a preferential claim, the secured creditor has only an unsecured claim against the grantor for breach of contract. In any case, whether or not the grantor discloses the existence of that claim, a claim listed by the enacting State in this article has priority to the extent stated in this article.

27. It should also be noted that, in some States, preferential claims are subject to the registration of a notice in the Registry. In some of those States, the priority of preferential claims is subject to the general first-to-register priority rule. This approach is useful only if the notice registered states a maximum amount which every secured creditor may take into account before extending credit. In other States, registered preferential claims have priority even over prior registered security rights. Such registration serves only information purposes. This approach is of limited value to secured creditors (see Registry Guide, paras. 46 and 51).

Article 37. Security rights competing with rights of judgment creditors

28. Article 37 is based on recommendation 84 of the Secured Transactions Guide (see chap. V, paras. 94-102). It determines the priority as between a security right in an encumbered asset and the right of a judgment creditor that has acquired a right in the encumbered asset by taking whatever steps are necessary in order to do so under applicable law. Paragraph 1 gives priority to the right of the judgment creditor if the steps necessary for it to acquire rights in the encumbered asset occur before the security right becomes effective against third parties. The enacting State should complete paragraph 1 by inserting the relevant steps, or a reference to those steps, necessary for a judgment creditor to acquire rights in the encumbered asset. These steps may include actions such as registration of a notice in the security rights registry, seizure of assets or service of a garnishment order.

29. Paragraph 2 provides that, in cases in which the judgment creditor does not acquire its rights in the encumbered asset before the security right becomes effective against third parties, the security right has priority over the right of the judgment creditor. This rule protects a secured creditor against the possibility of having its security right be subordinate to the right of a judgment creditor that did not exist at the time the secured creditor took the steps necessary to make its security right effective against third parties. However, paragraph 2 limits the extent of that priority by providing that the priority of the security right does not extend to: (a) credit extended by the secured creditor more than a short period of time (to be specified by the enacting State) after the judgment creditor notifies the secured creditor that it has taken the steps necessary to acquire its right; or (b) credit extended thereafter pursuant to an irrevocable commitment made before that notification. This rule prevents the secured creditor from exploiting its priority status to increase the secured obligation even after the secured creditor acquires actual knowledge about the rights of the judgment creditor and has had a short period of time to adjust to the existence of those rights. Paragraph 2 also deals with the rare situation in which the judgment creditor acquired its rights in the encumbered asset "at the same time" when the security right became effective against third parties, which may occur where the encumbered assets are future assets.

Article 38. Acquisition security rights competing with non-acquisition security rights

30. Article 38 is based on recommendation 180 of the Secured Transactions Guide (see chap. IX, paras. 131, 136, 137, 143 and 146) and recommendation 247 of the Intellectual Property Supplement (see paras. 259-263). Two alternative options are provided for the enacting State. Both options provide that, under certain circumstances, an acquisition security right has priority over a competing non-acquisition security right in the same encumbered asset even if, under the general priority rule in article 29 the non-acquisition security right would have priority over the acquisition security

right. When those circumstances are present, it is often said that the acquisition security right has "super-priority" over the competing non-acquisition security right.

31. "Super-priority" for acquisition security rights is a feature of the law of most States, whether phrased in terms of a higher priority for security rights securing obligations incurred in order to acquire the encumbered asset or, in many legal systems, as a necessary implication of title to the encumbered asset being retained by the seller (under art. 2, subpara. (kk), a seller's retention-of-title right is a security right). Article 38 continues this advantageous treatment of acquisition finance, providing a variety of "super-priority" rules depending on the nature of the asset that is subject to the acquisition security right. The reference to possession by the secured creditor in paragraphs 1 (a) and 2 (a) of option A and paragraph 1 (a) of option B means possession as a method of third-party effectiveness, and not possession acquired in the context of enforcement. Thus, an acquisition secured creditor who failed to register on time cannot obtain this super-priority by taking possession of the encumbered asset in the context of enforcement or otherwise if the security agreement allowed the acquisition secured creditor to do so. In other words, third-party effectiveness and priority cannot be changed upon commencement of enforcement. Otherwise, each secured creditor could change its priority by commencing enforcement, a result that would introduce great uncertainty.

32. Option A contains three "super-priority" rules. Which of the three rules is applicable in a particular case depends on the nature of the encumbered assets. If the encumbered assets are equipment or its intellectual property equivalent (that is, intellectual property or rights of a licensee under a licence of intellectual property that is primarily used or intended to be used by the grantor in the operation of its business; see art. 2, subpara. (l)), the rule in paragraph 1 applies. If the encumbered assets are either inventory or its intellectual property equivalent (that is, intellectual property or rights of a licensee under a licence of intellectual property held by the grantor for sale or licence in the ordinary course of the grantor's business; see art. 2, subpara. (q)), the rule in paragraph 2 applies. If the encumbered assets are consumer goods or their intellectual property equivalent (that is, intellectual property or rights of a licensee under a licence of intellectual property used or intended to be used by the grantor primarily for personal, family or household purposes; see art. 2, subpara. (f)), the rule in paragraph 3 applies.

33. Under the "super-priority" rule in paragraph 1 of option A, an acquisition security right in equipment or its intellectual property equivalent has priority over a competing non-acquisition security right created by the grantor, if either the acquisition secured creditor is in possession of the asset (unlikely inasmuch as most acquisition security rights are not made effective against third parties by the acquisition secured creditor maintaining possession of the asset) or a notice with respect to the acquisition security right is registered in the Registry within a short period of time to be specified by the enacting State after the grantor obtains possession of the asset (so that registration would not delay the delivery of the assets). Thus, so long as the acquisition secured creditor registers a notice with respect to the acquisition security right within the specified period, that security right will have super-priority over a competing non-acquisition security right that was made effective against third parties even before the acquisition security right was made effective against third parties.

34. Under the super-priority rule in paragraph 2 of option A, additional requirements must be satisfied for an acquisition security right in inventory or its intellectual property equivalent to have "super-priority" over a competing non-acquisition security right. In addition to the requirements set out in paragraph 1, if the non-acquisition secured creditor has registered a notice in the Registry with respect to a security right created by the grantor in an asset of the same kind as the asset that is subject to the acquisition security right, the acquisition security right will have super-priority only if the non-acquisition secured creditor received a notice from the acquisition secured creditor. The notice must: (a) state that the acquisition secured creditor has or intends to acquire an acquisition security right; and (b) describe the

asset sufficiently to enable the non-acquisition secured creditor to identify the asset that is the object of the acquisition security right.

35. There are two reasons for the additional requirements for super-priority in the case of inventory or its intellectual property equivalent. First, because inventory may "turn over" quickly and depreciate quickly, it would be economically inefficient for a potential financier considering extending credit to be secured by a non-acquisition security right in present and future inventory to need to wait for the passage of the period of time stated in paragraph 1 before being certain that the grantor's inventory is not subject to an acquisition security right that will have super-priority. The requirement that the actions required for super-priority in paragraph 2 take place before the grantor obtains possession of the encumbered asset addresses this concern. Second, inasmuch as new inventory can often be difficult to distinguish from old inventory, even a secured creditor with a security right in future inventory that monitors the assets of the grantor will not always be able to easily detect the presence of new inventory that has replaced similar older inventory. Thus, such a secured creditor may not be able to determine that some items of inventory are recently acquired and thus potentially subject to an acquisition security right. The additional notice requirement addresses this concern.

36. Paragraph 4 of option A contains two important rules about the additional notice required in paragraph 2 (b)(ii). First, such a notice may cover acquisition security rights under multiple transactions between the same parties without the need to identify each transaction. Thus, for example, a seller that is planning to engage in a series of transactions with the same grantor, under which the seller will sell inventory to the grantor subject to an acquisition security right, may send a single notice to the competing non-acquisition secured creditor generally describing the set of transactions. Second, the additional notice suffices to bring about super-priority if the grantor acquires the assets subject to the acquisition security right not later than a time period to be specified by the enacting State, such as five years, after that notice is received. As a result, a seller that provides a notice for a series of transactions in which acquisition security rights are created will not need to send another notice with respect to assets acquired within that time period after the first notice is received.

37. Under the super-priority rule in paragraph 3 of option A, an acquisition security right in consumer goods or their intellectual property equivalent automatically has priority over a non-acquisition security right in the same encumbered asset. No additional actions are required in order for the acquisition security right to enjoy super-priority.

38. Option B contains only two "super-priority" rules. The first rule, found in paragraph 1, is identical to paragraph 1 of option A (which applies only to equipment) except that it also applies to inventory and the intellectual property equivalent of inventory. The second rule, found in paragraph 2, is identical to paragraph 3 of option A. Thus, the only difference between option A and option B is that, in the former, additional steps must be taken in order for an acquisition security right in inventory or in the intellectual property equivalent of inventory to have priority over a competing non-acquisition security right.

Article 39. Competing acquisition security rights

39. Article 39 is based on recommendation 182 of the Secured Transactions Guide (see chap. IX, paras. 173-178). It addresses the priority of competing security rights when all of them are acquisition security rights. Unlike article 38 (which gives priority to acquisition security rights that satisfy certain criteria as against non-acquisition security rights), this article addresses priority as between security rights that would otherwise be entitled to "super-priority". The rule in article 39 reflects two policy decisions. First, under paragraph 1, except in the case addressed in paragraph 2, inasmuch as competing acquisition security rights are entitled to super-priority and super-priority gives no reason to prefer one over the other, priority should be determined on the basis of the general rules applicable. Second, under paragraph 2, an acquisition security right of a seller or lessor, or a licensor of intellectual property,

has priority over an acquisition security right of another person such as a lender. Thus, paragraph 2 protects the supplier of goods on credit over the lender of money because the supplier is often a small- or medium-size enterprise and the kind of credit it provides is extremely important for the economy as a whole (see para. 40 below).

Article 40. Acquisition security rights competing with the rights of judgment creditors

40. Article 40 is based on recommendation 183 of the Secured Transactions Guide (see chap. IX, paras. 145-148). Without the rule in this article, the period provided in article 38 would not be useful. The reason for this is that a secured creditor taking an acquisition security right typically would not want to have a period in which it would be vulnerable to the rights of a judgment creditor. In such a case, a secured creditor would likely register a notice before, or as soon as possible after, the security right was created. Accordingly, a secured creditor would not benefit from the longer period to register and achieve "super-priority" under article 38. Article 40 is another provision protecting the supplier of goods on credit because of the importance of this kind of credit for the economy as a whole (see para. 39 above).

41. By way of illustration, assume that Grantor acquires an item of equipment from Seller on credit on Day 1 and creates in favour of Seller an acquisition security right in the item of equipment to secure its obligation to pay the remainder of the purchase price. On Day 5 Seller registers a notice that has the effect of making its acquisition security right effective against third parties. Between those two dates, on Day 3, Judgment Creditor obtains a judgment against Grantor and takes the steps specified in article 37, paragraph 1, to acquire rights in the item of equipment. Under the rule in article 37, paragraph 1, Judgment Creditor's rights would have priority over Seller's security right because Judgment Creditor obtained its rights before Seller's security right was effective against third parties. As a result of the operation of article 40, however, Seller's security right has priority over the rights of Judgment Creditor.

Article 41. Competing security rights in proceeds of an asset subject to an acquisition security right

42. Article 41 is based on recommendation 185 of the Secured Transactions Guide (see chap. IX, paras. 158-172). Both option A and option B of article 38 provide that, under certain circumstances, an acquisition security right has priority over a competing non-acquisition security right in the same encumbered asset even if, under the general priority rule in article 29, the non-acquisition security right would have priority. This article determines whether that "super-priority" over non-acquisition security rights carries over to proceeds of the encumbered assets that are subject to the acquisition security right so that the security right in proceeds of the asset subject to an acquisition security right also has super-priority.

43. Under the general principles of article 10, a secured creditor with a security right in an asset obtains a security right in the identifiable proceeds of that asset and, under the circumstances described in article 19, that security right is effective against third parties. This is equally true of assets subject to non-acquisition security rights and those subject to acquisition security rights. Under the rule in article 32, the priority of the security right in the proceeds is the same as the priority of the security right in the original encumbered asset. Under that rule, the security right in proceeds of assets subject to an acquisition security right would have the same "super-priority" as the security right in the original encumbered asset. Article 41, however, limits the reach of article 32 by extending "super-priority" to proceeds only of certain types of asset subject to an acquisition security right (option A) or by not extending the "super-priority" to proceeds at all (option B).

44. Under option A, the "super-priority" with respect to the assets subject to the acquisition security right always carries over to the proceeds of those assets, except when the assets subject to the acquisition security right consist of inventory, consumer goods or their intellectual property equivalent. When the asset subject to the acquisition security right is inventory or its intellectual property equivalent, whether

the "super-priority" carries over to proceeds depends on the nature of the proceeds. If the proceeds are receivables, negotiable instruments or rights to payment of funds credited to a bank account, the "super-priority" does not carry over to those proceeds. If, on the other hand, the proceeds take another form, the "super-priority" does carry over to the proceeds. When the assets subject to the acquisition security right are consumer goods or intellectual property, or rights of a licensee under a licence of intellectual property used or intended to be used by the grantor primarily for personal, family or household purposes, however, the "super-priority" does not carry over to the proceeds.

45. The primary reason for the decision not to provide "super-priority" for certain types of proceeds in option A relates to the difficulty that would be faced by competing secured creditors with security rights in payment rights in determining which of those payment rights are proceeds of assets subject to acquisition security rights and which are not. As a result, if there were "super-priority" treatment for those types of proceeds, competing secured creditors with security rights in payment rights might simply assume that all of those payment rights are proceeds and, as a result, extend less credit on the basis of them.

46. Option B provides that the "super-priority" with respect to assets subject to an acquisition security right does not carry over to proceeds of those assets under any circumstances, with the result that the priority of the security right in the proceeds will be determined under the general principle in article 29. This option is provided as an option for States that do not wish to make the sort of distinctions between types of proceeds made in option A.

47. As the Model Law does not deal with insolvency-related matters, with the exception of article 35 (see para. 23 above), no article has been included in the Model Law along the lines of recommendation 186 of the Secured Transactions Guide to deal with the application of the special priority rules for acquisition security rights. However, there is nothing in these articles to imply that insolvency law will not operate against the background of secured transactions law and thus that these provisions will not apply to acquisition security rights in the case of insolvency.

Article 42. Acquisition security rights extending to a mass or product competing with non-acquisition security rights in the mass or product

48. Article 42 deals with situations in which a grantor has created an acquisition security right in an asset that later becomes part of a mass or product and has also created a security right in the mass or product. Under article 11, when the original asset becomes part of the mass or product, the secured creditor has a security right in that mass or product, subject to the limits set forth in that article. Article 42 provides that the security right in the mass or product that results from the acquisition security right in the separate asset has priority over the security right in the mass or product as an original encumbered asset, even if the latter security right would otherwise have had priority under the rules in article 29.

Article 43. Subordination

49. Article 43 is based on recommendation 94 of the Secured Transactions Guide (see chap. V, paras. 128-131). Paragraph 1 allows a person to agree to lower priority of its security right as against a competing claimant than would otherwise result from application of the priority rules in this chapter.

50. Such an agreement, usually referred to as a subordination agreement, may be in the form of a bilateral agreement between the party agreeing to lower priority and the competing claimant that will benefit from that agreement; it may also be a unilateral commitment (usually made to the grantor) by the party agreeing to lower priority that its priority will be lower than that of the beneficiaries described in the commitment. Such an agreement is governed by this article so long as it is between a secured creditor and a grantor, between two or more secured creditors or between a secured creditor and another competing claimant (e.g. a judgment creditor or an insolvency representative).

51. Paragraph 2 makes it clear that, as an agreement, a subordination agreement binds only the parties to it and does not subordinate the claims of any other parties. For example, assume that three secured creditor, SC 1, SC 2 and SC 3, have security rights in the same encumbered assets, securing claims of € 50.00, € 10.00 and € 70.00, respectively. Assume further that the order of priority is SC 1, SC 2 and SC 3, and that SC 1 subordinates its claim to that of SC 3. Under the rule in paragraph 2, the effect of subordination is that SC 3 will succeed to SC 1's priority status up to € 50.00 and that SC 2's claim to the next € 10.00 will not be affected.

Article 44. Future advances and future encumbered assets

52. Article 44 is based on recommendations 97-99 of the Secured Transactions Guide (see chap. V, paras. 135-143). Inasmuch as a security right can secure obligations arising after the conclusion of the security agreement (see art. 7) and a secured obligation can be secured by assets created or acquired after the conclusion of the security agreement (see art. 8), this article clarifies the priority of a security right in such circumstances.

53. Paragraph 1 provides that the priority of a security right extends to all obligations it secures, regardless of when those obligations were incurred. Thus, a security right has the same priority over the right of a competing claimant whether the entire secured obligation was incurred at or before the creation of the security right or whether the security right secures obligations incurred thereafter. Paragraph 2 similarly provides that when a security right has been made effective against third parties by the registration of a notice, the priority resulting from the time of that notice under article 29 is the same whether the encumbered assets were owned by the grantor at the time of registration or acquired thereafter.

Article 45. Irrelevance of knowledge of the existence of a security right

54. Article 45 is based on recommendation 93 of the Secured Transactions Guide (see chap. V, paras. 125-127). A secured creditor's knowledge or lack of knowledge of a competing security right is not relevant to a determination of priority as between the secured creditor's security right and the competing security right under either the general priority rule in article 29 or any of the special priority rules. The point is made explicit in this article to emphasize that priority is determined only on the basis of the facts referred to in those priority rules and not on the basis of difficult-to-prove subjective states of knowledge. Article 45 applies only to the knowledge of the existence of a competing security right. Under the Model Law, knowledge of other facts may be relevant to priority. For example, a buyer of a tangible encumbered asset that has knowledge that the sale violates the rights of a secured creditor with a security right in that asset under the security agreement does not take free of the security right (see art. 34, para. 4).

B. Asset-specific rules

Article 46. Negotiable instruments

55. Article 46 is based on recommendations 101 and 102 of the Secured Transactions Guide (see chap. V, paras. 154-156). Differences between article 46 and recommendations 101 and 102 are of a drafting nature and are intended to ensure that paragraph 1 deals only with the relative priority of competing security rights in the same negotiable instrument, while paragraph 2 addresses the rights of a secured creditor with a security right in a negotiable instrument as against a buyer or other consensual transferee of the negotiable instrument.

56. Under paragraph 1, a security right in a negotiable instrument that is made effective against third parties by the secured creditor's possession of the negotiable instrument has priority over a security right in the same negotiable instrument that is made effective against third parties by registration of a notice, without regard to the order in which the security rights became effective against third parties. This is

consistent with the important role that possession plays in the law of negotiable instruments.

57. Under paragraph 2, certain buyers or other transferees that obtain possession of a negotiable instrument acquire their rights in the instrument free of a security right that is effective against third parties by registration of a notice. More specifically, under paragraph 2, a buyer or other consensual transferee of a negotiable instrument can acquire its rights free of a security right in that instrument in either of two ways. First, under paragraph 2 (a), a person who becomes a protected holder or the like (the enacting State should insert the appropriate term in para. 2 (a)) of the negotiable instrument under the law of the enacting State acquires its right in the instrument free of an existing security right in it. Second, under paragraph 2 (b), a buyer or other transferee that takes possession of the instrument and gives value for it without knowledge that the sale or other transfer is in violation of the rights of the secured creditor also acquires its right in the instrument free of that security right. As with the rule in paragraph 1, this rule preserves the important role of possession in the law of negotiable instruments.

58. Knowledge of the existence of a security right does not prevent a buyer or other consensual transferee of a negotiable instrument from acquiring its rights in the instrument free of the security right under paragraph 2 (b) (although such knowledge may prevent the buyer from qualifying as a protected purchaser or the like and, thus, may prevent the buyer from taking free of the security right under paragraph 2 (a)). Rather, only knowledge that the transfer violates the rights of the secured creditor under the security agreement prevents the transferee from acquiring its rights in the instrument free of the security right under paragraph 2 (b). “Knowledge”, as defined in article 2, subparagraph (r), means “actual knowledge”. The reference to “good faith” that was included in recommendation 102 (b) has been deleted on the understanding that the absence of knowledge amounts essentially to good faith and the concept of good faith is used in the Model Law only to reflect an objective standard of conduct.

Article 47. Rights to payment of funds credited to a bank account

59. Article 47 is based on recommendations 103-105 of the Secured Transactions Guide (see chap. V, paras. 157-163). It determines the priority between competing security rights in a right to payment of funds credited to a bank account whether those rights to payment are original encumbered assets or proceeds of a security right in other property (according to art. 19, para. 1, a security right in proceeds in the form of a right to payment of funds credited to a bank account is automatically effective against third parties, if the security right in the original encumbered asset is effective against third parties). The rationale underlying the rules in article 47 is to avoid bringing the deposit-taking institution into violation of its obligations under other law.

60. Paragraphs 1-3, taken together, result in the conclusion that a security right in a right to payment of funds credited to a bank account made effective against third parties by any of the methods provided for in article 25 has priority over a security right made effective against third parties by registration of a notice in the Registry. Under paragraph 1, a security right in a right to payment of funds credited to a bank account that is made effective against third parties by the secured creditor becoming the account holder has priority over all competing security rights in the same asset. Next in priority order, paragraphs 2 and 3 give priority to: (a) a security right in a right to payment of funds credited to a bank account with respect to which the secured creditor is the deposit-taking institution; and (b) a security right made effective against third parties by a control agreement. Under paragraph 4, if there are multiple control agreements, priority is determined on the basis of the order of conclusion of the control agreements.

61. Under paragraph 5, except when the secured creditor has become the account holder, a security right in a right to payment of funds credited to a bank account is subordinate to the deposit-taking institution’s rights under other law to set off claims against the grantor against its obligations to the grantor with respect to the grantor’s

right to payment of funds from the bank account. This rule protects deposit-taking institutions from losing their rights of set-off without their knowledge or consent.

62. Under paragraph 6, a transferee of funds from a bank account pursuant to a transfer initiated or authorized by the grantor acquires its rights free of a security right in the right to payment of funds credited to the bank account so long as the transferee does not have knowledge that the transfer violates the rights of the secured creditor under the security agreement. A "transfer of funds" includes transfers by a variety of mechanisms, including by cheque and electronic means. The purpose of paragraph 6 is to preserve the free negotiability of funds.

63. Knowledge of the existence of a security right does not prevent a transferee of funds from the bank account from taking free of the security right. Rather, it is only knowledge that the transfer violates the rights of the secured creditor under the security agreement that prevents the transferee from taking free. "Knowledge", as defined in article 2, paragraph (r), means "actual knowledge". Paragraph 7 is intended to preserve the rights of transferees of funds credited to a bank account under other law to be specified by the enacting State.

Article 48. Money

64. Article 48 is based on recommendation 106 of the Secured Transactions Guide (see chap. V, para. 164). Its purpose is to preserve negotiability of money. Thus, under paragraph 1, a transferee of encumbered money acquires its rights in it free of the security right, unless it has knowledge that the transfer violates the rights of the secured creditor under the security agreement. "Knowledge", as defined in article 2, paragraph (r), means "actual knowledge". Under paragraph 2, to preserve the negotiability of money, the rule of paragraph 1 should not adversely affect the rights of persons in possession of money under the relevant law to be specified by the enacting State.

Article 49. Negotiable documents and tangible assets covered by negotiable documents

65. Article 49 is based on recommendations 108 and 109 of the Secured Transactions Guide (see chap. V, paras. 167-169). It is designed to preserve current practices under which rights to the tangible assets covered (or represented) by a negotiable document are subsumed in the negotiable document with the result that parties that deal with the document generally need not concern themselves separately with claims to the assets not reflected in the document. Accordingly, under paragraph 1, a security right in a tangible asset made effective against third parties by possession of the negotiable document covering that asset is given priority over a competing security right made effective against third parties by any other means.

66. Paragraph 2 states an exception to that general rule. Except when the encumbered asset is inventory, it provides that the rule in paragraph 1 does not apply to a security right in an encumbered asset made effective against third parties before the asset became covered by the negotiable document or the time of conclusion of an agreement between the grantor and the secured creditor in possession of the negotiable document. The agreement must provide that the asset was to be covered by a negotiable document so long as the asset actually became covered by such a negotiable document within the time to be specified by the enacting State.

Article 50. Intellectual property

67. Article 50 is based on recommendation 245 of the Intellectual Property Supplement (see paras. 193-212). Its purpose is to clarify that the rule in article 34, paragraph 6, does not obviate other rights of the secured creditor in its capacity as an owner or licensor of the intellectual property that is the subject of the licence. This clarification is of particular importance because the concept of "ordinary course of business", used in article 34, paragraph 6, is a concept of commercial law and is not drawn from law relating to intellectual property and thus may create confusion in an intellectual property context. Typically, law relating to intellectual property does not

distinguish in this respect between exclusive and non-exclusive licences and focuses rather on the issue whether a licence has been authorized or not.

68. As a result, unless the secured creditor authorized the grantor to grant licences unaffected by the security right (which will typically be the case as the grantor will rely on its royalty income to pay the secured obligation), the licensee would take the licence subject to the security right. Thus, if the grantor defaults, the secured creditor would be able to enforce its security right in the licensed intellectual property and sell or license it free of the licence. In addition, a person obtaining a security right from the licensee will not obtain an effective security right as the licensee would not have received an authorized licence and would have no right in which to create a security right.

Article 51. Non-intermediated securities

69. Article 51 covers a topic not addressed in the Secured Transactions Guide, which excluded from its scope security rights in all types of securities (see rec. 4 (c)). So as not to interfere with existing customs and practices with respect to non-intermediated securities, this article adjusts the general priority rule of article 29 in a manner similar to the special priority rules for security rights in negotiable instruments and rights to payment of funds credited to a bank account.

70. For certificated non-intermediated securities, paragraph 1 provides that a security right made effective against third parties by the secured creditor's possession of the certificate has priority over a competing security right created by the same grantor that is made effective against third parties by registration of a notice in the Registry. This is parallel to the rule for negotiable instruments in article 46, paragraph 1.

71. For uncertificated non-intermediated securities, paragraph 2 provides that a security right made effective against third parties by registration in the books maintained for that purpose by or on behalf of the issuer has priority over a security right in the same securities made effective against third parties by any other method. Such registration may take the form of a notation of the security right or an entry of the name of the secured creditor as the holder of the securities in the issuer's books. The enacting State may choose the method that best suits its legal system. This rule is similar to the rule for rights to payment of funds credited to a bank account in article 47, paragraph 1. The rationale for this rule is that such notation or registration in the books of the issuer fulfils a similar function to the secured creditor becoming the account holder of a bank account.

72. Paragraphs 3 and 4 are also applicable only to uncertificated non-intermediated securities. They parallel the similar rules for rights to payment of funds credited to a bank account in article 47, paragraphs 3 and 4. Paragraph 3 gives priority to a security right made effective against third parties by conclusion of a control agreement over other security rights in the same securities. As between security rights made effective against third parties by conclusion of a control agreement, paragraph 4 awards priority in the order in which those control agreements were concluded.

73. Paragraph 5 is intended to preserve the rights of transferees of non-intermediated securities under other law to be specified by the enacting State. It parallels article 47, paragraph 7. Paragraph 5 recognizes that enacting States may have complex regimes that protect certain holders of non-intermediated securities under their law relating to the transfer of securities and that these regimes may diverge more widely than with respect to negotiable instruments and negotiable documents. Accordingly, unlike articles 46, paragraph 2, 47, paragraph 6, and 49, paragraph 3, that protect transferees of encumbered negotiable instruments, funds from bank accounts and negotiable documents, paragraph 5 of article 51 simply defers to those regimes.

Paragraphs

Chapter VI. Rights and obligations of the parties and third-party obligors

Section I. Mutual rights and obligations of the parties to a security agreement

A. General rules

Article 52. Sources of mutual rights and obligations of the parties

1. Article 52 is based on recommendation 110 of the Secured Transactions Guide (see chap. VI, paras. 14 and 15), which in turn is based on article 11 of the Assignment Convention. Paragraph 1 is intended to reiterate the principle of party autonomy enshrined in article 3. Paragraph 2 is intended to give legislative strength to trade usages and practices, which may not be generally recognized in all States.

2. With the exception of certain mandatory rules included in chapter VI (see arts. 3, para. 1, 53, 54 and 72, para. 3), the parties are given wide latitude to tailor their security agreement and their usage and practices to the transaction at hand in order to most effectively and efficiently facilitate their respective commercial goals. The other articles of chapter VI are non-mandatory rules and apply where the parties have not provided otherwise in the security agreement. For this reason, a reference to contrary agreement of the parties, which was included in the recommendations of the Secured Transactions Guide and the provisions of the Assignment Convention on which the provisions of this chapter are based, has been deleted (see, for example, article 57, recommendation 114 of the Secured Transactions Guide and article 12 of the Assignment Convention).

Article 53. Obligation of the party in possession to exercise reasonable care

3. Article 53 is based on recommendation 111 of the Secured Transactions Guide (see chap. VI, paras. 24-31). It sets forth the rule that a grantor or secured creditor in possession of a tangible asset (which under the definition in art. 2, subpara. (ll), includes money, negotiable instruments, negotiable documents and certificated non-intermediated securities) must exercise reasonable care to preserve the asset. Any other person in possession of an encumbered asset may also be obliged to take reasonable care to preserve the encumbered assets under other law.

4. What constitutes "reasonable care" in a given case depends upon the nature of the encumbered asset. Thus, reasonable care may mean something different with respect to equipment, inventory, crops or live animals. Preservation of the asset normally includes preservation of its value. The obligation to preserve the value of the asset may also arise under article 4, according to which a party should act in good faith and in a commercially reasonable manner. Although physical preservation of a tangible asset would, in most cases, have the effect of preserving the asset's value, preservation of the asset's value may go beyond the physical preservation of the asset. For example, if a secured creditor has possession of certificated non-intermediated shares of a company, the secured creditor may be required in particular circumstances to exercise certain rights attached to the shares to preserve their value. However, preservation of the value of the encumbered assets may only include measures that are within the control of the person in possession.

5. Article 53 and a rule of law relating to securities along the lines of article 5(1) of the Financial Collateral Directive ("FCD"), which gives a secured creditor the right to use securities in its possession, should be read together and their relationship would be a matter of interpretation under the rules of the applicable law (under the FCD, "financial collateral" may consist of "cash", "credit claims" and "financial instruments", and "financial instruments" may be either intermediated or non-intermediated securities, as long as they are "negotiable on the capital market" or "normally dealt in").

Article 54. Obligation of the secured creditor to return an encumbered asset

6. Article 54 is based on recommendations 112 and 72 of the Secured Transactions Guide (see chap. VI, paras. 35-39). It provides that, once a security right in an encumbered asset is extinguished, a secured creditor in possession of the asset must return it to the grantor or, if the secured creditor so agrees, deliver it to a person designated by the grantor. In some States, delivery to a person designated by the grantor may be viewed as a means of returning the asset to the grantor. In any case, the additional cost then incurred by the secured creditor should be borne by the grantor in the same way as performance costs are normally payable by the grantor (for the secured creditor's obligation to register an amendment or cancellation notice, see art. 20, paras. 1, 2 and 3 of the Model Registry Provisions). A security right generally will be deemed to have been extinguished once the secured obligation has been paid in full or otherwise satisfied in full, and all further commitments to extend credit to the debtor have terminated.

7. Article 54 deals with a situation in which the secured creditor is in possession of an asset and therefore does not address the obligation of a secured creditor to withdraw any notification that it has given to the debtor of the receivable. However, the grantor is protected in this regard by article 59, paragraph 2, and article 79, paragraph 2 (b), which require the secured creditor to return to the grantor any surplus proceeds it receives. It should also be noted that: (a) article 54 does not apply to receivables or other intangible assets, because they cannot be the subject of physical possession (see art. 2, subpara. (z)); and (b) the question of whether a secured creditor should return securities equivalent to those received is a matter for the parties and other law (see, for example, art. 5(2) FCD).

Article 55. Right of the secured creditor to use and inspect an encumbered asset, and to be reimbursed for expenses

8. Article 55 is based on recommendation 113 of the Secured Transactions Guide (see chap. VI, paras. 50-65). It provides that a secured creditor not only has certain obligations (described in arts. 53 and 54), but also certain rights (in addition to its enforcement rights). Under paragraph 1 (a), a secured creditor in possession has the right to be reimbursed for the reasonable expenses incurred to preserve an encumbered asset in accordance with article 53. Under paragraph 1 (b), a secured creditor in possession may make reasonable use of an encumbered asset, so long as it

applies any revenues generated from the use to the payment of the obligation secured by the asset.

9. Finally, under paragraph 2, where an encumbered asset is in the possession of the grantor, the secured creditor has the right to inspect the asset. As this article is subject to the general standard of commercial reasonableness and good faith set forth in article 4, the right to inspect may only be exercised at reasonable times and in a commercially reasonable manner. The application of this standard depends upon the circumstances. For example, in extreme cases, such as where the debtor is in default or the secured creditor has reason to believe that the physical condition of the collateral is in jeopardy or has been, or is about to be, removed from the State of its location, the secured creditor may be justified to demand an immediate inspection.

Article 56. Right of the grantor to obtain information

10. Article 56 is a new provision intended to provide the grantor (other than the transferor in an outright transfer of a receivable) with the right to obtain information from a secured creditor (other than a transferee under an outright transfer of a receivable) as to the amount of the secured obligation or the assets encumbered at a certain point of time. This information may be necessary where the grantor is interested in obtaining credit against the security of assets that are already encumbered and the potential third-party creditor requests that information (this does not apply to a transferor of a receivable, as such a transferor retains no right in the receivable and thus may not create a security right in it under art. 6, para. 1). The enacting State may wish to extend that right to third-party creditors (e.g. judgment creditors). Other matters, such as the legal consequences of the secured creditor's failure to comply with a request for information or to give accurate information are left to other law.

B. Asset-specific rules

Article 57. Representations of the grantor of a security right in a receivable

11. Article 57 is based on recommendation 114 of the Secured Transactions Guide (see chap. VI, para. 73), which in turn is based on article 12 of the Assignment Convention. It provides that, when a grantor grants a security right in a receivable, the grantor is deemed to make various representations to the secured creditor at the time the security agreement is concluded. In particular, under paragraph 1, the grantor represents that it has not previously created a security right in the receivable in favour of another secured creditor, and that the debtor of the receivable will not have any defences or rights of set-off with respect to the receivable (e.g. that the grantor will fully perform the contract giving rise to the receivable and any other contract it has entered into with the debtor of the receivable). Under paragraph 2, the grantor does not represent that the debtor of the receivable has, or will have, the ability to pay the receivable (as this is beyond the grantor's control). As already noted (see para. 2 above), article 57 is not a mandatory law rule and, as it often happens in a factoring transaction, the grantor may warrant the solvency of the debtor of the receivable on the date the receivable is sold to the factor.

12. The representation that the grantor has the right to create a security right was not carried over from recommendation 114 of the Secured Transactions Guide into article 57, to avoid giving the impression that it applies to security rights created only in receivables. As a result, the matter is left to general contract law. It should be noted, however, that even in the case of an anti-assignment agreement between a grantor and a secured creditor, the grantor still has rights in the receivable and the power to encumber it, and thus may create a security right in the receivable (see art. 6, para. 1, and A/CN.9/WG.VI/WP.71/Add.1, para. 52).

Article 58. Right of the grantor or the secured creditor to notify the debtor of the receivable

13. Article 58 is based on recommendation 115 of the Secured Transactions Guide (see chap. VI, paras. 74 and 75), which is based on article 13 of the Assignment Convention. Paragraph 1 provides that, when a security right has been created in a receivable, either the grantor or the secured creditor has the right to notify the debtor of the receivable of the existence of the security right and send a payment instruction; however, once notification of the security right has been received by the debtor of the receivable, only the secured creditor may send a payment instruction (under art. 62, a notification or a payment instruction is effective only when received by the debtor of the receivable).

14. It should be noted that a payment instruction is treated as a notion distinct from notification, because: (a) a notification may not contain a payment instruction (for example, because the secured creditor may have obtained control of the grantor's bank account to which debtors of receivables have been instructed by the grantor to pay); (b) no notification may be given (for example, because the transaction involved is a non-notification factoring or undisclosed invoice discounting transaction); and (c) the secured creditor may need to change its payment instructions and thus there may be more than one payment instruction.

15. Paragraph 2 provides that a notification sent in breach of an agreement between the grantor of the security right and the secured creditor is nevertheless effective for the purposes of article 64, which precludes the grantor from raising, after receiving notice of the security right, certain rights of set-off with respect to the receivable that became available to the grantor after it received notice of the security right (see para. 35 below).

Article 59. Right of the secured creditor to payment of a receivable

16. Article 59 is based upon recommendation 116 of the Secured Transactions Guide (see chap. VI, paras. 76-80), which in turn is based on article 14 of the Assignment Convention. Any changes made are intended to clarify the text, but not to change its policy. The article establishes the right of the secured creditor to receive the proceeds of a receivable in which it holds a security right as against the grantor of the security right.

17. Paragraph 1 provides that, regardless of whether notification of the security right has been sent to the debtor of the receivable, the secured creditor is entitled to retain: (a) the proceeds of any full or partial payment of the receivable made to the secured creditor, as well as any tangible assets (such as inventory) returned to the secured creditor in respect of the receivable; (b) the proceeds of any full or partial payment of any receivable made to the grantor (as well as any tangible assets returned to the grantor); and (c) the proceeds of any full or partial payment of any receivable made to another person (as well as any tangible assets returned to that person) if the right of the secured creditor has priority over the right of that person.

18. Paragraph 2 reflects normal practice in secured transactions relating to receivables in which the secured creditor may have the right to collect the full amount of the receivable owed, plus any interest payable under contract or by law, but has to account for and return to the grantor any balance remaining after payment of the secured obligation (see also art. 79, para. 2). Of course, in the case of an outright transfer of a receivable by agreement, the transferee may retain the amount collected as it has become the owner of the receivable.

Article 60. Right of the secured creditor to preserve encumbered intellectual property

19. Article 60 is based on recommendation 246 of the Intellectual Property Supplement (paras. 223-226). It recognizes the effectiveness of an agreement between the grantor of a security right in intellectual property and the secured creditor that the

secured creditor may take the necessary steps to preserve the value of the intellectual property, such as making any necessary registration (such as a patent registration) and initiating actions to prevent infringement by third parties.

20. Although articles 3 (party autonomy) and 53 (obligation to preserve an encumbered asset) may be generally sufficient to ensure that the secured creditor may take these steps, article 60 has been included in the Model Law, because, in an intellectual property right context, these rights are normally rights of the intellectual property owner.

Section II. Rights and obligations of third-party obligors

A. Receivables

Article 61. Protection of the debtor of the receivable

21. Article 61 is derived from recommendation 117 of the Secured Transactions Guide (see chap. VII, para. 12), which in turn is based on article 15 of the Assignment Convention. Paragraph 1 sets forth the general principle that the creation of a security right in a receivable does not affect the rights or obligations of the debtor of the receivable, unless the debtor of the receivable consents. So, for example, the creation of a security right cannot change the payment terms of a contract giving rise to a receivable (e.g. the amount or the time of payment).

22. To implement the general principle of paragraph 1, paragraph 2 provides that, to enable the secured creditor to exercise its security right, a payment instruction (which is treated as a notion distinct from notification; see para. 14 above) may change the person, address or account to which the debtor of the receivable is required to make payment, but it may not change: (a) the currency in which the receivable is to be paid, as specified in the contract giving rise to the receivable; or (b) the State in which the payment is to be made, as specified in the contract giving rise to the receivable, to a State other than that in which the debtor of the receivable is located.

Article 62. Notification of a security right in a receivable

23. Article 62 is based on recommendation 118 of the Secured Transactions Guide (see chap. VII, paras. 13-16), which in turn is based on article 16 of the Assignment Convention. It describes the requirements for an effective: (a) notification of a security right in a receivable; or (b) payment instruction (a payment instruction is treated as a notion distinct from notification, see para. 14 above).

24. Under paragraph 1, for the effectiveness of a notification or a payment instruction, it must be “received” by the debtor of the receivable. In addition, a notification or payment instruction must reasonably identify the receivable and the secured creditor, and be in a language reasonably expected to inform the debtor of its contents. On this latter point, paragraph 2 makes it clear that the language of the contract giving rise to the receivable is always sufficient. Under paragraph 3, a notification or payment instruction may relate not only to receivables in existence at the time the notification or payment instruction is given, but also may relate to receivables arising thereafter.

25. Paragraph 4 addresses a scenario where a receivable is the subject of subsequent security rights (e.g., subsequent security assignments or outright transfers). For example, where A creates a security right in its receivables and then transfers the obligation secured by them to B, who also creates a security right in the receivables and then transfers the secured obligation to C, who also creates a security right in the receivables in favour of D, notification of the debtor of the receivables relating to the security right created by C in favour of D constitutes notification of all prior security rights created by A and B.

Article 63. Discharge of the debtor of the receivable by payment

26. Article 63 is based on recommendation 119 of the Secured Transactions Guide (see chap. VII, paras. 17-20), which in turn is based on article 17 of the Assignment Convention. It sets forth the rules affecting when and how a receivable is discharged by payment.

27. Paragraph 1 embodies the basic principle that, until the debtor of the receivable receives notification of a security right in a receivable, it may be discharged by payment in accordance with the contract giving rise to the receivable. Where the contract is a sales contract, this means payment to the seller. However, under paragraph 2, once the debtor receives notification of a security right, it can only be discharged by paying either the secured creditor or another party, as instructed by the secured creditor in the notification or as subsequently instructed by the secured creditor in a written payment instruction received by the debtor. However, the rule in paragraph 2 is subject to a number of qualifications that are set forth in paragraphs 3-8.

28. First, under paragraph 3, if the debtor of the receivable receives more than one payment instruction relating to a single security right in the same receivable created by the same grantor, it is discharged by paying in accordance with the last payment instruction received from the secured creditor before payment, as the last payment instruction will be the most recent (a payment instruction is treated as a notion distinct from notification, see para. 14 above).

29. Second, under paragraph 4, if the debtor receives notification of more than one security right in the same receivable created by the same grantor, it is discharged by paying in accordance with the first notification received, on the theory that the security right covered by the first notification will probably have priority over the subsequent security right under the Model Law's priority rules. It should be noted that the debtor of the receivable is discharged even if the first notification does not relate to the security right with priority, since the debtor cannot be required to determine which security right has priority. In such a case, the secured creditor with a security right that has priority will have to claim the proceeds of payment from the creditor to whom the debtor paid.

30. Third, under paragraph 5, if the debtor receives notification of one or more subsequent security rights in the same receivable, it is discharged by paying in accordance with the notification of the last of such subsequent security rights (i.e. where A creates a security right in favour of B, and B creates a security right in favour of C). The reason is that the last in such a series of successive secured creditors will be the actual holder of the security right.

31. Fourth, under paragraph 6, where the debtor receives notification of a security right in a part of, or an undivided interest in, one or more receivables, the debtor has a choice. It may be discharged by paying either in accordance with the notification or in accordance with paragraph 1 as if the debtor has not received the notification. However, if the debtor chooses the first of these alternatives, under paragraph 7, it is discharged only to the extent of the part or undivided interest paid.

32. Finally, under paragraph 8, if the debtor receives notification from a person other than the initial creditor of the receivable and wants to make sure that that person is a secured creditor entitled to payment, the debtor may request from the person that sent the notification to provide, within a reasonable time, adequate proof of the creation of the security right (including a security right granted by the initial or a subsequent secured creditor). If the secured creditor fails to provide such proof, the debtor may pay as if it had not received such notification. For this purpose, under paragraph 9, adequate proof includes any writing from the grantor that indicates that a security right has been created (e.g. a security agreement).

33. Paragraph 10 is intended to preserve any other ground for discharge based on payment to the person entitled to payment under other law (e.g. payment to a competent judicial or other authority, or to a public fund).

Article 64. Defences and rights of set-off of the debtor of the receivable

34. Article 64 is based on recommendation 120 of the Secured Transactions Guide (see chap. VII, para. 21), which in turn is based on article 18 of the Assignment Convention.

35. Paragraph 1 (a) preserves for the debtor all defences and rights of set-off arising from the contract giving rise to the receivable, including any other contract that was part of the same transaction, as if the security right had never been created and the claim were made by the grantor. Paragraph 1 (b) ensures that the debtor of the receivable can assert against the secured creditor any other right of set-off that was available to the debtor at the time it received notification of the security right. This means, however, that the debtor may not assert a right of set-off that arises subsequent to such notification. Under article 65, the debtor may waive its defences and rights of set-off.

36. Paragraph 2 provides that paragraph 1 does not give the right to the debtor of the receivable to raise against the secured creditor as a defence or right of set-off the breach of an agreement by the grantor limiting the grantor's right to create a security right. Otherwise, the validation of a security right under article 13 notwithstanding such an agreement would be meaningless.

Article 65. Agreement not to raise defences or rights of set-off

37. Article 65 is based on recommendation 121 of the Secured Transactions Guide (see chap. VII, para. 22), which in turn is based on article 19 of the Assignment Convention. Paragraph 1 provides that the debtor of the receivable may agree, in a writing signed by it, not to raise the defences and rights of set-off permitted by article 64. The secured creditor is entitled to invoke the benefit of such an agreement even though it was not a party to it. Under paragraph 2, any modification to such an agreement must also be in a writing signed by the debtor of the receivable and is effective as against the secured creditor only if the secured creditor consents or, in the case of a receivable that has not been earned yet by performance, a reasonable secured creditor would consent (see art. 66, para. 2). To avoid abuses, paragraph 3 provides that the debtor may not waive defences based on fraud committed by the secured creditor or the debtor's incapacity.

Article 66. Modification of the contract giving rise to a receivable

38. Article 66 is based on recommendation 122 of the Secured Transactions Guide (see chap. VII, paras. 23 and 24), which in turn is based on article 20 of the Assignment Convention. It addresses the impact of an agreement between the grantor of a security right in a receivable and the debtor of the receivable that modifies the terms of the receivable. The result depends on when the agreement is made. Under paragraph 1, if the agreement is concluded before the debtor receives notification of a security right in the receivable, it is effective against the secured creditor, but the secured creditor also enjoys any benefits derived from the agreement.

39. Under paragraph 2, even if the agreement is concluded after notification, it is also effective, even if it affects the secured creditor's rights provided that: (a) the secured creditor consents to it; or (b) the receivable has not been fully earned by performance and the modification was provided for in the contract giving rise to the receivable or a reasonable secured creditor would consent to the modification. Paragraph 3 provides that paragraphs 1 and 2 do not affect any right of the grantor or secured creditor arising under other law for breach of an agreement between them (such as an agreement that the grantor would not agree to any modifications of the terms of the receivable).

Article 67. Recovery of payments

40. Article 67 is based on recommendation 123 of the Secured Transactions Guide (see chap. VII, paras. 25 and 26), which in turn is based on article 21 of the

Assignment Convention. It addresses the situation in which the grantor of a security right in a receivable (or the transferor in an outright transfer of the receivable by agreement) fails to perform its obligations under the contract giving rise to the receivable. The article insulates the secured creditor from liability in this circumstance, by providing that the debtor of the receivable may not look to the secured creditor to recover any amount that it has paid to either the grantor or the secured creditor. As a result, the debtor of the receivable bears the risk of the insolvency of the other party to the contract giving rise to the receivable (i.e. the grantor).

B. Negotiable instruments

Article 68. Rights as against the obligor under a negotiable instrument

41. Article 68 is based on recommendation 124 of the Secured Transactions Guide (see chap. VII, paras. 27-31). It is intended to preserve the rights of parties under the relevant law relating to negotiable instruments (to be specified by the enacting State). For example, under that law: (a) a secured creditor with a security right in a negotiable instrument may collect from the obligor under the instrument only in accordance with its terms; (b) even if the grantor defaults, the secured creditor may collect from the obligor only when payment becomes due under the instrument and the law relating to such instruments; (c) a secured creditor with a security right in a negotiable instrument may have greater rights against the issuer of the instrument than the payee, since the issuer may not be able to raise against the secured creditor defences based on the contract between the issuer and the payee of the instrument. It should be noted that the reference in article 68 (as well as arts. 70 and 71) to another law of the enacting State will only apply if the enacting State's law is the applicable law under the conflict-of-laws rules of chapter VIII.

C. Rights to payment of funds credited to a bank account

Article 69. Rights as against the deposit-taking institution

42. Article 69 is based on recommendations 125 and 126 of the Secured Transactions Guide (see chap. VII, paras. 32-37). It addresses the situation in which a security right is created in a right to payment of funds credited to a bank account.

43. Paragraph 1 (a) provides that the rights and obligations of the deposit-taking institution are unaffected by the security right, unless the institution consents. The rationale for protecting deposit-taking institutions in this manner is that imposing duties on an institution or changing the rights and duties of the institution without its consent may subject that institution to risks that it is not in a position to manage appropriately unless it knows in advance what those risks might be and to the risk of having to violate obligations imposed by regulatory or other law (see Secured Transactions Guide, chap. VII, para. 33).

44. To safeguard the confidentiality of the relationship of a deposit-taking institution and its client that is imposed by regulatory or other law, paragraph 1 (b) also provides that the deposit-taking institution has no obligation to respond to requests for information (e.g. about the balance in the account, whether a control agreement exists or whether the account holder retains the right to dispose of funds credited to its bank account).

45. Finally, paragraph 2 provides that, even where the deposit-taking institution consents to the creation of a security right in a right to payment of funds credited in a bank account held by a grantor with that institution, any right of set-off that the institution may have under regulatory or other law also remains unaffected. The rationale for this rule is the need to avoid any interference with the way

deposit-taking institutions manage risks, given the nature of the transaction and the business of their customer.

D. Negotiable documents and tangible assets covered by negotiable documents

Article 70. Rights as against the issuer of a negotiable document

46. Article 70 is based on recommendation 130 of the Secured Transactions Guide (see chap. VII, paras. 43-45). It provides that, when a secured creditor has a security right in a negotiable document, the rights of the secured creditor as against the issuer of the document or any person obligated on the document are determined by the law relating to negotiable documents (to be specified by the enacting State). This means that, for a secured creditor with a security right in the document to enforce it against the assets covered by the document: (a) at the time of enforcement, the assets covered by the document must still be in the possession of the issuer or other obligor under the document; and (b) the issuer or other obligor will have no obligation to deliver the assets to the secured creditor, unless the negotiable document was transferred to the secured creditor in accordance with the law governing negotiable documents (e.g. with any necessary endorsement).

E. Non-intermediated securities

Article 71. Rights as against the issuer of a non-intermediated security

47. As already mentioned, the Secured Transactions Guide does not address security rights in any types of securities (see rec. 4 (c)). Thus, article 71 is a new rule. In line with articles 68-70, it provides that the rights of a secured creditor holding a security right in non-intermediated securities as against the issuer of the securities are determined by other law of the enacting State. For example, registration on the books of a corporation or special enforcement procedures may be required for a security right in the shares of a corporation to be effective against the issuer.

Chapter VII. Enforcement of a security right

A. General rules

Article 72. Post-default rights

48. Article 72 is based on recommendations 133, 139, 141, 143, and 144 of the Secured Transactions Guide (see chap. VIII, paras. 10-12, 15-17, and 34 and 35). Paragraph 1 clarifies that, following the grantor's default, the grantor and the secured creditor may exercise any right they may have under the provisions of chapter VII, other law or the security agreement (provided that, in the last two cases, that right is not inconsistent with the provisions of the Model Law).

49. For the purposes of the Model Law, "default" includes both events described in the relevant law as a "default" and events agreed to by the parties as a "default" (see art. 2, subpara. (j)). It should also be noted that some of the rights under this article may be available even before default. Thus, for example, even before default: (a) the grantor may exercise its right of redemption where permitted under contract law; (b) with the agreement of the grantor, the secured creditor may collect a receivable (see art. 82, para. 2); and (c) any party may apply to a court or other authority for relief under general procedural or other law (see also art. 74).

50. Paragraph 2 indicates that the exercise of one right generally does not prevent the exercise of another right, except if the exercise of one right makes impossible the

exercise of another right (e.g. if the secured creditor decides to obtain possession and sell the encumbered asset, and sells or enters into an agreement to sell the asset, it cannot propose to acquire it in satisfaction of the secured obligation).

51. Paragraph 3 provides that the debtor (generally defined to include the grantor and any other person that owes payment or other performance of a secured obligation but not a transferor in an outright transfer of a receivable (see arts. 1, para. 2, and 2, subpara. (h)) may not waive unilaterally or vary by agreement their rights under this chapter before default. Otherwise, the secured creditor could put pressure on the debtor to waive or vary its rights before default in return for concessions in the security agreement (see Secured Transactions Guide, chap. VIII, paras. 16 and 17).

Article 73. Methods of exercising post-default rights

52. Article 73 is based on recommendation 142 of the Secured Transactions Guide (see chap. VIII, paras. 18-20 and 29-33). Paragraph 1 clarifies that the secured creditor may exercise its post-default rights by applying to a court or other authority to be specified by the enacting State (e.g. a chamber of commerce, arbitral tribunal or notary public). There are many reasons why a secured creditor may decide to follow this approach. For example, judicial or similar proceedings may be sufficiently efficient, the secured creditor may wish to avoid having its self-help actions subsequently challenged, anticipate that it will have to apply to a court or other authority anyway to recover an anticipated deficiency or may fear and wish to avoid a breach of public order (see Secured Transactions Guide, chap. VIII, paras. 32 and 33).

53. Where judicial or other similar proceedings are likely to be slow and costly, and less likely to produce the highest possible amount upon the disposition of the encumbered assets, the secured creditor may decide to enforce its security right with minimal or no supervision by a court or other authority (see Secured Transactions Guide, chap. VIII, paras. 29 and 31). In such a case, the Model Law introduces a number of safeguards for the grantor, the debtor and other persons the rights of whom may be affected. For example, under article 4, the secured creditor has to proceed in good faith and in a commercially reasonable manner and, under article 77, paragraph 2, ensure that the grantor has consented in writing, the grantor and any person in possession have been notified of the secured creditor's intent and at the time of repossession the person in possession does not object (see para. 67 below).

54. In any case, the Model Law does not introduce any limitation to the ability of the parties to avail themselves of the assistance of a court or other authority at any time to resolve a dispute arising in relation to a security agreement or the exercise of a post-default right. Quite to the contrary, under article 74, the grantor, any person with a right in the encumbered asset or the debtor (option A), or any person affected by the non-compliance of the secured creditor with the provisions of this chapter (option B) is entitled to relief from a court or other authority.

55. It should also be noted that there is nothing in the Model Law that precludes the grantor and the secured creditor from agreeing to resolve any dispute that may arise between them by arbitration, conciliation or negotiation. Depending on the efficiency of court proceedings in a particular State, these alternative dispute resolution mechanisms may provide a viable alternative to court proceedings, provided that certain issues are addressed by the relevant law, in particular with respect to arbitration, such as the arbitrability of disputes arising under a security agreement or associated with a security right, protection of rights of third parties and the confidentiality of arbitral proceedings (see also para. 58 below).

56. Under paragraph 2, the exercise of post-default rights by application to a court or other authority is subject not only to the provisions of this chapter but also to the relevant provisions, including provisions on expeditious proceedings, to be specified by the enacting State (typically, procedural in nature). Under paragraph 3, the exercise of those rights without application to a court or other authority is subject only to the provisions of this chapter.

Article 74. Relief for non-compliance

57. Article 74, which is based on recommendation 137 of the Secured Transactions Guide (see chap. VII, para. 31), addresses the availability of relief by a court or other authority in the case of a person's non-compliance with its obligations under the provisions of this chapter. Two options are provided for the enacting State to choose the option that best fits its legal system. The first option addresses non-compliance only by the secured creditor, and provides that the grantor, any other person with a right in the encumbered asset or the debtor affected by that non-compliance (e.g. co-owners of the encumbered assets) may seek relief. The second option is broader, addressing non-compliance by any person, and giving any person affected by that non-compliance the right to seek relief. It should be noted that: (a) a violation of the secured creditor's obligations includes a violation by the secured creditor's agents, employees or service providers; and (b) persons that may be affected include a secured creditor with a lower priority ranking than that of the enforcing secured creditor, a guarantor or a co-owner of the encumbered assets.

58. The enacting State may wish to specify the court or other authority to which the party seeking relief should apply and the type of expeditious proceeding that would be available. That authority may include an arbitral tribunal, chamber of commerce or notary public. The resolution of a dispute arising generally from a security agreement or specifically in the context of enforcement of a security right by arbitration would be possible if: (a) the matter may be submitted to arbitration under the law of the enacting State; and (b) there is an arbitration agreement between the grantor and the secured creditor that is enforceable under the law of the enacting State. In such a case: (a) the arbitration agreement (and arbitral award) would bind only the parties thereto; and (b) if the winning party attempts to seize an encumbered asset, the law of the enacting State must provide adequate protection for the rights of persons, who are not party to the arbitration agreement, in the encumbered assets. For example, persons who are not parties to the arbitration agreement who have a right in the encumbered assets or might be affected by the enforcement of an arbitral award should be notified before an extrajudicial sale takes place (see art. 78, para. 4) and be given an opportunity to assert their rights, such as their right to take over enforcement (see art. 76), or their right to be paid from the proceeds of a sale according to their priority rank (see art. 79, para. 2).

59. As the length of time that it takes to obtain relief for non-compliance may bring about injustice or inefficiency, this article provides for the possibility of expeditious relief, the exact form of which is to be specified by the enacting State (e.g. proceedings for interim measures of protection and preliminary orders). [Explain the word "affected". See Commission report, para. 72.]

Article 75. Right of affected persons to terminate enforcement

60. Article 75 is based on recommendation 140 of the Secured Transactions Guide (see chap. VIII, paras. 22-24). Paragraph 1 enables any person whose rights in the encumbered assets are affected by the enforcement process to terminate it by paying or otherwise performing the secured obligation in full. This is sometimes known as "redeeming" the encumbered asset. A person that is affected by the enforcement of a security right is most likely to exercise this right when there will be a residual value because the value of the asset is higher than the outstanding part of the secured obligation. It should be noted that the extinguishment of a security right, which was also addressed in recommendation 140 of the Secured Transactions Guide, is addressed in article 12.

61. Full payment, for the purposes of paragraph 1, includes the reasonable cost of enforcement. Thus, in the case of enforcement before a court or other authority, the court or other authority will determine the reasonable cost of enforcement. In the case of enforcement without an application to a court or other authority, if the grantor or other interested person disputes the secured creditor's assertion as to the reasonable

cost of enforcement, the grantor or other interested person could seek the assistance of a court or other authority to resolve the dispute.

62. Under paragraph 2, the right to terminate enforcement may be exercised until the secured creditor has disposed of, acquired or collected the encumbered asset, or entered into an agreement for that purpose. Otherwise, the finality of acquired rights would be undermined (see paras. 79-81). Under paragraph 3, the rule in paragraph 2 does not apply in the case of a lease or licence of an encumbered asset. This means that a person affected by the enforcement may still terminate the enforcement process, if there is sufficient residual value left in the encumbered asset. However, there is one limitation, the rights of a lessee or licensee must be respected.

Article 76. Right of a higher-ranking secured creditor to take over enforcement

63. Article 76 is based on recommendation 145 of the Secured Transactions Guide (see chap VIII, para. 36). Paragraph 1 provides that a secured creditor whose security right has priority over that of the enforcing secured creditor or judgment creditor ("higher-ranking secured creditor") has the right to take over enforcement. Inasmuch as the higher-ranking secured creditor is entitled to be paid out of the proceeds of any disposition before the other secured creditor or judgment creditor, paragraph 1 recognizes that this greater stake in the results of enforcement justifies giving the higher-ranking secured creditor the right to control the enforcement process if it so desires. The higher-ranking secured creditor may take over the enforcement process at any time before the asset is sold or otherwise disposed of, or acquired by the secured creditor or until the conclusion of an agreement by the secured creditor for that purpose.

64. Under paragraph 2, the right of the higher-ranking secured creditor to take over the enforcement process includes the right to enforce by any of the methods foreseen in this chapter. This means that the higher-ranking secured creditor may change the method of enforcement, for example to follow a different strategy than that followed by the original enforcing creditor (or terminate enforcement if the higher-ranking secured creditor is an outright transferee). It should be noted, however, that the exercise of this right is subject to the standard of article 4, that is, the secured creditor would be obliged to act in good faith and in a commercially reasonable manner, for example, to avoid unreasonable enforcement costs.

Article 77. Right of the secured creditor to obtain possession of an encumbered asset

65. Article 77 is based on recommendations 146 and 147 of the Secured Transactions Guide (see chap. VIII, paras. 37-48 and 51-56). Taken as a whole, this article provides a secured creditor with an important pair of options about enforcing its security right. The secured creditor may obtain possession of a tangible encumbered asset either through a judicial process or an analogous process with another authority or, in certain circumstances, the secured creditor can utilize "self-help remedies" and obtain possession of the encumbered asset without resort to a court or other authority. The rules governing each of these options are set out separately, with paragraphs 1 and 2 setting the parameters for obtaining possession by application to a court or other authority and paragraph 3 setting the parameters for the exercise of a self-help remedy by the secured creditor.

66. Paragraph 1 states that, after default, the secured creditor is entitled to obtain possession of an encumbered asset by applying to a court or other authority, or without such an application. The opening words of paragraph 1 however, subordinate this right to the right of another person who has a superior right to possession of the asset (e.g. a lessee or licensee; see art. 34).

67. Under paragraph 2, the secured creditor is also entitled to obtain possession of an encumbered asset without applying to a court or other authority if all the conditions set out therein are met. The conditions are designed to ensure that such a self-help remedy is available only in appropriate circumstances. First, the self-help remedy is

available only if the grantor has consented in writing to the secured creditor obtaining possession without resort to a court or other authority. Typically, the secured creditor will obtain the grantor's consent in the security agreement. Second, the secured creditor cannot utilize this self-help remedy unless it has given the grantor and any person in possession of the encumbered asset notice of default and of the secured creditor's intent to obtain possession without resort to a court or other authority (the enacting State may wish to specify how long before seeking possession the secured creditor must give notice that would be in line with the good faith and commercial reasonableness standard set forth in art. 4). Third, and perhaps most important, the secured creditor may not obtain possession without resorting to a court or other authority if the person in possession of the encumbered asset objects to the secured creditor's attempt to utilize this self-help remedy. Thus, the grantor or other person in possession of the encumbered asset will always have the ability to require the secured creditor to utilize the judicial or similar process by objecting to the creditor's attempt to act without the assistance of a court or other authority, even if the grantor has already agreed to the secured creditor's self-help remedies in the security agreement.

68. Paragraph 3 recognizes that even relatively short delays associated with giving the notice required in paragraph 2 can be economically wasteful if the encumbered assets are perishable or otherwise likely to decline speedily in value. Accordingly, paragraph 3 dispenses with the requirement of notice in those cases.

69. Under paragraph 4, a lower-ranking secured creditor may not obtain possession of an encumbered asset from a higher-ranking secured creditor. The purpose of this provision is to ensure that: (a) the security right of the higher-ranking secured creditor does not cease to be effective against third parties through the relinquishment of possession to the lower-ranking secured creditor and thus lose its priority status; (b) the value of the encumbered asset does not diminish through its disposition by the lower-ranking secured creditor. It should be noted, however, that the lower-ranking secured creditor will be able to enforce its security right without obtaining possession and the buyer of the encumbered asset would acquire its rights in the asset subject to the right of the higher-ranking secured creditor (see art. 81).

Article 78. Right of the secured creditor to dispose of an encumbered asset

70. Article 78 is based on recommendations 148-151 of the Secured Transactions Guide (see chap. VIII, paras. 48 and 57-60). Paragraph 1 provides that the secured creditor may sell or otherwise dispose of, lease, or license an encumbered asset by applying to a court or other authority (to be specified by the enacting State) or may take those actions without making such an application. Paragraph 2 provides that, if the secured creditor decides to exercise its right by applying to a court or other authority, the enacting State may specify the rules that will determine the method, manner, time, place and other aspects of the sale or other disposition, lease or licence.

71. Paragraphs 3-8 deal with dispositions by the secured creditor without an application to a court or other authority. Under paragraph 3, the secured creditor may determine the aspects of the sale or other disposition, lease or licence (including whether to sell or otherwise dispose, lease or license encumbered assets individually, in groups or altogether). Under paragraph 4, the secured creditor must give to the grantor, the debtor, any person with a right in the encumbered asset that notifies in writing the secured creditor of those rights and any other secured creditor that registered a notice in the Registry or was in possession of the encumbered asset a notice that contains all the elements set out in paragraphs 5-7. The enacting State should specify a very short period of time within which the secured creditor must give the notice. Under paragraph 8, the notice need not be given if the encumbered asset is perishable, may decline in value speedily or is of a kind sold on a recognized market. "Recognized market" in this context means a market in which prices were set by the market and not by individual sellers. It should be noted this rule does not mean that a notice was not required for an out-of-court sale of a controlling stake in a company.

72. Subject to its obligation to act in good faith and in a commercially reasonable manner (see art. 4), the secured creditor may: (a) dispose of the encumbered assets by public or private sale, and if by public sale, through auction or tender; and (b) decide whether to dispose of the encumbered assets individually, in groups or as a whole (see art. 78, para. 3, and Secured Transactions Guide, chap. VIII, paras. 71-73).

Article 79. Distribution of the proceeds of a disposition of an encumbered asset and debtor's liability for any deficiency

73. Article 79 is based on recommendations 152-155 of the Secured Transactions Guide (see chap. VIII, paras. 60-64). Paragraph 1 provides that, in the case of a sale or other disposition, lease or licence supervised by a court or other authority, the distribution of the proceeds is determined by the rules to be specified by the enacting State. However, such distribution should follow the order of priority according to the priority rules of the Model Law.

74. Under paragraph 2, the distribution of the proceeds of a sale or other disposition, lease or licence that occurs without an application to a court or other authority must follow the rules set forth in paragraph 2 that determine the order in which the proceeds are to be applied. Paragraph 2 (b) requires payment to a subordinate competing claimant. This is so because, under article 81, paragraphs 3 and 4, the security right of a higher-ranking secured creditor is preserved even after enforcement by a lower-ranking secured creditor.

75. Under paragraph 3, if the net proceeds of disposition are insufficient to satisfy the secured obligation, leaving a shortfall, the debtor remains obligated to pay the remainder. It should be noted that damages for non-compliance with enforcement obligations are a matter for other law, in particular in relation to consumer transactions. Thus, if a sale of an encumbered asset is not commercially reasonable and the debtor has a counter-claim, the debtor may be liable only for a reduced shortfall. It should also be noted that this article, as well as articles 72, paragraph 1-3, to 81, does not apply to outright transfers of receivables (see art. 1, para. 2). It should be noted that: (a) the distribution of proceeds would require that the secured creditor report and provide an account to the grantor, the debtor and any subordinate competing claimant; and (b) any amount owing to the secured creditor after application of the net proceeds to the secured obligation would be an amount owing after deduction of any amount owing to the grantor by the secured creditor.

Article 80. Right to propose the acquisition of an encumbered asset by the secured creditor

76. Article 78 is based on recommendations 156-159 of the Secured Transactions Guide (see chap. VIII, paras. 65-70). Paragraph 1 states the right of the secured creditor to propose in writing to acquire one or more of the encumbered assets in total or partial satisfaction of the secured obligation. Paragraph 2 indicates to whom other than the grantor the proposal must be sent. Paragraph 3 governs the content of the proposal.

77. Paragraphs 4 and 5 provide rules that determine the outcome of the secured creditor's proposal. Paragraph 4 provides that, in the case of a proposal for the acquisition of an encumbered asset in full satisfaction of the secured obligation, the secured creditor acquires the encumbered asset in accordance with the proposal so long as none of the persons to whom the proposal must be sent objects within a short period of time after the proposal is received by those persons (to be specified by the enacting State); if any of those parties object, however, the secured creditor may not proceed. Paragraph 5 provides that, in the case of a proposal for the acquisition of the encumbered asset in partial satisfaction of the secured obligation, the secured creditor acquires the encumbered asset only if all of the addressees consent within a short period of time after the proposal is received by those persons (to be specified by the enacting State). This approach is intended to safeguard the rights of all addressees of the notice, since they will remain liable for part of the secured obligation or they may otherwise be affected by the enforcement of a security right.

78. Paragraph 6 provides a mechanism whereby the grantor can initiate this process rather than the secured creditor, by requesting a proposal from the secured creditor. If the secured creditor makes a proposal in response to the grantor's request, and the secured creditor accepts it, the secured creditor must proceed as provided in paragraphs 2-5.

Article 81. Rights acquired in an encumbered asset

79. Article 81 is based on recommendations 160-163 of the Secured Transactions Guide (see chap. VIII, paras. 74-81). It is intended to deal with the finality of rights acquired in an encumbered asset pursuant to the enforcement of a security right (e.g. whether a transferee acquires its rights free or subject to the security right). Paragraph 1 deals with sales or other dispositions under the supervision of a court or other authority and refers the finality of rights to the law to be specified by the enacting State. Paragraph 2 deals with leases and licences of encumbered assets under the supervision of a court or other authority and provides that the enacting State should specify whether the lessee or licensee acquires its rights to use the leased or licensed encumbered asset unaffected by the security right.

80. Under paragraphs 3 and 4, in the case of a sale or other disposition, lease or licence of an encumbered asset without application to a court or other authority, the buyer or other transferee acquires its rights subject only to rights that have priority over the security right of the secured creditor, and the lessee or licensee is entitled to the benefit of the lease or licence except as against creditors with rights that have priority over the rights of the secured creditor.

81. Under paragraph 5, if the sale or other disposition, lease or licence of an encumbered asset takes place in violation of the provisions of chapter VII, the buyer or other transferee, lessee or licensee does not acquire any rights or benefits[, if it had knowledge of the violation and that the violation materially prejudiced the rights of the grantor or another person].

B. Asset-specific rules

Article 82. Collection of payment

82. Article 82 is based on recommendations 169-171, 173 and 175 of the Secured Transactions Guide (see chap. VIII, paras. 93-98, 102-108, 111 and 112). Under paragraph 1, where the encumbered asset is a right to receive payment, the secured creditor is entitled to collect payment from the obligor after default (without having to sell or otherwise dispose that right). Under paragraph 2, with the agreement of the grantor, the secured creditor may also exercise the right to collect before default. Under paragraph 3, a secured creditor that collects under paragraph 1 or 2 also has the benefit of any personal or property right that secures or supports payment of the encumbered asset.

83. Under paragraph 4, notwithstanding the general rule of this article, a deposit-taking institution need not pay a secured creditor with a security right in a right to payment of funds credited to a bank account held with that deposit-taking institution against its consent without a decision by a court or other authority. However, the secured creditor may collect the balance credited in a bank account without applying to a court or other authority if the security right in the right to payment of the funds has been made effective against third parties by the security right being created in favour of the deposit-taking institution, the conclusion of a control agreement or the secured creditor becoming the account holder (see art. 25).

Article 83. Collection of payment by an outright transferee of a receivable

84. Article 83 is based on recommendations 167-168 of the Secured Transactions Guide (see chap. VIII, paras. 99-101). It provides that, in the case of an outright transfer of a receivable, the transferee is entitled to collect the receivable either before

or after default, provided that payment is due. It should be noted that the standards of good faith and commercial reasonableness do not apply to an outright transfer of a receivable without recourse to the transferor, as the grantor (transferor) has no remaining vested interest in the receivable that could be protected by a limitation on the way in which the secured creditor (transferee) could collect the receivable.

Chapter VIII. Conflict of laws

Introduction

1. Chapter VIII of the Model Law states the rules for determining the substantive law applicable to the issues dealt with in the other chapters. These rules are generally referred to as the conflict-of-laws rules. In a State that has enacted the Model Law, a court or other authority will use the conflict-of-laws rules of chapter VIII to determine which State's substantive law will govern issues such as the creation, effectiveness against third parties, priority and enforcement of a security right, as well as the mutual rights and obligations of the grantor and the secured creditor and the rights and obligations between third-party obligors and secured creditors. The substantive law indicated by the conflict-of-laws rules may be that of the enacting State or the law of another State. It must be noted that in the event of litigation in a State, a court or other authority in that State should apply: (a) the substantive law of its own legal system to characterize an issue for the purpose of selecting the appropriate conflict-of-laws rule; and (b) the conflict-of-laws rules of its own legal system to determine which State's law is applicable to the substance of the dispute (for a more elaborate discussion of the role of conflict-of-laws rules, see Secured Transactions Guide, chap. X, paras. 1-13).

2. The application of the conflict-of-laws rules relating to security rights in a particular case should not be conditional on a prior determination that the case presents an international element. Whenever a conflict-of-laws rule refers to the law of a State, that reference should not be refused on the ground of the absence of true "internationality" in the situation. Otherwise, courts might disregard a conflict-of-laws rule of a State by deciding that the case is not sufficiently international on the basis of discretionary criteria that are not part of the conflict-of-laws rules of that State. In other words, if in a given situation the rule of State A points to the law of State B, it must be presumed that the legislator of State A has considered that the situation of itself is presenting an international element. In the particular circumstances where additional criteria would be a prerequisite for the application of a conflict-of-laws rule of a State, these criteria should be spelled out in the conflict-of-laws rules of that State.

3. The conflict-of-laws rule dealing with the law applicable to the mutual rights and obligations of the parties points to the law governing the security agreement (see art. 84). It is not, however, a mandatory law rule (as it is not listed in art. 3, para. 1, as a mandatory law rule). The parties may choose the law applicable to their contractual rights and obligations and this is recognized by article 84. However, the conflict-of-laws rules dealing with the law applicable to the creation, third-party effectiveness, priority and enforcement of a security right, as well as with the effect of a security right on a third-party obligor, are mandatory (see art. 3, para. 1). Therefore, with respect to those matters, the parties cannot be permitted by a choice-of-law clause to avoid the substantive law provisions of the legal system to which a conflict-of-laws rule refers. This is because security rights are property (*in rem*) rights and thus affect third parties. Allowing the parties to a security agreement to select the applicable conflict-of-laws rule where the selection has third-party effects would also defeat one of the main purposes of the conflict-of-laws rules, which is to identify the State whose substantive law will apply in the event of a priority dispute among competing claimants. For example, if there is a priority dispute between secured creditor X and secured creditor Y, it would be impossible for third parties to ascertain the law applicable to the resolution of the dispute if each of X and Y were permitted to choose in their security agreement a different governing law for the ranking of their respective security right.

A. General rules

Article 84. Mutual rights and obligations of the grantor and the secured creditor

4. Article 84 is based on recommendation 216 of the Secured Transactions Guide (see chap. X, para. 61). It states that the parties to a security agreement are free to choose the law applicable to their contractual relationship. Article 84 follows the approach recommended by international texts on this matter, including the Hague Principles on Choice of Law in International Contracts (the "Hague Principles"). The question of whether there should be constraints to party autonomy with respect to the law applicable to contractual relationships is not addressed in the Model Law and is left to other conflict-of-laws rules of the enacting State. These other rules will also determine the law governing the contractual relationship between the parties in the absence of a choice of law in the security agreement; these rules will often point to the law of the State most closely connected to the security agreement. It should be noted that the rule of article 84 is confined to the contractual aspects of the security agreement. As already mentioned (see para. 3 above), matters relating to the property aspects of secured transactions (e.g. the priority of a security right) are outside the scope of freedom of contract; the parties cannot select a law other than that indicated by the conflict-of-laws rules on such matters.

Article 85. Security rights in tangible assets

5. Article 85 is based on recommendations 203-207 of the Secured Transactions Guide (see chap. X, paras. 28-38). It deals with the law applicable to the creation, effectiveness against third parties and priority of a security right in a tangible asset. The term "tangible asset" is defined to refer generally to all types of tangible movable asset, including money, negotiable instruments, negotiable documents and certificated non-intermediated securities (see art. 2, subpara. (ll); see also Secured Transactions Guide, chap. X, para. 26).

6. Paragraph 1 states the general rule that the law applicable to these issues is the law of the State in which the encumbered asset is located (the "*lex situs*" or the "*lex rei sitae*"). Article 91 deals with the scenario where the location of the asset changes to another State after the security right has been created. The *lex situs* rule for tangible assets is subject to five exceptions that are set out in articles 85, paragraphs 2 to 4, 98 and 100.

7. The first exception provides that, if a tangible asset located in a State is covered by a negotiable document in the possession of a secured creditor in another State, the priority of the security right over the asset will be determined by the law of the State in which the document is located, and not by the law of the State in which the asset covered by that document is located (see art. 85, para. 2). Unlike recommendation 206, on which paragraph 2 is based, which referred to priority as against "a competing security right", to cover all priority conflicts (e.g. as against a judgment creditor), paragraph 2 refers to priority "as against the right of a competing claimant". The second exception points to the law of the State in which the grantor is located for an asset of a type which may be ordinarily used in more than one State in the course of its normal use, that is, a "mobile asset" (see art. 85, para. 3; for the meaning of "location", see art. 90; for the relevant time for determining location, see art. 91). The test is an objective one and does not refer to actual use. The most obvious example is an aircraft, which may fly from a State to many other States. The rule will apply even if a particular aircraft is actually operated only in one single State.

8. The third exception deals with a tangible asset (other than a mobile asset) in transit or to be exported (see art. 85, para. 4). A security right in a tangible asset located in a State which is in transit or destined to be moved to another State may be created and made effective against third parties under the law of the State of its ultimate destination, if the asset reaches that destination within the period of time to be specified by the enacting State. It should be noted that: (a) if the asset does not reach the intended destination in a timely fashion, the rule in paragraph 4 will not

apply; and (b) under the rule in paragraph 1, a secured creditor may also take the necessary steps to create and make the security right effective against third parties under the law of the State in which the asset is actually located at the time such steps are taken. It should also be noted that paragraph 4 is a conflict-of-laws rule of the enacting State only and whether the security right will be treated as validly created and made effective against third parties in the State of the ultimate destination of the asset depends on the law applicable under the conflict-of-laws rules of that State.

9. The fourth exception is contained in article 100, which refers to laws other than the law of the State in which the certificate is located for a security right in certificated non-intermediated securities. The fifth exception is contained in article 98, which refers to the law of the State in which the grantor is located for third-party effectiveness by registration with respect to certain types of tangible asset where that law recognizes registration as a method for achieving third-party effectiveness for these types of asset.

10. Another possible exception was contemplated in the Secured Transactions Guide for assets, in respect of which a notice of a security right may be registered in a specialized title registry or noted on a title certificate. In the case of a security right in such an asset, the law applicable to the security right was proposed to be the law of the State under whose authority the registry is maintained or the certificate is located (see Secured Transactions Guide, chap. X, paras. 37 and 38, as well as rec. 205; see also A/CN.9/WG.VI/WP.71/Add.1, para. 85). This exception was not retained in chapter VIII.

Article 86. Security rights in intangible assets

11. Article 86 is based on recommendation 208 of the Secured Transactions Guide (see chap. X, paras. 39-47). It states the general conflict-of-laws rule for the creation, effectiveness against third parties and priority of a security right in an intangible asset (including a receivable). The applicable law is that of the State in which the grantor is located (for the meaning of "location", see art. 90; for the relevant time for determining location, see art. 91). This rule is subject to several exceptions.

12. The first exception relates to the priority of a security right in a receivable arising from a sale or lease of, or secured by, immovable property (see art. 87). The other exceptions relate to a security right in rights to payment of funds credited to a bank account (see art. 97), intellectual property (see art. 99, which refers both to the *lex protectionis* and to the law of the State of the grantor's location) and non-intermediated securities (see art. 100).

Article 87. Security rights in receivables relating to immovable property

13. Article 87 is based on recommendation 209 of the Secured Transactions Guide (see chap. X, para. 54). It deals with the priority of a security right in a receivable arising from a sale or lease of, or secured by, immovable property as against the rights of competing claimants. Article 87 is an exception to the general rule of article 86 and refers that matter to the law of the State under whose authority the immovable property registry is maintained. For article 87 to apply, the right of a competing claimant must be registrable (but not necessarily registered) in the relevant immovable property registry. It should be noted that, for a secured creditor to be able to determine the law applicable to the priority of its security right in these circumstances, it must be able to find out whether the receivable arises from a sale or lease of or is secured by immovable property.

Article 88. Enforcement of security rights

14. Article 88 is based on recommendation 218 of the Secured Transactions Guide (see chap. X, paras. 64-72). Subparagraph (a) deals with the law applicable to the enforcement of a security right in a tangible asset, as defined in article 2, subparagraph (ll). It refers to the law of the State in which the asset is located at the time of commencement of enforcement (*lex fori*). Subparagraph (a) is subject to an exception for certificated non-intermediated securities (see art. 100).

15. It should be noted that enforcement may involve several distinct actions (e.g. notice of the secured creditor's intent to obtain possession of an encumbered asset without applying to a court or other authority, disposition of an encumbered asset, and distribution of the proceeds of disposition) that may take place in different States. For example, a secured creditor may take possession of the encumbered assets in one State, dispose of them in a second State, and distribute the proceeds of disposition in a third State. A similar issue arises if a security right is created in several tangible assets that are located in different States or in a less frequent case where enforcement takes place in different States because the asset has been moved to another State after commencement of enforcement. In each case, the applicable law will be the law of the State of the location of the relevant asset at the time the first enforcement action is taken.

16. Under, subparagraph (b), the law applicable to the enforcement of a security right in an intangible asset (with the exception of a right to payment of funds credited to a bank account, intellectual property and uncertificated non-intermediated securities; see arts. 97, 99 and 100)) is the law governing priority. The main advantage of this approach is that the creation, third-party effectiveness, priority and enforcement of a security right in an intangible asset (but not the rights and obligations between the debtor of the receivable and the secured creditor; see art. 96) are referred to one and the same law (see Secured Transactions Guide, chap. X, para. 69).

Article 89. Security rights in proceeds

17. Article 89 is based on recommendation 215 of the Secured Transactions Guide (see chap. X, paras. 55-60). The following example illustrates how article 89 operates. Assume that the original encumbered asset is inventory, which is subsequently sold, and the purchase price is paid by a funds transfer to a bank account. Under paragraph 1, the law applicable to the question of whether the secured creditor automatically acquires a security right in the right to payment of the funds credited to the bank account as proceeds of the original encumbered inventory will be the law of the location of the inventory at the time of the putative creation of the security right (see art. 91, para. 1 (a)). Under paragraph 2, the law applicable to the third-party effectiveness and priority of the security right in the proceeds will be the law that would be applicable to a security right in the right to payment of the funds credited to the bank account as an original encumbered asset (see art. 97).

18. It should be noted that this type of bifurcated rule may lead to difficulties in cases where the law governing creation recognizes a broad-based automatic proceeds rule whereas the law governing third-party effectiveness and priority recognizes no or only a very limited automatic proceeds right. It should also be noted that article 89 is dealing only with the law applicable to proceeds derived from the original encumbered assets as a result of a disposition by the grantor or other event prior to enforcement. Article 88 deals with the law applicable to the distribution of proceeds derived from a disposition of the encumbered assets pursuant to post-default enforcement proceedings.

Article 90. Meaning of "location" of the grantor

19. Article 90 is based on recommendation 219 of the Secured Transactions Guide (see chap. X, paras. 73 and 74). It should be noted that the State in which a grantor that is a legal person has its central administration is not necessarily the State in which that legal person has its statutory seat (or registered office). If the grantor is a legal person formed under the law of State A with its statutory seat in that State but has in State B a place of business where its senior management is based, then the grantor is located in State B. As a result of this approach, for example, the creation, third-party effectiveness, priority and enforcement of a security right in a receivable is referred to a single law that is generally easy to determine and is most likely to be the law of the State in which the main insolvency proceeding with respect to the grantor would take place, if the grantor were to become insolvent (in which case a secured creditor would most likely need to enforce its security right). Thus, this approach minimizes the risks of inconsistencies between the law governing the insolvency proceeding *(lex*

fori concursus) and the substantive law applicable to a security right, as the two laws will be the law of one and the same State.

Article 91. Relevant time for determining location

20. Article 91 is based on recommendation 220 of the Secured Transactions Guide (see chap. X, paras. 75-78). It deals with the situation where the location of the asset or the location of the grantor changes from one State (State A) to another (State B) in circumstances where the applicable law is determined by reference to that location.

21. Paragraph 1 establishes that the creation of a security right remains governed by the law of the location of the asset or of the grantor at the time of the putative creation of the security right even if there is subsequently a change of location. State B will recognize the existence of the security right if the latter was validly created under the law of State A at the time the asset or the grantor was located in State A. However, for third-party effectiveness and priority issues, the applicable law will be that of the actual location of the asset or the grantor "at the time the issue arises". This is the time of the occurrence of the event which triggers the inquiry as to what law would be applicable to third-party effectiveness or priority. For example, if an insolvency proceeding commences in State B in respect of the grantor of a security right in a receivable, the law applicable to the effectiveness of the security right will be the law of State B if the location of the grantor is then in State B (see art. 86).

22. As a result, for the security right to be treated as being effective against the insolvency representative either in State A or in State B, the third-party effectiveness requirements of the law of State B must have been fulfilled prior to the commencement of the insolvency proceeding. Another example is where a tangible asset is seized by a judgment creditor. The respective priorities of the secured creditor and the judgment creditor will be determined under the law of the location of the asset at the time of the seizure (which will be "the time the issue arises"). This is so in each example even if the security right had been made effective against third parties under the law of State A at the time the asset or the grantor was located in State A.

23. Paragraph 2 constitutes an exception to the general rules of paragraph 1. In the event of a priority dispute between two security rights that have been made effective against third parties in the State of the initial location, the priority dispute will be resolved under the law of that State (State A in the example).

Article 92. Exclusion of *renvoi*

24. Article 92 is based on recommendation 221 of the Secured Transactions Guide (see chap. X, para. 14). Its purpose is to reject the doctrine of *renvoi* and provide greater certainty with respect to the applicable law by avoiding the complications arising from this doctrine. Under the doctrine of *renvoi*, when the conflict-of-laws rules of a State (State A) refer an issue to the law of a another State (State B), that law would include the conflict-of-laws rules of State B. If that were the case and the conflict-of-laws rules of State A refer the priority of a security right to the law of State B, the conflict-of-laws rules of State B may refer that issue to the law of yet another State (State C). In that case, a court in State A would need to resolve the priority dispute using the law of State C (and not the law of State B). This result, however, would create uncertainty as to the applicable law and be contrary to the expectations of the parties. For those reasons, article 92 excludes *renvoi* (for an exception, see art. 95).

Article 93. Overriding mandatory rules and public policy (*ordre public*)

25. Article 93, which is based on recommendation 222 of the Secured Transactions Guide (see chap. X, para. 79) and article 11 of the Hague Principles, states generally recognized principles of private international law.

26. To illustrate how the rules in paragraphs 1 and 3 will operate, assume that the law of the forum (State A) prohibits dealings in certain types of asset (such as an asset which is the proceeds of criminal activities or is the subject of international sanctions)

and that the law of the State whose law is applicable under the provisions of this chapter (State B) does not contain such a prohibition. In such a case, a court in State A may refuse to recognize a security right created in such an asset under the law of State B even though the law of State B does not contain the same prohibition. However, to do so, the forum court (in State A) must conclude that the application of the foreign law (of State B) would be manifestly contrary to the public policy of State A.

27. Under paragraphs 2 and 4, the forum court (if it is allowed to do so under its law) may refuse to recognize a security right that has been validly created under the applicable law (even if the applicable law is the law of the forum itself), if the creation of the security right would be manifestly contrary to public policy of another State (e.g. a State that has a close connection with the situation). For example, a law firm located in the forum State (State A) may wish to assign receivables arising from its legal services and the law of State A allows this assignment. However, the client is located in another State (State B) and, for reasons of public policy (confidentiality of lawyer-client relationship), the law of State B prohibits the transfers by a law firm of its receivables arising from legal services. In this case, the law of State A may allow a court in State A to take the public policy of State B into account in determining whether the assignment is valid.

28. Paragraph 5 is intended to make clear that the rules in paragraphs 1-4 may also be relied upon by an arbitral tribunal, although, unlike a court, it does not operate as part of the judicial infrastructure of a specific legal system. Under paragraph 5, an arbitral tribunal may take into account the overriding mandatory provisions and policies, for example, of the place of arbitration, however identified, or of the place where enforcement of any award would be likely to take place. Paragraph 5 requires an arbitral tribunal to determine whether it is required or entitled to take into account public policy or overriding mandatory provisions of another law, having regard (in particular) to the agreement of the parties, the designated or deemed seat of the arbitration, any institutional rules applicable to the arbitration, and the potentially controlling influence of State courts applying local arbitration legislation (see commentary to article 11(5) of the Hague Principles).

29. Under paragraph 6, the forum State may not displace the provisions of the law applicable to third-party effectiveness and priority of a security right and apply its own third-party effectiveness and priority provisions or those provisions of another State. This approach is justified by the need to achieve certainty with respect to the law applicable to third-party effectiveness and priority. The same approach is followed in article 23, paragraph 2, article 30, paragraph 2, and article 31 of the Assignment Convention, as well as in article 11, paragraph 3, of the Hague Securities Convention.

Article 94. Impact of commencement of insolvency proceedings on the law applicable to a security right

30. Article 94 is based on recommendation 223 of the Secured Transactions Guide (see chap. X, paras. 80-82). Its purpose is to establish that an insolvency court in the enacting State must in principle respect the law applicable to security rights under its conflict-of-laws rules. However, nothing in article 94 restricts the application of the law of the State in which insolvency proceedings are commenced (*lex fori concursus*) to matters such as the avoidance of fraudulent or preferential transactions, a stay of enforcement rights of secured creditors, the ranking of claims and the distribution of proceeds in the grantor's insolvency.

Article 95. Multi-unit States

31. Article 95 is based on recommendations 224-227 of the Secured Transactions Guide (see chap. X, paras. 83-87) and partly on article 37, first sentence, of the Assignment Convention. Its purpose is to deal with the law applicable where the State whose law is applicable to an issue under the provisions of this chapter has two or more territorial units, each of which has its own substantive law, and possibly its own

conflict-of-laws rules. In such a case, subparagraph (a) provides that a reference to the law of a multi-unit State is in principle a reference to the law applicable in the relevant unit to be determined under the provisions of this chapter. For example, in the case of a security right in a receivable created by a grantor located (in the sense of having its central administration) in territorial unit A, the law applicable to that security right is the law of territorial unit A (see arts. 86 and 90).

32. However, under subparagraph (b), if the internal conflict-of-law rules of the multi-unit State or, in the absence of such rules, of the territorial unit to which subparagraph (a) points, refer security rights to the law in force in another territorial unit of that State, the substantive law of that other unit will apply. In the above mentioned example, if territorial unit A has a conflict-of-laws rule under which the law applicable is the law of the grantor's location defined as the place of the grantor's statutory seat and that place is in territorial unit B, the substantive law of territorial unit B will apply, It should be noted that subparagraphs (a) and (b) are interpretative provisions and also apply where the forum State is the State whose law is applicable under the provisions of this chapter.

33. Thus, subparagraph (b) is indirectly an exception to the exclusion of the doctrine of *renvoi* (see art. 92) as it introduces internal "*renvoi*". The purpose of the exception is to ensure that, where the applicable law is that of a unit of a multi-unit State, a forum court outside that multi-unit State will apply the substantive law of the same unit as a forum court in that multi-unit State would do under its internal conflict-of-laws rules.

34. As a result, for example, where the conflict-of-laws rules of this chapter refer to the law of the location of the asset or the grantor, the forum court is required to examine the internal conflict-of-laws rules in effect in the territorial unit of the location of the grantor or the encumbered asset (under the provisions of this chapter). In this regard, the Assignment Convention allows a declaration by States as to the determination of the applicable priority rule as between various territorial units (see art. 37 of the Assignment Convention), but in this article there would be no declaration and the forum court would have to determine the applicable law under the conflict-of-laws rules in effect in the multi-unit State or, in the absence of such rules, in the territorial unit to which subparagraph (a) will point.

B. Asset-specific rules

Article 96. Rights and obligations between third-party obligors and secured creditors

35. Article 96 is based on recommendation 217 of the Secured Transactions Guide (see chap. X, paras. 62 and 63) and article 29 of the Assignment Convention. Its purpose is twofold. First, the conflict-of-laws rules on the third-party effectiveness or enforcement of a security right do not apply to the effectiveness or enforcement of a security right against a debtor of a receivable, an obligor under a negotiable instrument or an issuer of a negotiable document; they are not considered "third parties" for the purposes of the rules on third-party effectiveness and priority of a security right, as they are not competing claimants. Second, the law applicable to these issues is the law governing the legal relationship between the grantor and the relevant debtor of the receivable, or the relevant obligor under the instrument or the issuer of the document; the same law also applies to the question of whether any of the latter may invoke that their agreement with the grantor prohibits or limits the grantor's right to create a security right in the relevant receivable, instrument or document. For example, in the case of a receivable arising from a sales contract, the law chosen by the seller/grantor and the debtor of the receivable will apply to the matters covered by article 96.

Article 97. Security rights in rights to payment of funds credited to a bank account

36. Article 97 is based on recommendation 210 of the Secured Transactions Guide (see chap. X, paras. 49-51). While a right to payment of funds credited to a bank account is in the generic sense a receivable of the customer against the deposit-taking institution, to avoid interfering with banking law and practices, article 97 departs from the general conflict-of-laws rule on the law applicable to intangible assets (see art. 86). Two options are offered to the enacting State for the law applicable to the creation, third-party effectiveness, priority and enforcement of a security right in a right to payment of funds credited to a bank account, as well as to the rights and obligations between the deposit-taking institution and the secured creditor.

37. Under option A, the applicable law is that of the State of the location of the branch (or office) of the deposit-taking institution with which the account is maintained. It should be noted that a branch (or office) of a deposit-taking institution may be considered as being located in a particular jurisdiction irrespective of whether the institution offers its services through physical offices or only through an online connection accessible electronically by customers. In this regard, it should be noted that a deposit-taking institution must generally have a physical presence or legal address in a jurisdiction in order to be allowed by the relevant regulatory authorities to receive deposits and maintain bank accounts in that jurisdiction.

38. Under option B, the applicable law is the law designated in the account agreement as governing the issues that are the subject of article 97 or, in the absence of a designation of a law for these issues, the law designated by the parties to the account agreement as the law governing that agreement. To be effective for conflict-of-laws purposes, a designation must refer to the law of a State in which the deposit-taking institution is regularly engaged in the business of receiving deposits and maintaining bank accounts. It should be noted that the State whose law is so designated may be different than the State in which the grantor's bank account is maintained.

39. If the applicable law cannot be determined as described in the preceding paragraph, option B provides for a series of rules along the lines of the default rules contained in article 5 of the Hague Securities Convention, which the enacting State may wish to insert in this article, if it decides to adopt option B of article 97.

Article 98. Third-party effectiveness of a security right in certain types of asset by registration

40. Article 98 is based on recommendation 211 of the Secured Transactions Guide (see chap. X, para. 34). This article is an exception to the conflict-of-laws rules on the third-party effectiveness of a security right in a negotiable instrument, negotiable document, right to payment of funds credited to a bank account or certificated non-intermediated security. Under articles 85, 97 and 100, the effectiveness against third parties of a security right in any of these assets is governed by the law of a State which may be different from the State of the location of the grantor. However, under article 98, if the State of the location of the grantor recognizes registration of a notice as a method of third-party effectiveness for a security right in the types of asset coved in article 98, then the law applicable to third-party effectiveness by registration is the law of the State in which the grantor is located.

41. Therefore, with respect to these types of asset, a secured creditor may rely on the law of the location of the grantor to make its security right effective against third parties by registration, even if for these types of asset the applicable law might be different under the other conflict-of-laws rules of this chapter. However, if the priority rules of the applicable law are based on the priority rules of the Model Law, achieving third-party effectiveness by registration would only yield a lower-ranking priority in the case of a priority conflict with a competing secured creditor who achieved third-party effectiveness, for example, by possession in the case of a negotiable instrument (see art. 46, para. 1), by the secured creditor becoming the account holder in the case of a right to payment of funds credited to a bank account (see art. 47, para. 1) or by

possession in the case of a negotiable document or a certificated non-intermediated security (see arts. 49, para. 1, and 51, para. 1 respectively). However, the security right would have priority over the right of: (a) the grantor's insolvency representative or the mass of creditors; and (b) judgment creditors, if registration took place before a judgment creditor, for example, seized the encumbered assets.

Article 99. Security rights in intellectual property

42. Article 99 is based on recommendation 248 of the Intellectual Property Supplement (see paras. 284-337). The effect of paragraph 1 is the following. If intellectual property is protected in a particular State, the law of that State will apply to the requirements to be met for the security right in that intellectual property to be considered as having been created, made effective against third parties and enjoying priority in that State. It should be noted that a security right in intellectual property may be granted by any person that has a right in the related intellectual property under the relevant intellectual property law. Therefore, the grantor may be an owner, a licensor or a licensee of the intellectual property to be encumbered.

43. Paragraph 2 provides for an alternative way to create and make effective against certain third parties a security right in intellectual property. Under paragraph 2, the secured creditor may also rely for these purposes on the law of the State in which the grantor is located. The principal benefit of paragraph 2 is that, if the security right has been made effective against the grantor's insolvency representative under the law of the State in which the grantor is located, an insolvency court in the enacting State will recognize the security right even if the third-party effectiveness requirements of all States in which the intellectual property is protected have not been fulfilled.

44. Paragraph 3 refers enforcement issues to the law of the State in which the grantor is located. This rule allows for the same law to be applied to all enforcement steps, even if they take place in different States, because it is unlikely that the grantor's location (in particular the place of its central administration) would change between any of those steps. In the rare case where there would be such a change, it is assumed that a court would refer to the law of the State in which the grantor is located at the time of commencement of the enforcement (see art. 88). It should be noted that the effectiveness of the security right against persons other than the grantor (e.g. the licensor of the intellectual property, if the grantor is a licensee) is outside the scope of this article.

Article 100. Security rights in non-intermediated securities

45. Article 100 introduces one general rule for equity securities and another for debt securities. It should be noted that none of these general rules draws a distinction between certificated and uncertificated, or between traded and non-traded, securities. For equity securities, paragraph 1 designates the law of the constitution of the issuer as the law applicable to all issues (i.e. the creation, third-party effectiveness, priority, enforcement and effectiveness against the issuer of a security right in these securities). This approach provides greater certainty in the determination of the applicable law as referring to one single law for all such issues avoids the difficulties that can arise in circumstances where there could be an overlap between some issues (e.g., enforcement and effectiveness against the issuer) that could result in the referring them to different laws.

46. The term "equity" is not defined in the Model Law but it should be understood as referring to participation rights in the capital of the issuer. For a corporation or a similar legal person, equity securities consist of the shares in its capital. Similarly, for an entity which is not a legal person under its constitutive law (such as a general or limited partnership in many States), equity securities should refer to the rights of the persons (e.g. the partners) who are entitled to receive upon the liquidation of the entity the residual value of its assets after payment of its liabilities.

47. The test of the distinction between equity and debt securities should be based on their characterization for the purposes of corporate law, and not accounting or other law. Thus, preferred shares should be considered as equity securities even if under

accounting or other rules they are classified as liabilities. Likewise, subordinated debt securities (e.g. debt payable in insolvency only after satisfaction of obligations owing to certain creditors, such as lenders) should be treated as debt securities even if subordinated debt may be viewed as equity from the perspective of lenders extending other credit to the issuer.

48. The law of the constitution of the issuer is the law under which it has been formed. For a corporation, this is easy to ascertain; it is the law under which it has been incorporated. For a partnership, it should be the law under which the partnership has been created. In federal States where the issuer may be constituted either under a federal law or a law of one of its territorial units, the Model Law does not provide specific criteria on the determination of the territorial unit which will be considered as the issuer's law where the issuer's law is a federal law and the law on secured transactions is that of a territorial unit. However, under article 95, the internal conflict-of-laws rules of the federal State (or of the territorial unit which is the forum) should determine the territorial unit's law to be applicable to the issues falling under article 100 where all or some of these issues are not dealt with by the federal law of the constitution of the issuer.

49. For non-intermediated debt securities, paragraph 2 applies the law governing the securities to all issues (i.e. the creation, third-party effectiveness, priority, enforcement and effectiveness against the issuer of a security right in these securities). As already noted (see para. 45 above), greater certainty is achieved by designating one single applicable law for all such issues. The law governing the debt securities is the law selected by the parties as the law governing their contractual rights and obligations arising from the issuance of these securities. In the absence of such a choice of law (which would be extremely rare for debt securities), the forum will determine the applicable law under its own conflict-of-laws rules. The Model Law does not deal with the question of whether the parties may select a governing law which has no connection with the issuance of the securities. This matter is left to the conflict-of-law rules on contractual obligations of the forum State.

50. The term "debt securities" is not defined in the Model Law. The notion of debt is however well understood in most legal systems and denotes a payment obligation. In the context of debt securities, the obligation is generally to make payment of a sum of money. Bonds, debentures and promissory notes are debt securities, to the extent they come under the definition of securities in article 2, subparagraph (hh). The obligation of a borrower to a lender under a credit facility would not qualify as a debt security as it is not captured by that definition. Such an obligation is rather a receivable and is subject to the conflict-of-laws rules on receivables.

51. The concept of "debt securities" raises the following two questions: (a) the characterization of convertible debt securities; and (b) the effect of that characterization on the law applicable to a security right in that type of security. Convertible debt securities are debt securities that are convertible into equity securities at the option of their holder or issuer or upon the occurrence of a specified event.

52. Convertible debt securities should be characterized as debt securities because they constitute payment obligations as long as they are not converted into equity. This means that upon their issuance and until conversion, the law governing these securities will be the law applicable to the creation, third-party effectiveness, priority, enforcement and effectiveness against the issuer of a security right in such securities. The characterization of convertible debt securities for the purposes of article 100 may, however, change if and once they are converted into equity. The connecting factor then becomes the law of the constitution of the issuer. Therefore, upon being converted into equity, the law applicable to a security right in convertible debt securities will be the law of the State under which the issuer has been constituted.

53. A consequence of the change from the law governing the securities to the issuer's law is that a security right in debt securities made effective against third parties under the law governing the securities might become ineffective against third parties after the change. Article 23 addresses the impact of a change in the applicable law and

article 91 addresses a change in the connecting factor. However, strictly speaking, article 23 is not applicable to a change in the nature of non-intermediated securities; and article 91 only deals with the situation where the connecting factor is the location of the asset or the grantor. The enacting State may thus wish to draw from articles 23 and 91 and adopt rules dealing with the change on the basis of principles similar to those underlying articles 23 and 91.

54. Article 98 introduces an exception to the general conflict-of-laws rules of article 100. If the law of the State in which the grantor is located recognizes registration of a notice as a method for achieving effectiveness against third parties of a security right in certificated non-intermediated securities, the law of that State is also the law applicable to the third-party effectiveness of the security right in this type of asset by registration (see paras. 40 and 41 above). It should be noted that uncertificated non-intermediated securities are not mentioned in article 98 and, therefore, the issuer's law (and not the grantor's location law) is the law applicable to the third-party effectiveness by registration (if permitted by the issuer's law) of a security right in uncertificated securities.

Chapter IX. Transition

Introduction

55. This chapter accomplishes three tasks. First, it provides that the law formerly governing security rights (the "prior law") is repealed (see art. 101). Second, it provides rules governing the treatment of security rights that were created while the prior law was in force but continue to exist, perhaps for extensive periods of time, after the new secured transactions law (the "new law") enters into force (see arts. 102-106). Third, it sets a date on which the new law goes into effect (see art. 107). Thus, this chapter provides rules by which the law governing such security rights moves in a fair and efficient manner from the prior law to the new law (see Secured Transactions Guide, chap. XI, paras. 1-3).

Article 101. Amendment and repeal of other laws

56. The Model Law is intended as a complete system of secured transactions law, replacing in its entirety the prior law, rather than as a supplement to existing law. Accordingly, the enacting State should list in paragraph 1 and thus repeal the body of laws that comprise its secured transactions law. The way in which the repeal is effectuated will depend on the form of the prior law. Where the prior law is a free-standing code or the like, that code can be repealed in its entirety. Where the prior law is derived from statutes that also address other topics, though, the enacting State must determine how to excise the rules formerly governing security rights from the rules that apply to other topics. Where part of the prior law is based on judicial opinions (as may be the case, for example, in some common law systems), the method of repeal of the prior law must be determined by the enacting State.

57. Many other bodies of law interact with secured transactions law. In some cases, provisions of those other bodies of law may be based on the assumption that prior secured transactions law is in effect. Paragraph 2 provides the enacting State an opportunity to amend those provisions so as to mesh with the new law. It should be noted that, like any other article of the Model Law, article 101 can have effects only when the new law enacting the Model Law enters into force according to article 107. Thus, the existing laws are amended or repealed only as of the date the new law enters into force (in other words, there is no time in which neither set of rules governs secured transactions).

Article 102. General applicability of this Law

58. Paragraph 1 of this article defines two terms used in this chapter. According to paragraph 1 (a), "prior law" means the rules that applied to security rights under the law of the enacting State before the entry into force of the new law because, under

the conflict-of-laws rules of the enacting State (as those rules existed before the entry into force of the new law), the applicable law may be the law of the enacting State or of another State, article 102 refers to the law formerly applicable under the conflict-of-laws rules of the enacting State. As a different law may be applicable to the various security right issues (e.g. the contractual rights and obligations between the grantor and the secured creditor, the creation, third-party effectiveness, priority and enforcement of a security right, as well as the effectiveness of the security right against a third-party obligor) prior law means the law formerly applicable to the relevant issue.

59. According to paragraph 1 (b), "prior security right" is a right created by an agreement entered into before the entry into force of the new law that the new law would treat as a security right within the scope of the new law. This is the case even if the agreement covers future assets (see art. 2, subpara. (n)). The transition provisions of the Model Law determine the extent to which, even after the entry into force of the new law, the rules of prior law continue to apply to a prior security right.

60. Paragraph 2, which is based on recommendation 228 (second sentence) of the Secured Transactions Guide (see chap. XI, paras. 7-12), states the general rule of the applicability of the new law. It provides that, when it enters into force under article 105, the new law will apply to all security rights within its scope, including prior security rights, except as otherwise provided in this chapter (e.g. arts. 103 and 104). Much of the remainder of the chapter is devoted to providing exceptions to this general rule. Read together, the rule in paragraph 2 and the exceptions in the remainder of the chapter result in a transition period during which the new law will apply to all new transactions while some aspects of the rules of the prior law will continue to apply to some issues related to prior security rights.

61. As a result of paragraph 2, prior security rights may be governed, at least in part, by the new law. This is beneficial because, inasmuch as many secured transactions endure for several years, if the new law applied only to security rights created by agreements entered into after the effective date of the new law, the prior law would persist for a lengthy period during which lenders, borrowers, attorneys, and judges would need to be able to apply both the new law and the prior law (depending on the particular transaction) and during which searches for competing claimants would need to be done both under the rules of the new law and the prior law. Thus, a rule that the new law applied only to transactions entered into after its effective date would entail additional cost and delay the economic benefits of the new law.

Article 103. Applicability of prior law to matters that are the subject of proceedings commenced before the entry into force of this Law

62. Article 103 is based on recommendation 229 of the Secured Transactions Guide (see chap. XI, paras. 13-16). It introduces an exception to the rule in article 102, paragraph 2, that the new law applies to all security rights within its scope, including prior security rights. In particular, paragraph 1 provides that, if a matter with respect to a prior security right is the subject of litigation or arbitral proceedings commenced before the new law enters into force, the substantive (not procedural) law governing the dispute will remain the prior law (a forum may apply its own current rules of procedure when not inconsistent with those of the prior law). This paragraph applies to all disputes arising with respect to a prior security right, whether between the secured creditor and the grantor, the secured creditor and a competing claimant, or the secured creditor and a person liable, for example, on a receivable or negotiable instrument. It should be noted that the commencement of litigation before the new law enters into force with respect to one matter does not preclude the application of the rules of the new law to a separate matter arising under the same security agreement which is not the subject of litigation.

63. Paragraph 2 provides a substantive rule about the enforcement of security rights created under prior law. Under the rule in this paragraph, if enforcement is commenced under prior law (what constitutes "enforcement" and whether it was "commenced" are matters of prior law), the secured creditor may continue

enforcement under the rules of the prior law even after the new law enters into force or, rather may choose to utilize the enforcement mechanisms of the new law (what constitutes "enforcement" under the new law enacting the Model Law is addressed in chapter VII). This rule applies even if the commencement of enforcement under prior law occurs without application to a court or other authority. Thus, for example, if before the entry into force of the new law the secured creditor takes actions authorized under prior law to obtain possession of an encumbered asset without applying to a court or other authority, the secured creditor may, after the entry into force of the new law, choose to dispose of the encumbered asset and distribute its proceeds under the prior law or proceed as to those matters under the new law.

Article 104. Applicability of prior law to the creation of a prior security right

64. Article 104 is based on recommendation 230 of the Secured Transactions Guide (see chap. XI, paras. 17-19). This article contains two rules. First, paragraph 1 provides that prior law determines whether a security right putatively created before the new law enters into force was indeed created effectively. Second, under paragraph 2, a prior security right that was effectively created under prior law will remain effective between the parties under the new law even if the requirements for creation under the new law have not been satisfied. This rule avoids the invalidation of prior security rights and the creation of a situation in which the secured creditor would need to obtain cooperation from the grantor to take the additional steps necessary to continue the existence of the security right under the new law. Such cooperation may not be forthcoming from a grantor that has already received an extension of credit secured by the security right in the encumbered asset.

65. For example, assume that before the new law entered into force: (a) prior law allowed the creation of a security right by means of an oral security agreement even in the absence of possession of the encumbered asset by the secured creditor; and (b) a secured creditor extended credit to a grantor and the grantor secured its repayment obligation by creating a security right in an intangible asset in favour of the secured creditor by means of an oral security agreement. In the absence of the rule in paragraph 2, the security right would not be effective between the parties under the new law and the secured creditor would need to obtain the cooperation of the grantor in order to have an effective security right because the new law requires a written security agreement signed by the grantor (see art. 6, para. 3).

Article 105. Transitional rules for determining the third-party effectiveness of a prior security right

66. Article 105 is based on recommendation 231 of the Secured Transactions Guide (see chap. XI, paras. 20-22). Under this article, a security right created and made effective against third parties under prior law before the effective date of the new law remains effective against third parties for a period of time under the new law, even if the conditions for third-party effectiveness under the new law have not been satisfied. The period expires at the earlier of the time when the third-party effectiveness of the security right would have ceased under prior law (see para. 1 (a)) or at the time specified in paragraph 1 (b).

67. Illustration: Under the prior secured transactions law of State X, a security right in a receivable could be made effective against third parties by notifying the debtor of the receivable, but the third-party effectiveness of the security right would cease after five years, unless the secured creditor sent a renewal notice to the debtor of the receivable (which would extend the third-party effectiveness of the security right for another five years. State X's enactment of the Model Law specifies three years as the time period for that rule in paragraph 1 (b)). One year before the new law entered into force, the grantor created in favour of the secured creditor a security right in a receivable owed to the grantor by the debtor, and the secured creditor notified the debtor of the security right. Under paragraph 1 (a), the security right would cease to be effective against third parties five years after the security agreement was entered into and notice was given to the debtor of the receivable under prior law (which, under these facts, would result in the security right ceasing to be effective against third

parties four years after the new law entered into force). Under paragraph 1 (b), the security right would cease to be effective against third parties three years after the new law entered into force. Thus, because the date in paragraph 1 (b) is earlier than the date in paragraph 1 (a), the security right will cease being effective against third parties under the new law three years after it enters into force (subject to the rules in paragraphs 2 and 3).

68. A security right that would cease to be effective against third-parties under the rule in paragraph 1 may continue to be effective against third parties if the secured creditor takes the appropriate steps under the new law to achieve third-party effectiveness. Most often, this result will be accomplished by registering a notice with the Registry. The secured creditor's ability to do so is aided by paragraph 4, which provides that the prior written agreement creating the security right constitutes sufficient authorization for registration of the notice.

69. Paragraphs 2 and 3 address the continuity of third-party effectiveness of a prior security right in situations in which: (a) a security right was effective against third parties under the prior law; and (b) the requirements for third-party effectiveness under the new law are satisfied. Paragraph 2 provides that, if the requirements for third-party effectiveness under the new law are satisfied before the expiration of the period specified in paragraph 1, the prior security right is continuously effective against third parties from the time when it was made effective against third parties; thus, the priority of that security right, for the purposes of the rules that determine priority by reference to the time of third-party effectiveness, will date from that time.

70. If, however, the requirements of the new law for third-party effectiveness of the prior security right are satisfied only after the expiration of the period specified in paragraph 1, there will be a gap between the expiration of third-party effectiveness under paragraph 1 and the achievement of third-party effectiveness under the new law. In that case, paragraph 3 provides that the security right is effective against third parties only from the time it is made effective against third parties under the new law; thus, the priority of that security right, for the purposes of the rules that determine priority by reference to the time of third-party effectiveness, will date only from that time.

71. The rule in paragraph 5 makes explicit a point that is implicit in paragraph 2. Paragraph 2 provides that, in cases in which the requirements for third-party effectiveness of a prior security right under the new law are satisfied before the expiration of the period specified in paragraph 1, the prior security right is continuously effective against third parties from the time when it was made effective against third parties under prior law. Paragraph 5 states that, in cases in which the security right was made effective against third parties by registration under prior law and the security right remains continuously effective against third parties under paragraph 2, priority rules that depend on the time of registration are to be applied using the time of registration under prior law.

Article 106. Application of prior law to the priority of a prior security right as against the rights of competing claimants arising under prior law

72. Article 106 provides an exception to the general rule in article 102, paragraph 2, that the new law applies to all security rights, including prior security rights. Under the circumstance described in article 106, the priority of a prior security right as against competing claimants is determined by application of prior law.

73. In particular, under the rule stated in paragraph 1, the prior law, rather than the new law, determines the priority of a prior security right against competing claimants if that security right and the rights of all competing claimants arose before the entry into force of the new law and the "priority status" of competing claimants has not changed.

74. Paragraph 2 provides that the priority status of a security right has changed if either of the two events has occurred. First, the priority status has changed if: (a) the prior security right was effective against third parties under the new law only because

of the rule in article 105, paragraph 1; and (b) third-party effectiveness ceased because the time period set out in article 105, paragraph 1 expired before the necessary actions occurred to make the security right effective against third parties under the new law. Second, the priority status of a security right has changed if it was not effective against third parties under the prior law at the time the new law entered into force but became effective against third parties when the new law entered into force or thereafter. The purpose of this rule is to preserve priority among completing claimants that was established under the prior law when no change has occurred other than the new law becoming effective.

Article 107. Entry into force of this Law

75. Article 107, which is based on recommendation 228 of the Secured Transactions Guide (see chap. XI, paras. 4-6), provides the date when or the mechanism according to which the new law will enter into force. The Model Law does not recommend a particular date or mechanism, and leaves that matter to the enacting State. The enacting State may wish to determine whether this article should be placed at the beginning or at the end of the new law.

76. In selecting a date or mechanism according to which the new law will enter into force, careful consideration should be given both to obtaining the economic benefits of the new law as soon as possible and to minimizing dislocations that may be caused by significant changes in secured transactions practice resulting from the new law. Inasmuch as the new law will have been chosen because it is an improvement over the prior law, the new law should come into force as soon as is practical. However, some lead time is necessary in order to, inter alia: (a) publicize the existence of the new law; (b) enable establishment of the Registry (or adaptation of an existing registry to the registry system required by the new law); and (c) educate participants in the secured transactions system, particularly present and future secured creditors, about the effect of the new law and the transition from the prior to the new law and enable them to prepare, for example, for compliance with new rules and use of new forms. For example, the new law may enter into force on a specific date or a few months after a specific date, or on the date to be specified by a decree once the Registry becomes operational.

C. Report of the Working Group on Security Interests on the work of its thirty-first session (New York, 13-17 February 2017)

(A/CN.9/904)

[Original: English]

Contents

I. Introduction

1. At its present session, Working Group VI (Security Interests) continued its work on the preparation of a draft guide to enactment (the "draft Guide to Enactment") of the UNCITRAL Model Law on Secured Transactions (the "Model Law"), pursuant to a decision taken by the Commission at its forty-eighth session (Vienna, 29 June-16 July 2015).[1] At that session, the Commission had noted that the Working Group, in preparing a draft model law, was mindful of the fact that it would be a more effective tool for States modernizing their legislation if background and explanatory information were provided to assist States in considering it for enactment. In addition, the Commission noted that, in the preparation of a draft model law, the Working Group had assumed that it would be accompanied by such a guide and referred several matters to that guide for clarification.[2]

2. The Commission also agreed that the draft Guide to Enactment should: (a) be as short as possible; (b) include cross-references to the UNCITRAL Legislative Guide on Secured Transactions (the "Secured Transactions Guide") and the other texts of the Commission on secured transactions, including the United Nations Convention on the Assignment of Receivables in International Trade (the "Assignment Convention"), the Supplement on Security Rights in Intellectual Property (the "Intellectual Property Supplement") and the UNCITRAL Guide on the Implementation of a Security Rights Registry (the "Registry Guide"); (c) focus on giving guidance to legislators rather than users of the text; (d) explain the thrust of each provision or section of the Model Law and any difference with the corresponding recommendations of the Secured Transactions Guide or the provisions of another UNCITRAL text on secured

[1] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), para. 215.
[2] Ibid.

transactions; (e) give guidance to States with respect to matters referred to them and in particular explain each option offered in various articles of the Model Law to assist enacting States in choosing one of the options offered.[3]

3. At its forty-ninth session (New York, 27 June-15 July 2016), the Commission adopted the Model Law.[4] At that session, the Commission had before it the draft Guide to Enactment (A/CN.9/885 and Add.1-4). The Commission noted that the draft Guide to Enactment provided background and explanatory information that could assist States in considering the Model Law for adoption. In addition, the Commission noted with appreciation that the draft Guide to Enactment was already at an advanced stage. Moreover, the Commission noted that several issues were referred to the draft Guide to Enactment even at its present session, and thus the draft Guide to Enactment was an extremely important text for the implementation and interpretation of the Model Law. After discussion, the Commission agreed to give the Working Group up to two sessions to complete its work and submit the draft Guide to Enactment to the Commission for final consideration and adoption at its fiftieth session in 2017.[5]

4. In addition, the Commission agreed that, if the Working Group completed its work in less than two sessions it should use any time remaining to discuss its future work in a session or in a colloquium to be organized by the Secretariat. Moreover, the Commission agreed that, subject to further discussion of the overall future work of the Commission, a colloquium to discuss future work on security interests should be held even if the Working Group used the full time of the two sessions to complete its work on the draft Guide to Enactment.[6]

5. At its thirtieth session (Vienna, 5-9 December 2016), the Working Group commenced its work on the draft Guide to Enactment of the Model Law based on a note by the Secretariat entitled "Draft Guide to Enactment of the UNCITRAL Model Law on Secured Transactions" (A/CN.9/WG.VI/WP.71 and Add.1-4 and part of Add.5) and requested the Secretariat to revise the draft Guide to Enactment to reflect the deliberations and decisions of the Working Group (A/CN.9/899, para. 11).

II. Organization of the session

6. The Working Group, which was composed of all States members of the Commission, held its thirty-first session in New York from 13 to 17 February 2017. The session was attended by representatives of the following States members of the Working Group: Argentina, Australia, Belarus, Brazil, Burundi, Canada, China, Colombia, Czechia, El Salvador, France, Germany, India, Israel, Italy, Japan, Kenya, Kuwait, Libya, Mexico, Namibia, Philippines, Republic of Korea, Romania, Russian Federation, Singapore, Spain, Sri Lanka, Switzerland, Thailand, Turkey, United Kingdom of Great Britain and Northern Ireland and United States of America.

7. The session was attended by observers from the following States: Afghanistan, Algeria, Belgium, Bolivia (Plurinational State of), Croatia, Cyprus, Iraq, Saudi Arabia and Syrian Arab Republic. The session was also attended by observers from the Holy See and the European Union.

8. The session was also attended by observers from the following international organizations:

(a) *United Nations system*: World Bank and World Intellectual Property Organization (WIPO);

(b) *International non-governmental organizations invited by the Commission*: Alumni Association of the Willem C. Vis International Commercial Arbitration Moot (MAA), American Bar Association (ABA), Centro de Estudios de Derecho, Economía y Política (CEDEP), Commercial Finance Association (CFA), European Banking

[3] Ibid., para. 216.
[4] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), para. 119.
[5] Ibid., paras. 120-122.
[6] Ibid., paras. 122 and 356.

Federation (EBF), European Investment Bank (EIB), European Law Students' Association (ELSA), Factors Chain International (FCI), Forum for International Conciliation and Arbitration (FICA), International Insolvency Institute (III), National Law Centre for Inter-American Free Trade (NLCIFT), New York State Bar Association (NYSBA), The Law Association for Asia and the Pacific (LAWASIA) and Union Internationale du Notariat (UINL).

9. The Working Group elected the following officers:

Chairperson: Ms. Kathryn SABO (Canada)

Rapporteur: Ms. Diana MUÑOZ FLOR (Mexico)

10. The Working Group had before it the following documents: A/CN.9/WG.VI/WP.72 (Annotated Provisional Agenda) and A/CN.9/WG.VI/WP.71/Add.5 and 6, as well as A/CN.9/WG.VI/WP.73 (Draft Guide to Enactment of the UNCITRAL Model Law on Secured Transactions).

11. The Working Group adopted the following agenda:

1. Opening of the session and scheduling of meetings.
2. Election of officers.
3. Adoption of the agenda.
4. Draft Guide to Enactment of the UNCITRAL Model Law on Secured Transactions.
5. Future work.
6. Other business.
7. Adoption of the report.

III. Deliberations and decisions

12. The Working Group considered notes by the Secretariat entitled "Draft Guide to Enactment of the UNCITRAL Model Law on Secured Transactions" (A/CN.9/WG.VI/WP.71/Add.5 and 6, as well as A/CN.9/WG.VI/WP.73) and its future work. The deliberations and decisions of the Working Group are set forth below in chapters IV and V respectively. The Secretariat was requested to revise the draft Guide to Enactment to reflect the deliberations and decisions of the Working Group.

IV. Draft Guide to Enactment of the UNCITRAL Model Law on Secured Transactions

A. Chapter VII. Enforcement of a security right (A/CN.9/WG.VI/WP.71/Add.5)

Article 75. Right of affected persons to terminate enforcement

13. As a general matter, it was agreed that the draft Guide to Enactment should avoid repeating and focus more on explaining the text of the Model Law.

14. With respect to paragraph 60, it was agreed that: (a) the second sentence should refer to "the grantor, any other person with a right in the encumbered asset or the debtor" (and perhaps define them as "affected persons"); (b) it should refer to the fact that the right to terminate enforcement was known in some jurisdictions as the right to "redeem an encumbered asset"; and (c) the last sentence should explain that, unlike recommendation 140 of the Secured Transactions Guide on which article 75 was based, article 75 did not refer to the extinguishment of a security right, as that matter was addressed in article 12.

15. With respect to paragraph 61, it was agreed that: (a) it should refer to "affected", rather than to "interested", persons; and (b) in the case of extrajudicial enforcement,

if any affected person disputed the secured creditor's assertion that the cost of enforcement up to the time the assertion was made was reasonable, the court or other authority would determine whether that assertion was correct.

16. With respect to paragraph 62, it was agreed that: (a) it should clarify that, other than as provided in article 75, paragraph 2, under article 75, paragraph 3, the right of termination could be exercised even after the secured creditor had enforced its security right by entering into a lease or licence; (b) the rights of a lessee or a licensee should be respected; and (c) the reference to "residual value left in the encumbered asset" should be deleted, as it provided a practical, but not necessarily a legal, consideration to be taken into account and was already mentioned as a general matter in paragraph 60.

Article 76. Right of a higher-ranking secured creditor to take over enforcement

17. With respect to paragraph 63, it was agreed that: (a) the third sentence should be deleted and replaced by a succinct explanation of the reasons why a higher-ranking secured creditor should be entitled to take over enforcement, drawing a distinction between judicial and extrajudicial dispositions, and including cross-references to articles 79 and 81; and (b) the last sentence should include a reference to the "collection of an encumbered asset" and an explanation of the time limits for the exercise of the right of the higher-ranking secured creditor to take over enforcement.

18. With respect to paragraph 64, it was agreed that: (a) the words in parenthesis in the second sentence should be deleted, as article 76 did not apply to outright transfers of receivables and the matter should be addressed in the part of the draft Guide to Enactment that discussed article 1, paragraph 2, according to which articles 72 to 82 did not apply to outright transfers of receivables by agreement; and (b) the last sentence should better explain the circumstances in which article 4 would be applicable.

Article 77. Right of the secured creditor to obtain possession of an encumbered asset

19. With respect to paragraph 65, it was agreed that: (a) it should clarify that article 77 applied only to tangible assets and refer to the fact that the concept of "possession", as defined in the Model Law (see art. 2, subpara. (z)), applied only to tangible assets (and not, for example to receivables); and (b) it should refer to "extrajudicial enforcement", rather than to "self-help remedies", which, as understood in some jurisdictions, did not require the grantor's consent (it was agreed that the same change should be made throughout the draft Guide to Enactment).

20. With respect to paragraph 66, it was agreed that: (a) the first sentence should be placed in paragraph 65; and (b) the second sentence should be revised to explain that the secured creditor's right to obtain possession would be subject to the rights of another person who had possession of the encumbered asset, such as a lessee or licensee, the rights of whom were addressed in article 34, paragraphs 3 and 5.

21. With respect to paragraph 67, it was agreed that it should clarify that: (a) once the person in possession of the encumbered asset objected to extrajudicial repossession at the time it was attempted, the secured creditor had no alternative but to apply to a court or other authority even if that person was the grantor and even if the grantor had previously agreed to allow the secured creditor to take possession without applying to a court or other authority; (b) the reason for that approach was to avoid disturbances of the public order (see Secured Transactions Guide, chap. VIII, para. 54); (c) if the objection was found by the court or other authority to be unfounded, the person objecting would have to bear the costs of enforcement (in particular as if that person was the grantor, an unfounded objection would amount to unilateral withdrawal of the consent given in the security agreement); and (d) both the secured creditor and the person in possession of the encumbered asset would have to act in good faith and in a commercially reasonable way, as provided in article 4.

22. With respect to paragraph 69, it was agreed that: (a) the first sentence should clarify that a lower-ranking secured creditor should not be entitled to obtain

possession from a higher-ranking secured creditor, unless otherwise agreed; (b) subparagraph (b) of the second sentence was not clear and should be deleted; (c) the third sentence should be further explained by reference to the fact that the lower-ranking secured creditor could sell the encumbered asset (subject to the higher-ranking secured creditor's right) without obtaining possession on the understanding that the buyer could obtain such possession by paying off the higher-ranking secured creditor; and (d) the latter part of the third sentence ("and the buyer …") should be deleted, as it addressed a matter that was dealt with more accurately in article 81.

Article 78. Right of the secured creditor to dispose of an encumbered asset

23. With respect to paragraph 70, it was agreed that its last sentence should clarify that the enacting State should specify the rules applicable to judicial sales or other dispositions, leases or licences of encumbered assets.

24. With respect to paragraphs 71 and 72, it was agreed that: (a) paragraph 72 should be placed right after the second sentence of paragraph 71; (b) paragraph 71 should deal with each paragraph of article 78 in separate paragraphs and be further explained; (c) for the time periods referred to in article 78, paragraph 4 (b) and (c), one to five days should be suggested in the draft Guide to Enactment; (d) for the time period referred to in article 78, paragraph 5, ten to fifteen days should be suggested, while the reasons for those suggestions should be explained; and (e) examples of "recognized markets" should be given, such as a securities stock exchange through which shares of publicly listed companies might be bought and sold at publicly-quoted prices.

Article 79. Distribution of the proceeds of a disposition of an encumbered asset and debtor's liability for any deficiency

25. With respect to paragraph 73 (distribution of proceeds in the case of a judicial disposition of an encumbered asset), it was agreed that it should explain that: (a) the enacting State should specify the rules that would govern the distribution of proceeds; (b) such distribution should take place in line with the priority rules of the Model Law; and (c) the enacting State should provide in article 81, paragraph 1, that the buyer or other transferee of an encumbered asset would acquire it free of all security rights, including security rights having priority over the security right of the enforcing creditor, on the basis that the proceeds of disposition would have been paid first to the prior-ranking secured creditors in accordance with article 79, paragraph 1.

26. With respect to paragraph 74 (distribution of proceeds in the case of an extrajudicial disposition of an encumbered asset), it was agreed that it should explain that: (a) the enforcing creditor should apply the proceeds to the secured obligation (see art. 79, para. 2 (a)), then pay any surplus to subordinate competing claimants, as the disposition would result in the extinguishment of their rights under article 81, paragraph 3, and, if any balance was left, to the grantor (see art. 79, para. 2 (b)); (b) in the case of doubt as to the priority of subordinate competing claimants, the enforcing creditor should pay the surplus to a judicial or other authority or fund specified by the enacting State for distribution in accordance with the provisions of the Model Law on priority (see art. 79, para. 2 (c)); and (c) creditors with rights that had priority over the right of the enforcing creditor did not need to be paid from the proceeds of the disposition (as their rights would not be extinguished by an extrajudicial disposition under art. 81, para. 3).

27. With respect to paragraph 75, it was agreed that it should explain that: (a) the Model Law did not address the question whether the debtor's obligation might be reduced or extinguished if the secured creditor failed to comply with the provisions of the enforcement chapter governing disposition or failed to exercise its post-default rights in good faith and in a commercially reasonable manner; (b) the question whether the debtor had a claim or counter-claim in those circumstances was a matter left to other law of the enacting State; and (c) as a practical matter, the enforcing secured creditor should provide an accounting indicating whether there was a surplus or shortfall upon disposition of the encumbered asset for the rules in article 79, paragraphs 2 and 3 to apply. It was also agreed that the reference to the fact that

articles 72 to 82 did not apply to outright transfers of receivables by agreement should be deleted, as that matter was already dealt with in article 1, paragraph 2.

Article 80. Right to propose the acquisition of an encumbered asset by the secured creditor

28. With respect to paragraph 76, it was agreed that it should clarify that: (a) article 80 applied to both tangible and intangible assets (for example, all assets of the grantor or intellectual property of the grantor); (b) article 80, paragraph 2, contained a list of the persons to whom the secured creditor ought to send the proposal to acquire the encumbered asset; and (c) any person with a right in the encumbered asset or secured creditor of record should inform the enforcing secured creditor not later than a short period of time such as one to five days before the proposal was sent (see para. 24 (c) above).

29. With respect to paragraph 77, it was agreed that it should explain that: (a) any person entitled to receive the proposal should object or indicate its consent ten to fifteen days after that person received the proposal (see para. 24 (d) above); (b) if one of the persons entitled to receive the proposal objected to it (in the case of art. 80, para. 4) or did not give its consent (in the case of art. 80, para. 5) and the secured creditor chose to continue with the enforcement, the secured creditor could only exercise one of the other post-default rights provided in the security agreement, the secured transactions law or another law (see art. 72, para. 1); and (c) in the case of a proposal of the secured creditor to acquire an encumbered asset in partial satisfaction of the secured obligation, the requirement for positive consent was intended to protect the debtor who would remain liable for the balance of the secured obligation and subordinate claimants whose rights would be extinguished (see art. 81, para. 3, and para. 32 below).

30. In that connection, the view was expressed that article 80, paragraphs 4 and 5 did not expressly address the consequences of the failure of the secured creditor to send the proposal to a person entitled to receive it under article 80, paragraph 2, or to send a proposal that met all the conditions set out in article 80, paragraph 3. Differing views were expressed as to the legal consequences of such mistakes of the secured creditor and as to whether they should be addressed explicitly in article 80. After discussion, the Working Group agreed that the draft Guide to Enactment should explain that, if the secured creditor, failed to send the proposal to one or more persons entitled to receive it, the secured creditor would not acquire the encumbered asset. It was also agreed that whether a defective proposal would have the same result would depend on whether the defect was material (e.g. a substantial misstatement of the secured obligation), a matter that should be left to other law.

31. With respect to paragraph 78, it was agreed that it should explain that article 80, paragraph 6, was merely facilitative in nature since the formal proposal process remained the same even where it was initially triggered by a request from the grantor to the secured creditor.

Article 81. Rights acquired in an encumbered asset

32. With respect to paragraph 79, it was agreed that it should clarify that: (a) article 81, paragraphs 1 and 2, addressed judicially-supervised dispositions and required the enacting State to specify, in the case of a sale or other transfer, whether or not the transferee acquired the encumbered asset free of any rights, and in the case of a lease or licence, whether or not the lessee or licensee was entitled to use the encumbered asset during the term of the lease or licence unaffected by the security right; (b) as already noted (see art. 79, para. 1, and para. 1 above), in the case of a sale or other disposition, the enacting State should specify that the buyer or other transferee acquired the encumbered asset free of any security rights, including security rights ranking higher in priority to that of the enforcing creditor; and (c) for the same reason, a similar rule should apply in the case of a lease or licence of the encumbered asset.

33. With respect to paragraph 80, it was agreed that it should explain that: (a) article 81, paragraphs 3 and 4, took a different approach in the case of an extrajudicial sale or other disposition, lease or licence of an encumbered asset; (b) the reason for the difference in approach was that higher-ranking secured creditors were not entitled to share in the proceeds of an extrajudicial enforcement initiated by a subordinate creditor (see para. 26 (c) above); (c) the enacting State might wish to consider providing that the rule in article 81, paragraph 3, applied also to the acquisition of an encumbered asset by the secured creditor (see Secured Transactions Guide, rec. 161, second sentence).

34. With respect to paragraph 81, it was agreed that it should clarify that article 81, paragraph 5, provided that the rights acquired by a buyer or other transferee, lessee or licensee would be affected by the enforcing creditor's failure to comply with the requirements of the enforcement chapter only if: (a) they had knowledge of the violation; and (b) the violation materially prejudiced the rights of the grantor or another person.

35. In that connection, the Working Group noted that recommendation 163 of the Secured Transactions Guide, on which article 81, paragraph 5, was based, referred to recommendations 161 and 162, which were reflected in article 81, paragraphs 3 and 4. Thus, the Working Group agreed that the reference in article 81, paragraph 5, to paragraphs 1 and 2 was a typographical error and recommended to the Commission that a corrigendum be issued to refer in article 81, paragraph 5, to paragraphs 3 and 4 (for another typographical error to be corrected, see para. 41 below).

Article 82. Collection of payment

36. With respect to paragraph 82, it was agreed that it should: (a) clarify that collection was an additional enforcement right where the encumbered asset was a receivable, negotiable instrument, right to payment of funds credited to a bank account or non-intermediated security; and (b) give examples of rights securing or supporting payment of such encumbered assets (such as a guarantee or a stand-by letter of credit).

37. With respect to paragraph 83, it was agreed that it should explain that article 82, paragraph 4, limited the right of collection of a secured creditor if the encumbered asset was a right to payment of funds credited to a bank account and the security right was made effective against third parties solely by registration, but not if the security right was made effective against third parties by a method other than registration. It was also agreed that paragraph 83 should refer specifically to paragraph 107 of chapter VIII of the Secured Transactions Guide, which set out very clearly the reasons for the rule in article 82, paragraph 4.

Article 83. Collection of payment by an outright transferee of a receivable

38. With respect to paragraph 84, it was agreed that it should explain that: (a) article 83 provided that, in the case of an outright transfer of a receivable, the transferee was entitled to collect the receivable at any time provided that payment had become due; and (b) the overarching obligation of good faith and commercial reasonableness in article 4 also extended to the collection of receivables by an outright transferee; and (c) as a practical matter, where the receivable was transferred outright without recourse, the transferor could not by definition be prejudiced by the failure of the transferee to act in good faith and in a commercially reasonable manner in exercising its collection right.

39. Subject to the above-mentioned changes (see paras. 13-38 above), the Working Group approved the substance of paragraphs 60 to 84 of document A/CN.9/WG.VI/WP.71/Add.5.

B. Chapter VIII. Conflict of laws (A/CN.9/WG.VI/WP.71/Add.6)

Article 84. Mutual rights and obligations of the grantor and the secured creditor

40. With respect to paragraph 4, it was agreed that it should: (a) clarify that the only limitations to the party autonomy were the ones set out in article 93; (b) explain that other issues relating to party autonomy (such as how a choice of law could be made) were left to other law; and (c) examples should be given of rules governing party autonomy typically set out in the conflict-of-laws rules of various States.

Article 85. Security rights in tangible assets

41. With respect to paragraph 6, it was agreed that it should clarify that article 98 set out a limited exception to the *lex situs* rule contained in article 85, paragraph 1, as it provided a different rule only for the third-party effectiveness of certain types of, tangible and intangible, asset. In that connection, the Working Group noted that article 85, paragraph 1, made no reference to article 98 and agreed to recommend to the Commission to issue a corrigendum to include in article 85, paragraph 1, a reference to article 98 (for another typographical error to be corrected see para. 35 above).

42. With respect to paragraph 8, it was agreed that it should explain that: (a) for the rule in article 85, paragraph 4, to apply the tangible assets in transit ought to have reached their destination forty-five to sixty days after the putative creation of the security right; (b) if those tangible assets reached their destination and the security right had been previously created and made effective under the law of the State of their destination, the security right would be effective; (c) if those tangible assets did not reach their destination within the prescribed time period, the security right would be governed by the law of the State of their origin, as stated in article 85, paragraph 1.

43. With respect to paragraph 10, recalling a decision it made at its thirtieth session (see A/CN.9/899, para. 86), the Working Group agreed that it should be moved to the place in the draft Guide to Enactment in which issues relating to specialized registries were discussed (see A/CN.9/WG.VI/WP.73, paras. 28-30).

Article 86. Security rights in intangible assets

44. With respect to paragraph 11, it was agreed that no reference needed to be made to a receivable being an intangible asset, as it was clear that, while article 86 set out the law applicable generally to security rights in intangible assets, subsequent articles provided asset-specific rules for several types of intangible asset.

Article 87. Security rights in receivables relating to immovable property

45. With respect to paragraph 13, it was agreed that it should explain that, even if a secured creditor or another person did not find out that a receivable arose from a sale or lease of immovable property or was secured by immovable property, article 87 would apply and subject the security right to the law of the State under whose authority the immovable property registry was maintained.

Article 88. Enforcement of security rights

46. With respect to paragraph 14, it was agreed that: (a) the reference to the *lex fori* as the law governing enforcement should be deleted as the forum might not be the State in which a tangible asset was located at the time enforcement commenced; and (b) the cross-reference to article 100 should be explained as article 100 applied but did not refer explicitly to certificated non-intermediated securities (same point for the cross-reference to article 100 in paragraph 16 in connection with uncertificated non-intermediated securities).

47. With respect to paragraph 15, it was agreed that the phrase “if a security right is created in several tangible assets that are located in different States or” in the third

sentence should be deleted, as even under such circumstances enforcement might take place in one State.

48. With respect to paragraph 16, it was agreed that, for reasons of clarity, the second sentence should include a cross-reference to article 86 that dealt with the law applicable to security rights in intangible assets.

Article 89. Security right in proceeds

49. With respect to paragraph 17, it was agreed that: (a) an additional sentence should be inserted to explain article 89; and (b) the example provided in the second sentence should refer to instances where the laws of more than one State would be applicable.

50. With respect to paragraph 18, it was agreed the first sentence should further explain the difficulties that arose from the bifurcated rule contained in article 89.

Article 90. Meaning of "location" of the grantor

51. With respect to paragraph 19, it was agreed that it should explain: (a) the concepts of "place of business" and "habitual residence"; (b) that the concept of "place of business" meant place of activities of a natural or legal person (including, for example, of a non-profit foundation) and not only commercial activities; (c) that the concept of "habitual residence" would in most cases apply only to natural persons; (d) that the determination of the place of central administration of a person as a matter of fact was not a difficult exercise for a court; and (e) that the law that would most likely govern insolvency would be the law of the place in which a person had the centre of its main interests, which was generally interpreted to be the place in which that person had its central administration.

Article 91. Relevant time for determining location

52. With respect to paragraph 20, it was agreed that it should refer to the determination of the applicable law by reference to the location of the asset or the grantor.

53. With respect to paragraph 21, it was agreed that: (a) the second sentence should clarify that it was based on the assumption that State B had enacted the Model Law or its conflict-of-laws provisions; (b) the reference to "actual" location in the third sentence should be deleted and that sentence should be aligned more closely with article 91, paragraph 1 (b); and (c) the reference to the time an issue arose as the time of the occurrence of an event which triggered an inquiry as to what law would be applicable should be further clarified.

54. With respect to paragraph 23, it was agreed that it should explain that article 91, paragraph 2, required that the rights of *all* competing claimants should be established before the change of location (including judgement creditors) and not just the rights of secured creditors.

Article 92. Exclusion of renvoi

55. With respect to paragraph 24, it was agreed that it should clarify that: (a) the purpose of article 92 was to "exclude" (rather than "reject") the doctrine of renvoi; and (b) the result of article 92 would be to exclude the entire body of the private international law rules of the law of the State whose law was applicable under the conflict-of-laws rules of the Model Law.

Article 93. Overriding mandatory rules and public policy (*order public*)

56. With respect to paragraphs 25 to 29, it was agreed that: (a) examples could be provided relating to both overriding mandatory provisions and public policy; (b) with respect to article 93, paragraphs 2 and 4, an example that involved the enforcement (rather than the creation) of a security right should be given; and (c) the place of arbitration and the place of enforcement should be further explained.

Article 94. Impact of commencement of insolvency proceedings on the law applicable to a security right

57. With respect to paragraph 30, it was agreed that it should: (a) give a few more typical examples of matters left to the law governing insolvency by reference to recommendation 31 of the UNCITRAL Legislative Guide on Insolvency Law; and (b) draw the attention of enacting States of the need to ensure coordination between their secured transactions law and the insolvency law.

Articles 95 and 96

58. The Working Group was generally satisfied with the substance of paragraphs 31 to 35.

Article 97. Security rights in rights to payment of funds credited to a bank account

59. With respect to paragraph 36, it was agreed that: (a) the rules contained in article 97 should be explained by reference to the discussion in the Secured Transactions Guide (see chap. X, paras. 49 and 50) rather than with the overly broad and largely inaccurate words "to avoid interfering with banking law and practices".

60. With respect to paragraph 38, it was agreed that the reference to "receiving deposits" should be deleted to avoid giving the impression that that activity was separate from the activity of maintaining bank accounts (see the definition of "bank account" in art. 2, subpara. (c)).

61. With respect to article 97, paragraph 3, it was agreed that the draft Guide to Enactment should provide guidance, including possible drafting suggestions, as to how the fall-back rules of article 5 of the Hague Convention on the Law Applicable to Certain Rights in Respect of Securities Held with an Intermediary could be implemented.

Article 98. Third-party effectiveness of a security right in certain types of asset by registration

62. With respect to paragraph 41, it was agreed that the last sentence should place the discussion of the priority of a security right over the rights of the insolvency representative or the mass of creditors and judgment creditors in the proper context of articles 35-37 of the Model Law.

Article 99. Security rights in intellectual property

63. With respect to paragraphs 42-44, it was agreed that they should clarify: (a) the different types of intellectual property rights that could be the subject of a security right; (b) the national treatment of intellectual property rights embodied in international conventions by reference to the Intellectual Property Supplement (see paras. 297 to 300); (c) that another benefit of the rule in article 99 was that a security right in a portfolio of intellectual property rights protected under the laws of several States could be created under a single law; (d) a licensee of intellectual property could grant a security right only in its rights under the licence agreement; and (e) that the effectiveness of a security right against intellectual property right holders that were not grantors was outside the scope of article 99.

Article 100. Security rights in non-intermediated securities

64. It was agreed that the order of paragraphs 45 to 50 should be reviewed to ensure a logical flow of the comments included in those paragraphs.

65. With respect to paragraph 46, it was agreed that it should avoid giving examples of entities that might be legal persons in some jurisdiction but not in others.

66. With respect to paragraph 47, it was agreed that it should: (a) refer to the "law of business organizations" rather than "corporate law", since many entities might not

be corporations; (b) explain the term "preferred shares"; and (c) clarify that not only lenders but also regulators and tax authorities might view subordinated debt as equity.

67. With respect to paragraph 48, it was agreed that it should clarify that article 95 would apply only by analogy, as it did not directly address the scenario envisaged in paragraph 48.

68. With respect to paragraph 54, it was agreed that the last sentence should clarify that the law applicable to the third-party effectiveness of a security right in equity securities would be the law of the State of the issuer's location, while the law applicable to the third-party effectiveness of a security right in debt securities would be the law governing the securities.

69. Subject to the above-mentioned changes (see paras. 40-68 above), the Working Group approved the substance of paragraphs 1 to 54 of document A/CN.9/WG.VI/WP.71/Add.6.

C. Chapter IX. Transition (A/CN.9/WG.VI/WP.71/Add.6)

Article 101. Amendment and repeal of other laws

70. With respect to paragraph 56, it was agreed that it should clarify that: (a) the Model Law was intended to be a complete system of secured transactions law "with respect to the assets subject to its scope", since the Model Law did not apply to certain types of movable asset; and (b) the enacting State ought to determine whether or not to address explicitly the issue of prior case law, as case law was not repealed.

71. With respect to paragraph 57, it was agreed that it should clarify that the enacting State should coordinate existing law with the new secured transactions law.

Article 102. General applicability of this Law

72. With respect to paragraph 58, it was agreed that it should: (a) follow more closely the language of article 102, paragraph 1 (a); and (b) be reviewed for clarity and coherence.

73. With respect to paragraph 59, it was agreed that it should clarify that the notion of "prior security right" in article 102, paragraph 1 (b), included: (a) rights, such as retention-of-title rights, that were not security rights under prior law but were treated as security rights under the new law; and (b) security rights in future assets (including assets acquired by the grantor after the entry into force of the new law enacting the Model Law), assuming that prior law permitted the creation of a security right in future assets (a matter that was to be determined under prior law in accordance with article 104).

74. With respect to paragraph 60, it was agreed that: (a) reference in the second sentence should be made to articles 103-106; and (b) its third sentence should be revised to better reflect the purpose of the remainder of the chapter. With respect to paragraph 61, it was agreed that it could be shortened.

Article 103. Applicability of prior law to matters that are the subject of proceedings commenced before the entry into force of this Law

75. With respect to paragraphs 62 and 63, it was agreed that: (a) they should explain the relationship between paragraphs 1 and 2 of article 103 more clearly; (b) ensure that no confusion arose from the distinction between substantive and procedural law issues; and (c) clarify that article 103, paragraph 2, referred to steps that constituted enforcement under prior law.

Article 104. Applicability of prior law to the creation of a prior security right

76. With respect to paragraphs 64 and 65, it was agreed that: (a) they should explain the relationship between article 102 and article 104 more clearly; and (b) the examples given therein should be simplified.

Article 105. Transitional rules for determining the third-party effectiveness of a prior security right

77. With respect to paragraphs 66-71, it was agreed that: (a) paragraph 67 should refer to a more typical example, such as a retention-of-title sale; (b) the transitional period in article 105, paragraph 1 (b), should be from one to two years, coordinated with the entry into force of the new law and determined on the basis of various considerations to be set out in the draft Guide to Enactment, such as the size and complexity of the economy and the extent of the changes introduced by the new law; and (c) they should be reviewed for clarity and coherence.

Article 106. Application of prior law to the priority of a prior security right as against the rights of competing claimants arising under prior law

78. With respect to paragraph 72, it was agreed that the first sentence should be replicated in the commentary to articles 103-105.

79. With respect to paragraph 74, it was agreed that: (a) the words "and when no new competing rights arose after the new law became effective" should be added at the end of the last sentence; and (b) the revised sentence would be better placed in paragraph 73.

Article 107. Entry into force of this Law

80. The Working Group was generally satisfied with the substance of paragraphs 75 and 76.

81. Subject to the above-mentioned changes (see paras. 70-80 above), the Working Group approved the substance of paragraphs 55 to 76 of document A/CN.9/WG.VI/WP.71/Add.6.

D. General part of the draft Guide to Enactment (A/CN.9/WG.VI/WP.73, paras. 1-20)

Preface

82. The Working Group approved the substance of the preface unchanged.

Purpose of the draft Guide to Enactment

83. With respect to paragraph 3, it was agreed that it should clarify that information from the *travaux préparatoires* would be useful to legislators too, and not only to users of the text.

Purpose of the Model Law

84. The Working Group was generally satisfied with the substance of paragraph 4.

The Model Law as a tool for modernizing and harmonizing laws

85. With respect to paragraph 6, it was agreed that the reference to the term "deposit-taking institution" as an example of a term that might need to be adjusted could be retained on the understanding that reference would be made to the commentary on article 2, subparagraph (c), which clarified that the enacting State should use a term broad enough to include any institution authorized to receive deposits in any State whose law might be applicable (see A/CN.9/WG.VI/WP.73, para. 39).

Main features of the Model Law

86. With respect to paragraph 9, it was agreed that it should emphasize that one of the main reasons for preparing the Model Law was that it provided a higher degree of harmonization than the other UNCITRAL texts on which it was based.

87. With respect to paragraph 13, it was agreed that it should highlight that one of the main advantages of the Assignment Convention was that it was an instrument of unification of the law of States and provided a higher level of uniformity and transparency than a model law, which was an instrument of harmonization.

88. With respect to paragraph 14, it was agreed that: (a) paragraph 15 should be inserted right after the first sentence of paragraph 14 (as it dealt with the key objectives of the Model Law); and (b) the remaining part of paragraph 14 could be set out in a separate paragraph (as it dealt with the fundamental policies of the Model Law).

89. With respect to paragraph 17, it was agreed that: (a) the words "introduction of a case law reporting system" should be qualified with the words along the lines "when not already in place"; (b) the last sentence should highlight the need for the insolvency law to recognize in principle the effectiveness and priority of security rights; and (c) the revised paragraph 17 should be placed closer to paragraph 7, as both related to adjustments that needed to be made to the law implementing the Model Law or other law of the enacting State.

Assistance from the UNCITRAL Secretariat

90. The Working Group was generally satisfied with the substance of paragraphs 18-20.

91. Subject to the above-mentioned changes (see paras. 82-89 above), the Working Group approved the substance of paragraphs 1 to 20 of document A/CN.9/WG.VI/WP.73.

E. Chapter I. Scope of application and general provisions (A/CN.9/WG.VI/WP.73, paras. 21-78)

Article 1. Scope of application

92. With respect to paragraph 22, it was agreed that: (a) it should further clarify the reasons for including outright transfers of receivables within the scope of the Model Law and for subjecting outright transfers of and security rights in receivables to the same rules (with the exception of enforcement); (b) the words "that are clearly not financing transactions" should be revised along the following lines "that did not function as financing transactions"; and (c) the term "agent" should be replaced with the more neutral term "representative".

93. With respect to paragraph 23, it was agreed that it should clarify that the reason for the exclusion of rights to receive payment under an independent undertaking was that the implementation of the relevant recommendations of the Secured Transactions Guide would have made the Model Law unduly complex.

94. With respect to paragraph 25, it was agreed that it should express more clearly the reasons for excluding intermediated securities along the lines provided for in the Secured Transaction Guide (see chap. I, para. 37).

95. With respect to paragraph 27, it was agreed that it should be aligned more closely with article 1, paragraph 3 (e), to convey the notion that certain types of asset were to be excluded to the extent that other laws governed such types of asset.

96. With respect to the placement of paragraphs 28-30 (on specialized secured transactions and registration regimes), it was agreed that they should be revised to refer to the relevant issues (third-party effectiveness, priority, registration and conflict of laws) in a summary fashion with cross-references to the relevant paragraphs and recommendations of the Secured Transactions Guide.

97. With respect to paragraph 33, it was agreed that additional examples should be provided to explain the relationship between secured transactions law and consumer-protection laws, such as in the case of enforcement, where the consumer-protection

law might prohibit enforcement against a grantor or a debtor of a receivable that was a consumer.

98. With respect to paragraph 34, it was agreed that: (a) a reference to it might be made in paragraph 33 as it dealt with the general issue of statutory limitations; (b) the second sentence should be retained to provide useful guidance; and (c) the third sentence should end after the words "does not apply to contractual limitations" as article 1, paragraph 6, only dealt with statutory limitations.

99. As a drafting matter, it was suggested that the draft Guide to Enactment should refer to the respective provision explained in each paragraph rather than generally to the Model Law.

Article 2. Definitions and rules of interpretation

Acquisition security right

100. With respect to paragraph 38, it was agreed that it should clarify that the holder of an acquisition security right could be either a bank or a seller.

Bank account

101. With respect to paragraph 39, it was agreed that the last sentence should refer to "any institution authorized to receive deposits in *any* State whose law may be applicable".

Competing claimant

102. With respect to paragraph 41, it was agreed that it should refer to "steps necessary under other law of the enacting State to acquire a right in an encumbered asset".

Default

103. With respect to paragraph 44, it was agreed that reference should be made to the debtor's (rather than the grantor's) failure to perform the secured obligation, as if the grantor was a different person, it would not necessarily owe payment of the secured obligation or commit any other act that would constitute default.

Grantor

104. With respect to paragraph 47, it was agreed that it should clarify that a person that was not the owner but had a right to use an asset under a lease agreement could create a security right in that right.

Proceeds

105. With respect to paragraph 58, it was agreed that it should be revised to address rights in and limitations to rights in proceeds (rather than in original encumbered assets).

Securities

106. With respect to paragraph 64, it was agreed that it should: (a) distinguish between payment obligations that were securities and payment obligations that were not; and (b) explain that the definition of the term "securities" in the Model Law might differ from the definition of that term in securities regulations, the purpose of which might be different from the purpose of the Model Law (i.e. not to regulate security rights but rather protect public markets).

Security agreement

107. With respect to paragraph 66, it was agreed that it should clarify that, while a retention-of-title sale would not *create* title, under the functional approach followed in the Model Law, it would "provide for the creation of a security right".

Article 3. Party autonomy

108. In the context of its discussion of paragraph 73, the Working Group agreed that the draft Guide to Enactment (e.g. in the context of article 13) should clarify that, while a grantor might be liable for breach of a negative pledge agreement, the security right created would not be ineffective on the sole ground that it was created in breach of a negative pledge agreement.

109. With respect to paragraph 74, it was agreed that it should clarify that: (a) if other law allowed parties to agree to resolve any dispute with respect to their security agreement or security right by one of the alternative dispute resolution methods set out in article 3, paragraph 3, nothing in the Model Law would affect such an agreement; (b) article 3, paragraph 3, was based on the understanding (rather than the assumption) that alternative dispute resolution was important in particular for developing countries; and (c) article 3, paragraph 3, was intended to recognize the importance of alternative dispute resolution and did not prejudice the discussion of arbitrability, the protection of the rights of third parties or access to justice.[7]

Article 4. General standards of conduct

110. With respect to paragraph 76, it was agreed that it should: (a) clarify that the standards of good faith and commercial reasonableness applied to the exercise of the rights and the performance of obligations that any person might have under the Model Law (and not just the grantor); (b) provide examples of commercially reasonable behaviour; and (c) avoid suggesting that the standard of "commercial reasonableness" was a subjective standard.

Article 5. International origin and general principles

111. With respect to paragraphs 77 and 78, it was agreed that they should be clarified by reference to appropriate explanations included in other texts of UNCITRAL that contained a provision like article 5.

112. Subject to the above-mentioned changes (see paras. 92-111 above), the Working Group approved the substance of paragraphs 21 to 78 of document A/CN.9/WG.VI/WP.73.

F. Chapter II. Creation of a security right (A/CN.9/WG.VI/WP.73, paras. 79-114)

General rules

113. With respect to paragraph 79 it was agreed that, in view of their importance, the provisions on security rights in non-intermediated securities should not be mentioned as an example of asset-specific provisions that might be omitted.

Article 6. Creation of a security right and requirements for a security agreement

114. With respect to paragraph 83, it was agreed that: (a) it should clarify that article 6, paragraph 3, stated that a written agreement was required and set out the requirements for a written agreement; (b) it should explain that a written agreement was required because of the reasons mentioned in the Secured Transactions Guide (see chap. II, para. 30); and (c) it should explain the situation in which written form might serve evidentiary purposes giving the example of an oral agreement that would subsequently be confirmed in writing.

115. With respect to paragraph 85, it was agreed that it should clarify that possession was a substitute of a written agreement.

---

[7] *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), para. 98.

Articles 7 and 8

116. The Working Group was generally satisfied with the substance of paragraphs 86 to 89.

Article 9. Description of encumbered assets and secured obligations

117. With respect to paragraph 91, it was agreed that it should clarify that article 9, paragraph 2, was an application of the principle in article 8, subparagraph (c), that a security right might encumber a generic category of movable assets.

Articles 10-12

118. The Working Group was generally satisfied with the substance of paragraphs 92 to 100.

Article 13. Contractual limitations on the creation of a security right in receivables

119. With respect to paragraph 102, it was agreed that examples should be given to clarify the different agreements envisaged therein.

Article 14. Personal or property rights securing or supporting payment or other performance of encumbered receivables or other intangible assets, or negotiable instruments

120. With respect to paragraph 107, it was agreed that it should refer to: (a) accessory or secondary guarantees or suretyships; (b) a security right in movable or immovable property; and (c) a secured creditor having to make further registration.

Article 15. Rights to payment of funds credited to a bank account

121. With respect to paragraph 111, it was agreed that it should clarify that the consent of the deposit-taking institution would not be required even if there was an agreement between the grantor and the deposit-taking institution limiting the grantor's right to create a security right in its right to payment of the funds credited to its bank account.

Articles 16-17

122. The Working Group was generally satisfied with the substance of paragraphs 112 to 114.

123. Subject to the above-mentioned changes (see paras. 113-122 above), the Working Group approved the substance of paragraphs 79 to 114 of document A/CN.9/WG.VI/WP.73.

G. Chapter III. Effectiveness of a security right against third parties (A/CN.9/WG.VI/WP.73, paras. 115-133)

Article 18. Primary methods for achieving third-party effectiveness

124. The Working Group was generally satisfied with the substance of paragraph 115.

Article 19. Proceeds

125. With respect to paragraph 119, it was agreed that it should clarify that article 18 or 19 or both would apply, depending on the description of the encumbered assets in the security agreement and the registered notice. In that connection, it was agreed that that matter should be also clarified in the commentary on article 10 that dealt with the creation of a security right in proceeds.

126. With respect to paragraph 120, it was agreed that it contained a rule of interpretation that applied to all time periods suggested in the draft Guide to

Enactment and should thus be moved to the commentary on article 2 on definitions and rules of interpretation.

Article 20. Tangible assets commingled in a mass or transformed into a product

127. With respect to paragraph 121, it was agreed that it should refer to the automatic third-party effectiveness of the security right in the mass or product once the security right in the assets commingled was effective against third parties.

Articles 21-23

128. The Working Group was generally satisfied with the substance of paragraphs 122 to 125.

Article 24. Acquisition security rights in consumer goods

129. With respect to paragraph 126, it was agreed that the fourth sentence should refer to the circumstances in which it would be commercially practicable for the secured creditor to register, while the last part of the last sentence referring to the cost of enforcement could be deleted.

Article 25. Rights to payment of funds credited to a bank account

130. With respect to paragraph 127, it was agreed that it should clarify that the precise action for the secured creditor to become the account holder would depend on other law to which the deposit-taking institution was subject and practice, as well as on the terms of the account agreement.

Article 26. Negotiable documents and tangible assets covered by negotiable documents

131. With respect to paragraph 130, it was agreed that the suggested time period should be ten rather than five days for the security right to remain effective against third parties during the short period of time the grantor or other person needed in order to take actions with respect to the encumbered assets like loading and unloading.

Article 27. Uncertificated non-intermediated securities

132. With respect to paragraph 131, it was agreed that it should include a reference to the definition of control agreement in article 2, subparagraph (g) (i).

Additional third-party effectiveness and method for negotiable instruments and non-intermediated securities

133. The Working Group was generally satisfied with the substance of paragraphs 132 and 133.

134. Subject to the above-mentioned changes (see paras. 124-133 above), the Working Group approved the substance of paragraphs 115 to 133 of document A/CN.9/WG.VI/WP.73.

V. Future work

135. At the close of its considerations, having approved the substance of the draft Guide to Enactment as a whole, the Working Group decided to submit it to the Commission for final consideration and adoption at its fiftieth session, which was scheduled to take place in Vienna from 3 to 21 July 2017.

136. The Working Group noted with appreciation the draft programme of the Fourth International Colloquium on Secured Transactions, which was scheduled to take place in Vienna from 15 to 17 March 2017 (see www.uncitral.org/uncitral/en/commission/colloquia_security.html) pursuant to a request by the Commission at its forty-ninth session in 2016. The Working Group also noted that a report of the Colloquium would be submitted to the Commission for its

consideration of future work in the area of secured transactions and related topics at its fiftieth session.[8] In the discussion, particular interest was expressed in the following topics of the Colloquium: contractual guide on secured transactions, warehouse receipt financing; ADR (including online dispute resolution) in secured transactions and technical assistance to States in the field of secured transactions.

[8] See footnote 6 above.

D. Note by the Secretariat on a draft guide to enactment of the UNCITRAL Model Law on Secured Transactions

(A/CN.9/WG.VI/WP.73)

[Original: English]

Contents

Preface

At its forty-eighth session, in 2015, the Commission considered and approved the substance of article 26 of chapter IV of the draft Model Law on Secured Transactions and articles 1-29 of the draft Registry Act.[1]

At that session, the Commission also agreed that a guide to enactment of the Model Law should be prepared and referred that task to Working Group VI (Security Interests).[2]

At its forty-ninth session, in 2016, the Commission considered and adopted the UNCITRAL Model Law on Secured Transactions (the decision of the Commission and the relevant General Assembly resolution are contained in annexes I and II respectively).[3]

At that session, the Commission also noted that the Guide to Enactment was already at an advanced stage and was an extremely important text for the implementation and interpretation of the Model Law, and gave Working Group VI up to two sessions to complete its work and submit the Guide to Enactment to the Commission for final consideration and adoption at its fiftieth session in 2017.[4]

At its thirtieth and thirty-first sessions in December 2016 and February 2017, Working Group VI approved the substance of the draft Guide to Enactment.[5]

[At its fiftieth session, in 2017, the Commission considered and adopted the Guide to Enactment to the UNCITRAL Model Law on Secured Transactions (the decision of the Commission and the relevant General Assembly resolution are contained in annexes III and IV respectively).[6]]

I. Purpose of the Guide to Enactment

1. The Guide to Enactment is intended to explain briefly the thrust of each provision of the UNCITRAL Model Law on Secured Transactions (the "Model Law") and its relationship with the corresponding recommendation(s) of the UNCITRAL Legislative Guide on Secured Transactions (the "Secured Transactions Guide")[7] and other UNCITRAL texts on secured transactions,[8] including the United Nations Convention on the Assignment of Receivables in International Trade (the "Assignment Convention"),[9] the UNCITRAL Legislative Guide on Secured Transactions: Supplement on Security Rights in Intellectual Property (the "Intellectual Property Supplement"),[10] and the UNCITRAL Guide on the Implementation of a Security Rights Registry (the "Registry Guide").[11]

---

[1] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), para. 214. The draft Model Law and the draft registry Act are contained in documents A/CN.9/852 and A/CN.9/853.

[2] Ibid., para. 216.

[3] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), paras. 17-118. The draft Model Law, including the draft Model Registry-related Provisions, is contained in documents A/CN.9/884 and Add.1-4; the draft Guide to Enactment of the Model Law is contained in documents A/CN.9/885 and Add.1-4; and the compilation of comments by States is contained in documents A/CN.9/886, A/CN.9/887 and Add.1.

[4] Ibid., paras. 121 and 122.

[5] The reports of the Working Group are contained in documents A/CN.9/899 and A/CN.9/904. During these sessions, the Working Group considered documents A/CN.9/WG.VI/WP.71/Add.1-6 and A/CN.9/WG.VI/WP.73. Earlier versions of the Guide to Enactment are contained in documents A/CN.9/WG.VI/WP.66 and Add.1-4 and A/CN.9/WG.VI/WP.69 and Add.1-2.

[11] United Nations publication, Sales No. E.14.V.6.

2. A number of the provisions of the Model Law indicate that a State enacting the Model Law (the "enacting State") is required to make a decision or choose among several options. The Guide to Enactment is also intended to explain the import of these decisions or choices and thus assist enacting State in making those decisions or choices.[12]

3. To better explain provisions of the Model Law while avoiding repetition, the Guide to Enactment incorporates by reference the relevant recommendations and commentary contained in the Secured Transactions Guide, the Intellectual Property Supplement and the Registry Guide. While the focus of the Guide to Enactment is mainly on giving guidance to legislators, it also includes information from the *travaux préparatoires* of the Model Law, so as to be helpful to other users of the text, such as judges, arbitrators, practitioners and academics. [13]

II. Purpose of the Model Law

4. The Model Law is designed to assist States in implementing the recommendations of the Secured Transactions Guide, as well as the Intellectual Property Supplement and the Registry Guide with respect to security rights in movable assets. The overall objective of those texts and the Model Law is to increase the availability and decrease the cost of credit by providing an efficient, modern and certain legal framework for the creation of security rights in movable assets (see Secured Transactions Guide, rec. 1 (a)). Like those texts, the Model Law is based on the assumption that, to the extent that a secured creditor is entitled to rely on the value of the encumbered asset for the payment of the secured obligation, the risk of non-payment is reduced and that result is likely to have a beneficial impact on the availability and the cost of credit. It should also be noted that, like those texts, the Model Law is intended to be useful to all States, whether they do not currently have efficient and effective secured transactions laws or they already have such laws but wish to modernize and harmonize them with the laws of other States that are generally consistent with the Model Law (see Secured Transactions Guide, Introduction, para. 1).

III. The Model Law as a tool for modernizing and harmonizing laws

5. In general, States that incorporate the Model Law into their national law are advised to adhere as much as possible to its uniform text. This can help assure that the enacting State will obtain the full economic benefit of the legal system envisioned by the Model Law, avoid unintended consequences that may follow when a change in one provision has unforeseen effects elsewhere in the law, and enable the enacting State to gain the benefits flowing from the harmonization of its secured transactions law with that of other States. This does not deprive enacting States of any necessary flexibility as the Model Law provides options and leaves a number of matters to enacting States.

6. Examples of flexibility in the Model Law include the following: (a) the Model Law draws the attention of the enacting State to the need to adjust certain of the terms used in the Model Law to ensure that they are meaningful in the context of local law (e.g. "authorized deposit-taking institution", "movable property", "immovable

[12] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), para. 216.

[13] The reports of the Working Group on its work during the six sessions devoted to the preparation of the Model Law are contained in documents A/CN.9/796, A/CN.9/802, A/CN.9/830, A/CN.9/836, A/CN.9/865 and A/CN.9/871. During those sessions, the Working Group considered documents A/CN.9/WG.VI/WP.57 and Add.1 to 4, A/CN.9/WG.VI/WP.59 and Add.1, A/CN.9/WG.VI/WP.61 and Add.1 to 3, A/CN.9/WG.VI/WP.63 and Add.1 to 4, A/CN.9/WG.VI/WP.65 and Add.1 to 4, and A/CN.9/WG.VI/WP.68 and Add.1 and 2. For the reports of the Commission on its work during the two sessions it devoted to the Model Law and the document considered by the Commission during those sessions, see footnotes 1 and 3 above.

property" and "securities"; see art. 2, subparas. (c), (u) and (hh)); (b) several provisions of the Model Law refer within square brackets to issues that are left to the enacting State (e.g. art. 1, para. 3 (e)); (c) other provisions of the Model Law include options from which the enacting State is able to choose (e.g. art. 6, para. 3); (d) the Model Law leaves it to the enacting State to decide how to clarify in its enactment of the Model Law that that the general rules are subject to the asset-specific rules (see footnote 4); (e) the Model Law leaves it to the enacting State to decide whether to implement the Model Registry Provisions in its enactment of the Model Law, in a separate statute or in another type of legal instrument (see footnote 8); and (f) the Model Law leaves it to the enacting State to decide whether to incorporate the provisions in the conflict-of-laws provisions of the Model Law in its enactment of the Model Law or in a separate law addressing conflict-of-laws issues generally (see footnote 36).

7. The enacting State may need to make some changes to the Model Law in order to adapt it to its national legal system. Any modification, however, should not depart from the fundamental provisions of the Model Law, such as those implementing the functional, integrated and comprehensive approach to secured transactions (e.g. art. 1, para. 1, and art. 2, subpara. (kk)), the protection of the grantor and the debtor of the receivable (e.g. art. 1, paras. 5 and 6), the right of the parties to structure their security agreement as they wish to meet their needs (e.g. art. 3), the notice registration system (e.g. art. 18), the priority between a security right and the right of a competing claimant (e.g. art. 29) and the right to enforce a security right without application to a court or other authority while protecting the rights of the grantor and other parties with rights in the encumbered asset (e.g. art. 77, para. 3, and art. 78, para. 3). Otherwise, the enacting State will not be able to obtain the full economic benefits to be derived from the Model Law or achieve the harmonization of its law with the law of other States that will enact the Model Law (for the harmonization of the enactment of the Model Law with other laws of the enacting State, see para. 17 below).

8. Unlike an international convention, model legislation does not require enacting States to notify the United Nations or other enacting States. However, States are strongly encouraged to inform the UNCITRAL secretariat of their enactment of the Model Law (or indeed any other model law resulting from the work of UNCITRAL). This information will be made available on the UNCITRAL website to publicize the fact that the enacting State has adopted an international standard and, in any case, will assist other States in their consideration of the Model Law.

IV. Main features of the Model Law

A. Relationship of the Model Law with the secured transactions texts of UNCITRAL

9. The Secured Transactions Guide, the Intellectual Property Supplement of the Secured Transactions Guide and the Registry Guide contain detailed commentary and recommendations on the issues that need to be addressed in a modern law on secured transactions. However, they are lengthy texts and States will need assistance in transforming their recommendations into concrete legislative language. The Model Law was prepared to respond to this need.

10. The Model Law reflects the policies embodied in the recommendations of these texts. Differences in formulation between those recommendations and corresponding provisions of the Model Law are generally due to the legislative nature of the Model Law and are briefly explained in the relevant parts of the Guide to Enactment.

11. For reasons explained below in the relevant parts of the Guide to Enactment, the Model Law also addresses, in a manner that is consistent with the goals and the policies of the Secured Transactions Guide and the other texts of UNCITRAL on secured transactions, matters that were not addressed in a recommendation, or even discussed in those texts (e.g. security rights in non-intermediated securities). Conversely, certain matters that were addressed in the Secured Transactions Guide

are excluded from the scope of the Model Law (e.g. security rights in the right to receive the proceeds under an independent undertaking) or are not addressed specifically (e.g. security rights in attachments to encumbered movable assets or immovable property).

12. The provisions of the Model Law on security rights in receivables are substantially based on the recommendations of the Secured Transactions Guide, which in turn are based on the Assignment Convention. If a State ratifying or acceding to the Convention wishes to have an efficient and modern secured transactions law, it will nonetheless need to enact the Model Law, because: (a) the Convention applies only to security rights and outright transfers of receivables; (b) subject to limited exceptions, the Convention applies only to the assignment of international receivables and the international assignment of receivables (see art. 1, para. 1); (c) the Convention explicitly refers important matters (i.e. third-party effectiveness and priority) to the applicable domestic law, that is, the law of the assignor's location (see art. 22); and (d) the Convention leaves other issues (e.g. the form of the assignment) to domestic law.

13. Conversely, a State enacting the Model Law will still need to ratify or accede to the Convention in order to promote effective international receivables financing. Currently, exporters often face difficulty in obtaining financing based on receivables arising from the sale of exported goods because lenders are unwilling to extend credit secured by receivables owed by customers located in States whose laws are inconsistent with modern commercial finance practice. If both the enacting State and the State where the debtors of the receivables arising from the sale of exported goods are located ratify or accede to the Convention, lenders will be more willing to extend receivables financing to exporters because of the increased legal certainty that they will be able to collect the receivables.

B. Key objectives and fundamental policies of the Model Law

14. As already mentioned (see para. 4 above), the overall economic objective of the Model Law is the same as that of the Secured Transactions Guide (see Secured Transactions Guide rec. 1 and Introduction, paras. 43-59). The same is true for the fundamental policies of the Model Law and the Secured Transactions Guide (see Secured Transactions Guide, Introduction, paras. 60-72). One of these fundamental policies is the functional, integrated and comprehensive approach to secured transactions, under which any right created by agreement in any type of movable asset to secure the performance of an obligation is treated as a security right for the purposes of triggering the application of the Model Law, regardless of the terms used by the parties to describe their agreement (e.g. pledge, charge, transfer of title for security purposes, retention-of-title sale or financial lease; see Secured Transactions Guide, Introduction, para. 62, chap I, paras. 110-112, and chap. IX, paras. 60-84).

15. Depending on its drafting method and technique, the enacting State may wish to consider including the key objectives of the Model Law in a preamble or other similar statement accompanying its enactment of the Model Law. That statement could be used in interpreting and in filling gaps in the Model Law (see paras. 77 and 78 below).

16. The enacting State may also wish to consider producing an official commentary or guide to its enactment of the Model Law for use by courts and legal practitioners in interpreting and applying the law (see Secured Transactions Guide, Introduction, para. 86). This is likely to be particularly helpful if the Model Law introduces significant changes to the enacting State's previous secured transactions laws. Such a guide could explain the intent of particular provisions, in particular if they deviate significantly from previous law and, where necessary, provide concrete examples. Even more importantly, such an official commentary or guide could explain the fundamental principles that underlie the Model Law, such as the functional, integrated and comprehensive approach to secured transactions, under which the economic

substance of a transaction, rather than its form or the wording used by the parties to describe it, determines whether secured transactions law should apply. As the Guide to Enactment discusses all these and other relevant issues (either directly or by reference to the Secured Transactions Guide), the enacting State's commentary or guide could refer to the Guide to Enactment and the Secured Transactions Guide to allow its courts to obtain interpretative guidance from the international source from which its law was derived.

17. In enacting the Model Law, States will need to consider: (a) whether complementary amendments to other related laws (e.g. contract, property, insolvency, civil procedure and electronic commerce law) are required to ensure the overall coherence of its national law (see Secured Transactions Guide, Introduction, paras. 80-83); (b) harmonization with the existing concepts and drafting styles (see Secured Transactions Guide, Introduction, paras. 73-89); and (c) transition issues, including the preparation of an official commentary, model notice forms and agreements, the organization of educational programmes for users of the new law and the introduction of a case law reporting system (see Secured Transactions Guide, Introduction, paras. 84-89). For example, it is extremely important that the effectiveness of a security right, its priority and its enforceability is recognized in the case of the grantor's insolvency (for the treatment of security rights in insolvency, see Secured Transactions Guide, chap. XII).

V. Assistance from the UNCITRAL secretariat

A. Assistance in drafting legislation

18. In the context of its training and assistance activities, the UNCITRAL secretariat assists States with technical consultations for the preparation of legislation based on the Model Law. The same assistance is brought to Governments considering legislation based on other UNCITRAL model laws (e.g. the UNCITRAL Model Law on Cross-Border Insolvency),[14] or considering adhesion to one of the international trade law conventions prepared by UNCITRAL (e.g. the United Nations Convention on Independent Guarantees and Stand-by Letters of Credit (New York, 1995)[15] and the Assignment Convention).

19. Further information concerning the Model Law and other model laws and conventions developed by UNCITRAL, may be obtained from the UNCITRAL secretariat at the address below:

International Trade Law Division, Office of Legal Affairs
United Nations
Vienna International Centre
P.O. Box 500
A-1400 Vienna, Austria
Telephone: (+43-1) 26060-4060 or 4061
Telecopy: (+43-1) 26060-5813
Electronic mail: uncitral@uncitral.org
Internet home page: www.uncitral.org

B. Information on the interpretation of legislation based on the Model Law

20. The UNCITRAL secretariat welcomes comments concerning the Model Law and the Guide to Enactment, as well as information concerning enactment of legislation based on the Model Law. Once enacted, the Model Law will be included in the CLOUT information system, which is used for collecting and disseminating information on case law relating to the conventions and model laws that have

[14] United Nations publication, Sales No. E.14.V.2.
[15] United Nations publication, Sales No. E.97.V12.

emanated from the work of UNCITRAL. The purpose of the system is to promote international awareness of the legislative texts formulated by UNCITRAL and to facilitate their uniform interpretation and application. The UNCITRAL secretariat publishes, in the six official languages of the United Nations, abstracts of decisions and arbitral awards. In addition, upon individual request and subject to any copyright and confidentiality restrictions, the UNCITRAL secretariat makes available to the public all decisions and arbitral awards on the basis of which the abstracts were prepared. The system is explained in a user's guide that is available from the UNCITRAL secretariat in hard copy (A/CN.9/SER.C/GUIDE/1/Rev.2) and on the above-mentioned Internet home page of UNCITRAL.

VI. Article-by-article remarks

Chapter I. Scope of application and general provisions

Article 1. Scope of application

21. Article 1 is based on recommendations 1-7 of the Secured Transactions Guide (see chap. I, paras. 1-4, 13-15 and 101-112). It is intended to set out the various types of transaction and asset covered by the Model Law (see art. 1, paras. 1-4), as well as to clarify the relationship between the Model Law and other law (see art. 1, paras. 5 and 6). Generally, the Model Law follows the same functional, integrated and comprehensive approach to secured transactions as the Secured Transactions Guide. Thus, the Model Law applies to security rights, namely to property rights in movable assets, created by an agreement to secure payment or other performance of an obligation, regardless of whether the parties have denominated it as a security right (see art. 1, para. 1, and the definition of the term "security right" in art. 2, subpara. (kk)). However, there are some differences between the scope of the Model Law and the scope of the Secured Transactions Guide (see paras. 22-35 below).

22. Like the Secured Transactions Guide (see rec. 3) and the Assignment Convention (see art. 1, para. 1, and art. 2, subpara. (a)), the Model Law also applies to outright transfers of receivables by agreement, such as factoring (see art. 1, para. 2). The main reason for this approach is that the same third-party effectiveness and priority rules need to be applied to both outright transfers of and security rights in receivables because: (a) financing against receivables is sometimes done by an outright transfer of receivables rather than the creation of a security right in the receivables; and (b) it is sometimes difficult to determine at the outset of a transaction whether it will be held to involve an outright transfer of or the creation of a security right in a receivable (see Secured Transactions Guide, chap. I, paras. 25-31). While most modern secured transactions law generally follow this approach, some laws exclude certain types of outright transfers of receivables that are clearly not financing transactions, such as: (a) outright transfers of receivables for collection purposes where the transferee essentially acts only as an agent or trustee of the transferor; and (b) outright transfers of receivables as part of the sale of the business out of which they arose where the potential that the transfer will mislead other outright transferees or secured creditors is limited unless the old owner remains in apparent control of the business.

23. Unlike the Secured Transactions Guide which covered security rights in the right to receive payment under an independent undertaking (see rec. 2 (a)), the Model Law excludes from its scope security rights in both the right to receive and the right to request payment under an independent guarantee or letter of credit, whether commercial or standby (see art. 1, para. 3 (a)). The reason for this exclusion is that accommodating the various specialized financing practices in those areas would have made the Model Law unduly complex. Enacting States interested in dealing with security rights in those types of asset are encouraged to implement the relevant recommendations of the Secured Transactions Guide (recs. 27, 50, 107, 127, 176 and 212).

24. Like the Secured Transactions Guide (see rec. 4 (b)), to the extent that its provisions are inconsistent with law relating to intellectual property, the Model Law

defers to the enacting State's law relating to intellectual property (see art. 1, para. 3 (b)). This limitation is unnecessary if the enacting State has already coordinated the Model Law and its law relating to intellectual property or plans to do so in the context of the overall reform of its secured transactions law.

25. Unlike the Secured Transactions Guide which excludes from its scope all types of securities (see rec. 4 (c)), the Model Law excludes only security rights in non-intermediated securities (see art. 1, para. 3 (c)). The reasons for this approach are that: (a) non-intermediated securities often are part of commercial finance transactions (in which, for example, it is common for the lender's security to include in the assets to be encumbered shares of the borrower's wholly-owned subsidiaries or the shares of the borrower itself); (b) there are wide divergences among national regimes in this regard; and (c) security rights in non-intermediated securities are not addressed in any other uniform law text and thus no guidance is provided to States with regard to such securities. Conversely, security rights in intermediated securities are excluded as such securities are typically part of financial market transactions and are addressed in other uniform law texts (see Secured Transactions Guide, chap. 1, paras. 37 and 38).[16]

26. The Model Law excludes payment rights under or from financial contracts governed by netting agreements (see art. 1, para. 3 (d)), including foreign exchange transactions, because they raise complex issues that require special rules (see Secured Transactions Guide, chap. I, para. 39).

27. Combining the policy of recommendations 4 (a) and 7 of the Secured Transactions Guide, the Model Law permits the enacting State to exclude further types of asset (or transaction), provided that the matters that are addressed in the Model Law are governed by other law in force in that State (see art. 1, para. 3 (e)). The reason for this approach is to avoid inadvertently creating gaps (where that other law does not govern an issue addressed in the Model Law) or overlaps (where that other law governs an issue addressed in the Model Law).

28. Assets that may be excluded from the scope of the Model Law are, for example, assets that are subject to specialized secured transactions and registration regimes. Enacting States that do have such regimes with respect to assets that may be covered by the Model Law (e.g. ships, vehicles, aircraft or intellectual property) will have to consider whether registration with respect to security rights in those types of asset should take place in the security rights registry, in the specialized registry or in both. If registration may take place in both registries, the enacting State will have to ensure coordination of the applicable third-party effectiveness and priority rules. The Secured Transactions Guide recommends that, while a security right in an asset subject to a specialized registration system may be made effective against third parties by registration in the security rights registry, it is subordinate in priority to a security right or other right which was made effective against third parties by registration in the relevant specialized registry, irrespective of the temporal order of registration (see Secured Transactions Guide, recs. 43 and 77, subpara. (a); see also Registry Guide, paras. 23, 30 and 65).

29. The Secured Transactions Guide also recommends that, if registration in a specialized registry is possible in addition to registration in the security rights registry, an acquisition security right in consumer goods that is effective automatically (see art. 24) should not have the special priority of an acquisition security right over a security right registered in a specialized registry. The reason for this approach is to avoid any interference with any specialized registration system (see Secured Transactions Guide, chap. IX, paras. 125-128, and rec. 181).

30. The Secured Transactions Guide also discusses other ways of coordinating the security rights registry with any other registry that covers the same type of encumbered asset, including the automatic forwarding of information registered in

[16] Such as the Unidroit Convention on Substantive Rules for Intermediated Securities (Geneva, 2009; the "Unidroit Securities Convention") and the Convention on the Law Applicable to Certain Rights in respect of Securities held with an Intermediary (The Hague, 2006; the "Hague Securities Convention").

one registry to the other registry or the implementation of common gateways to enable registration in both registries simultaneously. However, the Secured Transactions Guide does not make any formal recommendations as to how States should ensure that registries are coordinated in the most efficient way. This approach takes into account the fact that specialized registries are typically subject to other law, and that the purposes, organization and administration of such registries vary from State to State and often from registry to registry (see Secured Transactions Guide, chap. IV, para. 117, and Registry Guide, para. 66).

31. With respect to security rights in attachments to immovable property and receivables arising from sale or lease of, or secured by, immovable property, the enacting State may wish to consider issues of coordination with immovable property registries (see Registry Guide, paras. 67-69). The enacting State may also wish to consider issues of international coordination among national security rights registries (see Registry Guide, para. 70).

32. Similarly, with respect to the application of the Model Law to proceeds, while the relevant provision of the Model Law (see art. 1, para. 4), is formulated somewhat differently from recommendation 6 of the Secured Transactions Guide, there is no policy difference between them. The policy may be explained as follows. In the case of a security right in an asset covered by the Model Law (e.g. receivables), the security right extends to its identifiable proceeds (see art. 10, para. 1); this rule applies even if the proceeds are of a type of asset that is outside the scope of the Model Law (e.g. intermediated securities), except to the extent that other law applies to proceeds of that type and governs the matters addressed in the Model Law.

33. With respect to the relationship with consumer-protection law, in line with the approach followed in the Assignment Convention (see art. 4, para. 4) and in the Secured Transactions Guide (see rec. 2 (b)), the Model Law is intended to preserve the application of consumer-protection law that protects a grantor or a debtor of an encumbered receivable (see art. 1, para. 5, of the Model Law). For example, under consumer-protection law, it may not be possible to create a security right in all present and future assets, employment benefits, at least up to a certain amount, or in necessary household items of a consumer. Enacting States that do not have a developed consumer-protection law may need to consider whether enactment of the Model Law should be accompanied by the enactment of such special protections for consumers. It should also be noted that the Model Law already includes certain consumer-specific rules (e.g. art. 24).

34. Following the approach of the Secured Transactions Guide (see rec. 18), the Model Law is intended to preserve limitations on the creation or the enforceability of a security right in certain types of asset (e.g. employment benefits) that are based on any other statutory or case law (see art. 1, para. 6). At the same time, it is intended to ensure that any such limitations based on the sole ground that an asset is a future asset, or a part of an asset or an undivided interest in an asset are overridden (see art. 8, subparas. (a) and (b)). However, paragraph 6 does not apply to contractual limitations on the creation of a security right in receivables (see art. 13) or rights to payment of funds credited to a bank account (see art. 15), or other contractual limitations such as a negative pledge agreement (for the effect of such an agreement on the creation of a security right, see para. 73 below).

35. Finally, like the Secured Transactions Guide, the general provisions of the Model Law apply to security rights in attachments to movable or immovable property, that is, movable assets that are attached to movable or immovable property, without losing their separate identity and thus becoming immovable property (see Secured Transactions Guide, Terminology). However, unlike the Secured Transactions Guide, the Model Law does not include specific provisions on security rights in attachments to movable or immovable property. Such provisions were not included in the Model Law to avoid making it even longer. In view of the importance of attachments, enacting States are encouraged to consider whether to include in their enactments of the Model Law provisions based on the relevant recommendations of the Secured Transactions Guide (see recs. 21, 25, 43, 48, 87, 88, 164, 165, 184, 195 and 196).

Article 2. Definitions and rules of interpretation

36. Article 2 contains definitions and rules of interpretation with respect to most key terms used in the Model Law. Other terms are defined or explained in various articles of the Model Law. For example, the term "judgment creditor" is defined in article 37, paragraph 1, of the Model Law.[17] Comments are not included below on all terms but only on those that are not self-explanatory or those that are not sufficiently explained in the Secured Transactions Guide, on the terminology of which article 2 is based (see Secured Transactions Guide, Introduction, paras. 15-20).

37. The rules of interpretation of the Secured Transactions Guide also apply to the Model Law. For example: (a) the word "or" is not intended to be exclusive; (b) the singular includes the plural and vice versa; and (c) the words "include" or "including" are not intended to indicate an exhaustive list (see Secured Transactions Guide, Introduction, para. 17).

Acquisition security right

38. An acquisition security right is a security right in a tangible asset that secures the grantor's obligation with respect to credit provided to enable the grantor to acquire that tangible asset (other than intangible assets embodied in a tangible asset, such as a negotiable instrument; see art. 2, subparas. (b) and (ll)), intellectual property or the rights of a licensee in intellectual property. This definition, in conjunction with the definition of "security right", results in the rights of any lender extending credit for the acquisition of an asset, whether a general bank lender, a retention-of-title seller or a financial lessor, being treated in the Model Law as acquisition security rights. It should be noted, however, that: (a) for a security right to be an acquisition security right, the credit it secures must in fact be used for that purpose; and (b) where a security right secures both other obligations and obligations incurred for the grantor to acquire a tangible asset, that security right is an acquisition security right to the extent it secures the obligation to pay the acquisition price and a non-acquisition security right to the extent it secures those other obligations.

Bank account

39. To underline the distinction between a "bank account" and a "securities account", the Model Law defines: (a) the former term as "an account maintained by an authorized deposit-taking institution to which funds may be credited or debited" (see art. 2, subpara. (c)); (b) the latter term as "an account maintained by an intermediary to whom securities may be credited or debited" (see art. 2, subpara. (ii)); and (c) the term "securities" in a manner that clearly excludes funds (see art. 2, subpara. (hh)). The term "bank account", therefore, includes any type of bank account (e.g. current or checking and savings account). The term does not include a right against the bank to payment evidenced by a negotiable instrument. The enacting State may wish to consider replacing the term "authorized deposit-taking institution" with a generic term broad enough to include any institution authorized to receive deposits in the State whose law may be applicable under article 97 of the Model Law.

Certificated non-intermediated securities

40. The term "represented" used in the definition of the term "certificated non-intermediated securities" (see art. 2, subpara. (d)) is intended to be broad enough to cover the approaches taken in different jurisdictions (e.g. "covered" or "embodied"). The term "certificate" means only a tangible document subject to physical possession. Thus, securities represented by an electronic certificate are considered to be uncertificated securities under the Model Law. It should be noted that securities represented by an electronic certificate may still qualify as non-intermediated securities.

---

[17] Since the Model Registry Provisions may be enacted in a separate statute or other type of legal instrument, the term "registry" is defined both in article 2, subparagraph (ee) of the Model Law and article 1, subparagraph (k), of the Model Registry Provisions. If they are enacted as part of the Model Law, the latter provision will not be necessary.

Competing claimant

41. The term "competing claimant" is principally used in the context of a potential priority dispute between a security right and the rights of another person claiming rights in the encumbered asset (see art. 2, subpara. (e)). This term includes another creditor of the grantor (secured or not) that has a right in the asset (such as a judgement creditor that has taken certain steps to execute the judgment), a buyer or lessee of the asset and an insolvency representative in insolvency proceedings with respect of the grantor.

Consumer goods

42. Unlike the definition of the term "consumer goods" in the Secured Transactions Guide on which it is based, the definition of the term in the Model Law (see art. 2, subpara. (f)) includes the word "primarily" to ensure that: (a) goods primarily used or intended to be used for personal family or household purposes and only incidentally for business purposes would be treated as consumer goods; and (b) goods primarily used or intended to be used for business purposes and only incidentally for personal, family or household purposes would not be treated as consumer goods. Accordingly, it is the primary use or the primary intended use of tangible assets by the grantor that determines whether they will be classified as consumer goods, equipment or inventory. It should also be noted that the terms "consumer goods", "equipment" and "inventory" are primarily relevant to the articles on acquisition security rights (see paras. 46 and 50 below).

Control agreement

43. The term "control agreement" refers to an agreement between the grantor, the secured creditor and the issuer (in the case of securities) or the deposit taking institution (in the case of a right to payment of funds credited to a bank account), according to which the issuer or the deposit-taking institution agrees to follow the instructions of the secured creditor without further consent from the grantor. A control agreement can achieve three purposes: (a) to render a security right effective against third parties (see arts. 25 and 27); (b) to ensure the cooperation of the deposit-taking institution or the issuer of securities in the enforcement of a security right; and (c) to establish the priority of the secured creditor that has control. Unlike the definition of this term in the Secured Transactions Guide, on which it is based, the definition of the term in the Model Law does not refer to a "signed writing" (see art. 2, subpara. (g)). This difference does not reflect a policy change but rather a decision that this matter should be left to the evidentiary requirements of other law of the enacting State. In any case, a control agreement does not need to be in a single written document.

Default

44. The term "default" is defined in a generic way by reference to the grantor's failure to perform and to the agreement between the grantor and the secured creditor. What exactly constitutes failure to perform (e.g. a day's or a month's delay to pay) is a matter for the agreement between the parties and the law applicable to that agreement.

Encumbered asset

45. Any movable asset to which the Model Law applies may be an encumbered asset. In order to apply the provisions of the Model Law to outright transfers of receivables by agreement, the term includes a receivable that is the subject of an outright transfer by agreement.

Equipment

46. Unlike the definition of the term "equipment" in the Secured Transactions Guide on which it is based, the definition of the term in the Model Law includes the word "primarily" to clarify that: (a) goods used or intended to be used by a person primarily

in the operation of its business and only incidentally for other purposes would be treated as equipment; and (b) goods used or intended to be used by a person primarily for other purposes and only incidentally in the operation of its business would not be treated as equipment (see art. 2, subpara. (l)). This definition also includes the words "other than inventory or consumer goods" as, depending on their primary use or primary intended use, the same type of tangible assets may be "equipment", "consumer goods" or "inventory" (see art. 2, subparas. (f), (l) and (q), and paras. 42 above and 50 below).

Grantor

47. The definition of the term "grantor" makes clear that a grantor of a security right may be the debtor of the secured obligation or another person (e.g. the parent company of the debtor-subsidiary if the parent company creates a security right in its assets so that the subsidiary may borrow (see art. 2, subpara. (o) (i)). A person who is not the owner of an asset but has rights in the asset (e.g. rights under a lease agreement; see art. 2, subpara. (o) (i)) may also be a grantor of a security right in those rights. A buyer or other transferee of an encumbered asset that acquires the asset subject to a security right is also treated as a grantor, even if that person did not create a security right in the asset (see art. 2, subpara. (o) (ii)). In order to apply the provisions of the Model Law to outright transfers of receivables by agreement, the term "grantor" also includes a transferor under an outright assignment of receivables (see art. 2, subpara. (o) (iii)).

Insolvency representative

48. As the term "insolvency representative" is only used in the definition of the term "competing claimant" it is not defined in the Model Law. It is defined though in the Secured Transactions Guide (see Introduction, para. 20) and the UNCITRAL Legislative Guide on Insolvency Law (the "Insolvency Guide"; see Introduction, para. 12 (v)) in a sufficiently broad manner to include the person responsible for administering insolvency proceedings or supervising the debtor and the debtor's affairs (see Insolvency Guide, part two, chap. III, paras. 11-18 and 35). The Secured Transactions Guide and the Insolvency Guide contain definitions of other insolvency-related terms, such as the term "insolvency proceedings" (which is referred to in arts. 2, subpara. (e) (iii), 35 and 94), and the term "insolvency estate".

Intangible asset

49. The term "intangible asset" includes receivables, rights to the performance of obligations other than receivables, rights to payment of funds credited to a bank account and uncertificated non-intermediated securities, as well as any other asset that is not a tangible asset (see art. 2, subpara. (p)).

Inventory

50. The term "inventory" refers to tangible assets held by the grantor for sale or lease in the ordinary course of the grantor's business. Thus. it is the purpose for which tangible assets are held by the grantor that determines whether they constitute inventory (see paras. 42 and 46 above). The term "work in process" includes "semi-processed materials". In States in which a licence of tangible assets is possible, the term "lease of tangible assets" in this definition includes the licence of tangible assets (see art. 2, subpara. (q)).

Mass and product

51. The Model Law distinguishes between a "mass" and a "product". A "mass" is the combination that arises when two or more tangible assets of the same type are commingled in such a way that they lose their separate identity. This could happen, for example, when a quantity of oil from one source is pumped into a storage tanker that already contains some oil from another source, or when a truckload of one farmer's wheat is put into a grain silo that already contains wheat from another farmer. In contrast, a "product" arises when one or more tangible assets are transformed into

something different, through a production or manufacturing process; for example, when gold is used to make a ring, or when flour and yeast are used to make bread. The distinction is relevant to articles 11 and 33 (see paras. 97-99 below and A/CN.9/WG.VI/WP.71/Add.4, para. 15).

Money

52. The term "money" includes not only the national currency of the enacting State but also the currency of any other State (see art. 2, subpara. (t)). However, it does not include virtual currency, as virtual currency is not national currency and is intangible (and money is in principle defined as a tangible asset; see art. 2, subpara. (ll)). Currency must qualify as a legal tender to constitute money. Rights to payment of funds credited to a bank account and negotiable instruments are distinct concepts in the Model Law. They are not included in the term "money".

Movable asset

53. The enacting State may wish to ensure that this definition captures anything that its laws consider to be an asset other than immovable property (see art. 2, subpara. (u)). Depending on its legal tradition and the terminology used, the enacting State may also wish to consider whether to replace the terms "movable asset" and "immovable property" with the equivalent concepts in its law (e.g. "personal property" and "land").

Non-intermediated securities

54. The term "non-intermediated securities" refers to securities (i.e. shares and bonds) that are not credited to a securities account (see art. 2, subparas. (w) and (ii)). This definition is structured around the definition of the term "intermediated securities" in the Unidroit Securities Convention (see art. 1, subpara. (b)). It refers only to "rights", in contrast to the language used in the Unidroit Securities Convention which refers to "rights or interests", for reasons of consistency with the terminology of the Model Law in which the term "right" is a broad term that covers any right or interest. It should be noted that, if securities are held by an intermediary directly with the issuer (e.g. the intermediary is registered in the books of the issuer as the holder of the securities), these securities in the hands of the intermediary are non-intermediated, even though equivalent securities credited by the intermediary to a securities account in the name of a customer are intermediated securities in the hands of the customer.

Notification of a security right in a receivable

55. The definition of the term "notification of a security right in a receivable" is based on the definition of the term "notification of the assignment" and recommendation 118 of the Secured Transactions Guide (see art. 2, subpara. (y)), which in turn is based on the definition of that term in the Assignment Convention (see article 5, subpara. (d)). The requirement for the identification of the encumbered receivable and the secured creditor in the definition of that term in the Assignment Convention is reflected in article 62, paragraph 1, of the Model Law as it states a substantive rule on the effectiveness of a notification of a security right, a matter that is already addressed in that article.

Possession

56. The definition of the term "possession" (see art. 2, subpara. (z)) is based on the definition of that term in the Secured Transactions Guide. The words "directly or indirectly" that were included in recommendation 28 of the Secured Transactions Guide were not included in this definition or article 16 which is based on that recommendation, because the definition is sufficiently broad to cover situations in which a person holds a tangible asset through another person (e.g. the issuer of a negotiable document may hold it through various persons responsible to perform parts of a multimodal transport contract).

Priority

57. The definition of the term "priority" (see art. 2, subpara. (aa)) is based on the definition in that term in the Secured Transactions Guide, which is in turn partly based on the definition of that term in the Assignment Convention (see art. 5, subpara. (g)). Like the definition in the Secured Transactions Guide, this definition does not include in the concept of "priority" the steps required to establish third-party effectiveness. Like the definition in the Assignment Convention and unlike the definition in the Secured Transactions Guide, however, this definition refers directly to the right of a person in preference to the right of another person.

Proceeds

58. The term "proceeds" in the Model Law (see art. 2, subpara. (bb)) has the same meaning as in the Secured Transactions Guide. It is important to note that it covers: (a) proceeds of the sale or other disposition, lease or licence of an encumbered asset (broadly understood); (b) proceeds of proceeds (e.g. if receivables are generated by the sale of encumbered inventory and those proceeds are deposited to a bank account, the right to payment of those funds constitutes proceeds of proceeds); and (c) natural fruits (e.g. the calves of the encumbered cows) or civil fruits (e.g. rents arising from the lease of encumbered assets). It should be noted that the secured creditor's right in the encumbered assets or proceeds is limited by various provisions of the Model Law. For example, under article 10, the security right extends only to identifiable proceeds; and under article 34, paragraph 4, a buyer of tangible encumbered assets in the ordinary course of the grantor's business acquires its rights in the assets free of the security right (see also arts. 19, para. 2, 34, para. 2, and 59, para. 2). It should also be noted that the terms revenues, dividends and distributions, which were included in the definition of this term in the Secured Transactions Guide, have been deleted on the understanding that they are covered by the term "civil fruits".

59. The term is not limited to proceeds received by the original grantor but includes proceeds received by a transferee of an encumbered asset when that transferee is treated as a grantor because it acquired the encumbered asset subject to the security right. For example, where A creates a security right in its assets in favour of X and then A transfers the assets to B who acquires its rights in the assets subject to X's security right and B subsequently sells the assets to C for a price of € 1.000 payable at a future date, the receivable arising from the sale by B to C constitutes proceeds covered by X's security right. The reason for this approach is that, otherwise, a transferee of an encumbered asset that acquired the asset subject to the security right (in the example, B) could sell the asset further (in the example, to C) and keep the proceeds free of the security right (for the issue of third-party transferees who are likely to search the registry under the name of their immediate transferor and who do not find a notice about a security right created by the first in a chain of transferors, see art. 26 of the Model Registry Provisions and A/CN.9/WG.VI/WP.71/Add.3, paras. 48-53).

60. It should be noted that proceeds may arise as a result of an action taken by a person other than the grantor or a transferee. Thus, article 10, paragraph 2, applies to funds in a bank account that are transferred to another bank account (even if this transfer takes place at the instigation of the deposit-taking institution) as the funds in the second bank account are "proceeds" (see para. 96 below).

Receivable

61. Like the Secured Transactions Guide, the Model Law defines the term "receivable" in a broad way to cover even non-contractual receivables, such as a claim for damages for the violation of law (see art. 2, subpara. (dd)). However, the term "receivable" does not include rights to payment evidenced by a negotiable instrument, rights to payment of funds credited to a bank account and rights to payment under a non-intermediated security, as they are treated as distinct types of asset that are subject to different asset-specific rules.

Secured creditor

62. The term "secured creditor" refers to the holder of a security right and includes a transferee in an outright transfer of a receivable by agreement (e.g. a factor in a factoring contract).

Secured obligation

63. The term "secured obligation" includes any obligation secured by a security right, including obligations arising from credit extended by a lender, a retention-of-title seller or a financial lessor (see art. 2, subpara. (gg)). It covers both monetary and non-monetary obligations, obligations already incurred at the time of the extension of the credit, as well as obligations incurred thereafter, if the security agreement so provides. As there is no secured obligation in an outright transfer of a receivable, the provisions that refer to a "secured obligation" do not apply to an outright transfer of a receivable.

Securities

64. The definition of the term "securities" in the Model Law is narrower than the definition of the term in article 1, subparagraph (a), of the Unidroit Securities Convention (see art. 2, subpara. (hh)). The reason is that, while a broad definition is appropriate for the purposes of that Convention, a broad definition for the purposes of the Model Law could result in an overlap with the terms money, receivables, negotiable instruments and other generic intangible assets and thus in uncertainty as to the regime applicable to security rights in those types of asset. In any case, the enacting State would need to coordinate the definition of the term "securities" in its secured transactions law with the definition of the term in its law governing the transfer of securities.

Securities account

65. The definition of the term "securities account" in the Model Law is derived from article 1, subparagraph (c), of the Unidroit Securities Convention (see art. 2, subpara. (ii)). It refers to an account maintained with a securities intermediary to which securities may be credited or debited.

Security agreement

66. The term "security agreement" is defined by reference to an agreement that provides for the creation of a security right (see art. 2, subpara. (jj)). In line with the functional, integrated and comprehensive approach followed in the Model Law (see paras. 7 and 15 above), the parties need not use any special words; and even if the parties use wording that does not refer to security rights, the agreement is a security agreement if it creates by agreement a property right in a movable asset that secures the payment or other performance of an obligation (see art. 2, subpara. (kk)). Thus, transactions such as transfers of property for security purposes, retention-of-title sales, hire-purchase agreements and financial leases are treated as secured transactions. To ensure that the provisions of the Model Law apply to outright transfers of receivables, the term "security agreement" is defined so as to include an agreement for the outright transfer of receivables.

Security right

67. The term "security right" is defined by reference to a property right created by agreement to secure payment or other performance of an obligation. In line with the functional, integrated and comprehensive approach followed in the Model Law (see paras. 7, 15 and 66 above), it is irrelevant whether or not the parties have denominated the right as a security right or even that they have used wording that does not refer to a security right. To ensure that the provisions of the Model Law apply to outright transfers of receivables, the term "security right" is defined so as to include the right of the transferee under an outright transfer of a receivable by agreement.

Tangible asset

68. The term "tangible asset" in the Model Law includes money, negotiable instruments, negotiable documents and certificated non-intermediated securities (some of them being intangible rights embodied in a document) except for the purposes of certain articles that contain rules that are not appropriate for those types of asset. For example, the term "tangible asset" in the definition of the term "mass" (see in art. 2, subpara. (s)) does not include negotiable documents because negotiable documents cannot be part of a mass as they are not interchangeable with other documents and are not fungible.

Writing

69. The definition of the term "writing" is intended to ensure that where the term is referred to in the Model Law (see arts. 2 (g) and (x), 6, para. 3, 63, paras. 2 and 9, 65, paras. 1 and 2, 77, para. 2 (a), 78, para. 4 (b) and 80, paras. 1, 2 (b), 4 and 6, of the Model Law, as well as arts. 2, paras. 1-3, and 20, para. 5, of the Model Registry Provisions), this reference will include electronic communications (see art. 2, subpara. (nn)). The definition is based on recommendation 11 of the Secured Transactions Guide, which in turn is based on article 9, paragraph 2, of the United Nations Convention on the Use of Electronic Communications in International Contracts (the "Electronic Communications Convention"). However, the Model Law does not include an article on the electronic equivalent of signature along the lines of recommendation 12 of the Secured Transactions Guide, which is in turn based on article 9, paragraph 3, of the Electronic Communications Convention. For the purpose of those articles of the Model Law that refer to signature (see arts. 6, para. 1, and 65, paras. 1 and 2), the enacting States may wish to consider whether to include in their enactment of the Model Law an article along the lines of recommendation 12 of the Secured Transactions Guide.

International obligations of the enacting State

70. The Model Law leaves to the enacting State the issue whether international treaties (such as the United Nations Convention on Contracts for the International Sale of Goods ("CISG") or the Assignment Convention when it enters into force) prevail over domestic law. For example, in the case of a conflict between a provision of the Model Law and a provision of any treaty or other form of agreement to which an enacting State is a party with one or more other States, the requirements of the treaty or agreement may prevail (see art. 3 of the UNCITRAL Model Law on Cross-Border Insolvency). Such an approach may need to be limited to international treaties that directly address matters governed by the Model Law (e.g. the creation, third-party effectiveness, priority and enforcement of a security right in movable assets). In other States, in which international treaties are not self-executing but require internal legislation in order to become enforceable law, such an approach might be inappropriate or unnecessary (see Guide to Enactment and Interpretation of the UNCITRAL Model Law on Cross-Border Insolvency, paras. 91-93).

Article 3. Party autonomy

71. Article 3 is based on article 6 of the Assignment Convention (the first sentence of which is based on art. 6 of CISG) and recommendation 10 of the Secured Transactions Guide. Paragraph 1 is intended to reflect the principle that, with the exception of the provisions listed in paragraph 1, parties are free to vary by agreement the effect of the provisions of the Model Law as between them. An agreement derogating from the provisions of the Model Law or varying its terms may be between any two parties whose rights are affected by the Model Law (e.g. between the secured creditor and the grantor, between the secured creditor and a competing claimant, between the secured creditor and the debtor of an encumbered receivable, or between the grantor and the debtor of the receivable).

72. The provisions listed in paragraph 1 are not subject to contrary agreement as permitting such an agreement with respect to these issues could result in abuse or uncertainty. In particular, article 4 sets out the general standard of conduct with which

the parties have to comply with in exercising their rights and performing their obligations under the Model Law; article 6 deals with the creation of a security right and sets out the requirements for the creation of a security right; article 9 deals with the standard for the description of encumbered assets and secured obligations; articles 53 and 54 deal with obligations of the party in possession to exercise reasonable care and the obligation of the secured creditor to return the encumbered assets; and article 72, paragraph 3, deals with the variation of the rights under the enforcement provisions of the Model Law and permits variation by the grantor or the debtor only after default to avoid abuse at the time of the conclusion of the security agreement. Articles 85-87, in the chapter of conflict of laws, deal with the law applicable to property law matters; determination of the law applicable to such matters is generally not left to a choice of law by the parties to ensure certainty with regard to the law applicable to property law matters, which are bound to involve rights of third parties.

73. Paragraph 2 reiterates the general principle that an agreement between two parties cannot affect the rights of a third party. For example: (a) if there are two debtors of a receivable that is an encumbered asset, and one of the two debtors agrees, pursuant to article 65, not to raise certain defences against a secured creditor, that agreement does not bind the other debtor of the receivable; and (b) if a secured creditor agrees that the grantor may not create another security right in the same assets in favour of another creditor (negative pledge agreement), that other creditor is not bound by the negative pledge agreement. The reason for stating a general principle of contract law is that the Model Law deals with relationships in which an agreement between two parties (e.g. the grantor and the secured creditor) might otherwise appear to have an undue impact on the rights of third parties (under art. 61, there is a limited impact of an agreement between the grantor of a security right in a receivable and the secured creditor in the sense that, for example, the debtor of a receivable may have to pay a person other than the initial creditor).

74. Paragraph 3 makes clear that, if other law allows the grantor and the secured creditor to agree to resolve any dispute that may arise between them from their security agreement or a security right created by that agreement by arbitration, mediation, conciliation and online dispute resolution, nothing in the Model Law affects any agreement to use such alternate dispute resolution mechanisms. Paragraph 3 is based on the assumption that, the use of alternative dispute resolution mechanisms to resolve disputes arising between the parties from their security agreement or the security right created by that agreement is important, in particular for developing countries, to attract investment. To the extent it is inefficient, judicial enforcement is likely to have a negative impact on the availability and the cost of credit. It should be noted that paragraph 3 is intended to recognize alternative dispute resolution mechanisms, without interfering with the way in which the various legal systems deal with arbitrability of disputes arising under a security agreement or a security right, the protection of rights of third parties or access to justice.

Article 4. General standards of conduct

75. Article 4 is based on recommendation 131 of the Secured Transactions Guide (see chap. VIII, para. 15). It is included in chapter I on the scope of application and general provisions, rather than in chapter VII on enforcement, as it states standards of conduct with which parties should comply when they exercise their rights and perform their obligations under the Model Law, even outside the context of enforcement. Under article 4, any person must exercise all its rights and perform all its obligations under the Model Law in good faith and in a commercially reasonable manner. The violation of this obligation may result in liability for damages and other consequences that are left to the relevant law of the enacting State.

76. The concept of “commercial reasonableness” is not defined in the Model Law but it typically refers to actions that a reasonable person might take in circumstances that would be similar to those encountered by the grantor in a particular case. Inasmuch as there is typically no single course of action that all reasonable persons would take in a particular situation, a wide range of actions may be considered as

meeting the standard of "commercial reasonableness". It should be noted that meeting the specific standards referred to in other provisions of the Model Law (e.g. art. 78, para. 4, according to which notice is to be given within a short period of time) should generally be construed as meeting the general standards of conduct referred to in this article. It should also be noted that, article 4 is listed in article 3 as a mandatory law rule. As a result, the duty to act in good faith and in a commercially reasonable manner cannot be waived or varied by agreement.

Article 5. International origin and general principles

77. Article 5 is inspired by article 7 of the CISG and based on article 3 of the UNCITRAL Model Law on Electronic Commerce, article 4 of the UNCITRAL Model Law on Electronic Signatures and article 2A of the UNCITRAL Model Law on International Commercial Arbitration. It is intended to limit the extent to which a national law implementing the Model Law would be interpreted only by reference to concepts of the national law of the enacting State, and reference would also be made to concepts of the Model Law and laws of other States that have enacted the Model Law.

78. The Model Law is a tool not only for modernizing but also for harmonizing secured transactions laws (see paras. 5-9 above). To promote harmonization, paragraph 1 provides that the provisions of a national law implementing the Model Law should be interpreted with reference to its international origin and the observance of good faith. The term "good faith" is also used in article 4 as an obligation of persons who have rights and obligations under the Model Law. By contrast, in this article, the term identifies a consideration to be taken into account in the interpretation of the Model Law. Under paragraph 2, gaps in a law implementing the Model Law are to be filled by reference to the general principles on which the Model Law is based (see para. 15 above).

Chapter II. Creation of a security right

A. General rules

79. This chapter, and several other chapters, contain a section A with general rules and a section B with asset-specific rules. This approach is followed to avoid overloading the general rules with asset-specific details. In some cases, it can make it easier for States that conclude that they do not need all of the asset-specific rules to leave some of them out of its law. For example, an enacting State may omit the rules dealing with security rights in non-intermediated securities. However, not all asset-specific rules may be omitted. For example, some asset-specific rules deal with core commercial assets such as receivables and no enacting State should omit them from its enactment of the Model Law. The result of this approach is that the general rules apply to all assets, but, in relation to certain types of asset, they apply subject to the asset-specific rules. The enacting State may wish to consider whether to include in the general rules of each chapter of its enactment of the Model Law cross-references to the asset-specific rules in that chapter or a provision that would state explicitly that the general rules in each chapter are subject to the asset-specific rules in that chapter (see footnote 4 of the Model Law).

Article 6. Creation of a security right and requirements for a security agreement

80. Article 6 is based on recommendations 13-15 of the Secured Transactions Guide (see chap. II, paras. 12-37). Its purpose is to deal with the creation of a security right, as well as the form and the minimum content of a security agreement, so as to enable parties to obtain a security right in a simple and efficient manner (see Secured Transactions Guide, rec. 1, subpara. (c)). A security right is created by agreement, for the content of which there are no requirements other than those listed in paragraphs 3 and 4, and for the conclusion of which no terms of art or special words need be used.

81. Under paragraph 1, an agreement is sufficient to create a security right, provided that the grantor has either a right in the asset to be encumbered or the power to encumber it. The grantor has the right to encumber an asset where the grantor is the owner of the asset. Where the grantor is in possession of the asset on the basis of an agreement with the owner, such as a lease agreement, the grantor has a right to create a security right in its rights under the lease agreement. The grantor has the power (rather than the right) to create a security right in a receivable, where the grantor has already transferred the receivable. That power is implicit in the fact that the third-party effectiveness and priority rules of the Model Law apply to outright transfers of receivables by agreement. As a practical matter, if the transferee does not make its right effective against third parties before a subsequent competing transferee or secured creditor does so, then the first transferee does not have priority over the subsequent competing transferee or secured creditor. However, if the first transferee made its right effective against third parties before the subsequent competing transferee or secured creditor, there would be no value left in the receivable for the subsequent transferee or secured creditor. It should also be noted that, in line with article 13, paragraph 1, the owner/grantor of a receivable to which that article applies has a right in the receivable or the power encumber it despite an anti-assignment agreement with the debtor of the receivable.

82. Paragraph 2 clarifies that a security agreement may provide for the creation of a security right in future assets (i.e. assets produced or acquired by the grantor after the conclusion of the security agreement; see definition in art. 2, subpara. (n)). However, the security right is created when the grantor acquires rights in them or the power to encumber them.

83. Paragraph 3 sets out the requirements for a written security agreement. From the two alternative wordings set out in the chapeau of paragraph 3 within square brackets, the enacting State may wish to select the one that is most fitting to its contract law and its law of evidence. If the enacting State retains the words “concluded in”, a security agreement that is not in written form is not effective (except as provided in art. 6, para. 4). If the enacting State retains the words “evidenced by”, a security agreement that is not in written form may still be effective if its terms are evidenced by a written document that is signed by the grantor (e.g. in a written offer by the grantor that the secured creditor accepts by way of its conduct).

84. Depending on what it considers as the most efficient financing practices and reasonable assumptions of credit market participants, the enacting State may wish to consider whether to retain paragraph 3 (d). One approach is to retain paragraph 3 (d) to facilitate the grantor’s access to secured financing from other creditors in situations where the value of the assets encumbered by the prior security right exceeds the maximum amount indicated in the notice registered with respect to that right. Another approach is to leave out paragraph 3 (d) to facilitate the grantor’s access to credit by the first secured creditor (for the comparative advantages and disadvantages of the two approaches, see Secured Transactions Guide, chap. IV, paras. 92-97, and Registry Guide, paras. 200-204). If paragraph 3 (d) is retained, the enacting State will need to make provision for the maximum amount to appear on the notice (see art. 8, subpara. (e) of the Model Registry Provisions). Otherwise the benefits of retaining paragraph 3 (d) will not be known to potential subsequent creditors (art. 24, para. 7, of the Model Registry Provisions would also need to be retained to deal with an error in stating the maximum amount on the notice).

85. Under paragraph 4, where the secured creditor is in possession of the encumbered asset on the basis of an oral security agreement with the grantor, there is no need for a written security agreement. The fact that the secured creditor is in possession of the encumbered asset is itself evidence of the existence of the security agreement (see Secured Transactions Guide, chap. II, paras. 30-33).

Article 7. Obligations that may be secured

86. Article 7 is based on recommendation 16 of the Secured Transactions Guide (see chap. II, paras. 38-48). It is primarily intended to ensure that future, conditional and fluctuating obligations may be secured. The main reason for this approach is to

facilitate modern financing transactions, in the context of which an agreement may provide that disbursements of funds by the secured creditor may be made at different times depending on the needs of the grantor (e.g. revolving credit facilities for the grantor to buy inventory). This approach does not necessarily mean that grantors may not be protected from excessive economic commitments. For example, depending on the grantor's financing needs, a maximum amount may be set for which the security right may be enforced (see art. 6, para. 3 (d), and para. 84 above).

Article 8. Assets that may be encumbered

87. Article 8 is based on recommendation 17 of the Secured Transactions Guide (see chap. II, paras. 49-57 and 61-70). It is primarily intended to ensure that future movable assets, parts of movable assets and undivided rights in movable assets, generic categories of movable assets, as well as all the movable assets a person has, may be the subject of a security agreement (for the time when a security right in future assets is created, see art. 6, para. 2, and para. 82 above).

88. It should be noted that the fact that future movable assets may be subject to a security right does not mean that statutory limitations on the creation or enforcement of a security right in specific types of movable asset (e.g. employment benefits in general or up to a specific amount) are overridden (see art. 1, para. 6, and para. 34 above).

89. It should also be noted that the fact that all the movable assets a person has may be subject to a security right so as to maximize the amount of credit that may be available and improve the terms of the credit agreement does not mean that other creditors of the grantor are necessarily unprotected. The protection of other creditors (within and outside insolvency proceedings) is a matter of other law and is foreseen in articles 35 and 36 of the Model Law (see A/CN.9/WG.VI/WP.71/Add.4, paras. 23-27).

Article 9. Description of encumbered assets and secured obligations

90. Article 9 is based on recommendation 14 (d) of the Secured Transactions Guide (see chap. II, paras. 58-60). In view of its importance, the standard for the description of encumbered assets in a security agreement is presented in a separate article (rather than in art. 6, para. 3, as it was done in rec. 14 (d) of the Secured Transactions Guide, on which art. 6, para. 3, of the Model Law is based).

91. Paragraph 1 sets out the general standard that must be met in the description of encumbered assets and the secured obligations for a security agreement to be effective (the description must reasonably allow their identification). Paragraph 2 is intended to ensure that a security right may be created in an asset or class of assets even if the description in the security agreement is generic, such as "all inventory" or "all receivables" (see Secured Transactions Guide, chap. II, paras. 58-60). Paragraph 3 sets out the same standard for the description of secured obligations.

Article 10. Rights to proceeds and commingled funds

92. Article 10 is based on recommendations 19 and 20 of the Secured Transactions Guide (see chap. II, paras. 72-89). Paragraph 1 is intended to ensure that, unless otherwise agreed by the parties (as this article is not listed in article 3 as a mandatory law rule), a security right in an asset automatically extends to its identifiable proceeds (for the definition of "proceeds" see art. 2, subpara. (bb)). The rationale for this rule is that it reflects the normal expectations of the parties and ensures that the secured creditor is sufficiently protected. This protection includes the secured creditor's right to enforce its security right both in the encumbered assets (provided that the transferee acquired its rights in the assets subject to the security right) and in the proceeds, although only up to the amount of the secured obligation. Otherwise, a grantor could effectively deprive a secured creditor of its security either by disposing of the

encumbered assets to a person who would take free of the security right or to a person from whom those assets could not easily be recovered.

93. By way of example, where the original encumbered asset is inventory, receivables generated from the sale of the inventory are proceeds (if they are identifiable). If upon payment of the receivables the funds received are deposited in a bank account, the right to payment of the funds credited to the bank account is also proceeds (proceeds of proceeds of the inventory). So, too, is the right to payment pursuant to a negotiable instrument (e.g. a cheque issued by the holder of that bank account to buy new inventory), as well as a negotiable warehouse receipt issued by the warehouse in which new inventory may be stored.

94. Paragraph 2 introduces an exception to the identifiability requirement in paragraph 1. A security right in an asset extends to its proceeds in the form of funds that are commingled with other funds even though the funds that are proceeds cannot be identified separately from the funds that are not proceeds (see para. 2 (a)). Paragraph 2 (b) limits that security right to the value of the proceeds immediately before they were commingled. So, if a sum of €1,000 is deposited in a bank account and at the time of enforcement the bank account has a balance of €2,500, the security right extends only to the sum of €1,000.

95. Paragraph 2 (c) deals with situations in which the balance in the bank account fluctuates and, at some point of time, is less than the value of the proceeds deposited (in the example set out in the previous paragraph, less than €1,000). In such a case, the security right extends only to the lowest value between the time when the proceeds were commingled and the time the security right in the proceeds is claimed. So, if in the example given in the previous paragraph, the balance in the account immediately after the proceeds were deposited was €1,500, then it went down to €500 and at the time of enforcement was €750, the security right extends only to €500 (i.e. the lowest intermediate balance). The rationale for this approach is that, if the balance of a bank account falls, funds deposited later are unlikely to be proceeds of the original encumbered assets.

96. Where funds in a bank account are original encumbered assets, and the funds are transferred into another bank account and mixed with other funds in that other account, then the funds as transferred into that other account will be “proceeds” of the original funds, and thus the rules in article 10 will apply (see para. 60 above).

Article 11. Tangible assets commingled in a mass or transformed into a product

97. Article 11 is based on recommendations 22 and 91 of the Secured Transactions Guide (see chap. II, paras. 90-95 and 100-102, and chap. V, paras. 117-123). It accomplishes two related objectives. First, it transforms a security right in a tangible asset commingled in a mass or transformed into a product into a security right in the mass or product. Second, it limits the value of that security right by reference to the quantity (in the case of a mass) or the value (in the case of a product) of the tangible asset commingled in the mass or product. Article 33 then addresses situations in which more than one secured creditor has a claim to a mass or product as a result of a security right in its components (see A/CN.9/WG.VI/WP.71/Add.4, para. 15). Paragraph 1 is intended to ensure that a security right in a tangible asset that is commingled in a mass or transformed into product will continue in the mass or product.

98. Paragraph 2 provides that a security right in a tangible asset that extends to a mass is limited to the same proportion of the mass that the asset bore to the quantity of the entire mass immediately after it was commingled in the mass. So, if a secured creditor has a security right in 100,000 litres of oil that is commingled with 50,000 litres of oil in the same tank so that the mass comprises 150,000 litres of oil, the security right is limited to two-thirds of the oil in the tank (i.e. 100,000 litres). If the quantity of the oil in the tank decreases, however, the secured creditor will still have security in two-thirds of the oil in the tank. For example, if one half of the oil leaks out so that only 75,000 litres remain, then the secured creditor will have a security right in two thirds of those 75,000 litres, namely in 50,000 litres only. The

value of the security right will decrease if the value of the oil in the tank goes down and correspondingly increase if the value of the oil in the tank goes up. This reflects commercial expectations, as it puts the secured creditor in the same position that the secured creditor would have been in if the oil had not been commingled in the tank with other oil in the first place.

99. Paragraph 3 applies a slightly different rule to products, consistent with the Secured Transactions Guide (see chap. II, para. 94). If the rule in paragraph 2 were to apply to security rights in assets that are transformed into a product, then this would provide the secured creditor with a windfall gain, if the value of the finished product is greater than the value of its components (e.g. because of value that is added by the debtor's production efforts including the labour of its employees). For this reason, paragraph 3 provides instead that a security right in an asset that is transformed into a product is limited to the value of the asset immediately before it became part of the product. So, if encumbered flour worth €100 is mixed with yeast to make bread worth €500, the security right is limited to €100.

Article 12. Extinguishment of security rights

100. Article 12 deals with the extinguishment of security rights, which triggers the obligation of a secured creditor in possession to return an encumbered asset or of a secured creditor who has registered a notice of its security right to register an amendment or cancellation notice (see art. 54 of the Model Law and art. 20, para. 3 (c), of the Model Registry Provisions). Under article 12, a security right is extinguished only where there is full payment or other satisfaction of all secured obligations and there is no longer any commitment of the secured creditor to extend further credit secured by the security right. For example, if a security right secures an amount owed under a revolving credit agreement, the security right is not extinguished where temporarily there is no amount outstanding under the credit agreement, since there may still be a contingent secured exposure under the commitment of the secured creditor to extend further credit.

B. Asset-specific rules

Article 13. Contractual limitations on the creation of security rights in receivables

101. Article 13 is based on recommendation 24 of the Secured Transactions Guide (see chap. II, paras. 106-110 and 113), which in turn is based on article 9 of the Assignment Convention. Paragraph 1 provides that an agreement limiting the grantor's right to create a security right in the receivables listed in paragraph 3 (often referred to as "trade receivables") does not prevent the creation of a security right. The rationale underlying this approach is to facilitate the use of receivables as security for credit, which is in the interest of the economy as a whole, without unduly interfering with party autonomy. This rule does not affect statutory limitations on the creation or enforcement of a security right in certain types of receivable (e.g. consumer or sovereign receivables; see art. 1, paras. 5 and 6, and paras. 33 and 34 above).

102. The agreement referred to in paragraph 1 may be entered into: (a) between the initial creditor/grantor and the debtor of the receivable; (b) where the initial creditor/grantor transfers the receivable to another person and that person creates a security right in the receivable, between that person (subsequent grantor) and the debtor of the receivable; (c) the initial creditor/grantor and the initial secured creditor; and (d) where the initial creditor/grantor transfers the asset to a person and that person creates a security right, between that person (subsequent grantor) and any secured creditor who obtained a security right from that person (subsequent secured creditor).

103. Paragraph 2 makes it clear that, while under paragraph 1 a security right is effective notwithstanding an agreement to the contrary, the grantor that creates a security right in a receivable despite that agreement (e.g. the initial creditor) is not excused from any liability to its counter-party (e.g. the debtor of the receivable) for

damages caused by breach of that contractual provision, if such liability exists under other law. Thus, under paragraph 2, if a party has sufficient negotiating power to convince its counterparty to consent to an anti-assignment agreement and a breach of that agreement by the grantor results in a loss to the debtor of the receivable, the grantor may be liable to the debtor of the receivable for damages under the law of the State whose law governs that agreements. However, the debtor of the receivable may not avoid the contract because of that breach or raise against the secured creditor (assignee) by way of set off or otherwise any claim it may have against the grantor for that breach. In addition, a secured creditor that accepts a receivable as security for credit is not liable to the debtor of the receivable for the grantor's breach just because it had knowledge of the anti-assignment agreement. Otherwise, the anti-assignment agreement would in effect prevent a secured creditor from obtaining a security right in a receivable covered by the anti-assignment agreement.

104. One of the benefits of the rules in paragraphs 1 and 2 is that a secured creditor does not have to examine each contract from which a receivable might arise to determine whether it contains a contractual limitation on assignment that may affect the effectiveness of a security right. This facilitates transactions relating to pools of receivables that are not specifically identified (with respect to which a review of the underlying transactions is possible but not necessarily time- or cost-efficient), as well as transactions relating to future receivables (with respect to which such a review would not be possible at the time of the conclusion of the security agreement, with the result that future receivables could not be accepted by lenders as security for credit).

105. Paragraph 3 limits the scope of the rule in paragraph 1 to what could broadly be described as trade receivables. It does not apply to so-called "financial receivables", "because, where the debtor of the receivable is a financial institution, even partial invalidation of an anti-assignment agreement could affect obligations undertaken by the financial institution towards third parties. Such a result is likely to have negative effects on important financing transactions, such as those involving the assignment of receivables arising from or under securities or financial contracts" (see Secured Transactions Guide, chap. II, para. 108).

106. Article 13 (read together with art. 14) is intended to apply also to anti-assignment agreements limiting the creation of a security right in any personal or property rights securing or supporting payment or other performance of an encumbered intangible asset other than a receivable or an encumbered negotiable instrument.

Article 14. Personal or property rights securing or supporting payment or other performance of encumbered receivables or other intangible assets, or negotiable instruments

107. The first sentence of article 14 reflects the thrust of recommendation 25 of the Secured Transactions Guide (see chap. II, paras. 111-122), which in turn is based on article 10 of the Assignment Convention. It is intended to ensure that a secured creditor with a security right in the types of asset described in article 14 automatically has the benefit of any personal or property right that secures or supports payment or other performance of those types of asset. For example, a personal or property right that *secures* payment of a receivable may be an accessory guarantee or a security right in immovable property; and a personal right that *supports* payment of a receivable may be an independent guarantee or a stand-by letter of credit. For example, if a receivable is secured by a personal guarantee or an encumbrance on immovable property, the secured creditor with a security right in that receivable obtains the benefit of that personal guarantee or encumbrance. This means that, if the receivable is not paid, the secured creditor may seek payment from the guarantor or enforce the encumbrance in accordance with the terms of the guarantee or the encumbrance (which may require that the secured creditor register the encumbrance; see para. 108 below).

108. The first sentence of article 14 does not include recommendation 25 (h), of the Secured Transactions Guide (which was based on art. 10, para. 6, of the Assignment

Convention). This is because it should be self-evident that the article does not apply to matters not addressed in it. Thus, to the extent that the automatic effects of the first sentence of article 14 are not impaired, any requirement under other law relating to the form or registration of the creation of a security right in any asset that is not covered in the Model Law (e.g. registration of an encumbrance on the relevant immovable property registry) is not affected.

109. The second sentence of article 14, which reflects the thrust of article 10, paragraph 1, of the Assignment Convention, is necessary because, in many States, some personal or property rights that might secure or support payment or other performance of a receivable or other intangible asset, or a negotiable instrument are transferable only with a new act of transfer. In such a case, the grantor is obliged to transfer the benefit of that right to the secured creditor. The reference in that sentence to the law governing the security or other supporting rights, is intended to ensure that other law that may require a new act of transfer is not overridden.

110. In addition, as this matter is addressed in articles 57-68, article 14 does not affect any duties of the grantor to the debtor of the receivable or other intangible asset, or the obligor of the negotiable instrument.

Article 15. Rights to payment of funds credited to a bank account

111. Article 15 is based on recommendation 26 of the Secured Transactions Guide (see chap. II, paras. 123-125). It is intended to implement the principles underlying article 13 with respect to rights to payment of funds credited to a bank account (see para. 107 above). As a result of article 15, a security right may be created in a right to payment of funds credited to a bank account without the consent of the deposit-taking institution. However, as a result of article 69, the creation of such a security right does not affect the rights and obligations of the deposit-taking institution or obligate the deposit-taking institution to provide any information about the bank account to third parties (see A/CN.9/WG.VI/WP.71/Add.5, paras. 42-45).

Article 16. Negotiable documents and tangible assets covered by negotiable documents

112. Article 16 is based on recommendation 28 of the Secured Transactions Guide (see chap. II, para. 128). Its purpose is to follow existing law in which a negotiable document is treated as embodying rights in the tangible assets it covers. As a result, there is no need separately to create a security right in those tangible assets if there is a security right in the document (e.g. cargo covered by a negotiable document issued by the person in possession of tangible assets or agricultural products covered by a negotiable warehouse receipt issued by the operator of the warehouse in which those products have been deposited).

113. In view of the definition of the term “possession” in article 2, subparagraph (z), possession of tangible assets by the issuer of a negotiable document covering those assets includes possession by its representative or a person acting on behalf of the issuer (including in situations where the issuer is a carrier that uses other persons for the transportation of those assets on its behalf pursuant to a multi-modal transport contract). A security right in a negotiable document extends to the tangible assets covered by the document and will continue to exist (subject to the terms of the security agreement) even after the document no longer covers those assets. However, effectiveness against third parties through possession of the document applies only as long as the document covers the assets and lapses once they are released by the issuer (see art. 26, para. 2, and para. 129 below).

Article 17. Tangible assets with respect to which intellectual property is used

114. Article 17 is based on recommendation 243 of the Intellectual Property Supplement (see paras. 108-112). It is intended to recognize the distinction between a tangible asset with respect to which intellectual property is used and the intellectual property used in connection with that asset. As a result, for a secured creditor to obtain

a security right in both a tangible asset with respect to which intellectual property is used (e.g. a personal computer or television set) and the intellectual property itself, the security agreement would need to expressly provide for it.

Chapter III. Effectiveness of a security right against third parties

A. General rules

Article 18. Primary methods for achieving third-party effectiveness

115. Article 18 is based on recommendation 32 of the Secured Transactions Guide (see chap. III, paras. 19-86). It is intended to set out the primary methods for achieving third-party effectiveness of a security right. The first is registration of a notice of the security right in the Registry established under article 28. This method of third-party effectiveness is available for all types of movable asset to which the Model Law applies. The second is physical possession of the encumbered asset by the secured creditor (for the definition of the term "possession", see art. 2, subpara. (z)). This latter method, as a practical matter, is available only for tangible assets. Alternative methods of third-party effectiveness for security rights in rights to payment of funds credited to a bank account and in non-intermediated securities are set out in the asset-specific provisions of this chapter (see arts. 25-27 and paras. 127 and 131 below).

Article 19. Proceeds

116. Article 19 is based on recommendations 39 and 40 of the Secured Transactions Guide (see chap. III, paras. 87-96). It addresses the circumstances in which the security right in identifiable proceeds that is provided for in article 10 is effective against third parties.

117. Under paragraph 1, if a security right in an asset is effective against third parties, a security right in its identifiable proceeds in the form of money, receivables, negotiable instruments or rights to payment of funds credited to a bank account is automatically effective against third parties, that is, without the need for any further act. For example, upon the sale of inventory that is subject to a security right that is effective against third parties, a security right in receivables arising from the sale of the inventory that are identifiable proceeds is effective against third parties without any further act.

118. Unlike recommendation 39, on which this article is based, paragraph 1 does not refer to the description of the proceeds in the notice. This is a drafting change and does not constitute a change of policy. The reason for this change is that, if the proceeds are described in the notice (in line with the security agreement), they constitute original encumbered assets, and article 18 is sufficient in dealing with the third-party effectiveness of a security right in those assets (and, as a result, the secured creditor does not need to rely on article 19 for this matter).

119. For proceeds other than those covered in paragraph 1, paragraph 2 provides that, if a security right in an asset was effective against third parties, the security right in those types of proceeds (if they are identifiable) is effective against third parties for a short period of time that should be enough for the secured creditor to find out that proceeds have been generated and take action (such as 20-25 days); thereafter, the security right in the proceeds continues to be effective against third parties only if it is made effective against third parties before the expiry of that short time period by one of the methods set out in article 18 or the asset-specific provisions of this chapter. For example, if an encumbered motor vehicle is exchanged for another motor vehicle, the other motor vehicle constitutes proceeds to which paragraph 2 applies; and the security right in the second motor vehicle will cease to be effective against third parties if no registration is made prior to the expiry of the time period set out in paragraph 2.

120. It should be noted that time periods set out in the Guide to Enactment are suggestions (not recommendations) for the enacting State to use for its consideration of what would be appropriate for its own circumstances. It should also be noted that issues relating to the measurement of time (e.g. whether only working days are meant) are left to other law of the enacting State. However, depending on how those issues are addressed (e.g. whether holidays are to be included), the time periods suggested in the Guide to Enactment may need to be adjusted.

Article 20. Tangible assets commingled in a mass or transformed into a product

121. Article 20 is based on recommendation 44 of the Secured Transactions Guide. Its purpose is to ensure that a security right created in a tangible asset that is commingled in a mass or transformed into a product under article 11 is automatically effective against third parties, that is, no separate act is necessary to make the security right effective against third parties (for the priority of this security right, see art. 42 and A/CN.9/WG.VI/WP.71/Add.4, para. 48). It should be noted that preserving continuity of third-party effectiveness is relevant for the purposes of the priority rules.

Article 21. Changes in the method for achieving third-party effectiveness

122. Article 21 is based on recommendation 46 of the Secured Transactions Guide (see chap. III, paras. 120 and 121). It is intended to ensure that a security right made effective by one method (e.g. registration) may later be made effective by another method (e.g. a control agreement), and that third-party effectiveness is continuous as long as there is no gap between the time third-party effectiveness was achieved by the first and the second method.

Article 22. Lapses in third-party effectiveness

123. Article 22 is based on recommendation 47 of the Secured Transactions Guide (see chap. III, paras. 122-127). It is intended to ensure that, if third-party effectiveness lapses, it may be re-established. In such a case, third-party effectiveness dates only from the time it is re-established.

Article 23. Continuity in third-party effectiveness upon a change of the applicable law to this Law

124. Article 23 is based on recommendation 45 of the Secured Transactions Guide (see chap. III, paras. 117-119). Under paragraph 1, if the law enacting the Model Law becomes applicable as a result, for example, of a change in the location of the encumbered asset or the grantor, a security right that was effective against third parties under the previously applicable law continues to be effective against third parties under the law enacting the Model Law for a short period of time that should be sufficient for the secured creditor to find out that the applicable law has changed and take action (such as 45-60 days).

125. This rule does not apply if the third-party effectiveness of a security right under the initially applicable law has already lapsed or lapses during the short period of time set out in paragraph 1 (b) but before the security right is made effective against third parties within that period. Thereafter, the security right continues to be effective against third parties only if, before the expiry of that period, it is made effective against third parties under the relevant provisions of the law enacting the Model Law. Under paragraph 2, if the third-party effectiveness of a security right continues (i.e. it did not lapse and the secured creditor satisfied the requirements for third-party effectiveness before the lapse and within the short period of time set out in para. 1 (b)), it dates back to the time it was first achieved under the previously applicable law. As already mentioned (see para. 123 above), if third-party effectiveness lapses, it may be re-established, but third-party effectiveness dates from the time it is re-established.

Article 24. Acquisition security rights in consumer goods

126. Article 24 is based on recommendation 179 of the Secured Transactions Guide (see chap. IX, paras. 125-128). An acquisition security right in consumer goods is automatically effective against third parties if the purchase price of the consumer goods is below an amount to be specified by the enacting State. While this limitation is intended to exempt from registration only low-value consumer transactions, for it to be meaningful, it must be set at a reasonably high price (for the question whether a buyer acquires its rights free of an acquisition security right that is automatically effective against third parties, see art. 34, para. 9, and A/CN.9/WG.VI/WP.71/Add.4, para. 21). That price should not be so high as to prevent a consumer from encumbering his or her assets to obtain credit, but not too low either to make it necessary for a secured creditor to register a notice of its security right. For example, the price could be several times the cost of registration or amount to the cost of typical durable household goods, or could be set at a level that would not justify the cost of enforcement of a security right.

B. Asset-specific rules

Article 25. Rights to payment of funds credited to a bank account

127. Article 25 is based on recommendation 49 of the Secured Transactions Guide (see chap. III, paras. 138-148). It adds to the methods set out in article 18 three asset-specific methods of achieving the third-party effectiveness of a security right in a right to payment of funds credited to a bank account. First, if the secured creditor is the deposit-taking institution with which the account is held, no additional action is required for a security right to become effective against third parties. Second, the security right is effective against third parties upon conclusion of a control agreement among the grantor, the secured creditor and the deposit-taking institution (for the definition of the term "control agreement", see art. 2, subpara. (g) (ii)). Third, the security right is effective against third parties if the secured creditor becomes the account holder. The precise action required for the secured creditor to become the account holder depends on the relevant law of the enacting State.

Article 26. Negotiable documents and tangible assets covered by negotiable documents

128. Article 26 is based on recommendations 51-53 of the Secured Transactions Guide (see chap. III, paras. 154-158). It addresses the relationship between the third-party effectiveness of a security right in a negotiable document and the third-party effectiveness of a security right in the tangible assets covered by the document.

129. Under paragraph 1, if a security right in a negotiable document (which extends to the assets covered by the document under article 16) is effective against third parties, the security right in the assets covered by the document is also effective against third parties for as long as the assets are covered by the document. Under paragraph 2, possession of the document is sufficient to make the security right in the assets covered by the document effective against third parties.

130. Under paragraph 3, the security right in an asset made effective against third parties by the secured creditor's possession of the document remains effective against third parties for a short period of time (such as 5 days) after the secured creditor relinquishes the possession of the document or the assets covered by the document for the purpose of enabling the grantor to deal with those assets. In paragraph 3, the words "or the asset covered by the document", which did not appear in recommendation 53, were added for clarification as to what would happen in actual practice; and the words "physical actions like loading and unloading", which appeared in that recommendation, were deleted on the understanding that the words "dealing with the asset" are sufficiently broad to cover not only transactions like sale and exchange but also physical actions like loading and unloading.

Article 27. Uncertificated non-intermediated securities

131. Article 27 is a new provision that does not correspond to any of the recommendations of the Secured Transactions Guide, which did not apply to security rights in any type of securities (see rec. 4 (c)). It addresses the methods, other than registration of a notice, by which a security right in uncertificated non-intermediated securities may be made effective against third parties. First, the security right may be made effective against third parties by notation of the security right or entry of the name of the secured creditor as the holder of the securities in the books maintained by the issuer or by another person on behalf of the issuer for the purpose of recording the name of the holder of securities (the enacting State should choose the method that would be best in line with its legal system; and if both methods are used in an enacting State, that State may choose to retain them both). Second, as in the case of a security right in a right to payment of funds credited to a bank account, the conclusion of a control agreement (between the grantor, the secured creditor and the issuer) with respect to the encumbered securities will result in the security right in those securities being effective against third parties.

Additional third-party effectiveness method for negotiable instruments and non-intermediated securities

132. Under article 19 of the Convention Providing a Uniform Law For Bills of Exchange and Promissory Notes (Geneva, 1930; the "Geneva Uniform Law"), "when an endorsement contains the statements 'value in security' ('valeur en garantie'), 'value in pledge' ('valeur en gage'), or any other statement implying a pledge, the holder may exercise all the rights arising out of the bill of exchange, but an endorsement by him has the effects only of an endorsement by an agent". Article 22 of the United Nations Convention on International Bills of Exchange and International Promissory Notes (the "Bills and Notes Convention") contains a similar rule, according to which "if an endorsement contain the words "value in security, or any other words indicating a pledge, the endorsee is a holder who: (a) may exercise all rights arising out of the instrument …".

133. An enacting State that has enacted the Geneva Uniform Law (or the Bills and Notes Convention) may wish to include: (a) this rule in its enactment of the Model Law (as a rule of creation and/or third-party effectiveness of a security right in negotiable instruments and non-intermediated securities); and (b) a rule dealing with the comparative priority of such a security right. Another option would be to leave the matter to articles 46, paragraph 2, 49, paragraph 3, and 51, paragraph 5, under which such a holder of a negotiable instrument or a non-intermediated security would take its rights free of, or unaffected by, any security right. A further option would be to leave the matter to the relevant domestic law rule dealing with the hierarchy between domestic law and an international convention (see para. 70 above).

E. Note by the Secretariat: draft guide to enactment of the UNCITRAL Model Law on Secured Transactions

(A/CN.9/914 and Add.1-6)

[Original: English]

Contents

Preface

At its forty-eighth session, in 2015, the Commission considered and approved the substance of article 26 of chapter IV of the draft Model Law on Secured Transactions and articles 1-29 of the draft Registry Act.[1]

At that session, the Commission also agreed that a guide to enactment of the Model Law should be prepared and referred that task to Working Group VI (Security Interests).[2]

At its forty-ninth session, in 2016, the Commission considered and adopted the UNCITRAL Model Law on Secured Transactions (the decision of the Commission and the relevant General Assembly resolution are contained in annexes I and II respectively).[3]

At that session, the Commission also noted that the Guide to Enactment was already at an advanced stage and was an extremely important text for the implementation and interpretation of the Model Law, and gave Working Group VI up to two sessions to complete its work and submit the Guide to Enactment to the Commission for final consideration and adoption at its fiftieth session in 2017.[4]

At its thirtieth and thirty-first sessions in December 2016 and February 2017, Working Group VI approved the substance of the draft Guide to Enactment.[5]

[At its fiftieth session, in 2017, the Commission considered and adopted the Guide to Enactment of the UNCITRAL Model Law on Secured Transactions (the decision of the Commission and the relevant General Assembly resolution are contained in annexes III and IV respectively).[6]]

---

[1] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), para. 214. The draft Model Law and the draft registry Act are contained in documents A/CN.9/852 and A/CN.9/853.

[2] Ibid., para. 216.

[3] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), paras. 17-118. The draft Model Law, including the draft Model Registry-related Provisions, is contained in documents A/CN.9/884 and Add.1-4; the draft Guide to Enactment of the Model Law is contained in documents A/CN.9/885 and Add.1-4; and the compilation of comments by States is contained in documents A/CN.9/886, A/CN.9/887 and Add.1.

[4] Ibid., paras. 121 and 122.

[5] The reports of the Working Group are contained in documents A/CN.9/899 and A/CN.9/904. During these sessions, the Working Group considered documents A/CN.9/WG.VI/WP.71/Add.1-6 and A/CN.9/WG.VI/WP.73. Earlier versions of the Guide to Enactment are contained in documents A/CN.9/WG.VI/WP.66 and Add.1-4 and A/CN.9/WG.VI/WP.69 and Add.1-2.

[6] *Official Records of the General Assembly, Seventy-second Session, Supplement No. 17* (A/72/17), para. […]. The draft Guide to Enactment is contained in documents A/CN.9/914 and Add.1-6. For the earlier project of UNCITRAL on security interests (1975-1980), see http://www.uncitral.org/uncitral/uncitral_texts/security_past.html.

I. Purpose of the Guide to Enactment

1. The Guide to Enactment is intended to explain briefly the thrust of each provision of the UNCITRAL Model Law on Secured Transactions (the "Model Law") and its relationship with the corresponding recommendation(s) of the UNCITRAL Legislative Guide on Secured Transactions (the "Secured Transactions Guide")[7] and other UNCITRAL texts on secured transactions,[8] including the United Nations Convention on the Assignment of Receivables in International Trade (the "Assignment Convention"),[9] the UNCITRAL Legislative Guide on Secured Transactions: Supplement on Security Rights in Intellectual Property (the "Intellectual Property Supplement"),[10] and the UNCITRAL Guide on the Implementation of a Security Rights Registry (the "Registry Guide").[11]

2. A number of the provisions of the Model Law indicate that a State enacting the Model Law (the "enacting State") is required to make a decision or choose among several options. The Guide to Enactment is also intended to explain the import of these decisions or choices and thus assist enacting States in making those decisions or choices.[12] To avoid unnecessary repetition, the Guide to Enactment incorporates by reference the relevant recommendations and commentary contained in the Secured Transactions Guide, the Intellectual Property Supplement and the Registry Guide, rather than repeating them.

3. The Guide to Enactment is primarily directed to executive and legislative branches of Governments. However, it may also provide useful insight to other users of the text, such as judges, arbitrators, practitioners and academics. It has been prepared by the Secretariat at the request of the Commission,[13] and is based on the deliberations and decisions of the Commission and Working Group VI.[14]

II. Purpose of the Model Law

4. The Model Law is designed to assist States in implementing the recommendations of the Secured Transactions Guide, the Intellectual Property Supplement and the Registry Guide with respect to security rights in movable assets. The overall objective of those texts and the Model Law is to increase the availability of and decrease the cost of credit by providing for an effective and efficient secured transactions law (see Secured Transactions Guide, rec. 1 (a)). Like those texts, the Model Law is based on the assumption that, to the extent that a secured creditor is entitled to rely on the value of the encumbered asset for the payment of the secured obligation, the risk of non-payment is reduced and this is likely to have a beneficial impact on the availability and the cost of credit. It should also be noted that, like those texts, the Model Law is intended to be useful to both States that currently do not have efficient and effective secured transactions laws and States that already have such laws but wish to modernize them, and harmonize them with the laws of other States

[14] The reports of the Working Group on its work during the six sessions devoted to the preparation of the Model Law are contained in documents A/CN.9/796, A/CN.9/802, A/CN.9/830, A/CN.9/836, A/CN.9/865 and A/CN.9/871. During those sessions, the Working Group considered documents A/CN.9/WG.VI/WP.57 and Add.1 to 4, A/CN.9/WG.VI/WP.59 and Add.1, A/CN.9/WG.VI/WP.61 and Add.1 to 3, A/CN.9/WG.VI/WP.63 and Add.1 to 4, A/CN.9/WG.VI/WP.65 and Add.1 to 4, and A/CN.9/WG.VI/WP.68 and Add.1 and 2. For the reports of the Commission on its work during the two sessions it devoted to the Model Law and the document considered by the Commission during those sessions, see footnotes 1 and 3 above.

that have modern secured transactions laws that are generally consistent with the Model Law (see Secured Transactions Guide, Introduction, para. 1).

III. The Model Law as a tool for modernizing and harmonizing laws

5. In general, States that incorporate the Model Law into their national law are advised to adhere as much as possible to its uniform text. This can help the enacting State to obtain the full economic benefit of the legal system envisioned by the Model Law, to avoid unintended consequences that may follow when a change in one provision has unforeseen effects elsewhere in the law, and to gain the benefits flowing from the harmonization of its secured transactions law with that of other States. This does not deprive enacting States of any necessary flexibility as the Model Law provides options and leaves a number of matters to enacting States.

6. Examples of flexibility in the Model Law include the following: (a) the Model Law draws the attention of the enacting State to the need to adjust certain terms used in the Model Law to ensure that they are meaningful in the context of local law (e.g. "authorized deposit-taking institution", "movable property", "immovable property" and "securities"; see art. 2, subparas. (c), (u) and (hh)); (b) several provisions of the Model Law refer within square brackets to issues that are left to the enacting State (e.g. art. 1, para. 3 (e)); (c) other provisions of the Model Law include options from which the enacting State is able to choose (e.g. art. 6, para. 3); (d) the Model Law leaves it to the enacting State to decide how to clarify in its enactment of the Model Law that the general rules are subject to the asset-specific rules (see footnote 4 of the Model Law); (e) the Model Law leaves it to the enacting State to decide whether to implement the Model Registry Provisions in its enactment of the Model Law, in a separate statute or in another type of legal instrument (see footnote 8 of the Model Law); and (f) the Model Law leaves it to the enacting State to decide whether to incorporate the conflict-of-laws provisions of the Model Law in its enactment of the Model Law or in a separate law addressing conflict-of-laws issues generally (see footnote 36 of the Model Law).

7. The enacting State may need to make some changes to the Model Law in order to adapt it to its national legal system. Any modification, however, should not depart from the fundamental provisions of the Model Law, such as those implementing the functional, integrated and comprehensive approach to secured transactions (e.g. art. 1, para. 1, and art. 2, subpara. (kk)), the protection of the grantor and the debtor of the receivable (e.g. art. 1, paras. 5 and 6), the right of the parties to structure their security agreement as they wish to meet their needs (e.g. art. 3), the notice registration system (e.g. art. 18), the priority between a security right and the right of a competing claimant (e.g. art. 29) and the right to enforce a security right without application to a court or other authority while protecting the rights of the grantor and other parties with rights in the encumbered asset (e.g. art. 77, para. 3, and art. 78, para. 3). Otherwise, the enacting State will not be able to obtain the full economic benefits to be derived from the Model Law or achieve the harmonization of its law with the law of other States that enact the Model Law (for the harmonization of the enactment of the Model Law with other laws of the enacting State, see para. 8 below).

8. In enacting the Model Law, States will also need to consider whether complementary amendments to other related laws (e.g. contract, property, insolvency, civil procedure and electronic commerce law) are required to ensure the overall coherence of its national law (see Secured Transactions Guide, Introduction, paras. 80-83). For example, it is extremely important that the insolvency law of the enacting State recognizes the effectiveness of a security right, its priority and its enforceability in the case of the grantor's insolvency (for the treatment of security rights in insolvency, see Secured Transactions Guide, chap. XII). In addition, enacting States will need to consider: (a) harmonization with the existing concepts and drafting styles (see Secured Transactions Guide, Introduction, paras. 73-89); and (b) transition issues, including the preparation of an official commentary, model notice forms and

agreements, the organization of educational programmes for users of the new law and the introduction of a case law reporting system if one is not already in place (see Secured Transactions Guide, Introduction, paras. 84-89).

9. Unlike an international convention, model laws do not require enacting States to notify the United Nations or other enacting States of their enactment. However, States are strongly encouraged to inform the UNCITRAL secretariat of their enactment of the Model Law (or indeed any other model law resulting from the work of UNCITRAL). This information will be made available on the UNCITRAL website to publicize the fact that the enacting State has adopted an international standard and will assist other States in their consideration of the Model Law.

IV. Main features of the Model Law

A. Relationship of the Model Law with the secured transactions texts of UNCITRAL

10. The Secured Transactions Guide, the Intellectual Property Supplement and the Registry Guide contain detailed commentary and recommendations on the issues that need to be addressed in a modern law on secured transactions. However, they are lengthy texts and States will need assistance in transforming their recommendations into concrete legislative language. The Model Law responds to this need. By providing concrete legislative language, the Model Law also provides a higher level of uniformity than a guide.

11. The Model Law reflects the policies embodied in the recommendations of the Secured Transactions Guide, the Intellectual Property Supplement and the Registry Guide. Differences in formulation between those recommendations and corresponding provisions of the Model Law are generally due to the legislative nature of the Model Law and are briefly explained in the relevant parts of the Guide to Enactment.

12. For reasons explained below in the relevant parts of the Guide to Enactment, the Model Law also addresses, in a manner that is consistent with the goals and the policies of the Secured Transactions Guide and the other texts of UNCITRAL on secured transactions, matters that were not addressed in a recommendation, or even discussed in those texts (e.g. security rights in non-intermediated securities). Conversely, certain matters that were addressed in the Secured Transactions Guide are excluded from the scope of the Model Law (e.g. security rights in the right to receive the proceeds under an independent undertaking) or are not addressed specifically (e.g. security rights in attachments to encumbered movable assets or immovable property).

13. The provisions of the Model Law on security rights in receivables are substantially based on the recommendations of the Secured Transactions Guide, which in turn are based on the Assignment Convention. Even if a State that does not yet have an efficient and modern secured transactions law ratifies or accedes to the Convention, it will need to enact the Model Law as well, because: (a) the Convention applies only to security rights and outright transfers of receivables; (b) subject to limited exceptions, the Convention applies only to the assignment of international receivables and the international assignment of receivables (see art. 1, para. 1); (c) the Convention explicitly refers important matters (i.e. third-party effectiveness and priority) to the applicable domestic law, that is, the law of the assignor's location (see art. 22); and (d) the Convention leaves other issues (e.g. the form of the assignment) to domestic law.

14. Conversely, a State enacting the Model Law will be well advised to ratify or accede to the Convention as well, in order to promote effective international receivables financing, in particular as a convention provides a higher level of uniformity and transparency than a model law. States that are parties to a convention have the same law, except to the extent the convention allows reservations, while States enacting a model law have compatible but rarely exactly the same laws. As an

example of the benefits that can flow from ratification or accession to the Convention, it should be noted that exporters often face difficulty in obtaining financing based on receivables arising from the sale of exported goods because lenders in the exporter's State are unwilling to extend credit secured by receivables owed by customers located in States with whose laws the lenders are not familiar, or are only prepared to extend such credit at a higher cost, which small- and medium-size enterprises may not be able to afford. If both the enacting State (where the assignor and the assignee are located) and the State where the debtors of the receivables arising from the sale of exported goods are located ratify or accede to the Convention, lenders will be more willing to extend receivables financing to the exporters and at more affordable cost, because they will understand the legal rules that apply to the receivables owed to the exporters and thus will be more confident that they will be able to collect them.

B. Key objectives and fundamental policies of the Model Law

15. As already mentioned (see para. 4 above), the overall economic objective of the Model Law is the same as that of the Secured Transactions Guide (see Secured Transactions Guide rec. 1 and Introduction, paras. 43-59). Depending on its drafting method and technique, the enacting State may wish to consider including the key objectives of the Model Law in a preamble or other similar statement accompanying its enactment of the Model Law. That statement could be used in interpreting and in filling gaps in the Model Law (see para. 77 below).

16. The same is true for the fundamental policies of the Model Law and the Secured Transactions Guide (see Secured Transactions Guide, Introduction, paras. 60-72). One of these fundamental policies is a functional, integrated and comprehensive approach to secured transactions, under which any right created by agreement in any type of movable asset to secure the performance of an obligation is treated as a security right for the purposes of triggering the application of the Model Law, regardless of the terms used by the parties to describe their agreement (e.g. pledge, charge, transfer of title for security purposes, retention-of-title sale or financial lease; see Secured Transactions Guide, Introduction, para. 62, chap I, paras. 110-112, and chap. IX, paras. 60-84).

17. The enacting State may also wish to consider producing an official commentary or guide to its enactment of the Model Law for use by courts and legal practitioners in interpreting and applying the law (see Secured Transactions Guide, Introduction, para. 86). This is likely to be particularly helpful if the Model Law introduces significant changes to the enacting State's previous secured transactions laws. Such a guide could explain the intent of particular provisions, in particular if they deviate significantly from the previous law, and, where necessary, provide concrete examples. Even more importantly, such an official commentary or guide could explain the fundamental principles that underlie the Model Law, such as the functional, integrated and comprehensive approach to secured transactions referred to in the previous paragraph. As the Guide to Enactment discusses all these and other relevant issues (either directly or by reference to the Secured Transactions Guide), the enacting State's commentary or guide could refer to the Guide to Enactment and the Secured Transactions Guide to allow its courts to obtain interpretative guidance from the international source from which its law was derived.

V. Assistance from the UNCITRAL secretariat

A. Assistance in drafting legislation

18. In the context of its training and assistance activities, the UNCITRAL secretariat assists States with technical consultations for the preparation of legislation based on the Model Law. The same assistance is brought to Governments considering legislation based on other UNCITRAL model laws (e.g. the UNCITRAL Model Law

on Cross-Border Insolvency),[15] or considering adhesion to one of the international trade law conventions prepared by UNCITRAL (e.g. the United Nations Convention on Independent Guarantees and Stand-by Letters of Credit (New York, 1995)[16] and the Assignment Convention).

19. Further information concerning the Model Law and other model laws and conventions developed by UNCITRAL, may be obtained from the UNCITRAL secretariat at the address below:

International Trade Law Division, Office of Legal Affairs
United Nations
Vienna International Centre
P.O. Box 500
A-1400 Vienna, Austria
Telephone: (+43-1) 26060-4060 or 4061
Telecopy: (+43-1) 26060-5813
Electronic mail: uncitral@uncitral.org
Internet home page: www.uncitral.org

B. Information on the interpretation of legislation based on the Model Law

20. The UNCITRAL secretariat welcomes comments concerning the Model Law and the Guide to Enactment, as well as information concerning enactment of legislation based on the Model Law. Once enacted, the Model Law will be included in the CLOUT information system, which is used for collecting and disseminating information on case law relating to the conventions and model laws that have emanated from the work of UNCITRAL. The purpose of the system is to promote international awareness of the legislative texts formulated by UNCITRAL and to facilitate their uniform interpretation and application. The UNCITRAL secretariat publishes, in the six official languages of the United Nations, abstracts of decisions and arbitral awards. In addition, upon individual request and subject to any copyright and confidentiality restrictions, the UNCITRAL secretariat makes available to the public all decisions and arbitral awards on the basis of which the abstracts were prepared. The system is explained in a user's guide that is available from the UNCITRAL secretariat in hard copy (A/CN.9/SER.C/GUIDE/1/Rev.2) and on the above-mentioned Internet home page of UNCITRAL.

VI. Article-by-article remarks

Chapter I. Scope of application and general provisions

Article 1. Scope of application

21. Article 1 is based on recommendations 1-7 of the Secured Transactions Guide (see chap. I, paras. 1-4, 13-15 and 101-112). It is intended to set out the various types of transaction and asset covered by the Model Law (see art. 1, paras. 1-4), as well as to clarify the relationship between the Model Law and other law (see art. 1, paras. 5 and 6). Generally, the Model Law follows the same functional, integrated and comprehensive approach to secured transactions as the Secured Transactions Guide. Thus, the Model Law applies to security rights, that is, to property rights in movable assets, created by an agreement to secure payment or other performance of an obligation, regardless of whether the parties have denominated them as security rights (see art. 1, para. 1, and the definition of the term "security right" in art. 2, subpara. (kk)). However, there are some differences between the scope of the Model Law and the scope of the Secured Transactions Guide (see paras. 22-31 below).

[15] United Nations publication, Sales No. E.14.V.2.
[16] United Nations publication, Sales No. E.97.V.12.

22. Like recommendation 3 of the Secured Transactions Guide and article 1, paragraph 1, of the Assignment Convention, article 1, paragraph 2, of the Model Law also applies to outright transfers of receivables by agreement that are used in financing transactions, such as factoring. The main reason for this approach is the need for the same third-party effectiveness and priority rules to apply to both outright transfers of and security rights in receivables because: (a) financing against receivables is sometimes done by an outright transfer of the receivables rather than the creation of a security right in the receivables; and (b) it is sometimes difficult to determine at the outset of a transaction whether it will be held to involve an outright transfer of or the creation of a security right in the receivables (see Secured Transactions Guide, chap. I, paras. 25-31). While most modern secured transactions laws generally follow this approach, some laws exclude certain types of outright transfers of receivables that do not function as financing transactions, such as: (a) outright transfers of receivables for collection purposes where the transferee essentially acts only as a representative or trustee of the transferor; and (b) outright transfers of receivables as part of the sale of the business out of which they arose (unless the former owner remains in apparent control of the business), where the potential for other outright transferees or secured creditors to be misled is limited.

23. Unlike the Secured Transactions Guide which covered security rights in the right to receive payment under an independent undertaking (see rec. 2 (a)), the Model Law excludes from its scope security rights in both the right to receive and the right to request payment under an independent guarantee or letter of credit, whether commercial or standby (see art. 1, para. 3 (a)). The reason for this exclusion is that implementation of the relevant recommendations of the Secured Transactions Guide would have made the Model Law unduly complex. Enacting States interested in dealing with security rights in those types of asset are encouraged to implement the relevant recommendations of the Secured Transactions Guide (recs. 27, 50, 107, 127, 176 and 212).

24. Like recommendation 4 (b) of the Secured Transactions Guide, to the extent that the provisions of the Model Law are inconsistent with law relating to intellectual property, article 1, paragraph 3 (b), of the Model Law defers to the enacting State's law relating to intellectual property. This limitation is unnecessary if the enacting State has already coordinated the Model Law and its law relating to intellectual property or plans to do so in the context of the overall reform of its secured transactions law.

25. Unlike recommendation 4 (c) of the Secured Transactions Guide which excludes from its scope all types of securities, article 1, paragraph 3 (c), excludes only intermediated securities. The reasons for this approach are that: (a) non-intermediated securities often are part of commercial finance transactions (in which, for example, it is common for the lender to obtain a security right in shares in the borrower's wholly-owned subsidiaries or the shares of the borrower itself); (b) there are wide divergences among national regimes in this regard; and (c) security rights in non-intermediated securities are not addressed in any other uniform law text and thus no guidance is provided to States with regard to such securities. Conversely, security rights in intermediated securities are excluded as the nature of such securities and their importance for the functioning of financial markets raise a broad range of issues that merit special legislative treatment and are addressed in other uniform law texts (see Secured Transactions Guide, chap. 1, paras. 37 and 38).[17]

26. Article 1, paragraph 3 (d), excludes payment rights under or from financial contracts governed by netting agreements, including foreign exchange transactions, because they raise complex issues that require special rules (see Secured Transactions Guide, chap. I, para. 39).

[17] Such as the Unidroit Convention on Substantive Rules for Intermediated Securities (Geneva, 2009; the "Unidroit Securities Convention") and the Convention on the Law Applicable to Certain Rights in respect of Securities held with an Intermediary (The Hague, 2006; the "Hague Securities Convention").

27. Combining the policy of recommendations 4 (a) and 7 of the Secured Transactions Guide, article 1, paragraph 3 (e), provides that the enacting State may exclude further types of asset (or transaction) to the extent that the matters that are addressed in the Model Law are governed by other law of the enacting State. The reason for this approach is to avoid inadvertently creating gaps (where that other law does not govern an issue addressed in the Model Law) or overlaps (where that other law governs an issue that is addressed in the Model Law as well). Assets that may be excluded from the scope of the Model Law in article 1, paragraph 3 (e) are, for example, assets that are subject to specialized secured transactions and registration regimes. Enacting States that do have such regimes with respect to assets that may be covered by the Model Law (e.g. ships, vehicles, aircraft or intellectual property) will have to consider a number of issues, including the following: (a) whether registration with respect to security rights in those types of asset should take place in the security rights registry, in the specialized registry or in both; (b) if registration may take place in both registries, coordination of the relevant registries (see Secured Transactions Guide, chap. IV, para. 117, and Registry Guide, paras. 66 and 70) and coordination of the relevant third-party effectiveness and priority rules (see Secured Transactions Guide, recs. 43 and 77, subpara. (a); see also Registry Guide, paras. 23, 30 and 65); (c) the priority of acquisition security rights in consumer goods that are effective automatically (see art. 24; and Secured Transactions Guide, chap. IX, paras. 125-128, and rec. 181); and (d) the determination of law that is applicable to security rights in tangible assets subject to specialized registration (see Secured Transactions Guide, chap. X, paras. 37 and 38, as well as rec. 205).

28. Like recommendation 6 of the Secured Transactions Guide, article 1, paragraph 4, provides that, in the case of a security right in an asset covered by the Model Law (e.g. receivables), the security right extends to its identifiable proceeds (see art. 10, para. 1). This rule applies even if the proceeds are of a type of asset that is outside the scope of the Model Law (e.g. intermediated securities), except to the extent that other law applies to proceeds of that type and governs the matters addressed in the Model Law.

29. With respect to the relationship with consumer-protection law, in line with the approach followed in the Assignment Convention (see art. 4, para. 4) and in the Secured Transactions Guide (see rec. 2 (b)), article 1, paragraph 5, is intended to preserve the application of consumer-protection law that protects a grantor or a debtor of an encumbered receivable (see also art. 1, para. 6, which preserves statutory limitations in general). For example, under consumer-protection law, it may not be possible to create or enforce a security right in all present and future assets, employment benefits, at least up to a certain amount, or in necessary household items of a consumer, or to collect an encumbered receivable from a debtor that is a consumer. Enacting States that do not have a developed consumer-protection law may need to consider whether enactment of the Model Law should be accompanied by the enactment of such special protections for consumers. It should also be noted that the Model Law already includes certain consumer-specific rules (e.g. art. 24).

30. Following the approach of recommendation 18 of the Secured Transactions Guide, article 1, paragraph 6 is intended to preserve limitations on the creation or the enforceability of a security right in certain types of asset (e.g. employment benefits) that are based on any other statutory or case law. At the same time, it is intended to ensure that any such limitations based on the sole ground that an asset is a future asset, or a part of an asset or an undivided interest in an asset are overridden (see art. 8, subparas. (a) and (b)). However, paragraph 6 does not apply to contractual limitations on the creation or enforceability of a security right in receivables (see art. 13) or rights to payment of funds credited to a bank account (see art. 15).

31. Finally, like the Secured Transactions Guide, the general provisions of the Model Law apply to security rights in attachments to movable or immovable property, that is, movable assets that are attached to movable or immovable property without losing their separate identity and thus becoming part of the movable or immovable property to which they have been attached (see Secured Transactions Guide, Terminology). However, unlike the Secured Transactions Guide, the Model Law does

not include specific provisions on security rights in attachments to movable or immovable property. Such provisions were not included in the Model Law to avoid making it even longer. In view of the importance of attachments, enacting States are encouraged to consider whether to include in their enactments of the Model Law provisions based on the relevant recommendations of the Secured Transactions Guide (see recs. 21, 25, 43, 48, 87, 88, 164, 165, 184, 195 and 196).

Article 2. Definitions and rules of interpretation

32. Article 2 contains definitions and rules of interpretation with respect to most key terms used in the Model Law. [18] Other terms are defined or explained in various articles of the Model Law. For example, the term "judgment creditor" is defined in article 37, paragraph 1, of the Model Law. Comments are not included below on all terms but only on those that are not self-explanatory or those that are not sufficiently explained in the Secured Transactions Guide, on the terminology of which article 2 is based (see Secured Transactions Guide, Introduction, paras. 15-20).

33. The rules of interpretation of the Secured Transactions Guide also apply to the Model Law. For example: (a) the word "or" is not intended to be exclusive; (b) the singular includes the plural and vice versa; and (c) the words "include" or "including" are not intended to indicate an exhaustive list (see Secured Transactions Guide, Introduction, para. 17).

34. It should be noted that time periods set out in the Guide to Enactment are suggestions (not recommendations) for the enacting State to use for its consideration of what would be appropriate for its own circumstances. It should also be noted that issues relating to the measurement of time (e.g. whether only working days are meant) are left to other law of the enacting State. However, depending on how those issues are addressed (e.g. whether official holidays are to be included), the enacting State may wish to consider adjusting the time periods suggested in the Guide to Enactment.

Acquisition security right

35. An acquisition security right is a security right in a tangible asset (other than a tangible asset that embodies an intangible asset, such as a negotiable instrument; see art. 2, subparas. (b) and (ll)), or in intellectual property or the rights of a licensee that secures the grantor's obligation with respect to credit provided by a lender, seller or financial lessor to enable the grantor to acquire title to or the right to use that tangible asset or intellectual property, or those rights of a licensee in intellectual property. This definition, in conjunction with the definition of "security right", results in the security right of any lender, seller or financial lessor extending credit for the acquisition of title to or right to use an asset being treated in the Model Law as an acquisition security right. It should be noted, however, that: (a) for a security right to be an acquisition security right, the credit it secures must in fact be used for that purpose; and (b) where a security right secures both obligations incurred for the grantor to acquire a tangible asset and other obligations, that security right is only an acquisition security right to the extent it secures the obligation to pay the acquisition price, and is a non-acquisition security right to the extent it secures those other obligations.

Bank account

36. To underline the distinction between a "bank account" and a "securities account", the Model Law defines: (a) the former term as "an account maintained by an authorized deposit-taking institution to which funds may be credited or debited" (see art. 2, subpara. (c)); (b) the latter term as "an account maintained by an intermediary to whom securities may be credited or debited" (see art. 2, subpara. (ii)); and (c) the term "securities" in a manner that clearly excludes funds (see art. 2,

[18] Since the Model Registry Provisions may be enacted in a separate statute or other type of legal instrument, the term "registry" is defined both in article 2, subparagraph (ee), of the Model Law and article 1, subparagraph (k), of the Model Registry Provisions. If they are enacted as part of the Model Law, the latter provision will not be necessary.

subpara. (hh)). The term "bank account", therefore, includes any type of bank account (e.g. current or checking and savings account). The term does not include a right against the bank to payment evidenced by a negotiable instrument. The enacting State may wish to consider replacing the term "authorized deposit-taking institution" with a generic term broad enough to include any institution authorized to receive deposits in any State whose law may be applicable under article 97 of the Model Law.

Certificated non-intermediated securities

37. The term "represented" used in the definition of the term "certificated non-intermediated securities" (see art. 2, subpara. (d)) is intended to be broad enough to cover the approaches taken in different jurisdictions (e.g. "covered" or "embodied"). The term "certificate" means only a tangible document that can be subject to physical possession. Thus, non-intermediated securities represented by an electronic certificate will be uncertificated non-intermediated securities under the Model Law.

Competing claimant

38. The term "competing claimant" is principally used in the context of a potential priority dispute between a security right and the rights of another person claiming rights in the encumbered asset (see art. 2, subpara. (e)). This term includes another creditor of the grantor (secured or not) that has a right in the asset (such as a judgment creditor that has taken the steps necessary under other law of the enacting State to acquire a right in the encumbered asset), an insolvency representative in insolvency proceedings with respect to the grantor, and a buyer or other transferee, lessee or licensee of the asset.

Consumer goods

39. Unlike the definition of the term "consumer goods" in the Secured Transactions Guide on which it is based, the definition of the term in the Model Law (see art. 2, subpara. (f)) includes the word "primarily" to ensure that: (a) goods primarily used or intended to be used by the grantor for personal, family or household purposes and only incidentally for business purposes would be treated as consumer goods; and (b) goods primarily used or intended to be used by the grantor for business purposes and only incidentally for personal, family or household purposes would not be treated as consumer goods. Accordingly, it is the primary use or the primary intended use of tangible assets by the grantor that determines whether they will be classified as consumer goods, equipment or inventory. It should also be noted that the terms "consumer goods", "equipment" and "inventory" are primarily relevant to the articles on acquisition security rights (see paras. 43 and 47 below).

Control agreement

40. The term "control agreement" refers to an agreement between the grantor, the secured creditor and the issuer (in the case of securities) or the deposit taking institution (in the case of a right to payment of funds credited to a bank account), according to which the issuer or the deposit-taking institution agrees to follow the instructions of the secured creditor without the further consent of the grantor (see art. 2, subpara. (g)). A control agreement can achieve two purposes: (a) to render a security right effective against third parties (see arts. 25 and 27); and (b) to establish the priority of the secured creditor that has control (see arts. 47 and 51). In addition, a control agreement can be useful to a secured creditor as a practical matter, because it can help ensure the cooperation of the deposit-taking institution or the issuer of securities if the secured creditor needs to enforce its security right. Unlike the definition of this term in the Secured Transactions Guide, on which it is based, the definition of the term in the Model Law does not refer to a "signed writing". This difference does not reflect a policy change but rather a decision that this matter should be left to the evidentiary requirements of other law of the enacting State. In any case, a control agreement does not need to be in a single written document.

Default

41. The term "default" is defined in a generic way to mean the debtor's failure to pay or otherwise perform the secured obligation and anything else that constitutes default under the agreement between the grantor and the secured creditor. What exactly constitutes failure to perform (e.g. a day's or a month's delay to pay) is a matter for the agreement between the parties and the law applicable to that agreement.

Encumbered asset

42. Any movable asset to which the Model Law applies may be an encumbered asset. In order to apply the provisions of the Model Law to outright transfers of receivables by agreement, the term also includes a receivable that is the subject of an outright transfer by agreement.

Equipment

43. Unlike the definition of the term "equipment" in the Secured Transactions Guide on which it is based, the definition of the term in the Model Law includes the word "primarily" to clarify that: (a) goods used or intended to be used by a person primarily in the operation of its business and only incidentally for other purposes would be treated as equipment; and (b) goods used or intended to be used by a person primarily for other purposes and only incidentally in the operation of its business would not be treated as equipment (see art. 2, subpara. (l)). This definition also includes the words "other than inventory or consumer goods" as, depending on their primary use or primary intended use, the same type of tangible assets may be, at different times, "equipment", "consumer goods" or "inventory" (see art. 2, subparas. (f), (l) and (q), and paras. 39 above and 47 below).

Grantor

44. The definition of the term "grantor" makes clear that a grantor of a security right may be the debtor of the secured obligation or another person (e.g. the parent company of the debtor-subsidiary if the parent company creates a security right in its assets so that the subsidiary may borrow; see art. 2, subpara. (o) (i)). A person who is not the owner of an asset but has rights in the asset (e.g. rights under a lease or licence agreement; see art. 2, subpara. (o) (i)) may also be a grantor of a security right, not in the asset, but in the rights that that person has in that asset. A buyer or other transferee of an encumbered asset that acquires the asset subject to a security right is also treated as a grantor, even if that person did not create a security right in the asset (see art. 2, subpara. (o) (ii)). In order to apply the provisions of the Model Law to outright transfers of receivables by agreement, the term "grantor" also includes a transferor under an outright assignment of receivables (see art. 2, subpara. (o) (iii)).

Insolvency representative

45. As the term "insolvency representative" is used only in the definition of the term "competing claimant" it is not defined in the Model Law. For the same reason, the term "insolvency proceedings", which is referred to in articles 2, subparagraph (e) (iii), 35 and 94 (and other insolvency-related terms, such as the term "insolvency estate"), is not defined in the Model Law. Those terms are defined though in the Secured Transactions Guide (see Introduction, para. 20) and the UNCITRAL Legislative Guide on Insolvency Law (the "Insolvency Guide"; see Introduction, para. 12). In particular the term "insolvency representative" is defined in a sufficiently broad manner to include the person responsible for administering insolvency proceedings or supervising the debtor and the debtor's affairs (see Insolvency Guide, part two, chap. III, paras. 11-18 and 35).

Intangible asset

46. The term "intangible asset" includes receivables, rights to the performance of obligations other than receivables, rights to payment of funds credited to a bank

account and uncertificated non-intermediated securities, as well as any other movable asset that is not a tangible asset (see art. 2, subpara. (p)).

Inventory

47. The term "inventory" refers to tangible assets held by the grantor for sale or lease in the ordinary course of the grantor's business. Thus, it is the purpose for which tangible assets are held by the grantor that determines whether they constitute inventory (see paras. 39 and 43 above). The term "work in process" includes "semi-processed materials". In States in which a licence of tangible assets is possible, the term "lease of tangible assets" in this definition includes the licence of tangible assets (see art. 2, subpara. (q)).

Mass and product

48. The Model Law distinguishes between a "mass" and a "product". A "mass" is a combination that arises when two or more tangible assets of the same type are commingled in such a way that they lose their separate identity. This could happen, for example, when a quantity of oil from one source is pumped into a storage tanker that already contains some oil from another source, or when a truckload of one farmer's wheat is put into a grain silo that already contains wheat from another farmer. In contrast, a "product" arises when a tangible asset is physically transformed so that it loses its separate identity, or is physically united with one or more tangible assets so that they lose their separate identities, through a production or manufacturing process; for example, when gold is used to make a ring, or when flour and yeast are used to make bread. The distinction is relevant to articles 11 and 33.

Money

49. The term "money" includes not only the national currency of the enacting State but also the currency of any other State (see art. 2, subpara. (t)). However, it does not include virtual currency, as virtual currency is not national currency and is intangible (and money is in principle defined as a tangible asset; see art. 2, subpara. (ll)). Currency must qualify as a legal tender to constitute money. Rights to payment of funds credited to a bank account and negotiable instruments are distinct concepts in the Model Law. They are not included in the term "money".

Movable asset

50. The enacting State may wish to ensure that this definition captures anything that its laws consider to be an asset other than immovable property (see art. 2, subpara. (u)). Depending on its legal tradition and the terminology used, the enacting State may also wish to consider whether to replace the terms "movable asset" and "immovable property" with the equivalent concepts in its law (e.g. "personal property" and "land").

Non-intermediated securities

51. The term "non-intermediated securities" refers to securities (i.e. shares and bonds) that are not credited to a securities account (see art. 2, subparas. (w) and (ii)). This definition is structured around the definition of the term "intermediated securities" in the Unidroit Securities Convention (see art. 1, subpara. (b)). It refers only to "rights", in contrast to the language used in the Unidroit Securities Convention which refers to "rights or interests", for reasons of consistency with the terminology of the Model Law in which the term "right" is a broad term that covers any right or interest. It should be noted that, if securities are held by an intermediary directly with the issuer (e.g. the intermediary is registered in the books of the issuer as the holder of the securities), these securities in the hands of the intermediary are non-intermediated, even though equivalent securities credited by the intermediary to a securities account in the name of a customer are intermediated securities in the hands of the customer.

Notification of a security right in a receivable

52. The definition of the term "notification of a security right in a receivable" (see art. 2, subpara. (v)) is based on the definition of the term "notification of the assignment" in the Secured Transactions Guide (see Introduction, para. 20, and rec. 118), which in turn is based on the definition of that term in the Assignment Convention (see art. 5, subpara. (d)). The requirement for the identification of the encumbered receivable and the secured creditor in the definition of that term in the Assignment Convention is reflected in article 62, paragraph 1, of the Model Law as it states a substantive rule on the effectiveness of a notification of a security right, a matter that is already addressed in that article.

Possession

53. The definition of the term "possession" (see art. 2, subpara. (z)) is based on the definition of that term in the Secured Transactions Guide. The words "directly or indirectly" that were included in recommendation 28 of the Secured Transactions Guide were not included in this definition or article 16 which is based on that recommendation, because the definition is sufficiently broad to cover situations in which a person holds a tangible asset through another person (e.g. the issuer of a negotiable document may hold it through various persons responsible to perform parts of a multimodal transport contract).

Priority

54. The definition of the term "priority" (see art. 2, subpara. (aa)) is based on the definition of that term in the Secured Transactions Guide, which is in turn partly based on the definition of that term in the Assignment Convention (see art. 5, subpara. (g)). Like the definition in the Secured Transactions Guide, this definition does not include in the concept of "priority" the steps required to establish third-party effectiveness. Like the definition in the Assignment Convention and unlike the definition in the Secured Transactions Guide, however, this definition refers directly to the right of a person in preference to the right of another person.

Proceeds

55. The term "proceeds" in the Model Law (see art. 2, subpara. (bb)) has the same meaning as in the Secured Transactions Guide. It is important to note that it covers: (a) proceeds of the sale or other disposition, lease or licence of an encumbered asset (broadly understood); (b) proceeds of proceeds (e.g. if receivables are generated by the sale of encumbered inventory and those proceeds are deposited to a bank account, the right to payment of those funds constitutes proceeds of proceeds); and (c) natural fruits (e.g. the calves of encumbered cows) or civil fruits (e.g. rents arising from the lease of encumbered assets). It should be noted that the secured creditor's right in proceeds is limited by various provisions of the Model Law. For example, under article 10, paragraph 1, the security right extends only to identifiable proceeds (see also art. 19, para. 2). It should also be noted that the terms "revenues", "dividends" and "distributions", which were included in the definition of this term in the Secured Transactions Guide, have been deleted on the understanding that they are covered by the term "civil fruits".

56. The term is not limited to proceeds received by the original grantor but includes proceeds received by a transferee of an encumbered asset when that transferee is treated as a grantor because it acquired the encumbered asset subject to the security right. For example, where A creates a security right in its assets in favour of X and then A transfers the assets to B who acquires its rights in the assets subject to X's security right and B subsequently sells the assets to C for a price of €1,000 payable at a future date, the receivable arising from the sale by B to C constitutes proceeds covered by X's security right. The reason for this approach is that, otherwise, a transferee of an encumbered asset that acquired the asset subject to the security right (in the example, B) could sell the asset further (in the example, to C) and keep the proceeds free of the security right (the issue of third-party transferees who are likely to search the registry under the name of their immediate transferor and who do not

find a notice about a security right created by the first in a chain of transferors is dealt with in art. 26 of the Model Registry Provisions).

57. It should be noted that proceeds may arise as a result of an action taken by a person other than the grantor or a transferee. Thus, article 10, paragraph 2, applies to funds in a bank account that are transferred to another bank account (even if the transfer takes place at the instigation of the deposit-taking institution) as the funds in the second bank account are "proceeds".

Receivable

58. The term "receivable" means a contractual or non-contractual right to payment of money (e.g. the right of a seller to the payment of a purchase price, the right of a lender for the payment of a loan or the right of a person for damages for breach of law; see art. 2, subpara. (dd)). However, it does not include rights to payment evidenced by a negotiable instrument, rights to payment of funds credited to a bank account and rights to payment under a non-intermediated security, as they are treated as distinct types of asset that are subject to different asset-specific rules.

Secured creditor

59. The term "secured creditor" refers to the person that has a security right. In order to apply the provisions of the Model Law to outright transfers of receivables by agreement, it includes a transferee of a receivable in an outright transfer by agreement (e.g. a factor in a factoring contract).

Secured obligation

60. The term "secured obligation" includes any obligation secured by a security right, including obligations arising from credit extended by a lender, a retention-of-title seller or a financial lessor (see art. 2, subpara. (gg)). It covers both monetary and non-monetary obligations, obligations already incurred at the time of the extension of the credit and obligations incurred thereafter, if the security agreement so provides. However, as there is no secured obligation in an outright transfer of a receivable, the provisions that refer to a "secured obligation" do not apply to an outright transfer of a receivable.

Securities

61. The definition of the term "securities" in the Model Law is narrower than the definition of the term in article 1, subparagraph (a), of the Unidroit Securities Convention (see art. 2, subpara. (hh)). The reason is that, while a broad definition is appropriate for the purposes of that Convention, a broad definition for the purposes of the Model Law could result in an overlap with the terms "money", "receivable", "negotiable instrument" and other generic intangible assets and thus could cause uncertainty as to the regime applicable to security rights in those types of asset. In any case, the enacting State would need to coordinate the definition of the term "securities" in its secured transactions law with the definition of the term in its law governing the transfer of securities. It should be noted that the definition of the term "securities" may also differ from the definition of the term as it is used in laws that regulate trading in securities, as the policies that inform the content of that definition may be different from the policies of the Model Law (e.g. the policy behind the definition of that term in those other laws is not to regulate security rights but rather to protect public markets).

Securities account

62. The definition of the term "securities account" in the Model Law is derived from article 1, subparagraph (c), of the Unidroit Securities Convention (see art. 2, subpara. (ii)). It refers to an account, which is maintained with a securities intermediary and to which securities may be credited or debited.

Security agreement

63. The term "security agreement" is defined as an agreement that provides for the creation of a security right (see art. 2, subpara. (jj)). In line with the functional, integrated and comprehensive approach followed in the Model Law (see para. 16 above), the parties need not use any special words; and even if the parties use wording that does not refer to security rights, the agreement is a security agreement if it provides for the creation of a property right in a movable asset that secures the payment or other performance of an obligation. As an example, it should be noted that, under the functional approach that characterises a transaction as a secured transaction if that is its functional effect, a retention-of-title sale *provides for the creation* of a security right in the asset that is the subject of the sale. Similarly, transactions such as transfers of property for security purposes, hire-purchase agreements and financial leases are treated as secured transactions, and an agreement that provides for them is a security agreement. In order to apply the provisions of the Model Law to outright transfers of receivables by agreement, the term "security agreement" also includes an agreement for the outright transfer of receivables.

Security right

64. The term "security right" is defined as a property right that is created by agreement to secure payment or other performance of an obligation. In line with the functional, integrated and comprehensive approach followed in the Model Law (see paras. 16 and 63 above), it is irrelevant whether or not the parties have denominated the right as a security right or whether or not the parties have used wording that refers to a security right. In order to apply the provisions of the Model Law to outright transfers of receivables by agreement, the term "security right" also includes the right of the transferee under an outright transfer of a receivable by agreement.

Tangible asset

65. The term "tangible asset" in the Model Law includes money, negotiable instruments, negotiable documents and certificated non-intermediated securities (some of these being intangible rights embodied in a document) except for the purposes of certain articles that contain rules that are not appropriate for those types of asset. For example, the term "tangible asset" in the definition of the term "mass" (see art. 2, subpara. (s)) does not include negotiable documents because negotiable documents cannot be part of a mass as they are not interchangeable with other documents and are not fungible.

Writing

66. The definition of the term "writing" is intended to ensure that where the term is referred to in the Model Law (see arts. 2 (g) and (x), 6, para. 3, 63, paras. 2 and 9, 65, paras. 1 and 2, 77, para. 2 (a), 78, para. 4 (b) and 80, paras. 1, 2 (b), 4 and 6, of the Model Law, as well as arts. 2, paras. 1-3, and 20, para. 5, of the Model Registry Provisions), this reference will include electronic communications (see art. 2, subpara. (nn)). The definition is based on recommendation 11 of the Secured Transactions Guide, which in turn is based on article 9, paragraph 2, of the United Nations Convention on the Use of Electronic Communications in International Contracts (the "Electronic Communications Convention"). However, the Model Law does not include an article on the electronic equivalent of signature along the lines of recommendation 12 of the Secured Transactions Guide, which is in turn based on article 9, paragraph 3, of the Electronic Communications Convention. For the purpose of those articles of the Model Law that refer to signature (see arts. 6, para. 1, and 65, paras. 1 and 2), the enacting States may wish to consider whether to include in their enactment of the Model Law an article along the lines of recommendation 12 of the Secured Transactions Guide.

International obligations of the enacting State

67. The Model Law leaves to the enacting State the issue whether international treaties (such as the United Nations Convention on Contracts for the International Sale of Goods ("CISG") or the Assignment Convention when it enters into force) prevail over domestic law. For example, in the case of a conflict between a provision of the Model Law and a provision of any treaty or other form of agreement to which an enacting State is a party with one or more other States, the requirements of the treaty or agreement may prevail (see art. 3 of the UNCITRAL Model Law on Cross-Border Insolvency). Such an approach may need to be limited to international treaties that directly address matters governed by the Model Law (e.g. the creation, third-party effectiveness, priority and enforcement of a security right in movable assets). In other States, in which international treaties are not self-executing but require internal legislation in order to become enforceable law, such an approach might be inappropriate or unnecessary (see Guide to Enactment and Interpretation of the UNCITRAL Model Law on Cross-Border Insolvency, paras. 91-93).

Article 3. Party autonomy

68. Article 3 is based on article 6 of the Assignment Convention (the first sentence of which is based on art. 6 of CISG) and recommendation 10 of the Secured Transactions Guide. Paragraph 1 is intended to reflect the principle that, with the exception of the provisions listed in paragraph 1, parties are free to vary by agreement the effect of the provisions of the Model Law as between them. An agreement derogating from the provisions of the Model Law or varying its terms may be between any two parties whose rights are affected by the Model Law (e.g. between the secured creditor and the grantor, between the secured creditor and a competing claimant, between the secured creditor and the debtor of an encumbered receivable, or between the grantor and the debtor of the receivable).

69. The provisions listed in paragraph 1 are not subject to contrary agreement as permitting such an agreement with respect to these issues could result in abuse or uncertainty. In particular, article 4 sets out the general standard of conduct with which the parties have to comply when exercising their rights and performing their obligations under the Model Law; article 6 deals with the creation of a security right and sets out the requirements for the creation of a security right; article 9 deals with the standard for the description of encumbered assets and secured obligations; articles 53 and 54 deal with obligations of the party in possession to exercise reasonable care and the obligation of the secured creditor to return the encumbered assets; and article 72, paragraph 3, deals with the variation of rights under the enforcement provisions of the Model Law, and only permits variation by the grantor or the debtor after default, in order to avoid abuse at the time of the conclusion of the security agreement. Articles 85-87, in the chapter of conflict of laws, deal with the law applicable to property law matters; determination of the law applicable to such matters is generally not left to a choice of law by the parties, in order to ensure certainty with regard to the law applicable to property law matters, which are bound to involve rights of third parties.

70. Paragraph 2 reiterates the general principle of contract law that an agreement between two parties cannot affect the rights of a third party. For example: (a) if there are two debtors of a receivable that is an encumbered asset, and one of the two debtors agrees, pursuant to article 65, not to raise certain defences against a secured creditor, that agreement does not bind the other debtor of the receivable; and (b) if there are three secured creditors with a security right in the same encumbered assets whose order of priority is A, B and C, and secured creditor A agrees to subordinate its security right to that of secured creditor C, the rights of secured creditor B cannot be affected. The reason for reiterating this general principle of contract law is that the Model Law deals with relationships in which an agreement between two parties (e.g. the grantor and the secured creditor) might otherwise appear to have an undue impact on the rights of third parties. It should be noted, however, that, under article 61, the impact of an agreement between the grantor of a security right in a

receivable and the secured creditor is limited in the sense that, for example, the debtor of a receivable may have to pay a person other than the initial creditor.

71. Paragraph 3 makes clear that, if other law allows the parties to a security agreement to agree to resolve any dispute with respect to their security agreement or a security right created by that agreement by arbitration, mediation, conciliation and online dispute resolution, nothing in the Model Law affects that agreement. Paragraph 3 is based on the understanding that, the use of alternative dispute resolution mechanisms to resolve such disputes is important, in particular for developing countries and countries with inefficient judicial enforcement mechanisms, to attract investment, as inefficient judicial enforcement mechanisms are likely to have a negative impact on the availability and the cost of credit. It should be noted that paragraph 3 is intended to recognize the importance of alternative dispute resolution mechanisms and does not prejudice the resolution of questions relating to arbitrability, the protection of rights of third parties or access to justice.

Article 4. General standards of conduct

72. Article 4 is based on recommendation 131 of the Secured Transactions Guide (see chap. VIII, para. 15). It is included in chapter I on the scope of application and general provisions, rather than in chapter VII on enforcement, as it states standards of conduct with which parties should comply when they exercise their rights and perform their obligations under the Model Law, even outside the context of enforcement. Under article 4, any person must exercise all its rights and perform all its obligations under the Model Law in good faith and in a commercially reasonable manner. A breach of this obligation may result in liability for damages and other consequences that are left to the relevant law of the enacting State.

73. The concept of "commercial reasonableness" is not defined in the Model Law but it typically refers to actions that a reasonable person might take in circumstances that would be similar to those encountered in a particular case by any person that had rights and obligations under the Model Law. Inasmuch as there is typically no single course of action that all reasonable persons would take in a particular situation, depending on the circumstances and the type of right or obligation involved, a range of actions may meet the objective standard of "commercial reasonableness". It should be noted that meeting the specific standards referred to in other provisions of the Model Law (e.g. art. 78, para. 4, according to which notice is to be given within a short period of time) should generally be sufficient to meet the general standards of conduct referred to in this article. It should also be noted that, article 4 is listed in article 3 as a mandatory law rule. As a result, the duty to act in good faith and in a commercially reasonable manner cannot be waived or varied by agreement.

Article 5. International origin and general principles

74. Article 5 is inspired by article 7 of the CISG and based on article 3 of the UNCITRAL Model Law on Electronic Commerce, article 4 of the UNCITRAL Model Law on Electronic Signatures and article 2A of the UNCITRAL Model Law on International Commercial Arbitration. It is intended to provide guidance in the interpretation of the Model Law. The expected effect of article 5 is to limit the extent to which the Model Law, once incorporated in national law, would be interpreted only by reference to concepts of the national law.

75. The purpose of paragraph 1 is to draw the attention of any person that might be called to interpret and apply the Model Law (or a national law implementing the Model Law) to the fact that the provisions of the Model Law, while implemented as part of a national law, should be interpreted by reference to its international origin in order to ensure uniformity in the interpretation of the Model Law and the observance of good faith in all enacting States. It should be noted that the term "good faith" in paragraph 1 identifies a consideration to be taken into account in the interpretation of the Model Law. In contrast, in article 4, the term sets a standard to be complied with by parties in the exercise of their rights and the performance of their obligations under the Model Law.

76. Under paragraph 2, gaps in a law implementing the Model Law are to be filled by reference to the general principles on which the Model Law is based. As already noted (see para. 15 above), the overall economic objective of the Model Law is the same as that of the Secured Transactions Guide, to promote low-cost credit by enhancing the availability of secured credit (for a complete statement and discussion of the key objectives of an effective and efficient secured transactions law, see Secured Transactions Guide rec. 1 and Introduction, paras. 43-59).

Note by the Secretariat: draft guide to enactment of the UNCITRAL Model Law on Secured Transactions

ADDENDUM

Contents

Chapter II. Creation of a security right

A. General rules

1. This chapter, and several other chapters, contain a section A with general rules and a section B with asset-specific rules. This approach is followed to avoid overloading the general rules with asset-specific details. The general rules apply to all assets, but, in relation to certain types of asset, they apply subject to the asset-specific rules. The enacting State may wish to consider whether to include in the general rules of each chapter of its law cross-references to the asset-specific rules in that chapter or a provision that states explicitly that the general rules in each chapter are subject to the asset-specific rules in that chapter (see footnote 4 of the Model Law). The rules in each chapter are divided between general and asset-specific rules also to make it easier for an enacting State to leave out of its law any asset-specific rules that they may not need. If an enacting State concludes that it does not need all of the asset-specific rules, it may decide to leave some of them out of its law. However, not all asset-specific rules should be omitted. For example, some asset-specific rules deal with core commercial assets such as receivables and no enacting State should omit them from its enactment of the Model Law.

Article 6. Creation of a security right and requirements for a security agreement

2. Article 6 is based on recommendations 13-15 of the Secured Transactions Guide (see chap. II, paras. 12-37). Its purpose is to deal with the creation of a security right, as well as the form and the minimum content of a security agreement, so as to enable parties to obtain a security right in a simple and efficient manner (see Secured Transactions Guide, rec. 1, subpara. (c)). A security right is created by agreement, for the content of which there are no requirements other than those listed in paragraphs 3 and 4, and for the conclusion of which no terms of art or special words need be used.

3. Under paragraph 1, an agreement is sufficient to create a security right, if the grantor has either a right in the asset to be encumbered or the power to encumber it. The grantor has the right to encumber an asset where the grantor is the owner of the asset. Where the grantor is in possession of the asset on the basis of an agreement with the owner, such as a lease agreement, the grantor has a right to create a security right in its rights under the lease agreement. Also, the creditor of a receivable has the power (rather than the right) to create a security right in the receivable, even if it has already transferred the receivable. That power is implicit in the fact that the third-party effectiveness and priority rules of the Model Law apply to outright transfers of receivables by agreement. If a transferee in an outright transfer of a receivable does not make its right effective against third parties before a subsequent competing secured creditor does so, then the transferee will not have priority over the competing secured creditor. If the transferee made its right effective against third parties before the subsequent competing secured creditor, then technically the transferor will still have the power to encumber (or transfer) the receivable in favour of the subsequent secured creditor, but as a practical matter there would be no value left in the receivable for the subsequent secured creditor to benefit from. It should also be noted that, in line with article 13, paragraph 1, the creditor of a receivable to which that article applies has a right in the receivable or the power to encumber it despite any anti-assignment agreement with the debtor of the receivable.

4. Paragraph 2 clarifies that a security agreement may provide for the creation of a security right in future assets (i.e. assets produced or acquired by the grantor after the conclusion of the security agreement; see definition in art. 2, subpara. (n)). However, the security right is created in the future assets only when the grantor acquires rights in them or the power to encumber them.

5. Paragraph 3 states that writing is required for a security agreement and sets out what the writing needs to contain. Written form provides objective evidence of the existence of a security agreement and its key terms (for other reasons why a security agreement might be required, see Secured Transactions Guide, chap. II, para. 30).

From the two alternative wordings set out in the chapeau of paragraph 3 within square brackets, the enacting State may wish to select the one that is most fitting to its contract law and its law of evidence. If the enacting State retains the words "concluded in", a security agreement that is not in written form will not be effective, except as provided in article 6, paragraph 4. For example, a written offer by the grantor that is subsequently accepted by the secured creditor by conduct would not be a sufficient security agreement under this option. If the enacting State retains the words "evidenced by", however, a security agreement that is not in written form may still be effective if its terms are evidenced by a written document that is signed by the grantor (e.g. an oral agreement that is subsequently confirmed in writing).

6. Depending on what it considers as the most efficient financing practices and reasonable assumptions of credit market participants, the enacting State may wish to consider whether to retain paragraph 3 (d). One approach is to retain paragraph 3 (d) to facilitate the grantor's access to secured financing from other creditors in situations where the value of the assets encumbered by the prior security right exceeds the maximum amount indicated in the notice registered with respect to that right. Another approach is to leave out paragraph 3 (d), in order to facilitate the grantor's access to credit by the first secured creditor (for the comparative advantages and disadvantages of the two approaches, see Secured Transactions Guide, chap. IV, paras. 92-97, and Registry Guide, paras. 200-204). If paragraph 3 (d) is retained, the enacting State will need to make provision for the maximum amount to appear on the notice (see art. 8, subpara. (e), of the Model Registry Provisions). Otherwise the benefits of retaining paragraph 3 (d) may not be realized because the maximum amount may not be known to potential subsequent creditors (art. 24, para. 7, of the Model Registry Provisions would also need to be retained to deal with an error in stating the maximum amount on the notice).

7. Under paragraph 4, where the secured creditor is in possession of the encumbered asset, an oral security agreement with the grantor is sufficient. The fact that the secured creditor is in possession of the encumbered asset is itself evidence that the asset may be encumbered (see Secured Transactions Guide, chap. II, para. 33).

Article 7. Obligations that may be secured

8. Article 7 is based on recommendation 16 of the Secured Transactions Guide (see chap. II, paras. 38-48). It is primarily intended to ensure that future, conditional and fluctuating obligations may be secured. The main reason for this approach is to facilitate modern financing transactions, in the context of which an agreement may provide that disbursements of funds by the secured creditor may be made at different times depending on the needs of the grantor (e.g. revolving credit facilities for the grantor to buy inventory). This approach does not necessarily mean that grantors may not be protected from excessive economic commitments. For example, depending on the grantor's financing needs, a maximum amount may be set for which the security right may be enforced (see art. 6, para. 3 (d), and para. 6 above).

Article 8. Assets that may be encumbered

9. Article 8 is based on recommendation 17 of the Secured Transactions Guide (see chap. II, paras. 49-57 and 61-70). It is primarily intended to ensure that future movable assets, parts of movable assets and undivided rights in movable assets, generic categories of movable assets, as well as all the movable assets a person has, may be the subject of a security agreement (for the time when a security right in future assets is created, see art. 6, para. 2, and para. 4 above).

10. The fact that future movable assets may be subject to a security right does not mean that statutory limitations on the creation or enforcement of a security right in specific types of movable asset (e.g. employment benefits in general or up to a specific amount) are overridden (see art. 1, para. 6).

11. The fact that all the movable assets a person has may be subject to a security right so as to maximize the amount of credit that may be available and improve the

terms of the credit agreement does not mean that other creditors of the grantor are necessarily unprotected. The protection of other creditors (within and outside insolvency proceedings) is a matter of other law and is referred to in articles 35 and 36 of the Model Law.

Article 9. Description of encumbered assets and secured obligations

12. Article 9 is based on recommendation 14 (d) of the Secured Transactions Guide (see chap. II, paras. 58-60). In view of its importance, the standard for the description of encumbered assets in a security agreement is presented in a separate article (rather than in art. 6, para. 3, as it was done in rec. 14 (d) of the Secured Transactions Guide, on which art. 6, para. 3, of the Model Law is based).

13. Paragraph 1 sets out the general standard that must be met in the description of encumbered assets and the secured obligations for a security agreement to be effective (the description must reasonably allow their identification). Paragraph 2 is intended to ensure that, if a security right is created in a generic category of assets under article 8, subparagraph (c), a generic description in the security agreement, such as "all inventory" or "all receivables", is sufficient to meet the standard in paragraph 1 (see Secured Transactions Guide, chap. II, paras. 58-60). Paragraph 3 sets out the same standard for the description of secured obligations.

Article 10. Rights to proceeds and commingled funds

14. Article 10 is based on recommendations 19 and 20 of the Secured Transactions Guide (see chap. II, paras. 72-89). Paragraph 1 is intended to ensure that, unless otherwise agreed by the parties (as this article is not listed in art. 3 as a mandatory law rule), a security right in an asset automatically extends to its identifiable proceeds (for the definition of "proceeds" see art. 2, subpara. (bb)). The rationale for this rule is that it reflects the normal expectations of the parties and ensures that the secured creditor is sufficiently protected. This protection includes the secured creditor's right to enforce its security right both in the encumbered assets (provided that the transferee acquired its rights in the assets subject to the security right) and in the proceeds, although only up to the amount of the secured obligation. Otherwise, a grantor could effectively deprive a secured creditor of its security by disposing of the encumbered assets either to a person who would take free of the security right or to a person from whom those assets could not easily be recovered.

15. By way of example, where the original encumbered asset is inventory, receivables generated from the sale of the inventory are proceeds (if they are identifiable). If upon payment of the receivables the funds received are deposited in a bank account, the right to payment of the funds credited to the bank account is also proceeds (proceeds of proceeds of the inventory). So, too, is the right to payment pursuant to a negotiable instrument (e.g. a cheque issued by the holder of that bank account to buy new inventory), as well as a negotiable warehouse receipt issued by the warehouse in which new inventory may be stored. It should be noted that, if the description of the encumbered asset is comprehensive and covers all assets received in respect of the original encumbered asset, they will all be original encumbered assets, and thus article 6, which governs the creation of a security right in original encumbered assets would apply, and not article 10.

16. Paragraph 2 introduces an exception to the identifiability requirement in paragraph 1. A security right in an asset extends to its proceeds in the form of funds that are commingled with other funds even though the funds that are proceeds cannot be identified separately from the funds that are not proceeds (see para. 2 (a)). Paragraph 2 (b) limits that security right to the value of the proceeds immediately before they were commingled. So, if a sum of €1,000 is deposited in a bank account and at the time of enforcement the bank account has a balance of €2,500, the security right extends only to the sum of €1,000.

17. Paragraph 2 (c) deals with situations in which the balance in the bank account fluctuates and, at some point of time, is less than the value of the proceeds deposited (in the example set out in the previous paragraph, less than €1,000). In such a case,

the security right extends only to the lowest value between the time when the proceeds were commingled and the time the security right in the proceeds is claimed. So, if in the example given in the previous paragraph, the balance in the account immediately after the proceeds were deposited was €1,500, then it went down to €500 and at the time of enforcement was €750, the security right extends only to €500 (i.e. the lowest intermediate balance). The rationale for this approach is that, if the balance of a bank account falls, funds deposited later are unlikely to be proceeds of the original encumbered assets.

18. Where funds in a bank account are original encumbered assets, and the funds are transferred into another bank account and mixed with other funds in that other account, then the funds as transferred into that other account will be "proceeds" of the original funds, and thus the rules in article 10 will apply.

Article 11. Tangible assets commingled in a mass or transformed into a product

19. Article 11 is based on recommendations 22 and 91 of the Secured Transactions Guide (see chap. II, paras. 90-95 and 100-102, and chap. V, paras. 117-123). It accomplishes two related objectives. First, it transforms a security right in a tangible asset that is commingled in a mass or transformed into a product into a security right in the mass or product. Second, it limits the value of that security right by reference to the quantity (in the case of a mass) or the value (in the case of a product) of the tangible asset commingled in the mass or product. Article 33 then addresses situations in which more than one secured creditor has a claim to a mass or product as a result of a security right in its components. Paragraph 1 is intended to ensure that a security right in a tangible asset that is commingled in a mass or transformed into a product will continue in the mass or product.

20. Paragraph 2 provides that a security right in a tangible asset that extends to a mass is limited to the same proportion of the mass that the asset bore to the quantity of the entire mass immediately after it was commingled in the mass. So, if a secured creditor has a security right in 100,000 litres of oil that is commingled with 50,000 litres of oil in the same tank so that the mass comprises 150,000 litres of oil, the security right is limited to two-thirds of the oil in the tank (i.e. 100,000 litres). If the quantity of the oil in the tank decreases, however, the secured creditor will still have security in two-thirds of the oil in the tank. For example, if one half of the oil leaks out so that only 75,000 litres remain, then the secured creditor will have a security right in two-thirds of those 75,000 litres, namely in 50,000 litres only. The value of the security right will decrease if the value of the oil in the tank goes down and correspondingly increase if the value of the oil in the tank goes up. This reflects commercial expectations, as it puts the secured creditor in the same position that the secured creditor would have been in if the oil had not been commingled in the tank with other oil in the first place.

21. Paragraph 3 applies a slightly different rule to products, consistent with the Secured Transactions Guide (see chap. II, para. 94). If the rule in paragraph 2 were to apply to security rights in assets that are transformed into a product, then this may provide the secured creditor with a windfall gain, if the value of the finished product is greater than the value of its components (e.g. because of value that is added by the debtor's production efforts including the labour of its employees). For this reason, paragraph 3 provides instead that a security right in an asset that is transformed into a product is limited to the value of the asset immediately before it became part of the product. So, if encumbered flour worth €100 is mixed with yeast to make bread worth €500, the security right is limited to €100.

Article 12. Extinguishment of security rights

22. Under article 12, a security right is extinguished only where there is full payment or other satisfaction of all secured obligations and there is no longer any commitment of the secured creditor to extend further credit secured by the security right. For example, if a security right secures an amount owed under a revolving credit agreement, the security right is not extinguished where temporarily there is no amount

outstanding under the credit agreement, since there may still be a contingent secured exposure under the commitment of the secured creditor to extend further credit.

23. The extinguishment of a security right triggers the obligation of a secured creditor in possession to return the encumbered asset or of a secured creditor that has registered a notice of its security right to register an amendment or cancellation notice (see art. 54 of the Model Law and art. 20, para. 3 (c), of the Model Registry Provisions).

B. Asset-specific rules

Article 13. Contractual limitations on the creation of security rights in receivables

24. Article 13 is based on recommendation 24 of the Secured Transactions Guide (see chap. II, paras. 106-110 and 113), which in turn is based on article 9 of the Assignment Convention. Paragraph 1 provides that an agreement limiting the grantor's right to create a security right in the receivables listed in paragraph 3 (often referred to as "trade receivables") does not prevent the grantor from creating a security right. The rationale underlying this approach is to facilitate the use of receivables as security for credit, which is in the interest of the economy as a whole, without unduly interfering with party autonomy. This rule does not affect statutory limitations on the creation or enforcement of a security right in certain types of receivable (e.g. consumer or sovereign receivables; see art. 1, paras. 5 and 6, and A/CN.9/914, paras. 29 and 30).

25. The agreement referred to in paragraph 1 may be entered into: (a) between the initial creditor/grantor and the debtor of the receivable (e.g. where the encumbered receivable is the claim of a seller for the outstanding balance of the purchase price, an agreement between the seller and the buyer); (b) where the initial creditor/grantor transfers the receivable to another person and that person creates a security right in the receivable, between that person (subsequent grantor) and the debtor of the receivable (e.g. where the seller sells the receivable to A and A creates a security right in favour of B, an agreement between A and the debtor of the receivable); (c) between the initial creditor/grantor and the initial secured creditor (e.g. an agreement between the seller and A); and (d) where the initial creditor/grantor transfers the receivable to a person and that person creates a security right, between that person (referred to in art. 13 as a subsequent grantor) and any secured creditor who obtained a security right from that person (referred to in art. 13 as a subsequent secured creditor; e.g. an agreement between A and B).

26. Paragraph 2 makes it clear that, while under paragraph 1 a security right is effective notwithstanding an agreement to the contrary, a person that creates a security right in a receivable in breach of that agreement is not excused from any liability to its counter-party for damages caused by breach of that contractual provision, if such liability exists under other law. Thus, for example, if the debtor of a receivable has sufficient negotiating power to convince the creditor of the receivable to consent to an anti-assignment agreement, and the creditor creates a security right in the receivable despite that agreement in a way that results in a loss to the debtor of the receivable, the creditor may be liable to the debtor of the receivable for damages under the law of the State whose law governs that agreement. However, the debtor of the receivable may not avoid the contract because of that breach or raise against the secured creditor (including an outright transferee) by way of set off or otherwise any claim it may have against the grantor (including an outright transferor) for that breach. In addition, a secured creditor that accepts a receivable as security for credit is not liable to the debtor of the receivable for such a breach just because it had knowledge of the anti-assignment agreement. Otherwise, the anti-assignment agreement would in effect prevent a secured creditor from obtaining a security right in a receivable covered by the anti-assignment agreement.

27. One of the benefits of the rules in paragraphs 1 and 2 is that a secured creditor does not have to examine each contract from which a receivable might arise to

determine whether it contains a contractual limitation on assignment that may affect the effectiveness of a security right. This facilitates transactions relating to pools of receivables that are not specifically identified (with respect to which a review of the underlying transactions is possible but not necessarily time- or cost-efficient), as well as transactions relating to future receivables (with respect to which such a review would not be possible at the time of the conclusion of the security agreement, with the result that future receivables could not be accepted by lenders as security for credit).

28. Paragraph 3 limits the scope of the rule in paragraph 1 to what could broadly be described as trade receivables. It does not apply to so-called "financial receivables", "because, where the debtor of the receivable is a financial institution, even partial invalidation of an anti-assignment agreement could affect obligations undertaken by the financial institution towards third parties. Such a result is likely to have negative effects on important financing transactions, such as those involving the assignment of receivables arising from or under securities or financial contracts" (see Secured Transactions Guide, chap. II, para. 108).

29. Article 13 (read together with art. 14) is intended to apply also to anti-assignment agreements limiting the creation of a security right in any personal or property rights securing or supporting payment or other performance of an encumbered intangible asset other than a receivable or an encumbered negotiable instrument.

Article 14. Personal or property rights securing or supporting payment or other performance of encumbered receivables or other intangible assets, or negotiable instruments

30. The first sentence of article 14 reflects the thrust of recommendation 25 of the Secured Transactions Guide (see chap. II, paras. 111-122), which in turn is based on article 10 of the Assignment Convention. It is intended to ensure that a secured creditor with a security right in the types of asset described in article 14 automatically has the benefit of any personal or property right that secures or supports payment or other performance of those types of asset. For example, a personal or property right that *secures* payment of a receivable may be an accessory or secondary guarantee (or suretyship) or a security right in immovable property; and a personal right that *supports* payment of a receivable may be an independent guarantee or a stand-by letter of credit. For example, if a receivable is secured by a personal guarantee or a security right in movable or immovable property, the secured creditor with a security right in that receivable obtains the benefit of that personal guarantee or security right. This means that, if the receivable is not paid, the secured creditor may seek payment from the guarantor or enforce the security right in accordance with the terms of the guarantee or the security right (which may require the secured creditor to register, if no registration was previously made, or make further registrations, if registration had already taken place; see para. 31 below).

31. The first sentence of article 14 does not include recommendation 25 (g) of the Secured Transactions Guide. This is because this matter is addressed in articles 57-58. Similarly, the first sentence of article 14 does not include recommendation 25 (h), of the Secured Transactions Guide (which was based on art. 10, para. 6, of the Assignment Convention). This is because it should be self-evident that the article does not apply to matters not addressed in it. Thus, to the extent that the automatic effects of the first sentence of article 14 are not impaired, any requirement under other law relating to the form or registration of the creation of a security right in any asset that is not covered in the Model Law (e.g. registration of an encumbrance on the relevant immovable property registry) is not affected.

32. The second sentence of article 14, which reflects the thrust of article 10, paragraph 1, of the Assignment Convention, is necessary because, in many States, some personal or property rights that might secure or support payment or other performance of a receivable or other intangible asset, or a negotiable instrument are transferable only with a new act of transfer. In such a case, the grantor is obliged to transfer the benefit of that right to the secured creditor. The reference in that sentence

to the law governing the security or other supporting rights is intended to ensure that any other law that may require a new act of transfer is not overridden.

Article 15. Rights to payment of funds credited to a bank account

33. Article 15 is based on recommendation 26 of the Secured Transactions Guide (see chap. II, paras. 123-125). It is intended to implement the principles underlying article 13 with respect to rights to payment of funds credited to a bank account (see para. 30 above). As a result of article 15, a security right may be created in a right to payment of funds credited to a bank account even if there was an agreement between the grantor and the deposit-taking institution prohibiting the creation of a security right. However, as a result of article 69, the creation of such a security right does not affect the rights and obligations of the deposit-taking institution or obligate the deposit-taking institution to provide any information about the bank account to third parties.

Article 16. Negotiable documents and tangible assets covered by negotiable documents

34. Article 16 is based on recommendation 28 of the Secured Transactions Guide (see chap. II, para. 128). Its purpose is to follow existing law in which a negotiable document is treated as embodying rights in the tangible assets it covers. As a result, there is no need separately to create a security right in those tangible assets if there is a security right in the document (e.g. cargo covered by a negotiable document issued by the person in possession of tangible assets or agricultural products covered by a negotiable warehouse receipt issued by the operator of the warehouse in which those products have been deposited).

35. In view of the definition of the term "possession" in article 2, subparagraph (z), possession of tangible assets by the issuer of a negotiable document covering those assets includes possession by its representative or a person acting on behalf of the issuer (including in situations where the issuer is a carrier that uses other persons for the transportation of those assets on its behalf pursuant to a multi-modal transport contract). A security right in a negotiable document extends to the tangible assets covered by the document and will continue to exist (subject to the terms of the security agreement) even after the document no longer covers those assets. However, effectiveness against third parties through possession of the document applies only as long as the document covers the assets and lapses once they are released by the issuer (see art. 26, para. 2, and para. 49 below).

Article 17. Tangible assets with respect to which intellectual property is used

36. Article 17 is based on recommendation 243 of the Intellectual Property Supplement (see paras. 108-112). It is intended to recognize the distinction between a tangible asset with respect to which intellectual property is used and the intellectual property used in connection with that asset. As a result, for a secured creditor to obtain a security right in both a tangible asset with respect to which intellectual property is used (e.g. a personal computer or television set) and the intellectual property itself, the security agreement would need to expressly provide for it.

Chapter III. Effectiveness of a security right against third parties

A. General rules

Article 18. Primary methods for achieving third-party effectiveness

37. Article 18 is based on recommendation 32 of the Secured Transactions Guide (see chap. III, paras. 19-86). It is intended to set out the primary methods for achieving

third-party effectiveness of a security right. The first is registration of a notice of the security right in the Registry established under article 28. This method of third-party effectiveness is available for all types of movable asset to which the Model Law applies. The second is physical possession of the encumbered asset by the secured creditor (for the definition of the term "possession", see art. 2, subpara. (z)). As intangible assets may not be the subject of physical possession, this latter method is available only for tangible assets. Alternative methods of third-party effectiveness for security rights in rights to payment of funds credited to a bank account and in non-intermediated securities are set out in the asset-specific provisions of this chapter (see arts. 25 and 27 and paras. 47 and 51 below).

Article 19. Proceeds

38. Article 19 is based on recommendations 39 and 40 of the Secured Transactions Guide (see chap. III, paras. 87-96). It addresses the circumstances in which the security right in identifiable proceeds that is provided for in article 10 is effective against third parties.

39. Under paragraph 1, if a security right in an asset is effective against third parties, a security right in its identifiable proceeds in the form of money, receivables, negotiable instruments or rights to payment of funds credited to a bank account is automatically effective against third parties, that is, without the need for any further act. For example, upon the sale of inventory that is subject to a security right that is effective against third parties, a security right in receivables arising from the sale of the inventory that are identifiable proceeds is effective against third parties without any further act. If those assets are described in the security agreement and the notice as original encumbered assets, article 18, which governs the third-party effectiveness of a security right in original encumbered assets, would apply, and not article 19 (this is the reason why, unlike rec. 39, on which this article is based, para. 1 does not refer to the description of the proceeds in the notice). If those assets are described in the security agreement as original encumbered assets but not in the notice, the security right in the proceeds would not be effective unless the conditions of paragraph 2 are satisfied.

40. For proceeds other than those covered in paragraph 1, paragraph 2 provides that, if a security right in an asset was effective against third parties, the security right in those types of proceeds (if they are identifiable) is effective against third parties for a short period of time that should be enough for the secured creditor to find out that proceeds have been generated and take action (such as 20-25 days); thereafter, the security right in the proceeds continues to be effective against third parties only if it is made effective against third parties before the expiry of that short time period by one of the methods set out in article 18 or the asset-specific provisions of this chapter. For example, if an encumbered motor vehicle with a specific description is exchanged for another motor vehicle with a different description, the latter motor vehicle constitutes proceeds to which paragraph 2 applies; and the security right in the latter motor vehicle will cease to be effective against third parties if no registration is made prior to the expiry of the time period set out in paragraph 2.

Article 20. Tangible assets commingled in a mass or transformed into a product

41. Article 20 is based on recommendation 44 of the Secured Transactions Guide. Its purpose is to ensure that, if an asset is subject to a security right that is effective against third parties is commingled in a mass or transformed into a product, and the security right extends to the mass or product under article 11, the security right in the mass or product will be automatically effective against third parties. In other words, no separate act is necessary to make the security right in the mass or product effective against third parties (for the priority of this security right, see art. 42). It should be noted that preserving continuity of third-party effectiveness is relevant for the purposes of the priority rules.

Article 21. Changes in the method for achieving third-party effectiveness

42. Article 21 is based on recommendation 46 of the Secured Transactions Guide (see chap. III, paras. 120 and 121). It is intended to ensure that a security right that has been made effective by one method (e.g. registration) may later be made effective by another method (e.g. a control agreement), and that third-party effectiveness is continuous as long as there is no gap between the time third-party effectiveness was achieved by the first and the second method.

Article 22. Lapses in third-party effectiveness

43. Article 22 is based on recommendation 47 of the Secured Transactions Guide (see chap. III, paras. 122-127). It is intended to ensure that, if third-party effectiveness lapses, it may be re-established. In such a case, however, the third-party effectiveness dates only from the time it is re-established.

Article 23. Continuity in third-party effectiveness upon a change of the applicable law to this Law

44. Article 23 is based on recommendation 45 of the Secured Transactions Guide (see chap. III, paras. 117-119). Under paragraph 1, if the law enacting the Model Law becomes applicable as a result, for example, of a change in the location of the encumbered asset or the grantor, a security right that was effective against third parties under the previously applicable law continues to be effective against third parties under the law enacting the Model Law for a short period of time (such as 45-60 days) to give the secured creditor an opportunity to find out that the applicable law has changed and take action.

45. This rule does not apply if the third-party effectiveness of a security right under the initially applicable law has already lapsed or lapses during the short period of time set out in paragraph 1 (b) but before the security right is made effective against third parties. Thereafter, the security right continues to be effective against third parties only if, before the expiry of that period, it is made effective against third parties under the relevant provisions of the law enacting the Model Law. Under paragraph 2, if the third-party effectiveness of a security right continues (i.e. it did not lapse and the secured creditor satisfied the requirements for third-party effectiveness before the lapse and within the short period of time set out in para. 1 (b)), it dates back to the time it was first achieved under the previously applicable law. As already mentioned (see para. 43 above), if third-party effectiveness lapses, it may be re-established, but third-party effectiveness will then only date from the time it is re-established.

Article 24. Acquisition security rights in consumer goods

46. Article 24 is based on recommendation 179 of the Secured Transactions Guide (see chap. IX, paras. 125-128). An acquisition security right in consumer goods is automatically effective against third parties if the purchase price of the consumer goods is below an amount to be specified by the enacting State. While this limitation is intended to exempt from registration only low-value consumer transactions, for it to be meaningful, it must be set at a reasonably high price. That price should not be so high as to prevent a consumer from encumbering his or her assets to obtain credit, but not so low either to make it necessary for a secured creditor to register a notice of its security right in circumstances in which it would not be commercially practicable to do so. For example, the price could be several times the cost of registration to reflect the cost of typical durable household goods (for the question whether a buyer acquires its rights free of an acquisition security right that is automatically effective against third parties, see art. 34, para. 9).

B. Asset-specific rules

Article 25. Rights to payment of funds credited to a bank account

47. Article 25 is based on recommendation 49 of the Secured Transactions Guide (see chap. III, paras. 138-148). It adds to the general methods for achieving third-party effectiveness that are set out in article 18 three asset-specific methods of achieving the third-party effectiveness of a security right in a right to payment of funds credited to a bank account. First, if the secured creditor is the deposit-taking institution with which the account is held, no additional action is required for a security right to become effective against third parties. Second, the security right is effective against third parties upon conclusion of a control agreement among the grantor, the secured creditor and the deposit-taking institution (for the definition of the term "control agreement", see art. 2, subpara. (g) (ii)). Third, the security right is effective against third parties if the secured creditor becomes the account holder. The precise action required for the secured creditor to become the account holder will depend on other factors, such as the law to which the deposit-taking institution is subject and the terms of the account agreement.

Article 26. Negotiable documents and tangible assets covered by negotiable documents

48. Article 26 is based on recommendations 51-53 of the Secured Transactions Guide (see chap. III, paras. 154-158). It addresses the relationship between the third-party effectiveness of a security right in a negotiable document and the third-party effectiveness of a security right in the tangible assets covered by the document.

49. Under paragraph 1, if a security right in a negotiable document is effective against third parties and extends to the assets covered by the document under article 16, the security right in the assets covered by the document will also be effective against third parties for as long as the assets are covered by the document. Under paragraph 2, the security right in the assets covered by the document can be made effective against third parties by possession of the document.

50. Under paragraph 3, a security right in an asset that is made effective against third parties by the secured creditor's possession of the document remains effective against third parties for a short period of time (such as 10 days) even if possession of the document or the assets covered by the document is relinquished for the purpose of dealing with those assets. In paragraph 3, the words "or the asset covered by the document", which did not appear in recommendation 53, were added for clarification as to what would happen in actual practice; and the words "physical actions like loading and unloading", which appeared in that recommendation, were deleted on the understanding that the words "dealing with the asset" are sufficiently broad to cover not only transactions like sale and exchange but also physical actions like loading and unloading.

Article 27. Uncertificated non-intermediated securities

51. Article 27 does not correspond to any of the recommendations of the Secured Transactions Guide, as the Guide did not apply to security rights in any type of securities (see rec. 4 (c)). It addresses the methods, other than registration of a notice, by which a security right in uncertificated non-intermediated securities may be made effective against third parties. First, the security right may be made effective against third parties by notation of the security right or entry of the name of the secured creditor as the holder of the securities in the books maintained by the issuer or by another person on behalf of the issuer for the purpose of recording the name of the holder of securities. The enacting State should choose the method that best fits its legal system; and if both methods are used in an enacting State, that State may choose to retain them both. Second, as in the case of a security right in a right to payment of funds credited to a bank account, the security right may be made effective against third parties through the conclusion of a control agreement between the grantor, the

secured creditor and the issuer (for the definition of the term "control agreement", see art. 2, subpara. 2 (g) (i)).

Additional third-party effectiveness method for negotiable instruments and non-intermediated securities

52. Under article 19 of the Convention Providing a Uniform Law For Bills of Exchange and Promissory Notes (Geneva, 1930; the "Geneva Uniform Law"), "when an endorsement contains the statements 'value in security' ('valeur en garantie'), 'value in pledge' ('valeur en gage'), or any other statement implying a pledge, the holder may exercise all the rights arising out of the bill of exchange, but an endorsement by him has the effects only of an endorsement by an agent". Article 22 of the United Nations Convention on International Bills of Exchange and International Promissory Notes (the "Bills and Notes Convention") contains a similar rule, according to which "if an endorsement contains the words 'value in security', or any other words indicating a pledge, the endorsee is a holder who: (a) may exercise all rights arising out of the instrument …".

53. An enacting State that has enacted the Geneva Uniform Law (or the Bills and Notes Convention) may wish to include: (a) this rule in its enactment of the Model Law (as a rule of creation and/or third-party effectiveness of a security right in negotiable instruments and non-intermediated securities); and (b) a rule dealing with the comparative priority of such a security right. Another option would be to leave the matter to articles 46, paragraph 2, 49, paragraph 3, and 51, paragraph 5, under which such a holder of a negotiable instrument or a non-intermediated security would take its rights free of, or unaffected by, any security right. A further option would be to leave the matter to the relevant domestic law rule dealing with the hierarchy between domestic law and an international convention (see A/CN.9/914, para. 67).

Note by the Secretariat: draft guide to enactment of the UNCITRAL Model Law on Secured Transactions

ADDENDUM

Contents

Chapter IV. The registry system

Article 28. Establishment of the Registry

1. Article 28 is based on recommendations 1(f) of the Secured Transactions Guide and 1 of the Registry Guide. It provides for the establishment by the enacting State of a public registry to give effect to the provisions of the Model Law relating to the registration of notices with respect to security rights (the "Registry"). In particular, under article 18 of the Model Law, a non-possessory security right in an encumbered asset is effective against third parties, as a general rule, only if a notice with respect to the security right is registered in the Registry (see Secured Transactions Guide, chap. III, paras. 29-46 and the Registry Guide, paras. 20-25). Under article 29 of the Model Law, the time of registration, again as a general rule, is also the basis for determining the order of priority between a security right and the right of a competing claimant (see Secured Transactions Guide, chap. V, paras. 42-50, and the Registry Guide, paras. 36-46).

2. Depending on its drafting conventions, an enacting State may decide to incorporate the provisions relating to the registry system in its secured transactions law implementing the Model Law, in a separate law or other legal instrument, or in a combination thereof. To preserve flexibility for enacting States, all the relevant registry-related provisions are collected in a set of rules presented after article 28 of the Model Law and called the "Model Registry Provisions".[1]

3. These Provisions have been drafted to accommodate flexibility in registry design. That said, the Secured Transactions Guide recommends that, if possible, the Registry should be electronic in the sense of permitting information in registered notices to be stored in electronic form in a single database (see Secured Transactions Guide, rec. 54 (j)(i), and chap. IV, paras. 38-41 and 43). An electronic registry database is the most efficient and practical means to implement the recommendation of the Secured Transactions Guide that the registry record should be centralized and consolidated (see rec. 54 (e), and chap. IV, paras. 21-24).

4. Access to registry services should be electronic in the sense of permitting users to directly submit notices and search requests over the Internet or via direct networking systems (see Secured Transactions Guide, rec. 54 (j)(ii), and chap. IV, paras. 23-26 and 43). This approach eliminates the risk of registry staff error in entering the information contained in a paper notice into the registry record, facilitates speedier and more efficient access to registry services by users, and greatly reduces the operational costs of the Registry, translating into lower fees for registry users (for a discussion of these advantages and guidance on implementation, see Registry Guide, paras. 82-89).

5. The scope of application of the Model Law is limited to consensual security rights and outright transfers of receivables (see arts. 1 and 2, subpara. (kk)). While the Model Law does not recommend this approach, some States provide for the registration of notices of rights and/or preferential claims created by operation of law in favour of specified classes of creditors (e.g. the State for tax claims and employees for employment benefits; see Registry Guide, paras. 46 and 51). If the enacting State follows this approach, it will need to specify the priority effect of registration (see art. 37 of the Model Law and A/CN.9/914, para. 31; see also Secured Transactions Guide, chap. V, para. 90, and Registry Guide, para. 51).

6. In addition, some States provide for the registration of notices of judgments obtained by a creditor of a grantor and treat registration as generally giving priority to the judgment creditor over consensual security rights that are subsequently made effective against third parties by registration. If the enacting State adopts this approach, it will need to adjust its general creditor-debtor law and its version of the Model Law (see art. 37 of the Model Law and A/CN.9/914, para. 31; see also Registry Guide, para. 40).

[1] A reference to an article in this chapter is a reference to an article of the Model Registry Provisions, unless otherwise indicated.

7. Moreover, some States provide for the registration of the ownership rights of consignors and lessors under commercial consignments of inventory and long-term operating leases of tangible assets. Even though these arrangements do not function to secure an obligation, bringing them within the registration regime ensures that the consignor's or lessor's right is publicized to third parties who deal with the consigned or leased goods in the hands of the consignee or lessee (see Secured Transactions Guide, Introduction, para. 26, and Registry Guide, paras. 50 and 78).

Model Registry Provisions

Section A. General rules

Article 1. Definitions and rules of interpretation

8. Article 1 contains definitions of key terms used in the Model Registry Provisions. These terms are derived from the Registry Guide (see Registry Guide, paras. 8 and 9). If the enacting State decides to incorporate the Model Registry Provisions in its enactment of the Model Law, these definitions should be included in the provision implementing article 2 of the Model Law (with the exception of the definition of the term "registry" which is also included in art. 2, subpara. (ee); see footnote 9 of the Model Law). In general, the definitions are self-explanatory. Where elaboration is needed, it is provided in the commentary on the relevant articles below.

Article 2. Grantor's authorization for registration

9. Article 2 is based on recommendations 71 of the Secured Transactions Guide (see chap. IV, para. 106) and 7(b), of the Registry Guide (see para. 101). Paragraph 1 provides that the registration of an initial notice is ineffective unless authorized by the grantor in writing (the rule is formulated in the negative, as the effectiveness of a registration is also subject to other requirements). If the grantor's authorization covers a narrower range of encumbered assets than that described in the registered notice, the registration would be effective only with respect to the assets to the extent authorized by the grantor. To ensure that this rule does not interfere with the efficiency of the registration process, paragraph 6 confirms that the Registry is not entitled to require evidence of the existence of the grantor's authorization.

10. Paragraphs 4 and 5 confirm that: (a) the grantor's authorization need not be obtained before registration; and (b) the conclusion of a written security agreement automatically constitutes authorization without the need to include an express authorization clause. Thus, the post-registration conclusion of a security agreement will constitute retrospective "ratification" of an initially unauthorized registration only with respect to the assets covered by the security agreement.

11. Paragraph 2 requires the grantor's authorization for the registration of an amendment notice that adds encumbered assets to those described in the prior registered notice. There is no need to register an amendment notice (and thus no need to obtain the authorization of the grantor) with respect to "additional assets" that are proceeds of encumbered assets described in a registered notice if the proceeds are: (a) of a type that fall within the existing description (for example, the description covers "all tangible assets" and the grantor exchanges one type of tangible asset for another; see Secured Transactions Guide, rec. 39); or (b) "cash proceeds", that is, money, receivables, negotiable instruments or funds credited to a bank account (see art. 19, para. 1, of the Model Law).

12. Under the bracketed language in paragraph 2, the grantor's written authorization must also be obtained for the registration of an amendment notice to increase the maximum amount set out in a registered notice for which the security right to which the registration relates may be enforced. This provision is only needed in systems that require this information to be set out in the security agreement and in the registered notice (see art. 8, subpara. (e), of the Model Registry Provisions and art. 6, para. 3(d) of the Model Law).

13. Where an amendment notice seeks to add a new grantor, paragraph 3 generally requires the additional grantor's authorization to be obtained. The grantor's authorization is not required for the registration of an amendment notice to disclose a post-registration change in the identifier of the grantor for the purposes of article 25; nor is the grantor's authorization needed to register the identifier of a buyer of the encumbered assets as a new grantor for the purposes of article 26, option A or option B.

14. If the grantor did not authorize the registration of the notice, or only authorized the registration of a notice covering a narrower range of encumbered assets, or has withdrawn an initial authorization, article 20 provides a procedure by which the grantor can compel the secured creditor to register a cancellation or amendment notice, as the case may be, to reflect the terms of the actual security or other agreement, if any, between the parties.

15. Registration of an amendment notice that adds encumbered assets, increases the maximum amount or adds a new grantor takes effect only from the time of the registration of the amendment notice regardless of whether authorization was obtained before or after its registration (see art. 13, para. 1).

Article 3. One notice sufficient for multiple security rights

16. Article 3 is based on recommendations 68 of the Secured Transactions Guide (see chap. IV, para. 101) and 14 of the Registry Guide (see paras. 125 and 126). It confirms that a single registered notice is sufficient to achieve the third-party effectiveness of security rights arising under one or more security agreements between the grantor and the secured creditor. This rule applies regardless of whether the agreements are related to one another or are separate and distinct, as where, for example, the initial security agreement covered the grantor's tangible assets and the parties subsequently conclude a new security agreement creating a security right in the grantor's receivables.

17. It should be emphasized that a single registration is sufficient under article 3 only to the extent that the information in the registered notice corresponds to the content of all the security or other agreement between the parties (see Registry Guide, para. 126). If, in the above-mentioned example, the registered notice described the encumbered assets as "all the grantor's tangible assets", a new initial notice (or an amendment to the existing notice) would have to be registered for the security right in grantor's receivables under the subsequent agreement to be effective against third parties, and that notice would take effect against third parties only from the time of its registration (see arts. 13, para. 1, and 29 of the Model Law). On the other hand, if the description in the registered notice covered "all of the grantor's movable assets", it would be sufficient to achieve the third-party effectiveness of its security right under both the initial and subsequent agreements, and its priority would date from the time of the initial registration (see art. 29 of the Model Law).

Article 4. Advance registration

18. Article 4 is based on recommendations 67 of the Secured Transactions Guide (see chap. IV, paras. 98-101) and 13 of the Registry Guide (see paras. 122-124). It confirms that a registration may be made before the creation of a security right to which the notice relates. This enables a security right under a security agreement covering after-acquired assets of the grantor to be made effective against third parties by a single registration before the assets are actually acquired by the grantor and the security right comes into existence.

19. Article 4 also confirms that a registration may be made before the conclusion of any security agreement between the parties to which the notice relates. As already noted in relation to article 2 (see para. 9 above), the underlying security agreement does not have to be submitted to the Registry. Advance registration is useful because it enables a secured creditor to establish its priority ranking against competing secured creditors under the general first-to-register priority rule in article 29 of the Model Law even before the security agreement with the grantor is formally concluded. However,

advance registration does not give the secured creditor priority over other categories of competing claimants, if they acquire rights in the encumbered assets before the security agreement is actually entered into and the other requirements for creation of the security right to which the notice relates are satisfied (see, notably, arts. 34, 36 and 37 of the Model Law).

20. Advance registration may be prejudicial to the grantor identified in a registered notice if a security agreement is never concluded or covers a narrower range of assets than those described in the registered notice. To protect the grantor in this scenario, article 20 provides a procedure to enable the grantor to obtain the compulsory amendment or cancellation of the registered notice, as the case may be.

Section B. Access to registry services

Article 5. Conditions for access to registry services

21. Article 5 is based on recommendations 54, subparagraph (c), (f) and (g), and 55(b), of the Secured Transactions Guide (see chap. IV, paras. 25-228) and 4, 6 and 9 of the Registry Guide (see paras. 95-97 and 103-105).

22. Paragraphs 1 and 3 confirm that the Registry must be public in the sense that any person is entitled to register a notice or search the registry record subject only to meeting the conditions governing access. For both types of service, access requires that the registrant must submit the prescribed form of notice or search request and pay or make any arrangements to pay the prescribed fees, if any (as to the latter, see art. 33).

23. Under paragraph 1(b), a registrant, as opposed to a searcher, additionally must identify itself to the Registry in the prescribed manner. This additional requirement is aimed at assisting the person identified in a registered notice as the grantor to determine the identity of the registrant in the event that the grantor did not authorize the registration (see Registry Guide, para. 96). This consideration must be balanced against the need to ensure efficiency and speed in the registration process. Accordingly, the evidence of identity required of a registrant should be that which is generally accepted as sufficient in day-to-day commercial transactions in the enacting State (for example, an identity card, driver's licence or other state-issued official document) provided it includes the registrant's contact details.

24. If access to registry services is refused, paragraph 4 requires the Registry to communicate the specific reason (for example, the registrant failed to use the prescribed form or to pay the prescribed fee) "without delay". What this means depends on the mode by which the notice or search request is submitted to the Registry. If the system is designed to enable users to submit notices and search requests through electronic means of communication directly to the Registry, the system should be programmed to automatically communicate the reason during the registration process and display the reason on the registrant's screen. If the system also permits notices and search requests to be submitted in paper form, the registry staff will need a reasonable period of time to verify compliance with the conditions of access and prepare and communicate a response.

25. To facilitate efficient and secure access to registry services, the Registry should be organized to accept payments made electronically in a manner that ensures the confidentiality of financial information submitted by users (see Registry Guide, para. 138). To facilitate efficient access by frequent users in particular (such as financial institutions, automobile dealers or other suppliers of goods on credit, lawyers and other intermediaries), they should be given the option of setting up an account that enables them to deposit funds to pay for their ongoing requests for services.

26. To limit the risk of registration of an amendment or cancellation notice that is not authorized by the person identified in the initial notice as the secured creditor, paragraph 2 requires persons who submit an amendment or cancellation notice for registration to satisfy the prescribed secure access requirements. For example, registrants may be required to set up a password-protected account when submitting

an initial notice and submit all amendment and cancellation notices through that account. Alternatively, the system might be designed to automatically assign a unique user code to registrants upon registration of an initial notice, with that code then required to be entered on all amendment and cancellation notices submitted for registration (with respect to the effectiveness of the registration of unauthorized amendment or cancellation notices, see art. 21).

Article 6. Rejection of the registration of a notice or a search request

27. Article 6 is based on recommendations 8 and 10 of the Registry Guide (see paras. 97-99 and 106). Paragraph 1 obligates the Registry to reject the registration of a notice if no information or illegible information has been entered in any one of the mandatory designated fields in the notice. As all mandatory fields must be completed for a registered notice to be effective, this provision ensures that submitted notices that are self-evidently ineffective are never entered into the registry record. For example, art. 8, paragraph (c), requires an initial notice to include a description of the encumbered assets. If no information or only illegible information is entered in the field reserved for setting out the description, the registration will be rejected. On the other hand, the registration will be accepted if legible information is set out in the field designated for entering a description, even if the information that is entered is incorrect or incomplete, for example, the registrant mistakenly entered the address of the grantor in the designated description field.

28. Paragraph 2 obligates the Registry to reject a search request if no information or illegible information is entered in one of the designated fields for entering a search criterion. Since searchers are entitled to search by either the identifier of the grantor or the registration number assigned to the initial notice (see art. 22), it is sufficient if legible information is entered into at least one of the search criterion fields.

29. To avoid any arbitrary decisions on the part of the Registry, paragraph 3 confirms that the Registry may not reject the registration of a notice or search request where the registrant or searcher satisfies the access conditions set out in paragraphs 1 and 2 respectively.

30. Paragraph 4 requires the Registry to provide the reason for rejecting the registration of a notice or a search request without delay. As already noted (see para. 24 above), the mode of communication of the reasons depends on whether the notice or search request was submitted in paper form or through electronic means directly to the Registry.

Article 7. Information about the registrant's identity and scrutiny of the form or contents of a notice by the Registry

31. Article 7 is based on recommendations 54(d), and 55(b), of the Secured Transactions Guide (see chap. IV, paras. 15-17 and 48) and 7 of the Registry Guide (see paras. 100 and 102). Paragraph 1 obligates the Registry to maintain the identity information submitted by registrants in compliance with article 5, paragraph 1(b), and to provide that information upon request to the person identified in the registered notice as the grantor. While this information does not form part of the public or archived registry record, it nonetheless must be preserved by the Registry in a manner that enables this information to be retrieved in association with the registered notice to which it relates. This is consistent with the rationale for obtaining and preserving this information which is to assist the grantor in identifying the registrant in cases where the registration of the notice was not authorized by the grantor (see para. 22 above). In order to ensure that this objective is balanced against the need to facilitate efficiency of the registration process, paragraph 2 provides that the Registry may not require further verification of the identity information provided by a registrant under article 5, paragraph 1(b). With the same objective in mind, paragraph 3 generally prohibits the Registry from scrutinizing the form or content of notices and search requests submitted to it except to the extent needed to give effect to articles 5 and 6.

Section C. Registration of a notice

Article 8. Information required in an initial notice

32. Article 8 is based on recommendations 57 of the Secured Transactions Guide (see chap. IV, para. 65) and 23 of the Registry Guide (see paras. 157-160). It sets out the items of information required to be entered in the appropriate designated fields in an initial notice. The items of information specified in subparagraphs (a), (b) and (c) are the subject of articles 9, 10 and 11, and the reader is generally referred to the commentary on those articles. It should be noted that where a notice relates to more than one grantor or secured creditor, the required information should be entered in separate designated fields for each grantor or secured creditor.

33. Subject to its privacy laws, the enacting State may decide to require "additional information" (such as the birth date of the grantor or an identification number issued by the enacting State) to be entered to assist in uniquely identifying a grantor where there is a risk that many persons may have the same name (see bracketed text in art. 8, subpara. (a)). If this approach is adopted, the form of notice prescribed by the enacting State should provide a separate designated field for entering the "additional information". The enacting State should also specify the type of additional information to be provided and make its inclusion mandatory in the sense that it must be entered in the relevant field for a notice to be registered. If the required additional information is an identification number issued by the enacting State, it will also be necessary to address cases in which the grantor is not a citizen or resident of the enacting State, or for any other reason has not been issued an identification number. Subject to privacy considerations, the enacting State might, for example, provide that the number of the grantor's foreign passport or some other foreign official document is a sufficient substitute (on all these points, see Registry Guide, rec. 23 (a)(i), and paras. 167-169, 171, 181-183, 226, as well as Annex II, Examples of registry forms).

34. Subparagraph (d) appears within square brackets, as an indication of the duration of registration on an initial notice is required only if the enacting State adopts options B or C of article 14 (see paras. 53-55 below; see also Registry Guide, paras. 199-204). Subparagraph (e) also appears within square brackets, as an indication of the maximum amount for which the security right may be enforced is required only if the enacting State implements the approach set out in article 6, paragraph 3 (d), of the Model Law, which also appears within square brackets (see A/CN.9/914, para. 5).

Article 9. Grantor identifier

35. Article 9 is based on recommendations 59 and 60 of the Secured Transactions Guide (see chap. IV, paras. 68-74), as well as recommendations 24 and 25 of the Registry Guide (see paras. 161-183). It provides that the identifier of the grantor is the name of the grantor. It then sets out separate rules for determining the name of the grantor depending on whether the grantor is a natural person or a legal person or other entity.

36. If the grantor is a natural person, paragraph 1 provides that the grantor's name is the name that appears in the official document specified by the enacting State as the authoritative source. If not all grantors possess a common official document (e.g., an identity card or driver's licence), the enacting State will need to specify alternative official documents as authoritative sources and specify the hierarchy of authoritativeness among them (for examples of possible approaches, see Registry Guide, paras. 163-168).

37. As already noted (see para. 33 above), the enacting State may require the entry of a State-issued identity or other official number as additional information to assist in uniquely identifying a grantor. Instead of the name, the enacting State may decide to make this number a grantor identifier. Since the grantor identifier is the criterion used to search the registry record, this approach is only feasible if there is a reliable record or other objective source that searchers can consult to determine a person's official number, If this approach is adopted, it will also be necessary for the enacting State to address cases in which the grantor is not a citizen or resident of the enacting

State, or for any other reason has not been issued an identification number. The enacting State might, for example, provide that the number in some other foreign official document is a sufficient substitute provided again that the relevant number is accessible to searchers. Otherwise, the name of the foreign grantor will have to be used as the grantor identifier (see Registry Guide, paras. 168 and 169).

38. Paragraph 2 requires the enacting State to indicate which components of the name of a grantor who is a natural person must be entered in the notice. The enacting State will need to specify, for example, whether only the given and family name of the grantor is required or whether a middle name or initial, if any, must also be included. It will also need to address the scenario where the grantor's name consists of a single word, for example, by providing that that word should be entered in the family name field and by ensuring that the registry system is designed so as not to reject notices that have no information entered in the other name fields (see Registry Guide, para. 165).

39. Paragraph 3 requires the enacting State to address how the grantor's name is to be determined where the grantor's name has legally changed under applicable law after the issuance of the official document designated in paragraph 1 as the authoritative source of the grantor's name (for example, as a result of an application for a name change under change of name legislation; see Registry Guide, para. 164(f)).

40. Paragraph 4 provides that where the grantor is a legal person the name of the grantor is the name that appears in the relevant document, law or decree to be specified by the enacting State constituting the legal person (see Registry Guide, paras. 170-173).

41. Paragraph 5, which appears in square brackets, provides for the possibility that an enacting State may wish to require additional information pertaining to the grantor's status to be entered in a notice in special cases, such as where the grantor is subject to insolvency proceedings (see Registry Guide, paras. 174-179). If the enacting State adopts this approach, it must ensure that the prescribed form of notice contains a field to enter the relevant status information.

Article 10. Secured creditor identifier

42. Article 10 is based on recommendations 57(a) of the Secured Transactions Guide (see chap. IV, para. 81) and 27 of the Registry Guide (see paras. 184-189). It largely replicates the rules in article 9 for determining the identifier of the grantor. Unlike under article 9 (read together with art. 8, subpara. (a)), however, under article 10 (read together with art. 8, subpara. (b)), the registrant may enter the name of a representative of the secured creditor (e.g. a law firm or other service provider or an agent of a syndicate of lenders). This approach is intended to protect the privacy of the actual secured creditor and facilitate the efficiency of arrangements such as syndicated loans where there are multiple secured creditors who may change over time. This approach does not have a negative impact on the grantor, who would typically know the identity of the actual secured creditor from their dealings, or third parties, as long as the representative is authorized to act on behalf of the actual secured creditor (see Registry Guide, paras. 186 and 187). It should also be noted that, as the security right is created by an off-record security agreement, the entry of the name of a representative as the secured creditor on a registered notice does not make the representative the actual secured creditor.

Article 11. Description of encumbered assets

43. Article 11 is based on recommendations 63 of the Secured Transactions Guide (see chap. IV, paras. 82-86) and 28 of the Registry Guide (see paras. 190-192). The test for the adequacy of a description of the encumbered assets in a registered notice in paragraph 1 parallels the test for the adequacy of a description of the encumbered assets in a security agreement (see art. 9 of the Model Law). That said, the description in a registered notice need not be identical to the description in any related security

agreement so long as it reasonably allows identification of the relevant encumbered assets in accordance with the test in paragraph 1.

44. Paragraph 2 confirms that a description in a registered notice that refers to all of the grantor's movable assets or to all of the grantor's assets within a specified generic category (for example, all receivables owing to the grantor) satisfies the test in paragraph 1 that the description reasonably allow identification of the encumbered assets. It follows that a generic description will be sufficient even if any related security agreement only covers a specific asset within that broad generic category (for example, the description in the registered notice refers to all "tangible assets of the grantor", whereas the security agreement only covers a specific tangible asset). However, the effectiveness of the registration in this scenario is dependent on the authorization of the grantor pursuant to article 2; if the grantor only authorized a registration covering a specific asset, the registration will only be effective with respect to that asset. Moreover, the grantor is entitled, pursuant to article 20, paragraph 1, to compel the secured creditor to register an amendment notice that narrows the description of the assets in the registered notice to correspond to the encumbered assets actually covered by the security agreement unless the grantor separately authorized the secured creditor to register a broader description (see para. 8 above) and has not withdrawn that authorization.

45. The secured transactions laws of some States adopt special rules for describing specified classes of high-value assets that have a significant resale market alphanumerically (by a "serial number"). In States that adopt this approach, entry of the serial number in its own designated field is required in the sense of being necessary to preserve the priority of the security right as against specified classes of third parties that acquire rights in the asset. Enacting States that are interested in adopting this approach will need to revise the priority rules of the Model Law to specify the priority consequences of a failure to enter the relevant serial number and to revise the registry design and the registry-related provisions to accommodate serial-number-based registration and searching (for the rationale for, and the advantages and disadvantages of this, approach, see Registry Guide, paras. 131-134; for the consequences of a failure of entering the serial number or an error in entering the serial number, see Registry Guide, paras. 193 and 213; and for the registry design and registry provisions needed to implement this approach, see Registry Guide, para. 266). It should be noted that even in legal systems that do not adopt this approach, a registrant may choose to include the serial number in the description it enters in the notice as a convenient method of describing the encumbered asset in a manner that reasonably allows its identification (see Registry Guide, paras. 194 and 212). On the other hand, using the specific serial number as the description may be risky since any error would render the description insufficient whereas a more generic description (e.g. a description of the grantor's automobile by make and model) may reduce the risk of error.

46. There is no need to register an amendment notice to describe proceeds of an encumbered asset in the form of money, receivables, negotiable instruments or rights to payment of funds credited to a bank account (see art. 19, para. 1, of the Model Law). If the proceeds take any other form and are not already covered by the description of the encumbered assets in a registered notice, the secured creditor must register an amendment notice to add a description of the proceeds within a short period of time (e.g. 20-25 days) after they arise in order to preserve the third-party effectiveness and priority of its security right in the proceeds (see arts. 19, para. 2, and 32 of the Model Law). An amendment is necessary because otherwise a search result would not disclose the potential existence of a security right in the assets constituting the proceeds (see Registry Guide, para. 197).

Article 12. Language of information in a notice

47. Article 12 is based on recommendation 22 of the Registry Guide (see paras. 153-156; the Secured Transactions Guide includes a discussion of this matter in chapter IV, paras. 44-46, but does not include a recommendation). Paragraph 1 requires the information contained in a notice to be expressed in the language or

languages to be specified by the enacting State with the exception of the names and addresses of the grantor and the secured creditor or its representative. Typically, the enacting State will require registrants to use its officially recognized language or languages. As the names and addresses of the parties generally need not be translated (see para. 48 below) and the and other items of information, such as the period of effectiveness of the registration, required to be entered in a notice can be expressed by numbers, registrants will only need to translate the description of the encumbered assets. Where the description of the encumbered assets is not expressed in the required language, the registration of the notice would be ineffective as seriously misleading (see art. 24, para. 4).

48. Paragraph 2 requires all information in a notice to be in the character set prescribed and publicized by the Registry. Otherwise, the notice will be rejected as illegible under article 6, paragraph 1 (a) (for the same rule with respect to search requests, see art. 6, para. 2). Accordingly, where the names and addresses of the grantor and secured creditor or its representative are expressed in a language that uses a different character set than that prescribed by the Registry, they will need to be adjusted or transliterated to conform to the prescribed character set (see Registry Guide, para. 155).

Article 13. Time of effectiveness of the registration of a notice

49. Article 13 is based on recommendations 70 of the Secured Transactions Guide (see paras. 102-105) and 11 of the Registry Guide (see paras. 107-112). Paragraph 1 provides that the registration of an initial or amendment notice submitted to the Registry is effective only once the information in the notice is entered into the public registry record so that it is accessible to searchers (see the definition of the term "registry record" in art. 1, subpara. (l)); and paragraph 3 requires the Registry to record that date and time and to make this information available to searchers.

50. In view of the importance of the timing and order of registration to the third-party effectiveness and priority of a security right, paragraph 2 requires the Registry to enter the information into the registry record "without delay" and in the order in which it was submitted. The meaning of the words "without delay" depends in practice on the design of the registry system. However, if the system enables users to submit information in a notice directly to the Registry through electronic means of communication without the intervention of registry staff, those words will typically mean "with little or no delay" between the time when the information in a notice is submitted to the Registry and the time when it becomes available to searchers. But in systems that permit or require the use of paper notice forms, there will inevitably be some time lag since the registry staff must enter the information on the paper notice form into the registry record. Thus, in this case, the words "without delay" will mean "as soon as practically feasible".

51. Paragraph 4 deals with the time of effectiveness of the registration of a cancellation notice. Option A provides that the registration of a cancellation notice is effective once the information in the registered notices to which the cancellation notice relates is no longer publicly searchable. Option A should be adopted by enacting States that adopt option A or B of article 21, since these options require the Registry to remove information in a registered notice from the public registry record and archive it upon registration of a cancellation notice pursuant to option A of article 30. Option B provides that the registration of a cancellation notice becomes effective once the information in the registered notices to which the cancellation notice relates is entered into the registry record so as to be accessible to searchers. Option B should be adopted by enacting States that adopt option C or D of article 21 since these options require the Registry to retain the information in all registered notices, including cancellation notices, on the public registry record until the effectiveness of the registration lapses pursuant to option B of article 30.

52. Option A and option B of paragraph 5 require the Registry to record the date and time of effectiveness of the registration of a cancellation notice as determined by option A and option B of paragraph 4 respectively. Accordingly, enacting States that

adopt option A of paragraph 4 should adopt option A of paragraph 5, while enacting States that adopt option B of paragraph 4 should adopt option B of paragraph 5.

Article 14. Period of effectiveness of the registration of a notice

53. Article 14 is based on recommendations 69 of the Secured Transactions Guide (see chap. IV, paras. 87-91) and 12 of the Registry Guide (see paras. 113-121, 240 and 241). It offers enacting States a choice of three different approaches to the determination of the initial period of effectiveness (or duration) of the registration of a notice. If option A is adopted, an initial notice (and any associated amendment notice) is effective for the period specified by the enacting State. If option B is adopted, registrants are permitted to choose the desired period of effectiveness. If option C is adopted, registrants are likewise permitted to choose the period of effectiveness but only up to the maximum number of years specified by the enacting State.

54. Paragraphs 2 and 3 permit the period of effectiveness of a notice to be extended and re-extended before its expiry by the registration of an amendment notice. Paragraph 2 of option B permits the period of effectiveness to be extended at any time before its expiry, whereas paragraph 2 of options A and C permit an extension to be made only during the period specified by the enacting State (e.g. four to six months) before expiry of the current period of effectiveness. The reason for this difference is to prevent a registrant from undermining the maximum period of effectiveness specified by the enacting State under options B and C by extending the period of effectiveness of a registration at an earlier point. Under paragraph 4 of option A, the duration of the registration would be extended for the period specified by the enacting State as the period of effectiveness of an initial notice. Under paragraph 4 of option B or option C the registrant is permitted to choose the duration of the further period of effectiveness, but only up to the maximum number of years prescribed by the enacting State in the case of option C.

55. If option B or option C is adopted, the period of effectiveness of the registration must be included in a notice (see art. 8, subpara. (d)). States that adopt either of these options will also need to prescribe how registrants must enter the desired period of effectiveness in the notice. The notice form might be designed to enable registrants to simply enter the desired number of whole years or to permit registrants to enter or select the specific day, month and year on which the registration is to expire.

Article 15. Obligation to send a copy of a registered notice

56. Article 15 is based on recommendations 55 subparagraphs (c), (d) and (e) of the Secured Transactions Guide (see chap. IV, paras. 49-53) and 18 of the Registry Guide (see paras. 145-149). Paragraph 1 obligates the Registry to send a copy of the information in a registered notice to the person identified in the notice as the secured creditor without delay after the registration becomes effective. To avoid delay, the registry system should be designed to automatically generate and transmit the copy electronically to the secured creditor (see Registry Guide, para. 146). This enables the secured creditor to verify the correctness of the information in the registered notice and to alert it to the erroneous or unauthorized registration of an amendment or cancelation notice (for the effectiveness of the registration of amendment or cancellation notices not authorized by the secured creditor, see art. 21; see also Registry Guide, paras. 249-259; for the liability of the Registry for failure to send a copy of the information in a registered notice, see art. 32).

57. Paragraph 2 obligates the secured creditor to forward a copy of the information it receives from the Registry pursuant to paragraph 1 to the person identified in the notice as the grantor. The purpose of this requirement is to enable the grantor to take the steps necessary to correct the registry record if the registration was wholly or partially unauthorized by that person (see art. 20). The secured creditor must comply with this obligation before the expiry of the period specified by the enacting State after it receives a copy of the registered notice (e.g. 14 days). The copy must be sent to the grantor at its address set forth in the registered notice or at the grantor's new address if the secured creditor knows that the grantor has changed its address and

knows or could reasonably discover that address. Placing the burden of forwarding a copy of the registered notice to the grantor on the secured creditor rather than on the Registry is the result of a cost-benefit analysis and is intended to avoid creating an additional burden for the Registry which could negatively affect its efficiency (see Registry Guide, para. 149).

58. Paragraph 3 provides that non-compliance by the secured creditor with its obligation under paragraph 2 does not by itself affect the effectiveness of the registration. Paragraph 4 limits the secured creditor's liability for non-compliance to a nominal amount (to be specified by the enacting State) and any actual loss or damage caused by its non-compliance. Paragraph 4 leaves to the relevant law of the enacting State related matters, such as the standard of liability and the way in which the actual loss or damage is to be measured.

ADDENDUM

Contents

Paragraphs

Section D. Registration of an amendment or cancellation notice

Article 16. Right to register an amendment or cancellation notice

1. Article 16 is based on recommendations 73 of the Secured Transactions Guide (see chap. IV, paras. 110-116) and 19 (a), of the Registry Guide (see paras. 150 and 225-244). Paragraph 1 gives the person identified in an initial notice as the secured creditor the right to register a related amendment or cancellation notice at any time. In order to limit the risk of the registration of notices not authorized by that person, the registrant must satisfy the secure access requirements that were prescribed under article 5, paragraph 2 (see A/CN.9/914/Add.2, para. 26). To ensure that the person identified in the registered notice as the secured creditor (or another person acting on its behalf) is able to register subsequent amendment and cancellation notices, the secure access details should be communicated to the registrant at the time of registration of the initial notice or as soon as possible thereafter.

2. Paragraph 2 provides that, after an amendment notice changing the person identified in a registered notice as the secured creditor has been registered, only the current secured creditor of record is entitled to register an amendment or cancellation notice. Where the change in the secured creditor identifier results from an assignment of the secured obligation, the registry system should be designed to assign new secure access details to the new secured creditor so as to prevent the previous secured creditor from registering an amendment or cancellation notice (see A/CN.9/914/Add.2, para. 26). Where the change in the secured creditor identifier instead results simply from a change in the name of the secured creditor, no such precautionary step is needed since the secured creditor is still the same person.

Article 17. Information required in an amendment notice

3. Article 17 is based on recommendation 30 of the Registry Guide (see paras. 221-224; the Secured Transactions Guide does not contain an equivalent recommendation). Paragraph 1 provides that an amendment notice must contain in the designated field the registration number assigned by the Registry to the initial notice to which the amendment relates (see art. 28, para. 1, and para. 56 below). The reason for this requirement is to ensure that the amendment notice will be associated in the registry record with the initial notice so as to be retrieved and included in a search result (see the definition of the term “registration number” in art. 1, subpara. (j), and art. 22, subpara. (b)).

4. Paragraph 1 (b) requires the amendment notice to set out the information to be “added or changed”. The term “change” includes the release of an encumbered asset or one of several grantors. Although this type of change amounts in effect to a cancellation of the registration as it relates to the relevant asset or grantor, it should be effected by registering an amendment notice and not a cancellation notice. A cancellation notice is to be used only when the purpose is to cancel the effectiveness of the registration of an initial notice and all related notices in their entirety (see the definitions of “amendment notice” and “cancellation notice” in art. 1, subparas. (b) and (c)).

5. Paragraph 2 makes it clear that an amendment notice may relate to more than one item of information in a registered notice. This means that a registrant need register only one amendment notice even if it wishes, for example, to add both a description of new encumbered assets and a new grantor. It follows that the form of amendment notice prescribed by the Registry must be designed to enable a registrant to change any and all items of information in an initial notice using a single form (see Registry Guide, Annex II, Examples of registry forms, II. Amendment notice).

Article 18. Global amendment of secured creditor information

6. Article 18 is based on recommendation 31 of the Registry Guide (see para. 242; the Secured Transactions Guide does not contain an equivalent

recommendation). It addresses the scenario where there is a change in the identifier or address, or both, of the person identified in multiple registered notices as the secured creditor as a result, for example, of its relocation, its merger with another company or the assignment of all its receivables to a new secured creditor. Its purpose is to make it possible for the secured creditor of record (option A) or the Registry on the application of that person (option B) to amend the relevant information in all the registered notices by the registration of a single global amendment notice.

7. To effectuate the amendment of secured creditor information in multiple notices through the registration of a single global amendment notice, the registry record must be organized in a manner that enables the retrieval of all registered notices in which a particular person is identified as the secured creditor. To avoid the risk of the registration of unauthorized global amendment notices, the Registry should institute the secure access requirements prescribed under article 5, paragraph 2, to ensure that the person requesting or effecting a global amendment is in fact the secured creditor of record (see A/CN.9/914/Add.2, para. 26).

Article 19. Information required in a cancellation notice

8. Article 19 is based on recommendation 32 of the Registry Guide (see paras. 243 and 244; the Secured Transactions Guide does not contain an equivalent recommendation). It requires a cancellation notice to contain in the designated field the registration number assigned by the Registry under article 28, paragraph 1, to the initial notice to which the cancellation notice relates. The registration number is the only item of information required to be included in a cancellation notice (see Registry Guide, Annex II, Examples of registry forms, III. Cancellation notice).

9. The inclusion of the registration number in a cancellation notice ensures that the cancellation notice extends to the information in all registered notices containing that number (see the definition of the term “registration number” in art. 1, subpara. (j)). To minimize the risk of the inadvertent registration of cancellation notices, the prescribed cancellation notice form should expressly indicate the effect of a cancellation (see Registry Guide, Annex II, Examples of registry forms, III. Cancellation notice; with respect to the effectiveness of a cancellation notice not authorized by the secured creditor, see paras. 19-27 below).

Article 20. Compulsory registration of an amendment or cancellation notice

10. Article 20 is based on recommendations 72 of the Secured Transactions Guide (see chap. IV, paras. 107 and 108) and 33 of the Registry Guide (see paras. 260-263). It should be read in conjunction with article 2 which requires the person identified as the grantor in a registered notice to authorize its registration.

11. Paragraph 1 (a) obligates the secured creditor to register an amendment notice deleting encumbered assets from the description in the registered notice if the grantor identified in the notice did not authorize the registration of a notice in relation to those assets and has informed the secured creditor that it will not do so. For example, the secured creditor may have registered an initial notice covering “all assets” of the grantor but the security agreement between the parties covers only a specific tangible asset and the grantor informs the secured creditor that it does not contemplate entering into any further security agreement. Even if the grantor separately authorized the registration of a notice covering “all assets”, paragraph 1 (c) obligates the secured creditor to amend the description in its registered notice if the grantor subsequently withdraws its authorization, provided that no security agreement covering those assets is concluded thereafter (since this would automatically constitute a new authorization under art. 2).

12. Paragraph 1 (b) addresses the scenario where the security agreement to which a registered notice relates is revised to release some of the initially encumbered assets from the security right. In this scenario, the secured creditor is obligated to register an amendment notice to delete the released assets from the description in the registered notice provided that the grantor did not authorize the registration of a notice

covering the released assets otherwise than by entering into the initial security agreement. Even if the grantor executed a separate agreement authorizing the secured creditor to make the registration, paragraph 1 (c) obligates the secured creditor to register an amendment notice deleting the released assets if the grantor subsequently withdraws that authorization, provided that the parties have not entered into a new security agreement covering the released assets.

13. Enacting States that implement article 8, subparagraph (e), will need to adopt paragraph 2 which requires a secured creditor to register an amendment notice reducing the maximum amount specified in a registered notice if: (a) the grantor only authorized the registration of a notice in the reduced amount; or (b) the security agreement to which the notice relates has been revised to reduce the maximum amount.

14. Paragraphs 3 (a) and 3 (b) obligate the secured creditor to register a cancellation notice where the grantor identified in a registered notice either did not authorize the registration and has informed the secured creditor that it will not do so, or subsequently withdrew its authorization and the parties did not enter thereafter into a security agreement. A cancellation notice must also be registered if the obligation secured by the security right to which the registered notice relates has been extinguished (see para. 3 (c)). It should be noted that, under article 12 of the Model Law, a security right is extinguished upon full payment or other satisfaction of the secured obligation, provided that there is no further commitment by the secured creditor to extend any further secured credit.

15. Paragraph 4 prohibits the secured creditor from charging any fee for complying with its obligations under paragraphs 1 (a), 1 (c), 2 (a), 3 (a) and 3 (b). These provisions require a secured creditor to amend or cancel a registration either because it was never authorized by the grantor or because the grantor's initial authorization was withdrawn owing to the failure of the parties to subsequently conclude a security agreement. In these circumstances, it is appropriate to impose the cost on the secured creditor.

16. To protect grantors against the risk of non-compliance by a secured creditor with its obligation under paragraphs 1, 2 and 3, paragraph 5 gives the grantor the right to send a formal written request to the secured creditor to register the appropriate amendment or cancellation notice. If the secured creditor does not comply with the request before the expiry of the period specified by the enacting State, paragraph 6 entitles the grantor to apply for an order compelling registration of the appropriate notice. If the person identified as the secured creditor in the notice is not the actual secured creditor but its representative, and the actual secured creditor is no longer contactable, the grantor should be entitled to send its request to the representative.

17. If the secured creditor does not comply with the grantor's request under paragraph 5 within the period of time specified by the enacting State, paragraph 6 entitles the grantor to apply for an order compelling registration of the appropriate notice. In order to ensure speedy and efficient relief for the grantor, it is suggested that a short period (e.g. 14 days) is appropriate. This is in line with the rationale underlying the requirement in paragraph 6 for the enacting State to establish a summary judicial or administrative procedure for obtaining the order. Depending on local considerations, the enacting State may decide to use an existing administrative or judicial summary procedure or it may decide to set up a new procedure administered, for example, by the Registrar or registry staff. As noted in the Registry Guide (see para. 262), while the process should be speedy and inexpensive, it should also incorporate appropriate safeguards to protect the secured creditor against an unwarranted demand by the grantor (for example, by requiring the relevant authority to notify the secured creditor of the grantor's application and give the secured creditor a reasonable opportunity to respond).

18. Once an order for registration has been issued pursuant to the procedure established by the enacting State under paragraph 6, paragraph 7 requires the Registry to register the appropriate notice "upon receipt of a request with a copy of the relevant order" (if the enacting State decides under para. 6 to designate a court or other external

body to administer the procedure) or "upon the issuance of the relevant order" (if the enacting State decides under para. 6 to vest the Registry with the authority to administer the procedure).

Article 21. Effectiveness of the registration of an amendment or cancellation notice not authorized by the secured creditor

19. Article 21 addresses the effectiveness of the registration of an amendment or cancellation notice where the registration was not authorized by the secured creditor of record. The options set out in article 21 are based on the discussion of the matter in the Registry Guide (see paras. 249-259).

20. An unauthorized registration of an amendment or cancellation notice may occur as a result of fraud or error by a third party or even by a member of the registry staff (for corrections of errors by the Registry, see art. 31). The issue is whether and to what extent conclusive effect should nonetheless be given to the unauthorized registration for the purposes of determining the third-party effectiveness and priority of the related security right as against a competing claimant. In choosing among these options, enacting States will need to decide whether the balance should favour reliability of the registry record for searchers including prospective secured creditors (options A and B), or protection of registered secured creditors against the risk of losing the third-party effectiveness or priority status of their security right (options C and D). It should be emphasized that regardless of which option is used the risk of the unauthorized registration of amendment or cancellation notices is greatly reduced by the requirement for the enacting State to prescribe secure access procedures for registering amendment and cancellation notices (see art. 5 and A/CN.9/914/Add.2, para. 26).

21. Under option A, the registration of an amendment or cancellation notice is effective whether or not it was authorized by the person identified as the secured creditor in the registered notice to which the amendment or cancellation notice relates.

22. Option B is a variation of option A. While recognizing the general effectiveness of an unauthorized amendment or cancellation notice, it preserves the priority of the security right to which the unauthorized registration relates as against the right of a competing claimant over whom the security right covered by that registered notice had priority prior to the unauthorized registration of the amendment or cancellation notice. This option is predicated on the rationale that such a claimant by definition could not have been prejudiced by relying on the unauthorized registration.

23. If an enacting State decides to adopt option A or option B, it will need to also implement option B of article 30 which obligates the Registry to remove information in a registered notice from the public registry record and archive it upon registration of a cancellation notice. It will also need to implement option A of article 13, paragraphs 4 and 5, dealing with the time of effectiveness of the registration of a cancellation notice.

24. Option C is at the opposite end of the spectrum from option A. It provides that the registration of an amendment or cancellation notice is ineffective, unless authorized by the secured creditor of record. Under this approach, a searcher will need to conduct off-record inquiries to verify whether the registration of an amendment or cancellation notice was in fact authorized by the secured creditor.

25. Option D is a variation of option C. It preserves the effectiveness of an unauthorized registration of an amendment or cancellation notice as against a competing claimant who acquired its right in reliance on a search of the registry record made after the registration of the amendment or cancellation notice, and who did not have knowledge that the registration was unauthorized when it acquired its right. This qualification differs from the qualification in option B above insofar as it requires the competing claimant to provide factual evidence that it actually searched and relied on the registry record prior to acquiring its right in order to prevail over the secured creditor whose registration was amended or cancelled without authority.

26. If an enacting State decides to adopt option C or option D, it will need to implement option B of article 30, which obligates the Registry to remove information in registered notices from the public registry record and archive it only upon the expiry of the period of effectiveness of the registration of the notice. Under option C or D, all amendment and cancellation notices need to remain in the public registry record for searchers to discover whom to contact to verify whether the amendment or cancellation was authorized. If all the relevant notices were instead removed from the public record upon registration of a cancellation notice, searchers would have no means of discovering from a search of the registry that a security right binding on them may potentially still exist.

27. Searchers may not necessarily appreciate that registered amendment and cancellation notices may not be legally effective. Accordingly, enacting States that implement options C or D may wish to include a note on search results advising searchers of the need to conduct off-record inquiries to verify whether the registration of an amendment or cancellation notice was authorized by the secured creditor of record.

Section E. Searches

Article 22. Search criteria

28. Article 22 is based on recommendation 54 (h) of the Secured Transactions Guide (see chap. IV, paras. 31-36) and 34 of the Registry Guide (see paras. 264-265). It sets out the two criteria according to which any person may conduct a search of the public registry record.

29. Under subparagraph (a), the first and principal search criterion is the identifier of the grantor. The identifier of the grantor is its name, determined according to the rules set out in article 9. If an enacting State decides to require "additional information" to be entered in a separate field to assist in uniquely identifying a grantor, this additional information neither constitutes a part of the name search criterion nor an alternative search criterion (see art. 8, subpara. (a)). Rather it will simply appear as additional information in a search result. Accordingly, search request forms should not be designed to require entry of any additional information.

30. Under subparagraph (b), the registration number assigned to an initial notice in accordance with article 28, paragraph 1, constitutes an alternative search criterion. A search by registration number gives secured creditors an efficient means of identifying and retrieving a registered notice for the purposes of registering an amendment or cancellation notice. Searches by registration number generally will not be conducted by third parties as they typically will not know the relevant registration number. In those registry systems that establish accounts for users, it may not be necessary to provide for indexing and searching according to registration numbers as the history of registrations is stored and easily accessible to the holder of that account.

31. If the enacting State decides to introduce the serial number of goods as a search criterion, it will need to list the serial number of the asset as an additional search criterion in this article. It will also need to design the registry system so that registered notices can be searched and retrieved by serial number. (see Registry Guide, para. 266, and A/CN.9/914/Add.2, para. 45).

32. To allow the registration of global amendment notices, as provided in article 18, the registry record must be organized to permit registered notices to be identified and retrieved by reference to the relevant secured creditor. For public policy reasons relating to privacy and confidentiality, the name or other identifier of the secured creditor should not be an available criterion for general public searching (see Secured Transactions Guide, chap. IV, para. 81 and Registry Guide, para. 267).

Article 23. Search results

33. Article 23 is based on recommendation 35 of the Registry Guide (see paras. 268-273; the Secured Transactions Guide does not contain an equivalent

recommendation). Paragraph 1 sets out the required content of search results provided by the Registry in response to a search request. The search result must first indicate the date and time when the search was performed.

34. Paragraph 1 does not adopt the approach followed in some States in which search results are required to include a "currency date" indicating that the search result includes only information contained in notices that were registered as of that date (as opposed to the actual date on which the search result was issued). Currency dates are only used in systems in which a registration is considered effective when submitted to the registry. Under the Model Law, a registration becomes effective only when the information in a notice submitted to the Registry has been entered into the registry record so as to be accessible to searchers (see art. 13, para. 1). Thus, the "currency date" is always the actual date and time of the search (see Registry Guide, para. 273).

35. With respect to the substantive content of the search result, paragraph 1 contemplates that an enacting State may adopt one of two options. Option A contemplates that the enacting State's registry system is designed to only retrieve notices that exactly match the identifier of the grantor entered by the searcher in a search request. Option B contemplates that the enacting State's registry system is designed to also retrieve notices that closely match the identifier of the grantor entered by the searcher. Option B builds on a certain degree of forgiveness for registrant error in entering the identifier of the grantor, The extent of close matches disclosed in States that adopt option B depends on the specific close-match search programme or logic used by the Registry. The enacting State should not implement a search logic that could potentially result in a long list of close matches since this would make it too difficult for a searcher to determine which, if any, of the registered notices that closely match the search criterion entered refer to the grantor that the searcher is inquiring about.

36. Option A should be read in conjunction with article 24, paragraph 1, which provides that an error by a registrant in entering the grantor identifier in a notice does not render the registration of the notice ineffective if the information in the notice would be retrieved by a search of the registry record using the grantor's correct identifier as the search criterion. Option B should be read in conjunction with article 24, paragraph 2, under which the registration of a notice that contains an error in the grantor's identifier might still be effective if the name that was entered by the registrant is a sufficiently close match to result in the notice being retrieved on a search using the grantor's correct identifier.

37. Paragraph 2 obligates the Registry to issue an official search certificate setting out a search result upon the request of a searcher. Paragraph 3 dispenses with the need to obtain an official search certificate, for example, for the purposes of subsequent disputes, by providing that a written search result that purports to have been issued by the Registry is proof of its contents in the absence of evidence to the contrary. A written search result for this purpose would include a print-out of a search result performed electronically.

Section F. Errors and post-registration changes

Article 24. Registrant errors in required information

38. Article 24 is based on recommendations 58 and 64-66 of the Secured Transactions Guide (see chap. IV, paras. 66-74, and 82-97) and 29 of the Registry Guide (see paras. 205-220). Its overall aim is to provide guidance on when the effectiveness of a registration may be challenged owing to errors committed by registrants in entering the information in notices submitted to the Registry.

39. Paragraphs 1 and 2 address errors on the part of a registrant in entering the grantor identifier in a registered notice. Paragraph 1 provides that the effectiveness of the registration cannot be challenged if the information in the registered notice would be retrieved by a search of the public registry record using the grantor's correct

identifier (determined under art. 9) as the search criterion (see option A of art. 23, and para. 36 above). Paragraph 2, which appears in square brackets, should be adopted by enacting States that implement option B of article 23 under which search requests will also retrieve registered notices in which the grantor identifiers closely match the identifier entered by a searcher (see para. 36 above). In enacting States that adopt this option, paragraph 2 provides that an error on the part of a registrant in entering the grantor identifier does not render the registration ineffective if the information in the notice would still be retrieved as a "close match" by a search using the grantor's correct identifier "unless the error would seriously mislead a reasonable searcher." For example, the registered notice identifies the grantor as "Jack McDonald" and the correct name of the grantor is in fact "John Macdonald." If the erroneous notice is retrieved as a "close match" on a search using the correct name, the degree of discrepancy between the correct name and the close match in this example may be considered such as to constitute a seriously misleading error from the perspective of a reasonable searcher. Whether this is the case can only be decided on the particular facts and in the local context including the logic of the registry close match software.

40. Paragraph 4 deals with the impact of errors committed by registrants in entering the other items of information required to be set out in registered notices under article 8, notably errors in the description of the encumbered assets. It provides that an error does not make the registration ineffective unless it "would seriously mislead a reasonable searcher." This language incorporates an objective test in the sense that a person involved in a priority competition with the secured creditor challenging the effectiveness of the registration need not show that it was actually misled by the error. It is sufficient to show that a hypothetical reasonable searcher, including an insolvency representative, would have been misled.

41. Paragraphs 3 and 5 incorporate the general principle of severability. Thus, an error in entering the identifier of a particular grantor or the description of a particular encumbered asset that would render the registration ineffective under paragraph 1, 2 or 4 does not make the registration of the notice ineffective with respect to other grantors correctly identified or other encumbered assets correctly described in the registered notice.

42. Paragraphs 6 and 7, which appear within square brackets, provide special rules for determining the impact of errors on the effectiveness of a registration in two scenarios. Paragraph 6 addresses the scenario where the enacting State allows a registrant to select the period of effectiveness of the registration of a notice pursuant to article 14, option A or B (and art. 8, subpara. (d)). In this scenario, an error in the entry of the relevant information does not render the registration ineffective even if the error would be seriously misleading from the perspective of a hypothetical reasonable searcher. Rather, the registration will be treated as ineffective only as against a competing claimant who can establish that it was in fact misled by the error (see Registry Guide, paras. 215 and 217-220). Paragraph 7 addresses the scenario where an enacting State chooses to require a registrant to indicate the maximum amount for which a security right may be enforced pursuant to article 8, subparagraph (e). It provides that while an error in the maximum amount stated in an initial or amendment notice does not render the registration ineffective, the priority of the security right is limited to the maximum amount stated in the notice or in the security agreement, whichever is lower. This rule is consistent with the rationale for requiring the maximum amount to be stated in the security agreement and disclosed in any related registered notice (see A/CN.9/914/Add.2, para. 34).

43. As already observed (see A/CN.9/914/Add.2, para. 45, and para. 31 above), some States provide for the entry of a serial number for specified classes of high-value assets that have a significant resale market. In States that adopt this approach, entry of this identifier in its own designated field in a notice is required in the sense of being necessary to achieve the priority of the security right as against specified classes of competing third-party claimants. Enacting States that decide to adopt this approach will need to deal with the impact of errors in the serial number on the effectiveness of a registration for this purpose. In general, the same test should apply as for an error in the grantor's identifier. Accordingly, the registration would be

ineffective if the information in the registered notice would not be retrieved by a search of the public registry record using the prescribed serial number. However, enacting States implementing paragraph 2 ("the close match search logic") should not extend its application to searches against serial numbers as there is too great a likelihood that this may result in too lengthy a list of close matches.

Article 25. Post-registration change of grantor identifier

44. Article 25 is based on recommendation 61 of the Secured Transactions Guide (see chap. IV, paras. 75-77; see also Registry Guide, paras. 226-228). It addresses the impact of a post-registration change in the identifier of the grantor (i.e. its name under art. 9) on the effectiveness of the registration of a notice. Since the grantor's identifier is the principal search criterion (see art. 22, subpara. (a)), a search under the new identifier will not retrieve registered notices in which the grantor is identified by its old identifier. This poses a risk for third-party searchers that contemplate acquiring rights in the grantor's encumbered assets after the change of the grantor's identifier.

45. To address this risk, paragraphs 2 and 3 give the secured creditor a grace period to be specified by the enacting State after the change of identifier occurs to either register an amendment notice adding the new identifier of the grantor or make its security right effective against third parties by a method other than registration (on other methods, see arts. 18 and 25-27 of the Model Law). A grace period of 60 to 90 days is suggested to give the secured creditor a reasonable period of time to monitor and find out the change. If neither step is taken before the expiry of the grace period, the security right is subordinated to a competing security right that was made effective against third parties after the change (see para. 2 (a)), and a buyer who acquired its rights in the encumbered asset after the change will acquire them free of the security right (see para. 3 (a)).

46. Under paragraphs 2 and 3, the secured creditor may still register an amendment notice or otherwise make its security right effective against third parties even after the expiry of the grace period. However, it loses the benefit of the grace period with the result that its security right will be subordinated to a competing security right that was made effective against third parties after the change but before the relevant step was taken, even if the competing security right was made effective against third parties before the expiry of the grace period (see para. 2 (b)). A buyer to whom the encumbered assets is sold after the change but before the relevant step was taken likewise acquires its rights free of the security right even if the sale took place before the expiry of the grace period (see para. 3 (b)). Under paragraph 4, paragraphs 2 and 3 do not apply if the information in the notice referred to in paragraph 1 would be retrieved by a search using the new identifier of the grantor as the search criterion. As indicated in the footnote to paragraph 4, this provision is necessary only if the enacting State adopts article 23, option B, paragraph 1, under which the registry system is designed to disclose on search results information in notices in which the identifier of the grantor closely matches the identifier of the grantor entered by the searcher. In a "close match" system, the search result might still retrieve the relevant notice if the subsequent change in the grantor identifier is relatively minor (for example, if Acme Co. changes its name to Acme & Co).

47. As against competing claimants other than a competing secured creditor and a buyer whose rights are specifically protected by paragraphs 2 and 3, paragraph 1 confirms that the third-party effectiveness and priority of a security right that was made effective against third parties by registration is not affected by a post-registration change in the identifier of a grantor. Thus, even if the secured creditor does not register an amendment notice or make its security right effective against third parties by a method other than registration, it will still retain whatever priority it has under the Model Law against competing secured creditors and buyers whose rights arose before the change in the identifier of the grantor and as against other classes of competing claimants whether their rights arose before or after the change of the grantor's identifier (for example, the grantor's judgment creditors and insolvency representative).

Article 26. Post-registration transfer of an encumbered asset

48. Article 26 is based on recommendation 62 of the Secured Transactions Guide (see chap. IV, paras. 78-80; see also Registry Guide, paras. 229-232). It addresses the impact of a post-registration sale of an encumbered asset on the effectiveness of the registration of a notice in relation to a security right in that asset where the buyer acquires the asset subject to the security right under article 34, paragraph 1, of the Model Law. This creates a risk for third parties that acquire rights in the encumbered asset from the buyer since a search of the public registry record under the identifier of the buyer will not retrieve registered notices in which the grantor identifier is the name of the seller/grantor. This risk is analogous to that addressed in article 25 in relation to post-registration changes in the grantor identifier. Unlike article 25, article 26 does not provide a uniform rule. Rather, it gives enacting States the option to enact any one of three approaches.

49. The approach in option A is identical to that set out in article 25 for post-registration changes in the grantor identifier. Paragraphs 2 and 3 give the secured creditor a grace period to be specified by the enacting State after the sale by the grantor to either register an amendment notice adding the buyer as a new grantor or otherwise make its security right effective against third parties in order to preserve its priority against secured creditors and subsequent buyers who acquire their rights in the encumbered assets from the grantor's buyer (see paras. 2 (a) and 3 (a)). As under article 25, a grace period of 60 to 90 days is suggested in order to give the secured creditor a reasonable period of time to monitor and find out about the sale by the grantor. As under paragraph 1 of article 25, paragraph 1 of article 26 provides that the secured creditor's failure to take either of these steps before the expiry of the grace period, or at all, does not generally prejudice the third-party effectiveness and priority status of its security right. However, its security right will be subordinated to competing security rights created by the buyer from the grantor and made effective against third parties after the sale, and before the relevant step is taken (see para. 2 (b)). A subsequent buyer to whom the buyer from the grantor sells the encumbered asset during this same period also acquires its rights free of the security right (see para. 3 (b)).

50. The approach in paragraphs 1-3 of option B is similar to the approach in paragraphs 1-3 of option A, with the important qualification that the grace period under paragraphs 2 and 3 to register the amendment notice or otherwise make the security right effective against third parties begins only when the secured creditor acquires knowledge: (a) that the grantor has sold the encumbered asset; and (b) of the identity of the buyer, and not simply when the sale takes place, as under paragraphs 2 and 3 of option A. In view of this difference, a grace period of 15 to 30 days is suggested.

51. If there are successive sales of an encumbered asset before the secured creditor acquires knowledge of the sale and the identity of the buyer, paragraph 4 of option B provides that it is sufficient, to protect its rights under paragraphs 2 and 3 against intervening secured creditors and buyers, if the secured creditor registers an amendment notice adding the identifier of the most recent buyer of whose identity it has knowledge.

52. Paragraph 4 of option A and paragraph 5 of option B provide that a security right in intellectual property made effective against third parties by registration of a notice generally retains its third-party effectiveness and priority status including as against secured creditors and buyers who acquire their rights from a buyer to whom the grantor sold the intellectual property after the notice was registered. This approach reflects recommendation 244 of the Intellectual Property Supplement. The reason for this different approach in the intellectual property context is that, the risks posed for third-party searchers by the grantor's sale of intellectual property were outweighed by the burden that would be imposed secured creditors if they were required to register an amendment notice each time intellectual property was sold or made the subject of an exclusive licence assuming that an exclusive licence is treated as a sale under

intellectual property law (see Intellectual Property Supplement, rec. 244 and paras. 158-166).

53. Under option C, the third-party effectiveness and priority of a security right that is made effective against third parties by registration of a notice is not affected by a post-registration sale of an encumbered asset covered by the registered notice. The secured creditor retains whatever priority it otherwise has under the Model Law against all competing claimants, whether their rights arise before or after the sale. This option extends the approach to the impact of post-registration sales of encumbered intellectual property in paragraph 4 of option A and paragraph 5 of option B to all types of encumbered asset. Under this approach, potential secured creditors and buyers are expected to inquire into the chain of ownership of the asset they are interested in and then conduct searches against the identifier of both the immediate owner and any predecessors in the chain of title.

Section G. Organization of the Registry and the registry record

Article 27. The registrar

54. Article 27 is based on recommendation 2 of the Registry Guide (see para. 74; the Secured Transactions Guide does not contain an equivalent recommendation). Recognizing that these matters may be dealt with differently in each State, article 27 leaves it to the enacting State to specify in the law, regulation or other act by which it implements the Model Registry Provisions the authority responsible for the appointment and dismissal of the registrar, and for determining the registrar's duties and monitoring their performance.

55. While an enacting State may decide to have the day-to-day operations of the Registry carried out by either a private or public entity, the Registry and the registrar should always be subject to the ultimate direction of and accountable to the authority designated by the enacting State. Depending on local considerations, the public authority specified by the enacting State may be a governmental ministry responsible for the preparation of the secured transactions law, another public agency, or a department of a central bank (see Registry Guide, para. 77).

Article 28. Organization of information in the registry record

56. Article 28 is based on recommendations 15 and 16 of the Registry Guide (see paras. 127-130; the Secured Transactions Guide does not contain an equivalent recommendation). Paragraph 1 requires the Registry to assign a unique registration number to an initial notice and associate all registered amendment and cancellation notices that contain that number with the initial notice in the registry record. The reason for these requirements is to ensure that amendment and cancellation notices are linked to the related initial notice in the registry record so that the information in all related notices is disclosed on a search result (see the definition of the term "registration number" in art. 1, subpara. (j), as well as arts. 17, 19 and 22, subpara. (b)).

57. If paragraph 2 of option A is adopted, the enacting State must ensure that the registry system is designed so that search results will only retrieve information in registered notices that exactly match the grantor identifier entered by the searcher (see option A of art. 23, para. 1). If paragraph 2 of option B is adopted, the enacting State must ensure that the registry system is designed to also retrieve information in registered notices in which the grantor's identifier closely matches the identifier entered by the searcher (see art. 23, option B, para. 1).

58. Paragraph 3 of option A is intended for enacting States that permit a person to register a global amendment notice changing its identifier or address or both in all registered notices in which it is identified as the secured creditor (see option A of art. 18). Option B of paragraph 3 is intended for enacting States in which the global amendment must be effected by the Registry at the request of the secured creditor (see art. 18, option B).

59. Paragraph 4 is intended to ensure that the entire registration record relating to an initial notice remains intact. It provides that the registry record must be organized in a manner that preserves the information in all registered notices, notwithstanding the registration of an amendment or cancellation notice that purports to change the information contained in previously registered notices.

60. As already noted (see A/CN.9/914/Add.2, para. 26, and para. 2 above), article 5, paragraph 2 requires a person who submits an amendment or cancellation notice to satisfy the secure access requirements prescribed by the enacting State. It follows that the Registry must organize the registry record in a manner that facilitates the application of this requirement. The enacting State will also need to impose additional organizational obligations on the Registry should it decide to provide for: (a) registration and searching according to serial number (see A/CN.9/914/Add.2, para. 45, and para. 31 above); or (b) registration and searching according to a grantor identifier other than the name of the grantor (see A/CN.9/914/Add.2, para. 33).

Article 29. Integrity of information in the registry record

61. Article 29, paragraph 1, is based on recommendation 17 (a), of the Registry Guide (see para. 136; the Secured Transactions Guide does not contain an equivalent recommendation). It prohibits the Registry from amending or removing information in the registry record except as authorized in articles 30 and 31.

62. Article 29, paragraph 2, is based on recommendations 55 (f) of the Secured Transactions Guide (see chap. IV, para. 54), and 17 (b) of the Registry Guide (see para. 137). It obligates the Registry to ensure that the information in the registry record is preserved and may be reconstructed in the event of loss or damage. In practice, this obligation requires the Registry to create and maintain a backup copy of the registry record.

Article 30. Removal of information from the public registry record and archival

63. Article 30, option A, is based on recommendations 74 of the Secured Transactions Guide (see chap. IV, para. 109), as well as recommendations 20 and 21 of the Registry Guide (see paras. 151-152). It requires the Registry to remove information in registered notices from the public registry record once the period of effectiveness of the notice expires or a cancellation notice is registered. If the information in cancelled or expired notices were to remain publicly searchable, this might create legal uncertainty for third-party searchers, potentially impeding the ability of the grantor to grant a new security right in or deal with the assets described in the notice (see Registry Guide, para. 151). Option A should be enacted by States that adopt option A or B of article 21.

64. Article 30, option B, should be enacted by States that adopt option C or D of article 21. Paragraph 1 of option B requires the Registry to remove information in registered notices from the public registry record once the period of effectiveness of the registration of a notice expires. Unlike option A, paragraph 2 of option B requires the Registry to preserve all information in registered notices on the public registry record notwithstanding the registration of a cancellation notice. This is necessary since the registration of an amendment or cancellation notice is wholly or partially ineffective under article 21, option C or D, if it is not authorized by the secured creditor of record. Since the factual question of whether the secured creditor of record authorized the registration of a cancellation notice can only be answered by conducting off-record inquiries, it is necessary to preserve the information in the cancellation notices and all related registered notices on the public registry record so that searchers have the information needed to conduct those inquiries.

65. Paragraph 3 requires the Registry to archive the information in registered notices removed from the public registry record in a manner that enables the information to be retrieved in accordance with the search criteria set out in article 22. This is necessary since the information in notices removed from the public registry record

may need to be retrieved in the future, for example, in order to determine the time of registration or the scope of the encumbered assets described in the notice for the purposes of a subsequent priority dispute between the secured creditor and a competing claimant (see Registry Guide, para. 151).

66. As to the duration of the Registry's archival obligation, paragraph 3 leaves this decision to the enacting State (while cautioning that it should minimally be coextensive with the prescription period under local law for disputes arising in relation to a security agreement).

Article 31. Correction of errors made by the Registry

67. Article 31 addresses the effect of errors and omissions made by the Registry in two scenarios. The first is where the Registry makes an error or omission in entering into the public registry record information contained in a notice submitted for registration. The need to address this scenario arises in particular if the registry system implemented by a State allows the submission of notices in paper form as opposed to requiring all registrants to transmit the information in notices directly to the registry via electronic means. The second scenario addressed by article 31 is where the Registry erroneously removes from the registry record information contained in a registered notice. The need to address this second scenario arises even in systems in which notices may only be submitted directly to the Registry via electronic means.

68. Paragraph 1 of article 31 requires the Registry to takes steps to correct the error or restore the erroneously removed information without delay after discovering the error. Under option A, the Registry required to take the necessary corrective action and must then send to the secured creditor of record a copy of the notice it registered to correct the record. Under option B, the Registry is instead required to inform the secured creditor of record of the error so as to enable it to register the notice needed to correct the record. Nothing in this article precludes the secured creditor from registering an amendment notice to correct the error if it discovers it before the Registry does so or before it receives notification from the Registry.

69. Paragraph 2 addresses the impact of the Registry's error on the third-party effectiveness and priority status of the security right in the event of a competition with the right of a competing claimant which arose prior to the registration of the notice correcting the record referred to in paragraph 1. It offers four options which parallel the four options in article 21 with respect to the effectiveness of the unauthorized registration of an amendment or cancellation notice. The enacting State should adopt the option in article 31 that corresponds to the option it selects in article 21. Accordingly, a State that adopts article 21, option A, should adopt article 31, option A and so on.

Article 32. Limitation of liability of the Registry

70. Article 32 is based on recommendation 56 of the Secured Transactions Guide (see chap. IV, paras. 55-64; see also Registry Guide, paras. 141-144). It offers three options to an enacting State in dealing with the potential liability of the Registry for loss or damage caused by its errors or omissions. It should be noted that especially in a fully electronic system in which registration and search information is submitted directly by users via electronic means, the risk of loss or error being caused by the Registry is extremely low. Nonetheless the objective of all options is to limit the liability of the Registry and to thus avoid an increase in the cost of the registry services in the rare event where loss or damage can be attributed to acts or omissions of the Registry. The enacting State should coordinate article 32 with its relevant law on the liability of public authorities.

71. Option A leaves the issue of the liability of the Registry to other law of the enacting State. If liability is foreseen by that other law, option A restricts any right of recovery to the types of errors or omissions listed in paragraph 1. Thus, liability is limited to: (a) errors or omissions in a search result issued to a searcher (para. 1 (a)); (b) errors or omissions in a copy of information in a registered notice sent to a secured creditor under article 15 or the failure of the Registry to send a copy of a registered

notice as required by that article or article 31 (para. 1 (a) and (c)); and (c) the provision of false or misleading information to a registrant or searcher (para. 1 (d)). Paragraph 2 of option A limits the liability of the Registry for loss or damage caused by the acts or omissions specified in paragraph 1 to the maximum monetary amount specified by the enacting State (regardless of the maximum value of the encumbered assets or the obligation secured by those assets). To minimize the risk of Registry liability for providing misleading advice, the enacting State should ensure that registry staff are trained to restrict their advice to the technical aspects of using the registry system, and not the legal implications or effects or registration (see Registry Guide, para. 139).

72. The first part of paragraph 1 (b) of option A appears within square brackets as it limits any liability that the Registry may have under other law for errors or omissions in registered notices to the scenario where the Registry is responsible for entering into the registry record information submitted by a registrant in a paper notice. Accordingly, paragraph 1 (b) should only be adopted by an enacting State if its registry system permits the submission of notices to the Registry using paper forms.

73. Like option A, option B leaves to other law any liability that the Registry may have for loss or damage caused by an error or omission in the administration or operation of the Registry. Unlike option A, option B does not restrict any right of recovery that a person may have under other law to particular types of errors or omissions. But like paragraph 2 of option A, it limits the Registry's liability to the maximum amount specified by the enacting State.

74. Option C simply excludes any liability of the Registry for an error or omission in the administration or operation of the Registry.

Article 33. Registry fees

75. Article 33 is based on recommendations 54 (i) of the Secured Transactions Guide (see chap. IV, para. 37) and 36 of the Registry Guide (see paras. 274-280). The Secured Transactions Guide recommends, in particular, that registry fees, if any, should be set at a level necessary to recover the cost of establishing, operating and upgrading the registry system. The requirement to set any fees to be charged at a cost-recovery level applies to all services provided by the registry, and thus include, for example: (a) not only the registration of an initial notice but also the registration of amendment and cancellation notices; and (b) not only registration services but also search services. If the registry system were instead used as an opportunity for the enacting State to generate profit, registrants and searchers might be discouraged from using the registry services.

76. Thus, article 33 presents two options. Under paragraphs 1 and 3 of option A, fees may be charged for the provision of registry services in the amounts specified by the enacting State and the fee schedule must be publicized by the Registry. To ensure that these fees are based on cost recovery, paragraph 2 of option A entitles the authority responsible for the appointment of the registrar under article 27 to periodically modify the fee schedule.

77. If the registry system allows access by electronic means and through the submission of written notices and search requests, the enacting State might decide to charge a lower fee for the registration of notices and the processing of search requests transmitted directly to the registry via electronic means given that electronic registration or searching does not require the intercession of registry staff and therefore is less costly. This approach might also encourage users to shift to this more efficient method in preference to continuing to use paper forms.

78. To enhance the efficiency of the payment process for frequent users of registry services, paragraph 4 of option A authorizes the Registry to enter into an agreement with any person to establish a Registry user account for any purpose, including the payment of registry fees. This approach has the additional advantage of facilitating the identification of the registrant for the purposes of article 5 (see A/CN.9/914/Add.2, para. 25).

79. A variant of option A would be to limit the charging of fees to registrations and allow searches to be made free of charge. This variant would encourage and facilitate due diligence by potential secured creditors and buyers and thereby reduce risk and future disputes.

80. Another variant of option A would be for the enacting State to decide not to charge any fee for the registration of the types of amendment and cancellation notices contemplated by article 20. This variant would encourage the secured creditor to promptly register amendment and cancellation notices in the circumstances contemplated by article 20 and relieve grantors from the time and expense of having to initiate formal proceedings to force cancellations or amendments under that article.

81. For enacting States that enact option B or C of article 14 (allowing a registrant to select the duration of a notice), yet another variant of option A would be to charge fees on a sliding scale depending on the period selected by the registrant. This approach would have the advantage of discouraging registrants from selecting an inflated period out of an excess of caution (see Registry Guide, para. 277).

82. Option B provides that the Registry may not charge any fees for its services. Under this approach, the cost of establishing and operating the Registry will be covered by general State revenues. Option B may be attractive for enacting States that seek to encourage secured financing in general and the use of the Registry in particular. Like option A, option B could have several variants. For example, the enacting State may wish to offer free registration services for a limited start-up period in order to facilitate acclimatization to and use of the registry system.

Paragraphs

Chapter V. Priority of a security right

A. General rules

Article 29. Competing security rights created by the same grantor

1. Article 29 is based on recommendation 76 of the Secured Transactions Guide (see chap. V, paras. 45-54). It addresses priority competitions between security rights created by the same grantor. Article 29 divides these priority competitions into three categories. Subparagraph (a) addresses priority competitions between security rights made effective against third parties by registration of a notice in the Registry. Subparagraph (b) addresses priority competitions between security rights made effective against third parties by a method other than registration of a notice in the Registry. Subparagraph (c) addresses priority competitions between a security right that is made effective against third parties by registration of a notice in the Registry and a security right that is made effective against third parties by another method (e.g. possession).

2. Subparagraph (a), addresses the most common situation, that is, priority competitions between security rights all of which were made effective against third parties by registration of a notice in the Registry. In that situation, priority is determined by the order of registration, regardless of the order of creation (provided that the competing security rights have actually been created when the priority competition arises). Subparagraph (a) provides a simple and easy-to-apply priority rule.

3. It should be noted that the first-to-register priority rule in subparagraph (a) applies even if one or more of the competing security rights had not been created at the time of registration (registration of a notice may precede creation of a security right; see art. 4 of the Model Registry Provisions) and, thus, was not effective against third parties at the time of registration (as a security right that has not yet been created cannot be effective against third parties).

4. The following example illustrates this aspect of the first-to-register priority rule in subparagraph (a). On Day 1, before entering into a security agreement and obtaining any credit, Grantor authorized SC 1 to register, and SC 1 registered, a notice listing Grantor as the grantor and describing the encumbered assets as “all present and future equipment of Grantor”. On Day 2, Grantor entered into a security agreement with SC 2 that created in favour of SC 2 a security right in the same assets (i.e. all of Grantor’s present and future equipment) and obtained credit from SC 2, and SC 2 registered a notice with respect to that security right. On Day 3, Grantor concluded a security agreement with and borrowed money from SC 1 and created in favour of SC 1 a security right in all of Grantor’s present and future equipment. In this case, the security right of SC 2 became effective against third parties before the security right of SC 1 (because SC 1’s security right could not become effective against third parties until it was created). Yet, as a result of the first-to-register rule in subparagraph (a) the time of registration of SC 1’s notice, rather than the later time on which SC 1’s security right became effective against third parties, is used to determine priority. Thus, the security right of SC 1 has priority over the security right of SC 2 because SC 1’s notice was registered before SC 2’s notice.

5. Ordering priority according to the time of registration as opposed to the time of creation of a security right promotes efficiency and fairness for three reasons. First, the time of registration of each notice is recorded by the Registry and set out in the search result (see arts. 13, para. 3, and 23, para. 1, of the Model Registry Provisions) and is therefore easily ascertainable by third-party searchers. In contrast, the time of creation of a security right depends on background facts that are not ascertainable by a search of the Registry, and are not otherwise publicly available.

6. Second, the results that follow from the application of the rule in subparagraph (a) are consistent with the expectations of prudent secured creditors. For example, assume that SC 2 is considering extending credit to Grantor, secured by a security right in Grantor’s equipment. If SC 2 searches the records of the Registry and

discovers that a notice has been registered that lists Grantor as the grantor and SC 1 as the secured creditor and that describes the encumbered asset as including Grantor's equipment, SC 2 would likely expect that the registered notice reflects an existing or contemplated security right in that equipment. Accordingly, if SC 2 decides to go forward with the transaction, it will be on the understanding that its security right may be subordinate to that of SC 1.

7. Third, the rule in subparagraph (a) enables a prospective secured creditor to determine the priority of its security right over competing security rights with a level of certainty that promotes the extension of secured credit. The reason is that, if the prospective secured creditor registers a notice with respect to its security right before it actually extends credit and finds no registered notice, it can enter into a security agreement and extend credit knowing that its security right will have first priority (unless any of the exceptions to the first-to-register rule applies).

8. Subparagraph (b) addresses priority competitions in which the competing security rights have all been made effective against third parties by a method other than registration of a notice in the Registry. This situation is not very common as for most types of encumbered asset it will not be possible for two different secured creditors to both be able to make their security rights effective against third parties by a method other than registration at the same time. This is because the only other method of achieving third-party effectiveness for most types of encumbered asset will be by the secured creditor taking possession of the encumbered asset, and two different secured creditors will not both be able to have possession of the same asset at the same time. Should a competition of this type nonetheless arise, priority is determined by the order of third-party effectiveness in accordance with the general priority rule of article 29. It should be noted that where more than one secured creditor can achieve third-party effectiveness at the same time by another means is by entering into a control agreement, where this method is available (see art. 2, subpara. (g)), and, in such a situation, different priority rules apply (see, for example, arts. 47, para. 3, and 51, para. 3).

9. Subparagraph (c) addresses priority competitions between a security right that is made effective against third parties by registration of a notice in the Registry and a security right that is made effective against third parties by another method (e.g. by possession of the encumbered asset). In this situation, the time of registration of the security right that is made effective against third parties by registration is compared to the time of third-party effectiveness of the competing security right, and priority is determined according to the order of registration or third-party effectiveness. As in the case of the rule in subparagraph (a), the time of registration of a registered security right is used to determine priority even if the security right is not created until after the notice is registered (see paras. 2-4 above). For example, assume that: (a) on Day 1, SC 1 registers a notice describing an asset (with Grantor's consent); (b) on Day 2, Grantor creates a security right in the asset to SC 2, and SC 2 takes possession of the asset; and (c) on Day 3, Grantor enters into a security agreement with SC 1 that creates a further security right in the asset in favour of SC 1. Even though SC 2's security right was created first, SC 1 will have priority, because its notice was registered before SC 2 took possession.

10. There may be cases in which a secured creditor has used more than one method to make its security right effective against third parties. For example, a secured creditor in possession of an encumbered asset may subsequently register a notice with respect to that security right in the Registry, or vice versa. In this situation, the earlier priority time (i.e. when the security right was first registered or made effective against third parties) continues to be used in applying the general priority rules in article 29, unless there is a "gap" during which the security right was neither effective against third parties nor the subject of a notice registered in the Registry (see art. 31 and para. 12 below).

Article 30. Competing security rights created by different grantors

11. Article 30 addresses priority competitions between security rights created by different grantors in the same encumbered asset. This situation can occur, for

example, if a grantor creates a security right in its equipment in favour of a secured creditor (SC 1 in the example given in para. 4 above) and then sells the equipment to a person that creates a security right in it in favour of a different secured creditor (SC 2). Article 30 provides that the general priority rules in article 29 apply in this situation as well, except as provided in article 26 of the Model Registry Provisions. Under options A and B of article 26 of the Model Registry Provisions, SC 2 may have priority if SC 1 did not preserve the third-party effectiveness of its security right as against secured creditors in the position of SC 2 by taking the steps provided for in one of those options.

Article 31. Competing security rights in the case of a change in the method of third-party effectiveness

12. Article 31 addresses situations in which there has been a change in the method of third-party effectiveness (which requires that a security right has been validly created under art. 6 and that one of the methods of third-party effectiveness, set out, for example, in art. 18, has been complied with). This may happen, for example where a secured creditor makes its security right effective against third parties by possession of the encumbered asset and subsequently registers a notice with respect to its security right. In such a case, for the purposes of applying the general priority rules in article 29, the priority of the security right is determined by the time when it initially became effective against third parties so long as there was no time thereafter during which the security right was not effective against third parties. So, if the secured creditor in this example registers before it returns possession of the encumbered asset to the grantor, its priority will date from the time when it assumed possession, not the time of the later registration.

Article 32. Competing security rights in proceeds

13. Article 32 is based on recommendation 100 of the Secured Transactions Guide (see chap. V, paras. 144-150). It addresses priority competitions between security rights in assets that are proceeds (for the definition of the term “proceeds”, see art. 2, subpara. (bb)). Situations in which a secured creditor has a security right in proceeds are quite common, particularly when the original encumbered asset is inventory or a receivable, as a grantor will frequently sell inventory or collect a receivable before satisfaction of the obligation secured by that asset. In such a case, under article 10, the security right continues in the proceeds that are derived from the sale of the inventory or the collection of the receivable, and the security right in the proceeds is effective against third parties if the conditions in article 19 are satisfied. Article 32 then determines the priority of that security right as against another security right in the same asset, whether that security right is over the asset as an original encumbered asset or as proceeds. Article 32 provides that the priority of the security right in the proceeds is the same as the priority of the security right in the original encumbered asset.

14. The following example illustrates the operation of article 32. On Day 1, Grantor creates in favour of SC 1 a security right in all of Grantor’s present and future inventory and SC 1 registers a notice with respect to that security right. On Day 2, Grantor creates in favour of SC 2 a security right in all of Grantor’s present and future receivables and SC 2 registers a notice with respect to that security right. On Day 3, Grantor sells some of its inventory on credit, generating a receivable. SC 1 has a security right in that receivable under article 10 because it is proceeds of the inventory in which SC 1 had a security right and its security right in the receivable as proceeds is automatically effective against third parties under article 19. SC 2 has a security right in that receivable as an original encumbered asset, because of its security right in present and future receivables. Under the priority rules in article 29, SC 1’s security right in the receivable has priority over SC 2’s security right in the receivable because the priority of SC 1’s security right in the receivable (as proceeds) is determined under article 32 by the time of registration of SC 1’s notice with respect to its security right in the inventory (as original encumbered assets). Thus SC 1’s priority in the receivable dates from Day 1, while SC 2’s priority in the receivable dates from Day 2 (for the

priority of a security right in proceeds of inventory subject to an acquisition security right, see art. 41).

Article 33. Competing security rights in tangible assets commingled in a mass or transformed into a product

15. Article 33 addresses priority competitions resulting from situations in which the original encumbered assets are commingled in a mass or transformed into a product (see Secured Transactions Guide, chap. V, paras. 117-124 and recs. 90 and 91). Under article 11, a security right in the original encumbered assets automatically extends to the mass or product and, under article 20, the security right in the mass or product is automatically effective against third parties.

16. Paragraph 1 of article 33 addresses the situation in which the competing security rights that extended to the mass or product were originally in the same encumbered asset. In this situation, the order of priority of the security rights in the mass or product is the same as the order of priority of the security rights in the original encumbered asset. For example, if SC 1 has a first-ranking security right in 100,000 litres of oil and SC 2 has a second-ranking security right in the same 100,000 litres of oil and the oil is then commingled with another 100,000 litres of oil in the same tank so that the mass comprises 200,000 litres of oil, under paragraph 1 of article 33, the security right of SC 1 will continue to rank ahead of the security right of SC 2 in relation to the commingled mass. Under article 11, paragraphs 1 and 2, however, the security rights of SC 1 and SC 2 are both limited to half of the oil in the tank (i.e. 100,000 litres).

17. Paragraphs 2 and 3 address the situation in which competing security rights that extended to the mass or product were originally in different encumbered assets. In this situation, paragraph 2 provides that the secured creditors share in the mass or product according to the ratio that the obligation secured by each of their security rights bears to the sum of the obligations secured by all those security rights. Paragraph 3 provides that the determination of the value of the obligations secured by the competing security rights is subject to the limitations on the value of the obligation that is set out in article 11, paragraphs 2 and 3.

18. The following example illustrates the operation of the limitations in paragraphs 2 and 3. SC 1 has a security right in flour worth €100 to secure a loan of €100 and SC 2 has a security right in yeast worth €20, also to secure a loan of €100. The flour is mixed with the yeast to make bread. Paragraph 2 starts by providing that SC 1 and SC 2 would share in the value of the bread 50/50 (as they were both owed the same amount, i.e. €100). Paragraph 3 overrides this, however, by capping the amount of SC 2's loan, for the purposes of this calculation, at the value of the yeast (i.e. €20), so that SC 2 will only be entitled to 1/6 of the value of the bread (20/120). If the bread is worth €120 (or more), then this will not matter, as there will be sufficient value for SC 1 to recover its €100, and for SC 2 to recover its €20, in full. If the value of the bread goes down to €60 (i.e. becomes insufficient to satisfy the secured claims in full), however, then SC 1 will be paid 5/6 of the value of the bread (i.e. €50) and SC 2 will be paid only 1/6 of the value of the bread (i.e. €10).

Article 34. Security rights competing with rights of buyers or other transferees, lessees or licensees of an encumbered asset

19. Article 34 is based on recommendations 79-82 of the Secured Transactions Guide (see chap. V, paras. 60-89). It determines the rights of a buyer or other transferee, lessee or licensee of an encumbered asset vis-à-vis a security right. Paragraph 1 states the general rule is that a security right in an encumbered asset that is effective against third parties continues to encumber the asset notwithstanding its sale or other transfer, lease or licence. Paragraphs 2-6 provide exceptions to this general rule.

20. Paragraph 2 provides that, if the secured creditor authorizes the sale or other transfer of the encumbered asset free of the security right, the buyer or other transferee acquires its rights in the asset free of that security right. This rule recognizes that a secured creditor is always free to voluntarily release its security right in an asset. In

practice, a secured creditor may be prepared to do this where: (a) the secured creditor and grantor have arranged for the proceeds of the sale or transfer to be remitted directly to the secured creditor in satisfaction of the secured obligation; or (b) the buyer or other transferee has agreed to assume the grantor's obligation to the secured creditor.

21. Paragraph 3 sets out a similar rule, for a situation where the secured creditor agrees that the grantor may lease or license the encumbered asset. It is stated differently than the rule in paragraph 2 (the rights of a lessee or licensee "are not affected by" the security right) because the secured creditor's authorization only entitles the lessee or licensee to enjoy undisturbed possession of the leased or licensed asset during the term of the lease or licence as opposed to acquiring ownership free of the security right as in the case of an authorized sale or other transfer.

22. Paragraph 4 provides that a buyer of a tangible asset that is sold in the ordinary course of business of the seller acquires its rights free of any security right created by the seller in that asset. It should be noted that the term "tangible asset" for the purposes of this rule excludes money, negotiable instruments, negotiable documents and certificated non-intermediated securities (see art. 2, subpara. (ll)).What constitutes a sale in the ordinary course of the seller's business requires a fact-specific analysis. Thus, for example, the sale by the grantor of some of its inventory in accordance with its usual business practices would satisfy this condition, but a one-time sale of a used item of equipment may not. It should be noted that this rule applies only to buyers, and not for other transferees. This means that it would not apply to a person that takes an encumbered asset as a gift, rather than by purchasing it. It should be also noted that a buyer of an encumbered asset sold in the ordinary course of the seller's business only takes free of security rights granted by the seller. For example, if a person acquires an encumbered asset from the grantor outside the ordinary course of the grantor's business, that person is likely to acquire the asset subject to the security right. If that person then resells the asset in the ordinary course of its business, its buyer will not acquire the asset free of the security right, even though it was sold in the ordinary course of the seller's business, because the seller had not been the grantor of the security right. This situation will most likely arise in cases where the seller's business includes the resale of used assets. The buyer's only recourse in this situation will be under other law of the enacting State (e.g. a claim for rescission of the contract or for damages).

23. A buyer may be protected by paragraph 4 even if the buyer knew of the existence of the security right. The buyer will not be protected, however, if the buyer knew that the sale breached the secured creditor's rights under its security agreement with the grantor. If, for example, a buyer knows that the seller has entered into a security agreement that limits the grantor's authority to deal in its inventory, but does not know that the sale is in breach of that limitation, the buyer can acquire the asset free of the security right.

24. Paragraphs 5 and 6 bring about similar results to those in paragraph 4 in the case of leases of tangible encumbered assets and non-exclusive licences of encumbered intellectual property that are in each case leased or licensed by the grantor in the ordinary course of its business. As with paragraph 3, the formulation of paragraphs 5 and 6 differs from the formulation of paragraph 4, because, in the case of a lease or licence concluded in the ordinary course of the grantor's business, the effect of the exception is to entitle the lessee or licensee to enjoy undisturbed use of the leased or licensed asset during the term of the lease or license as opposed to its acquiring ownership of the relevant asset.

25. Paragraphs 7 and 8 state what is often referred to as the "shelter principle". Under this principle, once a buyer or other transferee, lessee, or licensee obtains rights in the encumbered asset free of (or unaffected by) a security right, subsequent buyers or other transferees also acquire their rights in the encumbered assets free of (or unaffected by) that security right.

26. Paragraph 9 protects a buyer or lessee of low-value consumer goods that are subject to an acquisition security right that was made effective against third parties

automatically under article 24 (and not, for example, by registration). In this situation, the buyer or lessee acquires its rights free of or unaffected by the security right. If a secured creditor wishes to avoid this risk, it should register a notice of its acquisition security right.

Article 35. Impact of the grantor's insolvency on the priority of a security right

27. Under article 35, a security right that is effective against third parties remains effective against third parties and retains its priority as against competing claimants notwithstanding the commencement of insolvency proceedings with respect to the grantor, except to the extent that the insolvency law to be specified by the enacting State gives superior priority to the rights of another claimant (e.g. the insolvency representative for the costs of the insolvency proceedings). This rule is extremely important in creating a legal environment that promotes the extension of secured credit, because a security right that is not recognized in insolvency proceedings, or that loses its priority because of the commencement of insolvency proceedings, is of little value to a prospective secured creditor.

Article 36. Security rights competing with preferential claims

28. Article 36 is based on recommendations 83, 85 and 86 of the Secured Transactions Guide (see chap. V, paras. 90-93 and 103-109). It provides a framework for the enacting State to implement the policy of these recommendations by requiring it to: (a) list in a clear and specific way any claims that will have priority over security rights; and (b) specify a cap on the amount of the claim given priority. This requirement is intended to ensure that secured creditors are aware of the existence of any preferential claims and their maximum amounts, and thus can take them into account before lending (for example, by deducting the potential amount of the preferential claims from the amount that they are prepared to lend based on the value of the encumbered assets on which they are relying). In specifying the preferential claims that have priority over a security right, the enacting State should also indicate whether these claims are given priority generally or only if insolvency proceedings involving the grantor are commenced (see Secured Transactions Guide, rec. 239).

29. Examples of claims that some States have determined should have priority over a competing security right include: (a) short-term claims of unpaid suppliers of goods; (b) rights of retention of unpaid creditors who have rendered services such as repair services with respect to encumbered assets; (c) claims of the grantor's employees for employment benefits; and (d) tax claims.

30. It should be noted that secured creditors typically require grantors to disclose the existence of preferential claims. However, if a grantor does not comply with this obligation the secured creditor has only an unsecured claim against the grantor for breach of contract, and a claimant listed by the enacting State in this article as having priority retains that priority to the extent stated in this article, despite the grantor's non-compliance.

31. It should also be noted that, some States require a notice of preferential claims to be registered in the Registry. In some of those States, the priority of a registered preferential claim is subject to the general first-to-register priority rule. This approach is useful only if the registered notice states the maximum amount of the claim and the scope of the grantor's assets that are subject to that claim so as to enable potential secured creditors to make an informed decision about whether to extend credit and, if so, on what terms. In other States, registered preferential claims have priority even over security rights that were previously registered or otherwise made effective against third parties. In those States, requiring registration of preferential claims is of limited value to secured creditors (see Registry Guide, paras. 46 and 51).

Article 37. Security rights competing with rights of judgment creditors

32. Article 37 is based on recommendation 84 of the Secured Transactions Guide (see chap. V, paras. 94-102). It determines priority as between a security right in an

encumbered asset and the right of a judgment creditor that has taken whatever steps are necessary to acquire rights in the grantor's assets under other law of the enacting State. Paragraph 1 gives priority to the right of the judgment creditor if the required steps are taken before the security right becomes effective against third parties. The enacting State should complete paragraph 1 by inserting the relevant steps, or a reference to the other law that specifies those steps. In some States, the relevant step may be registration of a notice of the judgment in the security rights registry. In other States, the relevant step may be seizure of the grantor's assets or service of a garnishment order on a person against whom the grantor has a claim for payment of money.

33. Paragraph 2 provides that the security right has priority over the right of the judgment creditor if the judgment creditor does not acquire rights in the encumbered asset before the security right becomes effective against third parties. The same rule applies in the rare situation in which the judgment creditor acquired its rights in the encumbered asset at the same time as the security right became effective against third parties (this may occur where the encumbered assets are future assets). This rule protects a secured creditor against the possibility that its security right might otherwise be subordinate to the right of a judgment creditor that did not exist at the time the secured creditor took the steps necessary to make its security right effective against third parties.

34. However, paragraph 2 limits the extent of the priority of the security right over the right of the judgment creditor to: (a) credit extended by the secured creditor before the expiry of a short period of time to be specified by the enacting State (e.g. 15 days) after the judgment creditor notifies the secured creditor that it has taken the steps described in paragraph 1; or (b) credit extended pursuant to an irrevocable commitment made before receipt of that notification to extend credit in a fixed amount or in an amount fixed pursuant to a specified formula. This rule prevents the secured creditor from exploiting its priority status by increasing the secured obligation even after the secured creditor acquires actual knowledge of the rights of the judgment creditor, while giving the secured creditor a short period of time to adjust to the existence of those rights.

Article 38. Acquisition security rights competing with non-acquisition security rights

35. Article 38 is based on recommendation 180 of the Secured Transactions Guide (see chap. IX, paras. 131, 136, 137, 143 and 146) and recommendation 247 of the Intellectual Property Supplement (see paras. 259-263). Two options are provided for the enacting State. Under both options, provided that the specified conditions are satisfied, an acquisition security right has priority over a competing non-acquisition security right in the same encumbered asset including a prior non-acquisition security right that otherwise would have had priority over the acquisition security right under the general priority rules in article 29.

36. "Super-priority" for acquisition security rights is a feature of the law of most States, whether formulated as a specific priority rule as in the Model Law or, as is the case in many legal systems, as a necessary implication of ownership of the encumbered asset being retained by a seller or lessor under a retention-of-title sale or a financial lease agreement (under art. 2, subpara. (kk), a seller's or lessor's ownership rights under a retention-of-title sale or a financial lease agreement is a security right). Article 38 preserves this advantageous treatment of acquisition finance, extending it to credit supplied by bank lenders as wells as sellers and lessors.

37. Option A contains three "super-priority" rules. Which of the three rules applies will depend on the nature of the encumbered assets. The rule in paragraph 1 applies if the encumbered assets are equipment or its intellectual property equivalent (that is, intellectual property or rights of a licensee under a licence of intellectual property that is primarily used or intended to be used by the grantor in the operation of its business; see art. 2, subpara. (l)). The rule in paragraph 2 applies if the encumbered assets are either inventory or its intellectual property equivalent (that is, intellectual property or rights of a licensee under a licence of intellectual property held by the grantor for sale

or licence in the ordinary course of the grantor's business; see art. 2, subpara. (q)). The rule in paragraph 3 applies if the encumbered assets are consumer goods or their intellectual property equivalent (that is, intellectual property or rights of a licensee under a licence of intellectual property used or intended to be used by the grantor primarily for personal, family or household purposes; see art. 2, subpara. (f)).

38. Under the "super-priority" rule in paragraph 1 of option A, an acquisition security right in equipment or its intellectual property equivalent has priority over a competing non-acquisition security right created by the grantor, provided that the secured creditor has possession of the equipment or a notice with respect to the acquisition security right is registered in the Registry before the expiry of a short period of time to be specified by the enacting State (e.g. 15-20 days) after either the grantor obtains possession of the equipment or the agreement for the lease or licence of the intellectual property is concluded. If the acquisition secured creditor has possession or registers a notice with respect to the acquisition security right before the expiry of the specified period, that security right will have super-priority over a competing non-acquisition security right even if notice of the non-acquisition security right had been registered or the non-acquisition security right had been made effective against third parties before the acquisition security right (this could happen, for example, where the prior security right covered future assets). Even though possession of the equipment by the secured creditor is an alternative to timely registration for the purposes of obtaining super priority, continued possession of the equipment by the secured creditor is unlikely to be used in practice as a basis for super-priority, as this would deprive the grantor of the use of the equipment in its business. It is likely that possession will be relied on in practice only during the gap between the conclusion of the security agreement and the grantor's assumption of possession of the equipment.

39. Under the super-priority rule in paragraph 2 of option A, additional requirements must be satisfied for an acquisition security right in inventory or its intellectual property equivalent to have "super-priority" over a competing non-acquisition security right. The acquisition security right will have priority if the secured creditor has possession of the inventory, or if two conditions are met before the grantor takes possession (in the case of inventory) or the agreement for sale or licence has been concluded (in the case of the intellectual property equivalent). First a notice with respect to the acquisition security right must be registered in the Registry. Second, a non-acquisition secured creditor that registered a notice with respect to encumbered assets of the same kind as the inventory (or its intellectual property equivalent) must have received a notice from the acquisition secured creditor. The notice must: (a) state that the acquisition secured creditor has or intends to acquire an acquisition security right; and (b) describe the relevant encumbered assets sufficiently to enable them to be reasonably identified. It should be noted that there is no grace period as in the case of equipment. It should also be noted that even though possession of inventory by the secured creditor is an alternative to the satisfaction of these two conditions for the purposes of obtaining super-priority, a secured creditor is unlikely to rely on its continued possession of inventory as a basis for super-priority, as this would deprive the grantor of the ability to sell the inventory in the course of its business. It is unlikely that possession will be relied on in practice only during the gap between the conclusion of the security agreement and the grantor's assumption of possession of delivery of the inventory.

40. There are two reasons for the different requirements for super-priority in the case of inventory or its intellectual property equivalent as compared to the conditions for super-priority in the case of equipment and its intellectual property equivalent. First, because inventory may "turn over" (i.e. be sold by the grantor) quickly and depreciate quickly, it would be inefficient for a financier extending credit that is to be secured by a non-acquisition security right in present and future inventory to have to wait for the expiry of a grace period before being certain that the grantor's inventory is not subject to an acquisition security right that will have super-priority. The requirement in paragraph 2 that the notice be registered before the grantor obtains possession of the encumbered asset addresses this concern. Second, inasmuch as new inventory can often be difficult to distinguish from old inventory, even a secured

creditor with a non-acquisition security right in future inventory that monitors the ongoing acquisition of inventory by the grantor will not always be able to easily determine that new inventory has replaced similar older inventory and may thus potentially be subject to an acquisition security right. The requirement that the acquisition secured creditor give advance notice to prior-registered non-acquisition secured creditors of its pending acquisition security right addresses this concern.

41. Paragraph 4 of option A contains two important clarifications about the advance notice to be sent to prior-registered non-acquisition secured creditors under paragraph 2 (b)(ii). These clarifications are designed to facilitate acquisition financing. First, the notice may cover acquisition security rights under multiple transactions between the same parties without the need to send a new notice in relation to each new transaction. Thus, for example, where a seller or lender is planning to engage in an ongoing series of financing arrangements with the grantor, a single notice is sufficient, provided that it sufficiently describes the assets to be covered by these ongoing transactions to enable them to be reasonably identified. Second, the notice suffices only in respect of encumbered assets that are acquired by the grantor before the expiry of a time period to be specified by the enacting State (e.g. five years), after that notice is received by the non-acquisition secured creditor. As a result, an acquisition secured creditor will need to send a new notice before the expiry of the specified time period if it wants to continue to enjoy the super-priority for its acquisition financing to the grantor.

42. Under the super-priority rule in paragraph 3 of option A, an acquisition security right in consumer goods or their intellectual property equivalent automatically has priority over a non-acquisition security right that is created by the grantor in the same encumbered asset and was previously made effective against third parties. As with all the rules in article 38, it is implicit that the acquisition security right will only benefit from super-priority if it is effective against third parties. This means, for example, that a security right in consumer goods, other than low-value consumer goods, will need to be made effective against third parties by registration or possession (see arts. 18 and 24). Once it becomes effective against third parties, the acquisition security right will have priority. A non-acquisition security right may have priority, however, if the acquisition secured creditor fails to register notice of its security right altogether (unless the low-value exemption in art. 24 applies).

43. Option B contains only two “super-priority” rules. The rule in paragraph 1 is identical to the rule in paragraph 1 of option A, except that, while paragraph 1 of option A applies only to acquisition security rights in equipment and its intellectual property equivalent, paragraph 1 of option B also applies to acquisition security rights in inventory and the intellectual property equivalent of inventory. The rule in paragraph 2 is identical to the rule in paragraph 3 of option A. Thus, the only difference between option A and option B relates to the steps that must be taken in order for an acquisition security right in inventory or in its intellectual property equivalent to have priority over a competing non-acquisition security right. Under the approach in option B, a non-acquisition secured creditor with a security right in future inventory of the grantor or its intellectual property equivalent will need to monitor the registry record if it wants to ensure, before extending new credit against new inventory or new intellectual property acquired by the grantor, that it is not the subject of an intervening acquisition security right which if registered before the expiry of the specified grace period will have super-priority. The approach in option A relieves the prior non-acquisition secured creditor from this monitoring burden, but imposes a more onerous registration and notification burden on the acquisition secured creditor.

44. The reference to possession by the secured creditor in paragraphs 1 (a) and 2 (a) of option A and paragraph 1 (a) of option B refers to the situation where the secured creditor has possession of the encumbered asset at the outset of the acquisition financing transaction, such as where the secured creditor is a seller or lessor. It does not refer to possession acquired by the secured creditor as a result of seizure in the context of enforcement upon the grantor’s default. Thus, an acquisition secured creditor that failed to register in time after the grantor obtained possession of the encumbered asset cannot obtain super-priority under this article by subsequently

taking possession of the encumbered asset in the context of enforcement or otherwise. Otherwise, an acquisition secured creditor could change its priority by commencing enforcement, a result that would introduce great uncertainty.

Article 39. Competing acquisition security rights

45. Article 39 is based on recommendation 182 of the Secured Transactions Guide (see chap. IX, paras. 173-178). It addresses priority competitions between acquisition security rights that are created by the same grantor in the same encumbered asset. This type of priority competition could occur in two situations. The first is where two lenders have each financed a part of the total acquisition price of the relevant asset. In this situation, priority is determined under paragraph 1 according to the general rule of priority in article 29. The second situation is where a lender advances part of the acquisition price of the encumbered asset (for example, by lending the money used by the grantor for an advance against the purchase price) with the balance of the acquisition price being financed by the supplier of the encumbered asset. In this second situation, paragraph 2 gives priority to the acquisition security right of the supplier over that of the lender, as long as it is made effective against third parties before the expiry of the period specified in article 38, paragraph 1 (b).

46. Paragraph 2 protects the supplier over the lender because credit transactions between suppliers and their customers are often entered into on a same day basis without any practical opportunity for the supplier to first check the Registry to determine whether a competing acquisition security right has been registered against the asset. Without being assured of super-priority for a limited period going forward, suppliers would be reluctant to extend secured credit to their customers and this in turn would mean that their customers would be denied access to this important alternative source of secured credit. It should be noted that this rule applies even where the encumbered asset is inventory or its intellectual property equivalent notwithstanding that, under paragraph 2 of option A, the secured creditor must register and give notice to prior-registered non-acquisition secured creditors before the grantor obtains possession of inventory or the agreement for the sale or licence of the intellectual property equivalent of inventory is concluded in order to obtain super-priority against the holder of a prior non-acquisition security right in the encumbered asset.

Article 40. Acquisition security rights competing with the rights of judgment creditors

47. Article 40 is based on recommendation 183 of the Secured Transactions Guide (see chap. IX, paras. 145-148). It provides that an acquisition security right that is made effective against third parties before the expiry of the period specified in article 38, subparagraph 1 (b) has priority over the rights of a judgment creditor that would otherwise have priority under article 37. Where the enacting State adopts option B of article 38, article 40 ensures that acquisition secured creditors enjoy the same grace period to preserve priority over the rights of intervening judgment creditors as is available to them to establish priority over the rights of non-acquisition secured creditors.

48. By way of illustration, assume that Grantor acquires an item of equipment from Seller on credit on Day 1 and creates in favour of Seller an acquisition security right in the item of equipment to secure its obligation to pay the balance of the purchase price. On Day 5 Seller registers a notice. In the meantime, on Day 3, Judgment Creditor obtains a judgment against Grantor and takes the steps specified in article 37, paragraph 1, to acquire rights in the item of equipment. Under the rule in article 37, paragraph 1, Judgment Creditor's rights would have priority over Seller's security right because Judgment Creditor obtained its rights before Seller's security right was made effective against third parties by registration of a notice. As a result of the operation of article 40, however, Seller's security right has priority over the rights of Judgment Creditor.

49. Where the acquisition security right covers inventory and the enacting State adopts option A of article 38, the rationale for the rule in article 40 is necessarily

different. This is so because paragraph 2 of option A of article 38 requires the acquisition secured creditor to register *before* the grantor obtains possession of inventory (or the agreement for the sale or licence of the intellectual property equivalent of inventory is concluded) in order to obtain super-priority against the holder of a prior *non-acquisition* security right. The rationale for giving superior protection against judgment creditors in this situation is the same as that which informs the priority rule in article 39. Because acquisition financing is often provided by suppliers as opposed to lenders, and because supplier financing is often concluded on a same-day basis, article 40 ensures that suppliers are not prevented in practice from entering into inventory financing arrangements for fear that a judgment creditor may in the coming days take the steps necessary to acquire rights in the relevant inventory so as to obtain priority under article 37.

Article 41. Competing security rights in proceeds of an asset subject to an acquisition security right

50. Article 41 is based on recommendation 185 of the Secured Transactions Guide (see chap. IX, paras. 158-172). Both option A and option B of article 38 provide that, if the specified conditions are satisfied, an acquisition security right has priority over a competing non-acquisition security right in the same encumbered asset even if the non-acquisition security right would have priority under the general priority rule in article 29. Article 41 determines whether that "super-priority" carries over to proceeds of the encumbered assets that are subject to the acquisition security right.

51. Under article 10, a secured creditor with a security right in an asset automatically has a security right in the identifiable proceeds of that asset; and, under article 19, that security right is effective against third parties if the conditions specified in that article are satisfied. Under article 32, the priority of a security right in proceeds that is effective against third parties under article 19 is the same as the priority of the security right in the original encumbered asset. Under this rule, a security right in proceeds of assets subject to an acquisition security right would have the same "super-priority" as the security right in the original encumbered asset. Article 41, however, limits the application of article 32 by restricting the "super-priority" to the proceeds of only certain types of asset subject to an acquisition security right (option A) or by not extending the "super-priority" to the proceeds at all (option B). Paragraph 1 of option A provides that the "super-priority" of an acquisition security right under article 38 generally carries over to the proceeds of those assets. This is subject, however, to the exception in paragraph 2 for proceeds of inventory or its intellectual property equivalent. Under subparagraph 2 (a), the "super-priority" does not carry over to proceeds of inventory or its intellectual property equivalent that is in the form of receivables, negotiable instruments or rights to payment of funds credited to a bank account. If the proceeds take any other form, subparagraph 2 (b) states that the acquisition security right in the proceeds will have "super-priority" if, before the proceeds arose, the non-acquisition secured creditor had previously registered a notice in the Registry with respect to a security right in an asset of the same kind as the proceeds and the non-acquisition secured creditor receives a notice from the acquisition secured creditor that states that it has or intends to obtain a security right in assets of that kind and that describes those assets sufficiently to enable them to be identified.

52. The reason why subparagraph 2 (a) does not to extend "super-priority" to proceeds of inventory (and its intellectual property equivalent) that take the form of receivables, negotiable instruments or rights to payment of funds credited to a bank account relates to the difficulty that would otherwise be faced by prior non-acquisition secured creditors with security rights in these types of assets as original encumbered assets. If the "super-priority" given to acquisition security rights were extended to those types of proceeds, potential secured creditors would be reluctant to extend credit on the basis of these types of assets as original encumbered assets for fear that their priority would be trumped by the security right of subsequent acquisition financiers in these types of assets as proceeds. The reason why subparagraph 2 (b) requires the acquisition secured creditor to send a notice to prior-registered non-acquisition secured creditors with a security right in the same kind of

assets as the proceeds where the proceeds take any other form is to alert them to the existence of its prior-ranking security right in this kind of assets as proceeds so that they can decide whether to extend further credit to the grantor on the security of those assets. The decision not to provide "super-priority" with respect to these payment rights reflects a policy decision to promote receivables financing and other form of financing based upon such payment rights.

53. Option B provides that the "super-priority" with respect to assets subject to an acquisition security right does not carry over to proceeds of those assets under any circumstances. Instead, the priority of the security right in the proceeds will be determined under the general priority rules in article 29. Option B avoids the need to make the sort of distinctions between types of proceeds required to be made in option A. As already explained (see para. 27 above), article 35 provides that a security right that is effective against third parties remains effective against third parties and retains the priority it had against competing claimants notwithstanding the commencement of insolvency proceedings by or against the grantor except to the extent that the enacting State's insolvency law provides otherwise. Article 35 applies equally to the special priority accorded to acquisition security rights (see Secured Transactions Guide, rec. 186).

Article 42. Acquisition security rights extending to a mass or product competing with non-acquisition security rights in the mass or product

54. Article 42 preserves the super-priority of an acquisition security right in an asset that later becomes part of a mass or product in a way that allows the acquisition security right to extend to the mass or product under article 11 as against a competing non-acquisition security right in the mass or product as an original encumbered asset. Article 42 is subject to article 38, meaning that the super-priority of the acquisition security right is conditional on compliance with the conditions for super-priority set out in that article.

Article 43. Subordination

55. Article 43 is based on recommendation 94 of the Secured Transactions Guide (see chap. V, paras. 128-131). Paragraph 1 allows a person to subordinate its security right to a competing claim over which it would otherwise have priority. Such subordination may take the form of a bilateral agreement between the party agreeing to subordinate its security right and the competing claimant that will benefit from that subordination. However, paragraph 1 provides that the beneficiary need not be a party to the subordination. Thus, the subordination may also take the form of a unilateral commitment (usually made to the grantor) by the party agreeing to a lower priority that it will not assert its priority against a specified competing claimant or a specified class of competing claimants.

56. Paragraph 2 makes it clear that subordination does not affect the rights of competing claimants other than the party agreeing to subordinate its priority and the beneficiary of that agreement. For example, assume that three secured creditors, SC 1, SC 2 and SC 3, have security rights in the same encumbered assets, securing claims of €50, €10 and €70, respectively. Assume further that the order of priority (highest to lowest) is SC 1, SC 2 and SC 3, and that SC 1 subordinates its claim to that of SC 3. Under the rule in paragraph 2, the effect of the subordination is that SC 3 will succeed to SC 1's priority status up to €50 and that SC 2's claim to the next €10 will not be affected.

Article 44. Future advances and future encumbered assets

57. Article 44 is based on recommendations 97-99 of the Secured Transactions Guide (see chap. V, paras. 135-143). It clarifies the operation of the priority rules in this chapter in relation to a security right that secures obligations arising after the conclusion of the security agreement (see art. 7) and in relation to encumbered assets that come into existence or are acquired by the grantor after the conclusion of the security agreement.

58. Paragraph 1 provides that the priority of a security right extends to all obligations it secures, regardless of when those obligations were incurred. Thus, a security right has the same priority over the right of a competing claimant whether the entire secured obligation was incurred at or before the creation of the security right or all or a portion of the secured obligation was incurred thereafter. This rule is subject, however, to the rule in article 37, under which a judgment creditor may have priority for advances made by the secured creditor after it has knowledge that the judgment creditor has taken the steps necessary to acquire rights in the encumbered asset and has had a short period of time (set out in art. 37) to adjust. This rule is also subject to the maximum sum specified in the registered notice should the enacting State decide to require a maximum sum to be set out in the security agreement and in the registered notice.

59. Paragraph 2 similarly provides that, when a security right has been made effective against third parties by the registration of a notice, the priority resulting from that registration under article 29 extends to all the encumbered assets described in the notice whether they were owned by the grantor at the time of registration or were acquired thereafter.

Article 45. Irrelevance of knowledge of the existence of a security right

60. Article 45 is based on recommendation 93 of the Secured Transactions Guide (see chap. V, paras. 125-127). It confirms that a secured creditor's knowledge or lack of knowledge of the existence of a competing security right at the time it acquired its own security right is not relevant to the operation of the priority rules in this chapter. The point is made explicit to emphasize that priority is determined only on the basis of those priority rules and difficult-to-prove subjective states of knowledge are irrelevant. Article 45 applies only to a secured creditor's knowledge of the existence of a competing security right. Under the Model Law, however, knowledge of facts relating to the security right may be relevant in other contexts. For example, a buyer of a tangible encumbered asset sold in the ordinary course of the grantor's business that has knowledge that the particular sale breaches the rights of the secured creditor under its security agreement with the grantor does not take free of the security right; on the other hand, mere knowledge of the existence of the security right does not disqualify the buyer from protection (see art. 34, para. 4).

B. Asset-specific rules

Article 46. Negotiable instruments

61. Article 46 is based on recommendations 101 and 102 of the Secured Transactions Guide (see chap. V, paras. 154-156). Differences between article 46 and recommendations 101 and 102 are of a drafting nature only; paragraph 1 deals with the priority between competing security rights in the same negotiable instrument, and paragraph 2 addresses the rights of a secured creditor with a security right in a negotiable instrument as against a buyer or other consensual transferee of the negotiable instrument.

62. Under paragraph 1, a security right in a negotiable instrument that is made effective against third parties by the secured creditor's possession of the negotiable instrument has priority over a security right in the same negotiable instrument that is made effective against third parties by registration of a notice, whether the secured creditor took possession before or after the notice was registered. This is consistent with the important role that possession plays in ensuring negotiability under the law relating to negotiable instruments.

63. Paragraph 2 provides similar protection to a buyer or other consensual transferee that obtains possession of a negotiable instrument as against a secured creditor with a security right in the instrument that was made effective against third parties by registration of a notice. First, under paragraph 2 (a), the buyer or other consensual transferee acquires its rights free of the security right if it qualifies as a protected holder or the like under its relevant law (the enacting State should insert the

appropriate term in para. 2 (a)). Second, under paragraph 2 (b), a buyer or other transferee that takes possession of the instrument and gives value for it without knowledge that the sale or other transfer violates the rights of the secured creditor under the security agreement also acquires its right in the instrument free of that security right. As with the rule in paragraph 1, this rule preserves the important role of possession in ensuring negotiability under the law relating to negotiable instruments.

64. Knowledge of the existence of a security right does not prevent a buyer or other consensual transferee of a negotiable instrument from acquiring its rights in the instrument free of the security right under paragraph 2 (b) (although such knowledge may prevent the buyer or other transferee from qualifying as a protected holder or the like and, thus, may prevent the buyer or other transferee from taking free of the security right under paragraph 2 (a)). Rather, only knowledge that the sale or other transfer violates the rights of the secured creditor under the security agreement prevents the buyer or other transferee from acquiring its rights in the instrument free of the security right under paragraph 2 (b). "Knowledge", as defined in article 2, subparagraph (r), means "actual knowledge". The reference to "good faith" that was included in recommendation 102 (b) of the Secured Transactions Guide has been deleted on the understanding that the absence of knowledge amounts essentially to good faith in this context (and because the concept of good faith is used in the Model Law only to reflect an objective standard of conduct).

Article 47. Rights to payment of funds credited to a bank account

65. Article 47 is based on recommendations 103-105 of the Secured Transactions Guide (see chap. V, paras. 157-163). It determines priority between competing security rights in a right to payment of funds credited to a bank account whether those rights to payment are original encumbered assets or are proceeds of a security right in other property. In this respect, it should be noted that, according to art. 19, para. 1, a security right in proceeds in the form of a right to payment of funds credited to a bank account is automatically effective against third parties if the security right in the original encumbered asset is effective against third parties. Article 47 includes special priority rules because a security right in a right to payment of funds credited to a bank account may be made effective against third parties by methods other than registration (e.g. by control). Thus, there is a particular need to address priority competitions between security rights to payment of funds credited to a bank account made effective against third parties by different methods (see Secured Transactions Guide, chap. V, para. 157).

66. Paragraphs 1-3, taken together, have the effect that a security right in a right to payment of funds credited to a bank account that is made effective against third parties by any of the methods provided for in article 25 has priority over a security right that is made effective against third parties by registration of a notice in the Registry under article 18. Under paragraph 1, a security right in a right to payment of funds credited to a bank account that is made effective against third parties by the secured creditor becoming the account holder has priority over all competing security rights in the same asset. Next in the order of priority, under paragraphs 2 and 3 are: (a) a security right created in favour of the deposit-taking institution; and (b) a security right made effective against third parties by the conclusion of a control agreement between the secured creditor, the grantor and the deposit-taking institution (for the definition of the term "control agreement", see art. 2, subpara. (g) (ii)). Under paragraph 4, priority between competing security rights created in favour of secured creditors who have all concluded a control agreement is determined by the order of conclusion of the control agreements. This approach facilitates secured transactions that rely specifically on rights to payment of funds credited to a bank account by relieving secured creditors that make their security rights effective against third parties under article 25 from the general obligation of searching the Registry and from the first-to-register priority rules in article 29 (see Secured Transactions Guide, chap. V, para. 158).

67. Under paragraph 5, except when the secured creditor has become the account holder, a security right in a right to payment of funds credited to a bank account is

subordinate to the deposit-taking institution's right under other law to set off its claims against the grantor against its obligation to the grantor with respect to the grantor's right to payment of funds from the bank account. The effect of this rule is to preserve the right of a deposit-taking institution to exercise its right of set-off that it has under other law.

68. Under paragraph 6, a transferee of funds from a bank account pursuant to a transfer initiated or authorized by the grantor acquires its rights free of a security right in the right to payment of funds credited to the bank account so long as the transferee does not have knowledge that the transfer violates the rights of the secured creditor under the security agreement. A "transfer of funds" includes transfers by a variety of mechanisms, including by cheque and electronic means. The purpose of paragraph 6 is to preserve the free negotiability of funds.

69. Knowledge of the existence of a security right does not prevent a transferee of funds from a bank account from taking free of the security right. Rather, it is only knowledge that the transfer violates the rights of the secured creditor under the security agreement that prevents the transferee from taking free. "Knowledge", as defined in article 2, paragraph (r), means "actual knowledge". Paragraph 7 also preserves the rights of transferees of funds credited to a bank account under any other law specified by the enacting State.

Article 48. Money

70. Article 48 is based on recommendation 106 of the Secured Transactions Guide (see chap. V, para. 164). Its purpose is to preserve the negotiability of money. Thus, under paragraph 1, a transferee of encumbered money acquires its rights in the money free of the security right, unless it has knowledge that the transfer violates the rights of the secured creditor under the security agreement. "Knowledge", as defined in article 2, paragraph (r), means "actual knowledge". Paragraph 2 also preserves the rights of persons in possession of money under any other law specified by the enacting State.

Article 49. Negotiable documents and tangible assets covered by negotiable documents

71. Article 49 is based on recommendations 108 and 109 of the Secured Transactions Guide (see chap. V, paras. 167-169). It is intended to preserve the widely recognized practice under which rights to tangible assets that are covered (or represented) by a negotiable document are subsumed in the negotiable document with the result that persons that acquire rights in the document thereby also acquire rights in the assets covered by the document. Accordingly, under paragraph 1, a security right in a tangible asset that is made effective against third parties by possession of the negotiable document covering that asset has priority over a competing security right in the tangible asset that is made effective against third parties by any other means.

72. Paragraph 2 states an exception to that general rule. Except when the encumbered asset is inventory, it provides that the rule in paragraph 1 does not apply to a security right in a tangible asset that is made effective against third parties before the earlier of: (a) the time when that asset became covered by the negotiable document; or (b) the time of conclusion of the agreement between the grantor and the secured creditor in possession of the negotiable document so long as the asset actually became covered by the negotiable document before the expiry of a short period of time thereafter to be specified by the enacting State (e.g. seven days).

Article 50. Intellectual property

73. Article 50 is based on recommendation 245 of the Intellectual Property Supplement (see paras. 193-212). Its purpose is to clarify that the rule in article 34, paragraph 6, does not obviate other rights of the secured creditor in its capacity as an owner or licensor of the intellectual property that is the subject of the licence under other law relating to intellectual property to be specified by the enacting State. For

example, the Model Law does not affect any right that a licensor may have to terminate a licence agreement for non-compliance by the licensee (see Intellectual Property Supplement, paras. 23-25 and 196). This clarification is of particular importance because the concept of "ordinary course of business", used in article 34, paragraph 6, is a concept of commercial law and is not drawn from law relating to intellectual property and thus may create confusion in an intellectual property context. Typically, law relating to intellectual property does not distinguish in this respect between exclusive and non-exclusive licences and focuses rather on the issue of whether a licence has been authorized or not.

74. It should be noted that article 50 makes no reference to the rights of secured creditor in its capacity as a secured creditor under other law relating to intellectual property. This is so because, if the Model Law is in this respect inconsistent with law relating to intellectual property, the Model Law (including art. 50) would not apply (see art. 1, para. 3 (b)); and, if the Model Law (including art. 50) is not inconsistent with law relating to intellectual property and does apply, article 34 would generally apply to rights of a secured creditor under the Model Law without affecting the effectiveness of a security right in licensed intellectual property, its priority as against a competing claimant other than a non-exclusive licensee, or the post-default rights of a secured creditor under the Model Law that do not affect the rights of the licensee (see Intellectual Property Supplement, para. 203).

75. As a result, depending on the content of law relating to intellectual property, unless the secured creditor authorized the grantor to grant licences unaffected by the security right, the licensee may only take the licence subject to the security right, rather than free of it. This would mean that, if the grantor defaults, the secured creditor would be able to enforce its security right in the licensed intellectual property and sell or license it free of the licence. As a consequence, a person obtaining a security right from the licensee will only obtain a security right of limited value, as the encumbered licensed intellectual property may cease to exist if the licensor's secured creditor enforces its security right (following default by the licensor under its security agreement with the secured creditor).

Article 51. Non-intermediated securities

76. Article 51 covers security rights in non-intermediated securities. This is a type of encumbered asset not addressed in the Secured Transactions Guide, which excluded from its scope security rights in all types of securities (see rec. 4 (c)). Article 51 adjusts the general priority rules in article 29 in a manner similar to the special priority rules for security rights in negotiable instruments (for certificated securities) and rights to payment of funds credited to a bank account (for uncertificated securities).

77. For certificated non-intermediated securities, paragraph 1 provides that a security right that is made effective against third parties by the secured creditor's possession of the certificate has priority over a competing security right created by the same grantor that is made effective against third parties by registration of a notice in the Registry. This is parallel to the rule for negotiable instruments in article 46, paragraph 1 and similarly reflects the negotiable character of this type of encumbered asset (the term "certificated non-intermediated securities" is defined in art. 2, para. (d) in a manner that reflects its negotiable character).

78. For uncertificated non-intermediated securities, paragraph 2 provides that a security right that is made effective against third parties by registration in the books maintained for that purpose by or on behalf of the issuer has priority over a security right in the same securities that is made effective against third parties by any other method (e.g. by registration of a notice in the Registry). Depending on the applicable law (see art. 100), registration in the books of the issuer may take the form of a notation of the security right or an entry of the name of the secured creditor as the holder of the securities. The enacting State should specify the form of registration method that best fits its law. If that law provides for both forms of registration, both could be retained. This priority rule is similar to the rule for rights to payment of funds credited to a bank account in article 47, paragraph 1. The rationale for this rule is that

such registration in the books of the issuer fulfils a similar function to the secured creditor becoming the account holder of a bank account.

79. The priority rules in paragraphs 3 and 4 also apply only to uncertificated non-intermediated securities. They parallel the rules for security rights in rights to payment of funds credited to a bank account in article 47, paragraphs 3 and 4. Paragraph 3 gives priority to a security right that is made effective against third parties by the conclusion of a control agreement over a competing security right in the same securities made effective against third parties by another method (e.g. by registration of a notice in the Registry). As between competing security rights made effective against third parties by the conclusion of a control agreement, paragraph 4 awards priority in the order in which the control agreements were concluded (for the definition of the term "control agreement, see art. 2, subpara. (g)(i)).

80. Unlike article 46, paragraph 2, article 47, paragraphs 6 and 7, and article 49, paragraph 3, which provide a priority rule protecting transferees and then defer to other law that may provide them with better rights, paragraph 5 does not include a priority rule but instead defers to the law relating to the transfer of securities to be specified by the enacting State. The reason for this approach is that national law diverge widely with respect to the protection of holders of non-intermediated securities and the matter does not lend itself to unification at the international level. It should be noted that, if the enacting State neither has nor is prepared to introduce a law relating to the transfer of securities, it may not need to implement paragraph 5.

Note by the Secretariat: draft guide to enactment of the UNCITRAL Model Law on Secured Transactions

ADDENDUM

Contents

Paragraphs

Chapter VI. Rights and obligations of the parties and third-party obligors

1. Chapter VI deals with the pre-default rights and obligations of the parties and third-party obligors (chapter VII deals with the post-default rights and obligations of the parties). With the exception of articles 53 and 54 which are mandatory rules, the provisions of chapter VI are non-mandatory, and thus do not apply if the parties have agreed otherwise. This approach, which is based on the recommendations of the Secured Transactions Guide and the provisions of the Assignment Convention, is reflected as a general rule in article 3, paragraph 1, rather than specifically in the provisions of chapter VI.

Section I. Mutual rights and obligations of the parties to a security agreement

A. General rules

Article 52. Sources of mutual rights and obligations of the parties

2. Article 52 is based on recommendation 110 of the Secured Transactions Guide (see chap. VI, paras. 14 and 15), which in turn is based on article 11 of the Assignment Convention. Paragraph 1 is intended to reiterate the principle of party autonomy enshrined in article 3. Paragraph 2 is intended to give legislative strength to trade usages and practices, which may not be generally recognized in all States.

Article 53. Obligation of the party in possession to exercise reasonable care

3. Article 53 is based on recommendation 111 of the Secured Transactions Guide (see chap. VI, paras. 24-31). It sets out the mandatory law rule (see para. 1 above) that a grantor or secured creditor in possession of a tangible asset (which under the definition in art. 2, subpara. (ll), includes money, negotiable instruments, negotiable documents and certificated non-intermediated securities) must exercise reasonable care to preserve the asset. Whether a person other than the grantor and the secured creditor that is in possession of an encumbered asset is obliged to take reasonable care to preserve the encumbered asset is determined under other law.

4. What constitutes “reasonable care” in a given case depends upon the nature of an asset. Thus, it may mean something different with respect to equipment, inventory, crops or live animals. For example, precious metals may have to be kept in a vault and inventory in a warehouse, a cow has to be milked, a valuable musical instrument has to be played and a racing horse has to exercise. According to article 4, a person must exercise its rights and perform its obligations, including the obligation to preserve the value of the asset, in good faith and in a commercially reasonable manner.

5. Unlike recommendation 111 of the Secured Transactions Guide, on which it is based, article 53 refers only to the preservation of the asset, and not to the preservation of the asset’s value. This does not reflect a change of policy but is, rather, due to the fact that: (a) in most cases, physical preservation of a tangible asset would have the effect of preserving the asset’s value; and (b) in some cases, preservation of the asset’s value may go beyond the physical preservation of the asset and could place an undue burden on the person in possession. For example, a person in possession of certificated non-intermediated shares of a company may be required to exercise certain rights attached to the shares (e.g. the right to collect dividends or the right to vote), but should not be obliged to participate in an increase of the capital of an enterprise to preserve the value of the encumbered shares.

Article 54. Obligation of the secured creditor to return an encumbered asset

6. Article 54 is based on recommendations 112 and 72 of the Secured Transactions Guide (see chap. VI, paras. 35-39). It sets out a mandatory law rule (see para. 1 above) that, once a security right in an encumbered asset is extinguished, a secured creditor in possession of the asset must return it to the grantor or deliver it to a person designated by the grantor (in some jurisdictions, delivery to a person designated by the grantor may be viewed as a means of returning the asset to the grantor). Under article 4, the grantor is obliged to exercise the right to designate another person in good faith and in a commercially reasonable manner (e.g. by avoiding placing an undue burden on the secured creditor). In exercising its right to deliver the asset to the grantor or a person designated by the grantor, the secured creditor also must comply with the same standard. The same standard should apply to the question as to who should bear any additional cost incurred by the secured creditor. For example, any such additional cost may have to be borne by the debtor in the same way as costs of performance of the debtor's obligation under the credit and security agreement are normally payable by the debtor. It should be noted that where a security right in an encumbered asset is extinguished, and the security right had been made effective against third parties, not by possession, but by registration, the secured creditor is obliged to register an amendment or cancellation notice. This this issue is addressed in article 20, paras. 1, 2 and 3 of the Model Registry Provisions. The issue of when a security right is extinguished is addressed in article 12 of the Model Law.

7. Article 54 deals with a situation in which the secured creditor is in possession of an asset and therefore does not apply to receivables or other intangible assets because they cannot be the subject of physical possession (see art. 2, subpara. (z)). It therefore does not address the obligation of a secured creditor to withdraw any notification that it has given to the debtor of the receivable. However, the grantor is protected in this situation by article 59, paragraph 2, and article 79, paragraph 2 (b), which require the secured creditor to return to the grantor any surplus proceeds it receives. It should also be noted that the question of whether a secured creditor may agree with the grantor that the secured creditor has the right to dispose of encumbered non-intermediated securities and thus be obliged to return equivalent securities is a matter for other law.

Article 55. Right of the secured creditor to use and inspect an encumbered asset, and to be reimbursed for expenses

8. Article 55 is based on recommendation 113 of the Secured Transactions Guide (see chap. VI, paras. 50-65) and sets out a law rule, which the parties may vary or derogate from by agreement (see para. 1 above). Under paragraph 1 (a), a secured creditor in possession of an encumbered asset has the right to be reimbursed for reasonable expenses incurred to preserve it in accordance with article 53. Under paragraph 1 (b), a secured creditor in possession of an encumbered asset may make reasonable use of it and apply any revenues generated from the use to the payment of the obligation secured by the asset.

9. A rule of law relating to securities that entitles a secured creditor to use securities in its possession if the security agreement so provides should be read together with article 55. Their relationship would be a matter for the rules of the applicable law.

10. Finally, under paragraph 2, where an encumbered asset is in the possession of the grantor, the secured creditor has the right to inspect the asset. As this article is subject to the general standard of commercial reasonableness and good faith set out in article 4, the right to inspect may only be exercised at reasonable times and in a commercially reasonable manner. The application of this standard depends upon the circumstances. For example, in extreme cases, such as where the secured creditor has reason to believe that the physical condition of the collateral is in jeopardy or has been, or is about to be, removed from the State of its location, the secured creditor may be justified in demanding an immediate inspection.

Article 56. Right of the grantor to obtain information

11. Article 56 is intended to provide the grantor with the right to obtain information from a secured creditor as to the amount of the secured obligation or the assets encumbered at a certain point of time. This information may be necessary where the grantor is interested in obtaining credit against the security of assets that are already encumbered (and are subject to a notice registered against the grantor in the Registry) and the potential third-party creditor requests that information. The parties may vary or derogate from the rule set out in article 56 (see para. 1 above).

12. Under paragraph 1, the secured creditor is obliged to provide this information within a short period of time specified by the enacting State (e.g. 7 to 14 days) after receipt of the grantor's request. This obligation does not apply to an outright transfer of receivables by agreement, however, as the case of such an outright transfer there is no secured obligation.

13. Under paragraph 2, the grantor is entitled to one response free of charge during a short period of time specified by the enacting State (e.g. one year). Under paragraph 3, the secured creditor is entitled to require payment of a nominal fee for any additional response. The grantor should exercise this right and the secured creditor should perform this obligation in good faith and in a commercially reasonable manner (e.g. the grantor should avoid repeated and unnecessary requests, and the secured creditor should provide the information in a commercially reasonable way that can be readily understood). Other matters, such as the legal consequences of the secured creditor's failure to comply with a request for information or to give accurate information are left to other law (in the same way as breach of any of other obligations in this chapter is left to other law). The enacting State may wish to consider the question whether to extend this to information right to third-party creditors (e.g. judgment creditors).

B. Asset-specific rules

Article 57. Representations of the grantor of a security right in a receivable

14. Article 57 is based on recommendation 114 of the Secured Transactions Guide (see chap. VI, para. 73), which in turn is based on article 12 of the Assignment Convention. It provides that, unless otherwise agreed (see para. 1 above), when a grantor grants a security right in a receivable, the grantor is deemed to make various representations to the secured creditor at the time the security agreement is concluded. In particular, under paragraph 1, the grantor represents that it has not previously created a security right in the receivable in favour of another secured creditor, and that the debtor of the receivable will not have any defences or rights of set-off with respect to the receivable (i.e. that the grantor will fully perform the contract giving rise to the receivable and any other contract it has entered into with the debtor of the receivable).

15. Paragraph 2 reflects the generally accepted principle that, unless otherwise agreed (see para. 1 above), the grantor does not guarantee the solvency of the debtor of the receivable. As a result, the risk of debtor default is on the secured creditor, a fact that the secured creditor will take into account in determining whether to extend credit and on what conditions. Recognizing the right of the parties to financing transactions to agree on a different risk allocation, paragraph 2 allows the grantor and the secured creditor to agree otherwise. Such an agreement may be implicit or explicit. The question of what constitutes an implicit agreement is left to the applicable contract interpretation rules. In addition, it should be noted that such an agreement may refer to the solvency the debtor of the receivable at the time when the security agreement is entered or at the time when the receivable will become payable.

16. The representation that the grantor has the right to create a security right was not carried over from recommendation 114 of the Secured Transactions Guide into article 57, to avoid giving the impression that it applies to security rights created only

in receivables. As a result, the matter is left to general law. It should be noted, however, that even where an anti-assignment agreement is included in the contract giving rise to the receivable or other agreement between a grantor and the debtor of the receivable, the grantor still has rights in the receivable or the power to encumber it, and thus may create an effective security right in the receivable (see arts. 6, para. 1, and art. 13, para. 1).

Article 58. Right of the grantor or the secured creditor to notify the debtor of the receivable

17. Article 58 is based on recommendation 115 of the Secured Transactions Guide (see chap. VI, paras. 74 and 75), which in turn is based on article 13 of the Assignment Convention. It sets out a rule, which the parties may vary or derogate from by agreement (see para. 1 above). Paragraph 1 provides that, when a security right has been created in a receivable, either the grantor or the secured creditor has the right to notify the debtor of the receivable of the existence of the security right and send a payment instruction; however, once notification of the security right has been received by the debtor of the receivable, only the secured creditor may send a payment instruction. It should be noted that, under article 62, a notification or a payment instruction is effective only when received by the debtor of the receivable.

18. It should be noted that, while they may be included in the same document, a payment instruction is conceptually distinct from a notification. The former normally explains to the debtor of the receivable how it is to make payment and the latter typically informs the debtor of the receivable that it owes its obligations to a different person. For example: (a) a notification may contain no payment instruction (e.g. because the secured creditor may have obtained control of the grantor's bank account to which debtors of receivables have been instructed by the grantor to pay); (b) the parties may have agreed that no notification but only a payment instruction will be given (e.g. because the transaction involved is a non-notification factoring or undisclosed invoice discounting transaction); and (c) the secured creditor may need to change its payment instructions and thus there may be more than one payment instruction.

19. Paragraph 2 provides that a notification sent in breach of an agreement between the grantor and the secured creditor is nevertheless effective for the purposes of article 63. This means that the debtor of the receivable that pays in accordance with that notification is discharged (see paras. 29-36 below). However, article 58 does not affect any obligation or liability that the secured creditor may have under other law for sending a notification to the debtor of the receivable in breach of an agreement with the grantor.

Article 59. Right of the secured creditor to payment of a receivable

20. Article 59 is based upon recommendation 116 of the Secured Transactions Guide (see chap. VI, paras. 76-80), which in turn is based on article 14 of the Assignment Convention. Changes made are intended to clarify the text, but not to change its policy. Article 59, which the parties may vary or derogate from by agreement (see para. 1 above), reiterates the right that a secured creditor with a security right in a receivable has (as against the grantor) under article 10 to receive the proceeds of the encumbered receivable.

21. Paragraph 1 provides that, regardless of whether notification of the security right has been sent to the debtor of the receivable, the secured creditor is entitled to: (a) retain the proceeds of any full or partial payment of the receivable made to the secured creditor, as well as any tangible assets (such as inventory) returned to the secured creditor in respect of the receivable; (b) payment of the proceeds of any full or partial payment of any receivable made to the grantor (as well as any tangible assets returned to the grantor); and (c) payment of the proceeds of any full or partial payment of any receivable made to another person (as well as any tangible assets returned to that person) if the right of the secured creditor has priority over the right of that person.

22. Paragraph 2 provides that, unless otherwise agreed (see para. 1 above), the secured creditor has the right to collect the full amount of the encumbered receivable, but has to account for and return to the grantor any surplus remaining after payment of the secured obligation (art. 79, para. 2, contains a similar rule). In the case of an outright transfer of a receivable by agreement, however, under paragraph 2, the transferee may retain the full amount collected, as that will be the "value" of its right in the receivable.

Article 60. Right of the secured creditor to preserve encumbered intellectual property

23. Article 60 is based on recommendation 246 of the Intellectual Property Supplement (paras. 223-226). It reiterates the principle of party autonomy set out in article 3, paragraph 1 (which is based on rec. 10 of the Secured Transactions Guide) and parallels the rule in article 53 (which is based on rec. 111 of the Secured Transactions Guide and applies only to tangible assets) to ensure that, if so agreed with the grantor, the secured creditor would be entitled to exercise rights that are normally rights of the intellectual property right holder (e.g. to deal with authorities, renew registrations and pursue infringers, even before default, provided that it is not prohibited by law relating to intellectual property). This is important, as, if the grantor (the intellectual property right holder) failed to exercise these rights in a timely fashion, the value of the encumbered intellectual property could diminish, and this could negatively affect the use of intellectual property as security for credit.

Section II. Rights and obligations of third-party obligors

A. Receivables

Article 61. Protection of the debtor of the receivable

24. Article 61 is derived from recommendation 117 of the Secured Transactions Guide (see chap. VII, para. 12), which in turn is based on article 15 of the Assignment Convention. Paragraph 1 sets out the general principle that the creation of a security right in a receivable does not affect the rights or obligations of the debtor of the receivable, unless the debtor of the receivable consents. So, for example, without the consent of the debtor of the receivable, the creation of a security right cannot change the payment terms of a contract giving rise to a receivable (e.g. the amount or the time of payment), alter the defences or rights of set-off that the debtor of the receivable may raise under the contract giving rise to the receivable or increase expenses in connection with payment of the receivable.

25. Whatever change is effected in the legal position of the debtor of the receivable as a result of the creation of a security right in the receivable, under paragraph 2 a payment instruction (whether given together with the notification or subsequently) may change the person, address or account to which the debtor of the receivable is required to make payment, as these changes do not affect the rights or obligations of the debtor of the receivable. However, a payment instruction may not change: (a) the currency in which the receivable is to be paid, as specified in the contract giving rise to the receivable; or (b) the State in which the payment is to be made, as specified in the contract giving rise to the receivable, to a State other than that in which the debtor of the receivable is located. This is because these changes would affect the debtor's rights and obligations. It should be noted that, unlike the Assignment Convention that includes in article 5, subparagraph (h), a rule of interpretation as to the location of a person for the purposes of the Convention, the Model Law includes in article 90 such a rule that applies only in the context of chapter VIII on conflict of laws. Thus, for example, the location of the debtor of the receivable referred to in paragraph 2 (b) should be understood in the light of other law of the enacting State.

Article 62. Notification of a security right in a receivable

26. Article 62 is based on recommendation 118 of the Secured Transactions Guide (see chap. VII, paras. 13-16), which in turn is based on article 16 of the Assignment Convention. It describes the requirements both for an effective notification of a security right in a receivable and for a payment instruction (which is conceptually distinct from a notification, see para. 18 above).

27. Under paragraph 1, a notification or a payment instruction is effective from the time when it is received by the debtor of the receivable, if it reasonably identifies the receivable and the secured creditor, and is in a language reasonably expected to inform the debtor of its contents. On this latter point, paragraph 2 makes it clear that the language of the contract giving rise to the receivable is always sufficient. Under paragraph 3, a notification (which may include a payment instruction or not) may relate not only to receivables in existence at the time the notification is given, but also may relate to receivables arising thereafter.

28. Paragraph 4 addresses a scenario where a receivable is the subject of multiple successive security rights (whether they secure payment or other performance of an obligation or are outright transfers; see art. 2, subpara. (kk)). The following example illustrates the operation of paragraph 4. A, to whom a receivable is owed, creates a security right in the receivable in favour of B. B then creates a security right in the receivable in favour of C. C then creates a security right in the receivable in favour of D. Notification to the debtor of the receivable relating to the security right created by C in favour of D will also constitute notification of the prior security rights created by A and B. The same result would arise if A transferred receivables to B, B then transferred them to C, and C thereafter transferred them to D. Notification to the debtor of the receivable relating to the outright transfer from C to D constitutes notification of the outright transfer from A to B.

Article 63. Discharge of the debtor of the receivable by payment

29. Article 63 is based on recommendation 119 of the Secured Transactions Guide (see chap. VII, paras. 17-20), which in turn is based on article 17 of the Assignment Convention. It sets out the rules dealing with the discharge of the debtor of the receivable by payment. It should be noted that the debtor of the receivable is discharged by payment in accordance with this article, even if payment is not made to the secured creditor that has priority. It should also be noted that this article and all articles of the Model Law with the exception of articles 72-82 apply also to outright transfers of receivables by agreement (see art. 1, para. 2).

30. Paragraph 1 embodies the basic principle that, until the debtor of the receivable receives notification of a security right in the receivable, it may be discharged by payment in accordance with the contract giving rise to the receivable. For example, where the contract is a sales contract, this means payment to the seller. However, under paragraph 2, once the debtor receives notification of a security right, it can only be discharged by paying either the secured creditor or another party, as instructed by the secured creditor in the notification or as subsequently instructed by the secured creditor in a written payment instruction received by the debtor. However, the rule in paragraph 2 is subject to a number of qualifications that are set out in paragraphs 3-8.

31. First, under paragraph 3, if the debtor of the receivable receives more than one payment instruction relating to a single security right (and, therefore, from the same secured creditor) in the same receivable created by the same grantor, it is discharged by paying in accordance with the last payment instruction received from the secured creditor before payment, as the last payment instruction will be the most recent (a payment instruction is conceptually distinct from notification; see para. 18 above).

32. Second, under paragraph 4, if the debtor of the receivable receives notification of more than one security right in the same receivable created by the same grantor, it is discharged by paying in accordance with the first notification received. In this way, the debtor of the receivable, having received one notification of a security right, need not concern itself whether the grantor retained any right to create a second security

right and, if so, which notification should be complied with. This rule also reflects the fact that it is likely that the security right covered by the first notification will have priority over the subsequent security right under the Model Law's priority rules. As already noted (see para. 29 above), the debtor of the receivable is discharged even if the first notification does not relate to the security right with priority, since the debtor cannot be required to determine which security right has priority. In such a case, the secured creditor with a security right that has priority will have to claim the proceeds of payment from the creditor to whom the debtor made the payment.

33. Third, under paragraph 5, if the debtor of the receivable receives notification of one or more subsequent security rights in the same receivable, it is discharged by paying in accordance with the notification of the last of such subsequent security rights. The following example illustrates the operation of paragraph 5. A, to whom a receivable is owed, creates a security right in the receivable in favour of B. B creates a security right in the receivable in favour of C. If the debtor of the receivable receives a notification from each of B and C, it will be discharged by paying C. The reason is that the last in such a series of successive secured creditors is most likely to be the person entitled to payment. One side effect of this rule, along with the rule in paragraph 4, is that the debtor of the receivable needs to be able to distinguish between multiple notifications relating to security rights granted by the same grantor (in which case the debtor of the receivable must pay in accordance with the first notification) and notifications of multiple subsequent security rights (in which case the debtor of the receivable must pay in accordance with the last notification). This matter is addressed in paragraph 8 (see para. 35 below).

34. Fourth, under paragraph 6, where the debtor of the receivable receives notification of a security right in a part of, or an undivided interest in, one or more receivables, the debtor has a choice. It is discharged by paying either in accordance with the notification or in accordance with paragraph 1 as if the debtor had not received the notification. However, if the debtor chooses the first of these alternatives, under paragraph 7, it is discharged only to the extent of the part or undivided interest paid.

35. Finally, under paragraph 8, if the debtor of the receivable receives notification from a person claiming to have a security right in the receivable and wants to make sure that that person is a secured creditor to whom payment will discharge the debtor of the receivable, the debtor of the receivable may request that person to provide, within a reasonable time, adequate proof of the creation of the security right. If the asserted security right was created by an initial or subsequent secured creditor, the adequate proof must include proof of the initial and subsequent security rights. If the person claiming to have a security right fails to provide the required proof, the debtor may pay as if it had not received the notification sent by that person. For this purpose, under paragraph 9, adequate proof includes any writing from the grantor that indicates that a security right has been created (e.g. a security agreement).

36. Paragraph 10 is intended to preserve any other ground for discharge based on payment to the person entitled to payment, as well as payment to a competent judicial or other authority, or to a public fund, under other law. For example, under paragraph 10, the debtor of the receivable is discharged if it pays the right person pursuant to a notification conforming with the requirements of the other applicable law but not with the requirements of articles 2 (y), 62 and 63, paragraphs 1-9. Similarly, the debtor of the receivable is discharged by making payment to a competent judicial or other authority, or to a public fund if so provided by the applicable law (e.g. where the debtor of the receivable receives notifications by different secured creditors and is not certain whom to pay in order to be discharged).

Article 64. Defences and rights of set-off of the debtor of the receivable

37. Article 64 is based on recommendation 120 of the Secured Transactions Guide (see chap. VII, para. 21), which in turn is based on article 18 of the Assignment Convention. Paragraph 1 (a) preserves, for the benefit of the debtor of the receivable, all defences and rights of set-off arising from the contract giving rise to the receivable,

including any other contract that was part of the same transaction, as if the security right had never been created and the claim were made by the grantor. Paragraph 1 (b) ensures that the debtor of the receivable can assert against the secured creditor any other right of set-off that was available to the debtor at the time it received notification of the security right. This means, however, that the debtor may not assert a right of set-off other than that set out in paragraph 1 (a) that arises subsequent to such notification. Under article 65, however, the debtor may agree not to raise the above-mentioned defences and rights of set-off against the secured creditor.

38. Consistent with article 13, paragraph 2, paragraph 2 of article 64 provides that paragraph 1 does not give the debtor of the receivable the right to raise against the secured creditor, as a defence or right of set-off, the breach of an agreement by the grantor that limits the grantor's right to create a security right in the receivable. Otherwise, the validation of a security right notwithstanding such an agreement, as provided in article 13, would be meaningless.

Article 65. Agreement not to raise defences or rights of set-off

39. Article 65 is based on recommendation 121 of the Secured Transactions Guide (see chap. VII, para. 22), which in turn is based on article 19 of the Assignment Convention. Paragraph 1 provides that the debtor of the receivable may agree, in a signed written agreement with the grantor, not to raise against the secured creditor the defences and rights of set-off that it could otherwise raise against that secured creditor under article 64. The secured creditor is entitled to invoke the benefit of such an agreement even though it is not a party to it.

40. Under paragraph 2, any modification to such an agreement must also be in a written agreement between the grantor and the debtor of the receivable that is signed by the debtor of the receivable. Such a modification is only effective as against the secured creditor if the secured creditor consents or, in the case of a receivable that has not been earned yet by performance, a reasonable secured creditor would consent (see art. 66, para. 2).

41. To avoid abuses, paragraph 3 provides that the debtor may not waive defences based on fraud committed by the secured creditor or on the debtor's incapacity (see art. 30 of the Bills and Notes Convention). Paragraph 3 does not prevent the debtor of the receivable (e.g. the buyer in a sales agreement) from waiving defences relating to fraud committed by the grantor (e.g. the seller). If the debtor of the receivable could not waive such defences, the secured creditor would have to conduct an investigation in this regard and this could result in uncertainty.

Article 66. Modification of the contract giving rise to a receivable

42. Article 66 is based on recommendation 122 of the Secured Transactions Guide (see chap. VII, paras. 23 and 24), which in turn is based on article 20 of the Assignment Convention. It addresses the impact of an agreement between the grantor of a security right in a receivable and the debtor of the receivable that modifies the terms of the receivable. The result depends on when the agreement is made. Under paragraph 1, if the agreement is concluded before the debtor receives notification of a security right in the receivable, it is effective against the secured creditor, but the secured creditor also enjoys any benefits derived from the agreement.

43. Under paragraph 2, even if the agreement is concluded after notification, it is also effective, even if it affects the secured creditor's rights provided that: (a) the secured creditor consents to it; or (b) the receivable has not been fully earned by performance and either the modification was provided for in the contract giving rise to the receivable or a reasonable secured creditor would consent to the modification. Otherwise, an agreement concluded after notification of the security right is not effective against the secured creditor. Paragraph 3 provides that paragraphs 1 and 2 do not affect any right of the grantor or secured creditor for breach of an agreement between them (such as an agreement that the grantor would not agree to any modifications of the terms of the receivable).

Article 67. Recovery of payments

44. Article 67 is based on recommendation 123 of the Secured Transactions Guide (see chap. VII, paras. 25 and 26), which in turn is based on article 21 of the Assignment Convention. It addresses the situation in which the grantor of a security right in a receivable (including the transferor in an outright transfer of the receivable by agreement) fails to perform its obligations under the contract giving rise to the receivable. The article insulates the secured creditor from liability in this situation, by providing that the debtor of the receivable may not look to the secured creditor for recovery of any amount that it has paid to either the grantor or the secured creditor. As a result, the sole recourse of the debtor of the receivable in such a situation is against the grantor and the debtor of the receivable bears the risk of the grantor's insolvency.

B. Negotiable instruments

Article 68. Rights as against the obligor under a negotiable instrument

45. Article 68 is based on recommendation 124 of the Secured Transactions Guide (see chap. VII, paras. 27-31). It is intended to preserve the rights of parties under the relevant law of the enacting State relating to negotiable instruments (to be specified by the enacting State in its enactment of this article). For example, if the enacting State's law is substantively identical to the Bills and Notes Convention: (a) the maker of a note is obliged to pay the secured creditor with a security right in the note only if the secured creditor is a holder of the note or has paid it; (b) the maker of a note is obliged to pay the secured creditor only when payment becomes due under the terms of the note; (c) if the secured creditor is a "protected holder" of a note, the defences that the maker of the note may raise against the secured creditor may be significantly limited. It should be noted that the reference in article 68 (as well as arts. 70 and 71) to other relevant law relating to negotiable instruments to be specified by the enacting State will be the law of the enacting State's law only if that law is the applicable law under the conflict-of-laws rules of chapter VIII.

C. Rights to payment of funds credited to a bank account

Article 69. Rights as against the deposit-taking institution

46. Article 69 is based on recommendations 125 and 126 of the Secured Transactions Guide (see chap. VII, paras. 32-37). It addresses the situation in which a security right is created in a right to payment of funds credited to a bank account.

47. Paragraph 1 (a) provides that the rights and obligations of the deposit-taking institution are unaffected by the security right, unless the institution consents. The rationale for protecting deposit-taking institutions in this manner is that imposing duties on such an institution or changing the rights and duties of the institution without its consent may subject that institution to risks that it is not in a position to manage appropriately unless it knows in advance what those risks might be, and to the risk of having to violate obligations imposed by other law, such as sanctions law (see Secured Transactions Guide, chap. VII, para. 33).

48. To safeguard the confidentiality of the relationship of a deposit-taking institution and its client that is imposed by regulatory or other law, paragraph 1 (b) also provides that the deposit-taking institution has no obligation to respond to requests from third parties for information (e.g. about the balance in the account, whether a control agreement exists or whether the account holder retains the right to dispose of funds credited to its bank account).

49. Paragraph 2 addresses situations in which the deposit-taking institution has a security right in the right to payment of funds credited to a bank account maintained at that institution and also has a right of set-off against that right to payment of funds.

The paragraph provides that the deposit-taking institution's right of set-off is not limited by the security right. Thus, if, under applicable law of set-off, the set-off rights are broader than the rights of a secured creditor under the Model Law, the deposit-taking institution may avail itself of those broader rights. The policy rationale for this rule is the need to protect the general operations of deposit-taking institutions and to preserve the rights of set-off that a deposit-taking institution may have under other law (see Secured Transactions, chap. VII, para. 34).

D. Negotiable documents and tangible assets covered by negotiable documents

Article 70. Rights as against the issuer of a negotiable document

50. Article 70 is based on recommendation 130 of the Secured Transactions Guide (see chap. VII, paras. 43-45). It provides that, when a secured creditor has a security right in a negotiable document, the rights of the secured creditor as against the issuer of the document or any person obliged on the document are determined by the law relating to negotiable documents of the enacting State (to be specified by the enacting State in its enactment of this article).

E. Non-intermediated securities

Article 71. Rights as against the issuer of a non-intermediated security

51. As already mentioned, the Secured Transactions Guide does not address security rights in any types of securities (see rec. 4 (c)). Thus, article 71 has no antecedent in the Secured Transactions Guide. In line with articles 68-70, it provides that the rights of a secured creditor holding a security right in non-intermediated securities as against the issuer of the securities are determined by other law of the enacting State (to be specified by the enacting State in its enforcement of this article).

Chapter VII. Enforcement of a security right

A. General rules

Article 72. Post-default rights

52. Article 72 is based on recommendations 133, 139, 141, 143, and 144 of the Secured Transactions Guide (see chap. VIII, paras. 10-12, 15-17, and 34 and 35). Paragraph 1 provides that, following the grantor's default, the grantor and the secured creditor may exercise any right they have under the provisions of chapter VII, other law or the security agreement, provided that, in the last two cases, that right is not inconsistent with the provisions of the Model Law. In denying effect to any inconsistent terms of the security agreement, this proviso indirectly operates to limit party autonomy in relation to enforcement (for an additional limit to party autonomy, see para. 55 below).

53. For the purposes of the Model Law, "default" is defined to mean the failure of the debtor to pay or otherwise perform the obligation secured by the security right and any other event agreed to by the parties in their security agreement as constituting "default" (see art. 2, subpara. (j)). It should be noted that the only one of the secured creditor's rights provided in this chapter that may be exercised before default is the right to collect an encumbered receivable (see art. 82, para. 2, and 83).

54. The Model Law adopts the policy that maximizing flexibility in enforcement is likely to increase the efficiency of the enforcement process (see Secured Transactions Guide, rec. 143 and chap. VIII, para. 34). Accordingly, paragraph 2 indicates that the exercise of one post-default right does not prevent the exercise of another post-default

right, except if the exercise of one right makes it impossible to exercise of the other right. For example, a secured creditor that obtains possession of an encumbered asset under article 77 with the initial intention of disposing of it under article 78 may thereafter propose to acquire it in satisfaction of the secured obligation under article 80, unless the secured creditor has already sold or agreed to sell the asset.

55. Paragraph 3 provides that, before default, neither the grantor nor the debtor (defined to include a secondary debtor such as a guarantor of the secured obligation; see art. 2, subpara. (h)) may waive unilaterally or vary by agreement its rights under this chapter. In the absence of this provision, a secured creditor with superior bargaining power could put pressure on them to waive or vary their rights before default in return for concessions in the security agreement (see Secured Transactions Guide, chap. VIII, paras. 16 and 17). After default, this is no longer an issue and thus the grantor or the debtor may waive or vary its rights under the provisions of this chapter.

56. With the exception of article 83, the provisions of this chapter do not apply to an outright transfer of receivables by agreement (see art. 1, para. 2). Consequently, the terms "encumbered asset", "grantor", "secured creditor", "security agreement" and "security right" in articles 72-82 should be read with this exclusion in mind.

Article 73. Methods of exercising post-default rights

57. Article 73 is based on recommendation 142 of the Secured Transactions Guide (see chap. VIII, paras. 18-20 and 29-33). Paragraph 1 provides that the secured creditor has a choice to exercise its post-default rights judicially (i.e. by application to a court or other authority vested with adjudicative power) or extra-judicially (i.e. without an application to a court or other authority). It should be noted that public notaries, bailiffs, sheriffs or other court enforcement officers typically assist in enforcement by a court or other authority but do not have adjudicative powers to resolve disputes and issue decisions binding on all parties.

58. There are a number of reasons why a secured creditor may prefer to exercise its post-default rights by application to a court or other authority. For example: (a) judicial or similar proceedings may not be efficient; (b) the secured creditor may wish to avoid having its extrajudicial actions subsequently challenged; (d) the secured creditor may anticipate that it will have to apply to a court or other authority anyway to recover an anticipated deficiency; or (d) the secured creditor may fear and wish to avoid a breach of public order (see Secured Transactions Guide, chap. VIII, paras. 32 and 33).

59. A secured creditor may instead elect to exercise its post-default rights extra-judicially because, for example, it fears that judicial proceedings may be too slow and costly, or less likely to produce an appropriate amount upon the disposition of the encumbered assets (see Secured Transactions Guide, chap. VIII, paras. 29 and 31).

60. Under paragraph 2, the secured creditor's judicial exercise of its post-default rights is subject to the provisions of this chapter and to the provisions that are specified for this purpose by the enacting State. As inefficient enforcement mechanisms are likely to have a negative impact on the availability and the cost of credit (see Secured Transactions Guide, chap. VIII, para. 29), paragraph 2 also refers to expeditious enforcement proceedings. Such proceedings may, for example, include proceedings involving only affidavit evidence, proceedings in which hearings are held, challenges are disposed of and decisions are rendered in as expeditious a manner as possible, and proceedings in which court decisions are executed without an official seizure or sale of assets (see Secured Transactions Guide, chap. VIII, para. 33).

61. Under paragraph 3, the extrajudicial exercise by the secured creditor of its post-default rights is governed by the provisions of this chapter. These provisions incorporate advance notice and other procedural protections for the grantor, the debtor and third parties whose rights may be affected. For example, under article 77, paragraph 2, the secured creditor may exercise its extra-judicial right to possession of the encumbered asset only if it has the grantor's advance written consent, notified the

grantor and any person in possession of the debtor's default and of its intent to obtain possession, and the person in possession does not object (see further para. 72 below).

62. Moreover, a secured creditor's extrajudicial exercise of its post-default rights is subject to the overarching obligation in article 4 to exercise those rights in good faith and in a commercially reasonable manner. In this respect, it should be noted that the Model Law does not preclude recourse to the assistance of a court or other authority at any time to resolve a dispute arising in relation to the extrajudicial exercise of a post-default right. To the contrary, under article 74, if the secured creditor does not comply with its obligations under this chapter, the grantor, any person with a right in the encumbered asset or the debtor (option A), or any person whose rights are affected by the non-compliance of another person with the provisions of the Model Law (option B) is entitled to apply for expeditious relief from the court or other authority specified by the enacting State.

Article 74. Relief for non-compliance

63. Article 74 is based on recommendation 137 of the Secured Transactions Guide (see chap. VII, para. 31). It addresses the availability of relief from a court or other specified authority in the case of a person's non-compliance with its obligations under the provisions of this chapter. It also requires the enacting State to specify the court or other authority to which the party seeking relief should apply and to provide also for expeditious forms of proceedings (see para. 60 above).

64. Two options are provided for the enacting State to choose between. The first option addresses non-compliance only by the secured creditor, and provides that relief may be sought by: (a) the grantor; (b) any other person with a right in the encumbered asset whose rights are affected by that non-compliance; or (c) the debtor. The second option is broader, addressing non-compliance by any person, and giving any person affected by that non-compliance the right to seek relief. It should be noted that a breach of the secured creditor's obligations under the provisions of this chapter would typically include a breach by persons acting on behalf of the secured creditor (such as representatives, employees or service providers). It should also be noted that the persons that may be affected include: (a) a competing claimant; (b) a guarantor of the secured obligation; or (c) a co-owner of an asset in which another co-owner has created a security right.

Article 75. Right of affected persons to terminate enforcement

65. Article 75 is based on recommendation 140 of the Secured Transactions Guide (see chap. VIII, paras. 22-24). Paragraph 1 entitles the grantor, any other person with a right in the encumbered asset or the debtor to terminate the enforcement process by paying or otherwise performing the secured obligation in full (this right is known in some jurisdictions as the right to "redeem" the encumbered asset). In practice, this right is likely to be exercised when the value of the encumbered asset is significantly higher than the amount of the obligation secured by the security right of the enforcing secured creditor. It should be noted that, unlike recommendation 140 of the Secured Transactions Guide, article 75 does not address the extinguishment of a security right, because this matter is addressed in article 12 of the Model Law.

66. Full payment, for the purposes of paragraph 1, includes payment of the reasonable cost of enforcement incurred by the secured creditor whose enforcement is sought to be terminated. If the party exercising the termination right challenges the reasonableness of the enforcing creditor's statement of its enforcement costs and enforcement was initiated by an application to a court or other authority, this dispute would be resolved by the relevant authority. In the case of extrajudicial enforcement, the party exercising the termination right may seek the assistance of a court or other authority specified in article 74 to determine whether the secured creditor's assertion that the cost of enforcement is reasonable.

67. Under paragraph 2, the right to terminate enforcement is extinguished once the relevant enforcement process has reached a point when the asset is no longer available

to be the subject of enforcement (see para. 69 below). Thus, this right cannot be exercised once the secured creditor has sold or otherwise disposed of, acquired or collected the encumbered asset, or entered into an agreement for the sale or other disposition of the encumbered asset. Otherwise, the finality of acquired rights would be undermined (see further paras. 90-93 below). Under paragraph 3, the right to terminate enforcement may still be exercised even after the secured creditor has enforced its security right by entering into a lease or licence agreement under article 78. However, the party exercising the termination right must respect the rights of the lessee or licensee under its agreement with the secured creditor whose enforcement has been terminated.

Article 76. Right of a higher-ranking secured creditor to take over enforcement

68. Article 76 is based on recommendation 145 of the Secured Transactions Guide (see chap VIII, para. 36). Paragraph 1 deals with a situation where a lower-ranking secured creditor or a judgment creditor has commenced enforcement. It entitles a secured creditor, whose security right has priority over that of the enforcing creditor ("higher-ranking secured creditor") to take over enforcement. The right of the higher-ranking secured creditor to take over enforcement, if it so wishes, is justified because of the potential impact of enforcement on its rights. In particular, if a subordinate creditor exercises its right to dispose of the encumbered asset judicially, the security right of the higher-ranking secured creditor will usually be extinguished (see art. 81, para. 1, and para. 90 below) and replaced by a right to priority of payment out of the proceeds realized by the subordinate creditor (see art. 79, para. 1 and para. 81 below); it therefore has an interest in controlling the enforcement process. If the subordinate creditor instead exercises its disposition right extra-judicially, the security right of the higher-ranking creditor will follow the asset into the hands of the transferee to whom the enforcing creditor disposes of the asset (see art. 81, para. 3, and para. 91 below), thereby potentially forcing the higher-ranking secured creditor to commence enforcement proceedings against that transferee.

69. As in the case of the right of termination in article 75, the right of the higher-ranking secured creditor to take over the enforcement process under this article must be exercised before the asset is sold or otherwise disposed of, acquired, or collected by the subordinate creditor or before the conclusion of an agreement by the subordinate creditor with a third party to dispose of the encumbered asset. This is so because, after that time, the asset is no longer available to be the subject of an enforcement process.

70. Under paragraph 2, the right of the higher-ranking secured creditor to take over the enforcement process includes the right to enforce by any of the methods provided in this chapter. This means that the higher-ranking secured creditor may elect to pursue a different enforcement right than that contemplated by the original enforcing creditor. It should be noted, however, that the exercise of this right is subject to the standard in article 4. Accordingly, the secured creditor is obliged to act in good faith and in a commercially reasonable manner, so that it should, for example, avoid incurring unreasonable additional enforcement costs.

Article 77. Right of the secured creditor to obtain possession of an encumbered asset

71. Article 77 is based on recommendations 146 and 147 of the Secured Transactions Guide (see chap. VIII, paras. 37-48 and 51-56) and applies only to tangible assets, as only tangible assets may be the subject of possession (for the definitions of the terms "tangible asset" and "possession", see art. 2, subparas. (ll) and (z)). Paragraph 1 provides a secured creditor with two options for obtaining possession of a tangible encumbered asset. First, the secured creditor may obtain possession of an encumbered asset by application to a court or other authority. Alternatively, the secured creditor may obtain possession extra-judicially, provided that the conditions set out in paragraphs 2 and 3 are satisfied. Regardless of whether it proceeds judicially or extra-judicially, the secured creditor's right to possession

under paragraph 1 is subordinate to the right of a person that has a superior right to possession (e.g. a lessee or licensee whose rights are not affected by a security right under art. 34, para. 3, or para. 5).

72. Under paragraph 2, the secured creditor's right to obtain possession extra-judicially is available only if all the conditions set out in that paragraph are met. These conditions are designed to protect the public interest in a peaceful enforcement process and to ensure that that the interests of the grantor or other person in possession are not unduly prejudiced. First, the grantor must have consented in writing to the secured creditor obtaining possession without resort to a court or other authority (typically, the secured creditor will obtain the grantor's consent in the security agreement). Second, the secured creditor must give the grantor and any person in possession of the encumbered asset notice of default and of the secured creditor's intent to obtain possession (the enacting State may wish to specify how much advance notice must be given and select a period that would be in line with the good faith and commercial reasonableness standard in art. 4). Third, and perhaps most important, the person in possession of the encumbered asset at the relevant time must not object to the secured creditor obtaining possession. Thus, the secured creditor must obtain the assistance of a court or other authority if the person in possession objects, even if that person is the grantor and even if the grantor has previously agreed to allow the secured creditor to obtain possession extra-judicially.

73. It should be noted, however, that a secured creditor is usually entitled to be reimbursed for its reasonable enforcements costs from the proceeds realized from a disposition of the encumbered asset. It follows that, as a practical matter, the person in possession is unlikely to raise unfounded objections if that person is the debtor or the grantor (as an unfounded objection will amount in effect to a breach of the credit or security agreement). If instead the person in the possession is a third party, an unfounded objection is also unlikely to be made since this may expose that person to liability to pay the additional costs incurred by the secured creditor in having to seek judicial assistance.

74. Paragraph 3 recognizes that even relatively short delays in giving the advance notice required by paragraph 2 can be economically wasteful if the encumbered assets are perishable or otherwise likely to decline speedily in value. Accordingly, paragraph 3 dispenses with the advance notice requirement in those cases.

75. Under paragraph 4, a lower-ranking secured creditor is not entitled to obtain possession of an encumbered asset that is in the possession of a higher-ranking secured creditor, unless otherwise agreed. The purpose of this provision is to ensure that the security right of a higher-ranking secured creditor that was made effective against third parties by possession does not cease to be effective against third parties and thus does not lose its priority status through the relinquishing of possession to the lower-ranking secured creditor. It should be noted that the lower-ranking secured creditor may exercise its right to dispose of the encumbered asset under article 78 without obtaining possession, for example, by selling it extra-judicially. The buyer in this situation will acquire its rights subject to the right of the higher-ranking secured creditor, but, as a practical matter, could obtain possession only by paying off the higher-ranking secured creditor (see art. 81). If the lower-ranking secured creditor instead exercises its disposition right judicially, the security right of the higher-ranking secured creditor will be extinguished, meaning that the buyer will be entitled to obtain possession. However, the higher-ranking secured creditor will be entitled to priority of payment out of the proceeds of the disposition (see art. 79). It follows that the lower-ranking creditor is unlikely to initiate judicially-supervised disposition proceedings unless the proceeds to be realised from the disposition of the encumbered asset are likely to be sufficient to satisfy both its claim and the amount owed to the higher-ranking secured creditor.

Article 78. Right of the secured creditor to dispose of an encumbered asset

76. Article 78 is based on recommendations 148-151 of the Secured Transactions Guide (see chap. VIII, paras. 48 and 57-60). Paragraph 1 provides that the secured

creditor may sell or otherwise dispose of, lease, or license an encumbered asset judicially or extra-judicially. Paragraph 2 provides that, if the secured creditor elects the former option it must act in accordance with the rules specified by the enacting State that determine the method, manner, time, place and other aspects of the sale or other disposition, lease or licence.

77. Paragraphs 3-8 deal with extrajudicial dispositions by the secured creditor. Under paragraph 3 provided that its actions are in conformity with the overarching obligation to act in good faith and in a commercially reasonable manner (see art. 4), the secured creditor is entitled to determine all aspects of the sale or other disposition, lease or licence, including: (a) the method, manner, time and place; and (b) whether to sell or otherwise dispose of, lease or license the encumbered assets individually, in groups or all together (see Secured Transactions Guide, chap. VIII, paras. 71-73).

78. Under paragraph 4, the secured creditor must give advance written notice of its intention to dispose of the encumbered assets extra-judicially to the grantor, the debtor, any person with a right in the encumbered asset that notifies the secured creditor in writing of those rights, any other secured creditor that registered a notice in the Registry and any other secured creditor in possession (see paras. 4 (a)-(d)). In the case of other persons with rights in the encumbered asset that notified the enforcing secured creditor of their rights or secured creditors that registered a notice in the Registry (see paras. 4 (b) and (c)), the enforcing secured creditor has to give notice to them at least a short period of time specified by the enacting State before the notice is sent to the grantor (e.g. one to five days to allow those other secured creditors to exercise their rights, for example to take over enforcement under article 76).

79. Paragraph 5 sets out the specific information that must be included in the notice and requires the enacting State to specify the period of advance notice (e.g. ten to fifteen days to give the grantor sufficient time to consider the proposal). Paragraph 6 requires the notice to be in a language that is reasonably expected to inform the recipient about its content and paragraph 7 provides that the language of the security agreement is sufficient to meet this standard.

80. Under paragraph 8, the notice need not be given if the encumbered asset is perishable, may decline in value speedily, or is of a kind sold on a recognized market. “Recognized market” in this context means an organized market in which large volumes of similar assets are bought and sold between many different sellers and buyers, and accordingly one in which prices are set by the market and not negotiated between individual sellers and buyers. For example, a recognized market would include a stock exchange through which shares of publicly listed companies may be bought and sold at publicly-quoted prices. In contrast, shares in a privately held company are usually bought and sold in discrete transactions on the basis of individual negotiations between seller and buyer, and would not fall within the exception.

Article 79. Distribution of the proceeds of a disposition of an encumbered asset and debtor’s liability for any deficiency

81. Article 79 is based on recommendations 152-155 of the Secured Transactions Guide (see chap. VIII, paras. 60-64). It addresses the distribution of the proceeds of a sale or other disposition, lease or licence under article 78. If the secured creditor initiated the disposition by application to a court or other authority, paragraph 1 provides that distribution of the proceeds is determined by rules that must be specified by the enacting State, but the distribution must be in accordance with the priority rules of the Model Law. This requirement should be read in light of article 81, paragraph 1, which requires the enacting State to specify whether or not a buyer or other transferee in the context of a judicially-supervised disposition acquires the grantor’s right in the encumbered asset free of any other rights. Considering that paragraph 1 of this article requires secured creditors to be paid from the proceeds of a court-supervised disposition in their order of priority, it follows that the enacting State should specify in article 81, paragraph 1, that the transferee takes free of all security rights in the encumbered asset, including security rights having priority over the security right of the enforcing creditor (see para. 90 below).

82. Paragraph 2 addresses, the distribution of the proceeds of an extrajudicial sale or other disposition, lease or licence that is carried out by a secured creditor. Under paragraph 2 (a), the enforcing secured creditor is entitled to apply the proceeds in satisfaction of the obligation secured by its security right after first reimbursing itself for its reasonable costs of enforcement. Under paragraph 2 (b), any surplus must be paid to subordinate competing claimants that have notified the enforcing secured creditor of their claims, with any remaining balance then paid to the grantor. This is so because the rights of subordinate competing claimants in the encumbered asset are extinguished under article 81, paragraph 3. Alternatively, in order to relieve the enforcing creditor of having to determine the order of priority of competing claimants, paragraph 2 (c) entitles the enforcing secured creditor to pay the surplus to the judicial or other authority or fund specified by the enacting State for distribution in accordance with the provisions of the Model Law on priority. It should be emphasized that paragraph 2 (c) does not entitle higher-ranking creditors to payment from the proceeds. This is because, under article 81, paragraphs 3 and 4, the security right of a higher-ranking secured creditor is not extinguished by an extrajudicial disposition made by a lower-ranking secured creditor.

83. If the net proceeds of disposition are insufficient to satisfy the obligation secured by the security right of the enforcing secured creditor, paragraph 3 confirms that the debtor remains personally obliged to pay the deficiency. The Model Law does not address the question of whether the debtor's obligation may be reduced or extinguished if the secured creditor failed to comply with the provisions of this chapter governing dispositions or failed to exercise its post-default rights in good faith and in a commercially reasonable manner. Whether the debtor has a claim or counter-claim in these circumstances is a matter left to other law of the enacting State, including in particular its consumer protection law.

84. It should be noted that, in order for the provisions of paragraphs 2 and 3 to operate as intended, the secured creditor will need to provide an accounting of the disposition, specifying the amount of proceeds realized, how they were distributed and the amount of any surplus or deficiency.

Article 80. Right to propose the acquisition of an encumbered asset by the secured creditor

85. Article 80 is based on recommendations 156-159 of the Secured Transactions Guide (see chap. VIII, paras. 65-70). It applies to the enforcement of a security right in both tangible and intangible assets. Paragraph 1 entitles a secured creditor to make a proposal in writing to acquire one or more of the encumbered assets in total or partial satisfaction of the obligation secured by its security right. Under paragraph 2, the secured creditor must send the proposal to the same categories of persons to whom advance notice of an intended extrajudicial disposition must be sent under article 78, paragraph 4 (see para. 78 above). In the case of other persons with rights in the encumbered asset that notified the enforcing secured creditor of their rights or secured creditors that registered a notice in the Registry (see paras. 2 (b) and (c)), the enforcing secured creditor has to give notice to those other secured creditors at least a short period of time specified by the enacting State (e.g. one to five days to allow those persons to exercise their rights before the proposal is sent) before the proposal is sent to the grantor.

86. Paragraph 3 sets out the required content of the proposal. Whether a proposal that contains erroneous information or omits required information would result in the secured creditor failing to acquire the encumbered asset would depend, by analogy to article 81, paragraph 5, on whether the error or omission materially prejudiced the rights of the persons entitled to receive the proposal (e.g. a substantial misstatement of the amount of the secured obligation would typically be viewed as resulting in material prejudice).

87. In the case of a proposal for the acquisition of an encumbered asset in full satisfaction of the secured obligation, paragraph 4 provides that the secured creditor acquires the encumbered asset so long as none of the persons to whom the proposal must be sent under paragraph 2 objects before the expiry of the period specified by

the enacting State after they receive the proposal (e.g. 10 to 15 days to allow sufficient time for the addressees of the proposal to consider whether they should object, although acquisition of the encumbered asset by the secured creditor would result in full satisfaction of the secured obligation and thus in their full discharge). If a timely objection is made, the secured creditor may not proceed further and may only enforce its security right by disposition under article 78 (or collection under art. 82 where the encumbered asset is a right to payment).

88. In the case of a proposal for the acquisition of an encumbered asset in partial satisfaction of the secured obligation, paragraph 5 provides that the secured creditor acquires the encumbered asset only if all of the persons to whom the proposal must be sent under paragraph 2 positively consent before the expiry of the period specified by the enacting State after they receive the proposal (e.g. 45 days to allow sufficient time for the addressees of the proposal to consider whether they should accept although the acquisition of the asset by the secured creditor would result only in partial satisfaction of the secured obligation and thus they would remain personally liable for the balance). The requirement of positive consent in this paragraph is intended to protect the debtor, since, as the secured obligation is only partially satisfied, it would remain liable for the balance of the obligation. It is also to protect any subordinate claimant whose rights would be extinguished under article 81 paragraph 3 (see para. 91 below). As in the case of an unsuccessful proposal under paragraph 3, if the secured creditor does not obtain positive consent, it may only enforce its security right by disposition under article 78 (or collection if the encumbered asset is one of the rights to payment set out in art. 82).

89. Paragraph 6 entitles the grantor to request the secured creditor to make a proposal under paragraph 1. If the secured creditor agrees, paragraphs 1-5 apply in the same manner as if the secured creditor had been the one to initiate the proposal process. In other words, this provision is merely facilitative in nature since the formal proposal process remains the same even where it is initially triggered by a request from the grantor to the secured creditor.

Article 81. Rights acquired in an encumbered asset

90. Article 81 is based on recommendations 160-163 of the Secured Transactions Guide (see chap. VIII, paras. 74-81). It addresses the rights acquired by a buyer or other transferee, or a lessee or licensee, pursuant to a disposition under article 78. Paragraphs 1 and 2 address judicially-supervised dispositions and require the enacting State to specify: (a) in the case of a sale or other transfer, whether or not the transferee acquires the encumbered asset free of any rights; and (b) in the case of a lease or licence, whether or not the lessee or licensee remains entitled to use the encumbered asset during the term of the lease or licence. As already noted (see para. 81 above), article 79, paragraph 1, requires the distribution of the proceeds of a judicially-supervised sale or other disposition, lease or licence to be made in accordance with the priority rules of the Model Law. This requirement means that all secured creditors are entitled to share in the proceeds in order of priority. It follows that the enacting State should specify in paragraphs 1 and 2 that a buyer or other transferee acquires the encumbered asset free of, and a lessee or licensee is entitled to the benefit of the lease or licence unaffected by, any security rights (including security rights ranking higher in priority to that of the enforcing secured creditor).

91. Paragraphs 3 and 4 take a different approach in the case of an extrajudicial sale or other disposition, lease or licence of an encumbered asset. Under paragraph 3, a buyer or other transferee acquires the grantor's right in the encumbered asset free of the security right of the enforcing creditor and the rights of any subordinate competing claimants, but subject to the rights of secured creditors that have priority over the rights of the enforcing secured creditor. The enacting State may wish to consider providing that the rule in article 81, paragraph 3, applies also in the case of the acquisition of an encumbered asset by the secured creditor (see Secured Transactions Guide, rec. 161, second sentence).

92. Paragraph 4 similarly provides that a lessee or licensee is entitled to the benefit of the lease or licence during its term except as against creditors that have priority

over the rights of the enforcing creditor. The reason for the difference in approach is that higher-ranking secured creditors are not entitled to share in the proceeds of an extrajudicial enforcement initiated by a subordinate creditor (see art. 79, para. 2, and para. 82 above). It follows that a buyer or other transferee will discount the price it is willing to pay for the encumbered asset by the value of any prior-ranking security rights and a lessee or licensee will discount the amount of the rental payments it is willing to pay to address the risk that its right of use may be disrupted if the higher-ranking secured creditor elects to enforce its security right.

93. Paragraph 5 provides that the rights acquired by a buyer or other transferee, or a lessee or licensee under paragraphs 3 and 4 of this article are affected by the enforcing creditor's failure to comply with the requirements of this chapter only if two conditions are satisfied. First, they must have had knowledge of the violation, and second, the breach must have materially prejudiced their rights.

B. Asset-specific rules

Article 82. Collection of payment

94. Article 82 is based on recommendations 169-171, 173 and 175 of the Secured Transactions Guide (see chap. VIII, paras. 93-98, 102-108, 111 and 112). It provides secured creditors with an additional enforcement right where the encumbered asset is a receivable, negotiable instrument, right to payment of funds credited to a bank account or non-intermediated security. Paragraph 1 entitles the secured creditor to collect payment directly from the relevant obligor after default, as an alternative to selling or otherwise disposing of the encumbered asset under article 78. Under paragraph 2, with the agreement of the grantor, the secured creditor may exercise its right to collect even before default. Under paragraph 3, a secured creditor that collects under paragraph 1 or 2 has the benefit of any personal or property right that secures or supports payment of the encumbered asset (such as a guarantee or a stand-by letter of credit; see art. 14).

95. Paragraph 4 limits the secured creditor's right of collection if the encumbered asset is a right to payment of funds credited to a bank account and the security right was made effective against third parties solely by registration. In this situation, the secured creditor is entitled to collect (or otherwise enforce, for example, through a sale under art. 78 or through a proposal under art. 80) only if it obtains a court order or the deposit-taking institution consents. Paragraph 4 does not limit a secured creditor's right of collection where its security right was made effective against third parties by a method other than registration; that is: (a) automatically by the security right being created in favour of the deposit-taking institution itself; (b) by the conclusion of a control agreement between the deposit-taking institution, the grantor (account holder) and the secured creditor; or (c) by the secured creditor becoming the account holder, a method that requires the consent of the institution (see art. 25). The objective of this approach is to exempt deposit-taking institutions from having to respond to a request for payment sent by a person that asserts to have a security right in a right to payment of funds credited to the grantor's account unless the institution has actively consented to the creation of that security right (see Secured Transactions Guide, chap. VIII, para. 107).

Article 83. Collection of payment by an outright transferee of a receivable

96. Article 83 is based on recommendations 167-168 of the Secured Transactions Guide (see chap. VIII, paras. 99-101). It provides that, in the case of an outright transfer of a receivable, the transferee is entitled to collect the receivable at any time provided that payment has become due. It should be noted that the overarching obligation of good faith and commercial reasonableness in article 4 also extends to the collection of receivables by an outright transferee. As a practical matter, where the receivable is transferred outright without recourse, the transferor cannot by definition be prejudiced by the failure of the transferee to act in good faith and in a

commercially reasonable manner in exercising its collection right. However, the standard in article 4 is a general one and would still apply to protect the obligor on the receivable as well as a prior-ranking creditor even in the case of an outright transfer without recourse.

ADDENDUM

Contents

Chapter VIII. Conflict of laws

Introduction

1. Chapter VIII of the Model Law states the rules for determining the substantive law applicable to the issues dealt with in the other chapters. These rules are generally referred to as the conflict-of-laws rules. In a State that has enacted the Model Law, a court or other authority will use the conflict-of-laws rules of chapter VIII to determine which State's substantive law will govern issues such as the creation, effectiveness against third parties, priority and enforcement of a security right, as well as the mutual rights and obligations of the grantor and the secured creditor and the rights and obligations between third-party obligors and secured creditors. The substantive law indicated by the conflict-of-laws rules may be that of the enacting State or the law of another State.

2. It should be noted that, in the event of judicial proceedings in a State, a court or other authority in that State will typically apply: (a) the substantive law of its own legal system to characterize a transaction (e.g. whether it is a secured transaction in a strict sense or a different kind of transaction such as a retention-of-title sale) or a related issue (e.g. whether it is a priority or enforcement issue) for the purpose of selecting the appropriate conflict-of-laws rule; (b) the conflict-of-laws rules of its own legal system to determine which State's law is applicable to the substance of the dispute; and (c) the substantive law of the State whose law is applicable according to the conflict-of-laws rules of the forum State (for a more elaborate discussion of the role of conflict-of-laws rules, see Secured Transactions Guide, chap. X, paras. 1-13). For example, if a State enacts the Model Law and a court in that State characterizes a transaction as a secured transaction in accordance with the Model Law, it would use the rules in chapter VIII to determine which State's substantive law rules should apply, and then apply those rules.

3. The application of the conflict-of-laws rules in chapter VIII are not conditional on a prior determination that a particular case presents an international element. Thus, whenever a conflict-of-laws rule in this chapter refers to the law of a State, that reference should not be refused on the ground of the absence of true "internationality". Otherwise, courts might disregard a conflict-of-laws rule in this chapter by deciding that the case is not sufficiently international on the basis of discretionary criteria that are not part of the conflict-of-laws rules.

4. With the exception of article 84, the conflict-of-laws rules in this chapter are mandatory (see art. 3, para. 1). Thus, the law applicable to the creation, third-party effectiveness, priority and enforcement of a security right, as well as to the effect of a security right on a third-party obligor, cannot be selected by the parties through a choice-of-law clause. This is because security rights are property (*in rem*) rights and thus affect third parties (see art. 3, para. 2). Allowing the parties to a security agreement to select the applicable conflict-of-laws rule where the selection has third-party effects would also defeat one of the main purposes of the conflict-of-laws rules, which is to identify the State whose substantive law is to apply in the event of a priority dispute among competing claimants. For example, if there is a priority dispute between secured creditor X and secured creditor Y, it would be impossible for third parties to ascertain the law applicable to the resolution of the dispute if each of X and Y were permitted to choose in their security agreement a different governing law for the ranking of their respective security rights. By contrast, article 84 expressly provides for the possibility of the choice of the applicable law by the parties. This is because article 84 addresses only the mutual rights and obligations of the grantor and secured creditor arising from their security agreement and, accordingly, has no effect on the rights of third parties.

A. General rules

Article 84. Mutual rights and obligations of the grantor and the secured creditor

5. Article 84 is based on recommendation 216 of the Secured Transactions Guide (see chap. X, para. 61). Following the approach of international texts such as the Hague Principles on Choice of Law in International Commercial Contracts (the "Hague Principles"), article 84 states that the law chosen by the parties to a security agreement is the law applicable to their mutual rights and obligations arising from their agreement (subject only to the limitations set out in article 93). As already mentioned (see para. 4 above), matters relating to the property aspects of secured transactions are outside the scope of article 84. The parties cannot select the law that is to govern these matters. Other matters, such as the ability of the parties to choose different laws for different aspects of their contractual relationship or to modify their choice of law, are left to other conflict-of-laws rules of the enacting State (see, for example, art. 2 (2) and (3) of the Hague Principles).

6. In the absence of a choice of law by the parties, article 84 refers to the law governing the security agreement as determined by the conflict-of-laws rules generally applicable to contractual obligations. This law may be, for example, the law of the State: (a) which is most closely connected to the security agreement (e.g. the State in which a security agreement is entered into and performed, and in which both parties are located); (b) in which the characteristic performance of the agreement is to be made (e.g. the delivery of the goods in a sales agreement or the extension of credit in a credit agreement); or (c) in which the security agreement is entered into.

Article 85. Security rights in tangible assets

7. Article 85 is based on recommendations 203-207 of the Secured Transactions Guide (see chap. X, paras. 28-38). It deals with the law applicable to the creation, effectiveness against third parties and priority of a security right in a tangible asset (for the law applicable to the enforcement of such a security right, see art. 88, subpara. (a)). The term "tangible asset" is defined to refer generally to all types of tangible movable asset and to include money, negotiable instruments, negotiable documents and certificated non-intermediated securities (see art. 2, subpara. (ll); see also Secured Transactions Guide, chap. X, para. 26).

8. Paragraph 1 states the general rule that the law applicable to these issues is the law of the State in which the encumbered asset is located (the "*lex situs*" or the "*lex rei sitae*"; for the meaning of the term "location", see art. 90; for the relevant time for determining location, see art. 91). The *lex situs* rule for tangible assets is subject to five exceptions that are set out in articles 85, paragraphs 2 to 4, 98 and 100.

9. The first exception provides that, if a tangible asset located in a State is covered by a negotiable document in the possession of a secured creditor in another State, the priority of the security right over the asset covered by that document will be determined by the law of the State in which the document is located, and not by the law of the State in which the asset covered by that document is located (see art. 85, para. 2). Unlike recommendation 206, on which paragraph 2 is based, which referred to priority as against "a competing security right", to cover all priority conflicts (e.g. as against a judgment creditor), paragraph 2 refers to priority "as against the right of a competing claimant".

10. The second exception points to the law of the State in which the grantor is located for an asset of a type which may be ordinarily used in more than one State in the course of its normal use, that is, a "mobile asset" (see art. 85, para. 3). This exception refers to the ordinary use of assets of this type and not to their actual use. For example, where a motor vehicle ordinarily crosses national borders, the rule will apply to a particular motor vehicle even if it is actually operated only in one single State.

11. The third exception deals with a tangible asset (other than a mobile asset) in transit or to be exported (see art. 85, para. 4). A security right in a tangible asset located in a State which is in transit or destined to be moved to another State may be created and made effective against third parties under the law of the State of its ultimate destination, if the asset reaches that destination within the period of time to be specified by the enacting State (e.g. within 45-60 days after the putative creation of the security right to allow sufficient time for the asset to reach its destination). It should be noted that: (a) if the asset does not reach the intended destination within the period specified, the rule in paragraph 4 will not apply; and (b) under the rule in paragraph 1, a secured creditor may also take the necessary steps to create and make the security right effective against third parties under the law of the State in which the asset is actually located at the time such steps are taken. It should also be noted that paragraph 4 is a conflict-of-laws rule of the enacting State only and whether the security right will be treated as validly created and made effective against third parties in the State of the ultimate destination of the asset depends on the law applicable under the conflict-of-laws rules of that State.

12. The fourth exception is contained in article 98 and is only a partial exception. It applies only to the third-party effectiveness of a security right by registration in certain types of tangible and intangible asset. However, it does not alter the law applicable to other matters under the primary rule in article 85; questions of priority as against competing claimants, for example, will continue to be determined by the law of the State in which the asset is located (see paras. 44 and 45 below).

13. The fifth exception is contained in article 100. It refers matters relating to a security right in certificated securities to laws other than the law of the State in which the certificate is located (see paras. 49-58 below).

Article 86. Security rights in intangible assets

14. Article 86 is based on recommendation 208 of the Secured Transactions Guide (see chap. X, paras. 39-47). It states the general conflict-of-laws rule for the creation, effectiveness against third parties and priority of a security right in an intangible asset. The applicable law is that of the State in which the grantor is located (for the meaning of "location", see art. 90; for the relevant time for determining location, see art. 91). This rule is subject to several exceptions.

15. The first exception relates to the priority of a security right in a receivable arising from a sale or lease of, or secured by, immovable property (see art. 87). The other exceptions relate to a security right in rights to payment of funds credited to a bank account (see art. 97), intellectual property (see art. 99) and uncertificated non-intermediated securities (see art. 100).

Article 87. Security rights in receivables relating to immovable property

16. Article 87 is based on recommendation 209 of the Secured Transactions Guide (see chap. X, para. 54). It deals with the priority of a security right in a receivable arising from a sale or lease of immovable property or secured by immovable property as against the rights of competing claimants. Article 87 is an exception to the general rule of article 86 and refers that matter to the law of the State under whose authority the immovable property registry is maintained. However, article 87 applies only if the right of a competing claimant is registrable (but not necessarily registered) in the relevant immovable property registry. This means that, for a person to determine the law applicable to the priority of its security right in these circumstances, it needs to find out whether the receivable arises from a sale or lease of or is secured by immovable property. Even if a person does not find that out, the law applicable will still be the law provided in article 87.

Article 88. Enforcement of security rights

17. Article 88 is based on recommendation 218 of the Secured Transactions Guide (see chap. X, paras. 64-72). Subparagraph (a) deals with the law applicable to the enforcement of a security right in a tangible asset, as defined in article 2, subparagraph

(ll). It refers to the law of the State in which the asset is located at the time of commencement of enforcement. The rule in subparagraph (a) is subject to one exception. The enforcement of a security right in certificated non-intermediated securities is referred to the law indicated in article 100 (which applies to both certificated and uncertificated securities).

18. It should be noted that enforcement may involve several distinct actions (e.g. notice of the secured creditor's intent to obtain possession of an encumbered asset without applying to a court or other authority, disposition of an encumbered asset, and distribution of the proceeds of disposition) and these actions may take place in different States. For example, a secured creditor may take possession of the encumbered assets in one State, dispose of them in a second State, and distribute the proceeds of disposition in a third State. A similar issue arises in the less frequent case where enforcement takes place in different States because the asset has been moved to another State after commencement of enforcement. In each case, the applicable law will be the law of the State of the location of the relevant asset at the time the first enforcement action is taken.

19. Under subparagraph (b), the law applicable to the enforcement of a security right in an intangible asset (with the exception of a right to payment of funds credited to a bank account, intellectual property and uncertificated non-intermediated securities; see arts. 97, 99 and 100) is the law of the State whose law governs priority of the security right (see art. 86). The main advantage of this approach is that the creation, third-party effectiveness, priority and enforcement of a security right in an intangible asset are referred to one and the same law (see Secured Transactions Guide, chap. X, para. 69).

Article 89. Security rights in proceeds

20. Article 89 is based on recommendation 215 of the Secured Transactions Guide (see chap. X, paras. 55-60). It refers the creation of a security right in proceeds to the law of the State whose law governs the creation of the security right in the original encumbered assets, and the third-party effectiveness and priority of a security right in proceeds to the law of the State whose law governs those matters in the case of a security right in original encumbered assets of the same kind as the proceeds. The following example illustrates how article 89 operates. The original encumbered asset is inventory located in State A. The inventory is subsequently sold, and the purchase price is paid by a funds transfer to a bank account held with a deposit-taking institution in State B. Under paragraph 1, the law applicable to the question of whether the secured creditor automatically acquires a security right in the right to payment of the funds credited to the bank account as proceeds of the original encumbered inventory will be the law of the location of the inventory at the time of the creation of the security right in the inventory (see art. 91, para. 1 (a)). Under paragraph 2, the law applicable to the third-party effectiveness and priority of the security right in the right to payment of the funds credited to the bank account as proceeds will be the law that would be applicable to a security right in the right to payment of the funds credited to the bank account as an original encumbered asset (see art. 97).

21. It should be noted that this type of bifurcated rule may lead to difficulties in cases where the law governing creation recognizes a broad-based right in proceeds (including, for example, civil and natural fruits; see art. 2, subpara. (bb)) whereas the law governing third-party effectiveness and priority recognizes a narrower right in proceeds. It should also be noted that article 89 is dealing only with the law applicable to proceeds derived from the original encumbered assets as a result of a disposition by the grantor or other event prior to enforcement. Article 88 deals with the law applicable to the distribution of proceeds derived from a disposition of the encumbered assets pursuant to post-default enforcement proceedings.

Article 90. Meaning of "location" of the grantor

22. Article 90 is based on recommendation 219 of the Secured Transactions Guide (see chap. X, paras. 73 and 74). It provides that: (a) if a grantor has a place of business, it is located in that State; (b) if a grantor has a place of business in more than one

State, it is located in the State in which the grantor's central administration is exercised; and (c) if a grantor does not have a place of business, the grantor is located in the State in which the grantor has his or her habitual residence. The term "place of business" is understood as the place in which the grantor has an activity (and not necessarily commercial activities). Thus, a legal person without any commercial activities (e.g. a foundation) is located in the State in which it is exercising its activities. It should be noted that, if an individual has a habitual residence in one State and a place of business in another State, that individual is located in the latter State even if the transaction pursuant to which the security right is created is for personal, family, or household purposes unrelated to the individual's commercial activities.

23. It should also be noted that the State in which a grantor that is a legal person has its central administration is not necessarily the State in which that legal person has its statutory seat (or registered office). Thus, if the grantor is a legal person formed under the law of State A with its statutory seat in that State but has in State B a place of business where its senior management is based, then the grantor is located in State B. As a result of this approach, for example, the creation, third-party effectiveness, priority and enforcement of a security right in a receivable is referred to a single law that, as a matter of fact, is relatively easy to determine and is most likely to be the law of the State in which the main insolvency proceeding with respect to the grantor would take place (as insolvency proceedings are typically referred to the law of the State in which the insolvent person has the centre of its main interests and that State is generally interpreted to be the State in which that person has its central administration). This approach minimizes the risks of inconsistencies between the law governing the insolvency proceeding *(lex fori concursus*) and the substantive law applicable to a security right, as the two laws will be the law of one and the same State.

Article 91. Relevant time for determining location

24. Article 91 is based on recommendation 220 of the Secured Transactions Guide (see chap. X, paras. 75-78). It deals with the situation where the applicable law is determined by reference to the location of the asset or the grantor, and that location changes from one State (State A) to another (State B). In such a situation, the applicable law may change.

25. Paragraph 1 (a) establishes that the creation of a security right remains governed by the law of the location of the asset or of the grantor at the time of the creation of the security right even if there is subsequently a change of location. This means that, if the security right was validly created under the law of State A when the asset or the grantor was located there, the law of State A will continue to apply and, as a result, the security right will continue to be held to have been effectively created even after the move of the asset or the grantor to State B whether or not the creation requirements of the law of State B have been satisfied. However, for third-party effectiveness and priority issues, paragraph 1 (b) provides that the applicable law will be that of the location of the asset or the grantor "at the time when the issue arises". This is the time of the occurrence of the event that creates the need to determine the law that would be applicable to third-party effectiveness or priority.

26. For example, if an insolvency proceeding commences in State B in respect of the grantor that is located in State A at the time of the creation of a security right in a receivable, the law applicable to the effectiveness of the security right will be the law of State B if at the time of commencement of the insolvency proceeding the grantor is located in State B (see art. 86). As a result, for the security right to be treated as being effective against the insolvency representative either in State A or in State B, the third-party effectiveness requirements of the law of State B must have been fulfilled prior to the commencement of the insolvency proceeding. Another example is where a tangible asset is seized by a judgment creditor. The question of the respective priority of the secured creditor and the judgment creditor arises at the time of the seizure (which will be "the time when the issue arises"). This is so in each example even if the security right had been made effective against third parties under the law of State A at the time the asset or the grantor was located in State A.

27. Paragraph 2 constitutes an exception to the general rules of paragraph 1. In the event of a priority dispute between a security right that is created and made effective against third parties and the rights of all competing claimants that have been created and made effective against third parties in the State of the initial location, the priority dispute will be resolved under the law of that State (State A in the example).

Article 92. Exclusion of *renvoi*

28. Article 92 is based on recommendation 221 of the Secured Transactions Guide (see chap. X, para. 14). Its purpose is to exclude the doctrine of *renvoi* and provide greater certainty with respect to the determination of the applicable law by avoiding the complications arising from this doctrine. Under the doctrine of *renvoi*, when the conflict-of-laws rules of a State (State A) refer an issue to the law of another State (State B), that law would include the private international law rules of State B. However, the conflict-of-laws rules of State B may refer that issue to the law of another State (State C). In that case, a court in State A would need to resolve the priority dispute using the law of State C (and not the law of State B). However, this could result in circularity, create uncertainty as to the applicable law and be contrary to the expectations of the parties. For those reasons, article 92 excludes *renvoi* (for an exception, see art. 95).

Article 93. Overriding mandatory rules and public policy (*ordre public*)

29. Article 93, which is based on recommendation 222 of the Secured Transactions Guide (see chap. X, para. 79) and article 11 of the Hague Principles, states generally recognized principles of private international law. Under paragraphs 1 and 3, the forum court is not prevented from applying the overriding mandatory law provisions of the law of the forum State and may exclude the application of a provision of the law applicable under the provisions of this chapter if it is manifestly incompatible with fundamental notions of public policy of the forum State.

30. To illustrate how the rules in paragraphs 1 and 3 will operate, assume that the law of the forum (State A) prohibits dealings in certain types of asset (such as an asset which is the proceeds of criminal activities or is the subject of international sanctions) and that the law of the State whose law is applicable under the provisions of this chapter (State B) does not contain such a mandatory law prohibition. In such a case, a court in State A may refuse to recognize a security right created in such an asset under the law of State B even though the law of State B does not contain the same prohibition. Similarly, even if there is no statutory prohibition in State B at the time when a security right is created in a "cultural object", the forum court (State A) may set aside a provision of the law of State B that allows the creation of a security right in cultural objects as being manifestly incompatible with the public policy of State A.

31. Under paragraphs 2 and 4, the forum court (if it is allowed to do so under its law) may refuse to recognize and enforce a security right that has been effectively created and made effective against third parties under the applicable law (even if the applicable law is the law of the forum itself), if the creation of the security right would be manifestly incompatible with the public policy of another State (e.g. a State that has a close connection with the situation). For example, a law firm located in the forum State (State A) may wish to assign receivables arising from its legal services and the law of State A allows this assignment. However, the client is located in another State (State B) and, for reasons of public policy (confidentiality of lawyer-client relationship), the law of State B prohibits the transfers by a law firm of its receivables arising from legal services. In this case, the law of State A may allow a court in State A to take the public policy of State B into account in determining whether the assignment is valid.

32. Paragraph 5 is intended to make clear that the rules in paragraphs 1-4 may also be relied upon by an arbitral tribunal, although, unlike a court, it does not operate as part of the judicial infrastructure of a specific legal system. Under paragraph 5, an arbitral tribunal may be required to take into account the public policy and the overriding mandatory provisions of a State other than the State whose law is applicable (e.g. the State in which the arbitration takes place or the State in which

enforcement of any award is likely to take place). Paragraph 5 also requires an arbitral tribunal to determine whether it is required or entitled to take into account the public policy or the overriding mandatory provisions of another law, having regard (in particular) to the agreement of the parties, the designated or deemed seat of the arbitration, any institutional rules applicable to the arbitration, and the potentially controlling influence of State courts applying local arbitration legislation (see commentary to article 11 (5) of the Hague Principles).

33. Under paragraph 6, the forum State may not displace the provisions of the law applicable to third-party effectiveness and priority of a security right and apply its own third-party effectiveness and priority provisions or those provisions of another State. This approach is justified by the need to achieve certainty with respect to the law applicable to third-party effectiveness and priority. The same approach is followed in article 23, paragraph 2, article 30, paragraph 2, and article 31 of the Assignment Convention, as well as in article 11, paragraph 3, of the Hague Securities Convention.

Article 94. Impact of commencement of insolvency proceedings on the law applicable to a security right

34. Article 94 is based on recommendation 223 of the Secured Transactions Guide (see chap. X, paras. 80-82). It provides that an insolvency court in the enacting State must in principle respect the law applicable to security rights under its conflict-of-laws rules. However, nothing in article 94 restricts the application of the law of the State in which insolvency proceedings are commenced (*lex fori concursus*) to matters such as the avoidance of fraudulent or preferential transactions, the treatment of secured creditors, the ranking of claims and the distribution of proceeds (see rec. 31 of the Insolvency Guide).

Article 95. Multi-unit States

35. Article 95 is based on recommendations 224-227 of the Secured Transactions Guide (see chap. X, paras. 83-87) and partly on article 37, first sentence, of the Assignment Convention. Its purpose is to deal with the law applicable where the State whose law is applicable to an issue under the provisions of this chapter has two or more territorial units, each of which has its own substantive law, and possibly its own conflict-of-laws rules. In such a case, subparagraph (a) provides that a reference to the law of a multi-unit State is in principle a reference to the law applicable in the relevant unit (as determined under the other provisions of this chapter). For example, in the case of a security right in a receivable created by a grantor located (in the sense of having its central administration) in territorial unit A, the law applicable to that security right is in principle the law of territorial unit A (see arts. 86 and 90).

36. However, under subparagraph (b), if the internal conflict-of-laws rules of the multi-unit State or, in the absence of such rules, of the territorial unit to which subparagraph (a) points, refer security rights to the law in force in another territorial unit of that State, the substantive law of that other unit will apply. In the above mentioned example, if territorial unit A has a conflict-of-laws rule under which the law applicable is the law of the grantor's location defined as the place of the grantor's statutory seat and that place is in territorial unit B, the substantive law of territorial unit B will apply. It should be noted that subparagraphs (a) and (b) also apply where the forum State is the State whose law is applicable under the provisions of this chapter.

37. Thus, subparagraph (b) is a deviation from the general rule on the exclusion of *renvoi* (see art. 92). The purpose of the exception is to ensure that, where the applicable law is that of a unit of a multi-unit State, a forum court outside that multi-unit State will apply the substantive law of the same unit as a forum court in that multi-unit State would do under its internal conflict-of-laws rules. As a result, the deviation from the rule excluding *renvoi* is limited to internal *renvoi*, which should not materially affect certainty as to the applicable law (see Secured Transactions Guide, chap. X, para. 85).

38. As a result, for example, where the conflict-of-laws rules of this chapter refer to the law of the location of the asset or the grantor, the forum court is required under the provisions of this chapter to examine the internal conflict-of-laws rules in effect in the territorial unit of the location of the grantor or the encumbered asset. In this regard, the Assignment Convention allows a declaration by States as to the determination of the applicable priority rule as between various territorial units (see art. 37 of the Assignment Convention), but in this article there would be no declaration and the forum court would have to determine the applicable law under the conflict-of-laws rules in effect in the multi-unit State or, in the absence of such rules, in the territorial unit to which subparagraph (a) will point.

B. Asset-specific rules

Article 96. Rights and obligations between third-party obligors and secured creditors

39. Article 96 is based on recommendation 217 of the Secured Transactions Guide (see chap. X, paras. 62 and 63) and article 29 of the Assignment Convention. Its purpose is twofold. First, the conflict-of-laws rules dealing with the law applicable to the third-party effectiveness or enforcement of a security right do not apply to the effectiveness or enforcement of a security right against a debtor of a receivable, an obligor under a negotiable instrument or an issuer of a negotiable document; they are not considered "third parties" for the purposes of the rules on third-party effectiveness and priority of a security right, as they are not competing claimants. Second, the law applicable to these issues is the law governing the legal relationship between the grantor and the relevant debtor of the receivable, or the relevant obligor under the instrument or the issuer of the document; the same law also applies to the question of whether any of the latter may assert that their agreement with the grantor prohibits or limits the grantor's right to create a security right in the relevant receivable, instrument or document. For example, in the case of a receivable arising from a sales contract, the law chosen by the seller/grantor and the buyer/debtor of the receivable to govern the sales contract will apply to the matters covered by article 96.

Article 97. Security rights in rights to payment of funds credited to a bank account

40. Article 97 is based on recommendation 210 of the Secured Transactions Guide (see chap. X, paras. 49-51). While a right to payment of funds credited to a bank account is in the generic sense a receivable of the customer against the deposit-taking institution, article 97 departs from the general conflict-of-laws rule on the law applicable to intangible assets (see art. 86). Two options are offered to the enacting State for the law applicable to the creation, third-party effectiveness, priority and enforcement of a security right in a right to payment of funds credited to a bank account, as well as to the rights and obligations between the deposit-taking institution and the secured creditor.

41. Under option A, the applicable law is that of the State of the location of the branch (or office) of the deposit-taking institution with which the account is maintained. It should be noted that a branch (or office) of a deposit-taking institution may be considered as being located in a particular jurisdiction irrespective of whether the institution offers its services through physical offices or only through an online connection accessible electronically by customers. In this regard, it should be noted that a deposit-taking institution must generally have a physical presence or legal address in a jurisdiction in order to be allowed by the relevant regulatory authorities to maintain bank accounts in that jurisdiction. Under this approach, certainty and transparency with regard to the applicable law would be enhanced, as the location of the relevant branch could easily be determined in a bilateral relationship between a deposit-taking institution and its client. In addition, such an approach would reflect the normal expectations of parties to current banking transactions. Moreover, this approach would result in the law governing a security right in a right to payment of

funds credited to a bank account being the same as that applicable to regulatory matters (see Secured Transactions Guide, chap. X, para. 49).

42. Under option B, the applicable law is the law designated in the account agreement as governing the issues that are the subject of article 97 or, in the absence of a designation of a law for these issues, the law designated by the parties to the account agreement as the law governing that agreement. Under this approach, the applicable law would meet the expectations of the parties to the account agreement. A potential lender would be able to ascertain the law provided in the account agreement, as the grantor (the account holder) would normally supply information on the account agreement to obtain credit from the lender relying on the funds credited to the account (see Secured Transactions Guide, chap. X, para. 50). To be effective for conflict-of-laws purposes, a designation must refer to the law of a State in which the deposit-taking institution is regularly engaged in the business of maintaining bank accounts. It should be noted that the State whose law is so designated may be different than the State in which the grantor's bank account is maintained.

43. If the applicable law cannot be determined as described in the preceding paragraph, option B provides for a series of rules along the lines of the default rules contained in article 5 of the Hague Securities Convention, which the enacting State may wish to insert in this article, if it decides to adopt option B of article 97. For example, the enacting State may wish to consider inserting the following text as paragraph 3 of option B: "If the applicable law is not determined pursuant to paragraph 1 or 2, the applicable law is to be determined pursuant to the following rules: (a) If it is expressly and unambiguously stated in a written bank account agreement that the relevant deposit-taking institution entered into through a particular office, the law applicable is the law of the State in which that office is located; (b) If the applicable law is not determined under subparagraph (a), the applicable law is the law of the State under whose law the relevant deposit-taking institution is incorporated or otherwise organized at the time the written bank account agreement is entered into or, if there is no such agreement, at the time the bank account was opened; (c) If the applicable law is not determined under either subparagraph (a) or subparagraph (b), the applicable law is the law of the State in which the relevant deposit-taking institution has its place of business, or, if the relevant deposit-taking institution has more than one place of business, its principal place of business, at the time the written bank account agreement is entered into or, if there is no such agreement, at the time the bank account was opened".

Article 98. Third-party effectiveness of a security right in certain types of asset by registration

44. Article 98 is based on recommendation 211 of the Secured Transactions Guide (see chap. X, para. 34). This article is an exception to the conflict-of-laws rules on the third-party effectiveness of a security right in a negotiable instrument, negotiable document, right to payment of funds credited to a bank account or certificated non-intermediated security (but article 98 does not apply to uncertificated non-intermediated securities). Under articles 85, 97 and 100, the effectiveness against third parties of a security right in any of these assets is governed by the law of a State which may be different from the State of the location of the grantor. However, under article 98, if the State of the location of the grantor recognizes registration of a notice as a method of third-party effectiveness for a security right in the types of asset covered in article 98, then the law applicable to third-party effectiveness by registration is the law of the State in which the grantor is located.

45. Therefore, with respect to these types of asset, a secured creditor may rely on the law of the location of the grantor to make its security right effective against third parties by registration, even if for these types of asset the applicable law might be different under the other conflict-of-laws rules of this chapter. However, if the priority rules of the applicable law are based on the priority rules of the Model Law, achieving third-party effectiveness by registration would only yield a lower-ranking priority in the case of a priority conflict with a competing secured creditor who achieved third-party effectiveness, for example, by possession in the case of a negotiable instrument

(see art. 46, para. 1), by the secured creditor becoming the account holder in the case of a right to payment of funds credited to a bank account (see art. 47, para. 1) or by possession in the case of a negotiable document or a certificated non-intermediated security (see arts. 49, para. 1, and 51, para. 1, respectively). However, the security right would have priority over the right of: (a) the grantor's insolvency representative or the general body of creditors (subject to the applicable insolvency law; see arts. 35 and 36); and (b) judgment creditors, if registration took place before a judgment creditor took the steps required to acquire a right in the encumbered assets (see art. 37, para. 1).

Article 99. Security rights in intellectual property

46. Article 99 is based on recommendation 248 of the Intellectual Property Supplement (see paras. 284-337). The effect of paragraph 1 is the following. If intellectual property is protected in a particular State, the law of that State will apply to the requirements to be met for the security right in that intellectual property to be considered as having been created and made effective against third parties, and as having priority over the rights of competing claimants. It should be noted that even with respect to intellectual property protected under an international convention the *lex protectionis* is the law of the State party to the Convention under which the intellectual property is protected. For example, with respect to types of intellectual property that are subject to registration in a national, regional or international intellectual property registry (for example, patents and trademarks), the *lex protectionis* is the law of the State (including the rules promulgated by regional or international organizations) under whose authority the registry is maintained (see Intellectual Property Supplement, para. 297). It should also be noted that a security right may be created in intellectual property or rights under a licence agreement (e.g. the licensor's right to royalties or the licensee's right to use the licensed product; see Intellectual Property Supplement, paras. 89-112).

47. Paragraph 2 provides for an alternative way to create and make effective against certain third parties a security right in intellectual property. Under paragraph 2, the secured creditor may also rely for these purposes on the law of the State in which the grantor is located. The principal benefit of paragraph 2 is that a security right in a portfolio of intellectual property rights protected under the laws of different States may be created and made effective against third parties under a single law. An equally important benefit of paragraph 2 is that, if the security right has been made effective against the grantor's insolvency representative under the law of the State in which the grantor is located, an insolvency court in the enacting State will recognize the security right even if the third-party effectiveness requirements of all States in which the intellectual property is protected have not been fulfilled.

48. Paragraph 3 refers enforcement issues to the law of the State in which the grantor is located. This rule allows for the same law to be applied to all enforcement steps, even if they take place in different States, because it is unlikely that the grantor's location (in particular the place of its central administration) would change between any of those steps. In the rare case where there would be such a change, it is assumed that a court would refer to the law of the State in which the grantor is located at the time of commencement of the enforcement (see art. 88). It should be noted that the enforcement of the security right against persons other than the grantor (e.g. the licensor of the intellectual property, if the grantor is a licensee) is outside the scope of this article.

Article 100. Security rights in non-intermediated securities

49. Article 100 introduces one general conflict-of-laws rule for security rights in equity securities and another for security rights in debt securities, without distinguishing between certificated and uncertificated or between traded and non-traded securities. Both of these rules refer all issues (i.e. the creation, third-party effectiveness, priority, enforcement and effectiveness against the issuer of a security right) to a single law. This approach provides greater certainty in the determination of the applicable law.

50. For non-intermediated equity securities, paragraph 1 designates the law of the constitution of the issuer as the law applicable to all issues. The term "equity" is not defined in the Model Law but it should be understood as referring to participation rights in the capital of the issuer. For a corporation or a similar legal person, equity securities consist of the shares in its capital. Similarly, for an entity which is not a legal person under its constitutive law (such as a general partnership in many States), equity securities consist of the rights of the persons (e.g. the partners) who are entitled to receive upon the liquidation of the entity the residual value of its assets after payment of its liabilities.

51. The law of the constitution of the issuer is the law under which it has been formed. For a corporation, this is relatively easy to ascertain; it is the law under which it has been incorporated. For a partnership, it is the law under which the partnership has been created. In federal States where the issuer may be constituted either under a federal law or a law of one of its territorial units, the Model Law does not provide specific criteria on the determination of the territorial unit which will be considered as the issuer's law where the issuer's law is a federal law and the law on secured transactions is that of a territorial unit. However, applying by analogy article 95, the internal conflict-of-laws rules of the federal State (or of the territorial unit which is the forum) should determine the territorial unit's law to be applicable to the issues falling under article 100 where all or some of these issues are not dealt with by the federal law of the constitution of the issuer.

52. For non-intermediated debt securities, paragraph 2 refers all issues to the law governing the securities. The law governing debt securities is the law selected by the parties as the law governing their contractual rights and obligations arising from these securities. In the absence of such a choice of law (which would be extremely rare for debt securities), the forum will determine the applicable law under its own conflict-of-laws rules. The Model Law does not deal with the question of whether the parties may select a governing law which has no connection with the issuance of the securities. This matter is left to the conflict-of-laws rules on contractual obligations of the forum State.

53. The term "debt securities" is not defined in the Model Law. The notion of debt is however well understood in most legal systems and denotes a payment obligation. In the context of debt securities, the obligation is generally to make payment of a sum of money. Bonds and debentures are debt securities, to the extent they come under the definition of securities in article 2, subparagraph (hh).

54. The distinction between equity and debt securities should be based on their characterization under corporate or enterprise law, and not under accounting or other law. Thus, preferred shares (i.e. shares that entitle the holder to a fixed dividend, whose payment takes priority over that of common share dividends) are treated as equity securities if they are so considered under the corporate or enterprise law of the issuer's State even if under accounting or other rules of that State they are classified as liabilities. Likewise, subordinated debt securities (e.g. debt payable only after satisfaction of obligations owing to certain creditors) are treated as debt securities if they are so considered under the corporate or enterprise law of the issuer's State even if they are viewed as equity securities under accounting, regulatory or other law.

55. The concept of "debt securities" raises the following two questions: (a) the characterization of convertible debt securities; and (b) the effect of that characterization on the law applicable to a security right in that type of security. Convertible debt securities are debt securities that are convertible into equity securities at the option of their holder or issuer or upon the occurrence of a specified event.

56. Convertible debt securities should be characterized as debt securities because they constitute payment obligations as long as they are not converted into equity. This means that upon their issuance and until conversion, the law governing these securities will be the law applicable to the creation, third-party effectiveness, priority, enforcement and effectiveness against the issuer of a security right in such securities. The characterization of convertible debt securities for the purposes of article 100 may,

however, change if and once they are converted into equity. The connecting factor then becomes the law of the constitution of the issuer. Therefore, upon being converted into equity, the law applicable to a security right in convertible debt securities will be the law of the State under which the issuer has been constituted.

57. A consequence of the change from the law governing the securities to the issuer's law is that a security right in debt securities made effective against third parties under the law governing the securities might become ineffective against third parties after the change. Article 23 addresses the impact of a change in the applicable law and article 91 addresses a change in the connecting factor. However, strictly speaking, article 23 is not applicable to a change in the nature of non-intermediated securities; and article 91 only deals with the situation where the connecting factor is the location of the asset or the grantor. The enacting State may thus wish to draw from articles 23 and 91 and adopt rules dealing with the change on the basis of principles similar to those underlying articles 23 and 91.

58. With respect to certificated equity or debt non-intermediated securities, article 98 introduces an exception to the general conflict-of-laws rules of article 100. If the law of the State in which the grantor is located recognizes registration of a notice as a method for achieving effectiveness against third parties of a security right in certificated non-intermediated securities, the law of that State is also the law applicable to the third-party effectiveness of the security right in this type of asset by registration (see paras. 44 and 45 above).

Chapter IX. Transition

Introduction

59. The introduction of any new law requires fair and efficient transition rules (see Secured Transactions Guide, chap. XI, paras. 1-3). This is the purpose of this chapter. First, it provides that the law formerly governing rights that fall within the scope of the new law (the "prior law"; see art. 102, para. 1 (a)) is repealed (see art. 101). Second, it provides for the general application of the new law to all security rights (see art. 102, para. 2), including extant security rights that were created by a security agreement concluded while the prior law was still in force ("prior security rights"; see art. 102, para. 1 (b)), but continue to exist, perhaps for extensive periods of time, after the new secured transactions law (the "new law") enters into force. Third, it preserves the exceptional application of prior law in circumstances where no new third-party rights are implicated (see arts. 103-105). Fourth, it provides a transition period for the holders of prior security rights to comply with the third-party effectiveness requirements of the new law (see art. 106). Finally, it sets a date on which the new law goes into effect (see art. 107).

Article 101. Amendment and repeal of other laws

60. The Model Law provides a comprehensive legal framework to govern security rights in the types of asset within its scope under article 1, replacing rather than merely supplementing the prior law. Accordingly, paragraph 1 requires the enacting State to list the laws to be repealed upon entry into force of the new law under article 107. The way in which the repeal is effectuated will depend on the form of the prior law. Where the prior law is set out in a free-standing statute or combination of statutes, it can be repealed in its entirety. Where the prior law is contained in statutes that also address other topics, the enacting State must specify which provisions are to be retained or amended. Where all or part of the prior law is based on judicial opinions (as may be the case, for example, in common law systems), the effect of the new secured transactions law typically will be to override the prior case law without the need for the enacting State to take any explicit repealing measures.

61. Secured transactions law interacts with many other laws such as, for example, civil procedure, judgment enforcement, insolvency, property and taxation laws. These other laws may contain provisions that refer to or are premised on the enacting State's

prior law. Accordingly, paragraph 2 requires the enacting State to amend these provisions to the extent needed to align them with the terminology and the provisions of its new law.

62. It should be noted that, like the other articles of the Model Law, article 101 takes effect only when the new law enacting the Model Law enters into force according to article 107. Accordingly, until that date, the provisions listed for repeal or amendment in this article remain in effect.

Article 102. General applicability of this Law

63. Paragraph 1 of this article defines two terms used in this chapter. Paragraph 1 (a) defines the term "prior law" to mean the law that applied to "prior security rights" (see para. 64) before the entry into force of the new law. This definition makes it clear that the applicable prior law is the law designated by the conflict-of-laws rules of the enacting State as those rules existed before the entry into force of the new law. It follows that the applicable law may be: (a) the law of the enacting State or of another State; and (b) a different law than that which would apply under the conflict-of-laws rules of the Model Law if the enacting State's prior conflict-of-laws regime used a different connecting factor. It should be noted that, even though it is expressed in the singular, the term "prior law" refers to all relevant sources of the applicable prior substantive law wherever they may be reflected (e.g. in a civil or commercial code, a special statute, case law or a combination of any of these sources of law).

64. Paragraph 1 (b) defines "prior security right" (a term referred to in the definition of the term "prior law"; see para. 63 above) as a right created by an agreement entered into before the entry into force of the new law that the new law treats as a security right. For example, a seller's or lessor's retention-of-title right would be a prior security right because it is characterized as such under the functional concept of security right adopted by the Model Law (see art. 2, subpara. (kk)) even if prior law treated it as an ownership right. It should be noted that a security right in future assets acquired by the grantor after the new law enters into force would be a prior security right if it was provided for in an agreement entered into before the entry into force of the new law even though the creation requirements of the new law are not satisfied (see art. 104, para. 2). This presupposes that prior law permitted the creation of a security right in future assets; if it did not, then no prior security right could exist.

65. Paragraph 2 is based on recommendation 228 (second sentence) of the Secured Transactions Guide (see chap. XI, paras. 7-12). It states that, upon its entry into force under article 107, the new law applies, as a general rule, to all security rights within its scope, including prior security rights. This general rule ensures that the enacting State enjoys the economic benefits of the new law with immediate effect and avoids the complexity and conflict that would result from attempting to apply discrete laws to prior and new security rights.

66. The transition to any new legal regime requires that attention be paid to ensuring that extant rights are appropriately accommodated. To this end, paragraph 2 also provides that the general applicability of the new law to prior security rights is subject to the other provisions of this chapter. These other provisions preserve the exceptional application of prior law to prior security rights where no third-party rights are affected (see art. 104), or where the rights of a holder of a prior security right and competing claimants have already vested (see arts. 103 and 106); they also provide a transition period for the holders of prior security rights to conform to the third-party effectiveness requirements of the new law (see art. 105).

Article 103. Applicability of prior law to matters that are the subject of proceedings commenced before the entry into force of this Law

67. Article 103 is based on recommendation 229 of the Secured Transactions Guide (see chap. XI, paras. 13-16). It introduces two exceptions to the general rule in article 102, paragraph 2, that the new law applies to all security rights within its scope, including prior security rights. Paragraph 1 provides for the continued application of prior law to a matter with respect to a prior security right that is the subject of judicial

or arbitral proceedings commenced before the new law entered into force (except enforcement proceedings separately addressed in para. 2).

68. Paragraph 2 provides that, if enforcement of a prior security right is commenced before the entry into force of the new law, the secured creditor may continue enforcement in accordance with prior law (what constitutes "enforcement" under prior law would need to be assessed by reference to prior law), or may choose to enforce its security right in accordance with the new law (what constitutes "enforcement" under the new law is addressed in chapter VII of the Model Law). Paragraph 2 applies if "any step" has been taken to enforce a prior security right before the entry into force of the new law. Thus, for example, if the secured creditor has already obtained possession of an encumbered asset in accordance with prior law when the new law enters into force, it may choose to dispose of the encumbered asset and distribute its proceeds under the prior law or proceed as to those matters under the new law notwithstanding paragraph 1.

69. Paragraph 2 applies to all disputes arising with respect to a prior security right, whether between the secured creditor and the grantor, the secured creditor and a competing claimant, or the secured creditor and a person liable, for example, on a receivable or negotiable instrument. It should be noted that prior law applies only to the matter that is the subject of judicial or arbitral proceedings commenced before the new law enters into force; under the general rule in article 102, paragraph 2, the new law applies to a separate matter that is the subject of proceedings commenced after the new law enters into force even if it relates to the same security agreement.

Article 104. Applicability of prior law to the creation of a prior security right

70. Article 104 is based on recommendation 230 of the Secured Transactions Guide (see chap. XI, paras. 17-19). It sets out an exception to general applicability of the new law to prior security rights under article 102, paragraph 2. Paragraph 1 provides that prior law determines whether a right that was created under an agreement entered into before the new law enters into force that would be a security right under the new law was indeed created effectively. Paragraph 2 confirms that a prior security right that was effectively created under prior law remains effective between the parties after the new law enters into force even if the requirements for creation under the new law are not satisfied. This approach avoids the retroactive invalidation of prior security rights that were created in conformity with the law applicable to them when they were created. It also dispenses with the need for the secured creditor to obtain the cooperation of the grantor to take whatever additional steps may be necessary to conform to the creation requirements of the new law. Such cooperation may not be forthcoming from a grantor that has already received all the credit intended to be secured by the prior security right.

71. The creation requirements of the new law are relatively minimal (see art. 6). Consequently, it will rarely be the case that a security right created in conformity with prior law would not in any event also conform with the creation requirements of the new law. An example of a possible exception would be a prior security right created in accordance with a rule of prior law that allowed the creation of a security right by means of an oral agreement even in the absence of possession of the encumbered asset by the secured creditor. In this example, paragraph 2 would preserve the effectiveness of the prior security right between the parties even though the new law requires a written security agreement signed by the grantor (see art. 6, para. 3).

Article 105. Transitional rules for determining the third-party effectiveness of a prior security right

72. Article 105 is based on recommendation 231 of the Secured Transactions Guide (see chap. XI, paras. 20-22). It introduces a qualified exception to the general applicability of the third-party effectiveness requirements of the new law to prior security rights under article 102, paragraph 2. Under paragraph 1, a prior security right that was made effective against third parties under prior law remains effective against third parties for a transitional period specified by the enacting State after entry into force of the new law even if the conditions for third-party effectiveness under the

new law have not been satisfied The transitional period expires at the earlier of the time when the third-party effectiveness of the security right would have ceased under prior law (see para. 1 (a)) or the time when the transitional period would expire (see para. 1 (b). It should be noted that the transitional period could, for example, be one to two years to allow secured creditors to familiarize themselves with the new law and take the steps required by the new law to make their security rights effective against third parties (for the time required for the new law to enter into force and the relevant considerations to be taken into account in determining that time, see para. 83 below).

73. The following example illustrates the operation of paragraph 1. A prior security right took effect against third parties under prior law on the conclusion of the security agreement without the need for the creditor to register or take any other additional step such as possession. The effect of paragraph 1 is to preserve the third-party effectiveness of the prior security right for the purposes of the new law after it comes into force until the expiration of the period specified in paragraph 1 (b) (e.g. one to two years). If instead the applicable prior law required public registration for third-party effectiveness, and the holder of the prior security right duly registered, but the registration period under prior law would have expired six months after the new law comes into force, paragraph 1 (a) would apply with the result that the third-party effectiveness of the prior security right would be preserved only for a period of six months after the new law enters into force.

74. A security right that would cease to be effective against third-parties under the rule in paragraph 1 may continue to be effective against third parties if the secured creditor takes the appropriate steps under the new law to achieve third-party effectiveness. Most often, this result will be accomplished by registering a notice with the Registry. The secured creditor's ability to do so is aided by paragraph 4, which provides that a prior written agreement creating the prior security right constitutes sufficient authorization for registration of the notice.

75. Under paragraph 2, the third-party effectiveness of a prior security right that would otherwise cease to be effective against third-parties under paragraph 1 is preserved if the secured creditor takes the appropriate steps under the new law to achieve third-party effectiveness before the expiration of the relevant transition period in paragraph 1. In that event, the prior security right is treated as continuously effective against third parties from the time when it was first made effective against third parties under prior law. It follows that the time of third-party effectiveness under prior law will be treated as the relevant time for determining the priority of the security right against competing claimants for the purposes of the priority rules of the new law that turn on the time of third-party effectiveness.

76. Paragraph 3 addresses the situation where the requirements of the new law for third-party effectiveness are not satisfied until after the expiration of the transition period in paragraph 1, leaving a gap between the expiration of third-party effectiveness under paragraph 1 and the achievement of third-party effectiveness under the new law. In that case, paragraph 3 provides that the security right is effective against third parties only from the time it is made effective against third parties under the new law. It follows that the priority of the prior security right, for the purposes of the rules of the new law that determine priority by reference to the time of third-party effectiveness, will date only from that time.

77. A prior security right typically will be made effective against third parties under the new law by registration of a notice in the Registry (see art. 18). The Model Law requires the grantor's authorization for registration but provides that the conclusion of a written security agreement constitutes sufficient authorization without the need for an express authorization clause (see art. 2 of the Model Registry Provisions). In line with this rule, paragraph 4 confirms that a written agreement between a grantor and a secured creditor creating the prior security right constitutes sufficient authorization even if the agreement was concluded before the entry into force of the new law.

78. Paragraph 5 makes explicit a point that is implicit in paragraph 2. It provides that, if a prior security right that was made effective against third parties under prior law by registration remains continuously effective against third parties under paragraph 2, the priority rules of the new law that depend on the time of registration are to be applied using the time of registration under prior law. This clarification was thought to be helpful to cover cases where the registration venue specified by the prior law is different than the Registry established under the new law (see art. 28 of the Model Law).

Article 106. Application of prior law to the priority of a prior security right as against the rights of competing claimants arising under prior law

79. Article 106 provides an exception to the general rule in article 102, paragraph 2, that the new law applies to all security rights, including prior security rights. Under the circumstance described in article 106, the priority of a prior security right as against competing claimants is determined by application of prior law.

80. Application of the priority rules of prior law appropriately respects the settled expectations of secured creditors and competing claimants when no change has occurred other than the new law entering into force and when the priority competition does not involve rights of new competing claimants that arose after the new law became effective. Accordingly, paragraph 1 makes the application of prior law subject to the caveat that the priority status of the prior security right and the rights of competing claimants must not have changed since the entry into force of the new law.

81. Paragraph 2 provides guidance on when the priority status of a prior security right has changed within the meaning of paragraph 1 so as to instead require application of the priority rules of the new law in accordance with the general rule in article 102, paragraph 2. The effect of paragraph 2 is to make the priority rules of the new law applicable if the prior security right: (a) was created under prior law but was not made effective against third parties under prior law but only under the new law (see para. 2 (b)); or (b) it was made effective against third parties under prior law but continuity of third-party effectiveness was not preserved before the expiration of the transition period set out in article 105, paragraph 1 (see para. 2 (a)).

Article 107. Entry into force of this Law

82. Article 107 is based on recommendation 228 of the Secured Transactions Guide (see chap. XI, paras. 4-6). It requires the enacting State to specify the date when, or the mechanism according to which, the new law will enter into force. The Model Law does not recommend a particular date or mechanism, leaving this matter to the enacting State. The location of this article and its precise formulation will also depend on whether the new law is contained in a new stand-alone statute or incorporated into a general civil or commercial code.

83. In determining when the new law will enter into force, careful consideration should be given both to obtaining the economic benefits of the new law as soon as possible and to minimizing disruptions that may be caused by significant changes in secured transactions practice resulting from the new law. Inasmuch as the new law will have been chosen because it is an improvement over the prior law, the new law should come into force as soon as is practical. However, some lead time is necessary in order to, inter alia: (a) publicize the existence of the new law; (b) enable the establishment of the Registry (or adaptation of an existing registry to the registry system required by the new law) and ensure that it is fully operational; (c) educate participants in the secured transactions system about the effect of the new law and the transition from the prior to the new law and enable them to prepare, for example, for compliance with new rules and the use of new registration and security agreement forms; and (d) educate other affected constituents, for example, buyers, lessees, judgment creditors, and insolvency representatives, on the impact of the new law on their rights. For example, the new law may enter into force on a specific date or a few months (e.g. 6 to 12 months) after a specific date, or on the date to be specified by a decree once the Registry becomes operational.

VI. FUTURE WORK

A. Note by the Secretariat on the work programme of the Commission

(A/CN.9/911)

[Original: English]

Contents

I. Introduction

A. Background

1. At its forty-sixth session, in 2013, the Commission agreed that it should reserve time for discussion of UNCITRAL's future work as a separate topic at each Commission session (A/68/17, para. 310). This Note has been prepared to assist the Commission's consideration of its overall work programme and planning of its activities at this fiftieth session.

2. This Note considers both legislative development and activities designed to support the effective implementation, use and understanding of UNCITRAL texts. This Note also introduces possible future work in various areas of UNCITRAL activity.

3. The Commission may wish to consider its work programme and activities taking into account the progress reports of its Working Groups and reports from the Secretariat noted below, and the conclusions reached at its forty-ninth session under this agenda item (A/71/17, paras. 343-373). The Commission also has before it several draft texts for consideration and possible adoption. When setting UNCITRAL's work programme for the forthcoming period, the Commission may also wish to recall its decision at the forty-sixth session that it would normally plan for the period to the next Commission session, but that some longer-term indicative planning (for a three-to-five-year period) may also be appropriate (A/68/17, para. 305).

4. Documents for the current Commission session are available at www.uncitral.org/uncitral/commission/sessions/50th.html.[1] They include:[2]

(a) Progress reports of the Commission's Working Groups:

A/CN.9/895 and A/CN.9/900 — Report of Working Group I (MSMEs) on the work of its 27th and 28th sessions (Vienna, 3-7 October 2016; New York, 1-9 May 2017)

A/CN.9/896 and A/CN.9/901 — Report of Working Group II (Arbitration and Conciliation) on the work of its 65th and 66th sessions (Vienna, 12-23 September 2016; New York, 6-10 February 2017)

A/CN.9/897 and A/CN.9/902 — Report of Working Group IV (Electronic Commerce) on the work of its 54th and 55th sessions (Vienna, 31 October-4 November 2016; New York, 24-28 April 2017)

A/CN.9/898 and A/CN.9/903 — Report of Working Group V (Insolvency Law) on the work of its 50th and 51st sessions (Vienna, 12-16 December 2016; New York, 10-19 May 2017)

A/CN.9/899 and A/CN.9/904 — Report of Working Group VI (Security Interests) on the work of its 30th and 31st sessions (Vienna, 5-9 December 2016; New York, 13-17 February 2017)

(b) Draft texts for consideration and possible adoption by the Commission, and comments by States thereon:

A/CN.9/914 and Add.1-6 — Draft Guide to Enactment of the UNCITRAL Model Law on Secured Transactions

A/CN.9/920 — Draft Model Law on Electronic Transferable Records with Explanatory Notes

A/CN.9/921 and addenda — Compilation of comments by States and international organizations on the draft Model Law on Electronic Transferable Records with Explanatory Notes

A/CN.9/922 — Note by the Secretariat on proposed amendments to the draft explanatory notes and additional issues for consideration by the Commission

(c) Reports on other events and from the Secretariat:

A/CN.9/905 — Note by the Secretariat on technical cooperation and assistance

A/CN.9/906 — Note by the Secretariat on promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts

A/CN.9/907 — Bibliography of recent writings related to UNCITRAL's work

A/CN.9/908 — Note by the Secretariat on coordination activities

A/CN.9/909 — Note by the Secretariat on status of conventions and model laws

A/CN.9/910 — Note by the Secretariat on activities of the UNCITRAL Regional Centre for Asia and the Pacific

A/CN.9/912 — Note by the Secretariat on legal developments in the area of procurement and infrastructure development

A/CN.9/913 — Note by the Secretariat on possible future legislative work on security interests and related topics

A/CN.9/915 — Note by the Secretariat on possible future work in the field of dispute settlement: concurrent proceedings in international arbitration

[1] Titles and symbols of the documents referred to are current as at the date of submission of this Note, but are subject to change. Further documents may also be issued, and, if so, will be available at the UNCITRAL weblink indicated.

[2] Working Group III has not met since the 49th Commission session.

A/CN.9/916 — Note by the Secretariat on possible future work in the field of dispute settlement: ethics in international arbitration

A/CN.9/917 — Note by the Secretariat on possible future work in the field of dispute settlement: reforms of investor-State dispute settlement (ISDS)

A/CN.9/918 and addenda — Investor-State Dispute Settlement Framework, Compilation of comments

A/CN.9/923 — Proposal from CMI for possible future work on issues related to the judicial sale of ships

A/CN.9/924 — Note by the Secretariat on possible future coordination and technical assistance work on security interests and related topics

5. Background documents from the Commission's forty-ninth session are available at www.uncitral.org/uncitral/en/commission/sessions/49th.html. The Commission may wish to refer to the following documents in particular:

A/CN.9/878 — Work programme of the Commission — Note by the Secretariat

A/CN.9/880 — Settlement of commercial disputes: Possible future work on ethics in international arbitration

A/CN.9/881 — Concurrent proceedings in international arbitration

A/CN.9/890 — Settlement of commercial disputes: presentation of a research paper on the Mauritius Convention on Transparency in Treaty-based Investor-State Arbitration as a possible model for further reforms of investor-State dispute settlement

A/CN.9/891 — Legal Issues Related to Identity Management and Trust Services

A/71/17 — Report of the Commission's forty-ninth session (especially paras. 343-373)[3]

II. Summary of current activities and proposals for future work programme

A. Legislative development

1. Current legislative programme

6. Table 1 below sets out legislative development currently under way in the Commission's Working Groups, and the envisaged completion dates of the texts concerned.

Table 1
Current legislative activities[4]

Topic	*Report and document references*	*Envisaged completion date*
MSMEs (WG I)		
Preparation of legislative guide on simplified business entities	A/CN.9/WG.I/WP.99 and Add.1 and A/CN.9/895	Ongoing
Preparation of legislative guide on best practices in business registration	A/CN.9/WG.I/WP.101 and A/CN.9/900	Ongoing
Dispute settlement (WG II)		
Enforcement of settlement agreements resulting from international conciliation/mediation	A/CN.9/896 and A/CN.9/901	Estimated 2018 or beyond

[3] Background documents from the Commission's earlier sessions are available at www.uncitral.org/uncitral/commission/sessions/[ordinal number].html.

[4] Working Group III has not met since the 49th session.

Topic	*Report and document references*	*Envisaged completion date*
Electronic commerce (WG IV)		
(i) Electronic transferable records	A/66/17, para. 238; A/CN.9/897	Estimated 2017
(ii) Electronic single window facilities	A/66/17, para. 240	Ongoing
(iii) Contractual aspects of cloud computing	A/71/17, para. 235; A/CN.9/902	Ongoing
(iv) Legal issues related to identity management and trust services	A/71/17, para. 235; A/CN.9/902	Ongoing
Insolvency (WG V)		
(i) Model law or legislative provisions on selected international issues, including jurisdiction, access and recognition in the cross-border insolvency of enterprise groups	A/CN.9/691 A/65/17, para. 259 (a) A/CN.9/798 A/CN.9/803 A/CN.9/829	Ongoing
(ii) Obligations of directors of enterprise group's members in the period approaching insolvency	A/CN.9/691 A/65/17, para. 259(b) A/CN.9/829	Since text overlaps with work on topic (i), finalization related to progress with that topic.
(iii) Model law on recognition and enforcement of insolvency-related judgments	A/69/17, para. 155 A/CN.9/829	Ongoing
(iv) Insolvency of MSMEs	A/69/17, para. 156; A/71/17, para. 246	Starting spring 2017
Security Interests (WG VI)		
Preparation of a draft Guide to Enactment of the UNCITRAL Model Law on Secured Transactions	A/CN.9/914 and Addenda 1-6	2017

7. As noted above, the following draft texts will be presented for consideration and possible adoption at this Commission session:

A/CN.9/914 and Add.1-6 — Draft Guide to Enactment of the UNCITRAL Model Law on Secured Transactions

A/CN.9/920 — Draft Model Law on Electronic Transferable Records with Explanatory Notes

A/CN.9/921 and addenda — Compilation of comments by States and international organizations on the draft Model Law on Electronic Transferable Records with Explanatory Notes

A/CN.9/922 — Note by the Secretariat on proposed amendments to the draft explanatory notes and additional issues for consideration by the Commission

Progress of Working Groups

8. At its forty-seventh session, the Commission requested that the progress and status of the work of each Working Group, as set out in their reports, be collated and presented to the Commission so as to allow context of each Working Group's suggestions for future work and for prioritization among existing and new topics to be clearer (A/69/17, para. 253). A brief summary of the progress of each Working Group is accordingly presented below.

MSMEs (Working Group I)

9. At its twenty-seventh session (Vienna, 3-7 October 2016), Working Group I continued its exploration of the legal issues surrounding the simplification of

incorporation, and considered a draft legislative guide on a simplified business entity (A/CN.9/WG.I/WP.99 and Add.1). It completed its consideration of the commentary and recommendations in respect of the first 13 of the 27 recommendations in the text. The Working Group also heard a short presentation of working paper A/CN.9/WG.I/WP.94 of the French legislative approach known as an "Entrepreneur with Limited Liability" (or EIRL), which represented a possible alternative legislative model applicable to micro and small businesses.

10. At its twenty-eighth session (New York, 1-9 May 2017), the Working Group commenced its deliberation of the draft legislative guide on key principles of a business registry (A/CN.9/WG.I/WP.101) from 1 to 5 May, and from 8 to 9 May continued with its discussion of the draft legislative guide on a simplified business entity (A/CN.9/WG.I/WP.99/Add.1). The Working Group also heard a short presentation of working paper A/CN.9/WG.I/WP.102 by the delegation of Italy proposing possible future work in support of MSMEs on contractual networks.

Dispute settlement (Working Group II)

11. In line with the mandate received from the Commission, the Working Group commenced work on the topic of enforcement of settlement agreements at its sixty-third session, with the aim of identifying relevant issues and developing possible solutions, including the possible preparation of a convention, model provisions or guidance text, on the basis of notes by the Secretariat. At its sixty-fifth and sixty-sixth sessions (Vienna, 12-23 September 2016; New York, 6-10 February 2017, respectively), the Working Group considered the scope of a possible instrument, form requirements of settlement agreements, as well as the main features of an enforcement procedure and defences to enforcement, on the basis of draft provisions included in notes prepared by the Secretariat (A/CN.9/WG.II/WP.198, and A/CN.9/WG.II/WP.200 and its addendum, respectively). At its sixty-sixth session, the Working Group agreed that the Secretariat should prepare draft model legislative provisions complementing the UNCITRAL Model Law on International Commercial Conciliation and a draft convention, both addressing enforcement of international settlement agreements resulting from conciliation.

Electronic commerce (Working Group IV)

12. At its fifty-fourth session (Vienna, 31 October-4 November 2016) the Working Group finalized its work on the preparation of a Model Law on Electronic Transferable Records and requested the Secretariat to revise the draft Model Law on Electronic Transferable Records and explanatory materials contained in document A/CN.9/WG.IV/WP.139 and its addenda to reflect the deliberations and decisions at that session and transmit the revised text to the Commission for consideration at its fiftieth session. The Working Group recalled that UNCITRAL practice was to circulate the text as recommended by an UNCITRAL working group to all Governments and relevant international organizations for comment. It was noted that the same practice would be followed with respect to the draft Model Law, so that the comments would be before the Commission at its fiftieth session (A/CN.9/897, para. 20).

13. At its fifty-fifth session (New York, 24-28 April 2017) the Working Group considered legal issues related to identity management and trust services as well as contractual aspects of cloud computing in order to report back to the Commission so that it could make an informed decision at a future session, including on the priority to be given to each topic.

14. At its forty-fourth session, in 2011, the Commission welcomed the ongoing cooperation between the Secretariat and other relevant organizations on legal issues relating to electronic single-window facilities, and asked the Secretariat to contribute as appropriate, with a view to discussing relevant matters at the working group level when the progress of joint work offered a sufficient level of detail. In that respect, the Secretariat has regularly contributed to the preparation by UN/ESCAP of a Framework Agreement on Facilitation of Cross-border Paperless Trade in Asia and the Pacific, which has been adopted on 19 May 2016, and is now contributing to its

promotion as well as to developing the tools for its implementation (see A/CN.9/905, para. 27).

Insolvency (Working Group V)

15. At its fiftieth and fifty-first sessions (Vienna, 12-16 December 2016; New York, 10-19 May 2017, respectively), the Working Group continued its deliberations on (a) a draft legislative text to facilitate the cross-border insolvency of multinational enterprise groups; and (b) a draft model law on the recognition and enforcement of insolvency-related judgments. A draft commentary and recommendations on the obligations of directors of enterprise group companies in the period approaching insolvency is well-developed, but finalization depends upon progress with topic (a), as the solutions developed with respect to the conduct of enterprise group insolvencies will have an impact upon the nature of the obligations of directors of relevant group members and the steps that might be required to discharge those obligations. Work on the insolvency of MSMEs commenced at the fifty-first session, with a preliminary discussion of how the work should be approached (see A/CN.9/903).

Security Interests (Working Group VI)

16. At its thirtieth and thirty-first sessions (Vienna, 5-9 December 2016, and New York, 13-17 February 2017, respectively), the Working Group adopted the draft Guide to Enactment of the UNCITRAL Model Law on Secured Transactions (A/CN.9/899 and A/CN.9/904), and, at its thirty-first session, decided to submit it to the Commission for consideration and adoption at its fiftieth session (A/CN.9/904, para. 135). At that session, the Working Group also noted with appreciation the draft programme of the Fourth International Colloquium on Secured Transactions, which was scheduled to take place in Vienna from 15 to 17 March 2017 and that a report of the Colloquium would be submitted to the Commission for its consideration of future work in the area of secured transactions and related topics at its fiftieth session (A/CN.9/904, para. 136).

2. Future legislative programme

17. At its forty-sixth session, the Commission underscored the importance of a strategic approach to the allocation of resources inter alia to legislative development, in the light of the increasing number of topics referred to UNCITRAL for consideration (A/68/17, paras. 294-295). The Commission has emphasized the benefit of UNCITRAL's primary working method — that is, legislative development through formal negotiations in a working group (A/69/17, para. 249).

18. The Commission has also reaffirmed that it retained the authority and responsibility for setting UNCITRAL's workplan, especially as regards the mandates of Working Groups, though the role of Working Groups in identifying possible future work and the need for flexibility to allow a Working Group to decide on the type of legislative text to be produced were also recalled (ibid.).[5]

19. Table 2 below sets out proposals for future work by the Commission, annotated to show whether the work is mandated or possible future work. "Mandated future work" is planned legislative development, i.e. work in respect of which the Commission has provided a mandate to a Working Group. Items denoted as "possible future work" are topics proposed to the Commission, which the Commission may wish to consider. The final column of the table identifies areas in which a proposal may involve issues of another subject area relevant to UNCITRAL.

[5] At its forty-sixth session in 2013, the Commission confirmed that it would consider whether to refer proposals for future work to a Working Group by reference to four considerations: first, whether the Commission is satisfied that the topic is likely to be amenable to harmonization and the consensual development of a legislative text; second, whether the scope of a possible future text and the policy issues for deliberation are clear; third, whether there exists a sufficient likelihood that a proposed legislative text would enhance the law of international trade; and, fourth, whether proposed work would duplicate work undertaken by other law reform bodies. A/68/17, paras. 303 and 304.

20. The Commission may wish to consider the items set out in Table 2, the more detailed descriptions in the paragraphs following that table and the other documents referred to in this section when setting its work programme for the year to the Commission session in 2018. The Commission may also recall that further proposals seeking legislative mandates for other subject areas may be made at the current session, by States and/or international organizations.

Table 2
Summary of mandated and possible future legislative activity

Subject area	*Proposal*	*Document reference*	*Mandated/possible future work*	*Other relevant subject areas*
Dispute Settlement (WG II)	Concurrent proceedings in the field of investment arbitration	Paras. 21-22 below A/CN.9/881	Possible	–
	Code of ethics in international arbitration	Paras. 23-24 below A/CN.9/880	Possible	
	Possible reform of investor-State dispute settlement	Para. 25-26 below A/CN.9/880	Possible	
Electronic commerce (WG IV)	Mobile commerce	Para. 27 below A/70/17, para. 358	Possible	MSMEs
Security Interests (WG VI)	Contractual Guide on Secured Transactions Uniform law text on intellectual property licensing Finance to micro, small and medium-sized enterprises (MSMEs) Contractual issues of concern to MSMEs Warehouse receipt financing Secured transactions and alternative dispute resolution	Para. 32 below A/71/17, paras. 124-125	Mandated	Arbitration, MSMEs

Dispute settlement

Concurrent proceedings

21. At its forty-sixth session, in 2013, the Commission identified that the subject of concurrent proceedings was increasingly important particularly in the field of investment arbitration and might warrant further consideration. [6] At its forty-seventh session, in 2014, the Commission agreed that the Secretariat should explore the matter further, in close cooperation with experts and other organizations working actively in that area and that that work should focus on treaty-based investor-State arbitration, without disregarding the issue in the context of international commercial arbitration. [7] At its forty-eighth session, in 2015, the Commission requested the Secretariat to report to the Commission, outlining the issues at stake and identifying work that UNCITRAL might usefully undertake in the area. [8] At its

[6] Ibid., *Sixty-eighth Session, Supplement No. 17* (A/68/17), paras. 131-133 and 311.
[7] Ibid., *Sixty-ninth Session, Supplement No. 17* (A/69/17), paras. 126-127 and 130.
[8] Ibid., *Seventieth Session, Supplement No. 17* (A/70/17), paras. 143-147.

forty-ninth session, in 2016, the Commission had before it a note by the Secretariat outlining the causes and impact of concurrent proceedings, existing principles and mechanisms to address concurrent proceedings in international arbitration and possible future work in that area (A/CN.9/881).[9] After discussion, the Commission agreed that the Secretariat should continue to further develop possible work that could be undertaken with regard to concurrent proceedings as mentioned in section IV of document A/CN.9/881, for consideration by the Commission at a future session.[10]

22. Accordingly, the Commission will have before it a note by the Secretariat on the topic (A/CN.9/915).

Code of ethics

23. At its forty-eighth session, in 2015, the Commission had before it a proposal for future work on a code of ethics for arbitrators in investment arbitration (A/CN.9/855), which suggested that work on the topic could relate to conduct of arbitrators, their relationship with those involved in the arbitration process, and the values that they were expected to share and convey. There was general interest in the topic, which could be explored taking into account the wide range of issues and approaches.[11] At its forty-ninth session, in 2016, the Commission considered a note by the Secretariat, which outlined the concept of ethics in international arbitration as well as existing legal frameworks on ethics and posed some questions to be considered before possibly engaging in future work in that area (A/CN.9/880). After discussion, the Commission requested the Secretariat to continue exploring the topic in a broad manner, in close cooperation with experts including those from other organizations working actively in that area, and to report to the Commission at a future session on the various possible approaches.[12]

24. Accordingly, the Commission will have before it a note by the Secretariat on the topic further exploring the concept of ethics in international arbitration, identifying existing legal frameworks, and raising questions with regard to the topic as an item for possible future work by the Commission (A/CN.9/916).

Possible reform of investor-State dispute settlement

25. At its forty-eighth session, in 2015, in relation to investor-State arbitration, the Commission noted that the current circumstances posed a number of challenges and proposals for reforms had been formulated by a number of organizations. In that context, the Commission was further informed that the Secretariat was conducting a study on whether the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration ("Mauritius Convention on Transparency") could provide a useful model for possible reforms in the field of investor-State arbitration, in conjunction with interested organizations, including the Centre for International Dispute Settlement (CIDS) of the University of Geneva and the Graduate Institute of International and Development Studies. In that light, the Secretariat was requested to report to the Commission at a future session with an update on that matter. At its forty-ninth session, in 2016, the Commission considered a note providing a short overview of a research study on whether the Mauritius Convention on Transparency could provide a useful model for possible reforms in the field of investor-State dispute settlement, conducted within the framework of a research project of CIDS (A/CN.9/890). After discussion, the Commission requested the Secretariat to review how the project described in document A/CN.9/890 might be best carried forward, if approved as a topic of future work at the forthcoming session of the Commission, taking into consideration the views of all States and other stakeholders, including how this project might interact with other initiatives in this area and which format and processes should be used. In so doing, the Secretariat was requested to conduct broad consultations.

[10] Ibid., para. 181.
[11] Ibid., *Seventieth Session, Supplement No. 17* (A/70/17), paras. 148-151.
[12] Ibid., *Seventy-first Session*, *Supplement No. 17* (A/71/17), paras. 182-186.

26. Accordingly, the Commission will have before it a note by the Secretariat resulting from the consultations (A/CN.9/917) and compilation of comment from governments (A/CN.9/918 and addenda). The Commission will also have before it an additional report from CIDS, addressing the selection and appointment of members of international courts and assignment of individual cases to members.

Electronic commerce

27. At its forty-eighth session, in 2015, the Commission instructed the Secretariat to conduct preparatory work on identity management and trust services, cloud computing and mobile commerce, including through the organization of colloquiums and expert group meetings, for future discussion at the Working Group level following the current work on electronic transferable records. Working Group IV at its fifty-fifth session (New York, 24-28 April 2017) has started considering legal issues related to identity management and trust services as well as contractual aspects of cloud computing (see above, para. 13).

Procurement and infrastructure development

28. At its forty-eighth session, the Commission considered possible future work on the topics of suspension and debarment in public procurement and of public-private partnerships (PPPs) respectively. As regards suspension and debarment, the Commission at its forty-ninth session instructed the Secretariat to continue to monitor developments on the topic and to report periodically thereon to the Commission.[13]

29. As regards PPPs, the Commission decided at its forty-ninth session that the Secretariat should consider updating, where necessary, all or parts of the UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects,[14] involving experts, and report thereon.[15]

30. A Note by the Secretariat on legal developments in the area of procurement and infrastructure development provides the requested reports (A/CN.9/912).

Security Interests

31. As table 1 indicates, a draft Guide to Enactment of the UNCITRAL Model Law on Secured Transactions was completed and submitted by Working Group VI to the Commission for consideration and adoption at the present session. (As to the possible future legislative work on security interests and related matters, see document A/CN.9/913.)

32. As to the topics of a contractual guide on secured transactions, a uniform law text on intellectual property licensing, finance to micro, small and medium-sized enterprises (MSMEs), contractual issues of concern to MSMEs, warehouse receipt financing and secured transactions and alternative dispute resolution, the Commission may wish to consider them in the context of its consideration of document A/CN.9/913 on the possible future legislative work on security interests and related matters.

B. Current and possible future activities to support the adoption and use of UNCITRAL texts

33. The reports available to this fiftieth session of the Commission describing UNCITRAL's current activities in the provision of technical assistance, promoting ways to ensure a uniform interpretation and application of UNCITRAL texts; identifying the status of and work of other bodies in promoting its texts, coordination and cooperation with other relevant bodies and promoting the rule of law at the national and international levels ("support activities") are listed in paragraph 4(c)

[13] A/71/17, para. 361.
[14] A/71/17, para. 362.
[15] A/71/17, paras. 359-360 and 362.

above. At this fiftieth session, the Commission will have before it a note by the Secretariat on status of conventions and model laws (A/CN.9/909).

34. The Commission has emphasized the importance of support activities and the need to encourage such activities at the global and regional levels through the Secretariat, through the expertise available in the Working Groups and Commission, through member States and through partnering arrangements with relevant international organizations, as well as promoting increased awareness of UNCITRAL's texts in these organizations and within the United Nations system (A/69/17, paras. 263-265). It has requested the Secretariat to continue with those activities to the extent that its resources permit (A/70/17, para. 365). At this fiftieth session, the Commission will have before it a note by the Secretariat on activities of the UNCITRAL Regional Centre for Asia and the Pacific (A/CN.9/910).

35. As regards technical assistance activities, the Commission will have before it a note by the Secretariat on technical cooperation and assistance (A/CN.9/905), a Note by the Secretariat on promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts (A/CN.9/906) and a Bibliography of recent writings related to UNCITRAL's work (A/CN.9/907).

III. Commemoration of the fiftieth anniversary of the establishment of UNCITRAL

36. At its forty-ninth session, the Commission recalled its instruction to the Secretariat to commence preparations for a Congress to commemorate UNCITRAL's fiftieth anniversary. The Congress will take place during the first week of this fiftieth session, from 4-6 July 2017.

37. The Congress is entitled "Modernizing International Trade Law to Support Innovation and Sustainable Development". The Commission may recall that, in the Addis Ababa Action Agenda, States endorsed "the efforts and initiatives of the United Nations Commission on International Trade Law, as the core legal body within the United Nations system in the field of international trade law, aimed at increasing coordination of and cooperation on legal activities of international and regional organizations active in the field of international trade law and at promoting the rule of law at the national and international levels in this field."[16] The Congress will examine how trade law reform and innovation based on UNCITRAL's modern, fair and harmonized rules, can contribute to the 2030 Agenda for Sustainable Development, will emphasize the value of development-supporting work in a technical, non-politicized forum, and will examine the potential of UNCITRAL to propose legislative solutions to obstacles to cross-border commerce.

38. Information about the Congress, including the draft programme as it is developed, is available on the UNCITRAL website, at www.uncitral.org/uncitral/en/commission/colloquia/50th-anniversary.html.

39. The Secretariat will provide an oral report on the proceedings at the Congress at this session of the Commission, and written proceedings will be published at a later date. The Secretariat will bring to the attention of the Commission for its eventual consideration any proposals for future work in UNCITRAL arising as a result of the Congress.

B. Note by the Secretariat on possible future work in procurement and infrastructure development

(A/CN.9/912)

[Original: English]

Contents

I. Introduction

1. This Note has been prepared to enable the Commission's consideration of possible future work in procurement and infrastructure development at this fiftieth session. It addresses two possible areas of legislative development: suspension and debarment in public procurement, and public-private partnerships.

II. Suspension and debarment in public procurement

2. At its forty-eighth session, the Commission agreed on the importance of suspension and debarment in supporting the effective implementation of a public procurement law and in fighting corruption, noting that UNCITRAL Model Law on Public Procurement[1] did not provide any procedural rules for the process.[2] In light of considerable variations among suspension and debarment systems in practice, as regards the objectives, procedures and outcomes, the Commission considered that legislative development in UNCITRAL in this area was not presently feasible, but that developments towards convergence were such that the item should be retained on its agenda.[3]

3. The Commission also instructed the Secretariat to continue to monitor developments on the topic and to report periodically thereon to the Commission.[4]

4. The Secretariat has reviewed materials and recent training and other knowledge dissemination activities, which indicate growing efforts to promote greater procedural consistency, transparency in practice, and fairness in suspension and debarment procedures, indicating ongoing progress towards convergence in some areas (as reported to the Commission in 2016).[5]

5. Nonetheless, there remain significant divergence in policy and practice on key parameters for a suspension and debarment system, including on the appropriateness of flexibility in sanctions. For example, some systems permit deferred prosecution or non-prosecution agreements, under which suppliers are permitted to make reparation for their sanctionable conduct without prosecution and formal sanction. The benefits

of such systems, akin to some self-cleaning mechanisms, include that rehabilitation and improved conduct have long-term benefits for the system as a whole, avoid the potential negative impacts on overall market competition, and can also avoid some of the challenges involved in securing convictions and in cross-system recognition of sanctions. On the other hand, some commentators report that the deterrent effect of sanctions regimes and fight against corruption have been compromised, that transparency and fairness of the procedures to conclude the agreements may be lacking. It is also reported that some countries are motivated to protect large and influential domestic companies from convictions and reputational damage that could jeopardize their future bidding for international contracts and collateral economic and social consequences, without paying due regard to the governance implications.[6]

6. The Commission may therefore consider that the position remains as reported in 2016: legislative development in UNCITRAL in this area is not presently feasible, but the importance of the topic and moves towards indicate that the item should be retained on its agenda.

III. Public-private partnerships (PPPs)

7. At its forty-eighth session, and in light of the acknowledged importance of public-private partnerships (PPPs) for development and in the context of the Sustainable Development Goals, the Commission decided that the possibility of developing a legislative text on PPPs would be kept on the Commission's agenda, and instructed the Secretariat to follow the topic to advance preparations should the Commission decide to undertake work in this area.[7]

8. The Secretariat reported to the Commission in 2016 on areas of policymaking focus of other bodies active in PPPs, primarily the World Bank and regional development banks, the United Nations Economic Commission for Europe (UNECE) and the Organization for Economic Cooperation and Development and at the national level. The topics considered included procurement in PPPs, the terms of the project agreement, and post-award disputes.[8]

9. In light thereof, the Commission decided that the Secretariat should consider updating where necessary all or parts of the UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects,[9] involving experts.[10]

Consideration of possible updates to the UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects

10. In order to assess the likely extent of necessary updates to the UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects, the Secretariat has held consultations with experts in policy, law reform and practice in PPPs, on the provisions of the Legislative Guide and the accompanying Legislative Recommendations and Model Legislative Provisions (together, the PFIPs texts).[11] The review considered the main topics contained in those documents (Introduction; General legislative and institutional framework; Project Risks and Government Support; Selection of the concessionaire; Construction and operation of infrastructure — legislative framework and project agreement; Duration, extension and termination

[11] The UNCITRAL Legislative Guide (with Legislative Recommendations) and its Model Legislative Provisions on PFIP are available at www.uncitral.org/uncitral/uncitral_texts/procurement_infrastructure.html.

of the project agreement; Settlement of disputes and Other areas of law). The experts also took note of the conclusions held at two Colloquia considering the PFIPs texts held in May 2013 and March 2014 (both of which had recommended revisions to the PFIPs texts),[12] and the Commission's consideration thereof.[13]

11. The consultations starting in September 2016 were conducted through written exchanges, virtual meetings and two in-person meetings, one held in Washington, D.C., on 5-7 December 2016 (contemporaneously with the Global Forum on Law, Justice and Development, which considered various aspects of PPPs),[14] and one held in Vienna, on 6 and 7 March 2017.

12. The main conclusion of the experts is that most of the recommendations of the PFIPs texts reflect good policy and practices, and remain relevant. However, limited revisions to update the PFIPs texts are considered necessary, in order to take account of developments in practice since the existing Legislative Guide was issued in 2000. First, the term "public-private partnerships" has become the term generally used to describe the arrangements considered in the PFIPs texts, and should be used to replace "privately-financed infrastructure projects". In addition, referring to PPPs would avoid confusion with the "Private Financing Initiative" in the United Kingdom of Great Britain and Northern Ireland and also allow the importance of service delivery through PPPs to be placed on a par with the infrastructure development that precedes service delivery.

13. Secondly, objectives and requirements of the United Nations Convention against Corruption[15] should be fully reflected in the PFIPs texts, given the extent of ratification of that text.[16] The requirements, contained in articles 9(1) and 9(2) on public procurement and public financial management respectively, are that systems be based on principles of transparency, competition and objectivity in decision-taking. It is recommended that the PFIPs texts should be expanded as regards good governance throughout the life cycle of PPPs, and recent developments should be considered, for example those encouraging greater transparency in PPPs through open contracting and open data as well as transparency in procurement procedures.

14. The experts also agreed that an earlier instruction from the Commission to the Secretariat to consolidate the PFIPs texts should be implemented as part of the updating process. The PFIPs texts, as and when updated, should therefore present commentary, legislative guidance, legislative recommendations and model legislative provisions, as appropriate, on each aspect of PPPs covered. Legislative recommendations should form the central scoping provisions (and could be integrated in laws governing PPPs at the national level), but commentary on issues of implementation and use would be necessary to ensure the legal framework functioned as intended, and so should be included (reflecting the approach of the existing PFIPs texts). Thus updated PFIPs texts would take the form of a single Legislative Guide containing all guidance, recommendations and model provisions.

15. The other key conclusions of the review are set out in the following paragraphs.

16. First, and noting that the main objective of an updated Legislative Guide would be to assist legislators to establish an enabling legislative framework for PPPs, the text should be expanded as regards the institutional requirements for the effective

[15] Available at https://www.unodc.org/documents/brussels/UN_Convention_Against_Corruption.pdf.

[16] See https://www.unodc.org/documents/treaties/UNCAC/Status-Map/UNCAC_Status_Map_Current.pdf.

implementation of that framework (as provided in many modern PPPs laws).[17] In this context, the review concluded that the assumption in the existing PFIPs texts that the enacting State has appropriate institutional structure and capacity should be removed, and guidance should be included on both structure and capacity.

17. More generally, the extent of implementation guidance should be considered on a topic-by-topic basis, should focus on the legal and policy recommendations, and should not seek to provide a comprehensive user manual. For example, if an updated Legislative Guide recommends that a central PPPs agency or body be required to carry out readiness assessments, it should explain what is understood by readiness assessments. However, detailed practical advice on readiness assessments — a topic included by several organizations providing practical and capacity-building advice — [18] would not be included.

18. Secondly, additional discussion of key terms such as "value for money" and "sustainability", key features of the projects covered should be included. In this regard, the challenges of defining PPPs were noted, and the updated Legislative Guide should provide guidance on setting the scope of the projects for which the legal framework is designed, rather than seeking to define PPPs themselves.

19. Third, the review concluded, in light of practical experience and the requirements of the United Nations Convention against Corruption noted above, that more articulate recommendations for procedures and roles for project planning and preparation should be included. However, the review in this regard drew a distinction between infrastructure planning and administrative procedures to evaluate the quality of possible projects, identifying their intended and likely socioeconomic objectives and impact, and prioritization among projects, and PPPs planning and preparation.

20. While PPPs planning and preparation should be integrated into a national or regional infrastructure planning and public financial management processes, general administrative procedures will generally not feature in a law governing PPPs. Consequently, detailed commentary on such general administrative procedures should not be included in an updated Legislative Guide. Guidance on the importance of appropriate standards and linkages between these procedures and PPPs should, on the other hand, be provided.

21. The focus in an updated Legislative Guide should therefore be to address the steps to be taken once a PPP is a possible delivery model for a project (that is, the Guide would assume that the project is already identified as a worthwhile project). The guidance will focus on the steps involved to decide whether a proposed project would be viable as a PPP. The recommendations should focus on ensuring clarity in roles and responsibilities, and the criteria to be followed in taking the decisions involved. The approvals process is generally an iterative one involving, at a minimum, a public authority that would conduct the project and central authorities that provide the ultimate approvals. Methodologies to identify the suitability of a project as a PPP should be included, with requirements for a comparison with other delivery mechanisms at both the individual project level and at the level of government resource allocations, issues raised in the existing PFIPs texts but for which expanded guidance is recommended. In this regard, the review noted concerns that many existing systems in this area are not effective, and there is evidence of distortions in insufficiently rigorous processes designed to secure authorization for a PPP.

22. Other significant issues in the planning process include requirements for analyses of whether the long-term provision of services for which infrastructure is constructed can be assured; that is, can the services be provided at a price that will allow the private sector to develop and operate the project (whether with or without a subsidy); whether appropriate risk transfer is achievable; of the long-term financial implications of the project as PPP, including capital and operating financial requirements, fiscal and public debt implications, affordability, and appropriate

[17] See Comparison of Country PPP Laws with UNCITRAL PFIPs Instruments, report by Crown Agents, available at http://www.uncitral.org/uncitral/en/commission/colloquia/public-private-partnerships-2014-papers.html.

[18] Such as those identified in para. 6 above.

accounting for liabilities. Some of these elements are addressed in the existing PFIPs texts, and the review concluded that the existing guidance be consolidated and expanded, in a new chapter to address project preparation.

23. Third, the review recommended that all revisions should be grounded in current practices from all regions, for example on the emerging use of market consultations, and planning tools, which can assist in enhancing project quality and in preventing unnecessary changes in contract terms (concerns were expressed about recent examples of contract renegotiations only 12-18 months after contract signature). On the other hand, new tools for accommodating necessary changes during the period of project operation have emerged and should be considered.

24. Fourth, the review concluded that the scope of the revised Legislative Guide should remain focused on infrastructure-based PPPs with a public service element; any new models of such PPPs introduced should be based on successful experiences, and novel forms of PPP such as project alliancing should not be addressed, because there is a lack of broad-based experience that would allow UNCITRAL to build consensus on universally-acceptable recommendations and guidance, and also reflecting the limited scope of the instructions from the Commission.

25. As regards drafting issues, the review recommended a simpler style and presentation, and simplifying references to the constituent elements of a legal framework. Unnecessary reference to sector-specific issues should be removed, though some general recommendations in the updated Legislative Guide might be adapted for or applicable to individual sectors.

26. The review is now looking at individual chapters of the existing PFIPS texts in detail, starting with Chapter I of the existing Legislative Guide and associated Legislative Recommendations and Model Legislative Provisions. This Chapter addresses the general enabling environment (including country- or region-wide planning), the functions of PPPs-related institutions and interaction with other branches of government. The initial sections of Chapter I, as proposed to be updated based on the above recommendations, are annexed to this Note, so as to provide an example of the format an updated Legislative Guide may take.

27. A table of concordance with the existing PFIPs texts for this extract appears below.

Legislative Guide on PFIPs (2000) **Chapter and Main Topic Reference**	**Proposed Revised Legislative Guide on PPPs** **Chapter and Main Topic Reference**
Chapter I — General legislative and institutional framework	**Chapter I — General framework for PPPs**
A. General Remarks	A. General remarks
B. Constitutional legislative and institutional framework 1. General guiding principles for a favourable constitutional and legislative framework a. Transparency b. Fairness c. Long-term sustainability 2. Constitutional law and privately financed infrastructure projects 3. General and sector specific legislation Includes: Legislative Recommendation 1 and Model Legislative Provision 2	B. Legal and institutional framework for PPPs 1. Objectives of a PPPs legal framework a. Sustainability b. Value for money c. Participation d. Competition e. Integrity f. Transparency g. Fairness and public confidence 2. The legal framework for PPPs a. General remarks b. Interaction with other areas of law

	c. Sector specific legislation Includes: Model Legislative Provision 1 (Preamble)
C. Scope of authority to award concessions 1. Authorized agencies and relevant fields of activity 2. Definition of PPPs 3. Scope of authority to enter into PPPs Includes: Model Legislative Provisions 2 and 3
	D. The institutional framework for PPPs

IV. Conclusions and next steps

28. The review indicates that updating the PFIPs texts is both feasible and achievable within current resource constraints. The Secretariat proposes to hold a further Colloquium on PPPs in the autumn of 2017, in order to allow proposals to update the Chapters of the existing PFIPs texts to be considered in an open and inclusive forum.

29. A further report and recommendations will be presented to the Commission for its consideration in 2018.

Annex

Proposed updated Chapter I, Sections A-D, of the UNCITRAL Legislative Guide on Privately-Financed Infrastructure Projects

Notes:

1 This draft consolidates the Legislative Guide, Legislative Recommendations (LRs) and Model Legislative Provisions (MLPs);

2 Italicised text in square brackets refers to sources and may be excluded from the final text.

CHAPTER I. General framework for PPPs

A. General Remarks

1. The establishment of an appropriate and effective legal framework is a prerequisite to creating an environment that fosters public-private partnerships for infrastructure development and the provision of services to the public. For countries where such a legal framework already exists, it is important to ensure that the law is sufficiently flexible and responsive to keep pace with developments. This chapter deals with general issues and objectives that domestic legislators are advised to consider when setting up or reviewing the legal framework for public-private partnerships for infrastructure development.

B. Legal and institutional framework for PPPs

1. Objectives of a PPPs legal framework

2. A statement of objectives sets out the policy objectives in a law and supporting elements of the PPPs legal framework, therefore provides useful orientation for users, and can also provide guidance in the interpretation and application of the law.

3. Ensuring that PPPs are concluded using a transparent, objective and competitive process, principles underlying article 9 of the United Nations Convention against Corruption (New York, 31 October 2003),[19] will also ensure the integrity of the process and may also support the sustainability of a PPP (as projects may otherwise be vulnerable to cancellation when governments change).

4. It is recommended that such a statement be included in the form of a preamble to the law. In States in which it is not the practice to include preambles, a statement of objectives can be incorporated in the body of the provisions of the Law.

5. It should be noted that such a statement does not create substantive rights or obligations for the parties — these arise under procedures in the law itself.

---

[19] United Nations, *Treaty Series*, vol. 2349. The Convention was adopted by the United Nations General Assembly by its resolution 58/4. In accordance with article 68 (1) of the Convention, the Convention entered into force on 14 December 2005. The text of the Convention is also available at www.unodc.org/documents/treaties/UNCAC/Publications/Convention/08-50026_E.pdf (accessed January 2011).

Model Legislative Provision 1

Preamble

WHEREAS the [Government] [Parliament] of ... considers it desirable to regulate public-private partnerships so as to promote the following objectives in infrastructure development and the provision of associated services to the public:

(a) Achieving long-term sustainability of infrastructure and security in the delivery of services to citizens;

(b) Maximizing value for money;

(c) Fostering and encouraging the participation of the private sector;

(d) Promoting competition for public-private partnership contracts;

(e) Promoting integrity, transparency, fairness and public confidence in the processes concerned.

Be it therefore enacted as follows:

[*The objectives set out in the Model Legislative Provision are drawn from article 9 of the United Nations Convention against Corruption, the UNCITRAL Model Law on Public Procurement and the UNCITRAL Legislative Guide on Privately-Financed Infrastructure Projects.*]

Commentary on objectives of a PPPs legal framework

(a) Sustainability

6. Recalling the scope of this [Guide] and the context of infrastructure development [cross references], it is clear that an important objective of the PPPs legal framework is to ensure the long-term provision of public services, high quality in infrastructure, and economic, environmental and social sustainability. Inadequate arrangements for the operation and maintenance of public infrastructure severely compromise these objectives and can result directly in reduced service quality and increased costs for users.

7. This [Guide] addresses the role of the legislative framework in ensuring that the various public authorities involved in the governance and operation of PPPs have the legal authority and institutional capacity to undertake the various tasks entrusted to them throughout the planning and operational phases of PPPs.

[*sources include PFIPs Legislative Guide*]

(b) Value for money

8. Value for money means an objective assessment of the extent to which a PPP optimizes the use of resources to achieve the intended impact of the project concerned, and can include:

(a) The optimal relationship between the cost, time and other resources, and the quality of the subject matter of the project;

(b) Delivering the required level of services at a lower level of cost, time and other resources, without reducing the quality of those services, than would otherwise have been the case;

(c) Delivering a better-than-required level of services or achieving a better return on investment in the project for the cost, time and other resources than would otherwise have been the case.

[*Various sources, including P3s Legislative Resource Guide*]

(c) Participation

9. As regards participation in the process of awarding PPPs contracts, private entities will take part where they are confident that their offers will be objectively

assessed, and that the procedures are fair and transparent (both as regards the procurement process and the operation phase of the project, as reflected in the contractual arrangements therefor).

[*To be completed regarding bankability and related issues*]

[*Drawn from Guide to Enactment of the Model Law on Public Procurement*]

(d) Competition

10. Competition for PPPs contracts (meaning that potential investors and private entities engage in a rigorous contest for the opportunity to be awarded the PPPs contract) can reduce overall costs and other resource demands, can increase the productivity of infrastructure investment, can enhance responsiveness to the needs of the customers and thus obtain better quality of public services. Competition has the potential both to improve value for money in PPPs and to increase the likelihood of achieving the intended outcome of the project concerned. Competition is also one of the principles that the United Nations Convention against Corruption requires to be enshrined in a national system for procurement [references to be added].

11. Promoting potential investors' and private entity participation in PPPs is a key prerequisite for competition for the contracts concerned. The procurement procedures recommended in this [Guide] recognize, however, that in the context of the complex infrastructure projects at issue, competition is best assured by limiting the number of participants. This apparently paradoxical situation arises because the costs of participating in the procedure are high — unless the private entities assess their chances of winning the ultimate contract as reasonable, they will be unwilling to participate. Consequently the procurement procedures recommended in this [Guide] start with a process to identify a limited number of high-quality potential partners.

[*To be completed regarding exclusivity*]

[*Various sources, including Guide to Enactment of the Model Law on Public Procurement*]

(e) Integrity

12. Integrity involves both the avoidance of corruption and abuse and the notion of all participants in a PPPs project acting ethically and fairly, avoiding conflicts of interest. It requires the overall system for PPPs to be devoid of institutionalized discrimination or bias against any particular group of private entities or potential investors, and that the application of the rules of the legal framework on PPPs does not bring results contrary to the objectives of the system.

13. Officials in public authorities will exercise considerable commercial discretion in concluding and operating PPPs, and accordingly a code of conduct for their activities is recommended in this [Guide] [cross reference]. Integrity may be further enhanced by linking this code of conduct with applicable general standards of conduct for civil servants and any further provisions addressing integrity and prevention of corruption in other national laws and regulations.

[*Drawn from Guide to Enactment of the Model Law on Public Procurement*]

(f) Transparency

14. A transparent legal framework is characterized by clear and readily accessible rules and by efficient procedures for their application. Transparent laws and administrative procedures create predictability, enabling private entities and potential investors to estimate the costs and risks of their participation and thus to offer their most advantageous terms. They also set out the rules regarding provision of services to citizens and the means by which public service providers and their customers may protect their rights.

15. Transparent laws and administrative procedures may also foster openness through provisions requiring the publication of administrative decisions, including, when appropriate, an obligation to state the grounds on which they are based and to

disclose other information of public relevance. They also help to guard against arbitrary or improper actions or decisions by the public authority or its officials and thus help to promote confidence in a country's infrastructure development programme. Consequently, transparency is also one of the principles that the United Nations Convention against Corruption requires to be enshrined in a national system for procurement [references to be added].

16. Transparency of laws and administrative procedures is of particular importance where foreign investment is sought, since foreign companies may be unfamiliar with the country's practices for the award of infrastructure projects.

17. Transparency is a tool that allows the necessary exercise of discretion in the PPPs process in the operation of the infrastructure and in the delivery of services to citizens in changing circumstances, limits that discretion where appropriate, allows the exercise of discretion to be monitored and, where necessary, challenged. It is considered a key element of promoting accountability for the actions or decisions taken. It is thus a critical support for integrity and for public confidence in the system, as well as a tool to facilitate the evaluation of the system and projects against their desired outcomes.

18. This [Guide] recommends five key aspects of transparency in procurement of PPPs projects: the public disclosure of the legal framework; the publication of opportunities; the prior determination and publication of the key terms of the project against which offers are to be assessed; the visible conduct of the process according to the prescribed rules and procedures; and the existence of a system to monitor that these rules are being followed and to enforce them if necessary.

[*To be completed regarding transparency regarding socioeconomic objectives, budgets, open contracts and open data in the operation phase*]

[*Drawn from PFIPs Legislative Guide and Guide to Enactment of the Model Law on Public Procurement*]

(g) Fairness and public confidence

19. The PPPs legal framework is both the means by which Governments regulate and ensure the provision of public services to their citizens and the means by which public service providers and their customers may protect their rights. A fair legal framework takes into account the various (and sometimes possibly conflicting) interests of the Government, the public service providers and their customers and seeks to achieve an equitable balance between them. The private sector's business considerations, the users' right to adequate services, both in terms of quality and price, the Government's responsibility for ensuring the continuous provision of essential services and its role in promoting national infrastructure development are but a few of the interests that deserve appropriate recognition in the law.

20. Public confidence will also be enhanced where enforcement of the rules is clearly visible, and transgressions appropriately punished. This [Guide] therefore recommends procedures for such enforcement.

[*Drawn from PFIPs Legislative Guide and Guide to Enactment of the Model Law on Public Procurement*]

2. The legal framework for PPPs

(a) General remarks

21. The establishment of an appropriate and effective legal framework is a prerequisite to creating an environment that fosters the participation of the private sector in PPPs. A law governing PPPs typically embodies a political commitment, provides specific legal rights and may represent an important guarantee of stability of

the legal and regulatory regime, all of which are needed to facilitate private investment in PPPs. [*To be completed regarding instability in practice*]

22. The provisions in this [Guide] are designed both to allow countries to draft a Law governing PPPs where none presently exists, or to assess an existing legal framework against a framework reflecting international good practice.

23. An effective law governing PPPs will establish general principles for the basic policy, institutional and regulatory framework under which PPPs will be concluded and operated. Such a law is designed to provide all the essential principles and procedures for the conclusion and operation of PPPs. It is not intended to be a comprehensive guide, either in terms of setting out all detailed rules and procedures necessary to regulate the contractual relationships concerned, or in terms of rules and procedures applicable to particular sectors of the economy.

24. The overall system enabling PPPs will generally comprise the primary law, secondary regulations or decrees, internal rules, and guidance, drawing on the policy choices made for the system overall. When drafting a law governing PPPs, countries will need to ensure that the primary law precisely defines the obligations imposed and rights conferred and is sufficiently adaptable to PPPs in practice, recalling that not all situations are foreseeable. The legal and administrative tradition in a country will have significant bearing on drafting style, but a balance should be struck between law that is sufficiently clear and unambiguous and law that is sufficiently adaptable. Excessive delegation of interpretation to practitioners or the judiciary is undesirable in that it will foster uncertainty and inconsistent outcomes. Consequently, this [Guide] contains Model Legislative Provisions for those aspects of PPPs in which there is clearly-established international good practice and consensus on appropriate standards of conduct, and in areas in which there is evidence that absence of rules may lead to attempts to circumvent the principles on which it is based, the provisions are relatively detailed.

25. More detailed rules that can avoid uncertainty and ambiguity in how the primary law may operate in practice can be set out in supporting regulations and internal rules, which have the significant advantage of possible amendment as experience is gained without requiring new Parliamentary approvals as amendments to primary laws require. This flexibility, however, is appropriate provided that the main principles and procedures are set out in the primary law, so that they cannot themselves be amended without public scrutiny.

26. Countries using this [Guide] to draft their general enabling legislation for PPPs will therefore need to supplement its provisions through additional rules and regulations, supported by guidance and other capacity-building tools, to ensure appropriate governance and to promote integrity in the system.

27. As a matter of good practice, countries wishing to engage in PPPs should also set a national PPP policy to provide direction on the use of PPPs. A PPPs policy should also be set in a manner consistent with national and other governmental infrastructure plans (discussed further in [cross reference]). These policies will themselves refer to or include processes for planning, prioritization and project preparation, discussed in [new Chapter II].

28. Such policies, along with rights and obligations expressed in rules (primary law, secondary or delegated legislation and other rules and regulations) will support transparency and accountability where they are publicly available. While a primary law generally comes into force only upon publication, other rules and policies are not always subject to the same restriction. The law governing PPPs should therefore set out the authorities responsible for issuing rules, regulations and also national and any other statements of policy (see Model Legislative Provision number […]).

29. Laws require institutions to implement the rules and procedures they contain; institutions are also required to implement the policies and practices supporting the legal framework. In the PPPs context, the institutions can take the form of a body (e.g. a PPP authority/PPP Unit) or combination of administrative functions. In either case, the body or function should be authorized to address PPPs throughout their life-cycle.

Administrative functions include promoting PPP awareness, identifying opportunities for projects and liaising with central authorities, ensuring that PPPs are considered as possible forms of project deliver as and when appropriate. More detailed discussion of these and other functions and practical examples of structures in some existing systems, are found in […] of this [Guide].

30. In some countries, the State has an explicit duty to ensure the provision of services to its citizens and residents, and there may be restrictions on the extent to which the duty can be delegated to the private sector especially as regards major services such as health, justice and policing. Any such restrictions should be accurately reflected in the law on PPPs. In some cases, a contractual solution such as specially-created public entities or special purpose vehicles may provide a solution, in which case, the general legal framework for PPPs should enable such a possibility. This situation is to be distinguished from decisions that some services — such as clinical services at hospitals, guarding services at prisons — should be retained by the public sector, either as a policy matter or because private companies do not have the capacity to provide those services. Again, the law governing PPPs should set out all relevant restrictions.

(b) Interaction with other areas of law

31. The general legal framework for PPPs will also interact with other areas of the legal framework in the country concerned.

32. Chapter VII of the existing PFIPs Legislative Guide will be included here, addressing:

- Promotion and protection of investment
- Property law
- Security interests
- Intellectual property law
- Rules and procedures on compulsory acquisition of private property
- Rules on government contracts and administrative law
- Private contract law
- Company law
- Tax law
- Accounting rules and practices
- Environmental protection
- Consumer protection laws
- Insolvency law
- Anti-corruption measures
- International agreements:
- Membership in international financial institutions
- General agreements on trade facilitation and promotion
- International agreements on specific industries

33. Other issues to be included: potential overlap with PPPs and other laws; restrictions through regulatory function; land ownership restrictions; the interaction of tariffs as provided in other laws and the PPP legal framework [notably, addressing the need for a MLP and guidance on coordination between the tariff regulator and the public entity letting the project is needed to ensure long-term sustainability.]

(c) Sector-specific legislation

34. Legal provisions to enable PPPs create a framework for providing uniform treatment of issues that are common to such partnerships in different infrastructure

sectors but is normally not suitable to address all the particular requirements of different sectors. Even in countries that have adopted a general law governing PPPs addressing cross-sectoral issues, supplementary sector specific laws allow the legislator to formulate rules that take into account the market structure in each sector.

35. [Sector-specific laws should be expressly subordinate to a general law governing PPPs, so as to permit any inconsistencies to be clearly resolved in favour of the generally-applicable rule.]

36. Sector-specific laws may also establish a framework for the regulation of individual infrastructure sectors, thus allowing the development of national regulatory capacity. Effective laws will set parameters for the exercise of discretion by the regulator, but should not unnecessarily restrict the ability of parties to a PPP to determine their contractual relationship.

C. Scope of the legal authority for PPPs

37. The scope of the legal framework for PPPs should be clear both as regards which authorities may use the law to engage in PPPs and which projects are considered as PPPs under the law. The enabling provisions to such effect will require a definition of PPPs, and of the parties to PPPs projects to be concluded under the law — that is, of both the public authority and private entity. Model Legislative Provision 2 defines the scope of a law governing PPPs based on this Guide, as further explained in the following paragraphs.

1. PPP projects to be addressed

38. The recommendations in this [Guide] apply to PPPs for construction, maintenance, repair, refurbishment, modernization and/or expansion and operation of public infrastructure facilities and systems and the provision of services in connection therewith, through a contractual relationship (that is, with defined contractual obligations, shared risks and where payment is based on performance, as further explained below). While the infrastructure need not be physical infrastructure and may comprise, for example, communications systems, the scope of the provisions of this [Guide] does not extend to other forms of partnership between the public and private sectors, where the government does not have an interest in the provision of services, to concessions for oil and gas, mining or infrastructure, or to contractual arrangements as project alliancing or outsourcing. Nonetheless, many of the governance recommendations are transferable to such other projects and to projects in specific sectors.

39. The nature of the private participation includes investment in public infrastructure. The questions of ownership of the infrastructure and the nature of the public interest in that infrastructure are discussed in [cross reference — to cover direct and indirect public interest]. The nature of the services to be provided, including the public authority's responsibility for delivery of those services, is discussed in [cross reference].

40. Model Legislative Provision 2 limits the scope of the PPP projects in the legal framework to the infrastructure-based projects, as described. Governments wishing to expand the scope of a law governing PPPs may wish to expand the scope of the legal framework accordingly and revise the phrase "with respect to any infrastructure facilities and systems" when enacting this provision.

2. Definition of PPPs

41. An enabling provision for the conclusion of PPPs projects requires a definition of the projects covered. PPPs can be described as mutually beneficial contractual arrangements, in which resources are contributed by both the public and private partners (including provision of private finance, professional and other knowledge, expertise, and skills on the one hand, and granting of rights, such as rights over land and to exclusive operation of infrastructure on the other).

42. The contractual arrangements generally include:

(a) Obligations on the private entity to design, finance, build or rehabilitate infrastructure, to maintain and operate the infrastructure concerned and to provide defined services for a specified period;

(b) Obligations on the public authority to provide access to assets and the rights and permits necessary for the performance of the private party's obligations;

(c) The allocation of risk among the parties (including financing and construction risks, and risks associated with ensuring of accessibility of or demand for the infrastructure and the associated services, among others); and

(d) A payment mechanism based on performance criteria for service provision and in some cases the satisfactory operation/quality of the infrastructure, with remuneration being provided by the public authority or by the end users (or a combination of both). Where the payment mechanism consists of the right to charge a price for the use of the facility or premises or for the service or goods it generates, the PPP is a concession; in other cases, it is a publicly-funded PPP. PPPs may be exclusively publicly-funded, or concessions alone, or include a combination of both payment mechanisms. A discussion of these project types is set out in [cross reference — to include commentary on the relative frequency of those types].

43. It is recommended that PPPs are permitted to be concluded only in accordance with the provisions of the law governing PPPs, which should include:

(a) A planning and preparation process as set out in the law governing PPPs, and in other relevant laws, which includes assessments of the social, economic and other impact of the proposed project, and comparative assessments of the available project delivery mechanisms;

(b) A contract planning process that addresses the contractual arrangements set out in the preceding paragraph, provides for the control and ownership of infrastructure throughout the life of the PPP, and includes commercial terms that appropriately balance the interests of both parties, taking into account the anticipated length of the contract, the time necessary for the private entity to amortize all costs and make a reasonable profit, an adjustment mechanism for changes in circumstances and [other];

(c) A default procurement method that is competitive, with limited exemptions as set out in the law; and

(d) Provisions for termination of the contract at the expiry of the term, such as that the infrastructure is transferred in good operating condition to the public authority, generally without compensation (unless the contract provides otherwise).

44. While some of the above features would also apply to public procurement of infrastructure, it is clear that PPPs are neither merely traditional procurement nor, on the other hand, a privatization mechanism. The interaction between PPPs and other laws in a country is discussed in [cross reference].

45. The definition of a PPP clearly cannot include all the above descriptive elements. It is recommended that the constituent elements of a PPP as set out in Model Legislative Provision 2 be included in the definition, referring to the necessary steps to conclude and operate a PPP under the law.

3. Scope of authority to enter into PPPs

46. Possible investors, private parties, investors and others will not participate in PPPs projects unless they are confident that they are dealing with persons with the authority to engage in PPPs and the procedures to conclude them. The phrase "engage in PPPs" refers to the entire life-cycle of a PPP.

47. It is therefore recommended that the PPPs legal framework should establish a general authority for any public authority to enter into a PPP, to avoid the practical difficulties of keeping a positive or negative list system up to date. Model Legislative Provision 2 includes an option for countries to exclude specific sectors or entities

should they so choose. In some systems, this authority may exist outside the PPPs legal framework, in which case the provision when enacted should make appropriate cross-references.

48. The process to conclude a PPP and operate the project involves negotiations to conclude the terms, to enter into the PPPs contract, and amend the PPPs contract and associated contracts where modifications are needed. If any of these functions again exists outside the PPPs legal framework, which may be the case where some functions reside in a central body, appropriate cross-references will be needed, unless the PPPs legal framework is to supplement the general position (in which case additional provision may be needed).

49. Clearly, a definition of "public authority" for the purpose of a law governing PPPs is needed. The wording of the definition should be tailored to reflect the governmental structure in the country concerned and whether or not central authorities, sub-central authorities and others are to be permitted to engage in PPPs. If a positive list approach is taken, care is needed to ensure it is comprehensive, and the degree of centralization in a country should be reflected appropriately where PPPs are limited to central authorities.

50. The definition of a public authority in Model Legislative Provision 2 refers to authorities at any level of government, unless the bracketed language is included, in which case central government authorities may enter into PPPs (or national authorities in federal systems), but provincial, local or other sub-central government authorities will be excluded.

51. In addition, the definition of public authority can be extended to certain entities or state-owned enterprises that are not considered part of the government, if a country wishes to allow those bodies to engage in PPPs. Relevant considerations from this perspective include:

(a) [Whether the Government provides substantial public funds to the entity, or a guarantee or other security to secure payment or supports the entity's obligations under the PPP contract;

(b) Whether the entity is managed or controlled by the Government or whether the Government participates in the management or control of the entity;

(c) Whether the Government grants to the entity an exclusive licence, monopoly or quasi-monopoly for its operations;

(d) Whether the entity is accountable to the Government or to the public treasury in respect of its profitability; and

(e) Whether the entity is engaged in projects in partnership with an international donor.]

[*Source: Guide to Enactment of the Model Law on Public Procurement*]

[*To be completed regarding whether PPPs would be engaged in by SOEs or similar entities and possible conflicts of interest in vertical PPPs*]

Model Legislative Provision 2

[A public authority [of the [national Government]] [save [a list of exceptions can be included]] may enter into a public-private partnership with respect to any infrastructure facilities and systems in this State in accordance with the provisions of this law.]

Related definitions

[An infrastructure public-private partnership is a contractual arrangement between a public authority and a private entity for the construction, maintenance, repair, refurbishment, modernization and/or expansion and operation of infrastructure facilities and systems in which the public authority has an interest, and the provision of services in connection therewith, under which the remuneration provided to the

private entity is based on performance of the obligations undertaken by that private entity.]

[A public authority is any department, agency, organ or other unit, or any subdivision or multiplicity thereof [of the [national Government]]]

[A private entity is a body corporate organised under the laws of this or another State.]

[*Various sources*]

Exclusivity

52. Another important issue concerns the nature of the rights vested in the private partner, in particular whether the right to provide the service is exclusive or whether the private partner will face competition from other infrastructure facilities or service providers. Exclusivity may concern the right to provide a service in a particular geographical region or embrace the whole territory of the country; it may relate to the right to supply one particular type of goods or services to one particular customer or to a limited group of customers. [*Examples to be revised*]

53. The decision whether or not to grant exclusivity rights to a certain project or category of projects should be taken in the light of the scope for competition and whether there is a natural monopoly.

54. It is desirable therefore to deal with the issue of exclusivity in a flexible manner.

55. [*To be completed. Some experts recommend a default provision in favour of exclusivity, but others consider that exclusivity is not critical, and is subordinate to the policy priority of providing the best services to users. Location also to be reviewed.*]

56. [*Reflecting the overall approach to exclusivity, the guidance will address whether or not the law or standard or individual contracts or a combination thereof may restrict exclusivity; the cross-border context; how to link termination rights and compensation and exclusivity can be terminated only in the public interest; the nature of exclusivity (geographical, sectoral etc.); scope for competition in different sectors; the technical or commercial viability of a project without exclusivity*.]

57. [*Also to be completed as regards whether the contract or underlying legal principles should permit adaptation of the service to benefit the users without amounting to a renegotiation; whether exclusivity should give way to clauses or provisions addressing pacta sund servanda vs. rebus sic stantibus, i.e. amounting to the restoration of an economic equilibrium.*]

[Model Legislative Provision 3

A public-private partnership shall grant an exclusive right to a private entity to operate infrastructure facilities and systems in all or a defined subdivision of this State [save …]].

D. The institutional framework for PPPs

58. [*This section will address the general institutional framework for PPPs, including the need for institutions to create an attractive, predictable and transparent environment; the linkages between PPPs planning and planning for infrastructure development in an economy; issuing policy and practical guidance on such matters as possible projects, infrastructure plans and priorities, addressing obstacles e.g. consultations on land use, standard procedures and documents; disseminating best practices, and capacity-building.*

59. *This section will contain explanations of roles and criteria for decision-taking, using examples of common solutions, giving suggestions but not mandatory requirements, reflecting the wide variation in PPPs authorities, PPPs Units and other bodies found in practice. For example, a Ministry of Finance is likely to have overall*

decision-taking authority, will give approval and set rules, and will check compliance; sectoral ministries will address sectoral and other technical issues.

60. *This section will also address governance issues in institutions, such as avoiding conflicts of interest, administrative coordination and hierarchies.*

61. *Existing guidance on licences and permits, on sectoral regulators in this Chapter of the PFIPS Legislative Guide will be incorporated in a new Chapter II, to address the principles and procedures governing individual project planning and implementation*].

C. Note by the Secretariat on possible future legislative work on security interests and related topics

(A/CN.9/913)

[Original: English]

Contents

I. Introduction

1. At its forty-third session, in 2010, the Commission considered a note by the Secretariat entitled "Possible future work on security interests" (A/CN.9/702 and Add.1), and decided to entrust Working Group VI with the preparation of a text on registration of security rights in movable property.[1] At that session, the Commission also decided to retain on its future work programme the following topics: (a) security rights in non-intermediated securities; (b) a model law on secured transactions; and (c) a text dealing with the rights and obligations of the parties to secured transactions.[2] The Commission also requested the Secretariat to prepare a study on intellectual property licensing.[3]

2. At its forty-sixth session, in 2013, the Commission adopted the UNCITRAL Guide on the Implementation of a Security Rights Registry.[4] At that session, the Commission considered a note by the Secretariat entitled "Draft Model Law on Secured Transactions" (A/CN.9/WG.VI/WP.55 and Add.1-4), and entrusted Working Group VI with the preparation of a model law on secured transactions.[5]

3. At its forty-seventh session, in 2014, the Commission considered a note by the Secretariat entitled "Draft Model Law on Secured Transactions: Security Interests in Non-Intermediated Securities" (A/CN.9/811), and agreed that the draft model law on secured transactions prepared by Working Group VI should also cover security rights in non-intermediated securities.[6]

4. At its forty-eighth session, in 2015, the Commission agreed that a draft guide to enactment of the draft model law on secured transactions should be prepared and referred that task to Working Group VI.[7] At that session, the Commission also noted that, at its forty-third session, it had placed on its future work programme the preparation of a contractual guide on secured transactions and a uniform law text on intellectual property licensing, and decided that those matters should be retained on its future work programme and considered at a future session on the basis of notes to be prepared by the Secretariat, after a colloquium or expert group meeting, to be held within existing resources.[8]

5. At its forty-ninth session, in 2016, the Commission considered notes by the Secretariat entitled "Draft Model Law on Secured Transactions" (A/CN.9/884 and Add.1-4) and "Draft Model Law on Secured Transactions: compilation of comments" (A/CN.9/886, A/CN.9/887 and Add.1), and adopted the UNCITRAL Model Law on Secured Transactions.[9] At that session, the Commission had before it a note by the Secretariat entitled "Draft Guide to Enactment of the draft Model Law on Secured Transactions" (A/CN.9/885 and Add.1-4), and agreed to give Working Group VI up to two sessions to complete its work and submit the draft Guide to Enactment to the Commission for final consideration and adoption at its fiftieth session, in 2017.[10]

6. At that session, noting its earlier decisions (see paras. 1 and 4 above), the Commission also considered its possible future work on security interests and agreed that a contractual text on secured transactions and a text on intellectual property

[8] Ibid., para. 217.
[9] *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), para. 119.
[10] Ibid., para. 122.

licensing should be retained on its future work programme.[11] The Commission also decided that the following topics should be added on its future work programme: (a) micro-finance; (b) contractual issues relating to micro-enterprises (e.g. transparency issues); (c) warehouse receipt financing; and (d) alternative dispute resolution ("ADR") and secured finance.[12] The Commission agreed all those issues should be considered at a future session on the basis of notes to be prepared by the Secretariat, after a colloquium or expert group meeting, to be held within existing resources.[13]

7. In accordance with the decision of the Commission at its forty-ninth session (see para. 6 above), the Secretariat organized the Fourth International Colloquium on Secured Transactions in Vienna from 15 to 17 March 2017. The purpose of the colloquium was to obtain the views and advice of experts with regard to possible future work on security interests and related topics. Approximately 100 experts from governments, international organizations and the private sector participated in this three-day event and the discussions thereof provided a basis for this note by the Secretariat. The papers submitted for the international colloquium are available on the UNCITRAL website and selected articles will be published in the Uniform Law Review in coordination with the International Institute for the Unification of Private Law ("Unidroit"). The considerations and conclusions reached at the Colloquium with respect to possible future legislative work are summarized below. The considerations and conclusions reached at the Colloquium with respect to possible future coordination and technical assistance work are summarized in document A/CN.9/919.

II. Possible future legislative work topics

A. Contractual issues

1. Introduction

8. The panel that discussed contractual issues considered a text that would provide guidance to parties to secured transactions as to the issues that should be addressed in a security agreement and ways in which those issues should be addressed based on generally acceptable international best practices. Discussion was based on the assumption that the UNCITRAL Model Law on Secured Transactions (the "Model Law") was in effect in all relevant jurisdictions and focused on a typical simple security agreement, leaving aside conflict-of-laws issues.

2. Desirability

9. In the discussion that followed, some doubt was expressed as to whether there was a need for a contractual guide that would provide guidance to parties or whether UNCITRAL would be the most appropriate body to prepare such a contractual guide with sample security agreements. However, there was broad support for the suggestion that the text to be prepared could take the form of an addendum to the draft Guide to Enactment of the Model Law with interpretation or another form (e.g. a practice guide). In this connection, it was noted that the draft Guide to Enactment of the Model Law was mainly addressed to legislators. Thus, the suggestion was made that the draft Guide to Enactment could be expanded or supplemented to provide guidance to users (such as judges, arbitrators, parties to transactions, practitioners, and academics) of the Model Law and the Registry it envisages. The view was widely shared that, without such guidance, parties may not be able to use the Model Law to their benefit. Empirical evidence suggests, for example, that, even in States that have adopted modern secured transactions law, lenders that are not familiar with financing practices relating to movable property, such as inventory and receivables financing, keep requiring mainly immovable property as security for credit. Where the vast majority of immovable property is owned by a small percentage of the population of a State, this means that, despite the

[11] Ibid., para. 124.
[12] Ibid., para. 125.
[13] Ibid.

adoption of a modern secured transactions law, credit is not available to the sector of the economy that needs it the most, that is, small and medium-size enterprises ("SMEs").

3. Feasibility

10. The following paragraphs briefly summarize panel considerations with respect to the issues that should be addressed and ways in which those issues could be addressed in a text to be prepared by the Commission.

(a) Types of secured transaction enabled by the Model Law

11. The text could explain the special characteristics and advantages of the types of secured transaction made possible by the Model Law (e.g. inventory and equipment acquisition financing, inventory and receivables revolving loan financing, factoring and forfaiting, securitization, term loan financing, credit secured by transfer of title). The text could also discuss which provisions of the Model Law and exactly how they made possible these types of secured transaction.

(b) Pre-contractual issues

12. The text could discuss the goals of secured creditor and grantor, as well the necessary initial documents (e.g. secured creditor's non-binding indication of interest, proposal letters with sample forms, valuation of proposed collateral, and secured creditor's binding letter of commitment stating the amount of the loan, interest rates and fees).

(c) Due diligence

13. The text could discuss due diligence issues (e.g. search certificates with sample forms, perfection certificates, essential information about the grantor and the proposed collateral with sample forms, searches in secured transactions and other specialized registries, and searches about judgements and tax liens).

(d) Clear and simple drafting

14. The text could explain the benefits of clear drafting (e.g. to avoid disputes, ensure that parties understand the terms of the deal, use terms that correspond to the Model Law, take into account the experience and sophistication of the parties) and simple drafting (e.g. to avoid the use of legalistic words, long sentences and long paragraphs, use easy-to-read fonts, give examples of ineffective drafting).

(e) Party autonomy and mandatory provisions in the Model Law

15. The text could discuss article 3, paragraph 1, of the Model Law that enables parties to adapt their agreement to their needs, giving examples of particular articles of the Model Law which the parties may derogate from or vary by agreement (e.g. the definition of default under art. 2, subpara. (j) and the waiver of post-default rights after default under art. 72, para. 3). The text could also explain the mandatory provisions of the Model Law that are not subject to party autonomy giving examples (e.g. general standard of conduct of the parties under art. 4 and the conflict-of-laws provisions in arts. 85-107)

(f) Sample security agreement

16. The text could include sample security agreements based on widely acceptable international best practices. The text could also explain the key provisions of such a sample security agreement (e.g. identification of the parties, creation of a security right, description of the collateral and the secured obligation, representations concerning the grantor and the collateral, events of default, and post-default remedies).

(g) Closing the deal

17. The text could discuss issues relating to the closing of the deal (e.g. pre-filing, post-closing confirmatory search, certificates, and disbursement of funds).

(h) Post-closing monitoring

18. The text could discuss issues relating to post-closing monitoring of the grantor and the collateral (e.g. change in grantor identifier, change in State of location of the grantor or tangible collateral, and change in the value of collateral).

(i) Third-party effectiveness and registration

19. The text could provide sample forms for making the security right enforceable against third parties by methods other than registration. It could also provide model forms and guidance for preparing and submitting the appropriate notice forms to a registry to make the security right effective against third parties by registration.

4. Conclusions

20. The Commission may wish to consider whether a text should be prepared to provide guidance to users of the Model Law as to how to best benefit from the Model Law and the Registry it envisages. This text could take the form of a guide to enactment, part II, of the Model Law. Alternatively, this text could take the form of a practice guide, such as the UNCITRAL Practice Guide on Cross-Border Insolvency Cooperation, which provides information for insolvency practitioners and judges on practical aspects of cooperation and communication in cross-border insolvency cases, or the UNCITRAL Notes on Organizing Arbitral Proceedings, which are designed to assist arbitration practitioners by providing an annotated list of matters on which an arbitral tribunal may wish to formulate decisions during the course of arbitral proceedings.

B. Transactional and regulatory issues

1. Desirability

21. There are matters external to the secured transactions law that can play a major role in determining whether a State has vibrant and well-functioning secured credit markets that further the overall goal of an efficient and effective secured transactions law to increase the availability of credit at lower cost by the use of movable property as security for obligations. These matters include “capacity-building” in particular among lenders and the development of regulatory standards appropriate for secured credit.

22. Capacity-building among lenders means the development by lenders of the practical ability to utilize the tools provided by modern secured transactions law to engage efficiently and profitably in credit transactions with reduced risk of loss from default. It is generally recognized that providing a State with a modern secured transactions law like that recommended by the UNCITRAL Legislative Guide on Secured Transactions (the “Secured Transactions Guide”) and exemplified in the Model Law does not automatically result in lenders in particular having the practical tools to extend credit in a meaningful way. Rather, lenders often do not embrace transactions newly made possible on a profitable basis by secured transactions law reform until the creditors have the practical capacity to use the new legal rules effectively. Thus, law reform without such capacity-building may not be effective in achieving its goal.

2. Feasibility

23. The following paragraphs briefly summarize panel considerations with respect to the issues that should be addressed and ways in which those issues could be addressed in a text to be prepared by the Commission.

(a) Valuation of collateral and explanation of basic terms

24. The text could discuss issues relating to the valuation of collateral (e.g. by professional appraisers). The secured credit bargain creates a legal right. But the amount of protection against loss that the bargain provides is determined by the value of the collateral and, in particular, by its value in the context in which the collateral is likely to be disposed of. Thus, determining how much risk of loss is reduced by collateral requires expertise in estimating the amount that would likely be received upon its disposition. The text could also explain terms, such as "borrowing base" to determine how much to lend, particularly in the context of revolving credit facilities and a changing mass of collateral. When debt is revolving and the collateral consists of a fluctuating mass of property with too many items to efficiently evaluate each one separately, determining the maximum amount to be borrowed can be complex. Secured lenders in such transactions develop expertise in concepts such as defining a borrowing base and the development of formulas to determine how much can be safely loaned against the collateral (e.g. lender will extend credit against 70 per cent of the face amount of "qualifying receivables").

(b) Administration of secured loans

25. The text could discuss issues such as account keeping and monitoring of the grantor and the collateral. Secured creditors need to trust, but also verify. Thus, they need to develop expertise in audit matters related to collateral, including continued existence, quantity, condition, and fluctuations in value.

(c) Extrajudicial repossession, disposition and distribution of proceeds of collateral

26. As extrajudicial enforcement of security rights may be unknown in a State that enacts the Model Law, the text could explain the extrajudicial exercise of post-default rights and in particular the protection of the grantor and third-party rights and the use of alternative dispute resolution methods. The text could also explain the notices to be given in the context of extrajudicial enforcement of a security right and provide sample forms. The text could also discuss secondary markets for the sale of collateral, including electronic platforms and their advantages and disadvantages.

(d) Collection of receivables

27. The text could discuss issues that require additional capacity such as collection of collateral in the form of receivables (or other rights to the payment of money, including debt securities). For example, collection from the debtor of a receivable requires different skills than repossessing and disposing of a piece of equipment, as: (a) debtors of receivables often do care about the identity of the creditor; (b) it can be difficult to find the debtor of a receivable; and (c) it may be necessary to use historical data or information about the debtors of receivables to place a value on receivables at time of transaction.

(e) Investment in legal capacity

28. The text could also discuss legal capacity as modern secured transactions law is complex, and the exercise of rights is governed by complex rules. It could also discuss additional legal expertise needed in related areas of law, particularly insolvency law.

(f) Enhancing access to credit and financial stability

29. The text could discuss coordination between the Model Law and capital requirements under the Basel Accords issued by the Basel Committee on Banking Supervision ("BCBS"), as without understanding the relevant issues (e.g. about eligible collateral under the Basel Accords), lenders may not be prepared to lend or may lend only a higher cost to borrowers. The approach in regulatory law reflects the assumption that secured creditors may be unable to swiftly liquidate movable property collateral because of the limited availability of secondary markets and the fact that security rights are often subordinated to competing claims (such as privileged claims).

These considerations do not take into account that secured transactions law reforms increase legal certainty and market transparency.

3. Conclusions

30. Law reform alone is likely to be insufficient to fully generate the goals of modern secured transactions law. Rather, increased availability of credit at lower cost is more likely to follow if creditors and regulators are conversant with the benefits of the adoption of such reforms and develop the capacity to enter into and manage transactions that the reforms make possible and to regulate the soundness of bank creditors entering into such transactions. Moreover, implementation of such reforms is necessarily a task whose characteristics will depend to a significant extent on State-specific factors. Thus, the Commission may wish to consider whether a text should be prepared to address these transactional and regulatory issues. This text could take the form of a guide to enactment, part III, of the Model Law or a practice guide (see para. 20 above). Regulatory law issues could be addressed in cooperation with the relevant regulatory authorities, such as the BCBS.

C. Finance to micro-businesses

1. Desirability

31. Micro-businesses are a vital part of the world economy (i.e. over 90 per cent of all businesses). They are also particularly critically important in developing economies, and, therefore, devoting special attention to the special characteristics arising from their financing is desirable. The importance of micro-businesses was made clear by statistics prepared by the World Bank Group and was confirmed by those members of the panel working in this area in various parts of the world.

32. There are many issues arising from the financing of micro-businesses which do not necessarily arise in relation to the financing of larger businesses (including SMEs). Even where micro-businesses have access to credit, this is often from non-regulated non-bank financial institutions that are subject to limited supervision; and it is preferable if these micro-businesses are drawn into the regulated lending market. This is not only convenient from the perspective of monitoring a relevant part of the credit market in developing economies, but also because the regulation and control of these micro-businesses will help include them in the formal sector of the economy. This improves the chances of access to credit and increases the likelihood of good investment and lending decisions.

33. Most micro-businesses are unlikely to have immovable property to use as collateral. Thus, in order for them to have access to the regulated lending market, micro-businesses need to be able to offer other types of collateral. In addition, micro-businesses are often required to provide personal guarantees, from the entrepreneur himself or herself if the corporate form is used, as well as from family, friends and other entrepreneurs. A number of special situations arise as a consequence of this practice. The amount of collateral available is usually very limited and its type different to that often provided by larger businesses. Legal issues arise from the fact that the business and any guarantors are likely to be individuals. The fact that the amounts lent are very small may also have consequences concerning the cost of the transaction and the behaviour of lenders, both at time of the origination and during the lifecycle of the credit.

34. These factors lead to various issues arising in relation to the operation of the Model Law. These include the method used for the various notifications required by the Model Law, many issues relating to enforcement and debt recovery generally, including the complexity of the enforcement procedure, which is not particularly suitable for individuals, and very small loans and the way in which guarantees from individuals work in conjunction with secured lending. Thus, there is a need to consider and explain how secured transactions (under the Model Law) generally work for micro-businesses, and perhaps have some special rules to address the issues mentioned (see further paras. 39 and 40 below).

35. Furthermore, the small size of the micro-business puts the trader in a poor bargaining position vis-a-vis financiers. This often creates problems of over-collateralization, an area where both banking supervision and regulation need to be involved if a solution is to be reached. It also can lead to abusive interest rates, especially concerning default interest rates. The small size of micro-businesses also makes the introduction of special rules in case of insolvency advisable.

2. Feasibility

36. The following paragraphs briefly summarize panel considerations with respect to the issues that should be addressed and ways in which those issues could be addressed in a text to be prepared by the Commission.

(a) Special features of micro-businesses and financing of micro-businesses

37. The specific features of micro-businesses and the issues arising from their financing is one of the issues that would need to be discussed. Micro-businesses are usually either individual traders or small family businesses, and loans are usually of low value, whether term loans or revolving facilities. The types of finance available (unsecured or secured by proprietary security rights or personal guarantees), and the types of collateral available would also need to be discussed.

(b) Types of micro-finance transaction

38. The various types of transaction that are particularly suitable for micro-businesses, and the ways in which traditional financing structures would need to be adapted should be discussed. Possible structures include inventory-based lending, the special requirements for receivables financing for micro-businesses and the use of cash collateral, currency and bank accounts, as well as personal guarantees.

(c) Notifications

39. There are a number of situations in which the Model Law requires notification to be sent to the grantor (e.g. Registry Provisions, art. 15, para. 2, and Model Law, art. 77, para. 2 (b), art. 78, para. 4 and art. 80, para. 2 (a)). Apart from article 15, paragraph 2 of the Model Registry Provisions, which specifies that the notice is to be sent to the registered address of the grantor unless the secured creditor knows of a more recent address, the Model Law does not specify in detail to where notification should be sent. This is particularly true in the enforcement provisions. When the grantor is a company, it will have a registered office to which a notice can be sent, and the secured creditor can be reasonably sure that the grantor will receive it or will not be able to deny that it has received it. When the grantor is an individual, particularly a sole trader, its address may well change reasonably frequently and the secured creditor will not necessarily know about this change. The same is true of an individual's e-mail address (if electronic notification is permitted). For secured creditors to be sure that notifications will be effective, which will affect their decision to extend secured credit to individual traders, it would be desirable to develop a simple system where the means of notification are captured at the inception of the transaction, the individual then has a duty to update and the enforcement consequences flow from notification having been given to the to last address stored on the system. A written template of how to achieve this would be most useful. It should be borne in mind that notification is part of the balancing of interests between the ability of a creditor to enforce effectively (and out of court) and the protection of a debtor, and this balance may be different where the debtor is an individual trader or guarantor.

(d) Enforcement

40. A number of issues relating to enforcement arise where a business is very small, particularly where it is an individual trader, or where an individual gives a guarantee. For example, it is first necessary to consider the protection of personal assets on enforcement. In addition, the out-of-court remedies provided in the Model Law may be too complicated and costly for very low-value loans. In relation to enforcement of

security rights securing very small loans, a simplified out-of-court procedure may be needed with some protection for the debtor built in. Moreover, it may be necessary to move towards a "small claims" court model to facilitate enforcement by means of pre-designed templates with limited access to appeal, and/or to consider the use of Alternative Dispute Resolution (whether physical or online) as alternatives to court proceedings.

(e) Personal guarantees

41. Personal guarantees, which are often given by family, friends or mutualized organizations of micro-businesses, raise issues of protection of the guarantor, such as problems raised by household insolvency and the coordination of insolvency proceedings. It would be necessary to consider whether there should be special rules in relation to personal guarantees, and, in particular, in relation to their interaction with secured lending.

(f) Regulatory capacity issues

42. Inequality of bargaining power often leads to unfair terms in loan and security agreements. Thus, unfair terms, such as high default interest rates, unfair termination clauses and definitions of events of default, should be discussed together with ways in which their unfairness could be addressed. The regulation of bank behaviour in relation to lending to micro-businesses would also need to be discussed. Problems here include the fact that the very small size of loans reduces incentives on lenders to do a proper risk assessment, paving the way for the over-collateralization of the loans facilitated by the drastic inequality in bargaining power. Practice also shows that deficient monitoring and inefficient reactions in case of distress of the loan take place, in particular, the common practice of the "evergreening" of the loans. "Evergreening" causes problems from both sides of the lending process. Banks refinance almost blindly, without previously assessing the viability of the borrower (and hence of the likelihood of future repayment), which has the consequence of undermining the veracity of balance sheets of banks. On the other hand, this failure by creditors to enforce loans because their small size makes enforcement too expensive has a detrimental effect on micro-businesses as interest continues to accrue, making the loan virtually impossible to repay.

43. Possible solutions to these problems include more reliable information on which credit can be properly assessed (through efficient credit reporting systems), better monitoring practices and more efficient distribution of tasks within financial institutions, adequate implementation of the regulatory framework concerning non-performing loans, and perhaps even a redesign of enforcement mechanisms, which should be made cheaper, quicker and easier (see para. 40 above).

3. Conclusions

44. To address the issues identified above, the Commission may wish to consider preparing a text that would: (a) explain the application of the Model Law to security interests in movable assets of a micro-business; (b) include model rules on issues, such as notifications to be given under the Model Law and enforcement; (c) include commentary and perhaps rules on personal guarantees; and (d) discuss legal capacity, transactional capacity and regulatory capacity, addressing the points outlined above. The form of work could be determined by the Working Group and different aspects of work can be addressed in various ways. For example, security interests created by micro-businesses could be addressed in model rules to be added to the Model Law and the commentary on those rules could be added to the Guide to Enactment of the Model Law. Other issues, such as personal guarantees, could be addressed in model rules or in a legislative or practice guide (see paras. 20 and 30 above). Any future work may need to be coordinated with other work of the Commission (e.g. on simplified incorporation or insolvency of micro-businesses). Regulatory law issues could be addressed in cooperation with the relevant regulatory authorities, such as the BCBS (see para. 30 above).

D. Warehouse receipts

1. Desirability

45. Warehouse receipts have many commercial uses, including to facilitate sales and distribution of commodities and to allow businesses to secure credit. Warehouse receipt financing allows producers (exporters) and global traders (importers) of agricultural commodities or other assets to access loans using warehouse receipts issued against assets deposited in warehouses as collateral. As several studies have shown, warehouse receipts are underutilized in international trade as a tool for gaining access to credit because of the lack of enabling legislation.[14] A primary barrier to the use of warehouse receipts financing is a lack of enabling legislation.[15] Another problem is the risk of fraud associated with warehouse receipts financing. However, an integrated and properly supervised system of electronic warehouse receipts can provide more security against fraud and mismanagement than paper-based systems. Moreover, warehouse receipts that are issued in electronic and negotiable form may lead to the establishment of commodity exchanges, thereby providing greater liquidity to producers, distributors and lenders.

46. One economic sector that suffers greatly from a lack of access to reasonably priced credit and the unavailability of warehouse receipts is agriculture. A number of international organizations, including the International Bank for Reconstruction and development (the "World Bank"), the European Bank for Reconstruction and Development (the "EBRD"), the Food and Agriculture Organization (the "FAO") and the Organization of American States (the "OAS") have examined and proposed mechanisms to address these challenges, such as by facilitating adoption of warehouse receipts laws. At the moment, no international or regional organization has adopted a model law on warehouse receipts, resulting in a lack of harmonization and ad hoc approaches. The absence of a model framework presents challenges, particularly for cross-border supply-chain transactions.

47. UNCITRAL has developed modern instruments, including the UNCITRAL Model Law on Electronic Commerce and the United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea (Rotterdam Rules), to facilitate the use of transportation documents and bills of lading in particular, issued both in paper and electronically. Thus far, UNCITRAL has not addressed warehouse receipts and in particular non-negotiable warehouse receipts.

48. Various laws often pose impediments to the utilization of assets, such as growing crops, as collateral for loans. The Model Law seeks to ameliorate these challenges, both at the pre- and post-harvest stage. For the post-harvest stage, it provides clear and modern rules on the utilization of negotiable documents, including warehouse receipts, as collateral for loans. However, given its nature, it defers to the domestic law to determine a number of issues, including: (a) which documents are negotiable; (b) who may issue warehouse receipts; (c) what are the rights and duties of parties to a warehouse receipt; and (d) what are the rights of buyers of warehouse receipts and products covered by them. A significant majority of economies, especially in States with developing economies, lack any warehouse receipt legislation or have legislation that is outdated.

49. Furthermore, both the Model Law and the Secured Transactions Guide were prepared against the background of negotiable instruments and negotiable documents issued in paper form. Under these texts, a security right in negotiable instruments or

[14] See, for example, *Access to commodity finance by commodity-dependent countries,* Note by the UNCTAD Secretariat, United Nations Doc. TD/B/C.1/MEM.2/10 (2010), 9-10; OAS Inter-American Juridical Committee, *Principles for Electronic Warehouse Receipts for Agricultural Products*; APEC Secretariat, *Regulatory Issues Affecting Trade and Supply Chain Finance*, 2015, 13-14; World Bank Group, A Guide to Warehouse Receipts Financing Reform: Legislative Reform (2016); FAO and EBRD, Designing Warehouse Receipt Legislation: Regulatory Options and Recent Trends (2015).

[15] OAS Principles, supra. No.14, at 6; APEC Economic Committee, *Report on Workshop on Supply Chain Finance and Implementation of Secured Transactions in a Cross-Border Context*, August 20-21, 2016 (APEC doc 2016/SOM3/EC/040) at 4.

negotiable documents can only be made effective against third parties by registration or by possession; and possession is defined to mean "actual possession of the tangible asset". No reference is made to the fact that "control" has become the primary mechanism for outright transfers and third-party effectiveness of security rights in "electronic assets", especially warehouse receipts which are increasingly issued electronically. The Secured Transactions Guide points out that "in view of the particular difficulty of creating an electronic equivalent of paper based negotiability", if an enacting State "wishes to address this matter [it] will need to devise special rules".[16] No such rules are provided in the Model Law or the Secured Transactions Guide. Nonetheless, the Secured Transactions Guide notes that the failure to address electronic negotiable documents of title "should not be interpreted as discouraging the use of electronic equivalents of paper negotiable instruments or negotiable documents".[17] And the draft Guide to Enactment of the Model Law notes that "the enacting States may wish to consider whether to include in their enactment of the Model Law an article along the lines of recommendation 12 [Electronic communications] of the Secured Transactions Guide".[18]

50. The draft Model Law on Electronic Transferable Records provides a general framework for the issuance and transfer of electronic records, including electronic warehouse receipts. But it does not address many aspects typically regulated by warehouse receipts and secured transactions laws, such as the priority rights of a person in control of an electronic warehouse receipt as against competing claimants. Neither the draft Model Law on Electronic Transferable Records nor the Model Law on Secured Transactions explain how a security right in inventory might automatically flow into the related electronic warehouse receipt or into the proceeds involving an electronic negotiable invoice generated from the sale of that inventory.

2. Feasibility

51. The work done so far by other organizations mentioned above is a good indication of the likelihood that the Commission could successfully prepare a text on warehouse receipts (e.g. in the form of a model law). Expected participation of these international organizations in this project would ensure a quality product that could be immediately deployed in reform projects and within a relative short timeframe. For the security right aspects, this text could build on the principles, recommendations and model provisions enshrined in the UNCITRAL texts on security rights, and for the provisions addressing transferability of electronic warehouse receipts on the work of UNCITRAL in the area of electronic transferable records. In determining the feasibility of the proposed project, the Commission may wish to take into account the following issues:

(a) Clear definitions of key concepts and terms, including the warehouse receipt;

(b) Information required in a warehouse receipt;

(c) The form in which a warehouse receipt may be issued;

(d) Negotiable and non-negotiable warehouse receipts;

(e) Fundamental duties of warehouse operators;

(f) Responsibility for loss of or damage to stored goods;

(g) Irregularities, misdescription in and over-issue of warehouse receipts;

(h) Transfers of warehouse receipts, by negotiation, assignment, control or otherwise;

(i) Rights of transferees of warehouse receipts;

(j) Rights of buyers of goods covered by warehouse receipts;

---

[16] UNCITRAL Legislative Guide on Secured Transactions, 459, footnote 13.
[17] Ibid., chap. I, para. 121.
[18] A/CN.9/914, para. 66.

(k) Substitution and removal of goods from the warehouse;

(l) Termination of storage;

(m) Third-party effectiveness of security rights in electronic warehouse receipts;

(n) Third-party effectiveness of security rights in non-negotiable warehouse receipts;

(o) Warehouseman's lien and its enforcement; and

(p) Transitional matters.

52. The Commission may also wish to consider giving the mandate to a working group to examine and provide guidance on additional aspects of warehousing, either for inclusion in the text to be prepared or in a separate text (e.g. a guide to enactment, if the text to be prepared takes the form of a model law), such as:

(a) Licensing of warehouses;

(b) Regulation of warehouses;

(c) Insurance and bonding of warehouses;

(d) Maintenance of adequate reserves; and

(e) Maintenance of accounting records.

3. Conclusions

53. The Commission may wish to consider preparing a text on warehouse receipts. This text could provide, inter alia, a modern general framework for the issuance and transfer of warehouse receipts, the duties and rights of issuers and holders of warehouse receipts, and the allocation of losses in case of a shortage in the tangible assets covered. The proposed text could also address the use as collateral for credit of warehouse receipts that are not negotiable documents and especially the third-party effectiveness of security rights in electronic warehouse receipts. Any work on the subject should be conducted in consultation with other international organizations that have been involved in supply chain and warehouse receipt finance, especially the United Nations Conference on Trade and Development ("UNCTAD"), Unidroit, the FAO, the EBRD, the OAS and the World Bank.

E. Intellectual property licensing

1. Desirability

54. The panel that dealt with intellectual property licensing first discussed the need for a uniform law text on intellectual property licensing due to its growing importance in world commerce. The panel pointed to: (a) studies from 1998 to 2013, according to which the index of global exports in goods grew by about 20 per cent, but royalty payments for intellectual property more than quadrupled over the same period; and (b) studies from 1990 to 2009, according to which the share of developing countries in global technology payments doubled from approximately 13 per cent to 26 per cent.

55. However, the panel noted a gap in the law with respect to contractual matters. While some intellectual property laws contain a few provisions addressing contract terms, there is no general commercial law directed specifically to intellectual property licensing. Instead, contracting parties must rely on a general intellectual law merchant based on ad hoc rules and practices that often require specialized knowledge and experience. This causes increased transaction costs and barriers to international trade, and puts small and medium-size enterprises at a disadvantage.

56. The panel referred to studies that show the benefits that States derive from increased intellectual property commerce. These benefits include: (a) superior access to finance and venture capital; (b) higher quality utilization of national human capital; (c) increased local inventive activity; (d) better access for local firms to technology:

and (e) streamlined and enhanced access for the public to creative content. Realizing these benefits also requires legal support for commercial transactions in intellectual property, e.g. "licensing." The lack of a general commercial law text specially crafted to the unique needs of intellectual property licensing constitute a barrier to realization of these benefits.

57. The panel also referred to other specialized texts that address distinctive commercial transactions. A premier example is the United Nations Convention on Contracts for the International Sale of Goods (the "CISG"). Other texts mentioned are the Model Law, the Cape Town Convention on International Interests in Mobile Equipment, and the Unidroit Principles of International Commercial Contracts. It was mentioned that, unfortunately, none of these instruments are specifically tailored to the unique requirements of intellectual property licensing.

58. The panel noted that the Model Law applies also to transactions in which intellectual property (including licence royalties) is used as collateral for credit. It was pointed out that it would be a natural outgrowth of the Commission's work to also provide a uniform text for commercial contracts for the use of intellectual property. The panel concluded that a project on intellectual property licensing would be highly desirable for world commerce and a natural adjunct to the Commission's other work.

2. Feasibility

59. To establish the feasibility of the preparation of a uniform law text on intellectual property licensing, the panel then discussed a range of commercial issues that arise in typical intellectual property licensing contracts and ways in which they could be usefully addressed. These issues include the following:

(a) Scope of work: the proposed text should address intellectual property licensing issues that could be addressed with non-mandatory law rules that the parties could vary or derogate from, with the understanding that the text is not intended to alter provisions of intellectual property law;

(b) Definitions and rules of interpretation: terms, such as "assignment", "licence", "exclusive", "scope", "use", and other terms that would appear in the text, would need to be defined; also reference would need to be made to the general obligation of good faith and reasonable conduct;

(c) Contract formation: the question would need to be addressed whether there should be any special rules for the formation of an intellectual property licensing contract apart from a State's general contract law rules on matters, such as written form and contract formation by electronic means; in this regard, it may be useful to review the Unidroit Principles of International Commercial Contracts;

(d) Contract interpretation: a number of questions would need to be addressed, including whether: (i) the parties may agree to limit interpretation solely to the terms of a written instrument; (ii) if the written instrument is ambiguous, it is then proper to look to the conduct of the parties; (iii) a contract should be interpreted by neutral rules or whether there should be a rule in favour of one party (e.g. an author); and (iv) it is necessary to address interpretation of terms that call for successive performances, or that require performance to the satisfaction of the other party;

(e) Implied terms: the text would need to address the question whether an intellectual property licensing contract should be deemed to include implied terms, such as an implied representation about ownership or control of the intellectual property by the licensor, or a duty of cooperation, or mutual obligations to act in good faith;

(f) Obligations and their performance: it may be necessary to address the general obligations of the parties (e.g. the licensor to enable use and the licensee to use according to the terms of the licence and pay royalties) and their performance;

(g) Transfer of rights and acceptance of duties: it may be necessary to address transfers of intellectual property rights by a licence agreement and transfers of

contractual rights, for example, by an assignment of a right to payment, and to distinguish acceptance of duties from a transfer of rights;

(h) Breach of contract and remedies: it may be necessary to address situations that would constitute breach of an intellectual property licensing contract and the relevant remedies (e.g. whether exact or substantial performance is required, whether a distinction would need to be made between a breach that allows ending the contract and one that only allows damages, the measure and type of damages); and

(i) Conflict-of-laws issues: the law applicable to an intellectual property licensing contract may also need to be discussed and in particular whether the parties may choose it and, if so, what matters may be covered by the law chosen by the parties.

3. Conclusions

60. The Commission may wish to consider whether a text should be prepared on intellectual property licensing or whether the matter should be retained on its future work agenda for further consideration at a future session on the basis of a note to be prepared by the Secretariat within existing resources (the same approach may be followed with respect to any issue with respect to which the Commission may not be ready to decide whether it should undertake any work). Any future work may be undertaken in cooperation with relevant international governmental organizations, such as the World Intellectual Property Organization ("WIPO") and international non-governmental organizations.

F. Alternative dispute resolution in secured transactions

1. Desirability

61. The panel that dealt with ADR in secured transactions agreed that ADR, including arbitration, mediation and conciliation (whether conducted physically or online), should be available for the resolution of disputes arising with respect to security agreements or security rights (these are post-default disputes typically arising during enforcement of a security right). The panel also agreed that ADR is particularly important where court proceedings are inefficient, as problems, such as inordinate delays and cost, are bound to have a negative impact on the availability and the cost of credit.

62. However, laws differ on the extent to which such disputes may be resolved by arbitration. In addition, it is not clear that, where such disputes are resolved by arbitral proceedings, the rights of third parties are fully addressed in the case of enforcement of a security right in an asset. Moreover, while mediation or conciliation should in principle be possible, as it does not involve a binding decision, it is not clear that it could be used as an alternative to judicial proceedings in the enforcement of a security right. Mediation or conciliation could reduce the workload of courts and help parties achieve a balanced solution that both protects their rights and the rights of third parties, and makes low-cost credit available.

63. Article 3, paragraph 3, of the Model Law provides that "nothing in this Law affects any agreement to use alternative dispute resolution", thus referring the issue of arbitrability to other applicable law. Thus, the Model Law does not address the issue of arbitrability.

64. In addition, article 73 of the Model Law provides that a secured creditor may exercise its post-default rights by application to a court or other authority to be specified by the enacting State, or without such an application. The draft Guide to Enactment explains that "other authority" means an authority vested with adjudicative powers by a State (see A/CN.9/914/Add.5, para. 57). So, it seems that an arbitral tribunal would not qualify as such an authority. However, enforcement without application to a court or other authority may in principle include enforcement by arbitration, even though the matter is not expressly addressed in the Model Law or the draft Guide to Enactment.

65. Moreover, the Model Law includes a number of provisions dealing with the rights of third-parties with rights in an encumbered asset that may be affected by the enforcement of a security right. More concretely: (a) article 74, option B, permits any third party to seek relief for non-compliance by the enforcing secured creditor with the provisions of the chapter on enforcement; (b) article 75, paragraph 1, permits any third party to terminate enforcement; (c) article 76, paragraph 1, permits a higher-ranking secured creditor to take over enforcement; (d) article 77, paragraph 2, requires the enforcing secured creditor to give notice of default to any third party in possession of an encumbered asset and permits any such third party to prevent the out-of-court re-possession of the encumbered asset by the secured creditor; (e) article 78, paragraph 4, requires the enforcing secured creditor to give notice to third-party creditors of its intention to dispose of an encumbered asset out of court; (f) article 79, paragraph 2, requires the secured creditor to follow certain rules in distributing the proceeds of an out-of-court disposition of an encumbered asset; and (g) article 80, paragraph 2, requires the enforcing secured creditor to send the proposal for the acquisition of an encumbered asset to third-party creditors.

66. Moreover, where a person in possession objects to the out-of-court re-possession of an encumbered asset by the secured creditor, the secured creditor may seek to resolve the dispute by an ADR mechanism. For example, if the issue is not explicitly stated in other law as an issue with respect to which arbitration is not allowed, the grantor and the secured creditor may agree to arbitrate, as long as third-party rights are not affected; and mediation or conciliation (whether physical or online) should in principle be possible, if the parties agree, since by definition mediation or conciliation do not result in a binding decision and in particular third-party rights are not affected.

2. Feasibility

67. Like any other agreement, a security agreement creates rights and obligations for the parties, the grantor and the secured creditor. So, in principle the parties could agree to resolve any dispute arising in that regard by arbitration. If the arbitral award orders the debtor to pay and the secured creditor attempts to enforce the award by seizing the encumbered asset, the rights of third parties with rights in the encumbered asset should be protected.

68. For example, article 68 of the Model Inter-American Law on Secured Transactions deals with the issues of arbitrability as it provides that: “Any controversy arising out of the interpretation and fulfilment of a security interest may be submitted to arbitration by the parties, acting by mutual agreement and according to the legislation applicable in this State” (no reference is made though to mediation or conciliation).

69. Article 78 of the Colombian secured transactions law goes further and provides that: “If the parties so decide, any controversy that arises with respect to the creation, interpretation, perfection, performance, enforcement and liquidation of a security interest can be subject to conciliation, arbitration, or any other alternative dispute resolution mechanism, according to national legislation and applicable international treaties and conventions”. However, it should be made clear that parties to secured transactions may be allowed to commence arbitration when they wish and be trusted that they would not skip negotiations, mediation or conciliation if these dispute-resolution methods carry a realistic hope of success (i.e. multi-tiered dispute resolution clauses may not be suitable in all cases).

70. In the case of judicial enforcement of a security right, the protection of rights of third-party creditors is a matter of the law governing judicial enforcement. In the case of out-of-court enforcement, this protection should be addressed in secured transactions law along the lines set out above (see para. 65 above).

3. Conclusions

71. The Commission may wish to consider whether a model rule along article 68 of the Model Inter-American Law on Secured Transactions or article 78 of the

Colombian secured transactions law should be prepared and added to the Model Law, and whether commentary on that model rule should be included in the draft Guide to Enactment. The model rule could require parties to seek a resolution of an enforcement-related dispute first by negotiation and then by mediation or conciliation. The parties could be allowed to go to a court or other authority only if negotiation, mediation or conciliation does not produce a solution within a reasonable period of time and unless the parties agree at any time to go to arbitration. The commentary could discuss all these options and in particular the use of ADR to resolve disputes arising in the context of the enforcement of a security right. In this context, the commentary could highlight in particular the ways in which third-party rights are protected under the Model Law in the case of out-of-court enforcement of a security right. Such work could be undertaken by a working group that would include experts in both secured transactions law and dispute settlement law. Any work could be undertaken in coordination with any work undertaken by the Commission on dispute settlement and issues relating to ADR and insolvency.

G. Real estate financing

72. In the context of the general discussion that took place at the close of the Colloquium, the suggestion was made that the Commission should prepare a text on real estate financing. In support, it was stated that States interested in reforming their secured transactions law needed guidance also with respect to real estate financing. In opposition, it was pointed out that real estate financing law was generally well developed and did not lend itself to unification at the international level.

D. Note by the Secretariat on possible future work in the field of dispute settlement: concurrent proceedings in international arbitration

(A/CN.9/915)

[Original: English]

Contents

I. Introduction

1. At its forty-sixth session, in 2013, the Commission identified that the subject of concurrent proceedings was increasingly important particularly in the field of investment arbitration and might warrant further consideration.[1] At its forty-seventh session, in 2014, the Commission considered whether to mandate its Working Group II (Dispute Settlement) to undertake work in the field of concurrent proceedings in investment arbitration, based on a note by the Secretariat, briefly outlining the issues at stake (A/CN.9/816, Addendum). The Commission agreed that the Secretariat should explore the matter further, in close cooperation with experts and other organizations working actively in that area and that that work should focus on treaty-based investor-State arbitration, without disregarding the issue in the context of international commercial arbitration.[2] At its forty-eighth session, in 2015, the Commission considered a note by the Secretariat in relation to concurrent proceedings in investment arbitration (A/CN.9/848). It requested the Secretariat to report to the

Commission, outlining the issues at stake and identifying work that UNCITRAL might usefully undertake in the area.[3]

2. In accordance with that request, at its forty-ninth session, in 2016, the Commission had before it a note by the Secretariat outlining the causes and impact of concurrent proceedings, existing principles and mechanisms to address concurrent proceedings in international arbitration and possible future work in that area (A/CN.9/881).[4] After discussion, the Commission agreed that the Secretariat should continue to further develop possible work that could be undertaken with regard to concurrent proceedings as mentioned in section IV of document A/CN.9/881, for consideration by the Commission at a future session.[5]

3. Accordingly, the purpose of this note is to provide additional information on work that could be undertaken by the Commission.[6] In line with a suggestion at the forty-ninth session of the Commission, the note addresses not only concurrent but also, where relevant, successive proceedings, thus encompassing the full range of

In addition, this note builds on the discussions at the expert group meeting organized by the Secretariat and hosted by the French Ministry of Foreign Affairs and International Development in January 2016.

instances comprising multiple proceedings.[7] This note focuses mainly on the issue as it arises in investment arbitration.[8]

II. Possible future work

A. Summary of issues and purpose of work

4. Concurrent proceedings in international arbitration may result from different factors such as the involvement of multiple parties located in different jurisdictions in an investment or a contractual arrangement, the existence of multiple legal bases or causes for claims, as well as the availability of multiple forums and the lack of coordination among those forums.

5. In investment arbitration, concurrent proceedings may result from mainly two types of situation. The first type is where different entities within the same corporate structure have a right of action against a State or state-owned entity in relation to the same investment, with regard to the same State measure and for the benefit of substantially the same interests.[9] Each entity may have the possibility to commence arbitration proceedings under a different treaty, in addition to bringing claims under the dispute resolution mechanism provided for in an investment contract. In short, one might have various parties, claiming in various forums and under different sources of law, yet seeking substantially the same relief for the same measure. Given the large number of investment treaties, the participants in an investor-State relationship (i.e. the foreign company investing in a host State and the shareholders of various nationalities) may be governed by multiple treaties. Even if the investing company and its shareholders are protected under the same treaty, their ability to file separate claims could result in the formation of multiple tribunals hearing essentially the same claim. It may be noted that investors do not necessarily have the choice to bring their claims in proceedings before a single forum as there may not be a single forum with jurisdiction over all of the claims.

6. The second type is where a measure by a State has an impact on a number of investors which are not related.[10] States have developed policies favouring foreign investments, thereby increasing the occurrence of dealings with a wide range of investors. When a State takes a measure which potentially affects a number of investors, it may be faced with multiple claims from those unrelated investors in relation to that measure. In addition, States or state-owned entities when concluding agreements with investors sometimes use standard contracts with similar provisions. A change of a State or state-owned entities' policy impacting those provisions may affect a whole range of contracts concluded with different investors. While issues of law and fact raised in those proceedings will generally be common to all the claimants, it is foreseeable that decisions rendered by separate tribunals may yield different outcomes.

7. The multiplicity of proceedings may result in a State having to defend several claims in relation to the same measure, with possibly the same economic damage at stake, leading to a duplication of efforts, additional costs, procedural unfairness and potentially contradictory outcomes (see A/CN.9/848, para. 13). Concurrent proceedings involving entities within the same corporate structure (referred to in para. 5 above) give rise to a risk of multiple recovery of the same damage and may create

---

[7] *Official Records of the General Assembly, Seventy-first session, Supplement No. 17* (A/71/17), para. 180.

[8] At the forty-ninth session of the Commission, it was considered whether work should focus on investment and/or commercial arbitration, and it was suggested that a distinction should be made if work were to be undertaken. It was generally felt that there was a more pressing need for work to focus on concurrent proceedings in investment arbitration. It was also mentioned that concurrent proceedings in commercial arbitration deserved a similar level of attention (see *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 180).

[9] See A/CN.9/881, paras. 7, 11, 12, 14-16, 19 and 20(i).

[10] See A/CN.9/881, paras. 8 and 20(ii).

dissatisfaction among users of investment treaty arbitration, thus undermining predictability more generally.

8. The existing principles and mechanisms that could be applicable to prevent, or limit the impact of, concurrent proceedings include the doctrines of lis pendens and res judicata, consolidation, and coordination mechanisms in investment treaties (see section III of document A/CN.9/881). However, the possible application of the doctrines of lis pendens and res judicata is limited. Furthermore, the complexities of the investment protection framework make consolidation and coordination sometimes difficult to apply to concurrent proceedings in a treaty arbitration context. While almost all national legal/judicial systems have developed solutions to avoid the co-existence of concurrent proceedings and conflicting outcomes, at present there is no solution aimed at resolving that issue in international arbitration.

9. The purpose of undertaking work on concurrent proceedings as they occur in investment arbitration would be to provide a more predictable framework for coordinating concurrent proceedings in the interest of investors and States, and to promote procedural and cost efficiency, reliability and legitimacy of the process, while respecting parties' rights in resolving disputes (see A/CN.9/881, paras. 18-22). The work could consist in designing appropriate mechanisms for addressing some of the negative consequences of concurrent proceedings and recurring problems, such as contradictory and irreconcilable decisions and awards.

B. Guidance to arbitral tribunals

10. When the Commission considered briefly the possible form of work on the issue of concurrent proceedings at its forty-ninth session, in 2016, support was expressed for providing guidance to arbitral tribunals faced with concurrent proceedings, for example, on utilizing inherent powers provided in article 17 of the UNCITRAL Arbitration Rules and similar provision in other rules.[11]

11. Guidance to arbitral tribunals could be developed so as to form part of the procedural legal framework. Indeed, investment treaties, arbitration rules and arbitration law rarely include guidance to arbitral tribunals on the matter. In such a case, and when the parties to the dispute have also not agreed on how to address concurrent proceedings, an arbitral tribunal might have to render a final decision on the merits without taking any measures, for example, coordinating with other tribunals.

12. Guidance to arbitral tribunals could also be provided in the form of a soft law instrument including a list of options and methodology for the tribunal to deal with concurrent proceedings, providing the tribunal flexibility to assess which option would be most appropriate in the case at hand. Such a soft law instrument could provide arbitral tribunals with possible measures or actions they could take within the framework of their procedural powers. It could also clarify why an arbitral tribunal should take certain measures even when the existence of concurrent proceedings was not perceived as detrimental by the parties. The work could also highlight the limitations, given the role of parties' consent to arbitration and its relationship to a tribunal's authority to decide matters.

1. Stay of Proceedings

13. Once an arbitral tribunal is constituted and its jurisdiction established, the tribunal has inherent powers which could be exercised to prevent or limit the impact of concurrent proceedings. For instance, a tribunal, after having ascertained to have jurisdiction, might, in certain circumstances, exercise discretion to suspend the proceedings until the decision of another court or tribunal is rendered, and it could do so by application of various principles, including efficiency and fairness in the administration of justice, and deference to the work of other courts or tribunals..

---

[11] *Official Records of the General Assembly, Seventy-first session*, *Supplement No. 17* (A/71/17), para. 179.

Possible work

14. In that context, work could consist in the preparation of an instrument determining circumstances in which arbitral tribunals could or ought to stay proceedings. Work could expand on providing information to arbitral tribunals on (i) their power to temporarily stay/suspend proceedings as part of a tribunal's inherent authority to conduct the proceedings in line with the requirements of justice and efficiency; and (ii) the legal basis and criteria that could guide tribunals in exercising their discretion in this regard. Considerations of good faith, the finality of decisions, the timing of proceedings, and the ability of a forum to fulfil its judicial function would be elements to be taken into account.

15. Work could also address circumstances where an arbitral tribunal decides to stay the proceedings to await the outcome in a parallel action, and whether it should then accord due consideration to the decision rendered in the other forum or justify any deviation in this regard. More generally, work could also focus on guiding arbitral tribunals to consider how the various forums relate one to the other, such as whether following the application of certain rules, the decision of one forum would be taken into account by others.

16. In relation to successive proceedings, work could focus on whether an arbitral tribunal could, in the exercise of its discretion, take previous proceedings as well as the resulting award into account when deciding, for instance, whether a party could and should have raised a matter or claim in a previous proceeding, and if so, whether the party should subsequently be barred from bringing the matter or claim in the current proceedings. Arbitral tribunals could be encouraged to assess a case in the context of the overall circumstances of the parties' dispute.

2. Abuse of process

17. A ground upon which an arbitral tribunal could dismiss abusive claims is the prohibition of abuse of process, a generally recognized international law principle.

18. In the context of concurrent proceedings, the prohibition of abuse of process is most likely to become relevant and find application where an investor has already obtained a decision on the merits in one forum but continues to pursue the same claim in another forum. Abuse of process may also arise where a claimant makes or restructures its investment in order to raise a claim against the host State at a time where the dispute is foreseeable but has not occurred yet.[12]

19. The principle of abuse of process would allow for an arbitral tribunal to determine situations where concurrent proceedings are acceptable and those that are not. A situation where multiple proceedings are necessary to obtain adequate remedies and are unavoidable must be distinguished from a situation where an investor seeks to take advantage of the general lack of coordination of proceedings for the purpose of maximising its chances of success.

Possible work

20. Work could be undertaken in order to elaborate further on the principle of abuse of process, and to provide guidance on how an arbitral tribunal could determine situations where there is an abuse of process. Also, work could aim at clarifying the criteria for an arbitral tribunal to apply this principle so as to prevent concurrent proceedings from arising in the first place.

3. Information-sharing

21. Arbitral tribunals may be encouraged to seek information from one another in case of concurrent proceedings or to request disputing parties to inform the arbitral

[12] See case law where that matter was considered: Pac rim, Decision on the Respondent's Jurisdictional Objections (n 9), para. 2.41; Philip Morris Asia Limited (Hong Kong) v. The Commonwealth of Australia, PCA Case N0. 2012-12, Award on Jurisdiction and Admissibility (17 December 2015).

tribunal of any other related proceedings. In that context, arbitral tribunals could also seek whether parties would be willing to have their disputes heard in a single forum.

22. In that respect, it may be noted that information-sharing may gain pace in light of the trend favouring transparency in treaty-based investor-State dispute settlement. The UNCITRAL Rules on Transparency in Treaty-based Investor-State Arbitration have been referred to in a number of treaties concluded since the date of their coming into force, in April 2014.[13] It is also foreseeable that transparency will progressively be applied in the context of arbitration commenced under investment treaties concluded before April 2014, once the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration comes into effect.[14]

Possible work

23. Work could include listing the various initiatives that are available to arbitral tribunals as well as their limits and issues that might be encountered, for example, conflicts with confidentiality obligation with regard to sharing of information.

4. Other forms of coordination

24. Attention of arbitral tribunals could be drawn to other forms of coordination, particularly where concurrent proceedings are unavoidable, for instance in situations mentioned in para. 6 above. These other forms of coordination would include holding joint hearings or presenting a common set of evidence.

Possible work

25. Work could focus on providing arbitral tribunals with a list of possible tools for managing such situations, with the aim of preventing unnecessary delays and costs related to double or multiple fact-finding endeavors, and avoiding duplicative written and oral submissions.

26. The work could also take the form of a protocol to be used by parties as part of their agreement to arbitrate. It could cover various elements which would permit coordination, and possibly consolidation.

5. Ordering consolidation, when admissible

27. Consolidation involves the aggregation of two or more claims or pending arbitrations into one proceeding. Consolidation requires a basis, whether in law or in a contract (including institutional rules) and it is usually based on parties' consent. Subject to a reasonable assessment of fairness, due process and efficiency, consolidation can be an effective tool to reduce or avoid concurrent proceedings.

Possible work

28. While work could focus on providing mechanisms to allow for consolidation of concurrent proceedings, such work would be of limited use if it does not include the possible cooperation among arbitral institutions administering such proceedings. In addition, as consolidation is based on parties' consent, work should address ways to take account of possible concerns of the parties. For example, an investor may oppose consolidation if it would be required to disclose sensitive business information to its co-claimants.

---

[14] Information on the status of the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration can be found on the Internet at: http://www.uncitral.org/uncitral/en/uncitral_texts/arbitration/2014Transparency_Convention_status.html.

6. Lis pendens, res judicata, and *forum non conveniens*

29. In a domestic litigation setting, if there are two concurrent court proceedings, various doctrines have been developed to prevent them or limit their impact. For instance, in a civil law system, a court would apply the lis pendens rule, and the judge seized with the second proceeding will likely stay the proceedings until a decision is made by the judge seized with the first proceeding. In common law systems, remedies of *forum non conveniens* (and anti-suit injunctions) may be used. If one of the two proceedings is concluded with a judgment, the res judicata rule would likely apply.

Possible work

30. In the context of international arbitration, work may consist in providing guidance to arbitral tribunals on the principles of lis pendens and res judicata, even if their application might be limited (see A/CN.9/881, paras. 24-28). This work could complement the 2006 final reports of the International Law Association (ILA) on lis pendens and on res judicata in international commercial arbitration, which provided that arbitral awards should have conclusive and preclusive effects in further arbitral proceedings to promote efficiency and finality of international commercial arbitrations and that such effects need not necessarily be governed by national law but may be governed by transnational rules to be developed (recommendations 1 and 2).[15]

31. The res judicata effect in international arbitration gives rise to complex issues, in particular as different laws may come into play to govern the application of res judicata (the law of the place of the previous arbitration; the law of the place of the subsequent arbitration; the law governing the merits of the dispute), and res judicata has different scopes in different legal systems. Work in this field could also be developed to provide a more harmonized approach to the notion of res judicata.

7. Connexity or related action defense

32. Another tool known in litigation is the application of the connexity or related action defense.[16] This notion is broader than the doctrine of res judicata as it is not limited by the triple identity test. An example of this mechanism can be found in the Brussels Regulation (Council Regulation (EC) No 44/2001 of 22 December 2000 on jurisdiction and the recognition and enforcement of judgments in civil and commercial matter) which sets out a discretionary rule for "related actions", allowing for concentration of related or connected disputes in one forum.[17] Article 30.3 provides that "actions are deemed to be related where they are so connected that it is expedient to hear and determine them together to avoid the risk of irreconcilable judgements resulting from separate proceedings." Under the Brussels Regulation, a court other than the court first seized of an action may stay its proceedings if a related action is already pending in another EU Member State and await the outcome of that related action before rendering its decision. Under certain circumstances, it may even decline jurisdiction if the law of the first court allows consolidation of the actions.

Possible work

33. Work could be undertaken on the feasibility of designing a similar mechanism in the context of international arbitration.

---

[15] See International Law Association on Recommendations on lis pendens and res judicata and arbitration, Seventy-Second International Law Association Conference on International Commercial Arbitration, Toronto, Canada, 4-8 June 2006.

[16] *Multiple Proceedings in International Arbitration: Blessing or Plague?*, Gabrielle Kaufmann-Kohler, Herbert Smith Freehills and SMU School of Law Asian Arbitration Lecture (24 November 2015).

[17] Article 30(1) and (2) provide that: "1. Where related actions are pending in the courts of different Member States, any court other than the court first seized may stay its proceedings. 2. Where these actions are pending at first instance, any court other than the court first seized may also, on application of one of the parties, decline jurisdiction if the court first seized has jurisdiction over the actions in question and its law permits the consolidation thereof."

C. Provisions in investment treaties

34. Some investment treaties contain provisions aimed at preventing the occurrence of concurrent proceedings or limiting their impact (see section III. C of document A/CN.9/881). Concurrent proceedings could be tackled through different provisions in investment treaties, as briefly outlined below.

35. Work could be undertaken to call attention of States to the different types of treaty provisions available to address the matter.

1. Definition of investors

36. The definitions of the terms "investor" or "investment" in investment treaties determine which investors are protected and are able to bring claims against host States (see A/CN.9/848, paras. 8 and 9). Liberal definitions of "investor" and investment" contained in many treaties extend protection to indirect investments made through one or more corporate entities.

37. Treaty provisions have been drafted to prevent abusive use of an investment treaty by prohibiting claims by investors who engage in "treaty shopping" or "nationality planning" through "mailbox" companies that channel investments but do not engage in any real business operations in the host State.[18] There are different ways to define protected investors or investments with the aim of limiting possibilities of multiple claims, such as referring to criteria of "substantial business activity" and defining its meaning, and the nationality of the company's ultimate controller.[19]

38. Also, some investment treaties contain provisions that set out the level of indirect ownership that is required for a shareholder to acquire standing under the investment treaty. Such clarity is meant to reduce parallel proceedings in situations where the same parties (related by control) initiate proceedings under different treaties in relation to the same State measure.

39. Attention of States could be called to various options in investment treaties, such as (i) providing the level of indirect ownership required for an investor to acquire standing under an investment treaty; (ii) prohibiting claims by investors where the company itself is pursuing a remedy in a different judicial forum; (iii) permitting a submission of a claim by an investor only if the investor and the local company withdraw any pending claim and waive their rights to seek remedy before other forums; and (iv) limiting forum selection options to claims that have not yet been asserted elsewhere.

2. Preventing abuse of process

40. Treaty provisions on prohibiting abuse of process could provide the necessary mechanisms to allow arbitral tribunals to dismiss abusive claims and thus encourage investors to agree on a single forum for the resolution of their claims. If investment treaties are drafted providing a clear criteria on which concurrent proceedings will be regarded as abusive (see paras. 17-20 above), they could limit concurrent proceedings to those that are legitimate and enable disputing parties to have a clear understanding of those situations.[20]

3. Compensation mechanism, and notion of reflective loss

41. Treaty provisions on the compensation mechanism (including the allocation of costs) could also have an effect on limiting the impact of concurrent proceedings.[21]

---

[18] UNCTAD World Investment Report (2015), Chapter IV.

[19] Ibid.

[20] See *The Regulation of Parallel Proceedings in Investor-State Disputes*, Hanno Wehland, ICSID Review Vol. 31, Issue 3 (October 2016).

[21] See for instance, UNCTAD Series on International Investment Agreements, II, 2014; see also OECD, *Investment Treaties and Shareholder Claims for Reflective Loss: Insights from Advanced Systems of Corporate Law*, OECD Working Papers on International Investment, 2014/02, David

42. Regarding the specific notion of reflective loss, recent OECD working papers and intergovernmental discussions at OECD have highlighted the importance of the distinction between direct and reflective loss in considering concurrent claims in investment arbitration. [22] In claims brought under investment treaties, arbitral tribunals have found that shareholders are entitled to recover for reflective loss. In contrast, domestic law systems generally bar shareholder claims for reflective loss, both for corporate law reasons and procedural reasons, including the desire to promote judicial economy by reducing the number of cases necessary to address the injury, consistency, predictability, the avoidance of double recovery, and fairness to defendants. Only the directly-injured company can claim. OECD works indicate that acceptance of claims for reflective loss is an important aspect of concurrent claims in investment arbitration.

43. Intergovernmental discussions at OECD have preliminarily concluded that, while reflective loss claims raise significant policy issues, there does not appear to be any strong policy rationale for the general acceptance of reflective loss claims under investment treaties.

4. Consolidation

44. Provisions on consolidation are also increasingly found in investment treaties (see A/CN.9/881, paras. 32-34). There are two types of provisions on consolidation. [23] The first is a restatement of the general rule that consolidation is possible, if all of the concerned parties agree. The purpose of such provisions is to draw attention of the disputing parties to the possibility of consolidation, without necessarily providing the mechanism for consolidation. The second type permits yet limits consolidation to where there is a "question of law or fact in common" (for example, NAFTA Article 1126.2), or where common questions "arise out of the same events or circumstances" (for example, article 10.25 CAFTA-DR). Article 1117 of NAFTA specifically calls for consolidation of actions by different shareholders for claims made on behalf of a locally incorporated entity. The guidance provided to arbitral tribunals in certain investment treaties is that the tribunal must rule in the interest of fair and efficient resolution of the claims when considering whether to consolidate. These clauses usually set out a very detailed consolidation mechanism. Under the second type of provisions, any disputing party to the related, ongoing proceedings can request the consolidation of proceedings. This request triggers a process that involves the establishment of a consolidation tribunal.

45. Consolidation may also be carried out under applicable institutional arbitration rules. However, it is usually not possible to consolidate proceedings which have started under different arbitration rules and/or administered by different arbitration institutions. Consolidating claims based on different underlying treaties can prove difficult because they may contain differing substantive obligations, as well as diverging time limits, procedural obligations and dispute settlement forums. It is interesting to note that a recent treaty allows for consolidation across dispute settlement mechanisms (see article 9.29 of the EU-Singapore Free Trade Agreement). [24]

Gaukrodger; *Investment Treaties and Shareholder Claims: Analysis of Treaty Practice*, OECD Working Papers on International Investment, 2014/03, David Gaukrodger.

[22] Shareholders' reflective loss is incurred as a result of injury to "their" company, typically a loss in value of the shares; it is generally contrasted with direct injury to shareholders' rights, such as interference with shareholders' voting rights; Gaukrodger, D. (2013), "Investment Treaties as Corporate Law: Shareholder Claims and Issues of Consistency", OECD Working Papers on International Investment, 2013/03; Gaukrodger, D. (2014), "Investment Treaties and Shareholder Claims for Reflective Loss: Insights from Advanced Systems of Corporate Law", OECD Working Papers on International Investment, 2014/02; Gaukrodger, D. (2014), "Investment Treaties and Shareholder Claims: Analysis of Treaty Practice", OECD Working Papers on International Investment, 2014/03.

[23] UNCTAD Series on International Investment Agreements, II, 2014.

[24] Article 9.29 (5) provides that: "The consolidating tribunal shall conduct its proceedings in the following manner: (a) unless all disputing parties otherwise agree, where all the claims for which a consolidation order is sought have been submitted to arbitration under the same dispute settlement

5. Other treaty provisions

46. Various mechanisms have been developed over time in investment treaties to tackle this issue. Certain investment treaties provide for additional coordination or concentration mechanisms. For instance, the requirement that the claimant waives or terminates any other proceedings — also referred as "no U-turn" approach — is found in many recent investment treaties; the so-called, "fork-in-the-road" clauses offer the investor a choice between the host State's domestic courts and international arbitration; once the choice is made, it is final.

47. The usefulness of such clauses in the context of concurrent proceedings is limited as they apply only if the disputes are identical (same parties, same interests, and same legal basis). For example, such provisions would not preclude separate claims by majority and minority shareholders.

III. Concluding remarks

48. The Commission may wish to consider whether work should be undertaken on providing information on available tools, as suggested in section B above, to arbitral tribunals faced with concurrent proceedings. This may involve developing further certain principles of subsidiarity and of abuse of process.

49. At the forty-ninth session of the Commission, it was suggested that concrete examples of existing mechanisms or provisions in investment treaties and possible models to be followed could be provided, supplementing the work already done by other organizations.[25] The Commission may wish to consider whether attention of States should be directed to available mechanisms in investment treaties, as briefly outlined in section C above, to avoid the concurrent proceedings from occurring in the first place, or to limit their impacts.

---

mechanism, the consolidating tribunal shall proceed under the same dispute settlement mechanism; (b) where the claims for which a consolidation order is sought have not been submitted to arbitration under the same dispute settlement mechanism: (i) the disputing parties may agree on the applicable dispute settlement mechanism available under Article 9.16 (Submission of Claim to Arbitration) which shall apply to the consolidation proceedings; or (ii) if the disputing parties cannot agree on the same dispute settlement mechanism within thirty days from the request made pursuant to paragraph 3, the UNCITRAL arbitration rules shall apply to the consolidation proceedings."

E. Note by the Secretariat on possible future work in the field of dispute settlement: ethics in international arbitration

(A/CN.9/916)

[Original: English]

Contents

I. Introduction

1. At its forty-eighth session, in 2015, the Commission had before it a proposal for future work on a code of ethics for arbitrators in investment arbitration (A/CN.9/855), which suggested that work on the topic could relate to the conduct of arbitrators, their relationship with those involved in the arbitration process, and the values that they were expected to share and convey.[1] After discussion, the Commission requested the Secretariat to explore the topic in a broad manner, including in the field of both commercial and investment arbitration, taking into account existing laws, rules and regulations, as well as any standards established by other organizations. The Secretariat was requested to assess the feasibility of work in that area and report to the Commission at a future session.[2]

2. At its forty-ninth session, in 2016, the Commission considered a note by the Secretariat, which outlined the concept of ethics in international arbitration as well as existing legal frameworks on ethics (A/CN.9/880). The note also posed some questions to be considered by the Commission before possibly engaging in future work in that area. After discussion, the Commission requested the Secretariat to continue exploring the topic further, in close cooperation with experts including those from other organizations working actively in that area, and to report to the Commission at a future session on the various possible approaches.[3]

3. In accordance with that request, the purpose of this note is to explore the concept of ethics in international arbitration, to identify existing legal frameworks, and to raise questions with regard to the topic as an item for possible future work by the Commission.[4] This note is limited to exploring ethics of arbitrators, and does not

address other participants in the arbitration process, such as counsel, experts, or third-party funders.

II. Existing legal frameworks and possible future work

A. Existing legal frameworks on ethics in international arbitration

4. With the expansion of international arbitration, a variety of texts on ethics have been developed by various actors, including local bar associations, arbitral institutions and international organizations. Ethical standards have been either formulated in a stand-alone text, or included in national legislation on arbitration, in arbitration rules, in guidelines and, more recently, in investment treaties as a complement to investor-State dispute settlement provisions. Some texts have a binding effect, whereas others are meant to provide general guidance. State court decisions on challenge to arbitrators as well as on setting aside or enforcement of arbitral awards are also relevant as such decisions often constitute a last resort review of the arbitrators' conduct, thereby providing a source of information on the application of ethical standards.

1. National legislation

5. The UNCITRAL Model Law on International Commercial Arbitration ("Model Law on Arbitration" or "Model Law") has been enacted in a large number of jurisdictions[5] and its articles 12 and 13 on grounds for challenge and challenge procedure shed light on the conduct expected of arbitrators. Article 12 imposes on each arbitrator a continuing duty to disclose to the parties circumstances that are likely to give rise to justifiable doubts as to his or her impartiality or independence.[6] The Model Law also makes it clear that arbitrators cannot be challenged for reasons other than those mentioned in article 12(2).[7] Article 12(2) pursues two additional objectives. The first is to reinforce party autonomy in the choice of arbitrators by providing that an arbitrator may be challenged if circumstances exist that give rise to justifiable doubts as to his impartiality or independence, or if he or she does not possess qualifications required by the parties. The second is to prevent parties from abusing the trust of their opponents by engaging in contradictory behaviour. That objective is achieved by forbidding a party from challenging an arbitrator appointed by it, or in whose appointment it has participated, on the basis of circumstances known to that party at the time of the appointment.

6. The procedure applicable to challenges to arbitrators is addressed in article 13 of the Model Law, which sets out a two-stage procedure. In a preliminary phase, challenges are handled by the arbitral tribunal, according to either a procedure agreed to by the parties or the default procedure set out in article 13(2). Challenges that have

---

[5] The list of jurisdictions which have enacted legislation based on the Model Law on Arbitration can be found on the Internet at www.uncitral.org/uncitral/en/uncitral_texts/arbitration/1985Model_arbitration_status.html.

[6] Article 12(1) of the Model Law on Arbitration provides: "When a person is approached in connection with his possible appointment as an arbitrator, he shall disclose any circumstances likely to give rise to justifiable doubts as to his impartiality or independence. An arbitrator, from the time of his appointment and throughout the arbitral proceedings, shall without delay disclose any such circumstances to the parties unless they have already been informed of them by him."

[7] Article 12(2) of the Model Law on Arbitration provides: "An arbitrator may be challenged only if circumstances exist that give rise to justifiable doubts as to his impartiality or independence, or if he does not possess qualifications agreed to by the parties. A party may challenge an arbitrator appointed by him, or in whose appointment he has participated, only for reasons of which he becomes aware after the appointment has been made". The *travaux préparatoires* indicate that proposals were made to delete the word "only" in article 12(2) but it was considered preferable to retain that word to clearly emphasize that possible additional grounds for challenge provided for in domestic law should not apply in the context of international commercial arbitrations (see *Official Records of the General Assembly, Fortieth Session, Supplement No. 17* (A/40/17), paras. 116-119).

not been successful at that preliminary phase may subsequently be brought to a court or competent authority, whose decision on the matter is final.

7. The Model Law has also influenced jurisdictions that have yet to enact legislation based on it. Accordingly, national arbitration laws usually have provisions that address disclosures by, and challenges to, arbitrators. In addition, certain national arbitration laws impose specific obligations on arbitrators, for example, when arbitrators have knowledge about criminal wrongdoing by the parties.

2. Arbitration rules

8. Most arbitration rules include general principles on impartiality and independence of the arbitrators and detailed rules on the procedure for challenging an arbitrator. For instance, the UNCITRAL Arbitration Rules (as revised in 2010) deal with disclosure by, and challenge of, arbitrators in articles 11 to 13. An arbitrator may be challenged if circumstances exist that give rise to justifiable doubts as to the arbitrator's impartiality or independence in accordance with article 12(1). If the other party does not agree or the arbitrator does not withdraw voluntarily, the party challenging the arbitrator may seek a decision on the challenge by the appointing authority. Institutional arbitration rules contain similar provisions, sometimes with slight variations.[8]

9. In the investor-State dispute settlement context, article 14 of the ICSID Convention, for example, requires arbitrators and conciliators to be "persons of high moral character and recognized competence (…) who may be relied upon to exercise independent judgment". This requirement is supplemented by filing a declaration of independence at the beginning of the proceedings, as provided for under ICSID Arbitration Rule 6(2). Article 57 of the ICSID Convention further provides a mechanism by which a party may seek disqualification of an arbitrator by showing "a manifest lack of the qualities required (...)".

3. Guidance texts

10. In line with the provisions found in national legislation and arbitration rules, standards addressing the question of professional ethics and conflicts of interest have been developed by international organizations referring to the principle that arbitrators have a continuing obligation to remain impartial and independent.[9]

11. Recently, a number of arbitral institutions have established codes of conduct for arbitrators. Some of these codes are general moral guidelines, while others cover specific situations that occur during arbitration.

4. Case law

12. As mentioned above, the Model Law on Arbitration, including its articles 12 and 13, has been enacted in a number of jurisdictions. The Model Law, however, does not define terms such as "justifiable doubt", "impartiality", "independence", and thus State courts have used their respective standards to interpret those notions.

13. National courts have developed jurisprudence regarding arbitrator's obligations, specifically on the impartiality and/or independence requirements, and the level of proof required to establish a violation. The 2012 Digest of Case Law on the Model Law on Arbitration provides an analysis of the relevant court decisions.[10] Courts have highlighted the mandatory nature of impartiality and independence. Some decisions have underlined that there should be objective circumstances that give rise to justifiable doubts as to the impartiality or independence of the arbitrator for a

[8] For instance, the Arbitration Rules of the ICC International Court of Arbitration in effect as of 1 March 2017 refer to "an alleged lack of impartiality or independence".

[9] For instance, the American Arbitration Association/American Bar Association's Code of Ethics for Arbitrators in Commercial Disputes (2004), the Code of Professional and Ethical Conduct of the Chartered Institute of Arbitrators (2009), the IBA Guidelines on Conflicts of Interest in International Arbitration (2014).

[10] See 2012 UNCITRAL Digest of Case Law on the UNCITRAL Model Law on International Commercial Arbitration, available on the Internet at: http://www.uncitral.org/uncitral/en/case_law/digests.html.

challenge to be successful. For example, the notion of "justifiable doubts" has sometimes been interpreted to require a showing of objective facts that a reasonable, well-informed person would regard as constituting a bias on the part of the arbitrator. Some jurisdictions require a real manifestation of bias before an arbitrator can be removed. In certain jurisdictions, an analysis of circumstances that may affect the arbitrator's judgment and raise reasonable doubts in the mind of the parties as to the arbitrator's independence and impartiality is required.[11]

14. Decisions by courts with regard to article 36 of the Model Law on Arbitration on grounds for refusing recognition and enforcement of arbitral awards may also be relevant in relation to the interpretation of ethical standards. Article 36, which mirrors article V of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958) ("New York Convention"), does not include provisions that specifically address arbitrators' ethical obligations. Hence, in order to challenge the arbitrator's conduct, parties must argue that the arbitrator's conduct violates one of the exceptions for enforcing the award. Under article 36, the two provisions that are most often invoked are that the non-disclosure of information by the arbitrator caused the tribunal to not be constituted in compliance with the parties' agreement or the law at the place of arbitration (article 36(1)(a)(iv)) or that the arbitrator's conduct violated the public policy of the enforcement jurisdiction (article 36(b)(ii)). Parties have also argued that the arbitrator's alleged partiality prevented the party from presenting its case (article 36(1)(a)(ii)) or that the conduct of the arbitrator was outside the scope of the arbitrator's power (article 36(1)(a)(iii)).[12]

15. The most common basis for claims under the New York Convention has been that the alleged misconduct violates the public policy of the enforcement jurisdiction. However, these defences to enforcement presented on the basis of article V(2)(b) of the New York Convention have been rarely successful. Courts have sometimes underlined that the conduct of the arbitrator was not covered by public policy and that the party should have raised the matter during the arbitral proceedings.[13]

16. There have been a number of cases in different jurisdictions, in which parties have challenged arbitrators based on their past or existing experience, including as arbitrator or counsel. This matter is sometimes referred to as issue conflict. Issue conflict, also described as "inappropriate predisposition",[14] has been raised in cases where parties allege that an arbitrator's past publications or participation in prior awards indicate a lack of impartiality (see also below, para. 23).[15] In different circumstances, parties have challenged arbitrators based on their service as counsel either for or against one of the parties or in previous disputes involving issues that are related to the pending dispute. Courts have rendered divergent decisions on the matter. Some decisions sustain the challenges and note that the issue can pose legitimacy concerns for the arbitral process. Others have adopted the opinion that having a dual role as arbitrator and counsel is a common and acceptable practice in international arbitration.[16] The case law reviewed by the Joint ASIL-ICCA Task Force on Issue Conflicts in Investor-State Arbitration indicated "reluctance on the part of decision makers in investor-State cases to sustain challenges involving claims of three types of alleged inappropriate predisposition: (i) past publications, (ii) past advocacy as counsel and (iii) participation in prior awards, absent unusual circumstances".[17]

5. Code of ethics in investment treaties

17. Some recently concluded investment treaties contain a code of conduct for arbitrators acting in investor-State dispute settlement arising under that treaty, thereby complementing the provisions of the applicable arbitration rules (see above, paras. 8 and 9).[18] Those codes usually address the standards of conduct for arbitrators (and other persons), their duties in the conduct of the arbitration, the disclosure obligations and the obligations of confidentiality.[19] They usually do not provide for sanctions, other than the right of both parties to demand replacement of the arbitrator.

B. Possible approaches for future work

18. Two possible approaches could be considered for future work on ethics: the first being the preparation of a substantive code of ethics seeking to provide harmonization and clarity, for instance with regard to the disclosure and challenge procedures; and the second being the preparation of guidelines on relevant and applicable ethical standards.

1. Possible topics for a code of ethics for arbitrators

(a) Impartiality and independence

19. Impartiality and independence are the core elements of integrity and ethical conduct of arbitrators. Arbitrators are expected to avoid direct and indirect conflicts of interest. Such conflicts usually result in the lack of impartiality or the lack of independence. Impartiality means the absence of bias or predisposition towards parties. Lack of impartiality would arise, for instance, if an arbitrator appears to have prejudged some matters in favour of one of the parties. Independence usually relates to the business, financial, or personal relationship of an arbitrator with a party to the arbitration, and lack of independence usually derives from problematic relations between an arbitrator and a party or its counsel. Standards on ethics usually provide that ethical duties remain applicable throughout the duration of the arbitral proceedings.

20. A code of ethics would state that all arbitrators have to be independent and impartial, and comply with the same ethical standards. It could further explain how that key principle articulates with party autonomy on which arbitration is founded, achieving a proper balance between party autonomy and impartiality.

---

[18] See, for instance the European Union-Singapore Free Trade Agreement (Annex 15-B, Code of Conduct for Arbitrators and Mediators, version as of May 2015); and Canada-European Union Comprehensive Economic Trade Agreement (CETA) (Annex 29-B, Code of Conduct for Arbitrators and Mediators).

[19] The following provides a brief introduction of the structure and matters covered in the CETA Code of Conduct: The first section of the Code states the fundamental principle that "[e]very candidate and member shall avoid impropriety and the appearance of impropriety, shall be independent and impartial, shall avoid direct and indirect conflicts of interests and shall observe high standards of conduct so that the integrity and impartiality of the dispute settlement mechanism is preserved." The second section addresses the disclosure obligations for arbitrator candidates. The third section requires arbitrators to perform their obligations thoroughly and expeditiously and to ensure that their assistants and staff comply with the provisions of the code. The fourth section focuses on the independence and impartiality requirement of arbitrators. It states that arbitrators shall not be influenced by self-interest, outside pressure, political considerations, public clamour, loyalty to a party, or fear of criticism. Arbitrators shall not accept any benefit that would interfere or appear to interfere with her or his duties. Arbitrators may not allow financial, business, professional, family, or social relationships or responsibilities to influence her or his conduct or judgment. The fifth section requires former arbitrators to avoid actions that may create the impression that they were biased in carrying out their duties or that they derived benefits from the arbitral decision. The sixth section requires arbitrators to maintain any information of the proceedings, or acquired during the proceedings, confidential and prohibits using such information for personal gain or for adversely affecting others' interests. The seventh and eighth sections focus on expenses and mediators, respectively.

21. Sources sometimes differ concerning terminology. Regarding legislative texts, the UNCITRAL Model Law uses both the terms "independence" and "impartiality".[20] The 1996 English Arbitration Act refers to the duty to be "impartial."[21] The Swiss Federal Statute on Private International Law uses the term "independence".[22] Courts and institutions have often used the terms "impartiality" and "independence" interchangeably, and their meanings have further developed through application.

22. A code of ethics could seek to address specific situations, to the extent this would be feasible. For instance, it is sometimes difficult to delineate information and knowledge that may have an impact on the impartiality and independence of the arbitrator, and to draw the line between acceptable knowledge and unacceptable knowledge that could lead to partiality or lack of independence.

23. In this regard, the report of the ASIL-ICCA Task Force on Issue Conflicts in Investor-State Arbitration notes that formal 'bright line' rules regulating inappropriate prejudgment are unnecessary and would be counterproductive. The Task Force noted that its review of case law suggested that "it is not likely to be fruitful to try to articulate hard and fast rules about time periods triggering disclosures, blanket endorsements or preclusions of certain types of activities", due to the highly fact-dependent nature of the outcomes in challenge cases.[23] The 2004 AAA/ABA Code of Ethics draws the line by distinguishing between views on general issues and views on specific factual or legal points. The Code states: "A prospective arbitrator is not necessarily partial or prejudiced by having acquired knowledge of the parties, the applicable law or the customs and practices of the business involved. Arbitrators do not contravene this Canon if, by virtue of such experience or expertise, they have views on certain general issues likely to arise in the arbitration, but an arbitrator may not have prejudged any of the specific factual or legal determinations to be addressed during the arbitration."[24]

(b) Disclosure obligations

24. The obligation of impartiality and independence is usually accompanied by a requirement that the arbitrator shall disclose circumstances, past or present, that could give rise to justifiable doubts as to his or her impartiality or independence. It is then for the arbitrator to declare that the disclosed circumstances do not affect, in his or her opinion, his or her independence and impartiality.[25] Most national laws and arbitral rules have adopted objective standards for disclosure.

25. Investment treaties may contain additional requirements regarding disclosure in the context of investor-State dispute settlement, specifying, for instance, that the arbitrators shall disclose any financial interest in the proceeding or in its outcome, and in any other proceedings that involve issues that may be decided in the case for which the arbitrator is under consideration.[26]

[21] Arbitration Act 1996, Chapter 23, provision 24 (1)(a).

[22] Swiss Federal Statute on Private International Law, Chapter 12, Article 180(c).

[23] See ICCA, Report of the ASIL-ICCA Joint Task Force on Issue Conflicts in Investor-State Arbitration, The ICCA Reports No. 3, 17 March 2016, para. 183, available on the Internet at: http://www.arbitration-icca.org.

[24] AAA/ABA Code of Ethics for Arbitrators in Commercial Disputes, Comment to Canon 1.

[25] See, for instance, the model statement of independence contained in the Annex to the UNCITRAL Arbitration Rules (as revised in 2010) which gives an indication as to the elements that would be required to be disclosed: "Attached is a statement made pursuant to article 11 of the UNCITRAL Arbitration Rules of (a) my past and present professional, business and other relationships with the parties and (b) any other relevant circumstances."

[26] See, for instance, Canada-European Union Comprehensive Economic and Trade Agreement (CETA), Annex 29-B, Code of Conduct for Arbitrators and Mediators, Section on "Disclosure obligations", para. 4.

26. Specific requirements are also sometimes found in guidance texts on ethics,[27] such as that a prospective arbitrator shall disclose personal or business relationships with "any person known to be a potentially important witness in the arbitration".[28]

27. It is questionable whether arbitrators have a duty to investigate potential conflicts of interest. Some courts have found that arbitrators can be deemed impartial if they do not have knowledge about a certain conflict and that arbitrators do not have the duty to investigate unknown facts. Other courts have found that since standards for impartiality also include possible perceptions of bias, arbitrators should investigate potential conflicts of interest. The IBA Guidelines on Conflicts of Interest in International Arbitration, General Standard 7(d) states that "(f)ailure to disclose a conflict is not excused by lack of knowledge, if the arbitrator does not perform such reasonable enquiries."

28. Disclosure standards and disqualification standards are generally not the same. The scope of the matters that should be disclosed is generally broader than the scope of matters that would constitute a basis for disqualification. Not all information that should be disclosed would result in disqualification. Conversely, even if the information would not disqualify an arbitrator, it may nonetheless have to be disclosed. The disqualification standards provide a basis to determine whether an arbitrator is not sufficiently impartial to serve in a dispute.

29. For example, the Model Law on Arbitration makes a distinction between information that must be disclosed and information that must be disclosed under the disqualification standard. Article 12(1) on disclosure states that arbitrators should disclose any circumstances "likely to" give rise to justifiable doubts as to the arbitrator's impartiality or independence. Article 12(2) on disqualification, on the other hand, refers to "existing circumstances" that give rise to justifiable doubts as to an arbitrator's impartiality and independence. Having the disclosure standard cover a broader scope helps to avoid situations in which information may otherwise be benign if it were not inadvertently discovered later.

30. In the same vein, the explanation to the IBA Guidelines on Conflicts of Interest in International Arbitration, General Standard 3(c) states that: "… a failure to disclose certain facts and circumstances that may, in the eyes of the parties, give rise to doubts as to the arbitrator's impartiality or independence, does not necessarily mean that a conflict of interest exists, or that a disqualification should ensue."

(c) Other obligations possibly relevant to ethics of arbitrators

Fairness and diligence, confidentiality

31. Requirements of fairness and diligence, as well as provisions on confidentiality can be found in national legislation and arbitration rules which, in substance, usually oblige the arbitrator to: (i) perform his or her duties with fairness and diligence, thoroughly and expeditiously during the course of the proceeding;[29] and (ii) keep non-public information confidential, and not use any information to gain a personal advantage, or to affect the interest of others.

---

[27] See for instance, the AAA/ABA Code of Ethics for Arbitrators in Commercial Disputes; and the IBA Guidelines on Conflict of Interest in International Arbitration which indicate specific relationships that should be disclosed (the Red List in the IBA Guidelines shows circumstances that give rise to a conflict of interest; some circumstances in the Red List may be waived upon disclosure; the Orange List shows circumstances where a candidate has a duty to disclose and, after the disclosure, the parties are assumed to have waived their concerns after a period of thirty days; the Green List shows situations where there is no appearance of conflict from an objective viewpoint and the arbitrator has no obligation to disclose).

[28] See for instance the Code of Ethics for an Arbitrator, Singapore International Arbitration Centre 2.2 (a).

[29] See, for instance, article 17 (1) of the UNCITRAL Arbitration Rules (as revised in 2010), as well as their Annex (which provides that any party may consider requesting from the arbitrator a statement confirming that "on the basis of the information presently available, that arbitrator can devote the time necessary to conduct the arbitration diligently, efficiently and in accordance with the time limits in the Rules.").

Professional qualifications

32. In addition to the requirements of impartiality and independence, professional qualifications are also sometimes mentioned as part of ethical standards. For example, Article 14(1) of ICSID states that arbitrators shall be persons of high moral character and recognized competence in the fields of law, commerce, industry or finance, who may be relied upon to exercise independent judgment.

Nationality

33. In investor-State arbitration, there is the general presumption against appointing a chairperson or sole arbitrator who would share the nationality of one of the parties, unless the parties agree to do so. Article 39 of the ICSID Convention states that "[t]he majority of the arbitrators shall be nationals of States other than the Contracting State Party to the dispute and the Contracting State whose national is a party to the dispute […]"[30] Parties may waive this requirement by agreement. A similar principle can be found more generally in international arbitration. For instance, article 6(7) of the UNCITRAL Arbitration Rules (as revised in 2010) provides that "[t]he appointing authority shall have regard to such considerations as are likely to secure the appointment of an independent and impartial arbitrator and shall take into account the advisability of appointing an arbitrator of a nationality other than the nationalities of the parties".

Involvement of arbitrators in settlement

34. As underlined in the UNCITRAL Notes on Organizing Arbitral Proceedings (2016),[31] different legal systems have different views on whether arbitrators should refrain from encouraging the parties to settle. Some legal systems require judges and arbitrators to aid parties in reaching a settlement. The process of encouraging settlement, however, may involve ex parte communications with the parties, which may compromise the arbitrator's impartiality. The IBA Guidelines on Conflicts of Interest in International Arbitration, General Standard 4(d), provides that arbitrators may assist the parties in reaching a settlement if the parties consent to do so.

(d) Challenge procedure — Non-compliance with ethical standards

35. The typical measure to address non-compliance with ethical standards after the appointment of an arbitrator is the resignation and/or replacement of the arbitrator. Almost all national arbitration laws and arbitration rules contain provisions on procedures for challenging arbitrators who do not comply with the standards therein including ethical standards. They also include safeguards aimed at preventing abuse of the challenge procedures, as dilatory tactics, by parties.

36. Generally, parties have to challenge an arbitrator as soon as they become aware of relevant information. Parties cannot wait and assert the challenge when they find the award unfavourable. If parties fail to raise a challenge within a stipulated period of time, then the party is deemed to have waived the right to challenge.

2. Preparation of guidelines on existing ethical standards

37. At the forty-ninth session of the Commission, it was highlighted that different ethical norms and standards might be applicable, and there was currently no clear guideline for determining how they interrelated or which would prevail in a given situation. In that light, it was suggested that one possible form of work could be to address the interrelationship of multiple norms and standards providing guidance on which ethical standards would be applicable.[32]

---

[30] ICSID Rules of Procedure for Arbitration Proceedings, Chapter IV, Article 39.

[31] See Note 12 of the UNCITRAL Notes on Organizing Arbitral Proceedings (2016), available on the Internet at http://www.uncitral.org/uncitral/en/uncitral_texts/arbitration/2016Notes_proceedings.html

[32] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), para. 184.

38. Different approaches could be envisaged, for instance, providing guidance to determine whether and when the ethical standards are applicable, while noting the limits of application of such standards, since arbitrators are likely to come from different jurisdictions and would thus be subject to different ethical standards.

39. Work could be undertaken to provide clarity regarding the interrelationship among ethical rules (i) of the arbitrator's home jurisdiction, (ii) of the jurisdiction in which the arbitration is being held (both the legal seat and physical venue), (iii) provided for in the applicable law, (iv) of the arbitral institutions, and (v) contained in soft law standards agreed to by the parties or set by the arbitral tribunal.

III. Questions in relation to possible future work

40. With the development of international arbitration and the variety of sources and texts on ethics, no guidance has been provided on which approach arbitrators should adopt, for instance whether arbitrators dealing with international arbitration may disregard their home jurisdictions' ethical rules in favour of international texts. As noted by the Commission at its forty-eighth session, arbitral tribunals could be bound by more than one ethical standard depending on the nationality of the arbitrators, affiliation with bar associations, as well as the place of arbitration.[33] Therefore, multiple norms may apply at the same time, without any clear indication on which shall prevail in case of conflict.

41. The expansion of international arbitration has also resulted in the diversification of parties involved in the arbitration process. As such, their perspectives on ethics or conduct of arbitrators may differ significantly and what one expects may sometimes be at odds with the expectations of others from another jurisdiction or with the general practice in international arbitration. The increased complexity of recent disputes involving multiple parties and complicated transactions lead to new and more subtle questions. While there seems to be a general agreement about the fundamental ethical standards of international arbitration, in practice, the assessment of compliance with such standards may be carried out quite differently depending on the texts deemed applicable, and depending also on whether assessment is made by the arbitrators themselves, the parties, the arbitral institutions or national courts. Increased regulation of the arbitral procedure and increased transparency of the process also have an impact on parties' expectations in relation to ethics and conduct of arbitrators.

42. In addition, while the standards described above in section II contain statements of principle, they usually lack explanatory contents about their practical implications.

43. In that light, the Commission may wish to consider the following questions:

(a) Whether there is a need for a harmonized and authoritative source on ethics in international arbitration, or whether guidance on articulation among the possible applicable ethical standards would be more appropriate;

(b) Whether existing instruments sufficiently define the scope of disclosure and the disqualification process;

(c) Whether the purpose of undertaking work in the field of ethics in international arbitration would be to reduce any identified uncertainty and inconsistency in the existing ethical standards, and their application; if so, whether a new instrument should cover any or all of (i) persons concerned (in addition to the arbitrators), (ii) content of ethical standards (limited to impartiality and independence, or expanded to encompass other obligations), (iii) methods and extent of disclosure, (iv) challenge procedures, (v) effect of breach of ethical standards, and (vi) enforcement mechanisms (how should ethical rules be enforced and by whom (arbitrators, parties, institutions, others)?);

(d) Whether the consequences of non-compliance with ethical standards are addressed in sufficient detail in existing instruments; if this is considered not to be

[33] Ibid., para. 150.

the case, whether working on a compilation and digest of case law would be a possible way forward.

44. Ethical standards in investor-State arbitration and in commercial arbitration largely address the same obligations with some variation. The Commission may wish to consider whether any work on the topic should encompass both commercial and investor-State arbitration, or deal with them separately.

F. Note by the Secretariat on possible future work in the field of dispute settlement: reforms of investor-State dispute settlement (ISDS)

(A/CN.9/917)

[Original: English]

Contents

I. Introduction

1. At its forty-eighth session, in 2015, the Commission noted with appreciation the ongoing cooperation and coordination efforts of the Secretariat with organizations active in the field of international arbitration and conciliation.[1] The Commission further noted that UNCITRAL standards in that field were characterized by their flexibility and generic application to different types of arbitration, including both purely commercial arbitration and investor-State arbitration. In that light, the Commission agreed that the Secretariat should continue to coordinate with organizations in relation to the various types of arbitration to which UNCITRAL standards were applicable, and to closely monitor developments, further exploring areas for cooperation and coordination.[2]

2. In relation to investor-State arbitration, the Commission noted that the current circumstances posed a number of challenges and proposals for reform had been formulated by a number of organizations. In that context, the Commission was further informed that the Secretariat was conducting a study on whether the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration ("Mauritius Convention on Transparency" or "Mauritius Convention") could provide a useful model for possible reforms in the field of investor-State arbitration, in conjunction with interested organizations, including the Center for International Dispute Settlement (CIDS), a joint research centre of the Graduate Institute of International and Development Studies and the University of Geneva Law School. In that light, the Secretariat was requested to report to the Commission at a future session with an update on that matter.[3]

3. Pursuant to that request, at its forty-ninth session, in 2016, the Commission had before it a note providing an update on the study conducted within the framework of a research project of CIDS and a short overview of its outcome (A/CN.9/890). The

[2] Ibid., para. 268.

[3] Ibid.

Commission expressed its appreciation to the Secretariat and to CIDS for the research conducted.

4. At that session, the Commission heard an oral presentation of the CIDS research study (referred to below as the "CIDS report"),[4] which sought to provide a preliminary analysis of the issues that would need to be considered if a reform of the investor-State dispute settlement (also referred to as "ISDS") regime[5] were to be pursued at a multilateral level. It was pointed out that the CIDS report considered two different options in-depth: (i) a permanent international dispute settlement body providing direct access to private parties and State parties alike for investment related matters, and (ii) an appeal mechanism for investor-State arbitral awards. It was highlighted that the final part of the CIDS report addressed possible means for States to incorporate those options into their existing and future investment treaties. The conclusion reached regarding existing investment treaties was that, although not the only model that could be envisaged for that purpose, a convention modelled on the Mauritius Convention on Transparency with certain adaptations could effectively extend new dispute settlement options to existing investment treaties.

5. After discussion, the Commission requested the Secretariat to review how the project described in document A/CN.9/890 might be best carried forward, if approved as a topic of future work at the forthcoming session of the Commission, taking into consideration the views of all States and other stakeholders, including how this project might interact with other initiatives in this area and which format and processes should be used. In so doing, the Secretariat was requested to conduct broad consultations.[6]

6. Accordingly, the Secretariat circulated a questionnaire to States and regional economic integration organizations. The replies to the questionnaire are reproduced in document A/CN.9/918 and its addenda.

7. The Secretariat organized jointly with the CIDS a meeting with a view to consulting experts from governments and inter-governmental organizations.[7] Meetings are also planned for the purpose of collecting views from investors.[8] In addition, the Secretariat attended or monitored conferences where the matter was discussed.[9]

---

[4] The CIDS report is available on the Internet at: http://www.uncitral.org/pdf/english/commissionsessions/unc/unc-49/CIDS_Research_Paper_-_Can_the_Mauritius_Convention_serve_as_a_model.pdf.

[5] The term "investor-State dispute settlement ("ISDS") regime" is used in this note to refer generally to the use of arbitral tribunals established under the Rules of UNCITRAL, ICSID or other arbitral institutions, to solve a dispute between an investor and a State. While investor-State arbitration provisions show variations across different investment treaties, they normally provide for the following features: (i) the claimant-investor may bring a claim directly against the respondent-State; (ii) the dispute is heard by an arbitral tribunal constituted to hear that particular dispute; and (iii) disputing parties, including the claimant-investor and the respondent-State, play an important role in the selection of the arbitral tribunal.

8. In order to assist the Commission in its further consideration of the matter, this note provides an insight on the consultation process undertaken by the Secretariat regarding possible reforms of the ISDS regime. The Commission may wish to note that it will also have before it an additional report from the CIDS, addressing the selection and appointment of members of international courts and assignment of individual cases to members.

II. Possible reforms of investor-State dispute settlement (ISDS)

A. Rationale for reforms

Current ISDS regime and criticisms

9. During the consultation process, key elements of the current ISDS regime and its origin were underlined. In particular, it was recalled that the ISDS regime had been developed to allow a foreign national (whether an individual or a company) to bring a claim directly against a sovereign State, in a significant break from traditional mechanisms which were essentially founded on the institution of diplomatic protection. Importantly, the ISDS regime resulted in the "de-politicization" of investment disputes and effectively removed the risk of such disputes escalating into inter-State conflicts.[10]

10. Also, the ISDS regime was created within the broader context of the development of investment treaties as a means to enhance confidence in the stability of the investment environment. A growing number of investment treaties have been concluded by States over the last decades and more than 3,000 investment treaties are currently in force. In parallel, there have been a growing number of ISDS cases. According to the information collected by UNCTAD, there are currently 767 known ISDS cases, with 62 new known treaty-based cases initiated in 2016.[11] Over time, States have become more familiar with the current ISDS regime, and have organized themselves to better respond to investors' claims. The current ISDS regime has therefore been, and continues to be, widely used for solving disputes in a neutral and flexible manner between investors and States.

11. However, the current ISDS regime has recently attracted strong and growing criticisms in various parts of the world. Concerns are diverse, but generally relate to the method of appointing arbitrators, and the impact of such methods on arbitrators' independence and impartiality; the lack of coherence of a system based on decisions made by tribunals constituted to hear a specific case (also referred to as "ad hoc" tribunals), and the lack of corrective mechanisms (i.e., the lack of appropriate control or review mechanisms); the length and costs of the proceedings; and the lack of transparency.[12]

12. During the consultation process, it was reiterated that criticisms of the current ISDS regime in essence reflect concerns about the democratic accountability and legitimacy of the regime as a whole. While States themselves have established that regime and, therefore, their consent ensures its legitimacy under international law, this may not necessarily be how States and/or their constituencies perceive it.[13]

---

[10] See also the CIDS report, paras. 8-14, available at http://www.uncitral.org/pdf/english/commissionsessions/unc/unc-49/CIDS_Research_Paper_-_Can_the_Mauritius_Convention_serve_as_a_model.pdf.

[11] The Commission may wish to note that UNCTAD developed an online tool which provides comprehensive information on investment treaties, as well as on ISDS, available on the Internet at: http://investmentpolicyhub.unctad.org/IIA and http://investmentpolicyhub.unctad.org/ISDS.

[12] See also the CIDS report, para. 22, available at http://www.uncitral.org/pdf/english/commissionsessions/unc/unc-49/CIDS_Research_Paper_-_Can_the_Mauritius_Convention_serve_as_a_model.pdf.

[13] Ibid., paras. 15-23.

13. In that context, it was underlined that the public perception of any reform process was key to its success, and that communication should be handled adequately should any reform project be undertaken at a multilateral level.

Reform of the dispute settlement regime versus reform of the substantive investment protection standards

14. Comments were made during the consultation process that an inclusive approach might be necessary, requiring not only a reform of the ISDS regime but also of the substantive rules of investment protection. On that matter, suggestions were made that a phasing approach would be preferable in order to make progress. A reform focusing as a first step on ISDS was seen as more likely to be successful. Consideration of the substantive standards would most probably entail a different and more complicated process, and give rise to controversies on which and how substantive protection standards should be reformed.

15. As highlighted by commentators, it can be expected that a reform of the existing ISDS regime, in particular if it were to establish a permanent dispute settlement body and/or an appellate body, would bring more coherence as compared to the current system of ad hoc arbitral tribunals. On that point, the CIDS report highlights that even so, no absolute uniformity would be achieved, because the substantive standards on investment would continue to be anchored in different investment treaties. However, consistency would be reached in the application of the same investment treaty and of different investment treaties with identical or nearly identical wordings. Furthermore, even when applying differently worded provisions in investment treaties, it would be expected that a permanent dispute settlement body's and/or appellate body's pursuit of consistency would be greater as a natural consequence of the in-built elements of tradition, continuity and collegiality, which are inherent in permanent bodies as opposed to ad hoc bodies.[14]

Questions for consideration

16. The Commission may wish to note the following questions that might require further consideration regarding the rationale for a reform of the current ISDS regime:

(i) What would be the aim of a reform (for instance, to address legitimacy concerns, lack of consistency in decision-making, lack of a review mechanism, methods for appointing arbitrators, arbitrators' independence and impartiality, and/or length and cost of the procedure); what elements to preserve from the current ISDS regime (for instance, neutrality i.e. distance of the adjudicators from politics and from business interests; enforceability of the decisions; and the manageability and workability of the process);

(ii) Whether to proceed with a reform of the ISDS regime in conjunction with, or separately from, a reform of substantive investment standards;

(iii) Whether a reform should aim at making adjustments to the current ISDS regime (see paras. 17 to 28 below), whether such adjustments would be feasible and would be sufficient to respond to the legitimacy concerns that have been expressed (see para. 11 above);

(iv) If establishing a permanent international dispute settlement body would be the preferred choice for a reform (see paras. 29-57 below), what would be the articulation between the new body and the current ISDS regime.

[14] Ibid., para. 73.

B. Options for reforms

1. Adjustments to the current ISDS regime

(a) Characteristics of the current ISDS regime

17. Many observed during the consultation process that there is currently a legal framework in place to deal with investment disputes unlike in the mid-sixties when the International Centre for Settlement of Investment Disputes (ICSID) was created, and the investment arbitration framework was still being developed. Therefore, it was mentioned that any reform of ISDS should address its articulation with such framework. The current ISDS framework is characterized by the use of arbitral tribunals established ad hoc to solve a dispute between an investor and a State under the arbitration rules of UNCITRAL, ICSID or of other arbitral institutions. Under that framework, both disputing parties, i.e. the claimant-investor and the respondent-State, play an important role in the selection of the arbitral tribunal. Awards rendered by the arbitral tribunals are final and binding, and can be set aside under the annulment procedure provided for by the ICSID Convention for ICSID awards, and according to setting aside procedures at the place of arbitration for non-ICSID awards. ICSID awards can be enforced through a self-contained system provided for in the ICSID Convention, and non-ICSID awards can be enforced under available instruments, mainly the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (1958, New York) ("New York Convention"). The ICSID Convention as well as the New York Convention have been widely ratified.[15]

18. In light of the criticisms to the current ISDS regime (see para. 11 above), some adjustments have been recently implemented. New transparency standards have been adopted by ICSID in 2006, and UNCITRAL in 2013.[16] The Mauritius Convention on Transparency, open for signature since March 2015 and due to enter into force in October 2017, aims at applying the UNCITRAL Rules on Transparency in Treaty-based Investor-State Arbitration ("Rules on Transparency") to investment treaties concluded before the coming into force of these Rules in April 2014. The Rules on Transparency have been incorporated in almost all investment treaties concluded since their coming into force.[17] It is foreseeable that the transparency standards will allow for a better understanding of the interpretation given by arbitral tribunals to investment standards, and will over time have the effect of enhancing consistency of decisions made by arbitral tribunals.

19. Further means to address criticisms to the current ISDS regime include the possible set-up of a stand-alone appellate body, as well as adjustments regarding the appointment procedures and ethical requirements for arbitrators.

(b) Possible adjustments

(i) Questions regarding the setting up of a stand-alone appellate body

20. A reform option which would consist in the creation of an appellate body would result in the current ISDS regime maintaining most of its basic features, while being complemented with an appeal mechanism. A standing or at least semi-permanent appellate body as opposed to ad hoc arbitral tribunals would pursue coherence and consistency across separate investment treaties. That is the reason why an appeal mechanism is often cited as a possible response to demands for greater

---

[15] 161 States are party to the ICSID Convention and 157 States are party to the New York Convention.

[16] In 2013, UNCITRAL adopted the Rules on Transparency in Treaty-based Investor-State Arbitration (the "Rules on Transparency") together with a new article 1(4) of the UNCITRAL Arbitration Rules (as revised in 2010). The Rules on Transparency, which came into effect on 1 April 2014, comprise a set of procedural rules that provides for transparency, and for accessibility to the public of treaty-based investor-State arbitration.

[17] The status of the Mauritius Convention and the Rules on Transparency is available on the Internet at: http://www.uncitral.org/uncitral/en/uncitral_texts/arbitration/2014Transparency_Convention_status.html and http://www.uncitral.org/uncitral/en/uncitral_texts/arbitration/2014Transparency_Rules_status.html.

consistency in the decisions of investor-State arbitral tribunals, as well as legal correctness.[18]

21. Despite the fact that most arbitration regimes emphasize the finality of the awards thus prohibiting appeals, there are nonetheless examples of institutional arbitration regimes that provide for appellate review of arbitral awards.[19] As reported in the responses to the questionnaire circulated by the Secretariat to States and regional economic integration organizations, under some national arbitration laws, parties may agree on a two-level arbitration process, and there is no suggestion that the presence of an appeal makes the process different from arbitration.[20] This reform option would therefore not be completely alien to the current arbitration system.

22. During the consultation process, it was mentioned that there are challenges associated with setting up an appellate body to review the decisions of ad hoc tribunals. Two risks associated with the presence of an appeal mechanism have in particular been identified. First, if appeals were possible, they might become the norm, as States and investors who have lost a case would most probably file an appeal, be it only for reasons of internal accountability. Second, appeal may lead to a duplication of the arbitral process itself in terms of duration, cost, and complexity. This could prove detrimental for States and investors with limited resources.

23. Another matter that would deserve consideration is the relationship between an appellate body and the ICSID Convention, which excludes any appeal or other remedy, except for those provided for in the Convention itself (Article 53).

24. The Commission may wish to consider the following matters with regard to the establishment of an appellate body:

(i) Whether a single appellate body should be created to hear appeals against awards irrespective of the rules applied, and the extent to which this would be feasible; how to endow jurisdiction to the appellate body;

(ii) The composition of the appellate body: for instance, how should adjudicators of the appellate body be appointed; what procedures should be used to avoid conflicts of interest; what role should the disputing parties play, if any, in selecting the adjudicators or designing the procedures;

(iii) Grounds for appeal: in particular, should the grounds for appeal encompass both (clear/serious/manifest) errors of law and errors in the finding and/or assessment of facts, or alternatively be restricted to such errors of law; what should the standard of review be (i.e. should there be any measure of deference or a de novo review); whether there should be any remand power of the appellate body to the arbitral tribunal and, if so, how should it be delineated;

---

[18] See the CIDS report, paras. 189 and 283; also, the CIDS report notes in its para. 188 the following: "It is to be expected that even in the absence of a multilateral regime of substantive investment protection, a single multilateral Appeal Mechanism would 'develop a body of legally authoritative general principles' which would transcend the single IIA at issue. The Appeal Mechanism's broader 'vision' on certain issues (does MFN apply to dispute settlement? what are the limits of fair and equitable treatment (FET) clauses? is an expropriation rendered unlawful by mere lack of payment of compensation?, just to name a few) would likely permeate the regime [of investment treaties] beyond the specificities of a particular treaty."; the CIDS report is available at http://www.uncitral.org/pdf/english/commissionsessions/unc/unc-49/CIDS_Research_Paper_-_Can_the_Mauritius_Convention_serve_as_a_model.pdf.

[19] See, for instance, Arbitrators' and Mediators' Institute of New Zealand (AMINZ) (2009), Arbitration Appeal Rules (2009); American Arbitration Association (AAA) (2013), Optional Appellate Arbitration Rules; JAMS (2003), Optional Arbitration Appeal Procedure; International Institute for Conflict Prevention and Resolution (CPR) (2015), Arbitration Appeal Procedure; European Court of Arbitration (ECA) (2015), Arbitration Rules, Article 28; in the commodity sector, see the Grain and Feed Trade Association (GAFTA) (2014), Arbitration Rules No. 125, Articles 10-15; in sport-related matters, "[a]n appeal may be filed with Court of Arbitration for Sport (CAS) against an award rendered by CAS acting as a first instance tribunal if such appeal has been expressly provided by the rules of the federation or sports-body concerned"; see CAS Code, R47(2).

[20] See A/CN.9/918, and its Addenda.

(iv) Whether the decisions of the appellate body would be binding on the disputing parties only or whether a principle of law stated in the decisions of the appellate body would constitute a precedent;

(v) The relationship of the appellate body with existing annulment mechanisms;

(vi) Specific enforcement issues in relation to the creation of an appellate body to supplement the existing ISDS regime; and

(vii) Whether the seat of the appellate body would differ from that of the arbitration of first instance; in the affirmative, what criteria would be used to determine the choice of seat.

(ii) Questions regarding alternative methods for appointing arbitrators and code of conduct

Appointment of arbitrators

25. Consultations have shown that one of the main criticisms to the existing ISDS regime relates to the appointment of arbitrators by the parties, the lack of diversity in the appointment of arbitrators and the absence of transparency in the appointment process. A further possible adjustment to the current ISDS regime could consist in setting up a new mechanism for appointing arbitrators, which would come closer to a court system where the disputing parties do not choose the adjudicators.[21]

26. Possible options for setting up a new appointment procedure system under the current ISDS regime could be envisaged. For example, whether the parties could agree to refer to a pre-established group of arbitrators under article 37 of the ICSID Convention and its Additional Facility Rules and whether article 6 of the UNCITRAL Arbitration Rules and its system of designating and appointing authorities could allow for adjustments to the appointment process are elements for further consideration.

27. A question raised during the consultations was whether a procedure whereby parties would not have the right to appoint the arbitrators would still qualify as arbitration for enforcement purposes under existing instruments. On that matter, the CIDS report highlights that the most important element in qualifying a procedure as arbitration is that recourse to the procedure is based on an agreement between the State and the investor. That consent usually encompasses the acceptance of the arbitrators' selection method provided for in the applicable instrument.[22]

Code of conduct

28. Recently concluded investment treaties have included a code of conduct for arbitrators, in order to ensure respect of high ethical and professional standards. It may be noted that such codes define procedures to follow in order to ensure that any situation that could give rise to real or perceived conflicts of interest would be fully disclosed. Such codes also include concrete steps to determine whether a conflict of interest could arise or has arisen. The Commission may wish to note that the preparation of a code of conduct is also one of the items on its agenda for consideration as possible future work (see document A/CN.9/916).

---

[21] The appointment process of arbitrators in the current system is based on party autonomy. Regarding appointment of arbitrators in relation to specific arbitration cases, the norm is party appointment coupled with a default appointing mechanism. Reports show that parties appoint arbitrators in 75 per cent of cases under the Rules of ICSID, and that the default mechanism whereby an institution will appoint the arbitrator is mainly used for the appointment of the presiding arbitrator. As reported by the Permanent Court of Arbitration at The Hague ("PCA"), a list procedure is sometimes used for the appointment of arbitrators when the UNCITRAL Arbitration Rules apply; see presentations made during the consultations at the joint CIDS – UNCITRAL meeting on 2 and 3 March 2017, available at http://www.cids.ch/events-2/past-events/634-2/.

[22] See the CIDS report, paras. 81-99, available at http://www.uncitral.org/pdf/english/commissionsessions/unc/unc-49/CIDS_Research_Paper_-_Can_the_Mauritius_Convention_serve_as_a_model.pdf.

2. Setting up of an international investment court

29. A more radical option for reform would consist in the creation of an international investment court, which would be a permanent body, composed of tenured (or semi-tenured) members tasked with resolving investment disputes. Based on past and recent developments,[23] that option for reform has also been explored during the consultation process. It would consist in the establishment of a truly multilateral dispute settlement mechanism, resulting in the creation of an international investment court (also referred to as "international tribunal for investments" or "international dispute settlement body"). Such a court would generally be established through a founding legal instrument, the statute (referred to below as the "statute"), to which States would become party.

30. Such an international investment court could either be based on a two-tier adjudicative system with a built-in appeal or without one. The presence of a built-in appeal in that scenario must not be confused with the setting up of an appellate body mentioned above in paras. 20 to 24, which addresses the creation of an appeal mechanism for awards rendered in the current ISDS regime. The setting up of an international investment court would constitute a departure from the current ISDS regime. In short, an international investment court would bring key features of domestic and international courts to the settlement of investment disputes. A multilateral process to set up such a court would aim at ensuring coherence of the reform efforts, and address the fragmentation of the current regime.

31. During the consultation process, the following views were expressed by some regarding the establishment of an international investment court:

(i) An international investment court should (a) handle disputes arising under both existing and future investment treaties; (b) provide for transparency; (c) strike a proper balance between the protection of investors and the preservation of governments' right to regulate; and (d) provide for an efficient mechanism to solve disputes; in that context, a built-in appeal mechanism was seen as more efficient taken into consideration the public policy issues usually addressed in those cases, even if it could prolong the proceedings;

(ii) An international investment court might need to include (a) mechanisms for ensuring early dismissal of unfounded claims; (b) a possibility for encouraging parties to solve their dispute through mediation; and (c) a mechanism to cater for possible counter-claims by respondents; in that context, it was mentioned that such a court should permit consolidation of cases, and allow to better manage the relationship between procedures at the domestic level

[23] The last decade has evidenced strong debate on, and repeated calls for, the creation of permanent bodies within the investment treaty regime, both in the form of an appeal mechanism and in the more radical replacement of ISDS with a permanent dispute settlement body: See generally UNCTAD (2014), *Investor-State Dispute Settlement: A Sequel, Series on Issues in IIA II*, p. 192; UNCTAD (2013), *Reform of Investor-State Dispute Settlement: In Search of a Roadmap, Special issue for the Multilateral Dialogue on Investment*, International Investment Agreement Issues Note, No. 2, p. 8; See also generally UNCTAD (2014), *Investor-State Dispute Settlement: A Sequel, Series on Issues in IIAs II*, p. 194; UNCTAD (2013), *Reform of Investor-State Dispute Settlement: In Search of a Roadmap Special issue for the Multilateral Dialogue on Investment*, International Investment Agreement Issues Note, No. 2, p. 9. The most significant of these proposals include attempts by the International Centre for Settlement of Investment Disputes (ICSID) [see ICSID Secretariat (2004*)*, *Possible Improvements of the Framework for ICSID Arbitration*, Discussion Paper, p. 5] and the Organization for Economic Co-operation and Development (OECD), as well as the programmatic language contained in a number of investment treaties [see, for instance, Canada-Korea Free Trade Agreement, 1 January 2015, (Annex 8-E)], and the pioneering innovations towards the creation of permanent investment bodies in recent investment treaties [see, for instance, the EU-Canada Comprehensive Economic and Trade Agreement (CETA) (Chapter 8 Section F); or the European Union-Vietnam Free Trade Agreement (Chapter 8.II Section 3)]; Both the EU-Canada Comprehensive Economic Trade Agreement (CETA) and the EU-Vietnam Free Trade Agreement foresee setting up a permanent multilateral mechanism and contain a reference to it.

and remedies that can be obtained through international proceedings, thereby limiting instances of concurrent proceedings.[24]

32. During the consultation process, the main elements of an international investment court were considered. They include questions regarding adjudicators, review mechanisms, enforcement, and costs of its establishment and operation.

(a) Questions regarding adjudicators

33. The consultations covered the questions of composition and structure of an international investment court with the purpose to review in more detail issues relating to the appointment of adjudicators, and ethical and nationality requirements. In the following, a distinction should be made between the way adjudicators are elected as members of an international investment court and the way those adjudicators are appointed or assigned to a panel to decide a specific dispute.

34. During the consultations, it was underlined that the selection process of adjudicators should be transparent, rigorous, susceptible of being clearly monitored by all stakeholders in order ensure legitimacy and gain public confidence. The election and appointing process ought to take account of the independence and impartiality of the adjudicators, their nationality, as well as of the possibility of investors' input or involvement in the election and appointment process (see para. 36 below). Additional features to be considered in that process include the expertise and experience of the adjudicators, as well as the geographical and gender balance. A matter highlighted during the consultations was that in order to ensure their integrity, the elected and appointed adjudicators should generally be restricted from conducting other ISDS-related activities which could raise conflict of interest issues.

35. The criteria to determine the overall number of adjudicators at the international investment court include the expected number of cases,[25] and the need to ensure proper representation of various legal systems and States Parties. Costs and infrastructure are also salient issues that will have a practical impact on the workability of an international investment court (see paras. 51-57 below).[26]

36. Questions were raised whether only States would participate in the election process or whether a consultation with business organizations, i.e. organizations representing the interest of the investors should be considered in order to avoid that only or mainly "pro-State" adjudicators are selected, in particular if the system were to be funded by States entirely. It was underlined that States were both hosting investments and home State of investors, and would therefore take account of the interests of both when electing adjudicators.

37. Regarding the assignment of disputes to adjudicators, two different models were discussed. Under a first model, a roster of adjudicators would be formulated, from which the disputing parties could choose to constitute the tribunal or panel. That approach would keep some features of party autonomy. Under the alternative model, the disputing parties would have no say in the constitution of the panel hearing their dispute.

38. The Commission will have before it a report from CIDS providing information on the matter, including examples from existing international bodies regarding the number of judges composing such bodies,[27] the various nomination and selection

---

[24] The Commission may wish to note that the question of concurrent proceedings in investment arbitration is a topic on its agenda for possible future work (see A/CN.9/915).

[25] ICSID provided the following information: there are currently around 70 new ICSID cases per year, 34 per cent of the cases being discontinued before an award is rendered and the average length of a case is 3 years.

[26] The various elements to consider regarding the term of office of an adjudicator are discussed in the CIDS report (see para. 170), available at http://www.uncitral.org/pdf/english/commissionsessions/unc/unc-49/CIDS_Research_Paper_-_Can_the_Mauritius_Convention_serve_as_a_model.pdf.

[27] For instance, the European Court of Human Rights (47 judges), the European Court of Justice (28 judges), the International Tribunal on the Law of the Sea (21 judges), the International Court of

processes,[28] the term of an adjudicator's office (and the possibility of re-election),[29] number of adjudicators on a panel[30] and methods of assigning cases.

39. The Commission may wish to consider the following matters with regard to adjudicators of an international court:

(i) The election process of adjudicators of an international investment court (whether they should be elected by States or through a different mechanism possibly involving some consultation/participation of investors); the number of adjudicators of an international investment court including where a roster is maintained;

(ii) The number of adjudicators for a panel or division; appointment methods for adjudicators to a particular panel or division (whether there should be a roster from which disputing parties can choose);

(iii) Whether there should be any nationality restrictions;

(iv) The mechanism that could be envisaged to account for increasing membership of the international investment court.

(b) Questions regarding review mechanisms

40. Consultations also covered the question of control mechanisms in respect of decisions to be made by an international investment court, in particular annulment and appeal, and the alternative options, such as preliminary rulings, *en banc* determinations and consultation mechanisms. It was generally considered that a review mechanism should aim at striking a balance between the need for an efficient dispute settlement mechanism and the protection of the correctness of the decision-making.

41. According to some views expressed during the consultations, annulment is a control mechanism typically associated with arbitration, but if an international investment court were to be set up as a permanent body, then a control mechanism akin to an appeal could be more appropriate and might more likely contribute to addressing the criticisms of the current ISDS regime.

42. Regarding a built-in appeal mechanism, questions that would require careful consideration include whether the review should be limited to review of issues of law, or also encompass the assessment of the facts, and what the standard of review should be. An appeal system could have different purposes, including ensuring correctness of the decisions, legitimacy of the system, and consistency of decisions. A number of recurrent issues under treaties could also be addressed systematically through an appeal mechanism.

43. During the consultation process, alternative means to ensure the correctness and consistency of decisions were presented, mainly: (i) preliminary rulings, (ii) "en banc" determinations, and (iii) consultations mechanisms.[31] The preliminary ruling procedure addresses inconsistency ex ante, rather than ex post, as is the case with

---

Justice (15 judges), the Iran-United States Claims Tribunal (9 arbitrators), the Appellate Body of the World Trade Organization (7 members).

[28] For instance, nomination by contracting States (International Tribunal on the Law of the Sea), or by other constituencies (International Court of Justice).

[29] For instance, the European Court of Human Rights (9 years, non-renewable), the European Court of Justice (6 years, renewable once), the International Tribunal on the Law of the Sea (9 years, renewable), the International Court of Justice (9 years, renewable once), the Appellate Body of the World Trade Organization (4 years, renewable once).

[30] For instance, chambers of 15 to 17 judges at the International Court of Justice; chambers of 7 or 17 judges at the European Court of Human Rights; chambers of 3, 5 or 15 judges at the European Court of Justice; chambers of 3 or the full tribunal of 9 arbitrators at the Iran-United States Claims Tribunal; the Appellate Body of the World Trade Organization, composed of 7 members, sits in formations of 3, but exchanges views on cases among all members and benefits from strong institutional support in the preparation of the decisions (see also para. 175 of the CIDS report).

[31] See also the CIDS report, paras. 125-137, available at http://www.uncitral.org/pdf/english/commissionsessions/unc/unc-49/CIDS_Research_Paper_-_Can_the_Mauritius_Convention_serve_as_a_model.pdf.

appeals. However, it was felt that preliminary rulings would be useful to ensure consistency, but would not be sufficient to fix correctness of the decisions. It was suggested that preliminary rulings could be combined with other review mechanisms, such as appeal or annulment. Other mechanisms include transferring a particular case from a division to the plenary tribunal for final determination. Several domestic legal systems provide for such mechanisms when issues of coherence and consistency of the law are at stake.[32]

44. The Commission may wish to note that the CIDS report contains analyses of the usual control options, annulment and built-in appeal (with relevant questions, such as the appellate tribunal's composition, the grounds of appeal and standards of review, the effect of the appellate decision, and the binding nature of the decision). It also considers the alternatives to a built-in appeal system.[33]

45. Specific questions on annulment and appeal as well as alternative systems of control include the following:

(i) What are the main purposes and usefulness of control mechanisms;

(ii) Regarding annulment, whether annulment would be better conducted through a self-contained built-in system; if so, what are the procedural aspects to be considered, including grounds for annulment;

(iii) Regarding built-in appeal, how would an appeal mechanism interact with annulment (if provided for); when and under what conditions could a request for appeal be filed; what would be the grounds for appeal (in particular, should the grounds for appeal encompass both (clear/serious/manifest) errors of law and errors in the finding and/or assessment of facts, or alternatively be restricted to such errors of law; what should the standard of review be (i.e. should there be any measure of deference or a de novo review; which decisions could be appealed); whether there should be any remand power of the appellate body to the arbitral tribunal and, if so, how should it be delineated;

(iv) Regarding alternatives, what mechanisms may be considered; which of them would best serve the purpose; how would these alternative mechanisms relate to the annulment of awards; how could they best be applied to the new regime.

(c) Questions regarding enforcement

46. Enforcement of the decisions of an international investment court is essential to ensure the effectiveness of the system. Two different situations have been considered: enforcement of a decision of an international investment court in the territory of a State that consented to its statute, and enforcement in States not party to the court's statute.

47. With regard to enforcement of decisions of an international investment court in the territory of a State that would have consented to its statute, there are two possible options. The first option would be to provide in the statute a special enforcement regime, for instance obliging a Contracting State to recognize a decision of the international investment court as binding and enforce the obligations arising therefrom as if it were a final judgment of its courts. A second option would be to provide that decisions of the international investment court are enforceable pursuant to the New York Convention, under which States would retain some control over the decision through the grounds for non-recognition and non-enforcement as provided for in article V of the Convention.[34]

48. States not party to the statute would not be bound by any enforcement regime provided therein. There is currently no uniform regime for the enforcement of judgments of international courts, and in most States, there is currently no statutory

[32] Ibid., para. 132.
[33] Ibid., paras. 105-137.
[34] CIDS report, para. 140.

basis or judicial mechanism for enforcing such judgments.[35] Therefore, enforceability of decisions by an international investment court would largely depend on whether its decisions would fall within the scope of the New York Convention.[36]

49. The CIDS report addresses in detail the question of enforcement of decisions of an international investment court.[37] It discusses whether a permanent dispute settlement body would qualify as a "permanent arbitral body" under the New York Convention, either under the "ordinary meaning" of article I(2) of the New York Convention or under an "evolutionary interpretation" of the phrase which would take account of developments in international law and arbitration since 1958. When discussing whether the process under an international investment court would qualify as "arbitration", the consensual basis of the adjudicator's jurisdiction was identified as a key criterion, which would be met with regard to the new dispute resolution process (see para. 27 above). Further, it seems established that "delocalized" awards, in particular those made under the ICSID Convention, can be enforced under the New York Convention regime when recognition/enforcement is sought in a non-ICSID Contracting State.

50. The questions that would deserve preliminary consideration regarding that matter are as follows:

(i) Whether the statute of an international investment court should include a specific enforcement regime;

(ii) How could decisions of an international investment court be enforced in States that would not be party to its statute; in particular, what would be the role of domestic courts in enforcing decisions of the international investment court;

(iii) If the international investment court would not have a specific enforcement regime, what would be required so that its decisions could be enforceable under the New York Convention; would a built-in appeal mechanism affect the enforceability of the decisions of an international investment court through the New York Convention.

(d) Questions regarding costs

51. During the consultation process, a number of considerations underpinning the financing of an international investment court or a stand-alone appellate body discussed in the CIDS report were outlined. While the features of the court and the appellate body would determine the financial resources required, it would mostly be the case that the financial resources available would determine the design and structure of the court and appellate body.

52. At the current stage, it is not possible to come up with an estimate figure due to the possible variations and uncertainty about how a new system would operate.[38] The underlying objective of the reform, the scope and legal basis of the disputes, key functions of the system, whether the system would attempt to replace existing mechanisms or co-exist, the number of disputes expected to be handled, working language and provisions of other dispute resolution services are some of those variations, which could have an impact on the budget structure of the system.

---

[35] See A/CN.9/915 and Addendum, responses to question 6.

[36] CIDS report, para. 143.

[37] CIDS report, paras. 138-164.

[38] During the consultation process, some figures relating to the International Tribunal for the Law of the Sea (ITLOS) and the World Trade Organization (WTO) Appellate Body were provided, which provided a comparison on (i) the number of judges or members; (ii) budget allocated for the remuneration of the judge or members; (iii) budget and the structure (including the number of staff members) of the Registry and the Secretariat; (iv) the governing body (Meeting of the States Parties (UNCLOS) or the Dispute Settlement Body) and the entity providing secretariat services to that body; (v) location of the premises and relevant arrangements with the host country; (vi) number of State members contributing to the budget and key contributing States. Comparison with ITLOS and the WTO Appellate Body might not be as relevant as those institutions only dealt with inter-State disputes. Presentations on the topic are available on the Internet at http://www.cids.ch/events-2/past-events/634-2/.

53. During the consultation process, two options were presented regarding the establishment of an international investment court. One possibility would be to design the system as an add-on to the current ISDS regime or under the auspices of an existing institution. Such an approach would allow the use of existing resources for the preparation and initial set-up, saving costs. This would essentially require the approval by the existing regime or institution constituents for an additional mandate and that, in any case, would require additional financial resources.

54. Another possibility is that an international investment court would be established independently from any existing mechanism or institution. In such a case, it could be conceived that States that have consented to the statute of an international investment court would generally be responsible for the financing of the court (the same applies to a permanent appeals body). Questions to be considered include how best to allocate the budget among those constituent States, noting that not all States might be joining at the initial stages of establishment and that the number of investment treaties concluded by States as well as claims brought against those States differ to a substantial degree.

55. An alternative would be that the users of the system, including claimant-investors should be charged a fee, which would contribute to the financing of the system. The fee to be charged to users could vary, from covering the minimal cost of administration to an amount which would allow the system to cover a significant portion of its budget. The latter approach was seen as potentially useful to discourage frivolous claims by investors. In that context, it was also mentioned that one of the criticisms about the current system was that the tribunal members were being selected and paid by the parties, and therefore the funding of any new system should be set up so as to guarantee the independence and impartiality of the adjudicators. During the consultation process, it was also discussed whether an international investment court would address the legal costs of the disputing parties, as such costs constitute a significant portion of the overall costs of the current ISDS regime. Some recent investment treaties include provisions on the matter.[39]

56. As to the budget structure of the system, three broad items were identified during the consultation process. The first item is the remuneration of the adjudicators, which would depend on a number of variables like the number of adjudicators, their employment status (fully-employed, part-time, on-call) and their salaries, privileges and immunities including tax benefits and pension. The second item was the financing of the registrar or secretariat. Again, the budget would vary depending on the number of staff, their employment status and their salary structure as well as the services to be provided. The third item was operating facilities, which would cover the premises, costs of maintenance, security, information and communication and others.

57. In that context, the possibility of any new body having regional offices to give better access was mentioned. In addition, the establishment of an advisory centre to support developing countries in investment disputes was mentioned. The budget for such an advisory centre, which would greatly assist developing countries, could be part of, or be separate from, the overall budget of the system.

C. Applicability of reforms

58. A third element that was considered during the consultation process is the question of the applicability of the reforms to disputes that would arise under existing investment treaties. The options for reforms envisaged in this section are the creation of a stand-alone appellate body (see paras. 20-24 above) or the creation of an international investment court (see paras. 29-57 above).

59. The questions considered are whether a multilateral mechanism, possibly modelled on that of the Mauritius Convention on Transparency, could be envisaged

[39] For instance, the CETA and EU-Viet Nam Free Trade Agreements provide that it is for the losing party to pay the costs; in comparison, in the case of permanent international tribunals for inter-State disputes, the general principle is that each party bears its own costs.

in order to extend the new dispute resolution options to disputes arising under existing investment treaties and, if so, the legal issues to be considered.

60. Precedents for modifying bilateral treaties with a multilateral instrument exist in a number of areas of public international law. For instance, the OECD study, entitled "Developing a Multilateral Instrument to Modify Bilateral Tax Treaties" (the "OECD study")[40] notes that "there have been a number of situations in which States have adopted multilateral conventions in order to introduce common international rules and standards and thereby harmonise a network of bilateral treaties, for example, in the area of extradition".[41]

61. Document A/CN.9/890 and the CIDS report provide an insight on questions to be considered if an approach similar to that of the Mauritius Convention were to be adopted for the implementation of reforms. In short, this approach would relieve States from the burden of pursuing potentially complex and long amendment procedures set forth in their numerous existing investment treaties. Indeed, a mechanism implementing reforms, modelled on the Mauritius Convention, would render the innovations directly applicable to existing investment treaties for those States that wish to embrace such innovations.

62. Furthermore, a multilateral mechanism modelled on the Mauritius Convention approach could allow a reform to begin as a plurilateral project, with the possibility for other States joining at a later stage, whenever they consider it appropriate. This, too, would strengthen the chances for success of such reform.

63. A procedural reform of ISDS could lead to an amendment/modification of the ISDS provisions in the existing investment treaties, in particular where a reform would aim at replacing existing ISDS mechanisms by a new one. In that case, attention should be given to provisions on amendment/modification of investment treaties.[42]

64. Following the Mauritius Convention approach, if such a reform project were to be implemented, the first task could consist in determining the features of the reforms to be implemented. This step would reflect what was done in respect of transparency, where the content of the new transparency provisions was first agreed in the Transparency Rules. The second, logically subsequent step would consist in determining the relevant mechanism which would accomplish the extension of the reforms to existing investment treaties.

65. Moreover, if reforms were implemented, mechanisms could be envisaged to allow for a level of flexibility regarding States' commitments. In this respect, it should be noted that the Mauritius Convention allows for a limited number of reservations and that a similar approach could be adopted with regard to the reform project.

66. Within agreed boundaries, States could modulate the degree of their involvement in the reforms by making appropriate reservations or opt-in/opt-out declarations. These possibilities would accommodate specific concerns or objectives of States.

III. Concluding remarks

67. The Commission may wish to consider whether work should be undertaken on the question of ISDS reforms. In its consideration of the matter, the Commission may wish to note that various initiatives are currently on-going in that field. ICSID has launched a consultation process on a possible reform of its rules.[43] Canada and the European Union, which have set up a new court system in a recently concluded comprehensive economic and trade agreement, have held consultations on a possible

[40] OECD (2015), *Developing a Multilateral Instrument to Modify Bilateral Tax Treaties, Action 15 — 2015 Final Report*, OECD/G20 Base Erosion and Profit Shifting Project, OECD Publishing.
[41] Ibid., p. 31, para. 14.
[42] See A/CN.9/918 and Addendum, question 5.
[43] See available information on the website of ICSID, at https://icsid.worldbank.org/en/.

reform of ISDS.[44] Organizations that have taken part in the consultation process carried out by UNCITRAL, and are active in the field include, in addition to ICSID,PCA, UNCTAD and OECD. The need for reforms has been acknowledged in various fora specialised in investment policy (such as UNCTAD, OECD and the World Bank). As underlined in certain studies, international investment dispute settlement plays an important role in attracting investments and in strengthening confidence in the investment environment. It is therefore essential to ensure that the resolution of investment disputes is carried out effectively, and that those involved in, or affected by, such disputes have confidence in the system.

68. During the consultation process, it was underlined that efforts to proceed with a reform of the current ISDS regime should be transparent, undertaken on a multilateral basis in order to avoid fragmentation, and should provide the opportunity for non-State actors to give their views. It was generally expressed that the reform process should be the result of an inclusive and collective effort that would permit input from States with different levels of economic development and legal traditions. The importance of handling communication appropriately in relation to any reform process was also underlined.

69. During the consultation process, examples of international courts set up under the auspices of the United Nations were mentioned, for example, the International Criminal Court (ICC),[45] and the International Tribunal for the Law of the Sea (ITLOS).[46]

---

[44] See the questionnaire of the EU on options for a multilateral reform of investment dispute resolution, available on the Internet at http://trade.ec.europa.eu/consultations/index.cfm?consul_id=233.

[45] In that context, it may be interesting to note the processes that lead to the creation of the International Criminal Court. In 1994, the International Law Commission (ILC) adopted a draft statute of the international criminal court and recommended that an international conference of plenipotentiaries be convened to study the draft statute and to conclude a convention on the establishment of an international criminal court. In the same year, the General Assembly established an Ad Hoc Committee open to all States Members of the United Nations or members of specialized agencies, to review the major substantive and administrative issues arising out of the draft statute prepared by ILC and, in the light of that review, to consider arrangements for the convening of an international conference of plenipotentiaries (resolution 49/53). In 1995, the Ad Hoc Committee recommended further work, including on redrafting the text of the draft statute prepared by ILC. The General Assembly established the Preparatory Committee, open to all States Members of the United Nations or members of specialized agencies or of the International Atomic Energy Agency, to discuss further the major substantive and administrative issues arising out of the draft statute prepared by ILC (resolution 50/46). The Preparatory Committee worked until 1998. In 1998 the United Nations Diplomatic Conference of Plenipotentiaries on the Establishment of an International Criminal Court was held. The Secretariat prepared the text of the draft rules of procedure of the Conference and established trust funds for the participation of the least developed countries and developing countries in the work of the Preparatory Committee and in the Conference.

[46] The United Nations Convention on the Law of the Sea, which includes the Statutes of ITLOS in Annex VI, was negotiated from 1973 to 1982, opened for signature in 1982 and entered into force in 1994 (after 60 ratifications). Judges were elected in August 1996, with the first case submitted to ITLOS in November 1997.

G. Note by the Secretariat on settlement of commercial disputes: investor-State dispute settlement framework: compilation of comments

(A/CN.9/918 and Add.1-10)

[Original: English]

Contents

I. Introduction

1. At its forty-ninth session, in 2016, the Commission considered a research study carried out by the Secretariat in conjunction with the Center for International Dispute Settlement (CIDS) of the University of Geneva and the Graduate Institute of International and Development Studies.[1] The CIDS research study, briefly outlined in document A/CN.9/890, seeks to provide a preliminary analysis of the issues that would need to be considered if a reform of the investor-State dispute settlement system were to be pursued at a multilateral level and to map the main options available in reforming investor-State dispute settlement. At that session, the Commission requested the Secretariat to review how the CIDS research study might be best built upon, if approved as a topic of future work at the forthcoming session of the Commission, in 2017, taking into consideration the views of all States and other stakeholders, including how this project might interact with other initiatives in this area and which format and processes should be used.[2]

2. Pursuant to the request of the Commission, and to facilitate the collection of information by delegations, the Secretariat circulated a questionnaire regarding practices or experience with respect to investor-State dispute settlement, together with a short background note on the CIDS research study, reproduced below in section II. The replies are reproduced below in section III in the form in which they were received.

II. Questionnaire

A. Questions regarding the investor-State dispute settlement framework

3. In September 2016, the Secretariat circulated a questionnaire aimed at collecting information on the investor-State dispute settlement framework and the dispute settlement provisions usually included in international investment agreements (IIAs), as well as on the legislative and judicial framework on recognition and enforcement of decisions of international courts as well as appeal against arbitral awards.

4. The questionnaire included a background note introducing the CIDS research paper presented to UNCITRAL at its forty-ninth session, in 2016. The Commission may wish to recall that the CIDS research paper seeks to analyse whether the United Nations Convention on Transparency in Treaty-based Investor State Arbitration (Mauritius Convention), adopted in December 2014, could provide a useful model for broader reform of the investor-State dispute settlement framework. To this end, the CIDS research paper proposes a possible roadmap that could be followed if States (including regional economic integration organizations that are party to investment treaties) were to decide to pursue a reform initiative aimed at replacing or supplementing the existing investor-State arbitration regime in international investment agreements (IIAs) with a permanent investment tribunal and/or an appeal mechanism for investor-State arbitral awards.

5. The proposed reform plan is developed on three main blocks: the design of an International Tribunal for Investments (ITI); the design of an Appeal Mechanism (AM) for investor-State arbitral awards; and the establishment of a multilateral instrument (the Opt-in Convention) to extend those new dispute resolution options to States' existing IIAs.

6. The main pillars of the possible reform initiative reviewed in the CIDS research paper are the following. First, what is envisaged would be a truly multilateral dispute settlement system, possibly resulting in the creation of one single International Tribunal for Investments potentially competent to resolve investment disputes concerning as many States as would opt into it, and/or in the creation of one single Appeal Mechanism potentially competent to serve as appellate tribunal for investor-State arbitral awards across all States' IIAs. Second, the suggested reform initiative would be directed at one discrete issue of IIA reform, i.e. the treaties' investor-State arbitration provisions. Third, the mechanism of the Opt-in Convention effectively would release States from the burden of pursuing the potentially complex and long amendment procedures set out in the existing 3,000 IIAs.

7. Against this backdrop, the CIDS research paper first analyses the main challenges that would be faced when designing the International Tribunal for Investments and the Appeal Mechanism respectively and sets out the principal architectural and institutional options available to States when setting up those dispute settlement bodies. These include the options available in relation to the determination of the law governing the proceedings before the new dispute settlement bodies, their composition and structure, the systems of control over their awards and decisions, and questions of enforcement. The research paper then addresses the legal issues to be considered in drafting the Opt-in Convention. It concludes that the challenges involved in broader reforms of the investor-State arbitration regime are substantially more complex than the introduction of a transparency standard in investment treaties. At the same time, the paper also shows that the United Nations Convention on Transparency in Treaty-based Investor State Arbitration (Mauritius Convention) could provide a useful model if States wish to pursue such broader reform initiatives at a multilateral level.

8. The questionnaire contained the following questions:

A/International Investment Agreements (IIAs)

(1) Is your country a Party to bilateral or multilateral treaties on the protection of foreign investments, including free trade agreements containing a chapter on investment protection (hereinafter "international investment agreements" or "IIAs")? If so, do your IIAs include provisions on the settlement of investor-State disputes?

(2) Do any of the IIAs concluded by your country or your country's model IIA (if available) provide for permanent courts or tribunals (as opposed to investor-State arbitration) for the resolution of investor-State disputes? If so, could you please provide us with the texts of such IIAs, or any information relating thereto, including any information on decisions rendered by such permanent courts or tribunals?

(3) Do any of the IIAs concluded by your country or your country's model IIA (if available) contain provisions whereby investor-state arbitral awards may be subject to appeal (as distinguished from annulment)? If so, could you please provide us with the texts of such IIAs, or any information relating thereto?

(4) Do any of the IIAs concluded by your country or your country's model IIA (if available) address the possible creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court? If so, could you please provide us with the texts of such IIAs, or any information relating thereto, including any information as to whether the Contracting Parties to those IIAs have undertaken any steps to implement those provisions?

(5) Do the IIAs concluded by your country contain provisions on the amendment of the IIAs? If so, could you please provide us with the text of such provisions, or any information relating thereto, including any information as to any instances in which such amendment procedures have been resorted to? Do any of the IIAs concluded by your country contain provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs?

B/Legislative and judicial framework

(6) Is there any statutory basis or judicial mechanism in your country to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)? If so, could you please provide us with any information relating thereto (to the extent it does not relate to judgments of international criminal courts and tribunals)? Have domestic courts in your country ever been requested to recognize or enforce judgments of international courts? If so, could you please provide us with any of those court decisions or information relating thereto (to the extent such decisions or information do not relate to international criminal courts and tribunals)?

(7) Does the legislation on international arbitration in your country contain any provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards?

(8) Do you have any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper?

B. Reference to the questionnaire

9. In the remainder of this note and its addenda, the above questions are referred as follows:

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

B/Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

III. Compilation of comments

1. Austria

[Original: English]
[Date: 21 December 2016]

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Austria has so far concluded more than 60 bilateral investment treaties (BITs). Most of Austria's BITs provide for investor-state arbitration as a means of dispute settlement. Moreover, Austria is party or signatory to more than 70 treaties with investment provisions.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

So far, the dispute settlement clauses contained in Austria's IIAs follow the classic model of ad-hoc investor-State arbitration. However, as Austria is a member of the European Union (EU) and since the EU has gained explicit power to conclude IIAs to the extent that they concern foreign direct investment within the Common Commercial Policy, Austria will be bound by EU agreements, such as the EU-Canada Comprehensive Economic and Trade Agreement (CETA) or the EU-Vietnam Free Trade Agreement (FTA), in the foreseeable future. The texts of these agreements provide for a permanent "investment court system" but have not yet entered into force and are thus yet not legally binding.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

No appeal mechanisms have been included in Austria's IIAs so far. The investment court system in CETA and the EU-Vietnam FTA, however, will provide for such a possibility.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

This possibility has not been taken into consideration in Austria' s IIAs. In the EU context, the (future) parties to CETA and to the EU-Vietnam FTA agree to work towards the establishment of a multilateral investment tribunal and appellate mechanism.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Austria' s IIAs follow the rules of general public international law, i.e., of the Vienna Convention on the Law of Treaties, in this regard and do not provide for a special regime.

B/Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

There is no general applicable statutory basis of judicial mechanism in this respect. Whereas foreign arbitral awards can be declared enforceable in a declaratory procedure by a national court, no such procedural instrument exists for a decision or a judgment of an international court. Judgments of the European Court of Human Rights (ECtHR), e.g., are not directly applicable and enforceable under domestic law, and national statutes or decisions not in conformity with the European Convention on Human Rights (ECHR) are not directly set aside by them. Control is exercised politically and collectively, as the execution of the Court' s judgments is supervised by the Committee of Ministers of the Council of Europe. However, compensation based on judgments in accordance with Article 41 ECHR is always paid punctually and fully.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

If the question deals with possible appeals "to" state courts or arbitral tribunals, the answer would be no. However, Austria would like to add the following: Section 610 of the Austrian Code of Civil Procedure (ZPO) provides for a request by any party to the arbitral tribunal to correct or supplement the award in certain aspects. The provision refers to clerical errors, calculation errors, etc. in the award, to lack of reasons of the decision and to incompleteness of the award. It does not provide for an appeal on the merits. It is up to the parties to determine the number of instances of the proceedings in their arbitration agreement. Austrian law does not provide for any standard in this regard and simply respects the decision of the parties. Section 610 ZPO which provides for the possibility of certain challenges to an arbitral award exclusively refers to annulment and is therefore no provision within the meaning of this question.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

The EU and its Member States have been engaged over the past years in a reform process of their investment policy and in particular of investor-State dispute settlement procedure. As indicated above, one important element of that reform is the creation of a multilateral mechanism for the settlement of investment disputes which would seek to address some of the concerns which have arisen regarding the existing system. Since discussions on the creation and on possible features of such a mechanism are at a very early stage, many questions are still open. Against this background, the options and aspects mentioned in the CIDS research paper constitute useful contributions to the current discussion.

To a certain extent, the different aspects discussed in the CIDS research paper are inter-linked, and adopting a particular position on the options presented for one aspect will have implications on the policy choices available for other aspects. It is therefore difficult and too early to express a preference for any of the detailed options presented in the paper before further discussions about the main goals and priorities of the overall reform project have taken place.

2. Finland

[Original: English]
[Date: 22 December 2016]

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Finland is a Party to multilateral, such as the Energy Charter Treaty, and bilateral treaties on the protection of foreign investments, including European Union free trade agreements containing a chapter or provisions on investment protection (referred together as International Investment Agreements — IIAs). The IIAs include provisions on the settlement of investor-State disputes.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

The Comprehensive Trade and Economic Agreement between the European Union (EU) and its Member States and Canada (CETA) signed on 30 October 2016 and the Free Trade Agreement between the EU and its Member States and Vietnam, not yet signed, include an investment court system, providing for a renewed system for the resolution of investor-State disputes. These two IIAs are not yet in force.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs - Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

Yes, please refer to question 2 above.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

The IIAs concluded by Finland contain rather standard provisions regarding amendment of the IIAs. Article 30.2 of the above mentioned CETA also contains provisions on the amendment of the agreement. Amendments are subject to domestic ratification procedures in accordance with national constitutions of each Contracting Party.

B/Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

According to legislation on rules concerning the administration of justice relating to the Finnish membership of the EU (1554/1994), a judgment or a decision of a court or another authority of the EU, which is enforceable according to Article 18(3) or Article 280 of the Treaty on the Functioning of the European Union, or Article 299 of the European Atomic Energy Community Treaty, or according to certain separately mentioned EU-regulations, is to be enforced in Finland in the same way as a Finnish court judgment that is no longer subject to ordinary forms of appeal. The Ministry of Justice issues an order for enforcement on application. There is no information available on national court

cases on recognition or enforcement of judgments given by international courts. The existence of such cases is improbable.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

No.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

The CIDS research paper sets out a number of interesting options for reforming the existing investor-State dispute settlement system. To a certain extent, the different aspects discussed in the CIDS research paper are inter-linked and adopting a particular position on the options presented for one aspect will have implications on the policy choices available for other aspects. It is therefore rather difficult to express a preference for any of the detailed options presented in the paper before further discussions about the main goals and priorities of the overall reform project have taken place.

The EU and its Member States have already been engaged in a process of reform of investment policy and of investor-State dispute settlement over the past years. One element of the reform is also the work towards creation of a multilateral mechanism for the settlement of investment disputes which would seek to address some of the concerns which have arisen as regards the existing system. The EU and its Member States are currently engaged in exploratory discussions and reflections on the main goals and priorities of the creation of such a mechanism, both internally within the EU and with non-EU countries and we welcome the opportunity to pursue further discussions.

3. Netherlands

[Original: English]
[Date: 21 December 2016]

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Yes.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

Netherlands is member of the EU and creating a multilateral investment court has been included in the EU's new investment approach, presented in September 2016. The EU recently concluded the EU-Vietnam FTA and the Comprehensive Economic and Trade Agreement (CETA) with Canada in which a reference to a permanent court is found.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

No, not in particular, but the Dutch IIA's are subject to the ICSID Convention and UNCITRAL Arbitration Rules (i.e. New York Convention). If one of these treaties would be amended, such an appeal mechanism could be incorporated.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

The current treaties do not contain such provisions. However, this might change when the new Model Bilateral Investment Treaty (BIT) will be ready.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Provisions for amending are provided in our Model BIT in the last paragraph. As of 2014, EU Regulation 1219/2012 is in force, which means that amending or changing a BIT should be notified and authorized by the European Commission.

B/Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

The international court of which a judgement has been challenged before a Dutch Court is the Permanent Court of Arbitration (following the New York Convention). Its judgement is an arbitral award and is thus treated as such. There is a provision on the recognition and enforcement of foreign judgements. A distinction is made between foreign judgements for which an agreement on recognition and enforcement exists between the Netherlands and the State of origin of the judgement and other foreign judgements for which no such agreement exists. There is no provision for the recognition and enforcement of judgements of international courts.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

The Dutch arbitration bill contains provisions on appeal, only applicable if the parties gave their written consent (prior, and mutually agreed via a contract).

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

For reference, please see the submission of the European Commission.

4. United Kingdom of Great Britain and Northern Ireland

[Original: English]
[Date: 22 December 2016]

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

The United Kingdom has Bilateral Investment Treaties (BITs) in force with over 90 countries. Since the Treaty of Lisbon entered into force, the EU has held competence to negotiate investment treaties on behalf of Member States and since then the United Kingdom has not negotiated any new BITs. The UK's BITs include provisions for the settlement of investor-State disputes under the international arbitration investor-state dispute settlement (ISDS) model.

The UK is currently a Party to the Energy Charter Treaty. This treaty contains provisions on the protection of foreign investments and on the settlement of investor-State disputes.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

The existing 90+ UK BITs contain provisions for investor-State arbitration and therefore do not provide for a system of permanent courts or tribunals. Since the EU has held competence for the negotiation of investment treaties on behalf of Member States the United Kingdom has not negotiated any new BITs.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

BITs agreed under the existing UK model treaty do not contain provisions whereby investor-state arbitral awards may be subject to appeal.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

BITs agreed under the existing UK model treaty do not contain provisions that address the possible creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards or (b) a bilateral or multilateral permanent investment tribunal or court.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

BITs agreed under the existing UK model treaty do not contain provisions on the amendment of the IIAs.

B/Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

The UK has a statutory provision for recognizing and enforcing judgments of the CJEU, e.g. the European Communities (Enforcement of Community Judgments) Order 1972 (SI 1972/1590). Domestic courts in the UK may be requested to recognize or enforce judgments of other international courts, however, there is no statutory basis or judicial mechanism under which this takes place.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

The Arbitration Act 1996, the Arbitration (Scotland) Act 2010 and Arbitration (International Investment Disputes) Act 1966 provide for the enforcement of arbitral awards in the United Kingdom under the New York Convention or the ICSID Convention. The powers of review are generally limited as provided for in those treaties.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

The UK supports the inclusion of investor-state dispute settlement mechanisms in IIAs to provide investors with an independent means of redress in the event of a dispute with a host State. We support measures to achieve fair outcomes of claims, high ethical standards for arbitrators and transparency of tribunal hearings.

The UK believes that further analysis is needed in terms of the evidence base as well as procedural hurdles before considering the details of how any multilateral mechanism could be established and resourced. We would not seek to prejudice any policy position we would wish to adopt in due course regarding such a court, appeal mechanisms or implications towards existing IIAs.

5. European Union

[Original: English]
[Date: 22 December 2016]

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

The EU is currently a Party to the Energy Charter Treaty. This treaty contains provisions on the protection of foreign investments and on the settlement of investor-State disputes.

The EU has also concluded the negotiations of two other agreements containing provisions on investment protection and on the settlement of investor-State disputes which are not yet in force. These agreements are the EU-Canada Comprehensive Trade and Economic Agreement (CETA) and the EU-Vietnam Free Trade Agreement.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

The EU-Canada Comprehensive Trade and Economic Agreement (CETA) signed on 30 October 2016 establishes a Tribunal composed of fifteen Members that will decide claims submitted with regard to alleged breaches of the investment protection provisions of the agreement (Article 8.27 CETA). The text of the agreement can be found here: http://data.consilium.europa.eu/doc/document/ST-10973-2016-INIT/en/pdf.

The text of the EU-Vietnam Free Trade Agreement (currently subject to legal revision) establishes a Tribunal composed of nine Members that will decide claims submitted with regard to alleged breaches of the investment protection provisions of the agreement (Chapter 8 on Trade in Services, Investment and E-Commerce, Chapter II (Investment), Section 3 (Resolution of Investment Disputes), Sub-Section 4 Investment Tribunal System), Article 12 — the numbering of the Chapters, Sections and Articles is currently subject to legal revision). The text of the agreement can be found here: http://trade.ec.europa.eu/doclib/docs/2016/february/tradoc_154210.pdf.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

The EU-Canada Comprehensive Trade and Economic Agreement as well as the EU-Vietnam Free Trade Agreement establish Appeal Tribunals to review awards rendered by the Tribunals established under those agreements (Article 8.28 CETA, Article 13 EU-Vietnam FTA).

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

In both the EU-Canada Comprehensive Trade and Economic Agreement and the EU-Vietnam Free Trade Agreement, the Contracting Parties have committed to work towards the creation of a multilateral investment tribunal and/or appellate mechanism (Article 8.29 CETA, Article 15 EU-Vietnam FTA).

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Article 42 of the Energy Charter Treaty contains provisions on the amendment of the agreement. The text of these provisions can be found here: http://www.energycharter.org/fileadmin/DocumentsMedia/Legal/ECTC-en.pdf.

Article 30.2 of the EU-Canada Comprehensive Trade and Economic Agreement contains provisions on the amendment of the agreement and of its annexes. The

text of these provisions can be found here: http://data.consilium.europa.eu/doc/document/ST-10973-2016-INIT/en/pdf.

Article X.6 of Chapter 17 of the EU-Vietnam Free Trade Agreement contains provisions on the amendment of the agreement and of its annexes. The text of these provisions can be found here: http://trade.ec.europa.eu/doclib/docs/2016/february/tradoc_154210.pdf.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

The CIDS research paper sets out a number of interesting options for reforming the existing investor-State dispute settlement system. The main options range from creating an International Tribunal for Investments to the creation of an Appeal Mechanisms for reviewing investor-state arbitral awards. Different alternatives for reviewing decisions or awards are discussed, as are different options with regard to the composition of the Tribunal, the nomination of Tribunal Members, the enforcement of decisions, or the applicable law. The paper also examines different ways of applying any such new mechanism to existing investment treaties in the form of an opt-in convention modelled on the Mauritius Convention.

To a certain extent, the different aspects discussed in the CIDS research paper are inter-linked and adopting a particular position on the options presented for one aspect will have implications on the policy choices available for other aspects. It is therefore difficult to express a preference for any of the detailed options presented in the paper before further discussions about the main goals and priorities of the overall reform project have taken place.

The EU and its Member States have already been engaged in a process of reform of investment policy and in particular of investor-State dispute settlement over the past years. One important element of that reform is the creation of a multilateral mechanism for the settlement of investment disputes which would seek to address some of the concerns which have arisen as regards the existing system. The EU and its Member States are currently engaged in exploratory discussions and reflections on the main goals and priorities of the creation of such a mechanism, both EU-internally and with non-EU countries and we welcome the opportunity to pursue further discussions.

(A/CN.9/918/Add.1) (Original: English/French)

Note by the Secretariat on settlement of commercial disputes: investor-State dispute settlement framework: compilation of comments

ADDENDUM

Contents

III. Compilation of comments

6. China

[Original: English]
[Date: 29 December 2016]

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Yes.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs — Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

No.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

Yes. Article 9.23 of Chapter 9 (Investment) of the Free Trade Agreement between the Government of the People's Republic of China and the Government of Australia (signed in June 2015) provides that: "Within three years after the date of entry into force of this Agreement, the Parties shall commence negotiations with a view to establishing an appellate mechanism to review awards rendered under Article 9.22 in arbitrations commenced after any such appellate mechanism is established. Any such appellate mechanism would hear appeals on questions of law."

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

A few of IIAs concluded by China contain such provisions. For example, Article 27.4 of the Agreement Among the Government of the People's Republic of China, the Government of Japan and the Government of the Republic of Korea for the Promotion, Facilitation and Protection of Investment (signed in May 2012) provides that: "The Contracting Parties shall, at the request of any Contracting Party, enter into

negotiations through appropriate channels for the purpose of amending this Agreement. This Agreement may be amended by agreement among the Contracting Parties. Such amendment shall be accepted by the Contracting Parties in accordance with their respective legal procedures, and shall enter into force on the date to be agreed upon by the Contracting Parties. Amendments shall not affect the rights and obligations of the Contracting Parties provided for under this Agreement until the amendments enter into force."

Do any of the IIAs concluded by your country contain provisions safeguarding investor's rights or providing for transitional arrangements in case of modifications or amendments of the IIAs?

Yes. For example, Article 27.4 of the Agreement Among the Government of the People's Republic of China, the Government of Japan and the Government of the Republic of Korea for the Promotion, Facilitation and Protection of Investment provides that: "Amendments shall not affect the rights and obligations of the Contracting Parties provided for under this Agreement until the amendments enter into force."

B/Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

No. There is no known case of such request.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

No.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

China notices the growing calls to reform the investor-State arbitration regime, and appreciates the efforts made by CIDS in providing some policy options. We are still making in-depth study on those options and our point of departure is that the investor-State arbitration regime shall be an effective and efficient one striking the proper balance between investor protection and government's right to regulate. This is one of the guiding principles G20 adopted for global investment policymaking this July, and China welcomes and also keeps an open mind on any option that is conducive to the above-mentioned goal.

Without prejudice to China's position on the possible options discussed in the paper, we suggest starting from conducting fact-based analysis with a view to seeking consensus on certain overarching issues before launching any discussion on reform to the current regime. First, what are the main shortcomings of the current ISDS system? Second, what are the underlying causes of the problems? Third, based on the first two steps, we should carefully examine the pro and cons of any proposal in a pragmatic but cautious manner in order to find the most appropriate solution to address such problems without bringing any new systemic challenges. In this process, we should pay special attentions to a few important issues, such as how to ensure the future mechanism to be flexible enough and adapted to the nature of investor-to-state dispute, how to reconcile the future mechanism with the existing system and how to ensure enforcement of the award in the future mechanism.

In addition, China also believes that the procedural shortcomings should not undertake the entire responsibility of the criticism on the current system, and we should take concrete steps to have clearer and more precise substantive obligations in the treaties so that meaningful guidance could be given to the tribunal.

7. Greece

[Original: English]
[Date: 28 December 2016]

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Greece is a party to 44 Bilateral Investment Treaties (BITs). These BITs include provisions on the settlement of investor-States disputes.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs — Question 3: Provisions on appeal to investor-State arbitral awards in IIAs — Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

No.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

The Bilateral Investment Treaties to which Greece is a party do not contain specific provisions on amendment. They contain provisions on entry into force, duration and termination (with a sunset clause).

The EU Regulation 1219/2012, establishing transitional arrangements for bilateral investment agreements between Member States and third countries (Chapter IIII: Authorization to Amend or Conclude Bilateral Investment Agreements) include provisions concerning the authorization of a Member State to enter into negotiations with a third country to amend an existing bilateral investment agreement.

B/Legislative and judicial framework

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

The EU and its Member States have already been engaged in a process of reform of investment policy and in particular of investor-State dispute settlement over the past years. One important element of that reform is the creation of a multilateral mechanism for the settlement of investment disputes which would seek to address some of the concerns which have arisen as regards the existing system. The EU and its Member States are currently engaged in exploratory discussions and reflections on the main goals and priorities of the creation of such a mechanism, both EU-internally and with non-EU countries and we welcome the opportunity to pursue further discussions. In this context we believe that the CIDS research paper sets out a number of interesting options to explore for reforming the existing investor-State dispute settlement system.

8. Japan

[Original: English]
[Date: 29 December 2016]

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Japan is a contracting party to a number of bilateral and multilateral treaties, and most of them include provisions on the settlement of investor-State disputes.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs — Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

No.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

(a) The Trans Pacific Partnership (TPP) Agreement (not concluded by Japan as of December 2016) addresses the possible creation in the future of an appellate mechanism for investor-State arbitral awards as follows. "Chapter 9, Investment, Article 9.23: Conduct of the Arbitration — In the event that an appellate mechanism for reviewing awards rendered by investor-State dispute settlement tribunals is developed in the future under other institutional arrangements, the Parties shall consider whether awards rendered under Article 9.29 (Awards) should be subject to that appellate mechanism. The Parties shall strive to ensure that any such appellate mechanism they consider adopting provides for transparency of proceedings similar to the transparency provisions established in Article 9.24 (Transparency of Arbitral Proceedings)."

(b) No.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Some IIAs concluded by Japan contain provisions on the amendments. An example of such provisions is as follows. "Agreement between Japan and the Republic of Colombia for the Liberalization, Promotion and Protection of Investment, Article 44 Amendments — "1. The Contracting Parties may agree on any amendment to this Agreement. 2. Any amendment shall be approved by the Contracting Parties in accordance with their respective internal procedures and shall enter into force on such date as the Contracting Parties may agree, and shall thereafter constitute an integral part of this Agreement."

B/Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

We do not have any legislation which explicitly and specifically provides the procedure to recognize or enforce judgments of international courts. We are not aware of any case in which our domestic courts have been requested to recognize or enforce judgments of international courts.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

No.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

Japan considers it premature to make official comments on this paper, because this issue is not formally on the table for discussion in UNCITRAL yet and we should avoid make any prejudice.

9. Mauritius

[Original: English]
[Date: 30 December 2016]

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Mauritius is a party to several bilateral treaties on the protection of foreign investments and these agreements include provisions on the settlement of investor-State disputes.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

IIAs concluded by Mauritius do not provide for permanent courts or tribunals for resolution of investor-State disputes.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

Under IIAs concluded by Mauritius, an award made by an arbitral tribunal is final and binding.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

IIAs concluded by Mauritius do not provide for the possible creation in future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; or (b) a bilateral or multilateral permanent investment tribunal or court.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

IIAs concluded by Mauritius contain provisions for amendments. IIAs are typically incorporated into the laws of Mauritius by regulations made under section 28A of the Investment Promotion Act. Based on existing regulations, the amendment procedures have not so far been resorted to. IIAs concluded by Mauritius do not contain provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of IIAs. A typical amendment clause provides as follows: "This Agreement may be amended by agreement among both Contracting Parties. Such amendment shall enter into force on the date to be agreed upon by the Contracting Parties."

B/Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

To the extent that "international courts" refer to courts established by international treaties or conventions, there is no statutory or judicial mechanism whereby judgments of international courts except the International Criminal Court can be recognized or enforced in Mauritius. However, judgments from foreign courts can be recognized and enforced under the Foreign Judgments (Reciprocal Enforcement) Act.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Under the International Arbitration Act, a company holding a Global Business Licence (a non-domestic company) may include an arbitration clause in its constitution to the effect that any dispute arising out of the constitution of the company shall be referred to arbitration under the Act. In such a case, any party to the arbitration proceedings may appeal to the Supreme Court on any question of Mauritius law arising out of an award with the leave of the Court.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

We do not have any comments at this stage but would welcome any follow-up questions.

10. Poland

[Original: English]
[Date: 28 December 2016]

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

In the area of the protection of foreign investments Poland is a Party to ca. 60 bilateral treaties and to one multilateral treaty (the Energy Charter Treaty). These treaties contain provisions on investments protection as well as on the dispute settlement mechanism (negotiations during the cooling-off period and possibility to settle the dispute when the arbitration proceeding has already been initiated). There is only one exception — an agreement which regulates the area of commerce and navigation. Moreover, on 30 October 2016, Poland signed the EU-Canada Comprehensive Trade and Economic Agreement (CETA). This treaty also covers investment protection and ISDS.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

None of the IIAs treaties in force concluded by Poland provide for permanent courts or tribunals (as opposed to ISDS) for the resolution of investor-States disputes. However, such permanent court is envisaged in EU-Canada Comprehensive Trade and Economic Agreement (CETA — not in force yet). CETA establishes a Tribunal composed of fifteen Members that will decide claims submitted with regard to alleged breaches of the investment protection provisions of the agreement (Article 8.27 CETA). It is very hard to assess how this kind of permanent court is going to function. It is even too early to present any details of this court, because it does not exist.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

None of the IIAs treaties in force concluded by Poland contain provisions whereby investor-State arbitral awards may be subject to appeal (as distinguished from annulment). CETA (not in force yet) establishes Appeal Tribunals to review awards rendered by the Tribunal established under those agreements (Article 8.28 CETA).

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

None of the IIAs treaties in force concluded by Poland addresses the possible creation on the future of a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/nor a bilateral or multilateral permanent investment tribunal or court. In CETA (not in force yet) the Contracting Parties have committed to work towards the creation of a multilateral investment tribunal and/or appellate mechanism (Article 8.29 CETA).

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Some of the IIAs treaties in force concluded by Poland contain provisions on their amendment or supplement by the mutual agreement of the Contracting Parties. Article 42 of the Energy Charter Treaty contains provisions on the amendment of the agreement. CETA (Art. 30.2) contains provisions on the amendment of the agreement and of its annexes. Moreover, we would like to indicate that final provisions of IIAs treaties

concluded by Poland contain 'sunset clause', which allows protection of investment for some years after dissolving of an agreement.

B/Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Polish code for civil proceedings (art. 1145) provides for the recognition of the judicial decisions of foreign States. Since 2008 the *de plano* recognition principle is applied. The recognition may be refused only on grounds specified under art. 1146. Art. 1149(1) provides legal basis for the recognition of decisions of other court (or tribunal) of foreign State if taken in civil matter. However, the above statutory framework does not provide ground for the recognition of supra- or international tribunals. Statutory basis for the recognition and enforcement of the international arbitration tribunals awards is in art. 1215 of the Code. The other one is in the New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards whereof Poland is a signatory.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Arbitral awards, be they foreign or national, are subject to same legal requirements. In order to become equivalent to court decision (and to enjoy *res judicata*) they need to be recognized by common court (art. 1212) or the common court has to declare their enforceability (art. 1214). With regard to foreign arbitral award, the hearing is mandatory when the recognition or declaration of enforcement is sought.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

Options presented in the CIDS research paper have different aspects which are closely inter-linked. Hence it is difficult to indicate a preference for any of them before further discussion about the main goals and priorities.

Reforming investment arbitration and in particular investor-State dispute settlement is recently a subject of many discussions — it is visible especially for EU and its Member States (i.a. during the work on CETA and TTIP). Within the EU still persists discussion on the main goals and priorities in this matter (both EU-internally and with non-EU). Therefore Poland is not able to present any position in regard of the described ISDS mechanisms yet. Consequently, the mechanism elaborated by UNCITRAL can be accepted only as a non-binding guideline.

11. Romania

[Original: English]
[Date: 30 December 2016]

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Romania's investment agreements, either bilateral or multilateral, include provisions on the settlement of disputes in the form of investor-State arbitration.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

Romania's investment agreements do not provide for permanent courts or tribunals for the settlement of disputes.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

Romania's investment agreements do not contain any provisions whereby investor-state arbitral awards are subject to appeal.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

Romania's new model investment agreement, on the basis of which the new Romania-Senegal BIT is currently being negotiated, does provide for the possibility of creating in the future a multilateral permanent investment tribunal or court.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Currently, 6 investment agreements concluded by Romania have provisions on amendment. Of those, only the BIT between Romania and Malaysia has been amended according to those provisions. 29 Agreements were amended although they did not contain a specific amendment clause.

All amendment Protocols were concluded as part of Romania's obligation as an EU Member State to bring its bilateral investment treaties in line with EU legislation. The most commonly encountered provision is the Regional Organization Integration Clause (REIO for short).

Examples of amendment clauses:

Romania-Bosnia and Herzegovina BIT: "This Agreement may be amended by written Agreement between the Contracting Parties. Any amendment shall enter into force under the same procedure required for the entry into force of the present Agreement."

Romania-Demark BIT: "At the entry into force of this Agreement or at any time thereafter the provisions of this Agreement may be amended in such manner as may be agreed between the Contracting Parties. Such amendments shall enter into force when the Contracting Parties have notified each other that the constitutional requirement for the entry into force have been fulfilled"

B/Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Romania does not have any specific statutory basis or mechanism for the recognition and enforcement of the judgments of international courts per se (as opposed to the recognition of judgments of foreign courts).

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Romania's legislation on international arbitration (part IV of the 2009 Civil Code, art 541-1132) does not contain any provisions on appeal, either by State courts or arbitral tribunals, against arbitral awards.

12. Tunisia

[Original: French]
[Date: 28 December 2016]

A/International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Tunisia has concluded an extensive network of bilateral and multilateral treaties on foreign investment protection. Tunisia has concluded almost 63 bilateral investment treaties (BITs), the most recent of which was concluded with Switzerland in 2012 and entered into force in July 2014. The majority of these BITs have entered into force.

Despite efforts by the competent Tunisian authorities to establish a model Tunisian BIT, no such model treaty has yet been established.

Tunisia has also concluded a series of multilateral treaties and is in the process of negotiating an important Deep and Comprehensive Free Trade Agreement (DCFTA) with the European Union which will contain a chapter on investment.

Some of the multilateral treaties which have already been concluded relate exclusively to investment protection and include the following: the 1993 Convention on the encouragement and protection of investments among the countries of the Arab Maghreb Union (AMU); the Agreement on Promotion, Protection and Guarantee of Investments among Member States of the Organization of the Islamic Conference (OIC), which was signed by Tunisia in 1981 and entered into force in 1986; the League of Arab States (LAS) Unified Agreement for the Investment of Arab Capital in the Arab States, concluded in 1980, as amended in 2013.

The majority of these IIAs contain provisions for the settlement of disputes between a host State and foreign investors which refer to international arbitration institutions, including the International Centre for Settlement of Investment Disputes (ICSID) (see BITs concluded with, for example, Turkey, Sweden, the United States of America, France, Italy and Switzerland).

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

Arbitration by permanent courts or tribunals (as opposed to arbitration between investors and States) is provided for under some of the treaties concluded by Tunisia with other Arab States. Article 19 of the Convention on the encouragement and protection of investments among the countries of the Arab Maghreb Union and articles 25 and 28 et seq. of the LAS Unified Agreement for the Investment of Arab Capital in the Arab States refer to the Arab Court of Investment with regard to disputes between an investor and the host State.

Article 29 of the LAS Unified Agreement for the Investment of Arab Capital in the Arab States stipulates: "1 — The Court shall have jurisdiction to settle disputes brought before it by either party to an investment which relate to or arise from application of the provisions of the Agreement. 2 — The disputes must have occurred: (a) Between any State Party and another State Party or between a State Party and the public institutions and organizations of the other parties or between the public institutions and organizations of more than one State Party; (b) Between the persons referred to in paragraph 1 and Arab investors; (c) Between the persons referred to in paragraphs 1 and 2 and the authorities providing investment guarantees in accordance with this Agreement."

Only a small number of Tunisian BITs provide for recourse to a permanent court. Among the few BITs to contain this provision is the BIT concluded with Kuwait in 2004, in which article 10 provides for recourse to domestic courts of the host State, international arbitration by ICSID under UNCITRAL rules and also the means of resolution provided for in the LAS Unified Agreement for the Investment of Arab Capital in the Arab States concluded in 1980, namely the Arab Investment Court. (See also article 8 of the BIT concluded with Sudan in 2003 and article 5 of the BIT concluded with the Syrian Arab Republic in 2001.)

BITs concluded with Arab States are only available in Arabic.

The first judgment of the Arab Investment Court (which has so far passed judgment on no more than a dozen cases) was in the 2001 case of Adel Bin Saleh Almaddah and Tanmiah for Management and Marketing Consultancy v. the Tunisian State and the Organizing Committee of the Mediterranean Games in Tunis, Arab Investment Court, Case No. 1/1 Q, judgment of 12 October 2004. The court based its jurisdiction in the case on article 29 of the Unified Agreement for the Investment of Arab Capital in the Arab States and on the contract between the parties, but in its ruling rejected the claims of the plaintiff.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

There are no provisions for an appeal against arbitral awards or against the judgment of a permanent court charged with settling disputes between an investor and a host

State. For instance, article 34 of the LAS Unified Agreement for the Investment of Arab Capital in the Arab States stipulates:

> "1. Judgements shall have binding force only with regard to the parties concerned and the dispute on which a decision is given. 2. Judgements shall be final and not subject to appeal. Where there is a dispute as to the meaning or import of a judgement, the Court shall provide its interpretation at the request of any of the parties concerned. 3. A judgement delivered by the Court shall be enforceable in the States Parties, where they shall be immediately enforceable in the same manner as a final enforceable judgement delivered by their own competent courts."

For the Arab Investment Court, this involves a review procedure. This is in accordance with article 35 of the LAS Unified Agreement for the Investment of Arab Capital in the Arab States: "The Court may admit an application for a review of a judgement where the judgement gravely exceeds an essential principle of the Agreement or litigation procedures or where a decisive fact in the case is revealed which was not known at the time of judgement either by the Court or by the party requesting the review. The ignorance of such fact by the said party must not, however, be attributable to his own negligence. Applications must be submitted within six months of the new facts being uncovered and within five years of the delivery of judgement. Review proceedings shall be instituted by a decision of the Court which explicitly confirms the existence of the new fact, sets out the aspects justifying a review and declares that the application is accordingly admissible.

The Court may suspend execution of a judgement which it delivered before deciding to institute review proceedings."

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

There are currently no IIAs concluded by Tunisia which provide for:

(a) A bilateral or multilateral appeal mechanism for arbitral awards between investors and States;

(b) The answer to this question is given in paragraph (2).

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Some IIAs concluded by Tunisia establish provisions for their amendment.

Article 44 of the LAS Unified Agreement for the Investment of Arab Capital in the Arab States stipulates: "This Agreement may not be amended any earlier than five years from the date of its entry into force. Amendments to this Agreement shall be made with the consent of two thirds of the States Parties and shall enter into force for the ratifying States three months after instruments ratifying the amendments have been deposited by at least five States."

Article 10 of the BIT concluded between Tunisia and Turkey in 1991 also provides that "3 — This agreement may be amended by written agreement between the Parties. Any amendment shall enter into force when each Party has notified the other that it has completed all internal requirements for entry into force of such amendment."

See also the BIT between Tunisia and Denmark concluded in 1997 (article 13), the BIT between Tunisia and Guinea concluded in 1990 (article 12), the BIT between Tunisia and Mali concluded in 1986 (article 12), the BIT between Tunisia and Niger concluded in 1992 (article 19), the BIT between Tunisia and Togo concluded in 1987 (article 12) and the BIT concluded between Tunisia and Senegal concluded in 1984 (article 12).

These agreements also establish provisions for the protection of investors' rights in the event of the termination of an agreement. Most treaties will include survival

clauses ensuring the continuation of the agreement for investments completed before its expiry date (no details are given for the case of modification or amendment).

See, inter alia, article 43 of the LAS Unified Agreement for the Investment of Arab Capital in the Arab States, article 10 of the BIT between Egypt and Tunisia concluded in 1989, article 13 of the BIT between Tunisia and China concluded in 2004, article 12 of the BIT between Tunisia and France concluded in 1997 and article 13 of the BIT between Tunisia and Switzerland concluded in 2012.

B/Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Tunisia has a legal framework and a judicial mechanism for recognizing and enforcing the judgments of international courts.

Firstly, it is important to note that, in accordance with article 34 of the LAS Unified Agreement for the Investment of Arab Capital in the Arab States, "3 — A judgement delivered by the Court shall be enforceable in the States Parties, where they shall be immediately enforceable in the same manner as a final enforceable judgement delivered by their own competent courts".

There is no specific judicial mechanism in Tunisia for recognizing and enforcing the judgments of international courts. There is a common law provision that may be applied in such cases: article 11 et seq. of the Code of Private International Law (promulgated by Act No. 98-97 of 27 November 1998).

To our knowledge, no judgment of the Arab Investment Court has required enforcement proceedings in Tunisia.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

The Arbitration Code promulgated by Act No. 93-42 of 26 April 1993 only provides for an appeal procedure for domestic arbitral awards when the parties have provided for this expressly in the arbitration agreement, and excludes awards of arbitrators acting as mediators ("amiables compositeurs") (see article 39).

Only annulment is provided for an international arbitral award (article 78).

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

Regarding the possibilities of reforming the arbitration regime for disputes between investors and States proposed in the report of the Geneva Center for International Dispute Settlement (CIDS), establishing a permanent international tribunal for investor-State dispute settlement may be an effective means of addressing the lack of consistency among arbitral awards and decisions. This lack of consistency is also attributable to the fragmentation of the substantive regime for protecting international investment. It is therefore important to harmonize the international framework by establishing a balanced international agreement.

Issues which may arise when establishing a permanent mechanism for dispute settlement are whether a sufficient number of States will accede to this new mechanism and the nature of decisions which would be made by this court. Should these decisions be subject to exequatur procedure by the domestic courts of the executing State, which will enable domestic courts to have a level of control, or merely a simplified recognition procedure, as is the case in ICSID arbitral awards?

Another issue which could arise is the composition of this international court. How should judges or arbitrators be chosen and what criteria should be used?

(A/CN.9/918/Add.2) (Original: English/Spanish)

Note by the Secretariat on settlement of commercial disputes: investor-State dispute settlement framework: compilation of comments

ADDENDUM

Contents

III. Compilation of comments

13. Argentina

[Original: Spanish]
[Date: 9 January 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Yes, Argentina is a Party to treaties on the protection of foreign investments, which include provisions on the settlement of investor-State disputes.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs - Question 3: Provisions on appeal to investor-State arbitral awards in IIAs - Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

No.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

IIAs concluded by Argentina contain provisions on amendment of the IIA. They do not contain provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIA.

Example of treaty provisions:

Bilateral Investment Treaty (BIT) between Argentina and the Russian Federation (1998): "Article 14.3. Amendments may be made to this Convention by mutual agreement between the Contracting Parties. Any amendment shall enter into force after each Contracting Party notifies the other Contracting Party in writing of the completion of the procedures required by its legislation for the entry into force of the said amendments."

BIT between Argentina and Denmark (1992): "Article 11 Amendments. On the date of entry into force of this Agreement or at any time thereafter, its provisions may be amended in the manner agreed upon by the Contracting Parties. Any such amendments shall enter into force once the Contracting Parties have notified each other of the completion of the respective constitutional requirements."

BIT between Argentina and Senegal (1993): "Article 10. Each Contracting Party may request, in writing, the total or partial amendment of this Agreement. The agreed amendments shall enter into force as of notification of their approval by both Contracting Parties."

BIT between Argentina and Qatar (2016, has not yet entered into force): "Article 19 Entry into force - 1. This Treaty and its amendments shall enter into force on the date of receipt of the last notification given in writing by either Contracting Party providing notice, through diplomatic channels, of the completion of its domestic legal procedures required for the entry into force of this Treaty and its amendments. 2. This Treaty may be amended by written agreement between the Contracting Parties."

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

No specific regime has been established to recognize and enforce international judgments, but there is a specific regime to recognize and enforce foreign arbitral awards.

Nevertheless, it should be clarified that article 75 (22) of the National Constitution provides that treaties concluded by the Argentine Republic have supra-legal status. Furthermore, certain human rights treaties have constitutional status. Consequently, if a treaty concluded by Argentina establishes the jurisdiction of an international court over the settlement of disputes and rules on the recognition and enforcement of international awards or judgments, the provisions of that treaty should be observed for the purposes of recognition and enforcement of judgments. In this respect, for instance, reference may be made to article 54 of the Convention on the Settlement of Investment Disputes between States and Nationals of Other States of the International Centre for Settlement of Investment Disputes (ICSID), and the statement made by the Argentine Republic pursuant to article 54 (2), which establishes the national judicial authority for federal administrative litigation (Justicia Nacional en lo Contencioso Administrativo Federal) as the competent authority for the recognition and enforcement of ICSID awards.

Domestic courts have been requested to recognize or enforce judgments of international courts; for example, Compania de concesiones de infraestructura SA (CCI) regarding Peition for bankruptcy (Republic of Peru), Case No. 8030/2015, National Commercial Court of Appeals, judgment of 18 August 2015.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

No.

14. Jamaica

[Original: English]
[Date: 5 January 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Jamaica is a party to a number of bilateral treaties on the protection of foreign investments. Jamaica is also a party to the Revised Treaty of Chaguaramas ("RTC"), which establishes the Caribbean Community ("CARICOM") and the CARICOM Single Market and Economy ("CSME"), that contains provisions that would be applicable to investors within CARICOM. In particular, the RTC contains National Treatment (Article 7) and Most Favoured Nation Treatment (Article 8) standards that are commonly found in IIAs. Though these standards as articulated in the RTC are of general application, the provisions would still be applicable in a case where an investor brings a claim against a CARICOM State for failure to adhere to those

standards. The RTC essentially allows for investor-State arbitration by providing that natural or juridical persons of any CARICOM Member State may bring a claim before the Caribbean Court of Justice in relation to any of the rights under the RTC where all the criteria for espousing the claim have been met. There is also an extensive chapter on competition matters (Chapter 8) in the RTC. However, all the IIAs in force contain provisions for investor-State dispute settlement; (the BITs reviewed in preparation for answering this questionnaire are: Jamaica-Argentine Republic, Jamaica-Korea, Jamaica-Germany, Jamaica-Netherlands, Jamaica-Switzerland, Jamaica-China, Jamaica-United Kingdom and Jamaica-United States of America).

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

Jamaica does not have a model IIA. However, some IIAs concluded by Jamaica contain provisions whereby the parties to a dispute may submit the dispute to the courts or administrative tribunals of the host State. For example, Article VI(2)(a) of the Jamaica-USA BIT provides for this form of dispute settlement method. Further, Article 8(2) of the Jamaica-China IIA provides that where an investor-State dispute is not initially settled through negotiations, either party to the dispute shall be entitled to submit the dispute to the competent court of the Contracting Party accepting the investment. Another variation is the Jamaica-Swiss Federation IIA that provides that a Contracting Party may require the exhaustion of local administrative or judicial remedies as a condition of its consent to arbitration which would require resort to permanent national courts or tribunals (Article 9(4)). See also Article 11(1) of the Jamaica-Germany IIA which permits parties to pursue local remedies if disputes cannot be settled amicably. We are not aware of any decisions rendered by any Court or Tribunal in Jamaica under any of those IIAs.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

In the IIAs reviewed, there was no provision in any of them concerning appeals from awards of arbitral tribunals.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

In none of the IIAs in force was there any provision regarding the possible creation in the future of any bilateral or multilateral appeal mechanism for investor-State arbitration or for a bilateral or multilateral permanent investment tribunal or court.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

There is generally no provision regarding the amendment of the respective agreements.

<u>B/ Legislative and judicial framework</u>

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

The Judgments and Awards (Reciprocal Enforcement) Act provides for the registration and enforcement in Jamaica of any judgment obtained in a Superior Court in the United Kingdom on a reciprocal basis. Under the Judgments (Foreign)(Reciprocal Enforcement) Act, judgments from a Superior Court in any foreign jurisdiction may be recognised and enforced in Jamaica on the basis of an assurance that any such judgment rendered by a Superior Court in Jamaica would be given reciprocal treatment in the other jurisdiction.

The following are two Court of Appeal cases in which foreign judgments were determined to be enforceable in Jamaica. It should be noted that Jamaica has a separate legal framework for the recognition and enforcement of foreign arbitral awards.

(a) DYC Fishing Limited v Perla Del Caribe Inc [2014] JMCA Civ:

http://www.courtofappeal.gov.jm/sites/default/files/judgments/DYC%20Fishing%20Ltd.%20v%20Perla%20Del%20Caribe%20Inc..pdf

(b) Richard Vasconcellos and Jamaica Steel Works Limited and Others SCCA No. 01 of 2008

http://www.courtofappeal.gov.jm/sites/default/files/judgments/Vasconcellos%20(Richard)%20v.%20Jamaica%20Steel%20%20Works%20Ltd.%20%20et%20al_0.pdf

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

The recognition and enforcement of foreign arbitral awards in Jamaica is governed by The Arbitration (Recognition and Enforcement of Foreign Awards) Act. That Act incorporates the provisions of the New York Convention on the Recognition of Foreign Arbitral Awards. There is no reference in that Act, and by extension the New York Convention, to appeals against arbitral awards.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

The State acknowledges the consideration by the United Nations General Assembly of possible reformation of the Investor State Dispute Settlement System. The State further acknowledges that uniformity, transparency and predictability are desirable objectives in any Investor-State Dispute Settlement system. We note, however, that Jamaica is not a party to the Mauritius Convention which formed the basis of the CIDS research paper which indicates that we have not adopted a formal position with regards to the application of the Mauritius Convention to our IIAs.

The State recognizes, as the CIDS research paper does, that the incoherence within the present investor-state dispute settlement mechanisms continue to undermine support for IIAs. There are awards in which different arbitral panels have ruled differently on sometimes very similar facts. This has created an atmosphere of uncertainty for investors and States.

The proposals based on the Mauritius Convention are interesting and we continue to study them.

15. Portugal

[Original: English]
[Date: 4 January 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Portugal has signed and ratified approximately fifty Bilateral Investment Agreements (hereinafter BIT), most of which are currently in force. At the pluri-lateral level, Portugal is currently a Party to the Energy Charter Treaty. These treaties contain provisions on the protection of foreign investments and on the settlement of investor-State disputes.

As a member of the European Union (EU), Portugal has also concluded the negotiations of two other agreements containing provisions on investment protection and on the settlement of investor-State disputes, which are not yet in force. These said agreements are the EU-Canada Comprehensive Trade and Economic Agreement (CETA) and the EU-Vietnam Free Trade Agreement.

Please note that, in order to conclude other “IIAs”, several negotiations with third countries are currently underway, both bilaterally and within the framework of the European Investment Policy.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

Portugal has sustained the possibility for investors to use state courts to claim their rights. Hence, in its BITs and in its BIT model, this possibility has been duly foreseen; (accordingly to Portuguese BIT model "the investor may submit the dispute to: a) The national courts of the Party in whose territory the investment was made;"). As an alternative to domestic courts, investors may submit disputes to international arbitration.

The CETA, signed on 30 October 2016, establishes a Tribunal composed of fifteen Members to adjudicate claims submitted with regard to alleged breaches of the investment protection provisions of the agreement (Article 8.27 CETA). The same mechanism is also provided for in the EU-Vietnam Agreement, despite some adjustments (the numbering of the Chapters, Sections and Articles is currently subject to legal revision).

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

In the Portuguese BIT model "the awards shall be binding, but they may be subject to appeal or any other review procedure solely as provided by law and the applicable rules" (Article 24, paragraph 1).

Differently, the EU-Canada Comprehensive Trade and Economic Agreement as well as the EU-Vietnam Free Trade Agreement establish Appeal Tribunals to review awards rendered by the Tribunals established under those agreements (Article 8.28 CETA, Article 13 EU-Vietnam FTA).

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

Portuguese new Model BIT states that "Upon the entry into force of an international agreement providing for a multilateral investment tribunal and/or a multilateral appellate mechanism applicable to disputes under this Agreement, the relevant parts of this Agreement shall cease to apply subject to the agreement of both Parties." (Article 25, paragraph 1). Portugal has not yet concluded a BIT incorporating this language, for the time being.

In both the EU-Canada Comprehensive Trade and Economic Agreement and the EU-Vietnam Free Trade Agreement, the Contracting Parties have committed to work towards the creation of a multilateral investment tribunal and/or appellate mechanism (Article 8.29 CETA, Article 15 EU-Vietnam FTA).

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

The amendment of Portuguese BIT requires the consent of both parties and follows the same formalities regarding the entry into force of the agreement. In case of termination of the BIT, a sunset clause is foreseen, which guarantees the extension of the protection provided in the agreement for periods ranging from 10 to 20 years.

The provisions on amendments to the Energy Charter, the CETA and the EU-Vietnam Agreement are enshrined in Article 42, Article 30.2 and Article X.6 of Chapter 17, respectively.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Notwithstanding the international treaties signed and ratified by Portugal, pursuant to the Portuguese Civil Procedure Code, no decision issued by a foreign court or arbitrator shall have any effect in Portugal, regardless of the nationality of the parties involved, unless it has been reviewed and confirmed by the competent Portuguese court.

The court responsible for the recognition of foreign decisions is the Regional Appeal Court. The court must verify that: (i) the foreign decision is authentic; (ii) it does not

contain decisions in conflict with Portuguese public order; and (iii) if the situation was resolved under Portuguese law (in accordance with the rules of conflicts of law), it would not violate its provisions.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

We are not aware of the existence of requests to domestic courts to recognize or enforce judgments of international courts.

The primary source of statutory Law is Law No. 63/2011 of 14 December 2011, which approved the Voluntary Arbitration Law (hereinafter "VAL"). The VAL sets out a specific chapter for the enforcement of domestic arbitration awards (Chapter VIII) and another for the recognition and enforcement of foreign arbitral awards (Chapter X). The VAL governs both domestic and international arbitration proceedings.

However, there is a chapter in the VAL dedicated to international arbitration which sets forth certain specific rules, namely:

i. the inadmissibility of pleas based on domestic law of a party that is a State, a State-controlled organization or a State-controlled company;

ii. a more "pro-validity" rule regarding the substantial validity of the arbitration agreement;

iii. the possibility of choosing the rules of law to be applied by the arbitrators, if they have not authorized them to decide ex-aequo et bono;

iv. a more restrictive approach regarding appeals, pursuant to which the award is not appealable unless the parties have expressly agreed on the possibility of an appeal to another arbitral tribunal and regulated its terms; and

v. the possibility of setting aside an award made in Portugal, in an international arbitration in which non-Portuguese law has been applied to the merits of the dispute, if such award is to be enforced or produce other effects in national territory, whenever such enforcement leads to a result that is manifestly incompatible with the principles of international public policy.

Despite what is provided in that chapter, the provisions on domestic arbitration also apply to international arbitration, with the necessary adjustments. The VAL is essentially based on the UNCITRAL Model Law on International Commercial Arbitration (with the amendments adopted in 2006).

Awards issued in arbitrations seated in Portugal do not require submission to previous recognition and are enforceable in terms that are, in general, equivalent to decisions of the Portuguese state courts.

Without prejudice to the mandatory provisions of the New York Convention as well as to other treaties or conventions that bind the Portuguese State, arbitral awards issued in arbitrations seated abroad shall only be effective in Portugal if they are recognized by the competent Portuguese state courts.

The party wishing to recognize a foreign arbitral award, namely in order to have it enforced in Portugal, shall provide the original of the award dully authenticated or a copy dully certified of the same, as well as the original of the arbitration agreement or a duly authenticated copy of the same. If the award or the arbitration agreement is not in Portuguese, the requesting party shall provide a duly certified translation in this language. Once the application for recognition is filled, together with the documents identified above, the opposing party is summoned to, within 15 days, submit its opposition. The trial is conducted pursuant to the rules applicable to appeals.

Portuguese courts are generally favourable to the recognition and enforcement of arbitration awards. An arbitral award granted by an arbitral tribunal is binding upon the parties in the same terms prescribed for a domestic final judgment rendered by a state court and may be enforced similarly. Thus, issues raised that have been finally determined by a competent arbitral tribunal constitute res judicata. Only in exceptional circumstances is it possible to re-hear those issues in a national court.

Those circumstances, which are also applicable to state courts' decisions, include, for instance, the existence of another final decision attesting that the award was the result of a crime committed by the arbitrators in the performance of their functions.

Please note that Portugal signed and ratified the Washington Convention on the Settlement of Investment Disputes Between States and Nationals of Other States (1965) (otherwise known as "ICSID") in 1984 and the same is in force since 1 August of that year, and also ratified the New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York Convention) on 18 October 1994 and entered a reservation further to Article I(3) of the same: Portugal shall only apply the Convention in cases where the arbitral awards were rendered in the territory of States bound by the Convention.

Furthermore, Portugal is bound by the Geneva Convention on Execution of Foreign Arbitral Awards, dated 26 September 1927 (ratified by Portugal in 1931), the ICSID Convention and the Inter-American Convention on International Commercial Arbitration, signed in Panama in 1975 (ratified by Portugal in 2002). In addition to these Conventions, there are multiple Bilateral Investments Treaties in force between Portugal and other countries, some of which deal with enforcement issues.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

The CIDS research paper sets out a number of interesting options for reforming the existing investor-State dispute settlement system. The main options range from creating an International Tribunal for Investments to the creation of an Appeal Mechanism for reviewing investor-state arbitral awards. Different alternatives for reviewing decisions or awards are discussed, as are different options with regard to the composition of the Tribunal, the nomination of Tribunal Members, the enforcement of decisions, or the applicable law. The paper also examines different ways of applying any such new mechanism to existing investment treaties in the form of an opt-in convention modeled on the Mauritius Convention.

To a certain extent, the different aspects discussed in the CIDS research paper are inter-linked and adopting a particular position on the options presented for one aspect will have implications on the policy choices available for other aspects. It is therefore difficult to express a preference for any of the detailed options presented in the paper before further discussions about the main goals and priorities of the overall reform project have taken place.

The EU and its Member States, including Portugal, have already been engaged in a process of reform of investment policy and in particular of investor-State dispute settlement over the past years. One important element of that reform is the creation of a multilateral mechanism for the settlement of investment disputes which would seek to address some of the concerns which have arisen as regards the existing system. The EU and its Member States are currently engaged in exploratory discussions and reflections on the main goals and priorities of the creation of such a mechanism, both EU-internally and with non-EU countries and we welcome the opportunity to pursue further discussions.

16. Slovak Republic

[Original: English]
[Date: 5 January 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Slovak Republic is a party to Energy Charter Treaty, the ICSID Convention and various bilateral investment treaties with investor-state dispute settlement provisions (in total, 32 extra EU IIAs and 20 intra EU IIAs).

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs - Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

No.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

The Slovak Republic Model BIT does provide for possible future creation of a bilateral or multilateral investment court or tribunal. Such provision was included upon the requirement of the European Commission.

Here we provide the respective provisions included in the current IIAs between the Slovak Republic and Islamic Republic of Iran and the Slovak Republic and United Arab Emirates that have been negotiated, signed but not yet entered into force.

IIA between the Slovak Republic and the Islamic Republic of Iran: "Upon the entry into force between the Contracting Parties of an international agreement providing for a multilateral investment tribunal and/or a multilateral appellate mechanism applicable to disputes under this Agreement, the relevant parts of this Agreement shall cease to apply."

IIA between the Slovak Republic and the United Arab Emirates: "Contracting Parties may consider implementation of future developments in policy of investment protection of either Contracting Party, including a multilateral investment court provided that both Contracting Parties are signatories of the Convention establishing such a court."

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

In case of IIAs concluded by the Slovak Republic, these do not usually contain any specific provisions on amendment process. The amendment is left to the regime provided by the Vienna Convention on the Law of the Treaties.

However, please see below couple of sample provisions provided in the IIAs between the Slovak Republic and Kenya (which has not been ratified yet) and the Slovak Republic and Turkey entered into force in 2013.

IIA between the Slovak Republic and Kenya: "This Agreement may be amended in writing by mutual consent of both Contracting Parties at any time after it is in force. Any alteration or modification of this Agreement shall be done without prejudice to the rights and obligations arising from this Agreement."

IIA between the Slovak Republic and Turkey: "This Agreement may be amended by written agreement between the Contracting Parties. Any amendment shall enter into force when each Contracting Party has notified the other that it has completed all internal requirements for entry into force of such amendment."

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

No. The Slovak law governs the recognition and enforcement of court judgments of foreign countries.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

No.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

First of all, please be informed that the Slovak Republic consistently supports the ongoing efforts on reforming the current ISDS regime. Based on the discussions within the EU, outcomes reached in the EU investment agreements as well as after studying various investment protection models worldwide, the Slovak Republic successfully implemented many balanced provisions into its Model BIT with the primary aim to provide investment protection for responsible and non-speculative investors while providing sufficient space for state regulatory powers in dealing with the public legitimate objectives.

As a part of these efforts, the Slovak Republic welcomes the discussions on the multilateral solution options with extensive potential on the reform needed. All of the presented options, if chosen, would be preceded by a period of negotiations and meetings of the negotiating contracting parties. In case of a reform of ISDS, it is desired that the initiative for future proposal for multilateral reform of ISDS does have wide support from Contracting Parties. Therefore, it may be advisable to explore negotiation history of successful projects such as ICSID Convention, WTO Appellate body or process preceding Marrakesh Agreement.

You may be aware that the EU and its Member States have already been engaged in a process of reform of investment policy and in particular of investor-State dispute settlement over the past years, including the creation of a multilateral mechanism for the settlement of investment disputes. The EU and its Member States are currently engaged in exploratory discussions and reflections on the main goals and priorities of the creation of such a mechanism, both EU internally and with non-EU countries and we welcome the opportunity to pursue further discussions.

We appreciate the preparation of the said CIDS research paper in this regard, which we consider as a great basis for further expert discussions.

17. Spain

[Original: English]
[Date: 30 December 2016]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Spain is currently a party in 76 bilateral investment agreements (BIAs) and Spain is also a party to the Energy Charter Treaty. All of these agreements contain provisions on the protection of foreign investments and on the settlement of investor-State disputes.

The EU has concluded the negotiations of two other agreements, in which Spain is also a Party, containing provisions on investment protection and on the settlement of investor-State disputes, which are not yet in force. These agreements are the EU-Canada Comprehensive Trade and Economic Agreement (CETA) and the EU-Vietnam Free Trade Agreement.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs - -

Spain does not have any BIA containing provisions on permanent courts instead of investor-State arbitration for the resolution of disputes. However, the CETA agreement as well as the EU-Vietnam FTA establish Tribunals that will decide claims submitted with regard to alleged breaches of the investment protection provisions of these agreements.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

Spain does not have any BIA containing provisions whereby investor-State arbitral awards may be subject to appeal. However, the CETA agreement as well as the

EU-Vietnam FTA establish Appeal Tribunals to review awards rendered by the Tribunals established under those agreements.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

Spain does not have any BIA addressing the possible creation of a bilateral or multilateral appellate mechanism or a permanent institution. However, Spain is working in coordination with the European Commission and the other Member States towards the creation of a multilateral investment mechanism. The CETA agreement as well as the EU-Vietnam FTA contain provisions in this regard.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Only seven BIAs concluded by Spain contain provisions on the amendment of the agreement: Bosnia and Herzegovina; Republic of Korea; People's Republic of China; Indonesia; Lebanese Republic; Republic of Lithuania and Republic of Trinidad and Tobago.

None of the BIAs concluded by Spain contain provisions safeguarding investor's rights or providing for transitional arrangements in case of modifications.

On the other hand, the Energy Charter Treaty, the CETA and the EU-Vietnam FTA contain provisions on the amendment of the agreement.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Articles 21 and 22 of the Spanish organic law of Judicial Power stipulate that the judgments of international courts are enforceable in Spain provided that the jurisdiction of the International Tribunal is determined by an International Treaty of which Spain is a party or accepted by Spain unilaterally.

It is the case of the acceptance by Spain of the jurisdiction of the International Court of Justice (ICJ), which was made unilaterally by a Declaration of 15 October 1990.

The organic law of Judicial Power can be found at: http://www.boe.es/buscar/act.php?id=BOE-A-1985-12666

The unilateral declaration accepting the jurisdiction of the International Court of Justice can be found at: http://www.boe.es/buscar/doc.php?id=BOE-A-1990-27553

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

There is no appeal mechanism of arbitral awards in our legislation.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

Spain supports the idea of working towards the creation of a multilateral investment dispute settlement mechanism that counteracts on the perceived limitations of the current ad hoc Investor-State Dispute Settlement. The new mechanism should be built without any doubt in terms of its legitimacy, neutrality, independence, transparency, affordability and consistency.

This multilateral mechanism should apply to multiple existing or future agreements and we think that a good option to do this would be on the basis of an opt-in system, similar to the "Mauritius Convention on Transparency". This would avoid the need to modify the investment agreements one by one.

Spain, the EU and its Member States are currently engaged in exploratory discussions and reflections on the main goals and priorities of the creation of such mechanism and we welcome the opportunity to pursue further discussion

(A/CN.9/918/Add.3) (Original: English/French/Spanish)

Note by the Secretariat on settlement of commercial disputes: investor-State dispute settlement framework: compilation of comments

ADDENDUM

Contents

III. Compilation of comments

18. Algeria

[Original: French]
[Date: 10 January 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

At the bilateral level, Algeria has signed 29 treaties with European countries, 29 treaties with Arab countries, 9 treaties with Asian countries, 3 treaties with American countries and 13 treaties with African countries.

The treaties signed and ratified by Algeria include provisions on the settlement of investor-State disputes.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

The use of permanent tribunals for the resolution of disputes between investors and Algeria is provided for by both the bilateral and multilateral international agreements signed and ratified by Algeria.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

The IIAs concluded by Algeria do not contain provisions whereby investor-State arbitral awards may be subject to appeal.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

The IIAs signed and ratified by Algeria do not address the possible creation in the future of a bilateral or multilateral appellate mechanism for investor-State arbitral awards, or a bilateral or multilateral permanent investment tribunal or court.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

The IIAs signed and ratified by Algeria contain provisions on the amendment of the IIA.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Algerian domestic law recognizes and enforces judgments of international courts, subject to certain conditions. See article 605 of the Code of Civil and Administrative Procedure of Algeria.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Algerian legislation on international arbitration contains provisions on appeal in articles 1055 to 1061 of the Code of Civil and Administrative Procedure.

19. Czech Republic

[Original: English]
[Date: 10 January 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

The Czech Republic is currently a Party to about 80 bilateral investment treaties and to the Energy Charter Treaty. All of them include provisions on the protection of foreign investment and on the settlement of investor-State disputes.

The Czech Republic is also a Party to the EU-Canada Comprehensive Trade and Economic Agreement (CETA) and the EU-Vietnam Free Trade Agreement. Both agreements contain provisions on the protection of foreign investment and on the settlement of investor-State disputes, but they are not yet in force. However, in respect of this questionnaire, the Czech Republic will only provide information regarding bilateral investment treaties concluded by the Czech Republic with a third State.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

None of the IIAs concluded by the Czech Republic provide for permanent courts or tribunals.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

None of the IIAs concluded by the Czech Republic allow appeal.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

None of the IIAs concluded by the Czech Republic contain the possible creation of a bilateral or multilateral appellate mechanism for investor-State arbitral awards or a bilateral or multilateral permanent investment tribunal or court. The only option how to incorporate the bilateral or multilateral appellate mechanism for investor-State arbitral awards or a bilateral or multilateral permanent investment tribunal or court is to amend the IIAs (see question 5).

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Article 13(5) of the Czech — Chinese BIT, Czech — Bosnia and Herzegovina BIT and Czech — Bahrain BIT contains provisions on the amendment of the agreement, which states: "This agreement may be amended by a written agreement between the Contracting Parties. Any amendment shall enter into force under the same procedure required for entering in force of the present Agreement."

Article 15 of the Czech — Azerbaijan BIT contains provisions on the amendment of the agreement, which states: "Any additions and amendments may be made to this Agreement by mutual consent of the Contracting Parties. Such additions and amendments shall be made in a form of separate protocols being an integral part of this Agreement and shall enter into force in accordance with the provision of Article 16 of this Agreement."

Article 12 of the Czech — Indonesian BIT contains provisions on the amendment of the agreement, which states: "This Agreement may be amended at any time, if deemed necessary, by mutual consent."

Article 12(4) of the Czech — North Korean BIT contains provisions on the amendment of the agreement, which states: "This Agreement may be amended by mutual consent in writing between the Contracting Parties. Any amendment shall enter into force when each Contracting Party has notified the other that it has completed all legal requirements for entry into force of such an amendment."

Article 13(4) of the Czech — Lithuanian BIT contains provisions on the amendment of the agreement, which states: "This Agreement can be amended at any time as may be agreed by written notice between two Contracting Parties. Such amendments shall enter into force when the Contracting Parties have notified each other that all necessary juridical formalities for entry into force have been completed."

Article 11 of the Czech — Malaysian BIT contains provisions on the amendment of the agreement, which states: "This Agreement may be amended by mutual consent of both Contracting Parties at any time after it is in force. Any alteration or modification of this Agreement shall be done without prejudice to the rights and obligations arising from this Agreement prior to the date of such alteration or modification until such rights and obligations are fully implemented."

Article 25(5) of the Czech — Mexican BIT contains provisions on the amendment of the agreement, which states: "This Agreement may be modified by mutual consent of the Contracting Parties and the agreed modification shall come into effect in conformity with the procedures established in paragraphs (1) and (2)."

Article 12(3) of the Czech — Turkish BIT contains provisions on the amendment of the agreement, which states: "This agreement may be amended by a written agreement between the Contracting Parties. Any amendment shall enter into force after each Contracting Party has notified the other that it has completed all internal requirements for entry into force of such amendment."

Despite other BITs which the Czech Republic concluded do not contain explicit provisions on the amendment of the agreement, these BITs may be amended as well.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Generally speaking, recognition and enforcement of judgments of international courts is based on the Article 1 paragraph 2 of the Constitution of the Czech Republic.

Article 1:" (1) The Czech Republic is a sovereign, unitary, and democratic state governed by the rule of law, founded on respect for the rights and freedoms of man and of citizens. (2) The Czech Republic shall observe its obligations resulting from international law."

The relevant national legal framework for effective execution of ECHR judgments is based on the Act no. 186/2011 Coll., on Providing Cooperation for the Purposes of Proceedings before Certain International Courts and Other International Supervisory Bodies, and on the Government Agent`s Statute annexed to Government Resolution No. 1024/2009 of 17 August 2009. The Act stipulates that all branches of the Government as well as the judiciary are required to take without undue delay both individual and general measures to put an end to violations of the relevant international instrument found in individual cases. The Government Agent`s Statute specifies that after the translation of the respective judgment, the Government Agent

submits a report to the Minister of Justice and recommends to, and consults with, public authorities concerned what steps should be taken following the finding of a violation by the Court. Furthermore, in 2015, the Office of the Government Agent established the Committee of Experts on the Execution of Judgments of the European Court of Human Rights. Its legal basis stems from Article 5 § 5 of the Statute of the Government Agent. The Committee of Experts is composed of all key actors, including representative of all ministries, Parliament, the Constitutional Court, the Supreme Court, the Supreme Administrative Court, the Supreme Public Prosecutor`s Office, the Public Defender of Rights, the Czech Bar Association, academia and NGOs. The legal representative of the petitioner might be summoned as well. Once the consensus regarding measures that need to be taken to execute the Court`s judgment is reached, the Office of the Government Agent is then responsible for the drafting of action plans and reports for the Committee of Ministers.

Moreover, following the Court`s judgment, the Constitutional Court Act allows for the reopening of the proceedings before the Constitutional Court. It is possible to reopen the proceedings in any case, be it criminal, civil, commercial, administrative, etc. More information is available on the designated Council of Europe website.

As regards the judgments of European Court of Justice, these are legally binding and national courts follow them in their decision-making practice.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

According to the Czech law the arbitral award is final and binding and is not subject to appeal. However, according to Art. 27 of the Act No. 216/1994 Coll., on Arbitration, as amended, the parties to the arbitration agreement may agree in the arbitration agreement that a revision of the arbitral award by another arbitral tribunal may take place on the basis of a request by one of the parties after the arbitral award is rendered. Such request for revision shall be made in a time limit as specified in the arbitration agreement or by default in 30 days after the receipt of the arbitral award by requesting party. The revision proceedings are part of arbitral proceedings and shall be conducted in accordance with the above mentioned Act on Arbitration.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

The CIDS research paper is very useful for an initial debate how to approach the issue of multilateralization of investor-State dispute settlement system. The Czech Republic as a Member State of the EU is fully engaged in a process of reform of international investment regime, where a multilateral mechanism for settlement of investment disputes is an assumed future element. In this effort, the EU and its Member States currently discuss internally a possibility of such mechanism and related next steps.

20. Ecuador

[Original: Spanish]
[Date: 27 December 2016]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Response of the Office of the Counsel General of the State: The Republic of Ecuador is a State Party to bilateral investment protection treaties that include provisions on the settlement of investor-State disputes. A total of 16 bilateral investment treaties are currently in force and 10 have been terminated.

Response of the Office of the President of the Republic: Those IIAs include provisions on the settlement of investor-State disputes. Generally, such disputes are resolved through a tribunal composed of a representative of the State that has received the

investment, a representative of the investor and a third party chosen by the two representatives by mutual consent. If the two representatives are unable to reach an agreement, the arbitration administration centre will appoint the third arbitrator, who will preside over the arbitral proceedings. Those arbitrators generally belong to an exclusive club of professionals who are chosen repeatedly by investors and the respective arbitration centres. Their privately practicing lawyers, who come from large firms based in Paris, New York and London, usually defend big transnational corporations and therefore generally tend to rule in their favour and interpret the protection of investors broadly, to their benefit. Arbitrators' decisions are not open to appeal, even if they grossly violate Ecuadorian and comparative law, and arbitrators are also accorded immunity, which makes them — like European monarchs — exempt from liability with regard to all the decisions they take, even if such decisions lead to the State losing billions of dollars, in flagrant violation of law and equity.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

Response of the Office of the President of the Republic: The courts and tribunals draw their personnel from that exclusive club of lawyers who come from legal firms that tend to defend the rights of the investor.

Response of the Directorate of International Instruments, Ministry of Foreign Affairs and Human Mobility : The text of the Treaty between the United States of America and the Republic of Ecuador concerning the Encouragement and Reciprocal Protection of Investment states that: "Art. VI. 2. In the event of an investment dispute, the parties to the dispute should initially seek a resolution through consultation and negotiation. If the dispute cannot be settled amicably, the national or company concerned may choose to submit the dispute, under one of the following alternatives, for resolution: (a) To the courts or administrative tribunals of the Party that is a party to the dispute; or (b) In accordance with any applicable, previously agreed dispute-settlement procedures; or (c) In accordance with the terms of paragraph 3. 3. Provided that the national or company concerned has not submitted the dispute for resolution under paragraph 2 (a) or (b) and that six months have elapsed from the date on which the dispute arose, the national or company concerned may choose to consent in writing to the submission of the dispute for settlement by binding arbitration: (i) To the International Centre for the Settlement of Investment Disputes ('Centre') established by the Convention on the Settlement of Investment Disputes between States and Nationals of other States, done at Washington, March 18, 1965 ('ICSID Convention'), provided that the Party is a party to such Convention; or (ii) To the Additional Facility of the Centre, if the Centre is not available; or (iii) In accordance with the Arbitration Rules of the United Nations Commission on International Trade Law (UNCITRAL); or (iv) To any other arbitration institution, or in accordance with any other arbitration rules, as may be mutually agreed between the parties to the dispute. (b) Once the national or company concerned has so consented, either party to the dispute may initiate arbitration in accordance with the choice so specified in the consent."

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

Response of the Office of the President of the Republic: No. The only option that exists in some arbitration centres to which Ecuador has referred disputes is the possibility of requesting the annulment of arbitral awards. However, annulment action does not necessarily have suspensive effect and it is the annulment tribunal that must decide on the matter, either by suspending the effects of the appealed judgment, or by establishing a guarantee to ensure its enforcement.

Yet more concerning is the fact that, in arbitration that takes place in accordance with the UNCITRAL Arbitration Rules, annulment proceedings are not conducted before the arbitral tribunal, but before the courts of the Netherlands, which represents an

excessive and disproportionate relinquishment of sovereignty in favour of another country that is also a recipient of investments.[1]

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

Response of the Office of the Counsel General of the State to questions 2, 3 and 4: The IIAs concluded by the Republic of Ecuador do not contain provisions: (i) on the settlement of investor-State disputes through permanent courts or tribunals; (ii) whereby investor-State arbitral awards may be subject to appeal; (iii) on the possible creation in the future of a bilateral or multilateral appellate mechanism for investor-State arbitral awards, or on the creation of a bilateral or multilateral permanent investment tribunal or court.

Response of the Office of the President of the Republic: The IIAs do not address the creation in the future of a bilateral or multilateral appellate mechanism for investor-State arbitral awards, or a bilateral or multilateral permanent investment tribunal or court. However, the Republic of Ecuador agrees with that proposal as an alternative to the current system, with the proviso that it must be aligned with the Inter-American System for the protection of human rights; that is, recourse should be made to international tribunals only once all domestic judicial bodies have been exhausted.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Response of the Office of the Counsel General of the State: Examination of the IIAs signed and ratified by the Republic of Ecuador reveals that they do not contain provisions on the amendment or reform of the IIA, thus entailing implementation of article 39 of the Vienna Convention on the Law of Treaties, which states: "A treaty may be amended by agreement between the parties. The rules laid down in Part II apply to such an agreement except insofar as the treaty may otherwise provide."

Response of the Office of the President of the Republic: None of the IIAs concluded conflict with any provisions on their amendment.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Response of the Office of the Counsel General of the State: In respect of foreign judgments, article 102 of the General Code of Procedure states that "The recognition and homologation of foreign judgments, arbitral awards and mediation instruments which have the effect of a judgment in their legislation of origin shall be the responsibility of the specialized chamber of the provincial court of the place of domicile of the respondent.

"The enforcement of foreign judgments, arbitral awards and mediation instruments (actas de mediación) shall be the responsibility of the judge of the court of first instance of the place of domicile of the defendant which has jurisdiction over the case due to its subject matter.

"If the defendant is not domiciled in Ecuador, the judge of the court of first instance of the place in which the assets are located or in which the judgment, arbitral award or mediation instrument should have effect shall have jurisdiction."

However, judgments rendered by international courts (the Court of Justice of the Andean Community or the Inter-American Court of Human Rights) are directly applicable and Ecuadorian law does not provide for a judicial mechanism for their enforcement or recognition.

[1] Note by the Secretariat of UNCITRAL: The UNCITRAL Arbitration Rules provide that the place of arbitration is determined by agreement of the parties (article 18); annulment procedures would take place before the courts at the place of arbitration as determined by the parties.

In particular, article 91 of the Statute of the Court of Justice of the Andean Community, published in Official Register No. 384 on 6 August 2001, provides confirmation of that as follows: "The judgment shall have binding force and be considered res judicata from the day following its notification, and it shall be applicable in the territory of member countries, without homologation or an exequatur being necessary."

In relation to decisions emanating from the Inter-American System for the protection of human rights and the Universal Human Rights System, article 68 of the American Convention on Human Rights establishes that the States Parties to the Convention undertake to comply with the judgment of the Court in any case to which they are parties, which, in Ecuador, is reflected in Executive Decree No. W 1317, published in Official Register No. 428 on 18 September 2008. Namely, article 1 of that Decree provides as follows: "The Ministry of Justice and Human Rights shall be responsible for coordinating the enforcement of judgments, interim measures, provisional measures, amicable agreements, recommendations and resolutions originating in the Inter-American System for the protection of human rights and in the Universal Human Rights System, and other obligations arising out of international commitments in that area."

Response of the Office of the President of the Republic: This is governed by articles 102 to 106 of the General Code of Procedure, the text of which is transcribed below:

"Art. 102 — Jurisdiction. The recognition and homologation of foreign judgments, arbitral awards and mediation instruments which have the effect of a judgment in their legislation of origin shall be the responsibility of the specialized chamber of the provincial court of the place of domicile of the respondent.

"The enforcement of foreign judgments, arbitral awards and mediation instruments shall be the responsibility of the judge of the court of first instance of the place of domicile of the defendant which has jurisdiction over the case due to its subject matter.

"If the defendant is not domiciled in Ecuador, the court of first instance of the place in which the assets are located or in which the judgment, arbitral award or mediation instrument should have effect shall have jurisdiction.

"Art. 103 — Effect. In Ecuador, foreign judgments, arbitral awards and mediation instruments which have been homologated and rendered in contentious or non-contentious proceedings shall have the force granted to them by the international treaties and agreements currently in force, without the need for review of the substance of the case they concern. "With regard to children and adolescents, the provisions of the law on the subject and the international instruments ratified by Ecuador shall apply.

"Art. 104 — Homologation of foreign judgments, arbitral awards and mediation instruments. For the homologation of foreign judgments, arbitral awards and mediation instruments, the competent chamber of the provincial court shall ascertain whether: 1. They have undergone the necessary external formalities to be considered authentic in the State of origin; 2. The judgment became res judicata in accordance with the laws of the country where it was rendered and the necessary supporting documents have been duly authenticated; 3. They have been translated, where appropriate; 4. The relevant procedural documents and certifications prove that the respondent was legally notified and the proper defence of the parties was ensured; 5. The request indicates the place of summons of the natural or legal person against whom the foreign decision is to be enforced.

"For the purposes of recognizing judgments and arbitral awards against the State, since they do not relate to trade issues it must also be demonstrated that they are not contrary to the provisions of the Constitution and the law, and that they comply with the international treaties and agreements currently in force. In the absence of international treaties and agreements, they shall be regarded as compliant if they are

referred to in the letters rogatory concerned or if the national law of the country of origin recognizes their effectiveness and validity.

"Art. 105 — Homologation procedure. In order for foreign judgments, arbitral awards and mediation instruments to be homologated, the applicant shall submit an application to the competent chamber of the provincial court, which, after ensuring that the conditions of this article have been met, shall summon the applicant to the location indicated for that purpose. Once the person against whom the judgement is to be enforced has been summoned, that person shall have five days to submit and provide supporting evidence for any objection to the homologation.

"The judge shall reach a decision within thirty days of the date on which the summons was issued. If a well-founded and acceptable objection is submitted and if the complexity of the case so warrants, the court shall convene a hearing, which shall be conducted and a decision reached in accordance with the general rules of this Code. The hearing shall be convened within a maximum of 20 days of submission of the objection.

"The chamber shall reach a decision at the same hearing. Appeals against the judgment of the chamber of the provincial court may be made only before the same judge.

"Once the issue of homologation has been resolved, foreign judgments, arbitral awards and mediation instruments shall be enforced as provided for in this Code.

"Art. 106 — Evidentiary effects of foreign judgments, arbitral awards and mediation instruments. A party that, as part of a proceeding, seeks to avail itself of the evidentiary effects of a foreign judgment, arbitral award and mediation instrument must first have them homologated in the manner provided for in this Code."

With regard to the request to provide information on court decisions relating to recognition of the judgments of foreign courts, owing to the nature of my role I have no information in that regard, nor am I aware of whether any such judgment has been recognized or enforced.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

The legislation on international arbitration of the Republic of Ecuador does not contain any provisions on appeal by State courts or arbitral tribunals against arbitral awards.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

The Office of the Counsel General of the State has two comments regarding the CIDS research paper on reform of the investor-State arbitration regime.

The establishment of a supranational judicial body by means of a multilateral treaty would reduce inconsistencies in arbitral awards that settle similar cases, thus providing parties with uniform interpretations and legal certainty.

It is important to determine the legal status of the international investment tribunal, that is, whether it is a supranational judicial body or a private arbitral body. This clarification would lead to different outcomes with regard to the recognition and enforcement of a judgment (in the case of an international permanent investment tribunal or court) or an award (in the case of a tribunal or court that retained some of the advantages of international arbitration), depending on the case. With regard to the first scenario, prima facie, recognition and enforcement would be governed by the provisions of the multilateral treaty that created the aforementioned judicial body. In the second scenario, recognition and enforcement of an award could take place through the existing Convention on the Recognition and Enforcement of Foreign Arbitral Awards [done in New York on 10 June 1958].

21. Germany

[Original: English]
[Date: 6 January 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Germany is party to 129 bilateral investment promotion and protection treaties (BITs) currently in force. The majority of these treaties contains provisions on investor-state dispute settlement (ISDS). In addition, Germany is party to the Energy Charter Treaty which also contains provisions on investment protection and ISDS.

The Comprehensive Economic and Trade Agreement between the EU, its Member States and Canada (CETA), as well as the Free Trade Agreement between the EU, its Member States and Vietnam (EU-VNM FTA), neither of which has been ratified, yet, each also contain provisions on investment protection and provide for an investment court to settle investor-State disputes.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

No. However, CETA as well as the EU-VNM FTA each provide for a permanent investment court.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

No. However, CETA as well as the EU-VNM FTA each provide for a permanent appellate tribunal to review awards rendered by the court of first instance provided for by these agreements.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

No. However, in both CETA and the EU-VNM FTA the Contracting Parties have committed to work towards the creation of a multilateral investment court and/or appellate mechanism.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Article 42 of the Energy Charter Treaty contains provisions on the amendment of the agreement. In addition, Article 30.2 of CETA and Article X.6 of Chapter 17 of the EU-VNM FTA each contain provisions on the amendment of the respective agreement and of its annexes. Furthermore, IIAs can be modified or amended pursuant to general principles of public international law.

The German BITs contain so-called "sunset-clauses" providing protection when the respective BIT is terminated. According to such clauses investments made before the expiry of a terminated BIT remain protected by the provisions of the BIT for a certain time after the expiry of the BIT. In case an IIA was negotiated to replace an existing IIA, the IIAs usually provided for the more recent IIA to apply to existing investments from the date of its entry into force.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Judgments of the European Court of Justice against Member States like Germany are automatically enforceable (Art. 280 Treaty on the Functioning of the European Union, TFEU). The order for enforcement shall be appended to the decision of the European Court, without other formality than verification of the authenticity of the decision, by the national authority which the government of each Member State shall designate for

this purpose (in Germany the Ministry of Justice) and shall be made known to the Commission and to the Court of Justice of the European Union. When these formalities have been completed on application by the party concerned, the latter may proceed to enforcement in accordance with the national law, by bringing the matter directly before the competent authority.

Some decisions of the International Court of the Sea shall be enforceable in the Contracting States of the Convention of the Law of the Sea. In Germany the Law on the Enforcement of Decisions by International Courts in Matters of the Law of the Sea (*Gesetz über die Vollstreckung von Entscheidungen internationaler Gerichte auf dem Gebiet des Seerechts (Seegerichtsvollstreckungsgesetz — SeeGVG), BGBl. I 1995, p. 778, 786*) applies to the enforcement of such decisions. An enforcement clause (writ of enforcement) will be issued by the competent German court in case the authenticity of the decision has been verified, the content of the decision is enforceable and according to German law suitable to be enforced. After issuance of the enforcement clause the creditor will be able to proceed to enforcement in accordance with the national law.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

The German law on arbitration (§§ 1025-1066 Civil Procedure Law) follows the UNCITRAL Model Law on Arbitration of 1985. No appeal to the regular courts against an arbitral award is laid down in the German arbitration law. An appeal against an arbitral award to another arbitral tribunal remains possible if the parties have included such a measure into their arbitral agreement or have agreed upon it during the arbitral proceedings.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

Some features of ISDS have become subject to increased scrutiny in recent years. Investment policy makers, stakeholders and international organizations in many countries are engaged in a reflection process about possible reforms of the system.

The idea of a multilateral system for the resolution of investment disputes has emerged in order to improve the current system and address its perceived limitations in terms of legitimacy, transparency, consistency and predictability.

The establishment of an International Court for Investments and/or an Appeal Mechanism to the arbitration system, as proposed in the research paper, could be a further step to improve the current ISDS system. An important step has already been undertaken with the introduction of an Investment Court System with permanent judges (as opposed to an ad-hoc tribunal) and an appellate mechanism as undertaken by CETA, the EU-VNM FTA and the European Commission's draft proposal for TTIP (http://trade.ec.europa.eu/doclib/docs/2015/september/tradoc_153807.pdf).
Following this development we could also support the just opened discussions on the establishment of a Multilateral Investment Court, as proposed by the European Commission and Canada. As many of the design options for an International Court for Investments and/or an Appeal Mechanism are interdependent, at this early stage of exploration we do not have a position on a concrete concept for such institutions.

However, and without prejudice to a future German position, the following aspects should be taken into consideration:

(a) The design of such institutions should ensure that their awards can be reliably executed also in States that do not adhere to these institutions but are party to the ICSID Convention and / or the Convention on the Recognition and Enforcement of Foreign Arbitral Awards;

(b) An institutional system containing both a court of first instance and an appeal mechanism could provide for a greater consistency and predictability than only an appeal mechanism;

(c) An opt-in-convention may be a possible mechanism for establishing an International Court for Investments and/or an Appeal Mechanism. This approach would be more adaptable to the specific needs and interests of states and could enable a greater number of states to accede to such institutions.

22. Latvia

[Original: English]
[Date: 6 January 2017]

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Latvian legislation does not prescribe requirements for recognition of judgements of international courts (as opposed to decisions of a foreign court). Thereby, there are no judicial mechanism and court rulings with regards to recognition or enforcement of judgements of international courts.

Cabinet Regulation No. 355 of 1 July 2014 "Regulations Regarding Representation in International Human Rights Institutions" prescribes the procedures by which representation of the interests of Latvia shall be ensured before the European Court of Human Rights (hereinafter "the Court") and in the framework of the United Nations Organization (hereinafter "the UN") human rights treaty monitoring mechanisms. Representation of the interests of Latvia before the Court and in the framework of the UN human rights treaty monitoring mechanisms shall be ensured by an authorized representative of the Cabinet. According to the Regulation functions of the representative, among other, is to submit an appeal of the government to the Grand Chamber of the Court on the basis of a Cabinet decision; if the court makes a ruling finding a violation of the European Convention for the Protection of Human Rights and Fundamental Freedoms or its protocols in Latvia, to submit an informative report to the Cabinet on evaluation of the ruling of the Court, indicating measures necessary for execution of the ruling; on the basis of the information provided by responsible authorities, to prepare and submit a position of the government to the Committee of Ministers of the Council of Europe on execution of the ruling of the Court finding a violation of the European Convention for the Protection of Human Rights and Fundamental Freedoms or its protocols in Latvia.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

According to Latvian legislation, recognition of decisions of foreign arbitration courts takes place in accordance with international agreements that are binding for the Republic of Latvia, including the Convention on the Recognition and Enforcement of Foreign Arbitral Awards ("New York Convention"), and, respectively, in accordance with the Civil Procedure Law. There are no provisions on appeal by national courts against arbitral awards.

The order of recognition of foreign arbitrary judgements is similar to recognition of foreign court judgements. Procedure for Recognition and Enforcement of a Decision of a Foreign Court is regulated in Chapter 77 of the Civil Procedure Law. If some specific questions are not regulated by *lex specialis* in Chapter 77, general provisions of Civil Procedure Law shall apply. An application for the recognition and enforcement of a decision of a foreign arbitration court must be submitted for examination to a district (city) court on the basis of the place of enforcement of the decision or also based on the declared place of residence of the defendant, but, if none, the place of residence of the defendant or legal address. Having examined an application for the recognition and enforcement of decision of a foreign arbitration court, a court shall take a decision to recognize and enforce the decision, or to reject the application. An application can only be dismissed in the cases provided for by international treaties, binding upon the Republic of Latvia — Convention on the Recognition and Enforcement of Foreign Arbitral Awards.

Decision of a foreign arbitration court after its recognition must be enforced in accordance with the general procedures laid down in Civil Procedure Law.

There are no specific provisions on recognition or appeal concerning decisions of international arbitration. The procedure described above also applies to decisions of international arbitration in so far as it is not otherwise provided for in international agreements that are binding for the Republic of Latvia.

Note by the Secretariat on settlement of commercial disputes: investor-State dispute settlement framework: compilation of comments

ADDENDUM

Contents

III. Compilation of comments

23. Belarus

[Original: English]
[Date: 9 January 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

The Republic of Belarus is a party to the following multilateral treaties regulating investments: 1. Convention on the Settlement of Investment Disputes between the States and Nationals of Other States dated March 18, 1965; 2. Convention on the Recognition and Enforcement of Foreign Arbitral Awards dated June 10, 1958 (the enforcement of arbitral awards in the Republic of Belarus is governed by Chapter 28 of the Code of Economic Procedure); 3. Convention Establishing the Multilateral Investment Guarantee Agency dated October 11, 1985; 4. Energy Charter Treaty dated December 17, 1994; 5. Treaty on cooperation in the field of investment activities within the CIS dated December 24, 1993; 6. Convention on the investor rights' protection dated March 28, 1997.

The Republic of Belarus signed 61 bilateral investment agreements.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

Bilateral investment agreements of the Republic of Belarus usually include the clause providing for the possibility to submit the dispute to ICSID. No decision has ever been delivered by a permanent court or a tribunal with regard to the bilateral investment agreements of the Republic of Belarus.

As an example of Belarusian treaty practice, Article 9 of the Agreement between the Government of the Republic of Belarus and the Government of the Kingdom of Denmark concerning the Promotion and Reciprocal Protection of Investments, dated March 31, 2004, stipulates as follows: "1. Any dispute concerning an investment between an investor of one Contracting Party and the other Contracting Party shall, if possible, be settled by negotiations. 2. If any dispute mentioned in paragraph (l) of this Article cannot be settled within six months following the date on which the dispute has been raised by the investor through written notification to the Contracting Party, each Contracting Party hereby consents to the submission of the dispute, at the investor's choice, for resolution to: a competent court of the Contracting Party, or the International Centre for Settlement of Investment Disputes (ICSID) for settlement by

arbitration under the Washington Convention of 18 March 1965 on the Settlement of Investment Disputes between States and Nationals of Other States. In case of arbitration, each Contracting Party, by this Agreement irrevocably consents in advance, even in the absence of an individual arbitral agreement between the Contracting Party and the investor, to submit any such dispute to this Centre. This consent implies the renunciation of the requirement that the internal administrative or judicial remedies should be exhausted; or an ad hoc tribunal set up under Arbitration Rules of the United Nations Commission on International Trade Law (UNCITRAL). The appointing authority under the said rules shall be the Secretary General of ICSID. In case of arbitration, each Contracting Party, by this Agreement irrevocably consents in advance, even in the absence of an individual arbitral agreement between the Contracting Party and the investor, to submit any such dispute to the tribunal mentioned; or by arbitration in accordance with the Rules of Arbitration of the International Chamber of Commerce (ICC). 3. For the purpose of this Article and the said Washington Convention, any legal person which is constituted in accordance with the legislation of one Contracting Party and which, before a dispute arises, was controlled by an investor of the other Contracting Party, shall be treated as a national of the other Contracting Party. 4. Any arbitration under paragraph 2 (b)-(d) of this Article shall, at the request of either Contracting Party, be held in a state that is a party to the United Nations Convention on the Recognition and Enforcement of Foreign Arbitral Awards, done at New York, June 10, 1958. 5. The consent given by each Contracting Party in paragraph (2) and the submission of the dispute by an investor under the said paragraph shall constitute the written consent and written agreement of the parties to the dispute. 6. In any proceeding involving an investment dispute, a Contracting Party shall not assert, as a defence, counterclaim or for any other reason, that indemnification or other compensation for all or part of the alleged damages has been received pursuant to an insurance or guarantee contract. 7. Any arbitral award rendered pursuant to this Article shall be final and binding on the parties to the dispute. Each Contracting Party shall ensure the recognition and enforcement of the arbitral award in accordance with its relevant laws and regulations".

Article 10 of the Agreement between the Government of the Republic of Belarus and the Government of the Republic of Croatia on the Reciprocal Promotion and Protection of Investments, dated June 26, 2001, stipulates as follows: "1. Any investment dispute between a Contracting Party and an investor of the other Contracting Party shall be settled by negotiation. 2. If a dispute under paragraph 1 of this Article cannot be settled within six (6) months of a written notification, the dispute shall be, upon the request of the investor, settled as follows: a) by a competent court of the Contracting Party, or b) by conciliation or arbitration by the International Centre for Settlement of Investment Disputes (ICSID), established by the Convention on the Settlement of Investment Disputes between States and Nationals of other States, opened for signature in Washington D.C. on March 18th, 1965. In case of arbitration, each Contracting Party, by this Agreement irrevocably consents in advance, even in the absence of an individual arbitral agreement between the Contracting Party and the investor, to submit any such dispute to this Centre. This consent implies the renunciation of the requirement that the internal administrative or juridical remedies should be exhausted; or c) by arbitration by three arbitrators in accordance with the UNCITRAL arbitration rules, as amended by the last amendment accepted by both Contracting Parties at the time of the request for initiation of the arbitration procedure. In case of arbitration, each Contracting Party, by this Agreement irrevocably consents in advance, even in the absence of an individual arbitral agreement between the Contracting Party and the investor, to submit any such dispute to the tribunal mentioned; or d) by arbitration in accordance with the Rules of Arbitration of the International Chamber of Commerce (ICC). 3. The award shall be final and binding; it shall be executed according to the national law; each Contracting Party shall ensure the recognition and enforcement of the arbitral award in accordance with its relevant laws and regulations. 4. A Contracting Party which is a party to the dispute shall not, at any stage of conciliation or arbitration proceedings or enforcement of an award, raise the objection that the investor who is the other party

to the dispute has received an indemnity by virtue of a guarantee in respect of all or a part of its losses".

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs — Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

Belarusian bilateral investment agreements do not contain such provisions.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Belarusian bilateral investment agreements contain provisions on their amendments. As a general rule, any amendments enter into force under the same procedure that is required for the entry into force of the agreement itself. If an agreement does not contain specific rules for the amendments, then the general regulations set out by the Vienna Convention on the International Treaties are applied. For example, Article 13 of the Agreement between the Government of the Republic of Belarus and the Government of the Kingdom of Denmark concerning the Promotion and Reciprocal Protection of Investments, dated March 31, 2004, stipulates as follows: "At the time of entry into force of this Agreement or at any time thereafter the provisions of this Agreement may be amended in such manner as may be agreed between the Contracting Parties. Such amendments shall enter into force when the Contracting Parties have notified each other that the internal legal requirements for the entry into force have been fulfilled."

Several Belarusian multilateral investment agreements contain provisions [safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs]. For example, paragraph 2 of Article 10 of the Treaty on cooperation in the field of investment activities within the CIS dated December 24, 1993, stipulates as follows: "In case the change of investment legislation of the Party, receiving investment, or the denunciation of the present Agreement result in the impairment of the terms of the activities of enterprises previously created by the Parties in the territory of said Party, the rules, which applied at the time of registration of such enterprises, remain in force for the following 5 years". Nevertheless currently these provisions are viewed as outdated and discriminating against national investors, therefore the general approach is not to include them into the new agreements. These provisions are also not used in the Belarusian bilateral investment agreements.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

The Supreme Court of the Republic of Belarus is the competent court for recognition and enforcement of arbitral awards under the Convention on the Settlement of Investment Disputes between States and Nationals of Other States of March 18, 1965 (ICSID Convention). Pursuant to Article 45 of the Economic Procedure Code of the Republic of Belarus cases on recognition and enforcement of foreign courts' awards and foreign arbitral awards concerning business and other economic activities disputes are subject to the jurisdiction of a court that considers economic disputes. A procedure for recognition and enforcement of foreign arbitral awards is governed by Chapters 28 and 29 of the Economic Procedure Code of the Republic of Belarus. Whereas, having regard to the provisions of Article 48 of the Economic Procedure Code of the Republic of Belarus setting the right of the Supreme Court of the Republic of Belarus to initiate proceedings regarding any dispute within the jurisdiction of courts that consider economic disputes, the Supreme Court of the Republic of Belarus is a competent court for recognition and enforcement of arbitral awards in the Republic of Belarus under the ICSID Convention. As far as decisions of international courts such as ICJ are concerned, Belarus has never been handed down a ruling to recognize and enforce. It is presumed, however, that being grounded in international

treaty obligations, such rulings should fall under the legislation on international treaties (Law of the Republic of Belarus on International Treaties of the Republic of Belarus of July 23, 2008). Under the Law all governmental agencies are responsible for implementation and performance of international obligations of Belarus within their area of competence.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

There is no specific appeal system for the investment arbitration, as the general system of appeal under the Economic Procedure Code of the Republic of Belarus is applied.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

The Belarusian party recognizes the emerging global demand for the reform of the investor-State arbitration regime, and believes that UNCITRAL is the appropriate multilateral forum to discuss the correspondent issues.

The Belarusian party is convinced that, due to the importance of the topic and the long-lasting consequences of the proposed reform, it is of an utmost necessity that the consultation process is based on the principles of inclusiveness and transparency, while its outcome has to embody a well-defined and consensually shared vision of aims, methods and substance, address all possible concerns, and deliver a clear picture of the modalities and consequences of the mechanism to be adopted.

The Belarusian party is a firm advocate of the idea to enhance a regional dimension, complementing the global investor-State arbitration regime. Establishment of regional institutions as elements of the global system allows for better geographic coverage, decrease in logistical expenses, promotion and development of local expert capacities, encouragement of interaction among different legal systems.

The Republic of Belarus stands ready in principle to consider the possibility of establishing a regional presence of new investor-State arbitration regime for Eastern Europe in due course.

24. Colombia

[Original: Spanish]
[Date: 16 January 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Colombia is currently a Party to 23 IIAs, 17 of which are in force and 6 of which have been signed, all of which, apart from the free trade agreements (FTAs) with the European Free Trade Association (EFTA) and the European Union, have a mechanism for resolving disputes between investors and the State. In the specific case of the Cooperation Agreement concluded with Brazil, which provides for institutional governance and dispute prevention, a national focal point, or ombudsman, is appointed by each Party to support the investors of the other Party in its territory.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

Colombia is currently in the process of revising its model IIA to update it and tailor it to the international context. The revision brings together the international investment arbitration experiences of the past decade and reflects a number of important developments. To sum up very briefly, the model seeks to preserve the regulatory powers of the State and regulate the investor-State dispute settlement (ISDS) system, improving aspects such as transparency and consistency. For further information, we enclose herewith the first draft of this model.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs — Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

The 2011 model bilateral investment treaty (BIT) does not contain any such provisions or any such mechanism. However, the 2016 model IIA is expected to make provisions for the legal concept of appeal. In the case of the FTAs with Chile, the Pacific Alliance and the United States, the possibility of designing an appeal mechanism is established.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

The IIAs concluded by Colombia contain provisions on amendment that take various forms. Depending on the case, use might be made of administrative commissions with binding powers of interpretation with regard to investment arbitration. The general rule is that amendments may be made by written agreement between the Contracting Parties and submitted for ratification. No kinds of safeguards are provided for in case of amendments to the text of an IIA.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

Colombia is a Party to the New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards (1958) and to the Inter-American Convention on International Commercial Arbitration (1975), which address the recognition of international awards, as well as to the Convention on the Settlement of Investment Disputes between States and Nationals of Other States (1965).

Decisions of the Supreme Court granting recognition of international awards are available at: http://190.24.134.101/corte/wp-content/uploads/2016/10/SC12467-2016.pdf

http://www.oas.org/es/sla/ddi/docs/colombia%20-%20drummond%20ltd%20v%20ferrovias%20en%20liquidacion,%20ferrocariles%20nacionales%20de%20colombia%20s.a..pdf

http://190.24.134.101/corte/wp-content/uploads/2016/10/SC12467-2016.pdf

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Colombian domestic legislation does not provide for any such concept. The Arbitration Statute of Colombia follows the Model Law on International Commercial Arbitration of the United Nations Commission on International Trade Law.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

The paper outlines a number of options that are only now being explored in Colombia.

25. Mauritania

[Original: French]
[Date: 5 January 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

The Islamic Republic of Mauritania has concluded a large number of investment promotion and protection agreements with friendly countries. All of those agreements

include provisions on the settlement of any disputes which may arise between the State and investors.

Act No. 52-2012 of 31 July 2012 on the Investment Code contains provisions on the settlement of disputes, in particular in article 30, which states: "All disputes arising out of the interpretation or application of this Code shall be settled through conciliation or, if the parties concerned are unable to reach an agreement, through arbitration or, at the choice of the investor, by the competent Mauritanian courts in accordance with the laws and regulations of Mauritania. Disputes between foreign investors or foreign-controlled enterprises established in Mauritania and the public authorities of Mauritania in relation to this Code may also be resolved through conciliation or arbitration by virtue of either mutual agreement between both parties; agreements and treaties on investment protection concluded between Mauritania and the State from which the investor originates; or arbitration before the International Mediation and Arbitration Chamber of Mauritania (CIMAM) or the International Centre for Settlement of Investment Disputes (ICSID), established by the Convention on the Settlement of Investment Disputes between States and Nationals of Other States of 1965, ratified by Mauritania."

International agreements generally provide that "any investment dispute arising between one contracting party and an investor of the other contracting party shall be resolved amicably wherever possible". If the dispute cannot be settled amicably, within six months of the date of its notification by one of the contracting parties, the investor shall be entitled to submit the dispute either to the judicial authority of the contracting party to the dispute, or to an ad hoc arbitral tribunal established in accordance with the Arbitration Rules of the United Nations Commission on International Trade Law (UNCITRAL), or to the International Centre for Settlement of Investment Disputes.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

A permanent arbitration and mediation institution, the purpose of which is to contribute to building the trust required for business development while promoting mediation and arbitration as suitable methods of conflict resolution, has been established through the promulgation of Act No. 2000-06 of 18 January 2000 on the Arbitration Code and of Decree No. 2009-182 of 7 June 2009 on the creation of permanent arbitration and mediation institutions.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

The IIAs provide that arbitration awards shall be final and binding for the parties concerned.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

The agreements concluded by Mauritania do not provide for the creation in the future of a bilateral or multilateral appellate mechanism for investor-State arbitral awards, but there is nothing to prevent a clause to that effect from being established.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

The agreements that have been concluded provide for amendments according to the interest of the parties, except for the international treaties that govern intellectual or industrial property rights in force at the time of their signature.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

This issue of recognition can be resolved through bilateral cooperation by means of an agreement between Mauritania and the contracting party, or in accordance with the section of the Code of Civil, Commercial and Administrative Procedure relating to the procedure for the enforcement of judgments.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Act No. 2000-06 of 18 January 2000 on the Arbitration Code provides as follows:

"Article 37 — The award may be appealed against, unless the parties have waived their right to appeal [in the arbitration agreement. However, the award cannot be appealed] when the arbitrator has been appointed to decide as amiable compositeur, unless the parties have expressly reserved the right to do so in the arbitration agreement. The appeal against the arbitral award shall be considered and decided in accordance with the rules on the procedure established by the provisions of the Code of Civil, Commercial and Administrative Procedure regarding judicial judgments. If the court upholds the contested arbitral award, it renders it enforceable. If it invalidates the award, it shall rule on the merits and render a new decision.

"Article 38 — When, on the basis of the distinctions made in article 37, the parties have waived their right to appeal or have not expressly reserved the right to do so in the arbitration agreement, an action for annulment of the decision that is considered to be an arbitration award may nevertheless be brought despite any stipulation to the contrary. Annulment action shall be initiated only in the following cases: 1. If the arbitral award was rendered in the absence of an arbitration agreement or on the basis of an invalid or expired agreement; 2. If the arbitral tribunal was improperly constituted or the sole arbitrator was improperly appointed; 3. If the arbitrator ruled without complying with the mandate with which it was entrusted; 4. If the arbitrator failed to comply with a rule of public policy; 5. If the fundamental rules of procedure relating to due process and the adversarial principle were not complied with."

26. Thailand

[Original: English]
[Date: 25 January 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Thailand is a party to a number of IIAs, both bilateral investment treaties (BITs) and bilateral/regional free trade agreements (FTAs), most of which contain provisions on the settlement of investor-State disputes. Examples include Japan-Thailand Economic Partnership Agreement (JTEPA), Thailand-Australia Free Trade Agreement (TAFTA), Thailand-New Zealand Closer Economic Partnership (TNZCEP), ASEAN Comprehensive Investment Agreement (ACIA), ASEAN-Australia-New Zealand Free Trade Agreement (AANZFTA) and the Agreement on Investment of the Framework Agreement on Comprehensive Economic Cooperation between the People's Republic of China and ASEAN (ACFTA). It is also noteworthy that Thailand is in the process of negotiating FTAs containing provisions on the settlement of investor-State disputes, including the Regional Comprehensive Economic Partnership (RCEP) Agreement and the Agreement on Investment under ASEAN-Hong Kong Free Trade Agreement (AHKFTA).

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

Many of Thailand's IIAs, as well as its 2013 Model Bilateral Investment Treaty (Model BIT), have provisions allowing for investor-State disputes to be submitted to the competent domestic court in certain circumstances. Article 9(2) of the Thailand-Bahrain Bilateral Investment Treaty, for example, specifies that "If such disputes or differences cannot be settled according to the provisions of paragraph (1) of this

Article within three months from the date of request for settlement, the investor concerned may submit the dispute to: (a) the competent court of the Contracting Party for decision; ..."

Another example is Article 8(2) of the Thailand-Israel BIT, which provides that "If any dispute between an investor of one Contracting Party and other Contracting Party cannot be thus settled within a period of six months, the investor shall be entitled to submit the dispute to any of the following bodies at the option of the investor concerned: (a) The courts of competent jurisdiction of the Contracting Party in whose territory the investment was made; ..."

Similarly, Article 10(5) of Thailand's Model BIT provides that "If the dispute in question cannot be resolved through consultation and negotiations within a period of six months, the investor may submit the dispute, at the investor's choice, for settlement to: a) the competent courts or administrative tribunals of the Contracting Party in whose territory the investment was made, provided that such courts or administrative tribunals have jurisdiction ..."

Thailand's FTAs also contain similar provisions, one example being Article 21(1) of Chapter 11 of AANZFTA, which provides that "A disputing investor may submit a claim referred to in Article 20 (Claim by an Investor of a Party) at the choice of the disputing investor: (a) where the Philippines or Viet Nam is the disputing Party, to the courts or tribunals of that Party, provided that such courts or tribunals have jurisdiction over such claim; ..."

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

Thailand's IIAs and its Model BIT do not contain such provisions.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

None of Thailand's IIAs addresses the possible creation of such mechanisms. The same applies for the Model BIT.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Most of Thailand's IIAs contain provisions on amendment. The form and substance of these provisions differ across different lIAs. Some IIAs simply provide that "[this Agreement may be amended at any time, if deemed necessary, by mutual consent of both Contracting Parties" (see, for example, Article IX of Thailand-Indonesia BIT and Article 13 of Thailand-DPRK BIT).

Others adopt a more detailed formulation, such as "This Agreement may be amended in writing by mutual consent of the Contracting Parties. Any amendment shall enter into force after each Contracting Party has notified the other Contracting Party in writing that it has completed all internal requirements for the entry into force of such amendment' (see, for example, Article 14 of Thailand-Jordan BIT and Article 14 of Thailand-Myanmar BIT). A more flexible formulation can be found in Article 6 of Chapter 18 of AANZFTA, which provides that "[t]his Agreement may be amended by agreement in writing by the Parties and such amendments shall come into force on such date or dates as may be agreed among them".

None of Thailand's lIAs contains provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the lIAs. However, in the case of termination, some lIAs, such as Thailand-Hungary BIT, provide for a ten-year "survival" ("sunset") period for investments made prior to the date of termination of the Treaty.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

There is no existing statutory basis or judicial mechanism in Thailand to recognize and enforce judgments of international courts.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

Thailand's Arbitration Act B.B. 2545 (2002) does not provide a mechanism for appeal against arbitration awards. This means that arbitral awards are final and binding in Thailand. However, Section 45 of the Arbitration Act allows for appeals against an order or judgment of the competent court, which has been requested to enforce arbitration awards, in the following circumstances: (1) The recognition or enforcement is contrary to public policy; (2) The order or judgment is contrary to the provisions of law concerning public policy; (3) The order or judgment is not in accordance with the arbitral award; (4) The judge who sat in the case gave a dissenting opinion; or (5) The order is an order concerning provisional order measures for protection under Section 161 of the Arbitration Act.

The right to appeal pursuant to the Act is a statutory right and the parties are unable to exclude it by way of agreements.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

Thailand welcomes the preliminary analyses made in the CIDS research paper, and would like to suggest that further reflections be made on the following issues:

(l) Utility of an ITI

While having one single investment tribunal to resolve investment disputes across all investment treaties can potentially help ensure consistency in international investment law and the interpretation of investment treaties, it still needs to be considered whether having one single forum would be an efficient and sufficient way for resolving investor-State disputes. Particular attention might be paid to the issue of whether such a forum can adequately cater for country-specific situations and concerns. Additionally, since it is suggested that an ITI should be established as a permanent organization rather than an ad hoc arbitration body, there are important matters, both substantive and administrative, that need to be further considered, including the structure of the secretariat, the source of funding, the ITI's rules of procedure, the qualifications of arbitrators, and the possible mechanisms for enforcing the final arbitral awards.

More fundamentally, it should be recognized that one of the main purposes of using arbitration as a means to resolve disputes is to avoid having to resort to the formal and often lengthy process in domestic courts. In principle, arbitration is driven by "party autonomy" and can be customized in accordance with the parties' mutual agreement, thus offering flexibility and allowing for relatively fast settlement. The creation of one single arbitration forum may take away this flexibility. Importantly, under existing arbitration mechanisms the parties can select arbitrators with specific expertise, reputation, and competence to resolve their disputes. In contrast, the decision-makers of the envisaged ITI the permanent body-would not be selected by all parties. Doubts might therefore arise as to the suitability of the persons acting as arbitrators, and the relevant procedures may no longer depend on the parties' satisfaction but on the rules set by the permanent body. Moreover, the costs associated with using the ITI's mechanism — travelling costs, legal fees, tribunal fees and other expenses — as well as the estimated time needed for resolving each case are not yet determined. The amount of expenditure and time involved might be so substantial that the new mechanism becomes impractical, which is to be contrasted with normal arbitral proceedings, whereby the time and costs involved can be roughly estimated by considering the rules chosen by the parties.

(2) Appeal Mechanism (AM) and the establishment of an Opt-in Convention

With regard to the proposed creation of a single Appeal Mechanism (AM) to serve as appellate tribunal for investor-State arbitral awards across all States' IIAs, further study may be needed to consider whether the introduction of an appeal procedure

would unreasonably increase the costs and the length of proceedings. Such a study should also seek to further justify why an AM is desirable, given that it would jeopardize the finality of arbitral awards, which is one of the core advantages of arbitration.

It is also important to note that, while most arbitration regimes exclude the possibility of appeals against arbitral awards, there is an increasing number of investment treaties that include provisions for appellate review. Thus, it is necessary to consider how the appellate mechanism envisaged by the CIDS research paper would differ from the existing mechanisms as well as the relationship between the new appellate mechanism and the existing ones. A related issue warranting further study is the relationship between the new appellate mechanism (and the envisaged Opt-in Convention) and the operation of the New York Convention 1958, in particular the issue of whether the Convention and existing arbitration rules need to be amended.

Other matters that might benefit from a further study are (1) whether transitory measures, especially measures relating to an appeal against awards made prior to the establishment of the appellate mechanism and of mechanisms for recognition and enforcement of such awards by a domestic court are needed and (2) whether a mechanism for an exercise of the host State's right to appeal is needed in case where the host State unilaterally offers to investors the right to appeal under the Opt-in Convention but the home State is not a party to the Opt-in Convention.

(3) Other Comments

While the establishment of an ITI may have several benefits, it might still be worth exploring options other than creating a new mechanism in order to address the challenges associated with existing mechanisms, especially when it is considered that several questions and concerns surrounding the establishment of an ITI and an AM are yet to be addressed. One such option is to seek to resolve the problems with the existing mechanisms internally within the respective arbitration regimes.

III. Compilation of comments

27. Belgium

[Original: English/French]
[Date: 15 February 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Belgium has signed 95 bilateral investment treaties and 67 treaties with investment provisions. Investor state dispute settlement measures are present in each of these treaties. Most of these measures provide for an ICSID arbitral procedure or the establishment of an ad hoc arbitral tribunal according to UNCITRAL rules.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

Belgium is currently undergoing a revision of its model BIT and arbitration is one of the discussed topics. Belgium will provide UNCITRAL with the text of its new model BIT as soon as a final version is available.

Furthermore, Belgium is following closely the discussions relating to arbitration which are arising at the European level. Key priorities for Belgium relating to these evolutions are the selection process of the arbitration judges, their remunerations, the ethics standards that will be applied to them and the access of SMEs to the new system.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

None of the agreements that Belgium has signed have yet established an appeal mechanism.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

Belgium is currently undergoing a revision of its model BIT and arbitration is one of the discussed topics. Belgium will provide UNCITRAL with the text of its new model BIT as soon as a final version is available.

Furthermore, Belgium is following closely the discussions relating to arbitration which are arising at the European level. Key priorities for Belgium relating to these evolutions are the selection process of the arbitration judges, their remunerations, the ethics standards that will be applied to them and the access of SMEs to the new system.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

Article 42 of the Energy Charter Treaty contains provisions on the amendment of the agreement.

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

See Brussels Regulation No. 1215/2012 of 12 December 2012.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

See article 1716 of judicial Code — our legislation does not provide for appeal against arbitral awards and only allows parties to provide for such a possibility in their arbitration agreement.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

The CIDS research paper sets out a number of interesting options for reforming the existing investor-State dispute settlement system. The main options range from creating an International Tribunal for Investments to the creation of an Appeal Mechanism for reviewing investor-State arbitral awards. Different alternatives for reviewing decisions or awards are discussed, as are different options with regard to the composition of the Tribunal, the nomination of Tribunal Members, the enforcement of decisions, or the applicable law. The paper also examines different ways of applying any such new mechanism to existing investment treaties in the form of an opt-in convention modelled on the Mauritius Convention.

To a certain extent, the different aspects discussed in the CIDS research paper are interlinked and adopting a particular position on the options presented for one aspect will have implications on the policy choices available for other aspects. It is therefore difficult to express a preference for any of the detailed options presented in the paper before further discussions about the main goals and priorities of the overall reform project have taken place. The EU and its Member States have already been engaged in a process of reform of investment policy and in particular of investor-State dispute settlement over the past years. One important element of that reform is the creation of a multilateral mechanism for the settlement of investment disputes which would seek to address some of the concerns which have arisen as regards the existing system. The EU and its Member States are currently engaged in exploratory discussions and reflections on the main goals and priorities of the creation of such a mechanism, both EU-internally and with non-EU countries and we welcome the opportunity to pursue further discussions.

28. Chile

[Original: Spanish]
[Date: 6 March 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

Chile has signed 26 trade agreements, including free trade agreements and economic complementarity agreements, nine of which contain chapters on investment protection with provisions on investor-State dispute settlement. In addition, Chile has concluded 36 agreements on the promotion and reciprocal protection of investments, all of which include provisions on investor-State dispute settlement.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

As noted above, with regard to investor-State dispute settlement, the international investment agreements concluded by Chile provide for an arbitration model (a) in accordance with the Convention on the Settlement of Investment Disputes between States and Nationals of Other States of the International Centre for Settlement of Investment Disputes (ICSID) and the Rules of Procedure for Arbitration Proceedings of ICSID, provided that both the respondent and the Party of the claimant are parties to the ICSID Convention, (b) in accordance with the ICSID Additional Facility Rules, provided that either the respondent or the Party of the claimant is a party to the ICSID Convention, (c) that is established on an ad hoc basis in accordance with the Arbitration Rules of the United Nations Commission on International Trade Law, or (d) in accordance with any other arbitration rules or institution agreed upon by the disputing parties.

Without prejudice to the foregoing, it should be noted that in cases in which it is not possible to reach an amicable settlement or a settlement through consultations within the prescribed time limit, the agreements concluded by Chile on the promotion and reciprocal protection of investments (including with France, Ecuador, the Plurinational State of Bolivia and El Salvador) grant the investor the option of recourse to the competent courts of the contracting party in whose territory the investment was made or to international arbitration.

A third possibility is that recourse must be made to the competent courts of the contracting party in whose territory the investment was made, unless arbitration is commenced by mutual agreement. Specific examples include, but are not limited to:

Article 8, paragraph 2, of the Agreement between the Government of the French Republic and the Government of the Republic of Chile concerning the Mutual Promotion and Reciprocal Protection of Investments, regarding the settlement of disputes between one contracting party and an investor of the other contracting party: "2. If any such dispute cannot be so settled within six months of the time when a claim is made by one of the parties to the dispute, the dispute shall, at the request of the national or the company, be submitted: — Either to the competent tribunal of the Contracting Party in whose territory the investment was made; — Or for arbitration to the International Centre for Settlement of Investment Disputes […]. Once the investor has submitted the dispute to the competent tribunal of the Contracting Party in whose territory the investment was made or for international arbitration, the choice of procedure shall be definitive."

Article 10, paragraph 2, of the Agreement between the Republic of Chile and the Federal Republic of Germany on the Promotion and Reciprocal Protection of Investments: "If a dispute within the meaning of the first paragraph cannot be resolved within six months of the date of the claim by one of the two litigants, it shall be referred at the request of either disputing party to the competent courts of the Contracting Party in whose territory the investment was made. […] 4. The provisions

[of paragraph 2] do not affect the right of the Parties in dispute to mutually agree to submit the dispute to an international arbitral tribunal. (5) In the cases set out in paragraphs 3 and 4 of this Article, unless the disputing parties have agreed otherwise, disputes shall be submitted to arbitration proceedings within the framework of the "Convention on the Settlement of Investment Disputes between States and Nationals of Other States" of 18 March 1965."

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

In the light of the reference made by the international investment agreements concluded by Chile to the provisions of the Convention and the Additional Facility Rules of the International Centre for Settlement of Investment Disputes and the Arbitration Rules of the United Nations Commission on International Trade Law, final awards may be subject to clarification, review and annulment, but not to appeal.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

Four of the international investment agreements concluded by Chile (in the chapters on investment protection in the free trade agreements concluded with the United States of America, Colombia and Peru, and in the Additional Protocol to the Pacific Alliance Framework Agreement) address the creation in the future of a multilateral appellate mechanism, specifically in the provisions on the conduct of arbitration, along the following lines:

Article 10.19, paragraph 10, of the United States-Chile Free Trade Agreement: "If a separate multilateral agreement enters into force as between the Parties that establishes an appellate body for purposes of reviewing awards rendered by tribunals constituted pursuant to international trade or investment agreements to hear investment disputes, the Parties shall strive to reach an agreement that would have such appellate body review awards rendered under Article 10.25 in arbitrations commenced after the appellate body's establishment."

Article 10.20, paragraph 12, of the Additional Protocol to the Pacific Alliance Framework Agreement: "If a separate multilateral agreement enters into force as between the Parties that establishes an appellate body for purposes of reviewing awards rendered by tribunals constituted pursuant to international trade or investment agreements to hear investment disputes, the Parties shall explore the possibility of reaching an agreement that would have such appellate body review awards rendered under Article 10.26 in arbitrations commenced after the multilateral agreement enters into force as between the Parties."

To date, the international investment agreements concluded by Chile do not address the creation in the future of a permanent bilateral or multilateral investment tribunal or court.

Question 5: Provisions on the amendment of the IIAs; provisions safeguarding investors' rights or providing for transitional arrangements in case of modifications or amendments of the IIAs

In accordance with the final provisions of the international investment agreements concluded by Chile, the parties may agree on any modification of the agreements. Specific examples include, but are not limited to:

Article 24.2, paragraphs 1 and 2, of the United States-Chile Free Trade Agreement: "The Parties may agree on any modification of or addition to this Agreement", "When so agreed, and approved in accordance with the applicable legal procedures of each Party, a modification or addition shall constitute an integral part of this Agreement."

Article 22.1 of the Free Trade Agreement between Colombia and Chile, entitled "Amendments, Modifications and Additions": "The Parties may agree on any amendment to, modification of or addition to this Agreement. 2. When so agreed, and approved in accordance with the applicable legal procedures of each Party, an

amendment, modification or addition shall constitute an integral part of this Agreement."

With regard to provisions on transitional arrangements in case of modifications of or amendments to international investment agreements, all of the agreements concluded by Chile on the promotion and reciprocal protection of investments guarantee the continued effectiveness of the provisions for a period of 5, 10, 15 or 20 years in respect of investments made prior to the date of termination of the agreement:

Agreement between the Government of the Republic of Chile and the Government of the Republic of Italy on the Promotion and Protection of Investments. Paragraph 2 of article 15, entitled "Duration and Expiry": "With regard to investments made prior to the expiry dates referred to in the previous paragraph, the provisions of articles 1 to 13 shall remain in force for a further five years from the aforementioned dates."

Agreement between the Government of Malaysia and the Government of the Republic of Chile on the Promotion and Protection of Investments. Paragraph 4 of article 10, entitled "Entry into Force, Duration and Termination": "With respect to investments made or acquired prior to the date of termination of this Agreement, the provisions of this Agreement shall remain in force for a period of ten (10) years from the date of termination."

Agreement between the Government of the Republic of Chile and the Government of the Republic of Poland for the Promotion and Reciprocal Protection of Investments. Paragraph 3 of article 11, entitled "Final Provisions": "With respect to investments made prior to the date on which the notice of termination of this Agreement became effective, its provisions shall remain in force for an additional period of fifteen years from that date."

Agreement between the Government of the French Republic and the Government of the Republic of Chile concerning the Mutual Promotion and Reciprocal Protection of Investments. Article 13: "Upon the expiry of the validity of this Agreement, investments made while it was in force shall continue to be protected by its provisions for an additional period of 20 years."

B/ Legislative and judicial framework

Question 6: Statutory basis or judicial mechanism to recognize and enforce judgments of international courts (as opposed to foreign arbitral awards)

The legal system of Chile does not provide for a special regime for the recognition and enforcement of judgments of international courts. Given that lack of a special regime, it is understood that the general rules for the recognition in Chile of foreign judgments apply; recognition is governed by the provisions of articles 242 to 251 of the Code of Civil Procedure. Those provisions cover the procedure before the Supreme Court of Justice that leads to the recognition and enforceability of a decision provided that it falls within the framework of one of the following models.

The three models contained in the Code of Civil Procedure are as follows:

Firstly, if there is an express provision in a treaty that establishes a particular procedure, the "treaty regime" applies. That regime is established in article 242 of the Code. The provision states that "decisions rendered in a foreign country shall have the force granted to them by the relevant treaties in Chile, and the procedures established by Chilean law shall be followed for their enforcement, insofar as such procedures are not modified by those treaties."

In the absence of special rules in the applicable treaties, the "reciprocity model" applies, as enshrined in articles 243 and 244 of the Code. The articles establish that, in the absence of international conventions and treaties that bind Chile in that area, the country must abide by the principle of both positive and negative reciprocity. Therefore, in cases in which no agreement has been concluded with the State in whose territory decisions for which recognition is sought have been rendered, such decisions "shall have the same legal force as that given to judgments rendered in Chile." Similarly, article 244 of the Code states that if the decision "is rendered in a country

that does not give effect to the judgments of Chilean courts, the decision shall have no legal force in Chile."

Lastly, and with the greatest practical application, is the "model of international regularity", enshrined in article 245 of the Code. When none of the previous models can be applied, article 245 of the Code establishes that in Chile, the decisions of foreign courts will have "the same legal force as if they had been rendered by Chilean courts", provided that they meet the conditions set out in the provision.

Furthermore, according to article 245 of the Code, in Chile, decisions rendered by foreign courts shall have the same legal force as if they had been rendered by Chilean courts provided that they meet the following conditions:

"1a. They contain nothing contrary to the laws of the Republic. However, the procedural laws to which the determination of the judgment has been subject in Chile shall not be taken into consideration;

2a. They are not inconsistent with national jurisdiction;

3a. The party against whom the judgment is invoked has been duly notified of the action. However, that party may prove that, for other reasons, it was unable to present its case;

4a. They are enforceable under the laws of the country in which they have been rendered."

In respect of the procedure, as governed by article 248 of the Code, in short, once the enforcement request has been submitted, the party against whom enforcement of the foreign judgment is sought is notified, and is given a time frame in which to make any relevant comments. A report is also received from the prosecutor of the Supreme Court. Lastly, once the foreign judgment has been recognized by the Supreme Court, it may be enforced with the same value as a judgment rendered in a domestic court.

With regard to the recognition and enforcement of judgments of foreign courts, the procedure depends on the instrument through which the State became a party to the relevant legal body. For example, article 68 (2) of the American Convention on Human Rights states: "That part of a judgment that stipulates compensatory damages may be executed in the country concerned in accordance with domestic procedure governing the execution of judgments against the state." That article grants victims or their families recourse to domestic law for the enforcement of the judgment through the procedure for enforcing judgments against the State, in accordance with the domestic law of the respondent State.

Yes, domestic courts have been requested to recognize and enforce judgments of international courts. The judgment of the Inter-American Court of Human Rights in the case of Atala Riffo y Niñas vs. Chile is available at http://corteidh.or.cr/docs/casos/articulos/seriec_239_esp.pdf.

Question 7: Legislative provisions on appeal (as opposed to annulment) by State courts or arbitral tribunals against arbitral awards

No. Article 34 of the International Commercial Arbitration Act of 2004 provides for an application for setting aside an award as the exclusive recourse against an arbitral award.

Question 8: Any comments regarding the possible options for reform of the investor-State arbitration regime discussed in the CIDS research paper

At the moment, Chile does not wish to make any comments regarding the CIDS research paper.

29. France

[Original: French]
[Date: 23 January 2017]

A/ International Investment Agreements (IIAs)

Question 1: Information on IIAs and their provisions on the settlement of investor-State disputes

France is a party to 97 bilateral treaties on the promotion and protection of investments that are currently in force. Four treaties are undergoing an approval process that is nearing completion. Three other treaties have been unilaterally terminated, but remain applicable by virtue of their sunset clauses. With the exception of several treaties that, for the treatment of investor-State dispute settlement, refer to the contracts specifically concluded for the purposes of the investments covered by their provisions, those agreements typically contain a provision on the settlement of disputes that may arise between an investor and the State receiving the investment. The Energy Charter Treaty, to which France is a party, also includes provisions on investment protection (part III) and an investor-State dispute settlement mechanism (part V, article 26).

Since the entry into force, on 1 December 2009, of the Treaty of Lisbon amending the Treaty on European Union and the Treaty establishing the European Community, foreign direct investment has formed part of the commercial policy of the European Union, in accordance with article 207 of the Treaty on the Functioning of the European Union, which permits the European Union to negotiate, within the framework of its trade agreements, provisions on investment protection and investor-State dispute settlement. On 30 October 2016, the European Union and its member States signed the Comprehensive Economic and Trade Agreement (CETA) with Canada, which contains provisions on investment (chapter 8) and investor-State dispute settlement. The European Union has also negotiated a free trade agreement with Viet Nam, chapter 8 of which, entitled "Trade in Services, Investment and E-Commerce", contains a sub-chapter II on investment and investor-State dispute settlement.

It should be noted that under Regulation No. 1219/2012 of 12 December 2012 establishing transitional arrangements for bilateral investment agreements between member States and third countries, existing bilateral investment agreements remain in force provided that member States notify the European Commission of those agreements, as has been the case with regard to the aforementioned agreements concluded by France. Furthermore, member States of the European Union still have the option of concluding bilateral investment agreements under certain conditions, provided that those agreements are duly authorized by the European Commission.

Question 2: Provisions for permanent courts or tribunals (as opposed to investor-State arbitration) in IIAs

The international investment agreements to which France is currently a party do not provide for permanent courts or tribunals for investor-State dispute settlement. However, the recent agreements negotiated by the European Union and its member States with Canada and Viet Nam establish a permanent jurisdictional mechanism for the settlement of investor-State disputes which differs significantly from the ad hoc arbitration procedures currently used to resolve such disputes.

As previously indicated, the member States of the European Union are signatories, alongside the European Union, to the CETA with Canada. Chapter 8, section F, of the CETA establishes a tribunal with 15 members to resolve disputes arising out of alleged breaches of section C (non-discriminatory treatment with respect to the expansion, conduct, operation, management, maintenance, use, enjoyment and sale or disposal of a covered investment) and section D (investment protection) of the Agreement (article 8.18). Article 8.27 of the CETA relates to the constitution of the tribunal responsible for settling the aforementioned claims. To that end, the CETA Joint

Committee is responsible for appointing 15 tribunal members, five of whom are nationals of a member State of the European Union, five of whom are nationals of Canada and five of whom are nationals of third countries. The Agreement provides that those members shall possess the qualifications required in their respective countries for appointment to judicial office, or be jurists of recognized competence. They are appointed for a five-year term, renewable once. The full text of the CETA is available at http://data.consilium.europa.eu/doc/document/ST-10973-2016-INIT/en/pdf (pages 107-146 are relevant to this questionnaire).

Sub-chapter II, section 3, of chapter 8 of the agreement negotiated with Viet Nam, which is currently undergoing legal fine-tuning, contains a similar mechanism to that of the CETA. In this case, article 12 of that sub-chapter of the Agreement provides for the establishment of a tribunal with nine members, appointed jointly by the European Union and Viet Nam, to rule on alleged breaches of the provisions on investment protection. Competence criteria similar to those established in the CETA are also set out therein. The non-final text of the Agreement is available at http://trade.ec.europa.eu/doclib/docs/2016/february/tradoc_154210.pdf (pages 28 to 66).

In view of the fact that neither agreement is yet in force, the permanent tribunals whose establishment they provide for have not yet been constituted and, therefore, have not yet rendered any decisions.

Question 3: Provisions on appeal to investor-State arbitral awards in IIAs

The international investment agreements to which France is currently a party do not provide for the possibility of appeal against arbitral awards delivered pursuant to their clauses on investor-State dispute settlement. However, the agreements negotiated by the European Union and its member States with Canada (article 8.28) and Viet Nam (sub-chapter II, article 13) establish a mechanism for appeal against first-instance awards rendered by the permanent tribunals whose establishment the agreements provide for.

Article 8.28 of the CETA provides for the establishment of an appellate tribunal to review awards rendered by the aforementioned CETA tribunal. The appellate tribunal may uphold, reverse or modify awards on three bases: (a) errors in the application or interpretation of the law; (b) manifest errors in the appreciation of the facts, including the appreciation of relevant domestic law; and (c) the grounds for annulment set out in article 52 (1) (a)-(e) of the ICSID Convention, in so far as they are not covered by paragraphs (a) and (b) above.

Article 13, under sub-chapter II, of chapter 8 of the Agreement between the European Union and Viet Nam also provides for a permanent appeal tribunal and establishes grounds for appeal similar to those under the CETA.

Question 4: Provisions in IIAs on creation in the future of (a) a bilateral or multilateral appellate mechanism for investor-State arbitral awards; and/or (b) a bilateral or multilateral permanent investment tribunal or court

The international investment agreements to which France is currently a party do not specifically provide for the possibility of establishing, on a bilateral or multilateral basis, an appellate mechanism for awards or a permanent investment court.

However, the agreements negotiated by the European Union and its member States with Canada and Viet Nam refer to those possibilities as follows:

(a) Appellate mechanism
