60. With respect to subsection A.6.(c) (asset description), it was agreed that: (a) the discussion of the description of serial number assets should be separated from the discussion of a serial number as a search criterion; (b) where the indication of a serial number in a notice was optional, an error should not render the registered notice ineffective, unless it would seriously mislead a reasonable searcher; (c) where such indication was mandatory, an error should not render a registered notice ineffective, unless the notice would not be retrieved by a search with the correct serial number; (d) the impact of an incorrect statement in the registered notice of the period of effectiveness of registration should be discussed to clarify, inter alia, that: (i) if a shorter period than intended was indicated in the registered notice, upon its expiry, its effectiveness would lapse and could be re-established with the registration of a new notice but only as of the time of the new registration; and (ii) if a longer period than intended was mentioned in the registered notice, third parties would not be prejudiced as they would have been alerted to the fact that security right might exist; and (e) the discussion of the maximum monetary amount and the impact of error should clarify that: (i) if the maximum amount indicated in the notice was, as a result of a mistake, lower than the maximum amount indicated in the security agreement, the secured creditor could enforce its security right up to the maximum amount and claim any balance as an unsecured creditor (in accordance with law other than secured transactions law), if there were other competing claimants; and (ii) if there were no other competing claimants, the secured creditor could enforce its security right up to the amount indicated in the security agreement as, based on that agreement, the security right would be effective between the parties.

61. With respect to recommendations 21 to 27 (see also para. 77 below), it was agreed that: (a) in recommendation 22, subparagraph (b), it should be clarified that each component of the name should be entered in the field designated for the respective component; (b) in recommendations 26 and 27, the reference to the initial or the amendment notice should be reviewed, as recommendation 21, subparagraph (a), sufficiently clarified that recommendations 21 to 27 applied to the initial notice and recommendation 28, subparagraph (a) (ii) and (iii), properly

adjusted, could clarify that the recommendations that applied to entering information in an initial notice would also apply to entering information in an amendment notice; and (c) recommendation 27, subparagraph (e), should be retained within square brackets and with appropriate adjustments to provide guidance on how third parties that relied on an incorrect statement in the registered notice of the period of effectiveness or the maximum amount for which the security rights could be enforced would be protected.

62. Subject to the above-mentioned changes (see paras. 54-61 above), the Working Group adopted the substance of chapter IV (registration information) of the draft Registry Guide.

G. Amendment and cancellation information (A/CN.9/WG.VI/WP.52/Add.4, paras. 1-30)

63. With respect to subsection A.1.(a) (general), it was agreed that: (a) the terminology used should be adjusted to avoid implying that an amendment could result in a change (as opposed to the addition) of information in the registry record; (b) the question of whether an amendment would require the authorization by the grantor should be clarified by setting out examples (rather than setting a general test of adverse economic impact), such as adding encumbered assets or increasing the maximum amount for which the security right could be enforced; (c) situations in which the grantor had authorized an amendment should be distinguished from situations in which the grantor had not given such authorization; (d) emphasis should be given to multiple amendments with a single notice; and (e) the focus should be on guidance to registrants, while the text that provided guidance to the registry should be moved to the appropriate place in the draft Registry Guide.

64. With respect to subsection A.1.(b) (change of the grantor identifier), it was agreed that: (a) reference should be made to permanent unique numbers (rather than identity card numbers) and to the fact that their use as a supplementary identifier could not address the problem that arose from the change in the grantor identifier as the name would still be the main grantor identifier; (b) it was the function of the registry to preserve the old grantor identifier even if a new identifier was entered; (c) the impact of the old and the new grantor identifier on the third-party effectiveness and priority of the security right to which the notice related should be explained; and (d) the question whether a search would be possible against both the new and the old identifier, and if so, what would be the consequence for third parties that relied on a negative search result should be elaborated on.

65. With respect to subsection A.1.(c) (transfer of an encumbered asset), it was agreed that: (a) the different approaches taken by States with respect to the effectiveness of the registration upon the transfer of the encumbered asset should be discussed in a more streamlined manner; (b) even in States that did not require an amendment notice, the registrant could make such an amendment if it wished to; and (c) an amendment did not involve the deletion of information from the registry record.

66. With respect to subsection A.1.(e) (assignment of the secured obligation and transfer of the security right), it was agreed that: (a) reference should be made to article 10 of the United Nations Convention on the Assignment of Receivables in

International Trade; (b) the new secured creditor would not have to provide to the registry evidence of consent by the original secured creditor to register an amendment notice, and the matter would be left to the parties in their agreement; (c) the registry record would not need to disclose whether an amendment notice was registered by the original or the new secured creditor; and (d) the secured creditor was under no obligation to disclose the identity of the assignee to the grantor upon request.

67. With respect to subsections A.1.(f) (addition of newly encumbered assets) and (g) (deletion of encumbered assets), it was agreed that the discussion of instances where the grantor had partially satisfied the secured obligation should be merged with the discussion of the deletion of encumbered assets.

68. With respect to subsection A.1.(h) (change of description of encumbered assets), it was agreed that: (a) where the description of the encumbered assets in the registered notice was correct but no longer corresponded to the encumbered assets due to changes in their characteristics, the registration continued to be effective against third parties as long as it reasonably allowed their identification; (b) where the description of the encumbered assets in the registered notice was erroneous and the amendment notice corrected the errors, third-party effectiveness would be achieved as of the time the amendment notice was registered.

69. With respect to subsection A.1.(i) (extension of the period of effectiveness of a registration), it was agreed that: (a) the registration of an amendment notice to extend that period was not an obligation of, but an option for, the registrant; (b) the extension of the period of effectiveness before it expired was an amendment and not a new registration; (c) cross-references should be made to the relevant part of the draft Registry Guide providing options with regard to the period of effectiveness; and (d) the possibility of setting no limit to the period of effectiveness should not be mentioned as it was not an approach recommended in the *Secured Transactions Guide*.

70. With respect to subsection A.1.(j) (global amendment), it was agreed that the discussion should be shortened and explain how a global amendment was made with a single notice.

71. With respect to subsection A.2 (voluntary cancellation), it was agreed that: (a) the registrant should be able to cancel a notice at any time; (b) the grantor identifier was not required for a cancellation notice in order to facilitate the cancellation of registered notices; and (c) all relevant issues with respect to a cancellation notice submitted by one of the secured creditors in the registered notice should be discussed, including: (i) what kind of effect such a notice would have on the rights of other secured creditors and on third parties that relied on the non-existence of such information in the publicly accessible registry record; (ii) whether authorization by other secured creditors would be required and if so, the mechanism to obtain such authorization; (iii) whether the registry should be designed to reject such a notice and to request that it be submitted as an amendment notice; and (iv) whether the registry should be designed to treat such a notice as an amendment notice.

72. With respect to subsection A.3 (correction of erroneous lapse or cancellation), it was agreed that the commentary should explain that: (a) regardless of whether the lapse or cancellation of the registered notice was erroneous or not, a new initial

notice was required to correct the lapse or cancellation and re-establish third-party effectiveness; and (b) the matter might be discussed together with voluntary cancellation under a revised heading (“effect of lapse or cancellation”).

73. With respect to recommendations 28 to 31, it was agreed that: (a) at the end of recommendation 28, subparagraphs (a)(ii) and (iii), the words “in an initial notice” should be added; (b) recommendation 28, subparagraph (b), should be retained outside square brackets and the commentary should explain that in States that required the disclosure of the transferee identifier in an amendment notice, the recommendation would reflect a requirement, in other States it would indicate an option; (c) in recommendation 28, subparagraph (d), only option B should be retained and the commentary should discuss both options to better explain the recommended option; (d) recommendation 29 should be revised to provide two distinct options; (e) at the end of recommendation 30, the words “of the registered notice to which the cancellation relates” should be added and the formulation of the recommendation should be aligned with the formulation of other recommendations; (f) with respect to recommendation 31, subparagraph (a)(iii), the difference between the terms “inaccurate” and “incorrect” should be explained in the commentary by way of examples; (g) in recommendation 31, subparagraph (c), the words “to the extent appropriate” should be reviewed and perhaps replaced by words along the lines “as the case may be”; and (h) the bracketed text in recommendation 31, subparagraph (g), should be retained outside square brackets.

74. Subject to the above-mentioned changes (see paras. 63-73 above), the Working Group adopted the substance of chapter V (amendment and cancellation information) of the draft Registry Guide.

H. Searches (A/CN.9/WG.VI/WP.52/Add.4, paras. 31-41)

75. With respect to subsection A.1 (search criteria), it was agreed that: (a) commentary on the access to search services and on search results should be removed as those matters were addressed elsewhere in the draft Registry Guide; and (b) the commentary should discuss the use of a serial number as an optional search criterion.

76. With respect to subsection A.2 (search result), it was agreed that: (a) the discussion should be streamlined and carefully illustrate registry systems that disclosed “close matches”; (b) clarify the difference between the terms “match” and “exact match”; and (c) explain the reasons why no reference to currency dates was needed.

77. With respect to recommendations 32 and 33, it was agreed that: (a) only the grantor name should be a search criterion and thus the reference to additional grantor information in recommendations 22, 23 and 24 could be moved to recommendation 21, subparagraph (a)(i) (see also para. 61 above); (b) in recommendation 33, subparagraph (b), explicit reference should be made to close matches if a State chose to introduce any exceptions to the rule of “exact matches”.

78. Subject to the above-mentioned changes (see paras. 75-77 above), the Working Group adopted the substance of chapter VI (searches) of the draft Registry Guide.

I. Registration and search fees (A/CN.9/WG.VI/WP.52/Add.4, paras. 42-48)

79. After discussion, the Working Group adopted the substance of chapter VII (registration and search fees) unchanged.

J. Examples of registry forms (A/CN.9/WG.VI/WP.52/Add.6)

80. The Working Group next considered examples of registry forms and agreed that a number of changes would need to be made to reflect decisions taken by the Working Group at the present session and ensure the internal consistency of the examples of the registry forms. It was also agreed that the commentary should emphasize the importance to international trade of coordination among States to ensure the harmonization of secured transactions laws and regulations, as well as the standardization of registry forms.

V. Future work

81. The Working Group noted that the twenty-third session of the Working Group was scheduled to take place in New York from 8 to 12 April 2013.

**B. Note by the Secretariat on a draft Technical Legislative Guide on the
Implementation of a Security Rights Registry, submitted to the
Working Group on Security Interests at its twenty-second session**

Preface

At its forty-second session (Vienna, 29 June-17 July 2009), the Commission noted with interest the future work topics discussed by Working Group VI at its fourteenth and fifteenth sessions (A/CN.9/667, para. 141, and A/CN.9/670, paras. 123-126). At that session, the Commission agreed that the Secretariat could hold an international colloquium early in 2010 to obtain the views and advice of experts with regard to possible future work in the area of security interests.¹ In accordance with that decision,² the Secretariat organized an international colloquium on secured transactions (Vienna, 1-3 March 2010). At the colloquium several topics were discussed, including registration of security rights in movable assets, security rights in non-intermediated securities, a model law on secured transactions, a contractual guide on secured transactions, intellectual property licensing and implementation of UNCITRAL texts on secured transactions. The

¹ *Official Records of the General Assembly, Sixty-fourth Session, Supplement No. 17 (A/64/17)*, paras. 313-320.

² *Ibid.*

colloquium was attended by experts from governments, international organizations and the private sector.³

At its forty-third session (New York, 21 June-9 July 2010), the Commission considered a note by the Secretariat on possible future work in the area of security interests (A/CN.9/702 and Add.1). The note discussed all the items discussed at the colloquium. The Commission agreed that all issues were interesting and should be retained on its future work agenda for consideration at a future session on the basis of notes to be prepared by the Secretariat within the limits of existing resources. However, in view of the limited resources available to it, the Commission agreed that priority should be given to registration of security rights in movable assets.⁴

In that connection, it was widely felt that a text on registration of security rights in movable assets would usefully supplement the Commission's work on secured transactions and provide urgently needed guidance to States with respect to the establishment and operation of security rights registries. It was stated that secured transactions law reform could not be effectively implemented without the establishment of an efficient publicly accessible security rights registry. It was also emphasized that the *UNCITRAL Legislative Guide on Secured Transactions* (the "*Secured Transactions Guide*") did not address in sufficient detail the various legal, administrative, infrastructural and operational questions that needed to be resolved to ensure the successful implementation of a registry.⁵

The Commission also agreed that, while the specific form and structure of the text could be left to the Working Group, the text could: (a) include principles, guidelines, commentary, recommendations and model regulations; and (b) draw on the *Secured Transactions Guide*, texts prepared by other organizations and national law regimes that have introduced security rights registries similar to the registry recommended in the *Secured Transactions Guide*. After discussion, the Commission decided that the Working Group should be entrusted with the preparation of a text on registration of security rights in movable assets.⁶

At its eighteenth session (Vienna, 5-10 November 2010), the Working Group considered a note by the Secretariat entitled "Registration of security rights in movable assets" (A/CN.9/WG.VI/WP.44 and Add.1 and 2). At the outset, the Working Group expressed its broad support for a text on the registration of security rights in movable assets, noting that empirical evidence clearly demonstrated that the efficacy of a secured transactions law depended on an effective registration system (A/CN.9/714, para. 12). As to the specific form and structure of the text to be prepared, the Working Group adopted the working assumption that the text would be a guide on the implementation and operation of a registry of security rights in movable assets that could include principles, guidelines, commentary and possibly model regulations. The Working Group also agreed that the text of the proposed registry guide should be consistent with the type of secured transactions legal regime contemplated by the *Secured Transactions Guide*, while also taking into account the diverse approaches taken by modern national and international registry regimes. It was also observed that, in line with the *Secured Transactions Guide*

³ For the colloquium papers, see www.uncitral.org/uncitral/en/commission/colloquia/3rdint.html.

⁴ Ibid., *Sixty-fifth Session, Supplement No. 17* (A/65/17), paras. 264 and 273.

⁵ Ibid., para. 265.

⁶ Ibid., paras. 266-267.

(see recommendation 54, subpara. (j)), the proposed registry guide should take into account the need to accommodate a hybrid electronic/paper system in which parties would have the option of submitting registration and search inquiries either electronically or in paper form (A/CN.9/714, para. 13). The Secretariat was asked to prepare a draft of the proposed registry guide based on the discussions and conclusions of the Working Group (A/CN.9/714, para. 11).

At its nineteenth session (New York, 11-15 April 2011), the Working Group considered notes by the Secretariat entitled “Draft Security Rights Registry Guide” (A/CN.9/WG.VI/WP.46 and Add.1 and 2) and “Draft Model Regulations” (A/CN.9/WG.VI/WP.46/Add.3). At the outset, the Working Group considered the form and content of the text to be prepared. One view was that a stand-alone guide should be prepared that would include an educational part introducing the secured transactions law recommended in the *Secured Transactions Guide* and a practical part that would consist of model registration regulations and commentary thereon (see A/CN.9/719, para. 13). Another view was that emphasis should be placed on model registration regulations and a commentary thereon, which would provide States that had enacted the secured transactions law recommended in the *Secured Transactions Guide* with practical advice as to the issues to be addressed in the context of the establishment and operation of a general security rights registry (see A/CN.9/719, para. 14). At that session, differing views were also expressed as to whether the regulations should be formulated as model regulations or as recommendations (A/CN.9/719, para. 46). The Working Group requested the Secretariat to prepare a revised version reflecting the deliberations and decisions of the Working Group (A/CN.9/714, para. 12).

At its forty-fourth session (Vienna, 27 June-8 July 2011), the Commission considered the reports of the eighteenth and nineteenth sessions of the Working Group (A/CN.9/714 and A/CN.9/719, respectively). At that session, the significance of the work undertaken by Working Group VI was emphasized in particular in view of efforts currently undertaken by several States with a view to establishing a general security rights registry and the significant beneficial impact the operation of such a registry had on the availability and the cost of credit. With respect to the form and content of the text to be prepared, it was stated that, following the approach followed with respect to the *Secured Transactions Guide*, the text should be formulated in the form of a guide with commentary and recommendations, rather than as a text with model regulations and commentary thereon. In that connection, it was noted that the next version of the text before the Working Group would be formulated in a way that would leave the matter open until the Working Group had made a decision. After discussion, the Commission agreed that the mandate of the Working Group, leaving the decision on the form and content of the text to be prepared to the Working Group, did not need to be modified, and that, in any case, a final decision would be made by the Commission once the Working Group had completed its work and submitted the text to the Commission.⁷

At its twentieth session (Vienna, 12-16 December 2011), the Working Group continued its work based on a note by the Secretariat entitled “Draft Security Rights Registry Guide” (A/CN.9/WG.VI/WP.48 and Add.1-3). At that session, the Working Group agreed that the text should take the form of a guide (the “draft Registry

⁷ Ibid., *Sixty-sixth Session, Supplement No. 17* (A/66/17), para. 233.

Guide”) with commentary and recommendations along the lines of the *Secured Transactions Guide*. In addition, the Working Group agreed that, where the draft Registry Guide offered options, examples of model regulations could be included in an annex to the draft Registry Guide (A/CN.9/740, para. 18). As to the presentation of the text, it was agreed that the draft Registry Guide should be presented as a separate, stand-alone, comprehensive text that would be consistent with the *Secured Transactions Guide*, and be tentatively entitled “Technical Legislative Guide on the Implementation of a Security Rights Registry” (A/CN.9/740, para. 30).

At its twenty-first session (New York, 14-18 May 2012), the Working Group considered a note by the Secretariat entitled “Draft Technical Legislative Guide on the Implementation of a Security Rights Registry: Annex I. Terminology and recommendations” (A/CN.9/WG.VI/WP.50 and Add.1-2). At that session, the Working Group approved the substance of the terminology and the recommendations of the draft Registry Guide (A/CN.9/743, para. 21). In addition, the Working Group agreed that the draft Registry Guide should be finalized and submitted to the Commission for adoption at its forty-sixth session, in 2013 (A/CN.9/743, para. 73).

At its forty-fifth session (New York, 25 June-6 July 2012), the Commission considered the reports of the twentieth and twenty-first sessions of the Working Group (A/CN.9/740 and A/CN.9/743, respectively). At that session, the Commission expressed its appreciation to the Working Group and requested the Working Group to proceed with its work expeditiously and to complete it so that the draft Registry Guide would be submitted to the Commission for final approval and adoption at its forty-sixth session, in 2013.⁸

[Note to the Working Group: The Working Group may wish to note that the preface will be updated after each Working Group meeting and completed after the Commission adopts the draft Registry Guide at its forty-sixth session, in 2013.]

⁸ Ibid., *Sixty-seventh Session, Supplement No. 17* (A/67/17), para. 99.

Introduction

A. Purpose of the draft Registry Guide and its relationship with the *Secured Transactions Guide*

1. The *UNCITRAL Legislative Guide on Secured Transactions* (the “*Secured Transactions Guide*”) deals with the full range of issues that should be addressed in a modern secured transactions law (as supplemented with respect to security rights in intellectual property by the *Supplement on Security Rights in Intellectual Property*; the “*Supplement*”). The establishment of a publicly accessible registry in which information about the potential existence of a security right in movable assets may be registered is an essential feature of the *Secured Transactions Guide* and of modern law reform initiatives in this area generally. Chapter IV of the *Secured Transactions Guide* contains commentary and recommendations on many aspects of a security rights registry. In addition, chapters III and V of the *Secured Transactions Guide* address the related issues of third-party effectiveness and priority of a security right.

2. However, the *Secured Transactions Guide* does not address in every detail the myriad of legal, technological, administrative and operational issues involved in developing and operating an effective and efficient security rights registry. This is in line with the typical legislative drafting approach, under which the detailed rules applicable to the establishment and the operation of the registry, as well as the registration and search process, are left to be dealt with in subordinate regulations, ministerial guidelines or the like. Thus, the draft Technical Legislative Guide on the Implementation of a Security Rights Registry (the “draft Registry Guide”) seeks to implement the *Secured Transactions Guide* by addressing these issues in greater detail.

3. It should be emphasized at the outset that the recommendations of the draft Registry Guide are intended to be implemented by States that have enacted a secured transactions law that is substantially in conformity with the recommendations of the *Secured Transactions Guide*. It follows that, in order to understand the legal framework in which the registry is intended to function, a user of the draft Registry Guide should have a basic understanding of the secured transactions law contemplated by the *Secured Transactions Guide*. Thus, section E of the Introduction to the draft Registry Guide offers a concise summary of the secured transactions regime recommended by the *Secured Transactions Guide*. Other chapters of the draft Registry Guide include additional guidance about matters addressed in the secured transactions law recommended by the *Secured Transactions Guide*. For a thorough understanding, however, the draft Registry Guide should be read together with the *Secured Transactions Guide*.

4. The experience of States that have instituted the kind of general security rights registry contemplated by the *Secured Transactions Guide* demonstrates how advances in information technology can vastly improve the operational efficiency of such a registry. Particularly in relation to the technical aspects of registry design and operation, the draft Registry Guide draws on these national precedents. In addition, the draft Registry Guide has benefitted from international sources, including the following:

(a) Law and Policy Reform at the Asian Development Bank — A Guide to Movables Registries (2002);

(b) Publicity of Security Rights: Guiding Principles for the Development of a Charges Registry, European Bank for Reconstruction and Development (EBRD) (2004);

(c) Publicity of Security Rights: Setting Standards for Charges Registries, EBRD (2005);

(d) Principles, Definitions and Model Rules of a European Private Law, Draft Common Frame of Reference (DCFR), volume 6, book IX (Proprietary security in movable assets), chapter 3 (Effectiveness as Against Third Parties), section 3 (Registration), (2010), prepared by the Study Group on a European Civil Code and the Research Group on EC Private Law (Acquis Group);

(e) Model Registry Regulations under the Model Inter-American Law on Secured Transactions, Organization of American States (OAS) (2009);

(f) Secured Transactions Systems and Collateral Registries, The International Finance Corporation (World Bank Group) (2010); and

(g) Convention on International Interests in Mobile Equipment (Cape Town, 2001) and its Protocols, providing for the establishment of international registries (which, although they are asset-based and cover other transactions in addition to secured transactions, are notice-based, with registration resulting in third-party effectiveness and priority).

5. The national, regional and international sources referred to above are largely consistent with, but do not always fully accord with, the recommendations of the *Secured Transactions Guide*. Where appropriate, the draft Registry Guide explains the policy rationale for the approach recommended in the *Secured Transactions Guide* relative to other possible approaches.

6. The draft Registry Guide is addressed to all those who are interested or actively involved in the design and implementation of a security rights registry, as well as to those who may be affected by or interested in its establishment and operation, including:

(a) Policymakers implementing the recommendations of the *Secured Transactions Guide*, especially in relation to the establishment of a security rights registry;

(b) Registry system designers, including technical staff charged with the preparation of design specifications and with fulfilling the hardware and software requirements for the registry;

(c) Registry administrators and staff;

(d) Registry clientele, including potential secured creditors, credit reporting agencies, other creditors of the grantor of a security right and the grantor's insolvency representative, as well as all other persons whose rights may be affected by a security right, such as a potential buyer of an encumbered asset;

(e) The general legal community (including judges, arbitrators and practising lawyers); and

(f) All those involved in secured transactions law reform and the provision of technical assistance, such as the World Bank Group, the EBRD, the ADB and the Inter-American Development Bank.

7. Not all of these potential readers will be versed in the intricacies of secured transactions law or have legal training. Accordingly, the draft Registry Guide is written in "plain language" style employing "reader-friendly" aids.

8. The draft Registry Guide uses neutral generic legal terminology that is consistent with the terminology used in the *Secured Transactions Guide*. Consequently, it can be adapted readily to the diverse legal traditions and drafting styles of different States. The draft Registry Guide is also formulated in a flexible fashion enabling it to be implemented in accordance with local drafting conventions regarding which types of rule must be incorporated in principal legislation and which may be left to subordinate regulations, or ministerial or other administrative guidelines.

B. Terminology and interpretation

9. The terminology and interpretation section of the *Secured Transactions Guide* (see Introduction, sect. B, para. 20), applies also to the draft Registry Guide. The terminology of the draft Registry Guide is also consistent with the refinement of these terms and the explanations of additional terms in the various chapters of the *Secured Transactions Guide*.

10. For example, when the draft Registry Guide uses the term "future asset", it means, as explained in the *Secured Transactions Guide*, assets that come into existence or are acquired by the grantor after the time the security agreement is entered into (see *Secured Transactions Guide*, chap. I, para. 8; chap. II, para. 51; and chap. V, para. 151).

11. However, the draft Registry Guide refines certain of the terminological and interpretation provisions of the *Secured Transactions Guide* and also introduces additional terms as follows:

(a) Address

"Address" means: (i) a physical address, including a street address and number, city, postal code and State; (ii) a post office box number, city, postal code and State; (iii) an electronic address; or (iv) another address that is equivalent to (i), (ii) or (iii).

(b) Amendment

“Amendment” means the act of adding, deleting or modifying information contained in a registered notice, [by the one and only registrant or, if there is more than one registrant, some of them,] as well as the effect thereof.

[Note to the Working Group: The Working Group may wish to consider the text within square brackets in the terms “amendment” and “cancellation”), which, as explained in para. 12 below, is intended to distinguish between an amendment and a cancellation in cases in which there is more than one registrant.]

12. Examples of amendments include the following: (a) the extension or reduction of the period of effectiveness of a notice (if applicable); (b) the addition or deletion or modification of the identifier or address of a secured creditor or grantor; (c) the addition or deletion of encumbered assets; and (d) the modification of the maximum monetary amount for which the security right may be enforced (if applicable) (for a discussion of amendments, see A/CN.9/WG.VI/WP.52/Add.2, paras. 47-50 and A/CN.9/WG.VI/WP.52/Add.4, paras. 1-22). If information is deleted by one of several registrants, it is an amendment. Only the deletion of all information by all registrants amounts to a cancellation (see the term “cancellation” below).

(c) “Cancellation” means the act of deleting all information contained in a registered notice [by the one-and only registrant or, if there is more than one registrant, all of them].

(d) Grantor

“Grantor” means the person identified in the notice as the grantor.

(e) Law

“Law” means the law governing security rights in movable assets.

13. “Law governing security rights in movable assets” means a law based on the recommendations of the *Secured Transactions Guide*. This is because the recommendations of the draft Registry Guide may only be implemented by States that have enacted or are prepared to enact a secured transactions law in substantive conformity with the recommendations of the *Secured Transactions Guide*. For example, in order to implement the recommendations of the draft Registry Guide, a State would need to have in place or be prepared to enact a secured transactions law that provides for notice (rather than document) registration and that treats registration as a method of making a security right effective against third parties (rather than also for creating a security right).

(f) Notice

“Notice” means a communication in writing (paper or electronic) and includes an initial notice, an amendment notice or a cancellation notice.

14. The *Secured Transactions Guide* uses the term “notice” in the general sense of a communication (that is, in a broader sense than the draft Registry Guide). Thus, in the *Secured Transactions Guide* the term covers not only a form (or screen) used to transmit information to the registry (see *Secured Transactions Guide*, Introduction, B, “notice”, and recs. 54, subpara. (b), and 57), but also other communications, such as the non-registry-related notices required to be sent by secured creditors in the context of enforcing their security rights (see *Secured*

Transactions Guide, recs. 149-151). Chapter IV of the *Secured Transactions Guide* supplements the meaning of the term “notice” in the registration context by referring to: (a) “information contained in a notice” or “the content of the notice” (see *Secured Transactions Guide*, recs. 54, subpara. (d), and 57); and (b) the “registry record” in the sense of information contained in all notices that have been accepted by the registry and entered into the registry database that is available to the public (see *Secured Transactions Guide*, rec. 70). The draft Registry Guide uses the term “notice” only in the narrower sense, emphasizing more the information contained in the paper or electronic communication to the registry rather than the medium of communication. Thus, the word “notice” in the draft Registry Guide should be understood in that sense.

(g) Registrant

“Registrant” means the person identified in the notice as the secured creditor.

15. The registrant may be the secured creditor or its representative (see rec. 57, subpara. (a)).

(h) Registrar

“Registrar” means the person designated pursuant to the law and the regulation to supervise and administer the operation of the registry.

(i) Registration

“Registration” means the entry of information contained in a notice into the registry database.

(j) Registration number

“Registration number” means a unique alphanumeric identifier assigned to an initial registered notice by the registry and permanently associated with that notice and any related subsequent amendment or cancellation notice.

(k) Registry record

“Registry record” means the information in all registered notices that is stored in the registry database and includes both the information that is publicly available to searchers and the information in cancelled notices that is in the archives.

16. The term “registry record” includes all registered notices and not just the notices relating to a specified grantor. For this reason, to refer to one notice in the registry record, reference is made to a “registered notice”.

(l) Regulation

“Regulation” is the body of rules implementing the provisions of the law with regard to the registry.

[Note to the Working Group: The Working Group may wish to consider whether, if the secured transactions law is enacted in two or more statutes (e.g., one that deals with all the substantive rules, another that deals with conflict-of-laws rules, and another that establishes the registry), there may be rules relating to registration that are enacted as subordinate legislation (e.g., a regulation that is a separate enactment) in respect of all these statutes. If so, the scope of the term “regulation” may be slightly expanded beyond a text that establishes the registry

and explained in the commentary. The Working Group may also wish to consider whether, because of its importance, the term “designated field” should be explained, for example, along the following lines: “‘designated field’ means a specific place on the notice designated by the registry for entering specified information.”]

C. Key objectives and fundamental policies of an efficient registry

17. The key objectives and fundamental policies of an effective and efficient secured transactions regime discussed in the *Secured Transactions Guide* (see Introduction, section D) are relevant for the establishment and operation of an efficient security rights registry. Particularly relevant in this respect are: (a) the key objective of enhancing certainty and transparency by providing for registration of a notice in a general security rights registry (see *Secured Transactions Guide*, Introduction, para. 54, and rec. 1, subpara. (f)); and (b) the fundamental policy of adopting a functional, integrated and comprehensive approach to secured transactions and to establishing a general security rights registry (see *Secured Transactions Guide*, Introduction, paras. 62 and 66).

18. Consistently with the key objectives and fundamental policies of the *Secured Transactions Guide*, the draft Registry Guide is informed by the following overarching principles:

(a) Legal efficiency: the legal and operational guidelines governing registry services, including registration and searching, should be simple, clear and certain;

(b) Operational efficiency: registry services, including registration and searching, should be designed so as to be as fast and inexpensive as possible, while also ensuring the security and searchability of the information entered in the registry record; and

(c) A balanced approach to the interests of all registry users: the legal and operational framework of the registry should be designed to fairly balance the interests of all persons who may have an interest in the extent and scope of information that is entered in a security rights registry, as well as in the availability of that information, including potential grantors and secured creditors, the grantor’s other creditors and insolvency representative, and other potential competing claimants, such as potential buyers of assets encumbered by a security right.

D. Transitional considerations

19. The *Secured Transactions Guide* contains a detailed discussion of the various issues that States implementing its recommendations may wish to consider (see *Secured Transactions Guide*, Introduction, sect. E). These issues include harmonization with prior law, legislative method and drafting technique, as well as issues relating to post-enactment acculturation.

20. Harmonization with prior law is important as a law based on the recommendations of the *Secured Transactions Guide* may well constitute a significant departure from prior law. The *Secured Transactions Guide* contains a set of balanced and efficient recommendations governing the transition from the prior

law to the new law (see *Secured Transactions Guide*, recs. 228-234). In particular, these recommendations address two important transition issues, the date as of which the new law will come into force (the “effective date”) and the extent to which the new law will apply to transactions or security rights that existed before the effective date.

21. Generally, the *Secured Transactions Guide* recommends that the secured transactions law contemplated therein apply to all security rights including those already in existence on the effective date. However, it recognizes four important exceptions. First, prior law applies to matters that are the subject of litigation or alternative binding dispute resolution proceedings that have commenced before the effective date (however, out-of-court enforcement that has commenced before the effective date law may continue under the new law; see *Secured Transactions Guide*, rec. 229). Second, prior law determines whether a security right has been created before the effective date (see *Secured Transactions Guide*, rec. 230). Third, a security right that was effective against third parties under prior law remains effective until the earlier of: (a) the time it would cease to be effective against third parties under prior law; and (b) the expiration of a period of time specified in the law after the effective date (the “transition period”) (see *Secured Transactions Guide*, rec. 231). Under this approach, the holder of a security right that was created under prior law is given a transition period to comply with the third-party effectiveness requirements of the new secured transactions law. And fourth, the priority of a security right is determined by prior law if: (a) the security right and all competing rights arose before the effective date; and (b) the priority of none of these rights changed after the effective date (see *Secured Transactions Guide*, rec. 233).

22. The new general security rights registry contemplated by the *Secured Transactions Guide* would give all existing secured creditors a quick, easy and inexpensive way of maintaining the third-party effectiveness and priority status of their security rights. The new registry would also allow grantors to use more easily than under prior law the full value of their assets as security for credit as they would be able to create security rights in the same assets in favour of more than one secured creditor as long as the priority status of each secured creditor would be clear.

23. If the enacting State already has in place a registry for security rights in movable assets, additional transitional considerations will need to be addressed. For example, if the new registry is intended to cover security rights previously within the scope of an existing registry, the enacting State or the private entity responsible for implementing the registry may assume responsibility for migrating the information in the existing records into the new registry record. However, as mentioned above, the *Secured Transactions Guide* recommends that the burden of migration can be placed on secured creditors by giving them a transitional period (for example, one year) to register or otherwise make their security right effective against third parties. This latter approach has been used with considerable success in a number of States (especially, when such “re-registration” is free of charge). If this option is chosen, a space or field on the registration form should be provided for entering a note that the registration is a continuation (or transfer) of a registration made prior to the coming into operation of the new registry (for a more detailed discussion of these types of transition issue, see chap. XI of the *Secured Transactions Guide*).

24. States considering the draft Registry Guide for implementation will also need to consider issues of legislative methods and drafting technique. Certain of the recommendations of the draft Registry Guide reiterate or implement recommendations of the *Secured Transactions Guide* because of their importance or because of their relevance to the administration of the registry or its technical design. Such recommendations include the following: 8 (see recs. 55, subpara. (b), and 54, subpara. (d)); 10, subparagraph (a) (see rec. 70); 11 (see rec. 69); 12 (see rec. 67); 13 (see rec. 68); 16 (see rec. 55, subparas. (c), and (d)); 21 (see rec. 57); 26, subparagraph (a) (see rec. 63); 27, subparagraph (a) (see rec. 58); 27, subparagraph (b) (see rec. 64); 27, subparagraph (c) (see rec. 65); 31 (see rec. 72). The rest of the recommendations address purely technical registration matters. Enacting States will need to consider whether to deal with all these issues in the secured transactions law, in the registry regulation, in the terms of use of the registry, or in all or more than one of these texts.

25. Enacting States will also need to consider issues of post-enactment acculturation and, in particular, will need to design a programme aimed at familiarizing potential registry users with the operation of the registry. More specifically, to ensure the smooth implementation of the registry and its active take up by potential users, enacting States will need to consider entrusting an implementation team with the task of developing education and awareness programmes, disseminating promotional and explanatory material and conducting training sessions. The implementation team should also develop instructions on entering information into paper registration forms and electronic screens.

E. Overview of secured transactions law and the role of registration

1. General

26. As already mentioned, a general security rights registry does not exist in a vacuum. It is an integral component of the secured transactions regime recommended by the *Secured Transactions Guide*. Accordingly, this chapter provides an overview of that regime, focusing in particular on the legal function and consequences of registration. For more detailed information, the reader is encouraged to refer to the *Secured Transactions Guide*.

2. Notion and function of a security right

27. Under the *Secured Transactions Guide*, a security right is a property right (a right in rem, distinct from ownership and personal rights) in a movable asset that is created by agreement and secures payment or other performance of an obligation (see the term “security right” and “grantor” in the introduction to the *Secured Transactions Guide*, sect. B). The function of a security right is to mitigate the risk of loss resulting from a default in payment by entitling the secured creditor to claim the value of the assets encumbered by the security right as a back-up source of repayment in preference to the claims of the grantor’s other creditors. For example, if a business that borrows funds on the security of its equipment fails to repay the loan, a secured creditor with a security right in that equipment will be entitled to obtain possession and dispose of the equipment and apply the proceeds to the

outstanding balance. As the risk of loss from default is mitigated, the grantor's access to credit is expanded, quite often on more favourable terms.

28. The *Secured Transactions Guide* adopts a functional, integrated and comprehensive approach to secured transactions so as to encompass any type of property right in a movable asset that functions in substance to secure performance of an obligation regardless of the form of the transaction, the type of encumbered asset, the nature of the secured obligation or the status of the parties (see *Secured Transactions Guide*, chap. I, paras. 101-112, and recs. 2 and 10). Thus, the concept of "security right" is not limited to the types of nominated security device conventionally recognized by different legal systems, such as a pledge, charge or hypothec. It also encompasses any type of property right, including ownership, that functions as security, such as a retention-of-title right to secure payment of the purchase price of an asset, financial lease right, the right of a transferee in a transfer of assets for security purposes and the right of an assignee in an assignment of receivables for security purposes (see *Secured Transactions Guide*, chap. I, paras. 101-112 and recs. 2, 8 and 9).

29. The *Secured Transactions Guide* adopts this substance-over-form approach to the concept of security in order to ensure that the legal rights of the immediate parties and any third parties affected by a security agreement are subject to the same uniform set of legal rules. The *Secured Transactions Guide* recommends that, to the extent that exceptions are recognized for general policy reasons (for example, to protect buyers of relatively low-value consumer assets), these exceptions should be narrow and clearly specified in the law (see *Secured Transactions Guide*, recs. 4 and 7).

3. Creation of a security right

30. The *Secured Transactions Guide* recommends that a distinction should be drawn between the creation of a security right (effectiveness between the grantor and the secured creditor) and its effectiveness against third parties (see *Secured Transactions Guide*, chap. I, paras. 1-7, chap. III, paras. 6-8, and recs. 1, subpara. (c), 13 and 30). The main reason for this approach is to implement one of the key objectives of an effective and efficient secured transactions law, that is, to enable parties to create a security right in their assets in a simple and efficient manner by keeping the creation-related formalities to a minimum (see *Secured Transactions Guide*, recs. 1, subpara. (c) and 13).

31. Thus, the *Secured Transactions Guide* contains a number of features intended to achieve this objective. It recommends that: (a) a security right be created simply by agreement between the grantor and the secured creditor; (b) the agreement be in writing if it is not accompanied by a transfer of actual possession of the encumbered asset to the secured creditor; (c) the required form of writing be flexible to include electronic means of communications and require the signature of the grantor only; and (d) the agreement reflect the intent of the parties to create a security right, identify the parties and describe the secured obligation and the encumbered assets (see *Secured Transactions Guide*, recs. 14 and 15).

32. By dispensing with the need for a transfer of possession of the encumbered assets to create a security right, the secured transactions law contemplated by the *Secured Transactions Guide* enables an enterprise to encumber not only its tangible

existing assets but also its intangible and future assets, as well as pools of circulating assets, including, most significantly, receivables and inventory (see *Secured Transactions Guide*, chap. II, paras. 49-70 and recs. 2 and 17). Under the recommendations of the *Secured Transactions Guide*, a security right in future assets is created as soon as the grantor acquires rights in the assets (see *Secured Transactions Guide*, rec. 13). This approach is likely to increase access to credit by expanding the range of assets that a grantor can offer as security. The recommendations of the *Secured Transactions Guide* further confirm that a security right may secure any type of obligation, including future and indeterminate obligations (see *Secured Transactions Guide*, rec. 16).

33. This recognition by the *Secured Transactions Guide* of non-possessory security rights also enhances consumer access to credit since it enables consumer grantors to take immediate possession of assets acquired on secured credit terms. The *Secured Transactions Guide*, however, is mindful of the need to preserve the rights of consumers and other persons that may require special protection. Thus, it recommends that the secured transactions law should not affect the rights of consumers under consumer protection legislation or override statutory limitations relating to whether particular types of assets may be transferred or encumbered (see *Secured Transactions Guide*, chap. I, paras. 10 and 11; chap. II, paras. 56, 57 and 107; recs. 2, subpara. (b), and 18).

34. The *Secured Transactions Guide* also confirms that a security right automatically continues in any proceeds of the encumbered assets (and proceeds of proceeds) without the need for a specific agreement (see *Secured Transactions Guide*, rec. 19). This approach is consistent with the expectations of the parties. If the security right did not extend in the proceeds, an authorized transfer of the encumbered assets could defeat or sharply diminish its ability to rely on those assets to secure the debt. Even where the security right follows the encumbered assets in the hands of a transferee, an extension of the security right in the proceeds is meaningful as it may provide more security in particular where the proceeds happen to be more valuable than the encumbered assets (see *Secured Transactions Guide*, chap. II, paras. 72-81).

4. Third-party effectiveness of a security right

35. Under the recommendations of the *Secured Transactions Guide*, a security right becomes effective between the parties as soon as the requirements outlined above are satisfied. However, the security right cannot be set up against rights acquired by third parties in the encumbered assets unless and until the requirements for third-party effectiveness of the security right are satisfied. The reason for this distinction is to ensure that the security right created by the parties' private agreement is adequately publicized to third parties that might be negatively affected by its existence.

36. Registration of a notice in a general security rights registry is the main method recognized by the *Secured Transactions Guide* for achieving the third-party effectiveness of a security right (see *Secured Transactions Guide*, rec. 32). While this is the only method available for all types of encumbered asset, the *Secured Transactions Guide* recognizes other methods depending on the type of encumbered asset.

37. First, the transfer of possession of the encumbered assets to the secured creditor or its representative is considered to be sufficient practical notice to third parties that the grantor's rights in the assets are likely to be encumbered. Consequently, the dispossession of the grantor qualifies as an alternative method of achieving third-party effectiveness, provided that the dispossession is actual (not constructive, fictive, deemed or symbolic; see *Secured Transactions Guide*, Introduction, sect. B, "possession" and rec. 37). Clearly, this method of achieving third-party effectiveness is available only for the presently owned tangible assets of a grantor that, as a practical matter, the grantor is prepared to relinquish possession of.

38. Second, the *Secured Transactions Guide* recommends that, where the encumbered asset is the right to payment of funds credited to a bank account or a right to receive the proceeds of a letter of credit, secured creditors be given the option of achieving third-party effectiveness by taking "control" of the encumbered asset in lieu of registration in the general security rights registry (see *Secured Transactions Guide*, Introduction, sect. B, "control" and rec. 103). It should be noted that securities and payment rights arising under or from financial contracts governed by netting agreements and foreign exchange contracts are excluded from the scope of the *Secured Transactions Guide* (see *Secured Transactions Guide*, chap. I, paras. 37-39, and rec. 4, subparas. (c)-(e)). For these types of asset, an enacting State will typically wish to also provide for alternative methods of achieving third-party effectiveness.

39. Third, the *Secured Transactions Guide* may apply to security rights in types of asset that are subject to a specialized registration regime, such as motor vehicles, ships, aircraft and intellectual property (see *Secured Transactions Guide*, chap. I, paras. 32-36, and rec. 4, subparas. (a) and (b)). To the extent that the *Secured Transactions Guide* applies to security rights in these types of asset, it recommends that registration in the specialized registry be recognized as an alternative method of achieving third-party effectiveness (see *Secured Transactions Guide*, rec. 38).

40. Fourth, where the encumbered asset is or may be attached to immovable property so as to form part of the immovable property, the *Secured Transactions Guide* recommends that the security right in the encumbered asset may be made effective against third parties by the registration of a notice either in the general security rights registry or in the immovable property registry (see *Secured Transactions Guide*, rec. 43). It should be noted that the asset description requirements for an effective registration may differ depending on where the notice is registered owing to differences in the way in which registrations are organized in the two types of registry. The *Secured Transactions Guide* recommends that a description of an encumbered asset in a notice registered in the general security rights registry is sufficient if it reasonably allows its identification since notices in that registry are organized, not by asset description, but by grantor identifier (see *Secured Transactions Guide*, rec. 57, subpara. (b)). In contrast, registrations in an immovable property registry are generally organized by reference to the specific identifier for the relevant parcel of land. Consequently, the identifier used to identify the parcel of immovable property to which the encumbered asset is or will be attached will also need to be included in the notice that is registered in the immovable registry.

5. Priority of a security right

(a) Competing security rights

41. If more than one security right created by the same grantor in the same encumbered asset has been made effective against third parties, it is necessary to have a priority rule to rank the competing security rights as among themselves (see *Secured Transactions Guide*, chap. III, paras. 12-14). Where the competing security rights were all made effective against third parties by registration, priority is generally determined by the order of registration (see *Secured Transactions Guide*, rec. 76, subpara. (a)). Where the competing security rights were all made effective against third parties otherwise than by registration, priority is determined by the order of third-party effectiveness (see *Secured Transactions Guide*, rec. 76, subpara. (b)). In the event a security right that was made effective against third parties otherwise than by registration (e.g. by delivery of possession) comes into competition with a security right that was made effective against third parties by registration, priority is generally determined by the respective order of registration or third-party effectiveness (e.g. delivery of possession), whichever occurs first (see *Secured Transactions Guide*, rec. 76, subpara. (c)).

42. Although these recommendations provide the baseline rules, a modern secured transactions law along the lines recommended in the *Secured Transactions Guide* will invariably recognize some exceptions in the interest of facilitating other business practices and policy objectives. The following paragraphs summarize the principal exceptions recognized by the *Secured Transactions Guide*.

43. First, the *Secured Transactions Guide* recognizes a special priority in favour of a secured creditor that finances the grantor's acquisition of tangible assets (for example, consumer goods, equipment or inventory) or intellectual property (see *Secured Transactions Guide*, chap. X, paras. 125-139, and *Supplement*, paras. 181-183). Provided the requirements recommended by the *Secured Transactions Guide* for obtaining this special priority are satisfied, the "acquisition security right" has priority with respect to the value of those assets over security rights in the grantor's future assets of that kind that were previously acquired and registered or otherwise made effective against third parties. This approach does not prejudice the prior secured creditor since the grantor would not have been able to acquire these new assets but for the new financing (and the secured creditor could first enter into the security agreement, check the registry, wait for a short period of time and then disburse any funds). Giving priority to acquisition security rights also benefits the grantor by giving it access to diversified sources of secured credit to finance new acquisitions.

44. Second, a security right in money and in negotiable instruments or negotiable documents that is made effective against third parties by a transfer of possession to the secured creditor has priority over a security right that was previously made effective against third parties by registration (see *Secured Transactions Guide*, recs. 101, 102, 108 and 109). This exception is based on the policy of preserving the free negotiability of these types of asset in the market place.

45. Third, where the encumbered asset is the right to payment of funds credited to a bank account or a right to receive the proceeds of a letter of credit, a secured creditor that achieves priority by taking "control" of the encumbered asset has priority over a prior or subsequent security right that is made effective against

third parties by registration (see *Secured Transactions Guide*, Introduction, sect. B, “control” and recs. 103 and 107). As already mentioned (see para. 38 above), securities and payment rights arising under or from financial contracts governed by netting agreements and foreign exchange contracts are excluded from the scope of the *Secured Transactions Guide* (see *Secured Transactions Guide*, chap. I, paras. 37-39, and rec. 4, subparas. (c)-(e)). Enacting States will need to enact special priority rules in relation to these types of asset.

46. Fourth, to the extent that the secured transactions law applies to security rights in types of movable asset that are subject to specialized registration systems, such as motor vehicles, ships, aircraft and intellectual property (see *Secured Transactions Guide*, chap. I, paras. 32-36, and rec. 4, subparas. (a) and (b)), the *Secured Transactions Guide* recommends that priority be given to a security right that was made effective against third parties by registration in the specialized registry as against a security right registered in the general registry; and where both security rights are registered in the immovable registry, priority should be determined by the order of registration (see *Secured Transactions Guide*, recs. 77 and 78). These rules are designed to preserve the integrity and completeness of the specialized registry record.

47. Fifth, the *Secured Transactions Guide* recommends a similar approach to priority competitions involving competing security rights in attachments to immovable property. More concretely, the *Secured Transactions Guide* recommends that priority should be given to a security right, notice of which was registered in the immovable property registry, over a security right in the attachment, notice of which was registered only in the general security rights registry; and where registration with respect to the competing security rights in the attachment or in the immovable property has been made in the immovable property registry, priority should be determined by the order of registration (see *Secured Transactions Guide*, recs. 87 and 88). These rules are designed to preserve the integrity and completeness of the immovable property registry record.

Introduction (*continued*)

E. Overview of secured transactions law and the role of registration (*continued*)

5. Priority of a security right (*continued*)

(b) Buyers or other transferees of encumbered assets

1. As a general rule, the *Secured Transactions Guide* recognizes that a secured creditor that has complied with the requirements for third-party effectiveness with respect to its security right has a “right to follow” the encumbered asset into the hands of a buyer or other transferee from the grantor that acquires rights in the encumbered asset (see *Secured Transactions Guide*, chap. II, paras. 72-89, chap. III, paras 15, 16 and 89, and rec. 79). Conversely, a transferee will take free of a security right that has not been made effective against third parties by registration or by some other method even if it has actual knowledge of the existence of the security right. This approach is not unfair to secured creditors since they could have protected themselves by timely registration or by otherwise making their security right effective against third parties.

2. However, the *Secured Transactions Guide* recognizes a number of exceptions to this general rule. The following paragraphs summarize the principal exceptions.

3. First, a buyer or lessee or licensee that acquires an encumbered asset with the consent of the secured creditor acquires the asset free of the security right or takes its rights unaffected by the security right (see *Secured Transactions Guide*, rec. 80). This approach facilitates transactions that have been approved by a secured creditor typically after some arrangement has been made to provide other security to the secured creditor.

4. Second, a buyer or lessee or licensee that acquires an encumbered asset in the ordinary course of the grantor’s business takes free of any security right in that asset even if the secured creditor has registered a notice of the security right or otherwise complied with the requirements for third-party effectiveness (see *Secured Transactions Guide*, rec. 81). This approach is consistent with the reasonable commercial expectations of the parties involved. It is not realistic to expect buyers dealing with a commercial enterprise which routinely sells the types of asset in which the buyer is interested, for example, computer equipment, to check the registry before entering into the transaction. Moreover, a secured creditor that takes a security right in a grantor’s inventory will normally have done so on the understanding that the grantor may dispose of the inventory free of the security right in the ordinary course of the grantor’s business. After all, for the grantor to be able to generate the revenue necessary to pay back the secured loan, its customers need to be assured that they will acquire unencumbered title in any inventory sold to them in the grantor’s ordinary course of business.

5. Third, the same policy of preserving negotiability that justifies awarding a special priority to secured creditors that take physical possession of encumbered assets in the form of money or negotiable documents (such as a bill of lading) or negotiable instruments (such as a cheque) also justifies awarding priority to outright

transferees of these types of encumbered asset (see *Secured Transactions Guide*, recs. 101, 102, 108 and 109).

6. Fourth, as already mentioned, the *Secured Transactions Guide* may apply to assets that are subject to a specialized registration regime, such as motor vehicles, ships, aircraft and intellectual property (see *Secured Transactions Guide*, chap. I, paras. 32-36, and rec. 4, subparas. (a) and (b)). These registries typically serve broader goals than simply publicizing security rights in the relevant assets, notably, also recording ownership or transfers of ownership. Accordingly, to the extent that the *Secured Transactions Guide* applies to security rights in these types of asset, it recommends that priority be given to a buyer or other transferee that registered in the specialized registry as against a security right registered in the general security rights registry; and where the security right is also registered in the specialized registry, priority should be determined by the order of registration (see *Secured Transactions Guide*, recs. 77 and 78).

7. Fifth, a similar approach is taken to priority competitions involving security rights in attachments to immovable property. The *Secured Transactions Guide* recommends that priority should be given to a buyer or other transferee of the relevant immovable property that registered in the immovable property registry as against a security right in the attachment that is registered only in the general security rights registry; and where the security right in the attachment is also registered in the immovable property registry, priority should be determined by the order of registration (see *Secured Transactions Guide*, recs. 87 and 88).

(c) Unsecured creditors of the grantor

8. One of the principal advantages of taking security is that it entitles the secured creditor to claim the value of the encumbered assets in preference to the claims of the grantor's unsecured creditors. Accordingly, the *Secured Transactions Guide* recommends that a security right has priority over the rights of an unsecured creditor provided that the secured creditor registers or otherwise makes its security right effective against third parties before the unsecured creditor obtains a judgement or provisional court order against the grantor and takes the steps necessary under other law of the enacting State to acquire rights in the encumbered assets (see *Secured Transactions Guide*, rec. 84). This approach enables unsecured creditors to determine the extent to which their debtors' assets may be encumbered in order to decide whether it is worthwhile to obtain a judgement and pursue judgement enforcement proceedings. This priority rule, however, is subject to an important caveat. Even if the secured creditor registers a notice of its security right or otherwise achieves third-party effectiveness after the unsecured creditor acquires rights in its debtor's encumbered assets, the secured creditor will have priority to the extent of credit that it advances before it has actual knowledge that the unsecured creditor has acquired rights in the encumbered assets or that it advances pursuant to a prior irrevocable commitment to extend credit to the grantor (see *Secured Transactions Guide*, chap. V, paras. 94-106, and rec. 84).

9. The *Secured Transactions Guide* discusses but does not make any recommendation with respect to the steps that an unsecured creditor must take to acquire rights in its debtor's assets so as to potentially prevail over a secured creditor that has failed to achieve third-party effectiveness at all or in time (see *Secured Transactions Guide*, chap. V, paras. 94-106). This is left to the

judgement enforcement and execution law of the enacting State. In some States, an unsecured creditor acquires rights in its debtor's assets only once the judgement enforcement process is completed by seizure and sale and the judgement creditor's rights attach to the proceeds of the sale. In other States, an unsecured creditor upon obtaining judgement can obtain the equivalent of a general security right in the judgement debtor's present and future movable assets simply by registering a notice of the judgement in the general security rights registry. Accordingly, States enacting the general recommendations of the *Secured Transactions Guide* will need to take into account their existing law on this issue and decide on the most appropriate approach.

(d) The insolvency representative

10. Modern insolvency laws generally respect the priority to which secured creditors are entitled under other law in the event that insolvency proceedings are commenced against the grantor. This is the approach recommended in the *Secured Transactions Guide* (see *Secured Transactions Guide*, rec. 239) in line with the UNCITRAL Legislative Guide on Insolvency Law (the "Insolvency Guide"). It follows that a secured creditor generally will have priority over the claims of an insolvent grantor's unsecured creditors, provided that it registered or otherwise satisfied the third-party effectiveness requirements of secured transactions law before the commencement of the insolvency proceedings. Conversely, the failure of the secured creditor to register a notice or otherwise make its security right effective against third parties before the commencement of the insolvency proceedings generally results in the secured creditor being effectively demoted to the status of an unsecured creditor. This approach encourages timely registration or the taking of other third-party effectiveness steps by secured creditors. It also enables the grantor's insolvency representative to determine efficiently which of the grantor's assets may have been effectively encumbered.

11. Timely registration does not, however, protect a secured creditor from challenges on the basis of general insolvency law policies, such as rules avoiding preferential or fraudulent transfers and rules giving priority to certain protected classes of creditors (see *Secured Transactions Guide*, chap. XII, and rec. 239; see also *Insolvency Guide*, recs. 88 and 188).

12. A security right that was effective against third parties at the time of the commencement of the insolvency proceedings might lapse thereafter, for example, because it was made effective against third parties by registration and the period of effectiveness of the registration is due to expire. To address this risk, the *Secured Transactions Guide* recommends that a secured creditor should be entitled to take any action required by the secured transactions law to preserve the effectiveness of its security right against third parties even after the commencement of insolvency proceedings (see *Secured Transactions Guide*, rec. 238). This recommendation is designed to ensure that a secured creditor is not denied the ability to maintain its priority status as a result of the automatic stay typically imposed on enforcement action by creditors upon the commencement of insolvency proceedings.

13. Where the insolvency proceeding takes the form of a reorganization, modern insolvency laws generally authorize the insolvent grantor to create a security right to obtain post-commencement finance (see *Insolvency Guide*, rec. 65). Under the *Insolvency Guide*, such a security right does not have priority over any existing

secured creditors unless agreed to by them or authorized by the court with the appropriate protections for them. When post-commencement finance is provided, the rules of the secured transactions law governing the third-party effectiveness of security rights will apply.

(e) Preferential claims

14. For various policy reasons, a State's secured transactions law, insolvency law or both may sometimes award preferential priority status over the claims of secured creditors to specified categories of unsecured creditors. Typical examples include the claims of the enacting State for taxes and of employees for unpaid wages or other employment benefits. In addition, in the insolvency context, some States set aside a specified portion of the value of encumbered assets, particularly business assets, in favour of unsecured creditors in preference to the secured creditor. The *Secured Transactions Guide* discusses preferential claims and recommends that, to the extent an enacting State decides to maintain any, they should be limited in both type and amount and prescribed in the secured transactions law and the insolvency law, as the case may be, in a clear and specific way (see *Secured Transactions Guide*, chap. V, paras. 90-93, and chap. XII, paras. 59-63, and recs. 83 and 239). The reason why the *Secured Transactions Guide* follows this approach is twofold; on the one hand, the *Secured Transactions Guide* is mindful of the social policies enacting States may wish to pursue with preferential claims; on the other hand, the *Secured Transactions Guide* recognizes that preferential claims may have an impact on the cost and availability of credit.

15. In some States, preferential claims may be registered in the general security rights registry although in those States, the same registration and priority rules that apply to security rights may not necessarily apply to preferential claims. The *Secured Transactions Guide* discusses but does not make any recommendation with respect to whether preferential claims should have to be registered and what the priority implications of registration should be (see *Secured Transactions Guide*, chap. V, para. 90).

6. Broad transactional scope of the registry

(a) Outright assignments

16. As already explained (see A/CN.9/WG.VI/WP.52, paras. 27-29), the secured transactions law contemplated by the *Secured Transactions Guide* is comprehensive in scope, covering all transactions that in substance function to secure an obligation regardless of the formal character of the secured creditor's property right, the type of encumbered asset, the nature of the secured obligation or the status of the parties (see *Secured Transactions Guide*, chap. I, paras. 101-112, and recs. 2 and 10).

17. In addition to applying to all secured transactions defined in the functional, integrated and comprehensive sense just outlined, the *Secured Transactions Guide* recommends that the secured transactions law should also apply, at least to some extent, to outright assignments of receivables. However, bringing outright assignments within the scope of the secured transactions law does not mean that these transactions are re-characterized as secured transactions. Rather, it is intended to ensure that an outright assignee of receivables is subject to the same rules relating to creation, third-party effectiveness and priority (but generally not enforcement) as

the holder of a security right in receivables. It also ensures that the outright assignee has the same rights and obligations vis-à-vis the debtor of the receivable as a secured creditor (see *Secured Transactions Guide*, chap. I, paras. 25-31, and recs. 3 and 167).

18. Under this approach, an assignee generally will have to register a notice of its right in the security rights registry for the assignment to be effective against third parties; and priority among the rights of successive competing assignees or secured creditors that have acquired rights in the same receivables from the same assignor/grantor will be determined by the order of registration (see *Secured Transactions Guide*, chap. III, para. 43). The reason for this approach is that outright assignments of receivables not only perform a financing function but also create the same problem of information inadequacy for third parties as security rights in receivables. Unless a notice is registered in the security rights registry as a condition of third-party effectiveness, a potential secured creditor or assignee or other third party would have no efficient means of verifying whether the receivables owed to a business have already been assigned or, if assigned, whether the assignment is an outright assignment or an assignment for security purposes. While inquiries could be made of the debtors of the receivables, this is not practically feasible if the debtors of the receivables have not been notified of the assignment or the transaction covers present and future receivables generally.

(b) Additional non-security transactions

19. True long-term leases and consignment sales of movable assets do not operate to secure the acquisition price of assets and consequently do not qualify as security rights so as to fall within the secured transactions law contemplated by the *Secured Transactions Guide*. However, they create the same publicity problems for third parties as non-possessory security rights since they necessarily involve a separation of a property right (the ownership of the lessor or consignor) from actual possession (which is with the lessee or consignee). To address this concern, some States expand the scope of their secured transactions regime (other than enforcement) as it applies to acquisition security rights to these types of transaction. In addition to ensuring adequate publicity to third parties, this approach also diminishes the risk of litigation concerning whether a transaction in the form of a lease or a consignment is actually a secured transaction and thus ineffective if a notice with respect to it is not registered or subordinate in priority if the rules governing the special priority given to acquisition security rights do not apply. The *Secured Transactions Guide* discusses but makes no recommendation on this matter (see *Secured Transactions Guide*, chap. III, para. 44). It may be noted, however, that, if a lessor or a consignor is concerned about the risk to its third-party effectiveness or priority status where its right is characterized as a security right, it can always register a precautionary notice so as to avoid any challenges to the effectiveness of its rights against third parties.

7. Conflict-of-laws considerations

20. In situations where a secured transaction is connected to more than one State, secured creditors and third parties need clear guidance as to which State's law applies to the transactions. Under the conflict-of-laws approach recommended in the *Secured Transactions Guide*, the applicable law depends on the nature of the

encumbered assets. For example, the law applicable to the creation, third-party effectiveness and priority of a security right in tangible assets is generally the law of the State in which the encumbered asset is located (see *Secured Transactions Guide*, rec. 203). This means that, where a secured creditor wishes to make its security right effective against third parties by registration, it must register a notice of its security right in the registry of the State where the encumbered asset is located. It follows that, where the encumbered assets are located in multiple States, multiple registrations will generally be necessary. With respect to security rights in intangible assets and mobile assets that are ordinarily used in multiple jurisdictions, the applicable law is the law of the State in which the grantor is located (see *Secured Transactions Guide*, rec. 208). As a result, the secured creditor must register a notice of its security right in the registry of the State where the grantor is located if it wishes to achieve third-party effectiveness by registration.

21. The rules outlined above are the general baseline rules. the *Secured Transactions Guide* recommends different specialized conflict-of-laws rules for security rights in specific types of asset. These types of asset include: (a) assets rights in which are subject to a specialized registration regime; (b) receivables arising from a transaction relating to immovable property; (c) rights to the payment of funds credited to bank accounts; (d) rights to receive the proceeds under an independent undertaking; and (e) intellectual property rights (see *Secured Transactions Guide*, recs. 204-207, 209-215 and 248). For example, where the encumbered asset is an intellectual property right, the applicable law is primarily the law of the State under which the intellectual property is protected, although a security right that is created and made effective against third parties only under the law of the State in which the grantor is located may still be effective against the grantor's insolvency representative and judgement creditors (see *Supplement*, rec. 248).

8. Notice registration

22. Most States have established registries for recording title and encumbrances on title on immovable property. Many States have also established similar title registries for a limited number of high-value movable assets, such as ships and aircraft. It is essential to the successful implementation of the kind of general security rights registry contemplated by the *Secured Transactions Guide* that its very different characteristics be well understood by those responsible for its design and operation, as well as by its potential clientele.

23. First, unlike the typical land, ship or aircraft registry, the general security rights registry contemplated by the *Secured Transactions Guide* does not purport to record the existence or transfer of title to the encumbered asset described in the notice or to guarantee that the person named as grantor in the notice is the true owner. It simply provides a record of potentially existing security rights on whatever property right the grantor has or may acquire in the assets described in the notice as a result of off-record transactions or events (see *Secured Transactions Guide*, chap. IV, paras. 10-14).

24. Second, title registries typically require registrants to file or tender for scrutiny the underlying documentation. This is because registration generally is considered to constitute evidence or at least presumptive evidence of title and any property rights affecting title.

25. While, the security rights registries in some States also require submission of the underlying security documentation, the *Secured Transactions Guide* recommends that States adopt a notice registration rather than a document registration system (see *Secured Transactions Guide*, recs. 54, subpara. (b), and 57). A notice registration system does not require the actual security documentation to be registered or even tendered for scrutiny by registry staff. All that need be registered is a notice that provides the basic information necessary to alert a searcher that a security right may exist in the assets described in the notice. It follows that registration does not mean that the security right to which the notice refers necessarily exists; only that one may exist at the time of registration or may come into existence later. As already explained (see A/CN.9/WG.VI/WP.52, paras. 30 and 36), registration of a notice is irrelevant to the creation of a security right; it simply makes any security right created by an off-record security agreement between the parties effective against third parties provided the other requirements for creation outlined earlier are satisfied (see *Secured Transactions Guide*, recs. 32, 33 and 67).

26. The *Secured Transactions Guide* recommends notice registration rather than document registration because notice registration:

(a) Reduces transaction costs for registrants (as they do not need to register or provide evidence of the security documentation in order to register) and third-party searchers (as they do not need to peruse what may be voluminous security documentation to determine if a security right may exist in the relevant assets);

(b) Reduces the administrative and archival burden on registry system operators;

(c) Reduces the risk of registration error (since the less information that must be submitted, the lower the risk of error); and

(d) Enhances privacy and confidentiality for secured creditors and grantors (the less the information that must be registered, the less the information that is available to searchers).

27. As registration in a notice registration system does not necessarily mean that a security right actually exists, third parties with a competing property right in the encumbered assets will normally wish to demand proof of the existence of an effective security agreement between the parties and the scope of the assets covered by it. The same is true even where the alleged security right has been made effective against third parties by some other method, such as a transfer of possession, since possession by the putative secured creditor may be for a purpose other than security.

28. Some States provide a procedure whereby a third party with a property right in the encumbered asset may demand this information directly from the person named as a secured creditor in a registration or who is otherwise claiming this status. The same right is extended to unsecured creditors of the grantor so as to enable them to assess whether it is worthwhile to undertake the expense of obtaining a judgement and pursuing enforcement against the debtor's assets. While the *Secured Transactions Guide* does not make a recommendation on this matter, it is always open to the debtor to request the secured creditor to send the relevant information directly to a third party. However, the debtor or the secured creditor may not be

cooperative in which event the third party will need to seek a judicial order under other law.

29. Even in States that allow third parties to demand verification of the existence of a security right and its scope directly from the secured creditor, this right does not apply to potential buyers or potential secured creditors. They can protect themselves simply by refusing to buy or extend secured credit unless the registration relating to the security right is cancelled or the putative secured creditor is willing to undertake to them that it is not asserting and will not assert in the future a security right in the asset in which they are interested.

30. The grantor may also need to obtain up-to-date information about the scope and value of the security right claimed by its secured creditor and a copy of any written security agreement under which the security right is claimed. In some States, the grantor is entitled to demand this information free of charge although limits are usually placed on the frequency with which requests may be made so as to discourage demands that are unjustified or intended to harass.

31. A notice registered in the registry record contains minimum information about a security right that may not even exist at the time of registration and the amount of the secured obligation or the encumbered assets may change from time to time (see *Secured Transactions Guide*, rec. 57, A/CN.9/WG.VI/WP.52/Add.4, paras. 1-23, and draft Registry Guide, rec. 21). Thus, in certain circumstances, the grantor may need to request additional information about the security right. While the *Secured Transactions Guide* does not take a position on this issue, in some States, secured transaction law provides that the grantor is entitled to request the person identified in the notice as the secured creditor to provide to the searcher additional information about the security right. This information includes: (a) a list of the assets in which the person identified as the secured creditor is claiming a security right; and (b) the current amount of the obligation secured by the security right to which the registration relates, including the amount needed to pay off the secured obligation. The ability of a third party to obtain information from the secured creditor takes account of the fact that registration does not create or evidence the creation of a security right but merely signals that a security right may exist in a particular asset. Whether the security right has been created, and the scope of the assets which it covers, depends on off-record evidence. Consequently, prospective buyers and secured creditors and other third parties with whom the grantor is dealing may wish to have independent verification directly from the person identified in the notice as the secured creditor as to whether it is in fact currently claiming a security right in an asset in which they are interested under an existing security agreement with the named grantor. In some States, the grantor is entitled to one request free of charge every few months. For additional requests for information, the secured creditor may charge a fee. This approach protects the secured creditor from having to respond to frequent requests of the grantor that may not be justified or be intended to harass.

9. The role of registration and its legal consequences

(a) Creation, third-party effectiveness and registration

32. As already mentioned (see A/CN.9.WG.VI/WP.52, paras. 30 and 36), the *Secured Transactions Guide* recommends that registration should not be an element of the creation of a security right (see *Secured Transactions Guide*, rec. 33). Rather

the security right takes effect and becomes enforceable between the grantor and the secured creditor as soon as a security agreement is concluded (see *Secured Transactions Guide*, recs. 13-15). Registration is purely a precondition to the third-party effectiveness of the security right. The only sanction for a secured creditor's failure to register a notice of its security right is that the security right will not be effective against third parties (unless another method of third-party effectiveness is followed).

(b) Registration and enforcement

33. Some legal regimes require secured creditors to register in the general security rights registry a notice that they have initiated or propose to initiate an enforcement action. The goal of this approach is to enable the registry to notify third parties that have registered a competing right in the encumbered assets in the registry of the details of the pending enforcement. The *Secured Transactions Guide* does not recommend this approach. Instead, the *Secured Transactions Guide* recommends that the enforcing secured creditor should be required to search the registry and send out the required notices to interested third parties (including competing claimants) of the particular enforcement remedy that it seeks to exercise (see *Secured Transactions Guide*, rec. 151). Such notification will provide these third parties with an opportunity (should they choose to avail themselves of it) to remedy the default that has given rise to the enforcement proceeding.

10. Coordination with specialized movable property registries

34. Where specialized registries exist and permit the registration of security rights in movable assets with third-party effects (as is the case with the international registries under the Convention on International Interests in Mobile Equipment and its Protocols), modern secured transactions regimes must deal with matters related to the coordination of registrations in the two types of registry. The *Secured Transactions Guide* and the *Supplement* discuss coordination of registries in detail (see the *Secured Transactions Guide*, chap. III, paras. 75-82, chap. IV, para. 117; and the *Supplement*, paras. 135-140).

35. For example, the *Secured Transactions Guide* provides that a security right in an asset subject to specialized registration may be made effective against third parties by registration in the general security rights registry or in the specialized registry. It addresses the issue of coordination between the two types of registry through appropriate priority rules, giving priority to a security right, a notice of which is registered in the relevant specialized registry, over a security right in the same asset, a notice of which is registered in the general security rights registry, irrespective of the time of registration (see *Secured Transactions Guide*, recs. 43 and 77, subpara. (a)).

36. The *Secured Transactions Guide* also discusses other ways of coordinating registries, including the automatic forwarding of information registered in one registry to another registry and the implementation of common gateways to the various relevant registries. This approach raises complexities with respect to the design of the general security rights registry where the specialized registry organizes registrations by reference to the asset as opposed to the grantor-based indexing system used in the general security rights registry (see *Secured*

Transactions Guide, chap. III, paras. 77-81; see also A/CN.9/WG.VI/WP.52/Add.2, paras. 30-35).

11. Coordination with immovable property registries

37. Immovable property registries exist in most, if not in all, States. Typically, the general security rights registry is separate from the immovable property registry owing to differences as to what is registered (that is, document or notice), the requirements for the description of the encumbered asset (that is, specific or generic), indexing structures (that is, asset-based or debtor-based indices; see also A/CN.9/WG.VI/WP.52/Add.2, paras. 30-35) and legal consequences of registration.

38. However, some coordination of the two types of registry may be necessary with respect to assets, rights in which may be registered in either type of registry. Thus, a State implementing a general security rights registry will need to provide potential secured creditors and third-party financiers with guidance as to where notices relating to security rights in attachments to immovable property should be registered. The *Secured Transactions Guide* recommends that such registrations may be made either in the general security rights registry or in the immovable property registry (see *Secured Transactions Guide*, rec. 43). The choice between the two types of registration has priority consequences. In this regard, the *Secured Transactions Guide* recommends that an encumbrance registered in the immovable property registry has priority as against a security right a notice of which was registered only in the security rights registry (see *Secured Transactions Guide*, rec. 87). The *Secured Transactions Guide* also recommends that the security right in an attachment to immovable property will be ineffective against a buyer (or other third party) that acquires a right in the immovable property unless a notice with respect to the security right is registered in the immovable property registry in advance of the sale (see *Secured Transactions Guide*, rec. 88).

39. It should also be noted that the asset description requirements as to notices relating to security rights in an attachment to immovable property may differ depending on whether the notice is to be registered in the security rights registry or in the immovable property registry. The *Secured Transactions Guide* recommends that an attachment to immovable property, just like any other encumbered asset, should be described in a manner that reasonably allows its identification when registering a notice in the security rights registry (see *Secured Transactions Guide*, rec. 57, subpara. (b)). Thus, a description of the tangible asset that is or will be attached without a description of the immovable property is sufficient for the purposes of registering such a notice in the security rights registry. In contrast, registering such a document or notice in the immovable property registry will generally require that the immovable property to which the tangible asset is or will be attached be described sufficiently under the law of immovable property. Such description must be sufficient to allow the indexing of the notice in the immovable property registry.

I. Establishment and functions of the security rights registry

A. General remarks

1. Establishment of the security rights registry

40. As already mentioned, chapter IV of the *Secured Transactions Guide* contains commentary and recommendations on many aspects related to the establishment of a security rights registry and the registration and search process. The recommendations in chapter IV cover both legal issues that are typically dealt with in the principal secured transactions law and design and operational issues that are typically addressed in a supplementary body of administrative rules, referred to in the draft Registry Guide as the “regulation”. This approach enables the rules relating to the registration and search functions of the registry to be more easily revised from time to time to accommodate technological improvements and the like. As already elaborated (see A/WG.VI/WP.52, paras. 35-40), the *Secured Transactions Guide* clarifies that the purpose of the security rights registry is to provide: (a) a method by which a security right may be made effective against third parties; (b) an efficient point of reference for determining the ordered of priority of security rights with respect to which a notice has been registered; and (c) an objective source of information for third parties (see *Secured Transactions Guide*, chap. IV, purpose). Typically, the opening provisions of the regulation provide for the establishment of the registry and reiterate briefly that, in line with its purpose as set out in the law, the purpose of the registry is to receive, store and make available to the public, information relating to security rights in movable assets (see draft Registry Guide, rec. 1).

2. Appointment of the registrar

41. The appointment of the person that is to supervise and administer the operation of the registry (the “registrar”) is another of the matters that is usually dealt with in the initial provisions of the regulation. The regulation typically identifies, either directly or by reference to the relevant law, the authority that is empowered to appoint the registrar, determine his or her duties and generally supervise the registrar in the exercise of those duties. To ensure flexibility in the administration of the registry, the term registrar should be understood as referring either to a single person or to a group of persons appointed and supervised by the registrar to perform his or her duties (see draft Registry Guide, rec. 2).

3. Functions of the registry

42. The opening provisions of the regulation might also include a provision that lists the various functions of the registry that are dealt with in detail in the later provisions of the regulation with a cross-reference to the relevant provision of the regulation in which these functions are addressed. This is the approach recommended in the draft Registry Guide (see draft Registry Guide, rec. 3). The advantage of this approach is clarity and transparency as to the nature and scope of the issues that are dealt with in detail later in the regulation. The possible disadvantage is that the list may not be comprehensive or may be read as implying unintended limitations on the detailed provisions of the regulation to which

cross-reference is made. Accordingly, implementation of this approach requires special care to avoid any omissions or inconsistencies.

4. Additional implementation considerations

43. It is critical that the technical staff responsible for the design and implementation of the registry are fully apprised of the legal and practical objectives that it is designed to fulfil, as well as of the practical needs of the registry personnel and of potential registry users. Consequently, it is necessary at the very outset of the design and implementation process to constitute a team that reflects technological, legal and administrative expertise, as well as user perspectives.

44. It will also be necessary at an early stage in the registry design and implementation process to determine whether the registry is to be operated in-house by a governmental agency or in partnership with a private sector firm with demonstrated technical experience and financial accountability. While the day-to-day operation of the registry may be delegated to a private entity, the enacting State should always retain the responsibility to ensure that the registry is operated in accordance with the applicable legal framework (see *Secured Transactions Guide*, chap. IV, para. 47, and rec. 55, subpara. (a)). Accordingly, for the purposes of establishing public trust in the registry and preventing commercialization and fraudulent use of information in the registry record, the enacting State should retain ownership of the registry record and, when necessary, the registry infrastructure.

45. The design team will need to plan the storage capacity of the registry record. This assessment will depend in part on whether the registry is intended to cover consumer as well as business secured financing transactions. If this is the case, a much greater volume of registrations can be anticipated and thus the storage capacity should be increased. Capacity planning will need to take into account the potential for additional applications and features to be added to the system. For example, designers will need to take into account the need to expand the registry database at a later point to accommodate the registration of judgements or non-consensual security rights or the addition of linkages to other governmental records such as the State's corporate registry or its other movable or immovable registries. Capacity planning will depend as well on whether registered information is stored in a computer database or a paper record. Ensuring sufficient storage capacity is less of an issue if the record is in electronic form since recent technological developments have greatly decreased storage costs (the *Secured Transactions Guide* recommends that the registry be electronic "if possible"; see rec. 54, subpara. (j), and paras. 48-55 below).

5. Registry terms and conditions of use

46. As already mentioned, registry-related matters are typically dealt with in the secured transactions law and the registry regulation. They may also be addressed in the registry "terms and conditions of use". The registry terms and conditions of use are the terms and conditions of the contract that is entered into by people who file, modify or delete notices, on the one hand, and the contract governing the terms of access for searchers, on the other. For example, the registry terms and conditions of use may offer the opportunity to a regular user of the registry to open an account. Such an account could offer practical benefits such as quick access and a simplified

mechanism for the payment of any fees. In addition, the registry terms and conditions of use should address the issues of the security and confidentiality of information and user data (such as, for example, user name and password, or other modern security technique).

47. Some registry systems, upon request, make available to users additional services. These services include, for example, the following: (a) search audit, which provides information as to how a search was performed with the exact and similar match list indicating which similar matches were requested as a follow-up search; (b) transaction inquiry, which allows a user to track by his or her name or account information as to his or her transactions that occurred during a specified period of time; (c) secured creditor searches, which allow a searcher to search by secured creditor identifier; (d) advance search, which provides the ability to recover and make available all active and inactive registrations on the bases of a specified search criterion; (e) verification statement reprint, which provides reprints of a verification relating to a specific transaction; and (f) statistical reports.

6. Electronic or paper-based registry

48. The *Secured Transactions Guide* recommends that, if possible, the registry record should be electronic in the sense that information in notices is stored in electronic form in a computer database (see *Secured Transactions Guide*, chap. IV, paras. 38-41 and 43, and rec. 54, subpara. (j)(i)). An electronic registry record is the most efficient and practical means of enabling enacting States to implement the recommendation of the *Secured Transactions Guide* that the registry record must be centralized and consolidated to include all registrations made under the secured transactions law of the enacting State (see *Secured Transactions Guide*, chap. IV, paras. 21-24, and rec. 54, subpara. (e)).

49. The *Secured Transactions Guide* further recommends that, if possible, the registry should be electronic in the sense of permitting the direct electronic submission of notices and search requests by users over the Internet or via direct networking systems as an alternative to the submission of paper registration notices and search requests (see *Secured Transactions Guide*, chap. IV, paras. 23-26 and 43 and rec. 54, subpara. (j)(ii)). This approach is the most effective means of implementing the recommendation of the *Secured Transactions Guide* that the system should be designed to minimize the risk of human error (see *Secured Transactions Guide*, chap. IV, rec. 54, subpara. (j)(iii)-(iv)) since it eliminates the need for registry staff to enter the information contained in a paper notice or search request into the registry record and the risk of error associated with the transcription task.

50. Direct electronic registration and searching also contributes to a speedier registration and search process. When information is submitted to the registry in paper form, registrants must wait until the registry staff has entered the information into the registry record and the information is searchable by third parties before the registration becomes legally effective. Search requests transmitted by paper, fax or telephone also give rise to delays since searchers must wait until the registry staff member carries out the search on their behalf and transmits the results.

51. In addition to eliminating these delays and reducing the risk of human error, a registry system in which registrants and searchers have the option to electronically

enter the information directly into the registry record offers the following other advantages:

- (a) A very significant reduction in the staffing and other day-to-day costs of operating the registry;
- (b) Reduced opportunity for fraudulent or corrupt conduct on the part of registry personnel;
- (c) A corresponding reduction in the potential liability of the registry to users who otherwise might suffer loss as a result of the failure of registry staff to enter registration information or search criteria at all, or to enter it accurately; and
- (d) User access to the registration and searching services outside of normal business hours.

52. If this approach is implemented, the registry should be designed to permit registry users to submit a registration and conduct searches from any private computer facility, as well as from computer facilities made available to the public at branch offices of the registry or other locations. In addition, owing to the reduced costs of direct electronic access, the conditions governing access to the services of the registry should permit third-party private sector service providers to carry out registrations and searches on behalf of their clientele.

53. If the registry record is computerized, the hardware and software specifications should be robust and employ features that minimize the risk of data corruption, technical error and security breach. Even in a paper-based registry, measures should be taken to ensure the security and integrity of the registry record but this is more efficiently and easily accomplished if the registry record is in electronic form. In addition to database control programmes, software will also need to be developed to manage user communications, user accounts, payment of fees and financial accounting, computer-to-computer communication and the gathering of statistical data.

54. The necessary hardware and software needs will need to be evaluated and a decision made as to whether it is appropriate to develop the software in-house by the registry implementation team or purchase it from private suppliers. In making that determination, the team will need to investigate whether an off-the-shelf product is available that can easily be adapted to the needs of the implementing State. It is important that the developer/provider of the software is aware of the specifications for the hardware to be supplied by a third-party vendor, and vice versa.

55. Consideration should also be given to whether the registry should be designed to provide an electronic interface with other governmental databases. For example, in some States, registrants can search the company or commercial registry in the course of effecting a registration to verify and automatically input grantor or secured creditor identifier information (for a discussion of electronic matching of names, see A/CN.9/WG.VI/WP.52/Add.3, para. 10).

B. Recommendations 1-3

[*Note to the Working Group: The Working Group may wish to consider recommendations 1-3, as reproduced in document A/CN.9/WG.VI/WP.52/Add.5. The Working Group may also wish to note that, for reasons of economy, recommendations 1-3 are not inserted here at this stage but will be inserted in the final text.*]

II. Access to the registry services

A. General remarks

1. Public access

56. The *Secured Transactions Guide* recommends that any person may register a notice of a (potentially existing) security right or search the publicly available registry record (not the archives; see *Secured Transactions Guide*, chap. IV, paras. 25-30 and rec. 54, subparas. (f) and (g)). This approach is in line with one of the key objectives of the *Secured Transactions Guide* which is to enhance certainty and transparency by providing for registration of a notice of a security right in a general security rights registry (see *Secured Transactions Guide*, chap. IV, para. 25, and rec. 1, subpara. (f)). Because of the importance of the principle of public access to the registry services, it should be restated in the regulation (see draft Registry Guide, rec. 5).

57. Public access is facilitated to the extent that users with access to computers and the Internet are able to submit notices and conduct searches electronically without the need for the assistance or intervention of registry personnel. As already discussed (see A/CN.9/WG.VI/WP.52/Add.1, paras. 48-55), registration of paper forms is associated with cost, delay and potential for error and liability for the registry. In any case, even if the registry system permits or requires the use of paper forms, the registry record should be computerized and made accessible remotely by the Internet. In addition, public access to the registry's registration services is facilitated to the extent that the registry does not establish unnecessary conditions to access by registrants (see A/CN.9/WG.VI/WP.52/Add.2, paras. 1 and 2), nor requires verification of the identity of a registrant, evidence of existence of authorization for registration or conduct any scrutiny of the content of the notice (see A/CN.9/WG.VI/WP.52/Add.2, paras. 3-7).

58. Citing privacy concerns, some States require searchers to indicate that they have justifiable reasons for conducting a search. To facilitate access to the registry's search services, the *Secured Transactions Guide* recommends that the registry may not require a searcher to give reasons for the search (see *Secured Transactions Guide*, rec. 54, subpara. (g)). The privacy of the grantor is sufficiently protected by a regime that requires only a limited amount of information about the relevant security agreement to be included in a notice. The privacy of the secured creditor is sufficiently protected by the registry not allowing third-party searches according to the secured creditor identifier and by permitting the secured creditor to enter the name and address of a representative as the secured creditor in the notice, as well as by the limited amount of transaction information required. In addition, requiring

searchers to give reasons for a search would undermine the efficiency and functionality of the search process, as the registry would have to scrutinize the reasons given and determine that they are sufficient to justify a search. Moreover, depending on the exact reasons required, open access to information in the registry as part of an efficient and transparent market may be impeded, at least to the extent that some parties dealing with the grantor may not have the information available to other parties.

2. Operating days and hours of the registry

59. The approach to the operating days and hours of the registry recommended in the *Secured Transactions Guide* depends on the extent to which the registry is designed to permit direct electronic registration and searching by users or requires their in-person attendance at a physical office of the registry. In the former case, the registry should be accessible continuously except for brief periods to undertake scheduled maintenance; in the latter case, it should operate during reliable and consistent hours compatible with the needs of the potential registry users (see *Secured Transactions Guide*, chap. IV, para. 42, and rec. 54, subpara. (1)). In view of the importance of this issue to users, it should be addressed in the regulation or in administrative guidelines published by the registry (see draft Registry Guide, rec. 5).

60. Where the registry provides services through a physical office, the minimum operating days and hours should be the usual business days and hours in the enacting State. To the extent that the registry requires or permits the registration of paper notices or the submission of paper search requests, the time for receiving the paper notices, information in which will be entered in the registry record and made available to searchers on the same business day, may be set independently from the business hours. For example, the regulation or administrative guidelines of the registry may stipulate that, while the registry office is open between 09:00 and 17:00, all forms must be received by an earlier time (e.g. 16:30) so as to ensure that the registry staff has sufficient time to enter the information on notices into the registry record or conduct the search. Alternatively, the office might receive paper notices during all business hours, but set a “cut off” time, after which information in notices received may not be entered into the registry record until the next business day.

61. The registry regulation or administrative guidelines could also enumerate in an exhaustive or indicative way the circumstances in which access to the registry services may temporarily be suspended. An exhaustive list would provide more certainty but there is a risk that it may not cover all possible circumstances. An indicative list would provide more flexibility but less certainty. Circumstances justifying a suspension of the registry services might include any event that makes it impossible or impractical to provide users with access to the registry services (for example, where the registry provides users with direct electronic access to its services, force majeure, due, for example, to fire, flood, earthquake, war, or a breakdown in Internet or network access).

II. Access to the registry services (*continued*)

A. General remarks (*continued*)

3. Access to registration and search services

1. The *Secured Transactions Guide* recommends that the registry must accept a notice if: (a) it is presented in the authorized medium of communication (that is, in the prescribed paper or electronic form, as the case may be); (b) it is accompanied by the authorized fee, if any; and (c) provides the grantor identifier and the other information required to be included in the notice (see *Secured Transactions Guide*, rec. 54, subpara. (c)). In addition, as a measure of protection against the risk of unauthorized registrations, the *Secured Transactions Guide* recommends that the registry must request and maintain a record of the identity of the registrant (see *Secured Transactions Guide*, rec. 55, subpara. (b)).

2. To implement these recommendations, the regulation should provide that a person is entitled to have access to the registration services of the registry, if that person: (a) uses the prescribed form of notice; (b) provides its identity in the manner prescribed by the registry; and (c) has paid, or made arrangements to pay, any fees (see draft Registry Guide, rec. 6). For a person to have access to the search services of the registry, the regulation should provide that it is sufficient if the searcher: (a) uses the prescribed search form (including having entered search criteria into the relevant fields of the search form); and (b) has paid or made arrangements to pay the prescribed search fees, if any (see draft Registry Guide, rec. 7). There is no need for the registry to request and maintain a record of the identity of the searcher since, unlike an unauthorized registration, a search of the registry does not create any risk of prejudice to a grantor named in a notice (as to privacy concerns, see para. 3 below). It should be noted that the search relates to the registry record accessible to the public through the interface that is just a gateway to the database that contains the data, and not the archived information, that is, information in a registered notices removed from the publicly accessible record upon expiry of its period of effectiveness or upon registration of a cancellation office (see paras. 51-53 below and draft Registry Guide, rec. 18).

4. Verification of identity, evidence of authorization or scrutiny of the content of the notice not required

3. As already mentioned (see paras. 1 and 2 above), the *Secured Transactions Guide* recommends that the registry must request and maintain a record of the identity of the registrant (see *Secured Transactions Guide*, chap. IV, para. 48, and rec. 55, subpara. (b)). To facilitate the registration process, the required identification should be minimal (for example, a State-issued identification card, driver's licence or passport) and should be built into the access or payment process. For example, frequent users, such as financial institutions, automobile dealers, lawyers and other intermediaries acting for registrants and searchers, should have the option of setting up a user account with the registry that permits automatic charging of fees and provides them with special secure access codes for entering information and conducting searches.

4. In addition, the *Secured Transactions Guide* recommends that registration of a notice should be ineffective unless authorized by the grantor in writing. However, authorization may be given before or after registration, and a written security agreement is sufficient to constitute authorization (see *Secured Transactions Guide*, chap. IV, para. 106, and rec. 71). Moreover, to avoid overburdening the registration process with unnecessary formalities that could result in delays and costs, the *Secured Transactions Guide* recommends that the registry may not verify the identity of the registrant, or require evidence of the existence of authorization for registration of the notice, or conduct further scrutiny of the content of the notice (see *Secured Transactions Guide*, rec. 54, subpara. (d)). In view of the importance of these recommendations, the regulation may reiterate them (see draft Registry Guide, rec. 8). Accordingly, the function of the registry is to do what is set forth in the recommendations just mentioned. The determination of whether or not the registrant had authority to register a notice is outside the scope of the mandate of the registry. The same applies to amendments and cancellations that must be authorized by the secured creditor, whose rights they may affect. In this connection, it should be noted that, with few exceptions, all amendments may affect the rights of and thus require the authorization of the secured creditor as well. Typically, only two amendments, the addition of a grantor and of encumbered assets, require only the grantor's authorization.

5. Where the system is designed to allow notices to be directly registered electronically, there are effective methods to prevent fraudulent registrations, amendments or cancellations. For example, a secured creditor could be assigned a user identification number to use when effecting a registration. No amendments to or cancellation of a registered notice would be possible unless that number were used. If the secured creditor failed to preserve the confidentiality of that number, it should have no basis for a complaint about unauthorized cancellations or amendments. However, if the secured creditor were careful, it would be virtually impossible for the registration to be changed in any way without the involvement of the secured creditor.

6. However, where the registry system is designed to permit or require notices to be registered in paper form, there is little that the secured creditor can do to prevent an unauthorized amendment or cancellation from being registered fraudulently or without authority. In any case, in order to protect secured creditors, the *Secured Transactions Guide* recommends that a copy of all amendments and cancellations effected to a registered notice be sent to the registrant, that is, the secured creditor named in a notice (see *Secured Transactions Guide*, rec. 55, subpara. (d)). Registry systems sometimes build in "fail safe" mechanisms that provide secured creditors with the opportunity to reinstate or correct a registered notice that was amended or cancelled inadvertently or without authority within a short period after the registration of the amendment or cancellation notice. In States that adopt this approach, reinstatement within the specified period is effective as against third parties other than those that acquire a right in the encumbered asset during the period after registration of the amendment or cancellation notice and before the reinstatement or correction is registered. In other States, all registrations are retained on the registry record available to the public for a certain period of time, while the question whether or not the cancellation is effective is determined outside the registry system.

7. Once a registrant obtains access to the registry services and fills in all the required fields of the notice, the registry has no right to reject the notice. This does not mean that the registered notice will necessarily achieve its objective of making the security right to which it relates effective against third parties. This result depends on the satisfaction of the requirements for the creation of a security right in the secured transactions law that are not a matter of the registry record (conclusion of an effective security agreement, the existence on the part of the grantor of rights in the designated encumbered assets, and the existence of an outstanding obligation owed to the secured creditor or its commitment to extend credit). In addition, for the registered notice to achieve its objective, the registrant must also satisfy the requirements in the regulation and the secured transactions law for registering a notice (all the information required to be included in the notice has to be entered in the appropriate fields in the notice). All these matters are the responsibility of the registrant. If the registry had to scrutinize the notice and confirm its completeness, accuracy and legal sufficiency, the result would be delay, cost and potential for error, a result that would run counter to the kind of efficient registry envisaged in the *Secured Transactions Guide*.

5. Rejection of a registration or search request

8. As already mentioned (see para. 7 above), the fact that a registrant or searcher gained access to the registry services does not necessarily mean that a notice will be automatically accepted or a search result will automatically be produced. The *Secured Transactions Guide* recommends that a notice must contain certain information, such as the identifier and address of the grantor and the secured creditor, a description of the encumbered assets and, if the secured transactions law requires it, a statement as to the period of effectiveness of the registered notice and the maximum amount for which the security right may be enforced (see *Secured Transactions Guide*, chap. IV, paras. 92-97, and rec. 57).

9. In view of the importance of these requirements, the regulation should provide that the registry is permitted to reject registration of a notice only if it does not contain in a legible way the information required in the designated fields (for the information required in an initial amendment or cancellation notice, see A/CN.9/WG.VI/WP.52/Add.3, paras. 1 and 2, A/CN.9/WG.VI/WP.52/Add.4, para. 4, and draft Registry Guide recs. 21, 28 and 30). In addition, the regulation should provide that the registry may reject a search request only if it does not provide in a legible manner the search criterion in the designated field. Moreover, the regulation should clarify that the registry must provide grounds for such a rejection of a registration or search request immediately or as soon as practicable (in the case of other registries) (see draft Registry Guide, rec. 9).

10. It should be noted that the registry may reject non-conforming notices and search requests submitted in paper form, while in a registry system that allows a notice or search request to be entered electronically, the registry system will be designed so as to reject automatically non-conforming requests. In addition, while in the case of notice submitted in paper form the grounds for rejection will be communicated as soon as practicable, in the case of an electronic registry, the system should be designed to enable them to be immediately displayed on the electronic screen to the user.

B. Recommendations 4-9

[*Note to the Working Group: The Working Group may wish to consider recommendations 4-9, as reproduced in document A/CN.9/WG.VI/WP.52/Add.5. The Working Group may also wish to note that, for reasons of economy, the recommendations are not inserted here at this stage but will be inserted in the final text.*]

III. Registration

A. General remarks

1. Time of effectiveness of registered notice

11. The *Secured Transactions Guide* recommends that the registration of a notice or an amendment becomes effective when the information contained in the notice or the amendment is entered into the registry record so as to be available to searchers (see *Secured Transactions Guide*, chap. IV, paras. 102-105, and rec. 70).

12. In view of the importance of the effective time of registration for determining the third-party effectiveness and priority of a security right, the regulation could restate this recommendation (see draft Registry Guide, rec. 10, subpara. (a)). In particular, the regulation should provide that: (a) the effective time of registration (that is, the date and time when the notice became searchable) should be indicated on the registry record; and (b) the regulation should provide that a unique registration number must be assigned to an initial notice so that all subsequent amendment notices or a discharge notice are associated with that initial notice (see draft Registry Guide, rec. 10, subpara. (b); see also A/CN.9/WG.VI/WP.52, section B, terminology and interpretation, term “registration number”). In the unlikely but possible case where notices registered by competing secured creditors became searchable at the same date and time and, therefore, are assigned the same date and time of registration the secured transactions law could provide that, if there is even a slight time difference in the time the notices were received, priority should be resolved according to the exact sequence in which they were received or, if they were received at exactly the same time, they simply should have the same order of priority.

13. Where information in notices is entered into a computerized registry record, the registry software should be designed to ensure that the information becomes publicly searchable immediately or virtually immediately after it is entered. With modern advances in technology, this should not be a problem. As a result, any time lag between the entry of the information in a notice into the record and the time when the information will become available to searchers of the registry record will be all but eliminated. This is important because any time lag would create a priority risk for secured creditors as their rights would be subordinate to third-party rights acquired in the encumbered assets before the registration becomes effective by becoming publicly searchable. In systems that permit the direct electronic entry of a notice, registrants will have control over the timing and efficiency with which their registrations would become effective. However, to the extent there is a time lag (in particular in registry systems that permit or require notices to be submitted using a

paper form), before being confident in advancing funds, registrants should make an “advance registration” (see *Secured Transactions Guide*, chap. IV, paras. 98-101, and rec. 67). In addition, registrants should verify that: (a) the information in the notice has been entered by the registry staff into the registry record and is searchable; and (b) no notices of competing rights have been registered in the period between the submission of the paper notice and the time when the information became searchable.

14. To deal with the time lag problem associated with paper notices, the regulation could provide that the registry must enter the information in notices into the registry record in the order in which the paper notices were received by the registry (see draft Registry Guide, rec. 10, subpara. (c)). This approach would ensure that a notice received on 1 January at 08:00 would be entered and become available to searchers so as to be legally effective before a notice received by the registry on the same date at 08:01.

15. It should be noted that this recommendation would not necessarily protect a secured creditor that was the first to submit a paper notice in a hybrid registry that allows both paper and electronic submission of notices. Where, for instance, the paper notice is received at 08:00 am and is entered into the registry record by the registry staff and becomes searchable at 08:30, but a competing secured creditor enters a notice electronically at 08:05 and it becomes searchable at 08:10, the latter would have priority since its notice was the first to become searchable and therefore the first to be registered. In systems that adopt a hybrid approach, registrants who elect to use paper notices should be educated as to this risk.

16. In some legal systems, to deal with the time lag problem, search results are assigned a “currency date” indicating that the search result is designed to disclose only all registrations made as of the currency date and time (for example, a day before the search) and not as of the real time of the search. While this approach may not solve the problem, it provides warning to a prospective secured creditor that, after registering its security right, it would then have to conduct a second search to make sure no intervening notices have been registered before being confident in advancing funds. Prospective buyers and other third parties would similarly need to conduct a subsequent search before parting with value or otherwise acting in reliance on the registry record.

2. Period of effectiveness of registered notice

17. The *Secured Transactions Guide* recommends that an enacting State may adopt one of two approaches to the period of effectiveness (or duration) of a registered notice (see *Secured Transactions Guide*, chap. IV, paras. 87-91, and rec. 69).

18. Under option A, all registered notices are subject to a uniform statutory period of effectiveness. It follows that, where the secured transaction to which the registered notice relates has a longer duration, the secured creditor must ensure that the period of effectiveness is renewed before the expiry of the statutory period. This approach provides certainty as to the period of effectiveness of a registered notice, but limits the flexibility of the registrant to match the period of effectiveness of the registered notice to the likely duration of the secured financing relationship. Under option B, the registrant would be permitted to self-select the desired period of effectiveness with the option to renew the notice for an additional self-selected

period by registering an amendment notice. In such a case, the indication of the period in the notice would be a required component of the notice and without it a notice would be rejected. In legal systems that adopt the second approach, it may be desirable to base registration fees on a sliding tariff related to the duration selected by the registrant in order to discourage the selection of excessive terms that do not correspond to the expected duration of the underlying security agreements (with a cushion of extra time to allow for delays in payment of the secured obligation).

19. In view of the importance of this issue, the regulation should restate it (see draft Registry Guide, rec. 11, options A and B). In addition, the regulation could provide an option C, which is a hybrid of the first two options. Under this approach, the registrant would be entitled to select the period of effectiveness of the registered notice subject to a maximum temporal limit, so as to discourage the selection of excessive terms (see *Secured Transactions Guide*, chap. IV, para. 88, and draft Registry Guide, recommendation 11, option C).

20. If a State selects option A, it may wish to consider allowing the registrant to reduce the legal period of effectiveness of a registered notice if the anticipated duration of their security agreement is less than the specified statutory period of effectiveness of a registered notice. However, this approach would unnecessarily result in additional expense in the design of the registry, since the registrant would always be able and obligated, in any event, to cancel a registered notice if the secured obligation was satisfied and the security agreement was terminated before the expiry of its statutory period of effectiveness.

21. The requirement in options B and C for the registrant to indicate in the notice the period of effectiveness of the registered notice is a mandatory requirement with the result that a notice could be rejected if it did not indicate its period of effectiveness. States may wish to consider the possibility of designing the registry to automatically include a default period of effectiveness if the registrant failed to do so. A rule in the regulation implementing this approach could be drafted along the following lines: "When no period of time is indicated in the notice, the registration is effective for [a short period of time, such as 5 years, to be specified by the enacting State] years".

22. Where option B or C is selected by an enacting State, it would be desirable to design the registry in a way that permits the registrant to easily select and indicate in the notice the desired period without the risk of inadvertent error, for example, by limiting the choice to whole years from the date of registration. In order to ensure consistency between its secured transactions law and its registry regulation, the option a State decides to enact in its regulation should correspond to the option selected in its secured transactions law.

23. Whether a State enacts option A, B or C, the rules applying to the calculation of the period of effectiveness in national law will apply to the period of effectiveness of a registered notice, unless the secured transactions law provides otherwise. For example, national law may provide that where the calculation is from the day of registration or from the anniversary of the day of registration, a year runs from the beginning of that day. In addition, it should be noted that where the law requires the registrant to enter the period of effectiveness of registration in a notice, the requirement is a mandatory requirement. This means that, if the period of

effectiveness of registration is not entered in a notice, the notice will likely be rejected.

24. Regardless of the approach an enacting State may take to determining the period of effectiveness of a registration, under the recommendations of the *Secured Transactions Guide*, the third-party effectiveness of a security right is lost once the period expires unless: (a) the security right is made effective against third parties prior to the lapse by some other permitted method for that type of encumbered asset (see *Secured Transactions Guide*, rec. 46); or (b) an amendment notice is registered extending the period of effectiveness of the registration. While the third-party effectiveness of that security right could be re-established by registering a new notice, the security right would take effect against third parties only from the time of the new registration and it would as a general rule be subordinate to prior registered secured creditors (see *Secured Transactions Guide*, recs. 47 and 96).

3. Time when a notice may be registered

25. The *Secured Transactions Guide* recommends that it should be possible for a notice to be registered before the creation of the security right or the conclusion of a security agreement; this is often referred to as “advance registration” (see *Secured Transactions Guide*, chap. IV, paras. 98-101, and rec. 67). This rule typically would be stated in the secured transactions law. Depending on the drafting conventions in the enacting State, it may be included in the regulation (see draft Registry Guide, rec. 12).

26. As already explained (see A/CN.9/WG.VI/WP.52/Add.1, paras. 32), registration does not create and is not necessary for the creation of a security right (see also *Secured Transactions Guide*, rec. 33). Consequently, until the security agreement is actually entered into and the other requirements for the creation of a security right are satisfied, the secured creditor may be defeated by a competing claimant, such as a buyer that acquires rights in the encumbered assets in the period between advance registration and the creation of the security right. However, registration will generally ensure that the secured creditor, once the security right is created, has priority over another secured creditor that registers subsequently, regardless of the order of creation of the competing security rights.

27. If the negotiations are aborted after the registration is effected or for some other reason no security agreement is ever entered into between the parties, the creditworthiness of the person named as grantor in the registration may be adversely affected by the existence of the registration unless it is cancelled. The *Secured Transactions Guide* recommends that the registrant (or, in the case of an electronic registry, the registry system) should be required to notify the person identified in the notice as the grantor in a timely manner about the registration of the notice (see *Secured Transactions Guide*, rec. 55, subpara. (c)). Generally, the registrant will be willing to cancel the registration either unilaterally or at the request of the person named as grantor in the notice if no security agreement has been concluded between the parties or if the security right to which the notice relates has been extinguished. However, in the event the registrant refuses or neglects to do so, the *Secured Transactions Guide* recommends a summary judicial or administrative procedure to enable the person identified in the notice as the grantor to compel the cancellation of the notice (see *Secured Transactions Guide*, rec. 72, subpara. (b)). The *Secured Transactions Guide* further recommends that, if a security agreement is entered into

after the registration of a notice but its terms do not correspond to the content of the registered notice, the person identified in the notice as the grantor may also use this procedure to compel the amendment of the notice (see *Secured Transactions Guide*, rec. 72, subpara. (a), recs. 54, subpara. (d), and 72, subparas. (b) and (c), as well as A/CN.9/WG.VI/WP.52/Add.4, paras. 28-30).

4. Sufficiency of a single notice

28. In a notice registration system of the kind contemplated by the *Secured Transactions Guide* (see *Secured Transactions Guide*, chap. IV, paras. 10-14, and rec. 57, as well as A/CN.9/WG.VI/WP.52/Add.1, paras. 22-31 and draft Registry Guide, rec. 21), there is no reason why a single notice should not be sufficient to give third-party effectiveness to present or future security rights arising under multiple security agreements between the same parties covering the assets described in the notice (see *Secured Transactions Guide*, rec. 68). Requiring a one-to-one relationship between each notice and each security agreement would generate unnecessary costs and undermine the ability of the secured creditor to flexibly respond to the grantor's evolving financing needs without having to fear a loss of the priority position it holds under the initial registration. Accordingly, the *Secured Transactions Guide* recommends that the registration of a single notice should be sufficient to achieve the third-party effectiveness of one or more than one security right, whether they exist at the time of registration or are created later and whether they arise from one or more than one security agreements between the same parties (see *Secured Transactions Guide*, rec. 68). This rule typically would be stated in the secured transactions law. However, depending on the drafting conventions in the enacting State, it may be included or reiterated in the regulation (see draft Registry Guide, rec. 13).

29. It should be emphasized that a registration achieves the third-party effectiveness of security rights arising under multiple security agreements only to the extent that the description of the encumbered assets in the notice corresponds to their description in any new or amended security agreement (see *Secured Transactions Guide*, rec. 63). Otherwise, the registration would not serve the function of alerting third-party searchers to the potential existence of a security right. Accordingly, to the extent that any security agreement concluded between the parties covers additional assets that were not described in the initial notice, a new notice or an amendment of the initial notice would be needed and the third-party effectiveness and priority of the security right in these additional assets would date only from the time of registration of the new notice or the amendment.

5. Indexing or other organization of information in the registry record

30. The *Secured Transactions Guide* recommends that the primary indexing criterion for the purposes of searching and retrieving notices registered in the security rights registry should be the identifier of the grantor (see *Secured Transactions Guide*, chap. IV, paras. 31-36, and rec. 54, subpara. (h)). To implement this recommendation, enacting States should elaborate on it in the regulation (see draft Registry Guide, rec. 14).

31. Although the *Secured Transactions Guide* refers to the indexing of information in the registry record, indexing as a technical matter is not the only mode of organizing information in a data base so as to make it searchable. Accordingly, the

term indexing in the context of the *Secured Transactions Guide* should be understood as referring to any method of organizing the information contained in notices entered into the registry record that ensures that the information may be retrieved by a search using the identifier of the grantor as the search criterion.

32. The recommendation of the *Secured Transactions Guide* that the grantor's identifier should be used as the primary indexing and searching criterion (see *Secured Transactions Guide*, chap. IV, paras. 31-36, and rec. 58) is based on two considerations. First, unlike immovable property, most categories of movable asset do not have a sufficiently unique identifier to enable useful asset-based searching. Indeed, in light of the flexibility in describing encumbered assets (see *Secured Transactions Guide*, recs. 14, subpara. (d), and 57), there are many ways to describe them that will suffice (e.g., listing them by specific item or by category, etc.). Second, taking security in future assets and circulating pools of assets, such as inventory and receivables, would be administratively impractical and prohibitively expensive if the secured creditor had to continuously update its notice to add a description of each new asset acquired by the grantor. A grantor-based searching system resolves these problems by enabling the secured creditor to make its security right effective against third parties by a single one-time registration covering security rights, whether they exist at the time of registration or are created thereafter (see *Secured Transactions Guide*, rec. 68).

33. In cases in which the encumbered asset has only one unique description, as compared to a registry system that is organized so as to permit searching according to the identifier of the asset, grantor-based indexing and searching has a drawback in a specific transactional context. Under the recommendations of the *Secured Transactions Guide*, unless the grantor sells or disposes of an encumbered asset in the ordinary course of business, the security right will generally follow the asset into the hands of the transferee (see *Secured Transactions Guide*, recs. 79 and 81). Yet the security right will not be disclosed on a search of the registry record against the identifier of the transferee, potentially prejudicing third parties that deal with the asset in the hands of the transferee and that may not be aware of the historical chain of title. Suppose, for example, that B, after granting a security right in its automobile in favour of A, sells the automobile to C, who in turn proposes to sell or grant security in it to D. Assuming D is unaware that C acquired the asset from the original grantor B, he or she will search the registry using only C's identifier. That search will not disclose the security right granted by B in favour of A because it was registered against the name of the original grantor B. This problem is often referred to as the "A-B-C-D problem" (on the question whether a secured creditor should be obligated to amend its registration to add the transferee as a new grantor, see A/CN.9/WG.VI/WP.52/Add.4 paras. 8-11).

34. In response to the so-called "A-B-C-D problem", some secured transactions laws provide for supplementary asset-based indexing and searching so as to enable a remote transferee in the position of D in the above-mentioned example to determine from a search of the publicly available registry record whether a security right has been granted by a predecessor in title to the person with whom D is dealing. Generally, asset-based indexing and searching is available only for specific categories of high-value and durable movable assets with a significant resale market and for which unique and reliable serial numbers or equivalent alphanumeric identifiers are available (for example, road vehicles, trailers, mobile homes,

aircraft frames and engines, railway rolling stock, boats and boat motors, hereinafter generally referred to as “serial number assets”). The motor vehicle market is a good example. Motor vehicles typically are of quite high value with a relatively significant resale market. Moreover, the automotive industry assigns a unique alphanumerical identifier, commonly referred to as a vehicle identification number, to identify individual motor vehicles according to a system based on standards issued by the International Organization for Standardization (ISO). Requiring registration of the vehicle identification number, and permitting searching by reference to that number, solves the so-called “A-B-C-D problem”, since a search by that number will disclose all security rights granted in the particular motor vehicle by any owner in the chain of title. Other types of assets for which certain regimes have adopted this type of “serial number” approach include trailers, mobile homes, aircraft frames and engines, railway rolling stock, boats and boat motors.

35. The *Secured Transactions Guide* discusses but makes no recommendation on the question of using the serial number or equivalent alphanumerical identifier of an asset as an indexing and search criterion (see *Secured Transactions Guide*, chap. IV, paras. 34-36). The main reasons for this approach are that a multiplicity of search criteria would complicate searches and create unnecessary burdens on searchers. In any case, a serial number or equivalent is not a feasible search criterion for most types of movable asset or for circulating pools of present and future assets, such as inventory and receivables. Accordingly, if a State does choose to implement a system that uses the serial number of an asset as a supplementary indexing and search criterion, it should be limited to the types of high-value asset described above. In addition, under the secured transactions law of States that have adopted this approach, serial number registration is required for the purposes of achieving third-party effectiveness and priority only as against those classes of competing claimants that are most potentially prejudiced by the so called “A-B-C-D problem” (notably, transferees of the encumbered assets). As against other classes of competing claimants, for example, the grantor’s judgment creditors or insolvency administrator, registration of a notice that does not include entry of the serial number in the designated field is still effective against third parties so long as the notice otherwise sufficiently describes the encumbered asset.

6. Integrity of the registry record

36. The *Secured Transactions Guide* recommends that, while the day-to-day operation of the registry may be delegated to a private authority, the State retains the responsibility to monitor the operation of the registry to ensure that it functions in conformity with the secured transactions law to meet the needs of its users (see *Secured Transactions Guide*, chap. IV, para. 47, and rec. 55, subpara. (a)). In addition, the *Secured Transactions Guide* recommends a number of other steps to ensure the integrity and security of the registry record. These steps include: (a) the obligation of the registry to request and maintain the identity of the registrant; (b) send promptly copies of any amendment or cancellation to the registrant; and (c) maintain back-up copies of the registry record (see *Secured Transactions Guide*, chap. IV, paras. 48-54, and rec. 54, subparas. (b)-(f)). In order to ensure the integrity of the registry record, the regulation should include rules implementing these recommendations.

37. Additional measures to ensure that the integrity of the registry record is preserved include the following. First, the regulation should provide that the registry staff should not alter information in, or remove information from, the registry record, except as specified in the law and the regulation (see draft Registry Guide, rec. 15). Second, the regulation should provide that information in a registered notice may be amended only by registration of an amendment notice in accordance with the regulation (see Registry Guide, rec. 17).

38. In addition, the potential for registry staff corruption should be minimized by: (a) designing the registry system to make it impossible for registry staff to alter the time and date of registration or any other information entered by a registrant; (b) eliminating any discretion on the part of registry staff to reject users' access to the registry services; (c) instituting financial controls that strictly limit staff access to cash payments of fees (for example, by requiring the payment of fees to be made to and confirmed by a bank or other financial institution); and (d) designing the registry system to ensure that the archived copy of cancelled registrations preserves the original data submitted.

39. In addition, it should be made clear to registry staff and registry users, *inter alia*, that the registry staff are not allowed to give legal advice on the legal requirements for effective registration and searching or on the legal effects of registrations and searches. Moreover, it should be clear that the registry staff are only responsible for ongoing monitoring of the way the registry is working (or not working) in practice, including gathering statistical data on the quantity and types of registrations and searches that are being made, in order to be in a position to suggest any necessary adjustments to the registration and search processes and the relevant regulation.

40. Furthermore, as already discussed (see A/CN.9/WG.VI/WP.48/Add.1, paras. 48-55), the registry should be designed, if possible, to enable registrants and searchers to submit information for registration and conduct a search directly and electronically as an alternative to having registry staff do this on their behalf (see *Secured Transactions Guide*, rec. 54, subpara. (j)). In such a purely electronic registry, the role of the registry staff should essentially be limited to managing and facilitating electronic access by users, processing fees and overseeing the operation and maintenance of the registry system. If this approach is adopted, the regulation should make it clear that users bear sole responsibility for any errors or omissions they make in the registration or search process and carry the burden of making the necessary corrections or amendments (see draft Registry Guide, rec. 8).

7. Liability of the registry

41. The enacting State will need to assess how responsibility for loss or damage due to any of the following causes is to be allocated: (a) incorrect or misleading advice or information or unjustified rejection of a registration or search request by the registry staff; and (b) delay or erroneous or incomplete registrations or search results caused by a system malfunction or failure. As already mentioned (see paras. 36-40 above), while in cases where the registry permits direct registration and searching by registry users the law recommended in the *Secured Transactions Guide* limits the responsibility of the registry to system malfunction, it generally leaves this matter to enacting States (see *Secured Transactions Guide*, rec. 56). In some States, part of the registration and search fees are put into a fund to cover possible

liability of the registry for loss or damage suffered by secured creditors or third-party searchers. In other States, there are other insurance schemes aimed at covering such liability of the registry. In yet other States where data are being entered into the registry record by registry staff and thus the risk of error and liability is too great, there may be no back-up compensation or a maximum amount of recovery for any single loss.

8. Copy of registered notice

42. In view of the importance of the effective registration of a notice to the third-party effectiveness and priority of a security right, it is essential for the registrant to obtain verification that information in the notice has been successfully entered into the registry record and the date and time thereof. Accordingly, the *Secured Transactions Guide* recommends that a registrant should be able to obtain a record of the registration as soon as the information contained in a notice is entered into the registry record (see *Secured Transactions Guide*, chap. IV, paras. 49-51, and rec. 55, subpara. (e)).

43. In addition, the registrant needs to be informed of any changes to a registered notice to be able to take prompt steps to protect its position in the event that an amendment or cancellation was erroneous. Accordingly, the *Secured Transactions Guide* further recommends that the registry must send promptly a copy of any changes to a registered notice to the person identified as the secured creditor in the notice (see *Secured Transactions Guide*, chap. IV, para. 52, and rec. 55, subpara. (d)). The regulation should include provisions implementing these recommendations (see draft Registry Guide, rec. 16).

44. Moreover, for the grantor, receipt of a copy of the registered notice or a verification statement is necessary to ensure that the information in the notice: (a) corresponds to the authorization provided by the grantor in the security or other agreement, if any; and (b) conforms to the scope of the grantor's authorization for registration. Accordingly, the *Secured Transactions Guide* recommends that the registrant is obligated to send a copy of the registered notice to the grantor (see *Secured Transactions Guide*, rec. 55, subpara. (c)). This recommendation should likewise be reflected in the regulation.

45. Placing the obligation on the registrant, rather than the registry, to send a copy of the notice to the grantor is intended to avoid creating an additional burden for the registry which could negatively affect its time- and cost-efficiency. On the assumption that in most cases registrations will be made in good faith and will be accurate, failure of the registrant to meet this obligation results only in nominal penalties and any proven damages resulting from the failure (see *Secured Transactions Guide*, chap. IV, para. 51, and rec. 55, subpara. (c)).

46. In the interests of efficiency, the registry should be designed, if possible, so as to automatically generate an electronic record of the registration and send it electronically or by, for example, electronic mail attachment, to the registrant. If the registry needs to send paper copies to the registrant by mail and the registrant has to forward the copy to the grantor also by mail, delays and problems are likely to arise.

9. Amendment of information in a registered notice

47. The *Secured Transactions Guide* recommends that a registrant may amend information in a registered notice by registering an amendment notice at any time (see *Secured Transactions Guide*, chap. IV, paras. 110-116, and rec. 73). The *Secured Transactions Guide* also recommends that a grantor may, in certain circumstances, seek an amendment through a judicial or administrative process (see *Secured Transactions Guide*, chap. IV, paras. 107 and 108, and rec. 72). In view of the importance of these recommendations, the regulation may restate them and, in addition, set out the information that an amendment notice should contain (see draft Registry Guide, rec. 17).

48. A notice may not reflect, or may no longer reflect, an existing or contemplated financing relationship between the secured creditor and the grantor identified in the registration. This may happen because, after the registration, the negotiations between the parties broke down, the parties agreed to add or delete encumbered assets, or the financing relationship to which the registered notice relates came to an end. In such a case, the continued presence of the information on the registry record will limit the ability of the person identified as grantor to sell or create a new security right in the assets described in the registered notice. This is due to the fact that a prospective buyer or secured creditor will be reluctant to enter into any dealings with the person identified as the grantor unless and until the existing notice is cancelled.

49. While an amendment by the secured creditor would require appropriate authorization by the grantor, an amendment due to the assignment of the secured obligation, subordination or change of address of the secured creditor or its representative should not require authorization by the grantor. Typically, the grantor would authorize registration of an initial notice as well as any amendment in a single authorization document. This single authorization would not require the secured creditor to request individual authorizations for individual amendments (such as, for example, to extend the period of effectiveness of a registered notice).

50. It should be noted that an amendment will change the substance of the registry record through another notice, but it will never change the information of the initial notice, which will remain searchable in the publicly available registry record and, upon expiry of the period of effectiveness or cancellation of the notice, retrievable in the registry archives (see paras. 51-53 below).

10. Removal of information from the publicly available registry record and archival of such information

51. The *Secured Transactions Guide* recommends that information contained in a notice should be removed from the publicly available record once the period of effectiveness of the relevant registered notice expires or a cancellation notice is registered; such information must then be archived (see *Secured Transactions Guide*, chap. IV, para. 109, and rec. 74). The regulation should include rules implementing these recommendations (see draft Registry Guide, recs. 18 and 19).

52. In particular, the regulation should make it clear that information removed from the publicly available registry record must be archived so as to be capable of being retrieved for a period established at the discretion of enacting States (for example, at least twenty years). The archival period may be influenced by the length

of the period within which claims may be submitted under a loan agreement. For example, in some legal systems, no action may be brought later than fifteen years from the date on which the act that would be the basis of a claim occurred. In those systems, the registry regulation provides that information in all registered notices must be kept in the registry archives for fifteen years; and while it is possible that the fifteen year period can be extended through acknowledgment by the debtor of the debt, the registry is not obligated to keep the information in its archives beyond the initial limitation period. It should be noted that retrieval of archived information may be necessary for various purposes, such as, for example, for the purpose of establishing priority in the case of prolonged court or insolvency proceedings, or for the purposes of tax or money-laundering legislation. In many States, information in expired or cancelled notices may be retained in the registry record accessible to the public with an indication that it has expired or has been cancelled.

53. In other States, where information submitted to the registry is entered in the registry record by the registry, the registry may correct errors that it made in the process of entering information in the registry record. This is intended to ensure that the registry may correct errors made in entering into the record information submitted in a paper form (correctness of the information on the form being the responsibility of the registrant), but may not scrutinize and correct information entered by a registrant electronically, as this would run counter to the *Secured Transactions Guide* (see *Secured Transactions Guide*, rec. 54, subpara. (d), which is intended to limit the role of the registry and accordingly the scope of error and liability for error). The registry may effectuate the change correcting its error by registering a correction form that identifies the clerk making the corrections and the corrections made. Enacting States that may wish to allow such corrections by the registry will need to provide rules on the legal consequences of errors made by the registry in entering information in the registry record and in particular whether a “correction” may change the order of priority.

11. Language of a notice

54. The *Secured Transactions Guide* discusses but makes no recommendation with regard to the language of a notice (see *Secured Transactions Guide*, chap. IV, paras. 44-46). In view of the importance of the matter, it should be addressed in the regulation (see draft Registry Guide, rec. 20).

55. Two issues arise in this regard. First, the language in which information in a notice should be expressed and, second, the set of characters in which the information should be entered into the notice. The regulation should specify the language but need not deal with the permissible set of characters as long as they are publicized to users (for example, on the registry’s website). This would allow the registry to revise the set of characters from time to time.

56. The language to be used to enter information in the registry typically would be the official language or languages of the State under whose authority the registry is maintained, but could also include any other language specified by that State. In any case, search results should be displayed in the language in which the information was entered in the registry record. In addition, where the grantor’s name is the relevant identifier and the correct name is in a set of characters other than that used by the registry, the registry could be designed to adjust or transliterate some characters in the grantor’s name to conform to the characters used by the registry.

The same applies to secured creditor's name, the description of the encumbered assets or other information in the notice if, for example, the language used in the foreign State of the manufacturer has to be used in the notice. The characters to be transliterated and the form to which they will be transliterated may need to be made public (for example, on the registry's website).

57. Where the grantor is a legal person and the law under which it is constituted allows the use of alternative linguistic versions of its name, the regulation should specify that all linguistic versions of the name must be entered as separate grantor identifiers to the extent that this is compatible with the specified language of the registry. This is necessary to protect third parties that may be dealing or have dealt with the grantor under any one of the alternative versions of its name and would therefore search the registry using that version.

58. A way to mitigate the various problems that might arise from the fact that the identifier of the grantor is expressed in a language other than that used by the registry would be to use personal identity card numbers as the identifier of the grantor in lieu of the name of grantor (for a discussion of this matter, see A/CN.9/WG.VI/WP.52, paras. 11 and 12).

B. Recommendations 10-20

[Note to the Working Group: The Working Group may wish to consider recommendations 10-20, as reproduced in document A/CN.9/WG.VI/WP.52/Add.5. The Working Group may also wish to note that, for reasons of economy, the recommendations are not inserted here at this stage but will be inserted in the final text.]

(A/CN.9/WG.VI/WP.52/Add.3) (Original: English)

Note by the Secretariat on a draft Technical Legislative Guide on the Implementation of a Security Rights Registry, submitted to the Working Group on Security Interests at its twenty-second session**[Original: English]****ADDENDUM****Contents**

| | <i>Paragraphs</i> |
|--|-------------------|
| IV. Registration information | 1-56 |
| A. General remarks | 1-56 |
| 1. Information required in an initial notice | 1-23 |
| 2. Secured creditor information | 24-26 |
| 3. Description of encumbered assets | 27-35 |
| 4. Period of effectiveness of registered notice | 36 |
| 5. Maximum amount for which security right may be enforced | 37-41 |
| 6. Incorrect or insufficient information | 42-56 |
| B. Recommendations 21-27 | |

IV. Registration information**A. General remarks****1. Information required in an initial notice**

1. The *Secured Transactions Guide* recommends that the following information and only the following information needs to be provided in an initial notice for the registration to be effective: (a) the identifier and address of the grantor; (b) the identifier and address of the secured creditor or its representative; (c) a description of the encumbered asset; (d) the duration of the registration, if the enacting State chooses the option in its secured transactions law of allowing the registrant to select the period of effectiveness of the notice; and (e) the maximum monetary amount for which the secured creditor may enforce the security right, if the enacting State chooses to require this information in its secured transactions law (see *Secured Transactions Guide*, chap. IV, paras. 65-97, and rec. 57). The regulation should restate and supplement this recommendation (see draft Registry Guide, rec. 21). The following paragraphs discuss each of the elements of the required content of a notice.

2. As already discussed (see A/CN.9/WG.VI/WP.52/Add.2, paras. 1-2, 7 and 9), the registrant must enter the required information in the designated field or space in the prescribed form of notice (see draft Registry Guide recs. 9 and 21). If the registrant enters, for example, the identifier of the grantor in the secured creditor

field, this would not be a ground for the registry to reject the notice. However, the registration of the notice may be ineffective with the result that the security right to which it relates is not made effective against third parties. However, this would not be a ground for the rejection of the notice. In addition, the identifiers of the grantor and the secured creditor should be established on the basis of current and official documents, and should be their identifiers at the time of registration. Moreover, their addresses should be their current addresses known to the registrant at the time of registration.

(a) Grantor information

(i) General

3. As already explained (see A/CN.9/WGVI/WP.52/Ad.2, paras. 38-43), the *Secured Transactions Guide* recommends that information contained in notices should be indexed by reference to the grantor's identifier. In order to ensure that a search of the registry discloses all security rights that may have been granted by a person, the *Secured Transactions Guide* also provides explicit guidance on what constitutes the correct identifier of the grantor (see *Secured Transactions Guide*, recs. 58-60). The regulation should provide detailed guidance so as to ensure that a registrant can be confident that its registration will be legally effective and searchers can confidently rely on a search result (see draft Registry Guide, recs. 22-24).

4. It is not uncommon for a person to create a security right in its assets to secure an obligation owed by a third-party debtor (including a third-party guarantor of the obligation owed by the grantor). Since the function of registration is to disclose the possible existence of a security right in the assets described in the notice, the regulation should make it clear that the information required is the identifier and address of the grantor that owns, or has rights in, the encumbered assets, and not the information of the third-party debtor of the secured obligation (or a mere guarantor of the obligation owed by the debtor).

5. In addition, where there is more than one grantor, the regulation should specify that their identifiers and addresses must be entered in the designated field or space on the notice separately for each grantor. This is necessary since the identifier of the grantor is the search criterion by which notices are retrieved by searchers (see A/CN.9/WG.VI/WP.52/Add.4, paras. 31-36). To facilitate the registration process, the prescribed form of notice should be designed so as to enable the identifiers and addresses of multiple grantors to be entered separately on the same notice. While the registrant could achieve the same result by registering separate notices for each grantor, this is a more cumbersome process since the registrant will need to re-enter all the other information required on a notice on each separate notice.

(ii) Natural persons versus legal persons

6. The *Secured Transactions Guide* provides separate recommendations with respect to determining the identifier of the grantor depending on whether the grantor is a natural or a legal person or other entity (see *Secured Transactions Guide*, recs. 59-60). It follows that notices will be indexed or otherwise organized in the registry record according to distinct criteria depending on the category of grantor.

7. This approach has implications for the registration and search process. In order to ensure that the information in a notice is properly entered in the registry record so as to be retrievable by a searcher, the regulation should make it clear that a registrant must enter the identifier and address of the grantor in the fields designated for entering information relating to that category of grantor. To achieve this result, the prescribed form of notice, as well as the form of search request, should provide separate and distinct fields for entering the identifier and address of grantors in each category (see forms in A.CN.9/WG.VI/WP.52/Add.6).

(iii) *Grantor identifier for natural persons*

8. The *Secured Transactions Guide* recommends that, if the grantor is a natural person, the identifier of the grantor for the purposes of an effective registration should be the name of the grantor as it appears in a specified official document (see *Secured Transactions Guide*, rec. 59). In order to implement this recommendation, the regulation should specify the types of official document that the enacting State regards as authoritative sources of the grantor's name. The following table illustrates the type of approach that might be taken, although each enacting State will need to determine in accordance with its own naming conventions what types of official document or other source are most appropriate (see draft Registry Guide, rec. 22).

| Grantor status | Grantor identifier |
|--|---|
| Born in enacting State and birth registered in enacting State | Name on birth certificate or equivalent official document |
| Born in enacting State but birth not registered in enacting State | (1) Name on current passport (2) If no passport, name on equivalent official document such as an identification card or driver's licence |
| Not born in enacting State but naturalized citizen of enacting State | Name on citizenship certificate |
| Not born in enacting State and not a citizen of enacting State | (1) Name on current passport issued by the State of which the grantor is a citizen (2) If no current foreign passport, name on birth certificate or equivalent official document issued at grantor's birth place |
| None of the above | Name on any two official documents issued by the enacting State, if those names are the same (for example, a social security, health insurance or tax card) |

9. It is equally important to have clear rules specifying what components of the name in the official document are required to be entered in the prescribed notice (for example, family name, followed by the first given name, followed by the second given name) and to provide separate designated fields in the prescribed notice for entering each component. In deciding what components are required, the enacting State should take into account local naming conventions as well as the

extent to which locally issued official documents specify the different components of the name. Guidance should also be provided for exceptional situations. For example, where the grantor's name consists of a single word, the regulation should provide that that word should be entered in the family name field and the registry system should be designed so as not to reject notices that have nothing entered in the given name field (see draft Registry Guide, rec. 22, option A).

10. The enacting State may wish to consider whether there should be electronic matching of names entered in registered notices against names in other databases. In this regard, two issues should be considered. The first issue is the responsibility of the registry. The registry would be responsible for ensuring that the database to which it has connected is current, complete and accurate. Otherwise, it would be providing a disservice and exposing itself to liability. The second issue is the legal effect of offering matching services. One option would be for the regulation to provide that a matched record is legally sufficient to identify the grantor. Under this approach, electronic matching would shift the legal responsibility to correctly identify the grantor from the registrant to the registry, thereby exposing the registry to potential liability. The other option would be to provide that this is just a service without any legal effect and it is the responsibility of the registrant who relies on electronic matching to ensure that the grantor identifier in the external data base is correct. This latter approach more closely accords with the recommendations of the *Secured Transactions Guide*.

11. In some States, many persons may have the same name, with the result that a search may disclose multiple grantors all having the same name. To accommodate this scenario, the *Secured Transactions Guide* recommends that, where necessary, information in addition to the name of the grantor (such as the grantor's birth date or personal identification or other card number issued by the enacting State) must be included in the notice to uniquely identify the grantor (see *Secured Transactions Guide*, rec. 59). A State wishing to implement this additional recommendation should specify in the regulation the type of additional information, as well as whether it must be included for the registration to be effective or whether inclusion is at the option of the registrant (see draft Registry Guide, rec. 22, option B).

12. Whether an enacting State should provide for the inclusion in a notice of an identity card or other official card number issued by that State as additional information depends on three principal considerations. First, whether the registry system under which the identity card numbers are issued is sufficiently universal and reliable to ensure that each natural person is assigned a permanent unique number. Second, whether the public policy of the enacting State permits the public disclosure of the identity card or other card number that it assigns to its citizens and/or residents. Third, whether there is a reliable documentary record or other source by which third-party searchers can objectively verify whether a particular number relates to the particular grantor. If these three conditions are met, the use of State-issued identity card or other official card numbers would be an ideal way to uniquely identify grantors. However, as mentioned above, the approach recommended in the *Secured Transactions Guide* is that additional information, whether in the form of an identity card number or otherwise, may be required only where necessary to uniquely identify a grantor (see *Secured Transactions Guide*, rec. 59) and only as a requirement in addition to entering the name of the grantor (see draft Registry Guide, option B).

13. In view of the conflict-of-laws recommendations of the *Secured Transactions Guide* (such as, for example, recommendation 203, which provides that the law applicable to the creation, third-party effectiveness and priority of a security right in a tangible asset is the law of the State in which the tangible asset is located), the law of the enacting State (including its registry regulation) could apply to a security right created by a foreign grantor. Thus, the regulation requires the entry of a State-issued identity card or other official card number to uniquely identify a grantor, it will still be necessary for the regulation to address cases where the grantor is not a citizen or resident of the enacting State, or, for any other reason, has not been issued a number. The enacting State might, for example, provide in the regulation that the number of the grantor's foreign passport or the number in some other foreign official document is a sufficient substitute.

(iv) *Grantor identifier for legal persons*

14. For grantors that are legal persons, the *Secured Transactions Guide* recommends that the correct identifier for the purposes of effective registration is the name that appears in the document constituting the legal person (see *Secured Transactions Guide*, rec. 60). The regulation should restate and supplement this rule. In particular, the regulation should be drafted to make it clear that the relevant constituting document includes any type of instrument (whether it be a private contract, a statute or a decree) that is the legal source of the grantor's status as a legal person according to the law under which it was constituted (see draft Registry Guide, rec. 23).

15. Virtually all States maintain a public commercial or corporate register for recording information about legal persons constituted under the law of that State including their names. In many States, upon registration in that record, a unique and reliable registration number is assigned to the legal person. If the enacting State is concerned that multiple legal persons may share a common name, the regulation could specify the inclusion of that number in the notice as additional information to be used to uniquely identify the grantor (see Registry Guide, rec. 23, option B).

16. The name of a grantor that is a legal person typically includes generic abbreviations (such as S.A., "Ltd", "Inc", "Incorp", "Corp", "Co") or terms (such as Société Anonyme, "Limited", "Incorporated", "Corporation", "Company") indicative of the type of body corporate or other legal person. The regulation should make it clear whether these abbreviations or terms are an optional component of the grantor's identifier in the sense that a search with or without them, or using an erroneous version of them, would still retrieve the relevant registration. The optional approach would protect registrants that do not enter the correct generic abbreviation or term or fail to enter it at altogether. However, it could reduce transparency for third-party searchers since a search result would disclose all grantors that are legal persons, regardless of their type, that share the same specific name.

17. Depending on the law applicable to the constitution of the grantor, the document or other instrument constituting it as a legal person may contain inconsistent variations of the name (for example, referring to it in different places as "The ABC inc." or "ABC Inc." or "ABC"). Ideally, the regulation would provide guidance on which part of the constituting document is to be treated as the authoritative source of the grantor's name for registration purposes. Supplementary

rules would need to be developed to accommodate cases where the legal person was constituted in a foreign State, in particular, whether the name or registration number that appears on the public record of a foreign State may be used as the identifier of the legal person in the enacting State.

(v) *Special cases*

18. The regulation will also need to set out additional guidelines on the required grantor identifier where the grantor does not fit into either the natural person or the legal person categories (see draft Registry Guide, rec. 24). The issue here is not whether the grantor has the legal capacity to create a security right, but rather how its identifier should be entered in a notice. The following table sets out examples of the types of situation that will need to be addressed, together with examples of possible identifiers. Enacting States may wish to consider selecting and adapting these examples to their own laws.

| Grantor status | Grantor identifier |
|---|---|
| Insolvency estate acting through an insolvency representative | Name of the insolvent person, entered in accordance with the rules applicable for grantors who are natural or legal persons, as the case may be, with the specification in a separate designated field that the grantor is insolvent |
| Syndicate or joint venture | Name of the syndicate or joint venture as stated in any document constituting it, entered in the field designated for entering the identifier of a legal person |
| Trustee or representative of an estate | Name of the trustee or the representative of the, entered estate in accordance with the rules applicable for grantors who are natural or legal persons, as the case may be, with the specification in a separate field that the grantor is acting for a trust or is the representative of an estate |
| Other entity | Name of the entity as designated in any document constituting it, entered in accordance with the rules applicable for grantors who are legal persons |

19. In the case of sole proprietorships, even though the business may be operated under a different business name and style than that of the proprietor, the regulation should provide that the grantor's identifier is the name of the proprietor entered in accordance with the rules applicable for grantors who are natural persons. The name of the sole proprietorship is unreliable and may be changed at will by the proprietor. However, the name of the sole proprietorship may be entered as an additional grantor in the notice.

20. As noted above, systems for electronic registration of notices should be designed to allow registrants to select from a category field with the appropriate designation (for example, insolvency estate, syndicate or joint venture, trust or estate, etc.) instead of entering the designation in the name field of the grantor.

Alternatively, the notice may include a field or item in which the registrant must enter the appropriate designation.

(vi) *Address of the grantor*

21. Under the *Secured Transactions Guide*, the address of the grantor is part of the required content of the notice (see *Secured Transactions Guide*, rec. 57, subpara. (a)). This approach helps to uniquely identify the grantor where necessary as, for example, where the grantor's name is common (see *Secured Transactions Guide*, rec. 59). The grantor's address is relevant for the purpose of sending copies of registered notices to the grantor (see *Secured Transactions Guide*, recommendation 55, subparas. (c) and (d)) and enables third-party searchers to contact the grantor for further information. Accordingly, the registrant should enter the current known address of the grantor. However, the grantor's address is not part of the grantor's identifier in the sense of being a search criterion. The regulation should restate and, where necessary, supplement these recommendations. In addition, the registry system should be designed to prompt registrants to enter an address into a field separate from the one for the grantor identifier.

22. Some States do not require entry of the grantor's address where personal security concerns necessitate that an individual's address details not be disclosed in a publicly accessible record. Where this exception is recognized, the regulation may specify the entry of a post office box or similar non-residential mailing address. Alternatively, interested parties could contact the secured creditor (whose address must be entered in the notice) to obtain further information about the grantor.

23. The grantor's address plays less of a role in systems in which the grantor identifier is required to include additional information designed to uniquely identify the grantor (for example, a birth date or State-issued identity card number) as compared to systems in which the required identifier is only the grantor's name with the result that a search may disclose multiple security rights granted by different grantors that share the same name (see paras. 11 and 12 above).

2. Secured creditor information

24. The *Secured Transactions Guide* recommends that the identifier of the secured creditor or the secured creditor's representative, along with its address, be included in the notice submitted to the registry (see *Secured Transactions Guide*, rec. 57, subpara. (a)). The regulation should restate and, where necessary, supplement this recommendation (see draft Registry Guide, rec. 25).

25. The regulation should specify that the same identifier rules that apply to the grantor should apply also to the secured creditor or its representative. However, as explained below (see para. 46), since the identifier of the secured creditor or its representative is not a search criterion, strict accuracy is not as essential to the effectiveness of the registration. Accordingly, even if the regulation requires additional identifier information to be entered in order to uniquely identify the grantor (for example, birth date or a personal identification number), there is no need to extend this requirement to the secured creditor.

26. The regulation should make it clear that the registrant, who may be the secured creditor or its representative, may enter in the notice the identifier of the secured creditor or that of a trustee, agent or other representative. This approach is intended

to facilitate, for example, syndicated lending, since only the identifier of the lead bank or its nominee need be entered in a notice. It is also intended to protect the privacy of the secured creditor. The rights of the grantor are not affected since the grantor is in a direct relationship with the secured creditor (or the lead bank in a syndicated loan agreement) and already knows the secured creditor's identity. The rights of third parties are not affected either as long as the person identified in the notice as the secured creditor is in fact authorized to act on behalf of the actual secured creditor in any communication or dispute connected to the security right.

3. Description of encumbered assets

(a) General

27. The *Secured Transactions Guide* recommends that a description of the encumbered assets covered by the security right to which the registration relates should be a required component of an effective notice (see *Secured Transactions Guide*, rec. 57, subpara. (b)). This approach enables third parties dealing with a person's assets (such as prospective secured creditors, buyers, judgement creditors and the insolvency representative of that person) to determine which assets of that person may be encumbered by a security right. The *Secured Transactions Guide* also recommends that a description of the encumbered assets should generally be considered sufficient, for the purposes of both an effective security agreement and effective registration, as long as it reasonably allows identification of the encumbered assets (see *Secured Transactions Guide*, recs. 14, subpara. (d), and 63). Depending on the nature of the encumbered asset, the description may be specific or generic. For example, if the encumbered asset is a specific painting, the description in the notice would need to specify the title of the painting, the name of the painter and the year the painting was created. On the other hand, if the encumbered assets are generic categories of assets, such as all the inventory of an art gallery, it would be sufficient to describe them as "all paintings", "all works of art" or "all of the grantor's movable assets".

28. The regulation should restate and, where necessary, supplement this recommendation (see the draft Registry Guide, rec. 26). In particular, the regulation should explicitly state that the description of encumbered assets in a notice may be specific or generic as long as it reasonably allows their identification. The regulation should also clarify that a description that refers to all assets within a generic category or to all assets of a grantor is assumed to cover future assets within the specified category to which the grantor acquires rights during the duration of effectiveness of the notice. If the prescribed form of notice limits the number of characters that may be entered in the field for describing the encumbered assets and additional space is needed (for example, to identify the encumbered assets in more detail), the registry system should be designed to allow additional information to be provided in the form of an attachment or schedule to the notice. This is generally necessary only where the notice is in paper as opposed to electronic form, since the provision of sufficient space does not pose a practical problem in the latter case.

(b) Description of "serial number" assets

29. As already discussed (see A/CN.9/WG.VI/WP.52/Add.2, paras. 33-35), the *Secured Transactions Guide* discusses but makes no recommendation on the use of the serial number or other unique alphanumeric identifier constitute a separate

identifier for the purposes of registration and searching (see *Secured Transactions Guide*, chap. IV, paras. 34-36).

30. However, it would not be inconsistent with the *Secured Transactions Guide* for an enacting State in its secured transactions law to require a registrant to enter the serial number of specified categories of encumbered assets in a separate designated field, provided that the number reasonably allowed their identification (see *Secured Transactions Guide*, recs. 14, subpara. (d), 57, subpara. (b), and 63). If this approach is taken, it should be limited to high-value assets for which there is a significant resale market, since it would limit the ability of a secured creditor to make a security right fully effective against third parties in the grantor's future serial number assets through a single registration. The secured creditor would need to effect a new registration or amend the description of the encumbered assets in its existing registration to enter the serial number of each new asset as it is acquired by the grantor.

31. If the enacting State decides to adopt this approach, the regulation should make it clear that the entry of a serial number description in the designated field is not required where the relevant assets are held by the grantor as inventory. In the case of inventory, the entry of a generic description in the general field designated for entering a description of the encumbered assets is sufficient. This is because the so called "A-B-C-D problem"; see A/CN.9/WG.VI/WP.52/Add.2, para. 43) does not arise in the case of inventory, since buyers that acquire inventory from the original grantor in the ordinary course of the grantor's business take the inventory free of the security right in any event (see *Secured Transactions Guide*, rec. 81, subpara. (a)).

(c) Description of proceeds

32. The *Secured Transactions Guide* recommends that a security right should automatically extend to any identifiable assets received in respect of the encumbered assets, unless otherwise agreed by the parties to the security agreement (see *Secured Transactions Guide*, Introduction, sect. B, "proceeds", and rec. 19). Where the security right in the original encumbered assets was made effective against third parties by registration, the question arises as to whether the secured creditor needs to amend the description of the encumbered assets in the initial notice to include a description of the proceeds in order to ensure that its security right in the proceeds is effective against third parties.

33. When the proceeds consist of cash proceeds (for example, money or a right to payment), the *Secured Transactions Guide* recommends the automatic continuation of the third-party effectiveness of a prior registered security right in the original encumbered assets into the proceeds. The same is true where the proceeds are of a type that is already covered by the description of the original encumbered assets in the registered notice (for example, the description covers "all tangible assets" and the grantor trades in one item of equipment for another; see *Secured Transactions Guide*, rec. 39).

34. However, where the proceeds are not cash proceeds and are not otherwise encompassed by the description of the encumbered assets in the existing notice, the secured creditor must amend its registration to add a description of the proceeds within a short period of time after the proceeds arise in order to preserve the third-party effectiveness and priority of its security right in the proceeds from

the date of the initial registration (see *Secured Transactions Guide*, rec. 40). An amendment is necessary because a third party otherwise would not be able to identify which categories of asset in the grantor's possession might constitute the relevant proceeds.

(d) Description of encumbered attachments to immovable property

35. Like any other type of encumbered asset, a tangible asset that is or will be an attachment to immovable property needs to be described in a notice registered in the general security rights registry in a manner that reasonably allows its identification (see *Secured Transactions Guide*, recs. 14, subpara. (d), 57, subpara. (b), and 63)). While a generic description of the asset may be sufficient for this purpose, the registrant may also need to register in the immovable property registry in order to ensure that its security right is effective against third parties that acquire and register a right in the relevant immovable property. In an immovable property registry, registrations are normally indexed or otherwise organized by reference to the specific parcel of land as opposed to the identifier of the grantor. Thus, if the notice is to be capable of also being registered in the immovable property registry, the description of the asset in the notice must include a reference to the specific immovable property identifier. In addition, the rules governing registrations in the immovable property registry may need to be revised to permit the registration of notices and the generic description of encumbered assets (see *Secured Transactions Guide*, chap. III, para. 104). Moreover, if the grantor of the security right in the asset is not the owner of the related immovable property, the notice may also need to identify the owner of the asset if such identification is necessary for the indexing of the notice in the immovable property registry.

4. Period of effectiveness of registered notice

36. As already discussed (A/CN.9/WG.VI.WP.52/Add.2 paras. 25-32), if a State chooses in its secured transactions law the option of allowing registrants to self-select the period of effectiveness of a registered notice, the regulation should reflect this approach (see *Secured Transactions Guide*, rec. 69, and draft Registry Guide, recs. 11 and 21, subpara. (a)(iv)). In addition, the registry system should be designed so as to permit the registrant to easily select and indicate in the notice the desired period without the risk of inadvertent error (for example, by limiting the choice to whole years from the date of registration).

5. Maximum amount for which the security right may be enforced

37. The *Secured Transactions Guide* anticipates that, to facilitate subsequent lending against the residual value of the encumbered asset, some States may require an indication in the notice of the maximum monetary amount for which the security right may be enforced (see *Secured Transactions Guide*, chap. IV, paras. 92-97, and rec. 57, subpara. (d); for a corresponding indication of that amount in the security agreement, see rec. 14, subpara. (d)).

38. The aim of this approach is illustrated by the following example. An enterprise has an asset with an estimated market value of \$100,000. The enterprise applies for a revolving line of credit facility to a maximum amount of up to \$50,000 (including capital, interest and costs). The creditor is willing to extend the loan on the condition that it obtains a security right in the asset. The grantor is agreeable but

since the maximum loan amount specified in the security agreement and in the notice is only \$50,000 and the asset has a value of \$100,000, the grantor may wish to reserve the ability to obtain another secured loan from another creditor later by giving a security right in the same asset relying on the residual value of the asset. Ordinarily, the first-to-register priority rule would deter this subsequent creditor from giving a loan for fear that the first lender could later extend loans beyond the initial \$50,000 for which it would have priority under the general first-to-register rule. By imposing a requirement to specify the maximum value for which the security right may be enforced, the subsequent creditor in this example can be assured that the first-registered secured creditor cannot enforce its security right for an amount greater than \$50,000 (including capital, interest and costs), leaving the residual value available to satisfy its own claim should the grantor default.

39. In those States that adopt this option, the regulation should make it clear that the maximum amount and the relevant currency must be entered in the designated field of the notice. Each State has to determine whether the amount may be entered in numbers, letters or both. Possibly, the registry could be designed to accept letters or digits in all fields, except the fields for the maximum amount and the duration of registration in which only digits should be accepted. Some States allow the registrant to indicate or select from a menu the relevant currency in which the loan has been made. In those States, the legal consequences of a difference in the maximum amount specified in the notice and the amount actually owed need to be addressed. If the maximum amount specified in the notice is higher than the amount actually owed at the time of enforcement, the secured creditor is entitled to enforce its security right only up to the amount actually owed. In the contrary case where the maximum amount specified in the notice is lower than the amount actually owed, the secured creditor can enforce its security right only up to the maximum amount specified in the notice (and has the remedies of an unsecured creditor for the outstanding balance). However, if there is no other competing claimant, the secured creditor would be able to enforce its security right up to the amount actually owed.

40. At the same time, the *Secured Transactions Guide* recognizes that an equally valid approach is to avoid stating in the notice such a maximum amount so as to facilitate the extension of credit by the initial secured creditor. This approach is based on the assumptions that: (a) the first-registered secured creditor is either the optimal long-term financing source or will be more likely to extend financing, especially to small, start-up businesses, if it knows that it will retain its priority with respect to any financing to be provided to the grantor in the future; (b) the grantor will not have sufficient bargaining power to require the first-registered secured creditor to enter a realistic maximum amount in the notice (instead the secured creditor will insist that an inflated amount be included to cover all possible future extensions of credit and the grantor will not usually be in a position to refuse); and (c) a subsequent creditor to whom the grantor applies for financing may be able to negotiate a subordination agreement with the first-registered security creditor for credit extended on the basis of the current amount of residual value in the encumbered asset. In States that adopt this approach, the regulation would not include a rule requiring inclusion of the maximum amount in the registered notice (see draft Registry Guide, rec. 21, subpara. (a)(v)).

41. Thus, the *Secured Transactions Guide* acknowledges that both approaches have merit and recommends that States adopt the policy that is most consistent with

efficient financing practices in each State and, in particular, with the credit market practices that underlie each approach. As already mentioned, the regulation should adopt an approach that corresponds to the approach taken in the secured transactions law of the enacting State.

6. Incorrect or insufficient information

(a) Grantor information

42. The *Secured Transactions Guide* recommends that registration of a notice is effective only if it provides the grantor's correct identifier or, in the case of an incorrect statement, if the notice would be retrieved by a search of the registry record under the correct identifier (see *Secured Transactions Guide*, chap. IV, paras. 66-77, and rec. 58). The regulation should restate this recommendation (see draft Registry Guide, rec. 27, subpara. (a)).

43. As a result, an error in the grantor's identifier submitted by the registrant could render an initial notice or a notice that amends the grantor identifier ineffective, with the result that the third-party effectiveness of the security right would not be achieved. The test should not be based on whether the error appears to be minor or trivial in the abstract, but whether it would cause the information in the registry record not to be retrieved by a search of the registry record under the grantor's correct identifier. This is because the grantor's identifier is the search criterion for retrieving information submitted in a notice and entered in the registry record. The test is an objective one, since: (a) even if a searcher knew that a security existed and had been registered, the search would still be ineffective if the relevant notice could not be retrieved by a search of the registry record under the correct grantor identifier; and (b) the registration is ineffective regardless of whether a person challenging the effectiveness of the registration suffered any actual prejudice as a result of the error.

44. The *Secured Transactions Guide* does not include a recommendation as to the impact of an error in additional grantor information that does not constitute the grantor's identifier, for example, an error in the address of the grantor or in the grantor's birth date (unless this additional information is necessary to uniquely identify the grantor, in which case, what has already been mentioned above about an error in the grantor's identifier applies to such additional information). Guidance on this issue should be included in the regulation (see draft Registry Guide, rec. 27, subpara. (b)). By analogy to the general test recommended in the *Secured Transactions Guide* for errors in the entry of secured creditor information, the regulation should specify that an error in the additional grantor information that does not constitute an identifier does not render a registered notice ineffective unless it would seriously mislead a reasonable searcher (see *Secured Transactions Guide*, rec. 64). For example, if the search result discloses numerous grantors, all having the same name as the person in whom the searcher is interested, but the error in the additional grantor information is so acute as to make a reasonable searcher believe that the grantor named in the notice is not the relevant person, a notice indicating that grantor may be found to be ineffective.

45. In addition, the *Secured Transactions Guide* does not deal with the situation where a notice lists more than one grantor but an error occurs in the identifier of only one of the grantors listed in the notice. In this case, by analogy to the

recommendation of the *Secured Transactions Guide* with respect to an error in the description of only some of the encumbered assets (see *Secured Transactions Guide*, rec. 65), the regulation should provide that such an error would not render the registered notice ineffective with respect to the other grantors that were sufficiently identified (see draft Registry Guide, rec. 27, subpara. (c)). In line with the *Secured Transactions Guide*, the same rule should be restated in the regulation for notices that describe multiple encumbered assets but an error is made in the description of only one or some of them (see draft Registry Guide, rec. 27, subpara. (c)).

(b) Secured creditor information

46. As the secured creditor information is not an indexing or search criterion, the *Secured Transactions Guide* recommends that an error by the registrant in the identifier or address of the secured creditor or its representative renders the registration ineffective only if it would seriously mislead a reasonable searcher (see *Secured Transactions Guide*, rec. 64). For example, if the secured creditor is identified in the notice as bank AAA, and the search of the registry returns a result that names a different person as the secured creditor, the registered notice may not be ineffective (bank AAA may have changed its name, merged with another bank or been sold). Still, substantial accuracy is always important, since searchers rely on the identifier and address information of the secured creditor or its representative in the registry record for the purposes of sending notices under the secured transactions law (such as a notice of an extrajudicial disposition of an encumbered asset; see *Secured Transactions Guide*, recs. 149-151). Moreover, the grantor may need to rely on this information to submit a written request to the secured creditor for the cancellation or the amendment of a certain notice (*Secured Transactions Guide*, rec. 72, subpara. (a)).

(c) Asset description

(i) General

47. Under the *Secured Transactions Guide*, a registrant's failure to include an asset or certain type of asset in a notice means that the third-party effectiveness of the security right in any omitted asset or type of asset may not be achieved. However, the *Secured Transactions Guide* recommends that a minor error in the description of the encumbered asset does not render the registered notice ineffective unless it would seriously mislead a reasonable searcher (see *Secured Transactions Guide*, rec. 64). In addition, under the *Secured Transactions Guide*, a registrant's failure to meet the "seriously misleading" test means that the registration is ineffective only to the extent of the erroneously described or omitted assets and the security right continues to be effective against third parties with respect to other assets that were sufficiently described (see *Secured Transactions Guide*, rec. 65). The regulation should include corresponding recommendations (see draft Registry Guide, rec. 27, subparas. (b) and (c)).

(ii) Serial number assets

48. As already mentioned, serial number assets may need to be described in a notice by reference to the serial number and the type of asset, if this is necessary to allow their reasonable identification (see *Secured Transactions Guide*, recs. 14, subpara. (d), 57, subpara. (d), and 63). If that is the case, an error in the serial

number and type of asset should be treated in the same way as any other error in the description of the asset. This generally means that a minor error in the serial number does not render the registered notice ineffective unless it would seriously mislead a reasonable searcher (see *Secured Transactions Guide*, rec. 64 and draft Registry Guide, rec. 27, subpara. (b)).

49. As also already mentioned (see A/CN.9/WG.VI/WP.52/Add.2, paras. 33-35), in States that adopt a secured transactions law that requires the serial number of specified assets to be entered and indexed as a separate search criterion in order for the security right to be fully effective and take priority over specified classes of third-party competing claimants, an analogy could be made to the recommendation of the *Secured Transactions Guide* applicable to the incorrect or insufficient grantor identifier in the notice. Accordingly, a notice with the incorrect serial number would only be effective if it could be retrieved by a search of the registry record under the correct serial number (see *Secured Transactions Guide*, rec. 58).

50. In legal systems that adopt this latter approach, the regulation will also need to address the consequences of an error in the entry of one but not both the grantor identifier and the serial number. The regulation should provide that both would need to be entered correctly in the notice for the registration of that notice to be effective. As a result, should there be an error in either the grantor identifier or the serial number resulting in the notice not being retrievable by a search using the correct grantor identifier or the correct serial number, the registration of that notice would be ineffective or result in lower priority for the relevant security right as against certain classes of competing claimants specified in the secured transactions law (e.g. transferees or lessees of the encumbered assets from the original grantor).

(iii) *Period of effectiveness of registration*

51. The *Secured Transactions Guide* recommends that an incorrect statement in the notice as to the period of effectiveness of the registration should not render the registration ineffective (see *Secured Transactions Guide*, rec. 66). The regulation should include a corresponding recommendation (see draft Registry Guide, rec. 27, subpara. (e)). However, this recommendation is subject to the important caveat that protection should be given to third parties that relied on such a statement (for the protection of the grantor against an unauthorized statement in the notice of the maximum amount, see paras. 55 and 56 below).

52. Accordingly, where the registrant enters a longer duration than intended, the protection of third parties is not as relevant as they would not be prejudiced by relying on the incorrect statement. The registered notice will still alert them to the possibility that a security right may exist and that they can take steps to protect themselves against that risk. As there would be nothing on the registry record to indicate that the secured creditor intended to enter a shorter term, third-party searchers would not in any way be misled by the secured creditor's error in entering a longer term. Consequently, the error in the period of effectiveness of the registered notice should not render the registration ineffective. However, in cases where the security right referred to in the notice has, in fact, been extinguished (for example, by payment of the secured obligation and termination of any credit commitment), the grantor would be able to request the secured creditor to amend or cancel the notice to reflect the correct duration. If the secured creditor failed to do so within a number of days specified in the secured transactions law after receipt of the

grantor's written request, the grantor could seek the amendment or cancellation of the notice through a summary judicial or administrative procedure (see *Secured Transactions Guide*, rec. 72, subparas. (a) and (b)).

53. However, where the statutory period of effectiveness or the period that the registrant entered is shorter than the actually intended period of effectiveness, the registration will lapse at the end of the specified period and the security right will no longer be effective against third parties, unless it was made effective prior to the lapse by some other method (see *Secured Transactions Guide*, rec. 46). As mentioned, while the secured creditor can re-establish third-party effectiveness by registering a new notice, its security right will take effect against third parties only from the time of the new registration (see *Secured Transactions Guide*, recs. 47 and 96).

(iv) *Maximum monetary amount and impact of error*

54. For States that elect to require the maximum amount for which the security right may be enforced to be entered in the notice, the *Secured Transactions Guide* recommends that an incorrect statement in the registered notice of the maximum amount should not render the notice ineffective (see *Secured Transactions Guide*, rec. 66). The regulation should include a corresponding recommendation (see draft Registry Guide, rec. 27, subpara. (e)).

55. However, this is subject to the caveat that third parties that relied on the incorrect statement of the maximum monetary amount in the registered notice should be protected. Thus, where the maximum amount indicated in the notice is greater than the maximum amount agreed in the security agreement or the amount actually owed, there is no need to protect a third party since its decision to advance funds normally will be based on the amount indicated in the notice. It should be noted that the grantor would also be protected in this situation since it could request the secured creditor or, if the secured creditor failed to act in a timely manner, a judicial or administrative body through a summary proceeding, to amend the notice to correct the amount so that the grantor could obtain financing against the residual value of the encumbered asset (see *Secured Transactions Guide*, rec. 72).

56. However, where the maximum amount indicated in the notice is less than the maximum amount agreed to in the security agreement or the amount actually owed, a third party that relied on the maximum amount specified in the notice (in advancing secured credit on the assumption that it could enforce its security right against any residual value in the asset in excess of the amount indicated in the notice) should be protected. Similarly, a judgement creditor, who took enforcement action in the belief that the excess value of the asset above that stated in the notice would be available to satisfy its judgement claim, should also be protected. The way to protect the interests of third parties is to limit the right of the secured creditor to enforce its security right as against the third party up to the maximum amount erroneously stated by the secured creditor in the registered notice (as to the rights of the creditor to claim the amount actually owed, see para. 39 above).

B. Recommendations 21-27

[Note to the Working Group: The Working Group may wish to consider recommendations 21-27, as reproduced in document A/CN.9/WG.VI/WP.52/Add.5. The Working Group may also wish to note that, for reasons of economy, the recommendations are not inserted in here at this stage but will be inserted in the final text.]

| B. Recommendation 34 | |

V. Amendment and cancellation information**A. General remarks****1. Voluntary amendment****(a) General**

1. Information entered in the registry record may need to be changed to reflect a change in the relationship between the secured creditor and the grantor. This is typically done by way of an amendment that indicates the changes to the information contained in the registered notice (with the exception of errors made by the registry in entering the information in the registry record, once a notice is registered there is no means to edit a notice and all changes must be in the form of a subsequent amendment notice; see *Secured Transactions Guide*, rec. 72). An amendment may be necessary, for example, in order to add, change or delete

information in a registered notice or to renew the period of the effectiveness of a registered notice.

2. Normally, an amendment is not effected by deleting the currently registered information and replacing it with the new information. Instead, an amendment is added to the information in the initial registered notice so that the searcher is able to find and examine both the originally registered information as well as the information subsequently registered. Neither registrants nor registrars are able to replace any information from the registry record, and registry systems should be designed accordingly.

3. A secured creditor should be in a position to amend a notice, to the extent appropriate, at any time. While some amendments would require an authorization by the grantor, other amendments such as an amendment to reflect an assignment of the secured obligation, subordination or change of address of the secured creditor or its representative should not require authorization by the grantor. Typically, the grantor would authorize registration of an initial notice as well as any amendment in a single authorization document. This single authorization would not require the secured creditor to request additional authorization for individual amendments (such as, for example, to extend the period of effectiveness of the registration). This is the approach recommended in the *Secured Transactions Guide* (see *Secured Transactions Guide*, recs. 71 and 73).

4. To effect an amendment, a registrant must provide in the designated field in the amendment notice certain information, that is, the registration number of the notice to which the amendment relates, and the additional or changed information as the case may be (see draft Registry Guide, rec. 28, subpara. (a)). Each amendment notice should be assigned by the registry a date and time of registration (see draft Registry Guide, rec. 10). The enacting State may wish to consider whether the registry system should be designed to allow the registrant to amend only a single item in a single amendment notice (e.g., change the grantor's identifier) or multiple items with one amendment notice (e.g., add a new grantor and delete some encumbered assets; see draft Registry Guide, rec. 28, subpara. (e)). The former approach may be simpler, while the latter may be more cost-efficient. In any case, it should be clear that, if there is first an assignment of the secured obligation and a notice with the new secured creditor identified is registered, and then there is a change to the encumbered assets, only the assignee will have the power to change the encumbered assets. Furthermore, as with the information provided in the initial notice, the information in an amendment notice submitted by the registrant is not subject to verification or substantive change by those administering the registry, as the registry merely serves as a repository of information received by it. Similarly, the legal consequences of an amendment are determined by the substantive rules of the secured transactions law.

(b) Change in grantor identifier

5. A change in the identifier of the grantor indicated in the registered notice (for example, as a result of a subsequent name change) may undermine the publicity function of registration from the perspective of third parties that deal with the grantor after the identifier has changed. As already mentioned the grantor's identifier is the principal indexing and search criterion, with the result that a search using the grantor's new name will not disclose a security right registered against the

old name. In a registry system that uses a State-issued identity card number as the grantor identifier in lieu of the name, it is less likely that this problem will arise since the identity card number is typically permanent and not subject to change.

6. To address this problem, the regulation should provide that the secured creditor is entitled to register an amendment notice to add the new grantor identifier. While failure to submit an amendment should not make the security right generally or retroactively ineffective against third parties, third parties that deal with the grantor after the change in its identifier and before the amendment notice is registered should be protected. Accordingly, the applicable rules should provide that, if the secured creditor is entitled to register an amendment notice to add the new grantor identifier but does not register the amendment notice within a specified short “grace period” (for example, 15 days) after the identifier has changed, its security right would be ineffective against buyers, lessees, licensees and other secured creditors that acquire rights in the encumbered asset after the change in the grantor identifier and before the amendment is registered. This is the approach recommended in the *Secured Transactions Guide* (see *Secured Transactions Guide*, rec. 61). Normally, this rule would be stated in the secured transactions law. The law should specify when the grace period begins to run, whether it is the date of change or when the secured creditor acquired actual knowledge of the change. Although the *Secured Transactions Guide* recommends the first approach, some States adopt the latter with the result that the security right remains effective against intervening third parties that acquire rights in the encumbered assets before the secured creditor finds out about the change. Guidance should also be provided on what constitutes a change of identifier in the context, in particular, of corporate amalgamations and the effect of not making an amendment in the wake of the amalgamation.

7. The regulation should make it clear that the registrant should enter the grantor’s new identifier in the field designated in the amendment notice for adding an additional grantor, without deleting the old grantor information. As a result, a search under either the old or the new grantor identifier would reveal the registered notice. As the amendment notice would be assigned a date and time, and linked in the registry record with the initial notice, this approach would be simple to implement and cause no confusion.

(c) Transfer of an encumbered asset

8. When the grantor transfers, leases or licences an encumbered asset, the security right will generally follow the asset into the hands of the transferee (see *Secured Transactions Guide*, rec. 79). This creates a problem analogous to a post-registration change in the identifier of the grantor, since a search of the registry according to the transferee’s, lessee’s or licensee’s identifier will not disclose the security right registered against the identifier of the grantor (the transferor, lessor or licensor). Accordingly, to protect third parties that deal with the encumbered asset in the hands of the transferee, the registry system should enable the secured creditor to submit an amendment notice (or a new notice) to record the identifier and address of the transferee, lessee or licensee as a new additional grantor.

9. The *Secured Transactions Guide* discusses but makes no recommendation with respect to the impact of a transfer on the effectiveness of a security right against third parties that acquire rights in the assets from the transferee other than that a

State should address it in its law (see *Secured Transactions Guide* chap. IV, paras. 78-80, and rec. 62).

10. Some States provide that a registration remains effective without any amendment to indicate the identifier of the transferee as a new grantor. Other States, however, adopt a rule equivalent to that applicable to a change in the identifier of the grantor (see *Secured Transactions Guide*, rec. 61, and paras. 5-7 above). Under this approach, failure to amend the registration to add the identifier of the transferee as a new additional grantor does not make the security right ineffective against third parties generally. However, if the secured creditor does not register the amendment within a short “grace period” (for example, 15 days) after the transfer, its security right is ineffective against buyers, lessees, licensees and other secured creditors that deal with the encumbered asset after the transfer and before the amendment is registered. Other States adopt a similar approach subject to the important caveat that the grace period given to the secured creditor to register the amendment begins to run only after the secured creditor acquires actual knowledge of the transfer. In still other States, such an amendment is purely optional and failure to amend does not affect the third-party effectiveness or priority of the security right (see *Secured Transactions Guide*, chap. IV, paras. 78-80).

11. If the enacting State selects the first or the second approach, it would need to include in its regulation a provision enabling a secured creditor to register an amendment notice to add a new grantor (see draft Registry Guide, rec. 28, subpara. (a)). Secured creditors should understand that the original grantor information should not be deleted since deletion would terminate the effectiveness of the security right against the original grantor with the result that the security right would then also be ineffective against the transferee.

(d) Subordination of priority

12. Under the *Secured Transactions Guide*, a secured creditor with priority may at any time subordinate its priority unilaterally or by agreement in favour of any other existing or future competing claimant (see *Secured Transactions Guide*, rec. 94). Since third parties are not prejudiced by the subordination, there is no requirement that the subordinating secured creditor or the beneficiary of the subordination (assuming one or both have registered a notice with respect to their rights in the registry) amend the registered notice to reflect the change in their respective priority positions. However, in some cases, they may wish to do so. Accordingly, the registry should be designed so as to accommodate the registration of an amendment notice to reflect a subordination.

(e) Assignment of the secured obligation and transfer of the security right

13. A secured creditor may assign the secured obligation. As in most legal systems, the *Secured Transactions Guide* recommends that, as an accessory right, the security right follows the secured obligation, with the result that the assignee of the obligation in effect will be the new secured creditor (see *Secured Transactions Guide*, recs. 25 and 48). Under the approach recommended in the *Secured Transactions Guide*, an amendment to the initial notice to add the assignee as a new secured creditor is not required in the sense of it being necessary to preserve the effectiveness of the registration (see *Secured Transactions Guide*, rec. 75). As the identifier of the secured creditor is not an indexing and search criterion, searchers

will not be materially misled by the change in the identity of the secured creditor. However, the original secured creditor (assignor) will usually not wish to have to continue to deal with requests for information from searchers and the new secured creditor (assignee) will wish to ensure that it receives any notifications or other communications relating to its security right.

14. Consequently, the original secured creditor or the new secured creditor with the consent of the original secured creditor should be permitted to register an amendment notice to add the identifier and address of the new secured creditor. If the new secured creditor fails to register an amendment notice, the original secured creditor will retain the power to alter the record by submitting an amendment notice (see *Secured Transactions Guide*, chap. IV, para. 111). In any case, the registry system should be designed so that a search result will disclose whether an amendment notice was registered by the original or the new secured creditor.

15. Another issue relevant to the assignment of the secured obligation is the duty of the secured creditor to disclose the identity of the assignee upon a request by the grantor. If a notice about the assignment of the secured obligation is registered, under the law recommended in the *Secured Transactions Guide*, the registrant is obligated to forward a copy of that notice to the grantor (see *Secured Transactions Guide*, rec. 55, subpara. (c)). However, whether such a notice is registered or not, the secured creditor has an obligation to disclose the assignment and the identity of the assignee to the grantor upon request. In any case, this disclosure is not a registry function but an obligation imposed by the substantive law and effectuated outside the registry system.

(f) Addition of newly encumbered assets

16. After the conclusion of the original security agreement, the grantor may agree to grant a security right in additional assets not already described in the registered notice. To accommodate this possibility, the secured transactions law and the regulation should enable the secured creditor to amend the initial notice so as to add the description of the newly encumbered assets. While the secured creditor could achieve the same result by registering a new notice with respect to the new assets, the registration of an amendment notice would typically be more efficient and would ensure that the duration of the effectiveness of the registration is the same for both the original and the additional assets. Regardless of which method is chosen, the security right in the newly encumbered assets becomes effective against third parties only as of the time of registration of the amendment notice or the new notice as the case may be (see *Secured Transactions Guide*, rec. 70). The reason for this approach is that a search of the registry record by third parties prior to registration of the amendment notice or the new notice would not disclose that a security right has been granted in the newly encumbered assets.

17. After the grantor has partially satisfied the secured obligation, it may be entitled to have some of the encumbered assets released from the security right pursuant to the security agreement. The secured creditor may then become obligated to amend the registered notice to delete the relevant encumbered assets. The amendment notice becomes effective as of the time of its registration (see *Secured Transactions Guide*, rec. 70).

(g) Deletion of encumbered assets

18. The secured creditor may wish to delete encumbered assets from the description in the initial notice for a variety of reasons. For example, the grantor may have repaid a portion of the obligation secured by the security right on condition that the security right be extinguished against specified assets; or the description in the initial notice may have been overly broad and the grantor may have issued a demand to the secured creditor to amend the initial notice to reflect the true scope of the encumbered assets subject to the security right to which the notice relates. Accordingly, the registry system should be designed to accommodate the entry of an amendment notice to delete the encumbered assets described in the amendment notice.

(h) Change of description of encumbered assets

19. In addition, during the time the security agreement remains effective, some encumbered assets described in the initially registered notice may have changed some of its characteristics. For instance, the initial registered notice may have described the encumbered assets as “all cherry wood black furniture” but subsequent to the registration the grantor repainted the furniture in brown. The description included in the initially registered notice thus no longer corresponds to the reality and, in order to avoid issues as to whether the description remains reasonable, the secured creditor may want to amend it. This amendment is not in the nature of adding new assets with the consequence of a new priority date as would be the case of amendment notices that add new assets. As a result, the registry system should be designed to allow the registrant to provide the new description of encumbered assets and indicate in the amendment notice that the nature of this amendment is a “change”.

(i) Extension of the period of effectiveness of a registration

20. After a notice is registered and before its period of effectiveness expires, a registrant may need to extend this period. The rules applicable to registration should confirm that the period of effectiveness of a registered notice may be extended by the registration of an amendment notice at any time before the expiry of the period of effectiveness of the registered notice (see *Secured Transactions Guide*, rec. 69). If the registration of a new notice were instead required, this would undermine the secured creditor’s original priority status and the continuity of the effectiveness of its security right against third parties, since the new notice would take effect against third parties only from the time of its registration.

21. As already discussed (see A/CN.9/WG.VI/WP.52/Add.3, para. 36), there are several approaches that States can take with respect to the period of effectiveness of a registered notice. In States where the period of effectiveness is established by law, the extension should be for an additional period equal to the statutory period. In States that permit the registrant to self-select the period of effectiveness, the registrant should also be permitted to select the length of the extension period, subject to any applicable maximum limit, if the State imposes a limit on this option. Under this latter approach, a registrant who, for example, selected a five year term for the initial registered notice should be allowed to select three or seven years for the period of the extension. In States that do not set any limit to the period of

effectiveness, there would be no need for an extension and a registered notice would continue to be effective until it was cancelled.

(j) Global amendment

22. The identifier or address, or both, of a secured creditor may change as a result of a merger or other change of name or address. While the identifier of the secured creditor should not be a general search criterion (see para. 36 below), the registry should be designed to permit the retrieval of information according to the identifier of the secured creditor (see *Secured Transactions Guide*, chap. IV, para. 29). This feature would enable the secured creditor information in all notices associated with that particular secured creditor to be efficiently amended through a single global amendment. The registry system could be designed to allow a global amendment to be made either by registry staff at the request of the secured creditor or by the secured creditor directly (see draft Registry Guide, rec. 29). In either case, to protect the secured creditor from potentially erroneous or fraudulent amendments, the registry should be able to request and verify the identity of any registrant that seeks to effect a global amendment. A single global amendment would be particularly useful in certain case such as a merger or a change of the name of the secured creditor. In any case, the identifier of the secured creditor should not be a general search criterion (see para. 36 below).

2. Voluntary cancellation

23. As in the case of an amendment, the *Secured Transactions Guide* recommends that a secured creditor should be able to cancel a notice, to the extent appropriate, at any time (*Secured Transactions Guide*, rec. 73). A cancellation should not require authorization by the grantor, as it has no effect or only a beneficial effect on the grantor. Unlike an amendment, a cancellation is effected by adding the cancellation notice to the registry record and removing the registered information from the publicly available record. Information thus removed is archived for a long period of time in a manner that enables the information to be retrieved (see A/CN.9/WG.VI/WP.52/Add.2, paras. 51-53, and draft Registry Guide, rec. 19).

24. The only information that a registrant should be required to enter in the designated field of the cancellation notice is the registration number assigned to the initial notice by the registry and permanently associated with that notice and any related subsequent notice (see draft Registry Guide, rec. 30). The grantor identifier should not have to be included in a cancellation notice. The reason is that the registrant will have obtained access to the registry (for example, with his/her user identification and password), and have the relevant registration number.

25. The regulation should provide that a cancellation notice submitted by one of the creditors identified in the notice does not affect the rights of the other secured creditor. It has the effect of an amendment that deletes one or more secured creditors. In such a case, only a cancellation by all secured creditors results in the removal of the information in the registered notice from the publicly available registry record and the archival of that information (see A/CN.9/WG.VI/WP.52, section B terminology and interpretation).

[Note to the Working Group: The Working Group may wish to consider whether the matter discussed in para. 25 should be explicitly addressed in the recommendations.]

3. Correction of erroneous lapse or cancellation

26. In the event that a secured creditor fails to extend the duration of a registration in a timely fashion or inadvertently registers a cancellation notice, the secured creditor may register a new initial notice of its security right, thereby re-establishing third-party effectiveness. However, under the law recommended in the *Secured Transactions Guide*, the third-party effectiveness and priority status of the security right dates only from the time of the new registration (see *Secured Transactions Guide* rec. 47). The secured creditor will suffer a loss of priority as against all competing claimants, including those against whom it had priority, under the first-to-register rule, prior to the lapse or cancellation (see *Secured Transactions Guide*, rec. 96).

27. Some States adopt a more lenient approach. The secured creditor is given a short grace period after the lapse or cancellation to revive its registration so as to restore the third-party effectiveness and priority status of its security right as of the date of the initial registration. However, to protect intervening third parties, the secured transactions law in States that adopt this approach provides that the security right is ineffective against or subordinate to competing claimants that acquired rights in the encumbered assets or advanced funds to the grantor after the lapse or cancellation and before the new registration.

4. Compulsory amendment or cancellation

28. The ability of a grantor to obtain financing is potentially prejudiced by the existence of a registered notice that does not accurately reflect its financing relationship with the person named as the secured creditor in the notice. Accordingly, the secured transactions law or the regulation should provide that a registrant is obliged to register an amendment or cancellation notice where: (a) the registration of an initial or amendment notice has not been authorized by the grantor at all or to the extent described in the notice; (b) authorization has been withdrawn and no security agreement has been concluded; (c) the security agreement has been revised in a way that makes the information contained in the registered notice inaccurate; or (d) the security right to which the registered notice relates has been extinguished by payment or otherwise and there is no commitment to extend further credit (see draft Registry Guide, rec. 31, subpara. (a), which sets out a substantive law rule that was not included in the *Secured Transactions Guide*).

29. If the registrant does not comply with that obligation on its own, in the circumstances just described, the secured transactions law or the regulation should provide that the secured creditor is obliged to register an amendment or cancellation notice within a short period of time after receiving a written request from the grantor (see *Secured Transactions Guide*, rec. 72, subpara. (a), and draft Registry Guide, rec. 31, subpara. (c)). In the event that cooperation is still not forthcoming, a speedy and inexpensive judicial or administrative procedure should be established to enable the grantor to seek cancellation or amendment of the notice (see *Secured Transactions Guide*, rec. 72, subpara. (b), and draft Registry Guide, rec. 31, subpara. (e)).

30. Depending on the option chosen by an enacting State in its secured transactions law or regulation, a compulsory amendment or cancellation could be registered either by the registry staff or by a specified judicial or administrative officer vested with the authority to do so by the enacting State. In either case, the relevant judicial or administrative order may need to be attached to the amendment or cancellation notice presented by the person seeking the cancellation or amendment (see draft Registry Guide, rec. 31, subpara. (g)). A requirement that the order be attached to the notice would, on the one hand, provide more transparency and certainty, but, on the other hand, require the registry system to build this function which may increase the cost of the registry system.

[Note to the Working Group: The Working Group may wish to note that, depending on its decision as to the requirement for the attachment of the order to the notice which appears in square brackets in recommendation 31, subpara. (g), the text of paragraph 30 may need to be revised.]

B. Recommendations 28-31

[Note to the Working Group: The Working Group may wish to consider recommendations 28-31, as reproduced in document A/CN.9/WG.VI/WP.52/Add.5. The Working Group may also wish to note that, for reasons of economy, the recommendations are not inserted here at this stage but will be inserted in the final text.]

VI. Searches

A. General remarks

1. Search criteria

31. As already discussed (see A/CN.9/WG.VI/WP.52/Add.1, paras. 56-59), the *Secured Transactions Guide* recommends that the security rights registry must be publicly accessible and a searcher should not be required to give any reasons for the search (see *Secured Transactions Guide*, rec. 54, subparas. (f) and (g), and draft Registry Guide, rec. 4). Under the *Secured Transactions Guide*, privacy concerns are more effectively dealt with by requiring grantor authorization for a registration and by establishing a summary judicial or administrative procedure to enable grantors to cancel or amend unauthorized or erroneous notices quickly and inexpensively (see paras. 28-30 above).

32. The *Secured Transactions Guide* requires the registry to request and maintain the identity of a registrant as a pre-condition to effecting a registration (see *Secured Transactions Guide*, rec. 55, subpara. (b)), but does not include a similar recommendation with respect to a searcher. The reason for this difference is that an unauthorized registration has the potential to prejudice the ability of the person named as a grantor in a registered notice to obtain access to credit. Requesting and maintaining the identity of the registrant enables that person to determine to whom a demand to amend or cancel an unauthorized registration should be made. Since a search of the registry record cannot alter or change or add to the information in the registry record, no similar concern arises. Accordingly, the registry should not be

obligated to request or maintain the identity of the searcher except for the purposes of collecting search fees, if any (protection of the registry database from hackers should be ensured without complicating legitimate searches). Thus, a person should be entitled to search the registry record simply by using the prescribed search form and paying the search fees, if any (see draft Registry Guide, rec. 7).

33. As already explained (A/CN.9/WG.VI/WP.52/Add.1, paras. 38-40), under the approach recommended in the *Secured Transactions Guide*, information in the registry record must be indexed or otherwise be organized so as to be searchable by reference to the identifier of the grantor and as such, the identifier of the grantor is the principal criterion by which such information may be searched and retrieved by searchers. However, a searcher may rely on the accuracy of a search result only if the searcher used the correct grantor identifier in searching. The regulation should follow the same approach (see draft Registry Guide, rec. 32, subpara. (a)).

34. The registry should also be designed to allow notices to be searched and retrieved by reference to the unique registration number assigned by the registry to the initial notice and permanently associated with that notice and any related subsequent notice (see draft Registry Guide, rec. 32, subpara. (b)). While not generally useful to third parties as a search criterion (as third parties will not have the information), registration numbers give secured creditors an alternative search criterion to quickly and efficiently retrieve a registration for the purposes of entering an amendment or cancellation.

35. As already discussed (see A/CN.9/WG.VI/WP.52/Add.1, para. 43), the *Secured Transactions Guide* discusses but makes no recommendation on the use of the serial number of an asset as a supplementary search criterion with respect to assets that have a high resale value and a unique serial number or other alphanumerical identifier (see *Secured Transactions Guide*, chap. IV, paras. 34-36).

36. As already mentioned (see para. 22 above), a secured creditor should be able, either directly or through the registry staff to efficiently amend its identifier or address information in all registrations associated with that secured creditor through a single global amendment. However, the identifier of the secured creditor should not be a search criterion for searching by the public generally. The identifier of the secured creditor has limited relevance to the legal objectives of the registry system. Moreover, to allow public searching may violate the reasonable expectations of secured creditors; for example, because of the risk that a credit provider may undertake a search based on the secured creditor identifier to obtain the client lists of its competitors (see *Secured Transactions Guide*, chap. IV, para. 81).

2. Search results

37. A search result should either indicate that no registered notice was retrieved against the specified search criterion or otherwise list all registered notices that match the search criterion entered along with the full details of the information as it appears in the registry record (see draft Registry Guide, rec. 33, subpara. (a)). Whether the result will reflect information that matches the search criterion exactly or also include close matches is a matter of the design of the registry (see draft Registry Guide, rec. 33, subpara. (b)).

38. Where a State decides to implement a search functionality that also discloses close matches and the information provided in notices is stored in an electronic

database, the search logic will need to be programmed so as to return close matches to the grantor identifier entered by the searcher. In such a system, a registration may be considered effective even though the registrant had made a minor error in entering the correct grantor identifier (see A/CN.9/WG.VI/WP.52/Add.3, paras. 42-45). This is because a searcher entering the correct grantor identifier would still be able to retrieve the registration (with the error) and consider it likely that the grantor whose identifier appears on the search result as an inexact but close match is nonetheless the relevant grantor. Whether this is the case depends on such factors as whether: (a) a reasonable searcher would be able to readily identify the grantor by referring to additional information, such as address, birth date or identification number; (b) the list of inexact matches is not so lengthy as to prevent the searcher from efficiently determining whether the grantor which it is interested in is included in the list; and (c) the rules for determining “close” matches are objective and transparent so that a searcher will be able to rely on the search result.

39. The indexing and search logic for grantor identifiers may also be programmed so as to ignore all punctuation, special characters and case differences and to ignore selected words or abbreviations that do not make an identifier unique (such as articles of speech and indicia of the type of enterprise such as “company”, “partnership” “LLC” and “SA”). Where this is the case, an error in the entry of this type of information will not render the registration ineffective since the registration will still be retrieved despite the error.

40. The exact match logic also reduces the need for the courts to determine whether the error in the grantor’s identifier is insignificant and whether the notice that contains the incorrect identifier is a “close enough” match. In other words, the court will have to determine whether the searcher should have reviewed some or all matches on page 1 of the search result, whether the matches on page 2 should have been consulted.

41. The regulation should also provide that the registry should issue a search certificate upon request by a searcher and payment of the relevant fee, if any. A search certificate should in principle be admissible as evidence in court that a notice as registered, or not, at a certain date and time. All these issues should be addressed in the registration rules (see draft Registry Guide, rec. 33, subpara. (c)). Whether a search result or certificate is admissible in a court of the enacting State and, if so, what its evidentiary value is are matters for the procedural law of the enacting State.

B. Recommendations 32 and 33

[Note to the Working Group: The Working Group may wish to consider recommendations 32 and 33, as reproduced in document A/CN.9/WG.VI/WP.52/Add.5. The Working Group may also wish to note that, for reasons of economy, the recommendations are not inserted here at this stage but will be inserted in the final text.]

VII. Registration and search fees

A. General remarks

42. The *Secured Transactions Guide* recommends that registration and search fees should not be set to raise revenue but rather to recover the cost of establishing and operating the registry (see *Secured Transactions Guide*, chap. IV, para. 37, and rec. 54, subpara. (i)). When the *Secured Transactions Guide* refers to the registration fee, it means the entire fee that the registrant is charged, no matter what it is called (e.g. transaction tax or a registration fee) or whether it is imposed by the regulation or a separate decree. The reason for this approach is that excessive fees and transaction taxes will significantly deter utilization of the registry, thereby undermining the overall success of the enacting State's secured transactions law. Nonetheless, in assessing the level of revenue needed to achieve cost-recovery, account should be taken of the need to fund the operation of the registry, including: (a) salaries of registry staff; (b) replacement of hardware; (c) upgrading of software; (d) ongoing staff training; and (e) promotional activities and training on the registry operations for the users.

43. The registry regulation should follow the same approach (see draft Registry Guide, rec. 34). The relatively low start-up cost of an electronic security rights registry should be recoverable out of service fees within a relatively short period of time. In addition, the operation costs can be kept low, especially if the registry record is computerized and direct electronic registration and searching is available. Moreover, if the registry is developed in partnership with a private entity, it may be possible for the private entity to make the initial capital investment in the registry infrastructure and recoup its investment by taking a percentage of the service fees charged to registry users once the registry is up and running.

44. The enacting State may wish to consider a list of options ranging from charging a different fee for paper-based registrations, searches and search certificates to charging no fee at all. In some States, where the registry is established and managed by the State, in the interest of encouraging registration of financing transactions, the State charges no fee for registration or searching. Such an approach encourages registration and searching even for low-value and other transactions that might have otherwise been entered into on an unsecured basis. This means, however, that registration is subsidized with taxpayer money.

45. As already discussed, (see A/CN.9/WG.VI/WP.52/Add.2. para. 18), the enacting State may wish to consider whether registration fees should be set on a per transaction basis or based on a sliding tariff related to the period of effectiveness of registered notices (in systems that permit registrants to self-select that period). The latter approach has the advantage of discouraging registrants from selecting an inflated term out of an excess of caution. Whatever approach is adopted, fees should not be related to the maximum amount specified for which the security right can be enforced (in systems that require this information to be included) since this would discourage registration.

46. In addition, the enacting State may wish to consider whether any fees to be charged should be set out in the regulation or in another administrative act that may be easier to revise. Listing the registration fees in an administrative act has the

advantage that it provides the flexibility to the registry to adjust the fees to correspond to the cost of operating the system, such as when it is no longer necessary to charge the fee to recoup the cost of the initial investment. However, this approach has the disadvantage that this relatively low burden may be abused by the registry to unjustifiably adjust the fees upwards.

47. Moreover, the enacting State may wish to consider that, in a hybrid system, it may be reasonable to charge higher fees to process paper-based notices and search requests because they must be processed by the registry staff. Charging of higher fees will also encourage the user community to eventually transition to using the electronic registration and search functionalities.

48. The enacting State may also wish to provide for user account agreements to facilitate efficient user access to the registry services and payment of registry fees by frequent users.

B. Recommendation 34

[Note to the Working Group: The Working Group may wish to consider recommendation 34, as reproduced in document A/CN.9/WG.VI/WP.52/Add.5. The Working Group may also wish to note that, for reasons of economy, this recommendation is not inserted here at this stage but will be inserted in the final text.]

(A/CN.9/WG.VI/WP.52/Add.5) (Original: English)

Note by the Secretariat on a draft Technical Legislative Guide on the Implementation of a Security Rights Registry, submitted to the Working Group on Security Interests at its twenty-second session**[Original: English]****ADDENDUM****Contents**

| | <i>Recommendations</i> |
|---|------------------------|
| Annex I. Terminology and recommendations | |
| Terminology | |
| Recommendations | |
| I. Registry and registrar | 1-3 |
| II. Access to the registry services | 4-9 |
| III. Registration | 10-20 |
| IV. Registration information | 21-27 |
| V. Amendment and cancellation information | 28-31 |
| VI. Searches | 32-33 |
| VII. Fees | 34 |

Annex I**Terminology and recommendations****Terminology***

(a) “Address” means: (i) a physical address, including a street address and number, city, postal code and State; (ii) a post office box number, city, postal code and State; (iii) an electronic address; or (iv) an address that is equivalent to (i), (ii) or (iii);

(b) “Amendment” means the act of adding, deleting or modifying information contained in a registered notice, [by the one and only registrant or, if there is more than one registrant, some of them,] as well as the result thereof;

(c) “Cancellation” means the act of deleting all information contained in a registered notice [by the one and only registrant or, if there is more than one registrant, all of them];

* Section B of the Introduction to the *Secured Transactions Guide* on terminology and interpretation applies also to the draft Registry Guide, supplemented by the terminology and interpretation section of the Introduction to the draft Registry Guide.

- (d) “Grantor” means the person identified in the notice as the grantor;
- (e) “Law” means the law governing security rights in movable assets;
- (f) “Notice” means a communication in writing (paper or electronic) and includes an initial notice, an amendment notice or a cancellation notice;¹
- (g) “Registrant” means the person identified in the notice as the secured creditor;
- (h) “Registrar” means the person designated pursuant to the law and the regulation to supervise and administer the operation of the registry;
- (i) “Registration” means the entry of information contained in a notice into the registry database;
- (j) “Registration number” means a unique number allocated to an initial registered notice by the registry and permanently associated with that notice [and any related subsequent notice];
- (k) “Registry record” means the information in all registered notices that is stored electronically in the registry database and includes the record that is publically available and the archives;
- (l) “Regulation” is the body of rules implementing the provisions of the law with regard to the registry.

Recommendations

I. Registry and registrar

Recommendation 1: The registry

The regulation should provide that the registry is established for the purposes of receiving, storing and making accessible to the public information relating to security rights in movable assets.

Recommendation 2: Appointment of the registrar

The regulation should provide that [the entity or person identified by the enacting State or authorized by the law of the enacting State] designates the registrar, determines the registrar’s duties and monitors the registrar’s performance.

Recommendation 3: Functions of the registry

The regulation should provide that the functions of the registry include:

- (a) Providing access to the registry services according to recommendations 4, 6, 7 and 8;
- (b) Publicizing the means of access to, and the opening days and hours of, the registry according to recommendation 5;

¹ See term “notice” in the Introduction, section B, terminology and interpretation of the *Secured Transactions Guide*.

- (c) Providing the grounds for rejection of a registration or a search request according to recommendation 9;
- (d) Entering the information contained in a notice into the registry database, assigning a registration number to the initial notice and recording the date and time of each registration, according to recommendation 10;
- (e) Indexing or otherwise organizing the information in the registry record so as to make it searchable according to recommendation 14;
- (f) Providing registrants with a copy of the registered notice according to recommendation 16;
- (g) Entering the information contained in an amendment notice into the registry database according to recommendation 17;
- (h) Removing the information contained in a registered notice from the [publicly available registry record] upon expiry of its period of effectiveness or registration of a cancellation notice according to recommendation 18; and
- (i) Archiving information removed from the publicly available registry record according to recommendation 19.

[Note to the Working Group: The Working Group may wish to consider whether the cross-references to the relevant recommendations are necessary in recommendation 3. On the one hand, such cross-references may be useful for the reader. On the other hand, the purpose of recommendation 3 may not be to serve as a list of the contents of the regulation but as a summary of the registry's functions, which case the cross-references may not be necessary.]

II. Access to the registry services

Recommendation 4: Public access to the registry services

The regulation should provide that any person is entitled to have access to the services provided by the registry.

Recommendation 5: Operating days and hours of the registry

The regulation should provide that:

- (a) If access to the services of the registry is provided through a physical office:
 - (i) Each office of the registry must be open to the public during the days and hours [to be specified by the enacting State]; and
 - (ii) Information about registry office locations and their respective opening days and hours must be widely publicized on the registry's website, if any, or otherwise, and the opening days and hours of each office should be posted at that office;
- (b) If access to the services of the registry is provided through electronic means of communication, access to the services provided by the registry must be available at all times; and

- (c) Notwithstanding subparagraphs (a) and (b) of this recommendation:
 - (i) The registry may suspend access to the services provided by the registry in whole or in part; and
 - (ii) Notification of the suspension and its expected duration must be published in advance when feasible and otherwise as soon as reasonably possible on the registry's website, if any, or otherwise, and, if the registry provides access to its services through physical offices, the notification must be posted at each office.

Recommendation 6: Access to registration services

The regulation should provide that any person is entitled to register a notice if that person:

- (a) Uses the form of a notice prescribed by the registry;
- (b) Provides its identity in the manner prescribed by the registry; and
- (c) Has paid, or made arrangements to pay, any fee prescribed by the registry.

Recommendation 7: Access to searching services

The regulation should provide that any person is entitled to search the publicly available registry record, if that person uses the form prescribed by the registry for a search and has paid, or made arrangements to pay any fee prescribed by the registry.

Recommendation 8: Verification of identity, evidence of authorization or scrutiny of the contents of the notice not required

The regulation should provide that:

- (a) The registry requires and maintains the identity of the registrant but does not require verification of the registrant's identity;
- (b) The registry does not require evidence of the existence of authorization for registration of a notice; and
- (c) The registry does not conduct other scrutiny of the content of the notice. In particular, it is not the responsibility of the registry to ensure that the information in a notice is entered in the designated field and is complete, accurate and legally sufficient.

[Note to the Working Group: The Working Group may wish to note that, as a drafting matter, the former recommendation 19 (A/CN.9/WG.VI/WP.50/Add.1) has been merged with recommendation 8 as these recommendations seem to be dealing with the same issue. The Working Group may wish to consider whether the new recommendation 8 should be retained as is. The Working Group may also wish to consider whether the second sentence of subparagraph (c) ("In particular ... sufficient") should be retained in subparagraph (c) of this recommendation or moved to the commentary.]

Recommendation 9: Rejection of a registration or search request

The regulation should provide that:

- (a) The registration of a notice may be rejected if the notice fails to provide, in a legible manner, the information required by recommendation 21, in the case of an initial notice, recommendation 28, in the case of an amendment notice, or recommendation 30, in the case of a cancellation notice;
- (b) A search request may be rejected if it fails to provide in a legible manner a search criterion required by recommendation 32; and
- (c) The registry must provide the grounds for the rejection of a notice or search request immediately or as soon as practicable.

III. Registration

Recommendation 10: Time of effectiveness of registered notice

The regulation should provide that:

- (a) The registration of a notice is effective from the date and time when the information in the notice is entered into the registry database so as to be available to searchers of the publicly available registry record;
- (b) The registry maintains a record of the date and time when each notice is entered into the registry database so as to be available to searchers of the publicly available registry record, and assigns a registration number to an initial notice, by which the initial notice and any subsequent notices are identified; and
- (c) The registry enters into the registry database and indexes or otherwise organizes information in a registered notice so as to make it available to searchers of the publicly available registry record immediately or within [a short period of time to be specified by the enacting State] and in the order it was received.

Recommendation 11: Period of effectiveness of registered notice

The regulation should provide that:

Option A

- (a) A registration is effective for [enacting State to insert the period of time specified in its law].
- (b) The period of effectiveness of a registration may be extended for an additional period of time equal to the initial period specified in the law at any time before it expires. The new period starts when the current period expires.

Option B

- (a) A registration is effective for the period of time indicated in the initial notice.
- (b) The period of effectiveness of a registration may be extended or reduced for the period of time indicated in an amendment notice at any time before it

expires. In the case of an extension, the new period starts when the current period expires.

Option C

(a) A registration is effective for the period of time indicated in the initial notice, not exceeding [a long period of time, such as, for example, twenty years, to be specified by the enacting State].

(b) The period of effectiveness of a registration may be extended or reduced for the period of time indicated in an amendment notice not exceeding [a long period of time, such as, for example, twenty years, to be specified by the enacting State] at any time before the period of effectiveness of the registration expires. In the case of an extension, the new period starts when the current period expires.

Recommendation 12: Time when a notice may be registered

The regulation should provide that a notice may be registered before or after the creation of the security right or the conclusion of the security agreement.

Recommendation 13: Sufficiency of a single notice

The regulation should provide that a registration of a single notice is sufficient to achieve third-party effectiveness of one or more than one security right in the asset described in the notice, whether they exist at the time of registration or are created thereafter, and whether they arise from one or more than one security agreement between the same parties.

Recommendation 14: Indexing or other organization of information in the registry record

The regulation should provide that:

(a) The registry indexes or otherwise organizes information in an initial notice in the publicly available registry record so as to make it searchable according to the grantor identifier;

(b) The registry indexes or otherwise organizes information in an amendment notice in the publicly available registry record so as to make it searchable together with the initial notice; and

(c) The registry indexes or otherwise organizes information in a cancellation notice in the registry archives so as to make it retrievable according to recommendation 19 together with the initial notice as amended.

Recommendation 15: Integrity of the registry record

The regulation should provide that, except as provided in recommendations 17 and 18, the registry does not amend information in or remove information from the registry record.

Recommendation 16: Copy of registered notice

The regulation should provide that:

(a) The registry must promptly transmit a copy of a registered notice to each registrant at the address set forth in the notice, indicating the date and time when it became effective and the registration number; and

(b) The registrant must send a copy of a registered notice to each grantor at the address set forth in the notice or at the current address known to the registrant within [a short period of time, such as thirty days, to be specified by the enacting State] after the registrant has received a copy of the registered notice.

[Note to the Working Group: The Working Group may wish to note that, as a drafting matter, the former recommendation 31 (A/CN.9/WG.VI/WP.50/Add.2) has been placed right after recommendation 15, as the Secured Transactions Guide deals with the matter of copy of registered notices as a matter of integrity of the registry record. In any case, copy of registered notice is not a matter that belongs in a section dealing with cancellation and amendment, unless it refers only to a copy of an amendment or cancellation notice, but even in that case, the matter is one relating more to the integrity of the registry record. The Working Group may wish to consider whether the new recommendation 16 should be retained in this place in the text.]

Recommendation 17: Amendment of information in the registry record

The regulation should provide that information in a registered notice may be amended only by registration of an amendment notice in accordance with recommendations 28, 29 or 31.

Recommendation 18: Removal of information from the registry record

The regulation should provide that information in a registered notice is removed from the publicly available registry record upon the expiry of its period of effectiveness or upon registration of a cancellation notice in accordance with recommendations 30 or 31.

Recommendation 19: Archival of information removed from the registry record

The regulation should provide that information removed from the publicly available registry record is archived for a period of at least [a long period of time, such as, for example, twenty years, to be specified by the enacting State] in a manner that enables the information to be retrieved.

Recommendation 20: Language of a notice

The regulation should provide that the information in a notice should be expressed in [the language or languages to be specified by the enacting State]. The registry should specify and make publicly available the character set to be used.

IV. Registration information

Recommendation 21: Information required in an initial notice

The regulation should provide that:

(a) The initial notice must contain the following information in the designated field:

(i) The identifier and address of the grantor in accordance with recommendations 22-24;

(ii) The identifier and address of the secured creditor or its representative in accordance with recommendation 25;

(iii) A description of the encumbered assets in accordance with recommendations 26 and 27;

[(iv) The period of effectiveness of the registration in accordance with recommendation 11;² and

(v) The maximum monetary amount for which the security right may be enforced];³ and

(b) If there is more than one grantor or secured creditor, the registrant must enter the required information in the designated field separately for each grantor or secured creditor, either in the same notice or in different notices.

Recommendation 22: Grantor identifier (natural person)

The regulation should provide that, if the grantor is a natural person:

(a) The grantor identifier is:

Option A

the name of the grantor;

Option B

the name of the grantor and [any other information to be specified by the enacting State to uniquely identify the grantor, such as the grantor's birth date or any personal identification or other number assigned to the grantor by the enacting State];

(b) Where the grantor's name includes a family name and one or more given names, the name of the grantor consists of the grantor's family name and the grantor's first and second given names, and each component of the name must be entered in the designated field;

² If the enacting State has chosen option B or C in recommendation 11 (see *Secured Transactions Guide*, rec. 69).

³ If the secured transactions law of the enacting State requires it (see *Secured Transactions Guide*, rec. 57, subpara. (d)).

(c) Where the grantor's name consists of only one word, the name of the grantor consists of that word and it must be entered in field designated for the family name;

(d) The name of the grantor is determined as follows:

(i) If the grantor was born and the grantor's birth is registered in [the enacting State] with a government agency responsible for the registration of births, the name of the grantor is the name as stated in the grantor's birth certificate or equivalent document issued by the government agency;

(ii) If the grantor was born but the grantor's birth is not registered in [the enacting State], the name of the grantor is the name as stated in a valid passport issued to the grantor [by the enacting State];

(iii) If neither subparagraph (d)(i) nor subparagraph (d)(ii) of this recommendation applies, the [the enacting State should specify the type of official document, such as an identification card or driver's licence, issued to the grantor by the enacting State, that it considers appropriate];

(iv) If neither subparagraph (d)(i), nor subparagraph (d)(ii), nor subparagraph (d)(iii) of this recommendation applies but the grantor is a citizen of [the enacting State], the name of the grantor is the name as stated in the grantor's certificate of citizenship;

(v) If neither subparagraph (d)(i), nor subparagraph (d)(ii), nor subparagraph (d)(iii), nor subparagraph (d)(iv) of this recommendation applies, the name of the grantor is the name as stated in a valid passport issued by the State of which the grantor is a citizen and, if the grantor does not have a valid passport, the name of the grantor is the name as stated in the birth certificate or equivalent document issued to the grantor by the government agency responsible for the registration of births at the place where the grantor was born;

(vi) In a case not falling within subparagraphs (d)(i) to (v) of this recommendation, the name of the grantor is the name as stated in any two of the following valid official documents [the enacting State to specify documents other than the ones specified in subparagraph (d)(iii) of this recommendation, such as a social security, health insurance or tax card, issued to the grantor by the enacting State].

Recommendation 23: Grantor identifier (legal person)

The regulation should provide that, if the grantor is a legal person, the grantor identifier is

Option A

the name of the grantor that is specified as its name in the most recent [document, law or decree to be specified in the enacting State] constituting the legal person.

Option B

the name of the grantor that is specified as its name in the most recent [document, law or decree to be specified by the enacting State] constituting the legal person,

and [another identifier to be specified by the enacting State to uniquely identify the grantor, such as a registration or other number].

[Recommendation 24: Grantor identifier (special cases)]

The regulation should provide that:

(a) If the encumbered assets are subject to insolvency proceedings, the grantor identifier is the name of the insolvent person in accordance with recommendation 22 or 23, with the specification in a separate field that the grantor is in insolvency proceedings;

(b) If the grantor is a syndicate or joint venture, the grantor identifier is the name of the syndicate or joint venture designated in the most recent [document, law or decree to be specified by the enacting State] constituting it [and any additional information specified by the enacting State to uniquely identify the grantor] in accordance with recommendation 22 or 23;

(c) [If the grantor is a trust or an estate, the grantor identifier is the name of the trust or the estate in accordance with recommendation 22 or 23, with the specification in a separate field that the grantor is a trust or estate.]

(d) If the grantor is an entity other than one already referred to in the preceding rules, the grantor identifier is the name of the entity as designated in the most recent [document, law or decree to be specified by the enacting State] constituting it [and any additional information specified by the enacting State to uniquely identify the grantor] in accordance with recommendation 22 or 23.]

[Note to the Working Group: The Working Group may wish to note that, pursuant to its decision (see A/CN.9/743, para. 47), recommendation 24 appears within square brackets to indicate that its goal is to set out examples of special cases for enacting States to select and adapt to their own laws, as the treatment of these cases differed from State to State.]

Recommendation 25: Secured creditor identifier

The regulation should provide that:

(a) If the secured creditor or its representative is a natural person, the identifier is the name of the secured creditor or its representative in accordance with recommendation 22;

(b) If the secured creditor or its representative is a legal person, the identifier is the name of the secured creditor or its representative in accordance with recommendation 23; and

(c) If the secured creditor or its representative is a kind of person referred to in recommendation 24, the identifier is the name of the person in accordance with recommendation 24.

Recommendation 26: Description of encumbered assets

The regulation should provide that:

- (a) When the encumbered assets are described in an initial or amendment notice, they should be described in the designated field of the notice in a manner that reasonably allows their identification; and
- (b) Unless otherwise provided in the law, a generic description that refers to all assets within a generic category of movable assets includes all of the grantor's present and future assets within the specified category;
- (c) Unless otherwise provided in the law, a generic description that refers to the grantor's movable assets includes all of the grantor's present and future movable assets.

Recommendation 27: Incorrect or insufficient information

The regulation should provide that:

- (a) An initial notice, or an amendment notice that amends the grantor's identifier or adds a grantor, is effective only if it provides the grantor's correct identifier as set forth in recommendations 22-24 or, in the case of an incorrect identifier, if the notice would be retrieved by a search of the registry record using the grantor's correct identifier;
- (b) Except as provided in subparagraph (a) of this recommendation, an incorrect or insufficient statement of the information required to be provided in a registered notice does not render it ineffective, unless it seriously misleads a reasonable searcher;
- (c) An incorrect identifier of a grantor in a registered notice does not render it ineffective with respect to other grantors sufficiently identified in the notice;
- (d) An insufficient description of encumbered assets in a registered notice does not render it ineffective with respect to other encumbered assets sufficiently described in the notice; and
- (e) An incorrect statement in the registered notice with respect to the period of effectiveness of registration and the maximum amount secured does not render it ineffective, while third parties that relied on such incorrect statement should be protected].

[Note to the Working Group: The Working Group may wish to consider whether subparagraph (e) of this recommendation, which has been added to reflect the principle enshrined in recommendation 66 of the Secured Transactions Guide, should be retained.]

V. Amendment and cancellation information

Recommendation 28: Information required in an amendment notice

The regulation should provide that:

(a) The following information is required to be entered in the designated field of an amendment notice:

(i) The registration number of the registered notice to which the amendment relates;

(ii) If information is to be added, the additional information in the manner provided by this regulation for entering information of that kind; and

(iii) If information is to be changed, the changed information in the manner provided by this regulation for entering information of that kind;

[(b) An amendment notice that discloses a transfer of the encumbered assets should add the identifier and address of the transferee as a grantor in accordance with recommendations 22-24 and its address. An amendment that discloses a transfer that relates to only part of the encumbered assets must indicate the identifier and address of the transferee as a grantor in accordance with recommendations 22-24 and describe the part of the encumbered assets transferred in accordance with recommendation 26;]

(c) An amendment notice that discloses an assignment of the secured obligation must indicate the identifier and address of the assignee as a secured creditor in accordance with recommendation 25 and, in the case of a partial assignment, describe the encumbered assets to which the partial assignment relates in the designated field; and

(d) An amendment notice may relate to

Option A

a single item of information in a notice.

Option B

one or multiple items of information in a notice.

[Note to the Working Group: The Working Group may wish to consider whether a change addressed in subpara. (iii) of recommendation 28 encompasses deletion of information or whether a separate subparagraph should be included to address deletions. In this regard, the Working Group may wish to note that changes and deletions may have different third-party effectiveness consequences.]

Recommendation 29: Global amendment of secured creditor information in multiple notices

The regulation should provide that a registrant named in multiple registered notices may amend or request the registry to amend the secured creditor information with a single global amendment.

[Note to the Working Group: The Working Group may wish to consider whether both options (an amendment by the registrant and by the registry at the request of the registrant) should be offered in recommendation 29, or just one of them, and, if so, which one. A registry could be designed to accommodate both options but this would be done at some cost.]

Recommendation 30: Information required in a cancellation notice

The regulation should provide that a cancellation notice should include in the designated field the registration number.

Recommendation 31: Compulsory amendment or cancellation

The regulation should provide that:

- (a) A registrant is obliged to register an amendment or cancellation notice if:
 - (i) The registration of an initial or amendment notice has not been authorized by the grantor at all or to the extent described in the notice;
 - (ii) Authorization has been withdrawn and no security agreement has been concluded;
 - (iii) The security agreement has been revised in a way that makes the information contained in the registered notice inaccurate; or
 - (iv) The security right to which the registered notice relates has been extinguished by payment or otherwise and there is no commitment to extend further credit;
- (b) In the case of subparagraph (a)(ii) to (a)(iv) of this recommendation, the registrant may charge any fee agreed upon with the grantor;
- (c) Each registrant is obliged to register to the registry an amendment or cancellation notice to the extent appropriate, not later than [a short period of time, such as 15 days, to be specified by the enacting State] after the registrant's receipt of a written request by the grantor if any circumstance described in subparagraph (a) of this recommendation has occurred and the registrant has not complied;
- (d) No fee or expense may be charged or accepted by the registrant for compliance with the obligation addressed in subparagraph (c) of this recommendation;
- (e) If the registrant does not comply within the time period provided in subparagraph (c) of this recommendation, the grantor is entitled to seek a cancellation or amendment through a summary judicial or administrative procedure;
- (f) The grantor is entitled to seek a cancellation or amendment through a summary judicial or administrative procedure even before expiry of the period provided in subparagraph (c) of this recommendation, provided that there are appropriate mechanisms to protect the registrant; and
- (g) The amendment or cancellation notice is registered by

Option A

the registry promptly upon receipt of the notice [with the relevant judicial or administrative order attached].

Option B

a judicial or administrative officer promptly upon receipt of the notice [with the relevant judicial or administrative order attached].

[Note to the Working Group: The Working Group may wish to note with respect to subparagraph (a) that, while obliging the secured creditor to ensure that registrations are up to date may be good policy, the Secured Transactions Guide makes no recommendation on this matter other than that the secured creditor should be obliged to register an amendment or cancellation notice only at request of the grantor. Be that as it may, the Working Group may wish to consider that this is a substantive law matter that should be addressed in the commentary rather than in the recommendations for a registry regulation. In addition, the Working Group may wish to note that subparagraphs (b) and (d) deal with matters that are typically addressed in the security agreement and the law applicable to obligations. Thus, the Working Group may wish to consider whether those matters too should be rather discussed only in the commentary.]

VI. Searches

Recommendation 32: Search criteria

The regulation should provide that the criterion by which a search of the publicly available registry record may be conducted is:

- (a) The grantor identifier; or
- (b) The registration number.

Recommendation 33: Search results

The regulation should provide that:

- (a) The registry provides a search result that indicates the date and time when the search was performed and either sets forth all information in each registered notice that matches the specified search criterion or indicates that no registered notice matched the search criterion;
- (b) A search result reflects information in the registry record that matches exactly the search criterion except [the enacting State to specify any exceptions];
- (c) Upon request made by searcher, the registry issues an official search certificate indicating the search result.

VII. Fees

Recommendation 34: Fees for registry services

The regulation should provide that:

Option A

(a) [Subject to subparagraph (b) of this recommendation,] the following fees are payable for registry services:

- (i) Registrations:
 - a. Paper-based [...];
 - b. Electronic [...];
- (ii) Searches:
 - a. Paper-based [...];
 - b. Electronic [...];
- (iii) Certificates:
 - a. Paper-based [...];
 - b. Electronic;

(b) The registry may enter into an agreement with a person that satisfies all registry terms and conditions and establish a registry user account to facilitate the payment of fees.

Option B

The [the enacting State to specify an administrative authority] may determine the fees and methods of payment for the purposes of the regulations by decree.

Option C

The [registry] [search] [electronic search] services are free of charge.

ADDENDUM

¹ Note to the Working Group: The Working Group may wish to note that this field is designed to be used in States that elect option B of rec. 22, subpara. (a), of the draft Registry Guide, i.e., a State that elects to require or permit the registration of additional grantor identifier information such as, for example, the grantor's birthdate or an identification number or other number assigned by the State to its residents or citizens. While the form should set out the precise type

of additional identifier information that is either required or that may be entered, this will depend on the choice made by each enacting State.

² Note to the Working Group: The Working Group may wish to consider the function of listing the address. If the function is to help searchers distinguish among various grantors named, for example, "John Smith," the grantor's e-mail address will not be helpful, since people have many e-mail addresses and listing one of them will not necessarily help searchers distinguish one John Smith from another. If, on the other hand, the intent is to provide a way for interested parties to contact the grantor, this provides a method (see rec. 54, subpara. (c); but the registrant should have the e-mail of the grantor anyway). The grantor's e-mail could be used though if a State requires the registry to give notice to the grantor if the secured creditor makes changes to the registered notice.

³ Note to the Working Group: The Working Group may wish to note that this part reflects the special cases dealt with in recommendation 24.

REGISTRY OF SECURITY RIGHTS IN MOVABLE ASSETS

EXAMPLE OF AMENDMENT NOTICE

(FORM B)

IT IS THE REGISTRANT'S RESPONSIBILITY TO ENSURE THAT ALL REQUIRED INFORMATION IS PROVIDED AND ENTERED IN THE DESIGNATED FIELD OF THE NOTICE IN A LEGIBLE MANNER.

SELECT [ONE] [ONE OR MORE]⁶ OF THE FOLLOWING:

- Add or delete a grantor or change/edit grantor information
- Add or delete a secured creditor or change/edit secured creditor information
- Add or delete an encumbered asset or change/edit the description of encumbered assets (including adding or deleting items or kinds of encumbered assets and adding a description of assets that are proceeds of the original encumbered assets)
- Extend the period of effectiveness of registration (if the enacting State has specified a universal period of effectiveness of registration or a maximum initial registration period)]
- [Extend or reduce the period of effectiveness of registration (if the enacting State permits secured creditors to specify the period of effectiveness of the registration)]
- [Change the maximum amount for which the security right is enforceable (if the enacting State permits it)]

⁴ If the enacting State has chosen option B or C in recommendation 11 (see *Secured Transactions Guide*, rec. 69).

⁵ If the secured transactions law of the enacting State requires it (see *Secured Transactions Guide*, rec. 57, subpara. (d)).

⁶ Note to the Working Group: The Working Group may wish to consider which of the two alternatives (one amendment per notice or multiple amendments per notice) should be retained. The Working Group may wish to note that in any case it should be clear that, if there is first an assignment of the secured obligation and a notice with the new secured creditor identified is registered, and then there is a change to the encumbered assets, only the assignee will have the power to change the encumbered assets.

- Edit secured creditor information in all such notices with a single global amendment
- Add, change or delete information pursuant to a judicial or administrative order

REGISTRY OF SECURITY RIGHTS IN MOVABLE ASSETS

EXAMPLE OF REJECTION OF A REGISTRATION OR SEARCH REQUEST

(FORM F)

A. The registration request is rejected because:

1. In the case of an initial notice, it failed to provide in a legible manner in the designated field:

- (a) The identifier and address of the grantor,
- (b) The identifier and address of the secured creditor or its representative,
- (c) The description of the encumbered assets,
- (d) [The period of effectiveness of the registration],

* In digits.

(e) [The maximum monetary amount for which the security right may be enforced].

2. In the case of an amendment notice, it failed to provide in a legible manner in the designated field:

(a) The registration number of the registered notice to which the amendment relates,

(b) If information is to be added, the additional information,

(c) If information is to be changed, the changed information.

3. In the case of a cancellation notice, it failed to provide in a legible manner in the designated field the registration number.

B. The search request is rejected because it failed to provide in a legible manner in the designated field:

1. The grantor identifier.

2. The registration number.

I. Introduction

1. At its present session, Working Group VI (Security Interests) continued its work on the preparation of a text on the registration of security rights in movable assets, pursuant to a decision taken by the Commission at its forty-third session

(New York, 21 June-9 July 2010).¹ The Commission's decision was based on its understanding that such a text would usefully supplement the Commission's work on secured transactions and provide urgently needed guidance to States with respect to the establishment and operation of security rights registries.²

2. At its eighteenth session (Vienna, 8-12 November 2010), the Working Group began its work by considering a note by the Secretariat entitled "Registration of security rights in movable assets" (A/CN.9/WG.VI/WP.44 and Add.1 and 2). At that session, the Working Group adopted the working assumption that the text would take the form of a guide that should be consistent with the UNCITRAL Legislative Guide on Secured Transactions (the "*Secured Transactions Guide*") and take into account the approaches taken in modern security rights registration systems, national and international (A/CN.9/714, para. 13). Having agreed that the *Secured Transactions Guide* was consistent with the guiding principles of UNCITRAL texts on e-commerce, the Working Group also considered certain issues arising from the use of electronic communications in security rights registries to ensure that, like the *Secured Transactions Guide*, the text on registration would also be consistent with those principles (A/CN.9/714, paras. 34-47).

3. At its nineteenth session (New York, 11-15 April 2011), the Working Group considered a note by the Secretariat entitled "Draft Security Rights Registry Guide" (A/CN.9/WG.VI/WP.46 and Add.1 to 3). At that session, differing views were expressed as to the form and content of the text to be prepared (A/CN.9/719, paras. 13-14), as well as with respect to the question whether the text should include model regulations or recommendations (A/CN.9/719, para. 46).

4. At its forty-fourth session (Vienna, 27 June-8 July 2011), the Commission emphasized the significance of the Working Group's work in particular in view of efforts undertaken by States towards establishing a registry, as well as the potential beneficial impact of such a registry on the availability and the cost of credit. With respect to the form and content of the text to be prepared, the Commission agreed that the mandate of the Working Group, leaving the specific form and content of the text to the Working Group, did not need to be modified. It was further agreed that, in any case, the Commission would make a final decision once the Working Group had completed its work and submitted the text to the Commission.³

5. At its twentieth session (Vienna, 12-16 December 2011), the Working Group continued its work based on a note by the Secretariat entitled "Draft Security Rights Registry Guide" (A/CN.9/WG.VI/WP.48/Add.3). The Working Group agreed that, as to the form of the text, it should be a guide (the "draft Registry Guide") with commentary and recommendations along the lines of the *Secured Transactions Guide* (A/CN.9/740, para. 18). In addition, it was agreed that, where the draft Registry Guide offered options, examples of model regulations could be included in an annex to the draft Registry Guide. As to the presentation of the text, it was agreed that the draft Registry Guide should be presented as a separate, stand-alone, comprehensive text that would be consistent with the *Secured Transactions Guide*,

¹ *Official Records of the General Assembly, Sixty-fifth Session, Supplement No. 17* (A/65/17), para. 268.

² *Ibid.*, para. 265.

³ *Ibid.*, *Sixty-sixth Session, Supplement No. 17* (A/66/17), para. 237.

and be tentatively entitled “Technical Legislative Guide on the Implementation of a Security Rights Registry” (A/CN.9/740, para. 30).

6. At its twenty-first session (New York, 14-18 May 2012), the Working Group considered a note by the Secretariat entitled “Draft Technical Legislative Guide on the Implementation of a Security Rights Registry” (A/CN.9/WG.VI/WP.50 and Add.1 and 2). At that session, the Working Group approved the substance of the terminology and the recommendations of the draft Registry Guide (A/CN.9/743, para. 21). In addition, the Working Group agreed that the draft Registry Guide should be finalized and submitted to the Commission for adoption at its forty-sixth session in 2013 (A/CN.9/743, para. 73). Moreover, the Working Group agreed to propose to the Commission that the mandate be given to the Working Group to develop a model law on secured transactions and that the topic of security rights in non-intermediated securities should be retained on its future work agenda and be considered at a future session (A/CN.9/743, para. 76).

7. At its forty-fifth session (New York, 25 June-6 July 2012), the Commission expressed its appreciation to the Working Group and requested the Working Group to proceed with its work expeditiously and to complete it so that the draft Registry Guide would be submitted to the Commission for final approval and adoption at its forty-sixth session, in 2013.⁴ In addition, the Commission agreed that, upon its completion of the draft Registry Guide, the Working Group should undertake work to prepare a simple, short and concise model law on secured transactions based on the general recommendations of the *Secured Transactions Guide* and consistent with all texts prepared by UNCITRAL on secured transactions.⁵ Moreover, the Commission agreed that, consistent with the Commission’s decision at its forty-third session, in 2010, the topic of security rights in non-intermediated securities, in the sense of securities other than those credited in a securities account, should continue to be retained on the future work programme for further consideration, on the basis of a note to be prepared by the Secretariat, which would set out all relevant issues so as to avoid any overlap or inconsistency with texts prepared by other organizations.

8. At its twenty-second session (Vienna, 10-14 December 2012), the Working Group considered a note by the Secretariat entitled “Draft Technical Legislative Guide on the Implementation of a Security Rights Registry” (A/CN.9/WG.VI/WP.52 and Add.1-6). At that session, the Working Group adopted the substance of the draft Registry Guide and requested the Secretariat to prepare a revised version of the text reflecting the deliberations and decisions of the Working Group (A/CN.9/764, para. 15).

⁴ Ibid., *Sixty-seventh Session, Supplement No. 17* (A/67/17), para. 100.

⁵ Ibid., para. 105.

II. Organization of the session

9. The Working Group, which was composed of all States members of the Commission, held its twenty-third session in New York from 8 to 12 April 2013. The session was attended by representatives of the following States members of the Working Group: Austria, Belarus, Benin, Brazil, Canada, Chile, China, Colombia, El Salvador, France, Germany, India, Italy, Japan, Kenya, Mexico, Nigeria, Paraguay, Philippines, Poland, Republic of Korea, Russian Federation, Thailand, Turkey, Ukraine and United States of America.

10. The session was attended by observers from the following States: Angola, Burkina Faso, Croatia, Guatemala, Indonesia, Kuwait, Qatar and Switzerland. The session was also attended by observers from the Holy See.

11. The session was also attended by observers from the following international organizations:

(a) *United Nations system*: The World Bank;

(b) *Intergovernmental organizations*: Organization of American States (OAS);

(c) *International non-governmental organizations invited by the Commission*: American Bar Association (ABA), Commercial Finance Association (CFA), European Law Students' Association (ELSA), Inter-American Bar Association (IABA), Inter-Pacific Bar Association (IPBA), International Insolvency Institute (III), Moot Alumni Association (MAA), National Law Centre for Inter-American Free Trade (NLCIFT), New York City Bar (NYCBA) and Union Internationale des Huissiers de Justice et Officiers Judiciaires (UIHJ).

12. The Working Group elected the following officers:

Chairman: Mr. Rodrigo LABARDINI FLORES (Mexico)

Rapporteur: Mr. Madhukar R. UMARJI (India)

13. The Working Group had before it the following documents: A/CN.9/WG.VI/WP.53 (Annotated Provisional Agenda), A/CN.9/WG.VI/WP.54 and Addenda 1-6 (Draft Technical Legislative Guide on the Implementation of a Security Rights Registry) and A/CN.9/WG.VI/WP.55 and Addenda 1-4 (Draft Model Law on Secured Transactions).

14. The Working Group adopted the following agenda:

1. Opening of the session and scheduling of meetings.
2. Election of officers.
3. Adoption of the agenda.
4. Registration of security rights in movable assets.
5. Model law on secured transactions.
6. Other business.
7. Adoption of the report.

III. Deliberations and decisions

15. The Working Group first considered a note by the Secretariat entitled “Draft Technical Legislative Guide on the Implementation of a Security Rights Registry” (A/CN.9/WG.VI/WP.54 and Add.1-6), adopted the draft Registry Guide and referred it to the Commission for adoption at its forty-sixth session, which was scheduled to take place in Vienna from 8 to 26 July 2013. Thereafter, the Working Group considered a note by the Secretariat entitled “Draft Model Law on Secured Transactions” (A/CN.9/WG.VI/WP.55 and Add.1-4). The deliberations and decisions of the Working Group are set forth below respectively in chapters IV to VI. The Secretariat was requested to revise the draft Registry Guide to reflect the deliberations and decisions of the Working Group.

IV. Registration of security rights in movable assets

A. Preface (A/CN.9/WG.VI/WP.54)

16. The Working Group adopted the substance of the preface of the draft Registry Guide on the understanding that the preface would be updated to reflect the results of the present session and the Commission session.

B. Introduction (A/CN.9/WG.VI/WP.54 and A/CN.9/WG.VI/WP.54/Add.1, paras. 1-23)

17. With respect to section A (purpose of the draft Registry Guide and its relationship with the *Secured Transactions Guide*), it was agreed that: (a) in paragraph 3, reference should be made to registration as a method of achieving third-party effectiveness or, at least, as a method of establishing priority; (b) in paragraph 4, reference should be made to other texts on registration, such as texts prepared by the World Bank; and (c) in paragraph 6 (e), reference to academics should be added.

18. With respect to section B (terminology and interpretation), it was agreed that: (a) the explanation of the meaning of the term “amendment” should be revised to refer to “a modification with respect to information ...”; (b) paragraph 10 should be revised to read along the following lines “registration of an amendment notice does not result in the deletion or modification of information in previously registered notices to which the amendment notice relates. The legal consequence of the registration of an amendment notice is that the effect of the information to which it relates in the previously registered notice is modified to the extent of the change specified in the amendment notice. Under recommendation 11, an amendment notice is effective from the time it is accessible to searchers.”; (c) at the end of paragraph 11, a sentence along the following lines should be added “Under recommendation 11, a cancellation notice is effective from the time the previously registered notice to which the cancellation notice relates is no longer accessible to searchers of the public registry record.”; (d) the explanation of the meaning of the term “cancellation” should refer to “the removal of *all* information” from the public registry record; (e) in the explanation of the meaning of the term “registrant”, the

bracketed text “and may be a service provider” should be deleted; (f) in the explanation of the meaning of the term “registration”, the term “database” should be deleted and the word “record” should be retained outside square brackets; (g) in the explanation of the meaning of the term “registry record”, the terms “record” and “database” should be deleted and reference should be made to “information ... that is stored *by* the registry”; (h) in the explanation of the meaning of the term “secured creditor”, the bracketed text “and may be the secured creditor or its representative” should be deleted; and (i) an explanation of the meaning of the term “registry” should be added to read along the following lines “a system for registering and searching information about security rights in movable assets”.

19. With respect to section D (overview of secured transactions law and the role of registration), it was agreed that: (a) in subsection D.2 (concept of a security right), a security right should be qualified as a “limited” property right; (b) in subsection D.4 (third-party effectiveness of a security right), paragraph 30 should include a reference to paragraph 37 (dealing with the exclusion of securities from the scope of the *Secured Transactions Guide*), while footnote 9, dealing with the same issue, should be deleted, and paragraph 31 should be clarified to explain that registration in a specialized registry would be an alternative method of third-party effectiveness only if intellectual property law did not provide otherwise; (c) in subsection D.5, (a) to (d) and throughout the draft Registry Guide, the Secretariat should make any editorial changes necessary to ensure consistency of expression and to avoid duplication; (d) in subsection D.5 (e), it should be explained that, even if preferential claims were made subject to registration, the first-to-register priority rule might not necessarily apply; (e) in subsection D.6 (extended transactional scope of the registry), the heading of the subsection should be revised to read along the following lines “extended scope of the registry” as preferential claims (e.g. tax claims) did not necessarily arise as a result of a transaction, a subheading “preferential claims” should be added before paragraph 5, the paragraph should refer to the fact that the *Secured Transactions Guide* “discussed but made no recommendation on that matter” (an expression that should be used throughout the draft Registry Guide to refer to such instances) and the last sentence of paragraph 5 should be deleted; (f) in subsection D.7 (registration and enforcement of security rights), reference should be made directly to what was recommended in the *Secured Transactions Guide*; and (g) in subsection D.9 (notice registration), for consistency reasons, reference should be made to the “grantor” rather than to the “debtor”.

20. It was also agreed that a paragraph should be added at the end of section D to address international coordination among national security rights registries along the following lines: “States would benefit from coordinating and harmonizing their registry rules and procedures to the greatest extent possible in order to reduce transaction costs for registrants and searchers of the registry record. Accordingly, registrars would be well-advised to consult with registrars in other States and take into consideration the rules and procedures of registries in those States.”

21. With respect to section E (transitional considerations), it was agreed that: (a) paragraphs 24 to 30 should be deleted; (b) paragraphs 31 and 32 should be placed at the end of section D or in a more appropriate place; and (c) paragraph 33 should follow paragraph 39 as it referred to additional implementation considerations.

22. Subject to the above-mentioned changes (see paras. 17-21 above), the Working Group adopted the Introduction.

C. Establishment and functions of the security rights registry (A/CN.9/WG.VI/WP.54/Add.1, paras. 34-49)

23. With respect to subsection A.2 (appointment of the registrar), it was agreed that it should be made clear that the registrar could be either a legal person or a natural person.

24. With respect to recommendation 3, subparagraphs (d) and (g), in line with the decision with respect to the terms “registration” and “registry record” (see para. 18 above), it was agreed that reference should be made to “registry record” rather than to the “registry database”.

25. Subject to the above-mentioned changes (see paras. 23 and 24 above), the Working Group adopted chapter I.

D. Access to registry services (A/CN.9/WG.VI/WP.54/Add.1, paras. 50-65)

26. With respect to subsection A.3 (access to registration services), it was agreed that the third sentence of paragraph 56 should be deleted as the grantor would send a demand to amend or cancel an unauthorized registration to the secured creditor, and not to the registrant.

27. With respect to subsections A.4 (verification of identity, evidence of authorization or scrutiny of the content of the notice not required), it was agreed that: (a) paragraphs 59 to 61 would apply to notices in general and would not necessarily be limited to initial notices; (b) references should be made to authorization by the grantor, as the authorization of amendment or cancellation notices by the secured creditor was dealt with elsewhere in the draft Registry Guide (see A/CN.9/WG.VI/WP.54/Add.4, paras. 28-37); and (c) reference should be made to the discussion in the draft Registry Guide of types of amendment that required the grantor’s authorization as the grantor’s authorization was not required for all types of amendment (see A/CN.9/WG.VI/WP.54/Add.4, para. 3).

28. With respect to recommendations 4 to 10, it was agreed that: (a) in recommendation 4, the bracketed text should be retained outside square brackets; (b) in recommendation 6, the bracketed text in the chapeau should be deleted and subparagraph (b) should be revised to read along the following lines “identifies itself in the manner prescribed by the registry”; (c) in recommendations 6 and 9, a subparagraph should be added to require the registry to provide grounds for the rejection of access to registration and searching services respectively; (d) in recommendation 7, the bracketed text in subparagraph (a) should be retained outside square brackets and the relevant commentary should explain that subparagraph (b) referred to authorization by the grantor with a cross-reference to the part in the draft Registry Guide in which the effectiveness of amendment and cancellation notices that were not authorized by the secured creditor was discussed; (e) in recommendation 8, subparagraph (a) should be revised to read along the following

lines “the registry rejects the registration of a notice submitted to it if information is not entered in all the required designated fields ...”; (f) the commentary should explain the relationship between recommendation 6, which dealt with access to registration services, and recommendation 8, which dealt with the rejection of a notice, and discuss situations in which the registry might need to provide reasons for denying access to registration services (e.g. where the notice was submitted by mail and the registrant used the wrong form, an identity card that had expired or a credit card the limit of which had been exceeded); and (g) in recommendation 10, subparagraph (a) should be revised to read along the following lines “the registry rejects ...”, while the Secretariat should make similar editorial changes throughout the draft Registry Guide to ensure consistency of expression.

29. Subject to the above-mentioned changes (see paras. 26-28 above), the Working Group adopted chapter II.

E. Registration (A/CN.9/WG.VI/WP.54/Add.2, paras. 1-49)

30. With respect to subsection A.2 (period of effectiveness of registered notice), it was agreed that the first sentence of paragraph 11 should be revised to read along the following lines “if a State adopts option A, it is not necessary to design its registry system to allow the registrant to reduce the legal period of effectiveness”.

31. With respect to subsection A.3 (time when a notice may be registered), it was agreed that, where the draft Registry Guide recommended a rule typically found in the secured transactions law, which, depending on the drafting conventions in the enacting State might need to be included or reiterated in the registry regulation, reference should be made to the part in the draft Registry Guide which dealt with issues of legislative technique and drafting (see A/CN.9/WG.VI/WP.54/Add.1, para. 32).

32. With respect to subsection A.7 (preserving the integrity and security of the registry record), it was agreed that: (a) in line with recommendation 18, the commentary should refer to the obligation of the registry to send a copy of the registered notice to the secured creditor, rather than to the registrant; and (b) the commentary should explain that the registry could correct only errors it made in entering into the registry record information contained in a paper notice, but not possible errors made by the registrant.

33. With respect to section A.9 (registry’s duty to send a copy of the registered notice to the registrant), in line with the decision made by the Working Group with respect to subsection A.7 (see para. 32 above), it was agreed that reference should be made to the obligation of the registry to send a copy to the secured creditor, rather than to the registrant.

34. With respect to subsection A.12 (removal of information from the public registry record and archival), it was agreed that a reference should be made to recommendation 74 of the *Secured Transactions Guide*, under which information should be archived upon expiration or cancellation of a notice as provided in recommendations 69, 72 or 73 and to the part in the draft Registry Guide in which the effectiveness of amendment and cancellation notices that were not authorized by the secured creditor was discussed (see A/CN.9/WG.VI/WP.54/Add.4, paras. 28-37).

35. With respect to subsection A.13 (language of notices and search requests), it was agreed that paragraph 49 should be recast to set out the issue (multiple linguistic versions of a grantor that was a legal person under the law of its constitution) and provide options for States with advantages and disadvantages. It was noted that one option, for example, might be to require that all linguistic versions of the grantor's name be listed in the notice. In that connection, it was pointed out that that approach would protect third-party searchers using one of the versions but expose the secured creditor to the risk of error and potential ineffectiveness of the notice. It was also noted that another approach might be to require that only one of the linguistic versions of the grantor's name be listed in the notice. It was stated that that approach would protect the secured creditor against the risk of error and ineffectiveness of the notice, but expose third-party searchers to the risk that they might not find the registered notice if they used another version of the grantor's name.

36. With respect to recommendations 11-22, it was agreed that: (a) in line with the decision made by the Working Group with respect to terminology and interpretation (see para. 18 above), in recommendation 11, reference should be made to the "registry record", rather than to the "registry database", and, as the words "as soon as practicable" were sufficient, the words "or within [a short period of time to be specified by the enacting State]" should be deleted from subparagraph (c); (b) in recommendation 11, references to a "notice" in subparagraphs (a), (b) and (c) should be qualified with the words "initial or amendment"; (c) in recommendation 11, subparagraphs (d) and (e) should be added to read along the following lines "(d) The registration of a cancellation notice is effective from the date and time when the previously registered notice to which it relates is no longer accessible to searchers of the public registry record" and "(e) The registry maintains a record of the date and time when the previously registered notice to which a cancellation notice relates is no longer accessible to searchers of the public registry record", while commentary should be prepared to explain the new subparagraphs that addressed an issue that was not specifically dealt with in the *Secured Transactions Guide*"; (d) in recommendation 12, the bracketed text should be retained outside square brackets and revised to read along the following lines "all notices related to an initial notice are [identified by] or [associated with] the same number"; (e) in all the options of recommendation 13, subparagraph (c) should be deleted and replaced with words to be inserted after the first sentence of subparagraph (b) along the following lines "by an amendment notice indicating that its purpose was to extend the period of effectiveness"; (f) in recommendation 14, the bracketed texts should be deleted; (g) in recommendation 16, the bracketed text should be retained outside square brackets; (h) in recommendation 18, subparagraph (b) should state that the secured creditor "must" send a copy of an initial notice to each grantor and indicate that the copy of the registered notice mentioned at the end of that subparagraph was a copy transmitted by the registry to the secured creditor in accordance with subparagraph (a), while the commentary should explain that, where there were multiple secured creditors, it was sufficient if one of the secured creditors sent the copy to the grantor; and (i) in recommendation 22, consistent with the terminology used in the draft Registry Guide, the obligation of the registrant in subparagraph (a) should be reflected with the verb "must", while the obligation of the registry in subparagraph (b) should be reflected with the verbs "specifies" and "makes".

37. Subject to the above-mentioned changes (see paras. 30-36 above), the Working Group adopted chapter III.

F. Registration of initial notices (A/CN.9/WG.VI/WP.54/Add.2, paras. 50-71 and A/CN.9/WG.VI/WP.54/Add.3, paras. 1-35)

38. With respect to subsection A.2 (grantor information), it was agreed that: (a) the row “other entity” in the table following paragraph 66 should be deleted, as it was too general to provide any guidance and, in any case, enacting States would have to adjust the examples in the table to fit in their context; (b) following the order of examples in the table, the order of paragraphs 67 and 68 should be reversed; and (c) paragraphs 69 to 71 should be recast to state how the address of the grantor was dealt with in the *Secured Transactions Guide*, list additional issues that needed to be addressed, and conclude with a reference to the recommendations of the draft Registry Guide that dealt with those issues. In that connection, it was also agreed that the commentary should elaborate on instances where the grantor had multiple addresses or no address at all in the State in which the registry was located with a cross-reference to recommendation 18, subparagraph (b), which required the secured creditor to send a copy of the initial notice to the grantor at the address set forth in the notice and a copy of an amendment notice to the grantor at the address set forth in the notice or at the current address known to the secured creditor.

39. With respect to subsection A.3 (secured creditor information), it was agreed that: (a) paragraphs 2 and 4 should be aligned; and (b) paragraph 4 should make it clear that third parties should be able to rely on the fact that, even if it was not the actual secured creditor, the person mentioned in the notice as the secured creditor could act on behalf and bind the secured creditor, without having to determine what its exact relationship with the actual secured creditor was.

40. With respect to subsection A.4 (description of encumbered assets), it was agreed that paragraphs 10 and 11 should be revised to clarify that the need to amend the description of the encumbered assets in the notice would arise only if the proceeds were of a type that was not covered by the description of the encumbered assets in the initial notice.

41. With respect to subsection A.6 (maximum amount for which the security right may be enforced), it was agreed that: (a) the discussion of the possibility that the requirement to include in a notice the maximum amount might be used as a pretext to impose a tax on secured transactions should be deleted from paragraph 15 as it was addressed elsewhere (see A/CN.9/WG.VI/WP.54/Add.3, para. 19, and A/CN.9/WG.VI/WP.54/Add.4, para. 56); and (b) the commentary should explain that, in accordance with recommendation 11, subparagraph (a), an amendment of the maximum amount would only be effective when the registration of the amendment notice became effective and thus third parties that relied on the previous maximum amount would be protected.

42. With respect to subsection A.7 (effect of errors or omissions on the effectiveness of the registration of a notice), it was agreed that: (a) paragraph 27 should include a reference to the part of the draft Registry Guide in which serial number indexing and searching was discussed (see A/CN.9/WG.VI/WP.54/Add.2,

paras. 24-27); and (b) paragraphs 30 and 31 (with the exception of the first sentence, which should be placed after para. 28) should be deleted as the matter was addressed in paragraphs 32-35.

43. With respect to recommendations 23-29, it was agreed that: (a) references to the representative of the secured creditor in recommendations 23 and 27 should be deleted as the draft Registry Guide used the term “secured creditor” to encompass its representative, if that person was identified in the notice as the secured creditor; (b) recommendation 24, subparagraph (e), should be aligned with the relevant commentary (see A/CN.9/WG.VI/WP.54/Add.2, para. 56, and the table following that paragraph); (c) recommendation 26, subparagraph (a), should be revised to read along the following lines “if the grantor is subject to insolvency proceedings and the security right is created in the assets of the grantor by the insolvency representative ...” to ensure that it would not be understood as implying that an amendment notice would be required for a security right created by the grantor prior to the insolvency proceedings (see para. 52, (d), and 53 below); (d) recommendation 26, subparagraphs (b) and (d), should be deleted, while the relevant issues should be discussed in the commentary; (e) recommendation 26, subparagraph (c), should be aligned with the relevant commentary (see A/CN.9/WG.VI/WP.54/Add.2, para. 66, and the table following that paragraph) to refer to a trustee or representative of an estate; (f) the commentary to recommendation 27, subparagraph (c), should explain that subparagraph (c) would be of little practical importance, as it would be rather rare that an insolvent person or a trustee of an estate of a deceased person would be a secured creditor; (g) in recommendation 29, the word “registration” in subparagraphs (b)-(e) should be replaced with the words “registration of a notice” to ensure consistency of expression with other parts of the draft Registry Guide; (h) the reference in recommendation 29 to the fact that the registration of a notice might be rendered ineffective did not mean that the entry of information would be rejected but rather that the legal consequences of the registration would not be achieved; and (i) recommendation 29, subparagraph (c), should be revised to refer to an “insufficient” rather than to “incorrect” grantor identifier as, according to recommendation 29, subparagraph (a), even a notice with an incorrect grantor identifier might be effective (if the notice would be retrieved by a search of the public registry record using the grantor’s correct identifier).

44. Subject to the above-mentioned changes (see paras. 38-43 above), the Working Group adopted chapter IV.

G. Registration of amendment and cancellation notices (A/CN.9/WG.VI/WP.54/Add.4, paras. 1-41)

45. With respect to subsection A.1 (amendment notices), it was agreed that the commentary should clarify that: (a) the secured creditor, rather than the registrant, had a right to make an amendment; (b) an amendment to reflect a voluntary subordination would be optional; (c) the discussion was exhaustive to the extent that it related to all amendments with respect to the minimum content of a notice, but not exhaustive to the extent that it could not address all the reasons for an amendment; (d) in the case of a change in the grantor’s name, a search under the name of the old or the new grantor should retrieve the registration; (e) the *Intellectual Property Supplement* took a different position than the *Secured Transactions Guide* with

respect to the effectiveness of a registration in the case of a transfer of the encumbered assets (recommendation 244); and (f) the registry system could be designed to accommodate the registration of an amendment notice to disclose a subordination but adding new features to the registry system would be associated with cost.

46. With respect to subsection A.4 (effectiveness of amendment and cancellation notices not authorized by the secured creditor), it was agreed that it should be replaced by new text that would describe the issue, state that the *Secured Transactions Guide* did not address it explicitly and fully, identify the specific policy issues that an enacting State would need to address and discuss some of the possible approaches to those issues. In addition, it was agreed that the new text should reflect the two basic policy approaches (protection of third-party searchers relying on the registry record and protection of the secured creditor) and indicate the need to distinguish cases involving fraud by a third party (which could be addressed with secured access mechanisms) from cases involving a mistake by the secured creditor, its employees or agents (which could be addressed by rules relating to professional liability). Moreover, it was agreed that the new text should explain that the registry and bona fide third-party searchers would have no way of knowing whether fraud or mistake were involved in an unauthorized amendment or cancellation. It was also agreed that the new text should clarify that, upon registration of a cancellation notice, under recommendation 74 of the *Secured Transactions Guide*, the registry had to remove the relevant notice from the public registry record, irrespective of whether it was authorized by the secured creditor or not, as the registry had no way of verifying whether a cancellation notice had been authorized by the secured creditor.

47. With respect to recommendation 30, it was agreed that subparagraphs (a) and (f) should be retained to provide guidance as to amendments that related to information required in a notice, while subparagraphs (b)-(e) should be deleted and the matters addressed therein should be discussed in the commentary (for a change to recommendation 33, subpara. (g), see para. 57 below).

48. Subject to the above-mentioned changes (see paras. 45-47 above), the Working Group adopted chapter V.

H. Search criteria and search results (A/CN.9/WG.VI/WP.54/Add.4, paras. 42-51)

49. With respect to subsection A.2 (search results), it was agreed that the commentary should clarify that: (a) the registration number was the only other search criterion in addition to the identifier of the grantor; and (b) the discussion on close matches would only be applicable to searches conducted using the grantor identifier and not the registration number. Subject to those changes, the Working Group adopted chapter VI.

I. Registration and search fees (A/CN.9/WG.VI/WP.54/Add.4, paras. 52-58)

50. With respect to recommendation 36, it was agreed that it should refer to “paper” rather than to “paper-based” notices. Subject to those changes, the Working Group adopted chapter VII.

J. Annex I. Terminology and recommendations (A/CN.9/WG.VI/WP.54/Add.5)

51. Having adopted the commentary and recommendations of all the chapters of the draft Registry Guide, the Working Group noted that, it had also adopted Annex I, which reproduced the terminology and recommendations, set forth in the relevant chapters of the draft Registry Guide.

K. Annex II. Examples of registry forms (A/CN.9/WG.VI/WP.54/Add.6)

52. The Working Group next turned to the examples of registry forms, set forth in Annex II of the draft Registry Guide. With respect to form A (example of initial notice), it was agreed that: (a) the disclaimer at the top of form A should also mention that it was the responsibility of the registrant to ensure that all information in the notice was complete, accurate and legally effective (it was noted that the same change should also be made to forms B, C, D and E); (b) to the indication of the time of effectiveness that was to be automatically generated by the registry, minutes and seconds should be added (it was noted that the same change should also be made to forms B, C, D, E, G and H); (c) the reference to additional grantor information throughout form A should be revised to read along the following lines “additional information about the grantor”, placed within square brackets and accompanied by a note that would read along the lines of the relevant part of the commentary (see A/CN.9/WG.VI/WP.54/Add.2, para. 53; it was noted that the same change should also be made to form B); (d) section A.3 should be revised to indicate whether the grantor was the person that was subject to insolvency proceedings or that person’s insolvency representative; (e) throughout form A, reference to a “syndicate or joint venture” and to “an entity other than those mentioned above” should be deleted, and the reference to “a named trust or estate” should be revised to read along the following lines “a trustee or representative of an estate” (it was noted that the same change should also be made to form B); (f) in section C, reference to a description of the encumbered assets by serial number should be deleted; (g) in section D, reference should be made to the duration of registration, and the commentary should explain that that reference meant the last day of that period; and (h) in section G, the reference to the indication that the registration was transitional should be retained, while the reference to the indexing criterion and the date and time of effectiveness was not necessary and should thus be deleted.

53. As a result of the change to section A.3 of form A (see para. 52, (d) above) the Working Group revisited recommendation 26, subparagraph (a) (see para. 43, (c) above). It was widely felt that the answer to the question as to who might be the

person that had the right to grant a security right in assets that were part of an insolvency estate (i.e. the person that was subject to insolvency proceedings or that person's insolvency representative), and thus the answer to the question as to the person whose name should be entered as grantor in section A.1. or A.2 of form A, would depend on the law of the enacting State, which might differ from State to State. Accordingly, it was agreed that recommendation 26 (a) (and the relevant commentary) should be revised to state that the grantor identifier could be either the name of the person that was subject to insolvency proceedings or that person's insolvency representative.

54. With respect to form B (example of amendment notice), it was agreed that: (a) the list of acts, set forth at the top of the form, should be deleted and registrants should be instructed to fill out as many of the fields on the form as they might need; (b) with respect to a global amendment, to implement the options offered in recommendation 31, the commentary should explain that enacting States would need to design a form for a secured creditor to implement that amendment or an application for the secured creditor to request the registry to make that amendment; (c) in section D, wording along the following lines should be inserted "enter name of the grantor to whom the amendment relates"; and (d) in section G, wording along the following lines should be inserted "enter name of the secured creditor to whom the amendment relates".

55. With respect to form C (example of mandatory amendment notice), it was agreed that: (a) the heading should be revised to read along the following lines "example of amendment notice pursuant to a judicial or administrative order" (it was noted that a similar change should also be made to the heading of form E); (b) in section B, reference should also be made to "changes" of information pursuant to a judicial or administrative order; (c) in section C, reference should be made to a "registrant", and to its name and position, as well as to the name of the authority and its address (it was noted that the same change should also be made in form E); (d) the commentary to recommendation 33 should explain that an enacting State would need to determine whether a copy of all of the order (with the facts, the rationale and the actual decision) or only the actual decision should be attached, and whether a certified copy should be attached, and, if so, what constituted a certified copy under the law of the enacting State (it was noted that the same commentary would apply also with respect to form E); and (e) in section D, reference should be made to a copy of the judicial or administrative order (the same change should also be made in form E).

56. With respect to form D (example of cancellation notice), it was agreed that: (a) it should be revised to refer to the "registration number of the initial notice to be cancelled"; (b) a note should be added to alert the secured creditor to the legal consequences of a cancellation; and (c) the commentary should discuss the issue of inadvertent cancellations by secured creditors and ways in which such cancellations might be prevented (e.g. by requiring that additional information, such as the grantor identifier, be mentioned in a cancellation notice, and that the cancellation notice should be rejected if the registration number did not match the grantor identifier, or by designing the registry so as to have the entire record relating to the notice to be cancelled appear on a screen upon entry of the registration number).

57. In the context of the discussion of form E, it was agreed that, in recommendation 33, subparagraph (g), option A should be aligned with option B to

require that a copy of the relevant judicial or administrative order be attached, rather than the order itself (see para. 47 above).

58. With respect to form F (example of search request form), it was agreed that: (a) at the top of the form, wording along the following lines should be inserted “sections A and B are alternatives and only one of them needs to be filled out”; (b) the reference to the time should be deleted as that information would be set forth in the search result in form G; and (c) reference to “additional grantor information” should be deleted as, in accordance with recommendation 34, that information was not a search criterion.

59. With respect to form G (example of a search result), it was agreed that: (a) in line with the terminology used in the draft Registry Guide, reference should be made to notices being “retrieved”; (b) to indicate which notice matched the search criterion in line with recommendation 35, subparagraph (a), reference should be made to the search criterion used; and (c) the commentary should discuss the kind of information to be provided to a searcher in a search result (all information in an attachment or table, or some information relating to notices that matched the search criterion). In that connection, the Working Group discussed “currency dates” and noted that the relevant commentary (see A/CN.9/WG.VI/WP.54/Add.4, para. 51) was sufficient in discussing that issue.

60. With respect to form H (example of rejection of a registration or a search request), it was agreed that: (a) the form should be presented in a check-box format which would indicate to the registrant or the searcher the reason or reasons for the rejection of a registration or search request; (b) the time of rejection should be indicated in the form; (c) in line with the decision made by the Working Group at the present session (see para. 43 above), the reference to the representative of the secured creditor in section A.1.(b) should be deleted; (d) section A.2.(b) and (c) should be combined and revised to read along the following lines “it failed to provide any legible information”; (e) section B should be revised to read along the following lines “the search request is rejected because it failed to provide a search criterion in a legible manner in the designated field”; (f) the commentary should explain that form H would generally be used in a paper-based registry, as an ideal electronic registry would automatically reject a registration or a search request if some required information was not provided.

61. Subject to the above-mentioned changes, (see paras. 52-60 above), the Working Group adopted the examples of the registry forms and the revised recommendations 26, subparagraph (a), and 33, subparagraph (g), option A.

L. Title of the draft Registry Guide

62. The Working Group decided that the title of the draft Registry Guide should be “UNCITRAL Guide on the Implementation of a Security Rights Registry”. It was agreed that that title was appropriate, mainly as it indicated the contents of the draft Registry Guide but also its relationship to the *Secured Transactions Guide*.

V. Draft Model Law on Secured Transactions

63. Upon completion of its deliberations on the draft Registry Guide, the Working Group had a general exchange of views with respect to the draft Model Law on Secured Transactions (the “draft Model Law”) and in particular with respect to its scope. At the outset, the Working Group expressed its appreciation to the Commission for its decision to refer to the Working Group the preparation of a simple, short and concise model law on secured transactions based on the general recommendations of the *Secured Transactions Guide* and consistent with all texts prepared by UNCITRAL on secured transactions⁶ and to the Secretariat for preparing a first draft of the draft Model Law. One view was that Commission’s mandate for the draft Model Law did not require that matters that were the subject of asset-specific recommendation in the *Secured Transactions Guide* be excluded from the scope of the draft Model Law. It was stated that, the Commission’s mandate rather required that the decisions as to the scope should be made on the basis of the economic value of having the draft Model Law cover a transaction, and not on the basis of whether the asset was the subject of an asset-specific recommendation.

64. Another view was that the main elements of the mandate given by the Commission to the Working Group were that the text to be prepared should be simple, concise and supplement the *Secured Transactions Guide*. It was stated that, before considering the provisions of the draft Model Law, it was premature to discuss in any detail, or to refer to the Commission, the matter of the scope of the draft Model Law. In that connection, it was observed that the draft Model Law could meet the three conditions set by the Commission if it had a broad scope and included general principles but not if it had a broad scope and included detailed provisions. It was also pointed out that, while simplicity might be a subjective criterion, conciseness was objective and referred, for example, to a limited number of provisions. It was also observed that, in any case, the draft Model Law should supplement, and not replace, the *Secured Transactions Guide*.

VI. Future work

65. The Working Group referred the draft Registry Guide to the Commission for adoption at its upcoming forty-sixth session.

66. The Working Group noted that its twenty-fourth session was tentatively scheduled to take place in Vienna from 7 to 11 October 2013, those dates being subject to confirmation by the Commission at its forty-sixth session.

Preface

At its forty-second session (Vienna, 29 June-17 July 2009), the Commission noted with interest the future work topics discussed by Working Group VI at its fourteenth and fifteenth sessions (A/CN.9/667, para. 141, and A/CN.9/670, paras. 123-126). At that session, the Commission agreed that the Secretariat could hold an international colloquium early in 2010 to obtain the views and advice of experts with regard to possible future work in the area of security interests.¹ In accordance with that decision,² the Secretariat organized an international colloquium on secured transactions (Vienna, 1-3 March 2010). At the colloquium several topics were discussed, including registration of security rights in movable assets, security rights in non-intermediated securities, a model law on secured transactions, a contractual guide on secured transactions, intellectual property licensing and implementation of UNCITRAL texts on secured transactions. The

¹ *Official Records of the General Assembly, Sixty-fourth Session, Supplement No. 17 (A/64/17)*, paras. 313-320.

² *Ibid.*

colloquium was attended by experts from governments, international organizations and the private sector.³

At its forty-third session (New York, 21 June-9 July 2010), the Commission considered a note by the Secretariat on possible future work in the area of security interests (A/CN.9/702 and Add.1). The note discussed all the items discussed at the colloquium. The Commission agreed that all issues were interesting and should be retained on its future work agenda for consideration at a future session on the basis of notes to be prepared by the Secretariat within the limits of existing resources. However, in view of the limited resources available to it, the Commission agreed that priority should be given to registration of security rights in movable assets.⁴

In that connection, it was widely felt that a text on registration of security rights in movable assets would usefully supplement the Commission's work on secured transactions and provide urgently needed guidance to States with respect to the establishment and operation of security rights registries. It was stated that secured transactions law reform could not be effectively implemented without the establishment of an efficient publicly accessible security rights registry. It was also emphasized that the *UNCITRAL Legislative Guide on Secured Transactions* (the "*Secured Transactions Guide*") did not address in sufficient detail the various legal, administrative, infrastructural and operational questions that needed to be resolved to ensure the successful implementation of a registry.⁵

The Commission also agreed that, while the specific form and structure of the text could be left to the Working Group, the text could: (a) include principles, guidelines, commentary, recommendations and model regulations; and (b) draw on the *Secured Transactions Guide*, texts prepared by other organizations and national law regimes that have introduced security rights registries similar to the registry recommended in the *Secured Transactions Guide*. After discussion, the Commission decided that the Working Group should be entrusted with the preparation of a text on registration of security rights in movable assets.⁶

At its eighteenth session (Vienna, 5-10 November 2010), the Working Group considered a note by the Secretariat entitled "Registration of security rights in movable assets" (A/CN.9/WG.VI/WP.44 and Add.1 and 2). At the outset, the Working Group expressed its broad support for a text on the registration of security rights in movable assets, noting that empirical evidence clearly demonstrated that the efficacy of a secured transactions law depended on an effective registration system (A/CN.9/714, para. 12). As to the specific form and structure of the text to be prepared, the Working Group adopted the working assumption that the text would be a guide on the implementation and operation of a registry of security rights in movable assets that could include principles, guidelines, commentary and possibly model regulations. The Working Group also agreed that the text of the proposed registry guide should be consistent with the type of secured transactions legal regime contemplated by the *Secured Transactions Guide*, while also taking into account the diverse approaches taken by modern national and international registry regimes. It was also observed that, in line with the *Secured Transactions Guide*

⁴ Ibid., *Sixty-fifth Session, Supplement No. 17* (A/65/17), paras. 264 and 273.

⁵ Ibid., para. 265.

⁶ Ibid., paras. 266-267.

(see recommendation 54, subpara. (j)), the proposed registry guide should take into account the need to accommodate a hybrid electronic/paper system in which parties would have the option of submitting registration and search inquiries either electronically or in paper form (A/CN.9/714, para. 13). The Secretariat was asked to prepare a draft of the proposed registry guide based on the discussions and conclusions of the Working Group (A/CN.9/714, para. 11).

At its nineteenth session (New York, 11-15 April 2011), the Working Group considered notes by the Secretariat entitled “Draft Security Rights Registry Guide” (A/CN.9/WG.VI/WP.46 and Add.1 and 2) and “Draft Model Regulations” (A/CN.9/WG.VI/WP.46/Add.3). At the outset, the Working Group considered the form and content of the text to be prepared. One view was that a stand-alone guide should be prepared that would include an educational part introducing the secured transactions law recommended in the *Secured Transactions Guide* and a practical part that would consist of model registration regulations and commentary thereon (see A/CN.9/719, para. 13). Another view was that emphasis should be placed on model registration regulations and a commentary thereon, which would provide States that had enacted the secured transactions law recommended in the *Secured Transactions Guide* with practical advice as to the issues to be addressed in the context of the establishment and operation of a general security rights registry (see A/CN.9/719, para. 14). At that session, differing views were also expressed as to whether the regulations should be formulated as model regulations or as recommendations (A/CN.9/719, para. 46). The Working Group requested the Secretariat to prepare a revised version reflecting the deliberations and decisions of the Working Group (A/CN.9/714, para. 12).

At its forty-fourth session (Vienna, 27 June-8 July 2011), the Commission considered the reports of the eighteenth and nineteenth sessions of the Working Group (A/CN.9/714 and A/CN.9/719, respectively). At that session, the significance of the work undertaken by Working Group VI was emphasized in particular in view of efforts currently undertaken by several States with a view to establishing a general security rights registry and the significant beneficial impact the operation of such a registry had on the availability and the cost of credit. With respect to the form and content of the text to be prepared, it was stated that, following the approach followed with respect to the *Secured Transactions Guide*, the text should be formulated in the form of a guide with commentary and recommendations, rather than as a text with model regulations and commentary thereon. In that connection, it was noted that the next version of the text before the Working Group would be formulated in a way that would leave the matter open until the Working Group had made a decision. After discussion, the Commission agreed that the mandate of the Working Group, leaving the decision on the form and content of the text to be prepared to the Working Group, did not need to be modified, and that, in any case, a final decision would be made by the Commission once the Working Group had completed its work and submitted the text to the Commission.⁷

At its twentieth session (Vienna, 12-16 December 2011), the Working Group continued its work based on a note by the Secretariat entitled “Draft Security Rights Registry Guide” (A/CN.9/WG.VI/WP.48 and Add.1-3). At that session, the Working Group agreed that the text should take the form of a guide (the “draft Registry

⁷ Ibid., *Sixty-sixth Session, Supplement No. 17* (A/66/17), para. 233.

Guide”) with commentary and recommendations along the lines of the *Secured Transactions Guide*. In addition, the Working Group agreed that, where the draft Registry Guide offered options, examples of model regulations could be included in an annex to the draft Registry Guide (A/CN.9/740, para. 18). As to the presentation of the text, it was agreed that the draft Registry Guide should be presented as a separate, stand-alone, comprehensive text that would be consistent with the *Secured Transactions Guide*, and be tentatively entitled “Technical Legislative Guide on the Implementation of a Security Rights Registry” (A/CN.9/740, para. 30).

At its twenty-first session (New York, 14-18 May 2012), the Working Group considered a note by the Secretariat entitled “Draft Technical Legislative Guide on the Implementation of a Security Rights Registry: Annex I. Terminology and recommendations” (A/CN.9/WG.VI/WP.50 and Add.1-2). At that session, the Working Group approved the substance of the terminology and the recommendations of the draft Registry Guide (A/CN.9/743, para. 21). In addition, the Working Group agreed that the draft Registry Guide should be finalized and submitted to the Commission for adoption at its forty-sixth session, in 2013 (A/CN.9/743, para. 73).

At its forty-fifth session (New York, 25 June-6 July 2012), the Commission considered the reports of the twentieth and twenty-first sessions of the Working Group (A/CN.9/740 and A/CN.9/743, respectively). At that session, the Commission expressed its appreciation to the Working Group and requested the Working Group to proceed with its work expeditiously and to complete it so that the draft Registry Guide would be submitted to the Commission for final approval and adoption at its forty-sixth session, in 2013.⁸

At its twenty second session, the Working Group considered a note by the Secretariat entitled “Draft Technical Legislative Guide on the Implementation of a Security Rights Registry” (A/CN.9/WG.VI/WP.52 and Add.1-6). At that session, the Working Group adopted the substance of the draft Registry Guide and requested the Secretariat to prepare a revised version of the text reflecting the deliberations and decisions of the Working Group (A/CN.9/764, para. 15).

[Note to the Working Group: The Working Group may wish to note that the preface will be updated after each Working Group meeting and completed after the Commission adopts the draft Registry Guide at its forty-sixth session, in 2013.]

Introduction

A. Purpose of the draft Registry Guide and its relationship with the *Secured Transactions Guide*

1. The *UNCITRAL Legislative Guide on Secured Transactions* (the “*Secured Transactions Guide*”) deals with the full range of issues that should be addressed in a modern secured transactions law (as supplemented with respect to security rights in intellectual property by the *Supplement on Security Rights in Intellectual Property*; the “*Supplement*”). The establishment of a publicly accessible registry in which information about the potential existence of a security right in movable assets

⁸ Ibid., *Sixty-seventh Session, Supplement No. 17* (A/67/17), para. 99.

may be registered is an essential feature of the *Secured Transactions Guide* and of modern law reform initiatives in this area generally. Chapter IV of the *Secured Transactions Guide* contains commentary and recommendations on many aspects of a general security rights registry. Chapters III and V address the related issues of third-party effectiveness and priority of a security right.

2. However, the *Secured Transactions Guide* does not address in every detail the myriad of legal, technological, administrative and operational issues involved in developing and operating an effective and efficient general security rights registry. This is in line with the typical legislative drafting approach. Thus, the detailed rules applicable to the establishment and the operation of the registry, as well as the registration and search process, are dealt with in subordinate regulations, ministerial guidelines or the like. The draft Technical Legislative Guide on the Implementation of a Security Rights Registry (the “draft Registry Guide”) seeks to implement the *Secured Transactions Guide* by addressing these issues in greater detail.

3. It should be emphasized at the outset that the recommendations of the draft Registry Guide are intended to be implemented by States that have enacted or are prepared to enact a secured transactions law that is substantially in conformity with the recommendations of the *Secured Transactions Guide*. For example, in order to implement the recommendations of the draft Registry Guide, a State would need to have in place or be prepared to enact a secured transactions law that provides for notice (rather than document) registration and that treats registration as a method of making a security right effective against third parties (rather than for creating a security right). It follows that, in order to understand the legal framework in which the registry is intended to function, a user of the draft Registry Guide should have a basic understanding of the secured transactions law contemplated by the *Secured Transactions Guide*. Section E of the Introduction to the draft Registry Guide offers a summary of the secured transactions regime recommended by the *Secured Transactions Guide* and other chapters include additional guidance. For a thorough understanding, however, the draft Registry Guide should be read together with the *Secured Transactions Guide*.

4. The experience of States that have instituted the kind of general security rights registry contemplated by the *Secured Transactions Guide* demonstrates how advances in information technology can significantly improve its operational efficiency. Particularly in relation to the technical aspects of registry design and operation, the draft Registry Guide draws on these national precedents. In addition, the draft Registry Guide has benefitted from international sources that deal with secured transactions, including the following:

(a) Law and Policy Reform at the Asian Development Bank — A Guide to Movables Registries, Asian Development Bank (ADB) (2002);

(b) Publicity of Security Rights: Guiding Principles for the Development of a Charges Registry, European Bank for Reconstruction and Development (EBRD) (2004);

(c) Publicity of Security Rights: Setting Standards for Charges Registries, EBRD (2005);

(d) Model Registry Regulations under the Model Inter-American Law on Secured Transactions, Organization of American States (OAS) (2009);

(e) Principles, Definitions and Model Rules of a European Private Law, Draft Common Frame of Reference (DCFR), volume 6, book IX (Proprietary security in movable assets), chapter 3 (Effectiveness as Against Third Parties), section 3 (Registration), (2010), Study Group on a European Civil Code and the Research Group on EC Private Law (Acquis Group) (2010);

(f) Secured Transactions Systems and Collateral Registries, The International Finance Corporation (World Bank Group) (2010); and

(g) Convention on International Interests in Mobile Equipment (Cape Town, 2001) and Regulations and Procedures for the International Registry, document 9864, International Civil Aviation Organization (ICAO) (4th ed. 2010).

5. The national, regional and international sources referred to above are largely consistent with, but do not always fully accord with, the recommendations of the *Secured Transactions Guide*. Where appropriate, the draft Registry Guide explains the policy rationale for the approach recommended in the *Secured Transactions Guide* relative to other possible approaches.

6. The draft Registry Guide is addressed to all those who are interested or actively involved in the design and implementation of a security rights registry, as well as to those who may be affected by or interested in its establishment and operation, including:

(a) Policymakers implementing the recommendations of the *Secured Transactions Guide*, especially in relation to the establishment of a security rights registry;

(b) Registry system designers, including technical staff charged with the preparation of design specifications and with fulfilling the hardware and software requirements for the registry;

(c) Registry administrators and staff;

(d) Registry clientele, including potential secured creditors, credit reporting agencies, other creditors of the grantor of a security right and the grantor's insolvency representative, as well as all other persons whose rights may be affected by a security right, such as a potential buyer of an encumbered asset;

(e) The general legal community (including judges, arbitrators and practising lawyers); and

(f) All those involved in secured transactions law reform and the provision of technical assistance, such as the World Bank Group, the EBRD, the ADB and the Inter-American Development Bank.

7. The draft Registry Guide uses neutral generic legal terminology that is consistent with the terminology used in the *Secured Transactions Guide*. Consequently, it can be adapted readily to the diverse legal traditions and drafting styles of different States. The draft Registry Guide is also formulated in a flexible fashion enabling it to be implemented in accordance with local drafting conventions regarding which types of rule must be incorporated in principal legislation and which may be left to subordinate regulations, or ministerial or other administrative rules.

B. Terminology and interpretation

8. The terminology and interpretation section of the *Secured Transactions Guide* (see Introduction, sect. B, para. 20), applies also to the draft Registry Guide, except to the extent modified below. The terminology of the draft Registry Guide is also consistent with the refinement of these terms and the explanations of additional terms in the various chapters of the *Secured Transactions Guide*. For example, when the draft Registry Guide uses the term “future asset”, it means assets that come into existence or are acquired by the grantor after the time the security agreement is entered into (see *Secured Transactions Guide*, chap. I, para. 8; chap. II, para. 51; and chap. V, para. 151).

9. However, the draft Registry Guide modifies certain terminological and interpretation provisions of the *Secured Transactions Guide* for purposes of their use in the draft Registry Guide and also introduces additional terms as follows:

(a) Address

“Address” means: (i) a physical address, including a street address and number, city, postal code and State; (ii) a post office box number, city, postal code and State; (iii) an electronic address; or (iv) another address that would be effective for communicating information.

(b) Amendment

“Amendment” means the modification of information contained in a previously registered notice to which the amendment relates.

10. Registration of an amendment notice does not result in the deletion from the registry record of previously registered notices to which the amendment notice relates. It may have the effect, however, of modifying or terminating the effectiveness of a previously registered notice with respect to a particular security right (see A/CN.9/WG.VI/WP.54/Add.2, para. 46, and A/CN.9/WG.VI/WP.54/Add.4, paras. 1-22).

(c) Cancellation

“Cancellation” means the removal of [all] information contained in a previously registered notice to which the cancellation relates from the public registry record.

11. The legal consequence of the registration of a cancellation notice is that the previously registered notice to which it relates is no longer effective (see A/CN.9/WG.VI/WP.54/Add.4, paras. 23-25).

(d) Designated field

“Designated field” means the space on the prescribed form of notice designated for entering the specified type of information.

(e) Grantor

“Grantor” means the person identified in the notice as the grantor.

(f) Law

“Law” means the law of the enacting State governing security rights in movable assets.

12. The secured transactions law of the enacting State has to be in substantial conformity with the recommendations of the *Secured Transactions Guide* (see para. 3 above).

(g) Notice

“Notice” means a communication in writing (paper or electronic) to the registry of information with respect to a security right; a notice may be an initial notice, an amendment notice or a cancellation notice.

13. In the registration context, the *Secured Transactions Guide* uses the term “notice” to refer both to the form that a registrant uses to submit information to the registry (see *Secured Transactions Guide*, Introduction, sect. B, “notice”, and recs. 54, subpara. (b), and 57), and to the “information contained in a notice” or “the content of the notice” (see *Secured Transactions Guide*, recs. 54, subpara. (d), and 57). The draft Registry Guide uses the term “notice” in the same way.

(h) Registrant

“Registrant” means the person who completes a registry notice form and submits it to the registry [and may be a service provider].

14. The registrant may be the secured creditor (including an agent or trustee in the case of a syndicate of lenders) or its representative (e.g., a law firm or other service provider that is identified in the notice as the secured creditor). A courier or other mail service provider used by the registrant to transmit the notice is not the registrant and its identity is irrelevant.

(i) Registrar

“Registrar” means the person appointed pursuant to the law and the regulation to supervise and administer the operation of the registry.

(j) Registration

“Registration” means the entry of information contained in a notice into the registry [record] [database].

(k) Registration number

“Registration number” means a unique number allocated to an initial notice by the registry and permanently associated with that notice and any related notice.

(l) Registry record

“Registry record” means the information in all registered notices that is stored in the registry [record] [database] and consists of the record that is publicly accessible (public registry record) and the record that has been removed from the public registry record (registry archives).

15. Because the term “registry record” means the information contained in all registered notices (and not just the notices relating to a specified grantor), when referring to a particular notice in the registry record, reference is made to a “registered notice” as opposed to the “registry record”.

(m) Regulation

“Regulation” means the body of rules implemented by the enacting State with respect to the registry, whether these rules are found in administrative guidelines or the substantive secured transactions law.

16. The exact form and contents of the regulation will depend on the legislative policy and drafting technique of each enacting State. For example, if the secured transactions law is enacted in two or more statutes (e.g., one that deals with all the substantive rules, another that deals with conflict-of-laws rules, and another that establishes the registry), there may be rules relating to registration that are enacted as subordinate legislation (e.g., a regulation that is a separate enactment) in respect of all these statutes.

(n) Secured creditor

“Secured creditor” means the person identified in the notice as the secured creditor [and may be the secured creditor or its representative].

[Note to the Working Group: The Working Group may wish to note that: (a) the terms “amendment” and “cancellation” are explained by reference to their generic meaning, rather than their legal effect which is addressed in the commentary; (b) the bracketed text in the term “cancellation” may be necessary to distinguish a cancellation from an amendment; (c) the term “notice” is explained by reference to both the medium and the information contained therein; (d) the term “registrant” is explained by reference to the meaning of that term as is generally understood (the language in square brackets may be retained in the terminology or in the commentary); (e) the term “registry record” is used to reflect the contents (information) by reference to the container (the database); (f) the term “secured creditor” is a new term intended to clarify that the registry may rely on the person who is identified in the notice as the secured creditor or the secured creditor of record (the language in square brackets may be retained in the terminology or in the commentary). As the difference between the term “registry record” (the contents) and the term “database” (the container) may not be clear to the average reader of the draft Registry Guide, the Working Group may wish to consider whether: (a) the difference between the two terms should be explained in the commentary; or (b) in view of the fact that the recommendations of the Secured Transactions Guide use only the term “registry record” and most of recommendations of the draft Registry Guide use the term “registry record” (see, for example, recs. 3, subpara. (e) and 16), the reference to the term “database” in the terminology (subparas. (j) and (l)) and in recommendations 3, subparagraphs (d) and (g) and recommendation 11 should be replaced with a reference to the term “registry record” (in the sense of both the contents and the container). The Working Group may also wish to consider whether the term “registry” should also be explained along the following lines: “‘Registry’ means a system established for registering information about security rights in movable assets”.]

C. Key objectives and fundamental policies of an efficient registry

17. The security rights registry envisaged by the *Secured Transactions Guide* and the draft Registry Guide is informed by the following overarching principles:

(a) The legal and operational guidelines governing registry services, including registration and searching, should be simple, clear and certain from the perspective of all potential users; and

(b) Registry services, including registration and searching, should be designed so as to be as fast and inexpensive as possible, while also ensuring the security and searchability of the information entered in the registry record.

D. Overview of secured transactions law and the role of registration

1. General

18. As already mentioned, a general security rights registry is an integral component of the secured transactions regime recommended by the *Secured Transactions Guide*. The potential users of the draft Registry Guide will not necessarily be versed in the intricacies of that regime or even have legal training. Accordingly, this section provides an overview, focusing in particular on the legal function and consequences of registration. For more detailed guidance, the reader is encouraged to then refer to the *Secured Transactions Guide*.

2. Concept of a security right

19. In general terms, a security right is a property right (a right in rem, distinct from ownership and personal rights) in a movable asset that is created by agreement and secures payment or other performance of an obligation (see the term “security right” and “grantor” in the introduction to the *Secured Transactions Guide*, sect. B). The function of a security right is to mitigate the risk of loss resulting from a default in payment by entitling the secured creditor to claim the value of the assets encumbered by the security right as a back-up source of repayment in preference to the claims of the grantor’s other creditors. For example, if a business that borrows funds on the security of its equipment fails to repay the loan, a secured creditor with a security right in that equipment will be entitled to obtain possession and dispose of the equipment and apply the proceeds to the outstanding balance. As the risk of loss from default is mitigated, the grantor’s access to credit is expanded, quite often on more favourable terms.

20. The *Secured Transactions Guide* adopts a functional approach to the concept of a security right. Under this approach, the term encompasses any type of property right in a movable asset that functions in substance to secure performance of an obligation (see *Secured Transactions Guide*, chap. I, paras. 101-112, and recs. 2 and 10). Thus, the concept is not limited to the types of nominated security device conventionally recognized by different legal systems, such as a pledge, charge or hypothec. It encompasses any type of property right that functions as security. As such, it includes a transfer of tangible assets or assignment of intangible assets for security purposes, as well as a retention-of-title by a seller to secure payment of the

purchase price of an asset or the residual ownership of a lessor under a financial lease (see *Secured Transactions Guide*, chap. I, paras. 101-112 and recs. 2, 8 and 9).

21. The *Secured Transactions Guide* recommends this functional, integrated and comprehensive approach to the concept of security in order to ensure that the legal rights of creditors, debtors and third parties are subject to a common legal framework regardless of the form of the transaction, the type of encumbered asset, the nature of the secured obligation or the status of the parties. However, it recognizes that secured transactions covering specified types of encumbered asset may need to be excluded either because they are already covered by other law of the enacting State (for example, aircraft equipment covered by the Cape Town Convention/Aircraft Protocol) or raise concerns that are more appropriately dealt with by a more specialized regime (for example, investment securities covered by the Geneva Securities Convention). However, any additional exceptions (e.g., employment benefits), should be narrow and clearly specified in the law (see *Secured Transactions Guide*, chap. I, para. 44 and recs. 4 and 7).

3. Creation of a security right

22. The *Secured Transactions Guide* recommends that a distinction should be drawn between the creation of a security right (effectiveness between the grantor and the secured creditor) and its effectiveness against third parties (see *Secured Transactions Guide*, chap. I, paras. 1-7, chap. III, paras. 6-8, and recs. 1, subpara. (c), 13 and 30). The main reason for this approach is to enable parties to create a security right in their assets in an uncomplicated and efficient manner (see *Secured Transactions Guide*, recs. 1, subpara. (c), and 13).

23. Thus, the *Secured Transactions Guide* imposes minimum formalities on the creation of a security right. It recommends that: (a) a security right may be created simply by an agreement between the grantor and the secured creditor; (b) the agreement must indicate the intent of the parties to create a security right, identify the parties and describe the secured obligation and the encumbered assets (but there are no other requirements); (c) the agreement must be in a writing that indicates the grantor's intent to create a security right only if it is not accompanied by a transfer of actual possession of the encumbered asset to the secured creditor; and (d) the required form of writing is flexible and includes electronic means of communications (see *Secured Transactions Guide*, recs. 11-15).

24. By dispensing with the need for a transfer of possession of the encumbered assets to create a security right, the secured transactions law contemplated by the *Secured Transactions Guide* enables an enterprise to encumber not only its tangible existing assets but also its intangible and future assets, as well as pools of circulating assets, including, most significantly, receivables and inventory (see *Secured Transactions Guide*, chap. II, paras. 49-70 and recs. 2 and 17). Under the recommendations of the *Secured Transactions Guide*, a security right in future assets is created as soon as the grantor acquires rights in the assets (see *Secured Transactions Guide*, rec. 13). It also permits an enterprise to continue to retain possession of and to use its tangible encumbered assets. This approach is likely to increase access to credit by expanding the range of assets that a grantor can offer as security. The recommendations of the *Secured Transactions Guide* further confirm that a security right may secure any type of obligation, including future and indeterminate obligations (see *Secured Transactions Guide*, rec. 16).

25. This recognition by the *Secured Transactions Guide* of non-possessory security rights also enhances consumer access to credit since it enables consumer grantors to take immediate possession of assets acquired on secured credit terms. The *Secured Transactions Guide*, however, is mindful of the need to preserve the rights of consumers and other persons that may require special protection. Thus, it recommends that the secured transactions law should not affect the rights of consumers under consumer protection legislation or override statutory limitations on the types of asset that may be transferred or encumbered (see *Secured Transactions Guide*, chap. I, paras. 10 and 11; chap. II, paras. 56, 57 and 107; recs. 2, subpara. (b) and 18).

26. The *Secured Transactions Guide* also confirms that, unless otherwise agreed, a security right automatically continues in any proceeds of the encumbered assets (and proceeds of proceeds) without the need for a specific agreement with respect to the proceeds (see *Secured Transactions Guide*, rec. 19). This approach is consistent with the expectations of the parties (see *Secured Transactions Guide*, chap. II, paras. 72-81).

4. Third-party effectiveness of a security right

27. Under the recommendations of the *Secured Transactions Guide*, a security right becomes effective between the parties as soon as the requirements for creation outlined above are satisfied. However, the security right cannot be set up against rights acquired by third parties in the encumbered assets unless and until the requirements for third-party effectiveness of the security right are satisfied. The reason for this distinction is to ensure that the security right created by the parties' private agreement is adequately publicized to third parties that might be negatively affected by its existence.

28. Registration of a notice in a general security rights registry is the main method recognized by the *Secured Transactions Guide* for achieving the third-party effectiveness of a security right (see *Secured Transactions Guide*, rec. 32). While this is the only method of achieving third-party effectiveness of a security right that is available for all types of encumbered asset, the *Secured Transactions Guide* recognizes other methods for specific types of encumbered asset.

29. First, the dispossession of the grantor qualifies as an alternative method of achieving third-party effectiveness, provided that the dispossession is actual (not constructive, fictive deemed or symbolic). The transfer of possession of the encumbered assets to the secured creditor or its representative is considered to be sufficient practical notice to third parties that the grantor's rights in the assets are likely to be encumbered (see *Secured Transactions Guide*, Introduction, sect. B, "possession" and rec. 37). Since physical dispossession is required, this method of achieving third-party effectiveness is available only for the tangible assets of a grantor that the grantor owns at the time of the conclusion of the security agreement and then only if, as a practical matter, the grantor is prepared to relinquish possession.

30. Second, the *Secured Transactions Guide* recommends that, where the encumbered asset is a right to payment of funds credited to a bank account or a right to receive the proceeds of a letter of credit, secured creditors should be given the option of achieving third-party effectiveness by taking "control" of the encumbered

asset in lieu of registration in the general security rights registry (see *Secured Transactions Guide*, Introduction, sect. B, “control” and rec. 103).⁹

31. Third, the *Secured Transactions Guide* may apply to security rights in types of asset that are subject to a specialized registration regime, such as motor vehicles, ships, aircraft and intellectual property (see *Secured Transactions Guide*, chap. I, paras. 32-36, and rec. 4, subparas. (a) and (b)). To the extent that the *Secured Transactions Guide* applies to security rights in these types of asset, it recommends that registration in the specialized registry should be recognized as an alternative method of achieving third-party effectiveness (see *Secured Transactions Guide*, rec. 38).

32. Fourth, where the encumbered movable asset is at the time of the conclusion of the security agreement or may be subsequently attached (and does become attached) to immovable property, the *Secured Transactions Guide* recommends that the security right may be made effective against third parties by registration in either the general security rights registry or the immovable property registry (see *Secured Transactions Guide*, rec. 43; as to the priority implications of the choice of registration venue, see para. 40 below).

5. Priority of a security right

(a) Competing security rights

33. If more than one security right created by the same grantor in the same encumbered asset has been made effective against third parties, it is necessary to have a priority rule to rank the competing security rights (see *Secured Transactions Guide*, chap. III, paras. 12-14). Where the competing security rights were all made effective against third parties by registration, priority is generally determined by the temporal order of registration (see *Secured Transactions Guide*, rec. 76, subpara. (a)). Where the competing security rights were all made effective against third parties otherwise than by registration, priority is generally determined by the temporal order of when third-party effectiveness was achieved (see *Secured Transactions Guide*, rec. 76, subpara. (b)). In the event a security right that was made effective against third parties otherwise than by registration (e.g. by delivery of possession) comes into competition with a security right that was made effective against third parties by registration, priority is generally determined by the respective temporal order of registration or when the third-party effectiveness was otherwise established (see *Secured Transactions Guide*, rec. 76, subpara. (c)).

34. Although these recommendations provide the baseline rules, a modern secured transactions law along the lines recommended in the *Secured Transactions Guide* will invariably recognize exceptions in the interest of facilitating other business practices and policy objectives. The following paragraphs summarize the principal exceptions recognized by the *Secured Transactions Guide*.

⁹ It should be noted that securities, payment rights arising under or from financial contracts governed by netting agreements and payment rights arising under or from foreign exchange contracts are excluded from the scope of the *Secured Transactions Guide* (see *Secured Transactions Guide*, chap. I, paras. 37-39, and rec. 4, subparas. (c)-(e)). For these types of encumbered asset, the enacting State may wish to consider enacting specialized rules.

35. First, the *Secured Transactions Guide* recognizes a special priority in favour of a secured creditor that finances the grantor's acquisition of tangible assets (for example, consumer goods, equipment or inventory) or intellectual property (see *Secured Transactions Guide*, chap. X, paras. 125-139, and *Supplement*, paras. 181-183). Provided that the requirements recommended by the *Secured Transactions Guide* for obtaining this special priority are satisfied (that is, registration of a notice and, in the case of inventory, possibly notification of inventory financiers of record; see rec. 180, alternative A, subpara. (b), and alternative B, subpara. (b)), the "acquisition security right" has priority with respect to the value of those assets over security rights in the grantor's future assets of that kind that were previously acquired and registered or otherwise made effective against third parties. This approach does not prejudice the prior secured creditor since the grantor would likely not have been able to acquire these new assets but for the new financing. Giving priority to acquisition security rights also benefits the grantor by giving it access to diversified sources of secured credit to finance new acquisitions.

36. Second, a security right in money and in negotiable instruments or negotiable documents that is made effective against third parties by a transfer of possession to the secured creditor has priority over a security right that was previously made effective against third parties by registration (see *Secured Transactions Guide*, recs. 101, 102, 108 and 109). This exception is based on the policy of preserving the free negotiability of these types of asset in the market place.

37. Third, where the encumbered asset is the right to payment of funds credited to a bank account or a right to receive the proceeds of a letter of credit, a secured creditor that achieves priority by taking "control" of the encumbered asset has priority over a prior or subsequent security right that is made effective against third parties by registration (see *Secured Transactions Guide*, Introduction, sect. B, "control" and recs. 103 and 107). As already mentioned (see footnote 9 above), securities, payment rights arising under or from financial contracts governed by netting agreements and payment rights arising under or from foreign exchange contracts are excluded from the scope of the *Secured Transactions Guide* (see *Secured Transactions Guide*, chap. I, paras. 37-39, and rec. 4, subparas. (c)-(e)). Enacting States will need to enact special priority rules in relation to these types of asset.

38. Fourth, to the extent that the secured transactions law applies to security rights in types of movable asset that are subject to specialized registration systems, such as motor vehicles, ships, aircraft and intellectual property (see *Secured Transactions Guide*, chap. I, paras. 32-36, and rec. 4, subparas. (a) and (b)), the *Secured Transactions Guide* recommends that priority should be given to a security right that was made effective against third parties by registration in the specialized registry as against a security right registered in the general registry; where both security rights are registered in the specialized registry, it recommends that priority should be determined by the order of registration in the specialized registry (see *Secured Transactions Guide*, recs. 77 and 78). These rules are designed to preserve the reliability and comprehensiveness of the specialized registry record.

39. Fifth, the *Secured Transactions Guide* adopts a similar approach to priority competitions involving competing security rights in attachments to immovable property. It recommends that priority should be given to a security right, notice of

which was registered in the immovable property registry, over a security right in the attachment, notice of which was registered only in the general security rights registry; where notice with respect to both competing security rights was registered in the immovable property registry, it recommends that priority should be determined by the order of registration (see *Secured Transactions Guide*, recs. 87 and 88). These rules are likewise designed to preserve the reliability and comprehensiveness of the immovable property registry record.

(b) Buyers or other transferees of encumbered assets

40. As a general rule, the *Secured Transactions Guide* recognizes that a secured creditor that has complied with the requirements for third-party effectiveness with respect to its security right has a “right to follow” the encumbered asset into the hands of a buyer or other transferee from the grantor that acquires rights in the encumbered asset (see *Secured Transactions Guide*, chap. II, paras. 72-89, chap. III, paras 15, 16 and 89, and rec. 79). Conversely, a transferee of an encumbered asset will take it free of a security right that has not been made effective against third parties by registration or by some other method even if it has knowledge of the existence of the security right (under the *Secured Transactions Guide*, “knowledge” means actual knowledge; see Introduction, sect. B). This approach is not unfair to secured creditors since they could have protected themselves by timely registration or by otherwise making their security right effective against third parties. However, the *Secured Transactions Guide* recognizes a number of exceptions to this general rule. The following paragraphs summarize the principal exceptions.

41. First, where a secured creditor authorizes the grantor to sell, lease or licence an encumbered asset free of a security right, the rights of a buyer or lessee or licensee are unaffected by the security right (see *Secured Transactions Guide*, rec. 80). Typically, the secured creditor will give its consent only after some arrangement has been made with the grantor to provide other security such as ensuring that the proceeds of the transaction will be remitted directly to the secured creditor.

42. Second, a buyer or lessee or licensee that acquires an encumbered asset in the ordinary course of the grantor’s business acquires rights unaffected by any security right in that asset even if the secured creditor has registered a notice of the security right or otherwise complied with the requirements for third-party effectiveness (see *Secured Transactions Guide*, rec. 81). This approach is consistent with the reasonable commercial expectations of the parties involved. For example, it is not realistic to expect buyers dealing with a commercial enterprise which routinely sells the types of asset in which the buyer is interested to check the registry before entering into the transaction. Moreover, a secured creditor that takes a security right in a grantor’s inventory will normally have done so on the expectation that the grantor will dispose of the inventory free of the security right in the ordinary course of the grantor’s business. After all, for the grantor to be able to generate the revenue necessary to pay back the secured loan, its customers need to be assured that they will acquire unencumbered title in any inventory sold to them in the grantor’s ordinary course of business.

43. Third, the same policy of preserving negotiability that justifies awarding a special priority to secured creditors that take physical possession of encumbered assets in the form of money or negotiable documents (such as a bill of lading) or

negotiable instruments (such as a cheque) also justifies awarding priority to outright transferees of these types of encumbered asset who take possession (see *Secured Transactions Guide*, recs. 101, 102, 108 and 109).

44. Fourth, as already mentioned, the *Secured Transactions Guide* may apply to assets that are subject to a specialized registration regime, such as motor vehicles, ships, aircraft and intellectual property (see *Secured Transactions Guide*, chap. I, paras. 32-36, and rec. 4, subparas. (a) and (b)). These registries typically serve broader goals than simply publicizing security rights in the relevant assets, notably, also recording ownership or transfers of ownership. Accordingly, to the extent that the *Secured Transactions Guide* applies to security rights in these types of asset, it recommends that priority should be given to the rights of a buyer or other transferee with respect to which a notice was registered in the specialized registry as against a security right with respect to which a notice was registered in the general security rights registry; where a notice with respect to the security right is also registered in the specialized registry, it recommends that priority should be determined by the order of registration (see *Secured Transactions Guide*, recs. 77 and 78).

45. Fifth, a similar approach is taken to priority competitions involving security rights in attachments to immovable property. The *Secured Transactions Guide* recommends that priority should be given to the rights of a buyer or other transferee of the relevant immovable property with respect to which a notice was registered in the immovable property registry as against a security right in the attachment with respect to which a notice was registered only in the general security rights registry; where a notice with respect to the security right in the attachment is also registered in the immovable property registry, it recommends that priority should be determined by the order of registration in the immovable property registry (see *Secured Transactions Guide*, recs. 87 and 88).

(c) Unsecured creditors of the grantor

46. One of the principal advantages of taking security is that it entitles the secured creditor to claim the value of the encumbered assets in preference to the claims of the grantor's unsecured creditors. Accordingly, the *Secured Transactions Guide* recommends that a security right has priority over the rights of an unsecured creditor provided that the secured creditor registers or otherwise makes its security right effective against third parties before the unsecured creditor obtains a judgement or provisional court order against the grantor and takes the steps necessary under other law of the enacting State to acquire rights in the encumbered assets (see *Secured Transactions Guide*, rec. 84). This approach enables unsecured creditors to determine the extent to which their debtors' assets may be encumbered in order to decide whether it is worthwhile to obtain a judgement and pursue judgement enforcement proceedings. This priority rule, however, is subject to an important caveat. Even if the secured creditor registers a notice of its security right or otherwise achieves third-party effectiveness after the unsecured creditor acquires rights in its debtor's encumbered assets, the secured creditor will have priority to the extent of credit that it advances before it has knowledge that the unsecured creditor has acquired rights in the encumbered assets or that it advances pursuant to a prior irrevocable commitment to extend credit to the grantor (see *Secured Transactions Guide*, chap. V, paras. 94-106, and rec. 84).

47. The *Secured Transactions Guide* discusses but does not make any recommendation with respect to the steps that an unsecured creditor must take to acquire rights in its debtor's assets so as to potentially prevail over a secured creditor that has failed to achieve third-party effectiveness at all or in time (see *Secured Transactions Guide*, chap. V, paras. 94-106). This is left to the judgement enforcement and execution law of the enacting State. In some States, an unsecured creditor acquires rights in its debtor's assets only once the judgement enforcement process is completed by seizure and sale and the judgement creditor's rights attach to the proceeds of the sale. In other States, an unsecured creditor upon obtaining judgement can obtain the equivalent of a general security right in the judgement debtor's present and future movable assets simply by registering a notice of the judgement in the general security rights registry. Accordingly, States enacting the general recommendations of the *Secured Transactions Guide* will need to take into account their existing law on this issue and decide on the most appropriate approach.

(d) The insolvency representative

48. Modern insolvency laws generally respect the priority to which secured creditors are entitled under other law in the event that insolvency proceedings are commenced against the grantor. This is the approach recommended in the *Secured Transactions Guide* (see *Secured Transactions Guide*, rec. 239) in line with the UNCITRAL Legislative Guide on Insolvency Law (the "Insolvency Guide"). It follows that a secured creditor generally will have priority over the claims of an insolvent grantor's unsecured creditors, provided that the secured creditor registered or otherwise satisfied the third-party effectiveness requirements of secured transactions law before the commencement of the insolvency proceedings. Conversely, the failure of the secured creditor to register a notice or otherwise make its security right effective against third parties before the commencement of the insolvency proceedings generally results in the secured creditor being effectively demoted to the status of an unsecured creditor.

49. Timely registration does not, however, protect a secured creditor from challenges on the basis of general insolvency law policies, such as rules avoiding preferential or fraudulent transfers and rules giving priority to certain protected classes of creditors (see *Secured Transactions Guide*, chap. XII, and rec. 239; see also *Insolvency Guide*, recs. 88 and 188).

50. A security right that was effective against third parties at the time of the commencement of the insolvency proceedings might lapse thereafter, for example, because it was made effective against third parties by registration and the period of effectiveness of the registration expired. To address this risk, the *Secured Transactions Guide* recommends that a secured creditor should be entitled to take any action required by the secured transactions law to preserve the effectiveness of its security right against third parties even after the commencement of insolvency proceedings (see *Secured Transactions Guide*, rec. 238). This recommendation is designed to ensure that a secured creditor is not denied the ability to maintain its priority status as a result of the automatic stay typically imposed on enforcement action by creditors upon the commencement of insolvency proceedings.

51. Where the insolvency proceeding takes the form of a reorganization, modern insolvency laws generally authorize the insolvent grantor to create a security right

in the assets of the insolvency estate to obtain post-commencement finance (see Insolvency Guide, rec. 65). Under the Insolvency Guide, such a security right does not have priority over any existing secured creditors unless agreed to by them or authorized by the court with the appropriate protections for them (see Insolvency Guide, recs. 66 and 67).

(e) Preferential claims

52. For various policy reasons, a State's secured transactions law, insolvency law or both may sometimes award preferential priority status to specified categories of unsecured creditors over the claims of secured creditors. Typical examples include the claims of the enacting State for taxes and of employees for unpaid wages or other employment benefits. In addition or alternatively, in the insolvency context, some States set aside a specified portion of the value of encumbered assets, particularly business assets, in favour of unsecured creditors in preference to secured creditors. The *Secured Transactions Guide* discusses preferential claims and recommends that, to the extent an enacting State decides to maintain any, they should be limited in both type and amount and prescribed in the secured transactions law and the insolvency law, as the case may be, in a clear and specific way (see *Secured Transactions Guide*, chap. V, paras. 90-93, and chap. XII, paras. 59-63, and recs. 83 and 239). The reason why the *Secured Transactions Guide* follows this approach is twofold. On the one hand, the *Secured Transactions Guide* is mindful of the social policies enacting States may wish to pursue with preferential claims. On the other hand, the *Secured Transactions Guide* recognizes that preferential claims may have an impact on the cost and availability of credit.

53. In some States, while a notice with respect to preferential claims may be registered in the general security rights registry, the registration and priority rules that apply to security rights created by a voluntary security agreement may not necessarily apply. The *Secured Transactions Guide* discusses but does not make any recommendation with respect to whether notices with respect to preferential claims should be registered and what the priority implications of registration should be (see *Secured Transactions Guide*, chap. V, para. 90).

Introduction (*continued*)

D. Overview of secured transactions law and the role of registration (*continued*)

6. Extended transactional scope of the registry

(a) Outright assignments

1. As already explained (see A/CN.9/WG.VI/WP.54, paras. 18-20), the secured transactions law contemplated by the *Secured Transactions Guide* is comprehensive in scope, covering all consensual transactions that in substance function to secure an obligation regardless of the formal character of the secured creditor's property right, the type of encumbered asset, the nature of the secured obligation or the status of the parties (see *Secured Transactions Guide*, chap. I, paras. 101-112, and recs. 2 and 10).

2. The *Secured Transactions Guide* recommends that the secured transactions law (with the exception of the rules governing enforcement on default) should also apply to outright assignments of receivables. Bringing such outright assignments within the scope of the secured transactions law does not mean that outright assignments are re-characterized as secured transactions. Rather, it is intended to ensure that an outright assignee of receivables is subject to the same rules relating to creation, third-party effectiveness and priority as the holder of a security right in receivables. It also ensures that the outright assignee has the same rights and obligations vis-à-vis the debtor of the receivable as a secured creditor (see *Secured Transactions Guide*, chap. I, paras. 25-31, and recs. 3 and 167).

3. Under this approach, an assignee generally will have to register a notice of its right in the security rights registry for the assignment to be effective against third parties that have claims against the assignor; and priority among the rights of successive competing assignees or secured creditors that have acquired rights in the same receivables from the same assignor/grantor will generally be determined by the order of registration (see *Secured Transactions Guide*, chap. III, para. 43). This approach recognizes that outright assignments of receivables not only perform a financing function but also create the same problem of information inadequacy for third parties as security rights in receivables. Unless a notice is registered in the security rights registry as a condition of third-party effectiveness, a potential secured creditor or assignee, or other third party would have no efficient means of verifying whether the receivables owed to a business have already been made subject to a security right or an assignment. While inquiries could be made of the debtors of the receivables, this is not practically feasible if they have not been notified of the assignment or if the transaction covers not only present but also future receivables generally.

(b) Other non-security transactions

4. True long-term leases and consignment sales of movable assets do not operate to secure the acquisition price of assets and consequently do not qualify as security rights so as to fall within the secured transactions law contemplated by the *Secured Transactions Guide*. However, they create the same information inadequacy concerns for third parties as non-possessory security rights, since they necessarily

involve a separation of a property right (the ownership of the lessor or consignor) from actual possession (which is with the lessee or consignee). To address this concern, some States expand the scope of their secured transactions regime (other than the enforcement rules) as it applies to acquisition security rights to these types of transaction. In addition to providing adequate information to third parties, this approach also diminishes the risk of litigation concerning whether a transaction in the form of a lease or a consignment is functionally a secured transaction. As such, a lease or a consignment would be: (a) ineffective against third parties if a notice with respect to it was not registered; or (b) subordinate in priority if the lessor or consignor did not comply with the requirements for obtaining the special priority given to acquisition security rights. The *Secured Transactions Guide* discusses but makes no recommendation on this matter (see *Secured Transactions Guide*, chap. III, para. 44). It may be noted, however, that, a lessor or a consignor can always register a precautionary notice, if it is concerned that its right might be characterized as a security right under the functional concept of security recommended in the *Secured Transactions Guide*, and thus lose its third-party effectiveness or priority status.

5. Some legal systems go even further and require registration of a notice with respect to preferential claims (for a discussion of the related topic of the priority status of preferential claims, see A/CN.9/WG.VI/WP.54, para. 52). The rationale underlying this approach is that, in the absence of registration, it will typically be difficult or impossible for prospective creditors to know whether preferential claims exist, a circumstance that is likely to increase uncertainty and thereby discourage secured credit. The *Secured Transactions Guide* does not recommend this approach. Even registered preferential claims can adversely affect the availability and the cost of secured credit when they are given priority over pre-registered security rights, as preferential claims diminish the economic value of an asset to a secured creditor, who will often shift the economic burden of such claims to the grantor by increasing the interest rate or by withholding the estimated amount of such claims from the available credit (see *Secured Transactions Guide*, chap. V, paras. 90-93).

7. Registration and enforcement of security rights

6. Some legal systems require secured creditors to register in the general security rights registry a notice that they have initiated or propose to initiate an enforcement action. The goal of this approach is to enable the security rights registry to notify third parties that have registered a notice with respect to a competing right in the same encumbered assets of the details of the pending enforcement. The *Secured Transactions Guide* does not recommend this approach. Instead, the *Secured Transactions Guide* recommends that the enforcing secured creditor should be required to search the registry and send out the required notices to interested third parties (including competing claimants) of the particular enforcement remedy that the enforcing secured creditor seeks to exercise (see *Secured Transactions Guide*, rec. 151). Such notification is intended to provide interested third parties (such as a secured creditor with a lower priority ranking than that of the enforcing secured creditor, a guarantor or a co-owner of the encumbered assets) with an opportunity to monitor the enforcement proceedings, bid at any sale, or remedy the default that has given rise to the enforcement proceeding.

8. Conflict-of-laws considerations

7. Where a secured transaction is connected to more than one State, secured creditors and third parties need clear guidance as to which State's law applies. Under the conflict-of-laws recommendations of the *Secured Transactions Guide*, the law applicable to the creation, third-party effectiveness and priority of a security right in tangible assets is the law of the State in which the encumbered asset is located (see *Secured Transactions Guide*, rec. 203). This means that, where a secured creditor wishes to make its security right in a tangible asset effective against third parties by registration, it must register in the registry of the State where the encumbered asset is located. It follows that, where encumbered tangible assets are located in multiple States, registrations in the registries of all those States will be necessary. With respect to the creation, third-party effectiveness and priority of security rights in intangible assets and mobile assets that are ordinarily used in multiple jurisdictions, the applicable law, as a general rule, is the law of the State in which the grantor is located (see *Secured Transactions Guide*, rec. 208). As a result, the secured creditor must register in the registry of the State where the grantor is located.

8. The rules outlined above are the general baseline rules. The *Secured Transactions Guide* recommends different specialized conflict-of-laws rules for security rights in certain types of asset, including: (a) assets that are subject to a specialized registration regime; (b) receivables arising from a transaction relating to immovable property; (c) rights to the payment of funds credited to bank accounts; (d) rights to receive the proceeds under an independent undertaking; and (e) intellectual property rights (see *Secured Transactions Guide*, recs. 204-207, 209-215 and 248). For example, where the encumbered asset is an intellectual property right, the applicable law is primarily the law of the State under which the intellectual property is protected, although a security right that is created and made effective against third parties only under the law of the State in which the grantor is located may still be effective against the grantor's insolvency representative and judgement creditors (see *Supplement*, rec. 248).

9. Notice registration

9. Most States have established registries for recording title and encumbrances on title on immovable property. Many States have also established similar registries for a limited number of high-value movable assets, such as ships and aircraft. It is essential to the successful implementation of the kind of general security rights registry contemplated by the *Secured Transactions Guide* that its very different characteristics be well understood.

10. First, unlike the typical land, ship or aircraft registry, the general security rights registry contemplated by the *Secured Transactions Guide* does not purport to record the existence or transfer of title to the encumbered asset described in the notice or to guarantee that the person named as grantor in the notice is the true owner. It only provides a record of potentially existing security rights on whatever property right the grantor has or may acquire in the assets described in the notice as a result of off-record transactions or events (see *Secured Transactions Guide*, chap. IV, paras. 10-14).

11. Second, title registries typically require registrants to file or tender for scrutiny the underlying documentation. This is because registration generally is considered to constitute at least presumptive evidence of title and any property rights affecting title. While, the security rights registries in some States also require submission of the underlying security documentation, the *Secured Transactions Guide* recommends that States adopt a notice registration rather than a document registration system (see *Secured Transactions Guide*, recs. 54, subpara. (b), and 57). A notice registration system does not require the actual security documentation to be registered or even tendered for scrutiny by registry staff. All that need be registered is a notice that provides the basic information necessary to alert a searcher that a security right may exist in the assets described in the notice. It follows that registration does not mean that the security right to which the notice refers necessarily exists; only that one may exist at the time of registration or may come into existence later.

12. Third, in States that adopt document registration, registration is sometimes treated as a pre-condition to the creation of a security right. As already explained (see A/CN.9/WG.VI/WP.54, paras. 21, 22, 26 and 27), registration of a notice is irrelevant to the creation of a security right; registration makes any security right created by an off-record security agreement between the parties effective against third parties (see *Secured Transactions Guide*, recs. 32, 33 and 67).

13. The *Secured Transactions Guide* recommends notice registration rather than document registration because notice registration:

(a) Reduces transaction costs for registrants (as they do not need to register or provide evidence of the security documentation in order to register) and third-party searchers (as they do not need to peruse what may be voluminous security documentation to determine if a security right may exist in the relevant assets);

(b) Reduces the administrative and archival burden on registry system operators;

(c) Reduces the risk of registration error (since the less information that must be submitted, the lower the risk of error); and

(d) Enhances privacy and confidentiality for secured creditors and grantors (since the only information about a secured transaction that is publicly available is that which is necessary to alert a searcher that a security right may exist in the assets described in the registered notice).

14. As registration in a notice registration system does not necessarily mean that a security right actually exists, third parties with a competing property right in the encumbered assets will normally wish to obtain proof of the existence of an effective security agreement between the parties and the scope of the assets covered by it. The same is true even where the alleged security right has been made effective against third parties by some other method, such as a transfer of possession, since possession by the putative secured creditor may be for a purpose other than security.

15. Some States provide a procedure whereby a third party with a property right in the encumbered asset may demand this information directly from the person named as a secured creditor in a registration or who is otherwise claiming this status. The same right is extended to unsecured creditors of the grantor so as to enable them to

assess whether they should extend unsecured credit and whether it is worthwhile to undertake the expense of obtaining a judgement and pursuing enforcement against the debtor's assets. While the *Secured Transactions Guide* does not make a recommendation on this matter, it is always open to the debtor to request the secured creditor to send the relevant information directly to a third party. However, the debtor or the secured creditor may not be cooperative in which event the third party will need to seek a judicial order under other law.

16. Even in States that allow third parties to demand verification of the existence of a security right and its scope directly from the secured creditor, this right may not apply to potential buyers or potential secured creditors. They can protect themselves simply by refusing to buy or extend secured credit unless the registration relating to the security right is cancelled or the putative secured creditor is willing to undertake to them that it is not asserting and will not assert in the future a security right in the asset in which they are interested.

17. The grantor may also need to obtain up-to-date information about the scope and value of the security right claimed by its secured creditor and a copy of any written security agreement under which the security right is claimed. In some States, the grantor is entitled to demand this information free of charge although limits are usually placed on the frequency with which requests may be made so as to discourage demands that are unjustified or intended to harass.

10. Coordination with specialized movable property registries

18. Where specialized registries exist and permit the registration of security rights in movable assets with third-party effects (as is the case with the international registry under the Convention on International Interests in Mobile Equipment and its Aircraft Protocol), modern secured transactions regimes must deal with matters related to the coordination of registrations in the two types of registry. The *Secured Transactions Guide* and the *Supplement* discuss coordination of registries in detail (see the *Secured Transactions Guide*, chap. III, paras. 75-82, chap. IV, para. 117; and the *Supplement*, paras. 135-140).

19. One way of coordinating registries is through appropriate third-party effectiveness and priority rules. As already mentioned, the *Secured Transactions Guide* recommends that, while a security right in an asset subject to a specialized registry may be made effective against third parties by registration in the general security rights registry, it is subordinate in priority to a security right or other right, a notice of which was registered in the relevant specialized registry, irrespective of the temporal order of registration (see A/CN.9/WG.VI/WP.54, paras. 30 and 37, and *Secured Transactions Guide*, recs. 43 and 77, subpara. (a)).

20. The *Secured Transactions Guide* also discusses other ways of coordinating registries, including the automatic forwarding of information registered in one registry to another registry and the implementation of common gateways to the various relevant registries. This approach raises complexities with respect to the design of the general security rights registry where the specialized registry organizes registrations by reference to the asset as opposed to the grantor-based indexing system used in the general security rights registry (see *Secured Transactions Guide*, chap. III, paras. 77-81; see also A/CN.9/WG.VI/WP.54/Add.2, paras. 24-27). The *Secured Transactions Guide* envisages that States may wish to

modernize their various specialized registries. However, it does not make a formal recommendation as to how States should ensure the most efficient coordination of registries. This approach takes into account the fact that specialized registries are typically subject to law other than secured transactions law, and their purposes, organization and administration vary from State to State and often from registry to registry. Still, the *Secured Transactions Guide* suggests that a secured transactions law reform and the establishment of a general security rights registry may be used as an opportunity to reform specialized registry regimes to ensure an equivalent level of modern and efficient operation, by introducing, for example, notice registration, debtor-based indices, and for third-party effectiveness and priority purposes (see *Secured Transactions Guide*, chap. IV, para. 117).

11. Coordination with immovable property registries

21. Immovable property registries exist in most, if not in all, States. Typically, the general security rights registry is separate from the immovable property registry owing to differences as to: (a) what is registered (that is, document or notice); (b) the requirements for the description of the encumbered asset (that is, specific or generic); (c) indexing structures (that is, asset-based or debtor-based indices; see also A/CN.9/WG.VI/WP.54/Add.2, paras. 21-27) and legal consequences of registration (that is, creation or third-party effectiveness).

22. However, a State implementing a general security rights registry will need to provide potential secured creditors and third-party financiers with guidance as to the rules governing the third-party effectiveness and priority of security rights in movable assets that are at the time when the security right is created or subsequently become attachments to immovable property. As already discussed, the *Secured Transactions Guide* recommends that a notice of a security right in an attachment to immovable property may be registered either in the general security rights registry or in the immovable property registry and that the security right will be subordinate in priority to a security right or other right with respect to which a notice was registered in the immovable registry, irrespective of the temporal order of registration (see A/CN.9/WG.VI/WP.54, paras. 30 and 37, and *Secured Transactions Guide*, recs. 43, 87 and 88).

23. The asset description requirements for the registration of a notice relating to a security right in an attachment to immovable property may differ depending on whether the registration is made in the security rights registry or in the immovable property registry. The *Secured Transactions Guide* recommends that, for the purposes of registration in the security rights registry, an attachment to immovable property, just like any other encumbered asset, should be described in a manner that reasonably allows its identification (see *Secured Transactions Guide*, rec. 57, subpara. (b)). Thus, a description of the movable asset that is or will be attached may be sufficient without a description of the immovable property. In contrast, the immovable property registry regime will generally require that the immovable property to which the tangible asset is or will be attached be described sufficiently to allow the indexing of the notice in the immovable property registry.

E. Transitional considerations

24. The *Secured Transactions Guide* contains a detailed discussion of the various issues that States implementing a secured transactions law based on its recommendations will need to consider (see *Secured Transactions Guide*, Introduction, sect. E). These issues include the transitional treatment of security rights created under prior law, legislative drafting considerations and post-enactment acculturation.

25. The transitional treatment of existing security rights created under prior law is by far the most important of these considerations, since a law based on the recommendations of the *Secured Transactions Guide* will often constitute a significant departure from the enacting State's prior law.

26. The *Secured Transactions Guide* recommends that an enacting State apply its secured transactions law to all security rights including those already in existence on the date that the new law takes effect (the "effective date"). However, it recognizes four important qualifications.

27. First, prior law applies to enforcement matters that were already the subject of litigation or alternative binding dispute resolution proceedings that commenced before the effective date (see *Secured Transactions Guide*, rec. 229). However, this principle does not apply when the parties have recourse to a non-binding process, such as conciliation. In addition, continuing litigation under prior law should not preclude the secured creditor from commencing enforcement action under the new law after the effective date (see *Secured Transactions Guide*, chap. XI, paras. 15 and 16).

28. Second, prior law determines whether a security right allegedly created before the effective date was effectively created (see *Secured Transactions Guide*, rec. 230).

29. Third, a security right that was effective against third parties under prior law remains effective until the earlier of: (a) the time it would cease to be effective against third parties under prior law; and (b) the expiration of a period of time specified in the law after the effective date (the "transition period") (see *Secured Transactions Guide*, rec. 231). Under this approach, the holder of a security right that was created under prior law is given a transition period to comply with the third-party effectiveness requirements of the new secured transactions law.

30. Fourth, the priority of a security right is determined by prior law if: (a) the security right and all competing rights arose before the effective date; and (b) the priority of none of these rights changed after the effective date (see *Secured Transactions Guide*, rec. 233).

31. If the enacting State already has in place a registry for security rights in movable assets, additional transitional considerations will need to be addressed. If the new secured transactions law covers security rights previously within the scope of an existing registry, the enacting State may decide to assume responsibility for migrating the information in the existing record into the new registry record. In contrast to this approach, the *Secured Transactions Guide* recommends that the burden of migration be placed on secured creditors by giving them a transition period (for example, one year) to register or otherwise make their security right

effective against third parties. This approach has been used with considerable success in a number of States (especially, when such “re-registration” is free of charge). If this approach is chosen, a space or field on the registration form should be provided for indicating that the registration is a migration of a registration made prior to the effective date of the new secured transactions law (for a more detailed discussion of these types of transition issue, see chap. XI of the *Secured Transactions Guide*).

32. States implementing the recommendations of the draft Registry Guide will also need to consider issues of legislative method and drafting. Certain recommendations of the draft Registry Guide reiterate recommendations of the *Secured Transactions Guide* relating to the administration of the registry or its technical design. Such recommendations include the following: 7 (see recs. 55, subpara. (b), and 54, subpara. (d)); 11, subparagraph (a) (see rec. 70); 13 (see rec. 69); 12 (see rec. 67); 15 (see rec. 68); 18 (see rec. 55, subparas. (c) and (d)); 23 (see rec. 57); 28, subparagraph (a) (see rec. 63); 29, subparagraph (a) (see rec. 58); 29, subparagraph (b) (see rec. 64); 29, subparagraph (d) (see rec. 65); and 33 (see rec. 72). The rest of the recommendations address purely technical registration matters. Enacting States will need to consider whether to deal with all these issues in the secured transactions law, in the registry regulation, in the terms of use of the registry, or in all or more than one of these texts.

33. Enacting States will also need to consider issues of post-enactment acculturation and, in particular, will need to design a programme aimed at familiarizing potential registry users with the operation of the registry. More specifically, to ensure the smooth implementation of the registry and its active take up by potential users, enacting States will need to consider entrusting an implementation team with the task of developing education and awareness programmes, disseminating promotional and explanatory material and conducting training sessions. The implementation team should also develop instructions on entering information into paper registration forms and electronic screens.

I. Establishment and functions of the security rights registry

A. General remarks

1. Establishment of the registry

34. Typically, the opening provisions of the regulation provide for the establishment of the registry and reiterate briefly that, in line with its purpose as set out in the secured transactions law, the purpose of the registry is to receive, store and make available to the public, information relating to security rights in movable assets (see draft Registry Guide, rec. 1).

2. Appointment of the registrar

35. The regulation typically identifies, either directly or by reference to the relevant law, the authority that is empowered to appoint the registrar, determine his or her duties and generally supervise the registrar in the performance of those duties. To ensure flexibility in the administration of the registry, the term registrar should be understood as referring either to a single person or to a group of persons

appointed and supervised by the registrar to perform his or her duties (see draft Registry Guide, rec. 2).

3. Functions of the registry

36. The opening provisions of the regulation might also include a provision that lists the various functions of the registry that are dealt with in detail in the later provisions of the regulation with cross-references to the relevant provisions of the regulation in which these functions are addressed. This is the approach recommended in the draft Registry Guide (see draft Registry Guide, rec. 3). The advantage of this approach is clarity and transparency as to the nature and scope of the issues that are dealt with in detail later in the regulation. The possible disadvantage is that the list may not be comprehensive or may be read as implying unintended limitations on the detailed provisions of the regulation to which cross-reference is made. Accordingly, implementation of this approach requires special care to avoid any omissions or inconsistencies.

4. Additional implementation considerations

37. It is critical that the technical staff responsible for the design and implementation of the registry are familiar with the legal and practical objectives that it is designed to fulfil, as well as of the practical needs of the registry personnel and of potential registry users. Consequently, it is necessary at the very outset of the design and implementation process to constitute a team that reflects technological, legal and administrative expertise, as well as user perspectives.

38. It will also be necessary at an early stage to determine whether the registry is to be operated in-house by a governmental agency or in partnership with a private sector firm with demonstrated technical experience and financial accountability. While the day-to-day operation of the registry may be delegated to a private entity, the enacting State should always retain the responsibility to ensure that the registry is operated in accordance with the applicable legal framework (see *Secured Transactions Guide*, chap. IV, para. 47, and rec. 55, subpara. (a)). In addition, for the purposes of establishing public trust in the registry and preventing commercialization and fraudulent use of information in the registry record, the enacting State should retain ownership of the registry record and, when necessary, the registry infrastructure.

39. The design team will need to plan the storage capacity of the registry record. This assessment will depend in part on whether the registry is intended to cover consumer as well as business secured transactions and whether it will cover other transactions, such as true leases. If so, a much greater volume of registrations can be anticipated and thus the storage capacity should be increased. Capacity planning will also need to take into account the potential for additional applications and features to be added to the system. For example, designers may wish to provide sufficient capacity to permit expansion of the registry database at a later point to accommodate the registration of judgements or non-consensual security rights or the addition of linkages to other governmental records such as the State's corporate registry or its other movable or immovable registries. Capacity planning will depend as well on whether registered information is stored in a computer database or a paper record. Ensuring sufficient storage capacity is less of an issue if the record is in electronic form since recent technological developments have greatly decreased

storage costs (the *Secured Transactions Guide* recommends that the registry be electronic “if possible”; see rec. 54, subpara. (j), and paras. 42-49 below).

5. Registry terms and conditions of use

40. As already mentioned, registry-related matters are typically dealt with in the secured transactions law and the registry regulation. They may also be addressed in the registry “terms and conditions of use”. The registry terms and conditions of use are the terms and conditions of the agreement that is entered into by people who submit notices to, or search the public record of, the registry. For example, the registry terms and conditions of use may offer the opportunity to a regular user of the registry to open an account. Such an account could offer practical benefits such as quick access and a simplified mechanism for the payment of any fees. In addition, the registry terms and conditions of use should address the issues of the security and confidentiality of information and user data (such as, for example, user name and password, or other modern security technique).

41. Based on their terms and conditions of use, some registries make available to users upon request additional services. These services include, for example, the following: (a) transaction inquiries that allow users to track by their names or account information their transactions over a specified period of time; (b) verification statement reprints that provide reprints of a verification relating to a specific registration; and (c) statistical reports that provide registry designers, policymakers and academics with useful data (for example, as to the number of registrations and searches, the operating costs, and the registration and search fees collected).

6. Electronic or paper-based registry

42. The *Secured Transactions Guide* recommends that, if possible, the registry record, that is, the information in all registered notices, should be electronic in the sense that information in notices is stored in electronic form in a computer database, that is, the container of the information (see *Secured Transactions Guide*, chap. IV, paras. 38-41 and 43, and rec. 54, subpara. (j)(i)). An electronic registry record is the most efficient and practical means of enabling enacting States to implement the recommendation of the *Secured Transactions Guide* that the registry record must be centralized and consolidated (see *Secured Transactions Guide*, chap. IV, paras. 21-24, and rec. 54, subpara. (e)).

43. The *Secured Transactions Guide* further recommends that, if possible, the registry should be electronic in the sense of permitting the direct electronic submission of notices and search requests by users over the Internet or via direct networking systems as an alternative to the submission of paper registration notices and search requests (see *Secured Transactions Guide*, chap. IV, paras. 23-26 and 43 and rec. 54, subpara. (j)(ii)). This approach is the most effective means of implementing the recommendation of the *Secured Transactions Guide* that the system should be designed to minimize the risk of human error (see *Secured Transactions Guide*, chap. IV, rec. 54, subpara. (j)(iii)-(iv)) since it eliminates the need for registry staff to enter the information contained in a paper notice into the registry record and the risk of error associated with the transcription task.

44. Direct electronic registration and searching also contributes to a speedier registration and search process. When information is submitted to the registry in paper form, registrants must wait until the registry staff has entered the information into the registry record and the information is searchable by third parties before the registration becomes legally effective. Search requests transmitted by paper, fax or telephone also give rise to delays since searchers must wait until the registry staff member carries out the search on their behalf and transmits the results.

45. In addition to eliminating these delays and reducing the risk of human error, a registry system in which registrants and searchers have the option to electronically enter the information directly into the registry record offers the following other advantages:

(a) A very significant reduction in the staffing and other day-to-day costs of operating the registry;

(b) Reduced opportunity for fraudulent or corrupt conduct on the part of registry personnel;

(c) A corresponding reduction in the potential liability of the registry to users who otherwise might suffer loss as a result of the failure of registry staff to enter registration information or search criteria at all, or to enter it accurately; and

(d) User access to registration and searching services outside of normal business hours.

46. If this approach is implemented, the registry should be designed to permit registry users to submit a registration and conduct searches from any private computer facility, as well as from computer facilities made available to the public at branch offices of the registry or other locations. In addition, owing to the reduced costs of direct electronic access, the conditions governing access to the services of the registry should permit third-party private sector service providers to carry out registrations and searches on behalf of their clientele.

47. If the registry record is computerized, the hardware and software specifications should be robust and employ features that minimize the risk of data corruption, technical error and security breach. Even in a paper-based registry, measures should be taken to ensure the security and integrity of the registry record but this is more efficiently and easily accomplished if the registry record is in electronic form. In addition to database control programmes, software will also need to be developed to manage user communications, user accounts, payment of fees and financial accounting, computer-to-computer communication and the gathering of statistical data.

48. The necessary hardware and software needs will need to be evaluated and a decision made as to whether it is appropriate to develop the software in-house by the registry implementation team or purchase it from private suppliers. In making that determination, the team will need to investigate whether an off-the-shelf product is available that can easily be adapted to the needs of the implementing State. It is important that the developer/provider of the software is aware of the specifications for the hardware to be supplied by a third-party vendor, and vice versa.

49. Consideration should also be given to whether the registry should be designed to provide an electronic interface with other governmental databases. For example, in some States, registrants can search the company or commercial registry in the course of effecting a registration to verify and automatically input grantor or secured creditor identifier information (for a discussion of electronic matching of names, see A/CN.9/WG.VI/WP.54/Add.2, para. 58).

B. Recommendations 1-3

[Note to the Working Group: The Working Group may wish to consider recommendations 1-3, as reproduced in document A/CN.9/WG.VI/WP.54/Add.5. The Working Group may also wish to note that, for reasons of economy, the recommendations are not inserted here at this stage but will be inserted in the final text.]

II. Access to registry services

A. General remarks

1. Public access

50. The *Secured Transactions Guide* recommends that any person may register a notice of an existing or potential security right or search the public record (not the archives; see *Secured Transactions Guide*, chap. IV, paras. 25-30 and rec. 54, subparas. (f) and (g)). This approach is in line with one of the key objectives of the *Secured Transactions Guide* which is to enhance certainty and transparency (see *Secured Transactions Guide*, chap. IV, para. 25, and rec. 1, subpara. (f)). Because of the importance of ensuring public access to registry services, this principle should be stated in the regulation (see draft Registry Guide, rec. 5).

51. Public access is facilitated if the registry is designed to enable users to submit notices and conduct searches electronically without the need for the assistance or intervention of registry personnel. As already discussed (see paras. 42-49 above), registration using paper forms is associated with cost, delay and the potential for error and liability for the registry.

2. Operating days and hours of the registry

52. The approach to the operating days and hours of the registry recommended in the *Secured Transactions Guide* depends on the extent to which the registry is designed to permit direct electronic registration and searching by users or requires their in-person attendance at a physical office of the registry. In the former case, the registry should be accessible continuously except for brief periods to undertake scheduled maintenance; in the latter case, it should operate during reliable and consistent hours compatible with the needs of potential registry users (see *Secured Transactions Guide*, chap. IV, para. 42, and rec. 54, subpara. (l)). In view of the importance of this issue to users, it should be addressed in the regulation or in administrative guidelines published by the registry (see draft Registry Guide, rec. 5).

53. Where the registry provides services through a physical office, the minimum operating days and hours should be the usual business days and hours in the enacting State. To the extent that the registry requires or permits the registration of paper notices, the registry should aim at ensuring that the information is entered into the registry record and made available to searchers on the same business day that the paper notice is received by the registry. Search requests submitted in paper form should likewise be processed on the same day they are received. To achieve this goal, the deadline for submitting paper notices or search requests may be set independently from the business hours. For example, the regulation or administrative guidelines of the registry could stipulate that, while the registry office is open between 09:00 and 17:00, all forms must be received by an earlier time (e.g. 16:00) so as to ensure that the registry staff has sufficient time to enter the information on notices into the registry record or conduct the search. Alternatively, the registry office could continue to receive paper notices throughout its business hours, but set a “cut off” time, after which information in notices received may not be entered into the registry record, or searches performed, until the next business day. A third approach would be for the registry to undertake that information will be entered into the registry record and a search will be performed within a stated number of business hours after receipt of the notice or search request.

54. The registry regulation or administrative guidelines could also enumerate either in an exhaustive way or an indicative way the circumstances in which access to the registry services may temporarily be suspended. An exhaustive list would provide more certainty but there is a risk that it may not cover all possible circumstances. An indicative list would provide more flexibility but less certainty. Circumstances justifying a suspension of the registry services might include any event that makes it impossible or impractical to provide users with access to the registry services (such as force majeure, due, for example, to fire, flood, earthquake, or war, or where the registry provides users with direct electronic access, a breakdown in Internet or network connection).

3. Access to registration services

55. The *Secured Transactions Guide* recommends that the registry must accept an initial notice of a security right submitted to it for registration (as opposed to an amendment or cancellation notice, acceptance of which is subject to different requirements), if it: (a) is presented in the authorized medium of communication (that is, in the prescribed paper or electronic form); (b) is accompanied by the authorized fee, if any; and (c) provides the grantor identifier and the other information required to be included in the notice (see *Secured Transactions Guide*, rec. 54, subpara. (c), and A/CN.9/WG.VI/WP.54/Add. 2, paras. 53 and 54).

56. In addition, the *Secured Transactions Guide* recommends that the registry must request and maintain a record of the identity of the registrant (see *Secured Transactions Guide*, rec. 55, subpara. (b) and paras. 57-59 below). This additional requirement is included as a measure of protection against the risk that a registration was not authorized by the person identified as the grantor in a registered notice. Requiring the registry to request and maintain the identity of the registrant enables the named grantor to determine to whom a demand to amend or cancel the unauthorized registration should be made. In order to facilitate the registration process, the evidence of identity required of a registrant should be that generally

accepted as sufficient in day-to-day commercial transactions in the enacting State (for example, a driver's licence or other state-issued official document); and the registry should have no right or duty to confirm the evidence of identity submitted by a registrant. Registrants should also be given the option of setting up a user account that provides them with special secure access codes for transmitting notices to the registry. This would facilitate access by frequent users (such as financial institutions, automobile dealers, lawyers and other intermediaries), since they would need to provide the required evidence of their identity only once when initially setting up the account.

57. To implement these recommendations, the regulation should provide that a person is entitled to have access to the registration services of the registry, if that person: (a) uses the prescribed form of notice; (b) provides its identity in the manner prescribed by the registry; and (c) has paid, or made arrangements to pay, any fees (see draft Registry Guide, rec. 6). The regulation should further provide that the registry may reject registration of a notice if it does not contain the required information in the designated field for that type of information or if the information entered is illegible (for the information required in an initial notice and an amendment or cancellation notice, see A/CN.9/WG.VI/WP.54/Add.2, para. 50, A/CN.9/WG.VI/WP.54/Add.4, para. 4, and draft Registry Guide, recs. 23, 30 and 32).

58. Where incomplete or illegible notices are submitted in paper form, there will necessarily be some delay between the receipt of the form by the registry and the communication of its rejection and the reasons for the rejection to the registrant. However, in a registry system that allows registrants and searchers to electronically submit registration information directly to the registry, the system should be designed so as to automatically reject the submission of incomplete or illegible notices and display the reasons on the electronic screen.

4. Verification of identity, evidence of authorization or scrutiny of the content of the notice not required

59. As already mentioned (see para. 56 above), the *Secured Transactions Guide* recommends that the registry must request and maintain a record of the identity of the registrant (see *Secured Transactions Guide*, chap. IV, para. 48, and rec. 55, subpara. (b)). To facilitate the registration process, the *Secured Transactions Guide* further recommends that the registry may not verify the evidence of identity offered by the registrant (see *Secured Transactions Guide*, rec. 54, subpara. (d)). This recommendation should be incorporated into the regulation (see draft Registry Guide, rec. 7, subpara. (a)).

60. In addition, the *Secured Transactions Guide* recommends that registration of a notice should be ineffective unless authorized by the grantor in writing. However, to avoid delay and costs for registrants, evidence of the grantor's authorization is not a pre-condition to access to registry services. Rather, the grantor's authorization may be given before or after registration, and a written security agreement is sufficient to constitute authorization (see *Secured Transactions Guide*, chap. IV, para. 106, and rec. 71). This recommendation should be incorporated into the regulation (see draft Registry Guide, rec. 7, subpara. (b)).

61. Once a registrant satisfies the requirements outlined above for obtaining access to the registry services, the registry has no right to reject the notice. Accordingly, the regulation should confirm that the registry may not conduct other scrutiny of the content of the notice (see draft Registry Guide, rec. 7, subpara. (c)). This does not mean that the registered notice will necessarily be legally effective. The registrant is responsible for any errors or omissions in the registration information submitted by the registrant to the registry (on the types of errors or omissions that may render a registered notice ineffective, see A/CN.9/WG.VI/WP.54/Add.3, paras. 17-29). If the registry had to scrutinize the notice and confirm its effectiveness, the result would be delay, cost and potential for error, a result that would run counter to the kind of efficient registry envisaged in the *Secured Transactions Guide*. Accordingly, the regulation should also confirm that it is not the responsibility of the registry to ensure that the information in a notice is entered in the designated field and is complete, accurate and legally sufficient (see draft Registry Guide, rec. 7, subpara. (c)).

5. Access to search services

62. Citing privacy concerns, some States require searchers to provide justifiable reasons for conducting a search. To facilitate public access to the registry's search services, the *Secured Transactions Guide* recommends that a searcher should not be required to give reasons for the search (see *Secured Transactions Guide*, rec. 54, subpara. (g)). To require searchers to justify a search would undermine the efficiency of the search process, since the registry would have to train its employees to perform this function and would have to scrutinize the reasons given and determine whether they are sufficient to justify a search. Depending on the exact reasons required, equal public access to information in the registry may be impeded, since some potential searchers may not have information available to others. Privacy concerns relating to the grantor are more effectively dealt with by requiring grantor authorization for a registration (see para. 60 above) and by establishing a summary judicial or administrative procedure to enable grantors to cancel or amend unauthorized or erroneous notices quickly and inexpensively (see A/CN.9/WG.VI/WP.54/Add.4, paras. 38-41). Privacy concerns relating to the identity of the secured creditor can be addressed by enabling registrations to be effected by and in the name of the secured creditor's representative. In any event, privacy is less of a concern under the notice registration approach recommended by the *Secured Transaction Guide*, since registered notices provide only the minimal information needed to alert a searcher that a security right may exist in the asset described in a registered notice (see paras. 9-11 above).

63. Accordingly, the regulation should provide that any person is entitled to search the publicly accessible registry record provided that person submits the search request in the prescribed form and has paid, or made arrangements to pay any prescribed fee (see draft Registry Guide, rec. 9). The recommended provision refers to the "public" registry record because expired and cancelled registrations must be removed from the public record and archived (see A/CN.9/WG.VI/WP.54/Add.2, paras. 44 and 45, and draft Registry Guide, rec. 20).

64. As with incomplete or illegible registrations, the regulation should provide that the registry may reject a search request if the searcher does not enter a search criterion in a legible manner in the designated field and must provide the

grounds for a rejection immediately or as soon as practicable (see draft Registry Guide, rec. 10). In registry systems that permit registrants to electronically submit search requests to the registry, the software should be designed so as to automatically prevent the submission of search requests that do not include a legible search criterion in the designated field and display the reasons on the electronic screen.

65. Unlike the approach adopted for registrants (see paras. 55-57 above), the *Secured Transactions Guide* does not require the registry to request and maintain evidence of the identity of a searcher as a pre-condition to submitting a search request (see *Secured Transactions Guide*, rec. 55, subpara. (b)). Since a searcher is merely retrieving information contained in registered notices from the registry record, there is no equivalent concern with protecting the grantor from unauthorized registrations. Accordingly, identification evidence should be requested of searchers only if this is necessary for the purposes of collecting search fees, if any.

B. Recommendations 4-10

[Note to the Working Group: The Working Group may wish to consider recommendations 4-10, as reproduced in document A/CN.9/WG.VI/WP.54/Add.5. The Working Group may also wish to note that, for reasons of economy, the recommendations are not inserted here at this stage but will be inserted in the final text.]

| 1. Introduction | 50-51 |
| 2. Grantor information | 52-71 |

III. Registration

A. General remarks

1. Time of effectiveness of the registration of a notice

1. The *Secured Transactions Guide* recommends that the registration of a notice becomes effective only when the information contained in the notice is entered into the registry record so as to be available to searchers, rather than when the information contained in the notice is received by the registry (see *Secured Transactions Guide*, chap. IV, paras. 102-105, and rec. 70).

2. In view of the importance of the effective time of registration for determining the third-party effectiveness and priority of the security right to which it relates, this recommendation should be included in the regulation (see draft Registry Guide, rec. 11, subpara. (a)). In addition, the regulation should provide that the effective time of registration (that is, the date and time when the notice became searchable) should be indicated on the registry record relating to that notice (see draft Registry Guide, rec. 11, subpara. (b)).

3. As already mentioned, the *Secured Transactions Guide* recommends that the registry record should be computerized if possible. Where information contained in notices is entered into a computerized registry record, the registry software should be designed to ensure that the information becomes publicly searchable immediately or nearly immediately after it is entered. With modern advances in technology, this should not be a problem. As a result, any delay between the entry of the information in a notice into the record and the time when the information becomes available to searchers will be all but eliminated.

4. In registry systems that permit registrants to electronically transmit information directly to the registry, registrants will have control over the timing and efficiency with which their registrations become effective. However, in registry systems that permit or require registration information to be submitted using a paper form, registrants are dependent on the registry staff to enter the information found on the paper form into the registry record on their behalf. In view of the importance of the timing and order of registration to the third-party effectiveness and priority of a security right, the regulation should provide that the registry must enter information in paper notices into the registry record in the order in which they were submitted to the Registry (see draft Registry Guide, rec. 11, subpara. (c)).

5. In a hybrid registry system which permits notices to be submitted in both paper and electronic form, this recommendation would not necessarily ensure the priority of a secured creditor that submitted a paper notice to the registry before a competing secured creditor submitted a notice electronically. For example, the paper notice may be received at 08:00, and entered into the registry record by the registry staff and become searchable at 08:30, while a competing secured creditor may enter a notice electronically at 08:05 which may become searchable at 08:10. Assuming priority between them is determined by the general first-to-register rule, the latter would have priority since its notice was the first to become searchable and therefore the first to be registered. In systems that adopt a hybrid approach, registrants who elect to use paper notices should be alert to this potential disadvantage.

6. The regulation should require the registry to assign a unique registration number to an initial notice (see draft Registry Guide, rec. 12). This is necessary to ensure that any subsequent amendment or cancellation notice that relates to the security right to which the initial notice relates is associated with that initial notice in the registry record so as to be capable of being retrieved and included in a search result (for a discussion of the need for a registrant to provide the registration number of the initial notice to which the amendment or cancellation relates, see A/CN.9/WG.VI/WP.54/Add.4, paras. 4 and 24).

2. Period of effectiveness of the registration of a notice

7. The *Secured Transactions Guide* recommends that an enacting State may adopt one of two approaches to the period of effectiveness (or duration) of a registered notice (see *Secured Transactions Guide*, chap. IV, paras. 87-91, and rec. 69).

8. Under option A, all registered notices are subject to a uniform statutory period of effectiveness. It follows that, where the secured transaction to which the registered notice relates has a longer duration, the secured creditor must ensure that the period of effectiveness is renewed before the expiry of the statutory period. This approach provides certainty as to the period of effectiveness of a registered notice, but limits the flexibility of the registrant to match the period of effectiveness of the registered notice to the likely duration of the secured financing relationship.

9. Under option B, the registrant is permitted to self-select the desired period of effectiveness with the option to renew for an additional self-selected period by registering an amendment notice. In legal systems that adopt this approach, it may be desirable to base registration fees on a sliding tariff related to the duration selected by the registrant in order to discourage the selection of excessive terms that do not correspond to the expected duration of the underlying security agreements (with a cushion of extra time to allow for delays in payment of the secured obligation).

10. Enacting States should incorporate one or the other of these options in their secured transactions law and in the regulation (see draft Registry Guide, rec. 13, options A and B). Alternatively, enacting States could adopt a third option, which is a hybrid of the first two options. Under this approach, the registrant would be entitled to select the period of effectiveness of the registered notice subject to a maximum limit, so as to discourage the selection of excessive terms (see *Secured Transactions Guide*, chap. IV, para. 88, and draft Registry Guide, rec. 13, option C).

11. If a State adopts option A, it needs to design its registry system to allow the registrant to reduce the legal period of effectiveness of a registered notice if the actual duration of their security agreement is less than the specified statutory period. This is because a registrant is obligated, in any event, to register a cancellation notice once the secured obligation is satisfied and the security agreement is terminated (see A/CN.9/WG.VI/WP.54/Add.4, paras. 38-41).

12. In States that implement options B or C, the period of effectiveness of the registered notice is a mandatory component of the information required to be included in a notice with the result that a notice would be rejected if it did not indicate its period of effectiveness in the designated field (see A/CN.9/WG.VI/WP.54/Add.3, para. 14).

13. Where option B or C is selected by an enacting State, it may be desirable to design the prescribed notice form in a way that permits the registrant to easily indicate the desired period without the risk of inadvertent error, for example, by limiting the choice to whole years from the date of registration.

14. Whether a State adopts option A, B or C, the general law of the enacting State for calculating time periods will apply to the calculation of the period of effectiveness of a registered notice, unless the secured transactions law provides otherwise. For example, the general law of the enacting State may provide that where the calculation is from the day of registration or from the anniversary of the day of registration, a year runs from the beginning of that day.

15. Regardless of the approach an enacting State may take to determining the period of effectiveness of a registration, under the recommendations of the *Secured Transactions Guide*, the third-party effectiveness of a security right is lost once the registration expires unless: (a) the security right is made effective against third parties prior to the lapse by some other permitted method permitted for that type of encumbered asset (see *Secured Transactions Guide*, rec. 46); or (b) an amendment notice is registered extending the period of effectiveness of the registration. While the third-party effectiveness of that security right could be re-established by registering a new notice, the security right would take effect against third parties only from the time of the new registration. Consequently, it would as a general rule be subordinate to prior registered secured creditors and secured creditors that earlier made their security rights effective against third parties by a method other than registration (see *Secured Transactions Guide*, recs. 47 and 96 and A/CN.9/WG.VI/WP.54/Add.4, paras. 25-27).

3. Time when a notice may be registered

16. The *Secured Transactions Guide* recommends that it should be possible for a notice to be registered before the creation of the security right or the conclusion of a security agreement; this is often referred to as “advance registration” (see *Secured Transactions Guide*, chap. IV, paras. 98-101, and rec. 67). This rule may apply to an initial or amendment notice (as, in principle, an initial or an amendment notice may be pre-registered) but not to a cancellation notice (as normally the negotiations have to be concluded unsuccessfully for a cancellation notice to be registered). This rule typically would be stated in the secured transactions law. However, depending on the drafting conventions in the enacting State, it may be included in the regulation (see draft Registry Guide, rec. 14).

17. As already explained (see A/CN.9/WG.VI/WP.54, para. 27), registration does not create and is not necessary for the creation of a security right (see also *Secured Transactions Guide*, rec. 33). Consequently, until the security agreement is actually entered into and the other requirements for the creation of a security right are satisfied, the secured creditor may be defeated by a competing claimant, such as a buyer that acquires rights in the encumbered assets in the period between advance registration and the creation of the security right. However, registration will generally ensure that the secured creditor, once the security right is created, has priority over another secured creditor that registers subsequently, regardless of the order of creation of the competing security rights (A/CN.9/WG.VI/WP.54, para. 33).

18. If the negotiations are aborted after the registration is effected or for some other reason no security agreement is ever entered into between the parties, the creditworthiness of the person named as grantor in the registration may be adversely affected by the existence of the registration unless it is cancelled. To address this concern, the *Secured Transactions Guide* recommends that, if the potential secured creditor does not cancel its registration, the enacting State should establish a summary judicial or administrative procedure to enable the grantor to have the registration cancelled in the event the registrant fails or refuses to do so itself (see *Secured Transactions Guide*, rec. 72, subpara. (a), recs. 54, subpara. (d), and 72, subparas. (b) and (c), and A/CN.9/WG.VI/WP.52/Add.4, paras. 38-41, and draft Registry Guide, rec. 33).

4. Sufficiency of a single notice

19. In a notice registration system of the kind contemplated by the *Secured Transactions Guide* (see *Secured Transactions Guide*, chap. IV, paras. 10-14, and rec. 57, as well as A/CN.9/WG.VI/WP.54/Add.1, paras. 9-17 and draft Registry Guide, rec. 21), there is no reason why a single notice should not be sufficient to give third-party effectiveness to present or future security rights arising under multiple security agreements between the same parties covering the assets described in the notice (see *Secured Transactions Guide*, rec. 68). Requiring a one-to-one relationship between each notice and each security agreement would generate unnecessary costs and undermine the ability of the secured creditor to flexibly respond to the grantor's evolving financing needs without having to fear a loss of the priority position it holds under the initial registration. Accordingly, the *Secured Transactions Guide* recommends that the registration of a single notice should be sufficient to achieve the third-party effectiveness of one or more than one security right, whether they exist at the time of registration or are created later and whether they arise from one or more than one security agreements between the same parties (see *Secured Transactions Guide*, rec. 68). This rule typically would be stated in the secured transactions law. However, depending on the drafting conventions in the enacting State, it may be included or reiterated in the regulation (see draft Registry Guide, rec. 13).

20. It should be emphasized that a registration achieves the third-party effectiveness of security rights arising under multiple security agreements only to the extent that the description of the encumbered assets in the notice corresponds to their description in any new or amended security agreement (see *Secured Transactions Guide*, rec. 63). Otherwise, the registration would not serve the function of alerting third-party searchers to the potential existence of a security right. Accordingly, to the extent that any security agreement concluded between the parties covers additional assets that were not described in the initial notice, a new notice or an amendment of the initial notice would be needed and the third-party effectiveness and priority of the security right in these additional assets would date only from the time of registration of the new notice or the amendment.

5. Grantor-based organization and retrieval of registered notices

21. Registrations in an immovable registry are typically organized and retrieved by reference to an alphanumeric or similar identifier for the particular immovable (for example, its civic address). The same approach is usually taken for

asset-specific movables registries such as ship or aircraft registries. For example, the international registry established under the Cape Town Convention and Aircraft Protocol uses the serial number assigned by the manufacturer of the aircraft object as the principal indexing and search criterion.

22. In contrast to this approach, the *Secured Transactions Guide* recommends that the primary indexing criterion for the purposes of searching and retrieving registered notices should be the identifier of the grantor (see *Secured Transactions Guide*, chap. IV, paras. 31-36, and rec. 54. subpara. (h)). This recommendation is based on two considerations. First, most categories of movable asset do not have a sufficiently unique identifier to enable useful asset-based searching. Second, grantor-based indexing and searching enables a security right in the grantor's future assets and circulating pools of revolving assets, such as inventory and receivables, to be made effective against third parties by a single one time registration (see *Secured Transactions Guide*, rec. 68). To implement this recommendation, enacting States should incorporate it in the regulation (see draft Registry Guide, rec. 14).

23. Although the *Secured Transactions Guide* refers to the indexing of information in the registry record, indexing as a technical matter is not the only mode of organizing information in a data base so as to make it searchable. Accordingly, the regulation should be drafted to allow flexibility at this level in the design of the registry (see draft Registry Guide, rec. 16).

6. Serial number-based organization and retrieval of registered notices

24. Grantor-based indexing and searching has a drawback in a specific transactional context often referred to as the "A-B-C-D problem". Suppose, for example, that B, after granting a security right in its automobile in favour of A, sells the automobile to C, who in turn proposes to sell or grant security in it to D. Assuming D is unaware that C acquired the asset from the original grantor B, D will search the registry using C's identifier as the search criterion. Unless A amended its registration to add C as an additional grantor or registered a new registration notice naming C as the grantor, D's search will not retrieve the registered notice relating to the security right granted by B in favour of A (on the question whether a secured creditor should be obligated to amend its registration to add a transferee from the original grantor as a new grantor, see A/CN.9/WG.VI/WP.54/Add.4, paras. 9-12). Yet under the recommendations of the *Secured Transactions Guide*, the security right granted by B will generally follow the automobile into the hands of D (see *Secured Transactions Guide*, recs. 79 and 81).

25. In response to the "A-B-C-D problem", some secured transactions laws provide for supplementary asset-based indexing and searching. As a practical matter, this approach is feasible only for types of movable assets for which unique and reliable serial numbers or equivalent alphanumerical identifiers are available. For example, the automotive industry assigns a unique alphanumerical identifier, commonly referred to as a vehicle identification number, to identify individual motor vehicles according to a system based on standards issued by the International Organization for Standardization (ISO). In regimes that enable searchers to retrieve registered notices using a unique alphanumerical number of this kind, a prospective transferee in the position of D is protected, since a search by that number will disclose all security rights granted in the particular motor vehicle by any owner in

the chain of title. Other types of assets for which some regimes have adopted this approach include trailers, mobile homes, aircraft frames and engines, railway rolling stock, boats and boat motors.

26. The *Secured Transactions Guide* discusses but makes no recommendation on the question of using the serial number or equivalent alphanumeric identifier of an asset as an indexing and search criterion (see *Secured Transactions Guide*, chap. IV, paras. 34-36). The disadvantage of this approach is that it may reduce the ability of the parties to create an effective security right in future assets to the extent that the registrant must continuously amend its registered notice to add the serial number or other identifier of assets that are acquired by the grantor after the registration of the initial notice. Accordingly, in States that have implemented this approach, it is limited to assets that, in addition to having a unique identifier, have a high resale value and a significant resale market (for example, in addition to motor vehicles, trailers, mobile homes, aircraft frames and engines, railway rolling stock, boats and boat motors).

27. In addition, under the secured transactions law of States that have adopted this approach, serial number registration is required for the purposes of achieving third-party effectiveness and priority only as against those classes of competing claimants that are most potentially prejudiced by the so-called “A-B-C-D problem” (notably, transferees of the encumbered assets). As against other classes of competing claimants, for example, the grantor’s judgment creditors or insolvency administrator, registration of a notice that does not include entry of the serial number in the designated field is still effective against third parties so long as the notice otherwise sufficiently describes the encumbered asset. Furthermore, the entry of the serial number is not required at all where the relevant assets are held by the grantor as inventory. In the case of inventory, the entry of a generic description in the general field designated for entering a description of the encumbered assets is sufficient. This is because the “A-B-C-D problem” does not arise in the case of inventory, since buyers that acquire inventory from the original grantor in the ordinary course of the grantor’s business take the inventory free of the security right in any event (see *Secured Transactions Guide*, rec. 81, subpara. (a)).

7. Preserving the integrity and security of the registry record

28. As already mentioned (see A/CN.9/WG.VI/WP.54/Add.1, para. 38), for the purposes of establishing public trust in the security of the registry record, the *Secured Transactions Guide* recommends that, while the day-to-day operation of the registry may be delegated to a private authority, the State retains the responsibility to monitor the operation of the registry, and retains ownership of the registry record, and, if necessary, the registry infrastructure (see A/CN.9/WG.VI/WP.54/Add.1, para. 38). Other steps to ensure the integrity and security of the registry record include: (a) the obligation of the registry to request and maintain the identity of the registrant (see A/CN.9/WG.VI/WP.54/Add.1, paras. 56 and 57); (b) the obligation of the registry send promptly copies of registered notices to the registrant (see paras. 38-40 below); (c) the obligation of the registrant to send promptly copies of registered notices to the person named as the grantor in a registered notice (see paras. 41 and 42 below); and (d) the elimination of any discretion on the part of registry staff to reject users’ access to the registry services (see A/CN.9/WG.VI/WP.54/Add.1, paras. 55-58).

29. Additional measures to ensure that the integrity of the registry record is preserved include the following. First, the regulation should make it clear that the registry staff may not alter or remove information in registered notices, except as specified in the law and the regulation (see draft Registry Guide, rec. 17) and that any changes can only be made by registration of an amendment notice in accordance with the regulation (see draft Registry Guide, rec. 19). Nonetheless, enacting States may wish to consider whether the registry should be authorized to directly correct information in a registered notice where the notice was submitted by the registrant in paper form and the registry failed to accurately or completely enter the information on the paper form into the registry record. If this approach is adopted, a notice of the correction should be promptly sent to the registrant. Alternatively, the enacting State could require the registry to notify the registrant of its error and the registrant could then submit an amendment notice free of charge (for a discussion of the liability of the enacting State for loss or damage caused to the registrant or, for example, to another secured creditor that registered before the notice was amended, see paras. 34-37 below).

30. Second, to protect the registry record against the risk of physical damage or destruction, the enacting State should maintain back-up copies of the registry record (see *Secured Transactions Guide*, chap. IV, paras. 54, and rec. 54, subparas. (f)).

31. Third, the potential for registry staff corruption should be minimized by: (a) designing the registry system to make it impossible for registry staff to alter the time and date of registration or any information entered by a registrant; (b) instituting financial controls that strictly monitor staff access to cash payments of fees and to the financial information submitted by clients who use other modes of payment; and (c) designing the registry system to ensure that the archived copy of cancelled registrations preserves the original data submitted.

32. Fourth, it should be made clear to registry staff and registry users, *inter alia*, that the registry staff is not allowed to give legal advice on the legal requirements for effective registration and searching or on the legal effects of registrations and searches. However, registry staff should be able to give practical advice with respect to the registration and search process (see paras. 34-36 below).

33. Finally, as already discussed (see A/CN.9/WG.VI/WP.54/Add.1, paras. 55-58 and 62-65), the registry should be designed, if possible, to enable registrants and searchers to directly submit information for registration and conduct a search directly and electronically as an alternative to having registry staff do this on their behalf (see *Secured Transactions Guide*, rec. 54, subpara. (j)). Under this approach, users bear sole responsibility for any errors or omissions they make in the registration or search process and carry the burden of making the necessary corrections or amendments (see draft Registry Guide, rec. 7, and A/CN.9/WG.VI/WP.54/Add.1, para. 61). Consequently, the potential for corruption or misconduct on the part of the registry staff is greatly minimized since their duties are essentially limited to managing and facilitating electronic access by users, processing fees, overseeing the operation and maintenance of the registry system and gathering statistical data.

8. Liability of the registry

34. The *Secured Transactions Guide* recommends that the secured transactions law should provide for the allocation of legal responsibility for loss or damage caused by an error in the administration or operation of the registration and searching system (see *Secured Transactions Guide*, rec. 76).

35. As noted earlier, users bear sole legal responsibility for any errors or omissions in the registration information or search requests they submit to the registry and carry the burden of making the necessary corrections or amendments (see draft Registry Guide, rec. 7, and A/CN.9/WG.VI/WP.54/Add.1, para. 61). Where notices and search requests are directly submitted by users electronically without the interposition of registry staff, the potential liability of the enacting State should, therefore, be limited to system malfunction, since any other error would be attributable to the registrant (see *Secured Transactions Guide*, rec. 56). However, where a notice or search request was submitted using a paper form, the enacting State will need to address the existence or the extent of its potential liability for the refusal or failure of the registry to correctly enter registration information into the registry record or to correctly carry out a search request where the notice or search request was submitted using a paper form.

36. While it should be made clear that registry staff are not allowed to give legal advice, the enacting State will additionally need to address whether and to what extent it should be liable if registry staff provide incorrect or misleading information on the requirements for effective registration and searching or on the legal effects of registrations and searches.

37. To the extent they accept legal responsibility for loss or damage caused by system malfunction or registry staff error or misconduct, some States allocate part of the registration and search fees collected by the registry into a compensation fund to cover possible claims whereas in other States, claims are paid out of general revenue.

9. Registry's duty to send a copy of the registered notice to the registrant

38. As noted earlier, the registration of a notice becomes effective when the information contained in the notice is entered into the registry record so as to be available to searchers. In view of the importance of the effective time of registration to the third-party effectiveness and priority of a security right, the *Secured Transactions Guide* recommends that a registrant should be able to obtain a record of a registration as soon as the information contained in a notice is entered into the registry record and should be informed by the registry of any changes to an initial registration (see *Secured Transactions Guide*, chap. IV, paras. 49-52, and rec. 55, subparas. (d) and (e)). Accordingly, the regulation should provide that the registry must promptly transmit a copy of a registered notice (whether it is an initial or an amendment or cancellation notice) to the registrant, indicating the date and time when it became effective (see draft Registry Guide, rec. 18).

39. If the registry needs to send a paper copy of registered notices by ordinary mail to the registrant, this will delay the ability of the registrant to act with confidence on the third party effectiveness and priority of its security right. Accordingly, the registry should be designed, if possible, to automatically generate an electronic copy of a registered notice. If the system permits notices to be

submitted by the registrant electronically, the system should be designed to automatically transmit the electronic copy of the registered notice to the registrant using their common electronic interface. Even if the registrant submitted a paper notice, the registry system should be designed to permit electronic transmission of the copy, for example, by electronic mail attachment, to the registrant.

40. A registrant would want to receive a copy of a registered amendment or cancellation notice in order to be able to take prompt steps to protect its position in the event that the registration was unauthorized or erroneous. There are effective steps that can be taken to protect a registrant against the risk of fraudulent amendments or cancellations by a third party (for a discussion of the effectiveness of amendment or cancellation notices not authorized by the secured creditor, see A/CN.9/WG.VI/WP.54/Add.4, paras. 28-37).

10. Secured creditor's duty to send a copy of the registered notice to grantor

41. As already noted (see A/CN.9/WG.VI/WP.54/Add.1, para. 60), a secured creditor must obtain the written authorization of the grantor, in the security agreement or in a separate agreement, to effect a registration. To enable the person named as grantor in a registered notice to verify that the registration was in fact authorized, and that the registration information corresponds to the scope of the authorization, the *Secured Transactions Guide* recommends that the secured creditor must send a copy of the registered notice to the grantor (see *Secured Transactions Guide*, rec. 55, subpara. (c)). This recommendation should be reflected in the regulation (see draft Registry Guide, rec. 18, subpara. (b)).

42. Placing the obligation on the secured creditor, rather than the registry, to send a copy of the notice to the grantor is intended to avoid creating an additional burden for the registry which could negatively affect its efficiency. On the assumption that in most cases registrations will be made in good faith and will be authorized, the failure of the secured creditor to meet this obligation is not a pre-condition to the effectiveness of the registration. Rather, it results only in nominal penalties and liability to compensate the grantor for any actual damage resulting from the failure (see *Secured Transactions Guide*, chap. IV, para. 51, and rec. 55, subpara. (c), and paras. 41 and 42 above).

11. Amendment of information in the public registry record

43. The *Secured Transactions Guide* recommends that a secured creditor may amend information in a registered notice by registering an amendment notice at any time (see *Secured Transactions Guide*, chap. IV, paras. 110-116, and rec. 73). The *Secured Transactions Guide* also recommends that a grantor may, in certain circumstances, seek an amendment through a judicial or administrative process (see *Secured Transactions Guide*, chap. IV, paras. 107 and 108, and rec. 72). In view of the importance of these recommendations, the regulation may restate them and, in addition, set out the information that an amendment notice should contain (see draft Registry Guide, rec. 19 and paras. 50-53 below).

12. Removal of information from the public registry record and archival

44. The *Secured Transactions Guide* recommends that information contained in a registered notice should be removed promptly from the public record once the

period of effectiveness of the notice expires or a cancellation notice is registered; the information must then be archived so as to be capable of retrieval if necessary (see *Secured Transactions Guide*, chap. IV, para. 109, and rec. 74). If cancelled or expired notices remained publicly searchable, this might create legal uncertainty for third party searchers, impeding the ability of the grantor to grant a new security right in or deal with the assets described in the notice. Archival in a manner that permits retrieval is nonetheless required since expired or cancelled notices may need to be retrieved in the future, for example, in order to determine the time of registration or the scope of the encumbered assets in a subsequent priority dispute between the registrant and a competing claimant. The regulation should include rules implementing these recommendations (see draft Registry Guide, recs. 20 and 21).

45. The regulation should also specify a minimum period of time for which archived notices must be preserved (for example, twenty years) (see draft Registry Guide, rec. 21). The length of the archival period may be influenced by the length of the prescription or limitation period under the law of the enacting State for initiating claims. For example, with respect to security rights, if the law provides that no action may be brought later than fifteen years from the date of extinguishment of the security right or termination of the security agreement, the registry regulation could provide for a co-extensive archival period. In deciding the appropriate period, the enacting State should also consider whether the law permits an extension of the prescription period and whether the registry should then be obligated to keep the information in its archives for a period equivalent to any permitted extension.

13. Language of notices and search requests

46. While the *Secured Transactions Guide* does not make any specific recommendation with regard to the language to be used in submitting registration information and search requests to the registry, the commentary addresses the need for enacting states to address this issue in the registry regulation (see *Secured Transactions Guide*, chap. IV, paras. 44-46). Accordingly, it should be addressed in the regulation (see draft Registry Guide, rec. 22).

47. Regardless of the language used in the underlying security documentation, the regulation typically would require registration information and search requests to use the official language or languages of the State under whose authority the registry is maintained. While the enacting State could also authorize the use of other languages, this would undermine the efficiency and transparency of the registry record unless the typical searcher in the enacting State could reasonably be expected to understand that other language.

48. The only exception to this rule should be where the grantor's legal name, for example a business incorporated under foreign law, is expressed in a language that is different from that used by the registry. To address cases where the language in which the name is expressed uses a set of characters different from the characters used in the language or languages of the registry, it will be necessary for the regulation to provide guidance on how the characters are to be adjusted or transliterated to conform to the language of the registry. The same considerations apply to the secured creditor's name.

49. Where the grantor is a legal person and the law under which it is constituted allows the use of alternative linguistic versions of its name, the regulation should specify that all versions of the name must be entered as separate grantor identifiers, subject to the rules prescribed by the regulation regarding how names expressed in a foreign set of characters are to be adjusted or transcribed to conform to the language or languages of the registry. This is necessary to protect third parties that deal or have dealt with the grantor under any one of the alternative versions of its name and would therefore search the registry using that version.

B. Recommendations 11-22

[Note to the Working Group: The Working Group may wish to consider recommendations 11-22, as reproduced in document A/CN.9/WG.VI/WP.54/Add.5. The Working Group may also wish to note that, for reasons of economy, the recommendations are not inserted here at this stage but will be inserted in the final text.]

IV. Registration of initial notices

A. General remarks

1. Introduction

50. The *Secured Transactions Guide* recommends (see *Secured Transactions Guide*, chap. IV, paras. 65-97, and rec. 57) that the following information and only the following information must be provided in an initial notice for the registration to be accepted by the registry: (a) the identifier and address of the grantor; (b) the identifier and address of the secured creditor or its representative; (c) a description of the encumbered asset; (d) the period of effectiveness of the registration, if the enacting State chooses the option in its secured transactions law of allowing the registrant to select the period of effectiveness of the notice (see paras. 7-15 above); and (e) the maximum monetary amount for which the secured creditor may enforce the security right, if the enacting State chooses to require this information in its secured transactions law (see A/CN.9/WG.VI/WP.54/Add.3, paras. 15-19). The regulation should restate and supplement this recommendation (see draft Registry Guide, rec. 23). The following paragraphs discuss each of the elements of the required content of a notice.

51. As already discussed (see A/CN.9/WG.VI/WP.54/Add.1, para. 57), the registrant must enter the required information in the designated field or space in the prescribed form of notice for entering that kind of information (see draft Registry Guide recs. 7 and 23). If the registrant enters, for example, the identifier of the grantor in the secured creditor field, this would not be a ground for the registry to reject the notice. However, the registration of the notice may be ineffective with the result that the security right to which it relates is not made effective against third parties.

2. Grantor information

(a) General

52. As already explained (see paras. 21-23 above), the *Secured Transactions Guide* recommends that registered notices should be indexed and organized so as to be retrievable by a searcher using the grantor's identifier as the search criterion. In line with the recommendations of the *Secured Transactions Guide* (see *Secured Transactions Guide*, recs. 58-60), the regulation should provide detailed guidance on what constitutes the correct identifier of the grantor so as to ensure that a registrant can be confident that its registration will be effective and that searchers can confidently rely on a search result (see draft Registry Guide, paras. 54-68 and recs. 24-26 below). The regulation should also provide guidance on the consequences of incorrect or insufficient statements with respect to the grantor identifier (see A/CN.9/WG.VI/WP.54/Add.3, paras. 20-23, and rec. 29, subpara. (a) below).

53. It is not uncommon for a person to create a security right in its assets to secure an obligation owed by a third-party debtor (including a third-party guarantor of the obligation owed by the grantor). Since the function of registration is to disclose the possible existence of a security right in the assets described in the notice, registrants should understand that the grantor information required is the identifier and address of the grantor that owns, or has rights in, the encumbered assets, and not that of the third-party debtor of the secured obligation (or a mere guarantor of the obligation owed by the debtor). Where there is more than one grantor, the regulation should specify that their identifiers and addresses must be entered in the designated fields or spaces on the notice separately for each grantor. This is necessary to ensure that a search of the registry record using the identifier of any one of the grantors will retrieve the registered notice (see A/CN.9/WG.VI/WP.54/Add.3, paras. 20-23). To facilitate the registration process, the prescribed form of notice should be designed so as to enable the identifiers and addresses of multiple grantors to be entered on the same notice (see examples of registry forms in A/CN.9/WG.VI/WP.54/Add.6). While the registrant could achieve the same result by registering separate notices for each grantor, this is a more cumbersome process since the registrant would need to re-enter all the other information required on a notice on each separate notice.

(b) Grantor identifier for natural persons versus legal persons

54. The *Secured Transactions Guide* provides separate recommendations with respect to determining the identifier of the grantor depending on whether the grantor is a natural or a legal person or other entity (see *Secured Transactions Guide*, recs. 59-60). It follows that registered notices will need to be indexed or otherwise organized in the registry record according to distinct criteria depending on the category of grantor.

55. This approach has implications for the registration and search process. In order to ensure that the information in a notice is entered in the registry record so as to be retrievable by a searcher, the regulation should make it clear that a registrant must enter the identifier and address of the grantor in the fields designated for entering information relating to that category of grantor. To achieve this result, the prescribed form of notice, as well as the form of search request, should provide separate and distinct designated fields for entering the identifier and address of

grantors in each category (see the examples of registry forms in A/CN.9/WG.VI/WP.54/Add.6).

(c) Grantor identifier for natural persons

56. The *Secured Transactions Guide* recommends that, if the grantor is a natural person, the identifier of the grantor for the purposes of an effective registration should be the name of the grantor as it appears in a specified official document (see *Secured Transactions Guide*, rec. 59). In order to implement this recommendation, the regulation should specify the types of official document that the enacting State regards as authoritative sources of the grantor's name, as well as the hierarchy among those official documents. The following table illustrates the type of approach that might be taken, although enacting States will need to determine in accordance with its own naming conventions what types of official document are most appropriate taking into account their local naming conventions (see draft Registry Guide, rec. 24).

| Grantor status | Grantor identifier |
|--|---|
| Born in enacting State and birth registered in enacting State | Name on birth certificate or equivalent official document |
| Born in enacting State but birth not registered in enacting State | (1) Name on current passport (2) If no passport, name on equivalent official document such as an identification card or driver's licence |
| Not born in enacting State but naturalized citizen of enacting State | Name on citizenship certificate |
| Not born in enacting State and not a citizen of enacting State | (1) Name on current passport issued by the State of which the grantor is a citizen (2) If no current foreign passport, name on birth certificate or equivalent official document issued at grantor's birth place |
| None of the above | Name on any two official documents issued by the enacting State, if those names are the same (for example, a social security, health insurance or tax card) |

57. The regulation should specify the components of the grantor's name that are required to be entered in the prescribed notice (for example, family name, followed by the first given name, followed by the second given name) and provide separate designated fields in the prescribed notice for entering each component. In deciding what components are required, the enacting State should take into account local naming conventions as well as the extent to which locally issued official documents specify the different components of the name. Guidance should also be provided for exceptional situations. For example, where the grantor's name consists of a single word, the regulation should provide that that word should be entered in the family name field and the registry system should be designed so as not to reject notices that

have nothing entered in the given name field (see draft Registry Guide, rec. 24, subpara. (b)).

58. The enacting State may wish to consider whether during the registration process the registry should provide electronic verification of names entered in registered notices against names in other databases maintained by the enacting State. In this regard, two issues should be considered. The first is that the registry should not attempt to provide this service unless it is confident that the database to which it has connected is current, complete and accurate. Otherwise, it would be providing a disservice and possibly exposing itself to liability. The second issue is the legal effect of offering matching services. One option would be for the regulation to provide that a matched record is legally sufficient to identify the grantor. Under this approach, electronic matching would shift the legal responsibility to correctly identify the grantor from the registrant to the registry, thereby exposing the registry to potential liability. The other option would be to provide that this is just a service without any legal effect and it is the responsibility of the registrant who relies on electronic matching to ensure that the grantor identifier in the external database is correct. This latter approach more closely accords with the recommendations of the *Secured Transactions Guide*.

59. In some States, many persons may have the same name, with the result that a search may disclose multiple grantors all having the same name. To accommodate this scenario, the *Secured Transactions Guide* recommends that, where necessary, information in addition to the name of the grantor (such as the grantor's birth date or personal identification or other official number issued by the enacting State) must be included in the notice to uniquely identify the grantor (see *Secured Transactions Guide*, rec. 59). The *Secured Transactions Guide*, however, does not recommend that this additional information be used as search criteria. A State wishing to implement this additional recommendation should specify in the regulation the type of additional information, as well as whether it must be included for the registration to be accepted by the registry or whether inclusion is at the option of the registrant (see draft Registry Guide, rec. 23, subpara. (a) (i)).

60. Whether an enacting State should provide for the inclusion in a notice of an identity or other official number issued by that State as additional information depends on three principal considerations. First, whether the registry system under which the identity numbers are issued is sufficiently universal and reliable to ensure that each natural person is assigned a permanent unique number. Second, whether the public policy of the enacting State permits the public disclosure of the identity or other number that it assigns to its citizens and/or residents. Third, whether there is a reliable documentary record or other source by which third-party searchers can objectively verify whether a particular number relates to the particular grantor. If these three conditions are met, the use of State-issued identity or other official numbers would be an ideal way to uniquely identify grantors. However, as mentioned above, the approach recommended in the *Secured Transactions Guide* is that additional information, whether in the form of an identity card number or otherwise, may be required only where necessary to uniquely identify a grantor (see *Secured Transactions Guide*, rec. 59) and only as a requirement in addition to entering the name of the grantor (see draft Registry Guide, rec. 23, subpara. (a) (i)), and, in any case, not as a search criterion (see draft Registry Guide, rec. 34).

61. In view of the conflict-of-laws recommendations of the *Secured Transactions Guide* (such as, for example, recommendation 203, which provides that the law applicable to the creation, third-party effectiveness and priority of a security right in a tangible asset is the law of the State in which the tangible asset is located), the law of the enacting State (including its registry regulation) could apply to a security right created by a foreign grantor. Thus, where the enacting State requires the entry of a State-issued identity or other official number to uniquely identify a grantor, it will be necessary for the regulation to address cases where the grantor is not a citizen or resident of the enacting State, or, for any other reason, has not been issued a number. The enacting State might, for example, provide in the regulation that the number of the grantor's foreign passport or the number in some other foreign official document is a sufficient substitute.

(d) Grantor identifier for legal persons

62. For grantors that are legal persons, the *Secured Transactions Guide* recommends that the correct identifier for the purposes of effective registration is the name that appears in the document constituting the legal person (see *Secured Transactions Guide*, rec. 60). The regulation should restate and supplement this rule. In particular, the regulation should make it clear that the relevant constituting document includes any type of instrument (whether it be a private contract, a statute or a decree) that is the legal source of the grantor's status as a legal person according to the law under which it was constituted (see draft Registry Guide, rec. 25).

63. Virtually all States maintain a public commercial or corporate register for recording information about legal persons constituted under the law of that State including their names. In some States, upon registration in that record, a unique and reliable registration number is assigned to the legal person. If the enacting State is concerned that multiple legal persons may share a common name, the regulation could specify the inclusion of that number in the notice as additional information to be used to uniquely identify the grantor (see Registry Guide, rec. 25, option B). In States that require this additional information, the regulation should provide guidance for cases where the grantor is a legal person constituted under the law of a foreign State since the commercial or corporate record of the foreign State may not have an equivalent number system.

64. The name of a grantor that is a legal person typically includes generic abbreviations (such as S.A., "Ltd", "Inc", "Incorp", "Corp", "Co") or terms (such as Société Anonyme, "Limited", "Incorporated", "Corporation", "Company") indicative of the type of body corporate or other legal person. The regulation should make it clear whether these abbreviations or terms are an optional component of the grantor's identifier in the sense that a search with or without them, or using an erroneous version of them, would still retrieve the relevant registration. The optional approach would protect registrants that do not enter the correct generic abbreviation or term or fail to enter it altogether. However, it could reduce transparency for third-party searchers since a search result would disclose all grantors that are legal persons, regardless of their type, that share the same specific name.

65. Depending on the law applicable to the constitution of the grantor, the document or other instrument constituting it as a legal person may contain

inconsistent variations of the name (for example, referring to it in different places as “The ABC inc.” or “ABC Inc.” or “ABC”). Ideally, the regulation would provide guidance on which part of the constituting document is to be treated as the authoritative source of the grantor’s name for registration purposes.

(e) Special cases

66. The regulation will also need to set out additional guidelines on the required grantor identifier where the grantor does not fit into either the natural person or the legal person categories (see draft Registry Guide, rec. 26). The issue here is not whether the grantor has the legal capacity to create a security right, but rather how its identifier should be entered in a notice. The following table sets out examples of the types of situation that will need to be addressed, together with examples of possible identifiers. Enacting States will need to consider whether and how to adapt these examples to their context.

| Grantor status | Grantor identifier |
|---|--|
| Insolvency estate acting through an insolvency representative | Name of the insolvent person, entered in accordance with the rules applicable for grantors who are natural or legal persons, as the case may be, with the specification in a separate designated field that the grantor is insolvent |
| Syndicate or joint venture | Name of the syndicate or joint venture as stated in any document constituting it, entered in the field designated for entering the identifier of a legal person |
| Trustee or representative of an estate | Name of the trustee or the representative of the, estate, entered in accordance with the rules applicable for grantors who are natural or legal persons, as the case may be, with the specification in a separate field that the grantor is acting for a trust or is the representative of an estate |
| Other entity | Name of the entity as designated in any document constituting it, entered in accordance with the rules applicable for grantors who are legal persons |

67. In the case of a sole proprietorship, even though the business may be operated under a different business name and style than the name of the proprietor, the regulation should provide that the grantor’s identifier is the name of the proprietor entered in accordance with the rules applicable for grantors who are natural persons. The name of the sole proprietorship is unreliable and usually may be changed at will by the proprietor. While a registrant may enter the name of the sole proprietorship in the notice as an additional grantor, it is the name of the proprietor that is the required identifier.

68. In the above-mentioned table, where the grantor is an insolvency estate acting through an insolvency representative, registrants must, in addition to entering the name of the insolvent person in the appropriate grantor field, also specify in a separate field that the grantor is insolvent. Similarly, where the grantor is a trustee

or representative of an estate, registrants must, in addition to entering the name of the trustee or representative in the grantor field, specify in a separate field that the grantor is acting for a trust or is the representative of an estate. Accordingly, the prescribed form of notice will need to include a separate designated field to for this additional information.

(f) Address of the grantor

69. Under the *Secured Transactions Guide*, the address of the grantor is part of the required content of the notice (see *Secured Transactions Guide*, rec. 57, subpara. (a)). The grantor's address is relevant for the purpose of sending copies of registered notices to the grantor (see *Secured Transactions Guide*, rec. 55, subparas. (c) and (d)). Accordingly, the registrant should enter the current known address of the grantor. The grantor's address is not part of the grantor's identifier in the sense of being a search criterion and the prescribed form of notice should designate a field for entering the grantor's address that is separate from the field designated for entering the grantor's identifier. The regulation should restate and, where necessary, supplement these recommendations.

70. Some States do not require entry of the grantor's address where personal security concerns necessitate that an individual's address details not be disclosed in a publicly accessible record. Where this exception is recognized, the regulation may specify the entry of a post office box or similar non-residential mailing address.

71. The inclusion of the grantor's address in the notice also helps to uniquely identify the grantor in States where many people are likely to share the same common name with the result that a search may disclose multiple security rights granted by different grantors with the same name (see *Secured Transactions Guide*, rec. 59). The grantor's address plays less of a role at this level in systems in which the registrant is required to include additional information designed to uniquely identify the grantor, such as, for example, a birth date or State-issued official identity number (see paras. 59-61 above).

| B. Recommendations 23-29 | |

IV. Registration of initial notices (*continued*)

A. General remarks (*continued*)

2. Secured creditor information

1. The *Secured Transactions Guide* recommends that the identifier of the secured creditor or the secured creditor's representative, along with its address, be included in the notice submitted to the registry (see *Secured Transactions Guide*, rec. 57, subpara. (a)). The regulation should restate and, where necessary, supplement this recommendation (see draft Registry Guide, rec. 27).
2. The regulation should specify that the same identifier rules that apply to the grantor should apply also to the secured creditor or its representative. In this connection, it should be noted that an agent or trustee of a syndicate of lenders would be a representative of the secured creditor if the security right is granted to the syndicate of lenders, but a "secured creditor" if the security right is "granted" (even nominally) to the agent. A third-party service provider, who may submit a notice on behalf of the secured creditor, is neither the secured creditor nor its representative in the sense of the *Secured Transactions Guide*, unless the service provider's name is inserted in the secured creditor field in the registered notice.
3. The identifier of the secured creditor or its representative is not an indexing or search criterion (see A/CN.9/WG.VI/WP.54/Add.2, paras. 21-23, and A/CN.9/WG.VI/WP.54/Add.4, paras. 42-45). Accordingly, the consequences of an incorrect or insufficient statement of the secured creditor identifier are different

from those of an incorrect or insufficient statement of the grantor identifier (see paras. 20-24 below); and, even if the regulation requires additional identifier information to be entered in order to uniquely identify the grantor (for example, birth date or a personal identification number), there is no need to extend this requirement to the secured creditor.

4. The secured creditor identifier that should be entered in the notice may be either that of the actual secured creditor or that of its representative. This approach is intended to facilitate, for example, syndicated lending, since only the identifier of the trustee or agent for the syndicate of lenders need be entered in a notice. It is also intended to protect the privacy of the secured creditor. The rights of the grantor are not affected since the grantor is in a direct relationship with the secured creditor and already knows the secured creditor's identity. The rights of third parties also are not affected as long as the representative identified in the notice as the secured creditor is in fact authorized to act on behalf of the actual secured creditor in any communication or dispute connected to the security right to which the notice relates.

3. Description of encumbered assets

(a) General

5. The *Secured Transactions Guide* recommends that a description of the encumbered assets covered by the security right to which the registration relates should be a required component of an effective notice (see *Secured Transactions Guide*, rec. 57, subpara. (b)). This approach enables third parties dealing with a person's assets (such as prospective secured creditors, buyers, judgement creditors and the insolvency representative of that person) to determine which assets of that person may be encumbered by a security right and which assets may not be encumbered. The *Secured Transactions Guide* also recommends that a description of the encumbered assets should be considered sufficient, for the purposes of both an effective security agreement and an effective registration, as long as it reasonably allows identification of the encumbered assets (see *Secured Transactions Guide*, recs. 14, subpara. (d), and 63). Depending on the nature of the encumbered asset, the description may be specific or generic. For example, if the encumbered asset is one of many paintings owned by the grantor, the description in the notice may specify the title of the painting and the name of the painter in order to sufficiently identify the painting which is intended to be encumbered. On the other hand, if the encumbered assets are generic categories of assets, such as all the inventory of an art gallery, it would be sufficient to describe them generically, for example, as "all of the grantor's paintings", "all of the grantor's works of art" or "all of the grantor's inventory".

6. The regulation should restate and, where necessary, supplement this recommendation (see the draft Registry Guide, rec. 28). In particular, the regulation should explicitly state that the description of encumbered assets in a notice may be specific or generic as long as it reasonably allows their identification. The regulation should also clarify that a description that refers to all assets within a generic category or to all assets of a grantor is assumed to cover future assets within the specified category to which the grantor acquires rights during the duration of effectiveness of the notice.

7. If the prescribed form of notice limits the number of characters that may be entered in the space for describing the encumbered assets and additional space is needed (for example, to identify the encumbered assets in more detail), the registry form should be designed to allow additional information to be provided in an attachment or schedule to the notice. This is generally necessary only where the notice is in paper as opposed to electronic form, since the provision of sufficient space does not pose a practical problem in the latter case.

(b) Description of “serial number” assets

8. As already mentioned (see A/CN.9/WG.VI/WP./Add.2, paras. 24-27), the secured transactions laws of some States adopt supplementary asset-based indexing and searching for specified classes of high-value assets that have a significant resale market. In legal systems that adopt this approach, entry of the serial number in its own designated field is required in the sense of being necessary to achieve third-party effectiveness and priority as against specified classes of third parties that acquire rights in the asset.

9. The *Secured Transactions Guide* discusses but does not recommend this approach (see *Secured Transactions Guide*, chap. IV, paras. 34-36). Nonetheless, even in systems that do not adopt this approach, if the encumbered assets have a serial number, a registrant may wish to include the serial number in the description it enters in the notice as an economical method of sufficiently identifying the encumbered asset in a manner that reasonably allows their identification (see *Secured Transactions Guide*, recs. 63 and 14, subpara. (d)). For that purpose, the notice form could be designed to allow a registrant to enter the serial number in the form, if the registrant so wishes. However, it should be made clear that entry of the serial number is optional and not a mandatory component of an effective description as long as the description that is entered otherwise sufficiently identifies the asset. In addition, the serial number should not be a legally effective search criterion. Consequently, even if the registry is designed to permit serial number indexing and searching, such a search should be optional and thus a negative search result could not be relied upon.

(c) Description of proceeds

10. The *Secured Transactions Guide* recommends that a security right should automatically extend to any identifiable assets received in respect of the encumbered assets, unless otherwise agreed by the parties to the security agreement (see *Secured Transactions Guide*, Introduction, sect. B, “proceeds”, and rec. 19). Where the security right in the original encumbered assets was made effective against third parties by registration, the question arises as to whether the secured creditor needs to amend the description of the encumbered assets in the initial notice to include a description of the proceeds in order to ensure that its security right in the proceeds also is effective against third parties.

11. When the proceeds consist of cash or other equivalent proceeds (for example, money or a right to payment), the *Secured Transactions Guide* recommends the automatic continuation of the third-party effectiveness of a prior registered security right in the original encumbered assets into the proceeds. The same is true where the proceeds are of a type that is already covered by the description of the original encumbered assets in the registered notice (for example, the description covers

“all tangible assets” and the grantor trades in one item of equipment for another; see *Secured Transactions Guide*, rec. 39).

12. However, where the proceeds are not cash or other equivalent proceeds and are not otherwise encompassed by the description of the encumbered assets in the existing notice, the secured creditor must amend its registration to add a description of the proceeds within a short period of time after the proceeds arise in order to preserve the third-party effectiveness and priority of its security right in the proceeds from the date of the initial registration (see *Secured Transactions Guide*, rec. 40). An amendment is necessary because a third party otherwise would not be able to identify which categories of asset in the grantor’s possession constitute the relevant proceeds.

(d) Description of encumbered attachments to immovable property

13. As already discussed (see A/CN.9/WG.VI/WP.54/Add.1, paras. 21-23), like any other type of encumbered asset, a tangible asset that is or will become an attachment to immovable property needs to be described in a notice registered in the general security rights registry in a manner that reasonably allows its identification (see *Secured Transactions Guide*, recs. 14, subpara. (d), and 63). While a generic description of the asset may be sufficient for this purpose, the registrant may also need to register in the immovable property registry in order to ensure that its security right is effective against third parties that acquire and register a right in the relevant immovable property. In an immovable property registry, registrations are normally indexed or otherwise organized by reference to the specific immovable property as opposed to the identifier of the grantor. Thus, if the notice is to be capable of also being registered in the immovable property registry, the description of the asset in the notice must describe the specific immovable property. In addition, the rules governing registrations in the immovable property registry may need to be revised to permit the registration of notices and the generic description of encumbered assets (see *Secured Transactions Guide*, chap. III, para. 104). Moreover, if the grantor of the security right in the asset is not the owner of the related immovable property, the notice may also need to identify the owner of the asset if this information is necessary for the indexing of the notice in the immovable property registry.

4. Period of effectiveness of the registration of a notice

14. As already discussed (A/CN.9/WG.VI/WP.54/Add.2 paras. 7-15), the secured transactions law of an enacting State may adopt a uniform statutory period of effectiveness for all registrations (option A) or may give registrants the option to self-select the period of effectiveness (option B). In States that adopt this second option, the regulation should specify that an indication of the duration of effectiveness of a registration in the designated field is a mandatory component of the information that must be entered in a registered notice (see *Secured Transactions Guide*, rec. 69, and draft Registry Guide, recs. 13 and 23, subpara. (a)(iv)). If the enacting State imposes a maximum limit on the registrant’s right to self-select the period of effectiveness of the notice (option C), the registry should be designed so as to prevent a registrant from entering a period that exceeds the maximum limit.

5. Maximum amount for which the security right may be enforced

15. The *Secured Transactions Guide* recognizes that some States may require the maximum monetary amount for which the security right may be enforced to be specified in the security agreement and the registered notice (see *Secured Transactions Guide*, chap. IV, paras. 92-97, and recs. rec. 14, subpara. (d), and 57, subpara. (d)). The *Secured Transactions Guide*, however, does not leave room for this requirement to be used as a pretext to impose a tax on secured transactions. The registry fees, if any, should be set at a level no higher than necessary to permit cost recovery (see *Secured Transactions Guide*, rec. 54, subpara. (i), and draft Registry Guide, rec. 36).

16. The aim of this approach is illustrated by the following example. An enterprise has an asset with an estimated market value of \$100,000. The enterprise applies for a line of credit facility to a maximum amount of \$50,000 (including capital, interest and costs). The creditor is willing to extend the loan on the condition that it obtains a security right in the asset. The grantor is agreeable but since the maximum loan amount specified in the security agreement and in the notice is \$50,000 and the asset has a value of \$100,000, the grantor wishes to preserve the ability to obtain another secured loan from a subsequent creditor relying on the residual value of the asset. Ordinarily, the first-to-register priority rule may deter this subsequent creditor from giving a loan for fear that the first secured creditor may later extend loans beyond the initial \$50,000 for which it would have priority under the general first-to-register rule. By imposing a requirement to specify the maximum value for which the security right may be enforced, the subsequent creditor can be assured that the first-registered secured creditor cannot enforce its security right for an amount greater than \$50,000, leaving the residual value available to satisfy its own claim should the grantor default.

17. The *Secured Transactions Guide* recognizes that an equally valid approach is to not require the maximum amount to be included in the security agreement and the registered notice. This approach is based on the assumptions that: (a) the first-registered secured creditor is either the optimal long-term financing source or will be more likely to extend financing, especially to small, start-up businesses, if it knows that it will retain its priority with respect to any financing it may provide to the grantor in the future; (b) in any event, the grantor will not have sufficient bargaining power to require the first-registered secured creditor to enter a realistic maximum amount in the notice (instead the secured creditor will insist that an inflated amount be included to cover all possible future extensions of credit and the grantor will not usually be in a position to refuse); and (c) a subsequent creditor to whom the grantor applies for financing may be able to negotiate a subordination agreement with the first-registered security creditor for credit extended on the basis of the current amount of residual value in the encumbered asset.

18. Thus, the *Secured Transactions Guide* acknowledges that both approaches have merit and recommends that the secured transactions law of an enacting State should adopt the policy that is most consistent with efficient financing and credit market practices in that State. In States that adopt the first approach, the regulation would need to include a rule requiring the registrant to enter the maximum amount and the relevant currency in the designated field in the registered notice (see draft Registry Guide, rec. 23, subpara. (a)(v); for the consequences of entering a different maximum amount in the registered notice than the maximum amount actually

agreed to in the security agreement, see paras. 32-35 below). In States that adopt the second approach, there is no need to address the issue further in the regulation.

19. It should be emphasized that in States that adopt the first approach, the *Secured Transactions Guide* does not leave room for an enacting State to base its registration fees on an ascending scale linked to the maximum amount set out in the notice. Registry fees must be set at a level no higher than necessary to permit cost recovery (see *Secured Transactions Guide*, rec. 54, subpara. (i), and draft Registry Guide, rec. 36).

6. Effect of errors or omissions on the effectiveness of the registration of a notice

(a) Grantor information

20. The *Secured Transactions Guide* recommends that registration of a notice is effective only if the notice would be retrieved by a searcher of the registry record using the correct identifier of the grantor (see *Secured Transactions Guide*, chap. IV, paras. 66-77, and rec. 58). The regulation should restate this recommendation (see draft Registry Guide, rec. 29, subpara. (a)). Subject to the last sentence of this recommendation, it follows that an error in the grantor's identifier submitted by the registrant will render the registration of a notice ineffective, with the result that the third-party effectiveness of the security right would not be achieved. It does not matter that the error may seem minor or trivial in the abstract. The sole test is whether the error would cause the information in the registry record not to be retrieved by a searcher using the grantor's correct identifier as the search criterion.

21. The test is an objective one in the sense that the registration will be ineffective to achieve third-party effectiveness even if a competing claimant that challenges the effectiveness of the registration: (a) knew that a security right existed and the notice that related to it contained errors; and (b) did not suffer any personal prejudice as a result of the notice not being retrievable (for example, where the third-party searcher is the grantor's insolvency representative).

22. The *Secured Transactions Guide* does not include a recommendation as to the impact on the effectiveness of a registration of an error in the address of the grantor or in any additional grantor information (for example, the grantor's birth date or identification number) that the enacting State permits or requires to be included in order to more uniquely identify the grantor (for the discussion on additional grantor information, see A/CN.9/WG.VI/WP.54/Add.2, paras. 59-61 and 69-71). Like the identifier and address of the secured creditor, this type of information does not constitute a search criterion. Accordingly, by analogy to the test recommended in the *Secured Transactions Guide* for errors in the entry of secured creditor information (see *Secured Transactions Guide*, rec. 64), the regulation should specify that an error in the grantor's address or any required additional grantor information does not render the registration of a notice ineffective unless it would seriously mislead a reasonable searcher (see draft Registry Guide, rec. 29, subpara. (b)). For example, if the search result discloses numerous grantors, all having the same name as the person in whom the searcher is interested, but the error in the grantor's address or in any required additional grantor information is so acute as to cause a reasonable searcher to believe that none of the notices refer to the relevant grantor, the registration would be found to be ineffective.

23. The *Secured Transactions Guide* does not deal explicitly with the situation where a notice lists more than one grantor but an error occurs in the identifier of only one of the grantors listed in the notice. In this case, by analogy to the recommendation of the *Secured Transactions Guide* with respect to an error in the description of only some of the encumbered assets (see *Secured Transactions Guide*, rec. 65), the regulation should provide that the error does not render the registered notice ineffective with respect to the other grantors that were sufficiently identified (see draft Registry Guide, rec. 29, subpara. (c)).

(b) Secured creditor information

24. As the identifier of the secured creditor is not an indexing or search criterion (A/CN.9/WG.VI/WP.54/Add.2, para. 22), the *Secured Transactions Guide* recommends that an error by the registrant in the identifier or address of the secured creditor or its representative renders the registration ineffective only if it would seriously mislead a reasonable searcher (see *Secured Transactions Guide*, rec. 64). For example, if the actual secured creditor is Bank A, and a search of the registry record according to the identifier of the grantor returns a result that names Bank B as the secured creditor, the registered notice would generally still be effective, since a search result would still disclose the potential existence of a security right given by the named grantor. However, searchers rely on the identifier and address information of the secured creditor in the registry record for the purposes of sending notices under the secured transactions law. Consequently, a secured creditor may find itself disadvantaged if the secured creditor information that it entered is inaccurate. For example, the *Secured Transactions Guide* recommends that a notice of an extrajudicial disposition of an encumbered asset must be sent to all other secured creditors that have registered notices relating to the same grantor and the same encumbered assets (see *Secured Transactions Guide*, recs. 149-151). A secured creditor whose information is inaccurate risks not receiving the notice of extrajudicial disposition. In addition, the person named in the registered notice as grantor needs to be able to rely on this information to submit a written request to the secured creditor for the cancellation or the amendment of the notice where the registration was not authorized by the grantor (*Secured Transactions Guide*, rec. 72, subpara. (a), and A/CN.9/WG.VI/WP.54/Add.4, paras. [...]).

(c) Description of encumbered assets

(i) General

25. Under the *Secured Transactions Guide*, if a registrant fails altogether to describe an encumbered asset in a registered notice, the third-party effectiveness of the security right in the omitted asset will not be achieved (see *Secured Transactions Guide*, rec. 63). Where the description is merely erroneous, the error renders the registration of the notice ineffective only if the error would seriously mislead a reasonable searcher (see *Secured Transactions Guide*, rec. 64). Even if encumbered assets are omitted or the description is seriously misleading, the registration is ineffective only with respect to the omitted or erroneously described assets and not with respect to other assets that were sufficiently described (see *Secured Transactions Guide*, rec. 65). The regulation should include provisions corresponding to these recommendations (see draft Registry Guide, rec. 29, subparas. (b) and (c)).

(ii) *Serial number assets*

26. As already mentioned (see para. 8 above), encumbered assets that have a serial number asset may at the discretion of the registrant be described in a notice by reference to the serial number and the type of asset to allow them to be sufficiently identified (see *Secured Transactions Guide*, recs. 63 and 14, subpara. (d)). An error in the serial number or type of asset should be treated in the same way as any other error in the description. Accordingly, a minor error should not render the registration ineffective unless the error would seriously mislead a reasonable searcher (see *Secured Transactions Guide*, rec. 64 and draft Registry Guide, rec. 29, subpara. (b)).

27. Also as already mentioned (see para. 7 above), in some States, the serial number of specified types of asset is required to be entered in a notice in the sense of being necessary to achieve third-party effectiveness and priority as against specified classes of third parties that acquire rights in the asset. In States that adopt this approach, a notice that contained an incorrect serial number would only be effective if it could be retrieved by a search of the registry record under the correct serial number (see *Secured Transactions Guide*, rec. 58). In these States, the regulation will also need to address the consequences of an error in the entry of one but not both the grantor identifier and the serial number. The regulation should provide that both would need to be entered correctly.

(iii) *Period of effectiveness of registration*

28. As already discussed (see para. 14 above), the secured transactions law of an enacting State may allow a registrant to self-select the period of effectiveness of the registration (see options B and C discussed in A/CN.9/WG.VI/WP.54/Add.2, paras. 9-15). If an enacting State adopts this approach, the *Secured Transactions Guide* recommends that an incorrect statement in the registered notice as to the period of effectiveness should not render the registration ineffective except to the extent it seriously misled third parties that relied on the registered notice (see *Secured Transactions Guide*, rec. 66). The regulation should include a corresponding recommendation (see draft Registry Guide, rec. 29, subpara. (e)).

29. In addressing how third-party reliance may arise with respect to an error in entering the period of effectiveness of a registration, it is necessary to distinguish two situations (see *Secured Transactions Guide*, chap. IV, paras. 89-91). The first situation is where the error consists in entering too long a period. In this case, third-party searchers would not be prejudiced as they still would have been alerted to the fact that a security right might exist. The second situation is where the error consists in entering too short a period. In this case, the registration will lapse at the end of the specified period and the security right will no longer be effective against third parties, unless it was made effective prior to the lapse by some other method (see *Secured Transactions Guide*, rec. 46). As already mentioned, while the secured creditor can re-establish third-party effectiveness by registering a new notice, its security right will take effect against third parties only from the time of the new registration becoming effective (see *Secured Transactions Guide*, recs. 47 and 96).

30. Similarly, in determining what sort of error in the statement of the maximum amount is likely to cause detrimental reliance by third parties, two situations should be distinguished (see *Secured Transactions Guide*, chap. IV, paras. 96 and 97). Where the registrant enters in the registered notice by mistake an amount higher

than the amount specified in the security agreement, third parties are unlikely to be prejudiced since their decision to advance funds to the grantor normally will be based on the amount specified in the registered notice; and the grantor would be entitled to compel the secured creditor to amend the registered notice to reflect the amount specified in the security agreement. In the contrary case where the maximum amount specified in the notice is lower than the amount indicated in the security agreement, a third-party financier that searched the public registry record and extended credit to the grantor in reliance on the record could be prejudiced. Accordingly, if there are competing claimants, the secured creditor should be able to enforce its security right only up to the amount specified in the registered notice. If there are no competing claimants (in other words, there is no third-party reliance and prejudice), the secured creditor should be able to enforce its security right up to the amount specified in the security agreement.

31. It should be noted that (unlike situations covered by rec. 29, subpara. (b), where the test has to be objective; see para. 21 above), in this instance, the test whether the error is seriously misleading is subjective. A third party that challenges the notice on the basis of the error will need to show that it was actually seriously misled by the error. A subjective test is appropriate here since the purpose of requiring the maximum amount to be inserted is to ensure that the grantor can seek additional financing on the basis of the residual value of assets already encumbered by a security right without the third-party financier having to worry about the value of its security right (see *Secured Transactions Guide*, chap. IV, para. 96).

(iv) *Maximum monetary amount and impact of error*

32. For States that elect to require the maximum amount for which the security right may be enforced to be entered in the notice, the *Secured Transactions Guide* recommends that an incorrect statement in the registered notice of the maximum amount should not render the notice ineffective except to the extent it seriously misled third parties that relied on the registered notice (see *Secured Transactions Guide*, rec. 66). The regulation should include a corresponding recommendation (see draft Registry Guide, rec. 27, subpara. (e)).

33. As in the case of an error in the entry of the period of effectiveness of a registration (see para. 31 above), the test for whether the error is seriously misleading is subjective. A third party that challenges the notice on the basis of the error must show that it was actually seriously misled by the error. A subjective test is appropriate here since the purpose of requiring the maximum amount to be inserted is to ensure that the grantor can seek additional financing on the basis of the residual value of assets already encumbered by a security right without the third-party financier having to worry about a loss of priority to the first secured creditor (see *Secured Transactions Guide*, chap. IV, para. 96).

34. Thus, where the maximum amount indicated in the notice is greater than the maximum amount agreed to in the security agreement, a subsequent secured creditor generally would not be prejudiced since its decision to advance funds normally will be based on the amount indicated in the notice. The grantor would also be protected in this situation since it could request the secured creditor or, if the secured creditor failed to act in a timely manner, a judicial or administrative body through a summary proceeding, to amend the notice to correct the amount so that the grantor

can obtain financing against the residual value of the encumbered asset (see *Secured Transactions Guide*, rec. 72).

35. However, where the maximum amount indicated in the notice is less than the maximum amount agreed to in the security agreement, a subsequent secured creditor may have advanced credit on the assumption that it could enforce its security right against any residual value in the asset in excess of the amount indicated in the notice. Similarly, a buyer may have purchased the encumbered asset on the understanding that the secured creditor's right in it was limited to the value indicated in the notice. In addition, a judgement creditor may have initiated enforcement action in the belief that the excess value of the asset above that stated in the notice would be available to satisfy its judgement claim. Accordingly, the secured creditor in all these cases should be entitled to enforce its security right as against the third party only up to the maximum amount erroneously stated in the registered notice. It should be noted that the secured creditor can never, in any event, enforce its security right for an amount greater than that which is actually owed to it.

B. Recommendations 23-29

[Note to the Working Group: The Working Group may wish to consider recommendations 23-29, as reproduced in document A/CN.9/WG.VI/WP.54/Add.5. The Working Group may also wish to note that, for reasons of economy, the recommendations are not inserted in here at this stage but will be inserted in the final text.]

V. Registration of amendment and cancellation notices

A. General remarks

1. Amendment notices

(a) General

1. A registrant may wish to amend the information in a registered notice for a variety of reasons, for example, to correct an error in a previous registered notice or to update the registration information as a result of subsequent events. This is done by submitting an amendment notice to the registry. The regulation should make it clear that the registrant is responsible for entering the information in relation to the

amendment in the manner required by the regulation for entering information of that kind in an initial notice (see draft Registry Guide, recs. 19 and 30).

2. The registry system should be designed to ensure that the registration of an amendment notice does not have the effect of deleting or replacing registration information contained in the initial notice and any previously registered amendment notices. Instead, the information in the amendment notice should be added to the existing registration information so that a search result will show the initial notice and all subsequently registered amendment notices.

3. A secured creditor should be able to register an amendment notice, to the extent appropriate, at any time (see *Secured Transactions Guide*, rec. 73). Some amendments require the grantor's authorization (such as, for example, an amendment to reflect the addition of new encumbered assets or a new grantor, or, if required by the secured transactions law of the enacting State, an increase in the amount for which a security right to which the registration relates may be enforced. Other amendments do not require the grantor's authorization (such as, for example, an amendment to reflect a subsequent change in the grantor's identifier, an assignment of the secured obligation, a voluntary subordination of the priority of the security right to which the registration relates, a change of address of the secured creditor or its representative, or an amendment to reflect a transferee of an encumbered asset from the grantor as an additional grantor. In any event, as noted earlier, to the extent the grantor's authorization is needed, it may be given before or after the registration of a notice, and a written security agreement constitutes sufficient authorization (see *Secured Transactions Guide*, rec. 71 and A/CN.9/WG.VI/WP.54/Add.1, para. 60). Accordingly, where the amendment relates, for example, to the addition of new encumbered assets or a new grantor, the completion of a written security agreement covering the new assets or with the new grantor will itself constitute authorization.

4. To effect an amendment, a registrant must provide in the designated fields in the amendment notice the registration number of the initial notice to which the amendment relates, and the relevant amendment information (see draft Registry Guide, rec. 30, subpara. (a)). As in the case with an initial notice, each amendment notice should be assigned by the registry the date and time when the information in the notice was entered into the registry database so as to be available to searchers of the public registry record (see draft Registry Guide, rec. 12, and A/CN.9/WG.VI/WP.54/Add.2, paras. 1-6). The enacting State may wish to consider whether the registry system and the prescribed form of amendment notice should be designed to allow the registrant to amend only a single item of information in an amendment notice (e.g., change the grantor's identifier) or to allow multiple items to be amended with a single amendment notice (e.g., add a new grantor and delete some encumbered assets). The latter approach is recommended as it is simpler and more cost-efficient (see draft Registry Guide, rec. 30, subpara. (f)).

5. The following paragraphs discuss the various reasons why a secured creditor may wish to register an amendment notice and the legal implications of registration or failure to register.

(b) Subsequent change of the grantor's name

6. A change in the name of the grantor indicated in a registered notice (for example, as a result of a merger) may undermine the publicity function of registration from the perspective of third parties that deal with the grantor after its name has changed. As the grantor's name is the principal indexing and search criterion, a search using the grantor's new name will not retrieve the notice. In a registry system that uses a State-issued permanent and unique identity or other official number as the grantor's identifier for the purposes of indexing and searching registered notices, it is less likely that this problem will arise since the number is typically permanent and not subject to change. However, under the approach recommended in the *Secured Transactions Guide*, the name of the grantor is the principal indexing and search criterion; an identity number may be required as additional identifier if necessary to uniquely identify the grantor but it is not an indexing or search criterion (see *Secured Transactions Guide*, recs. 58-60, A/CN.9/WG.VI/WP.54/Add.2, paras. 59 and 60, and paras. 42-45 below).

7. To address this problem, the regulation and the prescribed form of amendment notice should make it possible for the secured creditor to register an amendment notice to add the grantor's new name. While failure to submit an amendment notice should not make the security right generally or retroactively ineffective against third parties, third parties that deal with the grantor after the change in its name and before the amendment notice is registered should be protected. Accordingly, the *Secured Transactions Guide* recommends that, if the secured creditor does not register the amendment notice within a specified short "grace period" (for example, fifteen days) after the name has changed, its security right is ineffective against buyers, lessees, licensees and other secured creditors that acquire rights in the encumbered asset after the change in the grantor's name and before the amendment is registered (see *Secured Transactions Guide*, rec. 61). The *Secured Transactions Guide* also recommends that the grace period should begin to run from the date of the change of the name (some States provide it begins only from the date when the secured creditor acquired knowledge of the change). The secured transactions law of the enacting State should also provide guidance on what constitutes a change of name in the context, in particular, of corporate amalgamations and the effect of not making an amendment in the wake of the amalgamation.

8. As already noted (see para. 2 above), the registry system should be designed to ensure that the registration of an amendment notice does not have the effect of deleting or replacing registration information contained in the initial notice and any previously registered amendment notices. As a result, a search using either the old or the new name of the grantor as the search criterion would retrieve the registration. It is thus important for the registrant to understand that it should enter the grantor's new name in the field designated in the amendment notice for adding the identifier of an additional grantor, without also deleting the old grantor information. Otherwise, a search of the registry record according to the grantor's old name would not retrieve the registration, potentially prejudicing the effectiveness of the security right against third parties that dealt with the grantor prior to the change of name and that would, therefore, likely conduct their search using the grantor's name at that time.

(c) Transfer of an encumbered asset

9. When the grantor transfers, leases or licences an encumbered asset, the transferee, lessee or licensee will ordinarily acquire its right in the asset subject to the security right assuming it has been made effective against third parties (see *Secured Transactions Guide*, rec. 79). If the security right was made effective against third parties by registration, this creates a problem analogous to a post-registration change in the name of the grantor discussed above. Third parties that deal with the encumbered asset in the hands of the transferee, lessee or licensee typically will search the registry record using the name of the transferee, lessee or licensee as the search criterion. That search will not retrieve the registered notice since it was registered and indexed according to the name of the grantor (the transferor, lessor or licensor). To protect third parties that deal with the encumbered asset in the hands of the transferee, lessee or licensee, the registry system and the regulation should enable the secured creditor to submit an amendment notice to record the name and address of the transferee, lessee or licensee as a new additional grantor.

10. The *Secured Transactions Guide* recommends that an enacting State should address the legal implications of the failure of a secured creditor to register an amendment notice in this scenario, but leaves it to each enacting State to decide which of the three approaches discussed in the commentary it should adopt (see *Secured Transactions Guide* chap. IV, paras. 78-80, and rec. 62).

11. The first approach is analogous to that recommended by the *Secured Transactions Guide* to a change in the name of the grantor (see *Secured Transactions Guide*, rec. 61, and paras. 6-8 above). Under this approach, failure to amend the registration to add the transferee, lessee or licensee as a new additional grantor does not make the security right ineffective against third parties generally. However, if the secured creditor does not register the amendment notice within a short “grace period” (for example, fifteen days), its security right is ineffective against buyers, lessees, licensees and secured creditors that acquire rights in the encumbered asset after it was transferred, leased or licensed and before the amendment notice was registered. The second approach is similar subject to the important caveat that the grace period to register the amendment notice begins to run only when the secured creditor acquires knowledge that the grantor has transferred, leased or licensed the encumbered asset. The third approach is different in that registration of the amendment notice is purely optional in the sense that failure to register does not affect the third-party effectiveness or priority of the security right to which the registration relates (see *Secured Transactions Guide*, chap. IV, paras. 78-80).

12. Regardless of which approach an enacting State adopts, it should include in its regulation a provision enabling a secured creditor to register an amendment notice to add a transferee, lessee or licensee of the grantor as an additional grantor (see draft Registry Guide, rec. 30, subpara. (c)). That is to say, even if the enacting State adopts the third optional approach, a secured creditor should be able to register an amendment of this kind, if it wishes to do so. Registration would provide a measure of practical protection against the risk that the transferee, lessee, or licensee will dispose of the encumbered asset to a new transferee whose whereabouts may not be traceable. Registration would also reduce the risk of disputes as lenders to the transferee, lessee or licensee would be on notice. The registrant should understand

that it should enter the name and address of the transferee, lessee or licensee in the fields designated in the amendment notice for adding a new grantor, without deleting the original grantor information. Otherwise, a search of the registry record according to the grantor's name would not retrieve the registration, potentially prejudicing the effectiveness of the security right against third parties that dealt with the grantor before the encumbered asset was transferred, leased or licensed and that would, therefore, likely conduct their search using the grantor's name.

(d) Subordination of priority

13. Under the *Secured Transactions Guide*, a secured creditor with priority may at any time subordinate its priority unilaterally or by agreement in favour of any other existing or future competing claimant (see *Secured Transactions Guide*, rec. 94). Subordination affects only the rights of the subordinating secured creditor and the beneficiary of the subordination. Accordingly, the registry should be designed to accommodate the registration of an amendment notice to disclose a subordination. However, registration should be purely optional in the sense that an amendment would not be needed to preserve the third-party effectiveness or priority (or subordination of priority) of the security right to which the registration relates.

(e) Assignment of the secured obligation and transfer of the security right

14. A secured creditor may assign the secured obligation. As in most legal systems, the *Secured Transactions Guide* recommends that, as an accessory right, the security right follows the secured obligation, with the result that the assignee of the obligation in effect will be the new secured creditor (see *Secured Transactions Guide*, recs. 25 and 48 that are based on article 10 of the United Nations Convention on the Assignment of Receivables in International Trade). Under the approach recommended in the *Secured Transactions Guide*, an amendment to the initial notice to add the assignee as a new secured creditor is not required in the sense of it being necessary to preserve the effectiveness of the registration (see *Secured Transactions Guide*, rec. 75). As the identifier of the secured creditor is not an indexing and search criterion, searchers will not be seriously misled by the change.

15. While registration of an amendment notice is optional, failure to register may be disadvantageous for the new secured creditor (assignee). As noted earlier, searchers rely on the secured creditor information in registered notices for the purposes of sending various communications under the secured transactions law (such as the notice of an extrajudicial disposition of an encumbered asset which a secured creditor is required to send to other secured creditors that have registered a notice relating to the same grantor and the same encumbered assets; see *Secured Transactions Guide*, recs. 149-151). If the assignee is not added as a new secured creditor, it will not receive notices of this kind directly and will be dependent on the original secured creditor (assignor) to forward them to it.

(f) Addition of new encumbered assets

16. A secured creditor may wish to register an amendment notice to add new encumbered assets to the description contained in a previously registered notice for a variety of reasons. For example, the grantor may have agreed to grant a security right in additional assets after the prior notice was registered or the secured creditor may have inadvertently omitted to include an encumbered asset in the previously

registered notice. To accommodate this possibility, the registry system should enable the secured creditor to amend the description of encumbered assets in a previously registered notice to add new assets. While the secured creditor could achieve the same result by registering a new initial notice with respect to the new assets, the registration of an amendment notice would typically be more efficient and would ensure that the duration of the effectiveness of the registration is the same for both the original and the additional assets. Regardless of which method is chosen, the security right in the new encumbered assets becomes effective against third parties only as of the time the amendment notice or the new notice as the case may be is entered into the registry record so as to be available to searchers (see *Secured Transactions Guide*, rec. 70). The reason for this approach is that a search of the registry record by third parties prior to registration of the amendment notice or the new notice would not disclose that the new encumbered assets were potentially subject to a security right.

(g) Deletion of encumbered assets

17. The secured creditor may wish or be required to register an amendment notice to delete encumbered assets from the description in the initial notice for a variety of reasons. For example, the grantor may have paid a portion of the obligation secured by the related security right on condition that the security right be extinguished against specified assets; or the description in the initial notice may have been overly broad and the grantor may have issued a demand to the secured creditor to amend the initial notice to reflect the true scope of the encumbered assets (as to the obligation of the secured creditor to amend a registered notice in the latter scenario, see paras. 38-41 below). Accordingly, the registry system should be designed to accommodate the registration of an amendment notice to delete specific assets that have been described in a previously registered notice as encumbered assets.

(h) Other changes to the description of encumbered assets

18. A registrant may wish to register an amendment notice to correct an error in the description of the encumbered assets contained in a previously registered notice. The amendment notice would normally take effect with respect to the assets to which it relates only as of the date it is entered into the registry record so as to be available to searchers unless the error is minor and the original description would have allowed the reasonable identification of the encumbered assets even if the amendment notice had not been registered (see *Secured Transactions Guide*, rec. 63).

19. A secured creditor may also wish to amend the description of the encumbered assets contained in a previously registered notice as a result of subsequent changes to the encumbered assets described in that previously registered notice. For instance, the previously registered notice may have described the encumbered assets as “all cherry wood furniture” but subsequent to its registration the grantor may have painted the furniture in green; or, in the previously registered notice, the encumbered assets may have been described as all inventory located at a specified address and the inventory may have since been relocated to a new address. Since the description in the previously registered notice no longer corresponds to the reality, the secured creditor may wish to submit an amendment notice to update the description. Generally, an amendment is not required in the sense of being necessary

to preserve the third-party effectiveness of the security right to which the registration relates. Searchers are expected to understand that aspects of the description of an encumbered asset in a previously registered notice may change as a result of post-registration events and that they may, therefore, need to make further inquiries. Accordingly, where an amendment notice of this kind is registered, the effective date of registration with respect to the encumbered assets to which it relates generally remains the date of registration of the prior notice containing the original description, provided that the description was current as of that time.

(i) Extension of the period of effectiveness of a registration

20. The *Secured Transactions Guide* recommends that a secured creditor should be able to extend the period of effectiveness of a registered notice by the registration of an amendment notice at any time before the expiry of its period of effectiveness (see *Secured Transactions Guide*, rec. 69). If the registration of a new notice were instead required, this would undermine the secured creditor's priority status and the continuity of the third-party effectiveness of its security right, since the new notice would take effect against third parties only from the time of its registration.

21. As already discussed (see A/CN.9/WG.VI/WP.54/Add.2, paras. 7-15), there are several approaches that States can take with respect to the period of effectiveness of the registration of a notice. In States where the period of effectiveness of the registration of a notice is established by law (option A), the registry system should be designed so that the registration of the amendment notice would automatically extend the period of effectiveness of the registration for an equivalent period. In States that permit the registrant to self-select the period of effectiveness (option B), the prescribed form of amendment notice should permit the registrant to likewise self-select the length of the extension period. Thus, a registrant who, for example, selected a five year term for the initial registered notice should be allowed to select a different period for the extension. In States that permit the registrant to self-select the period of effectiveness subject to a maximum limit (option C), the registry system should be designed to prevent a registrant from entering a period that exceeds the maximum limit.

(j) Global amendment of secured creditor information

22. The identifier or address, or both, of a secured creditor may change as a result of a merger, sale or other post-registration event. To enable the secured creditor information in all notices associated with that secured creditor to be efficiently amended, the registry system should be designed to allow a global amendment to be made either by registry staff at the request of the secured creditor or by the secured creditor directly (see draft Registry Guide, rec. 31; for the protection of the secured creditor against unauthorized or fraudulent amendments, see paras. 28-37 below).

2. Cancellation notices

23. As in the case of an amendment, the *Secured Transactions Guide* recommends that a secured creditor should be able to register a cancellation notice at any time (*Secured Transactions Guide*, rec. 73). A cancellation should not require authorization by the grantor, as it has no effect or only a beneficial effect on the grantor. As already mentioned, unlike an amendment, registration of a cancellation notice results in the removal of all registered notices to which it relates from the

public registry record. Information thus removed is archived for a long period of time in a manner that enables it to be retrieved by the registry staff (see A/CN.9/WG.VI/WP.54/Add.2, paras. 44 and 45, and draft Registry Guide, rec. 21).

24. To facilitate the registration process, the only information that the registrant should be required to enter in the designated field on the cancellation notice is the registration number assigned to the initial notice by the registry and permanently associated with that notice and any related subsequent notices (see draft Registry Guide, rec. 32; for authorization of a cancellation notice by the secured creditors, see paras. 28-37 below).

3. Effect of inadvertent expiration or cancellation of a registered notice

25. In the event that a secured creditor inadvertently fails to extend the period of effectiveness of a registration before it expires or inadvertently registers a cancellation notice, the secured creditor may register a new initial notice. However, the *Secured Transactions Guide* recommends that the third-party effectiveness and priority status of the security right to which the new notice relates should date only from the time of its registration (see *Secured Transactions Guide*, rec. 47). Accordingly, the secured creditor will suffer a loss of priority as against competing claimants whose rights became effective against third parties prior to the expiration or cancellation, including competing secured creditors against whom it previously had priority under the first-to-register rule (see *Secured Transactions Guide*, chap. V, paras. 132-134, and rec. 96). The policy underlying this approach is to avoid requiring a third-party searcher to go beyond the registry record in order to determine if a security right ever existed (see *Secured Transactions Guide*, chap. III, para. 123).

26. Some States adopt a more lenient approach. Under this second approach, the secured creditor is given a short grace period after the lapse or cancellation to revive its registration so as to restore the third-party effectiveness and priority status of its security right as of the date of the initial registration. However, to protect intervening third parties, the secured transactions law in States that adopt this approach provides that the security right is ineffective against or subordinate to competing claimants that acquired rights in the encumbered assets or advanced funds to the grantor after the lapse or cancellation and before the new registration. A third approach is the same except that there is no time limitation on when a lapsed or expired registration may be revived subject to the rights of intervening competing claimants (see *Secured Transactions Guide*, chap. III, para. 123).

27. On the one hand, the *Secured Transactions Guide* recognizes that the second and third approaches also protect third-party searchers. On the other hand, the *Secured Transactions Guide* also recognizes that reinstatement may give rise to a complicated “circular priority” dispute where the secured creditor that reinstates thereby regains a priority over a competing secured creditor that existed before the lapse or cancellation, but not over a third competing secured creditor that has entered the picture in the period between the lapse or cancellation and the reinstatement. In addition, adoption of either of these two approaches requires the registry system to be configured to enable revival of or a reference to the original registration on the reinstatement notice. To avoid these complications and in the interest of providing a clear and efficient registration and priority regime, the

Secured Transactions Guide recommends that a lapsed or cancelled registration can be revived only by registration of a new notice with the result that the related security right takes effect against competing claimants only from the date of its registration forward (see *Secured Transactions Guide*, chap. III, paras. 124-127, and rec. 47).

4. Effectiveness of amendment or cancellation notices not authorized by the secured creditor

28. As already discussed (see paras. 25-27 above), recommendation 47 of the *Secured Transactions Guide* provides that, where there is a lapse of third-party effectiveness as a result of the expiration of a registration or the registration of a cancellation notice, it can be re-established but only as of the time a new initial notice with respect to the security right is registered. However, recommendation 47 does not seem to deal with the issue of whether third-party effectiveness is lost where the registration of the cancellation notice was not authorized by the secured creditor. Nor does the *Secured Transactions Guide* address this issue in the context of an unauthorized amendment notice, the purported effect of which is equivalent to a cancellation (for example, where the amendment purports to delete an encumbered asset from the description in the initial notice or where it purports to delete a grantor). The balance of the discussion in this section also applies to such amendments as well as to cancellations.

29. In addition, as already discussed (see A/CN.9/WG.VI/WP.54/Add.2, paras. 38-40), recommendation 55, subparagraph (d), of the *Secured Transactions Guide* obligates the registry to send promptly a copy of a registered amendment or cancellation notice to the secured creditor. While the commentary in the *Secured Transactions Guide* explains that the purpose of this obligation is to enable the secured creditor to check the legitimacy of a cancellation or amendment, it does not go on to address the issue of whether an unauthorized cancellation or amendment may nonetheless be relied upon by third party searchers (see *Secured Transactions Guide*, chap. IV, para. 52). Moreover, recommendation 71 of the *Secured Transactions Guide* deals in detail with the issue of authorization in the context of the grantor's authorization for registration of an initial or amendment notice but not with the secured creditor's authorization for registration of an amendment or cancellation notice. Finally, recommendation 74 of the *Secured Transactions Guide*, which provides that cancelled notices are removed from the publicly searchable registry record, may also have a bearing on the effectiveness of the registration of an unauthorized cancellation notice (see paras. 33 and 34 below).

30. Legal systems differ on the approach they take to this question. In some legal systems, registration of an unauthorized amendment or cancellation notice is nonetheless effective with the result that a third-party searcher is entitled to rely on a "clean" search result regardless of the lack of authorization from the secured creditor. The policy underlying this approach is to avoid requiring the third-party searcher to go beyond the registry record in order to determine whether a security right ever existed in the case of a cancellation or whether an amendment purporting to delete an encumbered asset or a grantor was authorized. In these legal systems, the registry system is designed to protect the secured creditor against the risk of fraudulent amendments or cancellations by the grantor or a third party by incorporating an authorization mechanism into the process for registering

amendments and cancellations. For example, each secured creditor is assigned a unique user code which must be entered in all amendment or cancellation notices it submits for registration. If the secured creditor fails to preserve the confidentiality of its access code, it has no basis for a complaint if a third party uses that number to successfully submit an unauthorized cancellation or amendment.

31. An unauthorized amendment or cancellation may also result from the error of a law firm or other third-party service provider employed by the secured creditor to perform registration services on its behalf. For example, the secured creditor may have instructed the service provider to amend one notice and to cancel another and the service provider mistakenly cancels the wrong notice. In systems that adopt this first approach, the secured creditor bears the risk of third-party error in this scenario and is expected to either seek indemnity from the third-party service provider or to obtain insurance. As noted earlier, some legal systems that adopt the first approach also adopt a “fail safe” mechanism that provides secured creditors with the opportunity to reinstate a registered notice that was cancelled erroneously or without authority. Under this approach, the reinstatement restores the third-party effectiveness of the relevant security right as of the date of registration of the initial notice as against third parties other than third parties that acquire a right in the encumbered asset during the period after registration of the cancellation notice and before the reinstatement notice is registered. Some legal systems extend a similar approach to erroneous or unauthorized amendments in addition to cancellations.

32. In other legal systems, registration of an amendment or cancellation notice is not effective if it was not authorized by the secured creditor. The reason for this approach is that, in these legal systems, anybody may register an amendment or cancellation notice upon payment of the relevant fees. In open access registry systems of this kind it is thought that protecting a secured creditor that has properly registered an initial notice against the greater risk of unauthorized or fraudulent amendments and cancellations outweighs the need to ensure that the registry record can be fully relied upon by third parties. Legal systems that adopt this second approach also place the risk of unauthorized registrations by a law firm or other third-party service provider employed by the secured creditor on third-party searchers. The question of “authorization” in this scenario would typically be based on the State’s general law with respect to the power of agents and representatives to bind their principals. Third-party searchers under this second approach cannot rely fully on the registry record. This, however, does not mean that third-party searchers are not protected. It is assumed that prudent third-party searchers will protect themselves by contacting the secured creditor to verify whether the amendment or cancellation was authorized. In cases where the secured creditor fails or refuses to respond, these legal systems usually build in a procedure for compelling the secured creditor to respond.

33. In legal systems that adopt the second approach, all registered notices remain on the public registry record until they would have expired in the absence of a cancellation, notwithstanding the registration of a cancellation notice. Thus, searchers are expected to obtain direct confirmation from the secured creditor that the cancellation notice was authorized. In the registry system contemplated by the draft Registry Guide (see recs. 20 and 21), in line with the *Secured Transactions Guide* (see chap. IV, para. 109, and rec. 74), notices must be removed from the public registry record once a cancellation notice is registered. Consequently, in the

case of an unauthorized cancellation, if the second approach were adopted, searchers could not protect themselves by contacting the secured creditor to determine if the registration of the cancellation notice was authorized. Since the information in the registered notices to which the cancellation notice referred would have been archived, they would have no means of verifying by a search of the public registry record whether a security right may have historically existed in the relevant encumbered asset and, if so, the identity of the secured creditor.

34. On the other hand, the *Secured Transactions Guide* does not explicitly address the question of whether the registry is obligated to archive a notice where the registration of the cancellation notice was not authorized by the secured creditor. Recommendation 74 provides that the registry should “remove” information contained in a registered notice from the public registry record, if the registered notice “has been cancelled as provided in recommendation 72 or 73”. Those two recommendations provide for cancellation where no security right has been created, the security right has been extinguished or the registered notice has not been authorized by the grantor. Thus, it may be argued that the registry is not obligated to archive the relevant related notices where the registration of a cancellation notice was not authorized by the secured creditor.

35. Consequently, it would seem that it would not be inconsistent with the *Secured Transactions Guide* if an enacting State that adopted the second approach provided that the registry was not obligated to archive the information in registered notices in the event the secured creditor did not authorize the registration of a cancellation notice. However, in an open access system of the kind contemplated by the second approach, the registry has no means of verifying whether the registration of the cancellation notice was authorized. While the registry could simply not archive any registered notices despite registration of a cancellation notice, this would be contrary to recommendation 74 of the *Secured Transactions Guide*. Accordingly, to be consistent with recommendation 74, implementation of this second approach would require the registry system to modify the open access approach by building into the registration process for cancellation notices some mechanism for verifying whether the secured creditor has authorized the registration. It should be noted that it would not be sufficient for the registry simply to assign the secured creditor a secure access code for the purposes of registering cancellations. This would not catch cancellation notices erroneously submitted by a third-party service provider with whom the secured creditor had shared the access code for the purposes of performing registrations on its behalf. Some additional verification by the registry would be needed to ensure that the cancellation notice has been directly authorized by the secured creditor. Alternatively, the secured transactions law could specify that, where a cancellation notice that contains the secured creditor’s access code is registered, the registration is deemed to have been authorized by the secured creditor.

36. It should finally be noted that, if the second approach is adopted, the registry system also would need to be designed to retrieve a registered notice according to the name of the grantor even where an amendment notice has been registered purporting to delete that grantor. Otherwise, the notice would not be retrieved on a search result and third parties would not know that they need to contact the secured creditor or take other steps to determine whether the deletion was authorized by the secured creditor.

37. An enacting State alternatively might consider a third compromise approach under which a searcher who in fact relied on the registry record would be protected despite the lack of authorization for the registration for an amendment or cancellation, but the related security right would otherwise remain effective against other third parties. This third approach would protect a buyer or secured creditor that entered into a transaction with the grantor in reliance on a “clean” search result. However, the lack of authority for the registration could still be raised by the secured creditor as against third parties such as, for example, the grantor’s insolvency representative, who did not in fact rely on the registry record in the sense of entering into a particular transaction on the assumption that, because a cancellation or amendment notice had been registered, the relevant asset was unencumbered.

5. Compulsory amendment or cancellation

38. As already discussed (see A/CN.9/WG.VI/WP.54/Add.2, paras. 16-18), the *Secured Transactions Guide* permits a registration to be made before the security right to which it relates is created or any security agreement is concluded between the parties (see *Secured Transactions Guide*, rec. 67). If the negotiations are aborted after the notice is registered, or for some other reason no security agreement is ever entered into between the parties, the creditworthiness of the person named as the grantor in a registered notice may be adversely affected. The same is true where a security agreement has been entered into between the secured creditor and grantor named in a registered notice, but their secured financing arrangement has come to a final end or some of the information in the registered notice exceeds the scope of the grantor’s authorization for registration (for example, the description of the encumbered assets in the registered notice is broader than that authorized by the grantor in the security agreement). Accordingly, the *Secured Transactions Guide* recommends that the secured creditor should be legally obligated to register the necessary cancellation or amendment notice, as the case may be. In the event that the secured creditor fails to do so, the *Secured Transactions Guide* further recommends that the grantor should be entitled to send a formal demand to the secured creditor and that the enacting State should establish a summary judicial or administrative procedure to compel cancellation or amendment if the secured creditor fails to act on the request (see *Secured Transactions Guide*, rec. 72).

39. To implement these recommendations, the secured transactions law or the regulation of the enacting State should provide that a secured creditor is obliged to register an amendment or cancellation notice, as the case may be, where: (a) the registration of an initial or amendment notice has not been authorized by the grantor at all or to the extent described in the notice; (b) authorization has been withdrawn and no security agreement has been concluded; (c) the security agreement has been revised in a way that makes the information contained in the registered notice inaccurate; or (d) the security right to which the registered notice relates has been extinguished by payment or otherwise and there is no commitment to extend further credit (see draft Registry Guide, rec. 33, subpara. (a)).

40. If the secured creditor does not comply with that obligation on its own, the secured transactions law or the regulation should provide that the secured creditor must register the relevant amendment or cancellation notice within a short period of time after receiving a written request from the grantor (see *Secured Transactions*

Guide, rec. 72, subpara. (a), and draft Registry Guide, rec. 33, subpara. (c)). To address the possibility that the secured creditor neglects or refuses to respond to the grantor's request, the grantor should be entitled to seek an order compelling registration of the cancellation or amendment notice through a speedy and inexpensive judicial or administrative procedure, which should include appropriate safeguards for the secured creditor in the case of an unwarranted demand by the grantor (see *Secured Transactions Guide*, rec. 72, subpara. (b), and draft Registry Guide, rec. 33, subpara. (e)).

41. Depending on the option chosen by an enacting State in its secured transactions law or regulation, a compulsory amendment or cancellation could be registered by the registry staff at the request of either the grantor or a judicial or administrative officer specified by the enacting State. In either case, the relevant judicial or administrative order should have to be attached to the amendment or cancellation notice presented to the registry (see draft Registry Guide, rec. 33, subpara. (g)).

B. Recommendations 30-33

[Note to the Working Group: The Working Group may wish to consider recommendations 30-33, as reproduced in document A/CN.9/WG.VI/WP.54/Add.5. The Working Group may also wish to note that, for reasons of economy, the recommendations are not inserted here at this stage but will be inserted in the final text.]

VI. Search criteria and search results

A. General remarks

1. Search criteria

42. As already explained (A/CN.9/WG.VI/WP.54/Add.2, paras. 21-23), under the approach recommended in the *Secured Transactions Guide*, information in the registry record must be indexed or otherwise organized so as to be searchable by reference to the identifier of the grantor. Accordingly, the regulation should provide that the identifier of the grantor is the principal criterion by which registration information may be searched and retrieved (see draft Registry Guide, rec. 34, subpara. (a)).

43. The registry should be designed to also allow notices to be searched and retrieved by reference to the unique registration number assigned by the registry to the initial notice and permanently associated with that notice and any related subsequent notices (see draft Registry Guide, rec. 34, subpara. (b)). This approach would give registrants an alternative search criterion to quickly and efficiently retrieve a registration for the purposes of entering an amendment or cancellation. Accordingly, the regulation should provide that the registration number assigned to an initial notice is an alternative search criterion (see draft Registry Guide, rec. 34, subpara. (b)).

44. As already discussed (see A/CN.9/WG.VI/WP.54/Add.2, paras. 24-27), some States require the serial number of specified kinds of high value encumbered assets to be entered in an initial notice in order for the related security right to be effective against or have priority over certain types of competing claimants. The *Secured Transactions Guide* discusses but makes no recommendation with respect to this approach (see *Secured Transactions Guide*, chap. IV, paras. 34-36). If an enacting State decides to implement this approach, the regulation should provide guidance on what constitutes the correct serial number for the specified categories of serial numbered assets, and include that number as an alternative search criterion.

45. As already mentioned (see para. 22 above), a secured creditor should be able, either directly or through the registry staff to efficiently amend its identifier or address information in all registrations associated with that secured creditor through a single global amendment. However, the identifier of the secured creditor should not be a search criterion for searching by the public generally. The identifier of the secured creditor has limited relevance to the legal objectives of the registry system. Moreover, to allow public searching may violate the reasonable expectations of secured creditors; for example, because of the risk that a credit provider may undertake a search based on the secured creditor identifier to obtain the client lists of its competitors (see *Secured Transactions Guide*, chap. IV, para. 81).

2. Search results

46. The regulation should provide that a search result should either indicate that no registered notice was retrieved against the search criterion entered in the search request or include the registration information in all registered notices that match that criterion (see draft Registry Guide, rec. 35, subpara. (a)). A searcher may rely on the accuracy of a search result only if the searcher entered the correct grantor identifier or other search criterion in its search request (see draft Registry Guide, rec. 35, subpara. (b)).

47. As already noted (see A/CN.9/WG.VI/WP.54/Add.3, paras. 20-23), registration of a notice is effective only if the notice would be retrieved by a search of the registry record by a searcher using the correct identifier of the grantor as the search criterion. Some registry systems are designed to retrieve registrations only if the grantor identifier that was entered in a registered notice exactly matches the grantor identifier that was submitted by the searcher. Where registered notices are stored in an electronic database, some systems program the search logic so as to also retrieve registered notices that contain a grantor identifier that closely matches the grantor identifier entered by the searcher in the search request.

48. In a registry system that is designed to retrieve both exact and close matches, a registration may be considered effective even though the registrant made a minor error in entering the correct grantor identifier if the search in fact retrieves a registration with a minor error (see A/CN.9/WG.VI/WP.54/Add.3, paras. 20 and 21). This is because a search according to the correct grantor identifier may (if the search logic so provides) still retrieve the registration as an inexact but close match. Whether the error would nonetheless make the registration ineffective depends on such factors as whether: (a) a searcher would be able to readily identify the grantor by referring to additional information, such as the grantor's address or any additional information that the enacting State may require to be entered such as the grantor's birth date or identification number; and (b) the list of inexact matches

is not so lengthy as to prevent the searcher from reasonably determining whether the grantor which it is interested in is included in the list.

49. In deciding whether search results should also disclose close matches, enacting States should take into account that, while the close-match system may protect the registrant against some minor errors in entering the grantor identifier, it creates greater uncertainty for searchers. As a result, such a close-match system may require recourse to the courts to determine whether a searcher in the particular circumstances should have reasonably realized that a search result that included registrations in which the grantor's identifier is a close match referred to the relevant grantor. Accordingly, the regulation should provide that search results should reflect information in registered notices in which the grantor's identifier matches exactly the grantor identifier entered by a searcher. If the registry system is designed to also include information in registered notices in which the grantor's identifier closely matches the grantor identifier entered in the search request, the rules for determining what constitutes a sufficiently close match should be clearly stated (see draft Registry Guide, rec. 35, subpara. (b)). In some States, when a search using the registry's software retrieves a registration with a minor error, that is treated as a sufficiently close match.

50. The regulation should also provide that, upon request by a searcher and payment of the relevant fee, if any, the registry must issue an official search certificate that reflects a search result (see draft Registry Guide, rec. 33, subpara. (c)). In the case of an electronic search, a search certificate may be simply a printed version of the search result. Whether a search certificate is admissible in a court of the enacting State and, if so, its evidentiary value are matters for the procedural law of the enacting State. However, a search certificate should in principle be admissible as presumptive proof of its contents. It would then be up to the party challenging the certificate to provide evidence to the contrary (for example, by showing that the search certificate is a forgery or is an inaccurate or incomplete record of the search result to which it relates).

51. In some registry systems, search results include a "currency date" indicating that the search result only includes information in notices that were registered as of that date (as opposed to the actual date of the search result). "Currency dates" are included in search results in registry systems in which the registration of a notice becomes legally effective at the date and time when the notice is submitted to the registry. The "currency date" is meant to alert searchers to the possibility that a legally effective registration may have been submitted to the registry in the period between the "currency date" and the actual date of the search. As already mentioned (see A/CN.9/WG.VI/WP.54/Add.2, paras. 1-6), the *Secured Transactions Guide* recommends that a registration becomes legally effective only when the information in a notice submitted to the registry has been entered into the registry record so as to be publicly searchable (see *Secured Transactions Guide*, chap. IV, paras. 102-105, and rec. 70). Accordingly, under the registry system contemplated by the *Secured Transactions Guide*, there is no need to include a "currency date" in a search result: the "currency date" is the actual date of the search.

B. Recommendations 34 and 35

[*Note to the Working Group: The Working Group may wish to consider recommendations 34 and 35, as reproduced in document A/CN.9/WG.VI/WP.54/Add.5. The Working Group may also wish to note that, for reasons of economy, the recommendations are not inserted here at this stage but will be inserted in the final text.*]

VII. Registration and search fees

A. General remarks

52. The *Secured Transactions Guide* recommends that registration and search fees should not be used to raise revenue for the enacting State but rather set on a pure cost-recovery basis (see *Secured Transactions Guide*, chap. IV, para. 37, and rec. 54, subpara. (i)). The reason for this approach is that excessive fees and transaction taxes will significantly deter utilization of the registry, thereby undermining the overall success of the enacting State's secured transactions law. In assessing the level of revenue from registry fees needed to achieve cost-recovery, account should be taken not only of the initial start-up costs related to the establishment of a registry but also of the costs necessary to fund its operation, including: (a) salaries of registry staff; (b) upgrades and replacements of hardware and software; (c) ongoing staff training; and (d) promotional activities and training for registry users.

53. Advances in information technology have reduced the difference between the relative start-up costs of establishing an electronic versus a paper-based registry record. In addition, the operation costs associated with an electronic record are lower, especially if the registry system permits registrants and searchers to electronically submit notices and search requests directly without the interposition of registry staff. If the electronic registry record is developed in partnership with a private entity, it may be possible for the private entity to make the initial capital investment in the registry infrastructure and recoup its investment by taking a percentage of the service fees charged to registry users once the registry is up and running.

54. In some States, in the interest of encouraging use of the registry by creditors, charge no fees or very low fees below the cost-recovery level for registration. While this approach may encourage creditors to take and register security rights in low-value and other transactions that might have otherwise been entered into on an unsecured basis, it means that the registry and the benefits it provides to creditors is being subsidized with general taxpayer revenue. In other States, only the registration of a cancellation notice is free of charge so as to encourage secured creditors to promptly register cancellations once the secured financing relationship with the grantor has come to an end. In yet other States, electronic searches (as opposed to registrations) are free of charge.

55. As already discussed (see A/CN.9/WG.VI/WP.54/Add.2. paras. 9 and 10), an enacting State may decide to permit registrants to self-select the period of effectiveness of a registered notice. Enacting States that adopt this approach may

wish to consider whether registration fees should be based on a sliding tariff related to the period of effectiveness selected by the registrant. This approach has the advantage of discouraging secured creditors from entering an inflated term in the registered notice out of an excess of caution.

56. As also already mentioned (A/CN.9/WG.VI/WP.54/Add.3, paras. 15-19), an enacting State may choose to require a registered notice to specify the maximum amount for which a security right may be enforced. In enacting States that adopt this approach, the fees charged by the registry for registration should not be related to the maximum amount specified in the notice since this approach would be contrary to the cost-recovery approach to setting fees recommended by the *Secured Transactions Guide* (see para. 52 above).

57. Any registration and search fees set by the enacting State should be set out in the regulation (see draft Registry Guide, rec. 36). It is for each enacting State to decide whether “the regulation” in this context means a formal regulation or more informal administrative guidelines that the registry can revise. The latter approach would provide greater flexibility to adjust the fees in response to later events such as, for example, the need to reduce the fees once cost of the initial investment has been recouped. However, this approach has the disadvantage that lack of formality may be abused by the registry to unjustifiably adjust the fees upwards.

58. In setting fees in a hybrid paper and electronic registry system, it may be reasonable for the enacting State to decide to charge higher fees to process paper-based notices and search requests because they must be processed by the registry staff, while electronic notices and search requests that are directly submitted to the registry do not require attention from the registry staff. Charging higher fees will also encourage the user community to eventually transition to using the direct electronic registration and search functionalities.

B. Recommendation 36

[Note to the Working Group: The Working Group may wish to consider recommendation 36, as reproduced in document A/CN.9/WG.VI/WP.54/Add.5. The Working Group may also wish to note that, for reasons of economy, this recommendation is not inserted here at this stage but will be inserted in the final text.]

(A/CN.9/WG.VI/WP.54/Add.5) (Original: English)
Note by the Secretariat on a draft Technical Legislative Guide on the
Implementation of a Security Rights Registry, submitted to the
Working Group on Security Interests at its twenty-third session

Annex I

Terminology and recommendations

Terminology*

(a) “Address” means: (i) a physical address, including a street address and number, city, postal code and State; (ii) a post office box number, city, postal code and State; (iii) an electronic address; or (iv) an address that would be effective for communicating information;

(b) “Amendment” means the modification of information contained in a previously registered notice to which the amendment relates;

(c) “Cancellation” means the removal from the public registry record of the information contained in all previously registered notices to which the cancellation relates;

(d) “Designated field” means the space on the prescribed form of notice designated for entering the specified type of information;

* Section B of the Introduction to the *Secured Transactions Guide* on terminology and interpretation applies also to the draft Registry Guide, supplemented by the terminology and interpretation section of the Introduction to the draft Registry Guide.

- (e) “Grantor” means the person identified in the notice as the grantor;
- (f) “Law” means the law of the enacting State governing security rights in movable assets;
- (g) “Notice” means a communication in writing (paper or electronic) to the registry of information with respect to a security right; a notice may be an initial notice, an amendment notice or a cancellation notice;
- (h) “Registrant” means the person who submits a notice to the registry for registration [and may be the secured creditor or a third-party service provider];
- (i) “Registrar” means the person appointed pursuant to the law and the regulation to supervise and administer the operation of the registry;
- (j) “Registration” means the entry of information contained in a notice into the registry [record] [database];
- (k) “Registration number” means a unique number allocated to an initial notice by the registry and permanently associated with that notice and any related notice;
- (l) “Registry record” means the information in all registered notices that is stored electronically in the registry [record] [database] and consists of the record that is publicly accessible (public registry record) and the record that has been removed from the public registry record (registry archives);
- (m) “Regulation” means the body of rules implemented by the enacting State with respect to the registry, whether these rules are found in administrative guidelines or the substantive secured transactions law; and
- (n) “Secured creditor” means the person identified in the notice as the secured creditor [and may be the secured creditor or its representative].

Recommendations

I. Registry and registrar

Recommendation 1. Establishment of the registry

The regulation should provide that the registry is established for the purposes of receiving, storing and making accessible to the public information in registered notices with respect to security rights in movable assets.

Recommendation 2. Appointment of the registrar

The regulation should provide that [the person authorized by the enacting State or by the law of the enacting State] appoints the registrar, determines the registrar’s duties and monitors the registrar’s performance.

Recommendation 3. Functions of the registry

The regulation should provide that the functions of the registry include:

- (a) Providing access to the registry services in accordance with recommendations 4, 6, 7 and 9;
- (b) Publicizing the means of access to registry services, and the opening days and hours of any office of the registry in accordance with recommendation 5;
- (c) Providing the grounds for rejection of the registration of a notice or the performance of a search in accordance with recommendations 8 and 10;
- (d) Entering the information contained in a notice submitted to the registry into the registry [record] [database], and recording the date and time of each registration, in accordance with recommendation 11, and assigning a registration number to the initial notice in accordance with recommendation 12;
- (e) Indexing or otherwise organizing the information in the registry record so as to make it searchable in accordance with recommendation 16;
- (f) Providing registrants and secured creditors with a copy of the registered notice in accordance with recommendation 18;
- (g) Entering the information contained in an amendment notice into the registry [record] [database] in accordance with recommendation 19;
- (h) Removing the information contained in a registered notice from the public registry record upon the expiry of its period of effectiveness or registration of a cancellation notice in accordance with recommendation 20;
- (i) Archiving information removed from the public registry record in accordance with recommendation 21; and
- (j) Protecting the integrity of the information in the registry record in accordance with recommendation 17, subparagraph (b).

II. Access to the registry services**Recommendation 4. Public access to registry services**

The regulation should provide that any person may submit a notice or a search request to the registry [in accordance with recommendations 6 and 9].

[Note to the Working Group: To assist the reader in understanding the inter-relationship between recommendation 4, on the one hand, and recommendations 6 and 9, on the other, and to avoid inadvertently creating an inconsistency between them, the Working Group may wish to consider retaining the bracketed text.]

Recommendation 5. Operating days and hours of the registry

The regulation should provide that:

- (a) If access to registry services is provided through a physical office:
 - (i) Each office of the registry is open to the public during [the days and hours to be specified by the enacting State]; and
 - (ii) Information about any registry office locations and their opening days and hours is publicized on the registry's website, if any, or otherwise widely publicized, and the opening days and hours of registry offices are posted at each office;
- (b) If access to registry services is provided through electronic means of communication, access is available at all times; and
- (c) Notwithstanding subparagraphs (a) and (b) of this recommendation:
 - (i) The registry may suspend access to registry services in whole or in part for a period of time that is as short as practicable; and
 - (ii) Notification of the suspension and its expected duration is published in advance when feasible and otherwise as soon thereafter as reasonably practicable on the registry's website, if any, or otherwise widely publicized, and, if the registry provides access to its services through physical offices, the notification is posted at each office.

Recommendation 6. Access to registration services

The regulation should provide that any person may submit a[n initial] notice for registration if that person:

- (a) Uses the form prescribed by the registry;
- (b) Provides [information about] its identity in the manner prescribed by the registry; and
- (c) Has paid, or made arrangements to pay, to the satisfaction of the registry any fee prescribed by the registry.

[Note to the Working Group: The Working Group may wish to consider retaining: (a) the bracketed text in the chapeau as "notice" covers also amendment and cancellation notice and registry procedures may impose certain limitations (for example, require entry of a security code assigned to the registrant of the initial notice) on who may register an amendment or cancellation notice; and (b) the bracketed word in subparagraph (b), in view of the fact that a person provides information (e.g. a copy of a document) but not its identity as such, or alternative wording along the lines "identifies itself" or "establishes its identity" as long it is explained that no verification of identity beyond what is foreseen in recommendation 7 is required.]

Recommendation 7. Verification of identity, evidence of authorization or scrutiny of the contents of the notice not required

The regulation should provide that:

- (a) The registry maintains [information about] the identity of the registrant but does not require its verification;
- (b) The registry does not require evidence of the existence of authorization for registration of a notice; and
- (c) The registry does not conduct other scrutiny of the content of the notice. In particular, it is not the responsibility of the registry to ensure that information entered in a designated field is complete, accurate and legally sufficient.

[Note to the Working Group: In considering the bracketed text in subparagraph (a) of this recommendation, the Working Group may wish to note that the reference to the registry maintaining information would mean preserving in its records the information submitted by the registrant as to its identity (e.g. a copy of an identity card or a driver's licence or a record of the pertinent information on these documents).]

Recommendation 8. Rejection of the registration of a notice

The regulation should provide that:

- (a) The registry may reject the registration of a notice submitted to it for registration if the registrant failed to enter information in all the required designated fields or if the information entered is not legible; and
- (b) The registry provides the grounds for the rejection of the registration of a notice submitted to the registry as soon as practicable.

[Note to the Working Group: The Working Group may wish to note that the commentary explains that, in the case of an electronic registry, the wording "as soon as practicable" should mean "almost immediately", while, in the case of a registry in which the submission of paper notices is possible, the wording will mean "as soon as possible under the circumstances".]

Recommendation 9. Access to searching services

The regulation should provide that any person may submit a search request, if that person:

- (a) Uses the form prescribed by the registry; and
- (b) Has paid, or made arrangements to pay, to the satisfaction of the registry any fee prescribed by the registry.

Recommendation 10. Rejection of a search request

The regulation should provide that:

- (a) The registry may reject a search request if it fails to provide a search criterion in a legible manner; and

(b) The registry provides the grounds for the rejection of a search request as soon as practicable.

III. Registration

Recommendation 11. Time of effectiveness of the registration of a notice

The regulation should provide that:

(a) The registration of a notice is effective from the date and time when the information in the notice is entered into the registry [record] [database] so as to be accessible to searchers of the public registry record;

(b) The registry maintains a record of the date and time when each notice is entered into the registry [record] [database] so as to be accessible to searchers of the public registry record; and

(c) The registry enters into the registry [record] [database] and indexes or otherwise organizes information in a notice submitted to the registry for registration so as to make it accessible to searchers of the public registry record as soon as practicable or within [a short period of time to be specified by the enacting State] and in the order in which the notice was submitted to the registry.

[Note to the Working Group: The Working Group may wish to note that, in subparagraph (c) of this recommendation, the words “as soon as practicable” replaced the word “immediately”, as: (a) even, in the case of an electronic registry, registered notices would become searchable almost immediately; and (b) for consistency with the wording of recommendation 8, subparagraph (b). If the Working Group decides to retain this new wording, it may wish to include in the commentary an explanation along the lines of the explanation in the note to recommendation 8 and delete the alternative wording (“or within ...”).]

Recommendation 12. Registration number

The regulation should provide that the registry assigns a unique registration number to an initial notice [and that all notices related to that initial notice are assigned the same number].

[Note to the Working Group: The Working Group may wish to retain the bracketed text. While it appears repeating the thrust of the text used in the explanation of this term in the terminology, this may be necessary (or useful): (a) as the text has the form of a guide and the terminology is part of the commentary (not regulations with definitions); and (b) even if the text had the form of regulations with definitions, a distinction would need to be drawn between definitions and operative rules.]

Recommendation 13. Period of effectiveness of the registration of a notice

The regulation should provide that:

Option A

(a) The registration of an initial notice is effective for [the enacting State to insert the period of time specified in its law];

(b) The period of effectiveness may be extended for [an additional period of time specified in the law of the enacting State] at any time before it expires. The new period starts when the current period expires; and

[(c) An amendment notice other than an amendment notice referred to in subparagraph (b) of this recommendation does not extend the period of effectiveness.]

Option B

(a) The registration of an initial notice is effective for the period of time indicated in the designated field in the notice;

(b) The period of effectiveness may be extended or reduced for the period of time indicated in an amendment notice at any time before it expires. In the case of an extension, the new period starts when the current period expires; and

[(c) An amendment notice other than an amendment notice referred to in subparagraph (b) of this recommendation does not extend the period of effectiveness.]

Option C

(a) The registration of an initial notice is effective for the period of time indicated in the designated field in the notice, not exceeding [a long period of time, such as, for example, twenty years, to be specified by the enacting State].

(b) The period of effectiveness may be extended or reduced for the period of time indicated in an amendment notice not exceeding [a long period of time, such as, for example, twenty years, to be specified by the enacting State] at any time before the period of effectiveness of the registration expires. In the case of an extension, the new period starts when the current period expires.

[(c) An amendment notice other than an amendment notice referred to in subparagraph (b) of this recommendation does not extend the period of effectiveness.]

[Note to the Working Group: The Working Group may wish to note that the commentary explains that only an amendment notice that extends the period of effectiveness has that effect. Other amendment notices (e.g. modifying the description of the encumbered assets) do not extend the period of effectiveness. In view of that, the Working Group may wish to consider that subparagraph (c) in all three options is superfluous as stating the obvious that is, in any case, explained in the commentary. The Working Group may also wish to consider whether subparagraph (c) should state instead (or in addition, if current paragraph (c) is retained), in line with rec. 11, that an amendment notice becomes effective as of the time it is entered into the registry record so as to be accessible to searchers.]

Recommendation 14. Time when a notice may be registered

The regulation should provide that a[n initial or amendment] notice may be registered before or after the creation of the security right or the conclusion of the security agreement.

[Note to the Working Group: The Working Group may wish to consider retaining the bracketed text in the title and the text of this recommendation, as an initial or an amendment notice may be pre-registered. If the negotiations do not lead to an agreement, a cancellation notice must be registered anyway.]

Recommendation 15. Sufficiency of a single notice

The regulation should provide that the registration of a single notice is sufficient to achieve the third-party effectiveness of one or more than one security right created by the grantor in favour of the same secured creditor in the encumbered asset described in the notice, whether they exist at the time of registration or are created thereafter, and whether they arise from one or more than one security agreement between the same parties.

Recommendation 16. Indexing or other organization of information in the registry record

The regulation should provide that:

(a) The registry indexes or otherwise organizes information in an initial notice in the public registry record so as to make it searchable [by a searcher] according to the grantor identifier or the registration number assigned to the initial notice;

(b) The registry indexes or otherwise organizes information in an amendment notice in the public registry record so as to make it searchable [by a searcher] together with the initial and any related notice; and

(c) The registry indexes or otherwise organizes information in a cancellation notice in the registry archives so as to make it retrievable [by the registry] in accordance with recommendation 21 together with the initial and any related notice.

[Note to the Working Group: The Working Group may wish to consider retaining text along the lines of the bracketed text to avoid creating the implication that a searcher may have access to archived information.]

Recommendation 17. Integrity of the registry record

The regulation should provide that:

(a) Except as provided in recommendations 19 and 20, the registry does not amend information in or remove information from the registry record; and

(b) The registry protects the registry record from loss or damage, and provides for back-up mechanisms to allow reconstruction of the registry record.

[Note to the Working Group: The Working Group may wish to note that subparagraph (b) has been added to implement a decision of the Working Group (A/CN.9/764, para. 31). The Working Group may also wish to note that the commentary explains that this recommendation is intended to implement

recommendation 55, subparagraph (l), of the Secured Transactions Guide and is not intended to deal with liability which is a matter addressed in recommendation 56. The commentary also explains that the registry should be able to reconstruct information other than information in registered notices (e.g. accounts, user names, passwords, etc.).

Recommendation 18. Copy of registered notice

The regulation should provide that:

(a) The registry promptly transmits a copy of a registered notice to each secured creditor at the address set forth in the notice, indicating the date and time when the registration of the notice became effective and the registration number; and

(b) The secured creditor sends a copy of an initial notice to each grantor at the address set forth in the notice and a copy of an amendment notice to each grantor at the address set forth in the notice or at the current address known to the secured creditor within [a short period of time, such as thirty days, to be specified by the enacting State] after the secured creditor has received a copy of the registered notice.

Recommendation 19. Amendment of information in the public registry record

The regulation should provide that:

(a) Information in a registered notice may be amended by the secured creditor through the registration of an amendment notice in accordance with recommendation 30, 31 or 33; and

(b) The registration of an amendment notice does not result in the removal of information from the public registry record.

[Note to the Working Group: The Working Group may wish to note that the commentary explains that the grantor's consent is required for the following amendments: adding encumbered assets and increasing the amount of the secured obligation or, where applicable, the maximum amount for which the security right may be enforced. The commentary also explains that, as with the registration of an initial notice, on-record evidence of the grantor's authorization is not a pre-condition to registration of an amendment notice, and the grantor's authorization may be given before or after the registration either in the security agreement or in another off-record agreement. If authorization was not obtained, the grantor may seek the registration of an amendment notice through a summary judicial or administrative proceeding (see draft Registry Guide, rec. 33). The commentary also discusses the effectiveness of the registration of an amendment notice that was not authorized by the secured creditor but resulted from fraud or other misconduct by a third party (see A/CN.9/WG.VI/WP.54/Add.4, paras. 28-37). The Working Group may wish to consider whether it is sufficient to discuss this matter in the commentary or whether it should be addressed in a recommendation to be included in the draft Registry Guide.]

Recommendation 20. Removal of information from the public registry record

The regulation should provide that information in a registered notice is removed from the public registry record upon the expiry of its period of effectiveness or upon registration of a cancellation notice in accordance with recommendation 32 or 33.

Recommendation 21. Archival of information removed from the public registry record

The regulation should provide that information removed from the public registry record in accordance with recommendation 20 is archived for a period of at least [a long period of time, such as, for example, twenty years, to be specified by the enacting State] in a manner that enables the information to be retrieved in accordance with recommendation 16.

Recommendation 22. Language of a notice

The regulation should provide that:

- (a) The information in a notice should be expressed in [the language or languages to be specified by the enacting State]; and
- (b) The registry should specify and make publicly available the character set to be used.

IV. Registration of initial notices**Recommendation 23. Information required in an initial notice**

The regulation should provide that:

- (a) An initial notice must contain the following information in the designated field:
 - (i) The identifier of the grantor determined in accordance with recommendations 24-26, the address of the grantor [and any other information to be specified by the enacting State to assist in uniquely identifying the grantor];
 - (ii) The identifier of the secured creditor or its representative determined in accordance with recommendation 27 and the address of the grantor or its representative;
 - (iii) A description of the encumbered assets determined in accordance with recommendations 28 and 29;
 - [(iv) The period of effectiveness of the registration determined in accordance with recommendation 11;¹ and

¹ If the enacting State has chosen option B or C in recommendation 11 (see *Secured Transactions Guide*, rec. 69).

(v) The maximum monetary amount for which the security right may be enforced];² and

(b) If there is more than one grantor or secured creditor, the required information must be entered in the designated field separately for each grantor or secured creditor, either in the same notice or in separate notices.

Recommendation 24. Grantor identifier (natural person)

The regulation should provide that, if the grantor is a natural person:

(a) The grantor identifier is the name of the grantor;

(b) Where the grantor's name includes a family name and a given name, the name of the grantor consists of the grantor's family name and the grantor's given name, and each component of the name must be entered in the designated field for that component;

(c) Where the grantor's given name or family name consist of more than one word, the given name and the family name of the grantor consist of those words and they must be entered in the designated fields for the given and the family names;

(d) Where the grantor's name consists of only one word, the name of the grantor consists of that word and it must be entered in the designated field for the family name;

(e) The name of the grantor is determined as follows:

(i) If the grantor was born and the grantor's birth was registered in [the enacting State to insert its name] with a government agency responsible for the registration of births, the name of the grantor is the name as stated in the grantor's birth certificate or equivalent document issued by the government agency;

(ii) If the grantor was born but the grantor's birth was not registered in [the enacting State to insert its name], the name of the grantor is the name as stated in a valid passport issued to the grantor by [the enacting State to insert its name];

(iii) If neither subparagraph (e) (i) nor subparagraph (e) (ii) of this recommendation applies, the name of the grantor is the name as stated in [the enacting State should specify the type of official document, such as an identification card or driver's licence, issued to the grantor by the enacting State, that it considers the most appropriate source of the name to be used, and their hierarchical order];

(iv) If neither subparagraph (e)(i), nor subparagraph (e)(ii), nor subparagraph (e)(iii) of this recommendation applies but the grantor is a citizen of [the enacting State to insert its name], the name of the grantor is the name as stated in the grantor's certificate of citizenship;

(v) If neither subparagraph (e)(i), nor subparagraph (e)(ii), nor subparagraph (e)(iii), nor subparagraph (e)(iv) of this recommendation applies,

² If the secured transactions law of the enacting State requires it (see *Secured Transactions Guide*, rec. 57, subpara. (d)).

the name of the grantor is the name as stated in a valid passport issued by the State of which the grantor is a citizen and, if the grantor does not have a valid passport, the name of the grantor is the name as stated in the birth certificate or equivalent document issued to the grantor by the government agency responsible for the registration of births at the place where the grantor was born;

(vi) In a case not falling within subparagraphs (e) (i) to (v) of this recommendation, the name of the grantor is the name as stated in any two of the following valid official documents [the enacting State to specify documents other than the ones specified in subparagraph (e) (iii) of this recommendation, such as a social security, health insurance or tax card, issued to the grantor by the enacting State, and their hierarchical order].

Recommendation 25. Grantor identifier (legal person)

The regulation should provide that, if the grantor is a legal person, the grantor identifier is the name of the grantor that is specified as its name in the most recent [document, law or decree to be specified by the enacting State] constituting the legal person.

[Recommendation 26. Grantor identifier (special cases)]

The regulation should provide that:

(a) If the encumbered assets are subject to insolvency proceedings, the grantor identifier is the name of the insolvent person determined in accordance with recommendation 24 or 25, with the specification in a separate field that the grantor is in insolvency proceedings;

(b) If the grantor is a syndicate or joint venture, the grantor identifier is the name of the syndicate or joint venture designated in the most recent [document, law or decree to be specified by the enacting State] constituting it determined in accordance with recommendation 24 or 25;

(c) [If the grantor is a trust or an estate, the grantor identifier is the name of the trust or the estate determined in accordance with recommendation 24 or 25, with the specification in a separate field that the grantor is a trust or estate.]

(d) If the grantor is an entity other than one already referred to in the preceding rules, the grantor identifier is the name of the entity as designated in the most recent [document, law or decree to be specified by the enacting State] constituting it determined in accordance with recommendation 24 or 25.]

[Note to the Working Group: The Working Group may wish to note that, the commentary explains that this recommendation appears within square brackets to indicate that its goal is to set out examples of special cases for enacting States to select and adapt to their own laws, as the treatment of these cases may differ from State to State. The Working Group may wish to consider referring instead in subparagraph (a) to a grantor that is subject to insolvency proceedings and the security right is created by the insolvency representative. The current text would apply even to security rights created by the grantor before commencement of insolvency proceedings and would appear requiring an amendment of the registered notice to indicate that the grantor is in insolvency proceedings. The Working Group

may wish to consider whether subparagraph (d) is necessary. It states the obvious as it provides that, in all other cases, the general rule stated in recommendation 24 or 25 applies.]

Recommendation 27. Secured creditor identifier

The regulation should provide that:

- (a) If the secured creditor or its representative is a natural person, the identifier is the name of the secured creditor or its representative determined in accordance with recommendation 24;
- (b) If the secured creditor or its representative is a legal person, the identifier is the name of the secured creditor or its representative determined in accordance with recommendation 25; and
- (c) If the secured creditor or its representative is a kind of person referred to in recommendation 26, the identifier is the name of the person determined in accordance with recommendation 26.

Recommendation 28. Description of encumbered assets

The regulation should provide that:

- (a) The encumbered assets must be described in the designated field of the notice in a manner that reasonably allows their identification;
- (b) Unless otherwise provided in the law, a generic description that refers to all assets within a category of movable assets includes all of the grantor's present and future assets within the specified category; and
- (c) Unless otherwise provided in the law, a generic description that refers to the grantor's movable assets includes all of the grantor's present and future movable assets.

Recommendation 29. Incorrect or insufficient information

The regulation should provide that:

- (a) The registration of an initial notice, or an amendment notice that amends the grantor's identifier or adds a grantor, is effective if the notice provides the grantor's correct identifier as set forth in recommendations 24-26 or, in the case of an incorrect identifier, if the notice would be retrieved by a search of the public registry record using the grantor's correct identifier;
- (b) Except as provided in subparagraph (a) of this recommendation, an incorrect or insufficient statement of the information required in a notice does not render the registration ineffective, unless the incorrect or insufficient statement would seriously mislead a reasonable searcher;
- (c) An incorrect identifier of a grantor in a notice does not render the registration ineffective with respect to other grantors correctly identified in the notice;

(d) An insufficient description of encumbered assets in a notice does not render the registration ineffective with respect to other encumbered assets sufficiently described in the notice; and

(e) An incorrect statement in a notice with respect to the period of effectiveness of the registration and the maximum amount for which the security right may be enforced does not render the registration ineffective, except to the extent that it seriously misled third parties that relied on the registered notice.

[Note to the Working Group: The Working Group may wish to consider whether paragraph (a) of this recommendation should refer to a search by the registry's standard search logic. In theory, a grantor identifier could always be found if enough wild cards were used. Alternatively, this matter might be explained in the commentary.]

V. Registration of amendment and cancellation notices

Recommendation 30. Information required in an amendment notice

The regulation should provide that:

(a) An amendment notice must contain the following information in the designated field:

(i) The registration number of the initial notice to which the amendment relates; and

(ii) If information is to be modified, the additional information in the manner provided for entering that kind of information in an initial notice in accordance with recommendation 23;

(b) An amendment notice that discloses a change in the grantor identifier must indicate the new grantor identifier in accordance with recommendations 24-26;³

(c) An amendment notice that discloses a transfer of all of the encumbered assets must indicate the identifier and address of the transferee as a grantor in accordance with recommendations 24-26;

(d) An amendment notice that discloses a transfer that relates to only part of the encumbered assets must indicate the identifier and address of the transferee as a grantor in accordance with recommendations 24-26 and describe the part of the encumbered assets transferred in accordance with recommendation 28;

(e) An amendment notice that discloses an assignment of the secured obligation must indicate the identifier and address of the assignee as a secured creditor in accordance with recommendation 27 and, in the case of a partial

³ This type of amendment is mandatory in the sense that the *Secured Transactions Guide* recommends that, if the secured creditor does not register the amendment notice within a specified short "grace period" (for example, 15 days) after the grantor's identifier has changed, its security right is ineffective against buyers, lessees, licensees and other secured creditors that acquire rights in the encumbered asset after the change in the grantor identifier and before the amendment is registered (see *Secured Transactions Guide*, rec. 61).

assignment, describe in the designated field the encumbered assets to which the partial assignment relates; and

(f) An amendment notice may relate to one or multiple items of information in a notice.

Recommendation 31. Global amendment of secured creditor information in multiple notices

Option A

The regulation should provide that a secured creditor named in multiple registered notices may amend the secured creditor information in all these notices with a single global amendment.

Option B

The regulation should provide that a secured creditor named in multiple registered notices may request the registry to amend the secured creditor information in all these notices with a single global amendment.

Recommendation 32. Information required in a cancellation notice

The regulation should provide that a cancellation notice must contain in the designated field the registration number of the notice to which the cancellation relates.

Recommendation 33. Compulsory amendment or cancellation

The regulation should provide that:

(a) The secured creditor is obligated to register an amendment or cancellation notice, as the case may be, if:

(i) The registration of an initial or amendment notice has not been authorized by the grantor at all or to the extent described in the notice;

(ii) The registration of an initial or amendment notice has been authorized by the grantor but the authorization has been withdrawn or no security agreement has been concluded;

(iii) The security agreement has been revised in a way that makes the information contained in the notice incorrect or insufficient; or

(iv) The security right to which the notice relates has been extinguished by payment or other performance of the secured obligation or otherwise and there is no further commitment by the secured creditor to extend credit;

(b) In the case of subparagraph (a)(ii) to (a)(iv) of this recommendation, the secured creditor may charge any fee agreed upon with the grantor;

(c) Not later than [a short period of time, such as fifteen days, to be specified by the enacting State] after receipt of a written request from the grantor, the secured creditor is obliged to comply with its obligation under subparagraph (a) of this recommendation;

(d) Notwithstanding subparagraph (b) of this recommendation, no further fee or expense may be charged or accepted by the secured creditor if it complies with a written request from the grantor in accordance with subparagraph (c) of this recommendation;

(e) If the secured creditor does not comply within the time period provided in subparagraph (c) of this recommendation, the grantor is entitled to seek an amendment or cancellation, as the case may be, through a summary judicial or administrative procedure;

(f) The grantor is entitled to seek an amendment or cancellation, as the case may be, through a summary judicial or administrative procedure even before expiry of the period stated in subparagraph (c) of this recommendation, provided that there are appropriate mechanisms to protect the secured creditor; and

(g) The amendment or cancellation notice in accordance with this recommendation is registered by

Option A

the registry promptly upon receipt of the notice with the relevant judicial or administrative order attached.

Option B

a judicial or administrative officer promptly upon issuance of the relevant judicial or administrative order with a copy thereof attached.

[Note to the Working Group: The Working Group may wish to note that the commentary explains that the security right may be extinguished in different ways, including performance, settlement, enforcement, set off, avoidance of the security agreement in insolvency or avoidance of the security agreement for other reason (e.g. illegality).]

VI. Searches

Recommendation 34. Search criteria

The regulation should provide that the criterion by which a search of the public registry record may be conducted is:

- (a) The grantor identifier; or
- (b) The registration number.

Recommendation 35. Search results

The regulation should provide that:

- (a) The registry provides a search result that indicates the date and time when the search was performed and either sets forth all information in each registered notice that matches the specified search criterion or indicates that no registered notice matched the search criterion;

(b) A search result reflects information in the public registry record that matches exactly the search criterion except [in cases, in which a search result may reflect information in the public registry record that closely matches the search criterion and the rules (search logic) used by the registry to determine what constitutes a close match, to be specified by the enacting State];

(c) Upon request made by searcher, the registry issues an official search certificate indicating the search result.

[Note to the Working Group: The Working Group may wish to note that the commentary sets out examples of rules for determining what constitutes a close match.]

VII. Fees

Recommendation 36. Fees for registry services

The regulation should provide that:

Option A

(a) [Subject to subparagraph (b) of this recommendation,] the following fees are payable for registry services:

- (i) Registrations:
 - a. Paper-based [...];
 - b. Electronic [...];
- (ii) Searches:
 - a. Paper-based [...];
 - b. Electronic [...];
- (iii) Certificates:
 - a. Paper-based [...];
 - b. Electronic;

(b) The registry may enter into an agreement with a person that satisfies all registry terms and conditions and establish a registry user account to facilitate the payment of fees.

Option B

The [administrative authority specified by the enacting State] may determine the fees and methods of payment for the purposes of the regulations by decree.

Option C

The [registry] [search] [electronic search] services are free of charge.

(A/CN.9/WG.VI/WP.54/Add.6) (Original: English)
Note by the Secretariat on a draft Technical Legislative Guide on the
Implementation of a Security Rights Registry, submitted to the
Working Group on Security Interests at its twenty-third session

ADDENDUM

Annex II, Examples of Registry Forms

Note by the Secretariat

Addendum

The Working Group may wish to consider the examples of registry forms contained in this note. The examples are presented as annex II of the draft Technical Legislative Guide on the Implementation of a Security Rights Registry, following annex I on terminology and recommendations. The Working Group may wish to consider whether examples of other forms should also be prepared (for example, schedules for entering additional information).

REGISTRY OF SECURITY RIGHTS IN MOVABLE ASSETS

EXAMPLE OF INITIAL NOTICE

(FORM A)

IT IS THE REGISTRANT'S RESPONSIBILITY TO ENSURE THAT ALL REQUIRED INFORMATION IS PROVIDED AND ENTERED IN THE DESIGNATED FIELD OF THE NOTICE IN A LEGIBLE MANNER.

C. DESCRIPTION OF ENCUMBERED ASSETS

1. GENERAL

2. SERIAL NUMBER (OPTIONAL)

[D. PERIOD OF EFFECTIVENESS OF REGISTRATION(dd) (mm) (yyyy)]*³

³ If the enacting State has chosen option B or C in recommendation 13 (see *Secured Transactions Guide*, recommendation 69).

[E. MAXIMUM AMOUNT FOR WHICH SECURITY RIGHT IS ENFORCEABLE]⁴*

F. ADDITIONAL INFORMATION (OPTIONAL)

G. INDICATE IF THE REGISTRATION IS TRANSITIONAL, THE INDEXING CRITERION IN THE PRIOR REGISTRY AND THE DATE AND TIME OF EFFECTIVENESS OF THE REGISTRATION

[Note to the Working Group: The Working Group may wish to note that part G has been added to address transitional registrations. It is meant to preserve continuity of third-party effectiveness from the prior date of registration as contemplated by the transitional provisions that result in the application of the new law to existing security rights (see Secured Transactions Guide, rec. 231). Preserving the old data allows verification of the existence and date of registration under the old law in the event of a dispute and providing for the indication that this is a transitional registration ensures searchers know that the effective third-party effectiveness date is prior in time. The Working Group may wish to consider that it may not be worth going any further to deal with migration of data, taking into account that such migration may not be worth the cost and trouble, since old systems are typically document-registration systems and the registry might incur liability if does not extract the right information from the old records in entering it into the new registry record. A transitional registration puts the burden on the registrant to make the indication, which is a more efficient approach, and third parties can obtain verification from the old records if there is a dispute, which is rare. It should also be noted that old registry records may no longer be publicly searchable and records might be searchable only by registry staff if there is a request, which is also rare.]

REGISTRY OF SECURITY RIGHTS IN MOVABLE ASSETS

EXAMPLE OF AMENDMENT NOTICE

(FORM B)

IT IS THE REGISTRANT'S RESPONSIBILITY TO ENSURE THAT ALL REQUIRED INFORMATION IS PROVIDED AND ENTERED IN THE DESIGNATED FIELD OF THE NOTICE IN A LEGIBLE MANNER.

SELECT ONE OR MORE OF THE FOLLOWING:

- Add or delete a grantor or change/edit grantor information
- Add or delete a secured creditor or change/edit secured creditor information

⁴ If the secured transactions law of the enacting State requires it (see *Secured Transactions Guide*, recommendation 57, subpara. (d)).

- Add or delete an encumbered asset or change/edit the description of encumbered assets (including adding a description of assets that are proceeds of the original encumbered assets)
- [Extend the period of effectiveness of registration (if the enacting State has specified a universal period of effectiveness of registration or a maximum initial registration period)]
- [Extend or reduce the period of effectiveness of registration (if the enacting State permits secured creditors to specify the period of effectiveness of the registration)]
- [Change the maximum amount for which the security right is enforceable (if the enacting State permits it)]
- Edit secured creditor information in all such notices with a single global amendment

[Time of effectiveness of the registration:.....(dd)....(mm).....(yyyy).....(hour)*]⁵

Preamble

The purpose of this Law is:

- (a) To promote low-cost credit by enhancing the availability of secured credit;
- (b) To allow grantors to use the full value inherent in their assets to support credit;
- (c) To enable secured creditors to obtain security rights in a simple and efficient manner;
- (d) To provide for equal treatment of diverse sources of credit and of diverse forms of secured transactions;
- (e) To validate non-possessory security rights in all types of asset;
- (f) To enhance certainty and transparency by providing for registration of a notice of a security right in a general security rights registry;
- (g) To establish clear and predictable priority rules;
- (h) To facilitate efficient enforcement of a creditor's rights;
- (i) To allow parties maximum flexibility to negotiate the terms of their security agreement;
- (j) To balance the interests of all affected persons; and
- (k) To harmonize secured transactions laws, including conflict-of-laws rules relating to secured transactions.

[Note to the Working Group: The Working Group may wish to consider whether the commentary to the draft Model Law should, in line with the mandate

given to the Working Group by the Commission (see A/67/17, para. 105) clarify that the draft Model Law is intended to be a simple, short and concise model law to assist States in enacting the general recommendations of the UNCITRAL Legislative Guide on Secured Transactions (the “Secured Transactions Guide”), consistent with and without replacing the Secured Transactions Guide.]

Chapter I. General provisions

Article 1. Scope of application

Option A

1. Subject to paragraph 3 of this article, this Law applies to all rights in movable assets created by agreement that secure payment or other performance of an obligation, regardless of the form of the transaction or the terminology used by the parties, the type of the movable asset, the status of the grantor or secured creditor or the nature of the secured obligation, including:

(a) Security rights in all types of movable asset, tangible or intangible, present or future, including inventory, equipment and other tangible assets, contractual and non-contractual receivables, and contractual non-monetary claims;

(b) Security rights created or acquired by all legal and natural persons, including consumers, without, however, affecting rights under consumer-protection legislation;

(c) Security rights securing all types of obligation, present or future, determined or determinable, including fluctuating obligations and obligations described in a generic way; and

(d) All property rights created contractually to secure the payment or other performance of an obligation, including transfers of title to tangible assets for security purposes or assignments of receivables for security purposes, the various forms of retention-of-title sales and financial leases.

2. This Law also applies to:

(a) Security rights in proceeds of encumbered assets; and

(b) Subject to the exception provided in article 100, to outright transfers of receivables despite the fact that such transfers do not secure the payment or other performance of an obligation.

3. Notwithstanding paragraphs 1 and 2 of this article, this Law does not apply to:

(a) Rights to payment of funds credited to a bank account;

(b) Rights to receive the proceeds under an independent undertaking;

(c) Negotiable instruments and negotiable documents;

(d) Aircraft, railway rolling stock, space objects, ships as well as other categories of mobile equipment in so far as such asset is covered by a national law or an international agreement to which the State enacting legislation based on these articles (herein referred to as “the State” or “this State”) is a party and the matters covered by this Law are addressed in that national law or international agreement;

- (e) Intellectual property;
- (f) Securities;
- (g) Payment rights arising under or from financial contracts governed by netting agreements, except a receivable owed on the termination of all outstanding transactions;
- (h) Payment rights arising under or from foreign exchange transactions;
- (i) With the exception of articles 11, 15, 27, 32, 55, 98, 99, 109 and 120, immovable property;
- (j) Proceeds of an excluded type of asset even if the proceeds are of a type of asset to which this Law applies, but only to the extent that other law applies; and
- (k) [Other exception(s) to be added by the enacting State].

Option B

1. This Law applies to security rights in goods, inventory, equipment and receivables.
2. The security rights to which this Law applies may:
 - (a) Be created or acquired by all legal and natural persons, including consumers, without, however, affecting rights under consumer-protection legislation; and
 - (b) Secure all types of obligation, present or future, determined or determinable, including fluctuating obligations and obligations described in a generic way.
3. This Law also applies to:
 - (a) Security rights in proceeds of encumbered assets;
 - (b) Subject to the exception provided in article 100, to outright transfers of receivables despite the fact that such transfers do not secure the payment or other performance of an obligation; and
 - (c) All property rights created contractually to secure the payment or other performance of an obligation, including transfers of title to tangible assets for security purposes or assignments of receivables for security purposes, the various forms of retention-of-title sales and financial leases.

[Note to the Working Group: The Working Group may wish to note that option A is based on recommendation 2 of the Secured Transactions Guide, appropriately revised to exclude certain types of asset that are subject to asset-specific recommendations in line with the decision of the Commission to “prepare a simple, short and concise model law on secured transactions based on the general recommendations of the Secured Transactions Guide” (see A/67/17, para. 105). However, receivables are included pursuant to the decision of the Commission that the draft Model Law should be “consistent with all the texts prepared by UNCITRAL on secured transactions” (A/67/17, para. 105), including the United Nations Convention on the Assignment of Receivables in International Trade (the “United Nations Assignment Convention”). In view of the interdependence of

receivables with goods, equipment and inventory, excluding receivables would result in the application of different laws where, for example, inventory was sold and converted to receivables that were in turn used to buy new inventory. This approach would tend to have a negative impact on the availability and the cost of credit. In this connection, the Working Group may wish to note that, while the Convention applies only to contractual receivables, in line with the recommendations of the Secured Transactions Guide, the draft Model Law applies to non-contractual receivables as well.

In addition, the Working Group may wish to note that, to ensure that the draft Model Law is not inconsistent with the functional, integrated and comprehensive approach to secured transactions recommended in the Secured Transactions Guide (see chapter I, paras. 101-112). The commentary should explain that: (a) the draft Model Law is an economic way to implement the recommendations of the Secured Transactions Guide on core commercial assets (goods, equipment, inventory and receivables), without replacing the Secured Transactions Guide; and (b) States are encouraged to follow the functional, integrated and comprehensive approach and thus implement all the recommendations of the Secured Transactions Guide, including the asset specific, at least to the extent that they do not have any rules or modern rules on security rights in these types of asset.

Moreover, the Working Group may wish to note that option B is intended to reflect the same policy embodied in option A in a more economic way, that is, by referring directly to goods, equipment, inventory and receivables. This approach would make paragraph 3 and the relevant definitions of the terms included therein unnecessary.

If the Working Group decides to retain option A, it may wish to consider whether subparagraph 3 (j) is appropriate. For example, if intellectual property is sold for cash and the cash proceeds are used by the seller to buy inventory, the inventory would be proceeds of the intellectual property. Contrary to what subparagraph 3 (j) provides, the Working Group may wish to consider that the draft Model Law should apply to the inventory even if other law would cover the inventory (at least, in the case where the other law was insufficient, that is, for example, did not require registration of a notice in the general security rights registry). In addition, as a practical matter, subparagraph 3 (j) would require a secured creditor extending credit to a debtor against a security right in an encumbered asset to conduct an investigation into whether the encumbered asset is proceeds of assets that would not be subject to the draft Model Law. Such a rule would tend to increase the cost or reduce the availability of credit.]

Article 2. Definitions

For the purposes of this Law:

(a) “Acquisition secured creditor” means a secured creditor that has an acquisition security right. In the context of the unitary approach, the term includes a retention-of-title seller or financial lessor;

(b) “Acquisition security right” means a security right in goods, equipment or inventory that secures the obligation to pay any unpaid portion of the purchase price of the asset or an obligation incurred or credit otherwise provided to enable the grantor to acquire the asset;

(c) “Assignee” means a person to which an assignment of a receivable is made;

(d) “Assignment” means the creation of a security right in a receivable that secures the payment or other performance of an obligation, including an outright transfer of a receivable, without re-characterizing it as a secured transaction;

(e) “Assignor” means a person that makes an assignment of a receivable;

(f) “Attachment to a movable asset” means a tangible asset that is physically attached to another tangible asset but has not lost its separate identity;

(g) “Attachment to immovable property” means a tangible asset that is so physically attached to immovable property that, despite the fact that it has not lost its separate identity, it is treated as immovable property under the law of the State where the immovable property is located;

[Note to the Working Group: The Working Group may wish to note that the term “bank account” (and other types of asset not addressed in the draft Model law) and terms such as “insolvency court”, “insolvency estate” and “insolvency proceedings” have been deleted as they would normally be defined in other law of the enacting State, and not in its secured transactions law.]

(h) “Competing claimant” means a creditor of a grantor that is competing with another creditor of the grantor having a security right in an encumbered asset of the grantor and includes:

(i) Another creditor with a security right in the same encumbered asset (whether as an original encumbered asset or proceeds);

(ii) The seller or financial lessor of the same encumbered asset that has retained title to it;

(iii) Another creditor of the grantor that has a right in the same encumbered asset;

(iv) The insolvency representative in the insolvency proceedings in respect of the grantor; or

(v) Any buyer or other transferee (including a lessee or licensee) of the encumbered asset;

(i) “Consumer goods” means goods that a grantor uses or intends to use for personal, family or household purposes;

(j) “Debtor” means a person that owes performance of a secured obligation and includes a secondary obligor such as a guarantor of a secured obligation. The debtor may or may not be the person that creates the security right;

(k) “Debtor of the receivable” means a person liable for payment of a receivable and includes a guarantor or other person secondarily liable for payment of the receivable;

(l) “Encumbered asset” means a tangible or intangible asset that is subject to a security right. The term also includes a receivable that has been the subject of an outright transfer;

(m) “Equipment” means a tangible asset used by a person in the operation of its business;

(n) “Financial lease right” means a lessor’s right in a tangible asset (other than a negotiable instrument or negotiable document) that is the object of a lease agreement under which, at the end of the lease:

(i) The lessee automatically becomes the owner of the asset that is the object of the lease;

(ii) The lessee may acquire ownership of the asset by paying no more than a nominal price; or

(iii) The asset has no more than a nominal residual value.

The term includes a hire-purchase agreement, even if not nominally referred to as a lease, provided that it meets the requirements of subparagraph (i), (ii) or (iii);

(o) “Grantor” means a person that creates a security right to secure either its own obligation or that of another person, including a retention-of-title buyer, financial lessee or an assignor in an outright transfer of a receivable;

(p) “Insolvency representative” means a person or body, including one appointed on an interim basis, authorized in insolvency proceedings to administer the reorganization or the liquidation of the insolvency estate;

(q) “Intangible asset” means all forms of movable assets other than tangible assets and includes incorporeal rights, receivables and rights to the performance of obligations other than receivables;

(r) “Inventory” means tangible assets held for sale or lease in the ordinary course of a grantor’s business, as well as raw and semi-processed materials (work-in-process);

(s) “Knowledge” means actual rather than constructive knowledge;

(t) “Mass or product” means tangible assets other than money that are so physically associated or united with other tangible assets that they have lost their separate identity;

(u) “Notice” means a communication in writing;

[Note to the Working Group: The Working Group may wish to note that the commentary will refer to article 4 for the electronic equivalent of “writing” and “signed writing” and also to the term “notice” in the draft Registry Guide.]

(v) “Notification of the assignment” means a communication in writing that reasonably identifies the assigned receivable and the assignee;

(w) “Original contract” means, in the context of a receivable created by contract, the contract between the assignor and the debtor of the receivable from which the receivable arises;

(x) “Possession” means the actual possession only of a tangible asset by a person or an agent or employee of that person, or by an independent person that acknowledges holding it for that person. It does not include non-actual possession described by terms such as constructive, fictive, deemed or symbolic possession;

(y) “Priority” means the right of a person to derive the economic benefit of its security right in preference to a competing claimant;

(z) “Proceeds” means whatever is received in respect of encumbered assets, including what is received as a result of sale or other disposition or collection, lease or licence of an encumbered asset, proceeds of proceeds, civil and natural fruits, dividends, distributions, insurance proceeds and claims arising from defects in, damage to or loss of an encumbered asset;

(aa) “Receivable” means a right to payment of a monetary obligation, excluding a right to payment evidenced by a negotiable instrument, a right to receive the proceeds under an independent undertaking and a right to payment of funds credited to a bank account;

(bb) “Retention-of-title right” means a seller’s right in goods, equipment or inventory pursuant to an arrangement with the buyer by which ownership of the asset is not transferred (or is not transferred irrevocably) from the seller to the buyer until the unpaid portion of the purchase price is paid;

(cc) “Secured creditor” means a creditor that has a security right, including an assignee in an outright transfer of a receivable;

(dd) “Secured obligation” means an obligation secured by a security right;

(ee) “Secured transaction” means a transaction that creates a security right, including for convenience of reference an outright transfer of a receivable, without re-characterizing it as a secured transaction;

(ff) “Security agreement” means an agreement, in whatever form or terminology, between a grantor and a creditor that creates a security right, including for convenience of reference an agreement for the outright transfer of a receivable, without re-characterizing it as a security agreement;

(gg) “Security right” means a property right in a movable asset that is created by agreement and secures payment or other performance of an obligation, regardless of whether the parties have denominated it as a security right, including for convenience of reference the right of the assignee in an outright transfer of a receivable, without re-characterizing it as a security right and, [if the enacting State follows a unitary approach to acquisition financing, acquisition security rights and non-acquisition security rights] [but not a retention-of-title or financial lease right if the enacting State follows a non-unitary approach to acquisition financing]; and

(hh) “Tangible asset” means every form of corporeal movable asset, such as goods, inventory and equipment.

[Note to the Working Group: The Working Group may wish to note that the references to the unitary and non-unitary approach to secured transactions in the definitions contained in subparagraphs (a), (b), h (ii), (n), (o), (bb) have been deleted as it does not fit in a model law. The Working Group may wish to consider whether the unitary and the non-unitary approaches should be referred to within square brackets as is done in subparagraph (gg).]

Article 3. Party autonomy

1. Except as otherwise provided in articles 6, 7, 66, 79, 80, 103-132, 134-146, the secured creditor and the grantor or the debtor may derogate from or vary by agreement its provisions relating to their respective rights and obligations.
2. Such an agreement does not affect the rights of any person that is not a party to the agreement.

Article 4. Electronic communications

1. Where this Law requires that a communication or a contract should be in writing, or provides consequences for the absence of a writing, that requirement is met by an electronic communication if the information contained therein is accessible so as to be usable for subsequent reference.
2. Where this Law requires that a communication or a contract should be signed by a person, or provides consequences for the absence of a signature, that requirement is met in relation to an electronic communication if:
 - (a) A method is used to identify the person and to indicate that person's intention in respect of the information contained in the electronic communication; and
 - (b) The method used is either:
 - (i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or
 - (ii) Proven in fact to have fulfilled the functions described in subparagraph 2 (a) of this article, by itself or together with further evidence.

[Note to the Working Group: The Working Group may wish to note that, with respect to the substance of article 4, the commentary will refer to article 9, paragraphs 2 and 3, of the United Nations Convention on the Use of Electronic Communications in International Contracts.]

Chapter II. Creation of a security right (effectiveness as between the parties)

Article 5. Creation of a security right

1. A security right in an asset is created by a security agreement.
2. In the case of an asset with respect to which the grantor has rights or the power to encumber at the time of the conclusion of the security agreement, the security right in that asset is created at that time.
3. In the case of an asset with respect to which the grantor acquires rights or the power to encumber thereafter, the security right in that asset is created when the grantor acquires rights in the asset or the power to encumber the asset.

Article 6. Minimum content of a security agreement

A security agreement must:

- (a) Reflect the intent of the parties to create a security right;
- (b) Identify the secured creditor and the grantor;
- (c) Describe the secured obligation;
- (d) Describe the encumbered assets in a manner that reasonably allows their identification[]; and
- (e) Indicate the maximum monetary amount for which the security right may be enforced, if the enacting State determines that such an indication would be helpful in order to facilitate subordinate lending].

Article 7. Form of a security agreement

1. A security agreement may be oral if accompanied by the secured creditor's possession of the encumbered asset.
2. If it is not accompanied by possession of the encumbered asset, the security agreement must be concluded in or evidenced by a writing that, by itself or in conjunction with the course of conduct between the parties, indicates the grantor's intent to create a security right.

Article 8. Obligations secured by a security right

A security right may secure any type of obligation, whether present or future, determined or determinable, conditional or unconditional, fixed or fluctuating.

Article 9. Assets subject to a security right

1. With the exception of [any limited and specific exceptions to be set out by the enacting State], a security right may encumber any type of asset, including:

- (a) Parts of assets and undivided rights in assets;
- (b) Assets that, at the time the security agreement is concluded, may not yet exist or that the grantor may not yet own or have the power to encumber; and
- (c) All assets of a grantor.

2. Except as provided in articles 13-15, this Law does not override provisions of any other law to the extent that they limit the creation or enforcement of a security right in, or the transferability of, specific types of asset.

Article 10. Continuation of a security right in proceeds

1. Unless otherwise agreed by the parties to a security agreement, a security right in an encumbered asset extends to its identifiable proceeds, including proceeds of proceeds.

2. Where proceeds in the form of money or funds credited to a bank account have been commingled with other assets of the same kind so that the proceeds are no longer identifiable, the amount of the proceeds immediately before they were commingled is nevertheless to be treated as identifiable proceeds after commingling.

3. If, at any time after commingling, the total amount of the asset is less than the amount of the proceeds, the total amount of the asset at the time that its amount is lowest plus the amount of any proceeds later commingled with the asset is to be treated as identifiable proceeds.

Article 11. Creation and continuation of a security right in an attachment

1. A security right may be created in a tangible asset that is an attachment at the time of creation of the security right or continues in a tangible asset that becomes an attachment subsequently.

2. A security right in an attachment to immovable property may be created under this Law or under the law governing immovable property.

Article 12. Continuation of a security right into a mass or product

1. A security right created in tangible assets before they are commingled in a mass or product continues in the mass or product.

2. The amount secured by a security right that continues in the mass or product is limited to the value of the encumbered assets immediately before they became part of the mass or product.

Article 13. Bulk assignments of receivables

1. An assignment of a contractual receivable that is not specifically identified, a future receivable or a part of or an undivided interest in a receivable is effective as between the assignor and the assignee and as against the debtor of the receivable as long as, at the time of the assignment or, in the case of a future receivable, at the time it arises, it can be identified to the assignment to which it relates.
2. Unless otherwise agreed, an assignment of one or more future receivables is effective without a new act of transfer being required to assign each receivable.¹

Article 14. Anti-assignment clauses

1. An assignment of a receivable is effective as between the assignor and the assignee and as against the debtor of the receivable notwithstanding an agreement between the initial or any subsequent assignor and the debtor of the receivable or any subsequent assignee limiting in any way the assignor's right to assign its receivables.
2. Nothing in this article affects any obligation or liability of the assignor for breach of the agreement mentioned in paragraph 1 of this article, but the other party to such an agreement may not avoid the original contract or the assignment contract on the sole ground of that breach. A person that is not a party to such an agreement is not liable on the sole ground that it had knowledge of the agreement.
3. This article applies only to assignments of receivables:
 - (a) Arising from an original contract that is a contract for the supply or lease of goods or services other than financial services, a construction contract or a contract for the sale or lease of immovable property;
 - (b) Arising from an original contract for the sale, lease or licence of industrial or other intellectual property or of proprietary information;
 - (c) Representing the payment obligation for a credit card transaction; or
 - (d) Owed to the assignor upon net settlement of payments due pursuant to a netting agreement involving more than two parties.

Article 15. Creation of a security right in a personal or property right that secures a receivable

1. A secured creditor with a security right in a receivable has the benefit of any personal or property right that secures payment or other performance of the receivable automatically, without further action by either the grantor or the secured creditor.
2. If the personal or property right is an independent undertaking, the security right automatically extends to the right to receive the proceeds under the independent undertaking but does not extend to the right to draw under the independent undertaking.
3. This article does not affect a right in immovable property that under other law is transferable separately from a receivable that it may secure.

¹ For articles 13-15, see articles 8-10 of the United Nations Assignment Convention.

4. A secured creditor with a security right in a receivable has the benefit of any personal or property right that secures payment or other performance of the receivable notwithstanding any agreement between the grantor and the debtor of the receivable limiting in any way the grantor's right to create a security right in the receivable, or in any personal or property right securing payment or other performance of the receivable;
5. Nothing in this article affects any obligation or liability of the grantor for breach of the agreement mentioned in paragraph 4 of this article, but the other party to such an agreement may not avoid the contract from which the receivable arises, or the security agreement creating the personal or property security right on the sole ground of that breach. A person that is not a party to such an agreement is not liable on the sole ground that it had knowledge of the agreement.
6. Paragraphs 4 and 5 of this article apply only to security rights in receivables:
 - (a) Arising from an original contract that is a contract for the supply or lease of goods or services other than financial services, a construction contract or a contract for the sale or lease of immovable property;
 - (b) Arising from an original contract for the sale, lease or licence of industrial or other intellectual property or of proprietary information;
 - (c) Representing the payment obligation for a credit card transaction; or
 - (d) Owed to the assignor upon net settlement of payments due pursuant to a netting agreement involving more than two parties.
7. Paragraph 1 of this article does not affect any duties of the grantor to the debtor of the receivable.
8. To the extent that the automatic effects under paragraph 1 of this article and article 32 are not impaired, this article does not affect any requirement under other law relating to the form or registration of the creation of a security right in any asset, securing payment or other performance of a receivable that is not covered by this Law.

Chapter III. Effectiveness of a security right against third parties

Article 16. Achieving third-party effectiveness

A security right is effective against third parties only if it is created and one of the methods for achieving third-party effectiveness referred to in article 19, 21 or 22 has been followed.

Article 17. Effectiveness against the grantor of a security right that is not effective against third parties

A security right that has been created is effective between the grantor and the secured creditor even if it is not effective against third parties.

**Article 18. Continued third-party effectiveness
after a transfer of the encumbered asset**

After transfer of a right other than a security right in an encumbered asset, a security right in the encumbered asset that is effective against third parties at the time of the transfer continues to encumber the asset except as provided in article 50, and remains effective against third parties except as provided in article 39.

**Article 19. General method for achieving
third-party effectiveness: registration**

1. A security right is effective against third parties if a notice with respect to the security right is registered in the general security rights registry referred to in articles 33-47.
2. Registration of a notice does not create a security right and is not necessary for the creation of a security right.

Article 20. Alternatives and exceptions to registration

1. A security right may also be made effective against third parties by one of the following alternative methods:
 - (a) In tangible assets, by the secured creditor's possession, as provided in article 22;
 - (b) In movable assets, rights in which are subject to a specialized registration or title certificate system, by registration in the specialized registry or notation on the title certificate, as provided in article 23;
 - (c) In an attachment to a movable asset, rights in which are subject to a specialized registration or title certificate system, by registration in the specialized registry or notation on the title certificate, as provided in article 26; and
 - (d) In an attachment to immovable property, by registration in the immovable property registry, as provided in article 27.
2. A security right is effective against third parties automatically:
 - (a) In proceeds, if the security right in the original encumbered asset is effective against third parties, as provided in article 24;
 - (b) In an attachment to a movable asset, if the security right in the asset that becomes an attachment was effective against third parties before it became an attachment, as provided in article 25;
 - (c) In a mass or product, if the security right in processed or commingled assets was effective against third parties before they became part of the mass or product, as provided in article 28; and
 - (d) In movable assets, upon a change in the location of the asset or the grantor to this State, as provided in article 29.
3. A security right in a personal or property right that secures payment or other performance of a receivable is effective against third parties, as provided in article 32.

**Article 21. Different third-party effectiveness
methods for different types of asset**

Different methods for achieving third-party effectiveness may be used for different types of encumbered asset, whether they are encumbered pursuant to the same security agreement or not.

**Article 22. Third-party effectiveness of a security right
in a tangible asset by possession**

A security right in a tangible asset may be made effective against third parties by registration as provided in article 19 or by the secured creditor's possession.

**Article 23. Third-party effectiveness of a security right
in a movable asset subject to a specialized registration
or a title certificate system**

A security right in a movable asset that is subject to registration in a specialized registry or notation on a title certificate under other law may be made effective against third parties by registration as provided in article 19 or by:

- (a) Registration in the specialized registry; or
- (b) Notation on the title certificate.

**Article 24. Automatic third-party effectiveness of
a security right in proceeds**

1. If a security right in an encumbered asset is effective against third parties, a security right in any proceeds of the encumbered asset (including any proceeds of proceeds) is effective against third parties when the proceeds arise, provided that the proceeds are described in a generic way in a registered notice or that the proceeds consist of money, receivables, negotiable instruments or rights to payment of funds credited to a bank account.
2. If the proceeds are not described in the registered notice as provided in paragraph 1 of this article and do not consist of money, receivables, negotiable instruments or rights to payment of funds credited to a bank account, the security right in the proceeds continues to be effective against third parties for [a short period of time to be specified by the enacting State] days after the proceeds arise.
3. If the security right in such proceeds is made effective against third parties by one of the methods referred to in article 19 or 20 before the expiry of that time period, the security right in the proceeds continues to be effective against third parties thereafter.

**Article 25. Automatic third-party effectiveness
of a security right in an attachment**

If a security right in a tangible asset is effective against third parties at the time when the asset becomes an attachment, the security right remains effective against third parties thereafter.

**Article 26. Third-party effectiveness of a security right in
an attachment subject to a specialized registration
or a title certificate system**

A security right in an attachment to a movable asset that is subject to registration in a specialized registry or notation on a title certificate under other law may be made effective against third parties automatically as provided in article 25 or by:

- (a) Registration in the specialized registry; or
- (b) Notation on the title certificate.

**Article 27. Third-party effectiveness of a security right
in an attachment to immovable property**

A security right in an attachment to immovable property may be made effective against third parties automatically as provided in article 25 or by registration in the immovable property registry.

**Article 28. Automatic third-party effectiveness
of a security right in a mass or product**

If a security right in a tangible asset is effective against third parties when it becomes part of a mass or product, the security right that continues in the mass or product, as provided in article 12, is effective against third parties.

**Article 29. Continuity in third-party effectiveness
upon change of location to this State**

1. If a security right in an encumbered asset is effective against third parties under the law of the State in which the encumbered asset or the grantor is located (whichever determines the applicable law under the relevant conflict-of-laws provisions), and that location changes to this State, the security right continues to be effective against third parties under the law of this State for [a short period of time to be specified by the enacting State] days after the change.
2. If the requirements of the law of this State to make the security right effective against third parties are satisfied prior to the end of that period, the security right continues to be effective against third parties thereafter under the law of this State.
3. For the purposes of any rule of this State in which time of registration or other method of achieving third-party effectiveness is relevant for determining priority, that time is the time when registration or third-party effectiveness was achieved under the law of the State in which the encumbered asset or the grantor was located before its location changed to this State.

**Article 30. Continuity in third-party effectiveness of a security
right upon change of method of third-party effectiveness**

Third-party effectiveness of a security right is continuous notwithstanding a change in the method by which it is made effective against third parties, provided that there is no time when the security right is not effective against third parties.

**Article 31. Lapse in third-party effectiveness
or advance registration**

1. If a security right has been made effective against third parties and subsequently there is a period during which the security right is not effective against third parties, third-party effectiveness may be re-established, but only from the time when the new registration of a notice with respect to the security right becomes effective.
2. If registration made before creation of a security right as provided in article 42 expires as provided in article 44, it may be re-established, but registration takes effect only from the time when the new registration of a notice with respect to the security right becomes effective.

**Article 32. Third-party effectiveness of a security right
in a right that secures payment of a receivable**

1. If a security right in a receivable is effective against third parties, such third-party effectiveness extends to any personal or property right that secures payment or other performance of the receivable without further action by either the grantor or the secured creditor.
2. If the personal or property right is an independent undertaking, its third-party effectiveness automatically extends to the right to receive the proceeds under the independent undertaking, but the security right does not extend to the right to draw under the independent undertaking.
3. This article does not affect a right in immovable property that under other law is transferable separately from the receivable that it may secure.

(A/CN.9/WG.VI/WP.55/Add.2) (Original: English)
Note by the Secretariat on a draft Model Law on Secured
Transactions, submitted to the Working Group on Security Interests
at its twenty-third session

Chapter IV. The registry system

Article 33. Operational framework of the registration and searching processes

1. The registry must make available to the public clear and concise guides to registration and searching procedures and disseminate widely information about the existence and role of the registry.
2. Registration is effected by registering a notice that provides the information specified in article 36, as opposed to requiring the submission of the original or a copy of the security agreement or other document.

3. The registry must accept a notice presented by an authorized medium of communication, except if:
 - (a) It is not accompanied by the required fee;
 - (b) It fails to provide a grantor identifier sufficient to allow indexing; or
 - (c) It fails to provide some information with respect to any of the other items required under article 36.
4. The registry does not require verification of the identity of the registrant or the existence of authorization for registration of the notice or conduct further scrutiny of the content of the notice.
5. The record of the registry is centralized and contains all notices with respect to security rights registered under this Law.
6. The information provided on the public record of the registry is accessible to searchers.
7. A search may be made without the need for the searcher to justify the reasons for the search.
8. Notices are indexed and can be retrieved by searchers according to the identifier of the grantor.
9. Fees for registration and for searching, if any, are set at a level no higher than necessary to permit cost recovery.
10. If possible, the registration system is electronic. In particular:
 - (a) Notices are stored in electronic form in a computer database;
 - (b) Registrants and searchers have immediate access to the registry record by electronic or similar means, including the Internet and electronic data interchange;
 - (c) The system is programmed to minimize the risk of entry of incomplete or irrelevant information; and
 - (d) The system is programmed to facilitate speedy and complete retrieval of information and to minimize the practical consequences of human error.
11. Registrants may choose among multiple modes and points of access to the registry.
12. The registry, to the extent it is electronic, operates continuously except for scheduled maintenance, and, to the extent it is not electronic, operates during reliable and consistent service hours compatible with the needs of potential registry users.

[Note to the Working Group: The Working Group may wish to note that articles 33-47 are based on recommendations 54-75 of the Secured Transactions Guide and the recommendations of the draft Registry Guide. With respect to article 33, the Working Group may wish to consider whether it should be aligned closely with recommendations 4-10 of the draft Registry Guide and whether some of the matters addressed in article 33 (and other articles) could be left to be dealt with in the recommendations of the draft Registry Guide and in the commentary of the draft Model Law. In addition, the Working Group may wish to consider whether

some of the matters that are addressed in the recommendations of the draft Registry Guide such as, for example, the difference between access to the registry services and rejection of a notice, the period of effectiveness of a registration, the information required in an initial notice as opposed to an amendment or cancellation notice, search criteria and search results should be addressed in the draft Model Law, although they were not addressed in any detail in the recommendations of the Secured Transactions Guide.]

Article 34. Security and integrity of the registry

In order to ensure the security and integrity of the registry, the operational and legal framework of the registry should reflect the following characteristics:

- (a) Although the day-to-day operation of the registry may be delegated to a private authority, the State retains the responsibility to ensure that it is operated in accordance with the governing legal framework;
- (b) [Information about] the identity of a registrant is requested and maintained by the registry;
- (c) The registrant is obligated to forward a copy of a notice to the grantor named in the notice, but failure to meet this obligation may result only in nominal penalties and any damages resulting from the failure that may be proven;
- (d) The registry is obligated to send promptly a copy of any changes to a registered notice to the person identified as the secured creditor in the notice;
- (e) A registrant can obtain a record of the registration as soon as the registration information is entered into the registry record; and
- (f) Multiple copies of all the information in the records of a registry are maintained and the entirety of the registry records can be reconstructed in the event of loss or damage.

[Note to the Working Group: The Working Group may wish to consider whether the matter addressed in subparagraph (a) of this article should be dealt with in the commentary rather than in the draft Model Law, and whether the matters addressed in the remaining subparagraphs should be addressed either in a general way or in a detailed way but more in line with the recommendations of the draft Registry Guide.]

Article 35. Responsibility for loss or damage

1. If the registry system permits direct registration and searching by registry users without the intervention of registry personnel, the responsibility of the registry for loss or damage is limited to system malfunction.
2. If the registry system permits the submission of paper notices, the registry is liable for any loss or damage caused by an error in the entry of the information contained in a notice in the registry record.

[Note to the Working Group: The Working Group may wish to note that this article is based on recommendation 56 of the Secured Transactions Guide, which, however, deals only with the matter addressed in paragraph 1 of this article. Paragraph 2 has been added to complete article 35. The Working Group may wish

to consider whether article 35 should be retained or the matter should be left to other law of the enacting State. If the Working Group decides to retain article 35, it may wish to consider its substance.]

Article 36. Required content of a notice

The following information only is required to be provided in the notice:

- (a) The identifier of the grantor, satisfying the standard provided in article 37 [and any other information to be specified by the enacting State to assist in uniquely identifying the grantor];
- (b) The identifier of the secured creditor or its representative, their addresses;
- (c) A description of the asset covered by the notice, satisfying the standard provided in article 40;
- (d) [If the enacting State implements option B or C in article 44, the period of effectiveness of the registration as provided in article 44;] and
- (e) [If the enacting State determines that an indication in the notice of the maximum monetary amount for which the security right may be enforced would be helpful in order to facilitate subordinate lending, a statement of that maximum amount].

[Note to the Working Group: The Working Group may wish to note that the reference to additional information in the notice to assist in uniquely identifying the grantor has been added in subparagraph (a) and deleted from article 37, paragraph 2. These changes are intended to reflect decisions of the Working Group with respect to recommendation 23, subparagraph (a) (i), of the draft Registry Guide so as to avoid making the additional information part of the grantor's identifier and thus a search criterion.]

Article 37. Grantor identifier

1. The registration of an initial notice, or an amendment notice that amends the grantor's identifier or adds a grantor, is effective if the notice provides the grantor's correct identifier in accordance with paragraphs 2 and 3 of this article, or, in the case of an incorrect statement, if it meets the requirements of article 41, paragraphs 1 and 2.
2. Where the grantor is a natural person, the identifier of the grantor for the purposes of effective registration is the grantor's name, as it appears in a specified official document.
3. Where the grantor is a legal person, the grantor's identifier for the purposes of effective registration is the name that appears in the most recent [document, law or decree to be specified by the enacting State] constituting the legal person.

[Note to the Working Group: The Working Group may wish to note that the changes to paragraphs 1, 2 and 3 of this article (compared with recommendations 58-60 of the Secured Transactions Guide on which they are based) are intended to align them respectively with recommendations 29, 23, subparagraph (a) (i), and 25 of the draft Registry Guide. The Working Group may wish to consider

whether an article along the lines of paragraphs 2 and 3 of this article should be added to deal with the identifier of the secured creditor, while the impact of an incorrect statement may still be dealt with in article 41.]

Article 38. Impact of a change of the grantor's identifier on the effectiveness of the registration

1. If, after a notice is registered, the identifier of the grantor changes and as a result the grantor's identifier set forth in the notice does not meet the standard provided in article 37, the secured creditor [may] [must] amend the notice to provide the new identifier in compliance with that standard.
2. If the secured creditor does not register the amendment within [a short period of time, such as thirty days, to be specified by the enacting State] days after the change, the security right is ineffective against:
 - (a) A competing security right with respect to which a notice is registered or which is otherwise made effective against third parties after the change in the grantor's identifier but before registration of the amendment notice; and
 - (b) A person that buys, leases or licenses the encumbered asset after the change in the grantor's identifier but before registration of the amendment notice.

[Note to the Working Group: The Working Group may wish to consider that, while recommendation 61 of the Secured Transactions Guide leaves an amendment to the discretion of the secured creditor, an amendment must be made for the consequences described in paragraph 2 to be avoided.]

Article 39. Impact of a transfer of an encumbered asset on the effectiveness of the registration

Option A

1. If, after a notice is registered, the encumbered asset is transferred and a search against the transferee's name by a third party does not disclose the security right created by the transferor, the secured creditor must amend the notice to provide the transferee's identifier as a new grantor.
2. If the secured creditor does not register the amendment notice within [a short period of time to be specified by the enacting State] days after the transfer of the encumbered asset, the security right is ineffective against:
 - (a) A competing security right with respect to which a notice is registered or which is otherwise made effective against third parties after the transfer but before registration of the amendment notice; and
 - (b) A person that buys, leases or licenses the encumbered asset after its transfer but before registration of the amendment notice.

Option B

1. If, after a notice is registered, the encumbered asset is transferred and a search against the transferee's name by a third party does not disclose the security right created by the transferor, the secured creditor must amend the notice to provide the transferee's identifier as a new grantor.

2. If the secured creditor does not register the amendment notice within [a short period of time, such as fifteen days, to be specified by the enacting State] days after *the secured creditor acquires actual knowledge about* the transfer of the encumbered asset, the security right is ineffective against:

(a) A competing security right with respect to which a notice is registered or which is otherwise made effective against third parties after the transfer but before registration of the amendment notice; and

(b) A person that buys, leases or licenses the encumbered asset after its transfer but before registration of the amendment notice.

Option C

Registration of a notice in the security rights registry remains effective notwithstanding a transfer of the encumbered asset.

[Note to the Working Group: The Working Group may wish to note that: (a) article 39 reflects the three approaches to the issue discussed in the commentary of the Secured Transactions Guide (see chap. IV, paras. 78-80), as recommendation 62 of that Guide had left the matter to the discretion of each State; (b) the difference between options A and B lies in the text that appears in option B in italics; and (c) recommendation 244 of the Supplement on Security Rights in Intellectual Property reflects option C.]

Article 40. Description of an encumbered asset covered by a notice

The registration of an initial notice, or an amendment notice that affects the description of the encumbered assets, is effective if the notice describes the encumbered assets in a way that reasonably allows their identification, and if it does not, it meets the requirements of article 41, paragraph 3.

[Note to the Working Group: The Working Group may wish to note that this article, which is based on recommendation 63 of the Secured Transactions Guide, has been revised to be aligned with the formulation of article 37 and to deal with the description of the encumbered assets, leaving the consequences of an insufficient description to article 41, paragraph 3.]

Article 41. Consequences of an incorrect statement or insufficient description

1. An incorrect statement of the grantor identifier in a notice does not render the registration ineffective if the notice would be retrieved by a search of the registry record under the correct identifier.
2. An incorrect identifier of a grantor in a notice does not render the registration ineffective with respect to other grantors correctly identified in the notice.
3. An incorrect statement of the identifier or address of the secured creditor or its representative or a description of the encumbered asset that does not meet the requirements of article 40 in a notice does not render the registration ineffective unless the incorrect or insufficient statement would seriously mislead a reasonable searcher.

4. A description of certain encumbered assets that does not meet the requirements of article 40 does not render a registration ineffective with respect to other assets sufficiently described.

5. An incorrect statement in a notice with respect to the period of effectiveness of registration and the maximum amount for which the security right may be enforced, if applicable, does not render a registered notice ineffective except to the extent that it seriously misled third parties that relied on the registered notice.

[Note to the Working Group: The Working Group may wish to note that the changes made in this article (as compared to recommendations 64-66, on which it is based) are intended to align it with recommendation 29 of the draft Registry Guide. The Working Group may wish to note that the “seriously misleading test” in the context of paragraph 5 is objective, while the “seriously misleading test” of paragraph 3 is subjective (see Secured Transactions Guide, chap. IV, paras. 84 and 96) and consider whether this matter should be more explicitly reflected in this article and explained in the relevant commentary to be prepared.]

Article 42. Time when notice may be registered

A notice with respect to a security right may be registered before or after the creation of the security right or the conclusion of the security agreement.

Article 43. One notice sufficient for multiple security rights arising from multiple agreements between the same parties

The registration of a single notice is sufficient to achieve third-party effectiveness of one or more than one security right in the encumbered asset described in the notice, whether they exist at the time of registration or are created thereafter, and whether they arise from one or more than one security agreement between the same parties.

Article 44. Period of effectiveness of the registration of a notice

Option A

1. The registration of an initial notice is effective for [enacting State to insert the period of time specified in its law].
2. The period of effectiveness may be extended for [an additional period of time specified in the law of the enacting State] at any time before it expires. The new period starts when the current period expires.
- [3. An amendment notice other than an amendment notice referred to in paragraph 2 of this article does not extend the period of effectiveness.]

Option B

1. The registration of an initial notice is effective for the period of time indicated therein.
2. The period of effectiveness may be extended or reduced for the period of time indicated in an amendment notice at any time before it expires. In the case of an extension, the new period starts when the current period expires.

[3. An amendment notice other than an amendment notice referred to in paragraph 2 of this article does not extend the period of effectiveness.]

Option C

1. The registration of an initial notice is effective for the period of time indicated therein, not exceeding [a long period of time, such as, for example, twenty years, to be specified by the enacting State].

2. The period of effectiveness may be extended or reduced for the period of time indicated in an amendment notice not exceeding [a long period of time, such as, for example, twenty years, to be specified by the enacting State] at any time before the period of effectiveness of the registration expires. In the case of an extension, the new period starts when the current period expires.

[3. An amendment notice other than an amendment notice referred to in paragraph 2 of this article does not extend the period of effectiveness.]

[Note to the Working Group: The Working Group may wish to note that article 44 is based on recommendation 13 of the draft Registry Guide, which in turn is based on recommendation 69 of the Secured Transactions Guide.]

Article 45. Time of effectiveness of the registration of a notice

The registration of a notice becomes effective when the information contained in the notice is entered into the registry record so as to be [available] [accessible] to searchers of the public registry record.

[Note to the Working Group: The Working Group may wish to consider whether article 45 should include language along the lines of recommendations 11, subparagraphs (b) and (c) (the registry to record date and time of effectiveness and enter notices in the order they were received), and 12 (the registry to assign a registration number to the initial notice) of the draft Registry Guide. The Working Group may also wish to consider the bracketed text in this article in view of the formulation of recommendations 11, subparagraph (a), and 16 and of the draft Registry Guide.]

Article 46. Authority for registration of a notice

1. Registration of an initial notice is ineffective unless authorized by the grantor in writing.

2. Registration of an amendment notice that [describe the amendments] is ineffective unless authorized by the grantor.

3. Registration of a cancellation notice is ineffective unless authorized by the secured creditor or ordered by a judicial or administrative authority in accordance with article 47, paragraph 3.

4. The authorization may be given before or after registration.

5. A written security agreement is sufficient to constitute authorization for the registration.

[Note to the Working Group: The Working Group may wish to note that article 46 is based on recommendation 71 and consider addressing: (a) the issue of

authorization of an amendment notice by the grantor and/or secured creditor; (b) the impact of lack of such authorization by the secured creditor (or fraud) on the effectiveness of an amendment notice (see note to the Working Group after recommendation 19 in document A/CN.9/WG.VI/WP.54/Add.5; see also note to article 60 A/CN.9/WG.VI/WP.55/Add.3); and (c) the issue of authorization of a cancellation notice by the secured creditor.]

Article 47. Amendment and cancellation of a notice

1. The secured creditor is obliged to register an amendment or cancellation notice, as the case may be, if:

(a) The registration of an initial or amendment notice has not been authorized by the grantor at all or to the extent described in the notice;

(b) The registration of an initial or amendment notice has been authorized by the grantor but the authorization has been withdrawn or no security agreement has been concluded;

(c) The security agreement has been revised in a way that makes the information contained in the notice incorrect or insufficient; or

(d) The security right to which the notice relates has been extinguished by payment, other performance of the secured obligation or otherwise and there is no further commitment to extend credit.

2. The secured creditor is obliged to register an amendment or cancellation notice, to the extent appropriate, not later than [a short period of time, such as fifteen days, to be specified by the enacting State] after the secured creditor's receipt of a written request of the grantor if any of the circumstances described in paragraph 1 of this article have occurred and the secured creditor has not complied.

3. If the secured creditor does not comply within the time period provide in paragraph 2 of this article, the grantor is entitled to seek cancellation or appropriate amendment of the notice through a summary judicial or administrative procedure.

4. The grantor is entitled to seek an appropriate amendment or cancellation of the notice, as the case may be, even before the expiry of the time period stated in paragraph 2 of this article, provided that [there are appropriate mechanisms to protect the secured creditor].

5. The secured creditor is entitled to register an amendment or cancellation notice, to the extent appropriate, with respect to the relevant notice at any time.

6. Promptly after a notice has expired as provided in article 44 or has been cancelled as provided in paragraph 1-4 of this article the information contained in the notice should be removed from the public registry record.

7. The information provided in the expired or cancelled or amended notice and the fact of expiration or cancellation or amendment should be archived for [a long period of time such as, for example, twenty years, to be specified by the enacting State] years in a manner that enables the information to be retrieved in accordance with article [...].

8. In the case of an assignment of the secured obligation, the notice may be amended to indicate the name of the new secured creditor, but a notice not so amended remains effective.

[Note to the Working Group: The Working Group may wish to note that article 47 is based on recommendations 72-75 of the Secured Transactions Guide and recommendations 33, 20, 21 of the draft Registry Guide. The Working Group may wish to consider the bracketed text in paragraph 4, which is based on recommendation 72, subparagraph (c), of the Secured Transactions Guide and, without some explanation, does not fit in a model law. In addition, the Working Group may wish to consider whether paragraphs 5-7 should be presented as separate articles. Moreover, the Working Group may wish to consider whether the draft Model Law should include additional articles to reflect other recommendations of the draft Registry Guide, such as for example the recommendations on amendment and cancellation notices, indexing of information, search criteria and search results.]

(A/CN.9/WG.VI/ WP.55/Add.3) (Original: English)

Chapter V. Priority of a security right

Article 48. Priority between security rights granted by the same grantor in the same encumbered asset

1. Priority between competing security rights granted by the same grantor in the same encumbered asset is determined as follows:
 - (a) As between security rights that were made effective against third parties by registration of a notice, priority is determined by the order of registration, regardless of the order of creation of the security rights;
 - (b) As between security rights that were made effective against third parties otherwise than by registration, priority is determined by the order of third-party effectiveness; and
 - (c) As between a security right that was made effective against third parties by registration and a security right that was made effective against third parties otherwise than by registration, priority is determined (regardless of when creation occurs) by the order of registration or third-party effectiveness, whichever occurs first.
2. This article is subject to the exceptions provided in articles 49 and 55-64, as well as in articles 103-111.

Article 49. Priority of a security right registered in a specialized registry or noted on a title certificate

1. A security right in an asset that is made effective against third parties by registration in a specialized registry or notation on a title certificate, as provided in article 23, has priority as against:
 - (a) A security right in the same asset with respect to which a notice is registered in the general security rights registry or which is made effective against third parties by a method other than registration in a specialized registry or notation on a title certificate, regardless of the order; and
 - (b) A security right that is subsequently registered in the specialized registry or noted on a title certificate.
2. If an encumbered asset is transferred or leased and, at the time of transfer or lease, a security right in that asset is effective against third parties by registration in a specialized registry or notation on a title certificate, as provided in article 23, the transferee or lessee takes its rights subject to the security right, except as provided in paragraphs 2-8 of article 50.

3. If the security right has not been made effective against third parties by registration in a specialized registry or notation on a title certificate, a transferee, or lessee takes its rights free of the security right.

**Article 50. Priority of rights of
transferees or lessees of an encumbered asset**

1. If an encumbered asset is transferred or leased and a security right in that asset is effective against third parties at the time of the transfer or lease, a transferee or lessee takes its rights subject to the security right except as provided in paragraphs 2-7 of this article.

2. A security right does not continue in an encumbered asset that the grantor sells or otherwise disposes of, if the secured creditor authorizes the sale or other disposition free of the security right.

3. The rights of a lessee of an encumbered asset are not affected by a security right if the secured creditor authorizes the grantor to lease or license the asset unaffected by the security right.

4. A buyer of a tangible asset sold in the ordinary course of the seller's business takes free of a security right in the asset, provided that, at the time of the sale, the buyer does not have knowledge that the sale violates the rights of the secured creditor under the security agreement.

5. The rights of a lessee of a tangible asset leased in the ordinary course of the lessor's business are not affected by a security right in the asset, provided that, at the time of the conclusion of the lease, the lessee does not have knowledge that the lease violates the rights of the secured creditor under the security agreement.

6. If a buyer acquires a right in an encumbered asset free of a security right, any person that subsequently acquires a right in the asset from the buyer also takes free of the security right.

7. If the rights of a lessee are not affected by a security right, the rights of a sub-lessee are also unaffected by the security right.

[Note to the Working Group: The Working Group may wish to note that article 50 is based on recommendations 79-82 of the Secured Transactions Guide and that references to licences and licensees have been deleted (in this article and other articles, such as article 49) as the draft Model Law is not intended to apply to intellectual property rights.]

Article 51. Priority of preferential claims

Only the claims of [any limited specific claims to be set out by the enacting State] have priority over a security right and only up to an amount of [a limited amount to be set out by the enacting State].

[Note to the Working Group: The Working Group may wish to note that article 51 is intended to reflect the substance of recommendation 83 of the Secured Transactions Guide.]

Article 52. Priority of rights of judgement creditors

1. Subject to article 108, a security right has priority as against the rights of an unsecured creditor, unless the unsecured creditor, under other law, obtained a judgement or provisional court order against the grantor and took the steps necessary to acquire rights in the encumbered asset by reason of the judgement or provisional court order before the security right was made effective against third parties.

2. The priority of the security right extends to credit extended by the secured creditor:

(a) Before the expiry of [a short period of time, such as thirty days, to be specified by the enacting State] days after the unsecured creditor notified the secured creditor that it had taken the steps necessary to acquire rights in the encumbered asset; or

(b) Pursuant to an irrevocable commitment in a fixed amount or an amount to be fixed pursuant to a specified formula of the secured creditor to extend credit, if the commitment was made before the unsecured creditor notified the secured creditor that it had taken the steps necessary to acquire rights in the encumbered asset.

**Article 53. Priority of rights of persons
providing services with respect to an encumbered asset**

If other law gives rights equivalent to security rights to a creditor that has provided services with respect to an encumbered asset, such rights are limited to the asset in the possession of that creditor up to the reasonable value of the services rendered and have priority as against security rights in the asset that were made effective against third parties by one of the methods referred to in article 19 or 20.

Article 54. Priority of a supplier's reclamation right

If other law provides that a supplier of tangible assets has the right to reclaim them, the right to reclaim is subordinate to a security right that was made effective against third parties before the supplier exercised its right.

**Article 55. Priority of a security right
in an attachment to immovable property**

1. A security right or any other right, such as the right of a buyer or lessee, in an attachment to immovable property that is created and made effective against third parties under immovable property law, as provided in articles 11 and 27, has priority as against a security right in that attachment that is made effective against third parties by one of the methods referred to in article 19 or 20.

2. A security right in a tangible asset that is an attachment to immovable property at the time the security right is made effective against third parties or that becomes an attachment to immovable property subsequently, which is made effective against third parties by registration in the immovable property registry as provided in article 27, has priority as against a security right or any other right, such as the right of a buyer or lessee, in the related immovable property that is registered subsequently in the immovable property registry.

**Article 56. Priority of a security
right in an attachment to a movable asset**

A security right or any other right, such as the right of a buyer or lessee, in an attachment to a movable asset that is made effective against third parties by registration in a specialized registry or by notation on a title certificate as provided in article 26 has priority as against a security right or other right in the related movable asset that is subsequently registered in the specialized registry or noted on the title certificate.

Article 57. Priority of a security right in a mass or product

1. If two or more security rights in the same tangible asset continue in a mass or product as provided in article 12, they retain the same priority as the security rights in the asset had as against each other immediately before the asset became part of the mass or product.
2. If security rights in separate tangible assets continue in the same mass or product and each security right is effective against third parties, the secured creditors are entitled to share in the aggregate maximum value of their security rights in the mass or product according to the ratio of the value of the respective security rights.
3. For purposes of the formula provided in paragraph 2 of this article, the maximum value of a security right is the lesser of the value determined pursuant to article 12 and the amount of the secured obligation.
4. An acquisition security right in a separate tangible asset that continues in a mass or product and is effective against third parties has priority as against a security right granted by the same grantor in the mass or product.

**Article 58. Irrelevance of
knowledge of the existence of a security right**

Knowledge of the existence of a security right on the part of a competing claimant does not affect priority.

[Note to the Working Group: The Working Group may wish to note that the commentary will refer to the impact of knowledge that a transaction violates the rights of a secured creditor (see article 50, paragraphs 4 and 5).]

Article 59. Subordination

A competing claimant entitled to priority may at any time subordinate its priority unilaterally or by agreement in favour of any other existing or future competing claimant.

**Article 60. Impact of continuity in
third-party effectiveness on priority**

1. For the purpose of article 48, the priority of a security right is not affected by a change in the method by which it is made effective against third parties, provided that there is no time when the security right is not effective against third parties.

2. If a security right is covered by a registered notice or made effective against third parties and subsequently there is a period during which the security right is neither covered by a registered notice nor effective against third parties, the priority of the security right dates from the earliest time thereafter when the security right is either covered by a registered notice or made effective against third parties.

[Note to the Working Group: The Working Group may wish to consider addressing the issue of the effectiveness of amendment and cancellation notices that are unauthorized by the secured creditor or are fraudulent (see also note to article 46 in document A/CN.9/WG.VI/WP.55/Add.2 and note to recommendation 19 of the draft Registry Guide in document A/CN.9/WG.VI/WP.54/Add.5).]

Article 61. Priority of security rights securing existing and future obligations

Subject to article 52, the priority of a security right extends to all secured obligations, regardless of the time when they are incurred.

Article 62. Extent of priority

[If the enacting State implements article 36, subparagraph (d)], the priority of the security right is limited to the maximum amount set out in the registered notice.

Article 63. Application of priority rules to a security right in a future asset

For the purposes of article 48, subparagraphs 1 (a) and (c), the priority of a security right extends to all encumbered assets covered by the registered notice, irrespective of whether they are acquired by the grantor or come into existence before, at or after the time of registration.

Article 64. Application of priority rules to a security right in proceeds

For the purposes of article 48, the time of third-party effectiveness or the time of registration of a notice as to a security right in an encumbered asset is also the time of third-party effectiveness or registration as to a security right in its proceeds.

Chapter VI. Rights and obligations of the parties to a security agreement

Article 65. Rights and obligations of the parties to a security agreement

The mutual rights and obligations of the parties are determined by:

- (a) The terms and conditions set forth in that agreement, including any rules or general conditions referred to therein;
- (b) Any usage to which they have agreed; and
- (c) Unless otherwise agreed, any practices they have established between themselves.

Article 66. Mandatory rules

1. The party in possession of an encumbered asset must take reasonable steps to preserve the asset and its value.
2. The secured creditor must return an encumbered asset in its possession if, all commitments to extend credit having been terminated, the security right has been extinguished by full payment or otherwise.

[Note to the Working Group: The Working Group may wish to note that article 47 deals with the secured creditor's duty to register a cancellation notice and consider whether that matter should be addressed instead in article 66 or also in article 66.]

Article 67. Non-mandatory rules

Unless otherwise agreed, the secured creditor is entitled:

- (a) To be reimbursed for reasonable expenses incurred for the preservation of an encumbered asset in its possession;
- (b) To make reasonable use of an encumbered asset in its possession and to apply the revenues it generates to the payment of the secured obligation; and
- (c) To inspect an encumbered asset in the possession of the grantor.

Article 68. Representations of the assignor

1. Unless otherwise agreed between the assignor and the assignee, the assignor represents at the time of conclusion of the contract of assignment that:
 - (a) The assignor has the right to assign the receivable;
 - (b) The assignor has not previously assigned the receivable to another assignee; and
 - (c) The debtor of the receivable does not and will not have any defences or rights of set-off.
2. Unless otherwise agreed between the assignor and the assignee, the assignor does not represent that the debtor of the receivable has, or will have, the ability to pay.

[Note to the Working Group: The Working Group may wish to note that the commentary will clarify that articles 68-70 are based on recommendations 114-116 of the Secured Transactions Guide, which in turn are based articles 12-14 of the United Nations Assignment Convention.]

Article 69. Right to notify the debtor of the receivable

1. Unless otherwise agreed between the assignor and the assignee, the assignor or the assignee or both may send the debtor of the receivable notification of the assignment and a payment instruction, but after notification has been sent only the assignee may send such an instruction.

2. Notification of the assignment or a payment instruction sent in breach of any agreement referred to in subparagraph (a) of this article is not ineffective for the purposes of article 74 by reason of such breach.
3. Nothing in this article affects any obligation or liability of the party in breach of such an agreement for any damages arising as a result of the breach.

Article 70. Right of the assignee to payment

1. As between the assignor and the assignee, unless otherwise agreed and whether or not notification of the assignment has been sent:
 - (a) If payment in respect of the assigned receivable is made to the assignee, the assignee is entitled to retain the proceeds and tangible assets returned in respect of the assigned receivable;
 - (b) If payment in respect of the assigned receivable is made to the assignor, the assignee is entitled to payment of the proceeds and also to tangible assets returned to the assignor in respect of the assigned receivable; and
 - (c) If payment in respect of the assigned receivable is made to another person over whom the assignee has priority, the assignee is entitled to payment of the proceeds and also to tangible assets returned to such person in respect of the assigned receivable.
2. The assignee may not retain more than the value of its right in the receivable.

Chapter VII. Rights and obligations of the debtor of the receivable

Article 71. Protection of the debtor of the receivable

1. Except as otherwise provided in this Law, an assignment does not, without the consent of the debtor of the receivable, affect the rights and obligations of the debtor of the receivable, including the payment terms contained in the original contract.
2. A payment instruction may change the person, address or account to which the debtor of the receivable is required to make payment, but may not change:
 - (a) The currency of payment specified in the original contract; or
 - (b) The State specified in the original contract in which payment is to be made to a State other than that in which the debtor of the receivable is located.

[Note to the Working Group: The Working Group may wish to note that the commentary will clarify that articles 68-70 are based on recommendations 117-123 of the Secured Transactions Guide, which in turn are based articles 15-21 of the United Nations Assignment Convention.]

Article 72. Notification of the assignment

1. Notification of the assignment or a payment instruction is effective when received by the debtor of the receivable if it is in a language that is reasonably expected to inform the debtor of the receivable about its contents. It is sufficient if

notification of the assignment or a payment instruction is in the language of the original contract.

2. Notification of the assignment or a payment instruction may relate to receivables arising after notification.

3. Notification of a subsequent assignment constitutes notification of all prior assignments.

Article 73. Discharge of the debtor of the receivable by payment

1. Until the debtor of the receivable receives notification of the assignment, it is entitled to be discharged by paying in accordance with the original contract.

2. After the debtor of the receivable receives notification of the assignment, subject to paragraphs 3-8 of this article, it is discharged only by paying the assignee or, if otherwise instructed in the notification of the assignment or subsequently by the assignee in a writing received by the debtor of the receivable, in accordance with such payment instruction.

3. If the debtor of the receivable receives more than one payment instruction relating to a single assignment of the same receivable by the same assignor, it is discharged by paying in accordance with the last payment instruction received from the assignee before payment.

4. If the debtor of the receivable receives notification of more than one assignment of the same receivable made by the same assignor, it is discharged by paying in accordance with the first notification received.

5. If the debtor of the receivable receives notification of one or more subsequent assignments, it is discharged by paying in accordance with the notification of the last of such subsequent assignments.

6. If the debtor of the receivable receives notification of the assignment of a part of or an undivided interest in one or more receivables, it is discharged by paying in accordance with the notification or in accordance with this article as if the debtor of the receivable had not received the notification.

7. If the debtor of the receivable receives a notification as provided in paragraph 6 of this article and pays in accordance with the notification, it is discharged only to the extent of the part or undivided interest paid.

8. If the debtor of the receivable receives notification of the assignment from the assignee, it is entitled to request the assignee to provide within a reasonable period of time adequate proof that the assignment from the initial assignor to the initial assignee and any intermediate assignment have been made and, unless the assignee does so, the debtor of the receivable is discharged by paying in accordance with this article as if the notification from the assignee had not been received.

9. Adequate proof of an assignment referred to in paragraph 8 of this article includes but is not limited to any writing emanating from the assignor and indicating that the assignment has taken place.

10. This article does not affect any other ground on which payment by the debtor of the receivable to the person entitled to payment, to a competent judicial or other authority, or to a public deposit fund discharges the debtor of the receivable.

Article 74. Defences and rights of set-off of the debtor of the receivable

1. In a claim by the assignee against the debtor of the receivable for payment of the assigned receivable, the debtor of the receivable may raise against the assignee all defences and rights of set-off arising from the original contract, or any other contract that was part of the same transaction, of which the debtor of the receivable could avail itself as if the assignment had not been made and such claim were made by the assignor.
2. The debtor of the receivable may raise against the assignee any other right of set-off, provided that it was available to the debtor of the receivable at the time notification of the assignment was received by the debtor of the receivable.
3. Notwithstanding paragraphs 1 and 2 of this article, defences and rights of set-off that the debtor of the receivable may raise pursuant to article 14, paragraph 2, or article 15, paragraph 5, against the assignor for breach of an agreement limiting in any way the assignor's right to make the assignment are not available to the debtor of the receivable against the assignee.

Article 75. Agreement not to raise defences or rights of set-off

1. Subject to paragraph 3 of this article, the debtor of the receivable may agree with the assignor in a writing signed by the debtor of the receivable not to raise against the assignee the defences and rights of set-off that it could raise pursuant to article 74.
2. An agreement under paragraph 1 of this article, which may be modified only by an agreement in a writing signed by the debtor of the receivable and the effect of which as against the assignee is determined by article 76, paragraph 2, precludes the debtor of the receivable from raising against the assignee the defences and rights of set-off provided in paragraph 1 of this article.
3. The debtor of the receivable may not waive defences arising from fraudulent acts on the part of the assignee or based on the incapacity of the debtor of the receivable.

Article 76. Modification of the original contract

1. An agreement concluded before notification of the assignment between the assignor and the debtor of the receivable that affects the assignee's rights is effective as against the assignee, and the assignee acquires corresponding rights.
2. An agreement concluded after notification of the assignment between the assignor and the debtor of the receivable that affects the assignee's rights is ineffective as against the assignee unless:
 - (a) The assignee consents to it; or
 - (b) The receivable is not fully earned by performance and either the modification is provided for in the original contract or, in the context of the original contract, a reasonable assignee would consent to the modification.

3. Paragraphs 1 and 2 of this article do not affect any right of the assignor or the assignee arising from breach of an agreement between them.

**Article 77. Recovery of payments
made by the debtor of the receivable**

1. Failure of the assignor to perform the original contract does not entitle the debtor of the receivable to recover from the assignee a sum paid by the debtor of the receivable to the assignor or the assignee.
2. This does not affect any rights that the debtor of the receivable may have against the assignor.

[Note to the Working Group: The Working Group may wish to note that article 77 is based on recommendation 123 of the Secured Transactions Guide, which in turn is based on article 21 of the United Nations Assignment Convention. Paragraph 2 has been added to clarify that this article is not intended to deprive the debtor of the receivable of any rights it might have under other law to seek recovery of payments from its contractual partner, that is, the assignor.]

Chapter VIII. Enforcement of a security right

**Article 78. General standard of
conduct in the context of enforcement**

A person must enforce its rights and perform its obligations under the provisions on enforcement in good faith and in a commercially reasonable manner.

Article 79. Limitations on party autonomy

1. The general standard of conduct provided in article 78 cannot be waived unilaterally or varied by agreement at any time.
2. Subject to paragraph 1 of this article:
 - (a) The grantor and any other person that owes payment or other performance of the secured obligation may waive unilaterally or vary by agreement any of its rights under the provisions on enforcement, but only after default; and
 - (b) The secured creditor may waive unilaterally or vary by agreement any of its rights under the provisions on enforcement.
3. A variation of rights by agreement may not adversely affect the rights of any person not a party to the agreement.
4. A person challenging the effectiveness of the agreement on the ground that is inconsistent with paragraphs 1, 2, 3 or 4 of this article has the burden of proof.

Article 80. Liability

If a person fails to comply with its obligations under the provisions on enforcement, it is liable for damages caused by such failure.

Article 81. Judicial or other relief for non-compliance

The debtor, the grantor or any other interested person is entitled at any time to apply to a court or other authority for relief from the secured creditor's failure to comply with its obligations under the provisions on enforcement.

[Note to the Working Group: The Working Group may wish to note that, for the purposes of this and other articles (e.g. article 84), the commentary will give examples of interested persons, such as a secured creditor with a lower priority ranking than that of the enforcing secured creditor, a guarantor or a co-owner of the encumbered assets.]

Article 82. Expeditious judicial proceedings

Where the secured creditor, the grantor or any other person that owes performance of the secured obligation, or claims to have a right in an encumbered asset, applies to a court or other authority with respect to the exercise of post-default rights, the proceedings should be conducted in a reasonably expeditious manner.

[Note to the Working Group: If the Working Group decides to retain the expression "in a reasonably expeditious manner", it may wish to further clarify this expression in this article or in the relevant commentary. Alternatively the Working Group may wish to consider revising the formulation of this article.]

Article 83. Post-default rights of the grantor

After default, the grantor is entitled to exercise one or more of the following rights:

- (a) Pay in full the secured obligation and obtain a release from the security right of all encumbered assets, as provided in article 84;
- (b) Apply to a court or other authority for relief if the secured creditor is not complying with its obligations under the provisions of this law, as provided in article 81;
- (c) Propose to the secured creditor, or reject the proposal of the secured creditor, that the secured creditor acquire an encumbered asset in total or partial satisfaction of the secured obligation, as provided in paragraphs 3 and 4 of article 95; and
- (d) Exercise any other right provided in the security agreement or any law.

Article 84. Extinction of the security right after full satisfaction of the secured obligation

1. The debtor, the grantor or any other interested person is entitled to satisfy the secured obligation in full, including payment of the costs of enforcement up to the time of full satisfaction.
2. This right may be exercised until the earlier of the disposition, acquisition or collection of an encumbered asset by the secured creditor or the conclusion of an agreement by the secured creditor to dispose of the encumbered asset.

3. If all commitments to extend credit have terminated, full satisfaction of the secured obligation extinguishes the security right in all encumbered assets, subject to any rights of subrogation in favour of the person satisfying the secured obligation.

Article 85. Post-default rights of the secured creditor

After default, the secured creditor is entitled to exercise one or more of the following rights with respect to an encumbered asset:

- (a) Obtain possession of a tangible encumbered asset, as provided in articles 90 and 91;
- (b) Sell or otherwise dispose of, lease or license an encumbered asset, as provided in articles 92 and 93;
- (c) Propose that the secured creditor acquires an encumbered asset in total or partial satisfaction of the secured obligation, as provided in article 95;
- (d) Enforce its security right in an attachment, as provided in articles 99;
- (e) Collect on or otherwise enforce a security right in an encumbered asset that is a receivable, as provided in article 101; and
- (f) Exercise any other right provided in the security agreement (except to the extent inconsistent with the provisions of this Law) or any law.

Article 86. Judicial and extrajudicial methods of exercising post-default rights

1. After default, the secured creditor may exercise its rights provided in article 85 either by applying to a court or other authority, or without application to a court or other authority.
2. Extrajudicial exercise of the secured creditor's rights is subject to the general standard of conduct provided in article 78 and the requirements provided in articles 91-93 with respect to extrajudicial obtaining of possession and disposition of an encumbered asset.

Article 87. Cumulative post-default rights

The exercise of one post-default right does not prevent the exercise of another right, except to the extent that the exercise of one right has made the exercise of another right impossible.

Article 88. Post-default rights with respect to the secured obligation

The exercise of a post-default right with respect to an encumbered asset does not prevent the exercise of a post-default right with respect to the obligation secured by that asset, and vice versa.

Article 89. Right of higher-ranking secured creditor to take over enforcement

1. If a secured creditor has commenced enforcement by taking any of the actions described in the provisions on enforcement or a judgement creditor has taken the steps referred to in article 52, a secured creditor whose security right has priority as against that of the enforcing secured creditor or the enforcing judgement creditor is entitled to take control of the enforcement process at any time before the earlier of the final disposition or acquisition or collection of an encumbered asset or the conclusion of an agreement by the secured creditor to dispose of the encumbered asset.
2. The right to take control includes the right to enforce by any method available under articles 78-102.

Article 90. Secured creditor's right to possession of an encumbered asset

After default the secured creditor is entitled to possession of a tangible encumbered asset.

Article 91. Extrajudicial obtaining of possession of an encumbered asset

The secured creditor may elect to obtain possession of a tangible encumbered asset without applying to a court or other authority only if:

- (a) The grantor has consented in the security agreement to the secured creditor obtaining possession without applying to a court or other authority;
- (b) The secured creditor has given the grantor and any person in possession of the encumbered asset notice of default and of the secured creditor's intent to obtain possession without applying to a court or other authority; and
- (c) At the time the secured creditor seeks to obtain possession of the encumbered asset the grantor and any person in possession of the encumbered asset does not object.

Article 92. Extrajudicial disposition of an encumbered asset

1. After default, a secured creditor is entitled, without applying to a court or other authority, to sell or otherwise dispose of or lease an encumbered asset to the extent of the grantor's rights in the encumbered asset.
2. Subject to the standard of conduct provided in article 78, a secured creditor that elects to exercise this right may select the method, manner, time, place and other aspects of the disposition or lease.

**Article 93. Advance notice of
extrajudicial disposition of an encumbered asset**

1. After default, the secured creditor must give notice of its intention to sell or otherwise dispose of, lease or licence an encumbered asset without applying to a court or other authority.
2. The notice need not be given if the encumbered asset is perishable, may decline in value speedily or is of a kind sold on a recognized market.
3. The notice should be given in an efficient, timely and reliable way so as to protect the grantor or other interested parties, while, at the same time, avoiding having a negative effect on the secured creditor's remedies and the potential net realization value of the encumbered assets.
4. The notice must be given to:
 - (a) The grantor, the debtor and any other person that owes performance of the secured obligation;
 - (b) Any person with rights in the encumbered asset that, more than [to be specified] days before the sending of the notice by the secured creditor to the grantor, notifies in writing the secured creditor of those rights;
 - (c) Any other secured creditor that, more than [a short period of time to be specified] days before the notice is sent to the grantor, registered a notice with respect to a security right in the encumbered asset that is indexed under the identifier of the grantor; and
 - (d) Any other secured creditor that was in possession of the encumbered asset at the time when the enforcing secured creditor took possession of the asset.
5. The notice must be given in writing at least [a short period of time, such as fifteen days, to be specified by the enacting State] days before extrajudicial disposition takes place and must contain an accounting of the amount then owed and a reference to the right of the debtor or the grantor to obtain the release of the encumbered assets from the security right as provided in article 84.
6. The notice must be in a language that is reasonably expected to inform its recipients about its contents. It is sufficient if the notice to the grantor is in the language of the security agreement being enforced.

**Article 94. Distribution of proceeds
of disposition of an encumbered asset**

1. In the case of extrajudicial disposition of an encumbered asset:
 - (a) The enforcing secured creditor must apply the net proceeds of its enforcement after deducting costs of enforcement to the secured obligation;
 - (b) Except as provided in subparagraph 1(c) of this article, the enforcing secured creditor must pay any surplus remaining to any subordinate competing claimant that, prior to any distribution of the surplus, notified the enforcing secured creditor of the subordinate competing claimant's claim, to the extent of the amount of that claim, and any balance remaining must be remitted to the grantor; and

(c) Whether or not there is any dispute as to the entitlement or priority of any competing claimant under this Law, the enforcing secured creditor may, in accordance with generally applicable procedural rules, pay the surplus to a competent judicial or other authority or to a public deposit fund for distribution.

2. Distribution of the proceeds realized by a judicial disposition or other officially administered enforcement process is to be made pursuant to [the general rules of the enacting State governing execution proceedings], but in accordance with the provisions of this Law on priority.

3. The debtor and any other person that owes payment of the secured obligation remain liable for any shortfall owing after application of the net proceeds of enforcement to the secured obligation.

Article 95. Acquisition of an encumbered asset in satisfaction of the secured obligation

1. After default, the secured creditor may propose in writing to acquire one or more of the encumbered assets in total or partial satisfaction of the secured obligation.

2. The proposal must be sent to:

(a) The grantor, the debtor and any other person that owes payment or other performance of the secured obligation, including a guarantor;

(b) Any person with rights in the encumbered asset that, more than [a short period of time such as fifteen days to be specified by the enacting State] days before the proposal is sent by the secured creditor to the grantor, has notified in writing the secured creditor of those rights;

(c) Any other secured creditor that, more than [a short period of time such as fifteen days to be specified by the enacting State] days before the proposal is sent by the secured creditor to the grantor, registered a notice with respect to a security right in the encumbered asset indexed under the identifier of the grantor; and

(d) Any other secured creditor that was in possession of the encumbered asset at the time the secured creditor took possession.

3. The proposal must specify the amount owed as of the date the proposal is sent and the amount of the obligation that is proposed to be satisfied by acquiring the encumbered asset.

4. The secured creditor may acquire the encumbered asset as provided in paragraph 1 of this article, unless the secured creditor receives an objection in writing from any person entitled to receive such a proposal within [a short period of time such as fifteen days to be specified by the enacting State] days, after the proposal is sent.

5. In the case of a proposal for the acquisition of the encumbered asset in partial satisfaction, affirmative consent by each addressee of the proposal is necessary.

6. The grantor may make such a proposal and if the secured creditor accepts it, the secured creditor must proceed as provided in paragraphs 2-5 of this article.

Article 96. Rights acquired through judicial disposition

If a secured creditor disposes of an encumbered asset through a judicial or other officially administered process, the rights acquired by the transferee are determined by [the general rules of the enacting State governing execution proceedings].

Article 97. Rights acquired through extrajudicial disposition

1. If a secured creditor sells or otherwise disposes of an encumbered asset without applying to a court or other authority, in accordance with this Law, a person that acquires the grantor's right in the asset takes the asset subject to rights that have priority as against the security right of the enforcing secured creditor, but free of rights of the enforcing secured creditor and any competing claimant whose right has a lower priority than that of the enforcing secured creditor.
2. The rule provided in paragraph 1 of this article applies to rights in an encumbered asset acquired by a secured creditor that has acquired the asset in total or partial satisfaction of the secured obligation.
3. If a secured creditor leases an encumbered asset without applying to a court or other authority, in accordance with this Law, a lessee is entitled to the benefit of the lease during its term, except as against rights that have priority over the right of the enforcing secured creditor.
4. If the secured creditor sells or otherwise disposes of or leases the encumbered asset not in accordance with articles 78-102, a good faith acquirer or lessee of the encumbered asset acquires the rights or benefits described in article 97.

Article 98. Intersection of movable and immovable property enforcement regimes

1. The secured creditor may elect to enforce a security right in an attachment to immovable property in accordance with articles 78-102 or [the law of the enacting State governing enforcement of encumbrances on immovable property].
2. If an obligation is secured by both a movable asset and immovable property of a grantor, the secured creditor may elect to enforce:
 - (a) The security right in the movable asset under the provisions of this Law on the enforcement of a security right in a movable asset and the encumbrance on the immovable property under [the law of the enacting State governing enforcement of encumbrances on immovable property]; or
 - (b) Both rights under [the law of the enacting State governing enforcement of encumbrances on immovable property].

Article 99. Enforcement of a security right in an attachment

1. A secured creditor with a security right in an attachment to immovable property is entitled to enforce its security right only if it has priority as against competing rights in the immovable property.
2. A creditor with a competing right in the immovable property that has lower priority than the security right of the enforcing secured creditor is entitled to pay off

the obligation secured by the security right of the enforcing secured creditor in the attachment.

3. The enforcing secured creditor is liable for any damage to the immovable property caused by the act of removal other than any diminution in its value attributable solely to the absence of the attachment.

4. A secured creditor with a security right in an attachment to a movable asset is entitled to enforce its security right in the attachment.

5. A creditor with a competing right in the movable asset that has higher priority than the security right of the enforcing secured creditor is entitled to take control of the enforcement process, as provided in article 89.

6. A creditor with a competing right in the movable asset that has lower priority than the security right of the enforcing secured creditor is entitled to pay off the obligation secured by the security right of the enforcing secured creditor in the attachment.

7. The enforcing secured creditor is liable for any damage to the movable asset caused by the act of removal other than any diminution in its value attributable solely to the absence of the attachment.

Article 100. Application of the chapter on enforcement to an outright transfer of a receivable

Articles 78-102 do not apply to the collection or other enforcement of a receivable assigned by an outright transfer with the exception of:

- (a) Articles 78 and 79 in the case of an outright transfer with recourse; and
- (b) Article 101.

Article 101. Enforcement of a security right in a receivable

1. In the case of a receivable assigned by an outright transfer, subject to articles 71-77, the assignee has the right to collect or otherwise enforce the receivable.

2. In the case of a receivable assigned otherwise than by an outright transfer, the assignee is entitled, subject to articles 71-77, to collect or otherwise enforce the receivable after default, or before default with the agreement of the assignor.

3. The assignee's right to collect or otherwise enforce a receivable includes the right to collect or otherwise enforce any personal or property right that secures payment of the receivable.

Article 102. Distribution of proceeds of disposition where the encumbered asset is a receivable

1. In the case of collection or other enforcement of a receivable, the enforcing secured creditor must apply the net proceeds of its enforcement after deducting costs of enforcement to the secured obligation.

2. The enforcing secured creditor must pay any surplus remaining to the competing claimants that, prior to any distribution of the surplus, notified the

enforcing secured creditor of the competing claimant's claim, to the extent of that claim, and any balance remaining must be remitted to the grantor.

(A/CN.9/WG.VI/WP.55/Add.4) (Original: English)
Note by the Secretariat on a draft Model Law on Secured
Transactions, submitted to the Working Group on Security Interests
at its twenty-third session

Chapter IX. Acquisition financing

Option A: Unitary approach*

Article 103. An acquisition security right as a security right

An acquisition security right is a security right, and, as a result, all the articles governing security rights, including those on creation, third-party effectiveness, registration, priority (except as provided in articles 105-110), enforcement and the law applicable to a security right, apply to acquisition security rights.

Article 104. Third-party effectiveness and priority of an acquisition security right in consumer goods

An acquisition security right in consumer goods is effective against third parties upon its creation and, except as provided in article 106, has priority as against a competing non-acquisition security right created by the grantor.

Article 105. Priority of an acquisition security right in a tangible asset

Except as provided in article 106:

Alternative A**

(a) An acquisition security right in a tangible asset other than inventory or consumer goods has priority as against a competing non-acquisition security right created by the grantor, even if a notice with respect to that security right was registered in the general security rights registry before registration of a notice with respect to the acquisition security right, provided that:

- (i) The acquisition secured creditor retains possession of the asset; or
- (ii) A notice with respect to the acquisition security right is registered in the general security rights registry not later than [a short time period, such as thirty days, to be specified by the enacting States] after the grantor obtains possession of the asset;

(b) An acquisition security right in inventory has priority as against a competing non-acquisition security right created by the grantor, even if that security right became effective against third parties before the acquisition security right became effective against third parties, provided that:

- (i) The acquisition secured creditor retains possession of the inventory; or
- (ii) Before delivery of the inventory to the grantor:
 - a. A notice with respect to the acquisition security right is registered in the general security rights registry; and

* A State may adopt option A (unitary approach), that is, articles 103-111, or option B (non-unitary approach), that is, articles 112-126. The articles outside this chapter are generally applicable except to the extent modified by the articles in this chapter.

** A State may adopt alternative A or alternative B of article 105.

b. A secured creditor with an earlier-registered non-acquisition security right created by the grantor in inventory of the same kind is notified by the acquisition secured creditor that it has or intends to acquire an acquisition security right;

(iii) The notice referred to in subparagraph (b) (ii) b. of this article must describe the inventory sufficiently to enable the non-acquisition secured creditor to identify the inventory that is the object of the acquisition security right;

(c) A notice, sent pursuant to subparagraph (b) (ii) b. of this article, may cover acquisition security rights under multiple transactions between the same parties without the need to identify each transaction and is sufficient only for security rights in tangible assets of which the grantor obtains possession within a period of [a period of time, such as five years, to be specified by the enacting State] after the notice is given.

Alternative B

an acquisition security right in a tangible assets other than consumer goods has priority as against a competing non-acquisition security right created by the grantor, even if a notice of that security right was registered in the general security rights registry before registration of a notice of the acquisition security right, provided that:

(a) The acquisition secured creditor retains possession of the asset; or

(b) A notice relating to the acquisition security right is registered in the general security rights registry not later than [a short time period, such as thirty days, to be specified by the enacting State] after the grantor obtains possession of the asset.

Article 106. Priority of a security right registered in a specialized registry or noted on a title certificate

The priority of an acquisition security right under article 104 or 105 does not override the priority of a security right or other right registered in a specialized registry or noted on a title certificate as provided in article 49.

Article 107. Priority between competing acquisition security rights

The priority between competing acquisition security rights is determined according to the general priority rules applicable to non-acquisition security rights, unless one of the acquisition security rights is an acquisition security right of a supplier that was made effective against third parties within the period specified in article 105, in which case the supplier's acquisition security right has priority as against all competing acquisition security rights.

Article 108. Priority of an acquisition security right as against the right of a judgement creditor

An acquisition security right that is made effective against third parties within the period specified in article 105 has priority as against the rights of an unsecured creditor that would otherwise have priority as provided in article 52.

**Article 109. Priority of an acquisition security right
in an attachment to immovable property as against an
earlier registered encumbrance on the immovable property**

An acquisition security right in a tangible asset that becomes an attachment to immovable property has priority as against third parties with existing rights in the immovable property, other than an encumbrance securing a loan financing the construction of the immovable property, provided that notice of the acquisition security right is registered in the immovable property registry not later than [a short time period, such as thirty days, to be specified by the enacting State] days after the asset becomes an attachment.

**Article 110. Priority of an acquisition
security right in proceeds of a tangible asset**

Alternative A*

1. An acquisition security right in proceeds of a tangible asset other than inventory or consumer goods has the same priority as the acquisition security right in that asset.
2. A security right in proceeds of inventory has the same priority as the acquisition security right in that inventory, except where the proceeds take the form of receivables, negotiable instruments, rights to payment of funds credited to a bank account or rights to receive the proceeds under an independent undertaking.
3. The priority under paragraph 1 or 2 of this article is conditional on the acquisition secured creditor notifying secured creditors that, before the proceeds arise, registered a notice with respect to a security right in assets of the same kind as the proceeds.

Alternative B

if an acquisition security right in a tangible asset is effective against third parties, the security right in proceeds has the priority of a non-acquisition security right.

**Article 111. Acquisition security right
as a security right in insolvency proceedings**

In the case of insolvency proceedings with respect to the debtor, the provisions that apply to security rights apply also to acquisition security rights.

Option B: Non-unitary approach**

Article 112. Methods of acquisition financing

1. The regime of acquisition security rights in the context of the non-unitary approach is identical to that adopted in the context of the unitary approach.

* A State may adopt alternative A of article 110, if it adopts alternative A of article 105, or alternative B of article 110, if it adopts alternative B of article 105.

** A State may adopt option A (unitary approach), that is, articles 103-111, or option B (non-unitary approach), that is, articles 112-126.

2. All creditors, both suppliers and lenders, may acquire an acquisition security right in conformity with the regime governing acquisition security rights.
3. Acquisition financing based on retention-of-title rights and financial lease rights may be provided in accordance with article 188.
4. A lender may acquire the benefit of a retention-of-title right and a financial lease right through an assignment or subrogation.

**Article 113. Equivalence of a retention-of-title
right and a financial lease right to an acquisition security right**

The rules governing acquisition financing produce functionally equivalent economic results regardless of whether the creditor's right is a retention-of-title right, a financial lease right or an acquisition security right.

[Note to the Working Group: The Working Group may wish to consider whether articles 112 and 113 should be retained appropriately revised or deleted while the matters covered therein would be discussed in the commentary.]

**Article 114. Effectiveness of a
retention-of-title right and a financial lease right**

1. A retention-of-title right or a financial lease right in a tangible asset is not effective unless the sale or lease agreement is concluded in or evidenced by a writing that in conjunction with the course of conduct between the parties indicates the seller's or the lessor's intent to retain ownership.
2. The writing must exist not later than the time when the buyer or lessee obtains possession of the asset.

Article 115. Right of buyer or lessee to create a security right

1. A buyer or lessee may create a security right in a tangible asset that is the object of a retention-of-title right or a financial lease right.
2. The maximum amount for which the security right may be enforced is the asset's value in excess of the amount owing to the seller or financial lessor.

**Article 116. Third-party effectiveness of a
retention-of-title right or financial lease right in consumer goods**

A retention-of-title right or a financial lease right in consumer goods is effective against third parties upon conclusion of the sale or lease provided that the right is evidenced in accordance with article 114.

**Article 117. Third-party effectiveness
of a retention-of-title right in a tangible asset**

Alternative A*

1. An acquisition security right, a retention-of-title right or a financial lease right in tangible asset other than inventory or consumer goods is effective against third parties only if:
 - (a) The seller or lessor retains possession of the asset; or
 - (b) A notice relating to the right is registered in the general security rights registry not later than [a short time period, such as thirty days, to be specified by the enacting State] days after the buyer or lessee obtains possession of the asset.
2. A retention-of-title right or a financial lease right in inventory is effective against third parties only if:
 - (a) The seller or lessor retains possession of the inventory; or
 - (b) Before delivery of the inventory to the buyer or lessee:
 - (i) A notice relating to the right is registered in the general security rights registry; and
 - (ii) A secured creditor with an earlier registered non-acquisition security right created by the buyer or lessee in inventory of the same kind is notified by the seller or lessor of its intention to claim a retention-of-title right or a financial lease right;
 - (c) The notice referred to in subparagraph 2 (b) (ii) of this article should describe the inventory sufficiently to enable the secured creditor to identify the inventory that is the object of the retention-of-title right or the financial lease right.
3. A notice sent pursuant to subparagraph 2 (b) (ii) of this article may cover retention-of-title rights and financial lease rights under multiple transactions between the same parties without the need to identify each transaction. The notice is effective only for rights in tangible assets of which the buyer or lessee obtains possession within a period of [a period of time, such as five years, to be specified] years after the notice is given.

Alternative B

an acquisition security right, a retention-of-title right or financial lease right in a tangible asset other than consumer goods is effective against third parties only if:

- (a) The seller or lessor retains possession of the asset; or
- (b) A notice relating to the right is registered in the general security rights registry not later than [a short time period, such as thirty days, to be specified by the enacting State] days after the buyer or lessee obtains possession of the asset.

* A State may adopt alternative A or alternative B of article 117.

Article 118. One registration sufficient

1. Registration of a single notice in the general security rights registry is sufficient to achieve third-party effectiveness of a retention-of-title right or a financial lease right under multiple transactions between the same parties, whether concluded before or after the registration, which involve tangible assets that fall within the description contained in the notice.
2. The provisions of this Law on the registry system apply [with appropriate modifications as to terminology] to the registration of a retention-of-title right and a financial lease right.

Article 119. Effect of failure to achieve third-party effectiveness of a retention-of-title right or a financial lease right

If a retention-of-title right or a financial lease right is not effective against third parties, ownership of the asset as against third parties passes to the buyer or lessee, and the seller or lessor has a security right in the asset subject to the provisions of this Law applicable to security rights.

Article 120. Third-party effectiveness of a retention-of-title right or financial lease right in an attachment to immovable property

1. A retention-of-title right or a financial lease right in a tangible asset that becomes an attachment to immovable property is effective against third parties with rights in the immovable property that are registered in the immovable property registry only if it is registered in the immovable property registry not later than [a short time period, such as thirty days, to be specified by the enacting State] days after the asset becomes an attachment.
2. If a seller or lessor fails to register a notice of its retention-of-title right or financial lease right in a tangible asset that became an attachment to immovable property within the time period provided in paragraph 1 of this article, the retention-of-title right of the seller or the financial lease right of the lessor is deemed to be a security right.

Article 121. Existence of a security right in proceeds of a tangible asset subject to a retention-of-title right or financial lease right

A seller or lessor with a retention-of-title right or financial lease right in a tangible asset has a security right in proceeds of the asset.

Article 122. Third-party effectiveness of a security right in proceeds of a tangible asset subject to a retention-of-title right or financial lease right

1. A security right in proceeds referred to in article 121 is effective against third parties only if the proceeds are described in a generic way in the registered notice by which the retention-of-title right or financial lease right was made effective against third parties or the proceeds consist of money, receivables, negotiable instruments or rights to payment of funds credited to a bank account.
2. If the proceeds are not described in a generic way in the registered notice or do not consist of the types of asset referred to in paragraph 1 of this article, the security right in the proceeds is effective against third parties for [a short period of time,

such as thirty days, to be specified by the enacting State] days after the proceeds arise and continuously thereafter, if it was made effective against third parties by one of the methods referred to in article 18 or 20 before the expiry of that time period.

**Article 123. Priority of a security
right in proceeds of a tangible asset**

Alternative A*

1. If a retention-of-title right or financial lease right is effective against third parties, the security right in proceeds referred to in article 121 has priority as against another security right in the same asset.
2. If a retention-of-title right or financial lease right is effective against third parties, the security right in proceeds of inventory referred to in article 121 has the same priority as a retention-of-title or financial lease right in that inventory, except where the proceeds take the form of receivables, negotiable instruments, rights to payment of funds credited to a bank account and rights to receive the proceeds under an independent undertaking.
3. The priority referred to in paragraph 2 of this article is conditional on the seller or lessor notifying secured creditors that have registered a notice with respect to a security right in assets of the same kind as the proceeds before the proceeds arise.

Alternative B

1. If a retention-of-title right or financial lease right in a tangible asset is effective against third parties, the security right in proceeds referred to in article 121 has the priority of a non-acquisition security right if the security right in the proceeds is effective against third parties as provided in article 122.
2. The rule in paragraph 1 of this article applies also to the proceeds of a tangible asset subject to an acquisition security right.

**[Article 124. Enforcement of a
retention-of-title right or a financial lease right]**

1. Rules for the post-default enforcement of a retention-of-title right or a financial lease right in a tangible asset should deal with:
 - (a) The manner in which the seller or lessor may obtain possession of the asset;
 - (b) Whether the seller or lessor is required to dispose of the asset and, if so, how;
 - (c) Whether the seller or lessor may retain any surplus; and
 - (d) Whether the seller or lessor has a claim for any deficiency against the buyer or lessee.

* A State may adopt alternative A of article 123, if it adopts alternative A of article 117, or alternative B of article 123, if it adopts alternative B of article 117.

2. The regime that applies to the post-default enforcement of a security right applies to the post-default enforcement of a retention-of-title right or a financial lease right except to the extent necessary to preserve the coherence of the regime applicable to sale and lease.]

[Note to the Working Group: The Working Group may wish to note that article 124 is based on recommendation 200 of the Secured Transactions Guide and consider its substance as in its current formulation article 124 does not fit into a model law.]

**Article 125. Law applicable to a
retention-of-title right or a financial lease right**

The conflict-of-laws provisions of this Law that apply to security rights apply also to retention-of-title rights and financial lease rights.

**Article 126. Retention-of-title right or financial
lease right in insolvency proceedings**

In the case of insolvency proceedings with respect to the debtor,

Alternative A*

the provisions of this Law that apply to security rights apply also to retention-of-title rights and financial lease rights.

Alternative B

the provisions of this Law that apply to ownership rights of third parties apply also to retention-of-title rights and financial lease rights.

Chapter X. Conflict of laws

[Note to the Working Group: The Working Group may wish to consider whether chapter X should be retained in the draft Model Law. If the Working Group decided that chapter X should be deleted, the commentary could explain that States that wish to include conflict-of-laws provisions in their secured transactions (or other) law may implement the recommendations of the Secured Transactions Guide.]

Article 127. Law applicable to a security right in a tangible asset

1. Except as provided in paragraphs 2 to 4 and articles 128 and 131, the law applicable to the creation, third-party effectiveness and priority of a security right in a tangible asset is the law of the State in which the asset is located.

2. The law applicable to the issues mentioned in paragraph 1 of this article with respect to a security right in a tangible asset of a type ordinarily used in more than one State is the law of the State in which the grantor is located.

* A State may adopt alternative A or alternative B of article 126.

3. If a security right in a tangible asset is subject to registration in a specialized registry or notation on a title certificate providing for registration or notation of a security right, the law applicable to issues mentioned in paragraph 1 of this article is the law of the State under whose authority the registry is maintained or the title certificate is issued.

4. The law applicable to the priority of a security right in a tangible asset made effective against third parties by possession of a negotiable document as against a competing security right made effective against third parties by another method is the law of the State in which the document is located.

**Article 128. Law applicable to a security
right in a tangible asset in transit or to be exported**

A security right in a tangible asset in transit or to be exported from the State in which it is located at the time of the creation of the security right may be created and made effective against third parties under the law of the State of the location of the asset at the time of creation as provided in article 127, paragraph 1, or, provided that the asset reaches that State within [a short period of time, such as thirty days, to be specified by the enacting State] days after the time of creation of the security right, under the law of the State of its ultimate destination.

**Article 129. Law applicable
to a security right in an intangible asset**

The law applicable to the creation, effectiveness against third parties and priority of a security right in an intangible asset is the law of the State in which the grantor is located.

**Article 130. Law applicable to
receivables arising from a sale, lease or
security agreement relating to immovable property**

1. The law applicable to the creation, third-party effectiveness and priority of a security right in a receivable arising from a sale, lease or security agreement relating to immovable property is the law of the State in which the assignor is located.

2. Notwithstanding paragraph 1 of this article, the law applicable to a priority conflict involving the right of a competing claimant that is registered in an immovable property registry is the law of the State under whose authority the registry is maintained.

3. The rule in the preceding paragraph applies only if registration is relevant under that law to the priority of a security right in the receivable.

Article 131. Law applicable to the third-party effectiveness of a security right in specified types of asset by registration

If the State in which the grantor is located recognizes registration as a method of achieving effectiveness against third parties of a security right in a negotiable instrument or a right to payment of funds credited to a bank account, the law of the State in which the grantor is located is the law applicable to the issue whether third-party effectiveness has been achieved by registration under the laws of that State.

Article 132. Law applicable to a security right in proceeds

1. The law applicable to the creation of a security right in proceeds is the law applicable to the creation of the security right in the original encumbered asset from which the proceeds arose.
2. The law applicable to the third-party effectiveness and priority of a security right in proceeds is the law applicable to the third-party effectiveness and priority of a security right in an asset of the same kind as the proceeds.

Article 133. Law applicable to the rights and obligations of the grantor and the secured creditor

The law applicable to the mutual rights and obligations of the grantor and the secured creditor arising from their security agreement is the law chosen by them and, in the absence of a choice of law, by the law governing the security agreement.

Article 134. Law applicable to the rights and obligations of third-party obligors and secured creditors

The law applicable to a receivable also is the law applicable to:

- (a) The relationship between the debtor of the receivable and the assignee of the receivable;
- (b) The conditions under which an assignment of the receivable may be invoked against the debtor of the receivable, including whether an anti-assignment agreement may be asserted by the debtor of the receivable, the obligor or the issuer; and
- (c) Whether the obligations of the debtor of the receivable have been discharged.

Article 135. Law applicable to enforcement of a security right

Subject to article 140, the law applicable to issues relating to the enforcement of a security right:

- (a) In a tangible asset is the law of the State where enforcement takes place; and
- (b) In an intangible asset is the law applicable to the priority of the security right.

Article 136. Meaning of “location” of the grantor

1. For the purposes of the conflict-of-laws provisions of this Law, the grantor is located in the State in which it has its place of business.
2. If the grantor has a place of business in more than one State, the grantor’s place of business is that place where the central administration of the grantor is exercised.
3. If the grantor does not have a place of business, reference is to be made to the habitual residence of the grantor.

Article 137. Relevant time for determining location

1. Except as provided in paragraph 2 of this article, references to the location of the assets or of the grantor in the conflict-of-laws provisions refer, for creation issues, to the location at the time of the putative creation of the security right and, for third-party effectiveness and priority issues, to the location at the time the issue arises.
2. If the rights of all competing claimants in an encumbered asset were created and made effective against third parties before a change in location of the asset or the grantor, references in the conflict-of-laws provisions to the location of the asset or of the grantor refer, with respect to third-party effectiveness and priority issues, to the location prior to the change in location.

Article 138. Exclusion of renvoi

A reference in the conflict-of-laws provisions to “the law” of another State as the law applicable to an issue refers to the law in force in that State other than its conflict-of-laws provisions.

Article 139. Public policy and internationally mandatory rules

1. The application of the law determined under the conflict-of-laws provisions may be refused only if the effects of its application would be manifestly contrary to the public policy of the forum.
2. The conflict-of-laws provisions do not prevent the application of those provisions of the law of the forum which, irrespective of conflict-of-laws provisions, must be applied even to international situations.
3. Paragraphs 1 and 2 of this article do not permit the application of the provisions of the law of the forum to the third-party effectiveness and priority of a security right.

Article 140. Impact of commencement of insolvency proceedings on the law applicable to security rights

1. Subject to paragraph 2 of this article, the law the commencement of insolvency proceedings does not displace the conflict-of-laws provisions that determine the law applicable to the creation, third-party effectiveness, priority and enforcement of a security right [and, if the enacting State adopts the non-unitary approach, a retention-of-title right and financial lease right].

2. The rule in paragraph 1 of this article is subject to the effects on such issues of the application of the insolvency law of the State in which insolvency proceedings are commenced to issues such as avoidance, treatment of secured creditors, ranking of claims or distribution of proceeds.

**Article 141. Special rules for situations in which
the applicable law is the law of a multi-unit State**

1. In situations in which the law applicable to an issue is the law of a multi-unit State subject to paragraph 2 of this article, references to the law of a multi-unit State are to the law of the relevant territorial unit, as determined on the basis of the location of the grantor or of an encumbered asset or otherwise under the conflict-of-laws provisions of this Law, and, to the extent applicable in that unit, to the law of the multi-unit State itself.
2. If, under its conflict-of laws provisions, the applicable law is that of a multi-unit State or one of its territorial units, the internal conflict-of laws provisions in force in the multi-unit State or territorial unit determine whether the substantive provisions of law of the multi-unit State or of a particular territorial unit of the multi-unit State apply.

XI. Transition

Article 142. Effective date

1. The effective date, at which this Law comes into force, is [a date to be specified by the enacting State] [six months after [a date to be specified by the enacting State]].
2. From its effective date, this Law applies to all transactions within its scope, whether entered into before or after that date, except as provided in articles 143-146.

**Article 143. Inapplicability of the law to actions
commenced before the effective date**

1. This Law does not apply to a matter that is the subject of litigation or alternative binding dispute resolution proceedings that were commenced before the effective date.
2. If enforcement of a security right has commenced before the effective date, the enforcement may continue under the law in force before the effective date.

Article 144. Creation of a security right

The law in force before the effective date determines whether a security right was created before the effective date.

Article 145. Third-party effectiveness of a security right

1. A security right that is effective against third parties under the law in force before the effective date remains effective against third parties until the earlier of:
 - (a) The time it would cease to be effective against third parties under the law in force before the effective date; and
 - (b) The expiration of a transition period of [a period of time, such as six months, to be specified by the enacting State] months after the effective date.
2. If the requirements for third-party effectiveness under this Law are satisfied before third-party effectiveness would have ceased under the preceding sentence, third-party effectiveness is continuous.

Article 146. Priority of a security right

1. Subject to paragraphs 3 and 4 of this article, this Law governs the priority of a security right.
2. The time when a security right referred to in article 145 was made effective against third parties or became the subject of a registered notice under the law in force before the effective date is the time to be used in determining the priority of that right.
3. The priority of a security right is determined by the law in force before the effective date if:
 - (a) The security right and the rights of all competing claimants arose before the effective date of this Law; and
 - (b) The priority status of none of these rights has changed since the effective date of this Law.
4. The priority status of a security right has changed if:
 - (a) It was effective against third parties on the effective date of this Law as provided in article 145 and later ceased to be effective against third parties; or
 - (b) It was not effective against third parties on the effective date of this Law and later became effective against third parties.

VI. PROCUREMENT

A. Note by the Secretariat on guidance on procurement regulations to be promulgated in accordance with article 4 of the UNCITRAL Model Law on Public Procurement

(A/CN.9/770)

[Original: English]

1. Article 4 of the 2011 UNCITRAL Model Law on Public Procurement¹ envisages promulgation of procurement regulations to fulfil the objectives and to implement the provisions of the Model Law. Various provisions of the Model Law expressly indicate that they should be supplemented by procurement regulations. The Guide to Enactment of the UNCITRAL Model Law on Public Procurement adopted by the Commission at its forty-fifth session, in 2012,² notes that in addition the enacting State may decide to supplement other provisions of the Model Law with procurement regulations even though those provisions do not expressly refer to the procurement regulations. Suggestions about the content of the procurement regulations are found throughout the Guide.

For ease of reference, it was considered useful to consolidate the provisions of the Model Law and the Guide highlighting the main issues for the procurement regulations in a single document and to make available such document on the UNCITRAL website as a supplement to the Guide. This Note introduces a proposal for such a document for consideration by the Commission.

¹ *Official Records of the General Assembly, Sixty-sixth Session, Supplement No. 17 (A/66/17), annex I.*

² *Ibid., Sixty-seventh Session, Supplement No. 17 (A/67/17), para. 46.*

Guidance on procurement regulations to be promulgated in accordance with article 4 of the UNCITRAL Model Law on Public Procurement

I. Introduction

1. The 2011 UNCITRAL Model Law on Public Procurement¹ (article 4 [\[**hyperlink**\]](#)) envisages that enacting States will promulgate procurement regulations to fulfil the objectives and to implement the provisions of the Model Law. The purpose of the procurement regulations is to complete the legislative framework for the procurement system, both to fill in the details of procedures authorized by the Model Law and to take account of the specific, possibly changing, circumstances at play in the enacting State.
2. Various provisions of the Model Law expressly indicate that they should be supplemented by procurement regulations. Furthermore, the enacting State may decide to supplement other provisions of the Model Law even though they do not expressly refer to the procurement regulations. In both cases, the procurement regulations should not contradict the Model Law or undermine the effectiveness of its provisions.
3. The main examples of procedures for which the elaboration of more detailed rules in the procurement regulations may be useful include: the manner of publication of various types of information (articles 5, 6, 18 (2), 23, 33 (1) and 34 (5) [\[**hyperlinks**\]](#)); measures to secure authenticity, integrity and confidentiality of information communicated during the procurement proceedings (article 7 (5) [\[**hyperlink**\]](#)); grounds for limiting participation in procurement (article 8 [\[**hyperlink**\]](#)); calculation of margins of preference and application of socioeconomic policies in evaluation of submissions (article 11 [\[**hyperlink**\]](#)); estimation of the value of the procurement (article 12 [\[**hyperlink**\]](#)); requirements as regards the duration of a standstill period (article 22 (2) (c) [\[**hyperlink**\]](#)); requirements as regards the documentary record of procurement proceedings (article 25 (1) (w) and (5) [\[**hyperlink**\]](#)); the maximum duration of closed framework agreements (article 59 (1) (a) [\[**hyperlink**\]](#)); code of conduct (article 26 [\[**hyperlink**\]](#)); and limitation of the quantity of procurement carried out in cases of urgency using competitive negotiations or single-source procurement (that is, the quantity is limited to that required to deal with the urgent circumstances) (see the commentary to the relevant provisions of article 30 (4) and (5) in the Guide [\[**hyperlink**\]](#)).
4. In addition to the use of regulations as a matter of best practice, failure to issue procurement regulations as envisaged in the Model Law may deprive the procuring entity of authority to take the particular actions in question. These cases include: limitation of participation in procurement proceedings (article 8 [\[**hyperlink**\]](#)); authority and procedures for application of a margin of preference in favour of domestic suppliers or contractors (article 11 [\[**hyperlink**\]](#)); and use of request for quotations, since that method of procurement may be used only for procurement

¹ *Official Records of the General Assembly, Sixty-sixth Session, Supplement No. 17 (A/66/17), annex I.*

whose value is below threshold levels set out in the procurement regulations (article 29 (2) [[**hyperlink**](#)]).

5. As noted in the Guide to Enactment of the Model Law, adopted by the Commission at its forty-fifth session, in 2012,² reference to the “procurement regulations” should be interpreted in accordance with the legal traditions of the enacting State; the notion may encompass any tool used in the enacting State to implement its statutes. Those legal traditions may also delineate issues that are more commonly addressed through guidance.³ This document does not purport to address these issues. It consolidates all provisions of the Model Law and the Guide that highlight the main issues that should be considered for the procurement regulations in order to fulfil the objectives and to implement the provisions of the Model Law.

6. The relevant provisions are grouped per subject. First, general subjects are discussed that are relevant to several articles of the Model Law (such as socioeconomic policies, classified information). This is followed by the discussion of subjects relevant to specific articles of Chapter I of the Model Law, in the order of articles of that Chapter. The discussion of issues relevant to various methods and techniques of procurement is grouped per a method and technique of procurement. The document is finalized by issues highlighted for the procurement or other applicable regulations in the context of challenge proceedings.

7. Since the document addresses only main issues, it is not intended to be exhaustive as regards issues to be addressed in the procurement regulations. In particular, consistent with the scope of the Model Law and the Guide to Enactment, this document does not address issues of procurement planning and contract management other than those directly relevant to the pertinent provisions of the Model Law. Detailed regulation of these phases of the procurement cycle in the procurement regulations of the enacting States may be warranted.

8. In addition, as noted in the Guide,⁴ the Model Law and the procurement regulations to be promulgated in accordance with its article 4 alone are not sufficient to ensure the effective functioning of the procurement system of the enacting State. Some measures are to be taken in other branches of law while others are of an institutional and administrative nature. The Guide notes measures that are to be taken outside the procurement law framework in order to ensure effective implementation of the Model Law.⁵ These measures are not discussed in this document.

² Ibid., *Sixty-seventh Session, Supplement No. 17 (A/67/17)*, para. 46. The text of the Guide is available at the date of this document from www.uncitral.org/uncitral/en/uncitral_texts/procurement_infrastructure/2012Guide.html.

³ Para. 2 of the commentary to article 4.

⁴ Paras. 58-81 of Part I.

⁵ Ibid.

II. General subjects

A. Socioeconomic policies in procurement

9. Socioeconomic policies that can or must be pursued through procurement are to be set out in the procurement regulations or other provisions of the law of the enacting State (see article 2 (o) of the Model Law [[*hyperlink*](#)] and the commentary in the Introduction to Chapter I [[**hyperlink**](#)], and in the commentary to articles 2 (o) and 8-11 [[**hyperlinks**](#)], in the Guide).

10. Where they are to be set out in the procurement regulations, the latter must address, *inter alia*, and as applicable:

(a) Situations in which the procuring entity may or must limit the participation of certain categories of suppliers or contractors in procurement proceedings (e.g. declare procurement domestic only) (see article 8 and the relevant commentary [[**hyperlinks**](#)]);

(b) Any margin of preference that can be applied for the benefit of domestic suppliers or contractors or for domestically produced goods or any other preference when evaluating submissions, and the method of its calculation and application (see article 11 and the relevant commentary [[**hyperlinks**](#)]);

(c) Any socioeconomic policies that can or must be factored in qualification requirements (e.g. environmental, ethical and other standards), in the description of the subject matter of the procurement, and in the design of evaluation criteria (i.e. to give credit for compliance with socioeconomic policies beyond any required minimum) (see articles 9-11 and the relevant commentary [[**hyperlinks**](#)]);

(d) A particular socioeconomic policy that will justify the use of single-source procurement (see article 30 (5) (e) and the relevant commentary [[**hyperlinks**](#)]);

(e) Constraints on procuring entities, in particular by prohibiting the *ad hoc* adoption of policies at the discretion of the procuring entity.

11. Where these policies are not set out in the procurement regulations, the procurement regulations should at least direct readers to other relevant laws and rules, so that the procuring entities are aware of any mandatory socioeconomic criteria to be applied and of the extent of their discretion in applying other socioeconomic criteria while suppliers or contractors are assured that application of socioeconomic policies in the procurement of the enacting State is taking place on a transparent and objective basis.

12. The Guide alerts enacting States about implications of pursuing socioeconomic policies in procurement and cautions against providing a broad list of socioeconomic criteria or circumstances in which a margin of preference may be applied.⁶

⁶ Paras. 9-27 of Part I, paras. 26-33 of the Introduction to Chapter I, and paras. 7-13 of the commentary to article 11.

B. Classified information

13. The authority granted to procuring entities to take special measures and impose special requirements for the protection of classified information, including granting public disclosure exemptions, applies only to the extent permitted by the procurement regulations or by other provisions of law of the enacting State (see article 2 (1) and the relevant commentary [\[**hyperlinks**\]](#)).

14. When the procurement regulations address these issues, they must identify types of procurement in which the procuring entity may or must take measures and impose requirements for the protection of classified information. In addition, the procurement regulations must address, inter alia:

(a) Measures that may be taken. Examples of the measures that may be invoked include the protection of certain parts of the record from disclosure, exemptions from a public notice of the procurement and contract award, and the use of direct solicitation (see articles 7 (3) (b), 24, 25 (4) and 35 (2) and the relevant commentary [\[**hyperlinks**\]](#)); and

(b) Requirements that may be imposed to protect classified information on suppliers and contractors and subcontractors, such as certain methods and tools for transmission of information (e.g. encryption) (see articles 7 (3) (b) and 24 (4) and the relevant commentary [\[**hyperlinks**\]](#)).

C. Low-value procurement

15. Article 22 (3) (b) exempts low-value procurement from the mandatory application of a standstill period [\[**hyperlink**\]](#) and article 23 (2) exempts such procurement from the requirement for public notice of the contract award [\[**hyperlink**\]](#). (Chapter II also contains an upper threshold for the use of request for quotations under article 29 (2) [\[**hyperlink**\]](#).) In all these cases, the Model Law defers to the procurement regulations the identification of the threshold to be applied. This is because it is not possible for the Model Law to set out a single threshold for low-value procurement that will be appropriate for all enacting States, and the appropriate thresholds for each State may change with inflation and as other economic circumstances also change. It is for the body that issues the procurement regulations to consider the appropriate value or values for all such thresholds.

16. In other instances where references to low-value procurement are found, the Model Law does not require explicit thresholds in the procurement regulations. For example, invitations to pre-qualification and tendering proceedings need not be published internationally where the procuring entity decides that, in view of the low value of the subject matter of the procurement, only domestic suppliers or contractors will be interested in presenting submissions (articles 18 (2) and 33 (4) [\[**hyperlinks**\]](#)). In addition, one of the grounds justifying the use of one type of restricted tendering and direct solicitation in request for proposals procedures is that the time and cost required to examine and evaluate a large number of submissions would be disproportionate to the value of the subject matter of the procurement (see articles 29 (1) (b) and 35 (2) (b) and the relevant commentary [\[**hyperlinks**\]](#)).

17. The agency or body issuing the procurement regulations should consider the appropriate approach to what is treated as “low-value” procurement, notably as to whether there can and should be one amount below which procurement is treated as low-value. For example, should the procurement regulations fix one threshold for all instances where the procurement law refers to a low-value threshold (including the upper limit for the use of request for quotations), whether that value should apply to all instances of “low-value procurement” references found in the law (even those that do not contain explicit references to a low-value threshold, as explained above), or whether circumstances indicate that different thresholds and amounts are appropriate.

D. Fees charged for participating in the procurement proceedings

18. As noted in the Guide,⁷ ideally, no fees should be charged for access to, and use of, the procuring entity’s communications systems. The procurement regulations should therefore discourage such fees as a disincentive to participate in the procurement proceedings, contrary to the principles and objectives of the Model Law. Where the decision is to charge fees for the use of the communications system, the procurement regulations should require that the fee must be transparent, justified, reasonable and proportionate and not discriminate or restrict access to the procurement proceedings. The procurement regulations may require publicizing the amount of the applicable fee and justifications for charging it, and identify it as a temporary measures (e.g. until costs of introducing the new communications system are recovered).

19. The related issue is charging fees for obtaining the pre-qualification and/or solicitation documents. When a price is charged for obtaining those documents, the procurement regulations must contain provisions preventing the procuring entity from applying excessively high charges for the documents. They could do so by requiring that the price to be charged for the documents is to enable the procuring entity to recover its costs incurred in fact in providing the documents, for example, by printing and mailing them. The procurement regulations should illustrate what should not be attempted to be recovered through the price charged for the documents, such as development costs (including consultancy fees and advertising costs).

E. Issues of outsourcing and centralized purchasing

20. The procurement regulations should address measures in the design and the use of the procurement system that may produce discriminatory impact and other undesirable consequences. Approaches to the design and the use of the procurement system, such as any involvement of third parties in the design of the communication system and the use of proprietary systems, would have a direct impact on the participation of suppliers or contractors in the procurement proceedings. They would also affect such decisions across the procurement system as charging fees for the use of the procurement system as well as decisions of the procuring entities on their procurement strategies generally and in individual procurement.

⁷ Para. 12 of the commentary to article 7.

21. The procurement regulations must specifically address the issues of outsourcing of procurement functions, in particular risks of organizational conflicts of interest if third-party IT and service providers are remunerated on a fee-per-use basis for the maintenance and operation of e-purchasing platforms, such as electronic reverse auctions (ERAs) or open framework agreements, outsiders' influence on procurement strategies and problems with building and retaining sufficient skills and expertise in the procuring entity, needed among others for supervision of the activities of such third-party providers.

22. Where centralized purchasing agencies act as agents for one or more procuring entities and centralized purchasing is encouraged to allow for the economies of scale, the procurement regulations must ensure that such arrangements can operate in a transparent and an effective fashion. The procurement regulations should put measures for assessing the relative merits of such purchasing, standardization and accommodating different needs for individual procurements and across sectors of the overall government procurement market. They should address issues of organizational conflicts of interest (centralized purchasing entities may have an interest in increasing their fee earnings by keeping prices high and promoting purchases that go beyond the needs of the procuring entity). Where the centralized purchasing agency undertakes planning for future procurement, the procurement regulations must call for a closer interaction between the agency with the likely end-users before the procedure commences to allow for a better decision on the appropriate extent of standardization and accommodating varying needs (the quality of information from the end-users will be critical. The needs of individual ministries or agencies may themselves not be identical, with the result that some obtain better value for money than others if those needs are standardized without sufficient analysis.)

III. Subjects to be addressed in procurement regulations in the context of specific articles of Chapter I of the Model Law (General provisions) [\[hyperlink**\]](#), in the order of articles**

Article 5. Publication of legal texts [\[hyperlink**\]](#)**

1. The procurement regulations must specify the manner and medium of publication of legal texts covered by paragraph (1) of article 5 or refer to legal sources that address publicity of statutes, regulations and other public acts. If the manner and the medium are to be specified in the procurement regulations, the latter must also:

- (a) Provide for a centralized medium and manner of publication at a common place, readily and widely accessible (the "official gazette" or equivalent);
- (b) Specify that information posted in a single centralized medium must be authentic and authoritative and have primacy over information that may appear in other media. It must also remain readable, comprehensible and capable of interpretation and retention;
- (c) Establish rules to define the relationship of that single centralized medium with other media where such information may appear and provide for rules of publication in other official media (e.g. prohibition of publication in different

media before information is published in the centralized medium, and the requirement that the same information published in different media must contain the same data);

(d) Address the subject of fees (as in section II.D above, ideally, no fees should be charged for access to laws, regulations and other legal texts of general application in connection with procurement covered by the procurement law, and all amendments thereto).

2. The procurement regulations must also spell out the meaning of the requirements for documents promptly to be made “accessible” and “systematically maintained”. In practical terms, the requirement for the information to be “accessible” means that the information must be capable of being accessed, and read without having to request access. It implies proactive actions from designated State authorities (such as publication in official media) to ensure that the intended information reaches the public. The requirement for “systematic maintenance” means that the designated State authority must ensure that the information is in fact up-to-date and so reliable: the manner in which this obligation is discharged should be itself documented so that compliance can be monitored.

3. If the enacting State wishes to encourage the publication of other texts of relevance and practical use and importance to suppliers and contractors (such as procurement guidelines or manuals and other documents that provide information about important aspects of domestic procurement practices and procedures and may affect the general rights and obligations of suppliers and contractors), the procurement regulations should specify such additional texts and conditions of publication that should apply to them.

4. Unless this is already addressed in other provisions of law of the enacting State, the procurement regulations must specify which State organs are responsible for fulfilling the obligations under this article.

Article 6. Information on possible forthcoming procurement [\[hyperlink**\]](#)**

1. The procurement regulations should address the desirable content of information intended to be published under the article. The Guide notes in this respect that making available abundant, irrelevant or misleading information, rather than carefully planned, useful and relevant information, may compromise the purpose of issuing this type of information.⁸ Examples of information to be included are: a time frame that information regarding planned procurement should cover, which may be a half-year or a year or other period; the content of an advance notice of possible future procurement; and difference between this type of notice and other types of advance notices of the procurement, such as a notice seeking expressions of interest that is usually published in conjunction with request-for-proposals proceedings or an advance notice of the procurement required in most cases of direct solicitation under articles 34 and 35 of the Model Law [\[**hyperlinks**\]](#).

2. The procurement regulations should also address other conditions for publication, such as the place and means of publishing information, taking into account issues highlighted for the procurement regulations under article 5 above [\[**hyperlink**\]](#).

⁸ Para. 2 of the commentary to article 6.

3. Consistently with what is said in the Guide on this point,⁹ the procurement regulations should avoid imposing a requirement to publish this type of information. The procurement regulations should instead stipulate the default rule to publish this type of information, unless there are considerations indicating to the contrary: it should be left to the procuring entity to decide on a case-by-case basis on whether such information should be published.

4. The procurement regulations may provide incentives for publication of such information, such as a possibility of shortening a period for presenting submissions in pre-advertised procurements. The procurement regulations may also refer to cases when publication of such information would in particular be desirable, such as when complex construction procurements are expected or when procurement value exceeds a certain threshold.

Article 7. Communications in procurement [\[hyperlink**\]](#)**

1. The procurement regulations are to explain the notions “in common use” and “fully and contemporaneously” in the requirements of the article that means of communication must be in common use by suppliers or contractors concerned (e.g. that allow efficient and affordable connectivity and interoperability) and that the means of communication used in meetings must in addition be capable of ensuring full and contemporaneous participation in meetings, i.e. ability to follow all proceedings of the meeting and to interact with other participants when necessary (see article 7 (4) [\[**hyperlink**\]](#)). The procurement regulations must address characteristics of means of communication that can be used by the procuring entity in particular types of procurement to satisfy those requirements. Alternatively, the procurement regulations may illustrate by practical examples and references which technological solutions existing in the enacting State at a given time would meet those requirements and how. Another approach would be for the procurement regulations to require, where the decision is made by the procuring entity to use non-paper-based means of communication, the use of specific means of communication that would meet these requirements of the Model Law, in the light of prevailing conditions in the enacting State at any certain point of time.

2. The procurement regulations should establish clear rules as regards requirements for “writing”, “signature”, “authenticity”, “security”, “integrity” and “confidentiality” of submissions and when necessary develop functional equivalents for the non-paper-based environment. They should also address legal solutions aimed at achieving adequate usability, reliability, traceability and verification of information generated in the procurement proceedings and securing the authenticity, integrity and confidentiality of such information as appropriate. Caution should be exercised not to tie legal requirements to a given state of technological development and not to impose higher security measures than otherwise would be applicable in the paper-based environment since these measures can discourage the participation of suppliers or contractors in non-paper-based procurement.

3. Other specific issues to be addressed in the procurement regulations are: (a) the scope of the exceptions in paragraph (2) of the article to the form requirement and the practical implementation of the provisions; and (b) issues

⁹ Para. 7 of the commentary to article 6.

arising from the use of more than one form and means of communication in any given procurement proceedings.

4. As the Guide notes,¹⁰ other aspects and relevant branches of law are relevant to article 7, in particular those related to electronic commerce, records management, court procedure, competition, data protection and confidentiality, intellectual property and copyright. In addition, reliability of procurement proceedings should be addressed as part of a comprehensive good governance framework dealing with personnel, management and administration issues in the procuring entity and the public sector as a whole.

Article 8. Participation by suppliers or contractors ^[hyperlink**]**

1. The procurement regulations or other provisions of law of the enacting State must set out the exceptional conditions under which the procuring entity may limit the participation of certain categories of suppliers or contractors in procurement proceedings.

2. As noted in the Guide,¹¹ a decision to impose a limitation on participation in procurement proceedings may be taken in different situations. Such a situation may arise because of socioeconomic policies of the State (e.g. set-aside programmes for small and medium-sized enterprises (SMEs) or entities from disadvantaged areas) as noted in section II.A above. Other issues of concern to the State, such as safety and security, may justify the limitation of participation, for example because of the implementation of United Nations Security Council's sanctions regimes. The application of the article would therefore not necessarily lead to the limitation of participation on the basis of nationality (such as to the domestic procurement). The procurement regulations should address the variety of situations intended to be covered by this article as explained in the Guide.

3. As further noted in the Guide,¹² an enacting State, when formulating policies involving exceptional measures under article 8, must consider their consequences in the light of the State's international obligations, taking into account that any limitation of participation of suppliers or contractors in procurement proceedings risks violating free-trade commitments of States under relevant international instruments, such as the Agreement on Government Procurement of the World Trade Organization (WTO GPA).¹³

4. The procurement regulations may provide for a sample of a declaration to be issued by the procuring entity under paragraph (3) of the article. They may also specify the time frame within which the procuring entity must provide its reasons for limiting the participation of suppliers or contractors in the procurement

¹⁰ Para. 13 of the commentary to article 7.

¹¹ Para. 2 of the commentary to article 8.

¹² Para. 7 of the commentary to article 8.

¹³ The plurilateral Agreement on Government Procurement of the World Trade Organization (the GPA), negotiated in parallel with the Uruguay Round in 1994, and entered into force on 1 January 1996. On 15 December 2011, negotiators reached an agreement on the outcomes of the renegotiation of the GPA. This political decision was confirmed, on 30 March 2012, by the formal adoption of the Decision on the Outcomes of the Negotiations under Article XXIV:7 of the Agreement on Government Procurement (GPA/113). Both texts are available at www.wto.org/english/tratop_e/gproc_e/gp_gpa_e.htm.

proceedings to a person upon his/her request, as required under paragraph (5) of the article.

5. In the context of paragraphs (4) and (5) of the article, the procurement regulations may impose on the procuring entity a requirement to substantiate the reasons and circumstances on which it relied in making its decision to limit participation with legal justifications.

Article 9. Qualifications of suppliers and contractors [\[hyperlink**\]](#)**

1. Unless other provisions of law of the enacting State already do so, the procurement regulations must specify ethical and other standards applicable in the enacting State that are appropriate and relevant in the circumstances of various types of procurement (see paragraph (2) (b) of the article and the relevant commentary [\[**hyperlinks**\]](#)).

2. They should also specify appropriate documentary evidence or other information that may be requested by the procuring entity for ascertainment of qualifications of suppliers or contractors (see paragraph (3) of the article and the relevant commentary [\[**hyperlinks**\]](#)). Such documentary evidence may comprise audited annual reports (to demonstrate financial resources), inventories of equipment and other physical facilities, licences to engage in certain types of activities and certificates of compliance with applicable standards and confirming legal standing.

3. The procurement regulations may also specifically authorize a self-declaration from suppliers or contractors that they are qualified to participate in the given procurement proceedings. In such case, the procurement regulations should specify situations when such self-declaration would be sufficient. For example, it may be sufficient to rely on this type of declaration at the opening of simple stand-alone ERAs as long as it is envisaged that a proper verification of compliance of the winning supplier or contractor with the applicable qualification criteria will take place after the auction.

4. In some jurisdictions, standard qualification requirements are found in procurement regulations, and the pre-qualification/pre-selection/solicitation documents may simply cross-refer to those regulations. For reasons of transparency and fair, equal and equitable treatment, the Model Law requires all requirements to be set out in the relevant documents (see paragraph (4) of the article and the relevant commentary [\[**hyperlinks**\]](#)); however, the policy goals of paragraph (4) may be satisfied where the documents refer to the qualification requirements in legal sources that are transparent and readily available (such as by using [hyperlinks](#)). The procurement regulations must authorize this approach if it is appropriate in the enacting State.

5. The procurement regulations must authorize or require the use of any qualification criteria, requirement or procedures that are not objectively justifiable and discriminate against or among suppliers or contractor for the procuring entity to be able to use such criteria, requirement or procedures in the ascertainment of qualifications of suppliers or contractor (see paragraph (6) of the article in conjunction with article 8 (see above for the latter) and the relevant commentary [\[**hyperlinks**\]](#)). They could also provide examples of other requirements imposed by the procuring entities in practice that may intentionally or inadvertently distort or

restrict participation by suppliers or contractors in the procurement proceedings, and should therefore be avoided.

6. The procurement regulations may provide examples of materially inaccurate or materially incomplete information that would permit the procuring entity to disqualify the supplier or contractor submitting such information (see paragraph (8) (b) of the article and the relevant commentary [\[**hyperlinks**\]](#)).

7. The procurement regulations may restrict the application of paragraph (8) (d) by specifying that in most procurement (with the exception perhaps of complex and time-consuming multi-stage procurement), the reconfirmation of the qualifications of suppliers or contractors that have been pre-qualified at a later stage of the procurement proceedings should take place only with respect to the supplier or contractor presenting the successful submission (see paragraph (8) (d) of the article and the relevant commentary [\[**hyperlinks**\]](#)).

8. Other branches of law are relevant to the implementation of article 9, in particular those related to insolvency, taxation and legalization as well as corporate and criminal law. Compliance with other standards applicable in an enacting State referred to in paragraph (2) (b) of the article may involve security clearances, environmental considerations, international labour law and human rights standards and sustainability issues outside the procurement law framework. Coherence between the procurement regulations and regulations that may exist in such other branches of law must therefore be ensured.

Article 10. Rules concerning description of the subject matter of the procurement and the terms and conditions of the procurement contract or framework agreement [\[hyperlink**\]](#)**

1. The procurement regulations must specify situations where a detailed description of the subject matter of procurement at the outset of the procurement proceedings would not be possible and the procuring entity would therefore be permitted to provide the minimum requirements instead (for example, in request-for-proposals-with-dialogue proceedings and framework agreement procedures) (see paragraph (1) (b) and the relevant commentary [\[**hyperlinks**\]](#)).

2. The procurement regulations must authorize or require the use of any criteria, requirement or procedures that may restrict the participation of suppliers or contractors in or their access to the procurement proceedings for the procuring entity to be able to use such criteria, requirement or procedures in the description of the subject matter of the procurement and/or examination of submissions (see paragraph (2) of the article in conjunction with article 8 (see above for the latter) and the relevant commentary [\[**hyperlinks**\]](#)). They could also provide examples of other requirements imposed by the procuring entities in practice that may intentionally or inadvertently distort or restrict participation by suppliers or contractors in the procurement proceedings, and should therefore be avoided.

3. The procurement regulations may usefully discuss the extent of the procuring entity's discretion to use trademark or trade name, patent, design or type, specific origin or producer in the description of the subject matter of the procurement (see paragraph (4) of the article and the relevant commentary [\[**hyperlinks**\]](#)). They should: (a) address very narrow circumstances described in paragraph (4) of the article that authorize such use (where there is no other sufficiently precise or

intelligible way of describing the characteristics of the subject matter of the procurement); (b) call for output-based description as a general rule; (c) emphasize the need to describe the salient features of the subject matter being sought where the input-based description must be used; and (d) require to include the words “or equivalent” in the description of the subject matter of procurement where reference to trademark or trade name, patent, design or type, specific origin or producer is unavoidable or desirable in order to improve suppliers’ or contractors’ understanding of the procuring entity’s needs. As the Guide notes, where there is a generally used industry standard (which may be reflected in standardized trade terms), permitting the use of a brand name or a trademark instead of a very long and technical description may improve suppliers’ or contractors’ understanding of the procuring entity’s needs. However, in such cases, monitoring of the procuring entity’s willingness to accept equivalents will be a necessary safeguard, and guidance on how suppliers or contractors are to demonstrate equivalence, and objectivity in this regard, will be required.¹⁴ The procurement regulations should therefore address ways of demonstrating and assessing equivalence and require the procuring entity to accept equivalents.

4. The procurement regulations shall set out standardized features, requirements, symbols and terminology to be used by the procuring entity in formulating the description of the subject matter of the procurement or refer to the source where such standardized features, requirements, symbols and terminology could be found. The same applies to standardized trade terms and standardized conditions to be used by the procuring entity in formulating the terms and conditions of the procurement and the procurement contract or the framework agreement and in formulating other relevant aspects of various procurement documents: they should be set out in the procurement regulations or the latter should refer to the source where they could be found. (See paragraph (5) of the article and the relevant commentary [\[**hyperlinks**\]](#).)

Article 11. Rules concerning evaluation criteria and procedures [\[hyperlink**\]](#)**

1. The procurement regulations may expand or detail the illustrative list of evaluation criteria provided for in paragraph (2) of the article. They should however avoid setting an exhaustive list of evaluation criteria or requiring the use of a specific criterion or a group of criteria, other than price, since not all evaluation criteria would be applicable in all situations and it would not be possible to provide for an exhaustive list of evaluation criteria for all types of procurement, regardless of how broadly they are drafted. The approach of the Model Law, as stated in the Guide, is that procuring entity can apply evaluation criteria even if they do not fall under the broad categories listed in paragraph (2) of the article as long as the evaluation criteria meet the requirement set out in paragraph (1) of the article — they must relate to the subject matter of the procurement.¹⁵ The procurement regulations may however call for issuance by designated authorities of rules and/or guidance to assist procuring entities in designing appropriate and relevant evaluation criteria.

¹⁴ Para. 5 of the commentary to article 10.

¹⁵ Para. 3 of the commentary to article 11.

2. The procurement regulations should address situations where evaluating the experience, reliability and professional and managerial competence of the supplier or contractor and of the personnel to be involved in providing the subject matter of the procurement will be relevant (see paragraph (2) (c) of the article and the relevant commentary [\[**hyperlinks**\]](#)). This would be typically in request-for-proposals proceedings because the latter have traditionally been used for procurement of “intellectual type of services” (such as architectural, legal, medical, engineering). In this type of procurement, the cost is not a significant evaluation criterion. Instead, the emphasis will be placed on the service-provider’s experience and reliability for the specific assignment, the quality of the understanding of the assignment under consideration and of the methodology proposed, the qualifications, professional and managerial competence of the key staff delivering the service, transfer of knowledge, if such transfer is relevant to the procurement or is a specific part of the terms and conditions of the procurement, and when applicable, the extent of participation by nationals among key staff in the performance of the services.

3. The procurement regulations should clarify that these evaluation criteria may be in addition to a minimum requirement for skills and experience expressed as qualification criteria under article 9 [\[**hyperlink**\]](#). Whereas by virtue of article 9 the procuring entity will reject proposals of suppliers or contractors that do not meet a minimum requirement for skills and experience, the procuring entity will evaluate skills and experience of qualified suppliers or contractors admitted to the dialogue stage: the procuring entity will be able to weigh, for example, the required experience of one service provider against experience of others and on the basis of such a comparison, it may be more, or less, confident in the ability of one particular supplier or contractor than in that of another to implement the project. The procurement regulations should therefore explain the use of these criteria as minimum standards in ascertainment of qualifications of suppliers or contractors under article 9 of the Model Law [\[**hyperlink**\]](#) and the use of these criteria under for example articles 11 and 49 [\[**hyperlinks**\]](#) that would lead to the assessment by the procuring entity of these criteria on a competitive basis.

4. Unless this is done in other provisions of law of the enacting States, the procurement regulations must set out any exceptional criteria that procuring entity is authorized or required to take into account in evaluating submissions, which will ordinarily not relate to the subject matter of the procurement and will thus unlikely be permitted as evaluation criteria under paragraph (2) of the article (see paragraph (3) (a) of the article and the relevant commentary [\[**hyperlinks**\]](#)). See also under “Socioeconomic policies in procurement” in section II.A above [\[**hyperlink**\]](#)). In specifying such criteria, references to broad categories, such as environmental considerations, should be avoided since an overlap with criteria covered by paragraph (2) of the article may occur. For example, the environmental requirements for the production of the subject matter of the procurement relates to that subject matter, and can therefore be included as an evaluation criterion under paragraph (2): no authorization under the procurement regulations or other laws is required. Some other environmental considerations are not so related but may need to be considered if this is required or authorized by law of the enacting State.

5. The procurement regulations should also regulate how the criteria under paragraph (3) (a) may be used in individual procurements to ensure that they are

applied in an objective and transparent manner. Since environmental standards in particular may have the effect of excluding foreign suppliers or contractors (where, for example, national standards are higher than those prevailing in other States), the procurement regulations should address, or call for issuance of specific guidance on, the use of environmental standards to ensure that procuring entities may apply such standards without risk of disruptive challenge procedures.

6. Unless addressed in other provisions of law of the enacting States, the procurement regulations must authorize or require the use of any margin of preference that can be applied for the benefit of domestic suppliers or contractors or for domestically produced goods or any other preference when evaluating submissions (see paragraph (3) (b) of the article and the relevant commentary [\[**hyperlinks**\]](#). See also under “Socioeconomic policies in procurement” in section II.A above [\[**hyperlink**\]](#)). The procurement regulations should establish criteria for identifying a “domestic” supplier or contractor and for qualifying goods as “domestically produced” (e.g., that they contain a minimum domestic content or value added). In this regard, the provisions of the WTO GPA on offsets and price preference programmes, available as negotiated transitional measures to developing countries, may assist States in understanding how the concepts of “domestic” suppliers or contractors and “local content” have been applied in practice.

7. Furthermore, the procurement regulations should fix the amount of the margin of preference, which might be different for different subject matter of procurement (goods, construction and services). They must also provide for a method and rules concerning the calculation and application of a margin of preference. (Various publicly-available sources, including those of the World Bank, provide examples of applying margins of preference in practice.) That method of calculation and application may envisage applying a margin of preference to price or the quality factors alone or to the overall ranking of the submission when applicable; the enacting State will wish to decide how to balance quality considerations and the pursuit of socioeconomic policies. As noted in the Guide,¹⁶ the cumulative effect of application of socioeconomic criteria and margins of preference and the risks of inadvertent duplication should be considered carefully.

8. The procurement regulations must provide an illustrative list of situations where expressing all non-price evaluation criteria in monetary terms would not be practicable or appropriate, such as in request for proposals with dialogue (article 49 of the Model Law [\[**hyperlink**\]](#)). The procurement regulations must also spell out ways of quantifying non-price evaluation criteria in monetary terms where to do so is practicable. (See paragraph (4) of the article and the relevant commentary [\[**hyperlinks**\]](#).) They should also address situations where the procuring entity may list evaluation criteria in descending order of importance (see paragraph (5) (c) of the article and the relevant commentary [\[**hyperlinks**\]](#)), such as in request-for-proposals-with-dialogue proceedings under article 49 of the Model Law [\[**hyperlink**\]](#).

¹⁶ Para. 9 of the commentary to article 11.

Article 12. Rules concerning estimation of the value of procurement
[hyperlink**]**

The procurement regulations should elaborate on the rules on estimation of the value of the procurement. They should in particular clarify how a series of repeated low-value procurements over a given period should be aggregated for the purposes of applicable thresholds. They should also provide essential safeguards against the artificial division of the subject matter of the procurement for the purpose, for example, of justifying the use of restricted tendering on the ground set out in article 29 (1) (b) [**hyperlink**], i.e. that the time and cost required to examine and evaluate a large number of tenders would be disproportionate to the value of the subject matter of the procurement.

Article 13. Rules concerning the language of documents [**hyperlink**]

1. In States in which solicitation documents are issued as a rule in more than one language, the procurement regulations should include a rule, unless the procurement law of the enacting State already does so, to the effect that a supplier or contractor should be able to base its rights and obligations on either language version. The procuring entity may also be called upon to make it clear in the solicitation documents that both or all language versions are of equal weight, or whether any language is to prevail in cases of inconsistency.
2. Where the text in square brackets in the first paragraph of the article is retained, the procurement regulations should specify exemptions to the general rule to publish documents issued by the procuring entity in the procurement proceedings in a language customarily used in international trade. Those exemptions encompass the circumstances referred to in article 33 (4) [**hyperlink**]: domestic procurement (see the commentary to article 8 [**hyperlink**]) and low-value procurement where, in the view of the procuring entity, only domestic suppliers or contractors are likely to be interested in presenting submissions. (See section II.C of this document for the discussion of issues to be addressed in procurement regulations in the context of low-value procurement [**hyperlink**].)

Article 14. Rules concerning the manner, place and deadline for presenting applications to pre-qualify or applications for pre-selection or for presenting submissions [**hyperlink**]

1. The procurement regulations may address legal consequences that may arise out of non-compliance by suppliers or contractors with the procuring entity's requirements concerning the manner, place and deadline for presenting applications to pre-qualify or applications for pre-selection or for presenting submissions (for example, the procuring entity must return a submission presented late or that otherwise does not comply with the applicable requirements (see for example article 40 (3) and the commentary thereto [**hyperlinks**])).
2. The procurement regulations must require the procuring entity to ensure that any changes to information covered by the article are to be brought to the attention of suppliers or contractors to which the pre-qualification, pre-selection or solicitation documents were originally provided (see paragraph (5) of the article and articles 15 (2) and 18 (6) and the commentary thereto [**hyperlinks**]). If those documents were made available to an unknown group of suppliers or contractors

(e.g. through a download from a website), the procurement regulations must require that information on the changes made must, at a minimum, appear in the same place at which they could be downloaded.

3. The procurement regulations should establish minimum periods of time that the procuring entity must allow (particularly where its international commitments may so require) for suppliers or contractors to prepare their applications or submissions. These minimum periods should be established in the light of each procurement method, the means of communication used and whether the procurement is domestic or international. Such a period must be sufficiently long in international and complex procurement to allow suppliers or contractors reasonable time to prepare their applications or submissions. The establishment of the ultimate period in the context of each procurement is left up to the procuring entity, taking into account the circumstances of the given procurement, such as the complexity of the procurement, the extent of subcontracting anticipated, and the time needed for transmitting applications or submissions.

4. The procurement regulations should address situations when the extension of the originally stipulated deadline is mandatory under the law and where it is permitted and would be desirable. The Model Law requires the procuring entity to extend the deadline: (a) where clarifications or modifications, or minutes of a meeting of suppliers or contractors are provided shortly before the submission deadline; and (b) where any amendment to the information about procurement published at the outset of the procurement renders that information materially inaccurate (see article 15 (3) and the commentary thereto [\[**hyperlink**\]](#)). In other cases, the extension of the deadline is optional. To mitigate the risks of abuse in the exercise of the discretion by the procuring entity, the procurement regulations should establish some measures of control. For example, in the context of paragraph (4) of the article, they could address “circumstances beyond [the supplier’s or contractor’s] control” that would prevent one or more suppliers or contractors from presenting their applications or submissions on time, how those circumstances should be demonstrated, and the default response from the procuring entity in such situations. While flexibility should be preserved, such minimum measures of control would help mitigate risks of favouritism.

5. The procurement regulations may specify that the extension of the deadline is in particular desirable in situations where the procuring entity faces risks of numerous challenges if it fails to extend the deadline, for example in cases of failures in the procuring entity’s communication system. The procurement regulations should regulate other aspects of failures in communication systems and the allocation of risks.

Article 15. Clarifications and modifications of solicitation documents **[\[**hyperlink**\]](#)**

1. The procurement regulations must address the application of the article in situations where the solicitation documents were provided to an unidentified group of suppliers or contractors (e.g. through the download of documents from a publicly-available website). They should specify that the obligation of the procuring entity to inform individual suppliers or contractors of all clarifications and modifications of solicitation documents applies to the extent that the identities of the suppliers or contractors are known to the procuring entity. Where they are not

known, the clarifications and modification must at a minimum appear where downloads were offered. The procurement regulations must therefore be clear that proactive actions are required from the side of the procuring entity — permitting suppliers or contractors to have access to clarifications or modifications upon request would be inadequate: suppliers or contractors would have no way of discovering that a clarification or modification had been made.

2. The procurement regulations must call for prompt actions by the procuring entity under this article so that clarifications and modifications could be taken into account by suppliers or contractors in time before the deadline for presenting submissions.

3. The procurement regulations must also address the concept of information becoming “materially inaccurate”, referred to in paragraph (3) of the article, and differentiate it from the concept of “material change” occurring in the procurement. While the former requires the publication of amended information in the same place where the original information appeared and the extension of the deadline for presenting submissions, the latter would require the cancellation of the proceedings and beginning of the new procurement. Both are threshold concepts. If the information as a result of changes made became sufficiently inaccurate to compromise the integrity of the competition and the procurement process, one may say that the information became materially inaccurate. If as a result of such changes, the pool of potential suppliers or contractors is affected (for example, as a result of changing the manner of presenting submissions from paper to electronic in societies where electronic means of communication are not widespread), it may be concluded that a “material change” in the procurement has taken place. A “material change” in the procurement is also highly likely to arise when, as a result of clarifications and modifications of the original solicitation documents, the subject matter of the procurement has changed so significantly that the original documents no longer put prospective suppliers or contractors fairly on notice of the true requirements of the procuring entity.

4. The procurement regulations, in the context of paragraph (4) of the article, should clarify that the provisions do not prevent the procuring entity from addressing at the meeting with suppliers or contractors any requests for clarification of the solicitation documents submitted to it either before or at the meeting, and its responses thereto. The obligation to preserve the anonymity of the source of the request will apply to all such requests.

Article 16. Clarification of qualification information and of submissions

[hyperlink**]**

1. The procurement regulations must draw difference between this article and the preceding article: whereas clarifications under the preceding article are triggered by suppliers or contractors, clarifications under this article are triggered by the procuring entity. They should also clarify how a clarifications procedure under this article is different from negotiations (the article explicitly prohibits negotiations between the procuring entity and a supplier or contractor with respect to qualification information or submissions except for proposals submitted under articles 49, 50, 51 and 52 of the Model Law (see paragraphs (4) and (5) of the article)).

2. The procurement regulations should address points in time when the need for clarification of qualification information or submissions may arise in various methods of procurement. They should also specify to which methods of procurement some provisions of the article would not apply. For example, paragraph (2) requires the procuring entity to correct purely arithmetical errors that are discovered during the examination of submissions. They however are not applicable to some procurement methods, such as to request for quotations where correction of arithmetical errors would be prohibited under article 46 (2) [\[**hyperlink**\]](#), and to request for proposals with consecutive negotiations where they would simply be irrelevant since the financial aspects of proposals are crystallized during negotiations. They would not apply either to the auction stage of ERAs where purely arithmetical errors may lead to the automatic rejection by the system of the bid containing such an error or to suspension or termination of an auction under article 56 (5) [\[**hyperlink**\]](#).
3. The procurement regulations should provide for an illustration of clarifications permissible under the article. In particular, they should address risks of substantive changes that may occur as a result of seeking clarifications or correcting arithmetical errors, which is prohibited under the article. Provision of an illustrative list of prohibited changes would be desirable (the article refers in this context to changes that would make an unqualified supplier or contractor qualified or unresponsive submission responsive and to changes in price).
4. The procurement regulations should build procedural safeguards to mitigate the risks of discriminatory practices, for example by requiring the procuring entity to put on the record any arithmetical errors discovered during the examination and evaluation process and steps taken in connection with them.
5. The procurement regulations should address the manner of seeking clarifications under the article, drawing on the procedures for investigating abnormally low submissions under article 20 [\[**hyperlink**\]](#). The use of a written procedure must be required pursuant to article 7 of the Model Law [\[**hyperlink**\]](#).

Article 17. Tender securities [\[hyperlink**\]](#)**

1. The procurement regulations should stipulate cases justifying request for tender securities and illustrate cases where a tender security could be considered an excessive safeguard by the procuring entity.¹⁷ They should explain that circumstances of some procurement may themselves offer the required security to the procuring entity, such as in ERAs. The relative value of the procurement may also indicate that encouraging other measures to achieve the desired discipline in bidding may be the more appropriate course. The procurement regulations may provide examples where alternatives to a tender security, such as a bid securing declaration should be considered¹⁸ and where benefits of requesting tender securities may be illusory, for example in request for proposals with dialogue or ERAs where suppliers or contractors cannot be forced to stay in the process of dialogue or bidding (e.g. in ERAs, bidders cannot be obliged to change any aspects of their bids and can simply abstain from the bidding), so the tender security may in fact be worthless, or at best, not cost-effective.

¹⁷ For the guidance on this point, see paras. 4 and 5 of the commentary to article 17 in the Guide.

¹⁸ See para. 12 of the commentary to article 17 in the Guide.

2. Where requesting tender securities may be justified, the procurement regulations should address how the requirements will work in practice and its implications on the bidding process, in particular the price of the tender. The procurement regulations should also explain that in some procurement methods there could be a particular point in time when requesting tender securities may be appropriate, for example, in two-stage tendering this will be in the context of presentation of final tenders rather than of initial tenders.

3. Where applicable, the procurement regulations should refer to any law of the enacting State that prohibits the acceptance by the procuring entity of the tender security that is not issued by an issuer in the enacting State. The procurement regulations must call for prompt actions by the procuring entity under this article.

Article 18. Pre-qualification proceedings [\[hyperlink**\]](#)**

The procurement regulations are to stipulate the place where the invitation to pre-qualification is to be published (the official gazette or website). As explained in section II.C above in the context of low-value procurement, the procurement regulations are to provide detail of how to interpret “low-value” procurement for the purpose of exempting it from the publication of an invitation to pre-qualification internationally. The procurement regulations should also explain in this context that low value alone is not a justification for excluding international participation of suppliers or contractors per se (by contrast with domestic procurement set out in article 8 [\[**hyperlink**\]](#)): international suppliers or contractors can participate in a procurement that has not been advertised internationally if they so choose, for example, if they respond to a domestic advertisement or one on the Internet.¹⁹

Article 19. Cancellation of the procurement [\[hyperlink**\]](#)**

The procurement regulations should provide detailed guidance to procuring entities on the scope of their discretion to cancel the procurement proceedings and potential liability both under the procurement law and any other provisions of law of the enacting State that may confer liability for administrative acts.

Article 20. Rejection of abnormally low submissions [\[hyperlink**\]](#)**

1. The procurement regulations must refer to applicable law that may require the procuring entity to reject the submission, for example, if criminal acts (such as money-laundering) or illegal practices (such as non-compliance with minimum wage or social security obligations or collusion) are involved, and in doing so differentiate those cases from those covered by the article. They should also explain the notion of abnormally low submission, in particular in the context of international bidding.

2. The procurement regulations must also regulate which type of information the procuring entity may require for the price explanation procedure referred to in the article and in paragraphs 4 to 8 of the commentary to the article in the Guide. The procurement regulations may retain the flexibility to reject or accept the abnormally low submission, which recognizes that the assessment of performance risk is

¹⁹ In this context, see paras. 5 and 6 of the commentary to article 18 in the Guide.

inherently highly subjective, or they may alternatively decide to circumscribe the discretion to accept or reject such submissions.

Article 21. Exclusion of a supplier or contractor from the procurement proceedings on the grounds of inducements from the supplier or contractor, an unfair competitive advantage or conflicts of interest [\[hyperlink**\]](#)**

1. The procurement regulations should assist the procuring entity in assessing whether or not a factual basis for exclusion of a supplier or contractor from the procurement proceedings on the basis of an inducement, an unfair competitive advantage or conflicts of interest has arisen, to guard against any abusive application of the article.

2. The Model Law does not require definitions of the concepts covered by the article. If an enacting State decides to define them, it may wish to take into account the considerations raised in the commentary to the article in the Guide. Where there are relevant legal definitions of these concepts in an enacting State, the procurement regulations should call for their dissemination as part of the legal texts governing procurement in accordance with article 5 of the Model Law [\[**hyperlink**\]](#). Where there are no definitions, examples of what will and will not constitute practices intended to be covered by the article should be provided in the procurement regulations. For example, the procurement regulations should prohibit consultants involved in drafting the solicitation documents from participating in the procurement proceedings where those documents are used. They should also regulate participation of subsidiaries in the same procurement proceedings. In some jurisdictions, practice is to define an inducement by reference to a *de minimis* threshold; enacting States that wish to take this approach are encouraged to ensure that the threshold is appropriate in the prevailing circumstances.

3. References in the procurement regulations to other branches of law of the enacting State, such as anti-monopoly legislation, most likely will be necessary to avoid unnecessary confusion, inconsistencies and incorrect perceptions about anti-corruption policies of the State.

Article 22. Acceptance of the successful submission and entry into force of the procurement contract [\[hyperlink**\]](#)**

1. The procurement regulations must establish the minimum duration of the standstill period. A number of general considerations should be taken into account in establishing this minimum duration, including the impact that the duration of the standstill period would have on the overall objectives of the Model Law. Although the impact of a lengthy standstill period on costs would be considered and factored in by suppliers or contractors in their submissions and in deciding whether to participate, the period should be sufficiently long to enable any challenge to the proceedings to be filed. Enacting States may wish to set more than one standstill period for different types of procurement, reflecting the complexity of assessing whether or not the applicable rules and procedures have been followed, but should note that excessively long periods of time may be inappropriate in the context of ERAs and open framework agreements, which presuppose speedy awards and in which the number and complexity of issues that can be challenged are limited. On the other hand, the situation in infrastructure procurement may require a longer period of consideration. The length of the standstill period may appropriately be

reflected in working or calendar days, depending on the length and likely intervention of non-working days. It should be borne in mind that the primary aim of the standstill period is to allow suppliers or contractors sufficient time to decide whether to challenge the procuring entity's intended decision to accept the successful submission. The standstill period is, therefore, expected to be as short as the circumstances allow, so as not to interfere unduly with the procurement itself. If a challenge is submitted, the provisions in Chapter VIII of the Model Law would address any suspension of the procurement procedure and other appropriate remedies.

2. The procurement regulations should illustrate urgent public interest considerations that may justify non-application of the standstill period and ensure consistency in this regard with justifications for lifting the prohibition against bringing the procurement contract into force under article 65 [\[**hyperlink**\]](#) and justifications for lifting automatic suspension under article 67 [\[**hyperlink**\]](#) (see section X below for the discussion of these issues). As noted in connection with low-value procurement in section II.C above, the procurement regulations should also consider aligning the low-value threshold that would exempt low-value procurement from application of the standstill period under paragraph (3) (b) of article 22 [\[**hyperlink**\]](#) with other thresholds, such as those justifying an exemption from public notices of contract awards (under article 23 (2) [\[**hyperlink**\]](#)) and the use of request-for-quotations proceedings (under article 29 (2) [\[**hyperlink**\]](#)).

3. The procurement regulations should indicate the type of circumstances in which a written procurement contract may be required, taking into account that such a requirement may be particularly burdensome for foreign suppliers or contractors, and where the enacting State imposes measures for proving the authenticity of the signature. Similarly, the procurement regulations should identify the type of circumstances in which the approval by another authority of the procurement contract before its entry into force would be required (e.g. only for procurement contracts above a specified value).

4. The procurement regulations should guide the decision on the appropriate course of action when the winning supplier or contractor fails to enter into a procurement contract when required, and discuss avoiding abuse of the discretion conferred to the procuring entity to cancel the procurement or to award the contract to the next successful submission. The considerations raised in the similar context under articles 43 and 57 below are relevant here.

5. The procurement regulations may usefully discuss issues of debriefing: while maintaining it as an option for the procuring entity, the procurement regulations may emphasize the value of debriefing in particular in the context of framework agreements where repeated procurements can benefit from improved submissions. They should provide for the minimum safeguards of due process and transparency and address those safeguards in particular in the context of the need to preserve confidentiality of commercially sensitive information during the debriefing.²⁰

²⁰ For the guidance on the issues of debriefing, see paras. 23 to 27 of the commentary to article 22 in the Guide.

Article 23. Public notice of the award of a procurement contract or framework agreement [\[hyperlink**\]](#)**

1. The procurement regulations are to provide for the manner of publication of information covered by the article²¹ and regulate in detail the manner of periodic publication of cumulative notices of awards under the framework agreement.
2. The procurement regulations will set out a monetary value threshold below which the publication requirement would not apply. In doing so, as noted in section II.C above, the procurement regulations must ensure consistency in treating low-value procurement in the enacting State. The procurement regulations could usefully explain in this context that, while the exemption from publication in paragraph (2) covers low-value procurement contracts awarded under a framework agreement, it is most unlikely to cover framework agreements themselves, as the cumulative value of procurement contracts envisaged to be awarded under a framework agreement would probably exceed any low-value threshold.

Article 24. Confidentiality [\[hyperlink**\]](#)**

1. The procurement regulations must set out, if not an exhaustive list of information covered by paragraph (1) of the article, at least its legal sources, in particular of such notions as information whose non-disclosure is necessary for the protection of the essential security interests of the enacting State and information whose disclosure may “impede fair competition”. These notions, if not regulated, may be construed very broadly by the procuring entity for the purpose of exempting certain information from disclosure on the ground of confidentiality. Other branches of law may identify certain information as classified and the procurement regulations must cross-refer to them; in other cases, the procurement regulations themselves should clearly limit the scope of the relevant notions referred to in paragraph (1) of the article.
2. As noted in section II.B above, the procurement regulations may discuss measures to be taken by the procuring entity with respect to suppliers or contractors and their subcontractors to protect classified information in the context of a specific procurement additional to the general legal protection under paragraph (1). The procurement regulations should also explain situations when such measures may be justified or required by law because of the sensitive nature of the subject matter of the procurement or by the existence of classified information even if the subject matter itself is not sensitive (for example, when the need arises to ensure confidentiality of information about a delivery schedule or the location of delivery), or both. Cross-references in the procurement regulations to other branches of law may be required.

Article 25. Documentary record of procurement proceedings [\[hyperlink**\]](#)**

1. The procurement regulations should provide for robust record requirements to ensure accuracy and comprehensiveness of the record in order to make the use of the records by aggrieved suppliers or contractors and other competent bodies for the purpose of challenge, audit, control and oversight meaningful and effective. They

²¹ For the minimum standards for publication of this type of information, see the commentary to article 5 in the Guide.

must address such issues as the form and means in which the record must be maintained, the time of putting information and documents on the record and the scope of disclosure of the relevant information in the record to various groups of persons interested in gaining access thereto.

2. The procurement regulations should require the procuring entity to grant prompt access to the relevant parts of the records to authorized persons since delaying disclosure until, for example, the entry into force of the procurement contract might deprive suppliers and contractors of a meaningful remedy. Since the disclosure of some information (e.g. more detailed information concerning the conduct of the procurement proceedings) may be challenged by suppliers or contractors on the ground that its disclosure impedes fair competition and legitimate commercial interests of those suppliers or contractors, the procurement regulations may require the procuring entity in some particularly sensitive procurement to notify suppliers or contractors in the solicitation documents of its intention to disclose portions of the record concerning the conduct of the procurement proceeding relevant to suppliers or contractors.

3. As discussed in the context of article 24 above, the procurement regulations must set out, if not an exhaustive list of information covered by paragraph (4) of the article, at least its legal sources, in particular of such notions as information whose non-disclosure is necessary for the protection of the essential security interests of the enacting State and information whose disclosure may “impede fair competition”. They may be construed very broadly by the procuring entity for the purpose of not disclosing certain information from the record on the basis of confidentiality. Other branches of law may identify certain information as classified and the procurement regulations must cross-refer to them, in other cases, the procurement regulations themselves should clearly limit the scope of the relevant notions referred in paragraph (4) of the article.

4. The procurement regulations must set out all information to be included in the record of procurement proceedings in addition to that explicitly listed in the law itself (see in this context article 25 (1) (w) [\[**hyperlink**\]](#)). For example, the procurement regulations may require recording the submission of late tenders in the documentary record of procurement proceedings and putting on the record any minor deviations and errors and oversights discovered during the examination and evaluation of tenders and steps taken in connection with them.

5. If the enacting State considers that applicable internal rules and guidance should also be stored with the record and documents for a particular procurement, the procurement regulations or rules or guidance from the public procurement agency or other body may so require.

Article 26. Code of conduct [\[hyperlink**\]](#)**

1. Depending on the legal traditions of enacting States, a code of conduct specifically for the procurement personnel may be enacted as part of the administrative law framework of the State, at the level and as part of the procurement regulations.

2. When they are enacted separately from the procurement regulations and if appropriate, the procurement regulations must provide for the manner of the code of

conduct to be promptly made accessible to the public and systematically maintained.²²

IV. Subjects to be addressed in procurement regulations in the context of general issues raised by provisions of Chapter II of the Model Law (Methods of procurement and their conditions for use; solicitation and notices of the procurement) **[hyperlink**]****

1. The procurement regulations are to identify a publication where the invitation to tender or to present other submissions are to be advertised or where an advance notice of the procurement is to appear. The procurement regulations are also to determine the means and manner of the publication of those invitations and notices. There may be paper or electronic media or combination of both, as further explained in the commentary to article 5 in the Guide.
2. The procurement regulations are to provide for rules of publication of the invitation to tender or to present other submissions internationally, i.e. in the media with international circulation and in the manner and language which will ensure that the invitation will reach and be understood by an international audience of suppliers and contractors.
3. The procurement regulations may additionally require procuring entities to publish the invitation to tender or to present other submissions by additional means that would promote widespread awareness by suppliers and contractors of procurement proceedings. These might include, for example, posting the invitation on official notice boards, a contracts bulletin and circulating it to chambers of commerce, to foreign trade missions in the country of the procuring entity and to trade missions abroad of the country of the procuring entity. Where the procuring entity uses electronic means of advertisement and communication, the procurement regulation may allow including in the invitation a web link to the solicitation documents themselves.
4. The procurement regulations must address in detail exceptions to the general rule on publication of the invitation internationally — domestic procurement or where procurement in view of its low value, in the judgement of the procuring entity, is unlikely to be interest on the part of foreign suppliers or contractors. The issues to be addressed in the context of low-value procurement are discussed in section II.C above. As noted there, the procurement regulations must ensure consistency in determining what constitutes low-value procurement for the purpose of applying relevant exemptions of the Model Law. It is important for the procurement regulations to explain in this regard that in both cases in which the exemption from international publication applies, the procuring entity may still solicit internationally; where it does not solicit internationally but foreign suppliers or contractors wish to participate (if they have seen an advertisement on the Internet, for example), they must be permitted to do so.

²² See in this context the commentary in the Guide to article 5 (1) of the Model Law, in which a similar requirement applies to legal texts of general application.

5. As noted in the context of article 8 above, the procurement regulations must specify any grounds for the use of domestic procurement; if those grounds are found in other provisions of law of the enacting State, the procurement regulations must cross-refer to them.

V. Subjects to be addressed in procurement regulations in the context of specific articles of Chapter III of the Model Law (Open tendering) [\[hyperlink**\]](#), in the order of the articles**

Article 38. Provision of solicitation documents [\[hyperlink**\]](#)**

The considerations as regards the fee that may be charged for the solicitation documents are addressed in section II.D above and relevant in the context of this article.

Article 39. Contents of solicitation documents [\[hyperlink**\]](#)**

1. If the solicitation documents must contain at a minimum information in addition to that listed in the law, the procurement regulations must specify it or refer to other provisions of law of the enacting State where such information may be listed.
2. In the context of paragraph (g) of the article, where SME promotion is a socioeconomic policy of the government concerned, the procurement regulations may encourage procuring entities to consider whether to allow in the solicitation documents for partial submissions.

Article 40. Presentation of tenders [\[hyperlink**\]](#)**

1. The procurement regulations should provide for guidance or call for issuance of guidance as regards various aspects of submission of tenders in non-paper-based environment. They need to require that the procuring entity's system, at a minimum, has to guarantee that no person can have access to the content of tenders after their receipt by the procuring entity prior to the time set up for formal opening of tenders. It must also guarantee that only authorized persons clearly identified to the system will have the right to open tenders at the time of formal opening of tenders and will have access to the content of tenders at subsequent stages of the procurement proceedings. The system must also be set up in a way that allows traceability of all operations in relation to presented tenders, including the exact time and date of receipt of tenders, verification of who accessed tenders and when, and whether tenders supposed to be inaccessible have been compromised or tampered with. Appropriate measures should be in place to verify that tenders would not be deleted or damaged or affected in other unauthorized ways when they are opened and subsequently used. Standards and methods used should be commensurate with risk. A strong level of authentication and security can be achieved by various commercial technologies that are available at any given time but this will not be appropriate for

low-risk small-value procurement. The choice should therefore be based on the cost-benefit analysis.²³

2. In situations where the system of receipt of tenders makes it impossible to establish the time of receipt with precision, the procuring entity may need to have an element of discretion to establish the degree of precision to which the time of receipt of tenders presented would be recorded. However, the procurement regulations should regulate this element of discretion by reference to the applicable legal norms in electronic commerce, in order to prevent abuse and ensure objectivity.

3. It is recognized that failures in automatic systems, which may prevent suppliers or contractors from presenting their tenders before the deadline, may inevitably occur. The procurement regulations must address these situations and provide options for the procuring entity to address them. For example, as the commentary to article 40 in the Guide states, where a failure occurs, the procuring entity has to determine whether the system can be re-established sufficiently quickly to proceed with the procurement and if so, to decide whether any extension of the deadline for presenting tenders would be necessary. If, however, the procuring entity determines that a failure in the system will prevent it from proceeding with the procurement, the procuring entity can cancel the procurement and announce new procurement proceedings. Failures in automatic systems occurring due to reckless or intentional actions by the procuring entity, as well as decisions taken by the procuring entity to address issues arising from failures of automatic systems, can give rise to a challenge by aggrieved suppliers and contractors under Chapter VIII of the Model Law.²⁴

Article 42. Opening of tenders [\[hyperlink**\]](#)**

1. The procurement regulations must address in detail the means and manner of presence of suppliers and contractors at the opening of tenders, either in person or virtually. The procurement regulations must require the procuring entity in situations where it decides to use non-paper-based means of communication in the procurement proceedings exclusively or in combination with paper-based means, to set up modalities for the opening of tenders (the place, manner, time and procedures for the opening of tenders) that would allow for the physical and virtual presence of suppliers or contractors. The procurement regulations may list factors that must be taken into account in those situations, such as time difference, the need to supplement any physical location for opening of tenders with any means of ensuring presence of those who cannot be present at the physical location or opting for a virtual location.²⁵

2. As noted in the context of article 7 above, the procurement regulations must address such notions as means of communication being “in common use” and ensuring “full and contemporaneous participation in the meetings”. In addressing the latter notion, the procurement regulations may draw on the explanation found in paragraph 3 of the commentary to article 42 in the Guide: “fully and

²³ Para. 3 of the commentary to article 40 in the Guide.

²⁴ Para. 6 of the commentary to article 40 in the Guide.

²⁵ For a further discussion of the relevant requirements, see the commentary to article 7 (4) in the Guide.

contemporaneously” means that suppliers or contractors must be given a contemporaneous opportunity to receive all and the same information given out during the opening. The information concerned includes the announcements made in accordance with paragraph (3) of the article. Suppliers or contractors must also be able to intervene where any improprieties or inaccuracies are observed, to the extent that they would be able to do so if they were physically present. Regardless of the method used, all pertinent information must be communicated to suppliers or contractors sufficiently in advance to enable them, in accordance with the provisions of article 7 (4), to participate in the opening of tenders.

3. The procurement regulations must also set out specific safeguards for automated opening of tenders, such as: (a) that only authorized persons clearly identified to the system will have the right to set or change in the system the time for opening tenders in accordance with paragraph (1) of the article, without compromising the security, integrity and confidentiality of tenders; (b) only such persons will have the right to open tenders at the set time. The procurement regulations may require that at least two authorized persons should by simultaneous action perform opening of tenders. “Simultaneous action” in this context means that the designated authorized persons within almost the same time span shall open the same components of a tender and produce logs of what components have been opened and when; (c) before the tenders are opened, the system should confirm the security of tenders by verifying that no unauthorized access has been detected; (d) the authorized persons should be equipped with appropriate means to verify the authenticity and integrity of tenders and their timely presentation without the capability of making any changes; (e) measures should be in place to prevent the integrity of tenders from being compromised, to prevent their deletion or to prevent the destruction of the system when the system opens them, such as through virus or similar infection; (f) the system must also be set up in a way that provides for the traceability of all operations during the opening of tenders, including the identification of the individual that opened each tender and its components, and the date and time each was opened; and (g) the system must also guarantee that the tenders opened will remain accessible only to persons authorized to acquaint themselves with their contents and data (such as to members of an evaluation committee or auditors at subsequent stages of the procurement proceedings).²⁶

Article 43. Examination and evaluation of tenders [\[hyperlink**\]](#)**

1. The procurement regulations should explain such notions as minor deviations, errors and oversights as compared to arithmetical errors which correction is addressed in article 16 of the Model Law [\[**hyperlink**\]](#). The procurement regulations must emphasize that any deviations or errors or oversights that can be corrected without touching on the substance of the tender should be acceptable, such as those that do not materially alter or depart from the characteristics, terms, conditions and other requirements set out in the solicitation documents. In no case, however, can there be a correction of errors or oversights that involves a substantive change to the submissions concerned, such as changes that would make an unqualified supplier or contractor qualified or unresponsive submission responsive. The procurement regulations should provide practical examples of acceptable and unacceptable deviations, errors and oversights.

²⁶ Paras. 6 and 7 of the commentary to article 42 in the Guide.

2. The procurement regulations should provide for the rules for quantification of minor deviations and errors and oversights and for taking them into account appropriately in the examination and evaluation of tenders so that tenders may be compared objectively and fairly.
3. The procurement regulations need to build procedural safeguards to mitigate the risks of discriminatory practices in applications of provisions on correction and quantification of minor deviations and errors and oversights, for example by requiring the procuring entity to put on the record any minor deviations and errors and oversights discovered during the examination and evaluation process and steps taken in connection with them.
4. To address exhaustively all issues of errors or omissions in submissions and possible clarification and corrections either by the procuring entity or a supplier or contractor, the procurement regulations may need to refer to contract law and other branches of law of an enacting State as well as reflect the provisions of an international agreement to which the enacting State may be a party, such as the WTO GPA.
5. With reference to paragraphs (5) and (6) of the article, the procurement regulations must guide the procuring entity as regards the options available under the article if the winner fails to demonstrate its qualifications again: either to cancel the procurement proceedings or award the procurement contract to the next successful tender. The procuring entity should be required to assess the consequences of cancelling the procurement, in particular the costs of an alternative procurement method. The procuring entity should not be encouraged always to opt for the next successful tender. The cancellation of the procurement may be required for example where collusion between the supplier or contractor presenting the successful tender and the supplier or contractor presenting the next successful tender is suspected since this may lead to the acceptance of the tender with the abnormally high price. The procurement regulations must require the procuring entity to put on the record details of the procedures envisaged in paragraphs (5) and (6) of the article if they have taken place and the decisions taken by the procuring entity and reasons therefor.

VI. Subjects to be addressed in procurement regulations in the context of methods of procurement referred to in Chapter IV of the Model Law (Procedures for restricted tendering, request for quotations and request for proposals without negotiation) [hyperlink**](#)**

Restricted tendering and direct solicitation in request for proposals

1. In the context of the use of restricted tendering or request for proposals for procurement of items available from only a limited number of suppliers or contractors, the procurement regulations must address the question of market definition and the safeguard that the procuring entity must invite all potential suppliers or contractors capable to deliver the procured items. In this context they

should regulate the requirement of an advance notice of the procurement and its implications on the procurement, in particular that if previously unknown suppliers or contractors respond to the advance notice they must be permitted to submit a tender or proposal unless they are disqualified or otherwise do not comply with the terms of the notice. The procurement regulations must require open tendering with public and unrestricted solicitation or pre-qualification where the extent of the market is not fully known or understood, in particular as regards the pool of overseas suppliers or contractors and the extent of their interest in procurement proceedings of the enacting State.

2. The procurement regulations should address measures to mitigate the risks of an additional administrative burden and delays in the procurement should an additional supplier or contractor emerge, in the light of articles 14 and 15 [\[**hyperlinks**\]](#) that require providing sufficient time for suppliers or contractors to present their submissions. The procurement regulations may require including in the advance notice a statement requesting interested suppliers or contractors to identify themselves to the procuring entity before the date upon which the solicitation documents will be issued and provided to the suppliers or contractors known to the procuring entity.

3. As regards direct solicitation used to avoid the disproportionate costs of examining a large number of tenders or proposals as against the value of the procurement, the procurement regulations must address both a reasonable minimum of suppliers or contractors, such as five, to ensure effective competition, and the objective manner of selection of the suppliers or contractors to be invited to participate, such as “first-come, first-served”, the drawing of lots, rotation or other random choice in a commodity-type market.

Request for quotations

1. The procurement regulations must elaborate on conditions and rules for the use of this procurement method taking into account that ensuring adequate transparency is a key issue, given that procurement under this method is not required to be preceded by a notice of the procurement and may fall below the threshold for an individual public announcement of the contract award under article 23 [\[**hyperlink**\]](#). The procurement regulations should spell out the type of the items to be procured through this procurement method. They could require using recognized trade terms, in particular INCOTERMS, or other standard trade descriptions in common use — such as those in the information technology and communications markets — so that the off-the-shelf items for which the method is designed can be defined by reference to industry standards.

2. The procurement regulations should require the procuring entity always to consider alternatives to request for quotations, especially where e-purchasing became the norm. Electronic methods of requesting quotations may generally be particularly cost-effective for low-value procurement and ensuring also more transparent selection.

3. Where no alternatives are available, the procurement regulations must regulate the manner in which the participants are to be identified, to ensure that the selection of participants in request-for-quotations proceedings is not carried out in a way so

as to restrict market access or to allow abuse of the procedures. Examples of abuse include the selection of two suppliers or contractors whose prices are known to be high, or two suppliers or contractors that are geographically remote, so as to direct the procurement towards a third, chosen supplier or contractor, or suppliers or contractors belonging to a corporate group or that are otherwise under some form of common financial and managerial control. The procurement regulations may require the comparison of historical offers and rotation among suppliers or contractors, where the same items may be procured occasionally. The use of electronic catalogues as a source of quotations may in particular be considered to offer better opportunity for transparency in the selection of suppliers or contractors from which to request quotations, in that such selection can be evaluated against those suppliers or contractors offering relevant items in catalogues. Although not required in the Model Law, the procurement regulations may also require publication of an advance notice of the procurement as in other cases of direct solicitation. The procurement regulations may put in place special oversight procedures that should identify the winning suppliers or contractors under this method, so that repeat awards can be evaluated.

Request for proposals without negotiation

1. In addition to those issues highlighted in connection with restricted tendering and direct solicitation in request for proposals above, the procurement regulations should explain the purpose of this procurement method and with reference to examples illustrate the situations when it could usefully be used. They should also delineate clearly the scope of “technical, quality and performance” characteristics of the proposals from their “financial aspects”. Practical examples of elements of proposals that might fall into one or other category are provided in the commentary to request for proposals without negotiation in the Guide.²⁷
2. The procurement regulations must specify which minimum information not listed in the law must be included by the procuring entity in the solicitation documents. Where such information is specified in other provisions of law of the enacting State, the procurement regulations must cross-refer to them.
3. The considerations as regards the price charged for the solicitation documents are addressed in section II.D above and relevant in the context of article 47 (2) (h) and (i). The procurement regulations should therefore address them in the context of this procurement method as well.
4. If the procurement law of the enacting State allows that, the procurement regulations may provide for a variation of this procurement method that may be appropriate for the procurement of a simpler subject matter: the procuring entity may select the successful proposal on the basis of the price of the proposals that meet or exceed the minimum technical, quality and performance requirements, provided that the statement of the evaluation criteria in the invitation and request for proposals have so provided. This approach may be appropriate in situations where the procuring entity does not need to evaluate technical, quality and performance characteristics of proposals and assign any scores but rather establishes a threshold

²⁷ Para. 2 of the commentary in the Guide to General description and main policy issues of request for proposals without negotiation.

by which to measure technical, quality and performance characteristics of proposals at such a high level that all the suppliers or contractors whose proposals attain a rating at or above the threshold can in all probability perform the procurement contract at a more or less equivalent level of competence. There should also be no need in such cases to evaluate any financial aspects of proposals other than price.

VII. Subjects to be addressed in procurement regulations in the context of methods of procurement referred to in Chapter V of the Model Law (Procedures for two-stage tendering, request for proposals with dialogue, request for proposals with consecutive negotiations, competitive negotiations and single-source procurement) [**hyperlink****]**

General

1. The procurement regulations can assist in enhancing objectivity in the assessment of the circumstances that necessitate the use of a Chapter V procurement method. Since this assessment will take place at the procurement planning stage, the procurement regulations should build in appropriate safeguards at that stage, including by requiring that the procurement planning stage is to be fully documented and recorded.
2. The procurement regulations should address external expert assistance that can be provided centrally or from other sources to the procuring entity in building capacity to engage successfully in discussions, dialogue or negotiations with the private sector, to explain the procuring entity's needs in a way that can be fully and equally understood by all participants, and to assess the resulting tenders and offers such that its needs are properly met.
3. The procurement regulations should also provide for managerial tools, structures and procedural safeguards for the use of procurement methods involving interaction with the market, in particular those aimed at avoiding the possibility of abuse and corruption. In particular, in procurement involving delicate issues or highly competitive contracts, the procurement regulations should provide for oversight measures, including post-procedure audit, and the presence of observers coming from outside the procuring entity's structure during the procedures, to assess the use of the methods in practice. These measures should aim at preventing favouring certain suppliers or contractors, for example by providing different information to each of them during the discussions, dialogue or negotiations, and at mitigating the risks of revealing, inadvertently or otherwise, commercially sensitive information of competing suppliers or contractors.

Two-stage tendering

1. The procurement regulations should assist the procuring entity in the assessment of the circumstances that necessitate the use of this procurement method. They could usefully provide examples of its successful use, such as in procurement of high-technology items, such as large passenger aircraft or

communication systems, technical equipment and infrastructure procurement, including large complex facilities or construction of a specialized nature. More generally, the procurement regulations may instruct the procuring entity to consider the use of this method where it is evident at the procurement planning stage that obtaining best value for money is unlikely if the procuring entity draws up a complete description of the procurement setting out all the technical specifications, all quality and performance characteristics of the subject matter, all relevant competencies of the suppliers or contractors, and all terms and conditions of the procurement, without examining what the market can offer.

2. The procurement regulations should guide the procuring entity on all exceptions that should be made in applying general provisions of open tendering contained in Chapter III of the Model Law to two-stage tendering. Examples of such exceptions are provided in paragraphs 1 to 3 of the commentary to the procedures of two-stage tendering in the Guide.

3. The procurement regulations may elaborate on the provisions of the Model Law as regards presentation, examination and rejection of initial tenders. They in particular may list grounds for rejection of initial tenders, drawing on the list in article 43 (2) of the Model Law [\[**hyperlink**\]](#) as appropriate (noting that the grounds touching upon prices of the tenders would not be applicable since initial tenders do not include price).

4. The procurement regulations should explain the purpose for and nature of the discussion held in this procurement method, in particular that discussion does not involve binding negotiations or bargaining of any type and may concern any aspect of initial tenders that were not rejected but price. The procurement regulations may usefully emphasize that holding the discussions is an option, not an obligation: the procuring entity may be able to refine and finalize the terms and conditions of the procurement without holding the discussion, on the basis of the initial tenders received.

5. The procurement regulations should explain the notion of extending an equal opportunity to discuss to all suppliers or contractors concerned. An “equal opportunity” in this context means that the suppliers or contractors are treated as equally as the requirement to avoid disclosure of confidential information and the need to avoid collusion allow. The procurement regulations must build measures that would allow the monitoring of the compliance of the procuring entity with this requirement of the law, for example the requirement to record and preserve the details of the discussions with each supplier or contractor.

6. The procurement regulations must alert that the risks of revealing, inadvertently or otherwise, commercially sensitive information of competing suppliers or contractors may arise not only at the stage of discussions but also in the formulation of the revised set of the terms and conditions of the procurement. In conformity with the requirements of article 24 [\[**hyperlink**\]](#), the procuring entity must respect the confidentiality of the suppliers’ or contractors’ technical proposals throughout the process. The procurement regulations must provide practical guidance for achieving that, such as by prohibiting the procuring entity from revealing the source of information used in formulating the revised technical, quality and performance characteristics of the subject matter and by requiring them

to avoid using in the revised terms and conditions of the procurement requirements, symbols and terminology peculiar to only one supplier or contractor.

Request for proposals with dialogue

1. The procurement regulations should assist the procuring entity in the assessment of the circumstances that necessitate the use of this procurement method. They could usefully provide examples of its successful use, such as in procurement aimed at seeking different, often innovative, solutions to technical issues. The method may be appropriate for example in the procurement of architectural, construction and infrastructure works where achieving energy-saving and other sustainable procurement goals are sought. In those cases, there could be many possible solutions to the procuring entity's needs: the material may vary, and may involve the use of one source of energy as opposed to another (wind vs. solar vs. fossil fuels). The complexity need not be at the technical level: in infrastructure projects, for example, there may be different locations and types of construction as the main variables. A tailor-made solution may be needed in less complex projects, for example, a communication system for the archiving of legal records, which may need particular features such as long-term accessibility, and where technical excellence is an issue. In all these cases, the attractiveness of solutions and personal skill and expertise of the suppliers or contractors can be evaluated only through dialogue; the dialogue is essential in order to identify and obtain the best solution to the procurement needs. The opportunity cost of not engaging in dialogue with suppliers or contractors is therefore high, while the economic gains of engaging in the process are evident.

2. The procurement regulations must clarify in which cases this method is not to be used. Since the dialogue normally involves complex and time-consuming procedures, the method should not be used for simple items that are usually procured through procurement methods not involving interaction with suppliers or contractors. The procurement method is, for example, not intended to apply to cases where negotiations are required because of urgency or because there is an insufficient competitive base (in such cases, the use of competitive negotiations or single-source procurement is authorized under the Model Law). It does not address the type of negotiations that seek only price reductions as in request for proposals with consecutive negotiations. Nor it is intended to apply in situations when the procuring entity needs to refine its procurement needs and envisages formulating a single set of terms and conditions (including specifications) of the procurement, against which tenders can be presented, in which two-stage tendering proceedings should be used.

3. In view of many similarities in conditions for use and features of two-stage tendering and request for proposals with dialogue, the procurement regulations should pay particular attention to clarifying the purpose of the use of this method as opposed to two-stage tendering. One of the main distinct features of this procurement method — the absence of any complete single set of terms and conditions of the procurement beyond the minimum requirements against which final submissions are evaluated. In order to use request-for-proposals-with-dialogue proceedings, the procuring entity would have to conclude therefore that formulating a complete single set of terms and conditions of the procurement would not be

possible or would not be appropriate, and therefore dialogue with suppliers or contractors is necessary for the procurement to succeed.

4. While it is not intended that the procedure will involve the procuring entity in setting out a full technical description of the subject matter of the procurement, the method is not to be used as an alternative to appropriate preparation for the procurement. The procurement regulations must therefore list issues to be addressed at the procurement planning stage for the method to be successfully used, such as identifying minimum technical and other requirements for the project and parameters of the project that cannot be varied during the dialogue.

5. The procurement regulations should explain the purpose for and nature of the dialogue held in this procurement method, in particular that the dialogue may concern any aspect of proposals, including price. While the primary focus of dialogue typically may be on technical, quality and performance aspects or legal or other supporting issues, the subject matter of the procurement and market conditions may allow and even encourage the procuring entity to use price as an aspect of dialogue. In addition, in some cases, it is not possible to separate price and non-price criteria.

6. The procurement regulations are also to explain that the dialogue is not intended to involve binding negotiations or bargaining from any party to the dialogue. The procurement regulations should list requirements for a concurrent dialogue, such as that all suppliers and contractors identified for dialogue by the procuring entity in accordance with the terms and conditions of the solicitation are entitled to an equal opportunity to participate in the dialogue, there are no consecutive discussions, and the dialogue is to be conducted at different times with different suppliers or contractors, by the same procurement officials or negotiating committees composed of the same procurement officials.

7. If the provisions calling for an ex ante approval mechanism for the use of this procurement method are enacted,²⁸ the procurement regulations must regulate prerogatives in the procurement proceedings of an approving authority designated by the enacting State in the law, in particular whether these prerogatives will end with granting to the procuring entity the approval to use this procurement method or also extend to some form of supervision of the way proceedings are handled. In addressing these issues, the procurement regulations should pay special attention to the need to avoid conflict of interest at this and subsequent stages in the procurement proceedings if for example the same entity grants the approval for the use of the method and subsequently approves the entry into force of the procurement contract or is engaged in reviewing claims arising from the procurement proceedings.

8. Considerations raised in connection with methods of solicitation in section IV above and particular aspects of direct solicitation raised in section VI above in the context of restricted tendering and request for proposals are relevant to request-for-proposals-with-dialogue proceedings. The procurement regulations should therefore address them in the context of this procurement method as well.

²⁸ As to which see para. 5 of the commentary to Conditions for use of request for proposals with dialogue (article 30 (2)) in the Guide.

9. The procurement regulations should recommend the minimum three suppliers or contractors with whom to hold the dialogue and where the maximum number of suppliers or contractors from which proposals will be requested is established, that maximum number should be higher than the maximum to be admitted to the dialogue stage, in order to allow the procuring entity to select from a bigger pool the most suitable candidates for the dialogue stage.

10. At the same time, the procurement regulations should address situations when only one or two responsive proposals are presented: the procuring entity should not be precluded from continuing with the procurement proceedings in such cases because the procuring entity in any event has no means of ensuring that the competitive base remains until the end of the dialogue stage: suppliers or contractors are not prevented from withdrawing at any time from the dialogue.

11. The procurement regulations should list or cross-refer to all grounds under the law of the enacting State under which suppliers or contractors may be excluded from further dialogue by the procuring entity, taking into account that the Model Law does not give an unconditional right to the procuring entity to terminate competitive dialogue with a supplier or contractor, for example, only because in the view of the procuring entity that supplier or contractor would not have a realistic chance of being awarded the contract. On the other hand, they must be excluded on the basis of article 21 [\[**hyperlink**\]](#) (inducement, unfair competitive advantage or conflicts of interest), or if they are no longer qualified (for example in the case of bankruptcy), or if they materially deviate during the dialogue stage from the essential requirements of the procurement (such as the subject matter of the procurement, the minimum requirements or the requirements identified as not being the subject of dialogue at the outset of the procurement).

12. The procurement regulations may require in all those cases the procuring entity to notify promptly suppliers or contractors of the procuring entity's decision to terminate the dialogue and to provide reasons for that decision. They may also require the procuring entity to provide suppliers or contractors at the outset of the procurement proceedings with information about the grounds on which the procuring entity will be required under law to exclude them from the procurement.

13. The procurement regulations should encourage better procurement planning that would make the process more predictable, in particular by requiring the procuring entity to specify in the request for proposals an estimated timetable envisaged for the procedure to give both sides a better idea as regards the timing of various stages and which resources (personnel, experts, documents, designs and so forth) would be relevant, and should be made available, at which stage. The procurement regulations may also require the procuring entity specifying the maximum period of time during which suppliers or contractors should be expected to commit their time and resources.

14. The procurement regulations should explain limits on the extent of modification of the terms and conditions of the procurement as set out at the outset of the procurement proceedings during the dialogue, taking into account that flexibility in making modifications is an inherent feature of this method and imposing excessive restrictions will defeat the purpose of the procedure. The need for modifications may be justified in the light of dialogue but also in the light of circumstances not related to dialogue (such as administrative measures).

15. The procurement regulations must illustrate with practical examples which modifications would be acceptable and which will not in the light of the requirements of article 49 (9). In general terms, any modifications should be permitted unless they are made to such essential terms and conditions of the procurement whose modification would have to lead to the new procurement (the subject matter of the procurement, qualification and evaluation criteria, the minimum requirements and any elements that the procuring entity explicitly excludes from the dialogue at the outset of the procurement).

16. The procurement regulations must list practical measures aimed at achieving fair, equal and equitable treatment of all participants during the dialogue. In addition to those identified in the Model Law itself (e.g. that the dialogue is to be held on a concurrent basis by the same representatives of the procuring entity and those related to circulation of pertinent documents and information to participating suppliers or contractors), the procurement regulations should identify other measures, such as ensuring that the same topic is considered with the participants concurrently for the same amount of time, and the rules for establishing the sequence of meetings held with different participants.

17. The procurement regulations should explain that the prohibition to negotiate after the best and final offers (BAFOs) are presented does not cover the possibility to seek clarifications under article 16 [\[**hyperlink**\]](#) subject to limitations imposed by that article, such as prohibition to alter price or other significant information as part of the clarification process.

18. The procurement regulations must require the procuring entity to record and preserve in writing details of dialogue with each supplier or contractor.

Request for proposals with consecutive negotiations

1. The procurement regulations should assist the procuring entity in the assessment of the circumstances that necessitate the use of this procurement method. They could usefully provide examples of its successful use, such as in procurement of more complex subject matter where the examination and evaluation of technical, quality and performance characteristics of the proposals separately from consideration of financial aspects of proposals is possible and needed and where holding negotiations on commercial or financial aspects of proposals is indispensable — there may be so many variables in these aspects of proposals that they cannot be all foreseen and specified at the outset of the procurement and must be refined and agreed upon during negotiations. When the need exists to negotiate on other aspects of proposals, this procurement method may not be used. Examples of the use of this method in practice include consulting (e.g. advisory) services.

2. Considerations raised in connection with methods of solicitation in section IV above and particular aspects of direct solicitation raised in section VI above in the context of restricted tendering and request for proposals are relevant to request-for-proposals-with-consecutive-negotiations proceedings. The procurement regulations should therefore address them in the context of this procurement method as well.

3. All stages in this procurement method preceding the stage of negotiations are the same as in request for proposals without negotiation. The procurement

regulations should therefore address issues raised in the relevant context in section VI above in the context of this procurement method as well.

4. The procurement regulations should explain the purpose for and nature of the negotiations held in this procurement method, in particular that they may concern only commercial or financial aspects of proposals and that they are held consecutively as opposed to concurrently as for example in competitive negotiations. As is the case with request for proposals without negotiation, the procurement regulations should delineate clearly the scope of “technical, quality and performance” characteristics of the proposals from their “financial aspects”. Practical examples of elements of proposals that might fall into one or other category are provided in the commentary to request for proposals without negotiation and to this procurement method in the Guide.²⁹

5. The procurement regulations must emphasize the requirement of the law that no procurement contract can be awarded to the supplier(s) or contractor(s) with which the negotiations have been terminated. The commentary to this procurement method in the Guide sets out considerations that the procuring entity should take into consideration while deciding to terminate negotiations with the best, or a better-ranked, supplier or contractor.³⁰

6. The procurement regulations may need to provide for practical measures that encourage discipline on both suppliers or contractors and procuring entities to negotiate in good faith. The procurement regulations may also include measures aimed at increasing the bargaining position of the procuring entity. Such measures may include requiring the procuring entity to fix a period for the negotiations in the solicitation documents.

Competitive negotiations

1. The procurement regulations must emphasize the exceptional nature of this procurement method, which could be considered in preference to single-source procurement whenever possible in the case of urgency, catastrophic events and the protection of essential security interests of the enacting State. It cannot be considered as an alternative to any other method of procurement available under the Model Law.

2. The procurement regulations must require the procuring entity even in cases of urgency, catastrophic events and the protection of essential security interests of the enacting State first to consider the use of open tendering or any other competitive method of procurement. Where the procuring entity concludes that the use of other competitive methods is impractical, it must always consider the use of competitive negotiations in preference to single-source procurement unless it concludes that there is extreme urgency or another distinct ground justifying the use of single-source procurement under paragraph (5) of article 30 of the Model Law

²⁹ Para. 2 of the commentary in the Guide to General description and main policy issues of request for proposals without negotiation and para. 3 of the commentary to Procedures for request for proposals with consecutive negotiations (article 50).

³⁰ Paras. 4 to 7 of the commentary to Procedures for request for proposals with consecutive negotiations (article 50).

[**hyperlink**] (for example, the absence of a competitive base or exclusive rights involved).

3. The procurement regulations should illustrate examples that would necessitate the use of this procurement method, such as the need for urgent medical or other supplies after a natural disaster or the need to replace an item of equipment in regular use that has malfunctioned. They should explain that the method is not available if the urgency is due to a lack of procurement planning or other (in)action on the part of the procuring entity. The procurement regulations must elaborate that the extent of the procurement through this method must be directly derived from the urgency itself. In other words, if there is an urgent need for one item of equipment and an anticipated need for several more of the same type, competitive negotiations can be used only for the item needed immediately.

4. The procurement regulations may impose additional requirements for the use of competitive negotiations. They may require that the procuring entity take steps such as: establishing basic rules and procedures for the conduct of the negotiations in order to help ensure that they proceed in an efficient manner; preparing various documents to serve as the basis for the negotiations, including documents setting out the description of the subject matter to be procured, and the desired contractual terms and conditions; and requesting the suppliers or contractors with which it negotiates to itemize their prices so as to assist the procuring entity in comparing offers.

5. Direct solicitation is an inherent feature of this procurement method since the solicitation in this procurement method is addressed to a limited number of suppliers or contractors identified by the procuring entity. It raises identical issues to those discussed in section VI above in the context of restricted tendering and request for proposals, such as consequences of the publication of an advance notice of the procurement, notably the emergence of unknown suppliers or contractors requesting participation in competitive negotiations, and mechanisms for ensuring a non-discriminatory manner of selecting the suppliers or contractors. Those issues must be addressed in the procurement regulations in the context of this procurement method as well.

6. The procurement regulations must in particular discuss exceptions to the requirement to publish an advance notice of the procurement in the case of direct solicitation since they are pertinent to the conditions of use of competitive negotiations. The procuring entity will not be required to publish such a notice, but may still choose to do so, when competitive negotiations are used in situations of urgency. When competitive negotiations are used in procurement for the protection of essential security interests of the State, the advance notice of the procurement is required subject to any exemptions on the basis of confidentiality that may apply under the provisions of law of the enacting State. For example, procurement involving the protection of essential security interests of the State may also involve classified information; in such cases, the procuring entity may be authorized or required (by the procurement regulations or by other provisions of law of the enacting State) not to publish any public notice related to the procurement. The procurement regulations must set out such authority or requirement or cross-refer to other provisions of law of the enacting State where such authority or requirement is set out.

7. The procurement regulations may recommend engaging in negotiations with at least three suppliers or contractors to ensure effective competition.
8. The procurement regulations should explain the purpose for and nature of the negotiations held in this procurement method, in particular that they may concern any aspects of proposals and that they involve bargaining and are to be held concurrently, not consecutively as in request for proposals with consecutive negotiations.
9. The procurement regulations could usefully cross-refer to all safeguards in the Model Law aimed at ensuring transparency and the fair, equal and equitable treatment of participants in procurement by means of this procurement method. In addition to those identified in the Model Law itself specifically in the context of this procurement method (e.g. those related to circulation of pertinent documents and information to participating suppliers or contractors), they include the requirement to maintain a detailed record of the procurement proceedings, including details of negotiations with each participating supplier or contractor, and to provide access by suppliers or contractors to the record, as provided for in article 25 [\[**hyperlink**\]](#). The procurement regulations should identify other safeguards, such as providing equal opportunity to participate in negotiations to all invited to competitive negotiations. They could also provide for practical measures, such as ensuring that the same topic is considered with the participants concurrently for the same amount of time, and that the rules for establishing the sequence of meetings held with different participants, the maximum duration of the negotiations stage, and the time frame for negotiations with each supplier or contractor, are made known in the solicitation documents. The procurement regulations could also require oversight measures such as the presence during negotiations of persons outside the procuring entity's structure to oversee the process. They could also require the establishment of a negotiating committee and define rules for its composition and operation.
10. The procurement regulations must contain measures aimed at ensuring that all participating suppliers or contractors are treated by the procuring entity on an equal footing. Such measures include the requirement on the procuring entity to issue the request for BAFOs in writing and communicate it simultaneously to all participating suppliers or contractors so that all of them could receive information about termination of negotiations and available time to prepare their BAFO.
11. As with other procurement methods involving the BAFO stage, the procurement regulations must address differences between the prohibition of post-BAFO negotiations and the possibility to request clarifications and explanations as regards the terms and conditions of BAFOs under article 16 of the Model Law [\[**hyperlink**\]](#).

Single-source procurement

1. The procurement regulations must include measures that would prevent the procuring entity from using single-source procurement where other methods of procurement are available.
2. The procurement regulations should address different situations that lead to the use of single-source procurement, such as: (a) where no alternatives to single-source

procurement may objectively exist, such as where there is only one supplier or contractor capable of providing the subject matter, either because that supplier or contractor has exclusive rights with respect to the subject matter of the procurement or for other reasons that confirm the exclusivity; and (b) where the use of single-source procurement is authorized or required by law of the enacting State on other grounds, for example for implementing its socioeconomic policies or protecting essential security interests of the State. Apart from those objective and authorized reasons for the use of single-source procurement, the absence of the proper procurement planning or the capacity on the side of the procuring entity to consider and use alternative methods or tools may be the reason for the use of single-source procurement.

3. Where single-source procurement is used because of the absence of any alternative, the procurement regulations must establish or elaborate on measures of verifying whether the reason invoked by the procuring entity for the use of single-source procurement is indeed objectively justifiable. Among them is the requirement of giving a timely advance public notice of single-source procurement as an essential safeguard: it tests the procuring entity's assumption that there is an exclusive supplier or contractor and so enhances transparency and accountability in this aspect of procurement practice. The procurement regulations may establish a minimum period for the publication of such notice before the procurement proceedings may begin and call for the widest dissemination of the notice. The procurement regulations must require holding another procurement using another method of procurement where additional suppliers or contractors emerge, since the justification for single-source procurement in such case falls away. Other measures include verifying practices of formulating descriptions of the subject matter of the procurement (they could be formulated in such a narrow way so as to artificially limit the market concerned to a single source; this may encourage monopolies and corruption, whether inadvertently or intentionally). For this reason, the procurement regulations could encourage the use of functional descriptions (performance/output specifications).

4. Where the use of single-source procurement is authorized or required by law of the enacting State on other grounds, the procurement regulations should explain the application of the relevant condition for use and its limits, such as:

(a) In the context of the condition for use set out in article 30 (5) (b) of the Model Law, extreme urgency, the procurement regulations may explain that the urgency must be so extreme that holding negotiations with more than one supplier or contractor and thus the use of competitive negotiations would be impractical. As is the case in competitive negotiations, the need to link the extent of the procurement with the extreme urgency will limit the amount that can be procured using this method: the amount procured using emergency procedures should be strictly limited to the needs arising from that emergency situation. For example, following a catastrophic event, there may be immediate needs for clean water and medical supplies; a need for semi-permanent shelter may arise out of the same catastrophe but is perhaps not so urgent and could be procured by other methods;

(b) In the context of the condition for use set out in article 30 (5) (c), the need for standardization or compatibility with existing goods, equipment, technology or services, the procurement regulations must provide for the rule that procurement in such situations should be limited both in size and in time. They

should also emphasize that this reason must be truly exceptional: otherwise needs may be cited that are in reality due to poor procurement planning on the part of the procuring entity;

(c) In the context of the condition for use set out in article 30 (5) (d), the use of single-source procurement for the protection of essential security interests of the State, the procurement regulations must explain that the use of single-source procurement instead of another method of procurement, would be appropriate only if the procurement involves classified information and the procuring entity concludes that the information concerned will be insufficiently protected if any other method of procurement, including another exceptional method of procurement such as competitive negotiations, is used. As stated in section II.B above, the authority granted to procuring entities to take special measures and impose special requirements for the protection of classified information applies only to the extent permitted by the procurement regulations or by other provisions of law of the enacting State;

(d) In the context of the condition for use set out in article 30 (5) (e), the use of single-source procurement to implement socioeconomic policies of the enacting State, the procurement regulations must address in detail the stage of seeking and receiving comments, to make the opportunity to comment meaningful. They should provide for the minimum content of the notice, in particular to encourage on the question of whether there is only one available supplier or contractor, so as to avoid the abuse of this type of single-source procurement to favour a particular supplier or contractor. They should also regulate further aspects of these provisions: in particular, whose comments should specifically be sought (for example, of local communities), the purpose or the effect of comments, especially negative, if received. They should require the procuring entity to allow sufficient time to elapse between the public notice of the procurement and the start of the procurement proceedings, to analyse and record comments from any member of the public and to provide explanations upon request. If the provisions calling for an ex ante approval mechanism for the use of single-source procurement on this ground are enacted,³¹ the procurement regulations must regulate prerogatives of an approving authority, in particular whether these prerogatives will end with granting to the procuring entity the approval to use this procurement method or also extend to some form of supervision of the way proceedings are handled. In addressing these issues, the procurement regulations should pay special attention to the need to avoid conflict of interest at this and subsequent stages in the procurement proceedings if for example the same entity grants the approval for the use of the method and subsequently approves the entry into force of the procurement contract or is engaged in reviewing claims arising from the procurement proceedings.

5. Where the absence of the proper procurement planning or the capacity on the side of the procuring entity to consider and use alternative methods or tools is the reason for the use of single-source procurement, the procurement regulations must address those reasons by establishing measures towards the proper procurement planning and building the required capacity to consider and use alternatives to single-source procurement. For example, a closed framework agreement without

³¹ As to which see para. 8 of the commentary to Conditions for use of single-source procurement (article 30 (5)) in the Guide.

second-stage competition may effectively address situations of extreme urgency, where it has been concluded in advance against a background of an identified and probable need occurring on a periodic basis or within a given time frame. Open framework agreements could be established for the simple standardized items while closed framework agreements for more complex items, in anticipation of urgent needs or additional supplies from the same source for reasons of standardization and compatibility. Request for quotations and ERAs could be used instead of single-source procurement where the need for off-the-shelf items arose in situations of urgency, emergency and the protection of essential security interests of the enacting State. Where negotiations are necessary but the use of other more structured and transparent methods of procurement is not possible, the competitive negotiations are to be used. This is because competitive negotiations are inherently more competitive than single-source procurement and more safeguards are built in the provisions of the Model Law regulating procedures in competitive negotiations, making the latter more structured and transparent than single-source procurement.

6. Direct solicitation is an inherent feature of this procurement method since the solicitation in this procurement method is addressed to a single supplier or contractor identified by the procuring entity. It raises identical issues to those discussed in section VI above in the context of restricted tendering and request for proposals, such as consequences of the publication of an advance notice of the procurement, notably the emergence of suppliers or contractors challenging the use of single-source procurement, discussed also in paragraph 3 above. Those issues must be addressed in the procurement regulations in the context of this procurement method as well.

7. The procurement regulations must in particular discuss exceptions to the requirement to publish an advance notice of the procurement in the case of direct solicitation since they are pertinent to some conditions for use of single-source procurement. The procuring entity will not be required to publish such a notice, but may still choose to do so, when single-source procurement is used in situations of extreme urgency. When single-source procurement is used in procurement for the protection of essential security interests of the State, the advance notice of the procurement is required subject to any exemptions on the basis of confidentiality that may apply under the provisions of law of the enacting State. For example, procurement involving the protection of essential security interests of the State may also involve classified information; in such cases, the procuring entity may be authorized or required (by the procurement regulations or by other provisions of law of the enacting State) not to publish any public notice related to the procurement. The procurement regulations must set out such authority or requirement or cross-refer to other provisions of law of the enacting State where such authority or requirement is set out.

8. The procurement regulations could usefully cross-refer to all safeguards in the Model Law aimed at ensuring transparency in procurement by means of this procurement method, such as the requirements for an advance notice of the procurement, on publication of notices of procurement contract awards and on keeping the comprehensive record of the procurement proceedings, including justifications for the use of single-source procurement.

VIII. Subjects to be addressed in procurement regulations in the context of ERAs (article 31 and Chapter VI of the Model Law (Electronic reverse auctions) [\[hyperlinks**\]](#))**

General

1. The procurement regulations must explain the main features of ERAs and highlight their main differences from traditional auctions (such as that they are online auctions with automatic evaluation, where the anonymity of the bidders and the confidentiality and traceability of the proceedings can be preserved, and they are always to be used as the final stage in the procurement proceeding before the award of the procurement contract). In this respect they should draw on the definition of the ERA in article 2 of the Model Law and the general commentary to Chapter VI in the Guide [\[**hyperlinks**\]](#). To avoid confusion and undesirable interpretations, the procurement regulations should explain in particular the meaning of the term “successively lowered bids” used in the definition of the ERA as referring to successive reductions in the price or improvements in overall offers to the procuring entity.

2. The issues of authenticity, integrity of data, security and related topics in the use of e-procurement highlighted in the context of articles 7 and 40 above and in the Guide are in particular relevant in the context of ERAs since they are by default held online under the Model Law. The procurement regulations should therefore address technical issues, such as ensuring adequate infrastructure, that the relevant Internet sites are available and supported by adequate bandwidth, and appropriate security measures to avoid the elevated risk of bidders’ gaining unauthorized access to competitors’ commercially sensitive information.

3. The procurement regulations must address the technical aspects of the auction that must be provided in the solicitation documents to accommodate its online features and to ensure transparency and predictability in the process (such as specifications for connection, the equipment being used, the website, any particular software, technical features and, if relevant, capacity). The procurement regulations must require the procuring entity to prepare for each ERA rules for conducting the auction. The procurement regulations may provide for or call for formulating standard rules for conducting auctions that may be used by the procuring entities for adapting to the requirements of any given procurement. The rules for conducting the auction must specify at a minimum:

(a) The type of information that is to be disclosed to the bidders during the auction and how and when it will be made available to the bidders (at a minimum, and to ensure fair, equal and equitable treatment, the same information should be provided simultaneously to all bidders);

(b) The criteria and procedures for any extension of the deadline for submission of bids;

(c) Circumstances that would require suspension or termination of the auction;

(d) Procedural safeguards to protect the interests of bidders in case of the suspension or termination of the auction, such as immediate and simultaneous

notification of all bidders about suspension or termination and in the case of suspension, the time for the reopening of the auction and the new deadline for its closure. Where a stand-alone ERA is terminated, the rules should specify whether the termination necessarily cancels the ERA, or whether the contract can be awarded based on the results at the time of termination;

(e) Permissible criteria governing the closing of the auction, such as: (i) when the date and time specified for the closing of the auction has passed; (ii) when the procuring entity, within a specified period of time, receives no further new and valid prices or values that improve on the top-ranked bid; or (iii) when the number of stages in the auction, fixed in the notice of the ERA, has been completed. The procurement regulations should also make it clear that each of these criteria may entail the prior provision of additional specific information; guidance should expand on the types of information concerned. Examples include that item (ii) above would require the specification of the time that will be allowed to elapse after receiving the last bid before the auction closes. Item (iii) above would require the prior provision of information on whether there will be only a single stage of the auction, or multiple stages (in the latter case, the information provided should cover the number of stages and the duration of each stage, and what the end of each stage entails, such as whether the exclusion of bidders at the end of each stage is envisaged);

(f) The procedures to be followed in the case of any failure, malfunction, or breakdown of the system used during the auction process;

(g) As regards the conditions under which the bidders will be able to bid, any minimum improvements in price or other values in any new bid during the auction or limits on such improvements. In the latter case, the information must explain the limits (which may be inherent in the technical characteristics of the items to be procured).

4. The procurement regulations must call for more detailed planning than in other procurement methods, in view of the need to establish a mathematical formula to select the winner and prepare detailed rules for conducting the auction.

5. The procurement regulations should put in place or call for mechanisms in the procuring entity for monitoring competition in markets where techniques such as ERAs are used. The procurement regulations should require the procuring entity to possess good intelligence on past similar transactions, the relevant marketplace and market structure. The procurement regulations should call for modifications of procurement procedures in repeated procurement where the same small group of bidders take part in ERAs and if there is any evidence of manipulation of results of ERAs by bidders.

Article 31. Conditions for use of the electronic reverse auctions [\[hyperlink**\]](#)**

1. The procurement regulations should assist the procuring entity in the assessment of the circumstances that would make the use of an ERA desirable and appropriate. They should guide the procuring entity in considering the market concerned before a procurement procedure commences, to identify the relative risks and benefits of an ERA, and should encourage the use of a common procurement vocabulary to identify the subject matter of the procurement by codes or by reference to general market-defined standards. They must highlight that ERAs are

most suitable for commonly used goods and services which generally involve a highly competitive, wide market, where the procuring entity can issue a detailed description or one referring to industry standards, and where the offers from bidders offer the same quality and technical characteristics. Those include office supplies, commodities, standard communication technology equipment, primary building products and simple services. A complicated evaluation process is not required; no (or limited) impact from post-acquisition costs is expected; and no services or added benefits after the initial contract is completed are anticipated. Types of procurement where non-quantifiable factors prevail over price and quantity considerations including the procurement of construction or consulting services (e.g. advisory services) and other quality-based procurement are not suitable for ERAs.

2. The procurement regulations may restrict — perhaps on a temporary basis and to the extent allowed by the procurement law — the use of ERAs to markets that are known to be competitive (e.g. where there is a sufficient number of bidders to ensure competition and to preserve the anonymity of bidders) or through qualitative restrictions such as limiting their use to the procurement of goods only, where costs structures may be easier to discern. They may include illustrative lists of items suitable for acquisition through ERAs or, alternatively, to list generic characteristics that render a particular item suitable or not suitable for acquisition through this procurement technique.

3. The procurement regulations may establish additional conditions for the use of ERAs permissible under the law, such as consolidating purchases to amortize the costs of setting up the system for holding ERAs, including those of third-party IT and service providers, and guidance on the concept of “price” criteria drawing on the provisions of article 11 and the commentary thereto [\[**hyperlinks**\]](#). In the latter context, the procurement regulations should explain that when non-price criteria are involved in the determination of the successful submission, such criteria must be quantifiable and capable of expression in monetary terms (e.g. figures, percentages): this provision overrides the caveat in article 11 that the expression in monetary terms should be made “where practicable”. While all criteria can in theory be expressed in such terms, as noted in the Introduction to Chapter I in the Guide, an optimal result will arise where the evaluation criteria are objectively and demonstrably capable of expression in such terms.

Article 53. Electronic reverse auction as a stand-alone method of procurement [\[hyperlink**\]](#)**

1. The procurement regulations should assist the procuring entity in the assessment of the circumstances that would necessitate the pre-auction ascertainment of qualifications of bidders or examination and/or evaluation of initial bids. For example, for the procurement of off-the-shelf subject matter, there is almost no risk that bids will turn out to be unresponsive and little risk of bidders being unqualified. Hence the need for pre-auction checks is correspondingly low. In such cases, a simple declaration from suppliers or contractors before the auction may be sufficient (for example, that they possess the required qualifications and they understand the nature of, and can provide, the subject matter of the procurement). In other cases, assessing responsiveness before the auction may be necessary (for example, when only those suppliers or contractors capable of delivering cars with a pre-determined maximum level of emissions are to be

admitted to the auction), and initial bids will therefore be required. In some such cases, the procuring entity may wish to rank suppliers or contractors submitting responsive initial bids before the auction (in the given example, suppliers or contractors whose initial bids pass the established threshold will be ranked on the basis of the emissions levels), so as to indicate their relative position and the extent of improvement that their bids may need during the auction in order to increase a chance to win the auction. In such cases, the auction must be preceded by an evaluation of the initial bids.

2. The procurement regulations should establish any requirements that must be included in the solicitation documents in addition to those listed in the article. Where those requirements are found in other provisions of law of the enacting State, the procurement regulations should refer to them.

3. As was highlighted in section IV above, the procurement regulations must specify the media and means of publication of the invitation to the auction, including internationally that will ensure effective access by suppliers and contractors located overseas.

4. With reference to article 53 (4), the procurement regulations should list for ease of reference all grounds for the rejection of initial bids, such as those under article 9 setting reasons for disqualification, article 10 that sets out responsiveness criteria, article 20 on the rejection of abnormally low submissions, and article 21 on the exclusion of a supplier or contractor on the ground of inducements, an unfair competitive advantage or conflicts of interest [\[**hyperlinks**\]](#).

Article 54. Electronic reverse auction as a phase preceding the award of the procurement contract [\[hyperlink**\]](#)**

The procurement regulations should list all instances when the ERA announced as the method of selecting the successful supplier or contractor at the outset of the procurement proceedings may be cancelled, such as when the number of suppliers or contractors participating in proceedings is insufficient to ensure effective competition (article 55 (2)) or when there is a risk of collusion, for example if the anonymity of bidders has been compromised at an earlier stage of the procurement proceedings (article 19 [\[**hyperlink**\]](#) allows the procuring entity to cancel the procurement proceedings and the risk of collusion could be invoked as a reason for cancelling the ERA and the entire procurement proceedings).

Article 55. Registration for the electronic reverse auction and the timing of the holding of the auction [\[hyperlink**\]](#)**

1. The procurement regulations are to provide an exhaustive list of circumstances that would justify the ERA to proceed if the number of suppliers or contractors registered for the auction is insufficient to ensure effective competition. The provisions of the article are not prescriptive in this respect: they give discretion to the procuring entity to decide on whether the auction in such circumstances should be cancelled. Since the decision not to cancel may be inconsistent with the general thrust of competition and avoiding collusion, it should be justified only in the truly exceptional cases where the procurement must continue despite the lack of effective competition.

2. With respect to ERAs used as a phase in other procurement methods or technique, the procurement regulations may provide for an option for the procuring entity to stipulate in the solicitation documents that the award the procurement contract may take place on the basis of the initial bids. This option may be considered as an alternative to cancellation of the procurement where the number of remaining participants in the procurement proceedings is insufficient to ensure effective competition in the ERA or where collusion may occur.

Article 56. Requirements during the electronic reverse auction [\[hyperlink**\]](#)**

1. The procurement regulations must prohibit disclosure of identity of bidders during and after the auction, including where the auction is terminated or suspended. Both the explicit and indirect disclosure in whatever form must be prohibited, and the procurement regulations must illustrate ways of indirect disclosure intended to be covered by this prohibition.

2. The procurement regulations must require that any operators of the auction system on behalf of the procuring entity must be bound by the rules for conducting the auction, in particular as regards non-disclosure by any means of the identity of bidders before, during and after the auction.

Article 57. Requirements after the electronic reverse auction [\[hyperlink**\]](#)**

1. The procurement regulations must guide the procuring entity as regards the options available under the article if the winner turns out to be unqualified or its bid unresponsive or rejected as abnormally low: either to cancel the procurement proceedings or award the procurement contract to the next winning bidder. The procuring entity should be required to assess the consequences of cancelling the ERA, in particular whether holding a second auction in the same procurement proceedings would be possible and the costs of an alternative procurement method. In particular, the anonymity of the bidders may have been compromised and any re-opening of competition may also be jeopardized. This risk, however, should not encourage the procuring entity always to opt for the next winning bid. The cancellation of the auction may be required for example where collusion between the winning bidder and the next winning bidder is suspected since this may lead to the acceptance of the bid with the abnormally high price.

2. The procurement regulations must require prompt action after the auction, in strict compliance with the applicable provisions of the Model Law, so as to ensure that the final outcome should be determined as soon as reasonably practicable. The steps described in the article should not be treated as an opportunity to undermine the automatic identification of the winning bid. The procurement regulations must therefore require the procuring entity to put on the record details of the procedures envisaged in the article if they have taken place and the decisions taken and reasons therefor.

IX. Subjects to be addressed in procurement regulations in the context of framework agreement procedures (article 32 and Chapter VII of the Model Law (Framework agreement procedures) **[hyperlinks**]**)**

General

1. The procurement regulations must clarify the nature of the framework agreement in the enacting State. Under the Model Law, it is not a procurement contract as defined in the Model Law, but the framework agreement may be an enforceable contract in the enacting State. The procurement regulations or other provisions of law of the enacting States will therefore need to address such issues as the enforceability of the agreement in terms of contract law. The procurement regulations must in particular clarify whether the Government is to be bound to use the framework agreement, and the extent to which suppliers' or contractors' submissions at the first stage may be binding under the law of the enacting State. In the case of an open framework agreement, the procurement regulations must make it clear that suppliers or contractors that join the agreement after its initial conclusion will need to be bound by its terms upon joining.
2. The procurement regulations must explain the link between the circumstances of the procurement and various decisions to be taken in connection with the use of framework agreement procedures, in particular whether such use is appropriate, the type of framework agreement to be concluded, the scope of the framework agreement, the number of suppliers or contractors parties, the role of a centralized purchasing body, if any, and so forth.
3. As regards the type of framework agreement to be concluded, the procurement regulations must explain how to choose among the three types of framework agreements identified above, given the different ways in which competition operates in each type. How narrowly the procurement need can and should be defined at the first stage will dictate the extent of competition that is possible and appropriate at the second stage. If precise specification of the procurement needs is possible and if they will not vary during the life of the framework agreement, a framework agreement without second-stage competition, in which the winning supplier(s) or contractor(s) for all or some items is or are identified at the first stage, will maximize competition at the first stage and should produce the best offers. However, this approach is inflexible and requires precise planning: rigid standardization may be difficult or inappropriate, especially in the context of centralized purchasing where the needs of individual purchasing entities may vary, where refinement of the requirements may be appropriate so needs are expressed with lesser precision at the first stage, and in uncertain markets (such as future emergency procurement). If the procuring entity's needs may not vary, but the market is dynamic or volatile, second-stage competition will be appropriate unless the volatility is addressed in the framework agreement (such as through a price adjustment mechanism). The greater the extent of second-stage competition, the more administratively complex and lengthy the second-stage competition will be, and the less predictable the first-stage offers will be of the final result; this can make effective budgeting more difficult. Where there will be extensive second-stage

competition, there may also be little benefit of engaging in rigorous competition at the first stage; assessing qualifications and responsiveness may be sufficient.

4. A related issue that the procurement regulations must address is the selection between a single-supplier or multi-supplier framework agreement. The administrative efficiencies of framework agreements tend to indicate that multiple-supplier framework agreements are more commonly appropriate, but the nature of the market concerned may indicate that a single-supplier framework agreement is beneficial (for example, where confidentiality or security of supply is an important consideration, or where there is only one supplier or contractor in the market). In addition, a single-supplier closed framework agreement has the potential to maximize aggregated purchase discounts given the likely extent of potential business for a supplier or contractor, particularly where the procuring entity's needs constitute a significant proportion of the entire market, and provided that there is sufficient certainty as to future purchase quantities (through binding commitments from the procuring entity, for example). This type of agreement can also enhance security of supply to the extent that the supplier or contractor concerned is likely to be able to fulfil the total need. Multi-supplier framework agreements, which are more common, are appropriate where it is not known at outset who will be the best supplier or contractor at the second stage, especially where the needs are expected to vary or to be refined at the second stage during the life of the framework agreement, and for volatile and dynamic markets. They also allow for centralized purchasing, and can also enhance security of supply where there are doubts about the capacity of a single supplier to meet all needs.

5. The procurement regulations should emphasize that good procurement planning is vital to set up an effective framework agreement: framework agreements are not alternatives to procurement planning. Effective planning is required for both stages of a framework agreement procedure. Without it, no correct type of the framework agreement can be selected, not effective framework agreement may be concluded and its effective operation ensured. The procurement regulations should emphasize that the agreement itself should be complete in recording all terms and conditions, the description of the subject matter of the procurement (including specifications), and the evaluation criteria, both to enhance participation and transparency, and because of the restrictions on changing the terms and conditions during the operation of the framework agreement.

6. The procurement regulations may call for measures to ensure that appropriate capacity-building is in place in order to allow for optimal decision-making, taking into account that the capacity required to operate framework agreements effectively can be higher than for some procurement methods and techniques envisaged in the Model Law, and training and other capacity-building measures will be key to ensuring successful and appropriate use.

7. The procurement regulations should also address such issues as monitoring the operation of framework agreements to assess their effectiveness in the context of each procurement as well as the procurement market as a whole (whether the anticipated benefits in terms of administrative efficiency and value for money in fact materialize), the effect of the framework agreement on competition in the market concerned, particularly where there is a risk of a monopolistic or oligopolistic market, and compliance with safeguards built in the Model Law to ensure transparency, competition and objectivity in their operation. The

performance of individual procuring entities using the framework agreement and the performance of the framework agreement in terms of prices as compared with market prices for single procurements are also to be monitored. Increased prices or reductions in the quality of offers may arise from inappropriate or poor use of the framework agreement by one or two procuring entities.

8. Where the enacting State requires or encourages (or intends to encourage) that all framework agreements be operated electronically, the procurement regulations may require that all of them be maintained in a central location, which further increases transparency and efficiency in their operation and facilitates monitoring.

Article 32. Conditions for use of a framework agreement procedure

[hyperlink**]**

1. The procurement regulations should assist the procuring entity in the assessment of the circumstances that would make the use of a framework agreement procedure desirable and appropriate. They should set out measures that will enhance objectivity in taking decisions on the use of a framework agreement procedure and its type, and so facilitate the monitoring of whether decisions are reasonable in the circumstances of a given framework agreement.

2. The first circumstance that would make the use of a framework agreement procedure appropriate arises where the procuring entity's need is "expected" to arise on an "indefinite or repeated basis". The procurement regulations should explain that these latter conditions need not be cumulative, though in practice they will commonly overlap. The second circumstance arises where the need for the subject matter of the procurement "may arise on an urgent basis". The reference to an indefinite need, meaning that the time, quantity or even the need for the subject matter itself is or are not certain, can allow the framework agreement to be used to ensure security of supply, and in anticipation of repeat procurements. The regulations should also address the term "expectation", and how to assess in an objective manner the extent of likelihood of the anticipated need. The administrative costs of the two-stage procedure will be amortized over a greater number of purchases; i.e. the more the framework agreement is used in the case of repeat procedures. For indefinite purchases, those costs must be set against the likelihood of the need arising and the security that the framework agreement offers (for example, setting prices and other conditions in advance).

3. The procurement regulations may illustrate examples of products for which the use of framework agreement procedures could be considered: commodity-type purchases, such as stationery, spare parts, information technology supplies and maintenance, where the market may be highly competitive and where there will normally be regular or repeat purchases for which quantities may vary. They are also suitable for the purchase of items from more than one source, such as electricity, and for that of items for which the need is expected to arise in the future on an urgent or emergency basis, such as medicines (where a significant objective is to avoid the excessively high prices and poor quality that may result from the use of single-source procurement in urgent and emergency situations). These types of procurement may require security of supply, as may also be the case for specialized items requiring a dedicated production line, for which framework agreements are also suitable tools.

4. The procurement regulations may illustrate examples of procurement for which the use of framework agreement procedures should not be considered: complex procurement for which the terms and conditions (including specifications) vary for each purchase or may be expected to change before the procurement contract is awarded, such as procurement involving large investment or capital contracts, highly technical or specialized items, and more complex services, would not generally be appropriate for procurement through a framework agreement procedure.

Award of and requirements for a closed framework agreement (articles 58 and 59 [hyperlinks**])**

Award of the framework agreement

1. The procurement regulations are to provide guidance to the procuring entity in selection of a method of procurement for the award of a closed framework agreement taking into account the provisions of article 28 of the Model Law [**hyperlink**]. The importance of rigorous competition at the first stage of closed framework agreements means that the procurement regulations must refer to open tendering as default method for the award of a closed framework agreement. They should provide clear guidance as regards the application of exceptions to open tendering and provide for a mechanism to carefully scrutinize the application of those exceptions, particularly in the light of the competition risks in framework agreements procedures and types of purchases for which framework agreements are appropriate. The procurement regulations should provide examples of when procurement methods alternative to open tendering may be appropriate: for example, in the use of framework agreements for the swift and cost-effective procurement of low-cost, repeated and urgent items, such as maintenance or cleaning services (for which open tendering procurements may not be cost-effective), and specialized items such as drugs, energy supplies and textbooks, for which the procedure can protect sources of supply in limited markets. The use of competitive negotiations or single-source procurement may be appropriate for the award of a closed framework agreement in situations of urgency. There are examples in practice of effective procurement of complex subject matter using framework agreements combined with dialogue-based request-for-proposals methods, such as for the procurement of satellite equipment and specialized communications devices for law enforcement agencies.

2. The procurement regulations may need to explain the possible derogations from the procedures for the procurement method chosen for the award of a framework agreement to reflect specifics of a framework agreement procedure. The extent of the derogations will vary from case to case depending on the type of a closed framework agreement to be concluded (e.g. a closed framework agreement with and without second-stage competition and with one or more supplier or contractor parties). The procurement regulations may therefore provide for an illustrative rather than exhaustive list of expected derogations.

3. In the context of a multi-supplier closed framework agreement, the procurement regulations must guide the procuring entity on whether setting either a minimum or a maximum number of suppliers or contractors parties to a framework agreement or both would be appropriate and, if so, what to consider in doing so. For example, a minimum number may be required to ensure security of supply; where

second-stage competition is envisaged, there need to be sufficient suppliers or contractors to ensure effective competition, and the terms of solicitation may require a minimum number, or a sufficient number to ensure such effective competition. A maximum number may be appropriate, for example, where the procuring entity envisages that there will be more qualified suppliers or contractors presenting responsive submissions than can be accommodated. This situation may reflect the administrative capacity of the procuring entity, notably in that more participants may defeat the administrative efficiency of the procedure. An alternative reason for limiting the number of participants is to ensure that each has a realistic chance of being awarded a contract under the framework agreement, and to encourage it to price its offer and to offer the best possible quality accordingly. The procurement regulations must address situations where the stated minimum may not be achieved by requiring the procuring entity to specify in the solicitation documents the steps that it will then take, which might involve the cancellation of the procurement or the conclusion of the framework agreement with a lower number of suppliers or contractors.

4. The award of the closed framework agreement may be made subject to external approval; where framework agreements are being used across government ministries and agencies, ex ante approval mechanisms of this type may be considered appropriate. If so, the procurement regulations must require such approval and provide a mechanism for it. Alternatively, the enacting State may include the requirement for an ex ante approval in the procurement law itself and call for the procurement regulations to elaborate on the mechanism of its operation.

5. The procurement regulations must guide the procuring entity as regards the need in some cases to conclude separate agreements with individual suppliers or contractors that are parties to the framework agreement. The procurement regulations must set out the default rule that each supplier or contractor should be subject to the same terms and conditions of the framework agreement. Exceptions to this rule may allow only minor variations that concern only those provisions that justify the conclusion of separate agreements. The procurement regulations should illustrate possible justifications for concluding separate agreements. An example may be the need to execute separate agreements to protect intangible or intellectual property rights or where different licensing terms need to be accommodated or where suppliers or contractors have presented submissions for only part of the procurement. The procurement regulations must require putting on the record reasons for concluding separate agreements and variations made in each of the agreements concluded separately.

Duration of the agreement

6. The procurement regulations are to set out the maximum duration of a closed framework agreement. Practical experience in those jurisdictions that operate closed framework agreements indicates that the potential benefits of the technique are generally likely to arise where they are sufficiently long-lasting to enable a series of procurements to be made, such as a period of 3-5 years. Thereafter, greater anti-competitive potential may arise, and the terms and conditions of the closed framework agreement may no longer reflect current market conditions.

7. The procurement regulations must explain that different duration of framework agreement within the established maximum might be appropriate depending on the

circumstances of the procurement, in particular items covered, the market involved and needs of the procuring entity. As some procurement markets may change more rapidly, especially where technological developments are likely, for example in IT and telecommunications procurement, or the procuring entity's needs may not remain the same for a sustained period, the appropriate period for each procurement may be significantly shorter than the maximum established in the procurement regulations. For some highly changeable items, the appropriate period may be measured in months. For more stable items, markets and needs, a framework agreement may be long-lasting to enable a series of procurements to be made to derive most benefits of the technique.

8. The procurement regulations should therefore guide the procuring entity in selecting the maximum duration of a particular framework agreement within the maximum established in the procurement regulations or alternatively they may themselves establish different maximums for different types of procurement. The guidance provided in the procurement regulations should also address any external limitations on the duration of framework agreements (such as State budgeting requirements).

9. They should also explain that the maximum duration set out by the procuring entity for a particular framework agreement within the maximum established in the procurement regulations includes all possible extensions to the initially established duration for the framework agreement concerned. Any suspension of the operation of a framework agreement resulting from challenge proceedings would extend the framework agreement for the period of suspension, but the overall duration of the framework agreement remains unchanged.

10. If enacting States wish to provide for extensions of the duration of the framework agreement in exceptional circumstances, the procurement regulations must allow for that, specify such limited circumstances and ensure that any extensions are of short duration and limited scope. For example, new procurements may not be justified in cases of a natural disaster or restricted sources of supply, when the public may be able to benefit from the terms and conditions of the existing framework agreement.

11. The procurement regulations must establish internal controls in order to avoid abuse in extensions and exceptions to the initially established duration, in particular as regards the award of a lengthy or sizeable procurement contract towards the end of the validity of the framework agreement.

Estimates

12. The procurement regulations should guide the procuring entity when the contract price should or should not be established at the first stage. For example, where the subject matter is subject to price or currency fluctuations, or the combination of service-providers may vary, it may be counter-productive to try to set a contract price at the outset. A common criticism of closed framework agreements is that there is a tendency towards contract prices at hourly rates that are generally relatively expensive. The procurement regulations should encourage instead task-based or project-based pricing, where appropriate.

13. The terms of the framework agreement may limit commercial flexibility if guaranteed minimum quantities are set out as one of its terms, or if the framework

agreement operates as an exclusive purchasing agreement, though this flexibility should be set against the better pricing from suppliers or contractors. The procurement regulations should call therefore for: (a) using estimated (non-binding) quantities in the solicitation documents so that the framework agreement can facilitate realistic offers based on a clear understanding of the extent of the procuring entity's needs, and so that the procuring entity will be able to purchase outside the framework agreement if market conditions change; and (b) using binding quantities, which could be expressed as minima or maxima. There may be markets in which one solution appears to be better than the other; the monitoring mechanism can inform appropriate guidance, or can use examples from practice where the choice needs to be made by the procuring entity.

14. The procurement regulations must explain that maximum or minimum aggregate values for the framework agreement may be known; if so, they should be disclosed in the agreement itself, failing which an estimate should be set out. An alternative approach is, where there are multiple procuring entities that will use the framework agreement, to allow each procuring entity to set different maxima depending on the nature and potential obsolescence of the items to be procured; in such cases, the relevant values for each procuring entity should be included. The maximum values or annual values may be limited by budgetary procedures in individual States; if so, the procurement regulations should set out other sources of regulation in detail.

15. The procurement regulations must require setting out in the framework agreement all estimates to the extent they are known, recording the limitations on estimates, or a statement that accurate estimates are not possible (for example, where emergency procurement is concerned); providing the best available estimates, where firm commitments are not possible, will encourage participation.

Permissible variations to the framework agreement during its operation

16. In the context of articles 59 (1)(d)(iii) and 63 [\[**hyperlinks**\]](#), the procurement regulations must prohibit setting out in the framework agreement the range of permissible variation to evaluation criteria and their relative weight so wide as to make the safeguards contained in article 63 of the Model Law meaningless in practice. Those safeguards establish limits to the permissible range of changes to terms and conditions of the procurement during the operation of a framework agreement so that to ensure that no change to the description of the subject matter of the procurement occur and other changes are made in a transparent and predictable manner.

17. The procurement regulations should establish mechanisms for oversight of the application of those safeguards. Flexibility in varying evaluation criteria and their relative weight within the parameters and range set out in the framework agreement should not become a substitute for adequate procurement planning, distort purchasing decisions in favour of administrative ease, encourage the use of broad terms of reference that are not based on a careful identification of needs, and facilitate the abusive direction of procurement contracts to favoured suppliers or contractors. These latter points may be of increased significance where procurement is outsourced to a fee-earning centralized purchasing agency, which may use framework agreements to generate income. Oversight processes may assist in avoiding the use of relatively flexible evaluation criteria in framework agreements

to hide the use of inappropriate criteria based on agreements or connections between procuring entities and suppliers or contractors, and to detect abuse in pre-determining the second-stage results that would negate first-stage competition, the risks of which are elevated with recurrent purchases. Transparency in the application of the flexibility, and the use of a pre-determined and pre-disclosed range both facilitates such oversight.

Operation and monitoring of the closed framework agreement

18. The procurement regulations should explain that the basis for the award of procurement contracts under the framework agreement (the lowest-priced or most advantageous submission) will normally, but need not necessarily, be the same as that for the first stage; for example, the procuring entity may decide that among the highest-ranked suppliers or contractors at the first stage (chosen using the most advantageous submission), the lowest-priced responsive submission to the precise terms of the second-stage invitation to participate will be appropriate. Where variations and different options are envisaged, the procurement regulations must call for setting them all out in the framework agreement.

19. Where the procuring entity is not required to operate a closed framework agreement online, the procurement regulations should emphasize the advantages of an online procedure in terms of increased efficiency and transparency (for example, the terms and conditions can be publicized using a hyperlink; a paper-based invitation to the second-stage competition could be unwieldy and user-unfriendly). The procurement regulations should require the procuring entity to set out in the framework agreement all information specific to the online operation of the framework agreement, such as the requirements for connection to a website, particular software, technical features and, if relevant, capacity.

20. The procurement regulations should explain how to derive the major benefit and avoid the pitfalls of framework agreements. They should in particular address practical realities with the use of framework agreements reported in many jurisdictions that prices tend to remain fixed rather than varying with the market and procuring entities tend to procure through an existing framework agreement even though its terms and conditions do not quite meet their needs or reflect the current market conditions, to avoid having to commence new procurement proceedings. As a result, procuring entities may fail to assess price and quality sufficiently when placing a particular purchase order. They may overemphasize specifications over price.

21. To address these pitfalls, the procurement regulations should require procuring entities to assess on a periodic basis during the currency of a closed framework agreement whether a framework agreement continues to offer value for money and continues to allow access to the best that the market can offer at that time (e.g. whether its prices, and terms and conditions remain current and competitive). They should also consider the totality of the purchases under the framework agreement to assess whether their benefits exceed their costs. Ways of assessing whether the technical solution or product proposed remains the best that the market offers may include market research, publicizing the scope of the framework agreement and so forth. Where the framework agreement no longer offers good commercial terms to the procuring entity, the procurement regulations should require holding a new procurement procedure (classical or a new framework

agreement procedure). The procurement regulations should specifically discourage the award of a lengthy or sizeable procurement contract towards the end of the validity of the framework agreement, which increases risks of purchasing outdated or excessively priced items.

22. In multi-supplier framework agreements, each supplier or contractor party will wish to know the extent of its commitment both at the outset and periodically during operation of the framework agreement (such as after a purchase is made under the framework agreement). The procurement regulations should therefore require the procuring entities to inform periodically or upon request the suppliers or contractors about the extent of their commitments.

**Establishment of and requirements for an open framework agreement
(articles 60 and 61 [\[**hyperlinks**\]](#))**

1. The procurement regulations may recommend that the invitation to become a party to the open framework agreement should be made permanently available on the website at which the framework agreement will be maintained. They could also require that all information related to the operation of the open framework agreement must continuously be made available on the website. The procurement regulations may list information that should at a minimum appear there, such as:

(a) The names and addresses of all procuring entities that can use the framework agreement (where the framework agreement allows for several potential purchasers at the second stage);

(b) The agency responsible for establishing and maintaining the framework agreement where more than one purchaser are involved;

(c) Prerogatives of the central purchasing agency if any (e.g. whether it is authorized to undertake the procurements concerned in its own name (as a principal), without therefore needing to publish details of its own client entities; if the agency operates as an agent, however, these details must then be published);

(d) A maximum number of suppliers or contractors parties to the framework agreement, if any, and the procedure and criteria for the selection of that maximum. The procurement regulations must emphasize that establishing the maximum may be justified because of capacity limitations in its communications system, not on any other ground. They must specify techniques that can be used by the procuring entity to achieve the selection of the maximum number in a non-discriminatory manner, such as “first-come, first-served”, the drawing of lots, rotation or other random choice in a commodity-type market, and alert suppliers or contractors about the possibility of a challenge;

(e) The duration of the framework agreement. The procurement regulations may require in this context that the duration of an open framework agreement should not be excessive, and should be assessed by reference to the type of subject matter being procured, in order to allow for new technologies and solutions, and to avoid obsolescence. In addition, suppliers or contractors may be reluctant to participate in an agreement of unlimited duration;

(f) Requirements that must be fulfilled by suppliers or contractors in order to join the agreement;

- (g) All other main terms and conditions of the framework agreement;
- (h) The list of suppliers or contractors parties to the framework agreement (the procurement regulations may explain that posting the list in such a way could be effective implementation of the requirement on the public notice of the award of the framework agreement, contained in article 23 (1) of the Model Law);
- (i) The names of suppliers or contractors to whom procurement contracts were awarded under the framework agreement and prices of the awarded contracts (the procurement regulations may explain that posting this information could be effective implementation of the requirement on the public notice of the award of procurement contracts awarded under the framework agreement, contained in article 23 of the Model Law [\[**hyperlink**\]](#));
- (j) Announcements and all terms and conditions of second-stage competitions;
- (k) A copy of an invitation to the second-stage competition.

2. In the context of paragraph (5) of article 60, the procurement regulations must emphasize the importance of swift examination of applications to join the open framework agreement. The interaction between final submission deadlines, the time needed to assess indicative submissions and the frequency and size of second-stage competitions should be carefully assessed when operating the open framework agreement. The procurement regulations may emphasize the utility of relatively frequent and reasonable-sized second-stage competitions to take advantage of a competitive and dynamic market.

Article 62. Second stage of a framework agreement procedure [\[hyperlink**\]](#)**

1. The procurement regulations must explain how the option to issue an invitation to the second-stage competition to only those parties of the framework agreement then capable of meeting the needs of the procuring entity in the subject matter of the procurement will operate in practice without jeopardizing the principles of transparency and fair and equal treatment of suppliers and contractors. They need to emphasize that the purpose of the provision is to enhance efficiency, not to limit competition. The procurement regulations must set out the default rule that all suppliers or contractors parties to the agreement must be presumed to be capable of meeting the needs of the procuring entity in the subject matter of the procurement unless the framework agreement or initial or indicative submissions of some suppliers or contractors provide to the contrary. The procurement regulations should therefore require the procuring entity to interpret the term “then capable of meeting the needs” in a very narrow sense, in the light of the terms and conditions of the framework agreement and of the initial or indicative submissions. They may provide examples when issuing an invitation to a limited group of suppliers or contractors then capable of meeting the needs of the procuring entity in the subject matter of the procurement will be justified. For example, the framework agreement may permit suppliers or contractors to supply up to certain quantities (at each second-stage competition or generally) or initial or indicative submissions may state that certain suppliers or contractors cannot fulfil particular combinations or certain quality requirements.

2. The important safeguard against the abuse or misuse of this option, for example using it for the award of contracts to favoured suppliers or contractors, is the requirement on the procuring entity to give a notice of the second-stage competition to all parties to the framework agreement at the same time when the invitation to the second-stage competition is issued. Giving such notice in this manner will allow any excluded supplier or contractor to challenge the procuring entity's decision not to invite that supplier or contractor to the second-stage competition. The procurement regulations may provide for the minimum period of the notice before the second-stage competition may commence.
3. The procurement regulations must emphasize the negative impact of possible challenges on the efficiency that the framework agreement procedures try to achieve: exceptions to the default rule to invite all suppliers or contractors to the second-stage competition must be carefully considered and used when truly justified for the procuring entity to avoid being confronted by many aggrieved suppliers or contractors that challenge the procuring entity's assessment of their capability to meet the procuring entity's needs at a particular time. The procurement regulations must require the procuring entity to include in the record of the procurement an explanation of the exclusion of any suppliers or contractors parties to the agreement from the second-stage competition.
4. The procurement regulations should regulate the manner of issuing an invitation and notice of second-stage competition: e.g. that they must be in writing, issued simultaneously and automatically by the system to each supplier or contractor concerned. Although there is no requirement to issue a general notice of the second-stage competition, placing a notice on the publicly accessible page of the website where the framework agreement is maintained would bring such result and the procurement regulations may require the procuring entities to do so.
5. Paragraph (4) (b) regulates the content of the invitation to the second-stage competition. The procurement regulations must specify any other requirements relating to the preparation and presentation of submissions and to other aspects of the second-stage competition not listed in paragraph (4) (b) of the article that the procuring entity must specify in the invitation to present submissions at the second-stage competition. Where such requirements are found in other provisions of law of the enacting State, the procurement regulations should refer to them. The procurement regulations must also clarify whether suppliers or contractors may vary their first-stage (initial) submissions at the second stage with a result less favourable to the procuring entity (e.g. by increasing prices if market conditions change).
6. As noted in the context of the closed framework agreements above, the procurement regulations are to explain the operation of the permissible range of refinements to the terms and conditions of the procurement, including the relative weights of the evaluation criteria and subcriteria, through second-stage competition. The flexibility to engage in such refinement is limited by application of article 63 [\[**hyperlink**\]](#) which provides that there may be no change to the description of the subject matter of the procurement, and that other changes may be made only to the extent permitted in the framework agreement. Where modifications to the products, or technical substitutions, may be necessary, they should be foreshadowed in the framework agreement itself, which should also express needs on a sufficiently flexible and functional basis (within the parameters of article 10 [\[**hyperlink**\]](#)) to allow for such modifications. Other terms and conditions that may be refined

include combinations of components (within the overall description), warranties, delivery times and so forth. The balance of allowing sufficient flexibility to permit the maximization of value for money and the need for sufficient transparency and limitations to avoid abuse should form the basis of guidance to procuring entities in this aspect of the use of framework agreements.

7. With reference to paragraph (4) (b) (iv), the procurement regulations must emphasize the importance of setting out a suitable deadline for presenting submissions, in order to preserve the efficiency without jeopardizing legitimate interests of suppliers or contractors parties to the framework agreement: in the context of open framework agreements, for example, the deadline may be expressed in hours or a day or so. Otherwise, the administrative efficiency of the procedure will be compromised, and procuring entities will not avail themselves of the technique. The period of time between the issue of the invitation to present second-stage submissions and the deadline for presenting them should be determined by reference to what sufficient time to prepare second-stage submissions will be in the circumstances (the simpler the subject matter being procured, the shorter the possible duration). Other considerations include how to provide a minimum period that will allow a challenge to the terms of solicitation. The procurement regulations may explain that the time requirement will be in any event qualified by the reasonable needs of the procuring entity, as explicitly stipulated in article 14 (2) of the Model Law, which may in limited circumstances prevail over the other considerations, for example, in cases of extreme urgency following catastrophic events.

8. The procurement regulations must explain the operation of a standstill period in the context of various types of framework agreements, noting that shorter duration of a standstill period will be justified in the context of open framework agreement in the light of simple standardized items intended to be procured through such systems. The procurement regulations should explain reasons for not requiring a standstill period in the context of award of procurement contract under closed framework agreements without second-stage competition.

Article 63. Changes during the operation of a framework agreement [**hyperlink**]

As noted in the context of closed framework agreements and article 62 above, the procurement regulations are to explain limits on changes to the terms and conditions of the procurement during the operation of a framework agreement. The procurement regulations would also need to explain when framing the description of the subject matter of the procurement in a functional or output-based way, with minimum technical requirements where appropriate, would be appropriate so as to allow for subject-matter modifications or technical substitutions. Whether this approach is appropriate will depend on the nature of the procurement itself. There is a risk of abuse in both allowing broad and generic specifications, and in permitting changes; the framework agreement may be used for administrative convenience beyond its intended scope, allowing non-transparent and non-competitive awards of procurement contracts. Furthermore, this lack of transparency and competition will also have the potential significantly to compromise value for money in those awards. The procurement regulations should therefore address in some detail these risks and appropriate measures to mitigate them.

X. Subjects to be addressed in procurement regulations in the context of Chapter VIII of the Model Law (Challenge proceedings) [\[hyperlink**\]](#), in the order of the articles**

General

1. The provisions of the Chapter are intended to be supplemented by regulations and detailed rules of procedure to ensure that the challenge mechanisms operate effectively, expeditiously and in a cost-effective manner. Depending on legal traditions of the enacting State, such supplementing provisions will be included in the procurement regulations or regulations in other branches of law.
2. In addition, other branches of law and other bodies in the enacting State may have an impact on the challenge mechanism envisaged under Chapter VIII if for example a challenge is triggered by allegations of fraud or corruption, or breaches of competition law. In such cases, the procurement or other applicable regulations should require that the information about such allegations be made publicly available, to ensure that relevant authorities are alerted and so that appropriate action is taken.
3. The procurement or other applicable regulations should elaborate on all issues having implications on achieving the appropriate balance between the interests of suppliers or contractors and the needs of the procuring entity, such as the group of persons entitled to challenge the acts or decisions of the procuring entity (as discussed in the context of article 64 below) and on considerations relating to when suspension may or may not be appropriate and when the prohibition of article 65 should be lifted, such as in case of natural disasters, emergencies, and situations where disproportionate harm might otherwise be caused to the procuring entity or other interested parties. In this context, the procurement regulations must explain in detail the interaction of all relevant time limits in connection with challenge proceedings (such as duration of a standstill period, submission deadlines, the period in the end of which the prohibition covered by article 65 would lapse, the duration of suspension and deadlines for taking decisions on applications and for serving notices).
4. The procurement or other applicable regulations may discourage commencing parallel proceedings and establish a clear sequencing of applications to administrative and judicial review bodies existing in the enacting State. They may contain provisions addressing the sequence of applications, if desired. Sequencing may be different depending on legal traditions of enacting States. Some States are more flexible by not requiring the supplier or contractor to exhaust the challenge mechanism at the procuring entity before filing an application before the independent body or the court. Equally they may allow the aggrieved supplier or contractor not satisfied with the decision taken by the procuring entity in the challenge proceedings to appeal that decision in the independent body or the court. Where the application was filed directly to the independent body, the appeal of the decision of the independent body may be filed to any appeal authority within that body, if such option exists, or to the court. Some States may however require exhausting some or all measures before filing application to the court. The procurement or other applicable regulations may require the aggrieved supplier or

contractor to file an application for reconsideration first before the procuring entity and appeal any decision it wishes to appeal from that challenge proceedings within the independent body structure before applying to the court. Alternatively, they may allow to bypass the procuring entity but require to exhaust all remedies within the independent body structure before applying to the court. In this respect, the procurement regulations must be compliant with the international obligations of the enacting State, including under the United Nations Convention against Corruption (New York, 31 October 2003)³² and the WTO GPA, which may require them to ensure effective appeal to an independent body and that decisions of any review body that is not a court be open to judicial review.

Article 64. Right to challenge and appeal [\[hyperlink**\]](#)**

1. The procurement or other applicable regulations must provide or call for issuance of detailed guidance on operation of the provisions of article 64 consistent with the legal and administrative structure of the enacting State. In particular, they must specify the group of persons having the right to challenge decisions and actions taken by the procuring entity in the procurement proceedings. Unlike other systems, the Model Law gives this right only to suppliers and contractors (the term includes potential suppliers or contractors covered by the definition of article 2 [\[**hyperlink**\]](#), such as those excluded through pre-qualification or pre-selection), and not to members of the general public or subcontractors. This is because the right is based on a supplier's or contractor's claim that it has sustained loss or injury from non-compliance by the procuring entity with the procurement law. These limitations are designed to ensure that challenges relate to the decisions or actions of the procuring entity in a particular procurement procedure, and to avoid an excessive degree of disruption to the procurement process through challenges that are based on policy or speculative issues, or based on nominal breaches, and also reflecting that the challenge mechanism is not the only oversight mechanism available.
2. The procurement or other applicable regulations must in addition address the ability of a supplier or contractor to present a challenge and of various State bodies to pursue challenge applications, with reference to other provisions of law of the enacting State, such as those setting out the requirements under domestic law that a supplier or contractor must satisfy in order to be able to proceed with a challenge or obtain a remedy.
3. A challenge filed with the court — often termed a judicial review — is outside the scope of regulation by the procurement legal framework but has implications on it. It would be appropriate therefore for the procurement or other applicable regulations to refer to other provisions of law of the enacting State that set out the relevant authority and court procedures, so that both the procuring entities and suppliers and contractor has the complete picture as regards available remedies. In particular, this applies to the appeal mechanism, which under the Model Law is envisaged only through court proceedings and following the court procedures concerned. The procurement or other applicable regulations should provide for the

³² United Nations, *Treaty Series*, vol. 2349. The Convention was adopted by the United Nations General Assembly by its resolution 58/4. In accordance with article 68 (1) of the Convention, the Convention entered into force on 14 December 2005. The text of the Convention is also available at www.unodc.org/documents/treaties/UNCAC/Publications/Convention/08-50026_E.pdf (accessed January 2011).

guidance to users of the procurement system on whether the appeal exists in courts or elsewhere in the enacting States and how it operates.

Article 65. Effect of a challenge [\[hyperlink**\]](#)**

1. The procurement or other applicable regulations should explain to procuring entities the operation of the prohibition covered by the article, in particular differences between the prohibition covered by article 65 and suspension that may be applied by the procuring entity or ordered by an independent body, court or other competent authority. Although article 65 prohibits the entry into force of the procurement contract until the challenge or appeal has been disposed of, a suspension of the procurement proceedings may also be necessary. Suspension of the procurement proceedings is a broader notion than the prohibition under article 65: it stops all actions in those proceedings.

2. The procurement or other applicable regulations should explain what is intended to be covered by the term “any step to bring a procurement contract (or framework agreement) into force” and that the prohibition is not absolute (urgent public interest considerations may be invoked as the ground for lifting it). “Any step to bring a procurement contract (or framework agreement) into force” would encompass for example the dispatch of the notice of acceptance to successful supplier or contractor, or where this is envisaged, any steps towards signing a written procurement contract or receiving approval of another body for entry into force of the procurement contract (or framework agreement).

3. The procurement or other applicable regulations must explain the term the “participants in the challenge proceedings” as compared to “participants in the procurement proceedings”. The former term covers first the procuring entity and the supplier(s) or contractor(s) presenting the challenge (and, where relevant, any governmental authority whose interests are or could be affected by the application, such as an approving authority). They are generally a narrower group than the participants in the procurement proceedings, but under the right conferred by article 68 [\[**hyperlink**\]](#) more suppliers or contractors may seek to join the challenge proceedings, or to launch their own challenge, where they assert loss or damage arising from the same circumstances. In this context, the “participants in challenge proceedings” can include a varying pool of participants, depending on the timing of the challenge proceedings and subject of the challenge. Any supplier or contractor participating in the procurement proceedings to which the application relates can join the challenge proceedings. The “participants in challenge proceedings” can include other governmental authorities. In this regard, the term “governmental authority” means any entity that may fall within the definition of the procuring entity under article 2 [\[**hyperlink**\]](#), including entities that are entitled to operate and/or use a framework agreement, subject to the requirement in article 68 (1) for those entities to have an interest in the challenge proceedings at the relevant time. In this regard, it should be noted that a party to a framework agreement whose interests would or could be affected by the challenge proceedings is most probably the lead purchasing entity rather than other entities that became parties to the framework agreement at the outset of the procurement proceedings. The term would also include any approving authority in the context of the procurement concerned (see for example articles 22 (7) and 30 (2) and (5) (e) [\[**hyperlinks**\]](#) where the role of the approving authority is envisaged).

4. The procurement or other applicable regulations must clarify whether an independent body may take a decision on lifting the prohibition without a request from a procuring entity. This option may be appropriate in systems that operate on an inquisitorial, rather than an adversarial, basis, but in other States, it may be less so.

Article 66. Application for reconsideration before the procuring entity
[**hyperlink**]

1. The procurement or other applicable regulations may contain measures aimed at promoting the early resolution of disputes by encouraging the use of the optional challenge mechanism envisaged by this article. The procurement or other applicable regulations may also call for the wide dissemination and explanation to the public of the benefits of the reconsideration mechanism before the procuring entity and its manner of operation, so that effective use can be made of it. In addition, they should establish monitoring and oversight mechanisms to oversee the response to applications submitted, so as to ensure that they are treated seriously and the potential benefits are obtained.

2. The procurement or other applicable regulations are to elaborate on differences between the debriefing discussed in the context of article 22 above and a formal request for reconsideration before the procuring entity. In order to avoid confusion, they should highlight the key differences in terms of the objectives, procedures and possible outcomes of both procedures.

3. The procurement or other applicable regulations are to emphasize that filing the application for reconsideration to the procuring entity is not available where the procurement contract has entered into force; after the contract formation period, the challenge will fall instead within the purview of independent or judicial review bodies — that is, the independent body or the court. They should also explain that, where proceedings before an independent body or court are commenced, the competence of the procuring entity to entertain the application ceases. The procuring entity may nevertheless be able to continue with corrective action in the procurement proceedings concerned, provided that such action does not contravene any order of the independent body or court or other provisions of domestic law. Where such an application to an independent body or court is limited in scope, the precise implications of that application for the pre-existing application before the procuring entity will be a matter of domestic law and the procurement regulations must contain appropriate cross-references in this regard.

4. In connection with the deadlines for submitting applications for reconsideration, the procurement or other applicable regulations should explain:

(a) The meaning of the “terms of solicitation, pre-qualification or pre-selection” as encompassing all issues arising from the procurement proceedings before the deadline for presenting applications to pre-qualify or applications for pre-selection or submissions, such as the selection of a method of procurement or a method of solicitation where the choice between open and direct solicitation exists, and the limitation of participation in the procurement proceedings in accordance with article 8 [**hyperlink**]. It thus excludes issues arising from pre-qualification or pre-selection, which are covered by the second part of paragraph (2) (a) of the

article, or from examination and evaluation of submissions, which are covered by paragraph (2) (b) of the article;

(b) The term “prior to” the submission deadline in the context of paragraph (2) (a) and may establish the absolute maximum when the applications may be filed to prevent highly disruptive (and perhaps vexatious) challenges being filed immediately before the submission deadline. The aim should be to encourage filing any challenges to the terms of solicitation, pre-qualification or pre-selection and to the decisions taken by the procuring entity in the pre-qualification or pre-selection proceedings as early as is practicable;

(c) Which applications would be considered as filed out of time and must be dismissed by the procuring entity. For example, where a standstill period has been applied and approval of another authority is required for the entry into force of the procurement contract (or framework agreement), a challenge initiated after the expiry of the standstill period but before approval is granted is out of time; and

(d) That the alternative deadline provided for in paragraph (2) (b) is intended for all situations when the standstill period was not applied (e.g. because the legitimate exception was invoked or for illegal grounds).

5. The procurement or other applicable regulations may provide or call for issuance of procedural rules that would be applicable to the applications for reconsideration proceedings. Those rules may, inter alia, address the following issues:

(a) Supporting evidence to be presented by the applicant to demonstrate why a reconsideration or corrective action is the appropriate course. How that may be done will vary from case to case and preserving flexibility in this regard is necessary. The default rule should however be that the application for reconsideration should be accompanied by all available evidence; filing any supporting evidence later may defeat the aim of requiring prompt action on the application by the procuring entity;

(b) Time limits for serving prompt notices to all concerned and manner and means of doing so. The aim is to ensure that all interested persons, including participants in the procurement proceedings (whose contact details may or may not be known to the procuring entity), are timely informed that the application has been filed. In the electronic environment, for example, the most effective manner, means and place for serving notices is the website where the initial notice of the procurement was published, and the procurement regulations should encourage or require the procuring entity to do so;

(c) Sequence of issues to be considered and decisions to be taken by the procuring entity (whether the application has been filed within the prescribed time limits; whether or not the applicant has standing to file its application, whether the application is based on an obviously erroneous understanding of the facts or applicable law and regulations; or whether the application is frivolous or vexatious, whether the nature of the challenge and its timing, as well as the facts and circumstances of the procurement at issue justify suspending the proceedings and if so, for how long; which corrective measures are to take and so forth);

(d) The form, manner and place of recording all decisions by the procuring entity taken in the application-for-reconsideration proceedings and their minimum

content (e.g. that the decision must be in writing, state action(s) taken and include reasons, both to enhance understanding and thereby assist in the prevention of further disputes, and to facilitate any further challenge or appeal, and must become part of the documentary record of the procurement proceedings). In this context it should be noted that, although in some systems the silence can be deemed to be a rejection of an application, the Model Law provisions require a written decision on rejection. The procurement or other applicable regulations must therefore clarify the effect of silence by the procuring entity to an application within the periods allocated by law for taking actions and decisions on the application (including on serving notices under paragraph (3) of the article), in particular that the silence or absence of actions may trigger the application for review, to a court or to another competent authority of the enacting State;

(e) In the context of article 67 (8), means and manner of providing by the procuring entity of effective access by the independent body to all documents in the procuring entity's possession relevant to the procurement proceedings under review. Such means and manner must satisfy the requirement of law for prompt access upon receipt of a notice of the application. IT tools may facilitate that;

(f) The rights of persons joining the reconsideration proceedings, including the right to submit a request to lift a suspension that has been applied;

(g) Treatment of confidential information, including in the context of issuing decisions and notices and granting access to records by participants in challenge proceedings and by the independent body. In this context, the procurement or other applicable regulations may in particular explain the aim of provisions requiring servicing a notice of the substance of the application: it permits the procuring entity to avoid the disclosure of potentially confidential information without the need to redact confidential information from the application.

6. The procurement or other applicable regulations must explain the legal effects of a decision on dismissal, in particular that the dismissal constitutes a decision on the application and can thus be challenged and if it is not challenged, it lifts the prohibition against entry into force of the procurement contract or framework agreement after the time period allocated under article 65 for possible challenge or appeal has lapsed.

7. The procurement or other applicable regulations should guide procuring entities as regards corrective actions that they may take: for example, rectifying the procurement proceedings so as to be in conformity with the procurement law, the procurement regulations or other applicable rules; if a decision has been made to accept a particular submission and it is shown that another should be accepted, refraining from issuing the notice of acceptance to the initially chosen supplier or contractor, but instead to accept that other submission; or cancelling the procurement proceedings and commencing new proceedings.

8. To minimize the risks of abuse of the discretion on the side of the procuring entity as regards imposition of suspension, the procurement or other applicable regulations may provide examples when the suspension would be needed. An alternative approach would be to regulate the exercise of the procuring entity's discretion in deciding whether or not to suspend the procurement proceedings. Such approach may be particularly appropriate where the procuring entity might lack experience in challenge proceedings, where decisions in the procurement

proceedings concerned have been taken by another body, or where it is desired to promote the early resolution of disputes by strongly encouraging any challenge to be presented to the procuring entity in the first instance. If such an approach is preferred, more prescriptive regulation should be included in the procurement or other applicable regulations, taking into account the need to strike a balance between the right of the supplier or contractor to have a challenge or appeal properly reviewed and the need of the procuring entity to conclude a procurement contract (or a framework agreement) in an economic and efficient way, without undue disruption and delay of the procurement process.

Article 67. Application for review before an independent body [\[hyperlink**\]](#)**

1. In an enacting State that wishes to set up a mechanism for independent review, the procurement or other applicable regulations would need to identify the appropriate body in which to vest the review function, whether in an existing body or in a new body created by the enacting State. The body may, for example, be one that exercises overall supervision and control over procurement in the State, a relevant body whose competence is not restricted to procurement matters (e.g. the body that exercises financial control and oversight over the operations of the Government and of the public administration (the scope of the review should not, however, be restricted to financial control and oversight)), or a special administrative body whose competence is exclusively to resolve disputes in procurement matters.

2. The procurement or other applicable regulations should regulate the composition and operation of this body; the importance of independence and specialist expertise of individuals that will hear challenges in that body should be emphasized. They should attach particular importance to the question of evidence, confidentiality and hearings, so as to ensure that all parties to the proceedings are fully aware of their rights and obligations in this regard, to ensure that there is consistency in all proceedings, and to allow an effective and efficient appeal from a decision of an independent body. The regulations could allow civil society representatives or others to observe challenge proceedings, and provide for the required facility, in accordance with the legal tradition in the enacting State concerned.

3. There will be a need for robust procedural rules in order to ensure that the proceedings examine the issues in each case in the appropriate level of detail and in a timely fashion. The procurement or other applicable regulations must provide or call for issuance of rules of procedure and guidance for the operation of the independent body, including:

(a) The manner in which applications are to be filed, including applications to permit the procurement to continue on the ground of urgent public interest considerations (e.g. whether the application is to be made by the procuring entity *ex parte*, or *inter parts*);

(b) Questions of evidence and its examination, including clear rules and procedures as regards the elements and supporting evidence that a procuring entity would need to adduce as regards urgent public interest considerations;

(c) The conduct of review proceedings (such as whether public hearings are to take place);

(d) Issues of observers;

(e) Means of serving prompt notices by the independent body to all concerned, and means, manner and place of publication of such notices where required by law;

(f) Authority to make enquiry of the procuring entity if its decision on suspension must be taken before the independent body has a chance to review documents relating to the procurement proceedings, such as the full record of the procurement proceedings;

(g) Rights of entities whose interests might be affected by the application (such as other government entities), including intervention in the challenge proceedings or a request to lift a suspension that has been applied;

(h) Corrective actions that the independent body may order immediately in cases that trigger automatic suspension of the procurement proceedings under paragraph (4) of the article, such as ordering the procuring entity to extend the deadline for presenting submissions, or correcting the terms of solicitation, pre-qualification or pre-selection;

(i) Competence as regards applications submitted to the independent body out of time (the discretionary element of paragraph (2) (c) of the article allows the independent body to dismiss the application even where it was established that the application involves significant public interest considerations; it also does not bar the independent body from considering late applications where no significant public interest considerations are involved). The rules may illustrate the type of issues that should permit entertaining applications after the standstill period, such as the discovery of fraudulent irregularities or instances of corruption;

(j) The manner of access to all documents relating to the procurement proceedings in the possession of the procuring entity (e.g. physical or virtual), envisaging for example the provision of the relevant documents in steps (for example, a list of all documents could be provided to the independent body first so that the independent body could identify those documents relevant to the proceedings before it). The goal should be to avoid excessive disruption of both procurement and review proceedings by providing secure and efficient means of transfer of such documents, noting that the use of IT tools may facilitate this task. The rules must address in this context procedures of lifting any restrictions on the disclosure of confidential information covered by articles 24 and 25 (4) [\[**hyperlinks**\]](#) of the Model Law, in particular whether the independent body is the competent organ of the enacting State to lift such restriction or it has to apply to a court or another relevant organ of the enacting State for the order to lift such restriction;

(k) Rules for access by participants in the challenge proceedings to the record of the challenge proceedings (which will, under the provisions of article 67 (8), include the record of the procurement proceedings), including for example the requirement that participants in the challenge proceedings will need to demonstrate their interest in the documents to which access is sought: this measure is intended to allow the independent body to keep effective control of the proceedings and to avoid suppliers or contractors conducting exhaustive searches of the documents in case they may discover issues of relevance;

(l) Treatment of confidential information, including in the context of issuing decisions and notices and granting access to records by participants in challenge proceedings.

4. In the context of paragraph (9) (i), the procurement or other applicable regulations of the enacting State should address issues of quantification of losses specific to the procurement context. In addressing these issues, the regulations should consider how purely economic loss is addressed in the domestic legal system, so as to ensure consistency in the measure of financial compensation throughout the jurisdiction concerned (including the extent to which financial compensation is contingent on the applicant proving that it would have won the procurement contract concerned but for the non-compliance of the procuring entity with the provisions of the law). The possibility of receiving financial compensation can raise the risk of encouraging speculative applications and disrupting the procurement process. It may also increase the risk of abuse if the power to award financial compensation lies in a small entity or the hands of a few individuals. The applicable regulations may therefore call for oversight of the operation of the mechanism of financial compensation in challenge proceedings, especially where a quasi-judicial system is in its infancy. This should be coupled with a regular review of the entire challenge mechanism to ensure that it is operating effectively in allowing, and encouraging where appropriate, suppliers or contractors to bring applications.

Article 68. Rights of participants in challenge proceedings [\[hyperlink**\]](#)**

1. The procurement or other applicable regulations should explain that paragraph (1) aims to permit all suppliers or contractors “participating in the procurement proceedings” to join the challenge proceedings as long as they remain in the proceedings concerned at the time of the challenge. Thus the provisions intend to exclude those that have been eliminated through pre-qualification or a similar step earlier in the proceedings, unless that step is the action or decision of the procuring entity to which the challenge relates. This is predicated, as noted in the context of article 64 above, on the notion that participation is granted to the extent that the supplier or contractor, or other potential participant, can demonstrate that its interests may be affected by the challenge proceedings. The possibility of broader participation in the challenge proceedings should be provided for since it is in the interest of the procuring entity to have complaints aired and information brought to its attention as early as possible. The procurement or other applicable regulations may provide for suitable nomenclature to identify the various participants more accurately.

2. The rules of the conduct of challenge proceedings applicable to the procuring entity and the independent body, respectively, discussed in the context of articles 66 and 67 above, should provide for due process during the challenge proceedings and set out the rights of all participants in the challenge proceedings, differentiating the broader rights of the applicant and the procuring entity from the rights of other interested persons and the rights of those two groups from the rights of anyone else that may be present during public hearings (such as members of the press). The goal is to ensure that the proceedings can continue with appropriate dispatch and that suppliers or contractors can participate effectively.

Article 69. Confidentiality in challenge proceedings [\[hyperlink**\]](#)**

The issues for applicable regulations are those touched upon in the context of articles 24, 25 (4), 66 and 67 above.

**B. Note by the Secretariat on a glossary of procurement-related terms
used in the UNCITRAL Model Law on Public Procurement**

(A/CN.9/771)

[Original: English]

1. During the preparation of a guide to enactment of the 2011 UNCITRAL Model Law on Public Procurement,¹ it was decided to issue separately and publish on the UNCITRAL website a glossary of procurement-related terms used in the Model Law.² The Guide to Enactment adopted by the Commission at its forty-fifth session, in 2012,³ notes in this context the following:

“This glossary will include descriptions of terms that have not been defined in the Model Law, but are commonly used as procurement terms by suppliers, contractors, procuring officials and their advisers; it will also discuss terms that may carry a different meaning under the Model Law from those in other international or regional instruments regulating public procurement.”⁴

By this note, the Secretariat submits a draft text of the glossary for consideration by the Commission.

¹ *Official Records of the General Assembly, Sixty-sixth Session, Supplement No. 17 (A/66/17)*, annex I.

² *Ibid.*, *Sixty-seventh Session, Supplement No. 17 (A/67/17)*, para. 18, and paras. 19 (l) and 36 of A/CN.9/745.

³ *Ibid.*, para. 46.

⁴ Para. 8 of the Introduction to Chapter I of the Model Law. The text of the Guide as adopted by the Commission is available on the date of this document at www.uncitral.org/uncitral/en/uncitral_texts/procurement_infrastructure/2012Guide.html.

Glossary of procurement-related terms used in the 2011 UNCITRAL Model Law on Public Procurement (the “Model Law”)¹

| # | <i>The term used in the Model Law (with illustrative references to the relevant provisions of the Model Law)</i> | <i>Its definition or description</i> | <i>Other terms in use in international instruments regulating procurement to convey the same or similar meaning</i> |
|----|--|---|--|
| 1. | Abnormally low submission (article 20 [**hyperlink**]) | Submission which price in combination with other constituent elements of the submission is so abnormally low in relation to the subject matter of the procurement that it raises concerns with the procuring entity as to the ability of the supplier or contractor that presented it to perform the procurement contract. For the explanation of the terms “submission”, “constituent elements of the submission”, “subject matter of the procurement”, “procuring entity”, “supplier or contractor” and “procurement contract”, see ## 83, 14, 82, 62, 85 and 59 below [**hyperlinks**]. | <ul style="list-style-type: none"> • a tender abnormally lower than other tenders submitted (the plurilateral Agreement on Government Procurement (GPA) of the World Trade Organization (WTO)² (the 1994 WTO GPA), article XIII(4)(a)) • a tender with a price that is abnormally lower than the prices in other tenders submitted (the revised text of the 1994 WTO GPA³ (the 2012 WTO GPA), article XV(6)) • abnormally low tender (directive 2004/17/EC of the European Parliament and of the Council,⁴ article 57; directive 2004/18/EC of the European Parliament and of the Council,⁵ article 55) |

¹ *Official Records of the General Assembly, Sixty-sixth Session, Supplement No. 17 (A/66/17), annex I.*

² The plurilateral Agreement on Government Procurement (GPA) of the World Trade Organization (WTO), negotiated in parallel with the Uruguay Round in 1994, and entered into force on 1 January 1996 (see Annex 4(b) to the Final Act embodying the results of the Uruguay round of multilateral trade negotiations available at the date of this glossary at www.wto.org/english/docs_e/legal_e/gpr-94_e.pdf).

³ On 15 December 2011, negotiators reached an agreement on the outcomes of the renegotiation of the GPA. This political decision was confirmed, on 30 March 2012, by the formal adoption of the Decision on the Outcomes of the Negotiations under Article XXIV:7 of the Agreement on Government Procurement (GPA/113). The revised text is available at the date of this glossary at www.wto.org/english/tratop_e/gproc_e/gp_gpa_e.htm.

⁴ Directive 2004/17/EC of the European Parliament and of the Council of 31 March 2004 on the coordination of the procurement procedures of entities operating in the water, energy, transport and postal services sectors (*Official Journal of the European Union*, No. L 134, 30 April 2004, p. 1. Available at the date of this glossary at http://europa.eu.int/comm/internal_market/publicprocurement/legislation_en.htm).

⁵ Directive 2004/18/EC of the European Parliament and of the Council of 31 March 2004 on the coordination of procedures for the award of public works contracts, public supply contracts and public service contracts (*Official Journal of the European Union*, No. L 134, 30 April 2004, p. 114. Available at the date of this glossary at http://europa.eu.int/comm/internal_market/publicprocurement/legislation_en.htm).

|----|--|--|---|
| 2. | Appeal (article 64 [**hyperlink**]) | An application to a competent authority against a decision taken in the challenge proceedings. For the explanation of the term “challenge proceedings”, see # 8 below [**hyperlink**]. | <ul style="list-style-type: none"> • administrative or judicial review (the 2012 WTO GPA, article XVIII:1) • non-judicial and judicial review (directive 2007/66/EC of the European Parliament and of the Council,⁶ article 2 (9)) |
| 3. | Application for reconsideration before the procuring entity (article 66 [**hyperlink**]) | A challenge proceedings initiated by a supplier or contractor that claims to have suffered or claims that it may suffer loss or injury because of the alleged non-compliance of a decision or action of the procuring entity with the provisions of the procurement law of the enacting State (an “aggrieved supplier or contractor”) by filing an application to the procuring entity for reconsideration of its decision or an action taken in the procurement proceedings. For the explanation of the terms “challenge proceedings”, “supplier or contractor” and “procuring entity”, see ## 8, 85 and 62 below [**hyperlinks**]. | <ul style="list-style-type: none"> • initial review of a challenge by a body other than an authority referred to in paragraph 4 [administrative or judicial authority] (the 2012 WTO GPA, article XVIII:5) • review with the contracting authority (directive 2007/66/EC, article 1 (5)) • review by procuring entity (the 1994 UNCITRAL Model Law on Procurement of Goods Construction and Services⁷ (the “1994 Model Law”), article 53) |
| 4. | Application for review before an independent body (article 67 [**hyperlink**]) | A challenge proceedings initiated by an aggrieved supplier or contractor by filing an application to the independent body for review of a decision or an action taken by the procuring entity in the procurement proceedings, or of the failure of the procuring entity to issue a decision under article 66 of the Model Law within the time limits prescribed in that article. For the explanation of the term “aggrieved supplier or contractor”, see # 4 above [**hyperlink**]. For the explanation of the terms “independent body”, “challenge proceedings” and “procuring entity”, see ## 37, 8 and 62 below [**hyperlinks**]. | <ul style="list-style-type: none"> • administrative review with a review body that is not a court (the 2012 WTO GPA, article XVIII:6) • non-judicial review with the independent body (directive 2007/66/EC, article 2(9)) • administrative review (the 1994 Model Law, article 54) |

⁶ Directive 2007/66/EC of the European Parliament and of the Council of 11 December 2007 amending Council Directives 89/665/EEC and 92/13/EEC with regard to improving the effectiveness of review procedures concerning the award of public contracts (*Official Journal of the European Union*, No. L 335, 20 December 2007, p. 31. Available at the date of this glossary at http://ec.europa.eu/internal_market/publicprocurement/remedies/remedies_en.htm).

⁷ The text of the 1994 Model Law is found in annex I to the report of UNCITRAL on the work of its twenty-seventh session (*Official Records of the General Assembly, Forty-ninth Session, Supplement No. 17 (A/49/17)*), and is also available at www.uncitral.org.

| # | <i>The term used in the Model Law (with illustrative references to the relevant provisions of the Model Law)</i> | <i>Its definition or description</i> | <i>Other terms in use in international instruments regulating procurement to convey the same or similar meaning</i> |
|----|--|--|---|
| 5. | Award of a procurement contract or framework agreement (articles 22 and 23 [**hyperlinks**]) | A final stage of the procurement proceedings regulated by the Model Law, resulting in the conclusion and entry into force of a procurement contract or framework agreement between the procuring entity and selected supplier(s) or contractor(s). For the explanation of the terms “procurement contract”, “framework agreement”, “procuring entity” and “supplier or contractor”, see ## 59, 31, 62 and 85 below [**hyperlinks**]. | <ul style="list-style-type: none"> contract award and conclusion of a framework agreement (directive 2004/17/EC, article 43, and directive 2004/18/EC, article 35(4)) procurement contract award (the 1994 Model Law, article 14) |
| 6. | Best and final offers (BAFOs) (articles 49 (11) and 51 (3) [**hyperlinks**]) | Final submissions presented by suppliers or contractors remaining in the procurement proceedings following completion of the dialogue phase in the request-for-proposals-with-dialogue proceedings, or the negotiation phase in the competitive negotiations proceedings. For the explanation of the terms “submission”, “supplier or contractor” and “competitive negotiations”, see ## 83, 85 and 12 below [**hyperlinks**]. | final tenders (the 1994 WTO GPA, article XIV; directive 2004/18/EC, article 29) |
| 7. | Cancellation of the procurement (article 19 [**hyperlink**]) | The decision taken by the procuring entity during any procurement proceedings not to proceed with the procurement proceedings. For the explanation of the term “procuring entity”, see # 62 below [**hyperlink**]. | rejection of all tenders, proposals, offers or quotations (the Guidelines for selection and employment of consultants by World Bank borrowers, the 2010 version ⁸ (the “World Bank procurement guidelines (consultants)”); the 1994 Model Law, article 12) |
| 8. | Challenge proceedings (Chapter VIII [**hyperlink**]) | Proceedings initiated by an aggrieved supplier or contractor in the procuring entity, an independent body or a court against a decision or action of the procuring entity and any subsequent challenge or appeal to a competent body of the State against any decision taken in the challenge proceedings. For the explanation of the term “aggrieved supplier or contractor”, see # 4 above [**hyperlink**]. For the explanation of the terms “procuring entity” and “independent body”, see ## 62 and 37 below [**hyperlinks**]. | <ul style="list-style-type: none"> review procedures (the 2012 WTO GPA, article XVIII and directive 2007/66/EC, recital 17) review (the 1994 Model Law, chapter VI) |

|-----|--|---|--|
| 19. | Direct solicitation (articles 2 [**hyperlink**] , definition (b), 34 and 35 [**hyperlinks**]) | Defined in the Model Law as: “Solicitation addressed directly to one supplier or contractor or a restricted number of suppliers or contractors. This excludes solicitation addressed to a limited number of suppliers or contractors following pre-qualification or pre-selection proceedings.” For the explanation of the terms “solicitation”, “supplier or contractor”, “pre-qualification” and “pre-selection”, see ## 79, 85, 53 and 55 below [**hyperlinks**] . | direct invitation without open advertisement (the World Bank procurement guidelines, provision 3.2) |
| 20. | Documentary record of procurement proceedings (article 25 [**hyperlink**]) | An exhaustive written file on a given procurement that includes decisions, description of actions and all other information related to the procurement with supporting documentation. For the explanation of the term “procurement”, see # 58 below [**hyperlinks**] . | <ul style="list-style-type: none"> • documentation and reports of tendering procedures and contract awards relating to covered procurement, including the reports required under Article XIII (on contracts awarded through limited tendering, including the name of the procuring entity, the value and kind of goods or services procured and a statement indicating the circumstances and conditions that justified the use of limited tendering) as well as data that ensure the appropriate traceability of the conduct of covered procurement by electronic means (the 2012 WTO GPA, article XVI(3)) • information to be stored concerning awards (directive 2004/17/EC, article 50) • documentary records for post review (the World Bank procurement guidelines) • record of procurement proceedings (the 1994 Model Law, article 11) • agreed exclusions from national treatment and non-discrimination (the 2012 WTO GPA, article V:4) • national competitive bidding (the World Bank procurement guidelines, provision 3.3) |
| 21. | Domestic procurement (article 2 [**hyperlink**] , definition (c)) | Defined in article 2 of the Model Law as “procurement limited to domestic suppliers or contractors pursuant to article 8 of this Law”. For the explanation of the terms “procurement” and “supplier or contractor”, see ## 58 and 85 below [**hyperlinks**] . | <ul style="list-style-type: none"> • agreed exclusions from national treatment and non-discrimination (the 2012 WTO GPA, article V:4) • national competitive bidding (the World Bank procurement guidelines, provision 3.3) |
| 22. | Domestic suppliers or contractors (articles 2, 11 and 33 [**hyperlinks**]) | In the context of a particular State, suppliers or contractors registered as legal entities in that State. For the explanation of the term “supplier or contractor”, see # 85 below [**hyperlink**] . | |

| # | <i>The term used in the Model Law (with illustrative references to the relevant provisions of the Model Law)</i> | <i>Its definition or description</i> | <i>Other terms in use in international instruments regulating procurement to convey the same or similar meaning</i> |
|-----|---|---|--|
| 23. | Domestically produced goods (article 11 [**hyperlink**]) | In the context of a particular State, goods manufactured locally (legislation usually indicates the minimum percentage of required local content (labour, raw material, and components) for goods to qualify as such). For the explanation of the term “goods”, see # 35 below [**hyperlink**] . | <ul style="list-style-type: none"> domestic products (the 1994 WTO GPA, para. 2 of the preamble and articles III(1)(a) and XIII(4)(b)) goods manufactured in the country of the Borrower (the World Bank procurement guidelines) |
| 24. | Electronic reverse auction (article 2 [**hyperlink**] , definition (d), article 31 and Chapter VI [**hyperlink**]) | Defined in the Model Law as: “an online real-time purchasing technique utilized by the procuring entity to select the successful submission, which involves the presentation by suppliers or contractors of successively lowered bids during a scheduled period of time and the automatic evaluation of bids.” For the explanation of the terms “procuring entity”, “successful submission”, “supplier or contractor” and “evaluation”, see ## 62, 84, 85 and 27 below [**hyperlinks**] . | electronic auction (the 2012 WTO GPA, article XIV; directive 2004/18/EC, article 54) |
| 25. | Electronic reverse auction as a stand-alone method of procurement (articles 31 (1) and 53 [**hyperlinks**]) | An electronic reverse auction used as a separate method of procurement. For the explanation of the terms “electronic reverse auction” and “method of procurement”, see # 24 above and # 44 below [**hyperlinks**] . | electronic auction (the 2012 WTO GPA, article XIV; directive 2004/18/EC, articles 1 (7) and 54) |
| 26. | Electronic reverse auction as a phase (articles 31 (2) and 54 [**hyperlinks**]) | An electronic reverse auction used as a phase preceding the award of the procurement contract in another method of procurement or in a framework agreement procedure with second-stage competition. For the explanation of the terms “electronic reverse auction”, “method of procurement” and “framework agreement procedure with second-stage competition”, see # 24 above and ## 44 and 33 below [**hyperlinks**] . | electronic auction (directive 2004/18/EC, article 54) |
| 27. | Evaluation (articles 11, 16, 22, 25 and 43 [**hyperlinks**]) | Comparative analysis of submissions in accordance with the criteria and procedures set out in the solicitation documents for the purpose of the ascertainment of the successful submission. For the explanation of the terms “submission”, “solicitation document” and “successful submission”, see ## 83, 80 and 84 below [**hyperlinks**] . | assessment (directive 2004/18/EC, recital 46) |

| # | <i>The term used in the Model Law (with illustrative references to the relevant provisions of the Model Law)</i> | <i>Its definition or description</i> | <i>Other terms in use in international instruments regulating procurement to convey the same or similar meaning</i> |
|-----|--|---|---|
| 28. | Evaluation criteria (article 11 [**hyperlink**]) | Criteria used in evaluation as identified in the solicitation documents for ascertainment of the successful submission. For the explanation of the terms “evaluation”, “solicitation document” and “successful submission”, see # 27 above and ## 80 and 84 below [**hyperlinks**] . | <ul style="list-style-type: none"> • the criteria for awarding the contract (the 1994 WTO GPA, article XII(2)(h)) • contract award criteria or award criteria (directives 2004/17/EC and 2004/18/EC, preamble paras. 1 and 51) • selection criteria (the World Bank procurement guidelines (consultants)) • the criteria to be used by the procuring entity in determining the successful tender; criteria for the evaluation of proposals (the 1994 Model Law, articles 27 (e) and 39) |
| 29. | Examination (articles 11, 16, 25 and 43 [**hyperlinks**]) | Ascertainment of qualifications of suppliers or contractors and responsiveness of their submissions against the criteria specified in the solicitation documents. The process is on a “pass/fail” basis and does not involve comparison of submissions as in evaluation. For the explanation of the terms “supplier or contractor”, “submission”, “solicitation document” and “evaluation”, see # 27 above and ## 85, 83 and 80 below [**hyperlinks**] . | |
| 30. | Forthcoming procurement (article 6 [**hyperlink**]) | Planned procurement activities for forthcoming months or years. | <ul style="list-style-type: none"> • planned procurement (the 1994 WTO GPA, article IX(7) (cf. “proposed procurement”) and the 2012 WTO GPA, article VII (cf. “intended procurement”)) • future procurement (the 2012 WTO GPA, article VII) • “buyer profile” indicating the kind and value of contracts they intend to award (directive 2004/17/EC, article 41, and directive 2004/18/EC, article 35) |
| 31. | Framework agreement (article 2 [**hyperlink**] , definition (e) (i)) | Agreement between the procuring entity and the selected supplier (or suppliers) or contractor (or contractors) concluded upon completion of the first stage of the framework agreement procedure. For the explanation of the terms “procuring entity”, “supplier or contractor”, and “framework agreement procedure”, see ## 62, 85 and 32 below [**hyperlinks**] . | |

| # | <i>The term used in the Model Law (with illustrative references to the relevant provisions of the Model Law)</i> | <i>Its definition or description</i> | <i>Other terms in use in international instruments regulating procurement to convey the same or similar meaning</i> |
|-----|--|--|---|
| 32. | Framework agreement procedure (article 2 [**hyperlink**] , definition (e)) | Defined in the Model Law as: “Procedure conducted in two stages: a first stage to select a supplier (or suppliers) or a contractor (or contractors) to be a party (or parties) to a framework agreement with a procuring entity, and a second stage to award a procurement contract under the framework agreement to a supplier or contractor party to the framework agreement.” For the explanation of the terms “supplier or contractor”, “procuring entity” and “framework agreement”, see # 31 above and ## 85 and 62 below [**hyperlinks**] . | |
| 33. | Framework agreement procedure with second-stage competition (article 2 [**hyperlink**] , definition (e) (iv)) | Defined in the Model Law as: “Procedure under an open framework agreement or a closed framework agreement with more than one supplier or contractor in which certain terms and conditions of the procurement that cannot be established with sufficient precision when the framework agreement is concluded are to be established or refined through a second-stage competition.” For the explanation of the terms “closed framework agreement” and “framework agreement”, see ## 10 and 31 above [**hyperlinks**] . For the explanation of the terms “open framework agreement”, “supplier or contractor”, “procurement” and “second-stage competition”, see ## 48, 85, 58 and 74 below [**hyperlinks**] . | |
| 34. | Framework agreement procedure without second-stage competition (article 2 [**hyperlink**] , definition (e) (v)) | Defined in the Model Law as: “Procedure under a closed framework agreement in which all terms and conditions of the procurement are established when the framework agreement is concluded.” For the explanation of the terms “closed framework agreement” and “framework agreement”, see ## 10 and 31 above [**hyperlinks**] . For the explanation of the term “procurement”, see # 58 below [**hyperlinks**] . | |
| 35. | Goods (article 2 [**hyperlink**] , definition (j), and articles 11 and 39 [**hyperlinks**]) | Objects of every kind and description including raw materials, products and equipment and objects in solid, liquid or gaseous form, and electricity, as well as services incidental to the supply of the goods if the value of those incidental services does not exceed that of the goods themselves (the enacting State may include additional categories of goods) (see article 2, definition (c), of the 1994 Model Law). | products (directive 2004/18/EC) |

| # | <i>The term used in the Model Law (with illustrative references to the relevant provisions of the Model Law)</i> | <i>Its definition or description</i> | <i>Other terms in use in international instruments regulating procurement to convey the same or similar meaning</i> |
|-----|--|---|---|
| 36. | Indefinite or repeated basis (article 32 [**hyperlink**] , paragraph (1)(a)) | One of the conditions for use of a framework agreement procedure under the Model Law that presupposes that quantity and/or timing of delivery of the subject matter of the procurement that will be required during any given period is/are not known in advance. For the explanation of the term “framework agreement procedure”, see # 32 above [**hyperlink**] . For the explanation of the term “subject matter of the procurement”, see # 82 below [**hyperlink**] . | |
| 37. | Independent body (Chapter VIII [**hyperlink**]) | A competent body of the enacting State, which is independent of the procuring entity and entrusted by the State with the consideration of applications for review and taking actions as regards those applications and the procurement proceedings to which the applications relate, in accordance with article 67 of the Model Law. For the explanation of the term “applications for review”, see # 4 above [**hyperlink**] . For the explanation of the term “procuring entity”, see # 62 below [**hyperlink**] . | <ul style="list-style-type: none"> • independent authority (the 2012 WTO GPA, article XVIII:4) • a body of first instance, which is independent of the contracting authority (directive 2007/66/EC, article 2(3)) • administrative body (the 1994 Model Law, article 54) |
| 38. | Indicative submissions (article 60 [**hyperlink**]) | Submissions presented by suppliers or contractors to become a party to the open framework agreement. For the explanation of the terms “submission”, “supplier or contractor” and “open framework agreement”, see ## 83, 85 and 48 below [**hyperlinks**] . | |
| 39. | Initial bids (article 53 [**hyperlink**]) | Bids submitted for examination or evaluation before the electronic reverse auction as a stand-alone method of procurement is held. For the explanation of the terms “examination”, “evaluation” and “electronic reverse auction as a stand-alone method of procurement”, see ## 29, 27 and 25 above [**hyperlinks**] . | |
| 40. | Initial tenders (article 48 [**hyperlink**]) | Tenders containing proposals without a tender price, presented by suppliers or contractors in the first stage of two-stage-tendering proceedings for the examination by the procuring entity and the discussion between the procuring entity and suppliers or contractor in order to refine aspects of the description of the subject matter of the procurement and to formulate them with the detail required under article 10 of the Model Law. For the explanation of the terms “examination” and “description of the subject matter of the procurement”, see ## 29 and 18 above [**hyperlinks**] . | |

| # | <i>The term used in the Model Law (with illustrative references to the relevant provisions of the Model Law)</i> | <i>Its definition or description</i> | <i>Other terms in use in international instruments regulating procurement to convey the same or similar meaning</i> |
|-----|---|---|--|
| 41. | Invitation to tender, present submissions or participate in request-for-proposals proceedings or an electronic reverse auction (article 2 [**hyperlink**] , definition (p)) | <p>For the explanation of the terms “tender price”, “supplier or contractor”, “two-stage-tendering” and “procuring entity”, see ## 86, 85, 88 and 62 below [**hyperlinks**].</p> <p>Minimum information about any given procurement published or provided to suppliers or contractors to allow them to assess their interest in participating in the procurement proceedings and to apply according to the requirements specified in the invitation.</p> <p>For the explanation of the terms “procurement” and “supplier or contractor”, see ## 58 and 85 below [**hyperlinks**].</p> | <ul style="list-style-type: none"> • invitation to participate in the procurement (the 1994 WTO GPA, article IX) • notice of intended procurement (the 2012 WTO GPA, article I-k) • an invitation to submit a tender, to take part in a restricted or negotiated procedure, to negotiate or to participate or to take part in the dialogue (directive 2004/17/EC, articles 1(2)(7) and 47, and directive 2004/18/EC, articles 1(2)(8), 33 and 40) • letter of invitation (the World Bank procurement guidelines (consultants)) |
| 42. | Irresponsible or dilatory conduct on the part of the procuring entity (article 19 [**hyperlink**]) | <p>The term is used in the Model Law in the context of cancellation of the procurement (article 19 [**hyperlink**]): the procuring entity may be liable for cancelling the procurement if the cancellation is the consequence of irresponsible or dilatory conduct on its part, for example when the procuring entity cancels the procurement after the opening of tenders with the knowledge that a favoured supplier or contractor would not win, or when the procuring entity cancels open tendering intentionally with the purpose of using a method of procurement alternative to open tendering in the newly announced procurement as allowed by the Model Law under article 30 (1) (b) and (2) (d) [**hyperlink**], or when the procuring entity started the procurement without proper procurement planning.</p> <p>For the explanation of the term “cancellation of the procurement”, see # 7 above [**hyperlink**].</p> <p>For the explanation of the terms “procurement”, “procuring entity”, “supplier or contractor”, “open tendering” and “method of procurement”, see ## 58, 62, 85 and 44 below [**hyperlinks**].</p> | |
| 43. | Margin of preference (article 11 [**hyperlink**]) | <p>A technique applied in the evaluation of submissions that permits the procuring entity to accord a more favourable treatment to some suppliers or contractors or goods (usually domestic suppliers or contractors or domestically produced goods) in comparison with others. When the difference in price (or price combined with quality scores) between the submissions from a favoured group (or with</p> | |

|-----|--|--|--|
| 63. | Public notice of the award (article 23 [**hyperlink**]) | Announcement to the public in general through publication in the media specified in the legislation of the enacting State to whom the procurement contract or the framework agreement was awarded and the price of the procurement contract. For the explanation of the terms “procurement contract” and “framework agreement”, see ## 59 and 31 above [**hyperlinks**] . | <ul style="list-style-type: none"> • contract award notice (directive 2004/17/EC, article 43 and annex XVI) • a notice of the results of the award procedure (directive 2004/18/EC, article 35(4) and annex VII A) • publication of the award (the World Bank procurement guidelines, appendix 1 [7]) |
| 64. | Public procurement | Should be understood as procurement (see # 58 above). | |
| 65. | Publication internationally (articles 18(2) and 33 (2) [**hyperlinks**]) | Publication in a media widely accessible to international suppliers or contractors. For the explanation of the term “supplier or contractor”, see # 85 below [**hyperlink**] . | <ul style="list-style-type: none"> • e.g. publication by the Office for Official Publications of the European Communities (directive 2004/17/EC, article 42, and directive 2004/18/EC, articles 35 and 36 (2)) • e.g. a General Procurement Notice in the <i>United Nations Development Business</i> (UNDB online) (the World Bank procurement guidelines) |
| 66. | Qualification criteria (article 9 [**hyperlink**]) | Criteria used by the procuring entity in ascertainment of eligibility of suppliers or contractors to participate in the procurement proceedings, as specified in the pre-qualification or pre-selection documents where applicable and in the solicitation documents. For the explanation of the terms “pre-qualification documents” and “pre-selection documents”, see ## 54 and 56 above [**hyperlinks**] . For the explanation of the terms “supplier or contractor” and “solicitation document”, see ## 85 and 80 below [**hyperlinks**] . | substantives criteria to be taken into account to assert the contractor’s qualifications (directive 2004/17/EC, articles 52 to 54, and directive 2004/18/EC, articles 45 to 52) |
| 67. | Relative weights (article 11 [**hyperlink**]) | Weights assigned by the procuring entity in the solicitation documents to evaluation criteria in their relation to each other. For the explanation of the terms “procuring entity” and “evaluation criteria”, see ## 62 and 28 above [**hyperlinks**] . For the explanation of the term “solicitation document”, see # 80 below [**hyperlink**] . | <ul style="list-style-type: none"> • different weight, relative weighting of criteria (directive 2004/17/EC, preamble (55) and article 55(2), and directive 2004/18/EC, preamble (46) and article 53(2); • the weighting of evaluation criteria (the World Bank procurement guidelines) |
| 68. | Request for proposals with consecutive negotiations (articles 30 (3) and 50 [**hyperlinks**]) | A method of procurement which main distinct feature is negotiation of financial terms of submissions after completion of the evaluation of technical, quality and performance characteristics of submissions. For the explanation of the terms “method of procurement” and “evaluation”, see ## 44 and 27 above [**hyperlinks**] . For the explanation of the term “submission”, see # 83 below [**hyperlink**] . | |

| # | <i>The term used in the Model Law (with illustrative references to the relevant provisions of the Model Law)</i> | <i>Its definition or description</i> | <i>Other terms in use in international instruments regulating procurement to convey the same or similar meaning</i> |
|-----|--|---|---|
| 69. | Request for proposals with dialogue (articles 30 (2) and 49 [**hyperlinks**]) | A method of procurement which main distinct feature is a dialogue with suppliers or contractors to obtain the most satisfactory solution to the procurement needs. For the explanation of the term “method of procurement”, see # 44 above [**hyperlink**]. For the explanation of the term “supplier or contractor”, see # 85 below [**hyperlink**]. | competitive dialogue (directive 2004/18/EC, article 1(11) (c)) |
| 70. | Request for proposals without negotiation (articles 29 (3) and 47 [**hyperlinks**]) | A method of procurement which main distinct feature is evaluation of financial terms of submissions after completion of the evaluation of technical, quality and performance characteristics of submissions whereas submissions are presented to the procuring entity in two separate sealed envelopes. For the explanation of the terms “method of procurement”, “evaluation” and “procuring entity”, see ## 44, 27 and 62 above [**hyperlinks**]. For the explanation of the term “submission”, see # 83 below [**hyperlink**]. | |
| 71. | Request for quotations (articles 29 (2) and 46 [**hyperlinks**]) | A method of procurement which main distinct feature is submission of only one quotation by suppliers or contractors in response to request for quotations by the procuring entity; the quotation cannot be changed and be subject to negotiation (the method is available only for low-value simple off-the-shelf items). For the explanation of the terms “method of procurement” and “procuring entity”, see ## 44 and 62 above [**hyperlinks**]. For the explanation of the term “supplier or contractor”, see # 85 below [**hyperlink**]. | shopping (the World Bank procurement guidelines) |
| 72. | Request-for-proposals proceedings (article 35 [**hyperlinks**]) | Methods of procurement encompassing request for proposals without negotiation, request for proposals with dialogue and request for proposals with consecutive negotiations (see ## 70, 69 and 68 above). For the explanation of the term “method of procurement”, see # 44 above [**hyperlink**]. | |

| # | <i>The term used in the Model Law (with illustrative references to the relevant provisions of the Model Law)</i> | <i>Its definition or description</i> | <i>Other terms in use in international instruments regulating procurement to convey the same or similar meaning</i> |
|-----|---|--|---|
| 73. | Restricted tendering (articles 29 (1) and 45 [**hyperlinks**]) | A method of procurement and one of the forms of tendering, which main distinct feature is direct solicitation. For the explanation of the terms “method of procurement” and “direct solicitation”, see ## 44 and 19 above [**hyperlinks**]. | <ul style="list-style-type: none"> • selective tendering (the 2012 WTO GPA, articles I (q) and IX:4) • restricted procedures (EU directive 2004/18/EC, article 1(11) (b)) • limited international bidding (the World Bank procurement guidelines) reopening of competition (the EU Explanatory Note on Framework Agreements) ¹¹ |
| 74. | Second-stage competition (article 2 [**hyperlink**], definition (e) (iv), and Chapter VII [**hyperlink**]) | A stage in closed framework agreements with more than one supplier or contractor and in open framework agreements through which certain terms and conditions of the procurement that cannot be established with sufficient precision when the framework agreement is concluded are established or refined through a competition between or among suppliers or contractors parties to the framework agreement. For the explanation of the terms “closed framework agreement”, “open framework agreement”, “procurement” and “framework agreement”, see ## 10, 48, 58 and 31 above [**hyperlinks**]. For the explanation of the term “supplier or contractor”, see # 85 below [**hyperlink**]. | |
| 75. | Security for the performance of the procurement contract (articles 2, definition (u), 17 and 39 [**hyperlinks**]) | Security against the breach of the procurement contract by the supplier or contractor concluding the procurement contract with the procuring entity, presented to the procuring entity by that supplier or contractor in the form and the amount and in accordance with other requirements (such as with respect to the nature of the security and the issuer) specified by the procuring entity in the solicitation documents. For the explanation of the terms “procurement contract” and “procuring entity”, see ## 59 and 62 above [**hyperlinks**]. For the explanation of the terms “supplier or contractor” and “solicitation document”, see ## 85 and 80 below [**hyperlinks**]. | performance security (the World Bank procurement guidelines) |
| 76. | Services (article 39 [**hyperlink**]) | Services of intellectual and consulting nature and any other services not covered by the terms “goods” and “construction” above (see ## 35 and 15 [**hyperlinks**]). | |

I. Introduction

A. Background

1. At its forty-fourth session in 2011, the Commission requested the Secretariat to prepare a note on strategic planning for its next session (A/66/17, para. 343).
2. A Note by the Secretariat in response to that request entitled "A strategic direction for UNCITRAL" (A/CN.9/752 and Add.1, referred to in this paper as the "Strategic Direction paper") was submitted to the Commission at its forty-fifth session. The Commission agreed to consider and provide further guidance on UNCITRAL's strategic direction at its forty-sixth session, and

requested the Secretariat to reserve sufficient time to allow for a detailed discussion at that time (A/67/17, para. 231).

3. In the Strategic Direction paper, certain factors were set out to assist the Commission when considering possible future work, particularly in choosing between topics where resources are insufficient to address all current and possible future topics (A/CN.9/752, paras. 20 and 21). The current paper sets out details of current and possible future work; since the Commission may consider that UNCITRAL has indeed reached a situation of insufficient resources (see, further, section IV below), the paper has been produced to assist the Commission both in its discussions on future work at this forty-sixth session, and in discussing the Strategic Direction paper (A/CN.9/752 and Add.1).

4. The scope of this paper encompasses all of UNCITRAL's main work areas: planned and possible future legislative texts, technical assistance to law reform, promotion of uniform interpretation and application of UNCITRAL texts, status and promotion of those texts, coordination and cooperation with other organizations active in its field of activity and promoting the rule of law. The aim is to enable the Commission to consider how any mandate given for work on any one activity and in any topic will impact UNCITRAL's other activities and topics.

5. The Commission may wish to take into account the following documents in considering these issues. Background documents presented to the Commission at its forty-fifth session (available at www.uncitral.org/uncitral/commission/sessions/45th.html) are:

A/CN.9/752 and Add.1 A strategic direction for UNCITRAL, Note by the Secretariat; and

A/67/17 Report of the Commission's forty-fifth session.

Documents for the current Commission session, (available at www.uncitral.org/uncitral/commission/sessions/46th.html) are:

A/CN.9/760 and A/CN.9/765 Reports of the fifty-seventh and fifty-eighth sessions of Working Group II;

A/CN.9/762 and A/CN.9/769 Reports of the twenty-sixth and twenty-seventh sessions of Working Group III;

A/CN.9/761 and A/CN.9/768 Reports of the forty-sixth and forty-seventh sessions of Working Group IV;

A/CN.9/763 and A/CN.9/766 Reports of the forty-second and forty-third sessions of Working Group V;

A/CN.9/764 and A/CN.9/767 Reports of the twenty-second and twenty-third sessions of Working Group VI;

A/CN.9/773 Status of the conventions and model laws, Note by the Secretariat;

A/CN.9/775 Technical assistance activities undertaken since the Commission's forty-fifth session and technical assistance resources, Note by the Secretariat, including UNCITRAL publications, the UNCITRAL website,

and a survey of the activities undertaken by the UNCITRAL Regional Centre for Asia and the Pacific (RCAP) since the Commission's forty-fifth session;

A/CN.9/776 Brief survey of the activities undertaken by the Secretariat since the Commission's forty-fifth session to ensure coordination with the work of other organizations active in the field of international trade law, Note by the Secretariat;

A/CN.9/777 Status and progress of CLOUT, Note by the Secretariat (including updates on the current activities concerning digests);

A/CN.9/779 Report of a Colloquium on Public-Private Partnerships;

A/CN.9/780 Creating an enabling legal environment for microbusiness and small and medium-sized enterprises, Note by the Secretariat;

A/CN.9/785 Possible future work in the field of dispute settlement, Note by the Secretariat;

A/CN.9/788 Meeting on commercial fraud, Note by the Secretariat.

II. Summary of current activities

A. Legislative work

6. The table below sets out current and ongoing legislative activities, and their envisaged completion dates.

7. As the table indicates, draft texts on arbitration, insolvency and security interests will be presented for adoption at the forty-sixth session of the Commission. The Working Groups concerned (II, V and VI) will therefore be available for future work, some of which is already mandated by the Commission (as discussed in section III, paras. 10-14 below). Working Group I completed its work on developing the UNCITRAL Model Law on Public Procurement and Guide to Enactment in April 2012. It has not met since the forty-fifth Commission session in 2012 and is thus available for future work. Working Groups III and IV are engaged with ongoing work.

Table 1
Current and ongoing legislative activities

| <i>Topic</i> | <i>Report references</i> | <i>Envisaged completion date</i> |
|---|---------------------------|----------------------------------|
| <i>Arbitration (WG II)</i> | | |
| (i) Preparation of a legal standard on transparency in treaty-based investor arbitration | A/CN.9/760 and A/CN.9/765 | 2013 |
| (ii) Applicability of the UNCITRAL Rules on transparency to the settlement of disputes arising under existing investment treaties (draft text of a recommendation and convention) | | 2013 |

| <i>Topic</i> | <i>Report references</i> | <i>Envisaged completion date</i> |
|---|-------------------------------|--|
| Preparation of a Guide to the 1958 New York Convention | n/a – prepared by Secretariat | Extracts for consideration 2013; completion 2014 |
| <i>Online dispute resolution (WG III)</i> | | |
| Preparation of a legal standard on online dispute resolution for cross-border electronic transactions | A/CN.9/762 and A/CN.9/769 | Estimated 2014 or beyond |
| <i>Electronic commerce (WG IV)</i> | | |
| Electronic transferable records | A/CN.9/761 and A/CN.9/768 | Estimated 2015 or beyond |
| <i>Insolvency (WG V)</i> | | |
| (i) Revisions to Guide to Enactment of the Model Law on Cross-Border Insolvency | A/CN.9/763 and A/CN.9/766 | 2013 |
| (ii) Obligations of directors of an enterprise in the period approaching insolvency | | 2013 |
| (iii) Updating of The Model Law on Cross-Border Insolvency: the Judicial Perspective | | 2013 |
| <i>Security interests (WG VI)</i> | | |
| (i) Draft Technical Legislative Guide on the Implementation of a Security Rights Registry | A/CN.9/764 and A/CN.9/767 | 2013 |
| (ii) Draft Model Law on Secured Transactions ¹ | | Not yet known |

B. Other activities

8. UNCITRAL's main areas of activity other than legislative development are part of its mandate to support the adoption and use of UNCITRAL texts. The main activities concerned are technical cooperation and assistance, which covers both promotion of the adoption of a text and its application and interpretation, and coordination of work in the field of international trade law. As the Strategic Direction paper notes, harmonization in its true sense requires that, in addition to legislative activity, these areas be addressed for each text that UNCITRAL adopts (see, further, A/CN.9/752, para. 3).

9. Reports available to the forty-sixth session of the Commission describing UNCITRAL's current activities in these areas will be as follows:

A/CN.9/772 Bibliography of recent writings related to UNCITRAL's work;

¹ At its twenty-third session (2013), the Working Group had a general exchange of views with respect to the draft Model Law and, in particular, the scope of the Working Group's mandate in that regard.

A/CN.9/775 Technical assistance to law reform and technical assistance resources, including UNCITRAL publications, the UNCITRAL website and UNCITRAL regional presence: survey of the activities undertaken by the UNCITRAL Regional Centre for Asia and the Pacific (RCAP);

A/CN.9/773 Status and promotion of UNCITRAL legal texts (status of the conventions and model laws resulting from UNCITRAL's work as well as the status of the New York Convention);

A/CN.9/776 Coordination and cooperation: (i) Brief survey of the activities undertaken by the Secretariat; (ii) Reports of other international organizations;

A/CN.9/777 Promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts: (i) Case Law on UNCITRAL texts (CLOUT), (ii) Digests of case law relating to UNCITRAL legal texts;

Oral report Role of UNCITRAL in promoting the rule of law at the national and international levels.

III. Summary of planned and possible activities after July 2013

A. Legislative work

1. Planned future work

10. The Commission has previously considered proposals for future legislative work on the following topics and mandated a working group to commence such work at a future time:²

(a) *Arbitration*: See the Note by the Secretariat on possible future work in the field of dispute settlement (A/CN.9/785), which addresses (i) arbitrability: this topic has been maintained by Working Group II on its future work agenda since 2006 (A/62/17, para. 177);³ and (ii) revision of the 1996 UNCITRAL Notes on Organizing Arbitral Proceedings. The Commission has agreed to decide at a future session whether draft revised Notes should be examined by the Working Group before being considered by the Commission, or whether the work should be undertaken by the Secretariat (A/67/17, para. 70).

(b) *Insolvency*: The Working Group's current mandate extends, in addition to issuing guidance on the interpretation of selected concepts of the UNCITRAL Model Law on Cross-Border Insolvency relating to the centre of main interests, to possibly developing a legislative text (such as a model law, convention, or provisions for a domestic insolvency law) addressing selected international issues, including jurisdiction, access and recognition. Working Group V has recommended that the Commission confirm its view that the scope of the Working Group's

² Items that the Commission has considered in outline, but agreed to revisit after discussion of further or revised proposals submitted to it, are discussed in the following sub-section as proposals for possible future work.

³ See, also, subsequent reports of the Commission A/63/17 and Corr.1, para. 316; A/64/17, para. 299; and A/66/17, para. 203.

mandate as originally approved included centre of main interests in the context of enterprise groups (A/CN.9/763, para. 13). Working Group V agreed that this topic be handled upon completion of the current revisions proposed for the Guide to Enactment of the UNCITRAL Model Law on Cross-Border Insolvency relating to the centre of main interests of individual debtors (A/CN.9/763, para. 14). The Working Group has also agreed that directors' obligations in the context of the insolvency of enterprise groups should be considered (A/CN.9/763, para. 92 and A/CN.9/766, para. 104); and

(c) *Security interests*: The Commission provided a mandate for the preparation of a Model Law on Secured Transactions to Working Group VI to commence work on the preparation of a simple, short and concise model law on secured transactions (A/67/17, para. 105). The report of that Working Group includes an exchange of views on that mandate and the scope of a model law to be developed (A/CN.9/767, paras. 63-64).⁴

2. Possible future work

11. The Commission has before it proposals for possible future legislative work on the following subject areas (listed alphabetically):

(a) *Arbitration*: See the Note by the Secretariat on possible future work in the field of dispute settlement (A/CN.9/785), which addresses work identified in consultations held by the Secretariat: the question of concurrent proceedings in the field of investment arbitration was seen as increasingly important;

(b) *Commercial fraud*: UNCITRAL has considered the issue of international commercial fraud at several sessions commencing with its thirty-fifth session in 2002 (A/57/17, paras. 279-290; see also further discussions referred to in para. 75 of the Agenda for the forty-sixth Commission session). At this session, the Commission will have before it a note on commercial fraud (A/CN.9/788) outlining the conclusions of an informal meeting hosted by the Secretariat in Vienna on 29-30 April 2013;

(c) *Electronic commerce*: The Commission has previously agreed that work regarding electronic transferable records might include certain aspects of other topics such as identity management, use of mobile devices in electronic commerce and electronic single window facilities. However, there has been no mandate by the Commission for a working group to take up these subjects, other than as aspects of current work on electronic transferable records (A/66/17, paras. 235 and 239);

(d) *Insolvency*: In addition to the topics relating to the remainder of its current mandate, the following topics for possible future work were mentioned at the forty-third session of the Working Group (A/CN.9/766, para. 109), acknowledging that a further mandate for such topics would have to be sought from the Commission at some future time: private international law rules applicable in insolvency proceedings, especially as they relate to enterprise groups; the effectiveness of current instruments in the light of the global financial crisis, in particular, the provisions of the Legislative Guide on Insolvency Law relating to financial contracts; the relevance of the Model Law on Cross-Border Insolvency to

⁴ See footnote 1.

the resolution of financial institutions; and enforcement of substantive rights and claims in a cross-border insolvency context;

(e) *International contract law*: At its forty-fifth session, in 2012, the Commission considered the desirability of work in the area of international contract law on the basis of a proposal by Switzerland (A/CN.9/758). It was determined that there was a prevailing view in support of requesting the Secretariat to organize symposiums and other meetings, including at the regional level, maintaining close cooperation with Unidroit, with a view to compiling further information to assist the Commission in the assessment of the desirability and feasibility of future work in the field of general contract law at a future session. At its forty-sixth session, the Secretariat will present an oral report on this topic to the Commission;

(f) *Microfinance/Creating an enabling legal environment for microbusiness and small and medium-sized enterprises (MSMEs)*: At its forty-fifth session, the Commission agreed that one or more colloquiums on microfinance and related matters would be held with a focus on topics related to creating an enabling legal environment for microfinance and micro, small and medium-sized business. At its forty-sixth session, the Commission will have before it a note (A/CN.9/780) outlining the key findings of the colloquium organized by the Secretariat in Vienna on 16-18 January 2013, as well as recommendations for consideration by the Commission. The Commission will also hear an oral report on State's replies to a questionnaire (circulated in 2011-2012) on their experience with the establishment of a legislative and regulatory framework for microfinance;

(g) *Online dispute resolution (ODR)*: Future work raised with the Commission at its forty-fourth session includes guidelines and minimum requirements for online dispute resolution providers and neutrals; substantive legal principles for resolving disputes; and a cross-border enforcement mechanism (A/66/17, paras. 213-214);

(h) *Public procurement and related areas, including public-private partnerships (PPPs)*: At its forty-fifth session, the Commission agreed that a glossary of terms used in the UNCITRAL Model Law on Public Procurement and suggested topics for procurement regulations should be produced to support the Model Law. Draft papers on these topics will be before the Commission for its consideration (A/CN.9/771 and A/CN.9/772, respectively).

The Commission also agreed to explore the possibility of issuing further guidance papers on several topics to support the implementation and use of the Model Law, and instructed the Secretariat to undertake a study of topics that might warrant such guidance papers. The Commission also instructed the Secretariat to explore options for publishing and publicizing the various resources and papers themselves (A/67/17, paras. 109, 110 and 114). As regards several of those topics (suspension, debarment and self-cleaning, codes of conduct, interaction between suppliers or contractors and procuring entities and internal controls), the consultations indicated that there may be a need for further legislative work on some or all of these issues. As regards the other topics, the consultations indicated that further legislative activity was not warranted, but that further materials would be provided to the Secretariat in due course.

As regards PPPs, the recommendations emanating from a Colloquium, held in Vienna from 2-3 May 2013 pursuant to the Commission's suggestion made at its

forty-fifth session (*supra*, para. 120), to consider possible future work in public-private partnerships (PPPs) will also be before the Commission for its consideration (A/CN.9/779);

(i) *Security interests*: The Commission has agreed that security interests in non-intermediated securities (in the sense of securities other than those credited in a securities account), the rights and obligations of the parties to a security agreement and specific issues arising in the context of intellectual property licensing practices should continue to be retained on the future work agenda of Working Group VI (A/67/17, paras. 105, 268 and 273), as previously recommended by the 2010 International Colloquium on Security Interests (www.uncitral.org/uncitral/en/commission/colloquia_security.html).

Table 2

Summary of planned and possible future legislative activity

| <i>Subject area</i> | <i>Proposal</i> | <i>Planned or possible future work</i> | <i>Other relevant subject areas</i> |
|---|--|--|---|
| Arbitration | - Arbitrability; Revision of the Notes on Organizing Arbitral Proceedings - Multiple, concurrent proceedings in the field of investment arbitration; Dispute boards | Planned Possible | — |
| Commercial Fraud | Conclusions of informal meeting to be considered | — | |
| Electronic commerce | Identity management; single Windows; mobile commerce | Possible | — |
| Insolvency | Centre of main interests in the enterprise group context (including international aspects such as jurisdiction, access and recognition); directors' obligations in the group context | Planned | |
| International contract law | Broad proposal on international contract law | Possible | — |
| Microfinance/creating an enabling legal environment for MSMEs | Legal aspects of an enabling environment for MSMEs, e.g. corporate structure, dispute resolution, electronic transfers, access to credit and insolvency | Possible | Arbitration/ conciliation, insolvency, security interests, E-commerce |
| ODR | Guidelines and related issues; substantive legal principles; cross-border enforcement mechanism | Possible | Arbitration/ conciliation, E-commerce |
| Public Procurement | Sanctions-related issues | Possible | Arbitration/conciliation |

| <i>Subject area</i> | <i>Proposal</i> | <i>Planned or possible future work</i> | <i>Other relevant subject areas</i> |
|---------------------------------|---|--|-------------------------------------|
| PPPs | Development of a Model Law or Legislative Guide ⁵ | Possible | Arbitration/conciliation |
| Security interests ⁶ | - Preparation of a Model Law on Secured Transactions | Planned | Insolvency |
| | - Non-intermediated securities; party rights; intellectual property | Possible | |

B. Activities to support the adoption and use of UNCITRAL texts

12. Reports of the activities supporting the adoption and use of UNCITRAL texts (including technical assistance; promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL texts; identifying the status of and work in promoting UNCITRAL texts; coordination and cooperation; and promoting the rule of law at the national and international levels) are included in documents A/CN.9/772, A/CN.9/773, A/CN.9/775, A/CN.9/776 and A/CN.9/777; other activities will be reported orally to the Commission.⁷ These activities are expected to continue in the coming year at approximately the same level as in the year to July 2013.

13. As noted at several places in those documents, however, the demand for such activities far exceeds the resources available in the Secretariat to meet it, even given the additional resources provided by the UNCITRAL regional office in Incheon.

14. The implications for planning of future work within UNCITRAL and its strategic direction are discussed below.

IV. Allocation of resources and prioritization

A. Level of activity and need for prioritization or alteration in working methods

15. At its forty-fifth session, the Commission stated that, "... as is clear from the above analysis, UNCITRAL cannot continue, with its existing resources, to generate legal texts at the current rate and work towards the implementation and use of all UNCITRAL texts to the extent necessary." (A/CN.9/752/Add.1, at para. 25).

16. At the legislative level, paragraph 7 and Table 1 indicate the ongoing activities of the Working Groups, including those to be concluded at the Commission's forty-sixth session and those that are ongoing; Working Group I does not have a

⁵ The Colloquium will take place after the date of this Report. The development of a legal text on PPPs is one of the issues for discussion at the Colloquium; it is therefore included here for completeness, and the Report of the Colloquium will need to be examined for its recommendations (A/CN.9/779).

⁶ See footnote 1.

⁷ With respect to coordination activities on security interests, see provisional agenda A/CN.9/759, para. 18.

current legislative mandate. The Commission therefore has significant flexibility in setting its future legislative work programme. Paragraphs 10 and 11, including Table 2, set out the existing proposals for future work; the final column of the table identifies areas in which a proposal may involve issues of another subject area. More details of some of the proposals are found in the oral reports to the Commission and in the following documents: A/CN.9/785 (arbitration and conciliation); A/CN.9/763, paragraphs 13 and 14 and A/CN.9/766, paragraphs 103 and 104 (insolvency); A/CN.9/780, paragraphs 49-55 (Microfinance/Creating an enabling legal environment for MSMEs); A/66/17, paragraphs 213-214 (ODR); A/CN.9/779 (PPPs); and A/CN.9/788 (commercial fraud).

17. Clearly, six working groups cannot work on all of these activities simultaneously if UNCITRAL's current working methods are to be preserved (these methods are set out in A/CN.9/752, para. 5 and Section B), unless some of the suggestions proposed in the Strategic Direction paper are adopted (A/CN.9/752, paras. 34 and 35, and 37-40), such as (a) allocation of more than one topic to each working group, and (b) placing of greater emphasis on informal negotiations than on formal negotiations when developing texts, so that one working group could handle more than one topic within its allocated two weeks of conference time per annum.

18. In other words, UNCITRAL's legislative activity has now reached a level at which prioritization of subject-areas and/or some alteration in working methods is a necessity, even before considering the allocation of resources between legislative and other activity (a question that is addressed in section D, paras. 38-42 below).

B. Prioritization of subject areas

19. Prioritization of subject areas was discussed at the first Commission session in 1968, which concluded it was the appropriate manner of selecting topics for its work (A/7216, para. 39). At that first session the Commission also had before it a report on the progressive development of the law of international trade, submitted by the Secretary-General to the General Assembly at its twenty-first session — the session at which UNCITRAL was established (A/6396).

20. The Secretary-General's Report stated that, "in considering topics suitable for harmonization and unification, three general observations should be made. First ... harmonization is more easily achieved in technical branches of the law than in subjects closely connected with national traditions and basic principles of domestic law" (A/6396, para. 203). Examples of technical branches of the law given included transportation, international banking and arbitration.

21. The second observation was that, "the unification process is desirable per se only when there is an economic need and when unifying measures would have a beneficial effect on the development of international trade" (A/6396, para. 204).

22. The third observation was that, "in addition to their direct impact, unifying measures tend to have what is called a 'radiation' effect. This occurs when, for example, a State which is not a party to an international convention decides to apply the principle on which the international convention is founded, or when a unifying technique used in one international instrument is subsequently made part of another." (A/6396, para. 205).

23. At its first session, the Commission decided that it would select certain substantive topics for inclusion in its future work programme and identify certain topics for priority (A/7216, para. 34). The Report of that session does not set out the debate on prioritization on specific topics in detail, but the conclusions reflect the matters and suggested topics set out in the Report of the Secretary-General (see, also, the Strategic Direction paper, A/CN.9/752, para. 6). The Commission also stated at its first session that it would focus on short-term topics, rather than committing to all proposed topics at that session, with indications as to priority (A/7216, para. 34).

24. While there have been many developments in private international trade law since that time, the Commission may consider that those observations should continue to guide its selection of subjects.

25. The first observation underpins why UNCITRAL has not engaged in matters such as the regulation of corporate and taxation law. Instead, it has focussed on the areas set out in paragraph 20 above and others such as international sale of goods, electronic commerce, insolvency and online dispute resolution as more fully described in the Strategic Direction paper (A/CN.9/752, paras. 6 and 7).

26. The second observation, among other things, explains why UNCITRAL has taken up some subjects that are more closely connected with national traditions — such as public procurement and insolvency law. This is because such subjects have a potential beneficial effect on the development of international trade, rather than a potential benefit in terms of development of the legal and regulatory framework in a particular country alone. (In the case of public procurement, the OECD estimates that the total market value approaches 13 per cent of GDP in OECD countries and more elsewhere, the European Union indicates that international trade even within its borders is under 5 per cent of contract value, and many systems were riddled with obstacles to foreign participation before texts to remove them were issued by the World Trade Organization, the European Union, the World Bank and regional development banks, and UNCITRAL.)

27. As the Commission will be aware, the third observation has been proved in practice. Some examples include the enactment by the six States members of the Commission de la Communauté Economique et Monétaire de l'Afrique Centrale (CEMAC) of the substance of the United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea (the Rotterdam Rules) without ratification of the Convention; the use by the Organisation pour l'Harmonisation en Afrique du Droit des Affaires (OHADA) of the United Nations Convention on Contracts for the International Sale of Goods (CISG) as a regional law without ratification of the Convention; and, in the context of updating e-commerce laws, the inclusion by several States of provisions of the United Nations Convention on the Use of Electronic Communications in International Contracts (ECC), without ratification of the Convention, as well as the enactment of a regional model law based on the Convention.

28. In the Strategic Direction paper, it is noted that setting priorities in UNCITRAL's work programme requires a consideration of not only the current and likely future scope of that programme (in terms of the resources available for its activities), but also the role and relevance of UNCITRAL both within the United Nations and in the field of international trade and commerce (A/CN.9/752/Add.1,

para. 24). The Strategic Direction paper continues that “UNCITRAL’s role and relevance can be assessed by reference to the work and priorities of the United Nations, donor communities and priorities of national governments. Key developments, such as the Paris Declaration on Aid Effectiveness (2005), and major international issues of concern — anti-corruption agenda, 2008 global financial crisis, conflict/post-conflict situations — will shape the priorities of these bodies” (ibid.).

29. It is suggested that a further principle that the Commission may wish to apply when prioritizing subject areas is the extent to which work on any subject selected by the Commission would (a) accord with the priorities of these bodies and member States, and (b) enable a symbiotic approach with the activities of these bodies as set out in the notes by the Secretariat on technical assistance activities and activities to ensure coordination with the work of other organizations active in the field of international trade law undertaken since the Commission’s forty-fifth session (A/CN.9/775 and A/CN.9/776, respectively).

30. The Commission may therefore wish to apply the three observations and the matters in the preceding paragraph in selecting among the proposals in Table 2 for future legislative activity. The materials referred to in paragraph 16 above that describe the proposals in more detail may assist the Commission in assessing how they fit within its mandate and within the priorities of donor communities and national governments. Were the Commission to decide, for example, that a topic was of importance to development, but fell outside its mandate to address international trade law, the Commission might also consider recommending it to another body active in law reform for its own work programme.

31. In that regard, the Commission may also wish to balance the proposals of existing working groups for further work in their subject areas with the views of member States at a more strategic level.

32. As regards the time period over which it plans its future work, the Commission may wish to consult members of, and observers to, relevant working groups as well as the Secretariat on the likely time frame for planned and possible future legislative activity, so as to ensure that its planning accords with the life cycle of a text (see the Strategic Direction paper on that topic, paras. 6-62). In addition, the Commission may consider that some of the future work proposals, whether possible or planned, should be addressed sooner, and others later — in other words, that it addresses prioritization in terms both of importance and time frame.

33. The Commission may also wish to consider whether the priority it sets among subjects for legislative activity should apply also to activities supporting the adoption and use of UNCITRAL texts and its broader work programme, or whether other considerations should also apply in that context. Some considerations on the possible scope of activities to support the adoption and use of UNCITRAL texts are discussed in paragraphs 39 and 41 below.

C. Possible need for alteration of working methods

34. The Commission may wish to bear in mind the issues raised regarding working methods in the Strategic Direction paper, including the number of sessions of

working groups per year, documentation and ways of working (paras. 34-40). In summary, that section of the Strategic Direction paper notes the importance of the consensus-based methodology of the Commission's work in ensuring the acceptability of its texts, but that servicing six working groups was stretching the Secretariat's resources to the maximum; undertaking some work informally; and the question of reducing documentation.

35. One option noted above would be for each working group to take on more than one topic at a time: one meeting per annum could be reserved for one topic, and the second meeting for another (thus preserving the allotted conference time for working group sessions). This approach would facilitate legislative activity on more than six topics at a time. However, the Commission may consider that that approach would also stretch the Secretariat's resources beyond breaking point.

36. Another option would be to increase the proportion of informal to formal negotiations, with some texts being developed outside the working group structure and presented directly to the Commission (as has been done previously, as noted in the Strategic Direction paper, para. 33). Indeed, in its first session, the Commission stated that the balance between informal and formal negotiations should be assessed in the light of the nature of the topic concerned (A/7216, para. 43). However, as the Strategic Direction paper also notes, the risk is that the universal representation that also supports the acceptability of UNCITRAL texts might thereby be compromised (paras. 35 and 37-40).

37. The Commission may also wish to consider ways of streamlining documentation, as suggested in the Strategic Direction paper (A/CN.9/752, para. 36). Issues relating to the translation of UNCITRAL documents and texts are considered in paragraphs 45-47 below.

D. Prioritization within UNCITRAL's overall work programme

38. While the Strategic Direction paper notes that the comparative advantage of UNCITRAL (as compared with other organizations working in similar areas) lies in its legislative working methods as described (A/CN.9/752, paras. 35 and 37-40), the Commission indicated at its forty-fifth session that it would consider the suggestions in that paper to promote an integrated approach to UNCITRAL's range of activities, beginning with the development of a proposed legislative project and carrying through to technical assistance and monitoring of the use and adoption of the resulting text. Indeed, as the Strategic Direction paper points out, the activities supporting the enactment and use of UNCITRAL texts give UNCITRAL's legislative work meaning and relevance: "without those activities, the legislative texts remain little more than reference tools" (A/CN.9/752, para. 41).

39. With its current and anticipated level of resources and the existing balance between legislative activity and activity on other aspects of the mandate, the Secretariat is likely to be able to continue to adjust its current level of activity to support the adoption and use of UNCITRAL texts. Nonetheless, it is clear that the Secretariat cannot undertake further activities, such as those suggested as a possible basis for a work programme promoting the rule of law at the national and international levels, which the Commission indicated it wished to consider at this session (A/67/17, para. 230). These activities included, for example:

(a) Supporting the adoption and use of those existing texts not currently supported by an existing working group or other legislative work (for a complete list of texts as at 29 May 2012, see Annex to the Strategic Direction paper, A/CN.9/752/Add.1);

(b) Developing practice guidelines or training materials for judges working in cross-border areas of the law, beyond what was done by Working Group V (Insolvency Law) with regard to cross-border insolvency;

(c) Formalizing networking by creating a list of participants ("listserv") that would allow experts to "meet" and exchange information, as well as help States that needed assistance to identify experts in the field. The example was given of a similar mechanism that had been launched by the Hague Conference on Private International Law;

(d) Further developing the cooperation of UNCITRAL with the World Bank on elaborating the links between economic development and trade law, and the role of trade law in helping States attract foreign trade and investment, and enhancing the visibility and integration of trade law within the broader United Nations rule of law agenda, the benefits of which are described in the Strategic Direction paper (A/CN.9/752/Add.1, paras. 17-20);

(e) Monitoring experience in the adoption and use of UNCITRAL texts, which can be used both to indicate where revision or modernization may be necessary, and to improve the efficiency of future legislative work; and

(f) Identifying existing resources and publications of other bodies active in relevant law reform and development, which might be made available to support the implementation, interpretation and use of UNCITRAL texts, and establishing mechanisms for ongoing collaboration with such other bodies.

40. The Commission has not yet considered whether and how to mobilize additional and external resources for its activities, such as through joint activities and cooperation with other bodies, as raised in the Strategic Direction paper (A/CN.9/752/Add.1, para. 23). Despite its vastly increased workload and output, as that paper points out, the Secretariat currently operates with more or less the same level of human and other resources in real terms that it was allocated shortly after it was established (A/CN.9/752, para. 25); that is 14 professional posts and 7 general service posts, plus 1 professional post and 1 general service post to support the RCAP in Incheon. Indeed, a consequence for the Secretariat of budget cuts throughout the United Nations is that one of the general service posts has been identified for abolition as of 1 January 2014, with the consequence that ensuring the ongoing publication of the UNCITRAL Yearbook will prove difficult. It is also

assumed that the current financial backdrop is such that the availability of external resources will be limited.

41. Furthermore, experience with existing technical assistance and coordination projects indicates that external support provided, for example, by financing Secretariat travel to events organised by third parties to promote the adoption and use of UNCITRAL texts, may create additional pressure on the Secretariat to dedicate appropriate resources to the implementation of such projects.

42. The Commission may therefore wish to consider, when assessing the usefulness of the activities set out in paragraph 39 above, whether the current balance between them and legislative activities is optimal, given current resources. In that regard, the Commission may wish to assess whether the continuing servicing of six working groups is appropriate. Reducing the number of working groups involved on legislative activity to five, for example, would allow the Secretariat to devote more of its time to these other activities.

E. Related questions

1. Working group and Commission support for activities promoting the adoption and use of UNCITRAL texts

43. The Strategic Direction paper suggests that setting aside time at UNCITRAL meetings for the sharing of information by States on initiatives they were undertaking to promote UNCITRAL instruments would, inter alia, make States that might be seeking assistance aware of initiatives that they could access for their benefit. The Commission reserved that topic for possible discussion at its forty-sixth session (A/67/17, para. 230).

44. Including such a time at the end of a working group session before consideration of the report of that session, could both improve the efficiency of that session, and allow States to demonstrate their commitment to supporting the adoption and use of UNCITRAL texts. That type of discussion, which does not require negotiation or deliberation, would not need to be recorded in the report of the relevant session. A similar approach could be taken, as appropriate, for sessions of the Commission.

2. Issuing documents in all official UNCITRAL languages

45. The Commission may be aware of the increasing difficulties of ensuring documents are issued simultaneously in all official United Nations languages. UNCITRAL documents consume a significant portion of resources allocated for translation at the United Nations Office at Vienna. The increasing difficulties reflect, in part, the increase in volume of UNCITRAL documents noted in the Strategic Direction paper (A/CN.9/752, para. 36) and in part other pressures on the language sections concerned. Publications issued by UNCITRAL are particularly affected on the basis that they are not prepared for a specific meeting and thus do not have a firm deadline by which they must be issued. In one recent case, the final Spanish language version of a lengthy UNCITRAL text is unlikely to be published until some two years after its adoption by the Commission.

46. The Commission may also wish to note that the resources available for the translation of material for the website are increasingly limited.

47. The Commission may therefore wish to consider alternative mechanisms to ensure that the policy goal behind the issue of documents in all official languages — the wide understanding of UNCITRAL texts — can be fulfilled. Such mechanisms may include the use of external translators to provide unofficial translations of original texts and/or greater use of United Nations working languages only for some documents. The Commission may also wish to assist the Secretariat in identifying external sources and, as necessary, financial support for such purposes.

I. Introduction

1. At its forty-fifth session, in 2012, the Commission noted that further consideration of desirability and feasibility of future work in the area of PPPs would require additional research and a detailed study by the Secretariat. It therefore agreed that holding a colloquium to identify the scope of possible work and primary issues to be addressed would be helpful. The Secretariat was requested, in preparation for a colloquium, to define the possible topics for discussion at the colloquium, using the provisions of the UNCITRAL instruments on privately financed infrastructure projects¹ (the UNCITRAL PFIPs instruments) and drawing on the resources of other bodies and the deliberations at the forty-fifth session of the Commission. It was expected that the results of the colloquium would be presented

¹ The UNCITRAL Legislative Guide on Privately-Financed Infrastructure Projects (2000) and the Model Legislative Provisions on Privately-Financed Infrastructure Projects (2003), available at www.uncitral.org/uncitral/uncitral_texts/procurement_infrastructure.html.

to the Commission for its consideration. In that regard, it was also agreed that it would be essential to define a clear mandate for any future work in that area.²

2. The colloquium was held in Vienna, from 2 to 3 May 2013. It brought together experts from government, intergovernmental and international non-governmental organizations, private sector and academia. The discussion at the colloquium focused on two main issues: (a) whether there was a need for UNCITRAL work in the area of PPPs; and (b) if so, the scope of such work.

3. Under the first issue the following aspects were discussed: (a) experience with the use and regulation of PPPs since 2003 when the Commission last worked in the related area of privately financed infrastructure projects (PFIPs); (b) experience with the use of the UNCITRAL PFIPs instruments; and (c) particular factors that justify UNCITRAL work in the area of PPPs.

4. Under the second issue the following aspects were discussed: (a) which type of PPPs should be addressed in UNCITRAL work; (b) approaches to regulating PPPs; (c) which form(s) UNCITRAL work should take; and (d) considerations to be taken into account in the organization of UNCITRAL work in the area of PPPs.

5. This note transmits for consideration by the Commission a summary of the discussion and main conclusions reached at the colloquium.

II. Summary of the discussion at the colloquium

A. The need for UNCITRAL work in the area of PPPs

1. Experience with the use and regulation of PPPs since 2003

(a) Use of PPPs

6. It was noted that during the recent decade, in particular since the beginning of the financial crisis, there has been a growing interest in PPPs as an efficient means of resource mobilization for the provision of public services. PPPs have gained popularity also in the context of preparation of major public events (e.g. the Olympic Games). PPPs have thus increasingly been used and new forms of PPPs have emerged.

7. A shift has occurred in many jurisdictions as regards policies that underlie the use of PPPs. Previously, a lack of or insufficient public resources for the delivery of public services was the main driving force for the use of PPPs. Currently, there is a widespread recognition that private sector finance is not the only factor that makes PPPs attractive, other factors being the ability of the private sector to offer innovative, creative and efficient solutions to public needs.

8. Whereas the concept of a “public-private partnership” was earlier considered to be a policy term found only in long-term development programmes or visions at the national level, since 2005 the concept has been defined and regulated in several jurisdictions.

² *Official Records of the General Assembly, Sixty-seventh Session, Supplement No. 17 (A/67/17)*, para. 120.

9. Experience with PPPs has been mixed: some PPPs have been very successful, others less so, while some others have failed completely. A number of studies have been launched by international financial institutions and other entities to analyse the causes of PPPs' failures. The conclusion seems to be that problems with the implementation of PPPs are very specific and depend on the context and experience of countries where PPPs have been implemented.

(b) Regulation of PPPs

10. Some jurisdictions would require specific legislation enabling PPPs; others would not. Recent studies into the extent of regulation of PPPs, such as one into European Bank for Reconstruction and Development (EBRD) countries of operation, showed a wide variety in both how PPPs were regulated and in the scope of legislation.

11. A trend in a number of countries is to regulate PPPs by statute, sometimes in the absence of any prior practical experience with using them. In a few jurisdictions, efforts to legislate on PPPs have been undertaken only at the local/municipal level and not on the national/federal level; in others, legislation at both levels may exist. Only in a few cases was it thought that legislative efforts have resulted in a coherent and comprehensive legislative framework that facilitates, rather than creates obstacles to, the conclusion and successful use of PPPs. The adoption of PPPs-specific legislation in some countries has led to inconsistencies in the legislative framework. In some countries, the adopted PPPs laws exist only on paper, and are not used in practice. In some jurisdictions, the adoption of a PPPs law resulted in the appearance of three and more legislative acts that regulate the same issues (e.g. a law regulating public procurement, law regulating concessions and a PPPs law) and that may conflict with each other.

12. The existing texts on PPPs at the international and regional levels were recalled.³ It was noted that not all States take them into account when drafting PPPs laws.

13. In some jurisdictions, PPPs are regulated through regulations or guidance rather than by statute. In other countries, PPPs are not specifically regulated at all. PPPs in these countries may be created and implemented under the existing legal framework, i.e. using a combination of other laws in the State, such as the public procurement or concessions law. It was observed that this approach does not always produce the desired results if, for example, the stringent requirements of a public procurement law or concessions law are transposed without any modification to suit PPPs. In particular, a focus on price as the dominant evaluation criterion common in public procurement law might be excessive and inappropriate in the context of PPPs. Limitations on negotiations usually embedded in a public procurement law, it was said, would also not allow for sufficient flexibility in the PPPs context.

14. In some jurisdictions, in the absence of a specific legal framework on PPPs, rules regulating PPPs have been adopted on a project-by-project basis; the creation of a PPP may then be subject to cumbersome approvals in legislative bodies or municipal authorities, and may require feasibility studies to be first approved by the Government.

³ See, further, A/CN.9/782, Section II.B.4.

15. The Commonwealth of Independent States (CIS) was cited as an example of a regional effort to prepare a model law on PPPs.

16. Laws regulating PPPs vary in scope and level of detail. Some laws contain a definition of the term “public-private partnership” while others leave the term undefined. An observed trend is to encompass in a PPP law a wide range of arrangements through which the private sector can engage in the provision of public services. Some PPPs laws are very detailed in regulating various aspects of PPPs (said to be at the risk of over-regulating them), while others are very general and may contain gaps in regulating important issues. Most regulate contractual relationships arising from PPPs and call for the establishment of a PPP unit with a variety of functions and roles. The accumulated experience in some jurisdictions with the implementation of PPPs and the role of creditors in the process have led to adjustments in the existing legislative framework with the view to making laws more workable and PPPs created under them “bankable”.⁴ The scope of the draft model law currently being discussed in the CIS Inter-Parliamentary Assembly covers production-sharing and revenue-sharing agreements.

17. Another trend observed has been to include PPPs among subjects of negotiation for accession to the Agreement on Government Procurement of the World Trade Organization (GPA).⁵ If PPPs are part of a country’s GPA commitments, the principles of national treatment and most-favoured-nation clauses will apply to them.

18. The link between the quality of PPP regulation and the quality of implementation was discussed at length. In some jurisdictions, it was observed, successful PPPs have been implemented without any specific legislative framework. In other jurisdictions, where PPPs failed, the lack of appropriate legal framework could have been a contributing factor. At the same time, PPPs have also failed in some cases in jurisdictions that have in place an adequate legal framework applicable for PPPs. The absence of practical experience with the implementation of PPPs could have been a contributing factor to the failures in such cases. It was recognized that there could be many contributing factors to successes or failures of PPPs, including the political will and interest of the host country in a project and capacity and quality of engagement of all parties to the project. While it was difficult to illustrate a direct causal link between the quality of legal framework applicable to PPPs and their failure or success, it was undisputed that an inadequate legal framework creates barriers to the creation and successful use of PPPs.

2. Experience with the use of the UNCITRAL PFIPs instruments

19. According to some speakers, no legal instrument existing at the national, regional or international level, including the UNCITRAL PFIPs instruments, can be

⁴ This term may be used to describe a project that is acceptable to institutional investors and hence one in which contractors are likely to participate.

⁵ The plurilateral Agreement on Government Procurement of the World Trade Organization (the GPA), negotiated in parallel with the Uruguay Round in 1994, and entered into force on 1 January 1996. On 15 December 2011, negotiators reached an agreement on the outcomes of the renegotiation of the GPA. This political decision was confirmed, on 30 March 2012, by the formal adoption of the Decision on the Outcomes of the Negotiations under Article XXIV:7 of the Agreement on Government Procurement (GPA/113). Both texts are available at www.wto.org/english/tratop_e/gproc_e/gp_gpa_e.htm.

considered as a de facto standard or model available to States for PPPs legal reform. Other speakers considered that the UNCITRAL PFIPs instruments could be seen as such a model, and examples of laws on PPPs in CIS countries, Eastern Europe, North Africa, China and Mongolia, enacted on the basis of the UNCITRAL PFIPs instruments, were provided. EBRD reported that it used the UNCITRAL PFIPs instruments for assessing legislation on PPPs in thirty-four countries of its operation and consider them a useful benchmark tool. The utility of those instruments was highlighted in particular because they deal with issues beyond the selection of the project operator — a relatively straightforward stage where the main principles of sound public procurement apply. The point was made that not all States and not all institutions or individuals using the UNCITRAL PFIPs instruments acknowledge this fact.

20. Some speakers pointed out that, despite their use by some States and organizations as a benchmark for law reforms, there is no widespread awareness about the UNCITRAL PFIPs instruments. They have proved to be a useful source of information but mainly for experts and academia from countries and institutions that have extensive experience with PPPs. For others, especially in countries that do not have any or much experience with PPPs, they are excessively complex and do not reflect the immediate needs and realities on the ground, so they have proved to be of limited utility for legislators and regulators. They do not reflect regional particularities, particularities of PPPs in various sectors (water, health, roads, etc.) and do not allow countries to graduate from simple forms of PPPs to more complex ones. They tend to overwhelm readers with complex concepts, not taking into account that readers may not yet comprehend even simple concepts in the context of PPPs such as what would constitute State support measures, and what would be considered risks on the parties as opposed to their liabilities or obligations.

21. Some speakers raised a concern that while the UNCITRAL PFIPs instruments addressed the majority of PPPs — PFIPs — they failed to address some other forms of PPPs that became widespread since 2003 (such as partnering and alliancing). Others considered that the UNCITRAL PFIPs instruments might only seem to be outdated in that respect but were prepared intentionally with a limited scope and with a main focus on infrastructure development. Certain projects were excluded from coverage by choice (such as oil and gas concessions and institutional PPPs). It was also an informed choice to address only the core issues of PFIPs and guide enacting States as regards other branches of law where reforms would be necessary for the legal framework applicable to PFIPs to be coherent and comprehensive.

22. In response to the concerns about the complexity of the UNCITRAL PFIPs instruments, it was explained that the complexity of projects necessitated dealing with complex issues. The lack of capacity in some countries to implement PPPs should not mean that the quality of UNCITRAL texts should be jeopardized by taking a very simplistic approach to treating issues that are not simple; nor should the role of those instruments be downgraded to one of a simply educational nature. The UNCITRAL instruments need to reflect best practices in regulating PPPs. It was also pointed out that complaints about complexity may be valid as regards the UNCITRAL Legislative Guide on PFIPs, but not as regards the UNCITRAL Model Legislative Provisions on PFIPs. The former is indeed long and complex, but this is justified as the Guide is an analytical tool that explains various options and the implications of each. The latter, the UNCITRAL Model Legislative Provisions on

PFIPs, however, is a short and simple text providing guidance to States as regards the core provisions to be included in their laws on PFIPs.

3. Particular factors that justify UNCITRAL work in the area of PPPs

23. As the discussion summarized in section 1 above demonstrates, more States have started regulating PPPs and more definitions of this concept appear. Much confusion currently exists as regards terminology, the appropriate scope of a law on PPPs, its content and interaction with other areas of law, political aspects and policy considerations (trade, governance and employment). Poor laws enable poor projects, in particular leading to excessive transaction costs because of the need to prepare and negotiate complex contracts that would have to address the gaps and inconsistencies in the existing legal framework. This does not facilitate efficient use of public, private or development assistance resources. Institutional reforms that have accompanied legislative efforts have added even more complexity since they have led to the proliferation of State institutions dealing with issues of PPPs. This problem, it was noted, did not exist before 2003 when only a few national institutions entrusted with issues of PPPs, such as PPPs units (a common term for agencies handling policy and practical issues in PPPs), existed.

24. The view was that the international community, i.e. international, regional and subregional institutions, has not been effective in guiding States as regards legislative or institutional reforms in the area of PPPs. The situation is characterised by uncoordinated rule-making, technical assistance and capacity-building and inconsistent results and confusion. There was an urgent need therefore, according to the speakers that raised this issue, to achieve an integrated approach by all organizations that produce model laws on PPPs or guidelines on how to prepare and implement a national law on PPPs.

25. UNCITRAL was therefore urged to tackle all these difficulties faced by States in preparing a coherent law on PPPs. With its mandate to coordinate activities of various organizations preparing legal texts in the area of international trade law, UNCITRAL could ensure that the international community would start speaking in one language on the basis of an UNCITRAL model. The current situation is the reverse, and the UNCITRAL PFIPs instruments are not adequate to change it. Speakers considered that it is appropriate now to analyse why this is so and how to redress the situation.

26. PPPs have increasingly been used in various forms and various contexts and it is most likely that they will be used in an even wider array of contexts and forms. A survey of PFIPs and PPPs legislation worldwide indicated that PPPs laws contained some elements not found in PFIPs laws, including the UNCITRAL PFIPs instruments, arising from the distinct features of non-infrastructure-related PPPs. It was therefore argued that the scope of the UNCITRAL PFIPs instruments should be expanded by regulating some or all types of PPPs not currently covered.

27. As PPPs have proved to be an extremely effective tool under some circumstances and an undesirable tool under other circumstances, it was thought that an analysis of lessons learned from their implementation would assist in identifying factors that have contributed to the successes and failures. Safeguards against abuses and common mistakes would need to be provided accordingly. Some safeguards not found in the UNCITRAL PFIPs instruments would need to be added,

and some that are found in those instruments would need to be rephrased or revised in order to reflect practice.

28. It was noted in this regard that the UNCITRAL PFIPs instruments currently lack some important safeguards and provisions, such as on social clauses and other measures promoting social responsibility and pro-poor projects. As suggested at the UNCITRAL congress “Modern Law for Global Commerce” (Vienna, 9-12 July 2007),⁶ provisions aimed at anticipating and minimizing disputes between the contracting authority and a project operator should also be developed as a way of effectively handling continued relations between the core contracting parties to PPPs. Such preventive mechanisms may include regular meetings, alerts about possible changes in legislation and regulations and establishment of standing commissions in various sectors ready to intervene into disputes.

29. Some safeguards included in the UNCITRAL PFIPs instruments have not been sufficiently set out. For example, those aimed at transparency and accountability should be applicable not only at the stage of the selection of the project operator but throughout the project. The need for public disclosure of information about the movement of resources from the State to the project operator and vice versa was specifically highlighted. Anti-corruption measures should be strengthened, for example by discouraging one-to-one meetings and instead encouraging the use of public media and modern means of communication for better traceability of operations.

30. Another area to be developed in the UNCITRAL PFIPs instruments, it was added, is effective dispute resolution. The UNCITRAL PFIPs instruments do not address in detail the complexity of dispute resolution mechanisms that are usually involved in PPPs and crucial role that the choice of governing law and dispute resolution forum plays in effective dispute resolution. Different clusters of agreements may refer to various arbitration rules and governing laws and places for resolution of disputes. Their interaction with each other should be explained.

31. The view was also expressed that the UNCITRAL model legislative provisions and relevant provisions in the Guide addressing dispute resolution could be more balanced in treating various forums for dispute resolution — international arbitration as opposed to domestic dispute settlement. Dispute resolution through international arbitration has in many cases not led to effective outcomes, most importantly regarding the enforcement of international arbitral awards. This is despite the provisions of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, done at New York, on 10 June 1958 (the New York Convention)⁷ that are binding on the prevailing majority of States. Proliferation of international arbitration forums, cases and rulings, coupled with proliferation of investment treaties, have complicated dispute settlement through international arbitration. A shift towards emphasizing the importance of effective domestic dispute settlement and the need to build local capacity for such purpose may be needed in the UNCITRAL PFIPs instruments.

⁶ See the Proceedings of the Congress, chapter V; available from www.uncitral.org/pdf/english/congress/09-83930_Ebook.pdf.

⁷ United Nations, *Treaty Series*, vol. 330, No. 4739. Also available at www.uncitral.org/uncitral/en/uncitral_texts/arbitration/NYConvention.html (accessed May 2013).

32. Such a shift, if it were to take place, was recommended without jeopardizing the enabling environment for international arbitration. In particular, the contracting authority should be allowed by law to agree to international arbitration under a PPP contract; in many legal systems, this approach is currently not possible although the legal framework may generally allow for international arbitration. UNCITRAL was urged in any future work on PPPs also to address other obstacles towards achieving effective settlement of disputes arising from PPPs: (a) the necessary experience, skills and expertise of the judiciary to address complex issues in PPPs; (b) inefficiencies in court systems; (c) lack of independence; (d) accessibility (procedures may discriminate against foreign investors as opposed to national entities); and (e) reluctance at the domestic level (for a variety of reasons) to enforce international arbitral awards despite international obligations on States to do so under the New York Convention and other multilateral and bilateral treaties. Issues of sovereign acts and sovereign immunities should also be addressed in more detail, it was noted, as there had been cases of abuse where sovereign immunity defences and exemptions had been invoked.

33. Unsolicited proposals were identified as another area where more specific guidance by UNCITRAL is needed. The UNCITRAL PFIPs instruments allow unsolicited proposals to be considered with caution and subject to some transparency safeguards, but in practice this area was assessed as flawed and abuses were considered common, especially in countries without institutional and transparency safeguards. It was suggested that the provisions on this subject could be considerably strengthened, using positive experience accumulated since 2003 in the regulation of unsolicited proposals worldwide. The main approach was to preserve competition while protecting intellectual property rights and encouraging creativity and innovation. Caution was, however, voiced against detailed regulation of this controversial subject. Any regulatory text on this subject would by necessity be accompanied with extensive explanatory notes. It was also noted that the notion of unsolicited proposals depends on the definition of PPPs: when the focus in this definition is on the delivery of public services, the likelihood and justification for unsolicited proposals are minimal since the private sector cannot define better than the public sector what public needs are. It was added that the concept of unsolicited proposals should, however, not be confused with other related concepts, such as private sector proposals.

34. Some speakers considered that some other provisions of the UNCITRAL PFIPs instruments, in particular on risk allocation, government guarantees and State support measures, should be further elaborated, as there is much confusion in practice on those issues. Some other provisions of the UNCITRAL PFIPs instruments were considered to convey incorrect messages or to give the wrong impression, and needed therefore to be rephrased.

35. Other factors that some speakers noted might affect any decision of UNCITRAL to undertake the work in this area, include developments in the international arena, such as the entry into force of the United Nations Convention against Corruption (New York, 31 October 2003).⁸ This text contains provisions relevant to PPPs. Developments in UNCITRAL itself, in particular new legislative

⁸ United Nations, *Treaty Series*, vol. 2349. Also available at www.unodc.org/documents/treaties/UNCAC/Publications/Convention/08-50026_E.pdf.

standards in the areas of public procurement, insolvency law and security interests, may necessitate the revision of some provisions of the UNCITRAL PFIPs instruments.

B. The scope of any possible work by UNCITRAL on PPPs

36. As further elaborated in the sections below, there was no disagreement among speakers that, in the light of the above-referred facts, guidance from UNCITRAL on issues of PPPs is needed urgently and should be provided. Views varied as regards the form that such guidance should take — a model law or expanded and revised legislative guide, legislative recommendations and model provisions. While there was strong support for a model law, some speakers were not convinced that the preparation of a model law was desirable or feasible. Various considerations, including the time that would be allotted by UNCITRAL to its work in the area of PPPs, if any, would influence the eventual decision by the Commission on the extent and the form of any contemplated work in that area.

1. Which type of PPPs should be addressed in UNCITRAL work?

37. There was consensus that achieving a common understanding of PPPs would be essential in order to define accurately the scope of the work. There was no disagreement that the concept of PPPs must be kept flexible to cover all possible forms of private sector involvement in the provision of public services. This approach would lead to an umbrella concept, which in turn could be divided into subcategories, rather than a strict defined term of PPPs.

38. For such purpose, UNCITRAL would need to identify similar features attributable to PPPs that UNCITRAL would regulate and that make them distinct from related forms of public-private engagements that would fall outside the scope of the intended exercise. The presence of physical infrastructure, it was said, should not be considered as an indispensable criterion attributable to PPPs that UNCITRAL would regulate. Views varied on whether possible future work by UNCITRAL in this area should encompass partnering and alliancing, institutional PPPs and long-term lease, leasing and management contracts as well as natural resources concessions.

39. The colloquium had a preliminary consideration of the distinct features of PPPs that UNCITRAL should regulate, in particular as compared to public procurement and natural resources concessions.

40. In a public procurement project, it was noted, the Government is expected to finance the project from the start. Regardless of whether the payment to the supplier or contractor is made in the beginning or in the end of the project or in instalments, there are consequences for the public budget; an increase in public debt would be visible. In the PPPs context, it is usually the private sector, not the Government, that is expected to finance the project from the start, although sources of financing of the project at later stages of the project implementation are varied. The impact of PPPs on the State budgeting processes was observed to be less clear; it has been identified by experts as an area where guidance by UNCITRAL should be provided, taking into account that short-term budgeting cycles in many jurisdictions do not accommodate the long-term nature of PPPs. Risk allocation was considered as

another feature that differentiates PPPs from public procurement: performance risks in public procurement are primarily borne by the public sector, unlike PPPs in which project risks were allocated between the private and public sectors. Doubt was, however, expressed that such a strict risk allocation scheme remains true in all cases of public procurement and PPPs.

41. Most natural resources concessions, it was explained, involve the exploitation of public wealth/goods, rather than the delivery of public services, with the result that concessions have less direct impact on the public than PPPs. It was argued that this feature of concessions should not justify their exemption from sound procurement principles of competition, transparency and accountability, especially since public wealth should be exploited for the benefit of all and there are examples of concessions (e.g. exploitation of hydro resources) involving or impacting delivery of public services. Another distinct feature of such concessions, at least those in the mining sector, it was said, is that they did not presuppose the continuous engagement of public authorities in the implementation of the project; public authorities usually participate in profit-sharing and other type of ancillary arrangements.

42. The following main distinct features of PPPs were identified by some speakers: (a) the long-term participation of the private sector in the delivery of public services; (b) the PPP arrangement is amenable to modifications and adjustments over time; (c) such life-cycle considerations of the project as sustainable and sustained performance matter most (in particular because the need to provide uninterrupted services to the population); (d) the primacy of the government authority that remains responsible to the public for delivery of services throughout the project and afterwards; (e) an opportunity for innovation and creativity on the part of the private sector; and (f) various schemes for project finance payment to the private sector for the services delivered.

43. The long-term participation of the private sector in the delivery of public services and the government's remaining responsible to the public for the delivery of public services were identified by some speakers as the key distinct features of PPPs. Those features, it was said, have short- and long-term implications on the structure, contract formation and clauses and implementation of the project. As individuals are the ultimate beneficiaries of PPPs, and the public interest has a higher stake in PPPs than in other public-private transactions, the law regulating PPPs should limit the freedom of parties to agree terms. For example, a contract should provide for necessary safeguards in the case of termination, in order to ensure continuity of public services. The law should also address such sensitive issues as non-discrimination in the provision of public services and fair profit-sharing. Some other speakers pointed out that some public procurement contracts also involved long-term delivery of public services by the private sector; public procurement should not be reduced to supplier purchasing as a consequence of the introduction of PPPs.

44. As regards mining concessions in particular, a strong view was expressed that UNCITRAL should not contemplate regulating such a heavily political and internationally sensitive sector, which remains largely self-regulating (mining codes apply to them and in some jurisdictions they may operate under special regimes approved by the legislative body). The point was also made that, unlike PPPs that

UNCITRAL should regulate, these natural resource concessions do not have a direct impact on the immediate needs of individuals.

45. UNCITRAL was invited to look into PPPs with the participation of State-owned enterprises and new forms of PPPs linked to availability payments or infrastructure projects as private equity. It was also pointed out that cross-border PPPs should receive closer attention by UNCITRAL in the light of their emergence in some subregions and the likelihood of their gaining more popularity, in particular in the context of subregional and regional economic integration. They may face particular issues: applicable law, conflicts of law, supra-national institution, extra-territorial application of standards and so forth.

2. Approaches to regulating PPPs

46. It was suggested that UNCITRAL should aim at formulating general principles that regulate the common elements of PPPs. No PPP model should be singled out for regulation but a broad spectrum of PPPs should be addressed. Restricting an UNCITRAL text in this way to a high-level general framework level, adaptable to local circumstances, was said to be essential to make UNCITRAL work on PPPs feasible and useful — otherwise, the project would be too lengthy and complex to meet the urgent need for a more general UNCITRAL standard on PPPs. It was added that regulating specific elements of all PPPs would be useless because they would in any event be defined by local culture and the needs of each project.

47. The goal of any regulation, it was said, should be to enable and facilitate a variety of forms of PPPs for the delivery of better public services and sustainable development.

48. It was agreed that the work must define its boundaries, noting that not all issues are susceptible to legal solution. UNCITRAL should for example not try to regulate policy matters that underlie the use of PPPs or issues that are embedded in constitutional law (e.g. the primacy of collective property over private property). UNCITRAL should focus on categories of issues that need a legislative solution, such as allocation of powers and risks, and legal obstacles (e.g. authority and capacity to enter into PPPs, and inconsistencies of PPPs policy and laws with other related branches of law (insolvency, taxation)), and on basic standards and safeguards at which investors will look to ensure that the project is bankable (e.g. step-in rights, transparency and other sound procurement principles, safeguards against expropriations).

49. In regulating PPPs, the focus should be on enabling appropriate projects and reducing transaction costs, some of which could be minimized or avoided through an adequate legal framework. For example, including core principles regarding tariffs in law or regulations could save the need to hold lengthy negotiation with local authorities.

50. A balance between academic rigour and a pragmatic approach was urged. Such practical aspects as how public sector remains responsible to the public and engaged throughout the project should be addressed, as should such trends as new ways of urbanization, combating fraud and managing identity. With respect to the latter, establishing a global transparency registry that would track each company record in implementing PPPs worldwide for the benefit of Governments that would be able to consult the registry was suggested for consideration by UNCITRAL. Concern was

voiced that the risk of commercial fraud in developing countries is real and tools must be provided by the international community to combat this economic crime internationally.

51. UNCITRAL was also encouraged to be clear as to which aspects should be addressed in primary legislation and which aspects in regulations or guidance notes, so as to ensure an adequate level of predictability and security of the legal framework applicable to PPPs. This approach would also ensure that the basic legal framework on PPPs would not depend on the government or one minister, and a change in government would not therefore have a direct impact on the formation and implementation of PPPs. Currently, these risks are present in some countries because fundamental issues affecting PPPs are delegated there to regulations or guidance. This approach, however, would not mean that all fundamental issues would need to be addressed in a single legislative act — laws addressing customs, taxation, investment protection, land rights, insolvency law, security interests and so forth were noted also to be relevant.

52. A legal framework on PPPs should therefore be capable of interacting with other laws applicable to the project. In particular, it was noted that some level of harmonization between public procurement and PPPs laws should be achieved, by cross-references where necessary, since certain provisions might be equally applicable in the public procurement and PPPs contexts. Examples given included challenges before an independent body and remedies available to aggrieved investors. An UNCITRAL text on PPPs would have an added value to the extent that it would regulate specific features of PPPs requiring flexibility beyond that normally allowed by public procurement legislation, and so as to avoid creating disincentives and obstacles to PPPs.

53. It was emphasized that UNCITRAL could not avoid dealing with issues of institutional reforms in order to address practice: institutions intended to support PPPs should be compatible and coherent; the tendency to create additional bureaucracy should be avoided, as it would add an unnecessary level of complexity. In this regard, it was noted that putting in place more flexible structures would be desirable (e.g. an advisory board on policy issues with its precise composition designed to reflect the sector in which a PPP is undertaken).

54. It was added that UNCITRAL should advocate a gradual approach to introducing PPPs in jurisdictions that do not have experience with them (from simple PPPs to complex ones), and should provide options for States at different capacity level. Even in the presence of a sound legal framework, it was noted, PPPs would not be used if the society and public authorities were not ready for them.

55. It was added that issues of terminology should be addressed, and that any future text should be drafted in plain language to assist the reader.

3. Which form(s) should UNCITRAL work take?

56. A model law as the form of an UNCITRAL text on PPPs was preferred by many speakers, especially in the light of all facts set out above. It was acknowledged, however, that the nature of the social contract in States is very different and needs in regulating PPPs are therefore also very different. As a result, not all countries would need or would want to enact a law on PPPs. Where such need and will exist, a UNCITRAL model law would provide States with an

internationally accepted model, readily available and easy to use for enactment of a national law on PPPs. Without such model, the risk of adoption by States of ill-considered legislation on PPPs was said to be high. With such a model, States would be able to focus on local particularities that necessitated adjustments to the model. An UNCITRAL model law would thus provide the necessary level of confidence to policymakers and legislators that their law enacted on the basis of the UNCITRAL model reflected best international practices. This in turn would send a positive signal to the private sector as regards the adequacy and stability of the local legal framework applicable to PPPs.

57. The following features of a model law were suggested: it should not be overly complicated; it should be flexible; it should include best practice on which international consensus existed, disputed or controversial issues should not be included in its provisions; it should cover all core provisions applicable to all types of PPPs regulated by the model law and should cross-refer to other branches of law where necessary; the law should define the main PPP-related terms used in the law; the law should address the obligations of the parties to the PPP, State support obligations and measures, monitoring mechanisms, including the participation of civil society, compensation in case of termination, international arbitration and step-in rights. It should also require the PPP contract to address these issues if the law itself does not prescribe a specific solution to them. The law should be clear which mandatory provisions must be crafted individually for each project and should identify any minimum requirements applicable to them. The UNCITRAL Model Legislative Provisions on PFIPs, which addresses many of the enumerated points, should become the basis for such a model law.

58. Other options considered for possible work of UNCITRAL in this area were to update, revise and expand the scope of the UNCITRAL PFIPs instruments. It was recalled that when the UNCITRAL PFIPs instruments were prepared, governments were cautious about working in areas that were not in the core competence of UNCITRAL (issues of bilateral relations, politically sensitive areas, domestic institutions). It was queried whether Governments would be less reluctant to do so at present. A model law that required reaching a high level of specificity, comprehensiveness and harmonization in these areas would therefore not be an option.

59. In addition, it was suggested that the complexity of the subject and the need to preserve as much flexibility as possible in order not to stall innovation in PPPs, indicated providing more general analytical guidance such as that contained in the UNCITRAL Legislative Guide on PFIPs. It was noted that the latter identifies legal obstacles to PFIPs, explains implications if those obstacles are not addressed by States and points out to non-legal obstacles that are also to be dealt with. By providing this analytical information, the Guide empowers policymakers and legislators with choices in legislative and institutional reforms.

60. In response, those that preferred the preparation of a model law considered that updating, revising and expanding the scope of the UNCITRAL PFIPs instruments would not bring the main desired result from the exercise — preparation of a simple easy-to-use model for legislators. It was considered essential for UNCITRAL to prepare such an international model, which in turn should be accompanied by supplementing materials, such as commentaries to provisions of the

model law, guidance on specific issues that raise most difficulties in practical implementation of PPPs and policy papers.

61. Some speakers were convinced that the model law would not be able to provide one solution to all issues of PPPs to be included in a model law. It was therefore emphasized that while the text of the law may be desirable, accompanying guidance (such as that provided in the Guide to Enactment of the Model Law on Public Procurement)⁹ would be absolutely necessary in order not only to equip those that will implement the law with the capacity to do so but also provide them with explanations for possible deviations from the model or as regards options contained therein. Such explanatory guidance would also include discussion on any controversial issues on which a consensus did not emerge.

62. It was suggested that the UNCITRAL Legislative Guide on PFIPs could be updated in parallel with the preparation of a model law and the resulting updated text could become the basis for drafting a guide to enactment that would explain the provisions of the model law and would provide more detailed technical guidance to ministries and other Government departments that used PPPs. The approach to drafting such a guide should, it was urged, be carefully considered from the perspective of the intended end-users of the text, to avoid certain mistakes in the current Guide. While being specific and detailed, the guide should remain simple and easily understood by the intended readers. Complex terms should be avoided, examples and illustrative explanations should be included and various ways of presenting what is expected to be the lengthy material in a user-friendly way should be considered (e.g. the guide could be broken into sections and accompanied by annexes that would for example describe specific features of PPPs per sector). Preparing a glossary of PPP-related terms was also suggested. A set of essential contractual terms (akin to rules and procedures of the International Federation of Consulting Engineers (FIDIC)) could also be included in the guide as an annex or otherwise, which could be of value to contracting parties that could incorporate them by reference in their PPPs contracts, saving the need for negotiating them. This set could also be used as a checklist of core provisions that should be included in the contract.

63. In support of the work on a model law and its guide to enactment and other supplementary materials, it was argued that a shift from the existing model legislative provisions and legislative guide to a model law with the guide to its enactment would result in a big difference for enacting States. It was acknowledged that both options provide only for non-binding guidance since States are not bound to enact their law on the basis of UNCITRAL models and may adjust UNCITRAL models to local circumstances as they deem appropriate. Although the difference may eventually be only in names of instruments and ways of presenting them, not their substance or nature, the form would make a difference in that an easy-to-use model would be more seriously considered and widely used by local policymakers, legislators and assistance-providers.

64. In response to the question why a model law was not prepared in 2003, it was explained that at that time there was no consensus on the definition of PPP and there

⁹ Adopted by the Commission at its forty-fifth session, in 2012. *Official Records of the General Assembly, Sixty-seventh Session, Supplement No. 17 (A/67/17)*, para. 46. Available from www.uncitral.org/uncitral/en/uncitral_texts/procurement_infrastructure/2012Guide.html.

was no much demand for a model law since PPPs was considered a policy concept not to be regulated by law. These factors have changed since 2003 as explained in chapter II.A above.

4. Considerations to be taken into account in the organization of UNCITRAL work in the area of PPPs

65. For any work on PPPs, it was stated that it would be essential to identify the best or sufficiently good practices in regulating PPPs to provide impartial advice. UNCITRAL might face difficulties in this regard, given vested interests and institutions that represent them, including some private sector consultants and financial institutions. For example, where they are advisors to governments in legislative reforms and providers of technical assistance and capacity-building, and at the same time PPP financiers or project operators, they will have an inherent conflict of interest. It would be equally important to identify poor practices, many of which have been replicated by international consultants and advisors to Governments.

66. UNCITRAL was encouraged to make use of the significant information on PPPs accumulated by various institutions that include databases of contracts, PPP laws and other laws related to PPPs worldwide, surveys of PPPs and results of assessment of PPP legal framework in a number of countries, databases of PPPs experts, advisors, specialists and local focal points. Tools that allow tracing results of various PPPs, investment volumes, renewable energy aspects and data on PPPs grouped per sector were also highlighted.

67. While other international and regional instruments regulating various aspects of PPPs should be consulted in any possible work by UNCITRAL in this area, UNCITRAL was encouraged not to try to achieve harmonization among all such instruments in the light of their diverse scope, focus and purpose. UNCITRAL should instead take a critical look at different texts from the perspective of their utility to its work (whether there would be any added value in using them as the basis for its work or simply for reference). The point was made that UNCITRAL work in this area might necessitate those other instruments to be updated or revised.

68. The importance of bearing in mind what can be achieved within a reasonable period of time was emphasized, taking into account the complexity of issues intended to be addressed. Views varied as regards the volume of work involved. Some considered that the preparation of a model law or an expanded guide should not require much time, as most issues are already addressed in the UNCITRAL PFIPs instruments, while others were of the view that a considerable amount of work remained to bring the existing texts up to date and in order to prepare a model law. While adding clarity to the core elements that have already been addressed in the UNCITRAL PFIPs instruments might be not so time-consuming, the addition of new elements and clarity regarding scope and terminology would require substantial work. The point was also made that preparing a short simple instrument — which should be the goal of the work of UNCITRAL in this area — is considerably more difficult than preparing a large complex instrument. It was emphasized that the current UNCITRAL Legislative Guide on PFIPs to be useful for intended beneficiaries must be rewritten in a simple language and restructured.

69. It was underscored that an intergovernmental forum (the Commission and its working groups) would develop any texts to be prepared by UNCITRAL. Studies and preliminary drafts to be prepared by the Secretariat would be essential to expedite the work of the intergovernmental body. Involvement of experts in the Secretariat's preparatory work and allowing sufficient time for the preparatory work would be needed for producing studies and drafts of adequate quality.

70. It was also noted that deliberations should be as inclusive and comprehensive as possible to achieve a balanced representation of various views and interests and hence a satisfactory result (in addition to member States and observer States, participation of professional associations, academia and civil society organizations would be required). Close cooperation between UNCITRAL and international and regional institutions working in the area of PPPs should to be ensured. The process of preparation of texts would allow local specialists and international experts to exchange ideas, knowledge and experience so as to achieve consensus on what constitute internationally accepted best practices in regulating PPPs.

71. It was agreed that any further work by UNCITRAL in this area and results emanating from that work would be important for technical assistance and local capacity-building by UNCITRAL and others.

III. Conclusions

72. It was agreed that PPPs are increasingly used worldwide not only as means of resource mobilization from the private sector for public needs, but also as a means of delivering better services to the public, drawing on the creativity, innovative forces, expertise and competitive advantages of the private sector. PPPs were considered to be an essential mechanism to achieve sustained and sustainable development and to contribute to poverty alleviation, as they involve joint efforts by the public and private sectors — which to be successful must take into account numerous considerations, including the direct impact of the project on end-users — individual citizens.

73. It was also considered that PPPs could be advantageous given the greater efficiency of the private sector as compared with the public sector in project development and implementation.

74. It was recognized that PPPs have become a legal concept, and the subject of legislation in many jurisdictions and that an inadequate legal framework regulating PPPs has contributed to the failures of PPPs in some jurisdictions. An adequate legal framework would not address all failures, but would provide a system under which PPPs could be undertaken. However, putting an adequate legal framework in place is not a simple task in the light of the complex and intricate issues that it must address.

75. National efforts to design such a framework would benefit from international support in the form of an easy-to-use model, which is currently unavailable. The UNCITRAL PFIPs instruments cannot be considered as such — despite the recognition that their content is good — because of their limited scope, and their length and complexity that make them useful for international experts and specialists rather than for local policymakers, legislators or regulators. In addition,

the multiplicity of international guidance on PPPs, not all of it consistent, makes the task of those engaged in legal reform more difficult.

76. There was unanimity that, in the light of the developments in the regulation of PPPs and the experience with the use of the UNCITRAL PFIPs instruments described in chapter II.A above, UNCITRAL should evaluate its PFIPs instruments to assess how to ensure that they continue to reflect best practices in regulating PPPs. The prevailing view was that the time was also appropriate for UNCITRAL to seek to provide to the international community a model law on PPPs, accompanied by an appropriately detailed guide to enactment.

77. This task is in line with both the overall UNCITRAL mandate and the role of UNCITRAL to identify best practices in regulating a particular commercial transaction and to prepare a legal text that reflects them appropriately.

78. Such considerations as time to be allotted for the project and that harmonization cannot be achieved on all aspects of PPPs would affect the scope of such a project. While the work in this area might be considered as an urgent endeavour with the implication that the project should be developed quite quickly, the magnitude of efforts if the scope of the UNCITRAL PFIPs instruments is to be expanded and clarified is not to be underestimated.

79. Such future work would build on the UNCITRAL PFIPs instruments and work already accomplished, in particular because many concerns about practice with the regulation and implementation of PPPs raised at the colloquium are already addressed in the UNCITRAL PFIPs instruments. It remains to be analysed whether advice they contain remains sufficiently accurate and thorough.

80. The awareness about the content of the UNCITRAL PFIPs instruments should be increased to allow for such critical analysis. The goal should be the identification of gaps and needs for improvement — such as in accuracy or thoroughness — in those instruments, reasons for the existing gaps (intentional choice, new developments or experience accumulated in the use of the instruments). Where such gaps or needs are found, the goal would be to identify how and within what time frame improvements can be made, and which gaps would remain in any event and why.

81. Should the analysis envisaged in the previous paragraph indicate that there was insufficient consensus to provide a model law with a limited number of options to enacting States, it was agreed that there would remain considerable value for the international community in further work on the UNCITRAL PFIPs instruments in their current form.

82. UNCITRAL should consider the importance of not only the ultimate result of its work in this area but the process that would lead to that result. The value of the work suggested above in increasing awareness about the UNCITRAL PFIPs instruments and as technical assistance and local capacity-building tools should not be underestimated. This work would also support the fulfilment of another mandate of UNCITRAL — coordination of the work of organizations active in the field of international trade law and encouraging cooperation among them. Close coordination and cooperation of law-making, technical assistance and capacity-building efforts by various institutions and individuals are necessary in the area of PPPs to stop the current trend of formulating conflicting rules, providing

inconsistent advice and replicating bad practices. While harmonization by UNCITRAL of all the existing texts that provide guidance on PPPs will be difficult or impossible to achieve, by preparing a standard in the area of PPPs UNCITRAL would encourage the international community to start speaking in one voice on issues of PPPs.

83. It was agreed that the complexity of the issue involved would require significant preparatory work before presentation of a resulting text for consideration by an intergovernmental body. In order to ensure that such a text would be universally applicable in the context of the many entities that are parties to PPPs, participation should be as inclusive as possible, and efforts to ensure inclusivity should be undertaken.

84. It was considered that any mandate for future work in the area of PPPs could usefully include the following elements:

(a) To develop a legal text on PPPs, comprising a model law (or, if that were not feasible, model legislative provisions) and accompanying policy and practical guidance;

(b) To allow for flexibility, innovation and creativity, which will facilitate the realisation of sustainable development and related socioeconomic goals;

(c) To distil and identify best practices from existing texts and practices for PPPs, by identifying gaps in the UNCITRAL PFIPs instruments, by revising elements that have become outdated, and by including issues that were not previously amenable to regulation, but have become so as the market has matured;

(d) To address the core provisions applicable to common forms of PPPs, and to consider whether further work is required on other forms of PPPs (such as partnering and alliancing) or specific market sectors, and whether any forms of PPPs should be excluded from the scope of a legal text on PPPs;

(e) To address entire life-cycle of PPPs, including project planning and management;

(f) To identify any significant international obligations that would affect national regulation of PPPs (such as the United Nations Convention against Corruption);

(g) To analyse the extent to which key procedures to ensure transparency and competition, as expressed in the UNCITRAL Model Law on Public Procurement,¹⁰ should apply to PPPs procedures, so as to promote the core values of ensuring value for money and the avoidance of abuse; and

(h) To balance analytical rigour and empirical analysis with a pragmatic approach, so as to ensure the timely issue by UNCITRAL of a text on PPPs that will be of practical utility for legislators in countries at different levels of capacity and experience as regards PPPs.

| III. The way forward | 49-55 |

I. Introduction

1. Microfinance has been on the agenda of the Commission since 2009 when the Commission, at its forty-second session, requested the Secretariat to prepare a detailed study including an assessment of the legal and regulatory issues at stake in the field of microfinance. The study was also to include proposals as to the form and nature of a reference document discussing the various elements required to establish a favourable legal framework for microfinance, which the Commission might in future consider preparing with a view to assisting legislators and policymakers around the world.¹

2. The study, discussed at the forty-third session of the Commission, in 2010, considered the role of microfinance in poverty alleviation and achievement of the Millennium Development Goals by facilitating access to financial services for the poor who were not served by the formal financial system. On the understanding that an appropriate regulatory environment would contribute to the development of the microfinance sector, the Commission agreed that the Secretariat should convene a colloquium, with the possible participation of experts from other organizations working actively in that field, to explore the legal and regulatory issues surrounding microfinance that fell within the mandate of UNCITRAL. The colloquium was to

¹ *Official Records of the General Assembly, Sixty-fourth Session, Supplement No. 17 (A/64/17).*

result in an official report outlining the issues at stake and containing recommendations on work that UNCITRAL might usefully undertake in the field.²

3. The colloquium, held in January 2011, resulted in a number of findings.³ Despite some successful initiatives at national level, there was no coherent set of global legal and regulatory measures that could serve as a standard for international best practice. Many States were struggling to find an appropriate regulatory framework to promote financial inclusion (the more recent term for ‘microfinance’), and it was suggested that UNCITRAL could make a substantial contribution in this regard. Several issues were identified for future consideration, of which the Commission, at its forty-fourth session, in 2011, chose the following four for further in-depth study by the Secretariat: (i) overcollateralization and the use of collateral with no economic value; (ii) e-money, including its status as savings; whether “issuers” of e-money were engaged in banking and hence what type of regulation they were subject to; and the coverage of such funds by deposit insurance schemes; (iii) provision for fair, rapid, transparent and inexpensive processes for the resolution of disputes arising from microfinance transactions; (iv) facilitating the use of, and ensuring transparency in, secured lending to microenterprises and small and medium-sized enterprises. At that session, the Commission also agreed to include microfinance as an item for its future work.⁴

4. The study by the Secretariat,⁵ submitted at the forty-fifth session of the Commission, in 2012, provided a brief summary of the state of the matter in each of the four topics indicated above, as well as key legal and regulatory issues relating thereto, for consideration by the Commission. Following discussion, the Commission unanimously agreed to hold one or more colloquia on microfinance and related matters, as a matter of priority, with a focus on: facilitating simplified business incorporation and registration; access to credit for micro-businesses and small and medium-sized enterprises; dispute resolution applicable to microfinance transactions; and other topics related to creating an enabling legal environment for micro-businesses and small and medium-sized enterprises.⁶

5. This note outlines the key findings of the colloquium organized by the Secretariat in Vienna on 16-18 January 2013. The colloquium was structured around presentations and panel discussions on the following topics: the enabling environment for micro-business and the rule of law; incorporation and registration of micro-borrowers; effective alternative dispute resolution (ADR) mechanisms for micro-entrepreneurs; enabling legal environment for mobile payments; legal issues surrounding access to credit for micro-business, small and medium-sized enterprises (MSMEs); and insolvency and winding up of micro-businesses. Speakers and participants included specialists from governments, international organizations, non-governmental organizations, the private sector and academia from all over the world.

II. An enabling legal environment for micro-business

A. An overview

6. About half of the workforce worldwide is employed in the informal sector, which is said to amount to approximately 10 trillion USD annually (i.e. one third of the world economy).⁷ As the Commission for the Legal Empowerment of the Poor put it, members of this workforce “... operate not within the law, but outside it: they enter into informal labour contracts, run unregistered businesses, and often occupy land to which they have no formal rights”.⁸ Reasons for operating in the informal sector include: tax burden, excessive regulation of the formal sector, deterioration in the quality of public goods (e.g. public infrastructure) and of public administration,⁹ and the dynamics of the formal sector. The results, however, do not vary: micro-businesses cannot enforce contracts, get formal bank loans or expand beyond a very small local network.¹⁰ In sum, they have little option “but to trade in the informal economy”.¹¹

7. Certain factors are critical for micro-business to enter and operate in the formal market. One of the most important is formalization including incorporation, licensing, and other registrations. Starting a legally recognised business, however, can be an extremely burdensome process. Formalities may be extremely costly, they may impose entry requirements (e.g. minimum capital) and compliance with cumbersome administrative proceedings (e.g. submission of multiple and different documents for similar purposes). Some of these formalities are holdovers from existing institutions, many of which persist primarily due to pressure groups that can hinder legal reform.¹² These difficulties discourage many viable MSMEs from formalising.

8. Micro borrowers often lack knowledge of their rights and how to protect them.¹³ Furthermore, the formal justice system tend to exclude them “because they cannot afford the costs related to lawyers, or paying court fees ... court procedures can be slow, and it is not uncommon for courts to have a large backlog of cases”.¹⁴ Yet, extrajudicial third-party dispute resolution mechanisms are rarely in place, thus limiting the effectiveness of any microfinance legal framework for client protection. As a result, four billion of the world’s population lack access to justice.¹⁵

9. Currently, 2.7 billion adults worldwide do not have a savings or credit account with a bank or other formal institution: this figure includes households and MSMEs as well. However, an estimated 1.7 billion of these unbanked low income people are said to have access to mobile phones¹⁶ which, together with other new technologies, can enable them to make financial transactions that are accessible and reliable.¹⁷ However, for policy makers at the country level as well as global standard-setting bodies, these new models for delivering banking services to the unbanked present challenges because they implicate new actors and new relationships among actors. Unresolved legal issues surrounding the nature of e-money were already noted in the 2011 UNCITRAL Colloquium on Microfinance, together with their potential to negatively affect low income people.¹⁸

10. Most informal businesses have to operate with no more than a limited amount of family capital.¹⁹ With no access to the traditional banking system, they often look to microfinance services when in need of funds. However, increasing commercialization of the sector, intense competition among microfinance institutions (MFIs), and often low levels of literacy — including financial literacy — among borrowers can considerably add to the challenges faced by micro borrowers seeking affordable financing. For instance, micro borrowers may end up paying interest at rates five or six times higher than formal businesses that can access bank services and get more favourable conditions for their loans. Legal reforms that easily, predictably and inexpensively grant micro and small borrowers the status of “legal” persons, would empower them to act as “regular” or “formal” sector borrowers (see para. 7 above). In this regard, it can be noted that an internationally recognized form of business registration would facilitate cross border trade for MSMEs operating in regional markets since it would provide a recognizable international basis for transactions and avoid problems that can arise because of lack of recognition of the business form. The World Bank has found that economies with modern business registration “grow faster”,²⁰ “promote greater entrepreneurship and productivity”,²¹ “create jobs”,²² “boost legal certainty”²³ and “attract larger inflows of foreign direct investment”.²⁴ Legal reforms should also enable micro and small borrowers to obtain loans secured not by adding to their personal liability or that of their family or friends but by pledging their own market valued assets.

11. Unsurprisingly, informal businesses often have very short lives:²⁵ the conditions in which they operate make them particularly vulnerable to market shifts and at more frequent risk of bankruptcy. “They experience small economies of scale, there are higher risks in the establishment process and it is difficult to obtain

financing”.²⁶ Nevertheless, effective and ad hoc exit regimes for these businesses are absent in most of the countries with the result that in certain regimes entrepreneurs under financial stress would simply “close the door and walk away”, while in others they would face potentially lifelong battles against creditors.²⁷ Appropriate legal reforms tailored to the needs of MSMEs would allow viable businesses to recover and continue to operate.

12. In order to help micro, small and medium-sized enterprises to adjust to immediate uncertainty, and graduate from a subsistence form of doing business to a growth mode characteristic of the formal sector, an enabling legal environment is thus needed. Such an environment is not limited to microfinance alone; it relates to the life cycle of a business — its establishment, operation and termination — and it also focuses on the supporting institutional legal framework. Nonetheless it is clearly relevant to microfinance since, “as a market-based approach to fighting poverty, microfinance is focused on developing entrepreneurship and expanding self-employment”.²⁸ Furthermore, an enabling legal environment should not be confined only to micro-business. As definitions of micro-business and small enterprise vary substantially by region and from country to country,²⁹ the same factors defining an enabling legal environment should pertain to both micro and small/medium-sized businesses.

13. The creation of an enabling legal environment also contributes to reinforcing the rule of law at country level which, as stressed by the General Assembly in its Resolution on the Rule of Law,³⁰ is conducive to the growth of a fair, stable and predictable system for generating inclusive, sustainable, and equitable development. It is worth noting that most recently the General Assembly, once again “recognizing the important contribution entrepreneurship can make to sustainable development”,³¹ has encouraged “governments to develop and implement policies ... that address the legal, social and regulatory barriers to equal and effective economic participation and promote entrepreneurship”. This appeal has also been extended to the international community which has been asked “to support the efforts of countries to promote entrepreneurship and foster the development of small and medium-sized enterprises and microenterprises”.³²

B. Alternative simplified business forms in the context of microfinance

14. The 2012 Eurobarometer on Entrepreneurship informs that a large majority of EU respondents to the Survey “Entrepreneurship in the EU and beyond” are of the opinion that it is difficult to start one’s own business due to a lack of available financial support (79 per cent) and due to the complexities of the administrative process (72 per cent).³³ About 67 per cent of the respondents think self-employment is not feasible for them: impressions of the feasibility of self-employment reach as low as 19 per cent in one of the countries surveyed. The results in a selected group of non-EU countries are quite similar: the majority of respondents in eleven of the thirteen countries surveyed affirm that self-employment would not be feasible for them (the two exceptions being Brazil and China). A weak or absent enabling legal environment clearly influences people’s perceptions about starting a business.

15. MSMEs need to operate under a recognized business model to attract investment and protect the interests of entrepreneurs. However, “traditional” business models — including incorporated companies and partnerships — present possible barriers to the creation of MSMEs. Such models are often not “fit for purpose” for micro and small businesses as their establishment: (a) is too costly (both in terms of money and time); (b) results in over-regulation (with high compliance costs); and (c) exposes entrepreneurs to significant risks of liability (see also para. 7 above).

16. As a response to this need for new forms of limited liability organizations, new corporate forms (“uncorporations”), including hybrid business forms, are being developed to facilitate the establishment and operation of micro and small and medium-sized businesses. In India, for instance, the Limited Liability Partnership (LLP) blends features of an incorporated company (in providing limited liability) with a partnership (for taxation and financing purposes). Establishment of an LLP can be done quickly, using a web portal, and involves very low cost. In Colombia, a major legal reform effort in the past 15 years has led to the development of a hybrid business form prioritizing flexibility, contractual freedom and limited liability: the so called *sociedad por acciones simplificada* (SAS). An SAS can be formed by one or more shareholders and can be incorporated via a relatively simple private or electronic document at minimal cost. The Simplified Stock Corporation Act (2008) relies on a system of ex post regulation in the form of enforceable standards during operation (as opposed to ex-ante regulation which creates rules to be met during establishment) to target abusive behaviour, thus lowering costs for establishing micro-businesses. In fact, compliance with strict requirements to set up a business, e.g. minimum legal capital or public deeds of incorporation, affects all entrepreneurs. On the other hand, when standards that are enforceable ex post are used (e.g. abus de droit or equal treatment rules, that leave discretion for adjudicators to determine ex post whether violations have occurred), there is a cost only for those entrepreneurs who breach the standards. However, this approach requires effective judicial infrastructure to oversee and enforce ex-post standards. Since the SAS legislation was enacted in 2008 about 181,742 SASes (the data refers

³³ 2012 Flash Eurobarometer on Entrepreneurship, http://ec.europa.eu/enterprise/policies/sme/facts-figuresanalysis/eurobarometer/index_en.htm, page 13.

to November 2012) have been set-up, most of which, it is estimated, were pre-existing informal businesses. The SAS account for over 95 per cent of market share and, according to 2009-2010 data, they have enabled a growth in formalization of business entities of over 25 per cent.

17. The legislation developed by the government of Colombia was inspired by France's legislation, among others. Specialized corporate structures in France enable entrepreneurs to effectively separate personal assets from company assets, through either the form of the structure itself, e.g. EURL (*entreprise unipersonnelle à responsabilité limitée*, a single person limited company), EIRL (*entreprise individuelle à responsabilité limitée*, limited liability individual entrepreneur), or through a declaration of assets as being non-sizeable. Such approaches can provide flexibility for entrepreneurs as well as better information for potential creditors. In Germany, the legislator chose not to create a new legal structure, but to instead facilitate entry by significantly reducing the start-up capital requirements (1 EUR instead of 25,000 EUR) and to reduce other costs of establishment by providing a sample protocol as well as low notary and registration fees. In the 12 months following the legislative reform (1 November 2008-1 November 2009) 19,563 companies were registered; as at January 2013, that number had risen to 76,377. In another example, the Angolan experience of facilitating micro-businesses through the creation of the Entrepreneur Unique Office has stressed the need to: (a) simplify the process of incorporation; (b) speed up the granting of permits to operate businesses; and (c) reduce incorporation fees. In Brazil the difficulty in achieving a better corporate regime for smaller firms, despite various waves of reform, has prompted a reflection on the assistance international standards in this field (now lacking) could have provided to challenge the status quo.

18. It is to be noted that most of these reforms are relatively recent (within the last decade) and that many jurisdictions still struggle to find an appropriate regulatory solution. Common threads to facilitate participation by micro-businesses include the need to provide for flexible, simplified and low-cost corporate structures, accompanied by clear guidance and supported by streamlined and effective administrative and judicial infrastructure.

C. Effective dispute resolution mechanisms for micro-entrepreneurs and small and medium-sized enterprises

19. Dispute resolution has been identified as one of the elements defining the strength of a country's institutional framework for microfinance (another key element being transparent pricing regulation).³⁴ However, as a recent study has highlighted, dispute resolution mechanisms often lack accessibility and effectiveness, which suggests a need for new solutions to encourage the appropriate design of such mechanisms for microfinance.³⁵

20. In the meantime, the microfinance industry has been mainly relying on self-regulation which, on its own, is not enough to provide efficient client protection. Although "financial institutions are the first line of defence when it

³⁴ Economist Intelligence Unit, Global microscope on the microfinance business environment 2012, page 23.

³⁵ Ibid.

comes to resolving disputes”,³⁶ it has been noted that only a small number of countries require financial institutions to implement procedures for resolving customer complaints, set limits for timeliness of response, and ensure accessibility.³⁷ This corroborates the view that claims are likely to be better solved through self-regulatory channels if efficient external systems for solving disputes are also accessible to clients.

21. Depending on the country’s situation, such systems could include simplified court procedures, expedited commercial mediation and arbitration, or financial ombudsman offices. They could also include more than one mechanism, since these are not “mutually exclusive”.³⁸

22. States’ replies to the microfinance questionnaire circulated in 2011 by the Secretariat upon request of the Commission³⁹ indicate that in some cases small claims tribunals have been set up, as in Israel, the Philippines and states in the United States. Other countries have established ombudsman services or specialized institutions for the resolution of disputes resulting from financial claims. However, not all of these systems (whether ombudsman, arbitration or otherwise) can render binding decisions. Some systems rely more on voluntary compliance by the party at fault: for instance in Italy, where, if a financial institution does not comply with the decision of the *arbitro bancario finanziario*,⁴⁰ a notice of non-fulfilment is made public.

23. Trinidad and Tobago, one of the few low-income countries with a financial ombudsman, has an Ombudsman Office based on a voluntary scheme.⁴¹ The Office not only provides mediation services free of charge to aggrieved bank (and insurance) clients (individuals and small business), but it also promotes financial literacy among potential clients, using various formal and informal channels. However satisfactory, the experience of the Office prompts consideration of the importance of enshrining such regimes in law so that significant areas of complaint are not left outside the jurisdiction of the Ombudsman (due to a lack of “buy-in” by financial services providers participating in the scheme). For instance, the terms of reference of the Office do not include complaints in relation to general interest rate policies or pricing of products or services. Furthermore, “giving statutory backing to the Ombudsman scheme [would] also facilitate the introduction of appropriate sanctions for non-compliance”.⁴²

24. In general, legislation on ADR mechanisms addressing the needs of MSMEs doesn’t seem to be widespread. Only recently, for instance, new legislation on arbitration has been passed in Colombia,⁴³ which establishes that arbitration centres

³⁶ See CGAP, Financial Access Report 2010, page 31.

³⁷ Ibid.

³⁸ Ibid.

³⁹ *Official Records of the General Assembly, Sixty-sixth Session, Supplement No. 17 (A/66/17)*, cited, para. 246.

⁴⁰ The title can be roughly translated as “financial banking arbitrator”. The functions, however, cannot be compared to those of arbitrators in arbitration proceedings.

⁴¹ Ibid.

⁴² Office of the Financial Services Ombudsman, Annual Report 2011, Trinidad and Tobago, page 8.

⁴³ Law 1563/2012, 12 July 2012, available at: www.cancilleria.gov.co/sites/default/files/Normograma/docs/ley_1563_2012.htm.

must offer free arbitration proceedings for low-value cases (up to USD 13,000 approximately). These are intended to be short proceedings in which the parties do not require representation by a lawyer. The Ministry of Justice will issue regulations to set the minimum number of free arbitration proceedings to be offered annually by arbitration centres. The new law also makes it possible to use online mechanisms at any stage of the arbitration proceedings and for any purpose, thus reducing administrative cost. As a further development of this law (since it is based on its provisions), Colombia is in the process of issuing a regulation on on-line dispute resolution that aims at resolving low value disputes including those involving micro and small business. Prior to this recent legislation on arbitration, the Chamber of Commerce of Bogotá supported the development of arbitration for MSMEs, offering free proceedings in those disputes where one of the parties was an MSME. The Chamber's arbitration rules also provide for a sole arbitrator proceeding with a decision to be rendered within one month (the term can be extended for an additional month). It is estimated that in the last four years approximately 300 MSMEs have benefitted from this service.⁴⁴ Still in Colombia, the Banco Caja Social in the last decade initiated a pilot conciliation process to recover non-performing small loans from clients, in addition to the bank's established use of collection houses and litigation. After the completion of the pilot, the bank found that the conciliation mechanism had produced a significantly higher outcome in the recovery of small amount loans than the other two methods, i.e. the use of collection houses and litigation in court.⁴⁵

25. Other countries have perceived the need for legislation (or regulation) on ADR mechanisms applicable to microfinance. In Nigeria, for example, "microfinance banks in Lagos state have been calling for a special court to try loan default cases, to which the Central Bank of Nigeria agreed in 2011. The court has not yet been established, although the Central Bank is currently backing two bills that have direct ties to improving dispute resolution: the Financial Ombudsman Bill, which would help to resolve financial disputes more quickly, and the Alternative Dispute Resolution (ADR) Bill, which would promote and regulate ADR in Nigeria".⁴⁶

26. Alternative dispute resolution mechanisms may also be of significant assistance in resolving disputes other than the most common complaints in microfinance. The International Financial Corporation has noted that "when ADR structures are efficient, they may be the most effective way to recover secured assets ..."⁴⁷ and this could be applicable in the context of secured lending to microborrowers. The Model Inter-American Law on Secured Transactions, prepared by the Organisation of American States (OAS), explicitly provides for ADR mechanisms to be utilized to resolve all kinds of disputes, including those relating to enforcement (see Article 68). Colombia is in the process of modernizing its

⁴⁴ See Portafolio.co, Nueva Ley de Arbitraje, 10 October 2012 available at: www.portafolio.co/opinion/nueva-ley-arbitraje.

⁴⁵ A. Alvarez, The private sector approach to commercial ADR: commercial ADR mechanisms in Colombia, 2010, available at www.wbginvestmentclimate.org/uploads/Private%20Sector%20Approach%20to%20Commercial%20ADR_%20the%20case%20of%20Colombia%20.pdf.

⁴⁷ IFC, Secured Transactions Systems and Collateral Registries, January 2010, page 54, available at www.wbginvestmentclimate.org/uploads/SecuredTransactionsSystems.pdf.

legislative framework on secured transactions and the draft law includes a provision on ADR, based on the OAS Model Law.

27. The above examples indicate that an efficient dispute resolution framework for microfinance users would require “laws and regulations governing relations between service providers and users and [ensuring] fairness, transparency and recourse rights”.⁴⁸ Such a system would promote accessibility both through recourse mechanisms under financial institutions’ internal procedures, and dispute resolution through a third-party ADR mechanism. Facilitating access to redress mechanisms also implies the possibility for complainants to lodge a claim in their own language, at little or no cost, and to have easy-to-reach points of access to the system.⁴⁹ An efficient legal regime for microfinance would ensure enforceability of outcomes reached in mediation, arbitration proceedings or via an ombudsman. Finally, such a system would promote “financial literacy and capability by helping users of financial services to acquire the necessary knowledge and skills to manage their finances”.⁵⁰

D. An enabling legal environment for mobile payments

28. Branchless banking⁵¹ (of which mobile payments are a subset) has been identified as an effective means of achieving financial inclusion by facilitating access to financial services that is both convenient and affordable. Given the high levels of penetration of mobile phone access in many countries around the globe (for instance in Pakistan there are 110 million cell phone users but only 15 million bank account users; and 400,000 telecom agents as against only 12,700 bank branches), technology is an effective means of providing such access. Benefits of branchless banking, whether through mobile phones or other arrangements, include: improved access for people in remote areas; reduced transaction costs; improved efficiency for customers and service providers; and fewer losses of funds (as a result of a reduction in the number of cash transactions).

29. There are thought to be some 50 mobile payments models currently in existence, with a wide range of regulatory frameworks and practices in place. In Kenya, for instance, the Safaricom experience uses a blend of existing and amended laws, and the creation of new laws, to provide an appropriate regulatory framework. Guiding principles of the country legislative framework include efficiency and accessibility (encouraging client access to financial services, reducing barriers to entry for new entrants), client protection (responsibility for which should lie with

⁴⁸ O. P. Ardic, J. A. Ibrahim, N. Mylenko, *Consumer Protection Laws and Regulations in Deposit and Loan Services: A Cross-Country Analysis with a New Data Set*, The World Bank, Consultative Group to Assist the Poor, January 2011, page 2.

⁴⁹ See also CGAP, *A Guide to Regulation and Supervision of Microfinance*, Consensus Guidelines October 2012, page 59.

⁵⁰ O. P. Ardic, J. A. Ibrahim, N. Mylenko, *Consumer Protection Laws and Regulations in Deposit and Loan Services: A Cross-Country Analysis with a New Data Set*, The World Bank, Consultative Group to Assist the Poor, January 2011, page 2.

⁵¹ Branchless banking generally refers to the delivery of financial services outside conventional bank branches, using agents or other third-party intermediaries as the principal interface with customers, and relying on technologies (POS terminals and mobile phones) to transmit the transaction details.

the provider, and include accessible and efficient procedures and channels for resolution of client queries or complaints), technological neutrality (in which the regulatory framework provides for electronic retail transfers irrespective of the underlying technology used).

30. A new “e-money” law was recently issued in Peru,⁵² under which e-money is defined as a monetary value stored in an electronic device, widely accepted as a means of payment, can be converted back to cash, and is not considered a deposit. The new law seeks to ensure security, transparency and reliability for clients as well as foster competition and innovation among businesses. For that purpose, it allows the provision of e-money based services only to entities supervised by the Superintendencia de Banca, Seguros y AFP — financial intermediaries already in the market and new firms that can enter the market as specialized e-money issuers. The new law is complemented by a comprehensive legal framework already in place at the time the law was passed that addresses inter alia payment systems, anti-money laundering, integral and operational risk regulation, internal audit and retail agents’ regulation. The most important purpose of the law is to boost financial inclusion; thus, it is expected that the regulations accompanying the law, to be issued by the Superintendencia de Banca, Seguros y AFPs, will define a simplified e-money “account”, similar to the concept of basic deposit accounts already existing in Peruvian legislation. That is, a low-risk product with minimal pre-requisites for contracting, i.e. a valid Peruvian national identification document, in order to open the account at a retail agent. Such accounts have balance and transaction limits, per month and per day.

31. In Sri Lanka, the Mobile Payment Guidelines⁵³ promote safety and effectiveness of mobile payment services and enhance user confidence. The Guidelines require the licensed service provider to adhere to all applicable laws, including the Electronic Transactions Act No. 19 of 2006. The Act includes features to recognise mobile transactions as legally valid electronic transactions, thus facilitating the transition to this form of business. The Act is largely influenced by UNCITRAL texts (including the UNCITRAL Model Law on Electronic Commerce, 1996, and the United Nations Convention on the Use of Electronic Communications in International Contracts, 2005).

32. Notwithstanding the wide range of regulatory frameworks and practices, of which the above are just a few examples, there appears to be increasing convergence on a number of principles that are crucial in developing mobile payments legislation, including: use of agents by banks and non-bank e-money issuers; regulation of e-money issuers; protection of the “float” (i.e., the public’s funds held in the form of e-money by the e-money issuer) of non-bank e-money issuers;⁵⁴ and financial client protection, to name just a few. Emerging concerns include interoperability as between branchless banking schemes; competition and fair access to payment systems and communications infrastructure; and security of data.

⁵² Law nr. 29985 was approved by the Congress on 12 December 2012 and published on 17 January 2013.

⁵³ Mobile Payment Guidelines No. 1 and 2 of 2011 issued pursuant to Regulations under Payment and Settlement Systems Act No. 28 of 2005.

⁵⁴ See CGAP, A Guide to Regulation and Supervision of Microfinance, Consensus Guidelines, October 2012, page 77.

33. An enabling legal environment for mobile payments should thus create conditions to address these issues, while promoting innovation, fostering fluid market entry and exit by diverse players, and facilitating sustainable market development. The legal environment needs to be dynamic, adapting and evolving as the market enters different stages. The initial focus would be on facilitating innovation by removing barriers to entry and ensuring a level playing field, providing equal legal standards for diverse players engaging in the same activity. As innovations are implemented the enabling environment would turn to mitigating operational risk and enhancing client protection. As consolidation sets in, prudential regulation and addressing systemic risks becomes more relevant. A mature market needs to remain competitive and efficient to deliver productivity gains.

34. A number of components can be identified for building an enabling environment for mobile payments, including precise definitions of key concepts such as “deposit”, “payment” and “electronic money” which would provide clarity and uniformity in interpretation. Coordination between regulatory agencies would be important to ensure a coherent regulatory environment including the development of technological risk regulation and mitigation strategies prior to electronic money services becoming available. Further, development of a competitive market structure would foster innovation, remove barriers to entry and lower costs. New prudentially supervised entities should be created to manage the e-money: such capital structure entities should ideally allow all types of service providers to enter the market. Client protection should not be downplayed: allocation of the burden of loss concerning mobile payments should be borne by the service provider: countries where mobile financial services are offered directly by telecom agents may thus consider issuing separate regulations for establishing the responsibilities of their agents.

35. The legal environment for mobile payments should also take into account that such payments are at the intersection of two established areas of international law: namely electronic transactions and international payments. Existing UNCITRAL instruments, including the Convention on the Use of Electronic Communications in International Contracts, the Model Law on Electronic Commerce, and the Model Law on International Credit Transfers, provide the necessary building blocks for developments in mobile payments. As UNCITRAL develops further guidance relevant to the topic, coordinated guidance with other standard setting bodies relevant to branchless banking should be considered.

E. Legal issues of access to credit for micro-business, small and medium-sized enterprises

36. Businesses worldwide identify access to credit as one of the main obstacles they face. This holds particularly true for MSMEs. “Good credit information systems and strong collateral laws help overcome this obstacle”.⁵⁵ In the case of microfinance and micro-business, provisions addressing transparency in loan terms, overcollateralization and abusive collection practices also have a role to play. It is important to clarify that transparency in lending is not an issue of prudential

⁵⁵ World Bank, IFC, *Doing Business 2013, Smarter Regulations for Small and Medium-Size Enterprises*, page 22.

regulation (which has to do with the safety and soundness of deposit-taking and systemic risk regulation in the macro-economy). Rather it is a concept relating to clients' rights and their protection, and as such it is relevant for commercial law.

37. There is considerable evidence that many MFIs price their products in a non-transparent manner, obscuring the true price of loans and confusing clients through techniques such as “flat” interest and complex fee structures. A “downward spiral” process draws responsible MFIs into these practices in order to compete, because transparent prices look more expensive than non-transparent prices, even though the underlying product is the same. An absence of “truth-in-lending” legislation in many countries has allowed this situation to perpetuate, resulting in non-transparent, non-competitive and dysfunctional markets in which lack of price competition allows some institutions to generate high profits from the poorest in society. Truth-in-lending makes use of APR (annual percentage rates) or EIR (effective interest rates) to compare the true cost of various types of loans. The APR and EIR are standardized annualized rates, presenting the actual cost of the loan to the borrower. To be most accurate for the client, they should include not only interest but also all other compulsory fees (e.g. training fees, insurance, and security deposit), allowing the borrower to make an informed decision.

38. Transparent pricing data from fifty-nine MFIs in the Philippines demonstrates the existence of a “price curve” in microfinance. The smallest loan sizes have the highest prices, because of the correlation with the higher operating cost to the MFI of servicing these loans. This price curve needs to be considered when addressing the effectiveness of regulated price caps⁵⁶ in microfinance — a common feature of microfinance regulatory environments (for example in India, Colombia and the West Africa Economic and Monetary Union region). An unintended consequence of such caps is that they can lead to a reduction in the supply of smaller loans (those typically aimed at the most financially excluded in society) as these loans cannot be sustainably delivered without charging higher prices, whereas larger micro-loans can have prices under the cap and still be profitable for lenders. Therefore, the frequently advocated introduction of interest caps can, in the absence of transparency in pricing, be ineffective. Overall, a non-transparent pricing regime introduces serious market imperfections and confusion, affecting consumers, MFIs, investors and regulators alike.

39. Transparency is thus crucial, and self-regulation in this realm has not proven sufficient to protect clients, notwithstanding efforts launched by the industry, such as the global “Smart” Campaign (which includes, but is not exclusively about, transparency).⁵⁷ While self-regulation signals a commitment to responsible finance and is an important step for pricing transparency to function effectively, it includes no legal enforcement mechanism, relying rather on market forces to distinguish among MFIs. Furthermore, self-regulation is voluntary, while transparency works best when consistent, i.e. when clients can compare a product across all lenders and

⁵⁶ A “price cap” is more inclusive than an “interest rate cap”. It may include other costs, such as processing fees, and sometimes the cost of other services that are bundled with the loan, such as insurance, see for instance [mfTransparency.org](http://mftransparency.org) at www.mftransparency.org/zambias-new-price-cap-good-intentions-with-unintended-consequences/.

⁵⁷ The Smart Campaign is a global effort to promote client protection in the microfinance industry. The Campaign is based on a set of principles that assist MFIs in delivering financial services respectful of clients' rights. See www.smartcampaign.org/.

receive the same information, ideally in the same format. Truth-in-lending legislation in the United States, the Philippines and Cambodia demonstrates this point clearly: laws in these countries set up pricing disclosure regimes, mostly through the use of APR or EIR of the requirement that prices be calculated via the declining interest rate method, offering protection to borrowers against pricing abuse.

40. Transparent pricing is therefore an essential element in creating an enabling environment for micro-business: although important for any loan agreement, transparency issues are of most concern to unsophisticated borrowers who cannot afford counsel. The following can be suggested as essential when building transparency into an enabling legal environment: (a) standard pricing formulas (with appropriate disclosure standards); (b) standard repayment schedules; (c) enforcement of sanctions to ensure implementation of disclosure requirements; and (d) education of clients and MFIs about disclosure requirements as well as relevant communication mechanisms.

41. As mentioned above, credit reporting and the legal rights of borrowers and lenders in secured transactions are among the measures that better facilitate access to credit and make its allocation more efficient; and they work best when implemented together. Information-sharing through credit reporting systems or bureaus (though not the only risk assessment tool)⁵⁸ helps lenders assess the creditworthiness of clients, reduces processing time for loans and leads to lower default rates, thereby facilitating access to credit, particularly for small firms. For instance, one study noted that in countries where credit bureaus exist only 27 per cent of small and medium-sized enterprises (SMEs) report high financing constraints, against 49 per cent in countries without credit bureaus. Similarly 40 per cent of SMEs are able to obtain a bank loan in countries with credit bureaus, as opposed to 28 per cent in countries without. As noted at the 2011 UNCITRAL Colloquium on Microfinance, therefore, adequate legislation is needed to support the development of, and proper regulation of credit bureaus, which play an important role in providing accurate financial information to lenders to help reduce imprudent lending, thus limiting losses and leading to cheaper credit for all.⁵⁹

42. The report “Selected legal issues impacting microfinance”, prepared by the Secretariat in 2012, notes that while microfinance does not necessarily involve secured lending, when it does “fragile borrowers ... may be utilizing essential household items to secure loans for micro trade as well as consumption purposes”.⁶⁰ Although there are MFIs that do not require collateral, for example Fundoz Mikro in Poland and Grameen Bank in Bangladesh, there is an increasing trend to make use of collateral, as a complementary product to traditional unsecured methods such as group lending. Since the valuation of collateral in microloans is generally difficult, due to the type of assets used, overcollateralization is almost a standard practice in this market and much more prevalent than in secured loans for bigger businesses. The extent of overcollateralization also depends on a country’s legal framework and the efficiency of courts in expeditiously enforcing payment of debts. Evidence suggests that microlenders take collateral simply because the legal system allows them to do so

⁵⁸ World Bank, IFC, *Doing Business 2013 Smarter Regulations for Small and Medium-Size Enterprises*, page 72.

⁵⁹ A/CN.9/727, para. 32.

⁶⁰ A/CN.9/756, para. 3.

at a reasonable cost. This corroborates the view that it is difficult to define secured microlending as true asset-based lending since some of the features of asset-based lending, such as determining advances on the basis of the collateral value, are missing.

43. As with secured lending to non-micro businesses, however, a secured micro-lending model should be based on the borrower's ability to generate income (and thus repay the debt) rather than on the collateral, which is secondary and to which recourse is had only in the case of default. Therefore, an enabling legal environment for MSMEs, while being guided by the secured transactions regime as set out in the UNCITRAL Legislative Guide on Secured Transactions, could consider certain adaptations to target the particular needs of microborrowers (for example, limited enforceability or exemption of certain assets from enforcement, alternative enforcement mechanisms, e.g. ADR) and to facilitate registration and thus transparency of microloans (for example, through reduction of or exemption from registry fees).

F. A legal framework for insolvency and winding up processes of MSMEs

44. Insolvency regimes are fundamental to a sound investment climate and help promote commerce and economic growth.⁶¹ An important factor is that they enhance the willingness of creditors to lend,⁶² which is particularly relevant for MSMEs. According to the 2012 INSOL Africa Roundtable, there are still countries where banks will not lend to MSMEs because of the risk of non-recovery and lack of confidence in the court system.⁶³ As previously mentioned (see para. 11), MSMEs are particularly vulnerable since "they bear an excessive burden of risk...[and] the global financial crisis has exacerbated this problem, creating a scarcity of working capital for SMEs, a decline in equity finance, increased rates of rejected applications for finance, higher interest rate spreads, larger collateral requirements and an increase in insolvency".⁶⁴ Commercial insolvency regimes, however, are typically too complex and expensive for MSMEs and consumer insolvency regimes, from which MSMEs could benefit, may not exist or take insufficient account of the commercial nature of the debt. Moreover, the informal mechanisms (described in the UNCITRAL Legislative Guide on Insolvency as voluntary restructuring negotiations) widely used for the resolution of corporate insolvency in a number of developed countries, as well as expedited procedures (also addressed in the Legislative Guide) may not be widely available elsewhere. This is particularly relevant in developing countries, where the economy is often largely based on the informal sector: when informal entrepreneurs find themselves in a situation of financial distress, with no access to funds to overcome it, they become insolvent. A lack of appropriate legal regimes and mechanisms or outdated

⁶¹ World Bank, IFC, *Doing business 2013, Smarter Regulations for Small and Medium-Size Enterprises*, page 72.

⁶² M. Uttamchandani, A. Menezes, *The Freedom to Fail: Why Small Business Insolvency Regimes are Critical for Emerging Markets*, *Economist's Outlook*, 2010, page 264.

⁶³ A. Idigbe, O. Kalu, *Best practice and tailored reforms in African insolvency: lessons from INSOL*, December 2012, footnote 6.

⁶⁴ M. Uttamchandani, A. Menezes, *The Freedom to Fail: Why Small Business Insolvency Regimes are Critical for Emerging Markets*, *Economist's Outlook*, 2010, pages 263-264.

or inefficient legal regimes dealing with insolvency prevent viable small businesses from surviving or being revived, as there is no means by which to find a satisfactory settlement with creditors. Given their characteristics, MSMEs thus need alternative insolvency regimes that are expedited, streamlined and cost-efficient, and which should facilitate “exit and re-entry of the entrepreneurs” in the market.

45. An insolvency regime covering MSMEs should draw both from the regimes regulating the insolvency of corporations and those regulating insolvency of natural persons. Both have features that meet the needs of MSMEs: the corporate regime focuses on asset maximization and preservation of the company; insolvency of natural persons focuses on discharge or providing a fresh start to support and promote entrepreneurial activity. An insolvency system covering MSMEs should combine these characteristics: it should aim to maximize assets and preserve the company on one hand, and provide for discharge and a fresh start for the entrepreneurs involved on the other. The goal would be to distinguish the effects of insolvency on the enterprise from those on the individuals behind the enterprise. Continuity is possible for an incorporated entity, but more difficult for an individual operating without the protection of incorporation. A balance between the interests of the different stakeholders is required, and punitive approaches should be avoided. An insolvency regime covering MSMEs should also be adaptable to the social and economic features of each jurisdiction and it should consider the definition of small and medium-sized enterprise provided in that jurisdiction.

46. The example of OHADA can be provided. OHADA is modernizing its Uniform Act on Insolvency. The draft submitted by the Permanent Secretariat to OHADA member states (which are reviewing it and so the final version might eventually differ) makes the insolvency framework, *inter alia*, more adaptable to the needs of MSMEs. The new regime would provide simplified procedures for reorganization and liquidation of MSMEs both in the pre-insolvency phase and when the MSME debtor is insolvent. Broadly speaking, the *ad hoc* regime for MSMEs would provide shorter time-frames, lighter evidentiary requirements, fewer procedural steps, and permit fewer appeals (or none at all). However, courts would have the discretion to refuse to apply the simplified procedure and could decide to use the “standard” framework. Reforms are taking place in some Indian states as well.⁶⁵ Those states have amended the Provincial Insolvency Act from 1920, focusing on removing criminal punishments and reducing stigma; and introducing less cumbersome procedural requirements. The Reserve Bank of India has promoted a Debt Restructuring Scheme for viable SMEs, which is worked out and implemented within 90 days from the date of receipt of request for restructuring from the borrower. Furthermore, the establishment of specialized debt recovery tribunals has expedited the resolution of claims, increasing the probability of repayment by 28 per cent and reducing interest rates on loans by 1 to 2 percentage points.⁶⁶

47. In Colombia, a recent law⁶⁷ has established an insolvency system for natural persons that introduces hybrid proceedings and simplified procedures, removes criminal liability for the insolvent debtor and promotes discharge: discharge is also

⁶⁵ Some of the states include Andhra Pradesh, Tamil Nadu, Goa and Uttar Pradesh.

⁶⁶ World Bank, IFC, *Doing business 2013*, Smarter Regulations for Small and Medium-Size Enterprises, page 22.

⁶⁷ Ley 1564 de 2012, 12 July 2012, available at: www.alcaldiabogota.gov.co/sisjur/normas/Norma1.jsp?i=48425.

applicable to merchants. However, apart from discharge, merchants remain subject to the corporate insolvency regime, which makes no differentiation as to size or type of the enterprise's operation and is essentially designed to address problems of large enterprises, thus bringing with it high direct costs, complex requirements and procedures, and sophisticated mechanisms for creditors' participation.

48. An efficient framework to address the insolvency of MSMEs cannot be based on amended legislation alone, however. Like all insolvency systems, institutional and administrative arrangements for making the system work must also be developed or strengthened to ensure the effectiveness and efficiency of the insolvency resolution mechanisms developed. Resolving disputes, for instance, is particularly relevant and should not be limited to the court-based system: alternative dispute resolution regimes, including arbitration and mediation, could also be made available. Other elements to consider include insolvency representatives, the administrative structure of the regime, strong credit information systems (through credit bureaus, for instance), and capacity-building for key players involved in the insolvency proceedings (e.g. judges).⁶⁸

III. The way forward

49. Micro, small and medium-sized enterprises, which are often established informally without carefully considering and clarifying their business structure, continue to suffer the detrimental effects of sub-optimal legal rules in many respects. These firms usually lack the organization and resources necessary to lobby for the required legislative overhaul. On the other hand, the informal sector perpetuates non-compliance with the law, increasing risks for loss of tax revenue, corruption, and a poor environment for investment. It will not naturally evolve into a formal sector, which allows businesses to grow, obtain credit on normal terms, increase employment and contribute to the tax base. Excessive regulation, too many laws and too many outdated laws, will discourage transition of business to the formal sector. An improved legal infrastructure for MSMEs is needed which should rest on a global policy vision and not just isolated devices. Simply adapting traditional system laws to MSMEs will not work. Experience has shown that transposing laws from other, more highly-developed, jurisdictions is similarly unhelpful, since law needs to fit the culture and circumstances of the country. It will thus be important to prepare principles that are global in nature and can be tailored by countries according to their needs. UNCITRAL has proven to be well-placed as a forum for developing such general principles and legislation that is acceptable by a wide range of countries with different legal traditions. Therefore, the Commission could play a leading role in helping to create a level playing field by promoting best practices and sharing knowledge with countries seeking guidance in this area.

50. There was broad consensus among participants at the Colloquium recommending that a Working Group be established to address the legal aspects necessary for the creation of an enabling legal environment for MSMEs. It was stressed that work in establishing such an environment would be consistent with the Commission's primary mandate to promote coordination and cooperation in the

⁶⁸ See also M. Uttamchandani, A. Menezes, *The Freedom to Fail: Why Small Business Insolvency Regimes are Critical for Emerging Markets*, *Economist's Outlook*, 2010, pages 267-268.

field of international trade, including regional cross-border trade. This was consistent also with the findings of the 2011 UNCITRAL Colloquium that microfinance had become a globally recognized form of cross border finance, that it kept growing world-wide, that legal, regulatory and market gaps kept the sector from operating as well as it should and that this had created a role for international legal standard-setting.⁶⁹ Noting that cross-border recognition of these new and varied legislative issues and emerging structures was needed for MSMEs operating in regional markets in order to provide a recognizable international basis for transactions and avoid problems that can arise because of a lack of business recognition,⁷⁰ participants further suggested that a flexible tool, such as a legislative guide or a model law according to the topics, would contribute to harmonizing efforts in this sector and provide momentum for reforms which would further encourage micro-business participation in the economy. At the same time, it was pointed out that consideration could be given to addressing certain of the subject matters of the Colloquium in the context of relevant existing Working Groups, so as to make best use of Secretariat resources.

51. Whether handled in a single Working Group or allocated to various Working Groups, the guidance provided by the Commission should, nevertheless, be developed in a strongly coordinated fashion, so to result in a coherent and homogeneous framework addressing the business cycle of MSMEs. The starting point could be guidance that allows for simplified business start-up and operation procedures. In this regard, attention would be drawn to simplified corporate structures with easy establishment and minimal formalities, limited liability, flexible management and capitalisation structure, plus ample freedom to contract. Considering the current absence of any internationally recognized standards or direction for countries wishing to adopt effective new forms, such a legal framework would significantly contribute to the formalization of thousands of enterprises that would otherwise remain in the informal sphere.⁷¹

52. The Commission may then wish to focus on difficulties faced by MSMEs in accessing redress mechanisms, in particular court-based mechanisms. The Commission may thus wish to consider whether it would be appropriate to undertake preparation of notes⁷² on how a system of dispute resolution in the field of microfinance should be organized. Such notes could be designed for use by legislators and administrators in considering whether a country has established a system that effectively serves the needs of MSMEs. Furthermore, given the exponential increase in Internet usage around the world (and the corresponding ability to resolve disputes online), consideration could be given to the feasibility of

⁶⁹ A/CN.9/727, paras. 6-7.

⁷⁰ In this respect, contract law differs significantly from other fields of law, such as company law, where businesses are bound by the forms of legal entity created by the legislator, and the diversity of national forms of legal entity does indeed cause problems for SMEs. See, International Chamber of Commerce, ICC Position on the European Commission proposal for a regulation on a Common European Sales Law, July 2012, page 2, available at ICC Position on the European Commission proposal for a regulation on a Common European Sales Law.

⁷¹ F. Reyes, *Latin American Company Law — A New Policy Agenda: Reshaping the Closely-Held Entity Landscape*, 2013, page ii.

⁷² For instance, in the past the Commission prepared notes to assist arbitration practitioners during the course of arbitral proceedings, see UNCITRAL Notes on Organizing Arbitral Proceedings (1996).

using online dispute resolution (ODR) methods for microfinance-related disputes. ODR systems have the potential to reach the low income people residing in rural areas: in Africa, Internet usage increased by nearly 3000 per cent over the last 10 years, in the Middle East by nearly 2,250 per cent, in Latin America by over 1,200 per cent (for instance Brazil ranks fifth, Mexico twelfth and Colombia eighteenth in the world in number of individuals connected to the internet), and in Asia by nearly 800 per cent. Globally, Internet usage has increased by 528 per cent over the last decade: approximately one third of the world's population is now connected to the Internet. That number is expected to increase to 47 per cent by 2016.⁷³ The Commission might thus consider whether the legal standards currently under consideration in UNCITRAL's Working Group III, dealing with low-value cross-border e-commerce disputes, could be adapted to a microfinance context.

53. Electronic transfers (including mobile payments) offer MSMEs operating in the informal sector the opportunity to have effective access to financial services. UNCITRAL's existing instruments on e-commerce and international credit transfers can accommodate mobile payment systems, as recognized at the Colloquium (see para. 35 above). In order to broaden their scope, however, it was suggested that UNCITRAL should monitor market developments with a view to broadening the scope of these legal instruments, being careful to avoid duplication with other standard-setting bodies working in the field. The development by the Commission of a document summarizing the recommendations of relevant bodies would provide a reference guide for countries designing laws in this area, as well as the recompilation of best practices gathered from the successful experiences of countries that have set an enabling legal environment for mobile financial services and transactions, and would like to share laterally to other peer countries their experiences. The provision of a clear definition of key concepts such as deposit, payment and electronic money, as well as guidance on apportioning of the risks between providers and clients, would be of particular importance.

54. An enabling legal environment promoting access to credit for MSMEs would address commercial law matters arising in the context of secured and unsecured credit agreements. Guidance from the Commission, based on best practices, could deal with transparency in lending and enforcement in all kinds of lending transactions. The benefits of applying the recommendations of the UNCITRAL Legislative Guide on Secured Transactions to MSMEs should be the basis for discussion. Additional issues for guidance could include: (i) use of possessory and non-possessory security interests; (ii) assets in which security rights may not be created or are unenforceable (e.g. employment benefits and household items); (iii) exemption of microfinance secured transactions from any registration or searching fee; (iv) acquisition finance (e.g. financial leasing); (v) unfair collection and enforcement practices; (vi) asset valuation and over-collateralization; (vii) the importance of group guarantees; and (viii) the importance of credit bureaus.

55. Finally, the Commission may wish to address the insolvency of MSMEs with the objective to ensure fast-track procedures and business rescue options so as to develop adequate and workable alternatives to formal insolvency processes in line

⁷³ See Internet World Stats: Usage and Population Statistics, available at www.internetworldstats.com/stats.htm.

with both the key characteristics of an effective insolvency system and the needs of MSMEs.⁷⁴ Guidance could focus, *inter alia*, on matters such as use of informal procedures; commencement of proceedings, including expedited proceedings; applicable remedies, e.g. reorganization or liquidation; treatment of assets; and the administrative structure of the insolvency regime. Guidelines already developed by international organizations, such as UNCITRAL's Legislative Guide on Insolvency Law (2004) and INSOL's Statement of Principles for a Global Approach to Multi-Creditor Workouts, can serve as building blocks for this work.

I. Introduction

1. To facilitate discussions of the Commission on topics to be considered in priority by the Working Group after completion of its current work on the preparation of a legal standard in treaty-based investor-State arbitration, this note contains a brief outline on the revision of the UNCITRAL Notes on Organizing Arbitral Proceedings (1996)¹ and on the matter of arbitrability. This note also includes a list of topics that have been raised by arbitration practitioners, including at the occasion of a round table organized jointly by the Secretariat and the International Arbitration Institute, Paris, in April 2012, as areas where the lack of solutions or harmonized solutions create difficulties in practice and may warrant further deliberations.

2. By way of historical background, it may be recalled that Working Group II (Arbitration and Conciliation) resumed its work in 2000, following a mandate given by the Commission to the Working Group at its thirty-second session, in 1999.² Welcoming the opportunity to discuss the desirability and feasibility of further development of the law of international commercial arbitration, the Commission considered that the time had come to assess the extensive and favourable experience with national enactments of the UNCITRAL Model Law on International Commercial Arbitration (1985)³ (“the Model Law on Arbitration”), as well as the

¹ UNCITRAL Yearbook, vol. XXVII: 1996, part three, annex II.

² *Official Records of the General Assembly, Fifty-fourth Session, Supplement No. 17 (A/54/17)*, para. 337.

³ *Official Records of the General Assembly, Fortieth Session, Supplement No. 17 (A/40/17)*, annex I; UNCITRAL Yearbook, vol. XVI: 1985, part three, annex I.

use of the UNCITRAL Arbitration Rules (1976)⁴ and the UNCITRAL Conciliation Rules (1980),⁵ and to evaluate, in the universal forum of the Commission, the acceptability of ideas and proposals for improvement of arbitration laws, rules and practices.⁶

3. The Commission considered a number of topics for possible future work in that regard, based on a note it had before it at that session entitled “Possible future work in the area of international commercial arbitration” (A/CN.9/460).⁷ The extensive list of possible topics set out in that note included matters that are the subject of current UNCITRAL projects, such as online dispute resolution or guidance on the New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards (1958)⁸ (“the New York Convention”), as well as topics that have been the subject of legislative work by the Working Group.

4. In respect of the latter, since the Working Group resumed its work in 2000, the Commission has adopted the following texts in the field of dispute settlement: at its thirty-fifth session, in 2002, the UNCITRAL Model Law on International Commercial Conciliation with Guide to Enactment and Use;⁹ at its thirty-ninth session, in 2006, legislative provisions amending the Model Law on Arbitration on the form of arbitration agreement and interim measures, as well a Recommendation regarding the interpretation of article II, paragraph 2, and article VII, paragraph 1, of the New York Convention;¹⁰ and at its forty-third session, in 2010, the UNCITRAL Arbitration Rules (as revised in 2010).¹¹

5. At its forty-third session, in 2010, the Commission entrusted the Working Group with the task of preparing a legal standard on the topic of transparency in treaty-based investor-State arbitration. The result of the work of the Working Group on that topic, the draft UNCITRAL rules on transparency in treaty-based investor-State arbitration, will be before the Commission at its current session, for consideration and possible adoption (see A/CN.9/783). The Commission will also have before it draft instruments on the applicability of those rules to the settlement of disputes arising under existing investment treaties (see A/CN.9/784).

II. Topics noted by the Commission for future work

6. The topics which have been noted by the Commission for future work include the revision of the UNCITRAL Notes on Organizing Arbitral Proceedings (1996) and the topic of arbitrability.

1. Revision of the UNCITRAL Notes on Organizing Arbitral Proceedings

7. Further to initial discussions at its twenty-sixth session, in 1993,¹² the Commission finalized the UNCITRAL Notes on Organizing Arbitral Proceedings (also referred to below as the “Notes”) at its twenty-ninth session, in 1996.¹³ At that session, the Commission approved the principles underlying the Notes, among which were that the Notes must not impinge upon the beneficial flexibility of arbitral proceedings; that it was necessary to avoid establishing any requirement beyond the existing laws, rules or practices, and in particular to ensure that the sole fact that the Notes, or any part of them, were disregarded would not lead to a conclusion that any procedural principle had been violated or was a ground for refusing enforcement of an award; and that the Notes should not seek to harmonize disparate arbitral practices or recommend using any particular procedure.¹⁴

8. At its thirty-sixth session, in 2003, the Commission heard proposals that a revision of the Notes could be considered as a topic of future work.¹⁵ At its forty-fifth session, in 2012, the Commission recalled the agreement at its forty-fourth session,¹⁶ in 2011, that the Notes ought to be updated pursuant to the adoption of the 2010 UNCITRAL Arbitration Rules.¹⁷ At its forty-fifth session, the Commission confirmed that the Secretariat should undertake the revision of the Notes as its next task in the field of dispute settlement, and that it would decide at a future session whether the draft revised Notes should be considered by the Working Group before being submitted to the Commission.¹⁸

9. A conference was held in Vienna on 21-22 March 2013 in cooperation with the Vienna International Arbitral Centre (VIAC) of the Austrian Federal Economic Chamber on the topic, inter alia, of the UNCITRAL Notes on Organizing Arbitral Proceedings and matters that could be considered in their revision.¹⁹ In addition, a questionnaire on whether and how the Notes should be revised was made available to practitioners, through various distribution channels, including on the website of UNCITRAL. To facilitate the discussion of the Commission on the matter of the

¹⁶ Ibid., *Sixty-sixth session, Supplement No. 17* (A/66/17), paras. 205 and 207.

¹⁷ Ibid., *Sixty-seventh session, Supplement No. 17* (A/67/17), para. 70.

¹⁸ Ibid., *Sixty-seventh session, Supplement No. 17* (A/67/17), para. 70.

¹⁹ For the presentations made at the occasion of the joint annual UNCITRAL-VIAC-YAAP Conference, see www.viac.eu/en/news-events/news-en/9-nicht-kategorisiert/127-presentations-viac-seminar (available on 12 April 2013).

revision of the Notes, the following comprises a brief and non-exhaustive overview of suggestions made by practitioners during that joint conference as well as in response to the questionnaire:

(a) General comment on the Notes: It was confirmed that the Notes are widely used, and constitute a useful tool to assist arbitrators and parties in the organization of arbitral proceedings. It was also underlined that the Notes are different from many existing guidelines, because they assist arbitration practitioners by listing and briefly describing questions on which decisions on organizing arbitral proceedings may be usefully made, without promoting one particular approach or practice;

(b) Place of arbitration (see section 3 of the Notes): It was suggested that the Notes should provide more information to users on the legal implications of the choice of the place of arbitration in differentiating the physical place of arbitration (determined by factual factors such as convenience, proximity of evidence, and so on) and the seat of arbitration (determined by legal factors);

(c) Costs (see section 5 of the Notes): It was proposed that a revised draft of the Notes address issues of costs, and cost control. The existing Notes address only deposits in relation to costs;

(d) Use of electronic means (see e.g. section 8 of the Notes): The terminology in the Notes addressing communication needs to be updated. In addition, the Notes could include suggestions regarding whether electronic means of communication and electronic submissions are appropriate and cost-effective in the circumstances, and the obstacles as well as the benefits posed by electronic means of communication. More radical proposals, including creating an online “wiki” page for the Notes, such that practitioners could provide comments in relation to each paragraph of the Notes, thereby creating a living document, were also made;

(e) Document production and disclosure (see sections 10 and 13 of the Notes): It was suggested that the Notes could better identify issues for the parties’ and tribunal’s consideration in the standards to be applied in the production of documents, and in the matters of e-disclosure and e-production of documents;

(f) Experts (see section 16 of the Notes): It was proposed to complement the Notes with more recent developments in relation to experts, such as expert teaming or expert conferencing. Guidance was requested regarding advantages and disadvantages of party-appointed or tribunal-appointed experts;

(g) Multi-party proceedings (see section 18 of the Notes): It was said that information on how to address issues specific to multi-party arbitration that may arise at various stages of the proceedings would be useful, and that that matter should be covered in more detail in the Notes. It was suggested that an update in this regard might include providing notes on the question of mass claims;

(h) The refusal of a respondent to participate in proceedings and dilatory tactics: It was suggested that the Notes could provide possible solutions available to parties and tribunals where a respondent refuses to participate in proceedings, or uses dilatory tactics. In particular, it was said that the Notes ought to provide more information on how to ensure efficiency of proceedings in such situations and on any steps that could be taken to ensure that any award would be enforceable;

(i) Impact of arbitration on third parties: Third parties can be affected by arbitral proceedings, including for instance when interim measures are granted, and it was proposed that the Notes provide information in that context;

(j) Investment treaty arbitration: It was suggested that some separate guidance on existing practices in the field of treaty-based investor-State arbitration may be warranted in relation to some areas covered by the Notes.

10. Should the Commission decide that a revision of the Notes ought to be considered by the Working Group as a matter of priority, a more detailed annotated list of possible areas of revision would be presented by the Secretariat to the Working Group.

2. Arbitrability

11. Since its thirty-sixth session, in 2003, the Commission has mentioned on a number of occasions that the topic of arbitrability was an important issue that should be given priority as a topic for future work.²⁰

12. Various issues relating to arbitrability, including the arbitrability of intra-corporate disputes, arbitrability in the fields of immovable property, insolvency or unfair competition have been identified by the Commission as areas for possible consideration.²¹ It was said that it would be for the Working Group to consider whether arbitrable matters could be defined in a generic manner, possibly by way of an illustrative list, or whether a legislative provision should be prepared in respect of arbitrability, identifying topics not considered arbitrable.

13. In the context of previous deliberations of the Commission on that matter, it was also cautioned that the topic of arbitrability was a matter raising questions of public policy, which was notoriously difficult to define in a uniform manner, and that providing a pre-defined list of arbitrable matters could unnecessarily restrict a State's ability to meet certain public policy concerns that were likely to evolve over time.²² To the extent that the issue should be considered, the purpose should not be to strive for uniformity, but to highlight in a transparent manner different views on that topic.²³ At its forty-fourth session, in 2011, the Commission affirmed that the issue of arbitrability should be maintained by the Working Group on its agenda.²⁴

14. The Commission may wish to note that the form and content of any future work on arbitrability would need to be further defined. In that respect, the Commission may wish to consider whether that topic could adequately be addressed as part of the project of the guide on the New York Convention currently under

²⁰ Ibid., *Fifty-eighth session, Supplement No. 17 (A/58/17)*, para. 204; *Fifty-ninth session, Supplement No. 17 (A/59/17)*, para. 60; *Sixtieth session, Supplement No. 17 (A/60/17)*, para. 178; *Sixty-first session, Supplement No. 17 (A/61/17)*, para. 187; *Sixty-second session, Supplement No. 17 (A/62/17, Part I)*, para. 177; *Sixty-third session, Supplement No. 17 (A/63/17)*, para. 316; *Sixty-sixth session, Supplement No. 17 (A/66/17)*, para. 203.

²² Ibid., *Sixty-first session, Supplement No. 17 (A/61/17)*, para. 185.

²³ Ibid., *Fifty-fourth session, Supplement No. 17 (A/54/17)*, para. 352.

²⁴ Ibid., *Sixty-sixth session, Supplement No. 17 (A/66/17)*, para. 203.

preparation by the Secretariat; for example, guidance on arbitrability and information regarding the treatment of arbitrability of certain matters in various jurisdictions could be provided in the section relating to article V(2)(a) of the Convention. At its current session, the Commission will have before it excerpts of the guide (see A/CN.9/786).

15. In the event the Commission considers that the outcome of any future work on arbitrability should result in a legislative text amending the Model Law on Arbitration, it may wish to decide whether it would be appropriate for consideration at a later stage, as part of a possible general revision of the Model Law on Arbitration, which is currently silent on that matter.

III Issues raised as topics for possible future work

16. The Commission may wish to note the following topics that have been raised by arbitration practitioners as areas where the lack of solutions or harmonized solutions create difficulties in practice and may warrant further deliberation as topics of possible future work.

1. Multiple, concurrent proceedings in the field of investment arbitration

17. It has been suggested that the subject of concurrent proceedings is increasingly important, particularly in the field of investment arbitration, and may warrant further consideration by UNCITRAL. In particular, it has been suggested that it is not unusual for one arbitration to be initiated in relation to a particular dispute, and concurrently for related parties to initiate parallel proceedings, requesting, in whole or in part, the same relief. In certain investment arbitration proceedings, this is said often to involve a parent company invoking the benefit of a treaty against a given State while its subsidiary, with a different legal domicile, invokes the benefit of another treaty against the same State on the basis of the same facts. In other cases, practitioners have observed a difficulty where a foreign company launches an arbitration on the basis of the investment treaty corresponding to its legal domicile while a local subsidiary initiates a separate claim on the basis of the same facts pursuant to the same contract and under the same investment treaty.

18. Addressing the subject of concurrent proceedings would also be in the spirit of promoting a harmonized and consistent approach to arbitration. In order to further consider the concrete proposals to avoid multiple recovery in relation to the same facts in the context of international arbitration, the Commission may wish to note that the Secretariat will organize jointly with other interested institutions a conference on that topic, in November 2013, and will report to the Commission on matters raised at that conference.

2. Dispute boards

19. Dispute boards first came to prominence internationally in 1995 when the World Bank introduced the concept into its procurement regime. The purpose of a dispute board is to pre-empt issues as they arise between the parties to a contract and then make recommendations as to their resolution. These recommendations need not be contractually binding, unless the parties mandate that they should be so. If the parties to the contract are not willing to accept the recommendation of the

board or give effect to a binding decision, then the matter will proceed to formal resolution via arbitration or litigation. Originally, dispute boards were confined to the field of construction contracts. Now, dispute boards are to be found in wide ranging sectors of activity, such as space agency procurement, ship construction and IT contracts.²⁵

20. It was suggested that that matter would greatly benefit from a harmonized text that could be promoted and widely used by parties to contracts, as dispute boards have proven to be a useful dispute resolution mechanism.

3. Other topics

21. Other topics mentioned as worthy of consideration included:

(a) Guidance on the role of the home State of the investor in an investment arbitration: It was suggested that it would be beneficial to have some guidance in respect of the home State of the investor in an investment arbitration. One proposal was to draft guidelines on good practices for the home State in an investment arbitration, in particular as that State has access to the travaux préparatoires of international instruments;

(b) Mass claim arbitration: In the light of the great variety of mass claims being processed in international arbitration, work on mass claim arbitration has been suggested as a possible topic for harmonization;

(c) Enforcement of settlement agreements: In support of embarking on future work regarding issues relating to the enforcement of settlement agreements arising in conciliation and mediation, the Commission may wish to note that the UNCITRAL Congress in 2007 addressed that topic, as did the Working Group in its preparation of the UNCITRAL Model Law on International Commercial Conciliation;

(d) Power to conclude arbitration agreements: The question of which law applies to the authority of a person to bind a party to an arbitration agreement, and to the form and content a proxy must have, was seen as a matter that created difficulties in practice as national laws are silent on that issue;

(e) Third party funding: Third party funding is a practice which consists in an arrangement between a professional funder and a party to the arbitration to finance all or part of a party's legal costs and expenses. The Commission may wish to consider whether the issues raised by that practice should be further studied.

²⁵ The International Chamber of Commerce, adopted a set of Dispute Board Rules in 2004 (see www.iccwbo.org/). The Forum for International Conciliation and Arbitration (FICACIC) adopted its Dispute Board Rules in 2008 (see www.ficacic.com).

E. Commercial fraud

I. Introduction

1. The Commission has considered the issue of international commercial fraud on several occasions beginning with its thirty-fifth session in 2002,¹ and the reports of the Secretariat to the Commission describing work undertaken in this regard are available on the UNCITRAL website.² In addition, a colloquium on commercial fraud was held by UNCITRAL in April 2004 covering the topic in the context of the following broad areas: work in other international organizations; banking and trade fraud; investigation; cyber fraud; prevention; transport; insurance; recovery; money-laundering; insolvency; prosecution; procurement; the role of professionals; and securities (see A/CN.9/555). Following the colloquium, the Commission approved the preparation of a study intended to assist Governments and the international commercial community in combating commercial fraud.³

2. Two meetings of a group of experts on commercial fraud were held in October 2005 and January 2007, respectively. Those sessions contributed to the preparation of the study requested, which is referred to as the “Indicators of commercial fraud” (A/CN.9/624, Add.1 and Add.2), and serves to identify common characteristics in typical fraudulent schemes that provide warning of their nature, and to explain those characteristics. At the request of the Commission, the

² See A/CN.9/540, 2003; A/CN.9/555, 2004; A/CN.9/600, 2006; A/CN.9/624, Add.1 and 2, 2007; and A/CN.9/659, Add.1 and 2, 2008.

³ *Official Records of the General Assembly, Fifty-ninth Session, Supplement No. 17* (A/59/17), paras. 108-112.

“Indicators of commercial fraud” were circulated to Member States for comment in 2007 (A/CN.9/659, Add.1 and Add.2), following which the Commission in 2008 requested the Secretariat to make such adjustments and additions as were advisable to improve the materials and then to publish the materials as a Secretariat informational note for educational purposes and fraud prevention. The Commission also expressed its view that the materials could be incorporated by the Secretariat as a component of its broader technical assistance work, which could include dissemination and explanation to Governments and international organizations intended to enhance the educational and preventive advantages of the materials. Further, Governments and international organizations could be encouraged in turn to publicize the materials and make use of them in whatever manner was appropriate, including tailoring them to meet the needs of various audiences or industries.⁴

3. In addition, as requested by the Commission,⁵ the Secretariat has continued to participate in the work of the United Nations Office on Drugs and Crime (UNODC) on economic crime and identity fraud. In particular, the UNCITRAL Secretariat has participated in UNODC’s core group of experts on identity-related crime, which was formed to bring together on a regular basis representatives from Governments, private sector entities, international and regional organizations and academia to pool experience, develop strategies, facilitate further research and agree on practical action against identity-related crime. The most recent meeting of the core group of experts took place in January 2013, and resulted in a draft Economic and Social Council resolution (E/CN.15/2013/L.6/Rev.1) requesting UNODC to continue its efforts, in consultation with UNCITRAL, “to promote mutual understanding and the exchange of views and expertise between various stakeholders, and in particular between public and private sector entities, on issues pertaining to identity-related crime through the future work of the core group of experts on identity-related crime, including draft model legislation on identity-related crime”.

4. At its forty-fifth session in 2012, the Commission was reminded that more than a decade had passed since it first considered the issue of commercial fraud. It was said that “commercial fraud remained a major obstacle to international trade and noted that, given the vital role of the private sector in combating commercial fraud, UNCITRAL was in a unique position to coordinate ongoing efforts in that field and thereby help draw the attention of legislators and policymakers to that important issue”.⁶ In addition, it was proposed that the Secretariat could organize a colloquium on commercial fraud, resources permitting.⁷ In order to consider the feasibility and desirability of holding such a colloquium, the Secretariat held an informal meeting of experts in the field who met in Vienna, Austria, from 29-30 April 2013.

5. The informal meeting of experts reviewed the work on commercial fraud undertaken by UNCITRAL to date and considered whether or not future work in the area would be useful and, if so, the possible scope of that work.

⁴ Ibid., *Sixty-third Session, Supplement No. 17* (A/63/17), paras. 342-343 and *Sixty-fourth Session, Supplement No. 17* (A/64/17), para. 348.

⁵ Ibid., *Sixty-third Session, Supplement No. 17* (A/63/17), para. 347 and *Sixty-fourth Session, Supplement No. 17* (A/64/17), para. 354.

⁶ Ibid., *Sixty-seventh Session, Supplement No. 17* (A/67/17), para. 232.

⁷ Ibid.

II. The Indicators of commercial fraud

6. The informal meeting of experts reviewed the Indicators of commercial fraud and made several suggestions to align the text with developments in the field since the document was last revised in 2010.

7. The informal meeting of experts agreed that the Indicators of commercial fraud should be published in an appropriate manner as soon as practicable and given the widest possible circulation. In this regard, it was suggested that, were a Colloquium to be held, it could be of significant benefit in facilitating the distribution and further updating of the Indicators of commercial fraud.

III. Possible future work on commercial fraud

A. Colloquium

8. The informal meeting of experts suggested that a number of important areas in respect of commercial fraud warranted further attention in a broader forum. It was recalled that the UNCITRAL colloquium in 2004 provided a useful model for addressing issues in a context that attracted interest and participation from a wide spectrum of those combating commercial fraud.

9. In particular, it was observed that developments in electronic communications posed particular challenges through identity theft of corporations and banks, the inability of receivers of messages to identify senders with certainty, and the proliferation of websites that mimicked those of legitimate entities but that were controlled by fraudsters. It was observed that the consequences of such developments impacted every aspect of business, finance and trade from the sale of goods, information and services to online dispute resolution.

10. It was also suggested that the areas explored in the 2004 colloquium warranted revisiting in light of recent developments such as cloud computing, mobile payment systems, and expanded access to the Internet and the global financial crisis, which had exacerbated the impact of commercial fraud. It was noted that Internet usage has expanded at a dramatic rate around the world, increasing by 528 per cent over the last decade. It was further noted that 1/3 of the world's population is now connected to the Internet, increasing over the last decade by 3,000 per cent in Africa, 2,250 per cent in the Middle East, 1,200 per cent in Latin America and 800 per cent in Asia.⁸

11. It was recalled that the Commission agreed in 2004⁹ that it would be useful if, wherever appropriate, examples of commercial fraud were discussed in the particular contexts of projects undertaken by UNCITRAL so as to enable delegates involved in those projects to take the problem of fraud into account in their deliberations, and the Secretariat was requested to facilitate such discussions where appropriate. The informal meeting of experts expressed the view that while some of the UNCITRAL texts address issues of fraud, many do not and that even where

⁸ Internet World Stats: Usage and Population Statistics, www.internetworldstats.com (last visited 6 May 2013).

⁹ Ibid., *Fifty-ninth Session, Supplement No. 17 (A/59/17)*, para. 111.

fraud is addressed, the attention given to it is focused on its impact on existing obligations and not in identifying and preventing it. However, it was noted that identity management and mobile payments were on the list of topics for possible future work by Working Group IV.¹⁰ It was also suggested that the type of expertise necessary to formulate normative rules of commercial law in discrete fields is not necessarily the type of expertise necessary to identify possibilities of commercial fraud or how to address them; therefore, it was suggested that it might be useful to focus separately on the commercial fraud potential and dangers in the areas on which UNCITRAL Working Groups are focused.

12. Recognizing the unique value of the Indicators of commercial fraud, it was suggested that a colloquium could update the text and consider additions that might be appropriate, consider how to promote them, and to mobilize energies outside the United Nations to promote and keep them up to date.

13. The informal meeting of experts was of the view that in light of the continued threat to international trade posed by commercial fraud, the need for further coordination and education, and the unique position occupied by UNCITRAL to bring together governmental representatives and other organizations affected by commercial fraud, an international colloquium sponsored by UNCITRAL should be considered.

B. A mechanism for future work

14. The informal meeting of experts recalled that the report to the Commission on the 2004 colloquium had emphasized that education and training played a significant role in fraud prevention and could help address the problems resulting from under-reporting the incidence of commercial fraud.¹¹ The report further noted that prevention was primarily within the purview of commercial law and self-regulation by the commercial community, and was manifested through standards such as those affecting corporate governance, standards of professional conduct and audits.¹² The meeting suggested that a process through which the Indicators of commercial fraud could be regularly updated would be invaluable.

15. The informal meeting of experts suggested that there was coordination, education and cooperation among commercial fraudsters and that similar efforts were essential in order to prevent and combat commercial fraud.

16. The meeting highlighted the need for regular opportunities to gather together to exchange information for those engaged in combating commercial fraud. In light of the limited resources available to UNCITRAL, it was suggested that private organizations could be encouraged to continue anti-fraud activities in the future through informal cooperation with, as well as encouragement and support from, UNCITRAL.

¹⁰ Ibid., *Sixty-sixth Session, Supplement No. 17* (A/66/17), paras. 236-237 and 239. See also two notes by the Secretariat: "Present and possible future work on electronic commerce" (A/CN.9/728) and "Overview of identity management" (A/CN.9/WG.IV/WP.120).

¹¹ Document A/CN.9/555, para. 63.

¹² Ibid.

17. The informal meeting of experts recommended that attention be given to encouraging coordination, ongoing education and training by other organizations.

IV. Recommendations for consideration by the Commission

18. In light of these considerations, the informal meeting of experts suggested that it would be valuable for a colloquium to be organized by UNCITRAL, in consultation with UNODC, on the following topics:

- (a) Commercial fraud in the emerging technological landscape including:
 - (i) Theft of corporate identities;
 - (ii) Impact of commercial fraud on and misuse of cloud computing;
 - (iii) Abuse of mobile payments including its impact on microfinance initiatives;
 - (iv) Abuse of online dispute resolution by fraudsters;
- (b) Impact of the global financial crisis on commercial fraud;
- (c) Emerging commercial fraud threats to global trade;
- (d) Endorsement, promotion and updating of the Indicators;
- (e) Identification of work being done to combat commercial fraud and consideration of projects in the fields addressed at the 2004 Colloquium, particularly banking and trade fraud, cyber fraud, securities fraud, and fraud prevention; and
- (f) The feasibility and desirability of informal coordination to continue opportunities for coordination.

F. Proposal by the Government of the United States regarding UNCITRAL future work: provisional agenda item 16¹

(A/CN.9/789)

[Original: English]

Contents

| | <i>Paragraph</i> |
|---|------------------|
| I. Introduction | 1 |
| II. Proposal by the Government of the United States | |

I. Introduction

1. The forty-sixth session of the Commission will consider, under provisional agenda item 16, planned and possible future work by UNCITRAL, and will have before it a note by the Secretariat (A/CN.9/752 and Add.1) and an additional note by the Secretariat on planned and possible future work by UNCITRAL (A/CN.9/774). In that regard, the Government of the United States of America submitted a proposal regarding UNCITRAL future work, the text of which is reproduced below in the form in which it was received by the Secretariat.

II. Proposal by the Government of the United States

The United States greatly appreciates the notes prepared by the Secretariat on planned and possible future work,² designed to bring to the attention of States the important concerns regarding the organization's priorities and resource constraints. The United States has consistently supported the provision of adequate resources to support the important work being done by UNCITRAL, and we believe that it has been one of the most productive bodies in the United Nations system. The high level of output the UNCITRAL secretariat produces for all the meetings is even more impressive when considering the small number of officers working in the Secretariat and the vast scope of the work that UNCITRAL addresses. It is regrettable, as was reported at the last session of the Commission, that "UNCITRAL cannot continue, with its existing resources, to generate legal texts at the current rate and work toward the implementation and use of all UNCITRAL texts to the extent necessary."³

¹ Provisional Agenda Item 16 is entitled "Planned and possible future work, including in the areas of arbitration and conciliation, commercial fraud, electronic commerce, insolvency law, international contract law, microfinance, online dispute resolution, public procurement and infrastructure development, including public-private partnerships, and security interests." United Nations document A/CN.9/759 (2013).

² Notes by the Secretariat, A Strategic Direction for UNCITRAL, United Nations document A/CN.9/752 and Add.1 (2012); Planned and Possible Future Work, United Nations document A/CN.9/774 (2013).

³ A/CN.9/752/Add.1, para. 25.

At its 2012 session, the Commission took note of the following strategic considerations:

- (a) The subject areas that should be accorded the highest priority, by reference to the role and relevance of UNCITRAL;
- (b) Achieving the optimal balance of activities given current resources;
- (c) The sustainability of the existing *modus operandi*, i.e. current emphasis on formal rather than informal negotiations when developing texts, given current resources;
- (d) The mobilization of additional resources and the extent to which UNCITRAL should seek external resources for its activities, such as through joint activities and cooperation with other bodies.⁴

The Commission agreed to “provide further guidance on *inter alia*, those matters at its forty-sixth session.”⁵

Sustainability of existing *modus operandi*

For a number of years, States have proposed that UNCITRAL should adopt a more flexible approach to methods of work to address resource concerns and ensure that the highest-priority, most valuable projects are able to proceed.⁶ The Secretariat has suggested that more than one topic might be given to a specific working group. We submit that another way of achieving a more flexible work plan would be for UNCITRAL to focus on authorizing individual projects and allocating the needed resources to them, rather than maintaining six working groups that are generally devoted exclusively to one area of law for many years. We thus suggest that UNCITRAL should no longer structure its work priorities using a system of six semi-permanent working groups devoted to a particular area of law, each of which are expected to receive two weeks of meeting time every year.⁷

For example, instead of having a standing entity labelled as “Working Group IV — Electronic Commerce”, the Commission would approve further work on the in-progress instrument on electronic transferable records and determine the resources that the project will require in the next year (in terms of Secretariat attention and conference resources). Taking into account UNCITRAL’s current annual entitlement to 14 weeks of conference services (including meeting space and interpretation),⁸ those resources could then be allocated to specific projects as

⁴ Report of the United Nations Commission on International Trade Law, forty-fifth session (25 June-6 July 2012), United Nations document A/67/17, para. 229.

⁵ *Id.*, para. 231.

⁶ See e.g., Report of the United Nations Commission on International Trade Law, forty-fourth session (27 June-8 July 2011), United Nations document A/66/17, para. 343.

⁷ At its 2003 session, the Commission agreed that working groups should normally meet for a one-week session twice a year, but that extra time could be allocated to a working group if another working group did not make full use of its entitlement. Report of the United Nations Commission on International Trade Law, thirty-sixth session (30 June-11 July 2003), United Nations document A/58/17, paras. 273, 275.

⁸ The United States does not support a further reduction in the allocation of conference resources. At its 2011 session, the Commission agreed to a reduction in the habitual 15-week total entitlement per year in view of the extraordinary constraints placed on the Commission and its

needed — rather than, by default, assuming that each working group devoted to a particular topic will receive two weeks of meeting time. (A proposed allocation of resources for the next year is provided below.)

This approach would require the Commission to evaluate whether the topics being addressed continue to remain the highest priorities when resources become available upon the completion of a project. By contrast, the use of semi-permanent working groups that propose their own future areas of work means that only rarely will a working group deem its useful work to be exhausted. Understandably, experts in each area of law will often continue to believe that further valuable work can be done in their area of expertise. Even where that may be the case, such work may not be more valuable — in terms of furthering the mandate of UNCITRAL — than new work in areas that are not currently so fortunate as to have a working group assigned to them. Given the scarcity of resources, UNCITRAL cannot afford to continue operating under the implicit presumption that the conclusion of one project in an area of law will be followed by further work on that same topic.

As another method of conserving resources, we also believe that the Commission should consider, in appropriate cases, the development of draft instruments outside of the full intergovernmental discussions used by working groups. Formal review by UNCITRAL Member States is, of course, necessary for the approval and finalization of any instruments. However, in the past, the Commission itself has at times considered a text developed by the Secretariat (with input from experts) without prior negotiations in a working group context.⁹ The United States encourages UNCITRAL to consider the use of such an approach when appropriate, as well as other tools including expanded use of experts' meetings, regional meetings (including those where host government resources may be available), and use of special rapporteurs who, working closely with the Secretariat, could facilitate preparation of draft materials for consideration.¹⁰

Mobilization of additional resources

States have also recognized that, as another tool for tackling additional areas of work in an efficient manner, UNCITRAL should seek to increase cooperation with other international organizations, consistent with its primary mandate.¹¹ A

secretariat to reduce regular budget expenditures during the 2012-2013 biennium. Report of the forty-fourth session, *supra* note 5, para. 347.

⁹ See A Strategic Direction for UNCITRAL, *supra* note 1, para. 33 (noting that “the Secretariat has undertaken substantial preparation of a text on several occasions,” such as when “a draft text was developed by the Secretariat and referred directly to the Commission as there was no existing working group with the relevant expertise (e.g. the Legal Guide on Electronic Funds Transfers (1987) and the Legislative Guide on Privately Financed Infrastructure Projects (2000)” and when “preparation of the draft text was entrusted to the Secretariat and referred directly to the Commission (e.g. Recommendations on the use of the UNCITRAL Arbitration Rules (2012))”).

¹⁰ See Note by the Secretariat, UNCITRAL rules of procedure and methods of work, A/CN.9/638/Add.1, paras. 31-33, 36-42 (2007).

¹¹ See Establishment of the United Nations Commission on International Trade Law, General Assembly resolution 2205 (XXI), A/RES/2205 (Dec. 17, 1966), para. 8 (“The Commission shall further the progressive harmonization and unification of the law of

project-based resource allocation approach as described above would make it easier for UNCITRAL to engage in joint projects with other organizations such as UNIDROIT or the Hague Conference, as such collaboration would not have to wait for an existing working group to become “vacant”. Given that these other private law bodies face similar resource constraints, all three organizations should analyse their work programmes to identify projects that could be jointly developed. Indeed, at this year’s Governing Council meeting, UNIDROIT strongly supported the idea of substantive cooperation with UNCITRAL on future projects, with the two organizations developing instruments jointly.

Moving forward, we believe that UNCITRAL should make such collaboration a priority. We welcome recent efforts at cooperation such as the joint publication of the paper on “UNCITRAL, Hague Conference and UNIDROIT Texts on Security Interests”.¹² However, we believe that collaboration should not be limited to joint studies and attendance of Secretariat staff at meetings of the other organizations. Rather, we recommend that the organizations’ Secretariats seek to identify projects that could be developed jointly, in ways that maximize the comparative advantages of each organization.

Subject matters that should be accorded highest priority

In terms of evaluating future work, the Commission has repeatedly decided that assessment of specific projects should be based on the need for and feasibility of future work as it relates to the development of international trade law.¹³ A key criterion in assessing need in this context is the effect that a proposal will have on inclusive economic development and the rule of law, particularly in developing countries.¹⁴ As the Commission has also decided, “[a]s a general rule, the Commission should not refer subject-matters to a working group until after preparatory studies had been made by the Secretariat and the consideration of these studies by the Commission had indicated not only that the subject-matter was a

international trade by: (a) Co-ordinating the work of organizations active in this field and encouraging co-operation among them...”).

¹² See Report of the forty-fifth session, *supra* note 3, paras. 165-66.

¹³ As the Secretariat notes (A/CN.9/774, para. 19), the focus on need and feasibility dates back to the original report of the Secretary-General concerning the formation of UNCITRAL. Report of the Secretary-General, A/6396 (1966). That report notes that “the unification process is desirable per se only when there is an economic need and when unifying measures would have a beneficial effect on the development of international trade.” *Id.*, para. 204. It also addresses feasibility, noting that “[i]t should therefore be less difficult to adopt national rules to the needs of international trade, than to unify rules on such matters as family law, succession, personal status, and other subjects deeply rooted in national or religious traditions.” *Id.*, para. 222.

¹⁴ The role of UNCITRAL in promoting the rule of law had been on the agenda of the Commission since 2008, in response to a request from the General Assembly. In 2012, UNCITRAL participated in a high level meeting of the General Assembly, where the role of UNCITRAL in promoting the rule of law was highlighted. See Report of the forty-fifth session, *supra* note 3, paras. 195-227.

suitable one but that the preparatory work was sufficiently advanced for a working group to commence work in a profitable manner.”¹⁵

Allocating resources to projects

Taking into account the above considerations, and assuming that 14 weeks of meeting time will again be available, the United States proposes that resources might be allocated as follows for the upcoming year:

| <i>Project</i> | <i>Allocation of Meeting Time</i> |
|--|---|
| Follow-on transparency work, as needed, and/or new arbitration topics | Two weeks |
| Preparation of legal standards for online dispute resolution for cross-border electronic transactions | Two weeks |
| Development of an instrument on electronic transferable records | Two weeks |
| Preparation of a model law on secured transactions | Two weeks |
| Development of a legislative guide or model law on the creation of an enabling environment for microbusiness and small and medium-sized enterprises (microfinance) | Two weeks |
| Colloquium on cross-border insolvency to identify specific projects for future work (including projects related to general topics already under discussion) | One-half week |
| Colloquium on commercial fraud | One-half week |
| Drafting of a model law on public-private partnerships (PPPs) | No meetings – work by Secretariat and experts |
| 2014 Commission meeting, including review of work by Secretariat and experts on a model law on PPPs (if appropriate) | Three weeks |

The Secretariat paper suggests the possible reduction of the six existing working groups to five. However, we believe that using the more flexible approach outlined above — with resources allocated to specific projects rather than semi-permanent working groups — could permit UNCITRAL to conserve resources without eliminating useful topics. Only five projects would be the subject of full intergovernmental negotiations, thus reducing the burden on the Secretariat; at the same time, UNCITRAL could remain engaged on several other topics and be undertaking the necessary preparatory work for launching new projects in the future.

This suggested allocation of resources would entail a slightly different approach to several areas in which new or continued work has been proposed, including through use of some of the more flexible methods of work described above. The impact on particular projects is discussed below.

¹⁵ Report of the United Nations Commission on International Trade Law, eleventh session (30 May-16 June 1978), United Nations document A/33/17, paras. 67-68; Note by the Secretariat, UNCITRAL rules of procedure and methods of work, A/CN.9/638, para. 20 (2007).

Microfinance and related topics

Consistent with the decision of the Commission at its last session and the recommendation of the January 2013 colloquium on microfinance and related topics, we believe that, consistent with the proposal made by the Government of Colombia, work should begin on a legislative guide or model law addressing the elements necessary for the creation of an enabling legal environment relating to the life cycle of micro and small businesses: simplified business incorporation, dispute resolution, access to credit, mobile payments, and insolvency.

At its forty-fifth session, the Commission decided that holding a second colloquium on microfinance and related topics “should rank as a first priority for UNCITRAL”.¹⁶ The Commission decided that the colloquium should focus on “facilitating simplified business incorporation and registration; access to credit for micro-businesses and small and medium-sized enterprises; dispute resolution applicable to microfinance transactions; and other topics related to creating an enabling legal environment for micro-businesses and small and medium-sized enterprises.”¹⁷ That colloquium, held in January 2013, developed a “broad consensus among participants” that UNCITRAL should “address the legal aspects necessary for the creation of an enabling legal environment for MSMEs. It was stressed that work in establishing such an environment would be consistent with the Commission’s primary mandate to promote coordination and cooperation in the field of international trade, including regional cross-border trade.”¹⁸

The Secretariat report underscores the crucial importance of establishing an enabling legal environment for micro and small businesses in developing countries to effectively reach international markets through electronic and mobile commerce.¹⁹ Moreover, “[t]he creation of an enabling legal environment also contributes to reinforcing the rule of law at country level which, as stressed by the General Assembly in its Resolution on the Rule of Law, is conducive to the growth of a fair, stable and predictable system for generating inclusive, sustainable, and equitable development.”²⁰ Thus, consistent with the colloquium’s recommendation,

¹⁶ Report of the forty-fifth session, *supra* note 3, para. 126.

¹⁷ *Id.*

¹⁸ Note by the Secretariat, Microfinance: creating an enabling legal environment for micro-business and small and medium-sized enterprises, A/CN.9/780, para. 50 (2013). The Secretariat report points out that “cross-border recognition of these new and varied legislative issues and emerging structures [is] needed for MSMEs operating in regional markets in order to provide a recognizable international basis for transactions and avoid problems that can arise because of a lack of business recognition.” *Id.*

¹⁹ *Id.*, para. 52 (noting that “[g]lobally, Internet usage has increased by 528 percent over the last decade: approximately one third of the world’s population is now connected to the Internet” and that this “number is expected to increase to forty seven per cent by 2016”); see also Note by the Secretariat, Possible future work on online dispute resolution in cross-border electronic commerce transactions, United Nations document A/CN.9/706, para. 9 (2010) (observing that “[o]ne of the main drivers underlying e-commerce growth is the rising number of individuals connected to the Internet”).

²⁰ Microfinance, *supra* note 17, para. 13 (footnote omitted).

we believe that work should begin on a legislative guide or model law addressing these topics.²¹

Insolvency

The United States suggests that a colloquium to identify specific projects and possible future areas of work be scheduled in lieu of any full intergovernmental meetings on insolvency for the next year. Then, under the flexible approach to resource allocation outlined in the first section of this paper, work on insolvency could be resumed once an appropriately specific project is identified and approved by the Commission.

With respect to insolvency, Working Group V has now completed the two projects to which it has been devoting its time for the last several years. It has completed a set of revisions to the Guide to Enactment for the Model Law on Cross-Border Insolvency, and has also completed a new section of text for the Legislative Guide on Insolvency. Both of these documents are being presented to the Commission for finalization and approval. The most recent report of Working Group V notes that, although the Working Group may not have technically exhausted its mandate in terms of the legal issues that may be worth considering, it does not have a plan for what its work on those topics would produce.²² Thus, the Working Group has concluded that a colloquium could be useful to determine what future projects (on currently-planned topics as well as other proposed topics) could be the most valuable.²³

We agree with the Working Group's conclusion that a colloquium would be appropriate; the valuable instruments that Working Group V has developed in this area of law have been extremely influential, and UNCITRAL should consider additional projects that could utilize the extraordinary expertise of the delegates and observers who have participated in these past efforts. However, in light of the uncertainty regarding what concrete projects would be suitable for immediate work,

²¹ With respect to the report of the Secretary-General discussed in footnote 12 above, certain aspects of corporate law affecting international trade are cited as an example of work that might be pursued. United Nations document A/6396, para. 207 (noting that "it would be beneficial to international trade if more efforts were made in the direction of ... rules relating to corporations entering into foreign trade relations"). The General Assembly also requested UNCITRAL to engage in work on legal problems related to different kinds of multinational enterprises. See General Assembly resolution 2928, A/RES/2928 (XXVII), para. 5 (1972).

²² Report of Working Group V (Insolvency Law) on the work of its forty-third session (New York, 15-19 April 2013), United Nations document A/CN.9/766, para. 108 (noting that while the working group "had not yet completed its work on implementing the mandate received from the Commission," it nevertheless "was not yet clear how that part of the mandate could best be pursued").

²³ Id. ("The Working Group heard a proposal to hold a colloquium to examine how and by what type of instrument that remaining part of the mandate might be addressed, as well as to identify possible topics for future work. The Working Group agreed that such a colloquium could be useful; however, the suggestion that it should take the place of the Working Group sessions necessary to complete the mandate granted by the Commission did not attract sufficient support. Several delegations suggested that Commission approval should be sought for any future projects but that view did not attract sufficient support.").

we do not believe that working group meetings would be a prudent use of increasingly scarce resources while those projects are being identified.

Public-private partnerships (PPPs)

While further work on PPPs may be useful, it can be advanced through alternative methods of work led by the Secretariat. Such an approach would be consistent with the successful practice of the Commission in developing the Legislative Guide on Privately Finance Infrastructure Projects and the Model Law of Public Procurement.²⁴

In May 2013, UNCITRAL held a colloquium on PPP issues to discuss the possible value of future work that would expand on the closely-related instruments that Working Group I has produced in the past — namely, the Legislative Guide on Privately Finance Infrastructure Projects (which includes a set of legislative recommendation) and a set of Model Legislative Provisions on Privately Financed Infrastructure Projects. The colloquium concluded that, in light of increasing use of PPPs and developments in recent years, further work in this area might be useful. The most likely candidate for a future project would be a model law, which many colloquium participants noted would have greater visibility — and would be easier to promote — than the existing instruments.

Because of the work that has already been done on legislative recommendations and model legislative provisions, a basic model law could be developed without the expenditure of the resources that would be entailed by full intergovernmental negotiations in a working group. As noted above and in the Secretariat paper, the development of a text outside of a working group — with subsequent review by the Commission — could permit UNCITRAL to maximize its productivity despite the serious resource constraints. Based on the discussions at the colloquium, the United States believes that such an approach would be the ideal method for developing a model law on PPPs. As the Commission has previously approved the instruments developed by Working Group I, which cover most issues that a model law would need to address, the primary task remaining is merely a technical drafting exercise. The draft of a model law could be developed through an experts' group led by the Secretariat; then at a Commission session, Member States could review the document and either make any edits necessary to finalize it or, if needed, refer it for further work.

Commercial fraud

We support the organizing of a colloquium on commercial fraud in coordination with UNODC, as proposed at the last session of the Commission.²⁵ At the

²⁴ As noted above, *supra* note 8, a draft text was developed by the Secretariat and referred directly to the Commission concerning the Legislative Guide on Privately Financed Infrastructure Projects (2000). At the 2011 session of the Commission, States called for the utilization of “drafting groups for finalizing text, as had successfully been done during the current session in respect of the Model Law on Public Procurement.” Report of the forty-fourth session, *supra* note 5, para. 343.

²⁵ Report of the forty-fifth session, *supra* note 3, para. 232.

April 2013 UNCITRAL Expert Group Meeting on Commercial Fraud, there was broad support for holding another colloquium as a follow-up to the 2004 Colloquium and updating the work that UNCITRAL had previously done on commercial fraud indicators.²⁶ It was widely felt that given the vital role of the private sector in combating commercial fraud, UNCITRAL was in a unique position to coordinate ongoing efforts in that field and thereby help draw the attention of legislators and policymakers to that important issue.²⁷ In particular, it was pointed out that developments in electronic telecommunications pose new challenges and that the consequences of such developments impact every aspect of business, finance, and trade. It was further suggested that it might be useful to focus separately on the potential for commercial fraud in the areas on which UNCITRAL working groups are currently focused, such as online dispute resolution and electronic transferability of records. While these texts may attempt to address issues of fraud, the expertise necessary to formulate normative rules of commercial law in these fields may not necessarily be the same expertise required to identify possibilities of commercial fraud or how to address them in an instrument.²⁸

International contract law

We also support organizing a colloquium celebrating the 35th anniversary of the Convention on the International Sale of Goods in 2015. At the 2005 UNCITRAL Colloquium celebrating the 25th Anniversary of the CISG, the Convention was recognized as probably the single most successful treaty in the history of modern commercial law.²⁹ Since that colloquium, 16 more States have become party to the Convention, bringing the total number of parties to 79.³⁰

A proposal at the last session of the Commission called for consideration of a new global initiative on international contract law.³¹ A number of delegations, including the United States, expressed clear opposition to any effort to develop a new global framework for international contract law. Nonetheless, the Secretariat was requested “to organize symposiums and other meetings ... to assist the Commission in the assessment of the desirability and feasibility of future work in the field of general

²⁶ Note by the Secretariat, Commercial Fraud, A/CN.9/788, paras. 8-12, 18 (2013).

²⁷ *Id.*, paras. 13-17.

²⁸ *Id.*, para. 11. At the 2004 session of the Commission (following the 2004 Colloquium on international commercial fraud), it was decided that “it would be useful if, wherever appropriate, examples of commercial fraud were to be discussed in the particular contexts of projects worked on by the Commission so as to enable delegates involved in those projects to take the problem of fraud into account in their deliberations.” The Secretariat “was requested to facilitate such discussions where it seemed appropriate.” Report of United Nations Commission on International Trade Law on its thirty-seventh session (14-25 June 2004), United Nations document A/59/17, para. 111.

²⁹ Hebert Kronke, *The UN Sales Convention, the UNIDROIT Contract Principles and the Way Beyond*, 25 J. L. & Comm. 451 (2005).

³⁰ For the parties to the CISG see Status 1980 — United Nations Convention on Contracts for the International Sale of Goods, available at www.uncitral.org/uncitral/en/uncitral_texts/sale_goods/1980CISG_status.html.

³¹ Possible future work in the area of international contract law: Proposal by Switzerland on possible future work by UNCITRAL in the area of international contract law, United Nations document A/CN.9/758 (2012).

contract law.”³² To fulfil this mandate, UNCITRAL co-sponsored a symposium in January 2013 at Villanova Law School on “Assessing the CISG and Other International Endeavours to Unify International Contract Law,” and held an expert meeting on contract law in February 2013 at the UNCITRAL Regional Centre for Asia and the Pacific.³³

Based on the discussions at those meetings, the United States continues to oppose a new global initiative on international contract law, as an initiative of the scale proposed would be an enormous project, consuming considerable resources for many years, with limited likelihood of success. The scope of the CISG was intentionally limited to exclude issues on which a consensus could not be reached, and we have seen no evidence that those differences have fundamentally changed in recent years. Moreover, the UNIDROIT Principles of International Commercial Contracts already provide a useful complement to the CISG. At both its 2007 and 2012 sessions, the Commission endorsed the UNIDROIT Contract Principles — commending them for their intended purposes, identifying them as complementary to the CISG, and congratulating UNIDROIT on preparing “general rules for international commercial contracts.”³⁴ Thus, we believe that there are more practical, positive, and forward-looking alternatives that build on the existing platform of the CISG and the UNIDROIT Principles, and that UNCITRAL should focus on these alternatives.

³² A summary of the debate is contained in the report of the forty-fifth session, *supra* note 3, paras. 127-32.

³³ Information concerning the symposium is available at www.law.villanova.edu/Flash%20Stories/Norman%20J%20Shachoy%20Symposium.aspx. The papers relating to the symposium will be published in Issue 58:4 of the Villanova Law Review. The papers relating to the regional Expert Meeting held in Songdo, Incheon in South Korea will be published in an issue of the Comparative Law Journal of the Pacific — *Journal de Droit Comparé du Pacifique* (CLJP-JDCP).

G. Proposal by the Government of Colombia

(A/CN.9/790)

[Original: Spanish]

Note by the Secretariat

At its forty-sixth session, the Commission may wish to consider item 16 of the provisional agenda (Planned and possible future work, including in the areas of arbitration and conciliation, commercial fraud, electronic commerce, insolvency law, international contract law, microfinance, online dispute resolution, public procurement and infrastructure development, including public-private partnerships, and security interests). The Commission will have before it a note by the Secretariat on the planned and possible future work of UNCITRAL (A/CN.9/774). In this connection, the Government of Colombia has submitted a proposal, the text of which is reproduced below in the form in which it was received by the Secretariat.

Annex

Proposal for the establishment of a new working group on “Microfinance: creating an enabling legal environment for micro-business and small and medium-sized enterprises”

I. Introduction

At its forty-fifth session, the Commission approved the proposal of the Government of Colombia for the convening of a second colloquium on microfinance, with a focus on facilitating simplified business registration and incorporation.¹

The Government of Colombia’s proposal stated that one crucial aspect of the area of microfinance, besides the granting of credit, was the creation of simplified corporate business vehicles to promote formalization and transparency for the beneficiaries of microloans. There is clear scope for UNCITRAL to deal with this area of trade law.

The Commission agreed that “the holding of such a colloquium should rank as a first priority for UNCITRAL”.² The colloquium on microfinance and related matters took place in January 2013 with the participation of experts, specialists and representatives of governments, international organizations, non-governmental organizations, the private sector and academia from all over the world.³

¹ Superintendency of Companies, *Communication No. 2012-01-17-0670*, addressed to Renaud Sorieul, Registrar of UNCITRAL, 21 June 2012.

² *Official Records of the General Assembly, Sixty-sixth Session, Supplement No. 17* (A/66/17), para. 126.

³ Organized by the UNCITRAL Secretariat; references [in the Spanish original] in English since, when this text was prepared, the official text was not available in Spanish. Microfinance: creating an enabling legal environment for micro-business and small and medium-sized enterprises. Note by the Secretariat, document A/CN.9/780, para. 5 (May 2013).

The main conclusion reached by the colloquium was that UNCITRAL should set up a new working group on microfinance and related matters. The Secretariat summarized the outcome of the colloquium as follows:

“...There was broad consensus among participants at the Colloquium recommending that a Working Group be established to address the legal aspects necessary for the creation of an enabling legal environment for MSMEs. It was stressed that work in establishing such an environment would be consistent with the Commission’s primary mandate to promote coordination and cooperation in the field of international trade, including regional cross-border trade.”⁴

II. The importance of micro-business and small and medium-sized enterprises in developing countries

In a developing economy, small and microenterprises are the fabric of entrepreneurship and provide a base for medium-sized and large enterprises. The creation of the latter will depend on the degree to which small and microenterprises are able to integrate in a stable and sound way into a formal process of business operation.⁵

Governments must introduce public policies and focus their efforts on strengthening the business sector⁶ and, perhaps more importantly, promoting the establishment of an enabling legal environment tailored to micro-businesses and small and medium-sized enterprises.

One important consideration in the establishment of this enabling legal environment is the effect it would have on microfinance and micro-business. The Secretariat’s report emphasized the importance of this issue in the following terms:

“In order to help micro, small and medium-sized enterprises to adjust to immediate uncertainty, and graduate from a subsistence form of doing business to a growth mode characteristic of the formal sector, an enabling legal environment is thus needed. Such an environment is not limited to microfinance alone; it relates to the life cycle of an enterprise — its establishment, operation and termination — and it also focuses on the supporting institutional legal framework. Nonetheless it is clearly relevant to microfinance since, ‘as a market-based approach to fighting poverty, microfinance is focused on developing entrepreneurship and expanding self-employment’.⁷ Furthermore, an enabling legal environment should not be confined only to micro-business. As definitions of micro-business and small enterprise vary substantially by region and from country to country,⁸ the same

⁴ Ibid., para. 50. [*Translator’s Note*: MSME = micro-business, small and medium-sized enterprises].

⁵ [*Translator’s Note*: reference missing in Spanish original].

⁶ Public policy agenda included in this study: *Bank Financing to Small and Medium-Sized Enterprises (SMEs) in Colombia*, Constantinos Stephanou, World Bank, Camila Rodriguez, affiliation not provided to SSRN, World Bank Policy Research Working Paper No. 4481, 1 January 2008.

⁷ A/CN.9/727.

⁸ “Lack of a clear definition is the main challenge in ensuring SME finance”, see CGAP, *Financial Access Report 2010*, p. 37, also including examples of various definitions of SMEs. A definition of SMEs and/or micro-business can be found in the European Commission Recommendation of 6 May 2003 (2003/361/EC), in *Microenterprise Results Reporting*:

factors defining an enabling legal environment should pertain to both micro and small/medium-sized businesses.”⁹

It is thus necessary to establish a legal environment that enables entry-level formalization mechanisms, including crucial aspects such as the creation of simplified-regime corporations, access to credit, dispute resolution and simplified insolvency regimes, in other words a legal framework taking account of the entire economic cycle of micro-business and small and medium-sized business.¹⁰

III. Promotion of sustainable development and the rule of law

The United Nations Millennium Declaration¹¹ on development and the eradication of poverty has highlighted the potential of entrepreneurial initiative to contribute to specific sustainable development objectives.

When UNCITRAL is setting priorities in its work, it should consider the impact which the establishment of this enabling legal environment for micro-business and SMEs may have on inclusive, sustainable and equitable development and the promotion of the rule of law, as was frequently stated at the above-mentioned colloquium.

The link between creating this enabling legal environment, promoting development and strengthening the rule of law has also been recognized by the United Nations General Assembly, as confirmed by a recent Secretariat report:¹²

“The creation of an enabling legal environment also contributes to reinforcing the rule of law at country level, which, as stressed by the General Assembly in its Resolution on the Rule of Law,¹³ is conducive to the growth of a fair, stable and predictable system for generating inclusive, sustainable, and equitable development. It is worth noting that most recently the General Assembly, once again ‘recognizing the important contribution entrepreneurship can make to sustainable development’,¹⁴ has encouraged ‘governments to develop and implement policies

Methodology and Statistical Annexes FY 2010 19, USAID, available at www.usaid.gov/our_work/economicgrowth_and_trade/mlcro/MRR_FY10_Methodology_Statistical_Annexes_82211_Final.pdf. Different definitions of microcredit also exist; see, for instance, Basel Committee on Banking Supervision, *Microfinance Activities and the Core Principles for Effective Banking Supervision*, August 2010, pp. 34-35. [Translator’s Note: SME = small and medium-sized enterprises; CGAP = Consultative Group to Assist the Poorest].

⁹ Microfinance: creating an enabling legal environment for micro-business and small and medium-sized enterprises, Note by the Secretariat, A/CN.9/780, para. 12 (May 2013).

¹⁰ In the same way, the World Bank states “... There is a host of advantages brought about by the depth and importance of the SME sector. That also implies that the SME sector must be taken into account when drafting legislation or designing a regulatory system for enterprises, including the crucial aspect of restructuring and liquidating distressed businesses”. José M. Garrido, in *Issues in the Treatment of the Insolvency of SMEs in Asia*, FAIR, Kuala Lumpur, 2011, p. 3.

¹¹ Available at www.un.org.

¹⁴ A/RES/67/202.

...that address the legal, social and regulatory barriers to equal and effective economic participation and promote entrepreneurship'. This appeal has also been extended to the international community which has been asked 'to support the efforts of countries to promote entrepreneurship and foster the development of small and medium-sized enterprises and microenterprises'".¹⁵

The impact on the rule of law is particularly relevant for the regulation of micro and small enterprises, given that at least half the global labour force and one third of the global economy operate in the informal sector.

In a country like Colombia, it is not easy to determine the number of micro and small enterprises in operation, since this sector has developed largely informally.¹⁶

Informal enterprises operate outside the law and are sometimes involved in organized crime.¹⁷

The Secretariat's report points out: "...The results, however, do not vary: microbusinesses cannot enforce contracts, get formal bank loans or expand beyond a very small local network.^{18,19} In sum, they have little option 'but to trade in the informal economy'"²⁰ and the report concludes: "...the informal sector perpetuates non-compliance with the law, increasing risks for loss of tax revenue, corruption, and a poor environment for investment. It will not naturally evolve into a formal sector, which allows businesses to grow, obtain credit on normal terms, increase employment and contribute to the tax base."²¹

3.1. The informal sector in Colombia

A recent World Bank study,²² entitled *Informality: exit and exclusion* (Perry et al., 2007), explains the nature of informality in Colombia as a function of both economic "exclusion"²³ and the "exit"²⁴ into informality of enterprises in the formal sector.²⁵

¹⁵ Ibid.

¹⁶ "Existing studies have estimated the size of the informal economy in Colombia between 35 and 44 percent of GDP, a figure that has apparently grown over the past decade", Cardenas and Mejia (March 2007) and Perry (May 2007) for a view of the causes and implications of the informal sector. Cited in: *Bank Financing to Small and Medium-Sized Enterprises (SMEs) in Colombia*, Constantinos Stephanou, World Bank, Camila Rodriguez, affiliation not provided to SSRN, World Bank Policy Research Working Paper No. 4481, 1 January 2008.

¹⁷ Microfinance: creating an enabling legal environment for micro-business and small and medium-sized enterprises, Note by the Secretariat, A/CN.9/780, para. 6 (May 2013).

¹⁸ Ibid., citing *Report of the Commission on the Legal Empowerment of the Poor; Making the Law Work for Everyone*, Vol. 1, 2008, p. 15.

¹⁹ Idem supra 15.

²⁰ Ibid., supra 16, citing the same report, p. 39.

²¹ Idem supra 15 para. 49.

²² Contained in report 42698-CO, 2010, *Informality in Colombia, Implications for Worker Welfare and Firm Productivity*, Colombia and México Country Management Unit, Human Development Department, Latin America and the Caribbean Region, World Bank, 1 March 2010, available at www.dnp.gov.co.

²³ "The concept of 'exclusion' reflects the way informality has been traditionally viewed in Latin America, namely, that informal workers and firms would generally prefer to be formal — registering with the authorities, paying taxes, having access to social security — but are

According to the study, informality is a symptom of inadequate regulation which increases costs and detracts from the benefits of formalization.²⁶ It is thus imperative to consider creating an enabling legal environment for microenterprises and small and medium-sized enterprises which will put an end to exclusion and reduce the incentive for formally established enterprises to exit from the formal system.

In recent years, the Government of Colombia has implemented major reforms intended to promote development and the rule of law in various areas of commercial law, with the understanding that regulation, used as a cross-cutting policy tool, improves the conditions for access to markets and credit, reduces transaction costs and increases company competitiveness.²⁷

The reforms introduced in this area in Colombia include reforms intended to make the procedures for the registration and creation of trading companies simpler and more flexible, by means of Law 1258 of 2008 (Simplified Stock Corporation (SAS) Law); Law 1563 of 2012 on national and international arbitration, which introduces an alternative mechanism for online resolution of disputes for small claims; Law 1564 of 2012, which establishes an insolvency regime for natural persons not engaged in commercial activities, with hybrid proceedings for the discharge of insolvency; and the draft reform of the secured transactions regime which is currently before the Colombian Congress.²⁸

According to statistics from 2009-2010, these reforms promoted a rate of growth and formalization among business entities of over 25 per cent.²⁹

IV. Promotion of development and international trade

In the Commission's review of the strategic direction of UNCITRAL and in issues related to resource allocation, the need to set priorities for the Commission has become clear.³⁰ When there are competing proposals, setting priorities in UNCITRAL's work programme requires a consideration not only of its current and likely future scope and its relevance in the field of international trade and

prevented from doing so for reasons related to the state of the economy, the functioning of the labour market or the regulatory environment."

²⁴ "The concept of 'exit', by contrast, posits that some workers and firms are informal as a matter of choice. That is, some workers and firms, having considered the benefits and costs of formality, opt out of the formal sector. Given the benefits and costs (real or perceived) and existing opportunities and constraints, these workers and firms actually prefer informality."

²⁵ Luis Guillermo Vélez Cabrera, "Formalización Empresarial, la Base de Perdurabilidad para el Desarrollo Económico", ["Formalization of Enterprises, the Basis for Sustainability of Economic Growth"], *Revista Coyuntura Pyme de ANIF*, April 2013, Ed. 41.

²⁶ Likewise, as stated in the Secretariat report: "Excessive regulation, too many laws and too many outdated laws, will discourage transition of business to the formal sector" (A/CN.9/780, para. 49).

²⁷ Ibid., supra note 23.

²⁸ A/CN.9/780, paras. 16, 24, 26 and 47 (May 2013).

²⁹ Ibid., para. 16.

³⁰ A/CN.9/752/Add.1.

commerce,³¹ but also of the impact which this topic may have on the development of international law.³²

The colloquium emphasized not only the economic imperative to establish an enabling legal environment for enterprises, but also the effect of this environment on the development of international trade. The Secretariat's report concluded:

"...It was stressed that work in establishing such an environment would be consistent with the Commission's primary mandate to promote coordination and cooperation in the field of international trade, including regional cross-border trade. This was consistent also with the findings of the 2011 UNCITRAL Colloquium that microfinance had become a globally recognized form of cross-border finance, that it kept growing worldwide, that legal, regulatory and market gaps kept the sector from operating as well as it should and that this had created a role for international legal standard-setting.³³ Noting that cross-border recognition of these new and varied legislative issues and emerging structures was needed for MSMEs operating in regional markets in order to provide a recognizable international basis for transactions and avoid problems that can arise because of a lack of business recognition,³⁴ participants further suggested that a flexible tool, such as a legislative guide or a model law according to the topics, would contribute to harmonizing efforts in this sector and provide momentum for reforms which would further encourage micro-business participation in the economy."³⁵

In respect of simplified business incorporation and registration, the Secretariat report cites³⁶ the International Chamber of Commerce, which maintained that: "...company law, where businesses are bound by the forms of legal entity created by the legislator, and the diversity of national forms of legal entity does indeed cause problems for SMEs".

In addition, the World Bank found that "...economies with modern business registration 'grow faster',³⁷ 'promote greater entrepreneurship and productivity',³⁸ 'create jobs',³⁹ 'boost legal certainty'⁴⁰ and 'attract larger inflows of foreign direct investment'".⁴¹

³¹ Ibid., para. 24.

³² A/CN.9/774, para. 22.

³³ A/CN.9/727, paras. 6-7.

³⁴ In this respect, contract law differs significantly from other fields of law, such as company law, where businesses are bound by the forms of legal entity created by the legislator, and the diversity of national forms of legal entity does indeed cause problems for SMEs. See International Chamber of Commerce, *ICC Position on the European Commission Proposal for a Regulation on a Common European Sales Law*, July 2012, p. 2, available at ICC Position on the European Commission Proposal for a Regulation on a Common European Sales Law. [Translator's Note: sic].

⁴¹ Secretariat report A/CN.9/780, para. 10.

One fundamental consideration in the future development of international trade will be the ability of micro and small enterprises in countries with developing economies or economies in transition to access international markets, particularly through electronic commerce. The Secretariat report also concludes that:

“...Internet usage increased by nearly 3,000 per cent over the last 10 years, in the Middle East by nearly 2,250 per cent, in Latin America by over 1,200 per cent (for instance Brazil ranks fifth, Mexico twelfth and Colombia eighteenth in the world in number of individuals connected to the Internet), and in Asia by nearly 800 per cent. Globally, Internet usage has increased by 528 per cent over the last decade: approximately one third of the world’s population is now connected to the Internet. That number is expected to increase to 47 per cent by 2016.”⁴²

However, for micro and small enterprises to actually access the global electronic commerce market, an enabling legal environment that promotes trust in cross-border electronic transactions and provides an enduring and continuous trading system will need to be developed.

V. Proposal for development on the initiative of a country with a developing economy or economy in transition (*a bottom-up approach*)

In order to decide judiciously on the priority to be assigned to the work of UNCITRAL in establishing an enabling legal environment for microenterprises and small and medium-sized enterprises, account must be taken of the proposals submitted by developing countries as well as those of highly developed countries. The Secretariat report explains that:

“...An improved legal infrastructure for MSMEs is needed which should rest on a global policy vision and not just isolated devices. Simply adapting traditional system laws to MSMEs will not work. Experience has shown that transposing laws from other, more highly developed, jurisdictions is similarly unhelpful, since law needs to fit the culture and circumstances of the country. It will thus be important to prepare principles that are global in nature and can be tailored by countries according to their needs. UNCITRAL has proven to be well-placed as a forum for developing such general principles and legislation that is acceptable by a wide range of countries with different legal traditions. Therefore, the Commission could play a leading role in helping to create a level playing field by promoting best practices and sharing knowledge with countries seeking guidance in this area.”⁴³

VI. Elements required for the establishment of an enabling legal environment

At its forty-fifth session in 2012, UNCITRAL decided that the colloquium on microfinance should focus on “facilitating simplified business incorporation and

⁴² See Internetworldstats: Usage and Population Statistics, available at www.internetworldstats.com, cited in Secretariat report A/CN.9/780, para. 52.

⁴³ Secretariat report A/CN.9/780, para. 49.

registration; access to credit for micro-businesses and small and medium-sized enterprises; dispute resolution applicable to microfinance transactions; and other topics related to creating an enabling legal environment for micro-businesses and small and medium-sized enterprises”.⁴⁴

In accordance with this decision, the colloquium concluded that: “...a flexible tool, such as a legislative guide or a model law according to the topics, would contribute to harmonizing efforts in this sector and provide momentum for reforms which would further encourage micro-business participation in the economy.”⁴⁵

6.1. Facilitating simplified business incorporation and registration

The colloquium concluded that:

“...The starting point could be guidance that allows for simplified business start-up and operation procedures. In this regard, attention would be drawn to simplified corporate structures with easy establishment and minimal formalities, limited liability, flexible management and capitalization structure, plus ample freedom to contract. Considering the current absence of any internationally recognized standards or direction for countries wishing to adopt effective new forms, such a legal framework would significantly contribute to the formalization of thousands of enterprises that would otherwise remain in the informal sphere”.⁴⁶

The Secretariat report contains relevant information on the Colombian experience of simplified business incorporation and registration.⁴⁷

There is also a reference to a study by the Superintendency of Companies of Colombia, showing the impact of simplified and more flexible business incorporation in Colombia, which is annexed to this document.

European Commission studies⁴⁸ show that differences in company law can also hamper cross-border trade and limit international business operations: “...Currently

⁴⁴ Commission report on its 45th session, A/67/17, para. 126.

⁴⁵ Secretariat report A/CN.9/780, para. 50.

⁴⁶ F. Reyes, *Latin American Company Law — a New Policy Agenda: Reshaping the Closely-Held Entity Landscape*, 2013, p. ii, cited in Secretariat report A/CN.9/780, para. 51.

⁴⁷ “In Colombia, a major legal reform effort in the past 15 years has led to the development of a hybrid business form prioritizing flexibility, contractual freedom and limited liability: the so called *sociedad por acciones simplificada* (SAS). An SAS can be formed by one or more shareholders and can be incorporated via a relatively simple private or electronic document at minimal cost. The Simplified Stock Corporation Act (2008) relies on a system of ex post regulation in the form of enforceable standards during operation (as opposed to ex-ante regulation which creates rules to be met during establishment) to target behaviour, thus lowering costs for establishing micro-businesses. In fact, compliance with strict requirements to set up a business, e.g. minimum legal capital or public deeds of incorporation, affects all entrepreneurs. On the other hand, when standards that are enforceable ex post are used (e.g. abus de droit or equal treatment rules, that leave discretion for adjudicators to determine ex post whether violations have occurred), there is a cost only for those entrepreneurs who breach the standards. However, this approach requires effective judicial infrastructure to oversee and enforce ex-post standards. Since the SAS legislation was enacted in 2008 about 181,742 SASes (the data refers to November 2012) have been set-up, most of which, it is estimated, were pre-existing informal businesses. The SAS account for over 95 per cent of market share and, according to 2009-2010 data, they have enabled a growth in formalization of business entities of over 25 per cent”. Secretariat report A/CN.9/780, para. 16.

on average only 93 per cent of the EU companies involved in the sales of goods export inside of the EU.⁴⁹ The majority of them (62 per cent in B2B and 57 per cent in B2C) export to no more than three other MS.⁵⁰ One of the reasons for this relatively low level of cross-border trade — besides a lack of interest in export — is that some companies are hindered by [the] regulator (e.g. differences in tax regulations, contract law, administrative requirements and company law) and practical barriers (e.g. language, transportation and after-sales maintenance). Recent business surveys show that the regulatory barriers are a greater hindrance to the expansion of cross-border trade than the practical ones.”⁵¹

6.2. Other issues to be considered in the establishment of an enabling legal environment

The colloquium concluded that there are other elements essential to the establishment of an enabling legal environment which are relevant to the life cycle of the enterprise. These include dispute resolution mechanisms, electronic transfers, mobile payments, access to credit and insolvency.

6.2.1. Further issues to be considered in the establishment of an enabling legal environment

The colloquium highlighted the difficulties faced by microenterprises and small and medium-sized enterprises in obtaining access to justice and the need to set up appropriate dispute resolution systems in the area of microfinance. In report A/CN.9/756,⁵² the Secretariat described the situation relating to dispute resolution mechanisms and the problem of obtaining access to justice for the poor.

“The Commission may thus wish to consider whether it would be appropriate to undertake preparation of notes⁵³ on how a system of dispute resolution in the field of microfinance should be organized. Such notes could be designed for use by legislators and administrators in considering whether a country has established a system that effectively serves the needs of MSMEs.”⁵⁴

“Micro borrowers often lack knowledge of their rights and how to protect them.”⁵⁵ Furthermore, the formal justice system tend to exclude them ‘because they cannot

⁴⁸ European Commission, Brussels, 11 October 2011, *Proposal for a Regulation of the European Parliament and of the Council on a Common European Sales Law*, {SEC(2011) 1165 Final}, COM(2011) 635 final, p. 10.

⁵¹ EB 320 and EB 321, the SME Panel and EBTP surveys. Similarly, a survey by Eurochambres in 2010 found that the differences in legislation were the main difficulty in cross-border trade for 36 per cent of the respondents. It was conducted among 1,330 companies in 12 EU MS and Croatia. 83 per cent of the respondents were involved in B2C transactions while 57 per cent were delivering products cross-border.

⁵² Para. 23 et seq.

⁵³ For instance, in the past the Commission prepared notes to assist arbitration practitioners during the course of arbitral proceedings, see *UNCITRAL Notes on Organizing Arbitral Proceedings* (1996).

⁵⁴ Secretariat report A/CN.9/780, para. 52.

⁵⁵ See A/CN.9/727.

afford the costs related to lawyers, or paying court fees ...court procedures can be slow, and it is not uncommon for courts to have a large backlog of cases'.⁵⁶ Yet, extrajudicial third-party dispute resolution mechanisms are rarely in place, thus limiting the effectiveness of any microfinance legal framework for client protection. As a result, four billion of the world's population lack access to justice."^{57,58}

At its forty-fourth session, the Commission⁵⁹ noted that a favourable legal and regulatory framework for microfinance included the provision of fair, efficient, transparent and inexpensive procedures for resolution of disputes arising from microfinance transactions, and that the lack of such procedures for microfinance clients was an issue to be further examined.

We thus have an opportunity to consider the issue in more detail with the aim of establishing a new working group to explore the subject in greater depth.

6.2.2. Mobile banking and e-money

Technological advances in mobile banking and e-money systems are making them increasingly important as financial services and a means of financial inclusion,⁶⁰ a fact that makes establishing adequate legal guidelines necessary.⁶¹ Key concepts must also be defined, along with a harmonized approach to the regulation of these operations that balances financial inclusion needs with the need to protect vulnerable client populations.⁶²

The colloquium concluded that: "electronic transfers (including mobile payments) offer MSMEs operating in the informal sector the opportunity to have effective access to financial services. UNCITRAL's existing instruments on e-commerce and international credit transfers can accommodate mobile payment systems, as recognized at the Colloquium (see para. 35 of document A/CN.9/780). In order to broaden their scope, however, it was suggested that ...provision of a clear definition of key concepts such as deposit, payment and electronic money, as well as guidance on apportioning of the risks between providers and clients, would be of particular importance."⁶³

6.2.3. Access to credit

Access to credit for small, medium-sized and microenterprises is an area of future work for UNCITRAL, as the Commission has decided.⁶⁴ The Commission likewise decided that transparency in lending is not an issue of prudential regulation, but a

⁵⁶ See A/CN.9/756, para. 24.

⁵⁷ See *Report of the Commission on the Legal Empowerment of the Poor, Making the Law Work for Everyone*, Vol. 1, 2008, p. 13, and A/CN.9/756, para. 24.

⁵⁸ Secretariat report A/CN.9/780, para. 8.

⁵⁹ *Official Records of the General Assembly, Sixty-sixth Session, Supplement No. 17 (A/66/17)*, paras. 242 and 246.

⁶⁰ See A/CN.9/756, IV. Electronic Money (E-money), p. 18 et seq.

⁶¹ Unresolved legal issues surrounding the nature of e-money were already noted in the 2011 UNCITRAL Colloquium on Microfinance, together with their potential to negatively affect low-income people. See A/CN.9/727, paras. 43-44, cited in Secretariat report A/CN.9/780, para. 9.

⁶² A/CN.9/756, para. 54.

⁶³ Secretariat report A/CN.9/780, para. 53.

⁶⁴ At its forty-fourth session (A/CN.9/727).

concept relating to clients' rights and their protection and, as such, of relevance for commercial law.⁶⁵

The colloquium concluded that "an enabling legal environment promoting access to credit for MSMEs would address commercial law matters arising in the context of secured and unsecured credit agreements. Guidance from the Commission, based on best practices, could deal with transparency in lending and enforcement in all kinds of lending transactions."⁶⁶

6.2.4. Insolvency of microenterprises and small and medium-sized enterprises

The colloquium stressed the need to lay down rules governing insolvency of microenterprises and small and medium-sized enterprises, since the existing rules cannot be appropriately adapted to suit the scale and the needs of this sector of business, factors that mean that small enterprises may not be viable and may not recover after insolvency because they cannot reach a refinancing agreement with their creditors.

In view of the specific characteristics of micro and small enterprises, there is a need for alternative insolvency mechanisms which are more rapid and flexible and less costly, and different from those traditionally designed by large enterprises.⁶⁷

The colloquium recommended the inclusion of insolvency in UNCITRAL's work in order to increase the viability of micro and small enterprises, stating specifically that "...the Commission may wish to address the insolvency of MSMEs with the objective to ensure fast-track procedures and business rescue options so as to develop adequate and workable alternatives to formal insolvency processes in line with both the key characteristics of an effective insolvency system and the needs of MSMEs".^{68,69}

VII. Conclusion

As shown throughout this proposal, there is an urgent need to launch a global reflection on the importance of microfinance and related matters in order to establish an enabling legal environment for microenterprises and small and medium-sized enterprises.

In this proposal, the Government of Colombia suggests that the Commission should create a mandate for a new working group focused on the enterprise life cycle, particularly in relation to micro and small enterprises, which are the ones involved in microfinance. The working group should begin with the facilitation of simplified business incorporation and registration and other matters, such as those referred to above, related to and necessary for creating an enabling legal environment for this type of business activity.

The Government of Colombia looks forward to the discussion of this matter at the forthcoming session of the Commission.

Appendix

In Colombia, the Superintendency of Companies has conducted a preliminary study of the combined effect on business formalization procedures of two laws: Law 1258 of 2008 (SAS Law) and Law 1429 of 2010 (First Employment Law). These two laws form part of the policy to make procedures simpler and more flexible.⁷⁰

The measurement index used in this study to assess the level of formalization is the number of unregistered microenterprises divided by the total number of microenterprises.

The Superintendency compared the number of active businesses between April 2010 and January 2013, using information from the Single Business Registry (*Registro Unico Empresarial* — RUE) to observe the potential combined effect of the two laws, beginning in 2010 when they were both in force for the first time.

* Table 1

The simplified stock corporation (*sociedad por acciones simplificada* — SAS) was the only type of business which saw an increase in registration of new businesses, while other forms of incorporation declined.

* Table 2

In a more detailed study by size of the enterprise, designed to reveal the origins of the 192,602 SAS businesses apparently active in January 2013, we see that there are 132,873 businesses registered as completely new SAS businesses, i.e. they were not SAS businesses in 2010 and did not originate in an existing business structure, and that they are concentrated in the sphere of micro and small enterprises (92 per cent of all new SAS businesses). The effect of the increase in the number of businesses registering under this more flexible procedure is just one example of the potential impact on formalization exerted by regulatory frameworks more appropriate to the real situation of microenterprises and small and medium-sized enterprises.

VIII. CASE LAW ON UNCITRAL TEXTS (CLOUT)

The secretariat of the United Nations Commission on International Trade Law (UNCITRAL) continues to publish court decisions and arbitral awards that are relevant to the interpretation or application of a text resulting from the work of UNCITRAL. For a description of CLOUT (Case Law on UNCITRAL Texts), see the user guide (A/CN.9/SER.C/GUIDE/1/Rev.2), published in 2000 and available on the Internet at www.uncitral.org.

A/CN.9/SER.C/ABSTRACTS may be obtained from the UNCITRAL secretariat at the following address:

UNCITRAL secretariat
P.O. Box 500
Vienna International Centre
A-1400 Vienna
Austria

Telephone (+43-1) 26060-4060 or 4061
Telefax: (+43-1) 26060-5813
E-mail: uncitral@uncitral.org

They may also be accessed through the UNCITRAL homepage on the Internet at www.uncitral.org.

Copies of complete texts of court-decisions and arbitral awards, in the original language, reported on in the context of CLOUT are available from the secretariat upon request.

I. Introduction

1. Pursuant to a decision taken at its twentieth session in 1987, technical cooperation and assistance activities aimed at promoting the use and adoption of its texts represent one of the priorities of the United Nations Commission on International Trade Law (UNCITRAL).¹

2. In its resolution 67/89 of 14 January 2013, the General Assembly reaffirmed the importance, in particular for developing countries and economies in transition,

¹ *Official Records of the General Assembly, Forty-second Session, Supplement No. 17 (A/42/17)*, para. 335.

of the technical cooperation and assistance work of the Commission and reiterated its appeal to bodies responsible for development assistance, as well as to Governments in their bilateral aid programmes, to support the technical cooperation and assistance programme of the Commission and to cooperate and coordinate their activities with those of the Commission.

3. The General Assembly welcomed the initiatives of the Commission towards expanding, through its Secretariat, its technical cooperation and assistance programme, and noted with interest the comprehensive approach to technical cooperation and assistance, based on the strategic framework for technical assistance suggested by the Secretariat to promote universal adoption of the texts of the Commission and to disseminate information on recently adopted texts.

4. The General Assembly also stressed the importance of promoting the use of texts emanating from the work of the Commission for the global unification and harmonization of international trade law, and to this end urged States that have not yet done so to consider signing, ratifying or acceding to those conventions, enacting model laws and encouraging the use of other relevant texts.

5. The status of adoption of UNCITRAL texts is regularly updated and available on the UNCITRAL website. It is also compiled annually in a note by the Secretariat entitled "Status of conventions and model laws" (for the Commission's forty-sixth session, see A/CN.9/773).

6. This note sets out the technical cooperation and assistance activities of the Secretariat subsequent to the date of the previous note submitted to the Commission at its forty-fifth session in 2012 (A/CN.9/753 of 26 April 2012), and reports on the development of resources to assist technical cooperation and assistance activities.

7. A separate document (A/CN.9/776) provides information on current activities of international organizations related to the harmonization and unification of international trade law and on the role of UNCITRAL in coordinating those activities.

II. Technical cooperation and assistance activities

A. General approaches

8. Technical cooperation and assistance activities undertaken by the Secretariat aim at promoting the adoption and uniform interpretation of UNCITRAL legislative texts. Such activities include providing advice to States considering signature, ratification or accession to UNCITRAL conventions, adoption of an UNCITRAL model law or use of an UNCITRAL legislative guide.

9. Technical cooperation and assistance may involve: undertaking briefing missions and participating in seminars and conferences, organized at both regional and national levels; assisting countries in assessing their trade law reform needs, including by reviewing existing legislation; assisting with the drafting of national legislation to implement UNCITRAL texts; assisting multilateral and bilateral development agencies to use UNCITRAL texts in their law reform activities and projects; providing advice and assistance to international and other organizations, such as professional associations, organizations of attorneys, chambers of commerce

and arbitration centres, on the use of UNCITRAL texts; and organizing training activities to facilitate the implementation and interpretation of legislation based on UNCITRAL texts by judges and legal practitioners.

10. Some of the activities undertaken in the relevant time period are described below. Activities denoted with an asterisk were funded by the UNCITRAL Trust Fund for Symposia.

Initiatives for a regional approach

11. The Secretariat continued participation in the Asia-Pacific Economic Cooperation (APEC) Ease of Doing Business Project on enforcing contracts in coordination with the Korean Ministry of Justice. The project aims at strengthening the legislative and institutional framework for the enforcement of contracts in APEC as well as adjacent economies (Philippines and Thailand in 2012, Indonesia and Peru in 2011)*. At the Second International Conference on Enforcing Contracts (Seoul, 7 November 2012)*, recommendations to improve legal environment for enforcing contracts in Thailand and the Philippines were presented. In 2013, the project will focus on Brunei Darussalam (ranked 158th out of 185 countries), Saudi Arabia (124th) and Vietnam (44th) and adoption of UNCITRAL texts on arbitration, sale of goods and electronic communications will be suggested as possible law reform measures in these States (Saudi Arabia, 6-8 May 2013, Brunei Darussalam and Viet Nam scheduled for late May or early June)*. The Secretariat's participation in the project has been made possible through the voluntary contribution received from the Government of the Republic of Korea.

12. Other regional initiatives involving the Secretariat include the ongoing partnership with the Deutsche Gesellschaft für Internationale Zusammenarbeit ("GIZ"). The Secretariat attended a meeting to discuss future projects in the Balkan region with focus on activities implemented to date in the context of the Open Regional Fund for South East Europe (ORF-SEE) fund on legal reform and to identify broad areas of intervention for a possible phase three of the programme. Phases one and two focused on the United Nations Convention on Contracts for the International Sale of Goods and alternative dispute resolution methods respectively (Belgrade, 14-16 June 2012).

13. The Secretariat delivered a presentation on UNCITRAL's efforts in the harmonization of law, at the Middle Eastern regional conference, organized by the Protection Project, Johns Hopkins University School of Advanced International Studies and Beirut Arab University, in an effort to promote UNCITRAL texts in the Arab region (Beirut, 9-11 September 2012)*.

Promotion of the universal adoption of fundamental trade law instruments

14. One approach relies on promoting primarily the adoption of fundamental trade law instruments, i.e., those treaties that are already enjoying wide adoption and the universal participation to which would therefore seem particularly desirable.

15. The treaties currently considered under that approach are the Convention on the Recognition and Enforcement of Foreign Arbitral Awards² (the New York Convention, a United Nations convention adopted prior to the establishment of the

² United Nations, *Treaty Series*, vol. 330, No. 4739.

Commission, but actively promoted by the Commission), whose universal adoption has already been explicitly called for by the General Assembly,³ and the CISG.

General promotion of the work of UNCITRAL

16. Secretariat staff took part in the following:

(a) Represented UNCITRAL and delivered a presentation at high-level meeting “Foro Centroamericano de Derecho y Derecho Internacional Privado”, upon invitation of the Central American Court of Justice (Panama City, 30-31 January 2013); and

(b) Presented UNCITRAL’s work and exchanged views with the Members of the Committee on International Trade (INTA) of the European Parliament (Brussels, 21 March 2013).

Promotion of recent treaties

17. The Secretariat continues to promote recently adopted instruments, including at the regional level, in order to encourage their signature and adoption by States with a view to facilitating their early entry into force.

18. The United Nations Convention on the use of Electronic Communications in International Contracts (the “Electronic Communications Convention”) has entered into force on 1 March 2013. The Secretariat has continued to actively promote its adoption, especially in the Asia-Pacific region (for a list of the relevant activities in that region, see paras. 63-65).

B. Specific activities

Sale of goods

19. The Secretariat has continued to pursue universal adoption of the CISG. Accessions to the text have been supported by dedicated workshops and conferences as well as by bilateral meetings and other interactions. With regard to the March 2013 accession by Brazil, the Secretariat was involved in recent years in several related events (Rio de Janeiro, 23-30 June 2009;⁴ Sao Paulo, 29-30 April 2010;⁵ and Sao Paulo, 3-4 November 2011*⁶).

20. The Secretariat has also continued to support States in the process of revision of declarations lodged upon becoming party to the CISG, with a view to reconsidering them, where appropriate, in order to further harmonize the scope of application of the convention.

21. In addition, the Secretariat remains active in promoting uniform interpretation of the CISG, both through activities related to the Case law on UNCITRAL texts (CLOUT)⁷ and through delivery of targeted trainings for judges, practitioners and

³ United Nations General Assembly, Resolution 62/65 of 8 January 2008, para. 3.

⁴ A/CN.9/695, para. 12 (b).

⁵ A/CN.9/724, para. 52.

⁷ See A/CN.9/777 for more information.

students, such as delivery of a CISG workshop for the Czech Judicial Academy (Brno, Czech Republic, 14 June 2012)* and provision of a CISG seminar at the Faculty of Law, University of Vienna (Vienna, 15 October-7 November 2012).

22. Finally, the Secretariat has continued to promote the adoption and uniform interpretation of the Convention on the Limitation Period in the International Sale of Goods (New York, 1974), as amended by the Protocol of 11 April 1980 (Vienna) (the “Limitation Convention”),⁸ including by inviting States to consider the adoption of the amended version of the Limitation Convention when already a party to the unamended one.

Dispute resolution

23. The Secretariat has been engaged in the development of instruments and tools to provide information on the application and interpretation of UNCITRAL texts in the field of dispute settlement. The Secretariat has also been engaged in training activities, in the promotion of instruments relating to arbitration and conciliation as well as in supporting ongoing legislative work. Given the high rate of adoption of these texts, the demand for technical assistance in the field of dispute resolution remains particularly acute.

(i) Development of instruments and tools to provide information on the application and interpretation of UNCITRAL texts in the field of dispute settlement

24. Regarding the New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards (1958), a website (www.newyorkconvention1958.org) has been established in order to make the information gathered in the preparation of the UNCITRAL guide on the New York Convention publicly available; an updated version of the website was presented at the fifty-eighth session (New York, 4-8 February 2013) of Working Group II (Arbitration and Conciliation) (see A/CN.9/765, paras. 95-98).

25. Regarding the UNCITRAL Model Law on International Commercial Arbitration (1985, amended in 2006), the Secretariat has co-organized the following events related to the 2012 Digest of Case Law on the Model Law (the “Digest”): on 8-10 June 2012*, a launch event co-organized in Singapore with the Singapore Ministry of Law; and on 1 March 2013, a conference co-organized in Berlin, Germany, with the Ministry of Justice and the German Institution of Arbitration (DIS).

(ii) Supporting ongoing legislative work and training activities

26. The Secretariat has provided comments on:

(a) Draft legislation on arbitration, including for the Governments of Cook Islands, Palestine, Qatar and Slovakia;

(b) Draft legislation on mediation, including for the Government of Egypt; and

(c) Draft arbitration rules of arbitral institutions, including, at the request of the Stockholm Chamber of Commerce (SCC), on the SCC UNCITRAL Arbitration

⁸ United Nations, *Treaty Series*, vol. 1511, No. 26119, p. 3 and No. 26121, p. 99.

Rules 1976 and 2010, the SCC Appointing Authority Rules 1976, the SCC Appointing Authority Rules 2010 and the SCC Ad Hoc Administrative Services.

27. The Secretariat provided technical assistance to support the establishment of a commercial arbitration centre in Ramallah (Ramallah, State of Palestine, 14-16 December 2012).

28. The Secretariat also contributed, within the framework of the USAID Judicial Independence and Legal Empowerment Project, to the preparation of a judicial training for the High School of Justice in Georgia, with the aim of training judges in Georgia in the field of international commercial arbitration.

29. The UNCITRAL Regional Centre for Asia and the Pacific co-organized, with the Ministry of Justice of the Republic of Korea and the Korean Commercial Arbitration Board, a conference on Asia-Pacific Perspectives on International Commercial Arbitration (Seoul, 22-23 November 2012, see para. 58)*.

30. The Secretariat co-organized, with the International Arbitral Centre of the Austrian Federal Economic Chamber (VIAC) and the Young Austrian Arbitration Practitioners (YAAP), the annual joint Conference on arbitration (Vienna, 21-22 March 2013).

31. Other events on international arbitration in which the Secretariat participated or contributed included:

(a) A seminar on the role of the United Nations in International Arbitration at the invitation of the International Arbitration Academy (Paris, 16 July 2012);

(b) A seminar hosted by the Chartered Institute of Arbitrators, to present a talk entitled “UNCITRAL’s role in dispute resolution, as the promoter of the New York Convention and other legal standards” (London, 6 September 2012);

(c) A plenary session of the International Cotton Advisory Committee in relation to the enforcement of arbitral awards under the New York Convention (Interlaken, Switzerland, 9 October 2012);

(d) The Third Economic and Financial Forum for the Mediterranean, including a session on Conciliation and Arbitration, organized by the Milan Chamber of Commerce (Milan, 12-13 November 2012);

(e) A workshop organized by the International University MITSO (Belarus) in collaboration with the Ministry of Foreign Affairs of Belarus, and UNCTAD, UNCITRAL and ICSID, on the subject of Investment Dispute Settlement (Minsk, 19-20 November 2012);

(f) A conference entitled “The Role of State Courts in Arbitration” organized by the Cairo Regional Centre for International Commercial Arbitration, to present technical assistance tools such as the Digest of Case Law on the Model Law on Arbitration and the project for a guide to the New York Convention that aim (inter alia) to assist judges in the interpretation and application of the Model Law and New York Convention (Sharm El Sheikh, Egypt, 27-28 November 2012);

(g) The Twentieth Annual Croatian Arbitration Days Conference, on the topic of Investment Arbitrations in Central and Eastern Europe (Zagreb, 5-7 December 2012);

(h) The Mauritius International Arbitration Conference, where a presentation was made on the work of UNCITRAL and the United Nations Office of Legal Affairs in the promotion of the rule of law and the role of the United Nations in international dispute resolution (Mauritius, 10-11 December 2012); and

(i) A workshop on the harmonization of trade law in ASEAN, including in the area of dispute resolution (Singapore, 11-12 March 2013, see para. 59).

Electronic commerce

32. The Secretariat has continued promoting the adoption of UNCITRAL texts on electronic commerce, in particular in cooperation with other organizations and emphasizing a regional approach (see paras. 10, 63-65 and A/CN.9/776). It has also provided comments on draft regional and national legislation, for example, a draft law on electronic communication and transactions prepared by the Government of Botswana.

33. As a result of those promotional activities, the United Nations Convention on the Use of Electronic Communications in International Contracts entered into force on 1 March 2013 with the Dominican Republic, Honduras and Singapore as States Parties. In addition, several new national enactments of legislation on electronic commerce and electronic signatures were recorded (see A/CN.9/773).

34. The Secretariat also engaged in informal consultation with legislators and policymakers from various jurisdictions, including those from South Africa and Viet Nam.

Procurement

35. In accordance with requests of the Commission and Working Group I (Procurement), the Secretariat has established links with other international organizations active in procurement reform to foster cooperation with regard to the 2011 UNCITRAL Model Law on Public Procurement (the “Model Law”) and its accompanying Guide to Enactment (2012).⁹

36. The aims of such cooperation are to ensure that regional requirements and circumstances are understood by reforming Governments and organizations are informed of the policy considerations underlying those texts, so as to promote a thorough understanding and appropriate use of the Model Law, at both regional and national levels.¹⁰ The Secretariat is taking a regional approach to this cooperation, and activities with the multilateral development banks in several regions, focusing on good governance and anti-corruption (in which procurement reform plays a pivotal role), are envisaged.

37. To this end, the Secretariat has participated as speaker/presenter at a wide range of international events, including:

(a) Participation as a speaker at the 8th Regional Public Procurement Forum hosted by the Government of Albania, the ADB, EBRD, IsDB and WB, and attended by government officials from Albania, Armenia, Azerbaijan, Bosnia and

⁹ Available at www.uncitral.org/uncitral/en/uncitral_texts/procurement_infrastructure.html.

¹⁰ See documents A/CN.9/575, paras. 52 and 67, A/CN.9/615, para. 14, and A/66/17, paras. 186-189.

Herzegovina, Georgia, Kyrgyz Republic, Kosovo, Moldova, Montenegro Serbia, Tajikistan, the former Yugoslav Republic of Macedonia, Turkmenistan and Ukraine, and by representatives from the host organizations. The topics addressed were e-procurement and framework agreements under the UNCITRAL Model Law on Public Procurement (2011), in the context of harmonization of international and regional procurement regimes (Tirana, 22-25 May 2012);

(b) Continuing participation in the EBRD and UNCITRAL initiative, in partnership with the OSCE, on enhancing public procurement regulation in the CIS countries and Mongolia.¹¹ Within the framework of that Initiative, during the period under review, a Public Procurement Policy Workshop for the Government of Azerbaijan took place in Baku, from 31 May to 1 June 2012*, a Public Procurement Draft Law Review Session for the Government of Kyrgyzstan took place in Vienna, from 6 to 8 March 2013, and a public procurement workshop for the Government of Tajikistan took place in Vienna, from 9 to 11 April 2013. The topics addressed the use of the Model Law and Guide to Enactment in order to upgrade and modernize procurement laws and practice in the region. Under the same Initiative, the diagnostic analysis of the public procurement legislation of the following countries for its compliance with the UNCITRAL Model Law on Public Procurement was completed: Azerbaijan, the Kyrgyz Republic, Mongolia and the Russian Federation;

(c) Participation as a speaker at the VIII Annual Conference of the Inter-governmental Procurement Network, hosted by the Interamerican Network on Government Procurement (Spanish acronym, RICG); Government of Panama and PanamaCompra; Organization of American States (OAS), the Interamerican Development Bank (IDB), the Canadian International Development Agency (CIDA) and the International Development Research Center (IDRC/ICA). The conference considered national efforts in procurement reform and implementing and improving procurement performance, and the UNCITRAL Model Law on Public Procurement (2011) was presented in the context of international standards and procurement reform (Panama City, 11-13 September 2012)*;

(d) Participation in a workshop organized by the World Bank in cooperation with ADB and EBRD, delivering a presentation on international practices in public procurement, focussing on the Model and Guide to Enactment, the scope of UNCITRAL's activities and the importance of partnerships with other donors to ensure coherence and consistency in reforms (Dushanbe, 7-9 October 2012)*;

(e) Provision of technical support and cooperation to the UNODC Corruption and Economic Crime Branch, in particular regarding coordination in the implementation of article 9 of United Nations Convention against Corruption (UNCAC) regarding public procurement, and supporting the UNODC project entitled "Public-Private Partnership for Probity in Public Procurement", as noted in the 4th session of the Conference of the State Parties to the UNCAC (Marrakech, 24-28 October 2012). These activities included advising the Governments of India and Mexico on reform of their public procurement legal and regulatory framework, and participating in Expert Group and other meetings (24-26 September 2012);

¹¹ www.ppi-ebd-uncitral.com/index.php/en/the-initiative.

(f) Participation as a speaker at a Conference of the Public Procurement Network on the UNCITRAL Model Law on Public Procurement (2011) and possible future work in public-private partnerships (Stockholm, 3-4 December 2012);

(g) Conducting a seminar at the EBRD, pursuant to the EBRD UNCITRAL Initiative, to explain the principles of the Model Law and its use with other international and regional texts on public procurement, to further harmonization in its implementation (London, 11 January 2013)*;

(h) Participation in the Thomson Reuters Conference on “Government Contracts: Year in Review”, which is convened to provide expert briefings to local and international practitioners, policymakers and academics on the past year’s legal developments affecting public procurement. The session was entitled “Transatlantic Dialogue”, and included discussions of corporate compliance systems, comparative approaches to sanctions and debarment, the proposed EU Directives on public procurement and strategies for harmonization (Washington, D.C., 19 February 2013);

(i) Participation as a speaker at the AFDB-EBRD Regional Conference on Public Procurement, in a session on “New ideas in reform: the UNCITRAL Model Law and the World Trade Organization’s Agreement on Government Procurement”. The main purpose of the conference is to provide a forum to reflect upon the status of public procurement legal frameworks in the MENA region (Egypt, Jordan, Morocco and Tunisia) and to encourage their ongoing and future legal regulatory reform (Marrakech, 22-24 April 2013)*; and

(j) Participation in the US-European Procurement Leadership Roundtable: Key issues for Future Reform in Procurement Law, hosted by the Ruhr-Universität Bochum, Germany, and the George Washington University Law School (Washington D.C., United States of America) in cooperation with American Bar Association, Public Contract Law Section, United Kingdom Procurement Lawyers Association and the Forum Vergabe e.V.; Deutscher Anwaltverein; on emerging issues in United States and European procurement, the UNCITRAL Model Law and the World Trade Organization’s Agreement on Government Procurement, focussing on enhancing transatlantic cooperation in anti-corruption, compliance efforts, bid protests/challenges, mergers and acquisitions, export controls, academic issues and bar association initiatives (Vienna, 19 February 2013).

Supporting ongoing legislative work and training activities

38. The Secretariat has also provided ongoing advice to the Governments of Jamaica, Trinidad and Tobago (with the support of the IADB) on reform of their public procurement legal and regulatory framework.

39. Presentation of the UNCITRAL Model Law on Public Procurement and Guide to Enactment (2011 and 2012) to students of international public procurement law and policy at the University of Nottingham, United Kingdom and to students of EBRD-MAE-CONSIP Tor Vergata Master Programme in Public Procurement, to encourage broader understanding of the Model Law’s provisions and its use as a tool for procurement reform (Nottingham, United Kingdom, 14-15 January 2012 and Rome, Italy, 11-12 April 2013);

40. Presentation of the UNCITRAL Model Law on Public Procurement and Guide to Enactment (2011 and 2012) to students of Public Procurement for Sustainable Development, at ITC-ILO and the University of Turin; again to encourage broader understanding of the Model Law's provisions and its use as a tool for procurement reform (Turin, Italy, 29 February-1 March 2012); and

41. Conducting a training session on UNCITRAL for FAO, organized and financed by UNITAR and with the participation of IDLO. Topics covered included: public procurement and infrastructure development, international commercial arbitration and conciliation, online dispute resolution, international transport of goods and an overview of other areas within UNCITRAL's mandate (Rome, 21-23 May 2012).

Insolvency

42. The Secretariat has promoted the use and adoption of insolvency texts, particularly the Model Law on Cross-Border Insolvency and the Legislative Guide on Insolvency Law, through participation in various international fora. Such activities included:

(a) Delivered a presentation at the Policy Conference "Financial Restructuring and Bankruptcy Law" on regional and global practices in Financial Restructuring and Bankruptcy Law: lessons for UAE/Dubai. The purpose of the conference was to engage in a discussion of best practice; both regional and international, based on the laws of the United Kingdom, United States and Singapore and focusing on several key insolvency issues in the context of a new draft insolvency law for Dubai and the United Arab Emirates (Dubai, United Arab Emirates, 13-16 May 2012)*;

(b) To give a workshop on UNCITRAL's work on insolvency law at the 50th anniversary conference of the AIJA (International Association of Young Lawyers) to raise awareness of the work of UNCITRAL, particularly as it relates to enterprise group insolvency (Barcelona, Spain, 30 August 2012);

(c) Participation as speaker at the 3rd INSOL Africa Roundtable on Insolvency law, with the aim to facilitate discussion of Insolvency Law reform in the African region in the context of issues of particular concern to that region, such as micro- and small enterprises, as well as to promote consideration of the need to address cross-border insolvency. Also held consultations with senior government officials to discuss the proposal to establish an UNCITRAL Regional Centre in Kenya (Nairobi, 6-9 September 2012)*;

(d) Participation at the Global Forum on Law, Justice and Development Week (GFLJD) organized by the World Bank which is an annual event designed to address how law and justice contribute to better development outcomes through opportunity, inclusion and equity (Washington, D.C., 10-14 December 2012); and

(e) To participate and speak at the Canadian Annual Review of Insolvency Law, hosted by the University of British Columbia. The conference is the key insolvency event in Canada attracting a significant number of Canadian and United States practitioners and providing an update on notable developments in insolvency law (recent cases etc.) in the last 12 months (Montreal, Canada, 8-9 February 2013).

Security interests

43. The approach taken by the Secretariat in providing technical assistance related to UNCITRAL texts on security interests (the United Nations Convention on the Assignment of Receivables in International Trade,¹² the UNCITRAL Legislative Guide on Secured Transactions,¹³ its Supplement on Security Rights in Intellectual Property¹⁴ and the draft UNCITRAL Guide on the Implementation of a Security Rights Registry)¹⁵ is twofold. The first approach focuses on disseminating information about those texts to Government officials, legislators, judges, academics and practitioners and thus, promoting their implementation. Such activities included participation at the following events:

(a) Lectures on secured financing at Moscow State Institute of International Relations (MGIMO) and consultations with officials of the Ministry of Economic Development of the Russian Federation (Moscow, 13-20 October 2012);

(b) Expert group meeting with representatives of the Ministry of Justice and the Federal Notary Chamber of the Russian Federation on the draft pledge provisions of the Russian Civil Code and the new law on pledge registration (Vienna, 27-28 November 2012);

(c) Lecture on registration of security interests at the Colloquium on Publicity as a Factor of Efficiency of Security Interests at the Law School of the University of Auvergne (Clermont-Ferrand, France, 1 February 2013); and

(d) Lecture on Intellectual Property Financing at the Lazarski University/Center for International Legal Studies L.L.M. in Transnational Commercial Practice Programme (Salzburg, Austria, 26 March 2013).

44. The second approach focuses on providing technical assistance to States in their secured transactions law reform activities. An example of such activities is the technical assistance provided to the Russian Federation with respect to pledge and pledge registration law. Another example is the cooperation with international financial institutions, such as the World Bank, the International Finance Corporation (IFC), and other organizations, such as the National Law Centre on Inter-American Free Trade, in the context of their technical assistance to States. The objective of this cooperation is to ensure that technical assistance is provided consistent with UNCITRAL texts on secured transactions. Examples of such an approach include the adoption of secured transactions laws that are consistent with the UNCITRAL Legislative Guide on Secured Transactions in Colombia, Guatemala and Mexico.

45. The Secretariat also engages in informal consultation with legislators and policymakers from various jurisdictions, in some instances as a follow-up to the aforementioned activities. Finally, the Secretariat is making progress in its work with the World Bank with a view to preparing a set of principles for effective and efficient secured transactions.

Online dispute resolution

46. The Secretariat attended as speaker at the LawTech Europe Conference, on the Working Group's latest deliberations on Online Dispute Resolution (Prague, 12 November 2012).

Other capacity-building activities

47. The Secretariat took part as a resource person in the UNCTAD training on "Integrating the Trade dimension in the United Nations Development Assistance Frameworks" and delivered a presentation on the importance of trade law reform. The activity targeted government officials of various Asian countries, receivers of the United Nations assistance in economy and trade related issues. It was the third of a series of workshops based on the training manual developed by the Inter-Agency Cluster on Trade and Productive Capacity of which UNCITRAL is a member. Following the structure of the manual the workshop focused on various aspects of trade, including legal aspects, that should be considered in preparing country development plans in the context of the UNDAF (United Nations Development Assistance Framework) (Kathmandu, 23-27 April 2012).

48. The Secretariat has also been engaged in other capacity-building activities aimed at increasing the knowledge of international trade law. Among these, cooperation with the International Training Centre of the International Labour Organization (ITC-ILO) and the University of Turin may be noted.

49. In the framework of that cooperation, the Secretariat has continued to contribute to the management and delivery of the Master Course on Public Procurement for Sustainable Development and of the Master of Laws course in International Trade Law. These master level courses form an integral part of the broader educational programme denominated "Turin School of Development".¹⁶

50. International development agencies and other institutions managing comprehensive technical assistance programmes may wish to consider sponsoring the participation of students in such courses in order to strengthen local capacity in partner countries over the longer term.

¹⁶ www.itcilo.org/en/training-offer/turin-school-of-development-1.

III. Activities of the UNCITRAL Regional Centre for Asia and the Pacific

51. Since the Commission's forty-fifth session, the Regional Centre for Asia and the Pacific has carried out its activities in line with the lines of action for technical assistance of the Secretariat (A/66/17, para. 255) as well as the specific priorities identified for the Regional Centre (A/67/17, para. 184), namely assessing needs and mapping existing projects relating to trade law reform, with a view to increasing coordination among them, and establishing contacts with entities already significantly engaged in trade law reform. Particular importance was given to coordination with other regional entities, and, among them, with the United Nations Economic and Social Commission for Asia and the Pacific (ESCAP). Contacts were also made with the United Nations Information Centres in Australia and Japan to provide better media coverage of the activities of the Regional Centre and of legislative reform initiatives.

52. In light of existing initiatives and requests, the Regional Centre kept its focus on East Asia and the Pacific as geographic areas and on alternative dispute resolution, sale of goods and electronic commerce as thematic areas for its work. Closer cooperation was sought with institutions already involved in the field, such as the Asian Development Bank Pacific Liaison and Coordination Office, located in Sydney, Australia, and active in trade law reform in support of private sector development in the Pacific, the Korean Legislative Research Institute of the Republic of Korea and the Centre for Asian Legal Exchange at Nagoya University in Japan.

53. The work of the Regional Centre highlighted the interest of States and other stakeholders in the use of uniform texts in trade law reform as a means to increase legal predictability and reduce costs in cross-border trade. This interest was reinforced by the absence of regional economic integration organizations with comprehensive legislation-making authority and by the broad support for the pursuit of economic development as a matter of priority expressed by several Asian and Pacific States.

54. At the policymaking level, the Regional Centre contributed to the discussion on the nexus between trade law reforms based on uniform texts, economic development as a catalyser for social stability and conflict prevention, and the rule of law (e.g., at the workshop held at the University of Hokkaido, Sapporo, Japan, 22 February 2013).

55. A number of initiatives were undertaken at the operational level.

56. Alternative dispute resolution attracts steady interest in the region for a number of reasons. According to a widespread opinion, Asian values favour harmony and reconciliation over adversarial methods for the settlement of disputes. This attitude may, for instance, demand a less stringent separation between conciliation and arbitration proceedings. Moreover, the increasing involvement of Asian countries in international trade and investment, including as investors, increased their exposure to international arbitration. Finally, arbitration has been increasingly invoked as the preferred method of dispute resolution also for non-commercial international disputes. All of those factors coalesce to increase the

interest for alternative dispute resolution mechanisms in the region and the demand for related capacity-building exercises.

57. In this area, the Regional Centre organized with the Ministry of Justice of the Republic of Korea and the Korean Commercial Arbitration Board a major event on “Asia-Pacific Perspectives on International Commercial Arbitration” (Seoul, 22-23 November 2012), discussing all UNCITRAL texts relating to arbitration as well as its current work in the field. It is envisaged that that meeting will take place on an annual basis. Other events relating to alternative dispute resolution to which the Regional Centre contributed include participation in the “Asia-Pacific Mediation Conference 2012: Mediation and its Impact on National Legal Systems” organized by the City University of Hong Kong (Hong Kong, China, 16-17 November 2012) as well as in a workshop on international commercial arbitration organized by the Royal Academy for Judicial Professions of the Kingdom of Cambodia (Phnom Penh, 9 August 2012). That workshop aimed, in particular, at increasing the familiarity of the Cambodian judiciary with the Convention on the Recognition and Enforcement of Foreign Arbitral Awards, 1958 (the “New York Convention”) and the UNCITRAL Model Law on International Commercial Arbitration (the “Model Arbitration Law”), as both texts have been adopted by Cambodia.

58. Moreover, significant work was done to disseminate awareness on and promote the use of the 2012 UNCITRAL Digest of Case Law on the Model Arbitration Law, a tool that has raised great interest and received general praise (see para. 25). The Model Arbitration Law has been widely adopted in Asia and the Pacific and in some subregions, such as South-East Asia, is considered as a *de facto* standard. Recent enactments of that model law in the relevant region include, according to several sources, the new Arbitration Law of Saudi Arabia (Royal Decree No. M/34 dated 24/5/1433 H/16 April 2012).

59. The Regional Centre has actively pursued the promotion of universal participation in the New York Convention in its region. In this respect, it should be noted that Tajikistan became a party to the New York Convention on 14 August 2012. The consideration of that treaty action was promoted by a capacity-building project in support of Tajikistan’s accession to the World Trade Organization sponsored by the United States Agency for International Development (USAID). The Regional Centre has been closely monitoring the process of consideration of adoption of the New York Convention by Myanmar, including by contributing to dedicated events (Yangon, Myanmar, 12 December 2012). Special attention was given to the importance of that treaty in the context of the harmonization of arbitration laws in member States of the Association of South-East Asian Nations (ASEAN), including by contributing to the “ASEAN Senior Law Officials Meeting (ASLOM) Workshop on the Harmonization of the Trade Laws of ASEAN Member States” (Singapore, 11-12 March 2013). Myanmar became the 149th State party to the New York Convention on 16 April 2013.

60. Special attention was also given to promoting of the adoption of the New York Convention in Pacific small island States, one of the world’s regions where the rate of adoption of that treaty is lowest. Contacts have been made with partners potentially interested in contributing to an exercise aimed at promoting participation in the Convention by building related legal capacity so as to provide Pacific small island States with a legal tool fundamental for their closer integration in the regional and global economy.

61. Significant work relating to international sale of goods, and, in particular, the promotion of the adoption and uniform interpretation of the United Nations Convention on Contracts for the International Sale of Goods, 1980 (CISG) has been carried out directly with stakeholders. The topic was regularly featured at promotional events, such as the workshop on “UNCITRAL texts in Australia: Arbitration, Electronic Commerce, Sale of Goods” co-organized with the Commercial Law Group of the Faculty of Law, Monash University (Melbourne, Australia, 7 February 2013), and the conference “From Global to Local” organized by the Arbitrators’ and Mediators’ Institute of New Zealand (AMINZ) (Wellington, 2-4 August 2012), which similarly offered presentations on arbitration and electronic commerce as well.

62. From the legislative standpoint, the withdrawal of the declaration related to articles 11, 12 and 96 of the CISG by the People’s Republic of China is noteworthy in the framework of the global trend favouring review and, when advisable, withdrawal of existing declarations to that treaty in order to further increase the uniformity of its scope of application. The matter had been first discussed by the UNCITRAL secretariat at the international seminar on the “Interpretation and Application of the Convention on Contracts for the International Sale of Goods (CISG) with Emphasis on Litigation and Arbitration in China” held at the University of Wuhan (Wuhan, China, 13-14 October 2007) (A/CN.9/652, para. 10 (b)). Among potential new parties, progress towards the adoption of the CISG was reported by Viet Nam, following the positive conclusion of a public consultation on the matter.

63. The Regional Centre has been particularly active in the field of electronic commerce by promoting the adoption of existing texts and participating in regional fora, including those aiming at the elaboration of future regional standards. The information gathered indicates different levels of States’ awareness of and interest in electronic commerce law. For instance, several countries in East and South-East Asia have sufficiently developed national legislation in the field and are now dealing with international aspects, including by considering the adoption of the United Nations Convention on the Use of Electronic Communications in International Contracts, 2005. On the other hand, most countries in South Asia seem to prioritize strengthening their national legislative framework, and some Central Asian States are engaged in the preliminary steps of the preparation of national legislation.

64. In this respect, it should be noted that UNCITRAL texts on electronic commerce are considered as a *de facto* standard for subregional harmonization among member States of ASEAN. Recently, a further step in that direction was made with the adoption by the Lao People’s Democratic Republic of the Law on Electronic Transactions (Law No. 20/NA of 7 December 2012, promulgated with Presidential Decree No. 025/POR of 17 January 2013). The Regional Centre has participated in the “ASEAN/UNCTAD Preparatory Workshop on the Review of E-Commerce Laws Harmonization in ASEAN” (Cebu, the Philippines, 10-11 November 2012), and contributed to the subsequent review exercise, coordinated by the ASEAN Secretariat and UNCTAD and finalized by the preparation of a study containing recommendations on further harmonization of e-commerce laws in ASEAN.

65. Additional work of the Regional Centre in the field of electronic commerce included illustrating the benefits of the adoption of UNCITRAL uniform texts in the context of an enabling legal framework for electronic single window facilities (“2012 AFACT Plenary Meeting and EDICOM”, Teheran, Islamic Republic of Iran, 21-22 November 2012); and contributing to the work carried out by ESCAP and United Nations Network of Experts for Paperless Trade in Asia and the Pacific (UN NEXt), in furtherance of ESCAP Resolution no. 68/3, and with a view to assessing the desirability and feasibility of a regional agreement on paperless trade (“Regional Expert Consultation on Connecting Asia-Pacific’s Digital Society for Building Resilience”, Colombo, 5-6 September 2012; “Expert Group Meeting on Enhancing Regional Connectivity through Trade and Investment: Towards Regional Arrangements for the Facilitation of Cross-border Paperless Trade”, Bangkok, 13-14 March 2013). Events aimed, inter alia, at promoting the United Nations Convention on the Use of Electronic Communications in International Contracts, 2005 were organized by the Regional Centre with the Hankuk University of Foreign Studies (Seoul, 20-21 September 2012) and with the University of Queensland TC Beirne School of Law (Brisbane, Australia, 5 February 2013).

66. Moreover, the Regional Centre has been active in supporting present and possible future UNCITRAL legislative-drafting work. In particular, an expert group meeting was convened to discuss the use of uniform texts in ongoing contract law reform exercises, and possible means to enhance coordination between global, regional and national legislation (Incheon, Republic of Korea, 25-26 February 2013). That expert group meeting highlighted the significant reliance on uniform law in certain East Asian contract law reform exercises, the need for increased promotional work, especially in developing countries, to fully explain the features of uniform texts and the benefits associated with their adoption, and the desirability of more closely coordinating and supporting regional efforts aimed at preparing new uniform texts. Other relevant meetings include a conference co-organized with the Hankuk University of Foreign Studies (Seoul, 20-21 September 2012) to discuss, inter alia, matters relating to the work of UNCITRAL Working Group III (Online Dispute Resolution) and Working Group IV (Electronic Commerce).

67. The Regional Centre has participated in several events aimed at disseminating information and building capacity in its host country, the Republic of Korea, such as the seminar on “Practical and Current Issues in International Sale of Goods and International Commercial Arbitration”, co-organized by the Regional Centre with the Asia Office of the International Bar Association (Seoul, 12 July 2012), the conference “Recent Trends of International Business Transactions Law in Asia” organized by Dong-A University (Busan, 8-9 November 2012) and the special lecture “UNCITRAL and the Current Challenges of Trade Law Harmonization” at the Seoul National University (Seoul, 20 November 2012).

68. The Regional Centre is staffed with one professional and one team assistant, as well as a legal expert provided by the Government of the Republic of Korea on a non-reimbursable basis. Interns are hosted at the Regional Centre on a regular basis. The project budget, fully contributed by the Government of the Republic of Korea, allows for the occasional employment of experts and consultants. Moreover, the Regional Centre has often been able to leverage on the resources of its partners, especially for contribution to the costs of travel and of meeting facilities and services.

69. The Regional Centre has been supported in a number of administrative functions critical for carrying out its mandate by ESCAP and, in particular, its Sub-Regional Office for East and North-East Asia (SRO ENEA), also located in Incheon. This assistance is offered on a provisional basis, pending conclusion of a formal arrangement between the United Nations Office of Legal Affairs and ESCAP.

70. It is expected that the future activities of the Regional Centre will generate further interest for UNCITRAL texts and additional requests for technical assistance. Such increase will call for a corresponding increase in available resources. Those resources could be made available, in particular, by further stressing the fundamental contribution of trade law reform to major international policy goals such as the rule of law and the fight against poverty, and therefore mainstreaming trade law reform exercises in existing development assistance programmes.

IV. Dissemination of information

71. A number of publications and documents prepared by UNCITRAL serve as key resources for its technical cooperation and assistance activities, particularly with respect to dissemination of information on its work and texts.

A. Website

72. The UNCITRAL website, available in the six official languages of the United Nations, provides access to full-text UNCITRAL documentation and other materials relating to the work of UNCITRAL, such as publications, treaty status information, press releases, events and news. In line with the organizational policy for document distribution, official documents are provided, when available, via linking to the United Nations Official Document System (ODS).

73. In 2012, the website received roughly 500,000 unique visitors. While the overall number of visitors increased from 2011, the biggest gains in traffic were seen on pages in languages other than English. Approximately 58 per cent of traffic was directed to pages in English, 27 per cent to pages in French and Spanish (an increase from 22 per cent in 2011), and the remaining 15 per cent to pages in Arabic, Chinese and Russian (an increase from 11 per cent in 2011). In this respect, it should be noted that, while the UNCITRAL website is among the most important electronic sources of information on international trade law in all languages, it may represent one of few available sources on this topic in some of the official languages.

74. The content of the website is updated and expanded on an ongoing basis in the framework of the activities of the UNCITRAL Law Library and therefore at no additional cost to the Secretariat. In particular, UNCITRAL official documents relating to earlier Commission sessions are continuously uploaded in the ODS and made available on the website under a project on digitization of UNCITRAL archives conducted jointly with the UNOV Documents Management Unit.

B. Library

75. Since its establishment in 1979, the UNCITRAL Law Library has been serving research needs of Secretariat staff and participants in intergovernmental meetings convened by UNCITRAL. It has also provided research assistance to staff of Permanent Missions, global staff of the United Nations, staff of other Vienna-based international organizations, external researchers and law students. In 2012, library staff responded to approximately 475 reference requests a 36 per cent increase over 2011, originating from over 45 countries.

76. The collection of the UNCITRAL Law Library focuses primarily on international trade law and currently holds over 10,000 monographs, 100 active journal titles, legal and general reference material, including non-UNCITRAL United Nations documents, documents of other international organizations; and electronic resources (restricted to in-house use only). Particular attention is given to expanding the holdings in all of the six United Nations official languages. While use of electronic resources has increased, resources on trade law from many countries are still only found in print, and circulation of print items has remained steady.

77. The UNCITRAL Law Library maintains an online public access catalogue (OPAC) jointly with the other United Nations libraries in Vienna and with the technical support of the United Nations Library in Geneva. The OPAC is available via the library page of the UNCITRAL website.

78. The UNCITRAL Law Library staff prepares for the Commission an annual "Bibliography of recent writings related to the work of UNCITRAL". The bibliography includes references to books, articles and dissertations in a variety of languages, classified according to subject (for the forty-sixth Commission session, see A/CN.9/772). Individual records of the bibliography are entered into the OPAC, and the full-text collection of all cited materials is maintained in the Library collection. Monthly updates from the date of the latest annual bibliography are available in the bibliography section of the UNCITRAL website.

79. The Library produces a consolidated bibliography of writings related to the work of UNCITRAL on the UNCITRAL website.¹⁷ The consolidated bibliography aims to compile all entries of the bibliographical reports submitted to the Commission since 1968. It currently contains over 6,500 entries, reproduced in the English and the original language versions, verified and standardized to the extent possible.

C. Publications

80. In addition to official documents, UNCITRAL traditionally maintains two series of publications, namely the texts of all instruments developed by the Commission and the UNCITRAL Yearbook. Publications are regularly provided in support of technical cooperation and assistance activities undertaken by the Secretariat, as well as by other organizations where the work of UNCITRAL is discussed, and in the context of national law reform efforts.

¹⁷ Available from www.uncitral.org/uncitral/publications/bibliography_consolidated.html.

81. The following works were published in 2012: UNCITRAL Model Law on Cross-Border Insolvency: The Judicial Perspective;¹⁸ a revised booklet for the 1974 Convention on the Limitation Period in the International Sale of Goods with an updated explanatory note;¹⁹ UNCITRAL, Hague Conference and Unidroit Texts on Security Interests: Comparison and analysis of major features of international instruments relating to secured transactions;²⁰ UNCITRAL Legislative Guide on Insolvency Law, Part three: Treatment of enterprise groups in insolvency;²¹ UNCITRAL Digest of Case Law on the United Nations Convention on Contracts for the International Sale of Goods, 2012 Edition;²² UNCITRAL 2012 Digest on the Model Law on International Commercial Arbitration;²³ and the 2008 and 2009 UNCITRAL *Yearbooks*.²⁴

82. The following works were published in early 2013: Recommendations to assist arbitral institutions and other interested bodies with regard to arbitration under the UNCITRAL Arbitration Rules (as revised in 2010),²⁵ and A Guide to UNCITRAL: Basic facts about the United Nations Commission on International Trade Law.²⁶

83. In light of budget and environmental concerns, the Secretariat has continued its efforts to use electronic media as a primary method to disseminate UNCITRAL texts. Thus, print runs for all publications have been reduced and several texts published in 2012 have been published exclusively in electronic format, namely: UNCITRAL Model Law on Cross-Border Insolvency: The Judicial Perspective (e-book); the revised booklet for the 1974 Convention on the Limitation Period in the International Sale of Goods (e-book); UNCITRAL Digest of Case Law on the United Nations Convention on Contracts for the International Sale of Goods, 2012 Edition (CD-ROM and e-book); and the 2008 and 2009 UNCITRAL *Yearbooks* (CD-ROM and e-book).

D. Press releases

84. Press releases are being regularly issued when treaty actions relating to UNCITRAL texts take place or information is received on the adoption of an UNCITRAL model law or other relevant text. Press releases are also issued with respect to information of particular importance and direct relevance to UNCITRAL. Those press releases are provided to interested parties by e-mail and are posted on the UNCITRAL website, as well as on the website of the United Nations Information Service (UNIS) in Vienna or of the Department of Public Information, News and Media Division in New York, if applicable.

85. To improve the accuracy and timeliness of information received with respect to the adoption of UNCITRAL model laws, since such adoption does not require a

²⁶ Available from www.uncitral.org/uncitral/en/about_us.html.

formal action with the United Nations Secretariat, and to facilitate the dissemination of related information, the Commission may wish to request Member States to advise the Secretariat when enacting legislation implementing an UNCITRAL model law.

E. General enquiries

86. The Secretariat currently addresses approximately 2,000 general enquiries per year concerning, inter alia, technical aspects and availability of UNCITRAL texts, working papers, Commission documents and related matters. Increasingly, these enquiries are answered by reference to the UNCITRAL website.

F. Briefings for Permanent Missions in Vienna

87. The Secretariat provided a briefing on UNCITRAL and its working methods at the Orientation Seminar for Members of Permanent Missions accredited to the International Organizations in Vienna organized by the United Nations Institute for Training and Research (UNITAR) at the United Nations Office at Vienna on 4 December 2012.

G. Information lectures in Vienna

88. The Secretariat provides upon request information lectures in-house on the work of UNCITRAL to visiting university students and academics, members of the bar, Government officials including judges and others interested. Since the last report, lectures have been given to visitors from, inter alia, Austria, Hungary, Ireland, Saudi Arabia, Slovenia and a visiting delegation from the American Bar Association Section of International Law.

V. Resources and funding

89. The costs of most technical cooperation and assistance activities are not covered by the regular budget. The ability of the Secretariat to implement the technical cooperation and assistance component of the UNCITRAL work programme is therefore contingent upon the availability of extrabudgetary funding.

90. The Secretariat has explored a variety of ways to increase resources for technical assistance activities, including through in-kind contributions. In particular, a number of missions have been funded, in full or in part, by the organizers. Additional potential sources of funding could be available if trade law reform activities could be mainstreamed more regularly in broader international development assistance programmes. In this respect, the Commission may wish to provide guidance on possible future steps.

A. UNCITRAL Trust Fund for symposia

91. The UNCITRAL Trust Fund for symposia supports technical cooperation and assistance activities for the members of the legal community in developing countries, funding the participation of UNCITRAL staff or other experts at seminars where UNCITRAL texts are presented for examination and possible adoption and fact-finding missions for law reform assessments in order to review existing domestic legislation and assess country needs for law reform in the commercial field.

92. During the period under review, the Government of the Republic of Korea, through its Ministry of Justice provided a contribution of \$13,878.61 for the participation of the UNCITRAL Secretariat in the APEC EoDB project (see para. 11 above). Also, a new contribution of \$20,000 was received for 2012 as well as a new pledge of \$20,000 for 2013 by the Government of Indonesia, both to whom the Commission may wish to express its appreciation.

93. At its 45th Session (New York, 25 June-6 July 2012), the Commission appealed to all States, international organizations and other interested entities to consider making contributions to the Trust Fund for UNCITRAL symposia, if possible, in the form of multi-year contributions, or as specific-purpose contributions, so as to facilitate planning and enable the Secretariat to meet the increasing requests from developing countries and countries with economies in transition for training and technical legislative assistance (A/67/17, paras. 146-148). Potential donors have also been approached on an individual basis.

94. The Commission may wish to note that, in spite of efforts by the Secretariat to solicit new donations, funds available in the Trust Fund are sufficient only for a very small number of future technical cooperation and assistance activities. Efforts to organize the requested activities at the lowest cost and with co-funding and cost sharing whenever possible are ongoing. However, once current funds are exhausted, requests for technical cooperation and assistance involving the expenditure of funds for travel or to meet other costs will have to be declined unless new donations to the Trust Fund are received or alternative sources of funds can be found.

95. The Commission may once again wish to appeal to all States, relevant United Nations Agencies and bodies, international organizations and other interested entities to make contributions to the Trust Fund, if possible in the form of multi-year contributions, so as to facilitate planning and to enable the Secretariat to meet the demand for technical cooperation and assistance activities and to develop a more sustained and sustainable technical assistance programme. The Commission may also wish to request Member States to assist the Secretariat in identifying sources of funding within their Governments.

B. UNCITRAL Trust Fund to grant travel assistance to developing countries that are members of UNCITRAL

96. The Commission may wish to recall that, in accordance with General Assembly resolution 48/32 of 9 December 1993, the Secretary-General was requested to establish a Trust Fund to grant travel assistance to developing countries that are members of UNCITRAL. The Trust Fund so established is open to

voluntary financial contributions from States, intergovernmental organizations, regional economic integration organizations, national institutions and non-governmental organizations, as well as to natural and juridical persons.

97. In the period under review, a contribution in the amount of euro 5,000 has been made by the Government of Austria, to whom the Commission may wish to express its appreciation.

98. During 2012, the available Trust Fund resources were used to facilitate participation at the 45th session of UNCITRAL in New York in July 2012 for delegates from El Salvador, Honduras and Colombia. Due to the limited resources, cost coverage has been provided only for the air tickets for the three delegates.

99. In order to ensure participation of all Member States in the sessions of UNCITRAL and its Working Groups, the Commission may wish to reiterate its appeal to relevant bodies in the United Nations system, organizations, institutions and individuals to make voluntary contributions to the Trust Fund established to provide travel assistance to developing countries that are members of the Commission.

100. It is recalled that in its resolution 51/161 of 16 December 1996, the General Assembly decided to include the Trust Funds for UNCITRAL symposia and travel assistance in the list of funds and programmes that are dealt with at the United Nations Pledging Conference for Development Activities.

X. STATUS AND PROMOTION OF UNCITRAL LEGAL TEXTS

Note by the Secretariat on the status of conventions and model laws

XI. COORDINATION AND COOPERATION

Note by the Secretariat on coordination activities

(A/CN.9/776)

[Original: English]

Contents

| | <i>Paragraphs</i> |
|---|-------------------|
| I. Introduction | 1-4 |
| II. Coordination activities | 5-27 |
| A. The International Institute for the Unification of Private Law and the Hague Conference on Private International Law | 5-10 |
| B. Other organizations | 11-27 |

I. Introduction

1. In resolution 34/142 of 17 December 1979, the General Assembly requested the Secretary-General to place before the United Nations Commission on International Trade Law a report on the legal activities of international organizations in the field of international trade law, together with recommendations as to the steps to be taken by the Commission to fulfil its mandate of coordinating the activities of other organizations in the field.

2. In resolution 36/32 of 13 November 1981, the General Assembly endorsed various suggestions by the Commission to implement further its coordinating role in the field of international trade law.¹ Those suggestions included presenting, in addition to a general report of activities of international organizations, reports on specific areas of activity focusing on work already under way and areas where unification work was not under way but could appropriately be undertaken.²

3. This report, prepared in response to resolution 34/142 and in accordance with UNCITRAL's mandate,³ provides information on the activities of other international organizations active in the field of international trade law in which the UNCITRAL Secretariat has participated, principally working groups, expert groups and plenary meetings. The purpose of that participation has been to ensure coordination of the related activities of the different organizations, share information and expertise and avoid duplication of work and the resultant work products.

4. The Commission may wish to note the increasing involvement of the Secretariat in initiatives of other organizations. This is a recurrent pattern in recent

¹ *Official Records of the General Assembly, Thirty-sixth Session, Supplement No. 17 (A/36/17)*, paras. 93-101.

² *Ibid.*, para. 100.

³ See General Assembly Resolution 2205 (XXI), sect. II, para. 8.

years, consistent with the increase in the Secretariat's technical assistance activities,⁴ and which is expected to continue and even increase in future.

II. Coordination activities

A. The International Institute for the Unification of Private Law and the Hague Conference on Private International Law

International Institute for the Unification of Private Law (Unidroit)

5. The Secretariat participated in the ninety-first session of the Unidroit Governing Council (Rome, 7-9 May 2012). At the meeting, the Governing Council expressed satisfaction for the inclusion of Unidroit's request for formal endorsement of the Unidroit Principles 2010 in the agenda of the forty-fifth UNCITRAL session.

6. The Secretariat attended the first and second sessions of the Committee of governmental experts on the enforceability of close-out netting provisions (Rome, 1-5 October 2012 and 4-9 March 2013) in order to monitor developments to ensure consistency with UNCITRAL texts concerning insolvency and secured transactions. The draft text was completed at the second session and will be referred to the Unidroit Governing Council for adoption in May 2013. The final text is broadly consistent with the relevant UNCITRAL texts.

7. The Secretariat provided comments on a position paper in the area of contract law, titled "Model Clauses for Use of the Unidroit Principles of International Commercial Contracts in Transnational Contract and Dispute Resolution Practice", to the Unidroit Working Group for the preparation of Model Clauses (Rome, 11-12 February 2013).

Hague Conference on Private International Law (HCCH)

8. The Secretariat attended the Special Commission meeting of HCCH on Choice of Law in International Contracts. The outcome of the meeting was a non-binding instrument, i.e. a draft set of principles, for consideration by the Council on General Affairs and Policy in April 2013, prior to further work on the commentary by the Special Commission (The Hague, the Netherlands, 12-16 November 2012).

9. The Secretariat participated in the meeting of the HCCH Council on General Affairs and Policy (The Hague, the Netherlands, 9-11 April 2013). Among other matters, this was an opportunity for the Secretariat to congratulate the outgoing Secretary General of HCCH, Mr. Hans van Loon on his successful years in office, thanking him for the HCCH's cooperation with UNCITRAL, and to welcome his successor, Mr. Christophe Bernasconi. At the meeting, participants were briefed on HCCH ongoing matters, including the opening of its regional office in Hong Kong in December 2012, and considered the text prepared by the working group on Choice of Law in International Contracts (see paragraph 7 above). UNCITRAL will continue to participate as an observer to such working group, which is due to submit its final text with commentary to the next meeting of the Council in April 2014.

⁴ See A/CN.9/775.

Joint activities with Unidroit and HCCH

10. Unidroit hosted the annual coordination meeting with the UNCITRAL Secretariat and HCCH at which, current work of the three organizations and potential areas for cooperation were discussed (Rome, 5 June 2012). On this occasion both the Secretary of Unidroit and the Secretary of HCCH thanked the UNCITRAL Secretariat for having coordinated and sponsored the publication on the work of the three organizations in the area of secured transactions law.⁵

B. Other organizations

11. The Secretariat has undertaken other coordination activities with various international organizations. These have included provision of comments by the Secretariat on documents drafted by those organizations, as well as participation in various meetings and conferences with the purpose of briefing about the work of UNCITRAL or to provide an UNCITRAL perspective on the matters at stake.

1. General

12. The Secretariat remains actively involved in the Inter-Agency Cluster on Trade and Productive Capacity.⁶ In this context, the Secretariat was involved in the negotiation of the United Nations Development Assistance Framework (UNDAF) for Nepal. The UNDAF articulates the collective response of the United Nations system to national development priorities by coordinating the common contribution of the United Nations agencies to the needs and priorities of countries.

13. The Secretariat delivered a lecture on global and regional contract law harmonization at the conference on European Private Law at the University of Rome (Rome, 10 May 2012).

14. The Secretariat attended the General Assembly High-Level Meeting on the Rule of Law at which the chairperson of UNCITRAL delivered an official statement to Member States, non-governmental organizations and civil society representatives participating in the event (New York, United States of America, 23-24 September 2012). The Declaration adopted at the Meeting recognizes the importance of fair, stable and predictable legal frameworks for generating inclusive, sustainable and equitable development and economic growth and commends the work of UNCITRAL in modernizing and harmonizing international trade law.

15. As last year, the Secretariat attended the Annual meeting of the United States State Department Advisory Council on private international law (Washington D.C., 11-12 October 2012).

16. The Secretariat participated in the European Microfinance Week 2012 organized by the European Microfinance Platform and attended by worldwide representatives from governmental and non-governmental organizations, academia

⁵ See UNCITRAL, Hague Conference and Unidroit Texts on Security Interests: Comparison and analysis of major features of international instruments relating to secured transactions at www.uncitral.org/uncitral/en/uncitral_texts/security/2011UNCITRAL_HCCH_Unidroit_texts.html; see also A/CN.9/720 and A/CN.9/749.

⁶ See A/CN.9/725.

and private sector active in the domain of microfinance (Luxembourg, 14-16 November 2012).

17. The Secretariat attended the Law, Justice and Development Week 2012, an annual event designed to address how law and justice contribute to better development outcomes through opportunity, inclusion and equity. The event brought together World Bank Group staff, senior officials from other international financial institutions, international development practitioners, government officials, lawyers, judges, scholars and representatives from civil society and was co-organized by the World Bank's Legal Vice Presidency, the International Finance Corporation and Multilateral Investment Guarantee Agency Legal Departments, and the International Center for the Settlement of Investment Disputes. The formal launch of the "Global Forum on Law, Justice and Development" also took place during the week. The Global Forum is stated to be "a permanent forum ... for the exchange of knowledge, connecting developing countries, think-tanks, regional and international organizations, international financial institutions, governments, judiciaries, the private sector and civil society organizations with relevant research and practice"⁷ (Washington D.C., 10-14 December 2012).

2. Procurement

18. In accordance with requests of the Commission and Working Group I (Procurement), the Secretariat has established links with other international organizations active in procurement reform to foster cooperation with regard to the UNCITRAL Model Law on Public Procurement (2011) and its accompanying Guide to Enactment (2012). The aims of such cooperation are to ensure that reforming Governments and organizations are informed of the policy considerations underlying those texts, so as to promote a thorough understanding and appropriate use of the Model Law, at both regional and national levels. The Secretariat is taking a regional approach to this cooperation, and activities with the multilateral development banks in several regions, focusing on good governance and anti-corruption (in which procurement reform plays a pivotal role), are envisaged.

19. To this end, the Secretariat has participated, among others, in the following activities:

(a) The World Bank's International Advisory Group on Procurement, which is advising the World Bank on a wholesale Procurement Policy review, its new Program-for-Results (PforR) financing instrument, the Bank's procurement function in the context of public financial accountability, and the need to strengthen contract management (Washington, D.C., 4-5 June 2012 and 12-13 November 2012);

(b) The Second Annual EU Public Procurement Reform Conference, organized by IBC Legal Conferences, addressing the UNCITRAL reforms in public procurement and areas of harmony and discord between them and EU proposals. The Secretariat delivered a presentation at this event (Brussels, 20 September 2012);

(c) The seminar on Procurement and Trade, organized by the International Chamber of Commerce (ICC), addressing the EU proposals for a regulation on the

⁷ Law, Justice and Development Week 2012, Concept Note, available at: http://siteresources.worldbank.org/INTLAWJUSTICE/214576-1340728175970/23321647/LJDWEEK_2012_Concept_Note.docx.

access of third party suppliers and contractors to the EU public procurement market, which concern the principles of international participation in public procurement under the UNCITRAL Model Law on that topic (Paris, 7 November 2012). The Secretariat delivered a presentation at this event;

(d) The 5th session of the UNECE Team of Specialists, at which the Secretariat presented possible future work of UNCITRAL in public-private partnerships, with a view to ensuring appropriate coordination among the donor community in this regard (Geneva, Switzerland, 5-6 February 2013);

(e) The OECD's Meeting of Leading Practitioners on Public Procurement and ongoing work on key issues in updating the OECD Recommendation on Enhancing integrity in public procurement, the aim of which is to provide guidance to decision makers on how to use procurement as a strategic function of governments (Paris, 11-12 February 2013). The Secretariat delivered a presentation at this event; and

(f) The meeting of the heads of procurement of the multilateral development banks,⁸ at which the Secretariat presented possible future work of UNCITRAL in public-private partnerships, with a view to ensuring appropriate coordination among the donor community in this regard (Paris, 14 March 2013).

3. Dispute settlement

20. The Secretariat participated in the following activities:

(a) Consultative work in relation to the UNCTAD Pink Series publication on transparency in international investment agreements, entitled "Transparency 2012", in order to ensure that a consistent approach is promoted by UNCTAD and UNCITRAL in the field of transparency in treaty-based investor-State arbitration; and

(b) Consultative and coordination work with the Unidroit Working Group on the use of Unidroit Principles in arbitration clauses.

21. The Secretariat also organized a meeting with representatives of arbitral institutions in relation to the establishment of a registry on transparency under the draft UNCITRAL rules on transparency in treaty-based investor-State arbitration (Vienna, 3 December 2012).⁹

4. Electronic commerce

22. The Secretariat has been particularly active in coordinating with international and regional organizations involved in the formulation of legal standards in the field of electronic commerce to ensure their compatibility with UNCITRAL texts and principles.

⁸ The following Banks were represented: the World Bank, the African Development Bank, the Asian Development Bank, the European Bank for Reconstruction and Development, the European Investment Bank, the InterAmerican Development Bank and the Islamic Development Bank.

⁹ See A/CN.9/WG.II/WP.177.

23. Activities¹⁰ included the following:

(a) Coordination with the European Commission on its draft regulation on electronic identification and trust services for electronic transactions in the internal market (Brussels, 5 September 2012);

(b) Coordination with the United Nations Centre for Trade Facilitation and Electronic Business (UN/CEFACT) on the revision of recommendation 14 on authentication of trade documents and preparation of recommendation 36 on single windows interoperability (Vienna, 17-21 September 2012);

(c) Participation in the 13th plenary meeting of the Asia Pacific Council for Trade Facilitation and Electronic Business (AFACT) (Teheran, 21-22 November 2012);

(d) Participation in the meeting organized by the American Bar Association (ABA) Identity Management Legal Task Force (London, 10-11 December 2012); and

(e) Participation in the United Nations Office on Drugs and Crime (UNODC) core group of experts on identity-related crime (Vienna, 16-18 January 2013).

5. Security interests

24. Coordination with relevant organizations has been pursued to ensure that States are offered comprehensive and consistent guidance in the area of secured transactions law.

25. Specific activities of the Secretariat included:

(a) Coordination with Unidroit to ensure that the text on netting being prepared by Unidroit does not overlap or conflict with the security interests texts prepared by UNCITRAL (see also para. 6 above);

(b) Coordination with the European Commission to ensure that a coordinated approach is followed with respect to the law applicable to third-party effects of assignments of receivables; and

(c) Coordination with the World Bank to prepare joint UNCITRAL-World Bank Principles on Secured Transactions.

6. Insolvency

26. The Secretariat participated in the third session of the World Bank's Working Group for the Treatment of the Insolvency of natural persons (Washington D.C., 13-14 December 2012). The Working Group was established under the auspices of the World Bank's Insolvency Law Task Force to identify the policies and general principles that underlie the diverse legal systems that have evolved for effectively managing the risks of consumer insolvency and individual over-indebtedness in the modern context and prepare a report to provide guidance on the characteristics of an effective insolvency regime for natural persons and the opportunities and challenges

¹⁰ Coordination activities in the area of electronic commerce carried out by the UNCITRAL Regional Centre for Asia and the Pacific are listed in A/CN.9/775.

encountered in the development of such a regime. The report was finalized and adopted at this session.

7. Commercial fraud

27. Further to the request of the Commission (A/63/17, para. 347 and A/64/17, para. 354) in relation to work on commercial fraud, the Secretariat has continued to participate in the work of UNODC on economic crime and identity fraud. In particular, the Secretariat has participated in UNODC's core group of experts on identity-related crime, which was formed to bring together on a regular basis representatives from Governments, private sector entities, international and regional organizations and academia to pool experience, develop strategies, facilitate further research and agree on practical action against identity-related crime. The most recent meeting of the core group of experts, the sixth such meeting, took place in Vienna from 16-18 January 2013 (see also para. 23, lett. e), above).

Part Three

ANNEXES

I. SUMMARY RECORDS OF THE MEETINGS OF THE UNITED NATIONS COMMISSION ON INTERNATIONAL TRADE LAW

Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration

Summary record of the 958th meeting, held at the Vienna International Centre, Vienna, on Monday,
8 July 2013, at 10 a.m.

[A/CN.9/SR.958]

Temporary Chairperson: Mr. Sorieul (Secretary of the Commission)

Chairperson: Mr. Schöll (Switzerland)

Later: Mr. Moollan (Chairperson of Working Group II) (Mauritius)

The meeting was called to order at 10.15 a.m.

Opening of the session

1. **Mr. Sorieul** (Secretary of the Commission) opened the forty-sixth session of the United Nations Commission on International Trade Law.

Election of officers

2. **Mr. Sorieul** (Secretary of the Commission) said that it was the turn of the Western European and Other States Group to nominate a Chairperson. The Group had informed the Commission that it wished to nominate Mr. Schoell (Switzerland) for the office.

3. *Mr. Schöll (Switzerland) was elected Chairperson by acclamation.*

4. *Mr. Schöll (Switzerland) took the Chair.*

Adoption of the agenda

5. **The Chairperson** invited the Committee to adopt the agenda.

6. **Mr. Caplan** (United States of America) said he trusted that the Commission would not take any decisions regarding the authorization of work on current projects or on proposed future projects prior to the discussion of agenda item 16.

7. **Mr. Bellenger** (France) proposed that agenda item 16 should be discussed on Monday, 22 July, rather than at the very end of the session.

8. **Mr. Sorieul** (Secretary of the Commission) said that the secretariat had informally scheduled the

discussion of agenda item 16 for the morning of Wednesday, 24 July. However, the discussion could be brought forward if the Commission so wished.

9. **Mr. Apter** (Israel) said that the members of the various Working Groups would probably not be present for the entire session. He therefore asked whether, for instance, the members of Working Group II on arbitration and conciliation could present their views on future work informally before the end of the second week of the session.

10. **The Chairperson** said that the suggestion by the representative of Israel was consistent with the Commission's practice in recent years.

11. *The agenda was adopted.*

Consideration of issues in the area of arbitration and conciliation

(a) **Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration** (A/CN.9/760, 765, 783 and 787 and Add.1, Add.1/Corr.1, Add.2 and Add.3)

12. **Mr. Sorieul** (Secretary of the Commission) said that it was customary for the Chairperson of Working Group II to chair the discussion on arbitration and conciliation. Mr. Moollan, the representative of Mauritius, had chaired the Working Group's proceedings for several years. He understood that the Commission would like him to continue to do so at the current session.

13. **The Chairperson** invited Mr. Moollan to take the Chair.

14. *Mr. Moollan, Chairperson of Working Group II, took the Chair.*

15. **The Chairperson** said that the Commission hoped to adopt the UNCITRAL rules on transparency by the end of the first week of the session. The drafting of the rules had been an extremely complex process and he urged the Commission to bear that in mind during the final review. Moreover, many delegations had been willing to make substantial compromises, as reflected in paragraphs 75 to 78 of the report of Working Group II on its fifty-eighth session held in February 2013 (document A/CN.9/765). He therefore trusted that the debate on matters of substance would not be reopened at the current session of the Commission.

16. He noted that the Working Group had expressed the unanimous view at its fifty-eighth session that the Commission was the best qualified institution to serve as a registry or repository of published information under the rules on transparency. The problem, however, was funding. States had been encouraged since the end of the session to fund such an initiative outside the United Nations regular budget and some had expressed their willingness, in principle, to do so. Alternatively, it would be necessary to approach first the Sixth Committee and then the Fifth Committee of the General Assembly to seek funding under the regular budget. If the Commission was unable for financial reasons to serve as the registry, two institutions had kindly accepted to do so: the International Centre for Settlement of Investment Disputes (ICSID) and the Permanent Court of Arbitration (PCA) in The Hague.

17. It would be helpful if agreement could be reached before the end of that week on the desirability of having the Commission serve as the registry. If additional States were willing to contribute the requisite funds, it might be unnecessary to apply to the General Assembly for financing under the regular budget. It would also be helpful if the Commission were to decide by the end of the week which of the two volunteer institutions should be selected to serve as a registry if all else failed.

18. **Mr. Sorieul** (Secretary of the Commission) said that the secretariat had embarked on consultations with a view to obtaining the requisite funding. While the response to date was quite encouraging, it was still far from satisfactory. The idea of having the Commission serve as the registry under the rules on transparency had met with a broadly positive response at the United Nations secretariat in New York. If extrabudgetary financing was required, a number of options were available, but it was important to ensure that such a key service as the dissemination of published information was assured on a universal basis. Hence, logically speaking, the most rational choice would be to entrust the secretariat of the Commission with the mandate rather than subcontracting it to an outside organization. While the two organizations that had offered their services were eminently respectable, neither enjoyed the universality of a body administered by the United Nations secretariat.

19. **Ms. Kobayashi-Terada** (Japan) asked whether the two volunteer organizations had submitted specific proposals regarding the services that they were willing to provide.

20. **The Chairperson** said that both organizations had submitted proposals which would be made available to all members of the Commission.

21. **Mr. Sorieul** (Secretary of the Commission) said that the secretariat found it difficult, also for budgetary reasons, to ensure the speedy translation of Commission documents into the six working languages. Even when documents were submitted in all six languages, the United Nations translation services were required to review them to ensure the accuracy of the translations.

22. **The Chairperson** invited the Commission to consider the draft UNCITRAL rules on transparency in treaty-based investor-State arbitration contained in document A/CN.9/873, article by article. Any agreed amendments would be incorporated in the different language versions by a drafting committee.

Draft article 1 — Scope of application

23. **The Chairperson** drew attention to the secretariat's remark in paragraph 6 of the document concerning the reordering of the paragraphs of draft article 1 according to the matters they addressed. If he heard no objection, he would take it that the reordering was acceptable to the Commission.

24. *It was so decided.*

25. **The Chairperson** said that draft article 1, paragraphs 1 and 2, reflected the compromise solution adopted by Working Group II, according to which the rules on transparency would form part of the UNCITRAL Arbitration Rules and would be applicable to treaties adopted after the rules came into force unless the parties thereto opted out. That solution was reflected in paragraph 1 of the article. Paragraph 2 created what was referred to as a "bright line", i.e. a clearly defined rule or standard, according to which the rules would apply to UNCITRAL arbitration proceedings conducted under existing treaties only if the disputing parties so agreed.

26. Working Group II had agreed at the outset that the rules on transparency should be capable of being applied in all forms of arbitration. Reference had frequently been made in that connection to the International Bar Association Rules on the Taking of Evidence in International Arbitration. At the beginning of an arbitral procedure, the tribunal and the parties frequently agreed to invoke those Rules either as applicable rules or as guidelines. As it was important to ensure that various institutions would be able to administer arbitrations under their existing rules in conjunction with the draft rules on transparency, the question arose as to whether there should be a specific reference in draft article 1 to the application of the rules in that context. Paragraph 7 of document A/CN.9/783 invited the Commission to consider whether the words in square brackets "or (ii) in treaty-based investor-State arbitrations initiated under other arbitration rules or ad hoc" should be added in the chapeau of paragraph 2. In his view, that was not the appropriate place for such a reference if the objective was to achieve balance. Paragraph 2 created the "bright line" in respect of UNCITRAL arbitration proceedings. If the text in square brackets was added to paragraph 2, the Commission would be creating a "bright line" for other institutions.

27. **Ms. Kaufmann-Kohler** (Switzerland) said that the addition of the proposed wording would have the merit of creating clarity inasmuch as all institutions would then be aware that they could apply the rules if they so wished. It would also be consistent with the Working Group's mandate to create a standard of transparency for the advancement of arbitration in all circumstances.

28. **Mr. Loh Kong Yue** (Singapore) said that clarity was also desirable because it was consistent with the principle of party autonomy, namely that the rules were applicable only where the disputing parties or the parties to a treaty agreed that they should apply.

29. **Mr. Agrawal** (India) agreed that it should be left to the contracting parties to state whether the rules on transparency should be applicable in arbitration proceedings.

30. **Mr. Apter** (Israel) expressed support for the insertion of the proposed additional phrase in paragraph 2, perhaps with some amendments, since it reflected the compromise reached in the Working Group, which was all-encompassing. If all members of the Commission agreed on the "bright line" approach, it should be made clear that it was applicable wherever parties to investor-State arbitration agreed to the rules of transparency, which had universal status.

31. **The Chairperson** said that the insertion of the new phrase would certainly imply that the "bright line" approach was universally applicable. A distinction should be drawn between the UNCITRAL Arbitration Rules and other rules when it came to the application of transparency standards. A link was created in draft article 1 between the rules on transparency and the UNCITRAL Arbitration Rules by amending article 1 of the latter text. However, there was no such link with other rules, such as the International Chamber of Commerce (ICC) Rules of Arbitration.

32. **Mr. Caplan** (United States of America) drew attention to the United States proposal in its comments on the draft rules (A/CN.9/787) concerning the addition of a new paragraph 9 to draft article 1, which would read: "These Rules are available for use in investor-State arbitrations initiated under other arbitration rules where

permitted by the relevant institution or in ad hoc proceedings.”

33. **The Chairperson** expressed reservations about the words “where permitted by the relevant institution” since that would place an onus on institutions throughout the world to state whether they were willing to apply the rules.

34. **Mr. Lavranos** (Observer for the Netherlands) said that he was in favour of maintaining the leeway provided by the phrase, since one could not be confident that the rules of all institutions were perfectly consistent with the rules on transparency.

35. **Ms. Kobayashi-Terada** (Japan) expressed support for the proposal by the Chairperson to delete the phrase.

36. **Ms. Kaufmann-Hohler** (Switzerland) said she agreed that it would be preferable to delete the phrase, since it would simply encourage additional undesirable debate on each rule.

37. **Mr. Loh Kong Yue** (Singapore) said that the wording of the proposed new paragraph was somewhat ambiguous. It should be made clear that the disputing parties or the parties to a treaty should agree to the application of the rules on transparency.

38. **Mr. Kordač** (Observer for the Czech Republic) said that the proposed paragraph did not really qualify in technical terms as a rule. It might therefore be preferable to insert it in the Commission’s decision concerning the adoption of the rules or in its recommendation on their application.

39. **The Chairperson** invited the representatives of the International Centre for Settlement of Investment Disputes and the Permanent Court of Arbitration to comment on the acceptability of the proposed paragraph if the words “where permitted by the relevant institution” were to be deleted.

40. **Ms. Kinnear** (International Centre for Settlement of Investment Disputes) said that her institution would be quite willing to apply the rules on transparency if the disputing parties so wished or if the home State and the respondent State had agreed to their application.

41. **Mr. Daly** (Permanent Court of Arbitration) said that there was nothing in the Court’s procedural

rules that would come into conflict with the draft rules on transparency in their current form. The Court would therefore have no problem in applying the rules in its arbitration proceedings.

42. **Mr. Loh Kong Yue** (Singapore) said he took it that the proposed new paragraph would not affect the principle of party autonomy.

43. **The Chairperson** said he took it that the Commission wished to adopt draft paragraph 9 proposed by the representative of the United States with the deletion of the words “where permitted by the relevant institution” and that it also wished to delete the words in square brackets in draft paragraph 2.

44. *It was so decided.*

45. **The Chairperson** drew attention to the proposal in paragraph 8 of document A/CN.9/783 to clarify in a second footnote to article 1 that a reference in the rules to a “Party to the treaty” or “State” applied equally to a regional economic integration organization.

46. **Ms. Kobayashi-Terada** (Japan) drew attention to her country’s comment in document A/CN.9/787/Add.1/Corr.1 in which it had proposed a revised version of the first footnote which ensured that the transparency rules also applied to international agreements to which Hong Kong and Macao were parties. If the second footnote were to be adopted, she proposed that a reference to “any territory authorized by a State to enter into treaties” should be added thereto.

47. **Ms. Liang Danni** (China) said that although China exercised sovereign authority over Hong Kong and Macao, the two territories were entitled, under constitutional law, to decide for themselves whether to apply the rules on transparency.

48. **Mr. Caplan** (United States of America), referring to the definition of a treaty in the Vienna Convention on the Law of Treaties, proposed wording in the first footnote such as “any agreement governed by international law concluded between or among parties to such treaties”.

49. **Mr. Brown** (European Union) said that if the proposed amendments implied the deletion of the second footnote, it should be recalled that the purpose of that footnote was to make it clear that

where the word “State” was used in the draft rules, the relevant provisions were also applicable to regional economic integration organizations and perhaps other non-State entities. He therefore felt that the second footnote should be retained.

50. **The Chairperson** suggested that the neutral wording along the lines of that proposed by the representative of the United States should be used in both footnotes. The precise wording could be submitted to the Commission after the consultation break that would shortly be announced.

51. *It was so agreed.*

52. **The Chairperson** drew attention to paragraph 9 of document A/CN.9/783 concerning subparagraph 3 (b) of draft article 1, which had been redrafted to provide some flexibility to the arbitral tribunal to adapt the rules should be circumstances of the proceedings so require. It had been suggested that the last phrase, “whilst not undermining the transparency objective of the Rules”, should be amended to read “whilst ensuring that the transparency objective of the Rules is achieved”.

53. **Mr. Spelliscy** (Canada) said that the purpose of the final phrase was to ensure that arbitral tribunals understood the extent of their powers. Canada had proposed the following wording in document A/CN.9/787/Add.1: “but only insofar as such adaptation is consistent with achieving the transparency objective of the Rules”.

54. **Mr. Caplan** (United States of America) proposed as alternative wording “whilst achieving the transparency objective of the Rules”.

55. **The Chairperson** said he took it that the Commission wished to adopt subparagraph 3 (b) as amended by the representative of the United States.

56. *It was so decided.*

57. **Mr. Caplan** (United States of America) said that the words “the home State of the investor” in subparagraph 2 (b) of draft article 1 were, in his view, somewhat inappropriate in the context of procedural rules or investment treaties. As they might give rise to jurisdictional objections, he proposed replacing “the home State of the investor and the respondent State” with “the relevant Parties”.

58. **Ms. Kaufmann-Kohler** (Switzerland) said that Working Group II had amended “the relevant Parties” for reasons that she could not now recall. She requested time to consider the matter during the consultation break.

59. *It was so agreed.*

60. **The Chairperson** invited the Commission to consider the most appropriate date for the entry into effect of the rules on transparency. The need to ensure translation into the six working languages should be taken into account. It would also be necessary to approach the Sixth Committee and the Fifth Committee of the General Assembly to ascertain whether the necessary funding could be obtained to enable UNCITRAL to serve as the repository of published information. He therefore suggested that a date in the first half of 2014 would be most appropriate.

61. **Mr. Spelliscy** (Canada) said he agreed that a date in early 2014 would be appropriate if the Commission decided to seek funding for a registry mandate. Otherwise an earlier date of entry into force might be conceivable.

62. **Mr. Apter** (Israel) proposed that, rather than fixing a date of entry into force, the Commission should envision the gradual entry into force of various provisions as soon as practicable. It could perhaps state in its recommendation on the application of the UNCITRAL rules on transparency that the rules pertaining to the registry would enter into force only after the registry was established.

63. **The Chairperson** suggested that the proposal by the representative of Israel should be discussed with the representatives of the various institutions prior to the adoption of the draft rules later that week. The situation with respect to extrabudgetary funding should also be clear at that point.

The meeting was suspended at 11.50 a.m. and resumed at 12.20 p.m.

64. **The Chairperson** said that the discussion of the footnotes to draft article 1, paragraph 1, would be deferred until the next meeting.

65. He invited the representative of Switzerland to present her proposal regarding subparagraph 2 (b).

66. **Ms. Kaufmann-Kohler** (Switzerland) proposed the following wording: “the Parties to the treaty or, in the case of a multilateral treaty, the State of the claimant and the respondent State”. A reference to “the relevant Parties” was unacceptable because it would then be unclear, for instance under the Energy Charter Treaty, whether the liable party was the European Union or the State that had taken a particular measure. A reference to the “home State of the investor” was also unacceptable because of the jurisdictional arguments to which it gave rise.

67. **The Chairperson** said he took it that the Commission wished to adopt subparagraph 2 (b) as amended by the representative of Switzerland.

68. *It was so decided.*

69. **The Chairperson** said that some members of the Commission had expressed reservations during

the consultation break regarding the amended version of subparagraph 3 (b). The decision on its adoption was therefore revoked and he invited the representative of Switzerland to submit an amendment on behalf of the members concerned.

70. **Ms. Kaufmann-Kohler** (Switzerland) proposed the following wording: “but only insofar as such adaptation is consistent with the transparency objectives of the Rules”. It was similar to that proposed by Canada, but the word “achieving” had been deleted.

71. **The Chairperson** said that the proposed amendment would be discussed at the next meeting.

The meeting rose at 12.30 p.m.

Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration
(continued)

**Summary record of the 959th meeting, held at the Vienna International Centre, Vienna, on Monday,
8 July 2013, at 2 p.m.**

[A/CN.9/SR.959]

Acting Chairperson: Mr. Moollan (Chairperson of Working Group II) (Mauritius)

The meeting was called to order at 2.10 p.m.

Consideration of issues in the area of arbitration and conciliation

(a) Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration (continued)
(A/CN.9/760, 765, 783 and 787 and Add.1, Add.1/Corr.1, Add.2 and Add.3)

Draft article 1 — Scope of application (continued)

1. **The Chairperson** reminded the Commission of the proposal by the representative of Switzerland to replace the phrase “whilst not undermining the transparency objective of the Rules” in draft article 1, subparagraph 3 (b), with the following phrase: “but only insofar as such adaptation is consistent with the transparency objectives of the Rules”. He noted that the representatives of Canada, France, Japan, Singapore, Thailand and the United States supported the proposed amendment. If he heard no objections, he would take it that the Commission wished to adopt the amendment.

2. *It was so decided.*

3. **Mr. Agrawal** (India) proposed, in addition, that the words “in consultation with the disputing parties” should be inserted after “the arbitral tribunal” at the beginning of the subparagraph.

4. **Ms. Kaufmann-Kohler** (Switzerland) said that it would be preferable to add those words elsewhere in the subparagraph, since it would be inappropriate to state that the arbitral tribunal, in consultation with the disputing parties, “shall have the power” to take certain measures. It would also be advisable to check whether the reference to consultation with the disputing parties was inserted in all contexts. If it was only inserted in some cases, it might send out the wrong message.

5. **The Chairperson** suggested that the secretariat should check that important point of consistency prior to the next meeting.

6. **Mr. Apter** (Israel) proposed inserting an article to the effect that where the arbitral tribunal enjoyed discretionary authority, it should invariably consult the disputing parties when applying the rules on transparency.

7. **The Chairperson** said that a decision could also be taken on that point at the next meeting.

8. The other outstanding issue to be decided with respect to draft article 1 concerned the footnotes to paragraph 1. Draft article 1 as a whole could then be adopted.

Draft article 2 — Publication of information at the commencement of arbitral proceedings

9. **The Chairperson** drew attention to a comment on draft article 2 by Japan in document A/CN.9/787/Add.1. Japan pointed out that the current draft failed to deal with a situation in which a disputing party, normally the respondent, contested the applicability of the rules on transparency. It asked whether the issue would be dealt with in guidelines for the repository.

10. **Ms. Kobayashi-Terada** (Japan) proposed either addressing the issue in the repository’s guidelines or inserting the following new paragraph in the rules: “In the event of a dispute as to whether the Rules on Transparency apply to the arbitration at issue, the repository shall make available to the public the aforementioned information after the arbitral tribunal decides that the Rules of Transparency shall apply.”

11. **The Chairperson** said that the Commission needed to take a decision of principle regarding what kind of information should be made public and

at what stage in the proceedings. It was essential to strike a balance between draft article 2 and draft article 3 concerning the publication of documents. There were two possible solutions to disputes of jurisdiction arising under draft article 2. One could either conclude that the information was so limited that it was of no great importance. So long as the registry received what purported to be a notice of arbitration stating that the rules on transparency were applicable, it could proceed with publication of that information. The alternative was to proceed as suggested in the new paragraph proposed by Japan, requiring the arbitral tribunal to take a decision on the matter. However, respondents would then be accorded a unilateral right to delay the publication of information until the tribunal was in place.

12. He asked the International Centre for Settlement of Investment Disputes (ICSID) how it proceeded in such circumstances.

13. **Ms. Kinnear** (International Centre for Settlement of Investment Disputes) said that ICSID was required to post what might be termed benchmark data, such as the names of disputing parties, on its website, but only once the case had been registered. However, a case was registered only when it was not manifestly outside the jurisdiction of ICSID. Hence a test was already built into the ICSID rules. If the case was registered, there might still be disputes regarding jurisdiction, nationality and other matters, but all the relevant information would nonetheless be posted on the website.

14. **The Chairperson** noted that there was thus a limited safety valve in the case of ICSID.

15. **Mr. Daly** (Permanent Court of Arbitration) said that the role of the Secretary-General of the Permanent Court of Arbitration in the designation of appointing authorities constituted a safety valve under the UNCITRAL regime. Most investor-State treaties did not provide for an appointing authority. If parties were unable to agree on an authority when a dispute arose, they requested the Secretary-General to designate an appointing authority. However, States might object to any such action by the Court in response to some requests by investors. They might claim that the arbitration had been improperly instituted and that there were jurisdictional issues. The Court could then conduct a *prima facie* review of the documents submitted and

decide how to proceed. Where there was no basis for jurisdiction, the case would be suspended and no tribunal would be constituted.

16. Under the current proposal regarding the rules on transparency, a limited amount of information would be published before an arbitral tribunal was constituted and where there was no *prima facie* evidence of an arbitration agreement. Some States would be likely, in his view, to object to that procedure. In a letter to the secretariat of the Commission dated 29 May 2013, the Court had warned against the potential for frivolous and abusive claims and proposed the insertion of the following text in draft article 2: “The repository may refer any question regarding the publication of information required by article 2 to the arbitral tribunal once constituted.”

17. **The Chairperson** said that the repository would presumably only take such discretionary action when it had serious doubts about the publication procedure.

18. **Ms. Kaufmann-Kohler** (Switzerland) cautioned against rendering matters unduly complicated. It had been decided in the light of a previous discussion of the issue to restrict the material that would automatically be published by the registry at the beginning of an arbitration procedure to the names of the parties, the sectors involved and the relevant treaty. Hence, no discretionary action by the registry was required. More sensitive information would be published only after the arbitral tribunal had been constituted.

19. **Ms. Kobayashi-Terada** (Japan) said that she broadly agreed with the representative of Switzerland. However, as there might be cases where parties contested the applicability of the rules on transparency, it might be helpful to produce guidelines for the registry, or to incorporate the text proposed by the representative of the Permanent Court of Arbitration in draft article 2. Her delegation’s position in that regard remained flexible.

20. **The Chairperson** suggested that the Commission’s understanding of how the registry was supposed to work, namely without exercising its discretion at the commencement of arbitral proceedings, should be recorded in the drafting

history. Any allegations that it had acted *ultra vires* could be dealt with under a waiver of liability clause. If he heard no objections, he would take it that the Commission wished to adopt draft article 2 as it stood.

21. *Article 2 was adopted.*

Draft article 3 — Publication of documents

22. **The Chairperson** drew attention to paragraph 15 of document A/CN.9/783, in which the Commission was invited to decide whether the last sentence of paragraph 2, in square brackets, should be retained in the text. The sentence in question read: “This may include, for example, making such documents available at a specified site.”

23. **Mr. Spelliscy** (Canada) said that the sentence was unnecessary in legal terms, since it merely provided an example of how documents might be made available. However, the example might offer the arbitral tribunal some guidance as to how exhibits and documents that were not covered by paragraphs 1 and 2 of the article might be made public.

24. **Ms. Escobar** (El Salvador) proposed that the sentence should be included in a footnote rather than in the text of paragraph 3.

25. **The Chairperson** said that it was not the drafting practice to insert footnotes to substantive rules. If he heard no objection, he would take it that the Commission wished to remove the square brackets and retain the sentence in paragraph 3.

26. *It was so decided.*

27. **The Chairperson** drew attention to paragraph 16 of document A/CN.9/783, in which the Commission was invited to consider whether the words “ancillary to the costs of making those documents available to the public” in paragraph 5 of draft article 3 made it sufficiently clear that third parties would not be required to cover administrative costs relating to publication, such as uploading documents to the registry website.

28. **Ms. Escobar** (El Salvador), referring to her country’s comments in document A/CN.9/787/Add.1, proposed that the following text should be inserted after “available to the public”: “such as the cost of photocopying or shipping documents, but not

administrative costs relating to publication, such as uploading documents onto the registry website”.

29. **Mr. Brown** (European Union) proposed replacing “available to the public” with “available to that person” and replacing “administrative costs relating to publication” in the version proposed by the representative of El Salvador with “administrative costs relating to making the documents available to the public”.

30. **Mr. Spelliscy** (Canada) supported the first amendment proposed by the representative of the European Union. He proposed amending the last phrase to read: “administrative costs relating to making the documents available to the public through the registry”.

31. **Mr. Brown** (European Union) said that “repository” would be preferable to “registry”.

32. **The Chairperson** suggested that the words “to that person” should be retained after “photocopying or shipping documents”.

33. **Ms. Kaufmann-Kohler** (Switzerland) proposed to simplify the text by stating “shall bear the cost of making those documents available to that person” and deleting “any administrative costs ancillary to”.

34. **Mr. Spelliscy** (Canada) said that the term “administrative costs” had been used in order to exclude costs relating, for instance, to lawyer time spent reviewing documents for redactions.

35. **Mr. Lavranos** (Observer for the Netherlands), **Mr. Möller** (Observer for Finland) and **Mr. Caplan** (United States of America) expressed support for the proposal by the representative of Switzerland, but with the retention of the word “administrative”.

36. **Mr. Jacquet** (France) expressed reservations about the implication that costs should automatically be borne by the person referred to in paragraph 5. It might be simpler and more consistent with the spirit of the text if the words “shall bear” certain costs were replaced with “shall bear only” the costs in question.

37. **The Chairperson** drew attention to the amendment proposed by the United States in document A/CN.9/787 and its comment that the

reference to paragraph 2 in paragraph 5 should be deleted.

38. **Mr. Caplan** (United States of America) said that publication by the registry pursuant to paragraph 2 was automatic. It was only in the case of paragraph 3 that the registry had discretion to grant an individual access to certain materials.

39. **The Chairperson** noted that documents were automatically communicated under paragraphs 1 and 2. Paragraph 4 indicated how that occurred, namely by means of communication by the arbitral tribunal through the repository. The repository would then publish the documents, presumably on its website. Paragraph 3 fell into a different category, since it referred to discretionary action by the arbitral tribunal, including whether and how the material should be made available. The tribunal might decide to do so through the repository or, for instance, at a specified site. At all events, he felt that the reference to paragraph 2 should be deleted from paragraph 5.

40. He read out the text of paragraph 5, as amended: "A person, who is not a disputing party, granted access to documents under paragraph 3, shall bear any administrative costs of making those documents available to that person, such as the cost of photocopying or shipping documents to that person, but not administrative costs relating to making the documents available to the public through the repository."

41. **Mr. Apter** (Israel) said that the meaning of the first reference to "administrative costs" was unclear. If a third party wished to have access to such documents, it should normally bear the costs of having the documents made available, even though they were not specifically administrative. However, investors were sometimes small companies and the imposition of additional costs might cause problems. If the word "administrative" were to be deleted, the arbitral tribunal would have more room for manoeuvre. He therefore supported the wording proposed by the representative of Switzerland.

42. **The Chairperson** said that the deletion of the word "administrative" would constitute a substantive amendment. There had been a great deal of in-depth discussion of the matter.

43. **Mr. Loh Kong Yue** (Singapore) expressed concern about the cost implications of publication of

such documents. For example, in the case of *Cargill, Incorporated v. United Mexican States*, the parties had taken 17 months to agree on the redaction of the final arbitral award. Singapore took the view that the rules on transparency must strike a balance between different interests: those of States, investors and civil society. He understood from informal consultations with practitioners that the rules could increase arbitration costs relating to legal advice on redaction by 20 to 50 per cent.

44. **The Chairperson** said that the same point had been made by several delegations during previous discussions. That was why it had been decided to include in draft article 3, paragraphs 1 and 2, an automatic rule of publication for a narrow class of documents and to deal in paragraph 3 with wider publication of exhibits in respect of which the potential for disruption of the proceedings was greater. It had also been decided that the arbitral tribunal should be permitted to exercise its discretion in that regard. Moreover, draft article 1, paragraph 4, required the tribunal to balance the interests of the public and the disputing parties and to guarantee the right to fair resolution of the dispute.

45. **Mr. Loh Kong Yue** (Singapore) requested members of the Commission who had experience in arbitration proceedings to comment on the volume of documents that might fall within the scope of paragraph 2.

46. **The Chairperson** said that in relatively substantial arbitration proceedings the average volume of documents would run to a few hundred pages. A typical witness statement was 40 to 50 pages long and a detailed expert report could be 50 to 100 pages long. There would be five or six of each in a typical memorial. As exhibits could be extremely voluminous, the arbitral tribunal should be in a position to exercise its discretion as to whether and how they should be made available, especially if their publication would entail a major delay in the proceedings.

47. If he heard no objections, he would take it that the Commission wished to adopt draft article 3, as amended.

48. *Article 3 was adopted.*

Draft article 4 — Submission by a third person

49. **The Chairperson** invited comments on draft article 4.

50. **Mr. Caplan** (United States of America) proposed that the words “as may be” after the words “page limits” in the chapeau of paragraph 2 should be deleted. They implied that the arbitral tribunal could not set page limits until after the first procedural order.

51. The United States also had reservations concerning the reference to funding of “around 20 per cent” at the end of subparagraph 2 (c). With a view to indicating that the reference to such a percentage was merely illustrative, it proposed the following alternative wording: “by the third person under this article (e.g. funding around 20 per cent of its overall operations annually)”.

52. **The Chairperson** suggested that the word “such” in the chapeau of paragraph 2 should also be deleted. The amended phrase would then read: “and complies with any page limits set by the arbitral tribunal”.

53. *It was so agreed.*

54. **The Chairperson** said that, if he heard no objections, he would take it that the Commission also supported the second amendment proposed by the representative of the United States.

55. *It was so agreed.*

56. *Article 4, as amended, was adopted.*

The meeting was suspended at 3.25 p.m. and resumed at 3.55 p.m.

57. **The Chairperson** invited the Commission to resume its consideration of the footnotes to draft article 1.

58. **Mr. Caplan** (United States of America) proposed replacing the words “any agreement concluded between or among States or regional economic integration organizations, including free trade agreements” with “any treaty, including those referred to as free trade agreements”.

59. He further proposed the following amended version of the second footnote: “For the purpose of the Rules on Transparency, any reference to a ‘Party

to the treaty’ or a ‘State’ includes, for example, a regional economic integration organization where it is a Party to the treaty.”

60. **Mr. Brown** (European Union) said that his delegation required time to confirm that the new wording was acceptable.

61. **Ms. Pólit** (Ecuador), referring to the first footnote, said that it was unclear whether the word “treaty”, although it was a generic term, covered all types of agreements and conventions.

62. **The Chairperson** proposed rewording the first footnote to read: “For the purpose of the Rules on Transparency, a ‘treaty providing for the protection of investments or investors’ shall be understood broadly as encompassing any bilateral or multilateral treaty that contains provisions on the protection of investments or investors and a right for investors to resort to arbitration against Parties to the treaty, including those commonly referred to as free trade agreements, economic integration agreements, trade and investment framework or cooperation agreements, and bilateral investment treaties.”

63. **Ms. Pólit** (Ecuador) said that the footnote referred to a treaty providing for the protection of investments or investors. She enquired about the situation of countries that were recipients of investments.

64. **The Chairperson** said that the purpose of the footnote was merely to specify the scope of the rules. The representative of Ecuador had raised a valid substantive issue that should be addressed by the relevant tribunal.

65. **Ms. Kaufmann-Kohler** (Switzerland), noting that the term “treaty” was defined in draft article 1, paragraph 1, as a treaty providing for the protection of investments or investors, emphasized the importance of using the term consistently throughout the rules.

66. **The Chairperson** said that if he heard no objection, he would take it that the Commission wished to adopt the first and second footnotes, as amended.

67. *It was so agreed.*

Draft article 5 — Submission by a non-disputing Party to the treaty

68. **The Chairperson** drew attention to paragraph 20 of document A/CN.9/783, which stated that the Working Group had agreed that the arbitral tribunal should accept submissions on treaty interpretation by a non-disputing Party to the treaty, provided that such submissions would not disrupt or unduly burden the arbitral proceedings or unfairly prejudice any disputing party.

69. **Mr. Spelliscy** (Canada), referring to the use of the word “accept” in draft article 5, paragraphs 1 and 2, noted that the word “allow” was used in a similar context in article 4. His delegation proposed using the same term in draft article 5 to ensure consistency.

70. *It was so agreed.*

71. **Mr. Lee Jae Min** (Republic of Korea), noting that the words “any submission” were used in draft article 5, paragraphs 4 and 5, whereas the words “the submission” were used in article 4, paragraphs 5 and 6, proposed that the words “any submission” should be used in both articles.

72. *It was so agreed.*

73. **Mr. Caplan** (United States of America) proposed replacing the phrase “In exercising its discretion to allow such submissions” in the second sentence of paragraph 2 of draft article 5 with “In determining whether to allow such submissions” in order to ensure consistency with the wording of article 4, paragraph 3.

74. **The Chairperson** suggested that it would be preferable to align the wording of article 4 with draft article 5, since it would then be clear in both cases that the provisions of article 1, paragraph 4, were being invoked.

75. **Mr. Magraw** (Center for International Environmental Law) said that the words “In determining whether to allow” had been used in article 4 because paragraph 3 of that article listed several specific criteria that were not contained in article 1. He therefore considered that the original wording should be maintained.

76. **Mr. Kordač** (Observer for the Czech Republic) expressed support for the maintenance of the original wording of article 4.

77. **Mr. Caplan** (United States of America) requested that a decision on the matter should be deferred until the next meeting.

78. *It was so agreed.*

79. **Mr. Loh Kong Yue** (Singapore) said that although certain safeguards were built into draft article 5, his delegation considered that the wording failed to achieve the desired balance. In particular, if non-disputing Parties to a treaty were allowed to intervene on issues other than treaty interpretation, a State might be required to respond not only to claims brought by investors but also to the exercise of diplomatic protection.

80. **Ms. Esnarriaga Arantes Barbosa** (Brazil), **Ms. Le Duc Hanh** (Observer for Viet Nam) and **Mr. Yuprasert** (Thailand) expressed support for the comment made by the representative of Singapore.

81. **Ms. Pólit** (Ecuador) also expressed support for the comment made by the representative of Singapore. She added that draft article 5 failed to guarantee the desired balance between investors and State recipients of investments.

82. **Mr. Hirsch** (Argentina), expressing support for the comment made by the representative of Singapore, requested further time to consider that aspect of draft article 5.

83. *It was so agreed.*

Draft article 6 — Hearings

84. **The Chairperson** drew attention to the comment in paragraph 22 of document A/CN.9/783 that the Working Group had expressed formal and unanimous support for the revised compromise proposal, which included draft article 6.

85. **Mr. Lebedev** (Russian Federation) noted that, according to draft article 6, paragraph 1, hearings for the presentation of evidence or for oral argument would be public, subject to the provisions of paragraphs 2 and 3. The question arose, however, whether hearings could be closed where both disputing parties so agreed. He wished to have

confirmation that the draft article, as currently worded, did not preclude that possibility.

86. **The Chairperson** said that the possibility had been discussed at length and dismissed as part of the compromise solution. In that connection, he drew attention to article 1, subparagraph 3 (a), which stated that the disputing parties could not derogate from the rules, by agreement or otherwise, unless permitted to do so by the treaty.

87. **Mr. Lebedev** (Russian Federation) requested that, to avoid ambiguity, that understanding should be reflected in the Commission's report.

88. *It was so agreed.*

89. *Article 6 was adopted.*

The meeting rose at 4.55 p.m

Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration
(continued)

Summary record of the 960th meeting, held at the Vienna International Centre, Vienna, on Tuesday, 9 July 2013, at 9.30 a.m.

[A/CN.9/SR.960]

Acting Chairperson: Mr. Moollan (Chairperson of Working Group II) (Mauritius)

The meeting was called to order at 9.50 a.m.

Consideration of issues in the area of arbitration and conciliation

(a) Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration (continued)
(A/CN.9/760, 765, 783 and 787 and Add.1, Add.1/Corr.1, Add.2 and Add.3)

Draft article 1 — Scope of application (continued)

1. **The Chairperson** noted that there had been a proposal to insert the words “in consultation with the disputing parties” in draft article 1, paragraph 3 (b). The secretariat had confirmed that, as a matter of principle, the phrase had been included in the draft rules on transparency wherever it was deemed to be appropriate. He therefore suggested that it should be inserted after the words “the particular circumstances of the case”.

2. *It was so decided.*

3. **The Chairperson** said that the Drafting Group had suggested that the amended wording of the last phrase of paragraph 3 (b) should be modified slightly to read: “and is consistent with the transparency objectives of the Rules”.

4. *It was so decided.*

5. **The Chairperson**, referring to draft article 1, paragraph 9, and responding to a comment by the secretariat, suggested that the words “arbitrations initiated under other arbitration rules” should be amended to read “arbitrations initiated under rules other than the UNCITRAL Arbitration Rules”.

6. *It was so decided.*

7. **The Chairperson** noted that a subtitle should be inserted before paragraph 9.

8. **Ms. Kaufmann-Kohler** (Switzerland) proposed “*Application in non-UNCITRAL arbitrations*”.

9. *It was so decided.*

10. **The Chairperson** noted that the delegation of Switzerland also wished to propose an amendment to the first footnote to paragraph 1.

11. **Mr. Schöll** (Switzerland) proposed that the words “providing for the protection of investments or investors” should be deleted both in paragraph 1 and in the first footnote to the paragraph because a reference to such protection was already contained further down in footnote 1.

12. **Mr. Apter** (Israel) emphasized the importance of stating clearly within the rules themselves rather than in a footnote that the term “treaty” denoted any treaty providing for the protection of investments or investors.

13. **The Chairperson** expressed support for that view. The secretariat had suggested that the phrase in question should only be deleted from the footnote and that the asterisk should be placed after “(treaty)” in paragraph 1.

14. *It was so decided.*

15. *Article 1, as amended, was adopted.*

*Article 4 — Submission by a third person;
draft article 5 — Submission by a non-disputing
Party to the treaty (continued)*

16. **The Chairperson**, referring to the discussion at the previous meeting as to whether consistent language should be used in article 4, paragraph 3, which contained the phrase “In determining whether

to allow such a submission”, and draft article 5, paragraph 2, which contained the phrase “In exercising its discretion to accept such submissions”, said that the difference in wording was deliberate, since the reference in the former case was not to the general exercise of discretion by the arbitral tribunal. He therefore suggested that the wording of article 4, paragraph 3, should remain unchanged.

17. *It was so decided.*

18. **The Chairperson** further suggested that the wording of draft article 5, paragraph 2, should remain unchanged but that the Commission’s report should note that concern had repeatedly been expressed during the discussions of Working Group II and the Commission that the provision could potentially open the door to diplomatic protection and state explicitly that that was not its intention. The Commission might also invite arbitral tribunals called upon to exercise their discretion under draft article 5, paragraph 2, to bear that in mind. He deferred further discussion of the matter until the next meeting.

Draft article 7 — Exceptions to transparency

19. **The Chairperson** said that draft article 7 had been included in the revised compromise proposal for which Working Group II had expressed formal and unanimous support.

20. He invited comments on the drafting matters set forth in paragraph 25 of document A/CN.9/783.

21. **Mr. Spelliscy** (Canada) said he understood that the words “or to non-disputing Parties” had been inserted in paragraph 5 in the interests of consistency with earlier paragraphs. He would actually prefer to delete those words from paragraphs 1 and 3 because no distinction had been made in earlier articles between the public and the non-disputing Parties to a treaty.

22. **The Chairperson** said that the distinction had been made because articles 4 and 5 dealt separately with non-disputing Parties to a treaty and third persons. However, he agreed that in articles 2 and 3 the term “the public” encompassed non-disputing Parties. That could be made clear in the Commission’s report.

23. **Mr. Apter** (Israel) expressed support for the proposal by the representative of Canada and

emphasized the need to state clearly, perhaps in a footnote, that the term “the public” encompassed non-disputing Parties.

24. **The Chairperson** suggested that a footnote should be inserted the first time that the term “the public” was used in order to make it clear that the term covered both “third persons” and “non-disputing Parties”.

25. **Mr. Brown** (European Union) said that there was a requirement in the treaty practice applicable in some countries for the provision of information to a non-disputing Party to a treaty. The insertion of the proposed footnote might prove confusing in such situations.

26. **The Chairperson** said that the failure to include an explanatory footnote in the rules might also prove confusing.

27. **Ms. Pólit** (Ecuador) said that a distinction should be made in legal terms between the term “the public”, which designated any person, and a “third person” or *amicus curiae*, which designated a person who had a specific interest in a case before the arbitral tribunal.

28. **The Chairperson** drew attention to article 4, paragraph 1, which used the term “third person” to refer to a whole category of persons who might have such an interest. A limited number of persons within that category might have a significant interest and hence qualify as an *amicus curiae*. In addition, non-disputing Parties to a treaty were covered by draft article 5.

29. **Mr. Kordač** (Observer for the Czech Republic) said that the issue raised by the representative of the European Union was addressed in article 1, paragraph 7, which dealt with conflicts between the rules on transparency and the applicable arbitration rules.

30. His delegation considered that the scope of the term “the public” should be clarified in a footnote to the rules rather than in the Commission’s report.

31. **Mr. Lavranos** (Observer for the Netherlands), **Mr. Möller** (Observer for Finland) and **Mr. Popkov** (Belarus) said that the references to the public and non-disputing Parties in draft article 7 as it stood were sufficiently clear and should not be amended.

32. **The Chairperson** said that, according to the secretariat, the Commission's practice was to deal with such matters in the report rather than inserting a footnote in the text under discussion.

33. **Mr. Apter** (Israel) said that there was a consensus on the substantive point that the term "the public" encompassed non-disputing Parties and third persons. However, the inconsistency of the wording used in the different articles could give rise to a range of interpretation issues. As there were two footnotes to article 1, he failed to see why it was not possible to insert an additional footnote to clarify such an important point.

34. **Mr. Räftegård** (Observer for Sweden) said that a footnote stating that the term "the public" encompassed non-disputing States Parties might give readers the impression that non-States parties were not covered by the term.

35. **The Chairperson** said that, if he heard no objection, he would take it that Commission agreed to clarify all aspects of the issue in its report.

36. *It was so decided.*

37. **Mr. Kordač** (Observer for the Czech Republic) said that some entities that had been permitted pursuant to article 4 to file submissions as third persons might claim that they were now participants in the proceedings and should have access to all documents. He wondered whether the rights of such entities under the rules were crystal clear.

38. **The Chairperson** said that, in his view, there was no ambiguity in the rules regarding their rights.

39. **Mr. Cachapuz de Medeiros** (Brazil) expressed reservations regarding the provisions in article 7 for exceptions to transparency for what was termed "confidential information". Brazil had enacted a law in which the category of confidential information had been abolished.

40. **The Chairperson** pointed out that the article concerned reservations regarding both confidential and protected information.

41. **Mr. Lee Jae Min** (Republic of Korea) noted that the phrase "in consultation with the disputing parties" was used in paragraph 3 and had also just been inserted in article 1, paragraph 3 (b). Elsewhere, however, including in the last sentence

of draft article 7, paragraph 3, the wording "after consultation with the disputing parties" was used. Yet another version was used in paragraph 7: "after consultation with the disputing parties where practicable".

42. **The Chairperson** said that the words "in consultation" should be amended to read "after consultation" in all cases. The addition of the words "where practicable" in paragraph 7 was deliberate in order to cover the rare circumstance in which the arbitral tribunal, on its own initiative, took measures to restrain or delay the publication of information.

43. **Mr. Agrawal** (India) proposed amending the phrase "which it considers to be contrary to its essential security interests" in draft article 7, paragraph 5, to read "which it considers to be contrary to its public interest or its essential security interests". The term "public interest" was widely used and well understood in India and many other jurisdictions, while the term "essential security interests" was narrower in scope.

44. **The Chairperson** said that paragraph 5 had been discussed at great length. The proposed amendment was substantive and he noted that the Commission was unwilling to reopen the debate.

45. **Mr. Klippstein** (Germany) proposed moving the sentence at the end of paragraph 3 concerning the determination by the arbitral tribunal as to whether information was confidential or protected to the beginning of the paragraph. The tribunal should make the determination before deciding on how to prevent the relevant information from being made available to the public or to non-disputing Parties.

46. **Ms. Perales Viscasillas** (Spain) and **Mr. Brown** (European Union) expressed support for the proposal.

47. **Mr. Jacquet** (France) said that the chapeau of paragraph 3 presupposed that there was no disagreement as to whether certain information was confidential or protected. The purpose of the final sentence, on the other hand, was to address a specific problem, namely where the disputing parties disagreed on whether the information was confidential or protected. His delegation would therefore prefer to leave the paragraph unchanged.

48. **The Chairperson** noted that the members of the Commission, including the representative of Germany, were convinced by that explanation.

49. If he heard no objection, he would take it that the Commission wished to adopt draft article 7, as amended.

50. *Article 7 was adopted.*

The meeting was suspended at 10.50 a.m. and resumed at 11.10 a.m.

Draft amendment to article 1 of the UNCITRAL Arbitration Rules

51. **The Chairperson** said that the scope of application of the rules on transparency set forth in article 1 required an amendment to article 1 of the UNCITRAL Arbitration Rules in order to forge a link with the rules on transparency. The proposed wording of a new paragraph 4 to be added to article 1 of the UNCITRAL Arbitration Rules was contained in paragraph 29 of document A/CN.9/783.

52. The first issue to be discussed was whether the rules of transparency should be included as an appendix to the UNCITRAL Arbitration Rules. As the Commission had agreed that there was a link between the two sets of rules, but only for future treaties, it seemed reasonable that when the 2014 version of the UNCITRAL Arbitration Rules was issued, it should be accompanied, for the benefit of users, by the rules on transparency in the form of an appendix or in some other form. The form that was adopted should not, as a matter of principle, discourage the use of the rules of transparency in other contexts, for instance in conjunction with other institutional rules, in existing proceedings under the UNCITRAL Arbitration Rules or under future proceedings under existing treaties. In his view, the rules on transparency should be made available in the same document as the 2014 UNCITRAL Arbitration Rules but should not be referred to as an appendix. The rules on transparency should also be published separately.

53. **Mr. Cachapuz de Medeiros** (Brazil) said that the rules on transparency should be a stand-alone instrument and should not form part of the UNCITRAL Arbitration Rules.

54. **Mr. Popkov** (Belarus) said that he had no objection to the amendment to article 1 of the UNCITRAL Arbitration Rules and the inclusion of the rules on transparency in the same document as the 2014 Arbitration Rules. However, he agreed with the representative of Brazil that the rules on transparency should be a stand-alone instrument.

55. **Ms. Liang Danni** (China), **Ms. Szymanska** (Observer for Poland) and **Mr. Apter** (Israel) said that they also supported the proposal by the representative of Brazil.

56. **Ms. Kobayashi-Terada** (Japan) asked whether the two sets of rules would be available both together and separately on the website of the repository.

57. **The Chairperson** proposed that there should be a hyperlink in article 1, paragraph 4, of the UNCITRAL Arbitration Rules that would take the reader to the rules on transparency.

58. **Mr. Lebedev** (Russian Federation) said that, in his view, the current wording failed to clarify the status of the rules on transparency, which was certainly that of a stand-alone instrument. There was still a certain amount of ambiguity, especially since the rules on transparency would be published in conjunction with the UNCITRAL Arbitration Rules. He asked whether the 2010 UNCITRAL Arbitration Rules would remain in existence or whether they would be replaced by the 2013 version.

59. **The Chairperson** said that the status of the rules on transparency was set out unambiguously in article 1, particularly in the phrase “unless the Parties to the treaty have agreed otherwise”. It followed that an amendment to article 1 of the UNCITRAL Arbitration Rules was required. He drew attention in that connection to the compromise solution referred to in paragraphs 79 and 80 of the report of Working Group II (A/CN.9/765).

60. With regard to the status of the 2010 UNCITRAL Arbitration Rules, he drew attention to paragraph 31 of the report on the settlement of commercial disputes (A/CN.9/783), which stated that: “A reference to the UNCITRAL Arbitration Rules as adopted in 1976, or as revised in 2010, in a treaty concluded after the coming into force of the rules on transparency would have the effect of

precluding the application of the rules on transparency.”

61. **Mr. Lebedev** (Russian Federation) said that the documents cited by the Chairperson were a Working Group report and a note by the secretariat. Referring to paragraph 34 of document A/CN.9/783, he said that the Commission was now required to take a formal decision as to whether the rules on transparency would be a stand-alone instrument. His delegation was still unconvinced of the clarity of their status, but if other delegations had no doubts about the matter, it would join in the consensus.

62. **Ms. Kaufmann-Kohler** (Switzerland) expressed support for the points made by the Chairperson. As the rules on transparency were clearly a stand-alone instrument, it was preferable, as a matter of good faith and to avoid giving a false impression, not to include them as an appendix.

63. **Ms. Perales Viscasillas** (Spain) emphasized the importance of ensuring that the visual format of the publication containing the rules on transparency did not create confusion among users and the general public. Although the rules on transparency were

stand-alone rules, they should obviously be referred to in the UNCITRAL Arbitration Rules. The fact that the latter Rules were applied for the most part in commercial disputes, whereas the rules on transparency would be applied in investment-related disputes, should be highlighted.

64. **Mr. Sorieul** (Secretary of the Commission) said that it was also important to emphasize the autonomy of the UNCITRAL Arbitration Rules and to avoid what might be termed “contamination” by the rules on transparency.

65. **Mr. Jacquet** (France) said that the rules on transparency served a dual purpose. Their use in UNCITRAL arbitration contexts was reflected in article 1, which regulated their scope in relation to the UNCITRAL Arbitration Rules. As stand-alone rules, they were used as a matter of choice by parties to a dispute outside the context of the UNCITRAL Arbitration Rules. It was important to highlight that distinction and to avoid using terminology that was inconsistent with that aim.

66. **The Chairperson** said he took it that the Commission wished to instruct the secretariat to

publish the rules of transparency both in conjunction with the UNCITRAL Arbitration Rules and as a stand-alone document accessible to the general public.

67. *It was so decided.*

68. **Mr. Agrawal** (India) expressed reservations about the use of the word “include” in the phrase “these Rules include the UNCITRAL Rules on Transparency” in proposed new article 1, paragraph 4, of the UNCITRAL Arbitration Rules, even though it was clear from article 1 of the rules on transparency that an opt-out provision was applicable. He proposed as alternative wording: “the UNCITRAL Rules on Transparency shall supplement the UNCITRAL Arbitration Rules”.

69. **Mr. Apter** (Israel) proposed that the words in square brackets “as amended from time to time” after “the UNCITRAL Rules on Transparency” in draft paragraph 4 should be deleted. He also proposed that when the rules on transparency were published, the date should be added to the title, for example UNCITRAL Rules on Transparency 2013, since an amended version might be adopted in due course.

70. **The Chairperson**, referring to the new title adopted when the 1996 Model Law on Electronic Commerce with Guide to Enactment was republished, suggested that the phrase “with revised article 1, paragraph 4, as adopted in 2014” should be added to the title of the UNCITRAL Arbitration Rules.

71. **Ms. Kaufmann-Kohler** (Switzerland) proposed that the title of the rules on transparency should read: “UNCITRAL Rules on Transparency for Treaty-based Investor-State Arbitration”.

72. **The Chairperson** said that he would give the Commission time to reflect on the question of the titles.

73. He invited comments on the proposal to delete the words “as amended from time to time” in square brackets after “the UNCITRAL Rules on Transparency”.

74. **Mr. Lavranos** (Observer for the Netherlands) proposed replacing them with “in effect on the date of commencement of the arbitration”.

75. **Mr. Lawalata** (Indonesia) enquired about the implications for treaties of the wording proposed by the representative of the Netherlands.

76. **The Chairperson** said that if the parties to a treaty concluded in 2016, for example, decided to apply the 2014 UNCITRAL Arbitration Rules incorporating the wording “in effect on the date of commencement of the arbitration” and the rules on transparency were amended in 2020, a dispute initiated in 2025 would entail the application of the amended version of the rules. Similar principles were currently applicable to most arbitration agreements.

77. **Ms. Kaufmann-Kohler** (Switzerland) said that the 2010 UNCITRAL Arbitration Rules were based on the presumption that they would be applicable at the time of commencement of arbitration proceedings. She understood that the wording proposed by the representative of the Netherlands did not entail such a presumption.

78. **Mr. Lavranos** (Observer for the Netherlands) said that it would perhaps be advisable to include a transitional provision that would be applicable to all arbitrations that did not fall under the regime established by article 1, paragraph 4, of the new version of the UNCITRAL Arbitration Rules. The transitional provision might be based on article 1, paragraph 2, of the 2010 Arbitration Rules.

79. **The Chairperson** suggested that such a provision might be included in article 1 of the rules on transparency.

80. **Ms. Rennie** (United Kingdom) requested that a decision on the matter should be deferred until the next meeting.

81. **The Chairperson** drew attention to paragraph 36 of document A/CN.9/783, in which the Commission was requested to consider whether a footnote mirroring the first footnote to article 1 of the rules on transparency should be included as a footnote to article 1, paragraph 4, of the UNCITRAL Arbitration Rules.

82. If he heard no expression of support, he would take it that the Commission wished to reject the suggestion.

83. *It was so decided.*

The meeting rose at 12.25 p.m.

Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration
(continued)

Summary record of the 961st meeting, held at the Vienna International Centre, Vienna, on Tuesday, 9 July 2013, at 2 p.m.

[A/CN.9/SR.961]

Acting Chairperson: Mr. Moollan (Chairperson of Working Group II) (Mauritius)

Later: Vice-Chairperson: Mr. Moollan (Vice-Chairperson) (Mauritius)

The meeting was called to order at 2.20 p.m.

Consideration of issues in the area of arbitration and conciliation

(a) Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration (continued)

(A/CN.9/760, 765, 783 and 787 and Add.1, Add.1/Corr.1, Add.2 and Add.3)

Draft article 5 — Submission by a non-disputing Party to the treaty (continued)

1. **The Chairperson** said that some members of the Commission supported adopting draft article 5, paragraph 2, as it stood, while clarifying in the report that the wording was not intended to permit the exercise of diplomatic protection. Other members wished either to address that point in the paragraph itself or else to delete the paragraph altogether.

2. It had been proposed, as a compromise solution, to insert a comma at the end of the second sentence and to add the following words: “and the need to avoid submissions by a non-disputing Party which would support the claim of the investor in a manner which would be tantamount to diplomatic protection”.

3. **Mr. Brown** (European Union) said that the current version of paragraph 2 referred to article 4, paragraph 3, which listed factors that the arbitral tribunal should take into account when deciding whether to accept a submission. He asked whether the diplomatic protection factor mentioned in the amended version was an additional factor to be taken into account.

4. **The Chairperson** said that it was an additional but quite separate factor.

5. **Mr. Caplan** (United States of America) and **Mr. Galindo** (Ecuador) asked for time to consider the proposal.

6. **The Chairperson** said that a decision could be taken after the consultation break.

Draft amendment to article 1 of the UNCITRAL Arbitration Rules (continued)

7. **The Chairperson** reminded the Commission of the two alternative proposals to amend proposed new article 1, paragraph 4, of the UNCITRAL Arbitration Rules. The first was to remove the square brackets from around the words “as amended from time to time”. The second was to replace those words by “in effect on the date of commencement of the arbitration”.

8. Some delegations had asked whether the two proposed amendments would entail substantive differences. In his view, they would not. The second proposed amendment merely reflected the wording used in article 1, paragraph 2, of the 2010 UNCITRAL Arbitration Rules and made it clear that when UNCITRAL amended the rules on transparency, the amended version would be applicable to arbitrations.

9. Other delegations had drawn attention to policy concerns. It might be difficult for States to accept the rules on transparency as initially worded and even more difficult to accept the possibility of being required to apply amended versions.

10. **Ms. Kobayashi-Terada** (Japan), noting that article 1, paragraph 2, added the phrase “unless the parties have agreed to apply a particular version of the Rules” to the phrase “in effect on the date of commencement of the arbitration”, asked whether

the same wording would be added in article 1, paragraph 4.

11. **The Chairperson** said that the same wording could be used if the Commission so decided.

12. **Mr. Apter** (Israel) said that if the words “as amended from time to time” were to be maintained, it would deter States from applying the rules on transparency and encourage them to opt out of future treaties.

13. **Ms. Rennie** (United Kingdom) said that her delegation shared the concern that vague wording such as “as amended from time to time” might deter States from using the rules on transparency.

14. **Mr. Loh Kong Yue** (Singapore) expressed support for the points made by the previous two speakers.

15. **Mr. Jacquet** (France) said that when the rules on transparency were amended, the new version would almost certainly contain a provision specifying the conditions of application, which might be inconsistent with the words “as amended from time to time”. Hence, the inclusion of those words served no purpose and might even be counterproductive. He proposed as a solution the insertion of the word “applicable” before “UNCITRAL Rules on Transparency”.

16. **Ms. Kaufmann-Kohler** (Switzerland) suggested the following wording as an alternative solution: “the UNCITRAL Rules on Transparency in force in 2014, unless the parties have agreed to apply a later version of the Rules”.

17. **The Chairperson** cautioned against overcomplicating the issue under discussion. Nothing would prevent a party from stating in its treaty that the latest version of the rules on transparency would be applicable. He suggested that the Commission should omit all evolutive wording, as in the case of the 1976 version of the UNCITRAL Arbitration Rules.

18. If he heard no objection, he would take it that the Commission agreed to that suggestion.

19. *It was so decided.*

20. **The Chairperson** reminded the Commission of the proposal made at the previous meeting to adopt the following title: “UNCITRAL Rules on

Transparency in Treaty-based Investor-State Arbitration”.

21. The following title had also been proposed: “UNCITRAL Arbitration Rules (with revised article 1, paragraph 4, as adopted in 2014)”.

22. **Ms. Perales Viscasillas** (Spain) proposed replacing “revised” in the latter title with “new”, since paragraph 4 was being added to article 1.

23. *It was so decided.*

24. **Mr. Spelliscy** (Canada) proposed that “2014” should be replaced with “2013”, since new article 1, paragraph 4, would presumably enter into force before the end of the year.

25. *It was so decided.*

26. *Article 1 of the UNCITRAL Arbitration Rules, as amended, was adopted.*

The meeting was suspended at 2.50 p.m. and resumed at 4.05 p.m.

Draft article 5 — Submission by a non-disputing Party to the treaty (continued)

27. **The Chairperson**, referring to the consultations that had taken place during the break, said that draft article 5, paragraph 2, as currently worded, already mentioned the factors referred to in article 4, paragraph 3, that should be taken into account by the arbitral tribunal. Those factors included whether a submission could offer a perspective, particular knowledge or insight that was different from that of the disputing parties. That provision, in the view of a number of delegation, would in itself prevent a non-disputing Party from making a submission that would be tantamount to diplomatic protection under draft article 5. Other delegations disagreed and wished to include an explicit reference to diplomatic protection in the draft article. It had been pointed out, however, that the inclusion of such a reference would imply that the issue was not covered by article 4, paragraph 3.

28. It was proposed that the following new sentence should be added at the end of draft article 5, paragraph 2: “For the avoidance of doubt, in exercising its discretion to allow such submissions, the arbitral tribunal shall take into consideration the need to avoid submissions by a non-disputing Party

which would support the claim of the investor in a manner tantamount to diplomatic protection.” The report

would record that a number of delegations felt that the addition of that sentence was unnecessary, since its content was already covered by article 4, paragraph 3 (b).

29. **Mr. Popkov** (Belarus) said that it would be difficult for arbitral tribunals to interpret what was meant by “tantamount to diplomatic protection”. It should be explained that the main concern was to avoid a situation in which a non-disputing Party, seeking to advance an investor’s interests by improper means, abused the right to make a submission by making it clear that diplomatic protection was not applicable to the subject matter of the rules on transparency, given, inter alia, the definition of the nationality of legal persons in the context of diplomatic protection by the International Law Commission.

30. **The Chairperson** said that wording such as “tantamount to the espousal of the investor’s claim by the non-disputing Party” had previously been considered. The idea that the Commission was trying to encapsulate was that of the exercise of diplomatic protection through the back door, in other words a situation in which a State acted in support of an investor.

31. **Mr. Lee Jae Min** (Republic of Korea) asked whether a non-disputing Party would not be permitted to express any view that supported the aims of an investor, even if it did not amount to diplomatic protection.

32. **The Chairperson** said that most State submissions would have the effect of supporting one or the other party. Hence it would not be reasonable to stipulate that all such submissions were inadmissible. It was for the arbitral tribunal to evaluate the type of support that was being offered.

33. **Mr. Lee Jae Min** (Republic of Korea), referring to draft article 5, paragraph 1, said that submissions on issues of treaty interpretation from a non-disputing Party could also be unduly supportive of a party.

34. **The Chairperson** said that the home State of a disputing party would frequently submit its own interpretation of a treaty. It could therefore be useful

to hear a counterbalancing view, but such submissions fell into a different category.

35. He deferred the discussion of draft article 5, paragraph 2, until the next meeting.

Election of officers (*continued*)

36. **Ms. Kagwanja** (Kenya), speaking on behalf of the African Group, proposed that Mr. Moollan (Mauritius) should be elected Vice-Chairperson of the Commission.

37. *Mr. Moollan was elected Vice-Chairperson of the Commission by acclamation.*

Consideration of issues in the area of arbitration and conciliation

(a) Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration (*continued*)

(A/CN.9/760, 765, 783 and 787 and Add.1, Add.1/Corr.1, Add.2 and Add.3)

Article 3 — Publication of documents (*continued*)

38. **The Chairperson** said that a Drafting Group document (A/CN.9/XLVI/CRP.2) containing the amended version of article 3, paragraph 5, had just been issued. He suspended the meeting to give members time to decide whether it was acceptable.

The meeting was suspended at 4.25 p.m. and resumed at 4.35 p.m.

39. **The Chairperson** asked whether article 3, paragraph 5, as currently worded was acceptable: “A person, who is not a disputing party, granted access to documents under paragraph 3, shall bear any administrative costs of making those documents available to that person, such as the cost of photocopying or shipping documents to that person, but not the administrative costs of making the documents available to the public through the repository.”

40. **Ms. Rennie** (United Kingdom) proposed the following alternative wording: “A person granted access to documents under paragraph 3 shall bear any administrative costs of making those documents available to that person, such as the cost of photocopying or shipping documents to that person,

but not the costs of making the documents available to the public through the repository.”

41. **The Chairperson** said that the words “who is not a disputing party” were unnecessary inasmuch as a person granted access to documents under paragraph 3 was obviously not a disputing party.

42. **Mr. Brown** (European Union) proposed deleting the words “to that person” after “shipping documents”.

43. **Mr. Castello** (United States of America) said that if “to that person” were deleted, it might imply

that the cost of photocopying or shipping to the repository should be borne by the person granted access to documents.

44. **The Chairperson** said he took it that the Commission endorsed the edited version of article 3, paragraph 5, proposed by the representative of the United Kingdom.

45. *It was so decided.*

The meeting rose at 4.45 p.m.

Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration
(continued)

Summary record of the 962nd meeting, held at the Vienna International Centre, Vienna, on Wednesday, 10 July 2013, at 9.30 a.m.

[A/CN.9/SR.962]

Chairperson: Mr. Moollan (Vice-Chairperson) (Mauritius)

The meeting was called to order at 9.50 a.m.

Consideration of issues in the area of arbitration and conciliation

(a) Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration (continued)
(A/CN.9/760, 765, 783, 787 and Add.1, Add.1/Corr.1, Add.2 and Add.3, and 793)

Draft article 8 — Repository of published information

1. **The Chairperson** proposed that the Commission should proceed on the assumption that the rules on transparency would enter into force on 1 April 2014. That would give UNCITRAL sufficient time to seek extrabudgetary funding. He further proposed that the secretariat should be given a mandate to approach the Fifth Committee and the Sixth Committee of the General Assembly if necessary. As no decision by the General Assembly could be expected before late December 2013, the date of entry into force of the rules that he had just suggested would also be appropriate under those circumstances.

2. The following wording had been proposed for draft article 8 of the rules on transparency. “The repository of published information under the Rules on Transparency shall be the Secretary-General of the United Nations through the UNCITRAL secretariat or an institution named by UNCITRAL.”

3. The Commission was privileged to have received offers of assistance from two highly reputable institutions with an extremely heavy workload: the International Centre for Settlement of Investment Disputes (ICSID) and the Permanent Court of Arbitration (PCA). Both institutions had offered to undertake the functions of a repository

and they had also confirmed that as soon as UNCITRAL informed them that it was in a position to act as the repository, they would transfer those functions at no cost to the Commission. He hoped that the Commission could reach a consensus on the institution to be designated.

4. **Mr. Spelliscy** (Canada) asked whether an earlier date than 1 April 2014 could be set for the entry into force of the rules, since the Commission was already preparing to designate a back-up registry institution.

5. **Ms. Rennie** (United Kingdom) asked whether the Commission intended to request additional funding for the UNCITRAL secretariat under the regular budget from the Fifth and Sixth Committees of the General Assembly.

6. **The Chairperson** said he understood that some members of the Commission felt that the funding should be provided on a cost-neutral basis.

7. If he heard no objections, he would take it that the Commission wished to approve the proposal to mandate the secretariat to approach the Fifth and Sixth Committees of the General Assembly.

8. *It was so decided.*

9. **Ms. Escobar** (El Salvador) proposed inserting the word “temporarily” before “named by UNCITRAL”.

10. **The Chairperson** said that the Commission could not take a decision on such matters in advance, since there was a very slight possibility that UNCITRAL would be unable to obtain either regular budget or extrabudgetary funding.

11. He took it that the Commission wished to adopt the amended version of draft article 8 of the rules on transparency.

12. *Article 8, as amended, was adopted.*

13. **The Chairperson** said that he had suggested 1 April 2014 as the date of entry into force of the rules because the chances of obtaining funding under the regular budget or the requisite extrabudgetary funding would thus be maximized. There should also be a repository in place by that date.

14. If he heard no objection, he would take it that the Commission agreed on 1 April 2014 as the date of entry into force of the rules on transparency.

15. *It was so decided.*

16. **The Chairperson** invited the representative of the Permanent Court of Arbitration to take the floor.

17. **Mr. Daly** (Permanent Court of Arbitration) said that the Court understood that budgetary constraints were impeding UNCITRAL for the time being from assuming the role of a repository. With regard to the decision on which institution to designate in the meantime, both options were attractive in view of the significant experience of the two institutions. The PCA had concluded a cooperation agreement with ICSID in 1968 and had been cooperating closely with the Centre ever since.

18. The PCA was an intergovernmental organization founded in 1899 pursuant to the Hague Convention for the Pacific Settlement of International Disputes, which was revised in 1907. The 1899 and 1907 founding instruments specified that the Court should be available at all times and to all States, even those that had not signed one of its founding instruments, and that the International Bureau of the PCA was to serve as the record office for tribunals and to maintain an archive of its cases.

19. The work of the PCA was closely linked to arbitration proceedings under the UNCITRAL Arbitration Rules. Its role under the 1976 and 2010 versions of the Rules consisted in designating appointing authorities where the parties were unable to agree on such an authority. It had dealt with over 500 such requests to date. The PCA was also frequently asked to provide administrative services in proceedings under the UNCITRAL and other rules, for instance by managing a deposit, maintaining an archive or organizing hearings in different parts of the world. It was currently

administering 78 arbitrations, of which 7 were inter-State arbitrations, 50 were investor-State arbitrations under the UNCITRAL Arbitration Rules, and 21 were contract claims. In most of the 50 cases under the UNCITRAL Arbitration Rules, it performed an archiving function. It was administering an estimated two thirds of all known investor-State disputes. The PCA also held the largest archive of documents in investor-State arbitration under the UNCITRAL Arbitration Rules.

20. While there had been limited transparency in the cases administered to date, a slight trend towards greater transparency was discernible and the adoption of the rules on transparency would doubtless support that trend. The PCA was therefore developing a new database and a search engine that could be adapted to serve any needs identified by UNCITRAL for the repository.

21. The establishment and maintenance of the repository would be at no cost to Member States of the United Nations or PCA member States. The PCA would charge no fee as repository in cases requiring the publication of fewer than 50 documents. In cases requiring the publication of 50 or more documents, it would charge a flat rate of €750, which was the same fee as that charged for designating an appointing authority under the UNCITRAL Arbitration Rules. Published information would be searchable and available to third parties at no cost. Where copies of published documents were requested, the PCA would charge the requesting party for photocopying and postage.

22. The PCA was fully available to cooperate with UNCITRAL, if requested to do so, on any matters relating to the repository function. It had a long history of cooperation with the United Nations. In 2009, for instance, the Secretary-General of the United Nations had stated that he looked forward to strengthening the partnership between the PCA and the United Nations in its efforts to advance the peaceful settlement of disputes in accordance with international law and to build a safer and better world for all. While the Secretary-General was referring in particular to the work of the PCA in armed conflict resolution, the members of the Commission would doubtless agree that investor-State arbitration could also be quite acrimonious.

23. **Ms. Kinnear** (International Centre for Settlement of Investment Disputes) said she agreed with the comments by the representative of the PCA about the close relationship between the two institutions.

24. ICSID was a member of the World Bank Group, which was a United Nations specialized agency. It had 149 member States, which paid no membership fees and virtually all of which were Member States of the United Nations. If ICSID were to act as a repository, States would not be charged any direct or indirect fees.

25. ICSID had been created for the purpose of engaging in investment arbitration and had administered over 70 per cent of all known investment arbitration cases. ICSID administered such cases under any rules requested by the parties. While most of the 435 cases administered to date had been ICSID investment cases, it had also administered 36 UNCITRAL cases and five purely ad hoc cases. It was also designated appointing authority for numerous treaties and could be asked to serve as appointing authority under article 6 of the UNCITRAL Arbitration Rules. In addition, it acted as the nominee of consolidation tribunals under a number of treaties.

26. She welcomed the Commission's decision under article 1 of the rules on transparency that the rules would apply not only to UNCITRAL cases but would also serve as a template for transparency in the future. As the rules would therefore be increasingly used in cases administered by ICSID, it seemed logical to designate ICSID as the repository for an interim period. ICSID was so far the only institution that incorporated transparency in its rules and day-to-day practice. States would be able to benefit from that lengthy track record.

27. During the last fiscal year, ICSID had published details of more than 1,400 awards, procedural steps and other case-related documents. It had been publishing such information on its website since 1998 and had offered basic, advanced and full text search capacity in respect of documents in English, French and Spanish since 2007. It was able to take advantage of the high technology standards of the World Bank, which provided information security, and the requisite staffing systems were already in place. If ICSID were to act

as the repository, users could conduct a search of the whole of ICSID case law and the case law published by the repository under the rules on transparency. The rules would thus become truly effective and universal.

28. The ICSID proposal was highly cost-effective, since no funding was required from States and no costs would be borne by the UNCITRAL secretariat. The fact that the disputing parties would be charged a minimal one-time fee of between \$1,500 and \$2,000 would help to weed out more frivolous claims.

29. With regard to capacity, ICSID would offer all the features specified by Working Group II. It also continuously updated its website.

30. ICSID would operate the repository on a completely separate basis from its administration of cases. Hence, States and disputing parties could make their submissions to the arbitral tribunals and have the article 7 exceptions to transparency applied before anything was published by the repository.

31. Lastly, ICSID could start operating as a repository within two or three months. She emphasized, however, that, throughout the discussions of the rules on transparency, ICSID had supported the view that UNCITRAL itself was the ideal repository. She confirmed that as soon as UNCITRAL had acquired the necessary funding, ICSID would transfer all relevant publications and continue to offer its technological assistance if necessary.

32. **Mr. Sorieul** (Secretary of the Commission) emphasized that the UNCITRAL secretariat was not competing for the role of repository. As it was not an arbitral institution, it was entirely neutral in that regard. However, it was sensitive to the fact that, when the rules on transparency were adopted, it would be necessary to render them attractive to States that were neither members of the PCA nor of ICSID and that were not necessarily users of the UNCITRAL Arbitration Rules. In that context, the Secretariat of the United Nations had assured the UNCITRAL secretariat of its support for the promotion of the public service of transparency.

33. With regard to the basic problem of funding, the system established by UNCITRAL could either be free of charge or impose fees. If the disputing

parties were required to bear the costs, the corresponding funds would not be used to meet the operating costs of a repository run by UNCITRAL. They would be paid into the United Nations regular budget and would be deducted from the contributions payable to the Organization by Member States.

34. He believed that it would be possible, within the next few months, to set up the small team in the secretariat that would be required to run the repository. Steps had already been taken to update the website and to facilitate access to UNCITRAL case law.

35. The question had been raised whether UNCTRAL was included in the list of official development assistance organizations compiled by the Organisation for Economic Co-operation and Development (OECD). He could reply unambiguously that it was, but it was included as the United Nations because UNCITRAL had no separate legal personality. He trusted that the Commission would confirm that the aim of the rules on transparency and of the repository was to promote economic development and welfare, inasmuch as transparency was a key value of good governance and the rule of law.

36. **The Chairperson** said he took it that the Commission endorsed that view.

37. *It was so agreed.*

38. **Mr. Cachapuz de Medeiros** (Brazil) said that ICSID had been created by the Convention on the Settlement of Investment Disputes between States and Nationals of Other States. As Brazil had not ratified that Convention, it did not recognize the jurisdiction of ICSID and was therefore opposed to its designation as the repository.

39. **Mr. Spelliscy** (Canada) said that, in his view, ratification of the ICSID Convention should not be a relevant factor when it came to deciding which institution should be designated as the repository.

40. He requested information from the PCA regarding search capabilities on its website, which was an important requirement for functionality.

41. **Mr. Daly** (Permanent Court of Arbitration) said that the new PCA database would include a simple key word search and a number of advanced

search options, which would make it possible to identify cases or documents by the following factors: the pending or concluded status of the arbitration, the treaty under which the claim was brought, the subject matter, the arbitration rules used, the administering institution, the arbitrators, the parties involved, counsel for the parties, the language in which the proceedings were conducted, the economic sector, the type of document, the duration of the proceedings, the year in which the proceedings commenced or the year in which the award was issued or the proceedings were terminated. The search results would be filtered to display either a list of cases or specific documents meeting certain criteria. The database would be publicly available to all users without registration or a log-in requirement. The more advanced option would permit users to save searches and to be notified by e-mail whenever new documents on a particular matter or of relevance to a prior search became available.

42. **Ms. Perales Viscasillas** (Spain) said that Spain was a State party both to the Convention on the Settlement of Investment Disputes between States and Nationals of Other States and to the Hague Convention for the Pacific Settlement of International Disputes. She believed that, in technical terms, both ICSID and the PCA were perfectly well qualified to perform the functions of repository. The only factor that seemed to tilt the balance in favour of the PCA was its close link with proceedings under the UNCITRAL Arbitration Rules. The Commission had opted in 1976 to assign the institutional role of designating an appointing authority under the Rules to the Secretary-General of the PCA and had enhanced the Court's administrative role in support of parties and arbitrators acting under the UNCITRAL Arbitration Rules in 2010. The options envisaged under investment treaties included, on the one hand, ICSID institutional arbitration and, on the other, ad hoc UNCITRAL arbitration. Assignment of the role of repository to ICSID in respect of ad hoc proceedings might, in her delegation's view, create confusion. The two types of arbitration should be kept separate to avoid any ambiguity or misunderstanding. Spain therefore considered that the PCA should be designated as repository.

43. **Ms. Polit** (Ecuador) said that a number of countries in Latin America and the Caribbean, for instance member States of the Bolivarian Alliance for the Peoples of Our America (ALBA) and the Union of South American Nations (UNASUR), had opposed the manner in which arbitration proceedings were conducted by ICSID. Her delegation therefore supported the proposal to designate the PCA as repository.

44. **Mr. Lebedev** (Russian Federation) said that, given the apparent consensus that UNCITRAL was the most appropriate repository, it was essential to obtain the financial resources to enable it to perform that function as speedily as possible. Any Commission decision submitted to the United Nations General Assembly should underscore that objective. The Commission was required to make a choice, in the meantime, between two highly reputable international institutions. He recalled that in 1976, when the UNCITRAL Arbitration Rules were being drafted, the Commission had been greatly relieved when agreement had finally been reached on securing PCA support for their implementation. As the PCA had provided invaluable services over the years, the Russian Federation was in favour of designating it as repository until such time as funds were available to transfer that role to UNCITRAL. Obviously, the PCA should remain in close contact with the UNCITRAL secretariat in performing the functions assigned to it.

45. **The Chairperson** said he took it that the Commission agreed that the report should emphasize the consensus within the Commission that the UNCITRAL secretariat should perform the function of repository and that an alternative repository was being designated solely with a view to ensuring temporary back-up if absolutely necessary.

46. *It was so agreed.*

47. **The Chairperson** said that the report would also note that whichever institution was designated should remain in close contact and cooperate fully with the UNCITRAL secretariat.

48. **Ms. Kobayashi-Terada** (Japan) said that the question of membership of the two candidate

institutions was, in her view, irrelevant in the current context.

49. In view of ICSID's experience in the area of transparency in investment arbitration proceedings and the useful search engines that it had developed for the purpose, her delegation was inclined to support the designation of ICSID as repository.

50. **Mr. Macdonald** (United Kingdom) said that the United Kingdom would not endorse any statement in the report that indicated potential support by the Commission for the use of regular budget resources to fund the repository.

51. **Mr. Yuprasert** (Thailand) expressed support for the designation of the PCA because of the slightly lower fees that would be charged to parties to a dispute.

52. **Mr. Schöll** (Switzerland) said that his delegation had a slight preference for the designation of ICSID as the temporary repository for three reasons: the ICSID database had full-text search capabilities in respect of both UNCITRAL and ICSID case law; ICSID had acquired considerable expertise from handling 70 per cent of known investment cases; and ICSID also had experience in the field of transparency in investment arbitration proceedings.

53. **Mr. Agrawal** (India) expressed a preference for the designation of the PCA as repository.

54. **Mr. Apter** (Israel) said that whichever institution was designated as repository should not only cooperate with the UNCITRAL secretariat. The Commission should recommend that the two institutions should also cooperate with each other in the interests of best practice in the area of transparency.

55. The choice of institution should not be based on political but on technical considerations. As ICSID currently had greater experience in dealing with transparency-related issues, the Commission should take advantage of that expertise in designating a temporary repository.

56. **The Chairperson** said he took it that the Commission wished to recommend that all three institutions, UNCITRAL, ICSID and the PCA, should cooperate on matters relating to transparency,

which was becoming a very important aspect of investment arbitration.

57. *It was so agreed.*

58. **Mr. Räftegård** (Observer for Sweden) said that ensuring easy access to material for the general public, for instance by enabling people to undertake searches through both UNCITRAL and ICSID case law documents, was an important point. His delegation therefore expressed a slight preference for the designation of ICSID as the temporary repository.

59. **Mr. Hirsch** (Argentina) and **Ms. Laborte-Cuevas** (Philippines) expressed support for the designation of the PCA as the temporary repository.

60. **Mr. Lee Jae Min** (Republic of Korea) said that since the Commission was entering uncharted territory, prior experience was of great importance. The availability of an advanced search function was a further advantage. His delegation was therefore inclined to support ICSID as the repository.

61. **Mr. Snijders** (Observer for the Netherlands) expressed support for the designation of the PCA as repository because of the role assigned to it under the 1976 and 2010 versions of the UNCITRAL Arbitration Rules.

62. **Mr. Möller** (Observer for Finland) said that both institutions were perfectly capable of performing the functions of repository and his delegation would go along with the majority decision.

63. **Mr. Ghaniei** (Islamic Republic of Iran) asked exactly how much funding was required to enable UNCITRAL to perform the functions of repository. He also wished to know whether the funding process could be speeded up by introducing mandatory fees to be paid by the parties to a dispute and by creating a voluntary fund in addition to requesting resources under the United Nations regular budget.

64. If it was necessary to designate a temporary repository, his delegation would opt for the PCA.

65. **The Chairperson** drew attention to document A/CN.9/791, paragraphs 5 to 10, which contained the estimated resource requirements. According to paragraph 8, the total programme budget for the repository in the first biennium, exclusive of any

13 per cent project support cost, would be \$343,800, and in subsequent biennia \$493,600. Charges to the disputing parties would not be of any assistance to UNCITRAL since the proceeds would be paid into the general United Nations budget.

66. **Mr. Sorieul** (Secretary of the Commission) said that voluntary contributions would be collected through the existing UNCITRAL Trust Fund. A sub-account could be established so that the funds were earmarked for the functioning of the repository.

67. **Mr. Popkov** (Belarus) said that, while his delegation recognized the outstanding technical capabilities of ICSID, it supported the designation of the PCA as repository in view of the experience it had accumulated over several decades in the arbitration of disputes, including investment disputes, involving States.

68. **Ms. Cheng** (Singapore) said that the PCA seemed to be the preferable choice because it was already handling a great majority of investment arbitrations under the UNCITRAL Arbitration Rules and because ICSID administered cases under its own rules.

The meeting was suspended at 11.25 a.m. and resumed at 11.35 a.m.

69. **The Chairperson** said that it would be noted in the report that some delegations had expressed the view that any solution within the United Nations system should be budget-neutral.

70. **Ms. Rennie** (United Kingdom) said that her delegation, for technical and pragmatic reasons, had decided to support the designation of the PCA as the repository.

71. **Mr. Möller** (Observer for Finland) said that, on reflection, his delegation had also decided to opt for the designation of the PCA.

72. **Mr. Jacquet** (France) said that it seemed preferable under the current circumstances to designate the PCA as the repository on account of its flexibility.

73. **Mr. Jana Linetzky** (Observer for Chile) stressed the urgency of obtaining the resources that would enable UNCITRAL to perform the functions of repository. His delegation did not wish to express

a preference for either of the two institutions that had volunteered to perform those functions.

74. **Mr. Sorieul** (Secretary of the Commission) warmly thanked the States, including Chile, that had taken action to secure the extrabudgetary resources that would enable UNCITRAL to operate as repository. Considerable progress had been made in that regard during the past few days.

75. **Mr. Kordač** (Czech Republic) expressed support for the designation of the PCA as repository because of the lower fees that would be charged to disputing parties and the traditionally close links between the PCA and UNCITRAL.

76. **Mr. Stoimenov** (Bulgaria) expressed support for the designation of the PCA for similar reasons and also because it planned to provide a repository database in all six United Nations working languages.

77. **Mr. Sikirić** (Croatia) said that the submission to the Fifth and Sixth Committees of the General Assembly should stress that the Commission's work was of crucial importance for the rule of law at both the national and international levels and that the legislative standards elaborated by UNCITRAL promoted sustainable development.

78. He expressed support for the designation of the PCA as the repository.

79. **The Chairperson** said he took it that the Commission supported the proposal by the representative of Croatia concerning the submission to the Fifth and Sixth Committees.

80. *It was so agreed.*

81. **Mr. Kilppstein** (Germany) said that his delegation did not wish to express a preference regarding the institution that should act as repository.

82. However, noting that ICSID had listed four points regarding the rules on transparency in the letter that it had circulated to delegations, he asked whether those points were preconditions for its temporary performance of the functions of repository. He referred in particular to the requirement that a waiver of responsibility clause should be added to the rules. Moreover, ICSID headquarters was based in Washington and there was currently a certain amount of unease concerning the

transmission of sensitive information to the United States without reliable provision for data protection. He therefore asked whether ICSID operated a data protection regime that met European standards.

83. **Ms. Kinnear** (International Centre for Settlement of Investment Disputes) said that the four points were not preconditions for the performance by ICSID of the functions of repository. They were issues that ought eventually to be addressed, perhaps in guidelines, irrespective of which body acted as repository.

84. ICSID benefited from the highly effective data security wall erected by the World Bank Group.

85. **Ms. Le Duc Hanh** (Observer for Viet Nam) expressed a preference for the PCA because of its experience in dealing not only with investment disputes but also with disputes in other areas, its expertise in database management and its flexibility.

86. **Ms. Escobar** (El Salvador) also expressed a preference for the PCA as repository.

87. She urged the members of the Commission to alert delegations from their countries to the Fifth and Sixth Committees of the General Assembly to the importance of ensuring that UNCITRAL was in a position to serve as repository in due course.

88. **The Chairperson** expressed support for that recommendation.

89. **Mr. Bittner** (Austria) expressed a preference for the PCA as repository.

90. **The Chairperson** noted that a clear majority of members had expressed a preference for the PCA as the temporary repository.

91. *It was so decided.*

92. **The Chairperson** emphasized that the decision just taken reflected a fallback position. He reiterated the Commission's gratitude to both institutions for their offers of support.

93. **Mr. Schneider** (Switzerland) proposed that the secretariat should submit a report to the Commission at its next session in 2014 on the status of the establishment and functioning of the repository.

94. *It was so decided.*

Draft article 5 — Submission by a non-disputing Party to the treaty (continued)

95. **The Chairperson** invited the secretariat to present a proposed amendment to the wording of draft article 5, paragraph 2.

96. **Ms. Montineri** (Secretariat) noted that two amendments had already been proposed by delegations. One was to add the following words at the end of the paragraph: “and the need to avoid submissions by a non-disputing Party which would support the claim of the investor in a manner which would be tantamount to diplomatic protection”. The second proposal was to add the following sentence at the end of the paragraph: “For the avoidance of doubt, in exercising its discretion to allow such submissions, the arbitral tribunal shall take into consideration the need to avoid submissions by a non-disputing Party which would support the claim of the investor in a manner tantamount to diplomatic protection.”

97. The secretariat had attempted to combine the two proposals. It suggested that the following phrase should be inserted at the end of paragraph 2: “and, for the avoidance of doubt, the need to avoid submissions by a non-disputing Party which would support the claim of the investor in a manner which would be tantamount to diplomatic protection”.

98. **Ms. Kaufmann-Kohler** (Switzerland) proposed replacing “for the avoidance of doubt” with “for greater certainty”. She expressed support for a previous proposal by the representative of Canada to delete the words “by a non-disputing party” and she further proposed replacing “in a manner which would be tantamount to” with “in a manner tantamount to”.

99. *It was so agreed.*

100. **Mr. Cachapuz de Medeiros** (Brazil) proposed replacing “in a manner tantamount to” with “in a manner which could be interpreted as”.

101. **Mr. Caplan** (United States of America) said that he opposed that amendment because interpretation was an unduly subjective standard.

102. He referred to the discussion at an earlier meeting concerning the use in article 4, paragraph 3,

of the phrase “In determining whether to allow such a submission” and in draft article 5, paragraph 2, of the phrase “In exercising its discretion to accept such submissions”. As the reference in the later phrase to the exercise of discretion and hence to article 1, paragraph 4, might complicate the review process, he proposed that it be replaced with the wording used in article 4, paragraph 3.

103. **Mr. Jacquet** (France) expressed support for that proposal.

104. **Mr. Kordač** (Observer for the Czech Republic) said he understood that the factors mentioned in article 1, paragraph 4, should be taken into account by the arbitral tribunal whenever it took decisions that required the exercise of its discretion, even in cases where the word “discretion” was not expressly mentioned.

105. **Mr. Caplan** (United States of America) drew attention in that connection to paragraph 40 of the report of Working Group II (A/CN.9/760) concerning article 4 (at that time article 5).

106. **The Chairperson** said that the Working Group had agreed that the relevant factors in article 4, paragraph 3, were those set forth in paragraph 3 and not those listed in article 1, paragraph 4. By amending draft article 5, paragraph 2, the Commission would be applying the same principle.

107. **Mr. Caplan** (United States of America) said that he was not suggesting that an arbitral tribunal was precluded from considering the factors in article 1, paragraph 4.

108. **Mr. Kordač** (Observer for the Czech Republic) expressed the view that the word “discretion” should be mentioned in the relevant paragraphs to make that point clear. It should also be used, for example, in article 3, paragraph 3, in connection with the words “the arbitral tribunal may decide”.

109. **The Chairperson** said he understood that the factors listed in article 1, paragraph 4, were of relevance whenever an arbitral tribunal exercised its discretion, regardless of whether the word discretion was used in the rule in question. He deferred further discussion of the matter until the next meeting.

The meeting rose at 12.30 p.m.

Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration
(continued)

Summary record of the 963rd meeting, held at the Vienna International Centre, Vienna, on Wednesday, 10 July 2013, at 2 p.m.

[A/CN.9/SR.963]

Chairperson: Mr. Moollan (Vice-Chairperson) (Mauritius)

The meeting was called to order at 2.30 p.m.

Consideration of issues in the area of arbitration and conciliation

(a) Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration (continued)
(A/CN.9/760, 765, 783, 787 and Add.1, Add.1/Corr.1, Add.2 and Add.3, and 793)

Draft article 5 — Submission by a non-disputing Party to the treaty (continued)

1. **The Chairperson** invited the Commission to resume its discussion of whether the factors listed in article 1, paragraph 4, of the rules on transparency were of relevance whenever an arbitral tribunal exercised its discretion. The only remaining reference to discretion in the rules was contained in draft article 5, paragraph 2. Following informal consultations, it was proposed to replace the words “In exercising its discretion to accept such submissions” in that paragraph with “In determining whether to allow such submissions”, which was similar to the wording used in article 4, paragraph 3. The report would reflect the discussion of the matter that had taken place at the previous meeting, referring, *inter alia*, to the passage from the report of Working Group II that had been cited (A/CN.9/760, para. 40). It would state that the Commission had agreed that article 1, paragraph 4, would be applicable whenever a tribunal was called upon to exercise its discretion.

2. If he heard no objection, he would take it that the Commission concurred with that proposal.

3. *Article 5, as amended, was adopted.*

4. *The UNCITRAL Rules on Transparency in Treaty-based Investor-State Arbitration, as amended, were adopted.*

(b) Consideration of instruments on the applicability of the UNCITRAL rules on transparency to the settlement of disputes arising under existing investment treaties
(A/CN.9/765 and 784)

5. **The Chairperson** drew attention to document A/CN.9/784 concerning the applicability of the UNCITRAL Rules on Transparency to the settlement of disputes arising under existing investment treaties, which was a key issue since there were more than 2,000 existing bilateral investment treaties.

6. The compromise reached was that the Rules on Transparency would be applicable to arbitration under the UNCITRAL Arbitration Rules under future treaties unless the parties to the treaty agreed otherwise. Working Group II had also reached an understanding that parties who wished to apply the Rules on Transparency under existing treaties would be able to do so by various means, including a convention. Such a convention would be open for ratification by States, but they would not be obliged to do so. If both the home State and the investor State had ratified the convention prior to the referral of a dispute for arbitration, it would be assumed that the relevant bilateral investment treaty had been amended. The offer of UNCITRAL arbitration would thus become an offer of transparent arbitration. If, on the other hand, only the home State had ratified the convention, it could not unilaterally amend the treaty. However, the investor State could agree to an UNCITRAL arbitration on transparent terms.

7. The Commission was now required to decide whether Working Group II should be mandated to prepare such a convention.

8. **Ms. Kobayashi-Terada** (Japan) said that she had understood that the Rules on Transparency would be applicable only where both States had ratified the convention.

9. **The Chairperson** said that the matter was still under discussion. The Working Group had considered whether it would be possible under public international law to provide in the convention for the possibility of a unilateral offer by the home State that would have the effect of amending the bilateral investment treaty or for a declaration by the home State that it had made such an offer.

10. **Mr. Spelliscy** (Canada) said that it was vitally important to give Working Group II a mandate to develop a convention that would allow the Rules on Transparency to be applied to the huge number of existing investment treaties.

11. **Mr. Agrawal** (India) said that draft article 3 of the proposed convention was inconsistent with article 1, paragraph 2, of the Rules on Transparency. In his view, an amendment to a bilateral treaty or a joint declaration by the parties to the treaty was the best method of ensuring that the Rules were applied in arbitration proceedings under existing treaties.

12. **The Chairperson** said that he was unable to detect any such inconsistency inasmuch as article 1, paragraph 2 (b), of the Rules on Transparency provided for the possibility of the parties to a treaty agreeing to their application after a certain date. In any case, such issues would be discussed by Working Group II if it were given the requisite mandate.

13. **Mr. Brown** (European Union) said that the proposed convention had aroused a great deal of interest in the European Union. It was still under discussion and a number of drafting and other issues would be raised in due course.

14. **Mr. Caplan** (United States of America) expressed strong support for the development of the proposed convention.

15. **The Chairperson** said that the idea was to create an opt-in instrument, which would not impose any constraint on States that felt unable for the time being to espouse the Rules on Transparency. He was aware of the concern among some States that once a convention existed, pressure would be brought to

bear on them to ratify it. He suggested that it be recorded in the report that no value judgement would be attached by the Commission to whether a State ratified the convention.

16. **Mr. Schöll** (Switzerland) said that the drafting of a multilateral instrument that would render the Rules on Transparency applicable to existing treaties was the logical next step to be taken for those who wished to demonstrate a credible commitment to transparency in investment arbitration. Switzerland would welcome a convention that covered not only UNCITRAL arbitrations but also arbitral proceedings being held under the rules of specific institutions. Noting that certain States had large portfolios of bilateral investment treaties, he said that such States should not be precluded from applying the Rules on Transparency in an efficient manner to their entire portfolio if they so wished. He agreed, on the other hand, that they should not be compelled to do so if they considered that the time was not yet ripe.

17. Switzerland was ready not only for discussions but also for formal negotiations on the proposed convention. He asked whether such negotiations could be held within the Commission rather than in Working Group II so that a text could be forwarded more speedily to the General Assembly for formal adoption.

18. **The Chairperson** said that he had been intending to put that question to the Commission in due course.

19. **Mr. Loh Kong Yue** (Singapore) said that Singapore was reluctant to support a convention. His delegation had already drawn attention to the issue of costs. Working Group II had not resolved how requests for documents would be affected after an arbitral tribunal had discharged its functions, a point that had also been highlighted by the International Centre for Settlement of Investment Disputes (ICSID) in its letter to the secretariat.

20. The balance struck in article 1 of the Rules on Transparency was highly sensitive and the compromise thus achieved was not perfect. A convention might actually upset the balance, and States with reservations concerning the compromise should not be required to endorse it. A balanced approach should be adopted until such time as there

was greater clarity regarding the operation of the Rules on Transparency and their cost implications.

21. **The Chairperson** said that States with concerns such as those mentioned by the representative of Singapore could simply decide not to ratify the convention. He reiterated the fact that no value judgement would be passed in such cases.

22. The idea of drafting a convention had been part and parcel of the discussions from the outset. Article 1, paragraph 2, had been drafted specifically with a view to enabling both disputing parties and high contracting parties, if they so wished, to amend their bilateral investment treaties in order to make the Rules on Transparency applicable. States with large portfolios of treaties would need either to hold discussions with a large number of counterparts or simply to ratify a single instrument.

23. **Ms. Escobar** (El Salvador) said that the drafting of a convention was a complex issue and would create delays, also in terms of the time that would be required in her country's Parliament to complete the ratification procedure. Her delegation was not opposed to the convention but felt that a deadline should be set so that States could start to apply the Rules on Transparency as soon as possible.

24. She proposed that the Commission should take up the question of the recommendation urging parties to investment treaties to apply the Rules on Transparency to existing treaties.

25. **Mr. Klippstein** (Germany) said that his delegation could support a carefully worded mandate concerning the convention. However, he proposed that a reference to a recommendation or to model clauses should be added as an alternative for States that were not fully convinced of the benefits of the convention.

26. **The Chairperson** suggested that the Commission should consider the proposed recommendation contained in document A/CN.9/784 and consider whether a reference thereto should be included in the decision it adopted at its next meeting.

27. **Mr. Apter** (Israel) said he took it that the recommendation had been amended in the light of the compromise solution. If not, further discussion might be necessary.

28. His delegation had no objection to the assignment of a mandate to Working Group II to draft a convention. However, as the Rules on Transparency had just been adopted, he proposed that the convention should be discussed at the February 2014 session rather than at the September 2013 session so that States had time to conduct consultations. Clearly, the ultimate aim was to convince as many States as possible to ratify the convention.

29. **Mr. Jacquet** (France) said that, according to article 1, paragraph 2 (b), of the Rules on Transparency, the Rules would be applicable only when the parties had agreed to their application. The proposed convention was just one means of expressing States' intention to apply the Rules to the settlement of disputes that arose under treaties concluded prior to their entry into force. His delegation therefore supported the proposal to give Working Group II a mandate to draft such a convention.

30. Delegations that did not support the application of the Rules to the settlement of disputes arising under existing investment treaties should either remain indifferent because they had nothing to fear, or else keep an open mind and perhaps allow themselves to be persuaded in due course of the value of the convention.

31. **Mr. Li Wenzhu** (China) said that the proposal to draft a convention was, in his delegation's view, a premature step. Although the Chairperson had stated that no value judgement would be passed against a State that did not ratify the convention, pressure would nonetheless be brought to bear on the State concerned. Moreover, as the membership of UNCITRAL was limited, the universality of the convention might be compromised.

32. **Mr. Lee Jae Min** (Republic of Korea) said that his delegation considered it important to mandate Working Group II to draft a convention. However, the Rules on Transparency had just been adopted and some time was required to assess their implementation in practice. The experience thus acquired could be of assistance in drafting the convention. Moreover, as States that wished to apply the Rules to existing bilateral investment treaties were not precluded from doing so, there was no need for undue haste in drafting the convention.

33. **The Chairperson** said that the convention would simply amend bilateral investment treaties. Experience in implementing the Rules on Transparency might influence a State's decision on whether to ratify it, but he failed to see what impact it could have on the drafting process.

34. **Mr. Lee Jae Min** (Republic of Korea) said that the existence of a convention could change the dynamics of negotiating or interpreting bilateral investment treaties.

35. **The Chairperson** said he understood the fear of a number of delegations that, once a convention existed, pressure would be brought to bear on States to accede to it. The most productive way of finding a solution that would accommodate all concerned was to send out a clear message in the report that would allay those fears.

36. **Ms. Kobayashi-Terada** (Japan) said that her delegation would be willing to support a consensual decision on giving a mandate to Working Group II to draft a convention. However, as it was unsure whether the adoption of such a convention constituted the most efficient and cost-effective approach, it wished to keep options open for other initiatives, such as the adoption of a recommendation urging parties to investment treaties to apply the Rules.

37. **Mr. Lebedev** (Russian Federation), noting that the basic aim was to ensure the widespread and expeditious implementation of the Rules on Transparency, drew attention to the comment on draft article 1 of the proposed convention contained in paragraph 6 of document A/CN.9/784, which stated that the convention would apply only where the home State of the investor and the respondent State were parties thereto. Thus, if the respondent State had ratified the convention and the investor State had not ratified it, the goal of promoting the speedy application of the Rules on Transparency would not be achieved.

38. He believed that the adoption of the draft recommendation contained in document A/CN.9/784 as a separate initiative or in combination with the draft models of joint or unilateral interpretative declarations might prove more effective in that regard. It would perhaps be unwise to adopt a convention before some experience had been gained

in the practical implementation of the Rules. The draft text could be amended in the light of such experience.

39. **The Chairperson** said he agreed that the different methods proposed in document A/CN.9/784 were not mutually exclusive. A decision would be taken shortly on the draft recommendation and no practical action was necessary on the draft models of joint or unilateral interpretative declarations.

40. **Mr. Möller** (Observer for Finland) pointed out that a recommendation would have a far more limited impact than a convention. As he also believed that any delay in the drafting of a convention would simply complicate matters, he was in favour of mandating Working Group II to proceed with the drafting process at its September 2013 session.

41. **Ms. Laborte-Cuevas** (Philippines) expressed reservations about the wisdom of drafting a convention so soon after the adoption of the Rules on Transparency. Her delegation proposed that the drafting process should be postponed until February or September 2014.

42. **The Chairperson** noted that there was a clear majority in favour of drafting a convention but that concerns had been expressed by a number of States. He suggested that an effort should be made to narrow the gap in delegations' views during a consultation break.

43. **Mr. Loh Kong Yue** (Singapore) contested the Chairperson's statement that there was a clear majority in favour of drafting a convention.

44. **The Chairperson** said that the representative of Singapore was entitled to that view. However, he was convinced that if one looked at the bigger picture, a compromise could be reached that protected the interests of all parties.

The meeting was suspended at 3.35 p.m. and resumed at 4.35 p.m.

45. **The Chairperson** said that a mandate to be given by the Commission to Working Group II had been drafted. He understood that it had secured provisional support from most of the States that had expressed concern about the convention. He invited the Commission to take note of the draft, which would be discussed at the next meeting:

“The Commission gives the mandate to the Working Group to draft a convention on the application of the Rules on Transparency in Treaty-based Investor-State Arbitration to existing treaties, taking into account that the aim of the convention is to give those States that wish to make the Rules on Transparency applicable to their existing treaties an efficient mechanism to do so, without creating any expectation that other States will use the mechanism offered by the convention.”

46. If the mandate was given in those terms, he was convinced that compromises could be reached during the drafting process on issues such as the wording of the preamble, the number of ratifications required for the convention to enter into force and the scope of reservations. He emphasized that no work had yet been undertaken on the draft convention that was currently before the Commission (A/CN.9/784). It was simply a proposal from the secretariat.

47. He invited the Commission to consider the draft recommendation contained in paragraph 20 of document A/CN.9/784. It was proposed that the operative paragraphs would be inserted in the Commission decision adopting the Rules on Transparency, which would then be incorporated in a General Assembly resolution.

48. **Mr. Apter** (Israel) proposed inserting the words “States should examine the feasibility of applying” or, alternatively, “States should consider applying” after “higher degree of transparency,” in paragraph 1 and deleting the words “be applied”.

49. **Mr. Magraw** (Center for International Environmental Law) expressed opposition to the proposed amendment. The Commission had directed Working Group II to ensure transparency in

investor-State arbitrations, most of which would arise under existing treaties. If the proposed amendment were to be adopted, the Commission might be perceived to be backtracking.

50. **Ms. Montineri** (Secretariat) said that the aim of the recommendation was to promote the application of the Rules on Transparency. However, States were free to take whatever decision they saw fit. She had reservations about including the wording proposed by the representative of Israel in a Commission decision that would subsequently become a General Assembly resolution.

51. **Mr. Caplan** (United States of America) said that his delegation would prefer to retain the text of paragraph 1 as it stood.

52. **Mr. Loh Kong Yue** (Singapore) expressed support for the proposal by the representative of Israel which, in his view, was not inconsistent with the Commission’s instructions to Working Group II.

53. **Mr. Apter** (Israel) said that his delegation would not insist on its proposed amendment if it failed to secure sufficient support. However, it proposed that the recommendation should highlight the compromise reached in article 1, paragraph 2, of the Rules on Transparency.

54. **Ms. Kaufmann-Kohler** (Switzerland) proposed replacing the words “date of adoption” in paragraph 1 with “date of coming into effect”, which were the words used in article 1, paragraph 2 (b), of the Rules.

55. *It was so agreed.*

56. *Paragraph 1 of the recommendation, as amended, was adopted.*

The meeting rose at 5.05 p.m.30 p.m.

Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration (*continued*)

Summary record of the 964th meeting, held at the Vienna International Centre, Vienna, on Thursday, 11 July 2013, at 9.30 a.m.

[A/CN.9/SR.964]

Chairperson: Mr. Moollan (Vice-Chairperson) (Mauritius)

The meeting was called to order at 10.20 a.m.

Consideration of issues in the area of arbitration and conciliation

(b) Consideration of instruments on the applicability of the UNCITRAL rules on transparency to the settlement of disputes arising under existing investment treaties
(A/CN.9/765 and 784)

1. **The Chairperson** drew attention to the following text of a mandate by the Commission to Working Group II that had been proposed at the previous meeting:

“The Commission gives the mandate to the Working Group to draft a convention on the application of the Rules on Transparency in Treaty-based Investor-State Arbitration to existing treaties, taking into account that the aim of the convention is to give those States that wish to make the Rules on Transparency applicable to their existing treaties an efficient mechanism to do so, without creating any expectation that other States will use the mechanism offered by the convention.”

2. **Mr. Galindo** (Ecuador) proposed the following alternative text, which had been drafted in consultation with other delegations:

“The Commission gives the mandate to the Working Group to draft a convention to facilitate the application of the Rules on Transparency while taking into account the concerns by some States as regards possible difficulties of immediate application of the Rules to existing treaties.”

3. **Mr. Spelliscy** (Canada) said that his delegation was unable to support that proposal since it reflected the position of only one group of States, whereas the

text proposed at the previous meeting reflected the views of both sides.

4. **Mr. Jacquet** (France) said that the amended text was unbalanced inasmuch as it focused on the possible risks entailed by a convention intended to give States that wished to make the Rules on Transparency applicable to their existing treaties an efficient mechanism to do so.

5. **Mr. Brown** (European Union), **Mr. Caplan** (United States of America) and **Mr. Schöll** (Switzerland) aligned themselves with the comments made by the representatives of Canada and France.

6. **Ms. Liang Danni** (China) said that Working Group II should take account of the concerns expressed by some States regarding the immediate application of the Rules to existing treaties.

7. **The Chairperson** said that the report would note that the text proposed by the representative of Ecuador had obtained the support of a number of delegations.

8. **Mr. Apter** (Israel) stressed the importance of ensuring that Working Group II bore in mind the definition of its mandate that had been proposed at the previous meeting.

9. **Mr. Loh Kong Yue** (Singapore) said that his delegation was prepared to support the text proposed at the previous meeting.

10. **The Chairperson** said that, if he heard no objection, he would take it that the Commission wished to adopt the text of the mandate to Working Group II that had been proposed at the previous meeting.

11. *It was so decided.*

(a) **Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration** (*continued*)

(A/CN.9/XLVI/CRP.1/Add.1 and 2;

A/CN.9/XLVI/CRP.2/Add.1;

A/CN.9/XLVI/CRP.3)

12. **The Chairperson** invited the Commission to comment on the section of the draft report contained in document A/CN.9/XLVI/CRP.1/Add.1.

13. **Mr. Apter** (Israel) proposed that the final sentence in paragraph 9, which did not reflect the discussion in the Commission, should be deleted. The sentence read: "It was agreed that that distinction need not apply in relation to other arbitration rules or in ad hoc proceedings."

14. **The Chairperson** proposed amending the sentence to read: "It was agreed that different considerations applied with respect to other arbitration rules or in ad hoc proceedings."

15. *It was so decided.*

16. **Mr. Caplan** (United States of America) proposed amending "under other sets of arbitration rules or ad hoc" in the last sentence of paragraph 10 to read: "under other sets of arbitration rules or in ad hoc proceedings".

17. *It was so decided.*

18. **Mr. Brown** (European Union) proposed replacing the phrase "where liability might attach to different treaty Parties, and that a relevant Party would consequently not necessarily be limited to the home State of the investor" in paragraph 13 with the following text: "where identifying the 'relevant Party' might be difficult, and where the criterion of 'respondent State' would be more straightforward to operate. It was consequently decided to retain the term 'respondent State'."

19. *It was so decided.*

20. **Mr. Caplan** (United States of America) proposed replacing the phrase "that the rules should always require such consultation by the arbitral tribunal" in paragraph 21 with "that where such consultation by the tribunal was intended, the rules should expressly so state".

21. *It was so decided.*

22. **Mr. Caplan** (United States of America) said that paragraph 29 was intended to indicate how the repository should act in the event of a disagreement regarding transparency procedures. He therefore proposed adding the following sentence: "Any disagreement between disputing parties would then be resolved by the arbitral tribunal before further documents were sent to the repository."

23. *It was so decided.*

24. **Mr. Loh Kong Yue** (Singapore) proposed inserting the words "requiring redaction" after "documentations" and replacing "an investment arbitration" with "arbitration proceedings".

25. *It was so decided.*

26. *Document A/CN.9/XLVI/CRP.1/Add.1, as amended, was adopted.*

27. **The Chairperson** invited comments on document A/CN.9/XLVI/CRP.1/Add.2.

28. **Mr. Popkov** (Belarus) proposed expanding paragraph 14 by adding the following text: "as the procedure of diplomatic protection and submissions of non-disputing Parties to the treaty are of a different legal nature. The concern can relate not to the exercise of diplomatic protection on the basis of article 5 but to the possible use of these provisions to protect in an improper and persistent manner the right of an investor under the treaty."

29. **The Chairperson** suggested that a simpler solution might be to reword paragraph 14 to read: "It was clarified that article 5 was not meant to be used in a way which would be tantamount to diplomatic protection." As he did not recall any discussion of the protection of investors in an improper and persistent manner, he felt that the new sentence proposed by the representative of Belarus could not be included in the report. He suggested as an alternative: "One delegation highlighted the fact that diplomatic protection was a different concept that could not be applied under article 5 and that there was a risk that such provisions could be used to protect in an improper and persistent manner the right of an investor under the treaty." He invited the Commission to consider wording along those lines during the consultation break.

30. *It was so agreed.*

31. **Mr. Caplan** (United States of America) drew attention to the phrase in paragraph 19 which read “it was clarified that the principle set forth in paragraph (1) was that hearings should be public”. He proposed replacing the words “hearings should be public” with “hearings are public”.

32. *It was so decided.*

33. **Mr. Apter** (Israel), referring to paragraph 31, asked whether the year of adoption of the Rules on Transparency should be included in the official title.

34. **Ms. Montineri** (Secretariat) said that the date would be included when the Rules were published on the UNCITRAL website. However, it was not the normal practice to include it in the official title, especially since the Rules would be adopted before they actually entered into effect.

35. **Mr. Loh Kong Yue** (Singapore) proposed inserting the following sentence before the second sentence of paragraph 32: “The Commission noted that the form of the rules on transparency would not affect the scope of their applicability under article 1.” The next sentence would then begin with the words “The Commission further noted that”.

36. *It was so decided.*

37. **The Chairperson** noted that paragraph 14 was the only paragraph of document A/CN.9/XLVI/CRP.1/Add.2 that had not yet been approved.

38. He invited comments on document A/CN.9/XLVI/CRP.2/Add.1, which contained the amended version of the Rules on Transparency.

39. **Mr. Klippstein** (Germany) proposed replacing “In investor-State arbitrations” initiated under the UNCITRAL Arbitration Rules in article 1, paragraph 2, with “In investor-State arbitration”.

40. **Mr. Caplan** (United States of America) proposed as alternative wording “In an investor-State arbitration”.

41. **The Chairperson** suggested that the original wording should be maintained because it confirmed that the subsequent provisions were applicable to all arbitrations.

42. *It was so agreed.*

43. **Mr. Caplan** (United States of America), referring to the amendment to article 1, paragraph 4, of the UNCITRAL Arbitration Rules, said that the reference in brackets to the shorter version of the title of the Rules on Transparency was unnecessary if those Rules were mentioned only once.

44. **The Chairperson** noted that document A/CN.9/XLVI/CRP.2/Add.1 had been approved apart from article 5, paragraph 2, and article 8, which would be discussed later.

45. He invited comments on document A/CN.9/XLVI/CRP.3, which contained the Commission’s draft decision concerning the adoption of the Rules on Transparency. An additional paragraph would be added later concerning the recommendation on the application of the Rules to the settlement of disputes arising under existing investment treaties.

46. **Mr. Brown** (European Union) proposed inserting words such as “and other entities” or “and regional economic integration organizations” after “Recommends that all States” and “invites States” in paragraph 4.

47. **Ms. Kobayashi-Terada** (Japan) proposed replacing the word “States” in both cases with “parties to international investment treaties”.

48. **Ms. Montineri** (Secretariat) said that the decision as a whole was addressed to Member States of the United Nations. However, the invitation in the second part of the final paragraph was basically addressed to the high contracting parties to treaties.

49. **The Chairperson** said he took it that the Commission wished to amend “invites States” in paragraph 4 to read “invites parties to international investment treaties”.

50. *It was so decided.*

51. **Mr. Caplan** (United States of America) proposed deleting the comma after “UNCITRAL Arbitration Rules” in paragraph 1 and the indefinite article before “new article 1” in paragraph 3.

52. *It was so decided.*

The meeting was suspended at 11.30 a.m. and resumed at 12.05 p.m.

53. **Mr. Schneider** (Switzerland) proposed the following amendment to the opening words of paragraph 4 of the decision, which reflected the wording used in respect of the UNCITRAL Arbitration Rules: “Recommends the use of the UNCITRAL Rules on Transparency in Treaty-based Investor-State Arbitration”.

54. *It was so decided.*

55. **The Chairperson** invited the Commission to resume its consideration of paragraph 14 of document A/CN.9/XLVI/CRP.1/Add.2. The following wording had been proposed: “In relation to paragraph 2, it was clarified that that paragraph was not meant to allow submissions which would support the claim of the investor in a manner tantamount to diplomatic protection. One delegation said that the word ‘tantamount’ might not give arbitral tribunals sufficient guidance.”

56. **Mr. Schneider** (Switzerland) proposed adding that the Commission did not share that view.

57. **The Chairperson** proposed adding the following sentence: “This view was not shared.”

58. If he heard no objection, he would take it that the Commission wished to adopt paragraph 14 and document A/CN.9/XLVI/CRP.1/Add.2 as a whole, as amended.

59. *It was so decided.*

Future work in the field of settlement of commercial disputes (A/CN.9/785)

60. **The Chairperson** drew attention to document A/CN.9/785 concerning future work. As no decision would be taken on the matter until the end of the session, the object at that stage was to agree on priorities. He took it that high priority would be given to the revision of the UNCITRAL Notes on Organizing Arbitral Proceedings.

61. At a round table with arbitration practitioners organized jointly by the secretariat and the International Arbitration Institute, Paris, in April 2012, the question had been raised whether UNCITRAL should consider suspending its rule-making activities for the time being unless it could identify an area in which new rules would really be of use to the arbitral community. UNCITRAL had produced an impressive array of

standards, but resources could perhaps be better spent at that stage on capacity-building in order to ensure that the standards were properly applied. That view had been shared by quite a large number of participants in the round table.

62. **Ms. Kaufmann-Kohler** (Switzerland) drew attention to an issue which aroused a great deal of concern in investment arbitration circles. As most treaties allowed not only the company that was the vehicle of an investment but also its shareholders, including indirect shareholders, to bring investment arbitration proceedings for damage suffered, several concurrent proceedings could be brought for the same economic damage with, in some cases, overlapping claims. Another related issue was that contract arbitration proceedings involving claims of compensation could be brought concurrently with investment arbitration proceedings for the same economic damage. There was as yet no system that could be utilized to restore order in such cases. A conference on the issue, to which both academics and practitioners would be invited, was scheduled for November 2013. In her view, the time was not yet ripe for an exercise in rule-making.

63. Another complex issue that should be addressed at the multilateral level was that of parallel proceedings in commercial civil arbitration involving State courts and arbitral tribunals. Clear rules existed under most international civil procedure regimes, such as the Brussels Regulation. In view of the relevance of article II of the New York Convention on the Recognition and Enforcement of Foreign Arbitral Awards in that context, it might be desirable to consider drafting a protocol to the Convention at some time in the future.

64. **The Chairperson** asked whether the work by the International Law Association on the doctrine of *lis pendens* was helpful in that regard.

65. **Ms. Kaufmann-Kohler** (Switzerland) said that it could serve as a valuable starting point for any UNCITRAL discussion of the matter.

66. **Ms. Montineri** (Secretariat), referring to article 8 of the UNCITRAL Model Law on International Commercial Arbitration concerning arbitration agreements and substantive claims before

a court, said that the Digest of Case Law relating to the Model Law highlighted divergent approaches.

67. **The Chairperson** wondered whether UNCITRAL could take steps to promote a uniform interpretation of article 8 of the Model Law. The question arose whether a court, when deciding whether to stay arbitral proceedings, should undertake a full review or merely a prima facie review of the validity of an arbitration agreement.

68. **Mr. Schöll** (Switzerland) said that there should be a clear indication, before work was assigned to Working Group II, that no other institutional forum was already active in the area and better placed to undertake the work. The Commission should certainly remain active on the topic of parallel proceedings in commercial arbitration. However, he felt that it was too soon to take up the question of interpretation of article 8 of the Model Law or to draft a protocol to the New York Convention.

69. As the secretariat had accumulated a great deal of expertise in the area of arbitration, his delegation would not object if the task of updating the Notes on Organizing Arbitration Proceedings were to be assigned to the secretariat, which would then submit a draft text directly to the Commission.

70. **Ms. Monineri** (Secretariat) said that the secretariat would prefer to have Working Group II

devote a session to the updating of the Notes, since input on current arbitration practices was required from as many States as possible.

71. **Mr. Jacquet** (France) said that his delegation did not share the scepticism that had been expressed by the representative of Switzerland concerning the question of parallel proceedings. He did not see why Working Group II should not take up the subject and develop a number of guidelines on dealing with the practical difficulties to which such proceedings frequently gave rise.

72. His delegation would be less enthusiastic, however, when it came to questions such as the “competence-competence” principle or the power of an arbitral tribunal to determine its own jurisdiction. The Working Group should not become involved in dealing with questions of comparative law. It should deal exclusively with normative matters.

73. **The Chairperson** asked whether the Commission agreed that the first topic to be addressed after completion of the task of developing a convention on transparency should be the updating of the Notes on Organizing Arbitration Proceedings.

74. *It was so decided.*

The meeting rose at 12.30 p.m.

Summary record of the 965th meeting, held at the Vienna International Centre, Vienna, on Thursday, 11 July 2013, at 2 p.m.

[A/CN.9/SR.965]

Chairperson: Mr. Moollan (Vice-Chairperson) (Mauritius)

The meeting was called to order at 2.15 p.m.

Consideration of issues in the area of arbitration and conciliation

(c) Preparation of a guide on the 1958 New York Convention (A/CN.9/786)

1. **The Chairperson** invited the secretariat to introduce agenda item 4 (c).
2. **Ms. Montineri** (Secretariat) said that the Commission had decided at its forty-first session in 2008, on the basis of a report by the secretariat on the implementation of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (the New York Convention), to request the secretariat to study the feasibility of preparing a guide on the New York Convention. The secretariat's report, which had taken into account comments by 108 States parties to the Convention, had drawn attention to both legislative and judicial problems encountered in implementing the Convention. Some of the problems stemmed from divergent interpretations of the provisions and others from lack of awareness of the Convention. After studying the matter over a two-year period, the secretariat had opted for an open approach involving the compilation of as much information as possible on decisions taken under the Convention in a great variety of jurisdictions throughout the world. The information thus compiled with the assistance of Professor Bermann of Columbia University School of Law and Professor Gaillard of the Paris Institute of Political Studies had been published on the Internet. It served as the basis for the development of a soft-law guide on the New York Convention. She urged States that had not yet participated in the project to become involved, since the aim was to take advantage of the widest possible range of contributors. It was hoped to complete the guide before the end of 2013 and to publish it in due course.
3. Document A/CN.9/786 contained an excerpt from the guide concerning article VII of the New York Convention. It listed the different interpretations to which the article had given rise. While the guide respected the different approaches adopted, it highlighted the approach that it deemed to be preferable in the light of the drafting history of the Convention.
4. **Ms. Banifatemi** (International Arbitration Institute) commented on the website (www.newyorkconvention1958.org) that had been established to make available the information compiled in preparing the guide. The website was displayed on a screen in the conference room. One section contained the guide to the New York Convention from article I to article VII, which was the article addressed in document A/CN.9/786. The remaining articles would be dealt with by the end of 2013. The drafting history (*travaux préparatoires*) was shown for each article, followed by an analysis. Links were provided to case law and documents that were freely accessible on the Internet. A total of 22 jurisdictions and more than 1,000 cases were now covered, including 900 original language decisions. Over 100 decisions had been translated. The full guide would be available in all six working languages of the United Nations.
5. There was a powerful search tool on the website. Searches could be conducted by jurisdiction for the 22 jurisdictions and for the Organization for the Harmonization of Business Law in Africa (OHADA). The information could be filtered by type of court, language and provision of the Convention. The data was continuously updated.
6. Very helpful assistance had been provided by both individual and institutional contributors, who were listed on the website. It was hoped that additional jurisdictions would be covered in due course by that means.
7. **Mr. Gaillard** (International Arbitration Institute) joined the previous speaker in expressing

gratitude to all contributors who facilitated the process of keeping track of case law and assessing whether consensus existed on certain points. Where consensus did not exist, the trends were described as objectively as possible and an attempt was made to indicate which approach was most consistent with the spirit of the New York Convention. In general, the approach to implementation was relatively harmonious and there were very few instances of marked divergence from the underlying principles.

8. **Mr. Bermann** (International Arbitration Institute) said that the guide was a work in progress along many vectors. The number of jurisdictions covered and the number of operations performed had increased. Clearly, as the number of contributors grew, the task of coordination became more difficult. It was necessary to identify different lines of interpretation, indicating which position was most in conformity with the spirit and purpose of the New York Convention. It was a project of which UNCITRAL could, in his view, be quite proud.

9. **The Chairperson** expressed warm appreciation on behalf of the Commission to all those who had been involved in developing the guide and the website. Clearly, opinions were expressed in work of that kind regarding case law in different jurisdictions. He suggested that it should be clarified in the report that such opinions did not reflect a consensus within the Commission.

10. **Mr. Caplan** (United States of America) enquired about the status of the guide if it were to be published as a United Nations document. If the publication were to be authorized by the Commission, it could presumably provide input if necessary.

11. **Ms. Montineri** (Secretariat) said that the guide could be circulated to the members of the Commission prior to publication.

12. **Mr. Sorieul** (Secretary of the Commission) referred by way of example to the UNCITRAL Legal Guide on Electronic Funds Transfers, which was the product of research by the secretariat in cooperation with a number of expert groups. Such publications did not require the same type of Commission endorsement as standard-setting documents. The Commission could authorize the publication of the guide by the secretariat.

Alternatively, it might wish to review the text before granting its approval.

13. **Mr. Schöll** (Switzerland) proposed that the guide should be submitted on completion to the Commission so that its status could be established. Approval of the text by the Commission would enhance its legitimacy.

14. **The Chairperson** expressed doubts about the status of the guide notwithstanding its excellent quality. For instance, the provisions of article VII of the New York Convention were highly controversial. The authors were providing a valuable service to the arbitral community but, as had been noted, they occasionally expressed personal opinions. He therefore had serious reservations about the advisability of seeking the Commission's authorization for the guide.

15. **Ms. Montineri** (Secretariat) said that the purpose of the guide was not to express opinions but to present the case law and current trends without making value judgements. As it was important to produce a document that was universally acceptable, the secretariat would appreciate any comments that would assist it in achieving that aim in the months ahead.

16. **The Chairperson** said that he did not wish to imply that the authors lacked objectivity. However, it was not possible to analyse whether certain trends were consistent with the spirit of the New York Convention without passing judgement.

17. **Ms. Kaufmann-Kohler** (Switzerland) said that it would be odd if the authors of the guide, who were highly reputed academics, were precluded from expressing their opinions. As States naturally held different views based on divergent case law, they could scarcely be expected to express approval of contrary doctrinal views. She suggested that the Commission should request the secretariat to look into the matter together with the authors and submit a proposal regarding the procedure to be followed.

18. **Ms. Viscasillas Perales** (Spain) said that her delegation shared some of the doubts expressed by previous speakers. She had been involved in the updating of the Digest of Case Law on the Convention on Contracts for the International Sales of Goods, which had also required the preservation of a neutral stance. The Digest had been adopted by

the Commission. She wondered why the official CLOUT database, which contained case law on UNCITRAL texts, had not been used for the guide.

19. **Mr. Sorieul** (Secretary of the Commission) said that the question as to whether the Commission could approve documents containing doctrinal opinions had been discussed on a number of occasions in connection, for example, with the Digest of Case Law mentioned by the representative of Spain, the UNCITRAL Legal Guide on Electronic Funds Transfers, and other guides and digests. The secretariat had been mandated by the Commission in 2008 to disseminate information on the judicial interpretation of the New York Convention.

20. There were various options available. The guide could be published on the sole responsibility of the secretariat. Alternatively, the Commission could take note of the publication without commenting on its content. A third option would involve the circulation of the completed guide to Governments with a view to obtaining comments that would be considered by the Commission at a future session. It would then be more difficult for the Commission to dissociate itself from the content of the guide.

21. **The Chairperson** said that the second option might be preferable. The Commission could take note of the guide and encourage its use without passing judgement on its content.

22. **Ms. Rennie** (United Kingdom) expressed concern that the publication of a guide containing the authors' opinions as an UNCITRAL document would imply some form of endorsement of the content. She proposed deferring a decision on the procedure to be adopted until the guide had been completed.

23. **Mr. Caplan** (United States of America) supported the proposal by the representative of the United Kingdom.

24. **Mr. Kordač** (Observer for the Czech Republic) suggested that the authors should clarify which parts of the guide reflected their personal views. Their analysis could then be published separately as a digest of case law.

Future work in the field of settlement of commercial disputes (*continued*) (A/CN.9/785)

25. **The Chairperson** invited further comments regarding future work.

26. **Mr. Lebedev** (Russian Federation) said that he agreed with speakers at the previous meeting who had stressed the importance of the topic of concurrent proceedings in the field of investment arbitration, which should be included in the agenda of Working Group II. He also supported the proposal to revise the UNCITRAL Notes on Organizing Arbitral Proceedings.

27. In addition, priority should be given to the topic of arbitrability, since a large number of *sui generis* problems arose in that context. Lastly, he advocated the inclusion in the agenda of Working Group II of the question of mass claim arbitration. A comparative approach to that topic could prove very helpful.

28. **Mr. Kordač** (Observer for the Czech Republic) said that the issue of concurrent proceedings was of great importance. He was unable to share the view of the representative of Switzerland that the time was not yet ripe for an exercise in rule-making. He supported the proposal to update the UNCITRAL Notes on Organizing Arbitral Proceedings.

29. While arbitrability was an important issue, his delegation felt that the Commission was not in a position to exert a major impact in that area because of existing differences in public policies.

30. **The Chairperson** reminded the Commission that it had agreed at the previous meeting that the first topic to be addressed after completion of the task of developing a convention on transparency should be the updating of the Notes on Organizing Arbitration Proceedings.

31. **Mr. Apter** (Israel) said that while the issue of concurrent proceedings was of great interest, his delegation considered that it was of relevance only to a relatively small number of States. The criteria for choosing topics should be their relevance to States and the arbitral community and, as noted by the representative of the Czech Republic, the likelihood of the Commission's work having a practical impact.

32. **The Chairperson** said that concurrent proceedings could relate to almost every aspect of arbitration. There was the question of concurrent proceedings in investment arbitration. Another issue was the application of the *lis pendens* principle to arbitral tribunals, which could arise in commercial arbitrations. A third issue was concurrent court proceedings and arbitral proceedings as well as the interpretation of article 8 of the UNCITRAL Model Law on International Commercial Arbitration. For instance, the misapplication of the test for suspending court proceedings in favour of arbitration proceedings had caused many problems in the developing world.

33. **Mr. Popkov** (Belarus) said that Working Group II should continue to address questions relating to the settlement of commercial disputes with a view to promoting the development of sound practice in that area.

34. As States would greatly appreciate guidance concerning parallel proceedings in investment arbitration, he asked whether the secretariat could look into the possibility of developing guidelines on the subject in conjunction with other forums.

35. **Ms. Wilhelmsen** (Denmark) said that a clear framework should be devised for the work assigned to Working Group II. Her delegation considered that priority should be given to work on concurrent proceedings and the *lis pendens* principle. The Working Group could discuss, for instance, which law was applicable to the validity of arbitration agreements, since there was as yet no uniform rule applicable to the pre-award stage. The matter should perhaps be approached from the standpoint of articles II and III of the New York Convention.

The meeting was suspended at 3.30 p.m. and resumed at 4.15 p.m.

Consideration of issues in the area of arbitration and conciliation

(a) Finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration (continued) (A/CN.9/XLVI/CRP.1/Add.3 and Add.4)

36. **The Chairperson** invited comments on the section of the draft report contained in document A/CN.9/XLVI/CRP.1/Add.3.

37. **Mr. Spelliscy** (Canada) said that the last sentence of paragraph 2, which referred to paragraph 40 of document A/CN.9/760, conveyed the wrong message since it implied that the Commission was endorsing the content of that paragraph. He proposed that the sentence should be deleted and that the penultimate sentence should be amended to read: "The Commission recalled paragraph 40 of document A/CN.9/760, but agreed that when a tribunal was called upon in the rules to exercise its discretion as a matter of fact, the criteria in article 1(4) were plainly brought into application." The following words might be added at the end of that sentence if they secured the necessary support: "regardless of whether the rules used the term 'discretion'".

38. **The Chairperson** proposed the following amendment to the opening words: "The Commission reviewed paragraph 40".

39. *Paragraph 2, as amended, was adopted.*

40. **Mr. Spelliscy** (Canada) proposed that the words "Two delegations" in the second sentence of paragraph 7 should be replaced with "Several delegations".

41. *Paragraph 7, as amended, was adopted.*

42. **Ms. Pólit** (Ecuador) proposed adding the following phrase after "(the ICSID Convention)" in paragraph 18 "and by other delegations, such as those of Ecuador, the Bolivarian Republic of Venezuela and the Plurinational State of Bolivia, that they denounced ICSID."

43. **The Chairperson** said that it was not the Commission's practice to record the names of States in the report. He therefore proposed inserting instead the following phrase: "and that other countries had denounced the ICSID Convention". The sentence would then continue: "and that those countries thus felt more comfortable supporting the temporary option of the designation of the PCA".

44. *Paragraph 18, as amended, was adopted.*

45. **Mr. Popkov** (Belarus) proposed amending the second sentence of paragraph 21 to read: "It was also said that the PCA handled a variety of cases involving States, including inter-State disputes under treaties and contract disputes between States

and private parties, making it a desirable choice for some delegations.”

46. **Mr. Daly** (Permanent Court of Arbitration) proposed amending the first sentence of paragraph 21 to read: “Other delegations considered that the role of the PCA Secretary-General as designator of appointing authorities in the UNCITRAL Arbitration Rules provided for a more natural link with UNCITRAL.” He further proposed amending the text in brackets in the last sentence of the paragraph to read: “free for the publication of up to 50 documents, and a flat fee of 750 euro for the publication of greater than 50 documents”.

47. *Paragraph 21, as amended, was adopted.*

48. **Mr. Kordač** (Czech Republic) proposed that the phrase “recorded consensus that the PCA should be the institution it would designate to undertake the role of repository” should be worded in a more positive manner.

49. **Mr. Spelliscy** (Canada) proposed “recorded consensus that the PCA be designated to undertake the role of repository”.

50. *Paragraph 22, as amended, was adopted.*

51. **Mr. Schneider** (Switzerland) proposed adding the following phrase at the end of paragraph 23: “and if by that time the Registry is not established by UNCITRAL, the decision be reconsidered”.

52. **The Chairperson** said that the amendment seemed to imply that the difficult exercise of designating an institution to undertake the role of repository might need to be repeated.

53. **Ms. Pólit** (Ecuador) opposed the amendment proposed by the representative of Switzerland.

54. **Ms. Le Duc Hanh** (Observer for Viet Nam), supported by **Ms. Escobar** (Ecuador), noted that some delegations had expressed concern that the temporary solution might become permanent. It had therefore been decided to make provision for a review of the situation.

55. **The Chairperson** proposed amending paragraph 32 to read: “Concerns were raised that any temporary solution of having the PCA acting as registry should not become a permanent one, and the Commission therefore requested that, at its next session, in 2014, the Secretariat should report on the

status of the establishment and functioning of the Transparency Registry.”

56. *Paragraph 22, as amended, was adopted.*

57. **Mr. Loh Kong Yue** (Singapore) said that his delegation wished to introduce the following new paragraph after paragraph 24: “A view was expressed that the mandate of the Working Group was to explore options to make the rules on transparency applicable to existing investment treaties, but that it did not prejudice the outcome in favour of a recommendation.”

58. *It was agreed to insert the new paragraph after paragraph 24.*

59. **Mr. Lebedev** (Russian Federation) said that the last phrase in paragraph 26, “a recommendation promoting the use of the rules on transparency was not the appropriate vehicle for qualifying their use”, should either be clarified or deleted.

60. **The Chairperson** suggested that the whole of the second sentence should be replaced with the following sentence: “That request did not receive support.”

61. *Paragraph 26, as amended, was adopted.*

62. **Mr. Lee Jae Min** (Republic of Korea) proposed replacing the word “treaty” at the end of paragraph 28 with “convention”.

63. **Mr. Loh Kong Yue** (Singapore) proposed replacing the words “Support was expressed for” at the beginning of paragraph 28 with “Several delegations expressed support for”. He further proposed amending the last sentence to read: “It was emphasized that there would not be any expectation or value judgement on any State that chose not to sign or ratify such a convention.”

64. **The Chairperson** said that there was a reference to “any value judgement” in paragraph 34.

65. **Mr. Loh Kong Yue** (Singapore) said that in that case the words “obligation on” in the original version of the sentence should simply be replaced with “expectation for”.

66. *Paragraph 28, as amended, was adopted.*

67. **Mr. Caplan** (United States of America), noting that while paragraphs 28 to 31 reflected expressions of support for the preparation of a convention,

paragraph 32 reported certain reservations, proposed that the paragraph should begin with the words “In reply, it was noted that” instead of “Moreover, it was recognized that”.

68. *Paragraph 32, as amended, was adopted.*

69. **Mr. Loh Kong Yue** (Singapore) proposed inserting a new paragraph after paragraph 32 that would read: “A view was expressed that, while delegations have acknowledged the importance of transparency, it has also to be recognized that the compromise achieved by the rules is not a perfect one and that a convention will have the effect of upsetting the delicate balance struck in article 1 of the rules.”

70. **The Chairperson** suggested that the words “it has also to be recognized that” should be deleted since they might be interpreted as reflecting an agreement. The sentence would then read: “A view was expressed that, while delegations had acknowledged the importance of transparency, the compromise achieved by the rules was not a perfect one and a convention would have the effect of upsetting the delicate balance struck in article 1 of the rules.” As paragraph 29 dealt with the compromise, he proposed that the new sentence should be inserted there rather than after paragraph 32.

71. *It was so decided.*

72. **The Chairperson** said that paragraph 35 should be deleted since its content would be replaced by the first three paragraphs of the section of the draft report contained in document A/CN.9/XLVI/CRP.1/Add.4, which would be read out shortly by the secretariat.

73. In the meantime, he proposed inserting a new paragraph 35, which would read: “For the record, it was noted that the draft text of a convention, placed before the Commission in paragraph 5 of document A/CN.9/784, was a proposal by the secretariat which had not yet been the subject of any discussion by the Working Group.”

74. *It was so decided.*

75. **Ms. Salasky** (Secretariat) read out the first three paragraphs of document A/CN.9/XLVI/CRP.1/Add.4.

76. **The Chairperson** said he took it that those paragraphs were acceptable to the Commission.

77. *It was so agreed.*

78. *The draft report on the finalization and adoption of UNCITRAL rules on transparency in treaty-based investor-State arbitration, as a whole, as amended, was adopted.*

Future work in the field of settlement of commercial disputes (continued) (A/CN.9/785)

79. **The Chairperson** suggested that the Commission might request the secretariat, resources permitting, to look further into the question of concurrent proceedings and to report to the Commission in 2014 on how the question could be addressed.

80. In response to a query by **Mr. Caplan** (United States of America), **the Chairperson** confirmed that no decision would be taken on the matter until the final week of the current session.

Consideration of issues in the area of arbitration and conciliation

(c) Preparation of a guide on the 1958 New York Convention (continued) (A/CN.9/786)

81. **The Chairperson** said that the Commission might wish to defer a decision on the status of the guide on the 1958 New York Convention until the next session of the Commission when the complete guide would be available for consideration. With a view to allaying existing concerns, a caveat should be attached to any version of the guide published in the meantime to the effect that its status had not yet been determined by UNCITRAL. At the 2014 session, the secretariat would submit a recommendation to the Commission regarding the status of the guide and the form in which it should be published.

82. **Mr. Caplan** (United States of America) said that the question as to whether it would be published by the United Nations should be addressed.

83. **Mr. Sorieul** (Secretary of the Commission) said that the chapters that were completed before the next session would be published as notes by the secretariat so that they could be studied by members of the Commission. Any reservations they expressed

would be faithfully reflected in the documents and on the website.

84. **Mr. Apter** (Israel) said that some time might be required for in-depth consideration of the content of the remaining chapters. The Commission might perhaps consider making an abridged version available to ensure that all States had the opportunity to conduct a proper analysis of the guide.

85. **The Chairperson** said that all such concerns would be taken into account by the secretariat. If he heard no objection, he would take it that the Commission wished to defer a decision on the New York Convention until the next session.

86. *It was so decided.*

The meeting rose at 5.05 p.m.

Finalization and adoption of the Technical Legislative Guide on the Implementation of a Security Rights Registry

Summary record of the 966th meeting, held at the Vienna International Centre, Vienna, on Friday, 12 July 2013, at 9.30 a.m.

[A/CN.9/SR.966]

Chairperson: Mr. Schöll (Switzerland)

Later: Mr. Labardini Flores (Vice-Chairperson) (Mexico)

The meeting was called to order at 9.45 a.m.

Consideration of issues in the area of arbitration and conciliation

(d) International commercial arbitration moot competitions (A/CN.9/786)

1. **The Chairperson** invited the secretariat to introduce agenda item 4 (d).
2. **Ms. Salasky** (Secretariat) said that the Association for the Organization and Promotion of the Willem C. Vis International Commercial Arbitration Moot had held the Twentieth Moot in Vienna from 22 to 28 March 2013. As in previous years, the Moot had been co-sponsored by the Commission. A total of 291 teams from law schools in 66 countries had participated. The oral arguments phase of the Twenty-first Willem C. Vis International Commercial Arbitration Moot would be held in Vienna from 11 to 17 April 2014.
3. The Commission had also co-sponsored the Tenth Willem C. Vis (East) International Commercial Arbitration Moot, which had been held from 11 to 17 March 2013. The winning team was from the University of Canberra.
4. **Ms. Montineri** (Secretariat) said that the moot competitions provided excellent opportunities for students throughout the world to acquire experience in the area of arbitration. The Commission had co-sponsored the Fifth International Commercial Arbitration Competition, organized by the Carlos III University of Madrid, from 15 to 20 April 2013. The Sixth Madrid Moot would be held from 21 to 25 April 2014.
5. **Mr. Lebedev** (Russian Federation) emphasized the value of the moot competitions co-sponsored by UNCITRAL as a means of promoting outreach to

the student community throughout the world and generating awareness of the Commission's work among young jurists. He had been tracking the careers of some Russian students who had taken part in the competitions and had noted that their dissertations tended to focus on UNCITRAL issues. He proposed that the winners of moot competitions should be invited to attend UNCITRAL sessions.

6. **Mr. Adensamer** (Austria) expressed support for the proposal to invite winners to attend some of the meetings held during UNCITRAL sessions. Meetings at which particularly important topics were to be discussed should be selected.

7. **The Chairperson** said he took it that the Commission wished to emphasize in its report the important role played by moot competitions in familiarizing students with the work of UNCITRAL. He invited the secretariat to comment on the proposal to invite winners to attend UNCITRAL sessions.

8. **Mr. Sorieul** (Secretary of the Commission) said that while the secretariat was unable to allocate a great deal of resources to UNCITRAL sponsorship of the moot competitions, it was seeking to forge closer links with the competition organizing teams in Vienna and elsewhere. It would therefore look into the possibility of acting on the proposal just made by the representatives of the Russian Federation and Austria.

Election of officers (continued)

9. **Mr. Cabrera** (Mexico) speaking on behalf of the Latin American and Caribbean States, proposed that Mr. Labardini Flores (Mexico) be elected Vice-Chairperson of the Commission.

10. **Ms. Escobar** (El Salvador), **Mr. Dennis** (United States of America) and **Mr. Castellano** (Italy) seconded the proposal.

11. *Mr. Labardini Flores (Mexico) was elected Vice-Chairperson of the Commission by acclamation.*

12. **The Chairperson** invited Mr. Labardini Flores to chair the discussion concerning item 5 of the agenda.

13. *Mr. Labardini Flores (Mexico) took the Chair.*

Consideration of issues in the area of security interests

(a) Finalization and adoption of the Technical Legislative Guide on the Implementation of a Security Rights Registry (A/CN.9/WG.VI/WP.54 and Add.1-4; A/CN.9/781 and Add.1 and 2; A/CN.9/764 and 767; A/CN.9/XLVI/CRP.4)

14. **The Chairperson** invited the secretariat to introduce the documents relating to agenda item 5 (a).

15. **Mr. Bazinas** (Secretariat) said that the draft Technical Legislative Guide on the Implementation of a Security Rights Registry (the draft Registry Guide) was contained in a number of documents produced for Working Group VI (Security Interests) as well as several Commission documents. As the Working Group had adopted the draft Registry Guide in April 2013, it had not been possible to produce a complete revised version in time for the current session of the Commission. The Working Group documents before the Commission (A/CN.9/WG.VI/WP.54 and Add.1-4) therefore contained the commentary to the draft Registry Guide. Commission document A/CN.9/781 presented a summary of all amendments to the Guide adopted by the Working Group. Addendum 1 to document A/CN.9/781 contained the draft Registry Guide recommendations and addendum 2 contained examples of registry forms. The reports of Working Group VI were contained in documents A/CN.9/764 and 767. Lastly, document A/CN.9/XLVI/CRP.4 contained a draft decision concerning the adoption of the Registry Guide.

16. **The Chairperson** invited comments on document A/CN.9/WG.VI/WP.54, which contained the draft preface and introduction to the draft Registry Guide.

17. *The preface was adopted.*

18. **Mr. Dubovec** (National Law Center for Inter-American Trade) said that the International Civil Aviation Organization had recently adopted a fifth edition of the Regulations and Procedures for the International Registry. He therefore proposed that the reference to the Regulations and Procedures in subparagraph 4 (g) should be updated.

19. *It was so decided.*

20. **Mr. Bazinas** (Secretariat) said that paragraphs 8 to 16 of document A/CN.9/WG.VI/WP.54 concerning terminology and interpretation should be read in conjunction with paragraphs 3 to 9 of document A/CN.9/781, which drew attention to changes that had been adopted by the Working Group. The terminology was presented in document A/CN.9/781/Add.1, which contained, in addition, two notes to the Commission concerning issues that had come to light after the adoption of the text by the Working Group. They concerned the terms “amendment” and “registrant”. He assured the Commission that the secretariat would make any editorial changes that were necessary to ensure consistency in the use of terminology.

21. **Mr. Henning** (United States of America), referring to the definition of the term “grantor” as “the person identified in the notice as the grantor” in paragraph 11 of the Working Paper document and in paragraph (e) of document A/CN.9/781/Add.1, proposed adding the words “in the designated field” after the word “identified”. He proposed a similar amendment to the definition of a “secured creditor” in the two documents, which currently read: “‘Secured creditor’ means the person identified in the notice as the secured creditor.”

22. *It was so decided.*

23. **Mr. Henning** (United States of America) requested clarification as to how the new definition of the “registrant”, namely the person who submitted the prescribed registry notice form to the registry, would work in the context of paper registration where the person who transmitted the notice form to the registry was a courier or other mail service provider and hence was clearly not the registrant. It could perhaps be pointed out that a delivery agent was not covered by the term.

24. **The Chairperson** proposed that the commentary should explain that a courier or other mail service provider used by the registrant to transmit a paper notice would not be considered as a registrant.

25. *It was so decided.*

26. **Mr. Dubovec** (National Law Center for Inter-American Trade) proposed a simplification of the definition of the term “address” by combining options (i) and (ii) relating to a physical address, namely a street address or a post office box number.

27. *It was so decided.*

28. **Mr. Dubovec** (National Law Center for Inter-American Trade) proposed that option (iv), “an address that would be effective for communicating information”, should be deleted, since it was somewhat confusing and the commentary failed to explain what was designated.

29. **Mr. Castellano** (Italy) proposed that the reference to an address that would be effective for communicating information should be explained in the commentary.

30. **Ms. Walsh** (Canada) expressed support for the proposal by the representative of Italy. The best approach would be one that permitted flexibility. She considered that option (iv) could be deleted if the secretariat were to explain in the commentary that an enacting State was free to permit registrants to opt for various types of addresses.

31. **Mr. Dubovec** (National Law Center for Inter-American Trade) said that the commentary could provide examples of other types of address that would be effective for communicating information. The registry form should be designed in such a way as to allow registrants to choose a particular type of address.

32. **The Chairperson** said he took it that the Commission wished to delete option (iv) and provide the proposed explanation for enacting States in the commentary.

33. *It was so decided.*

34. **Mr. Dubovec** (National Law Center for Inter-American Trade), referring to the definition of “regulation”, proposed replacing the words “the body of rules implemented by the enacting State”

with “the body of rules adopted by the enacting State”.

35. *It was so decided.*

36. **The Chairperson** invited comments from the Commission on the remaining sections of document A/CN.9/WG.VI/WP.54, beginning with paragraph 17.

37. **Mr. Dubovec** (National Law Center for Inter-American Trade) proposed deleting the words “that indicates the grantor’s intent to create a security right” in subparagraph 23 (c) because that aspect of the agreement was already covered in subparagraph 23 (b).

38. *It was so decided.*

39. **Mr. Dubovec** (National Law Center for Inter-American Trade) noted that the second sentence of paragraph 28 stated that registration was the only method of achieving third-party effectiveness for all types of encumbered assets. He drew attention to recommendation 50 of the Legislative Guide on Secured Transactions, according to which an independent undertaking could be made effective against third parties only by the secured creditor obtaining control with respect to the right to receive the proceeds under the independent undertaking. He proposed that the second sentence should be amended to refer to that recommendation and to indicate that registration of a notice was the method of achieving third-party effectiveness for all types of encumbered assets “except with respect to a security right in a right to receive the proceeds under an independent undertaking”.

40. *It was so decided.*

41. *The section of the introduction to the draft Registry Guide contained in document A/CN.9/WG.VI/WP.54, as amended, was adopted.*

42. **The Chairperson** invited comments on the remainder of the draft introduction contained in document A/CN.9/WG.VI/WP.54/Add.1.

43. **Mr. Dubovec** (National Law Center for Inter-American Trade) said that the discussion referred to in paragraph 18 concerning coordination with specialized movable property registries was important, but only if security rights in specified

assets, such as railway rolling stock or aircraft objects, fell within the scope of the secured transactions law. If those assets were excluded from the law and a specialized registry existed for the respective security rights, there was no need for coordination.

44. **The Chairperson** said he took it that the Commission agreed to revise the section to clarify that point.

45. *It was so decided.*

46. *The remainder of the introduction to the draft Registry Guide, as amended, was adopted.*

47. **The Chairperson** invited comments on chapter I of the draft Registry Guide concerning the establishment and functions of the security rights registry contained in document A/CN.9/WG.VI/WP.54/Add.1 and on recommendations 1 to 3 contained in document A/CN.9/781/Add.1.

48. *Chapter I and recommendations 1 to 3 were adopted.*

49. **The Chairperson** invited comments on chapter II concerning access to the services of the registry contained in document A/CN.9/WG.VI/WP.54/Add.1 and on recommendations 4 to 10 contained in document A/CN.9/781/Add.1.

50. **Mr. Henning** (United States of America) proposed inserting the word “applicable” before “form” in recommendation 6, subparagraph (a) (i), because the registry would prescribe several different forms of notice for different purposes.

51. *It was so decided.*

52. **Mr. Bazinas** (Secretariat) drew attention to the note attached to recommendation 7, subparagraph (c). The Commission was invited to consider adding the following words at the beginning of the subparagraph: “Except as provided in recommendations 8, subparagraph (a), and 10, subparagraph (a).” The reason for the proposed addition was to explain that scrutiny was conducted by the registry, in accordance with recommendations 8 and 10, solely to ensure that some legible information was entered into a notice. Alternatively, the matter could be explained in the commentary.

53. **Ms. Walsh** (Canada) expressed support for the amendment proposed by the secretariat.

54. *Recommendation 7, as amended, was adopted.*

55. **Mr. Henning** (United States of America) proposed amending recommendation 8, subparagraph (a), to read: “The registry rejects the registration of a notice if information is not entered in each required designated field or if the information entered is not legible.”

56. *It was so decided.*

57. *Chapter II and recommendations 4 to 10, as amended, were adopted.*

The meeting was suspended at 11.10 a.m. and resumed at 11.45 a.m.

58. **The Chairperson** invited comments on chapter III concerning registration contained in document A/CN.9/WG.VI/WP.54/Add.2 and on recommendations 11 to 22 contained in document A/CN.9/781/Add.1.

59. **Mr. Dubovec** (National Law Center for Inter-American Trade), referring to paragraph 44 of document A/CN.9/WG.VI/WP.54/Add.2, said that a registrant could submit a notice with an attachment. He proposed that it should be made clear that the attachment thus became part of the notice and should be removed from the public registry record together with the notice itself when the notice expired.

60. *It was so decided.*

61. **Mr. Henning** (United States of America) said that recommendation 11 (a) closely resembled recommendation 70 of the *Legislative Guide on Secured Transactions*. It was not a regulation addressed to the registry or registrant but merely specified the legal impact of certain events. Working Group VI had correctly decided that it should be included in the draft Registry Guide so that the registrar and users would understand the relevant legal impact. However, it might be helpful if the commentary drew attention to the resemblance to recommendation 70 so that similar wording was used in the secured transactions law and the registry guide of an enacting State.

62. **Mr. Boettcher** (Germany) and **Mr. Dache** (Kenya) expressed support for the proposal by the representative of the United States.

63. **Mr. Bazinas** (Secretariat) drew attention to paragraph 32 of document A/CN.9/781 concerning amendments to the draft Registry Guide adopted by the Working Group, which was applicable to the point raised by the representatives of the United States, Germany and Kenya. The paragraph stated, inter alia, that wording along the following lines could be added where necessary: “Typically, this rule would be included in the secured transactions law of the enacting State. However, depending on its particular legislative method and drafting conventions, an enacting State may decide to place it or reiterate it in the regulation.”

64. **Ms. Walsh** (Canada) said that there were a number of locations in which that caveat should be inserted by the secretariat.

65. *It was so agreed.*

66. **The Chairperson** noted that the Commission was asked to consider whether recommendation 12 concerning a registration number should be moved closer to, or made part of, recommendation 16 on the indexing of information because the assignment of a registration number by the registry related to the indexing of information in the registry record.

67. **Mr. Bazinas** (Secretariat) noted that if recommendation 12 were to be incorporated in recommendation 16, the heading “Registration number” would be deleted.

68. **Ms. Walsh** (Canada) and **Mr. Castellano** (Italy) expressed support for the proposal to move recommendation 12 closer to recommendation 16.

69. **Mr. Weise** (American Bar Association) said that recommendation 12 might be perceived to be of relevance only to searchers if it were incorporated in recommendation 16, whereas the relevance of the registration number in the event of an amendment was highlighted in recommendation 30.

70. **Ms. Walsh** (Canada) proposed amending the title of recommendation 16 to read: “Registration number and indexing or other organization of information in the registry record”. Recommendation 16 was not solely an instruction to searchers; it was an instruction to the registry.

71. **The Chairperson** proposed inserting the words “For the purposes of recommendations 16, 18, 30, 32 and 34 at the beginning of recommendation 12, keeping it as a separate recommendation 15 and placing it right before recommendation 16. The secretariat could draft the final wording.

72. *It was so decided.*

73. **Mr. Dubovec** (National Law Center for Inter-American Trade), referring to recommendation 13, proposed that the wording of subparagraph (c) of option A should be aligned with the wording of the corresponding subparagraphs of option B and option C. It would then read: “In the case of an extension, the new period starts when the current period expires.”

74. **Mr. Bazinas** (Secretariat) drew the Commission’s attention to the note following recommendation 13, which raised an issue that might require some changes to option C. That option currently seemed to apply to each amendment notice. As a result, when the new period started on expiry of the current period and more than one amendment extending the period of effectiveness was registered, there would actually be no difference between options B and C. With a view to achieving the aim of option C, which was to set a maximum time limit, the new period could start: (a) when the amendment notice was registered with the maximum limit applicable to that amendment notice; or (b) when the current period expired as long as all the notices together would not exceed the maximum limit.

75. **The Chairperson** proposed the following wording for option C, subparagraph (c): “In the case of an extension, the new period could start: (a) when the amendment notice was registered with the maximum limit applicable to that amendment notice; or (b) when the current period expired as long as all the notices together would not exceed the maximum limit.”

76. **Mr. Dache** (Kenya) expressed support for the proposal.

77. **Ms. Walsh** (Canada) said she understood that the proposed text consisted of two alternatives rather than two cumulative approaches. The Commission would perhaps need to choose which of the two was more appropriate.

78. **Mr. Bazinas** (Secretariat) said that in the case of (a), each amendment notice would not exceed the

maximum limit, while in the case of (b), all amendment notices together would not exceed the maximum limit.

79. **Ms. Walsh** (Canada) said that the approach adopted in the case of (a) would not really further the policy reflected in option C, subparagraph (c). Her delegation therefore supported the approach adopted in the case of (b).

80. **Mr. Weise** (American Bar Association) said that some transactions continued for a very long time. If the cumulative effect of all the amendments was subject to an absolute limit, such a limit would be imposed on transactions that should be extendable for sound business reasons without any abuse of the registration system. Hence the goal of option C was that any particular registration was subject to a time limit, but that there was no aggregate limit, since option C would then be even more restrictive than option A.

81. **Mr. Castellano** (Italy) said he concurred with the comment on the (a) approach by the representative of Canada and with the point made by the representative of the American Bar Association

regarding the undesirability of imposing a maximum limit in certain circumstances. The policy intention underlying option C was different from that underlying option B. A loophole would arise where multiple amendments, each for a period of 20 years, were filed simultaneously. He suggested wording to the effect that multiple amendments entailing 20-year extensions were not acceptable.

82. **Mr. Bazinas** (Secretariat) said that three possibilities had now been envisaged. The first option pursuant to (a) would permit an unlimited number of 20-year amendment notices, an outcome that was inconsistent with the aim of option C. A second option consisted in permitting just one amendment for 20 years, which would mean that the initial 20-year notice would be followed by just one further 20-year amendment. The option envisaged in (b) was that all amendment notices together following expiry of the period should not exceed 20 years.

83. **The Chairperson** said that the Commission would continue its discussion of the matter at the next meeting.

The meeting rose at 12.30 p.m.

Finalization and adoption of the Technical Legislative Guide on the Implementation of a Security Rights Registry (*continued*)

Summary record of the 967th meeting, held at the Vienna International Centre, Vienna, on Friday, 12 July 2013, at 2 p.m.

[A/CN.9/SR.967]

Chairperson: Mr. Labardini Flores (Vice-Chairperson) (Mexico)

The meeting was called to order at 2.15 p.m.

Consideration of issues in the area of security interests

(a) Finalization and adoption of the Technical Legislative Guide on the Implementation of a Security Rights Registry

(A/CN.9/WG.VI/ WP.54 and Add.1-4; A/CN.9/781 and Add.1 and 2; A/CN.9/764 and 767; A/CN.9/XLVI/CRP.4) (*continued*)

1. **The Chairperson** invited the Commission to resume its discussion of chapter III concerning registration (A/CN.9/WG.VI/ WP.54/Add.2) of the draft Technical Legislative Guide on the Implementation of a Security Rights Registry (draft Registry Guide) and on recommendations 13 to 22 (A/CN.9/781/Add.1).
2. A number of comments and proposals had been made regarding recommendation 13 concerning the period of effectiveness of the registration of a notice.
3. **Ms. Walsh** (Canada) said that the wording of option C should be adjusted to ensure that the registration of an initial notice would be effective for the period of time indicated by the registrant but would not exceed a certain maximum period at any given time. Subparagraph (c) of option C should therefore provide that in the event of an extension, the registration of an amendment specifying a new period of time subject to the maximum limit would take effect as soon as the amendment was registered.
4. **Mr. Dennis** (United States of America) said that two issues were being discussed simultaneously. One concerned the most appropriate wording of options A, B and C. The second concerned the substance of option C. Some delegations had held consultations since the previous meeting and produced what might be agreed wording for option A. However, there were still some different

assumptions regarding the purpose of option C. For example, in option A the State fixed the period of time, which might be five years. If the current wording of option A was applied, a second five-year period could be added at any time during the first five years. Thus, if a second five-year period were to be added in the second year, the total period would be extended to 10 years. However, such action could be taken only once. His delegation had assumed that option C worked in a similar fashion, but with the party deciding on the relevant period of time and the period of the extension, provided that it did not exceed the maximum limit. Thus, if the statutory maximum period was 20 years, a secured creditor could register a notice for 20 years and introduce a 20-year extension at any time during that period. It had been suggested during the consultations that such an extension could be introduced only once, which would solve the problem of overlapping with option B. As other delegations interpreted option C somewhat differently, the Commission should first make clear whether the intention was that parties could introduce an extension up to the option C maximum in the same manner as in option A or whether the maximum time available at any one time could not exceed the stated time period.

5. **Mr. Weise** (American Bar Association) said that option C was designed to prevent potential abuse by precluding multiple extensions during a particular time period and not to provide for an aggregate maximum of all periods.

6. **Mr. Bazinas** (Secretariat) said that the *Legislative Guide on Secured Transactions (Secured Transactions Guide)* provided only for options A and B. Option C was the product of the discussions of Working Group VI. Several delegations had suggested that an amendment or notice should not be effective for an indefinite period of time and that the record should be cleared at some stage. That was

the purpose of the maximum limit. However, there were two possibilities. The limit could be the aggregate period, for example 20 years regardless of the number of amendments introduced, or a maximum limit could be applied to each amendment notice. If the Commission considered that the maximum limit should apply to each amendment notice, the text in the note to recommendation 13 would be applicable: “the new period could start when the amendment notice was registered with the maximum limit applicable to that amendment notice”. If the Commission was unable to support that solution, it might be helpful to request a group of members to put forward an alternative proposal.

7. **The Chairperson** invited a group of interested members to meet informally and submit a proposal to the Commission.

8. He invited comments on recommendations 14 to 22.

9. **Mr. Dennis** (United States of America) proposed amending recommendation 14 to read: “The regulation should provide that a notice may be registered before or after the creation of a security right or the conclusion of a security agreement.” The word “the” had been changed to “a” before “security right” and “security agreement” because a single notice could suffice for many security rights and agreements.

10. *Recommendation 14, as amended, was adopted.*

11. *Recommendations 15 to 17 were adopted.*

12. **Mr. Bazinas** (Secretariat) drew attention to the note concerning recommendation 18 entitled “Copy of registered notice”. The Commission might wish to amend subparagraph (b) (ii) to make it clear that if the secured creditor did not know the grantor’s current address, the secured creditor should be entitled to use the grantor’s “last known” or “reasonably available” address.

13. **Mr. Dubovec** (National Law Center for Inter-American Trade) expressed support for that amendment. He proposed inserting an additional provision requiring the secured creditor to send a copy of the cancellation notice to each grantor. The proposed revised wording regarding the grantor’s address should also be added thereto.

14. **Mr. Weise** (American Bar Association) proposed amending the phrase at the end of the recommendation to read “at a current address of the grantor known to the secured creditor”, since the grantor might have more than one address.

15. **Mr. Dennis** (United States of America) said that if a grantor had many addresses, some of which had changed, the secured creditor might not know which was the appropriate destination for a notice. A mandatory rule requiring a secured creditor who knew that a grantor’s address had changed to send an amendment notice to the current address of the grantor might therefore prove problematic for the secured creditor. On the other hand, it might prove risky for the grantor if the secured creditor were permitted to send the notice to any address.

16. **Mr. Weise** (American Bar Association) said he assumed that the reference at the end of the recommendation to a change in the grantor’s address referred only to the address set forth in the registered notice. That should perhaps be made clear in the text.

17. **Mr. Dennis** (United States of America) proposed that the point should be dealt with in the commentary because there were many different possibilities. For example, if an enterprise with a single headquarters opened a second office and transferred many of its top management there, it might be difficult for the secured creditor to assess whether a change of address had occurred.

18. **Mr. Castellano** (Italy) said that his delegation was quite satisfied that an optimum balance had been struck in the recommendation as currently worded. It could not possibly deal with the enormous number of possible scenarios, which should be dealt with instead in the commentary.

19. **The Chairperson** said he took it that the Commission wished to add the words “or a cancellation notice” after “an amendment notice” in subparagraph (b) (ii) and to replace the reference to the grantor’s “current address” in the final phrase of that subparagraph with a reference to the grantor’s “last known address” or “reasonably available address”. Further clarifications regarding the question of changes in the grantor’s address would be provided in the commentary.

20. *Recommendation 18, as amended, was adopted.*

21. *Recommendations 19 to 21 were adopted.*

22. **Ms. Escobar** (El Salvador) requested clarification of the requirement in subparagraph (b) of recommendation 22: “The registry determines and publicizes the character set to be used.”

23. **The Chairperson** said that “character set” referred to the use, for example, of the Cyrillic, Latin or some other alphabet.

24. **Mr. Weise** (American Bar Association) said that the registry might, in addition, specify certain characters within a country’s character set that should or should not be used. The rule in subparagraph (a) of the recommendation concerning the language or languages in which the information in a notice must be expressed was couched in mandatory terms. He wondered whether similar wording should be used in subparagraph (b) concerning the character set.

25. **Mr. Boettcher** (Germany) pointed out that subparagraph (a) was addressed to the party who filed the notice, while subparagraph (b) was addressed to the registry.

26. **Mr. Weise** (American Bar Association) said that, in his view, subparagraph (b) was addressed to the registrant, in which case it would be appropriate to make its mandatory nature clear.

27. **Mr. Bazinas** (Secretariat) said that subparagraph (b) should be interpreted to mean that the registry was entitled to determine and publish the character set to be used. The registrant was then required to use that character set. The words “to be used” at the end of the subparagraph could therefore be replaced with “that must be used by registrants”. Alternatively, the subparagraph could be amended to read: “The information in a notice must be expressed in the character set determined and published by the registry.”

28. **Mr. Boettcher** (Germany) expressed a preference for the second option.

29. *Recommendation 22, as amended, was adopted.*

30. *Chapter III of the draft Registry Guide, as amended, was adopted.*

31. **The Chairperson** invited comments on chapter IV concerning registration of initial notices contained in document A/CN.9/WG.VI/WP.54/Add.2

and Add.3, on the corresponding paragraphs of document A/CN.9/781 and on recommendations 23 to 29 contained in document A/CN.9/781/Add.1.

32. **Mr. Dubovec** (National Law Center for Inter-American Trade), referring to the last sentence of paragraph 55 in document A/CN.9/WG.VI/WP.54/Add.2, said that search forms did not contain a slot for the grantor’s address and there was in any case no need to include it. He therefore proposed that the words “as well as the form of search request” should be deleted.

33. *It was so decided.*

34. **Mr. Bazinas** (Secretariat), referring to recommendation 23 in document A/CN.9/781/Add.1, said that it might not be necessary to retain the phrase “either in the same notice or in separate notices” at the end of subparagraph (b). A registrant was in any case entitled to enter the required information for more than one grantor or secured creditor in the designated field in one or multiple notices. That point could be made in the commentary.

35. **Mr. Dennis** (United States of America) expressed support for that proposal.

36. With regard to the use of the terms “grantor” and “secured creditor” in recommendations 23 to 27, he pointed out that the *Secured Transactions Guide* defined “grantor” as the party that created a security right and “secured creditor” as the party to whom the security right was granted. The draft Registry Guide, on the other hand, defined “grantor” as the person identified in the notice as the grantor and “secured creditor” as the person identified in the notice as the secured creditor. Grantor and secured creditor were used in recommendations 23 to 27 in the sense in which the terms were defined in the *Secured Transactions Guide*. Recommendation 23, for example, required the identifier of the grantor to be presented in a particular way. That could only make sense if it referred to the party that created the security right. However, the references in recommendations 23 to 27 were to the actual grantor. Recommendation 24, subparagraph (a), stated that the grantor identifier was the name of the grantor. The right name to enter in the form was thus the name of the party that had created the security right. He suggested that the commentary should explain

that references to the grantor or secured creditor in those recommendations were to the actual grantor or secured creditor.

37. **Mr. Bazinas** (Secretariat) said that the registry should not be required to ascertain whether the grantor mentioned in the notice was the actual grantor, and the notice should not be invalidated if it mentioned a party other than the actual grantor. As far as the registry record was concerned, it should not be an issue whether the notice referred to the actual grantor or to another party. That was why the terms “grantor” and “secured creditor” had been defined simply by reference to the party identified in the notice itself. He agreed with the representative of the United States that it would be helpful to explain that approach in the commentary.

38. **Mr. Dennis** (United States of America) said he agreed that recommendations 23 and 24 were not directions to the registry but to the registrant. Recommendation 24 indicated the correct form of the name of a grantor who was a natural person. If the name was misspelt, for example, the question arose whether the security right granted by a grantor could be rendered effective against third parties. Recommendation 27 provided rules regarding the name to be entered for the secured creditor, but the draft Registry Guide did not define “secured creditor” as the party to whom the security right was granted. Although the intention of the group of recommendations was clear to the Commission, namely the correct procedure for entering the name of the grantor or secured creditor in the form, the terminology was used in accordance with the definitions in the *Secured Transactions Guide*.

39. **Mr. Bazinas** (Secretariat) suggested replacing the term “grantor” in the recommendations with a reference to the person creating the security interest and the term “secured creditor” with a reference to the person in whose favour the security interest was created. Alternatively, if the recommendations were left unchanged, it could be explained in the commentary that the references in question denoted the actual grantor and the actual secured creditor.

40. **Mr. Dennis** (United States of America) drew attention to paragraph 8 of document A/CN.9/WG.VI/WP.54, which stated that the terminology and interpretation section of the *Secured Transactions Guide* was also applicable to

the draft Registry Guide, except to the extent modified in the terminology and interpretation section of the draft Guide. He proposed highlighting in that section that the *Secured Transactions Guide* definitions of “grantor” and “secured creditor” were used in recommendations 23 to 27.

41. **Ms. Walsh** (Canada) pointed out that the use of the terms “grantor” and “secured creditor” in the commentary generally reflected their use in the *Secured Transactions Guide*, although the terms were also used in some cases to designate “the person identified in the notice”. She proposed that the foregoing phrase in the definition of “grantor” and “secured creditor” in the draft Registry Guide should be amended to read “the person identified or to be identified in the notice”. Following that amendment, the phrase “if the grantor is a natural person” at the beginning of recommendation 24, for example, would be interpreted to mean “if the person to be identified in the notice as the grantor is a natural person”. If the terminology and interpretation section of the draft Registry Guide was also applicable to the commentary, it would be necessary to state that the terms “grantor” and “secured creditor” should be taken to mean either, depending on the context, the person creating a security right or to whom a security right was granted, or the person identified or to be identified in the notice.

42. **Mr. Bazinas** (Secretariat) said that the fact that the terminology was reproduced with the recommendations might give the impression that it was applicable only to the recommendations. However, it was also applicable to the commentary. On the other hand, the terminology was not a set of definitions associated with a legislative text but a glossary designed to assist users in understanding certain terms used throughout the draft Registry Guide.

43. **Mr. Boettcher** (Germany) emphasized the importance of ensuring that the draft Registry Guide was as simple and readable as possible for users. The same term should not have different meanings in different contexts. He proposed defining the term “actual grantor” in the terminology section and using it in recommendations 23 to 27.

44. **Mr. Bazinas** (Secretariat) said that an alternative to the proposal made by the

representative of Germany would be to use the terms “grantor” and “secured creditor” as defined in the *Secured Transactions Guide*, which referred to the “actual grantor” and the “actual secured creditor”, and to introduce new terms in the draft Registry Guide such as “registration grantor”, “grantor of the record”, “registration secured creditor” or “secured creditor of the record”. The latter terms could be used in the recommendations when reference was made to the person identified in the notice as grantor or secured creditor, and the terms “grantor” and “secured creditor” could be used when reference was made to the actual grantor or secured creditor.

45. **Mr. Weise** (American Bar Association) expressed support for the point made by the representative of Germany and the secretariat’s proposal to use the term “grantor of the record”.

46. **Ms. Walsh** (Canada) urged the secretariat, in reviewing the commentary, to decide how the terms “grantor” and “secured creditor” were to be interpreted in each case. As she was somewhat concerned about the complexity of that exercise, she was in favour of simply stating that the terms generally had the same meaning as in the *Secured Transactions Guide* but, depending on the context, could refer to the person identified or to be identified in the notice.

The meeting was suspended at 3.40 p.m. and resumed at 4.10 p.m.

47. **Mr. Dennis** (United States of America) said that the proposed solutions were in most cases acceptable. However, they were difficult to incorporate at that stage in the proceedings. His delegation was therefore inclined to opt for the solution proposed by the representative of Canada, namely stating in the terminology section that the terms “grantor” and “secured creditor” had different meanings depending on the context. In his view, their meaning would in any case be clear to the reader from the context. If doubts might arise in a particular case, the commentary could specify the intended meaning of the term in that case.

48. **Mr. Weise** (American Bar Association) said that the use of the term “grantor” was very important in the recommendations. A user who was not familiar with the term should not be required to determine its meaning from the context. The

terminology used in the recommendations should therefore be as precise as possible. It was less risky in the case of the commentary to make the type of general statement proposed by the representative of Canada.

49. **Mr. Castellano** (Italy) expressed support for the proposal by the representative of Canada. Detailed guidance for users who were unfamiliar with the terminology could be included in the commentary.

50. **Mr. Dennis** (United States of America) said that readers of recommendations 23 to 27 would be unlikely to refer to the commentary in order to interpret their meaning.

51. **Mr. Walsh** (Canada) said she believed that the Commission agreed that the terminology section should explain that the terms “grantor” and “secured creditor” meant, on the one hand, the person who created the security interest in the case of the grantor or the person to whom it was granted in the case of the secured creditor and, on the other hand, the person identified or to be identified in the notice, depending on the context. The commentary would explain the two different concepts and provide examples. It could also state that the words “or to be identified” addressed the problems that arose in recommendations 23 to 27.

52. **Mr. Castellano** (Italy) and **Mr. Dennis** (United States of America) expressed support for the proposal by the representative of Canada.

53. **Mr. Weise** (American Bar Association) asked whether it would be possible in the terminology section to replace “depending on the context” with specific references to the recommendations where the different meanings of the terms were used.

54. **Mr. Bazinas** (Secretariat) drew attention to the footnote to the terminology section of document A/CN.9/781/Add.1, which stated that section B of the introduction to the *Secured Transactions Guide* on terminology and interpretation applied also to the draft Registry Guide, except to the extent modified by section B of the introduction to the draft Registry Guide on terminology and interpretation. Thus, the terminology actually formed part of the commentary. However, the comment following the definition of the term “grantor”, for example, could state that in

recommendations 23 to 27 the term meant the actual grantor or, as proposed by the representative of Canada, the person identified or to be identified as the grantor.

55. **The Chairperson** proposed that the Commission should suspend its discussion of the issue until the next meeting.

56. *It was so agreed.*

57. **Mr. Bellenger** (France) expressed reservations regarding the number of subparagraphs devoted to the name of the grantor in recommendation 24. The rules corresponded to those that were ordinarily applicable under the civil law of each State. Moreover, footnote 3 admitted that recommendation 24 was illustrative and that the enacting State should adjust it in the light of its own naming conventions.

58. **Mr. Dennis** (United States of America) concurred with the comment by the representative of France.

59. **Mr. Bazinas** (Secretariat) drew attention to paragraph 56 of document A/CN.9/WG.VI/WP.54/Add.2, the last sentence of which introduced a table related to recommendation 24, stating that the table illustrated the type of approach that might be taken but that enacting States would need to determine in accordance with their naming conventions what types of official documents were most appropriate.

60. **Mr. Castellano** (Italy) said that it would be preferable, in his view, to transfer the examples in the subparagraphs of recommendation 24 to the commentary.

61. **Mr. Boettcher** (Germany) expressed support for that proposal.

62. **Ms. Walsh** (Canada) said that recommendation 24 provided examples of the degree of precision of

the regulation governing the grantor identifier that was required for an effective registry in order to ensure a common legal understanding of how to enter the grantor's name. Such advice was required by both registrants

and searchers and was a vital prerequisite for the success of the registry. Moreover, it was clear from the footnote that the examples were illustrative and that the recommendation was not laying down rules for all legislative purposes. The entry of inaccurate grantors' names in the registry was the greatest source of litigation, frequently owing to the State's failure to provide clear guidance.

63. **Mr. Bazinas** (Secretariat), referring to recommendation 25, said that the understanding of Working Group VI was that only one document, law or decree was required for the identification of legal persons, namely the document, law or decree constituting the legal person. Many different documents might be required, on the other hand, for the identification of natural persons and they should all be mentioned in the regulations, in line with the relevant legislation. That was why recommendation 24 contained a list of documents on the basis of which natural persons could be identified.

64. **Ms. Walsh** (Canada) said that there might be different official sources for the name of a natural person, depending on the country concerned. Registrants therefore needed guidance as to which source was reliable.

65. **The Chairperson** said that the Commission would continue its discussion of the recommendations at the next meeting.

The meeting rose at 5 p.m.

Finalization and adoption of the Technical Legislative Guide on the Implementation of a Security Rights Registry (*continued*)

Summary record of the 968th meeting, held at the Vienna International Centre, Vienna, on Monday, 15 July 2013, at 9.30 a.m.

[A/CN.9/SR.968]

Chairperson: Mr. Labardini Flores (Vice-Chairperson) (Mexico)

The meeting was called to order at 9.40 a.m.

Consideration of issues in the area of security interests

(a) Finalization and adoption of the Technical Legislative Guide on the Implementation of a Security Rights Registry (*continued*)
(A/CN.9/WG.VI/ WP.54 and Add.1-4;
A/CN.9/781 and Add.1 and 2; A/CN.9/764 and 767; A/CN.9/XLVI/CRP.4)

1. **The Chairperson** invited the Commission to resume its discussion of chapter IV concerning registration of initial notices (A/CN.9/WG.VI/ WP.54/Add.2 and Add.3) of the draft Technical Legislative Guide on the Implementation of a Security Rights Registry (draft Registry Guide) and on recommendations 23 to 29 (A/CN.9/781/Add.1).

2. **Mr. Dennis** (United States of America) reiterated his delegation's support for the reservations expressed by the representative of France concerning the number of subparagraphs devoted to the name of the grantor in recommendation 24. While it was important to have a means of identifying parties, it was unnecessary to prescribe specific identification procedures in the recommendations. It would be preferable to describe possible approaches in the commentary.

3. **Mr. Boettcher** (Germany) expressed support for the comments by the representative of the United States. He drew attention to recommendation 59 of the *Legislative Guide on Secured Transactions* (*Secured Transactions Guide*) concerning the grantor identifier where the grantor was a natural person. A simple recommendation along those lines should be included in the draft Registry Guide since the matter was basically addressed in each State's domestic legislation. Any further clarifications that

were deemed to be necessary could be provided in the commentary.

4. **Mr. Bellenger** (France) said that the commentary should emphasize the importance of giving careful consideration to the grantor identifier in the case of a natural person.

5. **Ms. Walsh** (Canada) said that she had taken note of the comments concerning the unduly prescriptive approach adopted in recommendation 24. As the footnote to the recommendation stated that it was merely illustrative, she agreed that the examples it contained should be moved to the commentary. She proposed replacing the content of subparagraphs (b), (c) and (d) with text in square brackets indicating that the enacting State should specify the manner in which the components of a grantor's name should be entered, in what order and in which designated fields. Subparagraph (e), which dealt with the question of the source to be consulted in order to determine the correct name of a grantor, was predicated on the assumption that people frequently used different names in different contexts. She proposed replacing that subparagraph with text in square brackets directing the enacting State to specify the official documents that would constitute authoritative sources of a grantor's name and to provide alternative references if a particular grantor, for example a grantor who was not a citizen of the enacting State, did not possess the documents designated as paramount. With regard to the note to the Commission at the end of subparagraph (e), she proposed inserting text in square brackets reminding the enacting State of the need to issue a rule covering the scenario in which the grantor's name changed.

6. **Mr. Castellano** (Italy) said he agreed that recommendation 24 was too detailed and that it was for individual enacting States to establish the applicable regulations. He therefore supported the

proposal by the representative of Canada to tackle the issue by means of text in square brackets. Drawing attention to the table contained in paragraph 56 of document A/CN.9/WG.VI/WP.54/Add.2, which clearly illustrated the main points, he proposed that the content of subparagraph (e) should be transferred to the commentary.

7. **The Chairperson**, summarizing the discussion on recommendation 24, said that the proposal was to leave subparagraph (a) of recommendation 24 unchanged, to include text in square brackets in subparagraphs (b), (c) and (d) indicating that the enacting State should specify the manner in which the components of a grantor's name should be entered, in what order and in which designated fields, and to move the content of subparagraph (e) to the commentary with an indication that it was merely illustrative and should be adjusted in the light of national legislation. In addition, text in square brackets should be added to the recommendation indicating that the enacting State should issue a rule covering the scenario in which the grantor's name changed.

8. **Mr. Dennis** (United States of America) said that, as noted at the previous meeting, the use of the terms "grantor" and "secured creditor" was not always consistent with their definition in the terminology section of the draft Registry Guide.

9. **Mr. Cohen** (United States of America) said that a group of interested parties had reviewed the use of the terms in the recommendations since the previous meeting. They had concluded that the context solution, namely requiring the reader to apply the definition that the context required, worked quite well for the term "grantor" but not for the term "secured creditor" because two separate and quite novel definitions of that term were used in the *Secured Transactions Guide*. Thus, one of the recommendations stated that the identifier of the secured creditor "or its representative" should be provided in the notice. A second concept was the distinction between the party to whom the security right was granted and the party listed in the notice, who might be described as the secured creditor of record. Hence, instructions to the reader to apply whatever definition suited the context might not be effective. When the reference was to an economic

secured creditor, no special assistance was required because that corresponded to the basic definition in the *Secured Transactions Guide*. However, when other situations arose in the draft Registry Guide, the reader should be offered the requisite guidance. For example, when the text was intended to refer to the actual secured creditor or its representative, the draft Registry Guide could use the phrase "the secured creditor or its representative". When the reference was to the party listed in the notice as the secured creditor, the draft Guide could either refer to "the person identified as the secured creditor in the notice" or it could use its own definition of the "secured creditor of record" or the "indicated secured creditor". He could provide the Commission with a list of recommendations in which the different terms should be used.

10. **Mr. Bazinas** (Secretariat) said that previous drafts had referred to the "secured creditor or its representative". Working Group VI had agreed that it was sufficient to refer to the "secured creditor" on the understanding that, based on the definition in the draft Registry Guide, the secured creditor could be either the economic secured creditor or its representative. He asked whether the representative of the United States considered that three concepts should be reflected in the draft Guide: the secured creditor, the actual secured creditor, who could be the economic secured creditor or its representative, and the secured creditor who was identified in the notice.

11. **Ms. Sabo** (Canada) said that, while she appreciated the efforts of the United States delegation to produce a more precise text, her delegation felt that the reader should be trusted to make the correct distinctions. As amendments would be required not only in the recommendations but also in the commentary, the risk of mistakes and inaccuracies was quite high.

12. **Mr. Cohen** (United States of America) said that he had not intended to query the decision taken by the Working Group concerning "the secured creditor or its representative" but simply to address problems that might arise for readers of the recommendations who were not familiar with the various concepts. The lack of any reference to a representative might lead to an incorrect conclusion, for example regarding recommendation 27

concerning the secured creditor identifier. His delegation was willing to submit a precise proposal on the matter to the Commission as soon as possible.

13. **The Chairperson** invited the delegation of the United States to submit a proposal.

14. **Ms. Walsh** (Canada) said she hoped that the United States would not propose different uses of terminology in the recommendations and the commentary. At the previous meeting, her delegation had proposed simply stating that the terms “grantor” and “secured creditor” generally had the same meaning as in the *Secured Transactions Guide* but, depending on the context, could also refer to the person identified or to be identified in the notice.

15. **Mr. Bazinas** (Secretariat) said that the Working Group had adopted recommendation 27 without a reference to the representative although a previous version had contained such a reference. It had adopted the later version on the understanding that it would be left to the secured creditor who made the registration to decide whether to enter its own name or the name of a representative.

16. **Ms. Walsh** (Canada) reminded the Commission of the footnote to the terminology section, which stated that the terminology and interpretation section of the Introduction to the *Secured Transactions Guide* applied also to the draft Registry Guide, except to the extent modified by the terminology and interpretation section of the draft Registry Guide. The problem that had given rise to the discussion was that in some cases the definitions of “grantor” and “secured creditor” in the latter section had replaced those in the *Secured Transactions Guide* rather than simply supplementing them. Her delegation had proposed the wording “the person identified or to be identified in the notice” to deal with that problem.

17. **Mr. Weise** (American Bar Association) noted that the representatives of the United States and Canada were both quite appropriately concerned to ensure clarity as to the meaning of the terms “grantor” and “secured creditor” and to avoid creating confusion. He suggested that an agreement might be reached through informal consultations on the best approach to adopt.

18. **Mr. Castellano** (Italy) expressed support for that suggestion.

19. **The Chairperson** urged the interested parties to engage in consultations on the matter and to present their conclusions to the Commission.

20. He invited the Commission to resume its discussion of the proposals regarding recommendation 24.

21. **Ms. Walsh** (Canada) said she understood that new subparagraph (b) would indicate in square brackets that the enacting State should have a rule specifying which components of a grantor’s name should be entered, in what order and in which designated fields; that subparagraph (c) would indicate in square brackets the authoritative sources for the grantor’s name; and that subparagraph (d) would indicate in square brackets that the enacting State should issue a rule covering the scenario in which the grantor’s name changed.

22. **The Chairperson** said that, if he heard no objections, he would take it that the Commission wished to adopt text along the lines indicated by the representative of Canada.

23. *Recommendation 24, as amended, was adopted.*

24. **The Chairperson** said he took it that the Commission wished to delete the phrase “either in the same notice or in separate notices” at the end of subparagraph (b) of recommendation 23.

25. *Recommendation 23, as amended, was adopted.*

26. **Mr. Bazinas** (Secretariat) noted that, in line with a proposal by the representative of Canada, recommendation 25 should be split into two subparagraphs in order to ensure consistency with recommendation 24. The first subparagraph would state that the grantor identifier was the name of the grantor, and the second subparagraph would state that the name of the grantor was the name specified in a current document, law or decree constituting the legal person.

27. **The Chairperson** said he took it that the Commission wished to adopt recommendation 25 as reworded along those lines.

28. *Recommendation 25, as amended, was adopted.*

29. **Mr. Bazinas** (Secretariat) said that recommendation 26 was presented in square brackets

because it was illustrative and the enacting State might wish to adjust its content to its legislation and to add other special cases. Subparagraph (a) dealt with persons who were subject to insolvency proceedings and the commentary explained that the grantor could be the person subject to insolvency proceedings or the insolvency representative. He drew attention to the note to the recommendation which suggested a number of amendments to deal with various eventualities. The note provided possible amended wording of subparagraph (b) as well as wording of a new subparagraph (c). Further to the amendment of recommendation 24, the Commission might also wish to consider whether recommendation 26 should be recast in more general terms and whether the various issues to which it gave rise should be dealt with in the commentary.

30. **Mr. Boettcher** (Germany) said that the points that were made in the note to the Commission were important and should be taken into consideration. However, if they were reflected in the recommendation, they would render its content unduly complicated although it was only intended to be illustrative. He therefore proposed that the points addressed in the note should be moved to the commentary.

31. **Mr. Bellenger** (France) said that he supported the proposal by the representative of Germany. The cases addressed in the note could not arise under French law or under the law of a large proportion of the States that would be using the draft Registry Guide.

32. **Ms. Walsh** (Canada) said that she agreed with the substance of the solutions proposed in the note to recommendation 26 and had no objection to the proposal that they should be moved to the commentary.

33. **Mr. Dennis** (United States of America) supported the views expressed by the previous speakers. Recommendation 26 should be revised to ensure consistency with the approach adopted in recommendation 24.

34. **The Chairperson** said he took it that the Commission agreed that recommendation 26 should contain text in square brackets instructing the enacting State to specify the grantor identifier in special cases. The examples set forth in the

recommendation, amended in light of the note to the Commission, would be included in the commentary.

35. *Recommendation 26, as amended, was adopted.*

The meeting was suspended at 10.50 a.m. and resumed at 11.15 a.m.

36. **The Chairperson** said he took it that the Commission wished to adopt recommendation 27.

37. *Recommendation 27 was adopted.*

38. **Mr. Bazinas** (Secretariat), introducing the note to the Commission concerning recommendation 28, said that the words “unless otherwise provided in the law” in subparagraphs (b) and (c) should be deleted. The reference to the description of encumbered assets “in a manner that reasonably allows their identification” in subparagraph (a) reflected the standard applied in the *Secured Transactions Guide*. If the words “unless otherwise provided in the law” were to be included, they might inadvertently give the impression that there were exceptions to that rule. The Commission might, however, wish to consider inserting words such as “unless otherwise indicated in the notice” in subparagraphs (b) and (c) to indicate that the parties could exclude certain assets that were part of a specific category.

39. **Mr. Weise** (American Bar Association) expressed support for the proposed deletion of the words “unless otherwise provided in the law” in subparagraphs (b) and (c). He felt it was unnecessary to add the words “unless otherwise indicated in the notice” because if the notice excluded certain assets, the description was, by definition, non-generic.

40. **The Chairperson** said he took it that the Commission wished to delete the words “unless otherwise provided in the law”.

41. *Recommendation 28, as amended, was adopted.*

42. **Mr. Bazinas** (Secretariat) said that subparagraph (c) of recommendation 29 was in square brackets because its implementation depended on the approach adopted by an enacting State to whether a registrant could choose the period of effectiveness of a notice and whether the notice should include a maximum amount for which the security right could be enforced. The intention was to leave the text in

square brackets in the final version together with the explanations contained in the footnotes.

43. **Mr. Dubovec** (National Law Center for Inter-American Trade) proposed replacing the words “an amendment notice that amends” in subparagraph (a) with “an amendment notice that changes”.

44. He further proposed adding the following phrase at the end of subparagraph (a): “and using the official search logic”. Thus, a search or a registration would be effective only if the searcher used the public registry record and applied the official search logic.

45. **Mr. Castellano** (Italy) said that while he did not oppose the second suggested amendment, he had reservations regarding the term “search logic”. He asked whether it had been used elsewhere in the draft Registry Guide. If not, it would be necessary to add an explanation in the commentary.

46. **Ms. Walsh** (Canada) said that she had similar reservations regarding the proposed amendment. Subparagraph (a) referred to a search using the grantor’s correct identifier as the search criterion. It was unclear why that criterion was inadequate.

47. **Mr. Dubovec** (National Law Center for Inter-American Trade) said that the term “search logic” was used in recommendation 35 concerning search results. However, he would not insist on his proposed amendment. The point could be dealt with in the commentary.

48. **Mr. Bazinas** (Secretariat) said that when the Commission considered the commentary to recommendation 35, it might wish to add some further clarifications regarding the term “search logic”.

49. **The Chairperson** said he took it that the Commission wished to replace the word “amends” with “changes” in subparagraph (a).

50. *Recommendation 29, as amended, was adopted.*

51. **The Chairperson** drew attention to paragraph 44 of document A/CN.9/781, which stated that if the Commission revised recommendation 26, paragraph 68 of document A/CN.9/WG.VI/WP.54/Add.2 should be replaced by three new paragraphs 68 to 70. The text of the paragraphs was presented in paragraph 44.

52. In light of the Commission’s decision regarding recommendation 28, paragraph 51 of document A/CN.9/781 would be deleted.

53. *Chapter IV of the draft Registry Guide, as amended, was adopted.*

54. **The Chairperson** asked whether any progress had been made in the consultations on recommendation 13 concerning the period of effectiveness of the registration of a notice, which had been left pending.

55. **Ms. Walsh** (Canada) said that the consultation group had produced a revised version of the recommendation. She recalled that concerns had been raised regarding option C and by extension option A because it was possible to circumvent the maximum period of time during which a notice could be registered by registering an amendment notice soon after the registration of the initial notice. The resulting extension of the maximum period was deemed to be incompatible with the policy of establishing a maximum statutory period of effectiveness. At the same time, a certain amount of flexibility should be maintained so that secured creditors could renew their registrations before the conclusion of the registration period of the initial notice. The proposed solution took the form of a requirement in option A and option C that the registration of an amendment notice extending the period of registration should be possible only within a short period of time prior to the expiry of the current period. The wording of the different options had also been made more consistent.

56. Beginning with subparagraph (a) of option A, she said that the consultation group proposed adding the words “for example five years” after “enacting State”. Revised subparagraph (b) would read: “The period of effectiveness of the registration may be extended within [a short period of time, such as six months] before its expiry.” Subparagraph (c) would be replaced with the following text: “The registration of an amendment notice extending the period of effectiveness extends the period for [the period of time specified in subparagraph (a)] beginning from the time of expiry of the current period.”

57. Turning to option B, she said that the group proposed inserting the words “by the registrant” after

“the period of time indicated” in subparagraph (a). Both option B and option C permitted an amendment notice to reduce the initial period of effectiveness. The group had taken the view that the provision for a reduction had little practical value inasmuch as a cancellation notice would achieve the same end. It therefore proposed to delete the words “or reduced” in subparagraph (b) and to explain the underlying logic in the commentary. The words “it expires” in subparagraph (b) would be replaced with “its expiry”. Subparagraph (c) would be replaced with the following text: “The registration of an amendment notice extending the period of effectiveness extends the period for the amount of time specified by the registrant in the amendment notice beginning from the time of expiry of the current period.”

58. With regard to option C, the group proposed, as in option B, inserting the words “by the registrant” after “the period of time indicated” in subparagraph (a). It further proposed deleting the words “such as” before “for example”. Amended subparagraph (b) would read: “The period of effectiveness may be extended within [a short period of time, such as six months] before its expiry by the registration of an amendment notice that indicates in the designated field a new period of effectiveness not exceeding [the maximum period of time specified in subparagraph (a)].” Subparagraph (c) would be replaced with text identical to that proposed for subparagraph (c) of option B.

59. **Mr. Boettcher** (Germany) proposed adding the words “specified in the law of the enacting State” after the words “such as six months” in subparagraph (b) of options A and C.

60. The Chairperson said he took it that the Commission wished to adopt the version of recommendation 13 proposed by the consultation group, as amended by the representative of Germany.

61. *Recommendation 13, as amended, was adopted.*

62. **The Chairperson** invited comments on chapter V concerning registration of amendment and cancellation notices contained in document A/CN.9/WG.VI/WP.54/Add.4, on the corresponding paragraphs of document A/CN.9/781 and on recommendations 30 to 33 contained in document A/CN.9/781/Add.1.

63. **Mr. Dubovec** (National Law Center for Inter-American Trade), referring to paragraph 67 of document A/CN.9/781, said that he was confused by the reference in the second sentence to rejection of the cancellation notice “if the registration number does not match the grantor identifier”. He submitted that the registration number could never be expected to match the grantor identifier, since they were two entirely different components of a registration notice. He proposed that the phrase should be amended to read “if the grantor identifier entered in the cancellation notice does not match the grantor identifier in the registered notice to which it relates”.

64. *It was so decided.*

65. *Recommendation 30 was adopted.*

66. **Mr. Weise** (American Bar Association) said that he supported the suggestion in the note to the Commission following recommendation 31 that both option A and option B should be revised to provide that a secured creditor named in multiple registered notices could amend or request the registry to amend “its information” rather than “the secured creditor information in all these notices”.

67. *Recommendation 31, as amended, was adopted.*

68. *Recommendation 32 was adopted.*

69. **Mr. Bazinas** (Secretariat) drew attention to subparagraph (a) of recommendation 33, which stated that the secured creditor “must register” an amendment or cancellation notice under certain circumstances. If the Commission decided to retain that wording, the commentary could explain that the words “must register” were intended to clarify that the secured creditor could not be considered as having discharged its obligation by merely “submitting” a notice without ensuring that it was actually registered and not rejected for any of the reasons mentioned in recommendation 8. The definition of “notice” in the terminology section referred to a communication in writing to the registry. Recommendation 6, subparagraph (a), stated that any person “may submit a notice for registration” and recommendation 9 stated that any person “may submit a search request”. Moreover, a “registrant” was defined in the terminology section, following the Commission’s amendment, as the person who submitted the prescribed registry notice form to the registry, and “registration” was defined

as the entry of information contained in a notice into the registry record. If the Commission decided to retain the wording “must register” rather than “must submit” an amendment or cancellation notice, it might wish to include a clarification in the commentary. The commentary could also explain that, while the word “submit” might be appropriate in the case of a paper notice, the word “register” would probably be more appropriate in the case of an electronic notice.

70. **Ms. Sabo** (Canada) said that her delegation wished to maintain the text of recommendation 33 as it stood.

71. *Recommendation 33 was adopted.*

72. *Chapter V of the draft Registry Guide, as amended, was adopted.*

73. **The Chairperson** invited comments on chapter VI concerning search criteria and search results contained in document A/CN.9/WG.VI/WP.54/Add.4, on the corresponding paragraphs of document A/CN.9/781 and on recommendations 34 and 35 contained in document A/CN.9/781/Add.1.

74. **Mr. Dubovec** (National Law Center for Inter-American Trade) said that the term “search logic” used in recommendation 35, subparagraph (b), was a technical term. He therefore proposed that the words “or search logic” in brackets should be deleted.

75. Paragraphs 47 and 48 of document A/CN.9/WG.VI/WP.54/Add.4 also referred to “search logic” and “registry system” as though they were interchangeable. He proposed replacing “search logic” in each case with “registry system”.

76. **Mr. Weise** (American Bar Association) proposed clarifying in the commentary that all references to the retrieval of information through searches denoted searches conducted by the registry office or pursuant to the system used by the registry office. As some registry offices permitted third parties to use their own data retrieval methodology, a search conducted by a third party might retrieve different information from that retrieved in a search conducted by the registry office.

The meeting rose at 12.30 p.m.

Finalization and adoption of the Technical Legislative Guide on the Implementation of a Security Rights Registry (*continued*)

Summary record of the 969th meeting, held at the Vienna International Centre, Vienna, on Monday, 15 July 2013, at 2 p.m.

[A/CN.9/SR.969]

Chairperson: Mr. Labardini Flores (Vice-Chairperson) (Mexico)

The meeting was called to order at 2.10 p.m.

Consideration of issues in the area of security interests

(a) Finalization and adoption of the Technical Legislative Guide on the Implementation of a Security Rights Registry (*continued*) (A/CN.9/WG.VI/WP.54 and Add.1-4; A/CN.9/781 and Add.1 and 2; A/CN.9/764 and 767; A/CN.9/XLVI/CRP.4)

1. **The Chairperson** invited the Commission to conclude its discussion of chapter VI of the draft Technical Legislative Guide on the Implementation of a Security Rights Registry (draft Registry Guide) and of recommendations 34 and 35.

2. *Recommendation 34 was adopted.*

3. **The Chairperson** said he took it that the Commission wished to delete the words “search logic” in brackets in recommendation 35.

4. *Recommendation 35, as amended, was adopted.*

5. **The Chairperson** said he took it that the Commission wished to endorse the proposal by the representative of the National Law Center for Inter-American Trade to replace the word “search logic” in paragraphs 46 and 47 of document A/CN.9/WG.VI/WP.54/Add.4 with a reference to the registry system, and the proposal by the representative of the American Bar Association for a clarification in the commentary of references to the retrieval of information through searches.

6. *It was so decided.*

7. *Chapter VI of the draft Registry Guide, as amended, was adopted.*

8. **The Chairperson** invited comments by the Commission on chapter VII concerning registration and search fees (A/CN.9/WG.VI/WP.54/Add.4), on

the corresponding paragraph of document A/CN.9/781 and on recommendation 36 contained in document A/CN.9/781/Add.1.

9. *Recommendation 36 was adopted.*

10. *Chapter VII of the draft Registry Guide was adopted.*

11. **The Chairperson** invited comments on annex II to the draft Registry Guide, which contained examples of registry forms (A/CN.9/781/Add.2).

12. **Mr. Dubovec** (National Law Center for Inter-American Trade) said that the amendment to the definition of “address” in the terminology section should be reflected in the registry forms. For instance, the slots in form I, section A.1, contained no reference to a street. He proposed that the slot in the second line, which referred to “P.O. Box (if any)” should be amended to read “Street or P.O. Box (if any)”. Moreover, as the Commission had deleted the words “that would be effective for communicating information” from the definition of “address”, the slot which referred to “Electronic or other address (if any)” should be amended to read “Electronic address (if any)”.

13. Where the grantor was a legal person, there was a slot for “Additional information about the grantor”. Neither the *Legislative Guide on Secured Transactions (Secured Transactions Guide)* nor the draft Registry Guide required additional information about a grantor that was a legal person. He therefore proposed that the slot in question should be deleted.

14. Lastly, he said that users might find the check boxes preceding “Natural person” and “Legal person” in all the forms confusing. For instance, if information was inserted in the slots relating to “Natural person” but the check box had not been checked, the registry would presumably not be required to reject the form. He therefore proposed

that the check boxes should be deleted, at least from the initial notice. The check boxes could be maintained, however, in slot 3 of the forms concerning special cases relating to grantors, but he proposed that the text should be enclosed in square brackets.

15. **Ms. Walsh** (Canada) said that she supported the proposal to enclose the text in slot 3 concerning the grantor in square brackets. She further proposed inserting a footnote containing a reference to the relevant part of the commentary and the possible need to add other special cases.

16. She also supported the proposal to delete the check boxes before “Natural person” and “Legal person”.

17. She proposed deleting sections A.2 and B.2 which were to be used only if there was more than one grantor or secured creditor. They could be replaced by a footnote indicating that in cases where there was more than one grantor or secured creditor the enacting State should include slots in its paper or electronic forms that enabled registrants to insert the required additional information.

18. **The Chairperson** said he took it that the Commission agreed on the following amendments to form I (Initial notice): the check boxes before “Natural person” and “Legal person” in sections A and B would be deleted; the references to “P.O. Box (if any)” in sections A and B would be amended to read “Street or P.O. Box (if any)”; the references to “Electronic or other address (if any)” in sections A and B would be amended to read “Electronic address (if any)”; the “Additional information about the grantor” slot following “Legal person” in section A would be deleted; the slot concerning special cases relating to grantors in section A would be enclosed in square brackets and a footnote containing a reference to the commentary would be inserted; sections A.2 and B.2 would be deleted and replaced with the footnote proposed by the representative of Canada.

19. *It was so decided.*

20. **Ms. Walsh** (Canada) pointed out that similar amendments should be made to the corresponding boxes or slots in form II concerning amendment notices.

21. *It was so agreed.*

22. **Mr. Weise** (American Bar Association) said that section J of form II entitled “Extend or reduce duration of registration” should be amended in the light of the amendments adopted at the previous meeting to recommendation 13. The effectiveness of the notice would depend on whether the enacting State was applying option A, B or C.

23. **Ms. Walsh** (Canada) proposed deleting the words “or reduce” in the title.

24. **Mr. Bazinas** (Secretariat) noted that the footnote to section J indicated that the section related only to cases involving options B or C of what was now recommendation 13.

25. **Mr. Weise** (American Bar Association) said that, in his view, option A should be covered by section J because a secured creditor needed to be able to extend the period of effectiveness of the notice under that option. With regard to option C, he felt that it would be safer for the registry office to calculate the fixed extension period from the date of expiry of the existing period.

26. **Ms. Walsh** (Canada), referring back to the initial notice, said that section D of form I concerning duration of registration stated that the notice would be effective until a certain date. Some registry systems specified instead that the notice would be effective for a certain period such as a certain number of years. She therefore proposed amending the wording of section D of form I to read: “This notice shall be effective for a period of [x years and x months] until (dd/mm/yyyy)”. It might also be preferable in section J of form II to replace “This notice shall be effective until (dd/mm/yyyy)” with “This notice shall be effective for an extended period of [x years and x months]”. She agreed that the automatic statutory period that the enacting State had proclaimed under option A should appear on the form. However, as it would be automatically generated, the registrant would be unable to enter any further information.

27. **Mr. Bazinas** (Secretariat) said that the footnote to section D of form I could be amended to read: “If an enacting State chooses option A of recommendation 13, the duration of the registration will be automatically generated by the registry.” The amended footnote to section J of form II might read:

“If an enacting State chooses option A of recommendation 13, the duration of the extension will be automatically generated by the registry.”

28. **Mr. Weise** (American Bar Association) expressed support for the proposals by the representative of Canada and the secretariat. He asked whether dates or extension periods could be automatically generated in a non-electronic system so that they were immediately available to searchers. He also proposed expanding the footnotes to indicate that, where an enacting State chose option C, the software should be programmed to reject a period of years that was longer than the maximum period permitted by the State.

29. **Ms. Walsh** (Canada) expressed support for that proposal. With regard to the automatic generation of dates and extension periods, she suggested that a note stating that “The above field is for registry office use only” might be entered in the relevant sections of the forms.

30. **The Chairperson** said he took it that the Commission wished to amend the wording of section D of form I to read: “This notice shall be effective for a period of [x years and x months] until (dd/mm/yyyy)”. The footnote to section D would be amended to read: “If an enacting State chooses option A of recommendation 13, the duration of the registration will be automatically generated by the registry.” The footnote would also indicate the measures to be taken where an enacting State chose option C.

31. With regard to section J of form II, he took it that the Commission wished to delete the words “or reduce” in the title and to amend the text of the slot to read: “This notice shall be effective for an extended period of [x years and x months] until (dd/mm/yyyy)”. The footnote to section J would read: “If an enacting State chooses option A of recommendation 13, the duration of the extension will be automatically generated by the registry.” It would also indicate that, where an enacting State chose option C, the software should be programmed to reject a period of years that was longer than the maximum period permitted by the State.

32. **Ms. Walsh** (Canada) proposed that both form I and form II should specify the maximum period for option C.

33. **Mr. Weise** (American Bar Association) said that an electronic system would automatically reject an unacceptable period. In the case of a paper system, registrants should be alerted to the legally prescribed period. He suggested that the secretariat should draft three alternatives in brackets for section D of form I and section J of form II, indicating the provisions of recommendation 13 relating to options A, B and C.

34. **Mr. Castellano** (Italy) said he agreed that all three options should be described in the forms. In particular, the prescribed maximum period should be specified wherever relevant.

35. **The Chairperson** said he took it that the Commission wished to revise section D of form I and section J of form II to reflect options A to C of recommendation 13. The commentary would deal with policy issues that might arise in the case of a paper system where registrants entered a period that exceeded the legally prescribed period.

36. *It was so agreed.*

37. **The Chairperson** invited comments on form III concerning cancellation notices.

38. **Mr. Dubovec** (National Law Center for Inter-American Trade) proposed replacing the text in the second slot, which read “Registration No. of initial notice to be cancelled”, with the following text based on recommendation 32: “Registration No. of the initial notice to which the cancellation relates”.

39. *It was so decided.*

40. **The Chairperson**, turning to form IV concerning amendment notices pursuant to a judicial or administrative order, said that “Registration No. of initial notice” would be amended to read “Registration No. of the initial notice to which the amendment relates” and the check boxes before “Natural person” and “Legal person” in sections C and D would be deleted. “P.O. Box (if any)” in sections A and D would be amended to read “Street or P.O. Box (if any)”. “Electronic or other address, if any” in sections A and D would be amended to read “Electronic address (if any)”. The slot “Additional information about the grantor” in section D would be deleted. The slot on special cases in section D would be enclosed in square

brackets and a footnote referring to the relevant commentary would be inserted. The words “or reduce” would be deleted from the text in section G and the footnote would be amended as previously agreed.

41. **Mr. Dubovec** (National Law Center for Inter-American Trade) said that a grantor would be unlikely to request an extension of the period of effectiveness under the circumstances addressed by form IV. He therefore proposed that “Extend or reduce” in section G should be deleted.

The meeting was suspended at 3.35 p.m. and resumed at 4.05 p.m.

42. **The Chairperson** proposed that section G of form IV as a whole should be deleted.

43. *It was so decided.*

44. **The Chairperson**, referring to form V concerning cancellation notices pursuant to a judicial or administrative order, said that amendments similar to those in the case of form IV would be made to the address and electronic address slots in section A. In addition, “Registration No. of initial notice to be cancelled” would be amended to read “Registration No. of the initial notice to which the cancellation relates”.

45. Turning to form VI concerning search request forms, he said that the check boxes before “Natural person” and “Legal person” should be deleted.

46. **Mr. Dubovec** (National Law Center for Inter-American Trade) proposed that a separate slot should be included for searchers who submitted a paper search request in which they would indicate the person and address to which the results of the search should be mailed.

47. *It was so agreed.*

48. **The Chairperson** invited comments on form VII concerning search results.

49. **Mr. Dubovec** (National Law Center for Inter-American Trade) said that, according to the footnote, a search result might show all the information in the retrieved notices depending on the design of the registry. Recommendation 35, subparagraph (a), on the other hand, required the registry to set forth all information that matched the

search criterion. He proposed amending the footnote to reflect the content of recommendation 35.

50. **Ms. Walsh** (Canada) expressed support for that proposal.

51. **Mr. Bazinas** (Secretariat) said that the Working Group had discussed, as a matter of presentation, whether all the results of a search request should be listed immediately or whether a table permitting additional searches should be provided.

52. **Ms. Walsh** (Canada) said that the latter approach would be appropriate in an electronic system, where the searcher could click on an item to obtain additional information. In a paper system, the searcher would need to return to the registry to seek further details. The footnote could indicate that the presentation of the information required by recommendation 35 might differ depending on the registry system.

53. **Mr. Dennis** (United States of America) said that the search result provided to the searcher should not necessitate a second request for more detailed information. The footnote should indicate the approach to be adopted in both electronic and paper systems.

54. **The Chairperson** said that the footnote would be amended to take account of the various proposals made.

55. He invited comments on form VIII concerning rejection of a registration or a search request.

56. **Mr. Weise** (American Bar Association), noting that there was just one check box in section B.1 for “The identifier or address of the grantor” and for “The identifier or address of the secured creditor”, proposed that there should be two check boxes in each case, one for the identifier and the other for the address.

57. Section B.2 contained the check box “Relevant information for addition, deletion or change”, which implied that the registry would evaluate which information was relevant. He proposed deleting the word “Relevant” and providing separate check boxes for “Addition”, “Deletion” and “Change”.

58. **Mr. Dubovec** (National Law Center for Inter-American Trade) proposed that the text “The

registration number of the initial notice” in section B.2 should be amended to read “The registration number of the initial notice to which the amendment relates”. “The registration number of an initial notice” in section B.3 should also be amended to read “The registration number of the initial notice to which the cancellation relates”.

59. **Mr. Bazinas** (Secretariat) said that, in line with recommendation 32, which did not contain the word “initial”, the amended version should read: “The registration number of the notice to which the cancellation relates”.

60. **Ms. Walsh** (Canada) said that the registration number was always that assigned to the initial notice.

61. **Mr. Dubovec** (National Law Center for Inter-American Trade) said that, while the addition of the word “initial” was redundant because “registration number” was defined in the terminology section as “a unique number allocated to an initial notice by the registry”, he agreed with the representative of Canada that it should be included in the amended version of section B.3.

62. **The Chairperson** said he took it that the Commission wished to adopt the amendments proposed by the representatives of the American Bar Association and the National Law Center for Inter-American Trade.

63. *It was so decided.*

64. **The Chairperson**, referring to form II concerning amendment notices, said that

“Registration No. of initial notice” should be amended to read “Registration No. of the initial notice to which the amendment relates”.

65. *Annex II concerning examples of registry forms, as amended, was adopted.*

66. **The Chairperson** asked whether agreement had been reached in the informal consultations on how to ensure clarity throughout the draft Registry Guide as to the meaning of the terms “grantor” and “secured creditor”.

67. **Mr. Dennis** (United States of America) said that the delegations of Germany and the United States had circulated a proposal in English to all delegations.

68. **Ms. Sabo** (Canada) proposed that discussion of the proposal should be deferred until a version was available in all working languages.

69. *It was so agreed.*

70. **The Chairperson** drew attention to document A/CN.9/XLVI/CRP.4, which contained the draft decision concerning the adoption of the UNCITRAL Guide on the Implementation of a Security Rights Registry.

71. The decision concerning the adoption of the UNCITRAL Guide on the Implementation of a Security Rights Registry was adopted.

The meeting rose at 5 p.m.

Finalization and adoption of the Technical Legislative Guide on the Implementation of a Security Rights Registry (*continued*)

Summary record of the 970th meeting, held at the Vienna International Centre, Vienna, on Tuesday, 16 July 2013, at 9.30 a.m.

[A/CN.9/SR.970]

Chairperson: Mr. Labardini Flores (Vice-Chairperson) (Mexico)

The meeting was called to order at 9.55 a.m.

Consideration of issues in the area of security interests

(a) Finalization and adoption of the Technical Legislative Guide on the Implementation of a Security Rights Registry (*continued*)
(A/CN.9/WG.VI/WP.54 and Add.1-4;
A/CN.9/781 and Add.1 and 2; A/CN.9/764 and 767; A/CN.9/XLVI/CRP.6)

1. **The Chairperson** invited the Commission to consider the proposal concerning the terminology used in the Legislative Guide on the Implementation of a Security Rights Registry (draft Registry Guide) submitted by the delegations of Germany and the United States of America contained in document A/CN.9/XLVI/CRP.6.

2. **Mr. Cohen** (United States of America) said that the proposal focused on the definitions of the terms “grantor” and “secured creditor” in the terminology section of document A/CN.9/781/Add.1. The Commission had noted that the manner in which the terms were used in the draft Registry Guide sometimes corresponded to those definitions but at other times reflected the definition contained in the *Legislative Guide on Secured Transactions (Secured Transactions Guide)*. It had been suggested that readers should be alerted to the problem by stating that the terms could have either meaning depending on the context. An alternative suggestion had been to offer guidance to readers by presenting two sets of definitions. In the case of a “secured creditor”, for example, one definition would refer to the person to whom the right was granted and a second definition would refer to the person indicated in the notice as the secured creditor. The proposal by Germany and the United States was a compromise between the two suggestions. While readers would be trusted to make the right decision with respect to

“grantor” because the intended meaning of the term was usually discernible with little difficulty from the context, the same was not true of the term “secured creditor”.

3. As a result of informal consultations prior to the meeting, agreement had been reached on a simpler approach to the implementation of the proposal. It was now proposed to delete from the draft Registry Guide the definitions of “grantor” and “secured creditor” so that when the terms were used in the draft Guide they would correspond to the definitions in the *Secured Transactions Guide*. The term “secured creditor” in recommendations 3, subparagraph (g), 18, 19 and 31 would be replaced with “the person identified in the notice as the secured creditor”. Lastly, a statement would be inserted in the commentary, adjacent to the terminology section, indicating that the terms “grantor” and “secured creditor” were used in the commentary as defined in the *Secured Transactions Guide* but that there might be some instances in which, depending on the context, they had a narrower meaning.

4. **Mr. Boettcher** (Germany) said that the initial plan to define both “grantor” and “actual grantor” had proved to be unduly complicated. He believed that the new drafting proposals submitted by the representative of the United States provided a workable solution.

5. **Mr. Walsh** (Canada) also welcomed the proposals as a solution that was not unduly complicated.

6. She proposed that the term “grantor” in recommendation 18, subparagraph (b), should be replaced with “the person identified in the notice as the grantor”.

7. **Mr. Tosato** (Italy), **Mr. Maradiaga** (Honduras) and **Ms. Talero** (Colombia) expressed support for

the proposal by the representatives of Germany and the United States.

8. **Mr. Bazinas** (Secretariat) asked whether the amended version of the term “secured creditor” should be used with respect to recommendations 30, 32 and 33 in addition to recommendation 31. Recommendations 30 and 32 did not actually mention a secured creditor but the commentary contained a lengthy discussion of amendments and cancellations by secured creditors. He asked whether the commentary should refer to the definition in the *Secured Transactions Guide* or to “the person identified in the notice as the secured creditor”.

9. **Mr. Cohen** (United States of America) said that the key policy was expressed in recommendation 19 concerning the amendment of information in the public registry record. Following the amendment proposed by the delegations of Germany and the United States, that recommendation would refer to an amendment by “the person identified in the notice as the secured creditor”. A similar policy was applicable to recommendation 31 concerning global amendments of secured creditor information in multiple notices. If a secured creditor was mentioned in the commentary on recommendations 30 and 32, the reference would presumably be to the person entitled to make an amendment and hence to “the person identified in the notice as the secured creditor”. No amendment to recommendation 33 was required because it listed duties of the secured creditor owed, in particular, to the grantor. The secured creditor should not be able to waive those obligations simply by arranging for somebody else to be the party listed in the notice.

10. **Mr. Tosato** (Italy) expressed support for the proposal to clarify in the commentary which definition of “secured creditor” was used in the various recommendations.

11. **Ms. Walsh** (Canada) stressed that the term “the person identified in the notice as the secured creditor” would not need to be used throughout the commentary. The meaning should be discernible from the context.

12. **The Chairperson** said he took it that the Commission agreed to delete the terms “grantor”

and “secured creditor” from the terminology section; to replace the term “secured creditor” in recommendations 3, subparagraph (g), 18, 19 and 31 with “the person identified in the notice as the secured creditor”; to indicate in the commentary that the terms “grantor” and “secured creditor” were generally used as defined in the *Secured Transactions Guide* but that there might be some instances in which, depending on the context, they referred to the person identified in the notice; and to replace the term “grantor” in recommendation 18, subparagraph (b), with “the person identified in the notice as the grantor”.

13. *It was so decided.*

14. *The UNCITRAL Legislative Guide on the Implementation of a Security Rights Registry, as amended, was adopted.*

(b) Progress report of Working Group VI

(A/CN.9/764 and 767; A/CN.9/WG.VI/WP55 and Add.1-4)

15. **The Chairperson** invited the secretariat to introduce the progress report of Working Group VI.

16. **Mr. Bazinas** (Secretariat) said that the reports of the twenty-second and twenty-third sessions of Working Group VI were contained in documents A/CN.9/764 and 767. Paragraphs 63 and 64 of document 767 summarized the Working Group’s exchange of views on the draft Model Law on Secured Transactions (draft Model Law). The Commission had tasked the Working Group with preparing a model law that was consistent with UNCITRAL texts on secured transactions and based on the general recommendations of the *Secured Transactions Guide*. The secretariat had prepared on behalf of the Working Group the preliminary draft Model Law contained in documents Group A/CN.9/WG.VI/WP55 and Add.1-4, which consisted essentially of a synopsis of the non-asset-specific recommendations contained in the *Secured Transactions Guide*.

17. According to the Commission, the model law should be simple, short and concise inasmuch as the *Secured Transactions Guide* ran to 450 pages and contained some 250 recommendations. At the same time, however, it should be consistent with all UNCITRAL texts on secured transactions.

Fulfilment of the two requirements was not an easy task. If core commercial assets were excluded in order to ensure simplicity, different laws might be applicable to what was basically one and the same transaction. After the twenty-third session of the Working Group in April 2013, the secretariat had engaged in extensive consultations and research, and was currently redrafting the draft Model Law. Although the new draft contained less than half of the *Secured Transactions Guide* recommendations, it covered all the main categories of assets.

18. To sum up, Working Group VI had taken note of the Commission's mandate and the secretariat was preparing a revised version of the draft Model Law based on the Working Group's instructions. The Commission was scheduled to discuss future work priorities later in the session, taking into account the agendas of all the Working Groups. The Commission might therefore wish to take note at the current meeting of the progress report of Working Group VI and confirm its decision to prepare a draft Model Law, subject to further discussions concerning overall priorities.

19. **Ms. Sabo** (Canada) said that Working Group VI was proceeding in the right direction and producing a draft Model Law that would complement the *Secured Transactions Guide*. The Commission should, in her view, accord priority to that assignment.

20. **Mr. Bellenger** (France) welcomed the announcement by the secretariat that it was preparing a somewhat shorter version of the draft Model Law. The document should focus on enunciating a number of guiding principles to assist States whose legislation needed to be updated.

21. **Mr. Dennis** (United States of America) said that the draft Model Law would be particularly helpful for countries with emerging economies. Considerable progress in the enactment of secured transactions legislation had been made, for example, in Latin America, partly with the assistance of the Model Inter-American Law on Secured Transactions produced by the Organization of American States.

22. He agreed with the secretariat's comments on the scope of the draft Model Law, which should focus on assets that were economically valuable in the context of secured transactions.

23. **Mr. Dashe** (Kenya) said that Kenya, as an emerging economy, currently lacked legislation on secured transactions. It therefore looked forward to receiving and applying the draft Model Law.

24. **Ms. Talero** (Colombia) said that Colombia had recently updated its legislation on secured transactions with the assistance of the *Secured Transactions Guide*. However, in view of the scale of the Guide, access to a brief and concise model law would have been extremely helpful.

25. **Mr. Özsunay** (Turkey) said that the draft Model Law would usefully contribute, like the UNCITRAL Model Law on International Commercial Arbitration, to the harmonization of national legislation.

26. **The Chairperson** said that the Commission took note of the progress made by Working Group VI in drafting a Model Law on Secured Transactions and stressed the importance of the project in assisting jurisdictions throughout the world in enacting relevant legislation. Subject to the outcome of the forthcoming discussion of the priorities to be set by the Commission regarding future work, he took it that the Commission wished to confirm its decision that Working Group VI should continue its work on the draft Model Law.

27. *It was so decided.*

(c) Coordination in the field of security interests

28. **The Chairperson** invited the secretariat to introduce agenda item 5 (c) concerning coordination in the field of security interests.

29. **Mr. Bazinas** (Secretariat) said that one of the matters to be considered by the Commission under item 5 (c) concerned coordination with the European Commission on the law applicable to third-party effects of assignments. The issue had been addressed in a draft of the European Commission Regulation establishing uniform rules for determining the law applicable to contractual obligations in the European Union, a Regulation which had replaced the 1980 Rome Convention on the law applicable to contractual obligations. The draft had included an article which implemented to a large extent the approach of UNCITRAL in the United Nations Convention on the Assignment of Receivables in International Trade and in the

Secured Transactions Guide, namely by invoking the law of the assignor's location. However, that draft provision had not been included in the final text. The European Commission had requested the British Institute of International and Comparative Law to carry out a study of the matter and was currently preparing a report in the light of its results. The secretariat had attended a coordination meeting with the European Commission in Brussels, pursuant to the Commission's mandate, with a view to promoting the adoption of a consistent approach but one that was flexible enough to meet the requirements of parties to all categories of transactions. The Commission might wish to take note of the coordination efforts and confirm its mandate to the secretariat with a view to reaching an agreement on a consistent approach to the law applicable to third-party effects of assignments. A further meeting with the European Commission might be held in late 2013 or early 2014, at which a draft report by the European Commission would be discussed. The report would analyse the issues involved but was unlikely to adopt a position prior to the elections to the European Parliament scheduled for June 2014.

30. A second matter to be considered was coordination with the World Bank. In 2011 UNCITRAL and the World Bank had prepared a joint set of principles concerning creditor rights and insolvency. A similar effort was under way to prepare a joint set of principles on secured transactions or secured creditor rights, which would include the recommendations of the *Secured Transactions Guide*. An informal draft was currently

being discussed. When a more mature draft was available, arrangements might be made for a meeting of experts to discuss the details. The Commission would, of course, have an opportunity to discuss the text in due course. In the meantime, it might wish to confirm the secretariat's mandate to coordinate with the World Bank on the issue. He expressed his appreciation of the assistance provided by the World Bank and indeed the World Bank Group as a whole to States in the field of secured transactions which was consistent to a large extent with the recommendations of UNCITRAL.

31. **Ms. Sabo** (Canada), **Mr. Dennis** (United States of America) and **Mr. Boettcher** (Germany) thanked the secretariat for its outstanding work and expressed strong support for the continuation of its mandate to coordinate with the European Commission and the World Bank.

32. **Mr. Tata** (World Bank) thanked the Commission for its excellent work in the area of secured transactions, which was of great assistance to the World Bank and the World Bank Group. He also thanked the secretariat for its efforts to integrate the results of the Commission's work in that area into the guidance that the World Bank provided to its member States.

33. **The Chairperson** said he took it that the Commission wished to confirm the secretariat's mandate and to encourage it to pursue its work in the area of coordination with unflagging enthusiasm.

34. *It was so decided.*

The meeting rose at 11.10 a.m.

Finalization and adoption of the Technical Legislative Guide on the Implementation of a Security Rights Registry (*continued*)

Summary record of the 971st meeting, held at the Vienna International Centre, Vienna, on Tuesday, 16 July 2013, at 2 p.m.

[A/CN.9/SR.971]

Chairperson: Mr. Labardini Flores (Vice-Chairperson) (Mexico)

The meeting was called to order at 2.10 p.m.

Consideration of issues in the area of security interests

(a) Finalization and adoption of the Technical Legislative Guide on the Implementation of a Security Rights Registry (*continued*)

(b) Progress report of Working Group VI (*continued*)

(c) Coordination in the field of security interests (*continued*) (A/CN.9/WG.VI/ WP.54 and Add.1-4; A/CN.9/WG.VI/ WP.55 and Add.1-4; A/CN.9/764, 767, 781 and Add.1 and 2; A/CN.9/XLVI/CRP.1/Add.5-7 and 16)

1. **The Chairperson** invited the secretariat to introduce the section of the draft report concerning the finalization and adoption of the UNCITRAL Guide on the Implementation of a Security Rights Registry.

2. **Mr. Bazinas** (Secretariat) said that the first part of the draft report was contained in document A/CN.9/XLVI/CRP.1/Add.5. The second part was contained in document A/CN.9/XLVI/CRP.1/Add.6, which would be distributed shortly. An oral report on the discussion at the previous meeting would be presented and reflected in the record.

3. **The Chairperson** invited comments on document A/CN.9/XLVI/CRP.1/Add.5.

4. **Mr. Weise** (American Bar Association) noted that paragraphs 6 and 9 referred to the terms “grantor” and “secured creditor”, concerning which a number of decisions had been adopted at the previous meeting. He asked whether a footnote should be inserted to draw attention to those decisions.

5. **Mr. Bazinas** (Secretariat) said that paragraphs 6 and 9 could be deleted. Alternatively, the words “the Commission agreed” in the two paragraphs could be amended to read “the Commission considered a proposal” and a cross-reference could be inserted to the later part of the report in which the Commission’s decisions were reflected.

6. **Mr. Dennis** (United States of America) and **Mr. Boettcher** (Germany) expressed a preference for the second option, since it was helpful to preserve the drafting record.

7. *It was so agreed.*

8. **Mr. Dubovec** (National Law Center for Inter-American Trade), referring to the phrase in paragraph 12 which stated that coordination among registries would only be required if the secured transactions law “excluded” some types of asset. His organization had actually pointed out that coordination would be necessary only if such assets were “included” in the secured transactions law because it was only in those circumstances that coordination would be required between different regimes. He therefore proposed that the word “excluded” should be replaced with “included”.

9. *It was so decided.*

10. **Mr. Dennis** (United States of America) proposed that paragraph 15, subparagraph (c), should be amended to read: “Recommendation 8, subparagraph (a), should be revised to refer to ‘the information’ not entered in ‘each required designated field’.”

11. *It was so decided.*

12. **Mr. Bazinas** (Secretariat) suggested that the last sentence in paragraph 19, according to which

the Commission deferred a decision on recommendation 13 until to a later stage in the session, should be deleted and replaced with the paragraph setting out the relevant decision in document A/CN.9/XLVI/CRP.1/Add.6.

13. *It was so decided.*

14. **Mr. Bazinas** (Secretariat) said that a new paragraph would be inserted after paragraph 25 to reflect the Commission's decisions regarding the terms "grantor" and "secured creditor". Paragraph 25 referred to recommendations 23 to 27, which was correct in terms of the drafting history. However, it might be preferable to refer to "certain recommendations" since the relevant numbers had changed.

15. **Mr. Weise** (American Bar Association) expressed support for the amendment proposed by the secretariat.

16. *It was so decided.*

17. *The section of the draft report contained in document A/CN.9/XLVI/CRP.1/Add.5, as amended, was adopted.*

18. **The Chairperson** invited the secretariat to present an oral report on the outcome of the previous meeting.

19. **Mr. Bazinas** (Secretariat) said that the report he was about to present was contained in document A/CN.9/XLVI/CRP.1/Add.7, which would be distributed later that day.

20. During the earlier part of the meeting the Commission had discussed the terms "grantor" and "secured creditor" in the draft Registry Guide. He read out the paragraph reflecting the discussion, which would eventually be inserted after paragraph 25 of document A/CN.9/XLVI/CRP.1/Add.5.

21. **Mr. Dennis** (United States of America) said that, according to subparagraph (e), the commentary to recommendations 19, 30 and 32 should clarify that the person identified in the notice as the secured creditor would be the person authorized to amend the information in a registered notice. As that point was already made in recommendation 19, a clarification in the commentary would be necessary only in the case of recommendations 30 and 32. He proposed an amendment to the effect that the

commentary should clarify the matter "where appropriate".

22. **Ms. Walsh** (Canada) said that her delegation considered that no clarification was necessary, especially in the case of recommendations 30 and 32 which contained no reference to the secured creditor. The Commission should not give the impression that it was deciding who should be authorized to make an amendment or cancellation. It would be preferable to incorporate a general statement in the commentary to the effect that the term "secured creditor" meant either the person who received the security right or the person identified in the notice as the secured creditor, depending on the context. She therefore proposed that subparagraph (e) should be deleted.

23. **Mr. Dennis** (United States of America) said he understood that the commentary would merely refer to the rule set forth in recommendation 19 concerning the person authorized to make an amendment. According to subparagraph (c), recommendation 19 would refer to "the person identified in the notice as the secured creditor".

24. **Ms. Walsh** (Canada) pointed out that recommendations 30 and 32 did not refer to the person authorized to make an amendment.

25. **Mr. Bazinas** (Secretariat) said that the content of subparagraph (e) was the logical consequence of the decision in subparagraph (c) to replace the term "secured creditor" in recommendations 3, subparagraph (g), 18, 19 and 31 with "the person identified in the notice as the secured creditor". While recommendations 30 and 32 did not use the term "secured creditor", they dealt with amendments and cancellations. The commentary would therefore be required to refer, where appropriate, to the secured creditor as the person authorized to make the amendments and cancellations.

26. **Ms. Sabo** (Canada) reiterated her delegation's belief that a general explanation in the terminology section of the contextual meanings of the term "secured creditor" should be sufficient, and that instructions in the draft report regarding various amendments to the commentary were unnecessary.

27. **Mr. Bazinas** (Secretariat) said that the commentary on recommendations 30 and 32 would need to include a cross reference to the term "secured

creditor” as understood in recommendation 19 in order to clarify matters for the reader.

28. **Ms. Walsh** (Canada) said that recommendations 30 and 32 did not refer to the obligations of the secured creditor. They merely specified the type of information that was required in an amendment or cancellation notice.

29. **Mr. Dennis** (United States of America) said that subparagraph (e) reflected, in his view, the decision taken at the previous meeting. However, if it was likely to cause confusion, his delegation was willing to defer to the arguments presented by the representatives of Canada.

30. **Mr. Bazinas** (Secretariat) suggested that the references to recommendations 30 and 32 in subparagraph (e) should be deleted. He pointed out, however, that the commentary on recommendations 30 and 32 in document A/CN.9/WG.VI/WP.54/Add.4 contained several references to the secured creditor. A cross reference to the commentary in the terminology section could be inserted the first time the term was used.

31. **The Chairperson** said he took it that the Commission wished to delete the references to recommendations 30 and 32 in subparagraph (e) and to draw attention, where appropriate, to the commentary adjacent to the relevant paragraphs of the terminology section.

32. *It was so decided.*

33. **Mr. Bazinas** (Secretariat) read out the section of document A/CN.9/XLVI/CRP.1/Add.7 to be distributed later that day entitled “Progress report of Working Group VI and future work”.

34. **Mr. Dennis** (United States of America) proposed replacing the words “It was widely felt that”, which were used on two occasions, with “It was the unanimous view that”.

35. **Mr. Bazinas** (Secretariat) suggested replacing “It was widely felt that” with “It was agreed that”.

36. *It was so decided.*

37. **Mr. Dennis** (United States of America) proposed adding a sentence to the effect that the scope of the draft Model Law should include all economically valuable assets.

38. **Ms. Sabo** (Canada) said that her delegation was unable to support the latter proposal since further discussion of the matter was required.

39. **Mr. Tosato** (Italy) said that no discussion had taken place at the previous meeting of the economic relevance of the assets to be included in the scope of the draft Model Law. It had been agreed that the draft Model Law should be simple, short and concise and should focus on core commercial assets.

40. **Mr. Bazinas** (Secretariat) suggested that the additional sentence proposed by the representative of the United States might be reflected in the draft report as the statement of a particular viewpoint. The sentence might read: “It was stated that the scope of the draft Model Law should include all economically valuable assets.”

41. The last sentence of the general introduction in the first paragraph might be expanded to state that the secretariat was preparing a revised version of the draft Model Law that would implement the mandate given by the Commission to the Working Group and would cover core commercial assets. The secretariat had stated at the previous meeting that if core commercial assets were excluded, different regimes might be applicable to the same transactions.

42. **Mr. Dennis** (United States of America) said that the brief reference to “core commercial assets” could be read as suggesting either a very narrow or a very broad mandate. It would be helpful if an example of what the term denoted could be provided.

43. **Mr. Bazinas** (Secretariat) said that the following phrase might be inserted after “core commercial assets”: “such as equipment, inventory, receivables, bank accounts, negotiable instruments and negotiable documents”. If a specific example were to be provided, it might create a certain imbalance in the text.

44. **Ms. Rojas** (Mexico) expressed support for the proposal by the representative of the United States to insert a sentence stating that the scope of the draft Model Law should include all economically valuable assets.

45. **Ms. Sabo** (Canada) said that her delegation’s concern was that the draft report might prejudice the outcome of the discussions to be held in Working

Group VI. It was opposed to the inclusion of any examples after “core commercial assets”.

46. **Mr. Dennis** (United States of America) said that the use of the word “core” might prejudice the outcome of the discussions. It could be interpreted by some as denoting a broad range of assets and by others as denoting quite the opposite. He therefore proposed that it should be replaced with “economically valuable assets” or, alternatively, that an illustrative example should be provided.

47. **Mr. Tosato** (Italy) said that “core commercial assets” was the term habitually used by Working Group VI and should also be used in the report to preclude any discussion concerning the scope of the draft Model Law, which was not on the agenda. Incorporation of new terminology such as “economically valuable assets” into the report would give the impression that a discussion of the scope had actually taken place.

48. **Mr. Boettcher** (Germany) concurred with the previous speaker. The report should accurately reflect the Commission’s discussion and the inclusion of examples might prejudice future discussions concerning the scope of the draft Model Law.

49. **Mr. Bellenger** (France) expressed support for the points made by the representatives of Italy and Germany.

50. **Mr. Dennis** (United States of America) said that the Commission was entitled to expand the scope of the mandate and an example would indicate the types of assets to be covered. His delegation had proposed at the previous meeting that the draft Model Law should focus on economically valuable assets. The report should reflect that proposal.

51. **The Chairperson** said that there was a consensus that the report should not prejudice future discussions of the scope of the draft Model Law. It could, however, reflect statements presenting independent views.

52. **Mr. Bazinas** (Secretariat) reiterated his suggestion that the following sentence should be inserted at the end of the second paragraph: “It was also stated that the scope of the draft Model Law should be broad and cover all economically valuable assets.”

53. The end of the last sentence of the first paragraph, which referred to the secretariat’s preparation of a revised version of the draft Model Law, could be amended to read: “that would implement the mandate given by the Commission to the Working Group and facilitate commercial finance transactions”. That was a general statement which could not be construed as a comment on the scope of the draft.

54. **Mr. Dennis** (United States of America) said that his delegation could support the proposed new sentence in the second paragraph if the words “be broad and” were deleted. It also supported the amendment to the first paragraph.

55. *The section of the draft report concerning the progress report of Working Group VI and future work, as amended, was adopted.*

56. **Mr. Bazinas** (Secretariat) read out two paragraphs of the draft report concerning coordination in the field of security interests. The paragraphs would eventually be published in the section of the Commission’s overall draft report concerning coordination and cooperation (A/CN.9/XLVI/CRP.1/Add.16).

57. *The section of the draft report concerning coordination in the field of security interests was adopted.*

The meeting was suspended at 3.45 p.m. and resumed at 4.10 p.m.

58. **The Chairperson** invited comments on document A/CN.9/XLVI/CRP.1/Add.6.

59. **Mr. Dennis** (United States of America), referring to paragraph 11 which stated that the Commission had adopted chapter V concerning the registration of amendment and cancellation notices, pointed out that amendments had actually been made to that chapter at a later stage in the discussions. He proposed that a cross reference should be inserted to alert readers to that development.

60. **Mr. Bazinas** (Secretariat) said that, as noted earlier, a paragraph concerning the final outcome of the discussions would be inserted after paragraph 25 of document A/CN.9/XLVI/CRP.1/Add.5. A cross reference to that paragraph could be

included in paragraph 11 of document A/CN.9/XLVI/CRP.1/Add.6.

61. He also noted that the opening phrase of paragraph 21 of the latter document would be amended to read: “At its 970th meeting, on 16 July 2013, the Commission adopted the following decision”.

62. *Document A/CN.9/XLVI/CRP.1/Add.6, as amended, was adopted.*

63. *The draft report as a whole, as amended, was adopted.*

The meeting rose at 4.25 p.m.

Finalization and adoption of revisions to the Guide to Enactment of the UNCITRAL Model Law on Cross-Border Insolvency

Finalization and adoption of legislative recommendations on directors' obligations in the period approaching insolvency

Finalization and adoption of revisions to the Model Law on Cross-Border Insolvency: The Judicial Perspective

Summary record of the 973rd meeting, held at the Vienna International Centre, Vienna, on Thursday, 18 July 2013, at 9.30 a.m.

[A/CN.9/SR.973]

Chairperson: Mr. Schöll (Switzerland)

The meeting was called to order at 9.35 a.m.

Consideration of issues in the area of insolvency law

(a) Finalization and adoption of revisions to the Guide to Enactment of the UNCITRAL Model Law on Cross-Border Insolvency (A/CN.9/766; A/CN.9/792 and Add.1-3; A/CN.9/WG.V/WP.112; A/CN.9/XLVI/CRP.5)

1. **The Chairperson** invited the secretariat to introduce the proposed revisions to the Guide to Enactment of the UNCITRAL Model Law on Cross-Border Insolvency (the Guide to Enactment).

2. **Ms. Clift** (Secretariat) said that the proposed revisions contained in document A/CN.9/WG.V/WP.112 had been modified by the decisions taken by the Working Group at its last session, which were contained in document A/CN.9/766. While the revisions focused on centre of main interests (COMI), amendments had also been made to the definitions section under article 2 of the Guide to Enactment. The introduction to the Guide had also been revised. The secretariat had noted that paragraphs 14 to 17 had been inadvertently omitted from the existing introduction. It suggested that they should be reintegrated into the text under the heading "Origin of the Model Law".

3. **The Chairperson** invited comments on the proposed revisions to the Guide to Enactment contained in documents A/CN.9/766 and A/CN.9/WG.V/WP.112.

4. **Ms. Clift** (Secretariat), referring to paragraphs 123F and 123G of document A/CN.9/WG.V/WP.112 concerning factors relevant to the determination of centre of main interests under article 16, suggested including a cross-reference in those paragraphs to article 17, which addressed the question of the time at which those factors were to be considered.

5. **Ms. Sabo** (Canada), **Mr. Beale** (United Kingdom), **Mr. Maradiaga** (Honduras) and **Mr. Redmond** (United States of America) expressed support for the secretariat's suggestion.

6. *It was so decided.*

7. **Ms. Clift** (Secretariat) suggested that the words "The Model Law expressly provides that" at the beginning of paragraph 166 of document A/CN.9/WG.V/WP.112 should be replaced with "Article 23, paragraph 1, expressly provides that".

8. *It was so decided.*

9. **Mr. Bellenger** (France) proposed replacing the words "est habilité" ("has standing") in paragraph 98 of the French version of document A/CN.9/WG.V/WP.112 with "détient une habilitation".

10. *It was so decided.*

11. **The Chairperson** drew attention to document A/CN.9/XLVI/CRP.5, which contained the draft decision of the Commission on the revisions to the Guide to Enactment.

12. **Mr. Redmond** (United States of America) said that many centre of main interests issues had been clarified in the revisions to the Guide to Enactment, which could therefore be expected to provide substantial benefits, especially in the context of the current financial crisis. He strongly supported the decision and commended the excellent work undertaken by the Working Group and the secretariat.

13. **The Chairperson** endorsed the previous speaker's commendation of the achievements of the Working Group and the secretariat.

14. *The decision concerning the proposed revisions to the Guide to Enactment contained in document A/CN.9/XLVI/CRP.5 was adopted.*

(b) Finalization and adoption of legislative recommendations on directors' obligations in the period approaching insolvency

(A/CN.9/766; A/CN.9/792 and Add.1-3; A/CN.9/WG.V/WP.113; A/CN.9/XLVI/CRP.5)

15. **The Chairperson** invited the secretariat to introduce the proposed text concerning directors' obligations in the period approaching insolvency.

16. **Ms. Clift** (Secretariat) said that the proposed text contained in document A/CN.9/WG.V/WP.113 had been modified by the decisions taken by the Working Group at its last session, which were contained in document A/CN.9/766. Comments by Governments and international organizations were contained in documents A/CN.9/792 and Add.1-3 and the draft decision on the proposed text was set out in document A/CN.9/XLVI/CRP.5.

17. The proposed text created obligations incurred by a company that was approaching insolvency. However, they became enforceable only when insolvency proceedings were instituted. In accordance with the Commission's mandate, the text focused on the provisions that might be included in an insolvency law as opposed to either corporate law or criminal law.

18. **The Chairperson** invited comments on the recommendations contained in documents A/CN.9/766 and A/CN.9/WG.V/WP.113.

19. **Ms. Clift** (Secretariat) said that the Russian Federation had requested clarification of the term

"administrative expenses" in recommendation 10. The secretariat proposed inserting a footnote that would direct readers to the relevant part of the glossary contained in the introduction to the Legislative Guide on Insolvency Law.

20. *It was so decided.*

21. **Mr. Redmond** (United States of America), referring to recommendation 12, said that his delegation's position was that it was inappropriate to provide for measures to be taken against directors in addition to those envisaged in the area of insolvency. That position had been discussed at length by the Working Group.

22. **Mr. Baer** (International Bar Association) expressed support for the comment by the representative of the United States. His Association consistently maintained that it was inappropriate to move beyond the realm of insolvency and to envisage complementary sanctions.

23. **Mr. Beale** (United Kingdom) said that his delegation had no problem with the text as currently drafted. The disqualification of directors on account of their conduct during the period approaching insolvency was an important tenet of the regime in the United Kingdom and many other jurisdictions. The European Union was currently engaged in negotiations on the exchange of insolvency information and was considering a proposal for the sharing of information regarding disqualification among European Union member States.

24. **Ms. Clift** (Secretariat) said that a sentence at the end of paragraph 32 of document A/CN.9/WG.V/WP.113 concerning the reluctance of courts to second-guess directors in their commercial dealings had been deleted. The words "As noted above" in paragraph 37 should therefore also be deleted.

25. In paragraph 51, she suggested that the phrase "Under some laws in some circumstances, such as where the insolvency representative takes no action" should be amended to read: "Under some laws, where the insolvency representative takes no action".

26. *It was so decided.*

27. **The Chairperson** drew attention to document A/CN.9/XLVI/CRP.5, which contained the draft

decision on the proposed text concerning directors' obligations in the period approaching insolvency.

28. **Mr. Redmond** (United States of America) said that he supported the draft decision. The negotiations concerning the proposed text concerning directors' obligations had presented numerous challenges and provoked a number of adverse comments, including from his delegation. However, the outcome was a very balanced text, which reflected the views of many different States. He again commended Working Group V and the secretariat on their excellent work.

29. **Mr. Beale** (United Kingdom) agreed with the representative of the United States that the production of the text before the Commission had been a challenging project. He commended the secretariat on its skilful handling of the varied and disparate comments from delegations to produce a text that had achieved a consensus. Business confidence was a highly pertinent issue under the current circumstances and policymakers throughout the world would find the text extremely helpful.

30. *The decision concerning legislative recommendations on directors' obligations in the period approaching insolvency contained in document A/CN.9/XLVI/CRP.5 was adopted.*

(c) Finalization and adoption of revisions to the Model Law on Cross-Border Insolvency: The Judicial Perspective (A/CN.9/766 and 778)

31. **The Chairperson** invited the secretariat to introduce the documents concerning revisions to the Model Law on Cross-Border Insolvency: The Judicial Perspective.

32. **Ms. Clift** (Secretariat) said that the revisions were contained in document A/CN.9/778. When the Commission adopted the text of the Model Law in 2011, it had requested the secretariat to establish a mechanism for continuous updating of The Judicial Perspective, ensuring that the neutral approach was maintained. The secretariat had invited a group of experts from Canada, Colombia, France, New Zealand, the Republic of Korea, Slovenia, the United Kingdom and the United States to engage in consultations on the revisions. They communicated for the most part by electronic means and the revisions contained in

document A/CN.9/778 were the product of those communications. A significant number of new cases had been added and some older cases had been deleted. A case list was annexed to the document. The Judicial Perspective had also been updated to take account of the revisions to the Guide to Enactment of the UNCITRAL Model Law on Cross-Border Insolvency and a number of cross references would be added in due course.

33. She proposed inserting a reference in the final paragraph of the preface to the members of the Board of Experts.

34. **Mr. Redmond** (United States of America) expressed support for the proposed revisions. The references to the substantial modifications of the Guide to Enactment should, in his view, be highlighted because many jurisdictions currently interpreted the Model Law on the basis of the previous version of the Guide to Enactment.

35. **Ms. Clift** (Secretariat) said that the secretariat had been faced in some cases with differences between the position adopted by the Working Group and the Commission and some of the existing case law. It had decided to adopt a historical approach to the issue by retaining the sequence of cases and drawing attention to slight differences between the Guide to Enactment and the case law.

36. Several key decisions had been handed down after the latest version of The Judicial Perspective had been finalized. They could be reflected by means of additional text or footnotes or, alternatively, in the next revision.

37. **Mr. Redmond** (United States of America) said that the text could remain unchanged but attention should be drawn to the fact that the case law did not reflect decisions adopted after a certain date.

38. *It was decided that the preface should include reference to the names and States of the experts constituting the board of experts consulted on the updates to The Judicial Perspective.*

39. *It was also decided that the preface should clarify that judgements issued prior to 15 April 2013 were included and that later judgements would be considered for inclusion in a subsequent update of The Judicial Perspective.*

40. Alternatively, the words “It was so decided.” could be added at the end of para. 33. And the words “That date might be 15 April 2013. Later judgements could be considered for inclusion in a subsequent update of The Judicial Perspective. It was so decided” could be added at the end of para. 37.

41. **The Chairperson** said he took it that the Commission wished to take note of the revisions to the Model Law on Cross-Border Insolvency: The Judicial Perspective.

42. *It was so decided.*

The meeting was suspended at 10.35 a.m. and resumed at 11.05 a.m.

(d) Progress report of Working Group V
(A/CN.9/763, 766 and 789)

43. **The Chairperson** invited the Commission to engage in a preliminary exchange of views on possible future work in the area of insolvency law. No decisions would be taken until the Commission discussed agenda item 16 on planned and possible future work later in the session.

44. **Ms. Clift** (Secretariat) said that both of the texts that had been adopted at the current meeting focused on the insolvency of individual debtors or companies. Parts one and two of the Legislative Guide on Insolvency Law focused on the insolvency of individual debtors. Part three addressed the situation of enterprise groups, first in a domestic context and subsequently in a cross-border context. The Working Group had decided when revising the Guide to Enactment to deal first with centre of main interests in the context of individual debtors. It had later requested the Commission to confirm its view that the scope of the centre of main interests mandate included centre of main interests in the context of enterprise groups. It had also decided to take up that matter, which was one of the most complex issues in the area of cross-border insolvency, as soon as it completed its work on the Guide to Enactment. The Working Group had also agreed that, once it completed its consideration of the obligations of directors of individual companies, it would address the obligations of directors in the context of enterprise groups. At its forty-third session in April 2013, the Working Group had

concluded (document A/CN.9/766, paras. 104-109) that it had not yet fully implemented the 2010 mandate. However, the procedure to be adopted with respect to the pending issues was as yet unclear. Responding to a proposal for a colloquium, the Working Group had agreed that such a project could be useful but that it should not replace the Working Group sessions that were required to complete the mandate.

45. **Mr. Dennis** (United States of America) said that the United States had submitted a proposal regarding the Commission’s future work, which was contained in document A/CN.9/789. In the section on insolvency, it suggested that a colloquium to identify specific projects and possible future areas of work should be scheduled in lieu of any full intergovernmental meetings on insolvency for the next year. Work on insolvency could be resumed once an appropriately specific project had been identified and approved by the Commission. Although the Working Group’s mandate had not been technically exhausted, no specific workplan on pending legal issues had been developed for the time being. The Working Group had therefore concluded that a colloquium could be useful in determining what future projects would be the most valuable. The United States agreed with that conclusion. It also urged UNCITRAL to consider additional projects that could utilize the expertise of the delegates and observers who had participated in previous projects. However, in light of the uncertainty regarding the most suitable projects for immediate work, the United States did not believe that working group meetings would be a prudent use of increasingly scarce resources while those projects were being identified.

46. **The Chairperson** said that the Working Group had agreed that a colloquium would be useful, but the idea that it should replace the sessions of the Working Group had not attracted sufficient support.

47. **Mr. Dennis** (United States of America) agreed that the prevailing view in the Working Group was that work should go forward. However, an UNCITRAL prerequisite for the authorization of further work was the existence of a specific workplan. Working Group V had no such plan. While his delegation was not opposed to work in the area of insolvency law, it felt that, given the scarcity

of resources, that standard should be applied to the Working Group.

48. **The Chairperson** said that, as he saw it, the Working Group needed to reflect on how best to fulfil the remaining portion of its mandate.

49. **Mr. Dennis** (United States of America) said that document A/CN.9/789 was based on the Working Group's report contained in document A/CN.9/766.

50. **Mr. Beale** (United Kingdom) said that the mandate for completion of the work on enterprise groups was extremely important. It would be a missed opportunity if the Working Group failed to complete its work on what was a key topic in the area of cross-border insolvency. The texts that the Working Group had produced over the years were of great practical value to policymakers throughout the world. He trusted that the products of its future work would be of the same calibre.

51. **The Chairperson** asked delegations who considered that the sessions of the Working Group should be suspended what kind of political signal the cessation of UNCITRAL work on insolvency would send out in a post-financial-crisis situation.

52. He invited delegations who considered that the sessions of the Working Group should not be suspended to present an estimate of the number of sessions that would be required to complete the mandate, since the scarcity of resources was a legitimate concern.

53. **Mr. Bellenger** (France) said that his delegation was opposed to the consideration of centre of main interests in the context of enterprise groups, since it would cause an upheaval in existing legislation by denying the autonomy of companies that were members of such groups. His delegation therefore considered that the mandate had been completed in that regard. The Working Group should focus instead on topics such as the coordination of proceedings and collaboration among directors.

54. **Ms. Fedko** (Russian Federation) proposed a new topic that was highly relevant under the current circumstances, namely the development of a standard that would support staff welfare in the

context of insolvency. It was unclear whether it could be handled under the existing mandate.

55. Her delegation considered that the Working Group sessions should continue, but it could also support the convening of an intersessional colloquium.

56. **Ms. Talero** (Colombia) emphasized the importance of convening a colloquium to identify possible topics for future work which could assist countries that were confronted with crisis-related difficulties and found it difficult to handle existing challenges in the area of insolvency. The colloquium could also examine how the remaining part of the Working Group's mandate should be addressed.

57. **Ms. Sabo** (Canada) said that her delegation supported the United States proposal. As UNCITRAL currently lacked resources, it was essential to set clear priorities among its many projects. While Canada recognized the important work undertaken by Working Group V, it stressed the complexity of the issue of enterprise groups. The Working Group had in fact acknowledged that it needed time to reflect on how best to proceed. The colloquium provided an opportunity to analyse the best approach to the issue of enterprise groups, to generate ideas for future work and to attract new collaborators. It would therefore facilitate and would certainly not impede the mandate of the Working Group. Moreover, it would not send out a negative message. The Commission itself received little publicity, but a colloquium would attract far more attention and advertise the fact that UNCITRAL was focusing on important issues.

58. **The Chairperson** asked whether the Canadian delegation considered that no further sessions of the Working Group should be scheduled for the time being.

59. **Ms. Sabo** (Canada) replied in the affirmative. She assumed that the Commission would reconvene the Working Group in autumn 2014. It could then address the pending issues within a shorter timeframe.

60. **Mr. Ghia** (Italy) expressed support for the points made by the representative of the United Kingdom. Some fifty insolvency declarations were registered every day in Italy, several of which normally involved foreign companies. He therefore

felt that the Commission should seize the opportunity to complete its work on enterprise group issues. In particular, it was essential to clarify centre of main interests issues and directors' obligations in that context. He believed that two meetings of the Working Group would be sufficient for the purpose.

61. **Ms. Talero** (Colombia) expressed support for the views expressed by the representatives of the United States and Canada.

62. **Mr. Kono** (Japan) expressed support for the views expressed by the representatives of the United Kingdom and Italy. International guidance on the issue of enterprise groups would be greatly appreciated.

63. **Mr. Tata** (World Bank) said that the World Bank was a major beneficiary of the output of Working Group V and the Commission. The issues that the financial crisis continued to generate were affecting all jurisdictions, particularly in developing countries. In the context of globalization, one of the most critical and controversial issues was how to deal with enterprise groups. It was a source of considerable uncertainty and confusion, and legal decisions in that regard had been far from consistent. The World Bank therefore considered that the issue of enterprise groups as well as that of directors' obligations should be addressed by the Working Group.

64. Referring to the evolution of specialized insolvency regimes in various contexts, he suggested that the Working Group's future programme of work should also include the interface between general enterprise insolvency law and specialized insolvency regimes.

65. **Mr. Maradiaga** (Honduras) expressed support for the proposals made by the representatives of the United States and Canada.

66. **Ms. Kagwanja** (Kenya), emphasizing the need to take the concerns of developing countries into account, joined the previous speaker in expressing support for the proposals made by the representatives of the United States and Canada.

67. **Mr. Bellenger** (France) said that his delegation was not opposed to the continuation of the Working Group's sessions provided that the discussions

did not focus on centre of main interests in the context of enterprise groups. He noted in that context that the European Union, which was currently considering amendments to European Council Regulation No. 1346/2000 on insolvency proceedings, had decided to set aside the question of centre of main interests and to maintain the autonomy of subsidiary companies. His delegation supported the idea of convening a colloquium.

68. **Mr. Beale** (United Kingdom) said that centre of main interests remained a fundamental concept in the Council Regulation on insolvency proceedings. With regard to enterprise groups, the European Union was developing rules for the coordination of multiple insolvencies within an enterprise group in order to ensure the best possible outcome under the existing legislation. When Working Group V had first discussed enterprise groups, the basic aim had not been to devise a new understanding of centre of main interests that would be applicable only to such groups but to analyse how enterprise groups were coordinated. European Union efforts to develop rules governing cooperation and coordination among courts involved in enterprise group insolvencies should also be examined in that context.

69. **The Chairperson**, summing up the discussion, said that all delegations agreed that the work accomplished by Working Group V had offered valuable practical guidance on insolvency issues and assisted in clarifying legal concepts. There was also a consensus that UNCITRAL must use its scarce resources wisely and that serious discussions were therefore required about future work.

70. He was reluctant to divide speakers into two camps, since he was convinced of the possibility of reconciling seemingly conflicting proposals. Moreover, none of the delegations that were in favour of suspending the Working Group's sessions had suggested that the secretariat's work on the relevant topics should also be suspended. A large number of delegations took the view that the Working Group's mandate had not been completed and some delegations considered that the pending issues could be addressed within a relatively short period of time. The representative of France had made his expression of support for further meetings of the Working Group contingent on the issues to be addressed. A significant number of delegations also

supported the idea of holding a colloquium to identify possible future areas of work. All points made would be reflected in the report and the discussion would be continued when the Commission took up agenda item 16.

71. **Mr. Dennis** (United States of America) said that the record should reflect that the majority of delegations that had taken the floor had expressed support for the holding of a colloquium and hence for the suspension of the sessions of Working Group V.

72. **The Chairperson** said that it could not be inferred from the support expressed for a colloquium that delegations were in favour of suspending the sessions of the Working Group.

73. **Mr. Sorieul** (Secretary of the Commission) said that the two questions were interrelated inasmuch as the holding of a colloquium and the convening of the sessions of the Working Group would be financed from the same resources and the same conference services would be used. The Commission's resources were currently sufficient to cover 14 weeks of meetings per year. If a three-day colloquium were to be held, the time available for meetings of Working Group V or other Commission meetings would be reduced by three days.

The meeting rose at 12.10 p.m.

**Summary record of the 975th meeting, held at the Vienna International Centre, Vienna, on Friday,
19 July 2013, at 2 p.m.**

[A/CN.9/SR.975]

Chairperson: Mr. Schöll (Switzerland)

The meeting was called to order at 2.20 p.m.

Adoption of the draft report

(A/CN.9/XLVI/CRP.1/Add.4, Add.7, Add.8, Add.12-15 and Add.20)

1. **The Chairperson** invited comments on the section of the draft report concerning the finalization and adoption of the UNCITRAL Rules on Transparency in Treaty-based Investor-State Arbitration (A/CN.9/XLVI/CRP.1/Add.4).

2. He said that the delegation of Switzerland proposed that the following sentence should be inserted at the end of paragraph 7: “Yet another view was that it would be premature to decide which form such future work might take, and that any decision on future work on this topic ought to preserve the option of analysing the issue of parallel proceedings in commercial arbitrations in the context of the New York Convention.”

3. *It was so decided.*

4. *The section of the draft report contained in document A/CN.9/XLVI/CRP.1/Add.4, as amended, was adopted.*

5. **The Chairperson** invited comments on the section of the draft report entitled “Electronic commerce: progress report of Working Group IV” (A/CN.9/XLVI/CRP.1/Add.12).

6. **Mr. Bellenger** (France) proposed amending the words “A statement was made that” at the beginning of paragraph 4 with “The wish was expressed that” (*Le souhait a été émis que*). He further proposed that the words “might not be possible” at the end of that sentence should be replaced with “might entail legal difficulties” (*pouvait soulever des difficultés juridiques*).

7. *It was so decided.*

8. *The section of the draft report contained in document A/CN.9/XLVI/CRP.1/Add.12, as amended, was adopted.*

9. **The Chairperson** said that the section of the draft report concerning the finalization and adoption of the UNCITRAL Guide on the Implementation of a Security Rights Registry contained in document A/CN.9/XLVI/CRP.1/Add.7 had been adopted on the basis of an oral presentation. He invited comments on the written report.

10. *The section of the draft report contained in document A/CN.9/XLVI/CRP.1/Add.7 was adopted.*

11. **The Chairperson** invited comments on the section of the draft report entitled “Technical assistance: law reform” (A/CN.9/XLVI/CRP.1/Add.13).

12. *The section of the draft report contained in document A/CN.9/XLVI/CRP.1/Add.13 was adopted.*

13. **The Chairperson** invited comments on the section of the draft report concerning the promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts (A/CN.9/XLVI/CRP.1/Add.14).

14. *The section of the draft report contained in document A/CN.9/XLVI/CRP.1/Add.14 was adopted.*

15. **The Chairperson** invited comments on the section of the draft report concerning the status and promotion of UNCITRAL texts (A/CN.9/XLVI/CRP.1/Add.15).

16. *The section of the draft report contained in document A/CN.9/XLVI/CRP.1/Add.15 was adopted.*

17. **The Chairperson** invited comments on the section of the draft report concerning relevant General Assembly resolutions (A/CN.9/XLVI/CRP.1/Add.20).

18. *The section of the draft report contained in document A/CN.9/XLVI/CRP.1/Add.20 was adopted.*

19. **The Chairperson** invited comments on the section of the draft report concerning the consideration of issues in the area of insolvency law (A/CN.9/XLVI/CRP.1/Add.8).

20. **Mr. Bellenger** (France), referring to section (d) concerning the progress report of Working Group V, said that the question as to whether the applicability of the concept of centre of main interests (COMI) to enterprise groups formed part of the Working Group's mandate had not been clarified. He therefore proposed that a phrase should be inserted in the second sentence of paragraph 18 stating that the colloquium should clarify the Working Group's mandate in that regard.

21. **The Chairperson** noted that the first sentence of section (d) stated that the Working Group had discussed remaining elements of the mandate, particularly as it related to the applicability of the concept of centre of main interests to enterprise groups.

22. **Mr. Beale** (United Kingdom) proposed inserting the following sentence at the end of paragraph 18: "Another view was that Working Group V should continue with its mandate as planned."

23. **Mr. Redmond** (United States of America) said that the substance of the additional sentence proposed by the representative of the United Kingdom was reflected in paragraph 19. He proposed replacing the words "reflect on how to address" in the first sentence of paragraph 18 with the word "clarify". He stressed the importance of maintaining a balance between the different views that had been expressed during the discussion.

24. **Mr. Bellenger** expressed support for the amendment proposed by the representative of the United States.

25. *It was so decided.*

26. **Mr. Schoefisch** (Germany) said that the amendment proposed by the representative of the United Kingdom indicated support for the continued implementation by the Working Group of its mandate without a colloquium. The sentence in paragraph 19 mentioned by the representative of the United States provided for the continuation of the

Working Group's mandate once a colloquium had been held.

27. **Mr. Redmond** (United States of America) proposed that, if the sentence suggested by the United Kingdom were to be inserted in paragraph 18, the following additional sentence should be added: "Another view was that the mandate should not proceed, as the Working Group does not have a plan for what its work on those topics would produce, and no work should proceed until that issue is clarified."

28. **Mr. Beale** (United Kingdom) said that the Commission had not, as far as he could recall, discussed the possible cessation of the Working Group's mandate. The discussion had focused on the manner in which it should be completed.

29. **Mr. Redmond** (United States of America) said that his delegation had addressed the issue at the meeting held the previous morning.

30. **Ms. Nimeřická** (Observer for the Czech Republic) and **Mr. Kono** (Japan) expressed support for the insertion in paragraph 18 of the sentence proposed by the representative of the United Kingdom.

31. **Ms. Sabo** (Canada) and **Mr. Ghia** (Italy) expressed support for the insertion in paragraph 18 of both the sentence proposed by the representative of the United Kingdom and that proposed by the representative of the United States.

32. **The Chairperson** said he took it that the Commission agreed to insert in paragraph 18 the sentence proposed by the representative of the United Kingdom, followed by the sentence proposed by the representative of the United States.

33. *It was so decided.*

34. *The section of the draft report contained in document A/CN.9/XLVI/CRP.1/Add.8, as amended, was adopted.*

The meeting rose at 3.05 p.m.

**Summary record of the 976th meeting, held at the Vienna International Centre, Vienna, on Monday,
22 July 2013, at 9:30 a.m.**

[A/CN.9/SR.976]

Chairperson: Mr. Schödl (Switzerland)

The meeting was called to order at 9.40 a.m.

Planned and possible future work, including in the areas of arbitration and conciliation, commercial fraud, electronic commerce, insolvency law, international contract law, microfinance, online dispute resolution, public procurement and infrastructure development, including public-private partnerships, and security interests (A/CN.9/752 and Add.1; A/CN.9/774; A/CN.9/789)

1. **The Chairperson** proposed that the Commission should first discuss its strategic approach to the setting of priorities for future work, taking into account the scarcity of resources in recent years. The Commission would then discuss the practical application of its strategic approach to existing projects. He invited the secretariat to introduce the first part of the discussion.

2. **Ms. Nicholas** (Secretariat) drew attention to documents A/CN.9/752 and Add.1 concerning a strategic direction for UNCITRAL, which had been prepared by the secretariat for the previous session, and to document A/CN.9/774, which dealt with planned and possible future work. Paragraph 5 of document A/CN.9/774 contained an additional list of relevant reports.

3. As many States had gained valuable experience in recent years in making the most of scarce resources, their advice to the Commission and the secretariat on the adoption of a strategic approach to the assignment of tasks would be greatly appreciated. Referring to the title of document A/CN.9/774, “Planned and possible future work”, she said that the Commission was invited to set the scope of all UNCITRAL’s activities during the year ahead. It would therefore need to identify the activities to be undertaken and to specify when and how they should be undertaken. The activities comprised not only legislative work but also, for example, technical assistance, coordination and cooperation with other relevant bodies, and promotion of the uniform interpretation of texts.

4. With regard to legislative work, the secretariat had collated various views and comments previously expressed by the Commission. For instance, the Commission had noted the constraints imposed by the limited amount of conference time available for its formal deliberations. Tables 1 and 2 in document A/CN.9/774 identified 10 substantive topics related to legislative work. Summarizing the discussions during the previous two weeks of the session, she said that recommendations had been made in the area of arbitration and conciliation concerning the development of a convention on transparency, followed by the development of notes on the organization of arbitral proceedings and possibly concurrent and parallel proceedings. In the area of electronic commerce, it had been recommended that the work on electronic transferable records should continue. However, the question as to whether it should be expanded to include issues of identity management, single windows and mobile commerce remained to be assessed. The work under the current mandate in the area of insolvency, including that relating to centre of main interests (COMI) and directors’ obligations, would continue. In the area of secured transactions, it was proposed that work should continue on the development of the Model Law, subject to further discussion of priorities, which might include security interests in non-intermediated securities.

5. As only 12 conference weeks would be available over the year ahead, it would clearly be necessary to set priorities among the foregoing topics. The Commission might wish to consider whether it should establish a number of general principles applicable to the assessment of priorities for future work in order to promote both a strategic and a consistent approach. The Commission had repeatedly recognized the importance of the development of legislative texts through working group sessions. The comparative advantage enjoyed by UNCITRAL texts was that they were universally applicable and therefore widely accepted. A further important factor was the publication of draft texts in

advance. While some UNCITRAL texts had been developed on an exceptional basis outside that environment, they were generally less widely recognized and used. The Commission might therefore wish to reaffirm the importance of the development of legislative texts by the working groups.

6. When setting priorities, the Commission traditionally identified topics in terms of their importance but also in terms of their urgency. The section entitled “Prioritization of subject areas” in document A/CN.9/774 reviewed the history of the Commission’s approach to the matter since its establishment in 1968. It had been observed at the outset that harmonization was more easily achieved in technical branches of the law than in subjects closely connected with national traditions and basic principles of domestic law. The importance of focusing on areas where there was an economic need for harmonization and where a beneficial effect on international trade could be envisaged had also been recognized. A third point was the importance of bearing in mind the potential to harness what was termed the “radiation” effect. Thus, even if States did not adopt an entire UNCITRAL text, the principles and basic provisions it contained might be adopted and used in a variety of ways.

7. The Commission had been invited in the documents before it at its forty-fifth session in 2012 to consider the role and relevance of UNCITRAL activities within the broader United Nations agenda and with respect to donor community and national government priorities. A further important principle was ensuring the balance of UNCITRAL legislative and supportive activities, in other words balancing legislative development through formal working group sessions with activities undertaken by the secretariat, assisted where appropriate by experts. Other issues included the mobilization of additional resources, including partnering activities, as and when appropriate.

8. The Commission might wish to answer some general questions in deciding whether topics should be submitted to a working group. The secretariat had compiled a list of examples for the Commission to consider. The first was whether the topic was likely to produce a consensus or whether it was unduly divisive and unlikely to lead to harmonization and a

viable text. A second question was whether there was a sufficient likelihood that a legislative text would enhance international trade law. A third question was whether the scope of the topic and the policy issues to be addressed in a legislative text were sufficiently clear. A final question was whether related activities were being undertaken on similar issues in other relevant bodies.

9. The Commission might also wish to bear in mind the life cycle of an UNCITRAL text as set out in document A/CN.9/752. Working groups and colloquia had expressed the view that more informal activities could be particularly helpful, for example in preparing texts for submission to working groups. However, policy issues and substantive drafting issues should generally be addressed by a working group. A great deal of emphasis had recently been laid on the importance of using all the conference resources available to UNCITRAL. The use of colloquia might be regarded as a type of middle ground between formal and informal working methods inasmuch as colloquia that were held during conference time could attract a large audience and the proceedings could be conducted in all the United Nations working languages. With sufficient planning outside the current budgetary period, the secretariat might be able to organize colloquia outside the duty stations of New York and Vienna with limited financial consequences. The secretariat might also benefit from holding joint meetings with other relevant bodies, such as regional development banks.

10. There was an increasing demand, particularly by developing countries, for activities aimed at promoting the adoption and use of UNCITRAL texts, which required a certain level of understanding of the policies and procedures that they envisaged. It was essential to take account of the relevant country’s social context and legal traditions. The secretariat was attempting to undertake more technical assistance activities, but the scarcity of resources was a major problem in that regard. The Commission might therefore wish to consider how to promote a balance of formal and informal legislative development and to provide appropriate support for technical assistance without interrupting more formal work. If, for example, it was decided that work should be undertaken through colloquia, steps would need to be taken to prevent a

hiatus from occurring in subsequent working group sessions.

11. She drew attention to the suggestion in paragraph 43 of document A/CN.9/774 that time should be set aside at UNCITRAL meetings for the sharing of information by States on initiatives that they were undertaking to promote UNCITRAL instruments. The last paragraph of the document highlighted the increasing difficulties involved in ensuring that documents were issued simultaneously in all official United Nations languages. That problem was also particularly relevant in the area of technical assistance.

12. **The Chairperson** invited the Commission to focus on a number of basic strategy-related questions. The first was whether the working groups should continue to be assigned responsibility for the performance of core Commission tasks and what conditions a topic should meet in order to be deemed ripe for submission to a working group. For instance, it should be technical rather than political, it should have a bearing on international trade and it should be clearly defined. It was also important to avoid duplication of the work being undertaken by another governmental or non-governmental organization. He also invited comments on the complementarity between formal and informal working procedures. Certain tasks could be delegated, for instance, to the secretariat or to other informal forums. In addition, delegations were invited to express their views on cooperation with other inter-State organizations and on the future role of technical assistance.

13. **Mr. Dennis** (United States of America) drew attention to document A/CN.9/789, which contained a proposal by the United States regarding the future work of the Commission. With regard to the sustainability of the working groups, the United States considered that the Commission should no longer base its work priorities on a system of six semi-permanent working groups with titles confining them to a particular area of law. Changes in the titles and structure of the working groups would make it easier for the Commission to review current projects on an annual basis. He also highlighted the important contribution of the secretariat. As noted in document A/CN.9/752 concerning a strategic direction for UNCITRAL, the

draft versions of the Legal Guide on Electronic Funds Transfers and the Legislative Guide on Privately Financed Infrastructure Projects had both been produced by the secretariat and referred directly to the Commission. Texts on highly technical topics could be developed by experts or special rapporteurs and then submitted to the Commission for review. If they were deemed to be inadequate, they could be referred to a working group.

14. He agreed with the secretariat's comments regarding the subject matter to which high priority should be assigned. The selected topics should have a beneficial effect on international trade. An additional criterion should be the effect that a topic would have on inclusive economic development and the rule of law, particularly in developing countries. He drew attention to the following UNCITRAL decision dating from 1978, which was quoted in document A/CN.9/789: "[a]s a general rule, the Commission should not refer subject-matters to a working group until after preparatory studies had been made by the Secretariat and the consideration of these studies by the Commission had indicated not only that the subject-matter was a suitable one but that the preparatory work was sufficiently advanced for a working group to commence work in a profitable manner". Furthermore, the Commission should not duplicate the work of other international entities.

15. With regard to the mobilization of additional resources, it was essential to coordinate with international bodies, particularly organizations such as the International Institute for the Unification of Private Law (UNIDROIT) and the Hague Conference on Private International Law. UNCITRAL had recently collaborated with those organizations on the publication of a paper concerning security interests. He suggested that UNCITRAL might also collaborate with the Hague Conference on a project relating to sources of law, an area in which that organization had developed considerable expertise. Similarly, UNIDROIT had expertise in the area of contract law. At the meeting of its Governing Council in May 2013, UNIDROIT had strongly supported the idea of substantive cooperation with UNCITRAL on the joint development of instruments.

16. Given the scant resources available, the secretariat could not be expected to provide detailed technical assistance. However, it could act as a clearing-house for such assistance and his delegation supported the establishment of additional regional centres. Moreover, all States had a responsibility to promote technical assistance projects.

17. **Mr. Sorieul** (Secretary of the Commission) said that when the Commission had decided to double the number of working groups, it had assigned a number rather than an official title to each group. The title mentioned in brackets after the group's number was merely intended to inform delegations of the its field of specialization. The working groups were formally re-established each year and assigned a specific mandate.

18. **Ms. Nicholas** (Secretariat) emphasized that the development of texts outside the working group environment occurred only in exceptional situations. While the initial stages or the final technical drafting stages might be conducted outside that environment, policy and substantive issues were addressed within the working groups to ensure that the product was widely acceptable.

19. **Mr. Fruhmann** (Austria) agreed that legal texts should be developed within the working groups to ensure the inclusiveness of the process. However, that did not preclude the involvement of outside bodies, such as international organizations, in the preparation of the texts.

20. With regard to the fields of specialization of the working groups, one option mentioned in document A/CN.9/774 was that each working group should handle more than one topic at a time.

21. On the question of prioritization, the criteria of the impact on international trade law, the "radiation" effect and the envisaged added value were of key importance. However, his delegation was not entirely convinced that the additional criterion suggested in paragraph 29 of document A/CN.9/774 fell into that category. He requested the secretariat to clarify the idea underlying the suggestion.

22. Referring to the resources required for the publication of UNCITRAL documents in the official United Nations languages, he asked whether it was

really necessary to have all documents translated into the six languages. Substantial savings could be made by introducing a more streamlined system with greater reliance on electronic rather than paper-based documentation.

23. **Ms. Nicholas** (Secretariat), responding to the question regarding paragraph 29 of document A/CN.9/774, said that the additional criterion had been suggested in document A/CN.9/752/Add.1 in light of the role and relevance of UNCITRAL both within the United Nations and in the field of international trade and commerce. Its work in the area of international trade law was designed to support sustainable and inclusive development and the rule of law through the harmonization of the relevant legal provisions. The Commission might therefore wish to bear in mind the types of activities that would most directly support such development. For example, UNCITRAL might support the implementation of the provisions of the Paris Declaration on Aid Effectiveness relating to the rule of law, governance and anti-corruption. UNCITRAL's work on public procurement was currently being used by the custodians of the United Nations Convention against Corruption and some of the multilateral development banks as support for improving governance in the area of public procurement.

24. **Mr. Sorieul** (Secretary of the Commission) said that great importance was attached to the publication of the Commission's work in all the official United Nations languages. However, caseloads of paper documents were no longer shipped from one duty station to another. Steps were being taken to reduce the amount of paper-based documentation to the minimum.

25. **Mr. Bellenger** (France) emphasized the desirability of updating the Commission's working methods and suggested that strategic planning should be discussed at all future sessions. With regard to the proposals made by the representative of the United States, while he recognized the value of an approach based on the authorization of individual projects and the assignment of work to experts, he insisted that all UNCITRAL legislative drafting work must be undertaken by the working groups. Otherwise the requisite transparency vis-à-vis UNCITRAL member States might not be

assured. Further in-depth reflection was therefore required to achieve the aim of greater flexibility.

26. His delegation suggested that the Chairperson of the Commission should be appointed for a calendar year instead of for the period between two plenary sessions. Under the existing system, the Chairperson's duties were confined to chairing the sessions. A Chairperson who was elected prior to a plenary session could assist in organizing the proceedings.

27. **Mr. Schoefisch** (Germany) said that the working group system had worked very well to date. It should therefore be preserved but provision should be made for a more project-oriented approach and for greater flexibility. It was not necessary for all six working groups to meet each year. If a working group had no urgent topic to address, its meeting time could be transferred to another working group with a heavy workload. If a working group felt that it could handle more than one topic, it should be permitted to do so, but it was preferable in his view to address just one topic at a time.

28. The working group proceedings provided the best guarantee of transparency. However, preparatory work could be undertaken outside that context, for example in a colloquium.

29. Technical assistance was of great importance and should be undertaken by the secretariat provided that it did not interfere with the task of preparing the proceedings of the Commission and the working groups. Member States should also provide technical assistance as and when appropriate.

30. Coordination and joint projects with other bodies, such as UNIDROIT and the Hague Conference, was also of great importance.

31. **Mr. Shautsou** (Belarus) expressed support for the idea of updating UNCITRAL's working methods. While certain projects might be assigned to experts, such projects should be essentially of a technical nature, such as the compilation of glossaries and reference material. The most valuable work undertaken by UNCITRAL consisted in the development of legislative texts and in some cases informal texts. It assisted States in evolving from a narrow regional or specialized approach to an

international approach and in balancing different interests.

32. His delegation agreed that the coordination of work with other international bodies, such as UNIDROIT and the Hague, was of great importance.

33. **Mr. Rodriguez** (Switzerland) expressed support for the strategic approach to future work and for the four basic criteria to be applied in identifying future projects.

34. It would be unwise to adopt a prescriptive approach to the relationship between formal and informal meetings. As resources were scarce, it was essential to exploit available resources to the full. His delegation therefore endorsed innovative approaches and flexibility when it came to organizing colloquia or joint meetings. He understood the concern that semi-permanent working groups might perpetuate their existence and emphasized the need to ensure respect for the criteria applicable to future work. However, the value of such working groups should also be recognized, since the expertise that they developed over time was unique. Their output in many cases was inconceivable outside that context.

35. **Mr. Maradiaga** (Honduras) said that sections A, B and C of part IV of document A/CN.9/774 concerning the allocation of resources and prioritization contained an accurate summary of the core issues to be addressed by the Commission. In some cases, other international bodies such as UNIDROIT were working simultaneously on projects that fell within UNCITRAL's sphere of competence. As several different organizations might be devoting staff, resources and infrastructure to the same task, it was essential to forge close links with regional and international organizations with a view to setting priorities.

36. He proposed that the secretariat should be requested to look into the possibility of reducing the number of working groups owing to the lack of resources. It might be possible, for instance, to combine the working groups on arbitration and conciliation, online dispute resolution and electronic commerce.

37. **Mr. Chan Wah Teck** (Singapore) said that his delegation supported the proposals contained in document A/CN.9/789 submitted by the United

States. As it was vital to ensure the optimum use of resources under the current circumstances by means of a strategic approach and prioritization, it also fully supported the proposals presented by the secretariat. An overriding factor in that context was the UNCITRAL mandate to promote the modernization and harmonization of international trade law. Topics that fell outside the scope of that mandate should preferably be addressed by other agencies with the requisite expertise. Document A/CN.9/789 contained implicit criticism of some working groups that were allegedly attempting to perpetuate themselves. Those working groups had defined themselves not by numbers but by subject matter and had arrogated to themselves the exclusive right to deal with the topics in question. While the semi-permanent working groups had a great deal of expertise, continued work in an environment of scarce resources on topics that precluded work on more urgent issues was inadmissible.

38. Working groups were composed of representatives of States and their basic mandate consisted in preparing legal texts that were widely acceptable at the international level. He queried whether soft-law instruments such as guides, which did not set standards and were not binding, could be deemed to constitute legal texts. It might be preferable to assign such tasks to experts working with the secretariat. The resultant texts could then be reviewed and endorsed by the Commission. He drew attention in that connection to paragraph 20 of document A/CN.9/779 concerning public-private partnerships (PPPs), which stated that there was no widespread awareness of UNCITRAL privately financed infrastructure project (PFIP) instruments and that they had proved to be of limited utility for legislators and regulators. He was disappointed with that finding, since he had chaired the session of the Commission that had adopted the UNCITRAL Legislative Guide on PFIPs. However, the Guide was clearly not a legal text and did not set legally binding standards.

39. Technical assistance was extremely important and should be prioritized even when resources were scarce because of the reliance of developing countries on such assistance. States that were considering the possibility of adopting complex UNCITRAL legal texts required expert advice on

how the texts should be implemented in practice. Ideally, legal officers from the States concerned should receive personal guidance from UNCITRAL experts.

40. UNCITRAL should coordinate with other international agencies working in the area of international trade law, including within the United Nations system, with a view to avoiding duplication and ensuring the optimum use of scarce resources. A close examination of internal United Nations procedures would be necessary before any specific recommendations could be made in that regard. However, he was confident that the modalities for coordination could be developed in due course.

41. **Ms. Talero** (Colombia) expressed support for the proposals contained in document A/CN.9/789 submitted by the United States. She highlighted the reference to technical texts developed on an informal basis by the secretariat with input from experts and without prior negotiations in a working group. Such texts were generally highly appreciated by the member States of the Commission.

42. **Ms. Sabo** (Canada) said she agreed with the representative of France that strategic planning and prioritization should be discussed at all future sessions of the Commission.

43. She agreed with the representative of Germany that the working group system should be flexible. When the Commission had decided to increase the number of working groups from three to six, it had agreed that the number could be modified in exceptional circumstances. The key factors were the number of projects that the Commission decided to tackle, the working methods used to expedite projects, and the resources available to the secretariat and to States.

44. With regard to informal work, she believed that some technical or even legal texts could be prepared by the secretariat provided that they were thoroughly reviewed by the Commission or a working group.

45. Her delegation broadly agreed with the project selection criteria that were set out in document A/CN.9/774. With regard to paragraphs 28 and 29, UNCITRAL's role and relevance with respect to the work and priorities of the United Nations, donor communities and priorities of national governments

should be taken into account but they should not be deemed to constitute the main criteria governing the selection of projects.

46. Her delegation strongly supported the proposal by the representative of the United States concerning joint work with organizations such as UNIDROIT. She suggested that the Commission should take note of the support expressed by the Governing Council of UNIDROIT for substantive cooperation with UNCITRAL and that it should actively seek to identify an appropriate joint project.

47. Although some documents were issued on the UNCITRAL website before they were available in all six official United Nations languages, she considered that they should eventually be available in the six languages.

48. **Mr. Leinonen** (Observer for Finland) supported the view that strategic planning and prioritization should be included in the agenda of all future sessions of the Commission.

49. The selection criteria set out in document A/CN.9/774 were highly pertinent and should be borne in mind when deciding on the topics to be addressed by the working groups.

50. The principles applied to the organization of work were basically sound and the framework did not preclude greater flexibility. It was unnecessary to allot exactly the same number of meeting days to each working group. More time should be allocated, where appropriate, to more urgent projects and priority should be given to legislative work. While soft-law instruments were very important, it was questionable whether the working groups should devote a great deal of time to such documents. He had no objection to the idea of assigning more than one topic to a particular working group provided that a clearly defined mandate was issued by the Commission.

51. His delegation was very much in favour of substantive cooperation with other organizations. It agreed with the representative of Canada that the Commission should take note of the relevant decision of the UNIDROIT Governing Council and seek to identify a joint project.

52. **Ms. Marcucci** (Italy) said that the prioritization criteria set forth in document

A/CN.9/774 should serve as guidelines for the assessment of existing projects and possible future work. The problem of scarce resources should not be addressed in a manner that would alter the structure and scope of the mandate assigned to UNCITRAL. It was important to maintain as a general rule that the mandate should be implemented through working groups in order to promote the legitimacy and transparency of the Commission's products. That principle did not preclude the assignment of responsibility for analysis of technical material to groups of experts.

53. Cooperation with other organizations had proved highly productive and should be continued.

54. **Mr. Estrella Faria** (International Institute for the Unification of Private Law — UNIDROIT) said that at its session in May 2013 the Governing Council of UNIDROIT had confirmed its strong interest in resuming its long-standing practice of cooperating with United Nations bodies on the finalization of legal texts and in developing joint ventures. As UNCITRAL was a natural candidate for that type of cooperation, the Governing Council would appreciate any steps taken by the Commission to identify a suitable topic for future cooperation.

55. **The Chairperson**, summing up the discussion, said that broad support had been expressed for the prioritization criteria proposed by the secretariat. It had been noted that the Commission's mandate to promote the modernization and harmonization of international trade law remained in place, even in a situation of scarce resources. The development of texts within working groups had been highlighted as one of the Commission's key comparative advantages, which enhanced the transparency and legitimacy of the resulting texts. The importance of a multilingual approach had also been stressed. While concern had been expressed regarding the risk of self-perpetuation of working groups, the benefits that accrued from the accumulation of expertise had also been noted. Several speakers had stressed that priority should be given to the drafting of legal texts rather than non-binding instruments such as legislative guides. In response to the suggestion that the Commission should adopt a more project-based approach, it had been pointed out that current

working group practice already allowed for sufficient flexibility to meet that concern.

56. Speakers had noted that informal work was an exceptional option and that only technical work should be assigned to the secretariat or outside experts. The secretariat should be allowed sufficient flexibility to organize such work in the manner best suited to the individual case concerned.

57. It had been emphasized that UNCITRAL was not a regional but a global organization. The benefits that accrued to developing countries from its positive impact on international trade were to be welcomed. However, the Commission's mandate and its side effects should not be inversed. The importance of the technical assistance provided both by the secretariat and by States had been underscored.

58. Many speakers had urged the Commission to forge effective links with organizations that were active in similar fields and to promote coordination both within and outside the United Nations system. The Commission had also taken note of the invitation by UNIDROIT to build a more formal cooperative relationship. Different views had been expressed on whether the Commission should align its work priorities with those of other United Nations bodies.

59. Lastly, it had been recommended that a discussion of strategic planning and prioritization should be included in the agenda of future sessions of the Commission.

The meeting was suspended at 11.35 a.m. and resumed at 12.10 p.m.

60. **The Chairperson** invited comments on his summary of the discussion.

61. **Mr. Dennis** (United States of America) stressed the importance of taking the rule of law into account in prioritizing topics. He drew attention again to his delegation's reference in document A/CN.9/789 to a 1978 Commission decision concerning, inter alia, preparatory studies by the secretariat. Lastly, there seemed to be a consensus that documents produced by expert groups or regional meetings should be formally reviewed either by a working group or by the Commission.

62. **Mr. Fruhmam** (Austria) expressed reservations regarding paragraphs 28 and 29 of the section of document A/CN.9/774 concerning the prioritization of subject areas, especially the reference to a symbiotic approach to activities of the United Nations, donor communities and national governments.

63. **Mr. Bellenger** (France) said that it would be difficult for UNCITRAL to focus on legislative texts rather than on non-binding soft-law instruments, since it frequently began its work in specific areas by producing soft-law legislative guides and proceeded at a later stage to produce more binding texts.

64. He noted that several delegations had expressed support for the proposal to work on the basis of projects. It had also been suggested that the mandates of the working groups should be defined in greater detail.

65. He reiterated his proposal that the Chairperson of the Commission should be elected for a calendar year rather than for the intersessional period.

66. **Mr. Chan Wah Teck** (Singapore) said, by way of clarification, that his delegation was not opposed to the production by UNCITRAL of non-standard-setting texts. However, it questioned the appropriateness of assigning such tasks to working groups. With regard to the comment by the representative of France, he noted that the working groups sometimes began by producing a legislative text and followed up that work by producing a soft-law instrument. He added that working group mandates should specify the expected outcome of the deliberations.

67. **Mr. Sorieul** (Secretary of the Commission) said that the history of UNCITRAL demonstrated the difficulty of producing detailed definitions of working group mandates and their expected outcomes. He referred by way of example to the United Nations Convention on Independent Guarantees and Stand-by Letters of Credit. The secretariat had first produced a paper based on an intensive analysis of the subject. Discussions based on that paper had continued for several years before the mandate to draft a model law was assigned to a working group. After several sessions the working group had decided, for technical reasons, to opt

instead for a convention and had obtained the Commission's approval for that decision.

68. **Mr. Zhang** Chenyang (China) expressed support for the working group system, the multilingual approach, and the modernization and harmonization of international trade law. At a time

of scarce resources, however, special importance should be attached to flexibility, which was a basic prerequisite for the effectiveness of the work of UNCITRAL and its secretariat.

The meeting rose at 12.30 p.m.

**Summary record of the 977th meeting, held at the Vienna International Centre, Vienna, on Monday,
22 July 2013, at 2 p.m.**

[A/CN.9/SR.977]

Chairperson: Mr. Schöll (Switzerland)

The meeting was called to order at 2.05 p.m.

UNCITRAL regional presence (A/CN.9/775)

1. **The Chairperson**, welcoming the Deputy Minister for Legal Affairs of the Republic of Korea, Mr. Kang Chan Woo, invited the secretariat to introduce the agenda item concerning the UNCITRAL regional presence.

2. **Mr. Castellani** (Secretariat) said that a description of the activities undertaken in the last year by the UNCITRAL Regional Centre for Asia and the Pacific, which had been established in January 2012 and was based in the Republic of Korea, was contained in paragraphs 51 to 70 of document A/CN.9/775. The technical assistance priorities pursued included promotion of the universal adoption of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (the New York Convention). In addition, programmes had been tailored to the needs and requests of the countries of the region. He emphasized in that connection the Centre's cooperation with regional organizations. For instance, the United Nations Economic and Social Commission for Asia and the Pacific (ESCAP) was drafting an instrument on the facilitation of paperless trade and had sought the assistance of the Regional Centre on legal aspects of the project. A review of electronic commerce and electronic transactions law was being conducted by the Secretariat of the Association of South-East Asian Nations (ASEAN) and the United Nations Conference on Trade and Development (UNCTAD) with the involvement of the Regional Centre. Support had been provided to the adoption by the Lao People's Democratic Republic of a Law on Electronic Transactions. Expert group meetings had also been held on subjects such as online dispute resolution and the use of uniform texts in contract law reform.

3. **Mr. Kang Chan Woo** (Republic of Korea) said that the UNCITRAL Regional Centre for Asia and the Pacific had been established with the aim of

promoting standard UNCITRAL texts in the region and providing States with legal assistance for their adoption. To that end, the Korean Ministry of Justice had made a legal expert available and endeavoured to support the Centre's activities. In 2012 the Ministry and the Centre had successfully hosted three international conferences on contracts for the international sale of goods, e-commerce and online dispute resolution, and international commercial arbitration, at which UNCITRAL texts and relevant information had been promoted and shared. The Ministry and the Centre had also cooperated in assisting Myanmar in acceding to the New York Convention. Myanmar had become the 149th State party to the Convention in April 2013. The Ministry was planning to hold further international conferences together with the Regional Centre before the end of 2013. One such conference would deal with the creation of an appropriate legal environment for micro-businesses. As part of his country's efforts to assist its neighbours, the Ministry of Justice and the Regional Centre were preparing a joint research project to assist Mongolia in enacting modern arbitration legislation. In addition, the Republic of Korea had successfully provided the Lao People's Democratic Republic with assistance in overhauling its laws relating to securities. In the context of the Asia and the Pacific "Ease of Doing Business" project, the Regional Centre and the Ministry of Justice were taking action to improve the environment for the enforcement of contracts.

4. The Regional Centre's impressive achievements within such a short time were comparable to his country's rapid recovery from the ruinous consequences of the Korean War. In 1958, when the New York Convention was adopted, a journalist had made the following comment on war-torn Korea: "Expecting democracy to bloom in Korea is like hoping for a rose to blossom in a garbage bin." He had clearly been proven wrong. The Republic of Korea was thriving. As a nation that had overcome tremendous difficulties within a

relatively short period of time, his country was eager to share its expertise with its neighbours in the region. It was therefore appropriate that the Republic of Korea had been chosen to host the first UNCITRAL Regional Centre and the Ministry of Justice would provide unwavering support for the implementation of UNCITRAL's mandate.

5. **Mr. Dennis** (United States of America) congratulated the Regional Centre and the Korean Government on their outstanding achievements to date. He had attended regional conferences at the Centre on electronic commerce, online dispute resolution and international contract law. UNCITRAL could act as an effective clearing-house for technical assistance but States should also be actively involved. The conferences had offered States an excellent opportunity to discuss and coordinate the implementation of UNCITRAL instruments.

6. **Mr. Okemwa** (Kenya) said that the Kenyan Government was committed to the establishment of a regional centre. The new administration had begun to examine appropriate mechanisms and the UNCITRAL secretariat would be kept informed of progress in that regard.

Planned and possible future work, including in the areas of arbitration and conciliation, commercial fraud, electronic commerce, insolvency law, international contract law, microfinance, online dispute resolution, public procurement and infrastructure development, including public-private partnerships, and security interests (*continued*) (A/CN.9/752 and Add.1, 774, 780, 789 and 790)

7. **The Chairperson** invited the secretariat to introduce the second part of the Commission's discussion of agenda item 16.

8. **Ms. Nicholas** (Secretariat) said that there were 10 possible topics to be discussed with respect to future work. The secretariat considered that the Commission had already taken decisions concerning the following topics at the current session: arbitration, electronic commerce, insolvency, online dispute resolution and secured transactions. The following topics remained to be considered: commercial fraud, international contract law, microfinance and creating an enabling legal

environment for microbusiness and small and medium-sized enterprises, and public-private partnerships.

9. **Mr. Dennis** (United States of America) said that a final decision had not been taken in the case of insolvency regarding whether a colloquium should be held in preference to a two-week meeting of Working Group V.

10. **The Chairperson** agreed that no final decision had been taken on that point. However, the Commission should first clarify its position on the outstanding topics mentioned by the secretariat. Commercial fraud was the first such topic listed in paragraph 11 of document A/CN.9/774.

11. **Mr. Sorieul** (Secretary of the Commission) said that there was currently no proposal for the preparation of a new instrument and no request for meeting time or the establishment of a working group. The Commission had published indicators of commercial fraud several years ago that were deemed to be helpful. It had been proposed at the forty-fifth session in 2012 that the secretariat should convene a committee of experts to discuss the possible updating of the indicators. The committee had broadly confirmed the ongoing relevance of the indicators and had suggested that the secretariat should continue to convene a group of experts from time to time to assess the need for updating.

12. **Ms. Sabo** (Canada) said that priority should not be accorded to work on commercial fraud. Basic monitoring of the indicators by the secretariat would be sufficient.

13. **Mr. Dennis** (United States of America) said that the United States had expressed support in document A/CN.9/789 for the holding of a colloquium on commercial fraud in coordination with the United Nations Office on Drugs and Crime (UNODC). An informal meeting of experts organized by the secretariat in April 2013 had also concluded that a colloquium on the subject could be of significant benefit. The meeting had highlighted a UNODC decision calling for the development of a model law on identity theft and for coordination in that regard between UNODC and UNCITRAL. UNODC could focus on the consumer aspects and UNCITRAL on the corporate aspects of identity theft. A colloquium could also address the question

of commercial fraud in the context of online dispute resolution and the electronic transferability of records. Electronic commerce had grown exponentially since the convening of the first colloquium on commercial fraud in 2004. His delegation's position on the timing of a colloquium was flexible, but it attached great importance to the proposal to hold joint meetings with UNODC on identity theft.

14. **Mr. Schoefisch** (Germany) said that his delegation did not consider that commercial fraud was a priority topic. The secretariat should monitor the situation and, if necessary, provide for an updating of the indicators.

15. **The Chairperson** noted that there was agreement on the need to monitor developments in the area of commercial fraud and, in particular, to promote coordination with the work being undertaken by UNODC. With regard to the proposal to hold a colloquium, he suggested that the Commission should revisit the issue at its next session.

16. **Mr. Dennis** (United States of America) proposed that the secretariat should be authorized to organize meetings of experts on the subject.

17. **Ms. Sabo** (Canada) queried the desirability of devoting the secretariat's scarce resources to that type of work. If the secretariat considered, in light of its monitoring activities, that additional action was necessary, the matter could be referred to the Commission at its next session.

18. **Mr. Rivera Mora** (El Salvador) said that his delegation attached great importance to the topic of commercial fraud which, as demonstrated by the statistics, was a major problem. It would therefore support an independent analysis of mechanisms that could be used to address the problem.

19. **Mr. Chan Wah Teck** (Singapore) said that his delegation supported the views expressed by the representatives of Germany and Canada. The impact of commercial fraud on international trade was not on a scale consistent with UNCITRAL's mandate to harmonize international trade law.

20. **Mr. Schoefisch** (Germany) said that he agreed with the comments by the representatives of Canada

and Singapore. Commercial fraud was basically a criminal law issue.

21. **Mr. Dennis** (United States of America) said that his delegation was not suggesting that the secretariat should utilize scarce resources to address the issue. However, the secretariat should be authorized to comply with a possible decision by the United Nations Economic and Social Council regarding cooperation between UNCITRAL and UNODC on the development of a model law on identity theft.

22. **Mr. Sorieul** (Secretary of the Commission) reassured the Commission that the secretariat had no plans for the time being to devote resources to projects such as the drafting of a model law. One staff member would devote a very limited amount of time to the monitoring of developments in the area of commercial fraud, including in the context of UNODC. If it appeared that more substantive work might be required, the secretariat would refer the matter to the Commission.

23. **The Chairperson** said that the concerns of the representative of the United States had been taken into account. The question of commercial fraud would be revisited at the Commission's next session.

24. He invited the secretariat to introduce the topic of international contract law.

25. **Mr. Sorieul** (Secretary of the Commission) said that the delegation of Switzerland had submitted a proposal at the Commission's forty-fifth session in 2012 concerning work in the area of international contract law. The Commission had requested the secretariat to organize symposiums and other informal meetings to assess the need for such work and to investigate, in cooperation with the International Institute for the Unification of Private Law (UNIDROIT), the need to update the 1980 United Nations Convention on Contracts for the International Sale of Goods. The secretariat had been unable to organize any symposiums or other meetings owing to the lack of resources. However, it had attended meetings on the topic held in the United States, one organized by the Department of State and the other by Villanova University in Pennsylvania. The secretariat would continue to assess the feasibility of holding a symposium or other informal meeting on international contract law.

26. **Mr. Dennis** (United States of America) drew attention to the proposal by the United States contained in document A/CN.9/789 for the organization by UNCITRAL of a colloquium to celebrate the 35th anniversary of the United Nations Convention on the International Sale of Goods in 2015. The Convention was recognized as one of the most successful treaties in the history of modern commercial law. There were currently 79 States parties and the holding of a colloquium to mark the anniversary would probably lead to a further increase in ratifications. He noted that UNCITRAL had co-sponsored the meeting on international contract law that had been held at Villanova Law School in January 2013. In addition, an expert meeting on contract law had been held in February 2013 at the UNCITRAL Regional Centre for Asia and the Pacific. The secretariat had therefore complied with the request to organize symposiums and other meetings.

27. His delegation did not see the need for a global initiative on international contract law, but it was willing to consider the possibility of introducing reforms. At its 2007 and 2010 sessions, the Commission had endorsed the UNIDROIT Principles of International Commercial Contracts, which provided a useful complement to the Convention. UNIDROIT continuously monitored the principles with a view to enhancing their relevance.

28. **Ms. Sabo** (Canada) said that her delegation considered that there was no demonstrable need to revise the United Nations Convention on the International Sale of Goods, especially since it was effectively complemented by the 2010 edition of the UNIDROIT Principles of International Commercial Contracts. Expressing support for the proposal to mark the 35th anniversary of the Convention, she said that the need for revision could be assessed on that occasion.

29. **Mr. Schoefisch** (Germany) suggested that the Commission should confirm the request that it had made to the secretariat at the previous session. He noted with appreciation the secretariat's comment that it would continue to assess the feasibility of holding a symposium or other informal meeting on international contract law. He would also be interested in hearing the secretariat's views on the

proposal to mark the 35th anniversary of the Convention in 2014.

30. **Mr. Sorieul** (Secretary of the Commission) said that it would be important not only to celebrate the anniversary of the Convention but also to take the opportunity to analyse certain points that had not been fully addressed in that instrument. As it was somewhat early to take decisions regarding the Commission's work in 2015, it might be preferable not to fix a date for a colloquium but to authorize the secretariat to look into the matter and to assess availability of the requisite resources.

31. **The Chairperson** noted that the Commission supported the idea of holding a colloquium to celebrate the 35th anniversary of the Convention. The scope of the colloquium would not be limited to the Convention but would shed light on areas in which harmonization had not yet been achieved. The secretariat would be authorized to look into the matter and assess the most appropriate date for the colloquium.

32. **Ms. Sabo** (Canada) recommended that the colloquium should be held during one of the regular sessions of the Commission.

33. **Mr. Dennis** (United States of America) noted that when UNCITRAL had celebrated the 25th anniversary of the Convention in 2005, the Commission had discussed papers concerning a variety of issues as well as the UNIDROIT Principles of International Commercial Contracts.

34. **Mr. Sorieul** (Secretary of the Commission) said that the secretariat would submit a detailed proposal to the Commission at its next session.

35. **The Chairperson** invited the secretariat to introduce the topic entitled "Microfinance/creating an enabling legal environment for micro-business and small and medium-sized enterprises".

36. **Mr. Lemay** (Secretariat), introducing document A/CN.9/780, said that the topic of microfinance and the creation of an enabling legal environment for micro-business and small and medium-sized enterprises (MSMEs) had been on the Commission's agenda since its forty-second session in 2009, when the Commission had requested the secretariat to prepare a detailed study, including an assessment of the legal and regulatory issues at

stake in the field of microfinance. The study was also to include proposals concerning the form and nature of a possible reference document for legislators and policymakers indicating the elements required to establish a favourable legal framework for microfinance. At its forty-third session, the Commission had discussed the study and agreed that the secretariat should convene a colloquium involving experts from other organizations to explore the legal and regulatory issues that fell within the mandate of UNCITRAL. The colloquium had been held in January 2011. At its forty-fourth session, the Commission had decided to include microfinance as a topic for its future work and had requested the secretariat to prepare a study on four basic issues and to circulate a questionnaire among States regarding their experience with the establishment of a legislative and regulatory framework for microfinance and the obstacles they had encountered. The study had been submitted to the Commission at its forty-fifth session in 2012, and the Commission had agreed to hold one or more colloquia on microfinance and other topics related to creating an enabling legal environment for MSMEs.

37. A colloquium attended by experts from governments, international organizations, non-governmental organizations, the private sector and academia had been held from 16 to 18 January 2013 and the resulting report was contained in document A/CN.9/780. There had been a broad consensus at the colloquium that a working group should be established to address the legal aspects of an environment for MSMEs. The creation of such an environment would be consistent with the Commission's primary mandate to promote coordination and cooperation in the field of international trade, including regional cross-border trade. The participants had further suggested that a flexible tool, such as a legislative guide or a model law, would assist in harmonizing efforts in the sector and provide momentum for reforms that would further encourage micro-business participation in the economy.

38. The questionnaire circulated to States in 2011 had contained nine questions, some of a general nature and other more specific questions on secured financing, electronic money, supervision of microfinance institutions and resolution of disputes arising from low-value transactions. Twenty-nine

States had responded to the questionnaire. Some of the responses were summarized in document A/CN.9/780. The secretariat had also prepared a lengthy compilation of comments, but as insufficient resources were available to have the document translated into all six official United Nations languages, it would be posted unofficially in English only on the password-protected pages of the UNCITRAL website.

39. Very few States had enacted specific legislation on microfinance or microcredit, and regulatory impact assessments prior to the initiation of the law-making process appeared to be the exception rather than the rule. The main challenges encountered included the following: lack of formalization of companies; difficulties in raising awareness of the microfinance sector; financial entities that exceeded the monitoring capacities of regulators; the existence of limited and/or contradictory regulatory frameworks; and difficulties in the standardization of some of the main microfinance concepts. Where States had no specific legislation, the general provisions governing financial institutions were also applicable in most cases to microfinance.

40. With regard to secured financing, most States allowed MSMEs to use all types of assets as collateral and did not differentiate in terms of the size of the enterprise. Some did not allow the use of future property or fixtures as security for credit. Most States had a registration system in place and some were currently establishing such a system. Some States allowed the enforcement of security interests without the involvement of courts, while others required an enforcement order, usually involving a court decision. Several States did not regulate electronic money (e-money) in their jurisdictions. Others applied special legal provisions and did not recognize such money as savings. In most States e-money was not covered by deposit insurance schemes.

41. As a rule, microfinance institutions were supervised by the bodies that oversaw financial markets, and the regulations applicable to financial institutions and credit brokers were also applicable to them. In some States specific bodies had been assigned responsibility for supervising microfinance institutions. All States provided for confidentiality,

usually in the legislation applicable to financial services or consumer protection. In general, financial institutions were required to disclose the terms and conditions of service to clients.

42. With regard to the resolution of low-value transaction disputes, States mostly indicated that financial disputes could be settled before courts or arbitral tribunals. Some States had established specialized institutions for the resolution of disputes resulting from financial claims and relating to consumer contracts. In some cases customers could file complaints with the central bank or an ombudsman. In general, States did not employ special means for the resolution of disputes relating to microfinance.

43. States did not appear to have consistent views on the need for specific legislation on microfinance. The areas suggested for legislation included the following: the supply of capital for investment in microfinance; the quality of the products and services offered; specialized licensing criteria; the definition of microcredit; guidelines for the registration and licensing of microfinance institutions; monitoring and recovery processes; disclosure of information; collateral for microcredit loans; safeguards for low-income borrowers; and extrajudicial mechanisms for dispute resolution.

44. **Mr. Velez** (Colombia) said that the Commission, at its forty-fifth session, had agreed to hold one or more colloquiums on microfinance and the creation of an enabling legal environment for MSMEs. The secretariat had summarized the conclusions of the colloquium held in January 2013, as reflected in document A/CN.9/780. It had recommended, *inter alia*, that a working group should be established to address legal aspects of the creation of such an enabling environment. It had also stressed that work aimed at establishing such an environment would be consistent with the Commission's primary mandate to promote coordination and cooperation in the field of international trade, including regional cross-border trade. MSMEs required an internationally recognized legal framework in order to operate effectively on a global basis. He therefore proposed that two weeks should be reserved in the year ahead for meetings of a working group to discuss microfinance and related topics. The proposal was

set out in document A/CN.9/790 and was co-sponsored by El Salvador, Kenya, the Philippines and Uganda. It would be the first time in the history of UNCITRAL that a proposal from developing countries led to the establishment of a working group.

45. **The Chairperson** requested the representative of Colombia to comment on the criteria applicable to the prioritization of topics. The basic questions to be addressed were whether the formalization of MSMEs was likely to lead to consensus in a working group and to an increase in international trade, whether work in that area was being undertaken by other international bodies, such as the World Bank Group, and whether the topic was sufficiently clear in technical terms and in terms of the policy issues to be addressed.

46. **Mr. Velez** (Colombia) said that the informal sector, which operated outside the law, accounted for a large proportion of many emerging economies. For instance, it could account for as much as 50 per cent of economic activity in Colombia and many other Latin American countries. It was estimated that half of the workforce worldwide was employed in the informal sector and, according to World Bank data, the value of the business conducted by the sector amounted to approximately 10 trillion United States dollars. Action to formalize MSMEs would therefore promote the rule of law. However, the problems to be addressed were highly complex. The reasons that prompted businesses to operate in the informal sector included the tax burden, excessive regulation of the formal sector, a deterioration in the quality of public administration, and the dynamics of the formal sector. The problem in most States was not the absence of legislation but the poor quality of the existing legislation. The goal to be pursued was the development of a simple and flexible legal framework that would not impede formalization. The framework should be related to the different components of the life cycle of an enterprise and could take the form, for instance, of a model law concerning the establishment and registration of MSMEs. Provision should be made for simplified microfinance mechanisms and banking services, alternative dispute resolution mechanisms and simplified insolvency regimes. Action in that area was doubtless consistent with the mandate of

UNCITRAL to promote the modernization and harmonization of international trade law.

47. **Mr. Maradiaga** (Honduras) commended the overview of the problems related to microfinance set out in document A/CN.9/780, which clearly illustrated the adverse impact on emerging economies of the current economic situation. He also shared the views expressed by the representative of Colombia and endorsed his proposal for the development of a legal instrument to address the problems. Honduras had enacted legislation on microfinance and MSMEs but there was no consensus on how it should be enforced. The production by UNCITRAL of a standard-setting instrument would therefore be of great assistance.

48. **Mr. Schoefisch** (Germany) noted with surprise that only 29 States had responded to the secretariat's questionnaire and that most of those States had no specific legislation concerning microfinance. He therefore supported the proposal to engage in work in that area, focusing on international trade law aspects.

49. **Mr. Bellenger** (France) said that while his delegation also supported the proposal, it was somewhat concerned about the scope and complexity of the topic. It would perhaps be desirable to focus initially on company law.

50. **Mr. Fruhmenn** (Austria) said that it was unclear whether the topic under discussion concerned microfinance and microcredit or problems relating to the creation of an enabling legal environment for MSMEs. The scope of the latter topic, for instance in social terms, was far broader than that of the former. Clarity was essential if a mandate was to be assigned to a working group. A second question, in light of the existing scarcity of resources, was whether formalization was in itself desirable, whether it fulfilled an economic need and whether it would have a beneficial effect on international trade. The legal problems faced by micro-businesses were different from those faced by small and medium-sized enterprises. There was also a presumption that formalization would lead to the resumption of economic growth. He drew attention in that connection to a tendency in the European Union under the current economic circumstances to introduce escape clauses and exemptions from legal

regimes for small and medium-sized enterprises in order to enhance their development opportunities.

51. **Ms. Phongsathit** (Thailand) expressed support for the proposal made by the representative of Colombia. She emphasized the importance of an enabling legal environment for micro-businesses, especially in developing countries where large numbers of MSMEs regularly participated in cross-border trade. Access to credit for MSMEs and the associated legal framework should also be further explored by the Commission. Her delegation considered that the outcome would have a beneficial impact on international trade.

52. **The Chairperson** noted that broad support had been expressed for the proposal submitted by the representative of Colombia and co-sponsored by four other delegations. The scope of the topic was very broad since it encompassed the entire business cycle and a wide range of issues. The Commission might therefore wish to focus on one area, since it would then be easier to respond to follow-up questions regarding, for instance, whether formalization was desirable and feasible, and whether public policy issues were involved. He suggested simplified incorporation as the first issue to be addressed. If a working group was established, it should familiarize itself with relevant studies, for instance on the effectiveness of incorporation. It would also be necessary to investigate whether simplified incorporation would have the same effect on micro-businesses and on small and medium-sized enterprises. A working group should also be aware of contrasting circumstances in different parts of the world.

53. **Mr. Chan Wah Teck** (Singapore) said that microfinance was not an area requiring urgent action by UNCITRAL. However, the current discussion concerned an entirely different proposal, namely the creation of an enabling environment for MSMEs. The link between the two components of the topic was that MSMEs required micro-financing.

54. The size of the informal sector of the economy was in many cases a constraint on development and had an adverse impact on international trade. While the topic therefore seemed to fall within the mandate of UNCITRAL, it encompassed a very large number of issues. The basic aim was to modernize domestic legislation with a view to facilitating national

economic and social development. The question arose whether that aim could be achieved more effectively by another international agency, within or outside the United Nations system. Furthermore, the mandates of existing UNCITRAL working groups covered certain aspects of the topic. For instance, mobile payments were on the agenda of Working Group IV on electronic commerce, and a simplified form of dispute resolution was on the agenda of Working Group II on arbitration and conciliation. Furthermore, even if domestic legislation was reformed to create an enabling environment for MSMEs, such action would not have an extraterritorial impact unless UNCITRAL drafted a convention aimed at promoting extraterritoriality and hence international trade. He doubted, however, whether that was a practicable outcome. To sum up, his delegation was not opposed to the establishment of a working group, but it considered that such a step might be premature, since no preparatory work had yet been undertaken on its precise mandate.

55. **Ms. Fernández Sobarzo** (Observer for Chile) expressed strong support for the proposal made by the representative of Colombia. The colloquium held in January 2013 had shed light on the importance and scope of the topic, especially for developing countries. If the area to be addressed at the outset was narrowed down, a working group could develop a dynamic and modern legal instrument that would facilitate the emergence into the light of day of enterprises currently operating in the informal sector.

The meeting was suspended at 4.10 p.m. and resumed at 4.35 p.m.

56. **Ms. Matos** (Observer for the Dominican Republic) expressed support for the proposal made by the representative of Colombia, which would assist developing countries in which a large number of MSMEs were currently operating.

57. **Mr. Arosemena** (Panama) expressed support for the proposal that had been made both by Colombia and by the colloquium held in January 2013 to establish a working group on the creation of an enabling legal environment for MSMEs.

58. **Mr. Rodríguez** (Switzerland) said that the importance of microfinance for economic development throughout the world was evidenced by

the number of multilateral bodies that were currently dealing with the topic. The uniform criteria to be applied in prioritizing the Commission's future work included the topic's impact on international trade, the clarity of its scope and the existence of relevant documentation. A further criterion was the avoidance of duplication of work. Clarification was required with respect to the need for supranational legislation on the wide variety of issues that fell under the current topic. It would be helpful to have an overview of the work that was being undertaken by other bodies such as the World Bank and regional development banks and to hear their views on the possible coordination of their work with UNCITRAL.

59. The informal status of a business was a free choice under some legislation. The actors involved were not deemed to be engaged in unlawful conduct provided that they paid their taxes and other contributions. Moreover, certain studies had shown that a high degree of formalization of enterprises was not necessarily reflected in greater economic growth.

60. His delegation was not recommending that the prioritization criteria should be strictly applied at the current session to the proposal made by Colombia. It supported work on some aspects of the topic, such as incorporation, in the medium term. Existing working groups could also be asked to focus on issues of relevance to MSMEs, such as simplified dispute resolution and insolvency proceedings.

61. **Ms. Mlosovicova** (Bolivarian Republic of Venezuela) expressed support for the proposal by Colombia to establish a working group on the creation of an enabling legal environment for MSMEs. The working group should not focus exclusively on MSMEs but should also deal with the availability of microfinance for other types of associations and groups.

62. **Mr. Rivera Mora** (El Salvador) said that States that participated in UNCITRAL and other forums were generally prepared to develop legal frameworks to regulate large companies and transnational corporations. When it came to MSMEs, however, there was a tendency to downplay the prospective public and private benefits. Addressing, in particular, the member States of the European

Union, he said that the establishment of a working group to promote formalization of the informal sector would greatly benefit developing countries, including future members of the European Union, not only in economic terms but also in terms of fulfilment of their international financial obligations. His delegation therefore strongly supported the proposal by the representative of Colombia.

63. **Ms. Sabo** (Canada) reiterated her delegation's position concerning the lack of any well-defined project in the area of microfinance. However, Canada had supported the proposal by the delegation of Colombia at the forty-fifth session of the Commission for a project concerning simplified business incorporation and registration. The question whether that project should be submitted to a working group was a separate issue. It would be helpful to have written contributions from the secretariat concerning existing work in the area and the aspects of the topic that would need to be addressed.

64. With regard to the proposal by Colombia at the current session concerning the creation of an enabling legal environment for MSMEs, some of the issues, as noted by previous speakers, were already on the agenda of existing working groups. It might therefore be sufficient for the Commission to invite those groups to examine whether their work might be adjusted to take into account the needs of MSMEs.

65. **Ms. Gibbons** (Ecuador) expressed support for the proposal by the representative of Colombia

because of the important role played by MSMEs in the economies of developing countries. She emphasized in that connection the desirability of promoting flexible rules.

66. **Mr. Zhang** Chenyang (China) expressed support for the proposal by the representative of Colombia and urged the Commission to focus in its future work on the creation of an enabling environment for MSMEs. The colloquium held in January 2013 had covered many technical aspects of the topic but it was also necessary to investigate the legislative aspects.

67. **Mr. Sorieul** (Secretary of the Commission) said that the secretariat would produce working documents on the topic if so instructed by the Commission. However, the documents would not be ready for consideration by a working group until spring 2014.

68. **Mr. Ivančo** (Observer for the Czech Republic) expressed support for the proposal to address the topic of MSMEs. However, his delegation suggested that work should focus initially on simplified business incorporation.

69. **The Chairperson** interpreted the proposal under discussion as a call to the Commission to allocate substantial resources to activities aimed at meeting developing countries' concerns. He assured the delegations concerned that their call had been heard.

The meeting rose at 5 p.m.

**Summary record of the 978th meeting, held at the Vienna International Centre, Vienna, on Tuesday,
23 July 2013, at 9.30 a.m.**

[A/CN.9/SR.978]

Chairperson: Mr. Schöll (Switzerland)

The meeting was called to order at 9.50 a.m.

Planned and possible future work, including in the areas of arbitration and conciliation, commercial fraud, electronic commerce, insolvency law, international contract law, microfinance, online dispute resolution, public procurement and infrastructure development, including public-private partnerships, and security interests (*continued*) (A/CN.9/752 and Add.1, 774, 779, 780, 789 and 790)

1. **The Chairperson**, referring to the Commission's discussion at the previous meeting on the topic entitled "Microfinance/creating an enabling legal environment for micro-business and small and medium-sized enterprises", suggested that the following text should be inserted in the draft report:

"After discussion, the Commission agreed that work to reduce the legal obstacles faced by micro-business and small and medium-sized enterprises throughout their life cycle, in particular in developing economies, should be added to the agenda of the Commission.

The Commission also agreed that such work should start with a focus on the legal questions surrounding incorporation and that the secretariat should prepare the requisite documentation for the early convening of a working group.

The Commission agreed that the working group should include in its progress reports to the Commission: (i) information or empirical evidence demonstrating how its work relates to or affects sustainable development and inclusive finance; and (ii) information on how its work is complementary to the work of other international and intergovernmental organizations which are active or have a mandate in these fields."

He invited the Secretary of the Commission to indicate how the proposed work might be apportioned and how long it would take to prepare the ground for a working group on the topic.

2. **Mr. Sorieul** (Secretary of the Commission) said that working groups were normally mandated to prepare a text rather than to submit reports to the Commission on the legal situation in different countries or in a specific field. Clearly the proposed working group would need to take into account the information and evidence referred to in the text read out by the Chairperson. However, it might be preferable not to confine its terms of reference to research and investigation.

3. The secretariat would prepare documents reviewing the experience of developing countries in the area of simplified incorporation of micro-business and small and medium-sized enterprises (MSMEs), taking into account legal aspects of incorporation in other countries. It would need some time to undertake comparative studies and to hold meetings of expert groups. He estimated that the required documents could be produced by the end of 2013 and that a working group could be convened in spring 2014.

4. **Ms. Sabo** (Canada) proposed that the information-gathering mandate assigned to the working group in the text read out by the Chairperson should be assigned instead to the secretariat.

5. She further proposed inserting the word "simplified" before "incorporation" in the phrase "focus on the legal questions surrounding incorporation".

6. **Mr. Dennis** (United States of America) proposed expanding the phrase just mentioned by the representative of Canada to read "focus on developing a legal instrument or legal instruments relating to simplified business registration and incorporation". He further proposed adding the

following sentence: “The work should also include the elements of the enabling legal environment that were identified at the colloquium and spelt out in the secretariat paper and the paper submitted by the delegation of Colombia.” The work would thus cover alternative dispute resolution, mobile banking and e-money, access to credit, secured transactions and insolvency.

7. He agreed with the representative of Canada that the secretariat could undertake the information-gathering tasks mentioned at the end of the Chairperson’s text. He pointed out, however, that the secretariat reports on the two colloquiums already contained a great deal of relevant information.

8. With regard to the prioritization criteria, he considered that the topic of simplified business registration and incorporation was likely to lead to consensus in a working group. It would also certainly lead to an increase in international trade, since some 50 per cent of businesses in many developing countries were operating in the informal sector and were therefore unable to compete in international trade. Document A/CN.9/780 concerning microfinance contained a quotation from the World Bank according to which economies with modern business registration grew faster, promoted greater entrepreneurship and productivity, created jobs, boosted legal certainty and attracted larger inflows of foreign direct investment. The January 2013 colloquium had also stressed that the establishment of an enabling environment for MSMEs would be consistent with the Commission’s primary mandate to promote coordination and cooperation in the field of international trade, including regional cross-border trade.

9. With regard to the work being undertaken in that area by other international bodies, both colloquiums had concluded that such bodies were not involved in creating an enabling legal environment for MSMEs because they did not deal with the informal sector. It was therefore imperative for UNCITRAL to take up the topic, especially since the States that had co-sponsored and expressed support for future work in that area represented all regions of the world.

10. Another prioritization criterion was whether the topic was sufficiently clear in technical terms

and in terms of the policy issues to be addressed. In his view, it was. The delegation of Colombia had proposed that a model law should be developed on simplified business registration and incorporation. Other proposals relating to the topic included the following: notes on how a system of alternative dispute resolution in the field of microfinance should be organized; a best practices guide in the area of mobile payments; and model laws on access to credit and insolvency.

11. His delegation had no objection to the proposal that other working groups should deal with aspects of the topic that fell within their area of specialization. The Commission should make that clear when assigning priorities, for instance to the working groups on insolvency law and on arbitration and conciliation, and should provide for coordination on MSME issues between the different working groups.

12. **Mr. Adensamer** (Austria) said that his delegation supported the text proposed by the Chairperson. However, it proposed replacing “work to reduce legal obstacles” with “work on international trade law aimed at reducing legal obstacles”.

13. **Ms. Laborte-Cuevas** (Philippines) said that the creation of an enabling environment for MSMEs was consistent with the Commission’s mandate to promote coordination and cooperation in the field of international trade, including regional cross-border trade. Her delegation supported the assignment of a mandate to the secretariat to prepare information documents prior to the convening of a working group in 2014 to discuss simplified incorporation of MSMEs.

14. **Mr. Chan Wah Teck** (Singapore) said he took it that the Commission was still engaged in a general discussion of the issues raised by Colombia in document A/CN.9/790 and that any further points on which a consensus was reached would be reflected in the draft report. The title of the topic was “Microfinance/creating an enabling legal environment for micro-business and small and medium-sized enterprises”, but he proposed that the report should state that the Commission was no longer dealing with the question of microfinance. While many speakers had mentioned the findings of the two colloquiums, he pointed out that both had

focused on microfinance. It was therefore not surprising that the representatives of other international bodies who attended the colloquiums had shown little interest in creating an enabling legal environment for MSMEs.

15. His delegation was not opposed to the establishment of a working group. However, the working group's mandate should be clearly defined by means of careful preparatory work by the secretariat, with input from representatives of agencies both within and outside the United Nations system that were involved in creating a conducive legal environment for small and medium-sized enterprises. Many related issues were currently being addressed by other UNCITRAL working groups. While he emphasized that they did not have an exclusive mandate in those areas, they had accumulated a great deal of expertise. Hence, if the proposed new working group were to deal with the topic of alternative dispute resolution, it would be greatly disadvantaged if it was unable to draw on the expertise of the members of the working group on arbitration and conciliation. The secretariat should examine that aspect when undertaking its preparatory work.

16. **The Chairperson** invited further comments on whether the Commission should decide to delete the reference to "microfinance".

17. **Mr. Schoefisch** (Germany) expressed support for the creation of the proposed working group, which should have a clearly defined mandate. He agreed that the first paragraph of the text proposed by the Chairperson should refer to international trade law and that the word "simplified" should be inserted in the second paragraph.

18. The "microfinance" label was, in his experience, somewhat misleading. He therefore agreed with the representative of Singapore that the Commission should make it clear that it was no longer dealing with microfinance but with the creation of an enabling legal environment for MSMEs.

19. With regard to the statement by the representative of the United States, he warned against overloading the working group with a wide range of topics. It should focus initially on a single

topic and move on to other areas when the Commission decided that the time was ripe.

20. **Mr. Maradiaga** (Honduras) said that, in his view, there was no substantive difference between microfinance and the creation of an enabling legal environment for MSMEs. It was simply a matter of terminology. The Commission should adopt a constructive approach. The secretariat would be assigned the key task of compiling the requisite information and investigating links with the work of other international bodies. A colloquium should then be organized to discuss the outcome.

21. **The Chairperson** said that "creation of an enabling legal environment for micro-business and small and medium-sized enterprises" was an unduly lengthy title for a working group. He suggested as an alternative title "MSME framework".

22. **Mr. Anwar** (Indonesia), emphasizing the major role played by MSMEs in both developed and developing countries, expressed support for the creation of a working group. MSMEs had accounted for 59.08 per cent of the gross domestic product of Indonesia in 2012 and the country had recorded an economic growth rate of about 6 per cent. Moreover, some 107 million people had been employed by MSMEs in 2012. Legislation to regulate MSMEs had been enacted in 1995.

23. **Ms. Malaguti** (Italy) expressed support for the proposal to establish a working group and for the Chairperson's draft summary, as amended. Her delegation had consistently emphasized that its support depended on a link being established with international trade and with action to reduce legal obstacles faced by MSMEs.

24. **Mr. Rodriguez** (Switzerland) also expressed support for the amended version of the Chairperson's summary.

25. It was important to take advantage of the expertise accumulated by the different working groups by requesting them to address various aspects of the topic under discussion. If all those aspects were assigned to a single working group, an extremely lengthy period of time would be required for the proceedings. Provision could also be made for coordinated work by more than one working group.

26. **The Chairperson** invited the Commission to comment on whether the following constituted an acceptable summary of the discussion and decision. There was broad support for the establishment of a working group on the topic of MSMEs, which would meet for the first time in spring 2014. In the meantime, the secretariat would undertake the necessary preparatory work. He listed three amendments to his proposed summary: “work to reduce legal obstacles” in the first paragraph would be replaced with “work on international trade law aimed at reducing legal obstacles”; the word “simplified” would be inserted in the second paragraph before “incorporation”; the third paragraph would state that “The Commission agreed that the secretariat should undertake the following preparatory work” and the words “both within and beyond the United Nations context” would be inserted after “intergovernmental organizations”.

27. **Mr. Velez** (Colombia) said that his delegation found the summary and proposed decision acceptable. He took it that when the working group met for a week in spring 2014 it would discuss a draft model law on simplified incorporation. The report should make it clear that the preparation of such a model law would require two weeks at the very least.

28. **Mr. Sorieul** (Secretary of the Committee) reassured the representative of Colombia that the working group would not be expected to produce a model law in a single session. Such work was rarely completed within two years.

29. **Mr. Cabeiro Quintana** (Observer for Cuba) expressed support for the creation of a working group on an enabling legal environment for MSMEs. His delegation agreed with the recommendation made by the representative of the Bolivarian Republic of Venezuela at the previous meeting that the working group should not focus exclusively on MSMEs but should also deal with the availability of microfinance for other types of associations and groups.

30. **Mr. Nogues** (Paraguay) said that his delegation wished to co-sponsor the proposal for the establishment of a working group. There were about 300,000 MSMEs in Paraguay and they generated a great deal of employment. Yet the majority of such companies were denied access to financial services.

31. **Mr. Bellenger** (France) said that the report should mention the proposal that the Commission should refrain from using the term “microfinance” in the mandates that it assigned to working groups.

32. **The Chairperson** said he took it that the Commission wished to drop the term “microfinance”, while acknowledging that its discussions concerning microfinance had shed light on other aspects of the topic that would be addressed in the future.

33. The representative of Singapore had recommended that a working group should not be established until the secretariat had completed its preparatory work. That recommendation had received support from the representatives of Austria, Germany and Switzerland. He asked whether those four delegations would object to a decision by the Commission at the current session to establish a working group that would meet in spring 2014.

34. **Mr. Chan Wah Teck** (Singapore) said that his delegation would not object to such a decision. However, if the secretariat failed to complete its preparatory work by spring 2014, the working group would be unable to commence its proceedings. The representative of Honduras had proposed that a colloquium should be held. He suggested that the colloquium should be held as soon as the secretariat completed its work.

35. A key task to be assigned to the secretariat was the development of a definition of micro-businesses and small and medium-sized enterprises.

36. He proposed that the second paragraph of the Chairperson’s summary should refer to the research to be undertaken by the secretariat on relevant work by other agencies within and outside the United Nations system.

37. **Ms. Sabo** (Canada) said that while she agreed in principle that a colloquium might serve a useful purpose, she was concerned that the Commission might be overburdening the secretariat. It would perhaps be preferable to authorize the secretariat to confer with experts on various aspects of its preparatory work.

38. **Mr. Dennis** (United States of America) said he agreed that meetings between the secretariat and expert groups would be preferable to the convening of a colloquium.

39. He had proposed in his earlier statement that the Chairperson's summary should refer to a list of the elements constituting an enabling legal environment. Such a list would assist other working groups in assessing the relevance of the topic to their own mandates before the new working group met. For instance, there had been some confusion regarding the specific mandate of Working Group V on insolvency law. He suggested that simplified insolvency regimes, which had been mentioned in document A/CN.9/790 submitted by Colombia, might be an appropriate topic.

40. **Mr. Sorieul** (Secretary of the Commission) said that experience had shown that it was not particularly easy to promote cooperation between different working groups. He also doubted whether the publication of a general list of topics relating to MSMEs would prompt existing working groups to take up one of those topics. Furthermore, he cautioned against broadening the mandate of the new working group in a manner that might destabilize the existing working groups.

41. **Ms. Talero** (Colombia) said that she agreed with the representative of Canada that the proposal to hold a colloquium might overburden the secretariat, especially at a time of scarcity of budgetary resources. She also agreed that the working group should initially focus on simplified incorporation.

42. **Mr. Maradiaga** (Honduras) withdrew his proposal to hold a colloquium.

43. **The Chairperson** concluded that there was broad agreement on the Colombian proposal to set up a working group on the MSME framework that would meet for its first session in spring 2014. Preparatory work would be undertaken in the meantime by the secretariat in line with the amended version of the Chairperson's summary.

44. *It was so decided.*

The meeting was suspended at 11.30 a.m. and resumed at 11.50 a.m.

45. **The Chairperson** invited the secretariat to introduce the topic entitled "Public procurement and related areas, including public-private partnerships (PPPs)".

46. **Ms. Nicholas** (Secretariat) said that the Commission had agreed at its forty-fifth session in 2012 that the secretariat should organize a colloquium on public-private partnerships with a view to identifying whether the Commission should undertake work in that area. She drew attention in that connection to the UNCITRAL Legislative Guide on Privately-Financed Infrastructure Projects, which had been adopted by the Commission in 2000, and the Model Legislative Provisions on Privately-Financed Infrastructure Projects, which had been adopted in 2003. The purpose of the colloquium, which had been held in May 2013, was to assess whether the recommendations in the Legislative Guide and the Model Legislative Provisions remained an appropriate and adequate guide for such infrastructure projects and whether the market in PPPs was sufficiently well developed. There had been a broad consensus at the colloquium on the importance of PPPs as a developmental topic and as support to foreign direct investment and sustainable development.

47. With regard to the prioritization criteria, she drew attention to the report on the colloquium contained in document A/CN.9/779. The first criterion was whether the topic was likely to lead to consensus in a working group. The concept of a "public-private partnership" had been defined and regulated in several jurisdictions since 2005. Recent studies had shown that extremely different approaches were adopted to the regulation of PPPs despite the existence of many texts on the subject at the regional and international levels. Hence, there was no universally applicable standard that could be used by States. For instance, natural resources concessions were not included in the UNCITRAL texts but were included in other relevant international texts. There was also a great deal of confusion regarding terminology, the content of PPP legislation and its interaction with other laws. The colloquium had therefore concluded that there was an urgent need to address the chaotic and uncoordinated results in the legislative sphere. The current UNCITRAL texts could not fulfil that task.

48. The scope of possible UNCITRAL work on PPPs was set out in paragraphs 36 to 45 of document A/CN.9/779. The colloquium had expressed strong support for the notion of a model law on PPPs and a guide similar to the Guide to

Enactment of the UNCITRAL Model Law on Public Procurement that the Commission had adopted in 2012. It had been recognized, however, that if a comprehensive set of policy guidelines could not be issued, a legislative guide might be a better option. The colloquium had not addressed the question of whether the development of a legal text would enhance international trade law. Moreover, the precise scope of the work that should be envisaged had not been defined. There had been some disagreement among participants, for instance on the complexity of the work that might be required to harmonize and synthesize the existing UNCITRAL texts and other available instruments. However, the United Nations Economic Commission for Europe had stated that it would fully support legislative work by UNCITRAL and use it to support its capacity-building activities. No duplication of effort with other international bodies had been identified by the secretariat.

49. The topic was arguably ready for submission to a working group. However, paragraphs 69 and 70 of document A/CN.9/779 indicated that further preparatory work was necessary to define a precise mandate. Persons currently working in PPPs had indicated that a text on a clearly defined and limited set of issues was urgently needed. While the UNCITRAL instruments were recognized as a useful tool for experts, they were not widely used in the area of international development. The colloquium had concluded that future texts should be developed in the context of a working group. Its comments were set out in paragraphs 82 and 83 of the report.

50. Bearing in mind the importance of identifying the key elements that should be included in a model law and the importance of understanding the relevant techniques that were currently being applied, the Commission might consider that secretariat-based desk research should be complemented by consultations with experts and persons working in the field, especially in developing countries, with the support of the multilateral development banks. The colloquium had not recommended that the topic should be referred forthwith to a working group. Some participants had recommended that parts of the Legislative Guide that required updating should first be identified and that the possibility of developing a model law should be discussed in the context of colloquiums or

expert groups. A firm proposal could be submitted to the Commission at its forty-seventh session in 2014. The resources required from UNCITRAL for action along those lines would be conference support for a maximum of one week.

51. **Mr. Bellenger** (France) noted the important role played by PPPs in sustainable development and the great need for PPP infrastructure in developing countries at a time of scarce public funds and a decline in development assistance. It was a sensitive and complex topic that should be entrusted to a working group after the requisite preparatory work outlined by the secretariat, including perhaps the holding of colloquiums, had been completed.

52. **Mr. Fruhmann** (Austria) said that PPPs were an important topic for both developed and developing countries and met the prioritization criteria. His delegation supported the establishment of a working group following preparatory work by the secretariat, including the holding of colloquiums. He asked where such colloquiums might be held.

53. **Ms. Nicholas** (Secretariat) said that the secretariat planned to adopt a flexible and transparent approach and to seek the broadest possible participation, for instance by organizing expert group meetings in Europe and North America and holding colloquiums in other regions. The regional development banks and the World Bank had expressed support for such an approach.

54. **Mr. Dennis** (United States of America) said that the representative of Singapore had drawn attention at a previous meeting to paragraph 20 of document A/CN.9/779 concerning PPPs, which stated that there was no widespread awareness of UNCITRAL privately financed infrastructure project (PFIP) instruments and that they had proved to be of limited utility for legislators and regulators.

55. The proposed model law was already virtually complete and the United States had suggested in document A/CN.9/789 that it should be finalized by a meeting of experts rather than by a colloquium and should be submitted to a working group in 2014 for adoption. His delegation cautioned against expanding the scope of the revision and prolonging the discussions.

56. **Ms. Sabo** (Canada) said that her delegation was not convinced that a model law was the

appropriate instrument. The PFIP instruments previously produced by UNCITRAL were still highly relevant. However, she agreed with the proposal for the secretariat to undertake preparatory work with the assistance of experts. When it submitted its findings in 2014, the Commission could decide whether a guide or a model law should be developed.

57. **Ms. Nicholas** (Secretariat) said that the colloquium held in May 2013 had considered whether the proposed legal text was already virtually complete and simply needed to be updated. It had concluded that further work was required and could not be completed solely by means of secretariat research. It had also emphasized the need to adopt an inclusive approach in expert consultations through mechanisms designed to promote multilingualism and transparency. A colloquium had been proposed to meet those requirements.

58. **Ms. Whyte** (United Kingdom) expressed support for the comments by the representative of Canada.

59. **Ms. Malaguti** (Italy) said that the expert groups consulted by the secretariat should include representatives of the public sector.

60. **The Chairperson** said that resources were available for five days of expert group meetings in

different parts of the world in the interests of transparency and with a view to obtaining the widest possible range of views on the topic. One possible reason for the limited application of the UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects was that wide-ranging consultations had not been held on that instrument.

61. **Mr. Chan Wah Teck** (Singapore), speaking as the former Chairperson of the session of the Commission that had adopted the UNCITRAL Legislative Guide in 2000, said that there had been no suggestion during the lengthy deliberations that the text was deficient in any way or that the prior consultations had not been sufficiently wide-ranging.

62. **Mr. Fruhmenn** (Austria) said that the proposed instrument should respond to practical needs and should not be unduly complex.

63. **The Chairperson** noted that the Commission supported continuous work by the secretariat on the topic of PPPs and the organization of consultations with experts. In light of the scarcity of resources, the secretariat would adopt a flexible approach to the question of whether a colloquium should be convened with the support of the regional development banks.

The meeting rose at 12.30 p.m.

**Summary record of the 979th meeting, held at the Vienna International Centre, Vienna, on Tuesday,
23 July 2013, at 2 p.m.**

[A/CN.9/SR.979]

Chairperson: Mr. Schöll (Switzerland)

The meeting was called to order at 2.10 p.m.

Planned and possible future work, including in the areas of arbitration and conciliation, commercial fraud, electronic commerce, insolvency law, international contract law, microfinance, online dispute resolution, public procurement and infrastructure development, including public-private partnerships, and security interests (*continued*) (A/CN.9/752 and Add.1, 774 and 789; A/CN.9/XLVI/CRP.1/Add.8)

1. **The Chairperson** said that the mandates of Working Group II on arbitration and conciliation, Working Group III on online dispute resolution and Working Group VI on security interests had been confirmed and all three had been allocated two working group sessions.

2. He invited the secretariat to introduce the topic of insolvency.

3. **Ms. Clift** (Secretariat) drew attention to the summary of the Commission's discussion the previous week that was contained in the draft report (A/CN.9/XLVI/CRP.1/Add.8). Some of the proposals had been discussed informally during the intervening period.

4. The Commission had agreed that the mandate accorded to Working Group V had not been completed and that it was unclear how the Working Group should proceed with the remaining tasks. It had been proposed that, resources permitting, a colloquium on the subject should be held in December 2013. It had also been proposed that the colloquium should take place in the context of a meeting of the Working Group. The colloquium would discuss enterprise group issues and topics for future work, which could include insolvency issues raised by microbusiness and small and medium-sized enterprises (MSMEs). The Working Group would continue in spring 2014 to work on enterprise group issues and possibly also issues relating to MSMEs. The Commission would

decide how to proceed on the basis of the Working Group's report and would issue an additional mandate, if necessary, concerning MSMEs.

5. **Mr. Redmond** (United States of America) said that his delegation broadly supported the proposals outlined by the secretariat, also regarding the holding of a colloquium, followed by a meeting of the Working Group, in December 2013. The experts attending the colloquium should present their views on insolvency issues relating to MSMEs, and the Working Group should be given a mandate to discuss those issues when it met in April 2014. The working group on MSMEs that had just been established could determine public policy issues and obtain clarification on insolvency aspects of those issues as well as advice from Working Group V on additional issues that should be addressed.

6. The Working Group had held lengthy discussions on the subject of centre of main interests (COMI) in the context of enterprise groups. A colloquium would be of great assistance in identifying the work that should be accomplished in that area and in providing advice on whether a legislative guide or model law should be developed. The members of the Working Group should, of course, also decide whether they wished to proceed with such a project.

7. **Mr. Rodriguez** (Switzerland) and **Mr. Maradiaga** (Honduras) expressed support for the approach recommended by the representative of the United States.

8. **Ms. Talero** (Colombia) also expressed support for the proposals made by the representative of the United States. Insolvency was a source of great concern for MSMEs, which required speedier, more flexible and less costly proceedings. Working Group V had sufficient expertise to address the topic, and coordination on policy issues with the new working group on MSMEs could prove extremely helpful.

9. **Ms. Sabo** (Canada) expressed support for the proposals outlined by the secretariat. With regard to

the comments by the representative of the United States, she understood that the purpose of the colloquium would be to assist Working Group V by clarifying how it should approach issues relating to enterprise groups and by generating new ideas. However, its conclusions would not determine how the Working Group should proceed. That would be decided by the Commission on the basis of an assessment by the Working Group.

10. **Mr. Schoefisch** (Germany) expressed support for the proposals by the representative of the United States. He agreed with the representative of Canada that the purpose of the colloquium was to identify topics that might be addressed by Working Group V and that the Commission should decide which topics were appropriate.

11. **Mr. Bellenger** (France) also emphasized the need to distinguish between the processes of reflection and implementation. He agreed with the points made in that regard by the representatives of Canada and Germany.

12. **Mr. Redmond** (United States of America) read out the following proposal for a Working Group V mandate concerning MSMEs: "After discussion, the Commission agreed that work concerning insolvency considerations related to microbusiness, small and medium-sized enterprises should be taken up as an additional mandate by Working Group V in coordination with the new working group."

13. **Mr. Schoefisch** (Germany) said that he had understood that the colloquium and Working Group V should first discuss possible future topics.

14. **Ms. Sabo** (Canada) said that the proposal by the representative of the United States implied that Working Group V was being given a mandate both to continue considering issues relating to enterprise groups and to take up a new subject that might require several sessions. The position of her delegation was that the various elements of the MSME topic should be considered by the Commission in 2014. It would be helpful if working groups could provide information in the meantime that would assist the Commission in taking a decision on those elements.

15. **The Chairperson** said that there seemed to be broad support for the allocation of the first part of the five-day session in December 2013 to a

colloquium that would discuss the remaining portion of the Working Group's mandate and generate new ideas. There was also broad support for the consideration by the Working Group of insolvency in relation to MSMEs in due course. There were divergent views, however, on the question of timing. He suggested that the new working group on MSMEs, which would meet in spring 2014, could identify the basic issues to be addressed in an insolvency context and submit them to the Commission for a decision. In response to a question from the representative of Germany, he confirmed that if Working Group V took up those issues, they would not be discussed concurrently by any other working group.

16. **Ms. Sabo** (Canada) said that a basic issue was whether the Legislative Guide on Insolvency Law addressed the question of insolvency in relation to MSMEs.

17. **The Chairperson** said that the Working Group could consider that matter and discuss ways of enhancing the usefulness of the Legislative Guide from an MSME perspective.

18. **Mr. Redmond** (United States of America) said that ideas regarding new work generated by the colloquium would obviously not be implemented until the Commission gave its approval. His delegation was merely suggesting that the Working Group should be authorized to consider insolvency in relation to MSMEs during the period prior to the next session of the Commission. It would approach the subject solely from a technical perspective in coordination with the new working group, which would be responsible for identifying policy issues and defining the scope of its work.

19. **Ms. Clift** (Secretariat) proposed the following preliminary draft wording for the report: "After discussion, the Commission agreed that Working Group V should be requested to examine insolvency considerations relating to MSMEs, including whether the Legislative Guide on Insolvency Law provides sufficient solutions and, if not, what further work might be required, with a view to reporting to the Commission in 2014."

20. **The Chairperson** said that the draft report would also state that a total of five working days would be devoted in December 2013 to the

convening of a colloquium and a meeting of the Working Group to explore the remaining issue under the mandate, namely centre of main interests in the context of enterprise groups, and to discuss possible additional issues.

21. **Ms. Whyte** (United Kingdom) expressed support for the proposals just made by the secretariat and the Chairperson.

22. **Mr. Redmond** (United States of America) proposed stating in addition that policy decisions would be reserved for the new working group on MSMEs. Technical advice could then be provided by the other working groups.

23. **Mr. Chan Wah Teck** (Singapore) said that the practical implications of the dichotomy between policy considerations and technical considerations were unclear. As a rule, working groups were convened to implement a specific mandate and they were required to consider all policy and technical issues pertaining to that mandate.

24. **Mr. Sorieul** (Secretary of the Commission) expressed reservations concerning the establishment of a hierarchy among working groups. It would be the first time that the Commission mandated a working group to develop general policies and to coordinate the activities of another working group. Responsibility for policymaking lay with the Commission. The proposed procedure was, in his view, unduly complex. If the idea was simply to ensure coordination among the working groups, the secretariat could ensure the requisite communication and synergy.

25. **Mr. Bellenger** (France) and **Mr. Schoefisch** (Germany) expressed support for the secretariat's suggestion.

26. **Mr. Redmond** (United States of America) said that his delegation would also support the suggestion provided that the new working group focused on MSME policy issues and Working Group V on technical issues.

27. **Ms. Sabo** (Canada) said that the Commission could address that aspect when it adopted its report.

28. **The Chairperson** noted that there was a broad consensus on how the Commission should proceed with respect to the topic of insolvency.

29. **The Commission** had thus concluded its discussion of agenda item 16 on future work.

The meeting was suspended at 2.55 p.m. and resumed at 3 p.m.

Role of UNCITRAL in promoting the rule of law at the national and international levels

30. **The Chairperson** invited the secretariat to introduce the agenda item.

31. **Ms. Musayeva** (Secretariat) said that the item on the promotion of the rule of law had been on the Commission's agenda since its forty-first session in 2008 in response to the General Assembly's invitation to the Commission to comment, in its reports to the General Assembly, on the Commission's current role in promoting the rule of law. At its forty-first to forty-fifth sessions, the Commission had expressed its conviction, in its annual reports to the General Assembly, that the promotion of the rule of law in commercial relations should be an integral part of the broader agenda of the United Nations to promote the rule of law at the national and international levels. That view had been endorsed by the General Assembly.

32. At its forty-third session, the Commission had emphasized the importance of engaging in a regular dialogue with the Rule of Law Coordination and Resource Group through the Rule of Law Unit and to keep abreast of progress made in the integration of the work of UNCITRAL into the United Nations joint rule of law activities. To that end, it had requested the secretariat to organize briefings by the Rule of Law Unit biannually, when sessions of the Commission were held in New York. The first briefing had been provided at the Commission's forty-fifth session in 2012 and the next briefing was planned for 2014. At the 2012 briefing, the Commission had been informed about progress made in raising awareness of the work of UNCITRAL and about preparations for a high-level meeting of the General Assembly on the rule of law. The Commission had proposed ways and means of ensuring that aspects of its work were duly reflected at the meeting and in its outcome document.

33. There were no written reports to be considered at the Commission's current session. She drew attention, however, to General Assembly resolution

67/97 on the rule of law at the national and international levels. Paragraph 17 decided that the Sixth Committee should focus on the subtopic “The rule of law and the peaceful settlement of international disputes” at the sixty-eighth session of the General Assembly in 2013. As the Commission might also wish to focus on that subtopic in its comments to the General Assembly, the secretariat had invited experts in related areas of UNCITRAL work, namely arbitration and conciliation and online dispute resolution, to participate in a panel discussion.

34. General Assembly resolution 67/97 had further decided that the Sixth Committee should focus on the subtopic “Sharing States’ national practices in strengthening the rule of law through access to justice” at the forty-seventh session of the General Assembly in 2014. The Commission might wish to decide to focus on the same subtopic at its next session.

35. **The Chairperson** invited Professor Hrvoje Sikirić from Croatia, who had chaired the last session of the Commission, to report on the implementation of the relevant decisions of the Commission taken at its forty-fifth session and of its instructions regarding the High-level Meeting of the General Assembly on the rule of law.

36. **Mr. Sikirić** (Croatia) said that there had been a consensus in the Commission at its forty-fifth session that the Chairperson of UNCITRAL should address the High-level Meeting and that the outcome document of that meeting should recognize the contribution made by UNCITRAL to the promotion of the rule of law in the economic field, which was vital for its promotion in a broader context. The Commission had requested him in his capacity as Chairperson to transmit its views as reflected in the report of the forty-fifth session of the Commission to the Office of the President of the General Assembly. Further to his dialogue with that Office, UNCITRAL had been invited to present its views on the strengthening of the rule of law at the national and international levels to the High-level Meeting held on 24 September 2012.

37. A key point conveyed to that Meeting on behalf of UNCITRAL was that the rule of law concerned not only issues of public international law, human rights, criminal law and transitional justice

but also concerned the recognition and enforcement of property rights and contracts, and action to guarantee the legal security required to promote entrepreneurship, investment and job creation, as well as States’ capacity to mobilize resources for rule of law fundamentals, such as due process and judicial and legal infrastructure, including well-trained lawyers and judges. In his statement to the Meeting, he had provided examples of the wide-ranging impact of UNCITRAL work in that regard based on observations by practitioners made during discussions in the Commission. He had also referred to steps recommended by UNCITRAL whereby interested countries could achieve sustained capacity to implement commercial law reforms, with assistance, where necessary, from the international community.

38. The Declaration of the High-level Meeting of the General Assembly on the Rule of Law at the National and International Levels contained two paragraphs in which the views of UNCITRAL on the promotion of the rule of law in the economic field were set out as an essential element of the promotion of the rule of law in a broader context. Paragraph 7 acknowledged that the rule of law and development were strongly interrelated and mutually reinforcing, and that the advancement of the rule of law at the national and international levels was essential for sustained and inclusive economic growth and sustainable development. It called for reflection on that interrelationship in the post-2015 international development agenda. Paragraph 8 recognized the importance of fair, stable and predictable legal frameworks for generating inclusive, sustainable and equitable development, economic growth and employment, generating investment and facilitating entrepreneurship, and commended the work of UNCITRAL in modernizing and harmonizing international trade law. The High-level Meeting had thus increased awareness of local needs with respect to the promotion of the rule of law in the economic field, the importance of addressing those needs and the Commission’s constructive role in that regard.

39. **Mr. Sorieul** (Secretary of the Commission) said that UNCITRAL had been invited to participate in a meeting held in June 2013 in the context of the General Assembly’s thematic debate on “Entrepreneurship for Development”. Mr. Sikirić, as

Chairperson of UNCITRAL, had delivered the message that no society could develop unless it could respect and enforce legal relationships. An enabling environment, laws, institutions, skills and practices were necessary, especially for small and medium-sized enterprises in developing countries.

40. A one-day conference on the potential role of the private sector in helping fragile countries to emerge from conflict, co-hosted by the United Nations Peacebuilding Commission and the United Nations Global Compact, had also been held in June 2013. The UNCITRAL Chairperson had moderated a panel that had discussed ways and means of addressing the challenges that faced fragile peacebuilding environments.

41. The secretariat had been requested by the Rule of Law Unit to prepare a guidance note of the United Nations Secretary-General on the promotion of the rule of law in commercial relations. The secretariat's text, which had drawn heavily on the decisions taken by the Commission since 2008, was currently being considered by the Unit. It aimed at building States' sustained capacity for promotion of the rule of law in commercial relations with the assistance of the international community where necessary, and at increasing the ability of the United Nations to respond effectively to States' needs in that regard. It is intended for use in a variety of situations, including in the conflict prevention, post-conflict reconstruction and development contexts.

42. The Declaration adopted at the end of the High-level Meeting on the rule of law had called for reflection on the interrelationship between the rule of law and development in the post-2015 international development agenda. A special event to be held in the context of the General Assembly on 25 September 2013 would focus on that theme. The post-2015 agenda was intended to succeed the Millennium Development Goals (MDGs). The special event would provide an opportunity to discuss lessons learned from the MDGs' processes. It was as yet unclear whether UNCITRAL would participate therein.

43. Discussions were also being held in an Open Working Group of the General Assembly on Sustainable Development Goals and an Intergovernmental Committee of Experts on

Sustainable Development Financing. The Working Group had met four times in 2013 and had scheduled four further meetings in the period up to February 2014. It planned to discuss economic growth, infrastructure development, rule of law and governance. Steps would be taken to ensure that relevant contributions by UNCITRAL were taken into account.

44. The Commission might wish to note the relevance of its work to the formulation throughout the United Nations system of aspects of the post-2015 international development agenda that had a bearing on the rule of law. It might also wish to instruct the Chairperson and the secretariat to take appropriate steps to ensure that the role of UNCITRAL in the promotion of the rule of law and sustainable development were not overlooked.

45. **Ms. Sabo** (Canada) endorsed the secretariat's suggestions regarding future action.

46. **The Chairperson** invited the first panellist, Mark McNeill, who was a partner in Shearman & Sterling's International Arbitration Group in Paris and who specialized in international investment and commercial arbitration, to take the floor. Mr. McNeill had previously been employed at the Department of State of the United States and had worked on investor-State litigation and the drafting of investment chapters of free trade agreements.

47. **Mr. McNeill** (Panellist) said that he would discuss commercial arbitration as a neutral legal framework for adjudicating disputes and as a tool for conflict prevention, with a special focus on the extractive industries. He would also comment on the 1958 Convention on the Recognition and Enforcement of Foreign Arbitral Awards (the New York Convention).

48. One of the earliest examples of international arbitration as a means of conflict prevention and resolution had been the Jay Treaty of 1794 between the United States and Great Britain. As a number of disputes had been left unresolved since the war of independence 10 years earlier, there was a risk of renewed conflict. The commissions set up under the Treaty to resolve the disputes embodied features that were nowadays recognized as the hallmarks of international arbitration. They had demonstrated the utility of deploying an ad hoc procedure that was

adapted to the specific dispute. A similar flexible approach was adopted, for example, in the UNCITRAL Arbitration Rules. When an arbitral tribunal was constituted, it had inherent powers, in consultation with the parties, to decide on the time limit within which an award would be rendered, the number and order of pleadings, the taking of evidence and other aspects of the proceedings. Another core feature of arbitration under the Jay Treaty was the provision for a neutral and denationalized forum. Nobody was required to litigate in the courts of the other party and the commissions were insulated from government interference and were entitled to rule on their own jurisdiction. Similarly, the UNCITRAL Model Law on International Commercial Arbitration had been highly successful in ensuring the independence and denationalization of international arbitration. Article 5, for instance, enshrined the principle that courts must not interfere with international arbitration proceedings.

49. Since 1958 the New York Convention, which had been ratified by 148 States, had provided a common set of standards for the recognition and enforcement of international arbitration awards. It required the national courts of contracting States to enforce awards that were made in other contracting States unless they were deemed to be inconsistent with public policy or unenforceable pursuant to the narrow grounds set forth in article V. A website relating to the Convention listed more than a thousand relevant decisions handed down by courts in both civil-law and common-law jurisdictions throughout the world. Access by courts to that source should improve judicial interpretation, consistency and predictability.

50. Work in the extractive industries in developing countries was frequently conducted under an international agreement between a multilateral corporation and a government agency. Such agreements usually involved long-term investments binding together private and public actors that sometimes had conflicting goals. The producing country generally required the financial resources and technical expertise of the multinational corporation, but it naturally also wished to maintain sovereignty over its natural resources and to develop its own technology. In the long term, the investor was faced with commercial, legal and political risks,

since the host State might change its attitude to foreign investment. When disputes arose, neither party wished to have them resolved in the home courts of the other party. It had therefore become standard practice to include international arbitration clauses in the relevant agreements. Multilateral corporations also sought to conclude favourable investment treaties.

51. International private or treaty-based arbitration had certainly been one of the most effective means of resolving cross-border disputes concerning investments and natural resources. The question arose, however, whether such arbitration promoted the rule of law and helped to prevent future conflicts in countries that were struggling against poverty and other crises. In the case of inter-State arbitration proceedings, it could probably be concluded that international arbitration could help to resolve conflicts, including territorial disputes, under the right circumstances. However, the parties must have confidence in the process, be committed to resolving the dispute and be prepared to lose, which was unlikely where the issue involved was perceived to be of vital national importance.

52. When concluding an international investment treaty, some States were required to align their investment regime and other laws with international standards. In addition, international arbitration arguably reduced the opportunity for inter-State conflict by obviating the need for direct confrontation between States on behalf of their aggrieved citizens. Having a reliable mechanism for protecting investments and adjudicating claims tended to increase the amount of capital that investors were willing to risk overseas, particularly in developing countries where the courts might be perceived to be unreliable. Moreover, the increase in recourse to arbitration had led, in general, to greater clarity with respect to the legal standards that were applicable to investments.

53. On the other hand, international arbitration in the extractive industries had at times led to a backlash, especially in Latin American countries such as Ecuador. International arbitration could also sometimes impose an unwanted burden on States in post-conflict situations or struggling to recover from a national crisis. Moreover, in some cases arbitration proceedings involving State resources were kept

confidential and were concealed from citizens who had a vested interest in the disposition of public resources. Secret commercial deals between multilateral corporations and government officials could promote corruption and lead to popular dissent. The UNCITRAL Rules on Transparency in Treaty-based Investor-State Arbitration were therefore of fundamental importance, especially in the extractive industries.

54. All in all, the UNCITRAL instruments he had mentioned provided a robust legal framework for the peaceful resolution of disputes, which was of essential importance in the volatile environment of cross-border investment in the extractive industries. The judiciaries in developing countries and post-conflict States were frequently mistrusted by foreign investors. The framework provided by the UNCITRAL instruments might thus be the only effective means of attracting the investment funds required for sustainable development and capacity-building.

55. **Ms. Knieper** (Secretariat) said that Myanmar and the Democratic Republic of the Congo had recently ratified the New York Convention, so that there were now 150 States parties. Iraq was also contemplating the possibility of ratifying the Convention.

56. **The Chairperson** invited the panellist Daniel Magraw to take the floor. He was a President Emeritus at the Centre for International Environmental Law (CIEL) and in that capacity had attended the meetings of Working Group II on the UNCITRAL Rules on Transparency as an observer. He had also formerly been an Associate General Counsel and Director at the International Environmental Law Office of the United States Environmental Protection Agency.

57. **Mr. Magraw** (Panellist) said that he would discuss transparency in the context of investor-State arbitration. An initial question to be addressed was the definition of “rule of law”. The United Nations had defined it in Security Council document S/2004/616 as:

“a principle of governance in which all persons, institutions and entities, public and private, including the State itself, are accountable to laws that are publicly promulgated, equally

enforced and independently adjudicated, and which are consistent with international human rights norms and standards. It requires, as well, measures to ensure adherence to the principles of supremacy of law, equality before the law, accountability to the law, fairness in the application of the law, separation of powers, participation in decision-making, legal certainty, avoidance of arbitrariness and procedural and legal transparency.”

He highlighted the need for procedural and legal transparency, which was a fundamental concept for trade and investment communities. It created legal certainty and predictability and led to fairness in the application of laws and the avoidance of arbitrariness.

58. Transparency was also related to accountability. It required that the conduct of individuals, organizations and institutions should be made known to various actors in society. Examples in the business community included securities laws that required the disclosure of material business developments, thereby curtailing corruption. The disclosure of information concerning, for instance, the implementation of anti-pollution laws could be used to assess whether laws were being enforced on an equal basis. At the international level, it was vital to have access to information regarding law enforcement, the degree to which compliance with the law was independently adjudicated, and respect for human rights norms. An important tool in that regard was the shadow reports submitted by civil society organizations to the United Nations Human Rights Council. In fact, there was now a human right to access to information based on article 19 of the Universal Declaration of Human Rights.

59. Investor-State disputes were manifestly a matter of public interest. They could involve very substantial funds in terms of the gross domestic product of the country concerned and frequently involved vital natural resources. They could undermine domestic health and challenge environmental regulations that constituted sovereign prerogatives. The outcome of the cases brought to date, which invariably involved allegations that the host country had violated international law, was being used to develop a corpus of international law. It was therefore vital to generate awareness of the

results. Unfortunately, the existing investor-State system was very deficient in terms of transparency. Hence the importance of the new UNCITRAL Rules on Transparency, which were the product of more than three years of intense negotiations. The Rules were nuanced and balanced, and they covered virtually all aspects of treaty-based investor-State arbitration. The question arose, however, whether they would be implemented in practice, since many States feared the type of pressure for transparency that they would entail. The Rules on Transparency were not applicable to arbitration brought under an existing treaty unless the States parties opted in unilaterally, bilaterally or pursuant to a convention to be drafted by Working Group II. On the other hand, the Rules would be applicable to future treaties unless the parties opted out. UNCITRAL should, of course, urge States parties to existing treaties to opt for application of the Rules on Transparency. It should also urge parties to individual arbitrations to apply them and should collect and publicize good practices. It was to be hoped that UNCITRAL would obtain sufficient funding to become the repository under the Rules on Transparency. In the meantime, the Permanent Court of Arbitration had agreed to serve as the repository. Lastly, UNCITRAL could engage in a periodic stocktaking exercise with respect to the implementation of the Rules.

60. **Mr. Chan Wah Teck** (Singapore) emphasized the important role played by the rule of law in ensuring that people were aware in advance of the consequences of their actions and hence made the proper choices. Most investments should also be made on the basis of clear-cut rules. Certainty was essential and expectations should not be compromised. Any modification of the rules after an investment was made would negate the concept of the rule of law. He therefore welcomed the opt-in clause in the Rules on Transparency with respect to existing treaties. A critical factor in determining whether a State would opt in was the extent to which such a decision would negate investors' expectations and the general impact it would have on the concept of the rule of law.

61. **The Chairperson** invited the panellist Anna Joubin-Bret to take the floor. Ms. Joubin-Bret had a unique combination of work experience as a legal adviser to multinational corporations and as a Senior

Legal Advisor with the Division on Investment, Technology and Enterprise Development of the United Nations Conference on Trade and Development (UNCTAD). She was currently practising as a lawyer in Paris, focusing on international investment law and investment dispute resolution.

62. **Ms. Joubin-Bret** (Panellist) said that she would focus on mediation for the peaceful settlement of economic disputes and the rule of law.

63. A dispute or conflict could be resolved by means of direct negotiations between the parties. Alternatively, a third party could be involved and there were three main approaches to that option. One was adjudication by a court of law; the second was international arbitration; and the third was conciliation and mediation. The neutral adjudicators in the first two cases had the authority to bind the disputing parties. The conciliators in the third case, which was also a relatively formal and structured process, were mandated by the parties to settle the dispute, but the final decision was taken by the parties themselves. The difference between conciliation and mediation consisted in the role of the third party, who played a less formal role in the case of mediation. The mediator encouraged the parties to interact and put forward their own solution.

64. One of the advantages of alternative dispute resolution was that settlements were achieved more speedily. It was also less costly and more flexible because the parties themselves agreed on the procedure and exercised greater control over it. Private economic actors and investors thus tended to prefer alternative dispute resolution, but States also frequently opted for arbitration.

65. Insufficient use was made of mediation and conciliation because of lack of awareness of that option. It was easier for States in particular to hand over a dispute to a court or an arbitral tribunal and then to abide by the decision or award. A further disadvantage of mediation and conciliation was the lack of enforceability. In addition, it might be regarded as a waste of time and money where the parties were not really intent on reaching a settlement. Government officials might also find it difficult to secure a firm mandate to negotiate and to propose a solution that might entail the transfer of funds.

66. The World Bank had conducted a survey on alternative dispute resolution in 101 economies. It had found that only seven of those economies had no consolidated law on commercial arbitration, conciliation or mediation. Only five economies had no institutions that could administer arbitration cases. Mediation and conciliation services were not widely used. However, she was pleased to note that many of the economies surveyed applied the UNCITRAL Model Law on International Commercial Conciliation.

67. Turning to practical examples, she said that the alternative dispute resolution framework in Colombia required conciliation as a prerequisite for litigation in commercial cases. A special preliminary hearing was held in which the judge acted as a conciliator. Fifty per cent of the cases referred for conciliation were settled. Ecuador had a mediation institution within the Attorney-General's Office that proposed mediation to foreign and domestic economic actors. The General Authority for Investment in Egypt had a mediation facility, which was principally used to settle disputes among investors in joint venture agreements but which could also be extended to other disputes involving investments. Lastly, the Republic of Korea had a Foreign Investment Ombudsman who mediated between government agencies and foreign investors.

68. The preferred settlement system for international investment disputes was arbitration, since there was considerable distrust of the investment treaty system and domestic courts. She argued, however, that insufficient use was made of mediation, which could pave the way for early amicable settlements. It was estimated that some 450 investor-State dispute settlement cases had been conducted to date. That was far more than the number of conciliation cases that had been conducted under the Convention on the Settlement of Investment Disputes between States and Nationals of Other States. There was nonetheless a strong impetus for mediation as an alternative means of investment dispute settlement. Arbitration was deemed to be an unduly lengthy process and far too costly. Thirty-nine per cent of the cases she had brought for international arbitration had been settled before a final award was rendered. A solution had thus been found through negotiations in the shadow of the arbitration proceedings. Such negotiations

should, in her view, be conducted with transparency and accountability under the umbrella of the rule of law.

69. Two steps should be taken to promote the acceptability of mediation. First, domestic frameworks should have built-in legal provisions for mediation based on the UNCITRAL Model Law on International Commercial Conciliation. Second, it was essential to generate awareness of mediation and to build the necessary capacity for its application.

70. **The Chairperson** said that there had been an assumption for decades that commercial and perhaps also investment arbitration ought to be confidential. He asked whether there was a role for transparency in investment mediation.

71. **Ms. Joubin-Bret** (Panellist) said that investor-State mediation rules had recently been adopted under the auspices of the International Bar Association. They included both confidentiality and transparency provisions. A certain degree of transparency was clearly necessary in the context of State interests, which were also obviously public interests.

72. **The Chairperson** invited the final panellist, Mohamed Abdel Wahab, to take the floor. Mr. Abdel Wahab was a Professor in the Faculty of Law of Cairo University, specializing in private international law and dispute resolution. He was Vice-President of the London Court of International Arbitration and Chairman of the Egyptian Branch of the Chartered Institute of Arbitrators. Mr. Abdel Wahab had also participated in the proceedings of UNCITRAL Working Group III concerning online dispute resolution.

73. **Mr. Abdel Wahab** (Panellist) said that he would focus on how online dispute resolution (ODR) could contribute to the rule of law. The definition of ODR was highly controversial, even among practitioners. However, in the context of the rule of law, ODR served as an innovative means of promoting the peaceful settlement of disputes in an international context through technology-based processes. It required the use of state-of-the-art technologies that formed part of the evolution to a paperless society. Many ODR providers had entered the global market, especially in developed countries

which had the requisite infrastructural requirements. However, there had been a notable decline in their ability to compete. While there had been some 115 providers in 2004, there were only about 63 in 2013.

74. ODR schemes could be divided into three basic categories. The first was technology-assisted schemes, in which the electronic aspect was simply added to negotiation, mediation and arbitration proceedings. A second category consisted of fully fledged technology-based ODR mechanisms, including automated negotiations whereby variables were entered into the system, which produced optimal solutions to the dispute. Thirdly, ODR not only contributed to dispute resolution but also to dispute avoidance. Certain online schemes helped to prevent disputes by providing for certainty and predictability and minimizing the risks involved in cross-border transactions.

75. The activities of the UNCITRAL Working Group on online dispute resolution could, in his view, encompass both inter-State and intra-State disputes, which formed part of the ODR mandate with respect to global governance and the rule of law. The United Nations instruments set the requisite standards and promoted harmonization. He urged State representatives who participated in standard-setting activities to ensure that the potential contribution of technology to dispute resolution and the rule of law in a transnational context was explicitly recognized.

76. ODR had a number of added values such as round-the-clock accessibility, trust and confidence in the process, the promotion of swift justice and speedy settlements, and effective prevention and proper management of disputes. In circumstances of emotional distress and conflict situations, when it was difficult to persuade the parties to sit together for the purpose of negotiations, ODR could play an important role by providing for both synchronous and asynchronous communications from afar. It was also far more affordable than other types of dispute resolution. All in all, he submitted that ODR could have a global domino effect on the rule of law across the political, economic, legal and social arenas, leading to progress and reform in intra-State and inter-State contexts.

77. A parallel set of ODR rules should be developed for inter-State disputes and conflicts. While traditional forms of dispute resolution should be maintained, innovative dimensions could be incorporated in such schemes through technology. In addition, procedural and substantive standards and trust-building mechanisms should be developed for ODR providers. While regulations were a controversial issue for many States, they promoted trust on a global level and could enable the providers to continue operating. The globalization of ODR for the benefit of the rule of law required the training of arbitrators who were acquainted with the demands of technology and its integration into the dispute resolution process.

78. **The Chairperson**, summarizing the items to be reflected in the report, said that the Commission reiterated its conviction that the rule of law in commercial relations should be incorporated into the broader rule of law agenda at the national and international levels through the appropriate United Nations bodies. The Commission thanked the previous Chairperson for addressing the High-level Meeting of the General Assembly on the rule of law and contributing to the outcome document. The Commission would be provided by the secretariat with a guidance note of the United Nations Secretary-General on the promotion of the rule of law in commercial relations, which would be widely disseminated. Efforts would be made through the various UNCITRAL bodies to reflect the Commission's views and work in ongoing processes aimed at the formulation of the post-2015 international development agenda. Lastly, the report would note that the General Assembly had decided that the topic for consideration by the Sixth Committee in 2014 was: "Sharing States' national practices in strengthening the rule of law through access to justice". Delegations were invited, if they so wished, to provide comments on the subject to the secretariat for discussion by the Commission at its next session.

The meeting rose at 4.55 p.m.

IV. LIST OF DOCUMENTS OF THE UNITED NATIONS COMMISSION ON INTERNATIONAL TRADE LAW REPRODUCED IN PREVIOUS VOLUMES OF THE *YEARBOOK*

The present list indicates the particular volume, year, part and chapter where documents relating to the work of the United Nations Commission on International Trade Law were reproduced in previous volumes of the *Yearbook*; documents that do not appear in the list here were not reproduced in the *Yearbook*. The documents are divided into the following categories:

1. Reports on the annual sessions of the Commission
2. Resolutions of the General Assembly
3. Reports of the Sixth Committee
4. Extracts from the reports of the Trade and Development Board, United Nations Conference on Trade and Development
5. Documents submitted to the Commission (including reports of the meetings of Working Groups)
6. Documents submitted to the Working Groups:
 - (a) Working Group I:
Time-Limits and Limitation (Prescription) (1969 to 1971); Privately Financed Infrastructure Projects (2001 to 2003); Procurement (as of 2004)
 - (b) Working Group II:
International Sale of Goods (1968 to 1978); International Contract Practices (1981 to 2000); Arbitration and Conciliation (as of 2000)
 - (c) Working Group III:
International Legislation on Shipping (1970 to 1975); Transport Law (2002 to 2008); Online Dispute Resolution (as of 2010)
 - (d) Working Group IV:
International Negotiable Instruments (1973 to 1987); International Payments (1988 to 1992); Electronic Data Interchange (1992 to 1996); Electronic Commerce (as of 1997)
 - (e) Working Group V:
New International Economic Order (1981 to 1994); Insolvency Law (1995 to 1999); Insolvency Law (as of 2001)*

* For its 23rd session (Vienna, 11-22 December 2000), this Working Group was named Working Group on International Contract Practices (see the report of the Commission on its 33rd session A/55/17, para. 186).

(f) Working Group VI:

Security Interests (as of 2002)**

7. Summary records of discussions in the Commission
8. Texts adopted by Conferences of Plenipotentiaries
9. Bibliographies of writings relating to the work of the Commission.

** At its 35th session, the Commission adopted one-week sessions, creating six working groups.

6. Documents submitted to Working Groups

(a) Working Group I

(i) Time-limits and Limitation (Prescription)

| | | |
|------------------|-----------------|-------------------|
| A/CN.9/WG.1/WP.9 | Volume II: 1971 | Part two, I, C, 1 |
|------------------|-----------------|-------------------|

(ii) Privately Financed Infrastructure Projects

| | | |
|-------------------------------|--------------------|----------------|
| A/CN.9/WG.I/WP.29 and Add.1-2 | Volume XXXIV: 2003 | Part two, I, B |
|-------------------------------|--------------------|----------------|

(iii) Procurement

| | | |
|-------------------------------|--------------------|-----------------|
| A/CN.9/WG.I/WP.31 | Volume XXXVI: 2005 | Part two, II, B |
| A/CN.9/WG.I/WP.32 | Volume XXXVI: 2005 | Part two, II, C |
| A/CN.9/WG.I/WP.34 and Add.1-2 | Volume XXXVI: 2005 | Part two, II, E |
| A/CN.9/WG.I/WP.35 and Add.1 | Volume XXXVI: 2005 | Part two, II, F |
| A/CN.9/WG.I/WP.36 | Volume XXXVI: 2005 | Part two, II, G |
