NOTE

Symbols of United Nations documents are composed of capital letters combined with figures. Mention of such a symbol indicates a reference to a United Nations document.

The footnote numbering follows that used in the original documents on which this *Yearbook* is based. Any footnotes added subsequently are indicated by lower-case letters.

Changes of and additions to wording that appeared in earlier drafts of conventions, model laws and other legal texts are in italics, except in the case of headings to articles, which are in italics as a matter of style.

CONTENTS

Part Three. Annexes

INTRODUCTION

This is the forty-ninth volume in the series of *Yearbooks* of the United Nations Commission on International Trade Law (UNCITRAL).[1]

The present volume consists of three parts. Part one contains the Commission's report on the work of its fifty-first session, which was held in New York, from 25 June–13 July 2018, and the action thereon by the General Assembly. There was no action by the United Nations Conference on Trade and Development (UNCTAD) in 2018. It is expected that there will be action on the Commission's report by UNCTAD in 2019.

In part two, most of the documents considered at the fifty-first session of the Commission are reproduced. These documents include reports of the Commission's Working Groups as well as studies, reports and notes by the Secretary-General and the Secretariat. Also included in this part are selected working papers that were prepared for the Working Groups.

Part three contains summary records, the bibliography of recent writings related to the Commission's work, a list of documents before the fifty-first session and a list of documents relating to the work of the Commission reproduced in the previous volumes of the *Yearbook*.

REPORT OF THE COMMISSION ON ITS ANNUAL SESSION AND COMMENTS AND ACTION THEREON

THE FIFTY-FIRST SESSION (2018)

A. Report of the United Nations Commission on International Trade Law, fifty-first session (New York, 25 June–13 July 2018) (A/73/17)

[Original: English]

Contents

I. Introduction

1. The present report of the United Nations Commission on International Trade Law (UNCITRAL) covers the fifty-first session of the Commission, held in New York from 25 June to 13 July 2018.

2. Pursuant to General Assembly resolution 2205 (XXI) of 17 December 1966, this report is submitted to the Assembly and is also submitted for comments to the United Nations Conference on Trade and Development (UNCTAD).

II. Organization of the session

A. Opening of the session

3. The fifty-first session of the Commission was opened by the Under-Secretary-General for Legal Affairs and United Nations Legal Counsel, Miguel de Serpa Soares, on 25 June 2018.

B. Membership and attendance

4. The General Assembly, in its resolution 2205 (XXI), established the Commission with a membership of 29 States, elected by the Assembly. By its resolution 3108 (XXVIII) of 12 December 1973, the Assembly increased the membership of the Commission from 29 to 36 States. By its resolution 57/20 of 19 November 2002, the General Assembly further increased the membership of the Commission from 36 States to 60 States. The current members of the Commission, elected on 14 November 2012, 14 December 2012, 9 November 2015, 15 April 2016 and 17 June 2016 are the following States, whose term of office expires on the last day prior to the beginning of the annual session of the Commission in the year indicated: [1] Argentina (2022), Armenia (2019), Australia (2022), Austria (2022), Belarus (2022), Brazil (2022), Bulgaria (2019), Burundi (2022), Cameroon (2019), Canada (2019), Chile (2022), China (2019), Colombia (2022), Côte d'Ivoire (2019), Czechia (2022), Denmark (2019), Ecuador (2019), El Salvador (2019), France (2019), Germany (2019), Greece (2019), Honduras (2019), Hungary (2019), India (2022), Indonesia (2019), Iran (Islamic Republic of) (2022), Israel (2022), Italy (2022), Japan (2019), Kenya (2022), Kuwait (2019), Lebanon (2022), Lesotho (2022), Liberia (2019), Libya (2022), Malaysia (2019), Mauritania (2019), Mauritius (2022), Mexico (2019), Namibia (2019), Nigeria (2022), Pakistan (2022), Panama (2019), Philippines (2022), Poland (2022), Republic of Korea (2019), Romania (2022), Russian Federation (2019), Sierra Leone (2019), Singapore (2019), Spain (2022), Sri Lanka (2022), Switzerland (2019), Thailand (2022), Turkey (2022), Uganda (2022), United Kingdom of Great Britain and Northern Ireland (2019), United States of America (2022), Venezuela (Bolivarian Republic of) (2022) and Zambia (2019).

5. With the exception of Armenia, Belarus, Cote d'Ivoire, El Salvador, Kenya, Lesotho, Liberia, Mauritania, Pakistan, Sierra Leone and Zambia, all the members of the Commission were represented at the session.

[1] Pursuant to General Assembly resolution 2205 (XXI), the members of the Commission are elected for a term of six years. Of the current membership, 29 were elected by the Assembly on 14 November 2012, at its sixty-seventh session, one was elected by the Assembly on 14 December 2012, also at its sixty-seventh session, 23 were elected by the Assembly on 9 November 2015, at its seventieth session, five were elected by the Assembly on 15 April 2016, also at its seventieth session, and two were elected by the Assembly on 17 June 2016, again at its seventieth session. By its resolution 31/99, the Assembly altered the dates of commencement and termination of membership by deciding that members would take office at the beginning of the first day of the regular annual session of the Commission immediately following their election and that their terms of office would expire on the last day prior to the opening of the seventh regular annual session following their election.

6. The session was attended by observers from the following States: Algeria, Bahrain, Belgium, Bolivia (Plurinational State of), Cambodia, Croatia, Dominican Republic, Finland, Gambia, Georgia, Iraq, Morocco, Myanmar, Nepal, Netherlands, Norway, Senegal, Sudan, Uruguay and Viet Nam.

7. The session was also attended by observers from the Holy See and the European Union.

8. The session was also attended by observers from the following international organizations:

(a) United Nations system: World Bank;

(b) Intergovernmental organizations: African Legal Support Facility, Gulf Cooperation Council, International Development Law Organization, International Institute for the Unification of Private Law (Unidroit), Organization of American States (OAS) and Permanent Court of Arbitration (PCA);

(c) Invited non-governmental organizations: American Arbitration Association/International Centre for Dispute Resolution (AAA/ICDR), American Bar Association, Arbitrators' and Mediators' Institute of New Zealand Inc., Association for the Promotion of Arbitration in Africa (APAA), Beijing Arbitration Commission/Beijing International Arbitration Center, China International Economic and Trade Arbitration Commission, Comité Maritime International (CMI), Council of the Notariats of the European Union, European Law Students' Association, EU Federation for the Factoring and Commercial Finance Industry, Factors Chain International, Florence International Mediation Chamber, Group of Latin American International Commercial Law Lawyers (GRULACI), Hong Kong Mediation Centre, INSOL International, International Academy of Mediators, International Arbitration Institute, International Bar Association (IBA), International Chamber of Commerce (ICC), International Insolvency Institute, International Law Institute (ILI), International Mediation Institute, International Union of Judicial Officers, International Union of Notaries, International Women's Insolvency and Restructuring Confederation, Internet Corporation for Assigned Names and Numbers, Jerusalem Arbitration Center, Moot Alumni Association, National Law Center for Inter-American Free Trade, New York International Arbitration Center, Russian Arbitration Association and Vienna International Arbitral Centre (VIAC).

9. The Commission welcomed the participation of international non-governmental organizations with expertise in the main items on the agenda. Their participation was crucial for the quality of texts formulated by the Commission and the Commission requested the Secretariat to continue to invite such organizations to its sessions.

C. Election of officers

10. The Commission elected the following officers:

Chair:	Beate Czerwenka (Germany)
Vice-Chairs:	Daniel Mbabazize (Uganda) Natalie Yu-Lin Morris-Sharma (Singapore) Zoltàn Nemessányi (Hungary)
Rapporteur:	Juan Cuéllar Torres (Colombia)

D. Agenda

11. The agenda of the session, as amended, was adopted by the Commission at its 1069th meeting, on 25 June. It was as follows:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.

4. Finalization and adoption of instruments on international commercial settlement agreements resulting from mediation.

5. Consideration of issues in the area of micro, small and medium-sized enterprises:

   (a) Finalization and adoption of a legislative guide on key principles of a business registry;

   (b) Progress report of Working Group I.

6. Celebration of the sixtieth anniversary of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958) (the "New York Convention").

7. Investor-State dispute settlement reform: progress report of Working Group III.

8. Electronic commerce: progress report of Working Group IV.

9. Security interests: progress report of Working Group VI.

10. Work programme of the Commission.

11. Date and place of future meetings.

12. Consideration of issues in the area of insolvency law:

   (a) Finalization and adoption of a model law on cross-border recognition and enforcement of insolvency-related judgments and its guide to enactment;

   (b) Progress report of Working Group V.

13. Coordination and cooperation:

   (a) General;

   (b) Reports of other international organizations;

   (c) International governmental and non-governmental organizations invited to sessions of UNCITRAL and its working groups.

14. Technical assistance to law reform:

   (a) General;

   (b) UNCITRAL regional presence.

15. Status and promotion of UNCITRAL legal texts:

   (a) General;

   (b) Functioning of the transparency repository;

   (c) International moot competitions;

   (d) Bibliography of recent writings related to the work of UNCITRAL.

16. Promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts: CLOUT and digests.

17. Role of UNCITRAL in promoting the rule of law at the national and international levels.

18. Relevant General Assembly resolutions.

19. Consideration of revised UNCITRAL texts in the area of privately financed infrastructure projects.

20. Other business.

21. Adoption of the report of the Commission.

E. Establishment of the Committee of the Whole

12. The Commission established a Committee of the Whole and referred to it, for consideration, agenda item 5 (a). The Commission elected Maria Chiara Malaguti (Italy) to chair the Committee of the Whole in her personal capacity. The Committee of the Whole met on 26 and 27 June 2018 and held four meetings. At its 1074th meeting, on 27 June, the Commission considered and adopted the report of the Committee of the Whole and agreed to include it in the present report (see para. 111 below). (The report of the Committee of the Whole is reproduced in chapter IV, section B, of the present report.)

F. Adoption of the report

13. The Commission adopted the present report by consensus at its 1078th meeting, on 29 June, at its 1081st meeting, on 3 July, at its 1082nd and 1083rd meetings, on 5 July, and at its 1085th meeting, on 6 July.

III. Finalization and adoption of instruments on international commercial settlement agreements resulting from mediation

A. Introduction

14. The Commission recalled its decision, made at its forty-eighth session, in 2015, to mandate Working Group II to commence work on the topic of enforcement of settlement agreements to identify relevant issues and develop possible solutions, including the possible preparation of a convention, model provisions or guidance texts.[2] At its forty-ninth session, in 2016, the Commission had confirmed that the Working Group should continue its work on the topic.[3] At its fiftieth session, in 2017, the Commission had taken note of the compromise reached by the Working Group at its sixty-sixth session (A/CN.9/901, para. 52) and had expressed support for the Working Group to finalize its work on the basis of that compromise by preparing a draft convention on international settlement agreements resulting from mediation as well as a draft amendment to the UNCITRAL Model Law on International Commercial Conciliation (2002).[4]

15. The Commission had before it the reports of Working Group II (Dispute Settlement) on the work of its sixty-seventh session, held in Vienna from 2 to 6 October 2017, and of its sixty-eighth session, held in New York from 5 to 9 February 2018 (A/CN.9/929 and A/CN.9/934).

16. It also had before it the texts of the draft convention on international settlement agreements resulting from mediation as contained in document A/CN.9/942 and of the draft amended UNCITRAL Model Law on International Commercial Conciliation as contained in document A/CN.9/943 (together referred to as the "draft instruments").

17. The Commission took note of the summary of the deliberations on the draft instruments that had taken place at the sixty-seventh and sixty-eighth sessions of the Working Group, and of the consensus reached by the Working Group in relation to the instruments. The Commission also took note of the comments by States on the draft instruments as set out in document A/CN.9/945.

---

[3] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), paras. 162–165.

[4] Ibid., *Seventy-second Session, Supplement No. 17* (A/72/17), paras. 236–239.

B. Finalization and approval of the draft convention on international settlement agreements resulting from mediation

1. Consideration of the draft convention

18. The Commission considered the text of the draft convention, as contained in paragraph 4 of document A/CN.9/942.

Terminology

19. The Commission affirmed the decision of the Working Group to replace the term "conciliation" with "mediation" throughout the draft instruments and approved the explanatory text describing the rationale for that change, as indicated in document A/CN.9/942, paragraph 5, which would be used, with necessary adjustments, when revising existing UNCITRAL texts on conciliation (see also para. 51 below).

Title and preamble

20. The Commission approved the title of the draft convention and the preamble.

Reference to "Party/Parties to the Convention"

21. The Commission agreed that the term "a Party to the Convention" or "Parties to the Convention" should be used in the draft convention.

Draft article 1: Scope of application

22. The Commission approved article 1, without modification.

Draft article 2: Definitions

Paragraph 2

23. The Commission agreed that the definition of the terms "electronic communication" and "data message" should be deleted from paragraph 2 on the basis that those definitions were contained in other United Nations and UNCITRAL instruments, namely the United Nations Convention on the Use of Electronic Communications in International Contracts (2005), the UNCITRAL Model Law on Electronic Commerce (1996) and the UNCITRAL Model Law on Electronic Signatures (2001), which could be used as a reference for the interpretation of those terms in the context of the draft convention.

Paragraph 4

24. The Commission considered paragraph 4, aimed at clarifying the notions of "granting relief" and "seeking relief". A proposal was made to simplify paragraph 4 along the lines of: "'Relief' means any of the actions set out in article 3". It was, however, pointed out that the notion of "actions" might be ambiguous. Another suggestion was made to delete paragraph 4 and include a cross reference to article 3 in the chapeau of article 4 in order to make it abundantly clear that the term "relief" referred to both enforcement of settlement agreements (under art. 3, para. 1) and the right for a party to invoke a settlement agreement as a defence against a claim (under art. 3, para. 2). After discussion, the Commission agreed to delete paragraph 4 as it was generally considered unnecessary.

25. The Commission approved article 2, as modified (see paras. 23 and 24 above).

Draft article 3: General principles

26. The Commission noted that article 3 provided for States' obligations under the draft convention regarding both enforcement of settlement agreements (para. 1) and the right for a party to invoke a settlement agreement as a defence against a claim (para. 2). It was clarified that the fact that the notions of "enforcement" and "enforceability" as used in the instruments should not be understood as indicating that enforcement referred to something different to enforceability. It was stated that

"enforcement" in the meaning of the instruments covered both the process of issuing an enforceable title and the enforcement of that title.

27. The Commission approved article 3, without modification.

Draft article 4: Requirements for reliance on settlement agreements

28. The Commission noted that article 4 reflected a balance between the formalities that were required to ascertain that a settlement agreement resulted from mediation and the need for the draft convention to preserve the flexible nature of the mediation process.

29. The Commission considered whether the words "such as", which appeared at the end of the chapeau of paragraph 1 (b), should be replaced with the words "in the form of". Support was expressed for retaining the words "such as" as it was considered that they better expressed the open-ended nature of the list in article 4, paragraph 1, should the parties be unable to produce the evidence that the settlement agreement resulted from mediation listed in article 4, subparagraphs 1 (b) (i)–(iii) (see also below, para. 60).

30. The Commission approved article 4, without modification.

Draft article 5: Grounds for refusing to grant relief

31. The Commission noted the extensive consultations held by the Working Group at its sixty-eighth session aimed at clarifying the various grounds provided for in paragraph 1, in particular the relationship between subparagraph (b) (i), which mirrored a similar provision of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York Convention) and was considered to be of a generic nature, and subparagraphs (b) (ii) and (iii), (c) and (d), which were deemed to be illustrative in nature. The Commission also noted that, at that session of the Working Group, various attempts to group the grounds differently had been unsuccessful; such attempts represented serious efforts to avoid overlap, in the light of the importance of the issue; difficulties arose because of the need to accommodate the concerns of different domestic legal systems, which had resulted in the failure of attempts to achieve consensus. The Commission further noted the shared understanding of the Working Group that there might be overlap among the grounds provided for in paragraph 1 and that competent authorities should take that aspect into account when interpreting the various grounds.

32. The Commission approved article 5, without modification.

Draft article 6: Parallel applications or claims

33. The Commission noted that article 6 provided the competent authority with the discretion to adjourn its decision if an application or claim relating to a settlement agreement had been made to a court, arbitral tribunal or other competent authority, which might affect the process. The Commission confirmed the understanding of the Working Group that article 6 should apply both when enforcement of a settlement agreement was sought and when a settlement agreement was invoked as a defence.

34. The Commission approved article 6, without modification.

Draft article 7: Other laws or treaties

35. The Commission considered article 7, which mirrored article VII of the New York Convention and was aimed at permitting the application of more favourable national legislation or treaties to matters covered by the draft convention. The Commission confirmed the understanding that: (a) article 7 would not allow States to apply the draft convention to settlement agreements excluded under article 1, paragraphs 2 and 3, as such settlement agreements would fall outside the scope of the draft convention; and (b) States would nevertheless have the flexibility to enact relevant domestic legislation, which could include in its scope such settlement agreements.

36. The Commission approved article 7, without modification.

Draft final provisions

Draft article 8: Reservations

37. The Commission noted that article 8 provided for two reservations authorized under the draft convention.

38. Regarding the reservation on the application of the draft convention on the basis of the parties' consent, under subparagraph 1 (b), the Commission recalled paragraph 78 of document A/CN.9/934, in which it was clarified that, with regard to how article 8, subparagraph 1 (b), of the draft convention would operate in practice, the understanding was that even without an explicit provision in the draft convention, parties to a settlement agreement would be able to exclude the application of the draft convention.

39. In the context of those discussions, it was further clarified that subparagraph 1 (b) referred to an opt-in possibility, and that article 5, subparagraph 1 (d), would find application where the parties would agree to opt out of the application of the draft convention.

40. After discussion, the Commission approved article 8, without modification.

Draft article 9: Effect on settlement agreements

41. The Commission noted that article 9 addressed the impact of the entry into force of the draft convention and of any reservations or withdrawal thereof on settlement agreements concluded before such entry into force. Similarly, article 16, paragraph 2, addressed the effect of the denunciation of the draft convention on settlement agreements concluded before such denunciation took effect. It was recalled that the purpose of the provisions was to enhance legal certainty for parties to settlement agreements.

42. The Commission approved article 9, without modification.

Draft article 11: Signature, ratification, acceptance, approval, accession

43. In connection with draft article 11, the attention of the Commission was drawn to an offer from the Government of Singapore to organize a ceremony for the signing of the convention, once adopted. The Commission was informed that the Government of Singapore was prepared to assume the additional costs that might be incurred by convening a signing ceremony outside the premises of the United Nations so that the organization of the signing ceremony would not require additional resources under the United Nations budget.

44. The Commission expressed its gratitude for the offer of the Government of Singapore to act as host for such an event, and the proposal was unanimously supported. The Commission therefore agreed that paragraph 1 of article 11 would read as follows: "This Convention is open for signature by all States in Singapore, on 1 August 2019, and thereafter at United Nations Headquarters in New York."

45. Unanimous support was also expressed for the convention to be referred to as the "Singapore Convention on Mediation".

Draft article 13: Non-unified legal systems — Draft article 15: Amendment

46. The Commission clarified the understanding that article 13 would be applicable in the context of amendments to the convention under article 15, so that States could avail themselves of article 13 to decide whether and how to apply amendments to the convention under article 15 to their territorial units.

47. The Commission approved in substance articles 10 to 16, as modified (see para. 44 above).

Material accompanying the draft convention

48. The Commission agreed that, resources permitting, the *travaux préparatoires* of the draft convention should be compiled by the Secretariat, so that they could be easily accessible.

2. Decision of the Commission and recommendation to the General Assembly

49. At its 1070th meeting, on 25 June 2018, the Commission adopted by consensus the following decision and recommendation to the General Assembly:

The United Nations Commission on International Trade Law,

Recalling its mandate under General Assembly resolution 2205 (XXI) of 17 December 1966 to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Recognizing the value of mediation as a method of amicably settling disputes arising in the context of international commercial relations,

Recalling General Assembly resolution 57/18 of 19 November 2002, in which the Assembly noted with appreciation the adoption of the United Nations Commission on International Trade Law Model Law on International Commercial Conciliation (2002),[5] and expressing the conviction that the Model Law, together with the United Nations Commission on International Trade Law Conciliation Rules (1980),[6] the use of which was recommended by the General Assembly in its resolution 35/52 of 4 December 1980, contributes significantly to the establishment of a harmonized legal framework for the fair and efficient settlement of disputes arising in international commercial relations,

Convinced that the adoption of a convention on international settlement agreements resulting from mediation that is acceptable to States with different legal, social and economic systems would complement the existing legal framework on international mediation and would contribute to the development of harmonious international economic relations,

Recalling that the decision of the Commission to concurrently prepare a draft convention on international settlement agreements resulting from mediation and an amendment to the Model Law on International Commercial Conciliation was intended to accommodate the different levels of experience with mediation in different jurisdictions and to provide States with consistent standards on cross-border enforcement of international settlement agreements resulting from mediation, without creating any expectation that interested States will adopt either instrument,[7]

Noting that the preparation of the draft convention on international settlement agreements resulting from mediation was the subject of due deliberation in the Commission and that the draft convention benefited from consultations with Governments and interested intergovernmental and invited non-governmental organizations,

Having considered the draft convention at its fifty-first session, in 2018,

Drawing attention to the fact that the text of the draft convention was circulated for comment before the fifty-first session of the Commission to all Governments invited to attend the meetings of the Commission and the Working Group as members or observers,

Considering that the draft convention has received sufficient consideration and has reached the level of maturity for it to be generally acceptable to States,

1. *Submits* to the General Assembly the draft convention on international settlement agreements resulting from mediation, as it appears in annex I to the

[5] General Assembly resolution 57/18, annex.

[6] *Official Records of the General Assembly, Thirty-fifth Session, Supplement No. 17* (A/35/17), chap. V, sect. A, para. 106. See also *UNCITRAL Yearbook*, vol. XI: 1980, part three, annex II.

[7] A/CN.9/901, para. 93.

report of the United Nations Commission on International Trade Law on the work of its fifty-first session;[8]

2. *Recommends* that the General Assembly, taking into account the extensive consideration given to the draft convention by the Commission and its Working Group II (Dispute Settlement), consider the draft convention with a view to adopting, at its seventy-third session, on the basis of the draft convention approved by the Commission, a United Nations Convention on International Settlement Agreements Resulting from Mediation, authorizing a signing ceremony to be held as soon as practicable in 2019 in Singapore, upon which the Convention would be open for signature, and recommending that the Convention be known as the "Singapore Convention on Mediation";

3. *Requests* the Secretary-General to publish the Convention, upon adoption, including electronically, in the six official languages of the United Nations and to disseminate it broadly to Governments and other interested bodies.

C. Finalization and adoption of amendments to the UNCITRAL Model Law on International Commercial Conciliation

1. Consideration of the draft amended Model Law

50. The Commission approved the title of the draft amended Model Law, as well as its structure and presentation in three different sections. The Commission agreed to replace the word "Mediation" in the heading of section 2 with the words "International commercial mediation", it being understood that such modification would not have any implication as to the applicability of the Model Law to various fields where mediation was used, including investor-State dispute settlement.

51. The Commission also approved the replacement of the term "conciliation" by "mediation" throughout the draft instruments, as well as in the explanatory text describing the rationale for that change reproduced in footnote 2 to the draft amended Model Law (see also para. 19 above).

52. The Commission noted that, in its deliberations on the draft amended Model Law, the Working Group had generally agreed that the guiding principles would be to ensure a level of consistency with the draft convention and, at the same time, to preserve the existing text of the Model Law to the extent possible.

Draft section 1: General provisions

53. The Commission adopted section 1, without modification.

Draft section 2: International commercial mediation

54. The Commission adopted section 2, with the modification to its title (see para. 50 above).

Draft section 3: International settlement agreements

55. The Commission considered draft articles 16 to 20, which addressed international settlement agreements in a manner consistent with the draft convention.

Draft article 16: Scope of application of the section and definitions

56. The Commission agreed that the modifications approved with respect to the draft convention should be reflected in the relevant provisions of the draft amended Model Law (see above, paras. 23 and 24). Accordingly, the Commission agreed to delete the definition of the terms "electronic communication" and "data message" in draft article 16, paragraph 6, and to delete draft article 16, paragraph 7.

57. The Commission adopted article 16, as modified (see para. 56 above).

[8] *Official Records of the General Assembly, Seventy-third Session, Supplement No. 17* (A/73/17).

Draft article 17: General principles

58. The Commission noted that article 17 provided for the principles regarding both enforcement of settlement agreements (para. 1) and the right for a party to invoke a settlement agreement as a defence against a claim (para. 2).

59. The Commission adopted article 17, without modification.

Draft article 18: Requirements for reliance on settlement agreements

60. The Commission noted that article 18 reflected a balance between the formalities that would be required to ascertain that the settlement agreement resulted from mediation and the need for the instrument to preserve the flexible nature of the mediation process. As agreed in the context of the consideration of the draft convention, the Commission agreed to retain the words "such as", which appeared at the end of the chapeau of paragraph 1 (b) (see above, para. 29).

61. The Commission adopted article 18, without modification.

Draft article 19: Grounds for refusing to grant relief

62. The Commission noted the extensive consultations of the Working Group at its sixty-eighth session aimed at clarifying the various grounds provided for in paragraph 1 (see also above, para. 31).

63. The Commission adopted article 19, without modification.

Draft article 20: Parallel applications or claims

64. The Commission noted that article 20 provided the competent authority with the discretion to adjourn its decision if an application or claim relating to the settlement agreement had been made to a court, arbitral tribunal or other competent authority, which might affect the process.

65. The Commission adopted article 20, without modification.

Footnotes

66. The Commission considered the footnotes to the draft amended Model Law. The Commission agreed that the third sentence of footnote 5 should become a separate footnote to article 16, paragraph 1. In footnote 6, the Commission agreed to add the word "also" before the word "international" so that the possible addition to paragraph 4 in footnote 6 would read as follows: "A settlement agreement is also 'international' if it results from international mediation as defined in article 3, paragraphs 2, 3 and 4."

Material accompanying the draft amended Model Law

67. The Commission noted the recommendation of the Working Group that, resources permitting, the *travaux préparatoires* of the draft amended Model Law should be compiled by the Secretariat so that they could be easily accessible. It was agreed that the Secretariat should be tasked with the preparation of a text to supplement the "Guide to enactment and use of the UNCITRAL Model Law on International Commercial Conciliation".[9] In that regard, the Commission agreed that the "Guide to enactment and use" should provide guidance on how sections 2 and 3 of the amended Model Law should each be enacted as a stand-alone legislative text.

[9] *UNCITRAL Yearbook*, vol. XXXIII: 2002, part three, annex II.

2. Adoption of the Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation

68. At its 1070th meeting, on 25 June 2018, the Commission adopted by consensus the following decision:

The United Nations Commission on International Trade Law,

Recalling its mandate under General Assembly resolution 2205 (XXI) of 17 December 1966 to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Recognizing the value of mediation as a method of amicably settling disputes arising in the context of international commercial relations,

Recalling General Assembly resolution 57/18 of 19 November 2002, in which the Assembly noted with appreciation the adoption of the United Nations Commission on International Trade Law Model Law on International Commercial Conciliation (2002), and expressing the conviction that the Model Law, together with the United Nations Commission on International Trade Law Conciliation Rules (1980),[10] the use of which was recommended by the General Assembly in its resolution 35/52 of 4 December 1980, contributes significantly to the establishment of a harmonized legal framework for the fair and efficient settlement of disputes arising in international commercial relations,

Believing that the Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation will significantly assist States in enhancing their legislation governing the use of modern mediation techniques and in formulating such legislation where none currently exists,

Recalling that the decision of the Commission to concurrently prepare a draft convention on international settlement agreements resulting from mediation and an amendment to the Model Law on International Commercial Conciliation was intended to accommodate the different levels of experience with mediation in different jurisdictions and to provide States with consistent standards on cross-border enforcement of international settlement agreements resulting from mediation, without creating any expectation that interested States will adopt either instrument,[11]

Noting that the preparation of the Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation was the subject of due deliberation in the Commission and that the draft Model Law benefited from consultations with Governments and interested intergovernmental and invited non-governmental organizations,

1. *Adopts* the Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation as it appears in annex II to the report of the United Nations Commission on International Trade Law on the work of its fifty-first session;[12]

2. *Recommends* that all States give favourable consideration to the enactment of the Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation when they enact or revise their laws, in view of the desirability of uniformity of the law of dispute settlement procedures and the specific needs of international commercial mediation practice;

---

3. *Requests* the Secretary-General to publish the Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation, including electronically, in the six official languages of the United Nations, and to disseminate it broadly to Governments and other interested bodies.

IV. Consideration of issues in the area of micro, small and medium-sized enterprises

A. Introduction

69. The Commission recalled that, at its forty-sixth session, in 2013, it had agreed that work on reducing the legal obstacles faced by micro, small and medium-sized enterprises throughout their life cycle, in particular in developing economies, should be added to its work programme and that such work should be allocated to Working Group I. The Commission also recalled that it had agreed at that session that such work should start with a focus on legal questions surrounding the simplification of incorporation.[13] The Commission further recalled that Working Group I, since its twenty-third session, in 2014, had considered the legal issues surrounding the simplification of incorporation and good practices in business registration, both of which aimed at reducing the legal obstacles encountered by micro, small and medium-sized enterprises throughout their life cycle.

70. The Commission had before it: (a) the reports of Working Group I (Micro, Small and Medium-sized Enterprises) on its twenty-ninth and thirtieth sessions (A/CN.9/928 and A/CN.9/933, respectively); (b) a note by the Secretariat on the draft legislative guide on key principles of a business registry (A/CN.9/940); and (c) a note by the Secretariat on adopting an enabling legal environment for the operation of micro, small and medium-sized enterprises (A/CN.9/941), which was intended to provide the context for the work of UNCITRAL on micro, small and medium-sized enterprises.

B. Finalization of a draft legislative guide on key principles of a business registry: report of the Committee of the Whole

71. The Committee of the Whole, established by the Commission at its fifty-first session (see para. 12 above), considered the text of the draft legislative guide on key principles of a business registry and approved the changes as set out below. Paragraphs and recommendations not referred to below were adopted by the Committee as drafted.

1. Introduction

Paragraph 2

72. The Committee agreed to replace the word “certain” with “many” and to add the words “depending on their legal forms” after the word “businesses”.

Terminology: paragraph 12

73. To resolve concerns about the use of terminology, the Committee agreed to delete the definition of “business registration” and the reference to “business registration system” in the definition of “business registry” and to adopt the following definition of “business registry”: “‘Business registry’ means the State’s mechanism for receiving, storing and making accessible to the public certain information about businesses, as required by domestic law.”

74. The Committee also agreed to add a footnote to that definition to the following effect: “The business registry may also function as a one-stop shop to support mandatory registration with other relevant authorities (e.g., taxation and social

[13] Ibid., *Sixty-eighth Session, Supplement No. 17* (A/68/17), para. 321.

security authorities) — this is discussed further in paragraph 57." With respect to the use of the phrase "business registration system" throughout the text, the Committee agreed that it could be replaced with the term "business registry" as appropriate; it was noted that the direct replacement would not be possible in all instances.

75. The Committee agreed to delete the definition of "formal economy" on the basis that that issue was addressed in A/CN.9/941.

76. The Committee agreed to delete the words "or a non-business entity" from the definition of "unique identifier" and from other parts of the text, as appropriate, such as from paragraphs 101 and 104 (see paras. 92 and 93 below).

2. Objectives of a business registry: paragraph 25

77. The Committee agreed to delete from the paragraph the sentence commencing with the words "A desirable approach" and also agreed that the paragraph should end after the words "and social security authorities" in the penultimate sentence.

Purposes of the business registry: paragraph 26

78. The Committee agreed to delete the following words from the paragraph: "However, since business registration may be viewed as a conduit through which businesses of all sizes and legal forms interact with the State and operate in the formal economy (see paras. 123 to 126 below and rec. 20),".

79. The Committee agreed to add, before the penultimate sentence of paragraph 26, text explaining that, in some States, one of the consequences of business registration was that the registered information had *erga omnes* legal effect.

Simple and predictable legislative framework permitting registration: recommendation 3

80. The Committee agreed that the chapeau and subparagraph (a) of the recommendation should read: "Laws governing the business registry should: (a) Adopt a simple structure and avoid the unnecessary use of exceptions or granting of discretionary power;".

Key features of a business registry: paragraph 32

81. The Committee agreed to delete from the paragraph the following words: "whether or not the information in the business registry is legally binding on the registry, the registrant, the registered business or on third parties, nor to".

3. Establishment and functions of the business registry

Responsible authority: paragraph 40

82. The Committee agreed to replace the word "liability" in the first sentence with the word "responsibility".

Appointment and accountability of the registrar: paragraph 43

83. The Committee agreed to revise the second sentence as follows: "In this regard, the applicable law of the enacting State should establish principles for the accountability of the registrar to ensure appropriate conduct in administering the business registry (the potential liability of the registry is addressed in paras. 213–218 and rec. 47 below)."

Core functions of business registries: paragraphs 53 and 56

84. The Committee agreed to delete from paragraph 53 the words "and in any event, the assignment of a unique identifier will assist in ensuring the unique identity of the business within and across jurisdictions (see also paras. 98 to 105 below)."

85. The Committee also agreed that the reference to email in paragraph 56 (as well as paras. 74, 120 and 196) should be expanded to include electronic address or other electronic means of communication.

4. Operation of the business registry

Electronic, paper-based or mixed registry: recommendation 12

86. The Committee agreed to replace the title of the recommendation with "Medium to operate a business registry".

Electronic documents and electronic authentication methods: paragraph 85 and recommendation 13

87. The Committee agreed to modify the third sentence of paragraph 85 to refer to "electronic signature or other means of identification and authentication".

88. The Secretariat was requested to ensure that the reference to "electronic signatures and other equivalent identification methods" in recommendation 13, subparagraph (a), was consistent with the language used in other UNCITRAL texts.

A one-stop shop for business registration and registration with other authorities: paragraphs 86 and 88

89. The Committee agreed to delete the reference to "justice and employment authorities" in paragraph 86.

90. The Committee also agreed to delete the second sentence of paragraph 88 and to adjust the third sentence as appropriate, in particular by deleting the word "additional".

Use of unique identifiers: paragraphs 98, 101 and 102

91. The Committee agreed to delete the last sentence of paragraph 98.

92. The Committee also agreed to replace the word "entities" in the first sentence of paragraph 101 with the word "businesses" and similarly the word "entity" with the word "business" in the penultimate sentence. The Committee further agreed to revise the third sentence as follows: "The unique identifier is usually allocated by an authority with which the business is required to register and does not change during the existence of that business, or after its deregistration."

93. The Committee further agreed to delete the last two sentences of paragraph 102.

Business permitted or required to register: paragraphs 124 and 125

94. The Committee agreed to delete the reference to "government bodies" in the fourth sentence of paragraph 124.

95. In respect of paragraph 125, the Committee agreed that: (a) the first sentence should end after the word "markets"; (b) the words "and, subject to the legal form chosen for the business which may require it to be registered," should be deleted; and (c) the new second sentence should be revised as follows: "In any event, registration is always required for the separation of personal assets from assets devoted to the business or for limiting the liability of the owner of the business."

Minimum information required for registration: paragraph 127

96. The Committee agreed to delete the words "and economic framework" from the first sentence of the paragraph.

Rejection of an application for registration: paragraph 149

97. The Committee agreed to replace "may" with "must" and to add the word "only" before the word "if" in the first sentence of the paragraph, as well as to delete the last sentence of that paragraph.

5. Accessibility and information-sharing

Access to registration services of the business registry: paragraph 167 and recommendation 33

98. The Committee agreed that: (a) the title of section B and that of recommendation 33 should be changed to: "Access to services of the business registry"; (b) the first sentence of paragraph 167 should refer to "all potential users, including potential registrants"; and (c) the opening phrase of recommendation 33 should be amended to read: "The law should permit access to the business registry without discrimination".

Equal rights of women to access the registration services of the business registry: paragraphs 173 and 174 and recommendation 34

99. The Committee agreed that in the last sentence of paragraph 173, the word "some" should be replaced with "many".

100. The Committee also agreed that in the last sentence of paragraph 174, a reference should be added to the Universal Declaration of Human Rights so that the sentence reads: "Such steps are also in compliance with the non-discrimination commitments of States under international human rights instruments, such as the Universal Declaration of Human Rights, as well as with the obligations of States parties to the United Nations Convention on the Elimination of All Forms of Discrimination against Women and other United Nations treaties for the elimination of discrimination based on gender."

101. The Committee further agreed to add a new paragraph after paragraph 174 along the lines of: "To establish gender-neutral business registration frameworks, States also need to institute policies to collect anonymized, sex-disaggregated data for business registration on a voluntary basis through the business registry. Such efforts would facilitate a Government's ability to determine the extent of informal barriers. Evidence for policy development continues to suffer because of the lack of sex-disaggregated data for statistical purposes."

102. Finally, the Committee agreed to add a new subparagraph to recommendation 34, reading: "(c) Provide for the adoption of policies to collect anonymized, sex-disaggregated data for business registration through the business registry."

Direct electronic access to submit registration, to request amendments and to search the registry: paragraphs 185 and 188 and recommendation 37

103. The Committee agreed to: (a) revise the title of section F and recommendation 37 to "Direct electronic access to registry services"; (b) add the words "including mobile devices," after the words "any electronic device" in the first sentence of paragraph 185; and (c) delete the last two sentences of that paragraph.

104. The Committee also agreed to revise paragraph 188 as follows: (a) to end the third sentence after the words "multiple points of access"; and (b) to revise the last sentence to read: "The overall objective of access to business registry services is the same for both electronic and paper-based or mixed registries: to make the registration and information retrieval process as simple, transparent, efficient, inexpensive and publicly accessible as possible."

6. Fees: paragraph 197

105. The Committee agreed to delete the words "while to a lesser extent, fines may also generate funds" from the paragraph.

Fees charged for information: recommendation 42

106. The Committee agreed to add the word "Basic" at the beginning of recommendation 42, subparagraph (a).

7. Liability and sanctions

107. The Committee agreed to move paragraph 210 to follow paragraph 207.

8. Underlying legal reforms

Clarity of the law: paragraphs 238 and 239 and recommendation 56

108. The Committee agreed to: (a) delete paragraph 238; (b) insert ", where possible," after the word "unification" in paragraph 239; (c) add ", in a clear manner," after the word "should" in recommendation 56; and (d) end that recommendation after the words "business registration".

Flexible legal forms for business: paragraph 240 and recommendation 57

109. The Committee heard a proposal to delete recommendation 57, subparagraph (b), or, if deletion was not approved, to revise it along the following lines: "The law in all States, no matter which registration system may apply, should adopt the measures necessary to promote the creation and growth of businesses and ensure that the registration procedures for micro, small and medium-sized enterprises are fast, efficient, reliable and low cost."

110. In the course of the discussion of that proposal, the Committee heard a number of additional proposals seeking to achieve a compromise between different views on the substance of the recommendation. Although some of those proposals received some support, the Committee ultimately agreed that recommendation 57, subparagraph (b), should be deleted. The Committee agreed that a cross reference to paragraphs 115–117 should be added at the end of paragraph 240.

C. Adoption of the report of the Committee of the Whole and of the *UNCITRAL Legislative Guide on Key Principles of a Business Registry*

111. At its 1074th meeting, on 27 June 2018, the Commission adopted the report of the Committee of the Whole and agreed that it should form part of the present report. It also adopted the following decision:

The United Nations Commission on International Trade Law,

Recalling General Assembly resolution 2205 (XXI) of 17 December 1966, in which the Assembly established the United Nations Commission on International Trade Law with the purpose of promoting the progressive harmonization and unification of the law of international trade in the interests of all peoples, in particular those of developing countries,

Recognizing the importance to all States of a fair, stable and predictable legal framework for the promotion of development-oriented policies that support productive activities, decent job creation, entrepreneurship, the equal rights of women to economic resources, creativity and innovation, and encourage the formalization and growth of micro, small and medium-sized enterprises,

Noting that simple, efficient and cost-effective business registration can assist in business formation of all sizes and types of business, in particular micro, small and medium-sized enterprises,

Noting also that when business registries perform their functions in accordance with simplified and streamlined procedures they greatly contribute to the economic development of a State as they allow expedited access to business information from interested users, including from foreign jurisdictions, thus facilitating the search for potential business partners, clients or sources of finance and reducing risks in transacting and contracting,

Noting further the widespread wave of reforms of business registration systems carried out by States in all regions and at all levels of development and, accordingly, the wealth of lessons learned that have informed the preparation of the legislative guide on key principles of a business registry and the growing opportunities for the use and application of such guide,

Recalling the mandate given to Working Group I (Micro, Small and Medium-sized Enterprises) to prepare legal standards aimed at reducing the legal

obstacles encountered by micro, small and medium-sized enterprises throughout their life cycle, in particular those in developing economies,

Convinced that legislative recommendations negotiated internationally through a process involving a broad range of constituents will be useful to both States that do not have an efficient and effective business registration system and States that are undertaking a process of review and reform of their business registration systems,

Expressing its appreciation to Working Group I for its work in developing the draft legislative guide on key principles of a business registry and to intergovernmental and invited non-governmental organizations active in the field of business registration reform for their support and participation,

1. *Adopts* the *UNCITRAL Legislative Guide on Key Principles of a Business Registry*, contained in document A/CN.9/940, as revised by the Commission at its fifty-first session,[14] and authorizes the Secretariat to edit and finalize the text of the *Legislative Guide* in the light of those revisions;

2. *Requests* the Secretary-General to publish the *Legislative Guide*, including electronically, in the six official languages of the United Nations, and to disseminate it to Governments and other interested bodies, so that it becomes widely known and available;

3. *Recommends* that the *Legislative Guide* be given due consideration, as appropriate, by legislators, policymakers, registry system designers and other interested bodies and individuals.

D. Progress report of Working Group I

112. The Commission noted that Working Group I, at its thirty-first session, would resume its deliberations on a draft legislative guide on an UNCITRAL limited liability organization, with a view to completing the first reading of the draft text.

V. Consideration of issues in the area of insolvency law

A. Finalization and adoption of the Model Law on the Recognition and Enforcement of Insolvency-Related Judgments and its guide to enactment

1. Introduction

113. The Commission recalled that, at its forty-seventh session, in 2014, it had approved a mandate for Working Group V (Insolvency Law) to develop a model law or model legislative provisions providing for the recognition and enforcement of insolvency-related judgments.[15] It also recalled that the Working Group had discussed that topic at its forty-sixth to fifty-third sessions (from 2014 to 2018),[16] and noted that, at its fifty-second session, the Working Group had requested the Secretariat to circulate the draft model law to States for comment (A/CN.9/931, para. 41).

114. The Commission had before it: (a) the reports of Working Group V (Insolvency Law) on the work of its fifty-second and fifty-third sessions (A/CN.9/931 and A/CN.9/937, respectively); (b) the draft Model Law on Recognition and Enforcement of Insolvency-Related Judgments (as contained in the annex to document A/CN.9/937); (c) the draft guide to enactment of the Model Law on Recognition and Enforcement of Insolvency-Related Judgments (A/CN.9/WG.V/WP.157); (d) a note by the Secretariat on amendments to the draft guide to enactment agreed by the

[14] Ibid., *Seventy-third Session, Supplement No. 17* (A/73/17), chapter IV, section B.
[15] Ibid., *Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 155.
[16] For the reports of the Working Group on those sessions, see A/CN.9/829, A/CN.9/835, A/CN.9/864, A/CN.9/870, A/CN.9/898, A/CN.9/903, A/CN.9/931 and A/CN.9/937.

Working Group at its fifty-third session (A/CN.9/955); and (e) a compilation of comments on the draft Model Law (A/CN.9/956, A/CN.9/956/Add.1, A/CN.9/956/Add.2 and A/CN.9/956/Add.3).

115. The Commission commenced with an article-by-article consideration of the draft Model Law and then took up the accompanying draft guide to enactment.

2. Article-by-article consideration

Preamble and articles 1 to 12, 14 and X

116. The Commission approved the preamble and articles 1 to 12, 14 and X as drafted.

Article 13. Grounds to refuse recognition and enforcement of an insolvency-related judgment

117. The Commission approved the following amendments to article 13:

(a) In subparagraph (a) (ii), adding the words “in this State” after the word “notified” and replacing the words “fundamental principles” with “the rules”;

(b) In subparagraph (g) (ii), replacing the words “the defendant” with the words “that party”.

118. A proposal was made to delete the words at the end of subparagraph (g) (ii), commencing with the word “unless”. It was indicated that the text to be deleted might be superfluous as it was difficult to envisage a situation where the exclusion could be applied in practice. It was said that, if it was not possible to come up with a practical example, that phrase should be deleted. That proposal did not receive sufficient support. Proposals to delete subparagraph (h) in its entirety or to retain the chapeau but delete subparagraphs (h) (i) and (ii) were also made. Reference was made to document A/CN.9/956/Add.3 in that respect and it was stated that subparagraph (h) legitimized the exercise of insolvency jurisdiction in situations that were not widely accepted, such as situations where the exercise of court jurisdiction was based on the mere presence of the debtor’s assets in the jurisdiction. In response it was stated that subparagraph (h) would provide a useful tool in the recovery of assets. The proposals to delete all or part of subparagraph (h) did not receive sufficient support.

119. The Commission heard another proposal to add a further subparagraph to article 13 along the following lines:

> (x) The judgment affects the rights of creditors in this State, who could have opened an insolvency proceeding in relation to the same debtor whose insolvency proceeding issued the insolvency-related judgment, and these creditors would be better off if the laws of this State apply, unless they have agreed to this treatment.

120. It was indicated that that additional subparagraph would complement article 13, subparagraph (f), as it would cover situations where adequate protection was not specifically requested but was nonetheless needed by creditors in the receiving State to ensure that they were not worse off than they would have been had they been subject to local insolvency proceedings. In support of that proposal, reference was made to document A/CN.9/956/Add.3.

121. Various concerns were expressed, including: (a) the manner in which the new subparagraph would interact with other articles of the draft text, including article 13, subparagraph (f); (b) whether the provision was intended to apply only to States that had enacted the UNCITRAL Model Law on Cross-Border Insolvency (1997);[17] and (c) the breadth of the exception and, in particular, the possibility that the words “affects the rights of creditors” could lead to litigation to determine whether creditors were adversely affected by the judgment, and the delay that might be occasioned by that litigation to what was intended to be a straightforward and expeditious

[17] General Assembly resolution 52/158, annex.

mechanism for the recognition of judgments. After discussion, the proposal did not receive sufficient support.

122. The Commission approved article 13 with the amendments noted in paragraph 117 above.

Article 15. Severability

123. A proposal to replace the word "shall" with "may" in draft article 15 did not receive sufficient support and the Commission approved article 15 as drafted.

3. Guide to enactment of the Model Law on Recognition and Enforcement of Insolvency-Related Judgments

Purpose and origin of the Model Law

Paragraph 8

124. A proposal to delete the last sentence of paragraph 8 did not received sufficient support.

Article 2. Definitions

Subparagraph 59 (d)

125. With reference to subparagraph 59 (d) of the draft guide, reference was made to the ongoing work of the Hague Conference on Private International Law on a global judgments convention. It was explained that, while a neutral approach was taken in subparagraph 59 (d) with respect to the applicability of the Model Law to judgments on causes of action arising prior to the commencement of insolvency proceedings, other international instruments might take a different approach. It was added that a reference to that approach could provide useful guidance to legislators and assist in ensuring consistency across international instruments. Suggestions were made to insert a reference in subparagraph 59 (d) to existing and future international agreements. In response, it was indicated that, on the one hand, legislators were usually not concerned with instruments not yet in force or still under negotiation and, on the other hand, States had to take into account their international obligations when making legislative decisions.

126. After discussion, the Commission agreed that the beginning of the second sentence of the paragraph should be revised to read "Enacting States will need" and that the following sentence should be inserted at the end of subparagraph 59 (d):

> "Enacting States may also wish to have regard to the treatment of such judgments under other international instruments."

Article 7. Public policy exception

Paragraph 70

127. It was indicated that, during the preparation of the model law, several reasons had been suggested to support the absence of a uniform definition of public policy in the model law and that paragraph 70 seemed to be too narrow. It was suggested that the paragraph should be drafted in a more neutral manner and that a reference to the Model Law should be inserted. In response, it was indicated that the notion of public policy was general and not exclusive to the Model Law.

128. After discussion, the Commission agreed on the following text for paragraph 70:

> "The notion of public policy is grounded in national law and may differ from State to State. No uniform definition of that notion is attempted in article 7."

Article 13. Grounds to refuse recognition and enforcement of an insolvency-related judgment

Paragraph 105

129. Various proposals were made with respect to the last sentence of paragraph 105. In particular, it was suggested that there was a need to better explain the basis of the inconsistency arising under article 13, subparagraph (c), and the use of the phrase "mutually exclusive". After discussion, the Commission agreed to revise the final sentence of the paragraph as follows:

> "Under subparagraph (c), inconsistencies between judgments occur when findings of fact or conclusions of law, which are based on the same issues, are different."

4. Renumbering of the articles of the Model Law and finalization of the guide to enactment

130. The Secretariat was requested to renumber the articles of the Model Law and to edit and finalize the text of the guide to enactment in the light of the changes agreed to the text of article 13 (see para. 117 above). It was noted that the list of references to the discussion at UNCITRAL and in the Working Group in the guide to enactment would be updated.

5. Adoption of the UNCITRAL Model Law on Recognition and Enforcement of Insolvency-Related Judgments and its guide to enactment

131. At its 1080th meeting, on 2 July 2018, after consideration of the text of the draft Model Law on Recognition and Enforcement of Insolvency-Related Judgments and the guide to enactment, the Commission adopted the following decision:

> *The United Nations Commission on International Trade Law*,
>
> *Recalling* General Assembly resolution 2205 (XXI) of 17 December 1966, in which the Assembly established the United Nations Commission on International Trade Law with the purpose of promoting the progressive harmonization and unification of the law of international trade in the interests of all peoples, in particular those of developing countries,
>
> *Recognizing* that effective insolvency regimes are increasingly seen as a means of encouraging economic development and investment and of fostering entrepreneurial activity and preserving employment,
>
> *Convinced* that the law of recognition and enforcement of judgments is becoming more and more important in a world in which it is increasingly easy for enterprises and individuals to have assets in more than one State and to move assets across borders,
>
> *Considering* that international instruments on the recognition and enforcement of judgments in civil and commercial matters exclude insolvency-related judgments from their scope,
>
> *Concerned* that inadequate coordination and cooperation in cases of cross-border insolvency, including uncertainties associated with recognition and enforcement of insolvency-related judgments, can operate as an obstacle to the fair, efficient and effective administration of cross-border insolvencies, reducing the possibility of rescuing financially troubled but viable businesses, making it more likely that debtors' assets are concealed or dissipated and hindering reorganizations or liquidations that would be the most advantageous for all interested persons, including the debtors, the debtors' employees and the creditors,
>
> *Convinced* that fair and internationally harmonized legislation on cross-border insolvency that respects national procedural and judicial systems and is acceptable to States with different legal, social and economic systems would contribute to the development of international trade and investment,

Appreciating the support for and the participation of intergovernmental and invited non-governmental organizations active in the field of insolvency law reform in the development of a draft model law on recognition and enforcement of insolvency-related judgments and its guide to enactment,

Expressing its appreciation to Working Group V (Insolvency Law) for its work in developing the draft Model Law on Recognition and Enforcement of Insolvency-Related Judgments and its guide to enactment,

1. *Adopts* the UNCITRAL Model Law on Recognition and Enforcement of Insolvency-Related Judgments, as it appears in annex III to the report of the United Nations Commission on International Trade Law on its fifty-first session,[18] and its guide to enactment, consisting of the text contained in A/CN.9/WG.V/WP.157, with the amendments listed in document A/CN.9/955 and the amendments adopted by the Commission at its fifty-first session;[19]

2. *Requests* the Secretary-General to publish the UNCITRAL Model Law on Recognition and Enforcement of Insolvency-Related Judgments and its guide to enactment, including electronically, in the six official languages of the United Nations, and to disseminate it broadly to Governments and other interested bodies;

3. *Recommends* that all States give favourable consideration to the UNCITRAL Model Law on Recognition and Enforcement of Insolvency-Related Judgments when revising or adopting legislation relevant to insolvency, and invites States that have used the Model Law to advise the Commission accordingly;

4. *Also recommends* that all States continue to consider implementation of the UNCITRAL Model Law on Cross-Border Insolvency (1997).[20]

B. Progress report of Working Group V

132. The Commission recalled that Working Group V, at its forty-fourth session, held in Vienna from 16 to 20 December 2013, had commenced its deliberations on a legislative text addressing the cross-border insolvency of enterprise groups. That text, which the Working Group had decided should be a model law, was likely to be available, together with a guide to enactment, for finalization and adoption by the Commission at its fifty-second session, in 2019. In addition, the Commission noted that a draft commentary and recommendations on the obligations of directors of enterprise group companies in the period approaching insolvency (which would supplement part four of the UNCITRAL Legislative Guide on Insolvency Law, dealing with obligations of directors in the period approaching insolvency, (2013)[21]) had been prepared and it was likely that the text could be finalized and adopted at the same time as the draft model law and guide to enactment on enterprise group insolvency.

133. The Commission also took note that the Working Group, at its fifty-first session, held in New York from 10 to 19 May 2017, had commenced its deliberations on the insolvency of micro, small and medium-sized enterprises, based upon the provisions of the UNCITRAL Legislative Guide on Insolvency Law (2004)[22] and that that work was ongoing.

134. The Commission expressed its satisfaction with the progress of the work of the Working Group, in particular its management of parallel topics and the likelihood of completion of several texts so that they could be considered by the Commission at its fifty-second session, in 2019.

VI. Consideration of revised UNCITRAL texts in the area of privately financed infrastructure projects

135. At its forty-eighth and forty-ninth sessions, in 2015 and 2016, the Commission had reiterated its belief in the key importance of public-private partnerships to infrastructure and development.[23] The Commission had decided that the Secretariat should consider updating where necessary all or parts of the UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects (2000),[24] and involve experts in the process.[25] At its fiftieth session, in 2017, the Commission had confirmed that the Secretariat (with the assistance of experts) should continue to update and consolidate the Legislative Guide, the accompanying Legislative Recommendations and the UNCITRAL Model Legislative Provisions on Privately Financed Infrastructure Projects (2003), and should report further to the Commission at its fifty-first session, in 2018.[26] The Secretariat had since organized and convened the Third International Colloquium on Public-Private Partnerships in Vienna on 23 and 24 October 2017.[27]

136. The Commission had before it a note by the Secretariat setting out the proposals of the Secretariat on both the scope and nature of the proposed amendments to the UNCITRAL Legislative Guide on Privately Financed Infrastructure Projects, as well as the process for implementing them (A/CN.9/939). Revised drafts of the introduction and of chapters I, II and III of the Legislative Guide reflecting the changes proposed by the Secretariat were contained in A/CN.9/939/Add.1, A/CN.9/939/Add.2 and A/CN.9/939/Add.3, for review and consideration by the Commission.

137. The Commission took note of the general policy proposals for amending the Legislative Guide, as well as the specific amendments proposed by the Secretariat in the revised drafts of the introduction and of chapters I, II and III. The Commission endorsed the general policy proposals for amending the Legislative Guide. The Commission also approved in principle the nature of the amendments proposed by the Secretariat, subject to specific comments and further adjustments that might be proposed in the course of the consultations with experts that the Commission encouraged the Secretariat to pursue with a view to submitting to the Commission the complete set of all draft revised chapters of the Guide, to be renamed the UNCITRAL Legislative Guide on Public-Private Partnerships, for consideration and adoption at its fifty-second session, in 2019.

VII. Investor-State dispute settlement reform: progress report of Working Group III

138. The Commission recalled that, at its fiftieth session, in 2017, it had approved a mandate for Working Group III to work on the possible reform of investor-State dispute settlement. It further recalled that the Working Group was, in discharging that mandate and in line with the UNCITRAL process, to ensure that the deliberations, while benefiting from the widest possible breadth of available expertise from all

[26] Ibid., *Seventy-second Session, Supplement No. 17 (*A/72/17), para. 448.

[27] The documents presented at the colloquium and a summary report of the discussions are available in English at the colloquium website (www.uncitral.org/uncitral/en/commission/colloquia/public-private-partnerships-2017.html).

stakeholders, would be Government-led, with high-level input from all Governments, consensus-based and fully transparent.[28]

139. The Commission had before it the reports of Working Group III (Investor-State Dispute Settlement Reform) on the work of its thirty-fourth and thirty-fifth sessions (A/CN.9/930/Rev.1, A/CN.9/930/Add.1/Rev.1 and A/CN.9/935).

140. The Commission noted the discussions of the Working Group, which had focused on the first stage of its mandate (to identify and consider concerns regarding investor-State dispute settlement).

141. Recalling that the process should be Government-led, the Commission welcomed the participation of 80 States and 35 intergovernmental organizations and invited non-governmental organizations in the thirty-fourth session and of 84 States and 50 organizations in the thirty-fifth session of the Working Group.

142. In that context, the Commission expressed its appreciation for the contributions to the UNCITRAL trust fund from the European Union and the Swiss Agency for Development and Cooperation, aimed at allowing the participation of representatives of developing States in the deliberations of the Working Group (see also para. 191 below), and was informed about ongoing efforts by the Secretariat to secure additional voluntary contributions. States were urged to support those efforts.

143. The Commission welcomed the outreach activities of the Secretariat aimed at raising awareness about the work of the Working Group and ensuring that the process would remain inclusive and fully transparent. The Commission noted the engagement of the Working Group, and of the Secretariat, with diverse stakeholders, including intergovernmental organs and organizations such as UNCTAD, the World Trade Organization (WTO), the Organization for Economic Cooperation and Development (OECD), the International Centre for the Settlement of Investment Disputes and PCA.

144. The Commission expressed its appreciation for the provision of information by various stakeholders to assist the Working Group in its deliberations, as well as for proposals by an academic forum and a group of practitioners to make information from their research and experience available to the Working Group.

145. After discussion, the Commission expressed its satisfaction with the progress made by the Working Group and the support provided by the Secretariat. The Commission noted that the Working Group would continue its deliberations pursuant to the mandate given to it, allowing sufficient time for all States to express their views, but without unnecessary delay.

146. The Commission also welcomed the invitation of the Republic of Korea to a regional intersessional meeting on investor-State dispute settlement reform to be held in Incheon on 10 and 11 September 2018. The Commission took note that, while it was clear that no decisions would be taken at the intersessional meeting, the event would provide an open forum for high-level Government representatives and relevant stakeholders in the Asia-Pacific region to discuss issues being deliberated by Working Group III. (For further discussions of methods of work relevant to Working Group III, see paras. 269 and 270 below.)

VIII. Electronic commerce: progress report of Working Group IV

147. The Commission recalled that, at its forty-ninth session, in 2016, it had mandated Working Group IV (Electronic Commerce) to take up work on the topics of identity management and trust services, and cloud computing, upon completion of the work on the Model Law on Electronic Transferable Records. In that context, the Secretariat, within its existing resources, and the Working Group had been asked to continue to update and conduct preparatory work on the two topics, including their feasibility, in parallel and in a flexible manner and to report back to the Commission

[28] *Official Records of the General Assembly, Seventy-second Session, Supplement No. 17* (A/72/17), para. 264.

so that it could make an informed decision at a future session, including on the priority to be given to each topic.[29]

148. The Commission also recalled that, at its fiftieth session, in 2017, having considered the reports of the Working Group on the work of its fifty-fourth and fifty-fifth sessions, it had recognized that, until the following session of the Commission, in 2018, both the Secretariat and the Working Group would be able to handle the projects on cloud computing, identity management and trust services in parallel. The Commission had therefore reaffirmed the mandate given to the Working Group at its forty-ninth session, in 2016, and agreed to revisit that mandate at its fifty-first session, in particular if the need arose to prioritize between the topics or to give a more specific mandate to the Working Group as regards its work in the area of identity management and trust services.[30]

149. The Commission had before it the report of the Working Group on its fifty-sixth session, held in New York from 16 to 20 April 2018 (A/CN.9/936).

150. The Commission considered the recommendation of the Working Group that the Commission should review the draft notes on the main issues of cloud computing contracts at its fifty-second session, in 2019, and authorize its publication or issuance in the form of an online reference tool, in both cases as a work product of the Secretariat (A/CN.9/936, para. 44). After discussion, the Commission decided to review the draft notes on the main issues of cloud computing contracts at its fifty-second session, in 2019.

151. The Commission also considered the suggestion by the Secretariat and discussed by the Working Group that the notes on the main issues of cloud computing contracts could be prepared as an online reference tool (A/CN.9/936, paras. 16 and 17). The Commission took note of the recommendation of the Working Group that the Commission should request the Secretariat to prepare a note setting out considerations relating to the preparation of the suggested online reference tool (A/CN.9/936, para. 17).

152. Broad support was expressed for developing new forms of electronic publication that could more effectively reach users and ultimately increase the relevance of UNCITRAL texts, especially non-legislative texts. The possible use of an online tool to present the outcome of the work on a practice guide on security interests as well as of the work on a guidance document on international commercial contracts (with a focus on sales), conducted jointly with the Hague Conference on Private International Law and Unidroit, was mentioned.

153. It was indicated that the notion of an online tool could be interpreted in different ways; the envisaged features of the online tool should therefore be clarified. Various concerns were expressed, including about how the online tool would address multilingualism, how users and the tool would interact, and the availability of financial and human resources. It was suggested that the Commission could benefit from piloting the use of an online tool.

154. It was noted that, since the structure and content of each non-legislative text varied, they might need to be presented online in different ways. The suggestion was made that Working Group VI (Security Interests) could consider how the practice guide on security interests might be presented, and that other working groups may also make useful contributions. States and other entities were invited to share their experience, expertise and, when possible, resources in designing and deploying online tools relating to legal texts.

155. After discussion, the Commission requested the Secretariat to prepare, within existing resources, a pilot online tool containing the draft notes on the main issues of cloud computing contracts, for consideration at its fifty-second session, in 2019. The Commission also requested the Secretariat to prepare a note illustrating the considerations relating to the preparation of the pilot online tool, including budgetary and other implications, and departure from the existing UNCITRAL publication policy.

---

[29] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), para. 235.
[30] Ibid., *Seventy-second Session, Supplement No. 17* (A/72/17), para. 127.

156. The Commission considered the recommendation of the Working Group that it should request the Working Group to conduct work on legal issues relating to identity management and trust services with a view to preparing a text aimed at facilitating cross-border recognition of identity management and trust services, on the basis of the principles and discussing the issues identified by the Working Group at its fifty-sixth session (A/CN.9/936, para. 95).

157. Broad support was expressed for requesting the Working Group to conduct work on legal issues relating to identity management and trust services in the light of the fundamental importance of that topic for the global digital economy.

158. It was indicated that, while the issues identified by the Working Group at its fifty-sixth session could provide a useful starting point for its deliberations, the mandate of the Working Group should not be restricted to those issues since the flexibility provided by a broader mandate was desirable. It was also indicated that the Working Group should, to the extent possible, expedite its work on substantive matters.

159. After discussion, the Commission requested Working Group IV to conduct work on legal issues relating to identity management and trust services with a view to preparing a text aimed at facilitating cross-border recognition of identity management and trust services, on the basis of the principles and issues identified by the Working Group at its fifty-sixth session (A/CN.9/936, paras. 61–94).

160. With respect to ongoing work in the field of paperless trade facilitation, including electronic cross-border single window facilities,[31] the Commission was informed that the Secretariat was carrying out that work in cooperation with the Economic Commission for Europe (ECE), the Economic and Social Commission for Asia and the Pacific and other international governmental and non-governmental organizations.

IX. Security interests: progress report of Working Group VI

161. The Commission recalled that, at its fiftieth session, in 2017, it had decided that the Working Group should prepare a practice guide to the UNCITRAL Model Law on Secured Transactions. At that session, it was agreed that issues addressed in document A/CN.9/926 and the relevant sections of document A/CN.9/913 should form the basis of that work.[32] It was widely felt that, to be able to use a law implementing the UNCITRAL Model Law on Secured Transactions to their benefit, parties to transactions, judges, arbitrators, regulators, insolvency administrators and academics would need guidance with respect to contractual, transactional and regulatory issues, as well as issues relating to the financing of micro-businesses. The Commission further recalled that it had given broad discretion to the Working Group in determining the scope, structure and content of the practice guide.[33]

162. The Commission considered the reports of the Working Group on the work of its thirty-second session, held in Vienna from 11 to 15 December 2017 (A/CN.9/932), and its thirty-third session, held in New York from 30 April to 4 May 2018 (A/CN.9/938). The Commission noted the Working Group's preliminary discussions on the intended audience, scope, structure, style and overall content of the draft practice guide, which formed the basis of the first draft. The Commission also noted that the Working Group, at its thirty-third session, had completed its first reading of the draft practice guide, and expressed support for the Working Group to continue its work.

163. After discussion, the Commission expressed its satisfaction with the progress made by the Working Group and noted the Secretariat's efforts to coordinate with the Basel Committee on Banking Supervision with respect to the regulatory aspects. Considering the progress made, the Commission requested the Working Group to complete the work expeditiously, with a view to presenting a final draft to the

[31] Ibid., *Sixty-sixth Session, Supplement No. 17* (A/66/17), para. 240.
[32] Ibid., *Seventy-second Session, Supplement No. 17* (A/72/17), para. 227.
[33] Ibid., paras. 222, 223 and 227.

Commission for consideration at its fifty-second session, in 2019. (See paras. 152 and 154 above on the issues also relevant to the work of Working Group VI.)

X. Celebration of the sixtieth anniversary of the New York Convention

A. Celebratory event

164. The Commission held a celebratory event to mark the sixtieth anniversary of the New York Convention. In addition to the representatives of member States of the Commission and observers, some 300 persons were invited to participate in the event.

165. In the opening statements, it was pointed out that the almost universal acceptance of the New York Convention brought legal certainty to business operations worldwide, thereby contributing to decreasing the level of risk and transactional costs associated with international trade. It was said that the implementation of the New York Convention was an important indicator of a sound business and investment environment. Further, it was pointed out that acceptance of the Convention was a demonstration of States' strong commitment to the rule of law and represented a step towards better access to justice for economic operators. Adoption and proper implementation of the Convention were regarded as furthering progress towards achieving the Sustainable Development Goals. The Convention, by establishing a fundamental legal framework for the use of arbitration and its effectiveness, had strengthened respect for binding commitments, inspired confidence in the rule of law and ensured fair treatment in the resolution of disputes arising over contractual rights and obligations.

166. The celebratory event provided an opportunity to consider how the mandate of UNCITRAL contributed in general to the successful development of the international arbitration framework, with the New York Convention as a foundational instrument.

167. The first panel discussion was focused on cooperation and coordination activities. Representatives of international organizations and governmental cooperation agencies provided insights into the role of their organizations in the promotion of the New York Convention. It was underlined that international organizations had developed specific expertise, and cooperation among organizations was key to strengthening the international framework that had been built over the years.

168. The second panel discussion addressed the relation between domestic legislative frameworks on the recognition and enforcement of foreign arbitral awards and the New York Convention; the relevance of the law reform process and the role of article VII of the New York Convention in the development of the international arbitration framework was highlighted. On that point, it was observed that the New York Convention set a maximum level of control that contracting States might exert over arbitral awards, but they remained free to apply more liberal rules than those provided in the Convention. It was said that article VII had enabled contracting States to adapt to the development of international arbitration for the past 60 years.

169. The celebratory event also provided an opportunity to highlight the importance of adequate legislative implementation and judicial application of the New York Convention. In that context, the *UNCITRAL Secretariat Guide on the New York Convention* and the web platform (www.newyorkconvention1958.org) created to publish both the Guide and the resources on which it was based electronically were presented as the most comprehensive freely accessible resource on the Convention. Other initiatives were presented, such as the ICC Guide to national procedures for recognition and enforcement of awards under the New York Convention and the International Council for Commercial Arbitration Guide to the interpretation of the New York Convention.

170. The celebratory event ended with a panel on instruments recently finalized and adopted by UNCITRAL to strengthen the framework for alternative dispute resolution. Regarding mediation, it was highlighted that while the finalized draft convention on international settlement agreements resulting from mediation and the

UNCITRAL Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation (see chapter III above) were mainly intended for the private sector, enforcement of international mediated settlements was a sensitive policy issue for many States, as evidenced by the many responses submitted by States to the initial questionnaire sent by the Secretariat before the commencement of work. Hope was expressed that the instruments on mediation would be widely adopted, and that the draft convention would be as successful as the New York Convention and would become a cornerstone in the field of alternative dispute settlement. To end, the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration was presented as a first step in addressing concerns in investor-State dispute settlement.

171. The celebratory event also included an evening reception where the international arbitration community gathered to celebrate the sixtieth anniversary of the Convention. The reception was jointly organized by the Commission and the International Court of Arbitration of ICC, hosted by the United States District Court for the Southern District of New York. A number of organizations representing the international arbitration community supported the event, including IBA, the New York State Bar Association, AAA/ICDR, the Chartered Institute of Arbitrators (CIArb), the Centre for Dispute Resolution and JAMS.

172. The Commission commended the Secretariat for the organization of the celebratory event, and the opportunity to reflect on the implementation of the UNCITRAL mandate in relation to the New York Convention. It requested the Secretariat to publish the conference proceedings electronically and to disseminate the publication broadly to any interested bodies.

B. Decision of the Commission

173. At its 1076th meeting, on 28 June 2018, the Commission adopted by consensus the following decision:

The United Nations Commission on International Trade Law,

Recalling the adoption of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards[34] on 10 June 1958 by the United Nations Conference on International Commercial Arbitration,

Recalling also General Assembly resolution 2205 (XXI) of 17 December 1966, in which the Assembly established the United Nations Commission on International Trade Law with the object of promoting the progressive harmonization and unification of the law of international trade by, inter alia, promoting ways and means of ensuring a uniform interpretation and application of international conventions and uniform laws in the field of the law of international trade,

Conscious of the fact that the different legal, social and economic systems of the world, together with different levels of development, are represented in the Commission,

Recalling successive resolutions of the General Assembly reaffirming the mandate of the Commission as the core legal body within the United Nations system in the field of international trade law to coordinate legal activities in this field,

Convinced that the Convention, by establishing a fundamental legal framework for the use of arbitration and its effectiveness, has strengthened respect for binding commitments, inspired confidence in the rule of law and ensured fair treatment in the resolution of disputes arising over contractual rights and obligations,

Recalling General Assembly resolution 62/65 of 6 December 2007, in which the Assembly requested the Secretary-General to increase efforts to promote wider

[34] United Nations, *Treaty Series*, vol. 330, No. 4739.

adherence to the Convention and its uniform interpretation and effective implementation,

Taking note of the UNCITRAL Secretariat Guide on the New York Convention, which is aimed at assisting in the dissemination of information on the Convention and further promoting its effective implementation,

Expressing its hope that States that are not yet parties to the Convention will soon become parties thereto, which would ensure that the legal certainty afforded by the Convention is universally enjoyed, decreasing the level of risk and transactional costs associated with doing business and thus promoting international trade,

1. *Welcomes* the initiatives being undertaken by various organs and agencies within and outside the United Nations system to organize conferences, judicial workshops and other similar events to provide a forum for an exchange of views on experiences worldwide with the implementation of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards;[35]

2. *Encourages* the use of these events for the promotion of wider adherence to the Convention and greater understanding of its provisions and their uniform interpretation and effective implementation;

3. *Invites* all States that have not yet done so to consider becoming parties to the Convention.

XI. Coordination and cooperation

A. General

174. The Commission had before it a note by the Secretariat (A/CN.9/948) providing information on the activities of international organizations active in the field of international trade law in which the Secretariat had participated since the last note to the Commission (A/CN.9/908). The Commission expressed appreciation for the Secretariat engaging with a high number of organizations and entities, both within and outside the United Nations system. Among others, the Secretariat had participated in the activities of the following: UNCTAD, ECE, United Nations Inter-Agency Cluster on Trade and Productive Capacity, Inter-Agency Task Force on Financing for Development, World Bank, Hague Conference on Private International Law, OECD, Unidroit, WTO, Asia-Pacific Economic Cooperation (APEC), European Commission, Basel Committee on Banking Supervision and ILI.

175. In particular, the Commission noted with satisfaction the coordination activities involving the Hague Conference on Private International Law, particularly with respect to its work on judgments, and Unidroit.

176. The Commission heard an oral report on the preparation of a guidance document in the area of international commercial contract law (with a focus on sales) in coordination with the Hague Conference on Private International Law and with Unidroit.[36] It was indicated that an initial draft was being prepared with the help of experts and that it would be informally circulated to stakeholders. It was added that, according to the envisaged timeline, the document should be finalized in 2020, on the occasion of the fortieth anniversary of the United Nations Convention on Contracts for the International Sale of Goods (1980).

177. Broad appreciation was expressed for the joint project. It was said that such a project was particularly useful for illustrating the coordination among uniform law instruments. Cooperation allowed for efficient allocation of resources. It was indicated that the project contributed to ensuring the visibility of UNCITRAL, which,

[35] Ibid.

[36] *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), para. 281.

in turn, was important for it to carry out its coordination mandate effectively. However, it was added that work on the project should be balanced with the needs of UNCITRAL legislative activities. The Commission encouraged the Secretariat to continue its collaboration with the Hague Conference on Private International Law and Unidroit on that project.

178. The Commission noted that the coordination work of the Secretariat concerned topics currently being considered by the working groups, as well as topics related to texts already adopted by the Commission, and that the Secretariat had participated in expert groups, working groups and plenary meetings with the purpose of sharing information and expertise and avoiding duplication of work in the resultant work products.

179. The Commission observed that coordination work often involved travel to meetings of the different organizations concerned and the use of funds allocated for official travel. The Commission reiterated the importance of such work being undertaken by UNCITRAL as the core legal body in the United Nations system in the field of international trade law and supported the use of travel funds for that purpose.

B. Reports of other international organizations

180. The Commission took note of statements made on behalf of international and regional organizations invited to the session.

1. Permanent Court of Arbitration

181. The representative of PCA made a statement providing a summary of the work of PCA during the period 2017–2018, including an update on the provision of registry support in a number of different arbitration and conciliation proceedings, its role as an appointing authority and, in particular, its experience with the operation of the UNCITRAL Arbitration Rules and some novel ways in which they had recently been used. PCA had increased its technical contribution to discussions in Working Group III on investor-State dispute settlement reform, including information on costs and appointment and challenges of arbitrators.

2. Organization of American States

182. The representative of OAS recalled the general mandate received from the OAS General Assembly to promote a greater dissemination of private international law among its member States, in collaboration with other organizations and associations that worked in that area; UNCITRAL, the Hague Conference on Private International Law, Unidroit and the American Association of Private International Law had been identified in particular. The OAS General Assembly had also instructed the secretariat to: (a) continue promoting the UNCITRAL Model Law on Secured Transactions among member States (the Model Law had been adopted at the Inter-American Specialized Conference on Private International Law held in 2002, and the accompanying Model Regulations had been adopted at the Inter-American Specialized Conference on Private International Law held in 2009); (b) extend the training for judges and other public officials on the effective implementation of international treaties on enforcing decisions and arbitral awards; and (c) disseminate the OAS Model Law on the Simplified Corporation. Lastly, at its most recent session, in June 2018, the OAS General Assembly had requested the Inter-American Juridical Committee to update its 2016 report on principles for electronic warehouse receipts for agricultural products in the light of developments that had occurred since those principles were adopted.

183. The representative of OAS also informed the Commission about the activities of the Inter-American Juridical Committee and the instruments it had produced in areas of interest for UNCITRAL, highlighting the importance of the ongoing work on drafting a guide to the law applicable to international contracts, and a set of draft principles on electronic warehouse receipts for agricultural products. In those and

other areas, the OAS secretariat looked forward to a continuation of its fruitful cooperation with UNCITRAL.

C. International governmental and non-governmental organizations invited to the sessions of UNCITRAL and its working groups

184. The Commission recalled that, at its forty-fourth session to fiftieth sessions, from 2011 to 2017, it had heard oral reports by the Secretariat about intergovernmental organizations and non-governmental organizations (NGOs) invited to sessions of UNCITRAL.[37] At its forty-eighth session, in 2015, it had requested the Secretariat, when presenting its oral report on the topic of organizations invited to sessions of UNCITRAL, to provide comments on the manner in which invited organizations fulfilled the criteria applied by the Secretariat in making its decision to invite NGOs.[38] At its forty-ninth session, in 2016, the Commission had welcomed the detailed and informative report presented by the Secretariat pursuant to that request.[39] At its fiftieth session, in 2017, the Commission had requested the Secretariat to provide information about organizations invited to sessions of UNCITRAL in writing for future sessions.[40]

185. The Commission had before it a note submitted pursuant to the request made by the Commission at its fiftieth session (A/CN.9/951). The note presented information about the newly accepted organizations and those whose applications had been declined between the start of the fiftieth session of UNCITRAL and 28 May 2018. The Commission noted the establishment of a separate list of additional NGOs invited only to sessions of Working Group III (Investor-State Dispute Settlement Reform) for its work on issues of investor-State dispute settlement reform, the reasons for establishing that list and the NGOs included in that list.

186. The Commission took note of the request submitted by Public Citizen, an NGO interested in participating as an observer in sessions of Working Group III, but which the Secretariat had not found to be international in membership and focus or to possess demonstrated international expertise in the area of work currently dealt with by Working Group III, for a reconsideration of that decision (A/CN.9/951, para. 5 (d)). The Commission confirmed the decision of the Secretariat in that case.

XII. Technical assistance to law reform

A. General

187. The Commission had before it a note by the Secretariat (A/CN.9/958/Rev.1) on technical cooperation and assistance activities undertaken in the period since the last report to the Commission in 2017 (A/CN.9/905). The Commission stressed that technical cooperation and assistance activities continued to be an important part of the Secretariat's activities in order to ensure that the legislative texts developed and adopted by the Commission were enacted or adopted by States and applied and interpreted in a uniform manner to promote the basic goal of harmonization of international trade law. The technical assistance and cooperation activities of the Secretariat included (a) providing States with information necessary to allow them to enact the various texts developed or adopted by UNCITRAL, including technical information, information and advice on practical experience in the enactment of UNCITRAL texts, (b) providing assistance to the drafting of laws and regulations

[37] Ibid., *Sixty-sixth Session, Supplement No. 17* (A/66/17), paras. 288–298; ibid., *Sixty-seventh Session, Supplement No. 17* (A/67/17), paras. 174–178; ibid., *Sixty-eighth Session, Supplement No. 17* (A/68/17), paras. 257–261; ibid., *Sixty-ninth Session, Supplement No. 17* (A/69/17), paras. 205–207; ibid., *Seventieth Session, Supplement No. 17* (A/70/17), paras. 279–281; ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), paras. 286–290; and ibid., *Seventy-second Session, Supplement No. 17* (A/72/17), paras. 360–364.

[38] Ibid., *Seventieth Session, Supplement No. 17* (A/70/17), para. 280.

[39] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), para. 290.

[40] Ibid., *Seventy-second Session, Supplement No. 17* (A/72/17), para. 364.

enacting UNCITRAL texts, including information and advice on interpretation and implementation of texts, and (c) providing capacity-building for law reform and the interpretation and application of UNCITRAL texts. The Commission acknowledged that development of legislative texts was only the first step in the process of trade law harmonization and that technical cooperation and assistance activities were vital to the further use, adoption and interpretation of those legislative texts. The Commission expressed its appreciation for the work undertaken by the Secretariat in that regard. At the same time, the Commission recalled that the main mandate of the Secretariat was to support the Commission's legislative work and encouraged the Secretariat to ensure that human resources allocated to technical assistance would not adversely affect the servicing of the Commission and its working groups.

188. The Commission noted that the continuing ability to respond to requests from States and regional organizations for these activities was dependent upon the availability of funds to meet the associated costs. With respect to the Trust Fund for UNCITRAL Symposia, the Commission acknowledged the contribution by the Republic of Korea to support participation in the APEC Ease of Doing Business project (as noted in A/CN.9/958/Rev.1, paras. 10 and 52). The Commission further noted that, despite efforts by the Secretariat to solicit new donations, funds available in the Trust Fund for UNCITRAL Symposia were very limited. Accordingly, requests for technical cooperation and assistance activities continued to be very carefully considered, and the number of such activities, which of late had mostly been carried out on a cost-share or no-cost basis, was limited. The Commission requested the Secretariat to continue exploring alternative sources of extrabudgetary funding, in particular by more extensively engaging permanent missions, as well as other possible partners in the public and private sectors, subject to relevant United Nations rules and regulations on fundraising and relations with the private sector. The Commission also encouraged the Secretariat to seek cooperation and partnership with international organizations, including through regional offices, and bilateral assistance providers in the provision of technical assistance, and appealed to all States, international organizations and other interested entities to facilitate such cooperation and take any other initiative to maximize the use of relevant UNCITRAL standards in law reform. In that connection, the Commission expressed the wish that the Secretariat would be able to maintain a neutral and independent approach to technical assistance, consistent with the policies of the Commission, bearing in mind that potential donors, including national development agencies, might have their own priority or policy considerations.

189. The Commission reiterated its call for all States, international organizations and other interested entities to consider making contributions to the Trust Fund for UNCITRAL Symposia, if possible in the form of multi-year contributions or as specific-purpose contributions, in order to facilitate planning and enable the Secretariat to meet the increasing number of requests for technical cooperation and assistance activities.

190. With respect to the Trust Fund for Granting Travel Assistance to Developing States Members of UNCITRAL, the Commission appealed to the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the Trust Fund. The Commission noted that the available Trust Fund resources had been used to facilitate participation at the fifty-first session of the Commission for one delegate from Honduras. Owing to the limited resources, only partial assistance could be provided.

191. The Commission further noted that the European Union and Swiss Agency for Development and Cooperation had made resources available to provide financial support for the participation of developing countries in Working Group III (Investor-State Dispute Settlement Reform), which had been used to facilitate participation at the thirty-fifth session of Working Group III (New York, 23–27 April 2018) for delegates from El Salvador and Sri Lanka, as the agreement between the United Nations and the European Union also covered the funding of travel for States that are not currently members of UNCITRAL.

192. The Commission commended the Secretariat for organizing a round table on technical assistance at the Commission's 1084th meeting, on Friday, 6 July. The round table brought together governmental and intergovernmental organizations active in international development assistance to explore synergies and discuss ways to further cooperate with the Secretariat in implementing sound reforms of international trade law. The presentations made at the round table and the discussion that took place thereafter offered valuable insights into needs for commercial law reform, the tools and methods for enhancing delivery of law reform projects and the means for evaluating their effectiveness. The Commission expressed its appreciation to the experts who had participated in the round table.

193. With regard to the dissemination of information on the work and texts of UNCITRAL, the Commission noted the important role played by the UNCITRAL website (www.uncitral.org) and the UNCITRAL Law Library. The Commission welcomed the inclusion on the UNCITRAL website of a feature highlighting the role of UNCITRAL in supporting the Sustainable Development Goals.[41] The Commission recalled its request that the Secretariat continue to explore the development of new social media features on the UNCITRAL website as appropriate,[42] noting that the development of such features in accordance with the applicable guidelines was also welcomed by the General Assembly.[43] In that regard, the Commission noted with approval the continued development of the "What's new at UNCITRAL?" Tumblr microblog[44] and the establishment of an UNCITRAL presence on LinkedIn.[45] Finally, recalling the General Assembly resolutions commending the website's six-language interface,[46] the Commission requested the Secretariat to continue to provide, via the website, UNCITRAL texts, publications, and related information, in a timely manner and in the six official languages of the United Nations.

B. UNCITRAL regional presence

194. The Commission had before it a note by the Secretariat on the activities undertaken by its Regional Centre for Asia and the Pacific (A/CN.9/947) in the period since the last report to the Commission in 2017 (A/CN.9/910).

195. The Commission acknowledged the noticeable progress, as a result of the regional activities of the Secretariat, through its Regional Centre, in the levels of awareness, adoption and implementation of harmonized and modern international trade law standards elaborated by UNCITRAL, and emphasized the significance of the Regional Centre in mobilizing contributions to the work of UNCITRAL from the Asia-Pacific region.

196. The Commission noted that the Regional Centre was staffed by one professional, one programme assistant, one team assistant and two legal experts, and that its core project budget allowed for the occasional employment of experts and consultants. During the reporting period, the Regional Centre had received 15 interns. The Commission also noted that the Regional Centre relied on the annual financial contribution to the Trust Fund for UNCITRAL Symposia to meet the costs of operations and programmes. The Commission expressed its gratitude to the Incheon Metropolitan City for extending its financial contribution over a five-year period (2017–2021) for the operation of the Regional Centre, revising the annual contribution to $450,000. The Commission further expressed its gratitude to the Ministry of Justice of the Republic of Korea and to the government of the Hong Kong

Special Administrative Region of China for the extension of their contribution of two legal experts on non-reimbursable loans.

197. The Commission commended the Regional Centre for having continued to deliver its flagship activities during the reporting period, namely the second edition of the UNCITRAL Asia Pacific Judicial Summit (Hong Kong, China, 16–18 October 2017), the Asia Pacific Alternative Dispute Resolution Conference (Seoul, 7–9 November 2017) and the UNCITRAL Asia Pacific Day held by various universities during the last quarter of 2017 with the objective of streamlining activities to promote UNCITRAL texts and establishing regular opportunities for substantive regional contributions to support the present and possible future legislative work of UNCITRAL.

198. The Commission noted with appreciation the various public, private and civil society initiatives that the Regional Centre had organized or supported, or in which, through either Incheon-based staff or Vienna-based secretariat staff, it had participated during the reporting period. The Commission further noted with appreciation that the Regional Centre, in consultation and with the support of Vienna-based secretariat staff had also been engaged in the technical assistance and capacity-building services, provided to States in the Asia-Pacific region and to international and regional organizations and development banks.

199. The Commission encouraged the Secretariat to continue seeking cooperation, including through formal agreements, with regional stakeholders, including development banks, to ensure coordination and funding for its technical assistance and capacity-building activities and services aimed at promoting the adoption of UNCITRAL texts in the region.

200. The delegate of Cameroon informed the Commission that, since the announcement of its intention to host an UNCITRAL regional centre for Africa, at the Commission's fiftieth session, in 2017,[47] the Government of Cameroon had continued to examine the financial implications and the feasibility of establishing a UNCITRAL regional centre in the country. The Commission reiterated its gratitude to the Government of Cameroon for actively pursuing that matter, and encouraged the Secretariat to continue its consultations and consider carefully the level of human resources that the Secretariat would need for the efficient management of any new regional centre and for ensuring adequate supervision by, and coordination with, Vienna-based secretariat staff.

XIII. Status and promotion of UNCITRAL legal texts

A. General discussion

201. The Commission considered the status of the conventions and model laws emanating from its work and the status of the New York Convention, on the basis of a note by the Secretariat (A/CN.9/950). It was noted that certain States had adopted more than one UNCITRAL text in the framework of a comprehensive exercise on commercial law modernization. The Commission noted with appreciation the information on treaty actions and legislative enactments received since its fiftieth session and invited States to share with the Secretariat information on the enactment of UNCITRAL texts.

202. The Commission also noted the following actions and legislative enactments made known to the Secretariat subsequent to the submission of the Secretariat's note:

(a) Mauritius Convention on Transparency: ratification by Cameroon (four States parties);

[47] *Official Records of the General Assembly, Seventy-second Session, Supplement No. 17* (A/72/17), para. 292.

(b) UNCITRAL Model Law on Cross-Border Insolvency (1997): new legislation based on the Model Law had been adopted in Israel;

(c) UNCITRAL Model Law on International Commercial Arbitration (1985), with amendments as adopted in 2006: legislation based on the Model Law had been adopted in British Columbia, Canada.

203. The Commission expressed appreciation to the General Assembly for the support it provided to UNCITRAL in its activities and in particular its distinct role in furthering the dissemination of international commercial law. In particular, the Commission referred to the long-established practice of the General Assembly, upon acting on UNCITRAL texts, to recommend to States to give favourable consideration to UNCITRAL texts and to request the Secretary-General to publish UNCITRAL texts, including electronically, in the six official languages of the United Nations, and take other measures to disseminate UNCITRAL texts as broadly as possible to Governments and all other relevant stakeholders.

B. Functioning of the transparency repository

204. The Commission recalled that the repository of published information under the UNCITRAL Rules on Transparency in Treaty-based Investor-State Arbitration ("Transparency Rules"), adopted at its forty-sixth session in 2013, had been established under article 8 of the Transparency Rules ("transparency repository"). The Commission also recalled reports on the transparency repository that had been provided at its previous sessions.[48]

205. The Commission recalled that, following ratification by Mauritius, Canada and Switzerland (listed in the chronological order of ratification), the Mauritius Convention on Transparency entered into force on 18 October 2017. It also noted that since that date, Cameroon had ratified the Convention (see para. 202 (a) above). The Commission noted that none of the ratifying States had made reservations and, as a result, the Transparency Rules were part of the investor-State dispute settlement regime created by investment treaties concluded by those four States. Thus, the Transparency Rules apply on a unilateral basis, under all treaties concluded by those States, if the claimant agrees to their application.

206. The Commission reiterated its appeal to all States, international organizations and other interested entities to consider making contributions to the funding of the project, preferably in the form of multi-year contributions, so as to facilitate its continued operation. It expressed its gratitude to the European Commission for its continuing financial commitment and to the Fund for International Development (OFID) of the Organization of the Petroleum Exporting Countries for its recent offer of additional funds.

207. The Commission recalled that a certain number of projects and activities taking place throughout the year in which the UNCITRAL transparency standards were promoted, strengthen the trend in investor-State dispute settlement towards increased transparency. For instance, the Commission heard about several academic programmes, including moots, where around 4,000 students were able to become familiar with the UNCITRAL transparency standards. In addition, the Commission was informed about the continuation of the 18-month project under the overall project "Open regional fund: legal reform", conducted by the Deutsche Gesellschaft für Internationale Zusammenarbeit (GIZ), which was a key element of the promotion of the UNCITRAL transparency standards in South-Eastern Europe.

[48] Ibid., *Sixty-ninth Session, Supplement No. 17* (A/69/17), paras. 107–110; ibid., *Seventieth Session, Supplement No. 17* (A/70/17), paras. 152–161; ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), paras. 166–173; and ibid., *Seventy-second Session, Supplement No. 17* (A/72/17), paras. 308–321.

208. The Commission welcomed the report on the transparency repository and expressed its support for continued operation of the repository as a key mechanism for promoting transparency in investor-State arbitration.

C. International commercial law moot competitions

1. Willem C. Vis International Commercial Arbitration Moot

209. The Commission noted that the Association for the Organization and Promotion of the Willem C. Vis International Commercial Arbitration Moot had organized the Twenty-fifth Moot, the oral arguments phase of which had taken place in Vienna from 24 to 29 March 2018, and that the best team in oral arguments had been the National Research University Higher School of Economics of Moscow. As in previous years, the Moot had been co-sponsored by the Commission. Legal issues addressed by the teams in the Twenty-fifth Moot were based on the United Nations Sales Convention and the UNCITRAL Arbitration Rules.

210. A total of 362 teams from 82 countries participated in the 2018 Vis Moot, comprising more than 2,000 students, 1,000 arbitrators and 700 coaches. It was stressed that Vis Moot contributed to promoting cultural diversity and improving gender representation in international arbitration, both important aspects in increasing the credibility and acceptance of international arbitration. The oral arguments phase of the Twenty-sixth Willem C. Vis International Commercial Arbitration Moot were to be held in Vienna from 12 to 18 April 2019.

211. It was also noted that the Vis East Moot Foundation had organized the Fifteenth Willem C. Vis (East) International Commercial Arbitration Moot, which had been co-sponsored by the Commission. The final phase took place in Hong Kong, China, from 11 to 18 March 2018. A total of 125 teams from 31 jurisdictions participated in the Fifteenth (East) Moot and the best team in oral arguments had been ILS Law College (India). The Sixteenth (East) Moot was to be held in Hong Kong, China, from 31 March to 7 April 2019.

2. Additional moots

Madrid Commercial Arbitration Moot 2018

212. The Commission noted that Carlos III University of Madrid had organized the Tenth International Commercial Arbitration Competition in Madrid from 16 to 20 April 2018. The Commission co-sponsored the Moot. Legal issues addressed by the teams related to an international sale of goods, where the United Nations Sales Convention, the New York Convention, the UNCITRAL Arbitration Rules and the Transparency Rules were applicable. A total of 27 teams from 13 jurisdictions participated in the Madrid Moot 2018, which was conducted in Spanish. The best team in oral arguments had been the Pontifical Catholic University of Peru. The Eleventh Madrid Moot was to be held from 1 to 5 April 2019.

Frankfurt Investment Moot Court

213. The Commission noted that the Eleventh Frankfurt Investment Moot Case involved the application of the Transparency Rules, with a key issue concerning the question of confidential documents. More than 80 teams from over 30 countries participated in the competition, which took place from 12 to 16 March 2018, and the National University of Singapore had been declared the best team in oral arguments. The Twelfth Moot will take place from 4 to 8 March 2019.

Mediation and negotiation competition

214. It was noted that the fourth mediation and negotiation competition organized jointly by IBA and VIAC with the support of the Commission was to take place in Vienna on 17–20 July 2018. Legal issues to be considered were those that were addressed at the Twenty-fifth Willem C. Vis International Commercial Arbitration

Moot (see para. 209 above). A total of 33 teams from 15 jurisdictions had registered to participate.

Ian Fletcher International Insolvency Law Moot

215. The second Ian Fletcher International Insolvency Law Moot was held in Vancouver, Canada, on 5–8 February 2018, with the winning team being from the University of British Columbia (located in Vancouver). The Moot provides an opportunity to learn about international insolvency law and the use of the UNCITRAL Model Law on Cross-Border Insolvency. It is supported by the Commission and offers the best individual mooter the opportunity to visit UNCITRAL in New York or Vienna during a session of Working Group V (Insolvency Law) to observe first-hand the experience of Secretariat members.

D. Bibliography of recent writings related to the work of UNCITRAL

216. The UNCITRAL Law Library specializes in international commercial law. Its collection features important titles and online resources in that field in the six official languages of the United Nations. In 2017, library staff responded to approximately 520 reference requests, originating in over 50 countries, and hosted researchers from over 25 countries.

217. Considering the broader impact of UNCITRAL texts, the Commission took note of the bibliography of recent writings related to the work of UNCITRAL (A/CN.9/949) and the influence of UNCITRAL legislative guides, practice guides and contractual texts as described in academic and professional literature. The Commission noted the importance of facilitating a comprehensive approach to the creation of the bibliography and the need to remain informed of activities of non-governmental organizations active in the field of international trade law. In this regard, the Commission recalled and repeated its request that non-governmental organizations invited to the Commission's annual session donate copies of their journals, reports and other publications to the UNCITRAL Law Library for review.[49] The Commission expressed appreciation to all non-governmental organizations that donated materials. The Commission noted, in particular, the addition of current and forthcoming issues of the following journals to the UNCITRAL Law Library collection: *The International Journal of Arbitration, Mediation and Dispute Management* (Chartered Institute of Arbitrators) and the *Dispute Resolution Journal (*American Arbitration Association), as well as new donations from the Centre de recherches informatique et droit, the European Consumer Centre Belgium, the International Union of Notaries and the Regional Centre for International Commercial Arbitration — Lagos. In addition, a great number of book donations were received from Beck, Bruylant, Cambridge University Press, Eleven, Kluwer, LexisNexis and Schulthess.

XIV. Promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts

218. The Commission considered a note by the Secretariat on promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts (A/CN.9/946), which provided information on the current status of the Case Law on UNCITRAL Texts (CLOUT) system, including the digests of case law relating to the United Nations Sales Convention and the UNCITRAL Model Law on International Commercial Arbitration.

219. The Commission expressed its appreciation that CLOUT and the digests continued to be used by the Secretariat for promoting uniform interpretation of the law relating to UNCITRAL texts. The Commission also noted with satisfaction the increasing number of UNCITRAL legal texts that were currently represented in

[49] Ibid., *Seventieth Session, Supplement No. 17* (A/70/17), para. 264.

CLOUT. As at the publication date of A/CN.9/946, 190 issues of compiled case-law abstracts had been prepared, dealing with 1,752 cases. The cases related to the following legislative texts:

- The New York Convention
- Convention on the Limitation Period in the International Sale of Goods (New York, 1974) and Convention on the Limitation Period in the International Sale of Goods as amended by the Protocol of 11 April 1980 (Vienna)
- United Nations Convention on the Carriage of Goods by Sea (Hamburg, 1978)
- United Nations Sales Convention
- United Nations Convention on Independent Guarantees and Stand-by Letters of Credit (New York, 1995)
- United Nations Convention on the Use of Electronic Communications in International Contracts (New York, 2005)
- UNCITRAL Model Law on International Commercial Arbitration (1985) with amendments as adopted in 2006
- UNCITRAL Model Law on International Credit Transfers (1992)
- UNCITRAL Model Law on Electronic Commerce (1996)
- UNCITRAL Model Law on Cross-Border Insolvency (1997)
- UNCITRAL Model Law on Electronic Signatures (2001)

220. The Commission took note of the considerable gap that still existed between the volume of abstracts referring to Western European and other States and those referring to other geographic regions. Similarly, the Commission noted that the United Nations Sales Convention and the UNCITRAL Model Law on International Commercial Arbitration were still the texts most represented in the CLOUT system, although in the period under review there was an increase in published cases concerning the New York Convention.

221. After taking note of the current composition of the network of national correspondents, the Commission encouraged States that had not yet appointed national correspondents to do so in order to contribute to the increased collection of relevant case law. The Commission also noted that in the period under review national correspondents had provided approximately 33 per cent of the abstracts published in CLOUT, while the rest of the abstracts had been prepared by voluntary contributors or by the Secretariat.

222. The Commission expressed its appreciation for the volume of users of the CLOUT database in the period under review, as well as the increasing number of full texts of decisions, including decisions stored in the database's archives, published in the database. The Commission also commended the Secretariat for its use of social media in order to promote visibility of the CLOUT system and encourage contributions.

223. As at previous sessions, the Commission took note with satisfaction of the performance of the website www.newyorkconvention1958.org, and the successful coordination between that website and CLOUT.

224. After drawing attention to the resource-intensive nature of the CLOUT system and the need for further means to sustain it, the Commission commended the Secretariat for its work despite its limited resources.

XV. Role of UNCITRAL in promoting the rule of law at the national and international levels

A. Introduction

225. The Commission recalled that the item had been on the agenda of the Commission since its forty-first session, in 2008,[50] in response to the General Assembly's invitation to the Commission to comment, in its report to the General Assembly, on the Commission's current role in promoting the rule of law.[51] The Commission further recalled that, at its forty-first to fiftieth sessions, from 2008 to 2017, the Commission, in its annual reports to the General Assembly, transmitted comments on its role in promoting the rule of law at the national and international levels, including in the post-conflict reconstruction context.[52]

226. The Commission also recalled that it had considered it essential to keep a regular dialogue with the Rule of Law Coordination and Resource Group through the Rule of Law Unit and to keep abreast of progress made in the integration of the work of UNCITRAL into the United Nations joint rule of law activities. The Commission recalled that, to that end, it requested the Secretariat to organize briefings by the Rule of Law Unit biannually, when sessions of the Commission were held in New York.[53] The Commission recalled that the briefings consequently took place at the Commission's forty-fifth, forty-seventh and forty-ninth sessions, in 2012, 2014 and 2016,[54] and it welcomed holding the rule of law briefing at its fifty-first session. (A summary of the briefing is contained in section B below.)

227. At its fifty-first session, in 2018, the Commission also took note of General Assembly resolution 72/119 on the rule of law at the national and international levels, in paragraph 25 of which the Assembly invited the Commission to continue to comment, in its reports to the General Assembly, on its current role in promoting the rule of law. The Commission recalled that it had been the practice in the Commission to focus comments on its current role in promoting the rule of law on a subtopic identified by the General Assembly for its deliberations under the rule of law agenda item at its subsequent session.

228. The Commission noted that the General Assembly, in its resolution 72/119, did not identify any specific subtopic for discussion at its next session, in 2018, inviting Member States and the Secretary-General to suggest possible subtopics for future Sixth Committee debates, for inclusion in the forthcoming annual report, with a view to assisting the Sixth Committee in choosing future subtopics (resolution 72/119, para. 29). The Commission further noted that, for that reason, no written note by the Secretariat was presented to the Commission at its fifty-first session.

229. In its comments to the General Assembly this year, the Commission decided to highlight the role for the promotion of the rule of law of the texts adopted or approved

---

[50] For the decision of the Commission to include the item on its agenda, see *Official Records of the General Assembly, Sixty-second Session, Supplement No. 17* (A/62/17), part two, paras. 111–113.

[51] General Assembly resolutions 62/70, para. 3; 63/128, para. 7; 64/116, para. 9; 65/32, para. 10; 66/102, para. 12; 67/97, para. 14; 68/116, para. 14; 69/123, para. 17; 70/118, para. 20; and 71/148, para. 22.

[54] Ibid., *Sixty-seventh Session, Supplement No. 17* (A/67/17), paras. 199–210; ibid., *Sixty-ninth Session, Supplement No. 17* (A/69/17), paras. 229–233; and ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), paras. 313–317.

at the session, of its ongoing work in the areas of investor-State dispute settlement reform, electronic commerce and public-private partnerships, and of the New York Convention, whose sixtieth anniversary was celebrated during the session. (For comments of the Commission transmitted to the General Assembly under this agenda item, as requested in para. 25 of General Assembly resolution 72/119, see sect. C below.)

B. Summary of the rule of law briefing

230. The Chief of the Rule of Law Unit held a briefing on the current and future rule of law agenda of the United Nations and the expected role of UNCITRAL therein.

231. The Commission expressed appreciation to the Chief of the Rule of Law Unit for holding a briefing in UNCITRAL and looked forward to the next rule of law briefing at its fifty-third session, in 2020. The Commission noted with interest the increased attention being paid to the Sustainable Development Goals, in particular Goal 16. The Commission was of the view that this broader perspective offered an interesting avenue for a better focusing of its consideration of the relevance of its work for the broader agenda of the United Nations to promote the rule of law at the national and international levels. The Commission agreed to continue that discussion in connection with its consideration of proposals for changes in its working methods under agenda item 20 (see paras. 264–267 below).

C. Comments of the Commission on its current role in promoting the rule of law

232. The Commission brought the attention of the General Assembly to the preambular paragraphs of the decisions adopted by the Commission during the current session that explained the role of the texts adopted, approved or celebrated at the session to the promotion of the rule of law (see paras. 49, 68, 111, 131 and 173 above).

233. It also highlighted the importance of the proper identity management in the digital economy, which was the subject of the current work of Working Group IV (see chapter VIII above), for the implementation of the United Nations anti-corruption, anti-money-laundering, anti-fraud and good governance agenda. The Commission also referred to issues of transparency, access to justice and accountability dealt with in its ongoing work on investor-State dispute settlement reform and on the revision of the UNCITRAL texts in the area of infrastructure development (see chapters VI and VII above).

XVI. Relevant General Assembly resolutions

234. The Commission recalled that, at its fiftieth session, in 2017, it had requested the Secretariat to replace an oral report to the Commission on relevant General Assembly resolutions with a written report to be issued before the relevant session.[55] Pursuant to that request, the Commission had before it at its fifty-first session a note by the Secretariat (A/CN.9/953) summarizing the content of the operative paragraphs of General Assembly resolution 72/113 on the report of UNCITRAL on the work of its fiftieth session and resolution 72/114 on the UNCITRAL Model Law on Electronic Transferable Records, both resolutions having been adopted by the General Assembly on 7 December 2017 on the recommendation of the Sixth Committee (A/72/458).

235. The Commission took note of those General Assembly resolutions.

[55] Ibid., *Seventy-second Session, Supplement No. 17* (A/72/17), para. 480.

XVII. Work programme

236. The Commission recalled its agreement to reserve time for discussion of its overall work programme as a separate topic at each session, in order to facilitate the effective planning of its activities.[56]

237. The Commission took note of the documents prepared to assist its discussions on the topic (A/CN.9/952 and A/CN.9/952/Corr.1 and the documents referred to therein, including the proposals contained in documents A/CN.9/944/Rev.1, A/CN.9/954, A/CN.9/959, A/CN.9/960 and A/CN.9/961, as well as the proposals referred to in working group documents and reports, namely A/CN.9/WG.V/WP.154 and A/CN.9/937, paras. 121–122, as well as A/CN.9/938, paras. 92–93 and annex).

A. Current legislative programme

238. The Commission took note of the progress of its working groups as reported earlier in the session (see chapters III to IX above) and confirmed the programme of current legislative activities set out in table 1 of document A/CN.9/952 and A/CN.9/952/Corr.1 as follows:

(a) As regards micro, small and medium-sized enterprises, the Commission confirmed that Working Group I should continue its work to prepare a legislative guide on a UNCITRAL limited liability organization (see para. 112 above);

(b) With respect to investor-State dispute settlement reform, the Commission agreed that Working Group III should continue with its work programme as mandated (see para. 145 above);

(c) As regards e-commerce, the Commission confirmed that Working Group IV should continue with its ongoing projects on legal issues related to identity management and trust services (see para. 159 above). With respect to contractual aspects of cloud computing, the Commission noted that the draft Secretariat notes on the main issues of cloud computing contracts would be available to the Commission at its fifty-second session, in 2019 (see para. 150 above);

(d) With respect to insolvency, the Commission noted that it was anticipated that two draft legislative texts would be sufficiently developed for submission by Working Group V to the Commission for finalization and adoption in 2019, namely the draft model law on enterprise group insolvency and its guide to enactment and a supplement to part four of the *UNCITRAL Legislative Guide on Insolvency Law* addressing the obligations of directors of enterprise group companies in the period approaching insolvency (see para. 132 above). The Commission confirmed that the work on insolvency of micro, small and medium-sized enterprises should continue (see para. 133 above);

(e) As regards secured transactions, the Commission confirmed that Working Group VI should continue its work to prepare a practice guide on the contractual, transactional and regulatory issues arising in the context of secured transactions (see also para. 163 above), with a request that it be presented to the Commission in 2019 for finalization and adoption.

B. Future legislative programme

239. The Commission recalled the importance of a strategic approach to the allocation of resources to, inter alia, legislative development, and its role in setting the work programme of UNCITRAL, especially as regards the mandates of working groups.[57]

240. The Commission heard several proposals for possible future legislative development.

---

[56] Ibid., *Sixty-eighth Session, Supplement No. 17* (A/68/17), para. 310.

[57] Ibid., paras. 294 and 295.

241. Firstly, the Government of Italy presented a proposal on possible future work on contractual networks (A/CN.9/954). It was recalled that an earlier proposal had been presented to the Commission at its fiftieth session, in 2017, and noted that document A/CN.9/954 clarified aspects of that proposal in response to comments received at the fiftieth session. It was noted that those networks provided an opportunity to organize cooperation between businesses without a requirement for a legal entity to be formed. They could facilitate sharing of resources; provide a means of accessing business opportunities not otherwise available to individual participating entities; facilitate access to finance for the network itself, rather than the individual participating entities; and permit sharing of property and of labour. It was pointed out that certain international organizations were undertaking projects using clusters, where the governance of the projects was organized in a manner similar to contractual networks but without the legal certainty provided by contractual networks. In conclusion, the delegation observed that work on such networks would complement the work on the UNCITRAL limited liability organization currently being considered by Working Group I.

242. The Government of Switzerland presented a proposal on possible future work on cross-border issues related to the judicial sale of ships (A/CN.9/944/Rev.1). The Commission recalled that a proposal had been made at its fiftieth session by CMI, that it had indicated its support for a colloquium to be initiated by CMI to discuss and advance the proposal, and that it had agreed to revisit the topic at a future session. The Commission noted that that colloquium had been held in February 2018 and that the proposal included the outcomes and conclusions of that colloquium.

243. In support of the proposal, it was noted that that issue had the potential to affect many areas of international trade and commerce, not simply the shipping industry, with several examples of that impact being provided. In support of work being undertaken by UNCITRAL, various parallels were drawn between the work currently being undertaken in Working Group V on recognition of insolvency-related judgments and a possible instrument on judicial sale of ships.

244. The Governments of Italy, Norway and Spain presented a proposal for possible future work in the field of dispute resolution (A/CN.9/959), in particular on expedited arbitration. The Government of Belgium supported that proposal in its submission (A/CN.9/961), suggesting in addition work on the conduct of arbitrators in the field of commercial arbitration, with a focus on questions of impartiality and independence of arbitrators. It was pointed out that the aim of the proposals was to improve the efficiency and quality of arbitral proceedings.

245. Regarding expedited arbitration, it was suggested that the work could consist of providing information on how the UNCITRAL Arbitration Rules could be modified or incorporated into contracts via arbitration clauses that provided for expedited procedures or in guidance to arbitral institutions adopting such procedures in order to ensure the right balance between speedy resolution of the process and respect for due process. Reference was also made to the possibility of considering jointly the topics of expedited arbitration and adjudication, as expedited arbitration would provide generally applicable tools for reducing the cost and time of arbitration, while adjudication would facilitate use of a particular tool that had demonstrated its utility in efficiently resolving disputes in a specific sector.

246. The Commission also heard the proposal that the Secretariat could undertake work on (a) updating the UNCITRAL Conciliation Rules (1980) to both reflect current practice and ensure consistency with the contents of the draft instruments finalized by the Commission at is current session, and (b) preparing notes on organizing mediation proceedings.

247. The Government of Czechia presented a proposal that the Secretariat should closely monitor developments relating to legal aspects of smart contracts and artificial intelligence (A/CN.9/960) and report back to the Commission on areas that might warrant uniform legal treatment, with a view to undertaking work in those fields when appropriate.

248. It was indicated that several suggestions had been made in the working groups and in the Commission with respect to various legal aspects of the digital economy.

It was recalled that additional considerations on those legal aspects had been presented at the Congress held in 2017 on the occasion of the Commission's fiftieth session, to celebrate the fiftieth anniversary of UNCITRAL. It was suggested that UNCITRAL would benefit from a broader understanding of the legal issues related to the digital economy and, that to do so, it should monitor relevant developments on the basis of information compiled by the Secretariat. It was said that in addition to artificial intelligence and smart contracts, topics of possible relevance included the use of distributed ledger technology, supply chain management, payments and cross-border data flows. It was stressed that such work should not only legally enable the commercial use of new technologies and methods but also assist developing economies in bridging the digital gap.

249. In addition to the proposals noted above, reference was made to two proposals that had been considered by working groups and were contained in working group documents as noted in paragraph 237 above. The first of those proposals concerned warehouse receipts, which had first been considered at a colloquium on secured transactions (Vienna, 15–17 March 2017).[58] After further discussion at its thirty-third session (New York, 30 April–4 May 2018), Working Group VI requested a mandate on that issue to develop a modern and predictable legal regime (A/CN.9/938, paras. 92–93). In support of the proposal, the importance of warehouse receipts to agriculture and food security was noted, as well as their use in supply and value chains.

250. The second proposal concerned civil law aspects of asset tracing and recovery, which had been considered by Working Group V (A/CN.9/937, paras. 121–122). With respect to that proposal, it was suggested that it would be relevant not only to insolvency but also to treatment of commercial fraud and other topics. It was noted that many States lacked adequate legal tools for tracing and recovery. What was suggested was the development of a toolbox of legislative provisions from which States could choose, as indicated in document A/CN.9/WG.V/WP.154. It was emphasized that the work proposed was not intended to address criminal law or cross-border issues and that coordination and cooperation with other relevant organizations would be a key element, in order to avoid potential overlap and duplication. The first step, it was proposed, was to undertake work to explore the issues in more detail and identify the scope of possible work.

251. In that context, the European Union delegation presented as an alternative a proposal to dedicate future work to applicable law related to insolvency. It was stressed that the issue of applicable law was an important matter that warranted consideration.

252. After discussion, the Commission agreed that priority, in the allocation of working group time, should be given to the topics of judicial sale of ships and issues relating to expedited arbitration; that judicial sale of ships should be allocated to the first available working group, possibly Working Group VI when it had completed its current work on the practice guide, and that Working Group II should be mandated to take up issues relating to expedited arbitration.

253. Regarding the other topics discussed, the Commission came to the conclusion that the preparatory work on those matters was less mature, and given the limited resources of the Secretariat, should be given less priority. More preparatory work by the Secretariat would be needed before the Commission could decide on further steps on those matters. Accordingly, the Commission decided the following:

(a) The Secretariat should conduct exploratory and preparatory work on warehouse receipts in order to refer that work to a working group;

(b) The Secretariat should compile information on legal issues related to the digital economy, including by organizing, within existing resources and in cooperation with other organizations, symposiums, colloquiums and other expert meetings, and to report that information for its consideration at a future session. It was stressed that discussions should focus on identifying legal obstacles and their possible solutions and avoid privacy and data protection issues. In that respect, it was

[58] For further information, see www.uncitral.org/uncitral/en/commission/colloquia_security.html.

noted that Working Groups IV and VI had already compiled a list of legal matters related to the use of new technologies and methods, which could provide a basis for further expert discussion;

(c) With respect to the proposal on contractual networks, Working Group I was authorized to hold a colloquium in the context of a future working group session for the purpose of further analysing the relevance of those networks to the work on developing an enabling legal environment for micro, small and medium-sized enterprises and the desirability of taking up work of those networks. That discussion should also explore legal tools that achieve goals similar to contractual networks that were being used in both civil and common law jurisdictions;

(d) With regard to the proposal on asset tracing in the area of insolvency, the Secretariat should prepare a background study on the relevant issues, taking into account work undertaken by other organizations, in order to avoid duplication and overlap.

254. In the area of dispute settlement, the Commission noted that the Secretariat would prepare notes on organizing mediation proceedings and update the UNCITRAL Conciliation Rules in the light of the mediation framework adopted at its current session.

C. Technical cooperation and assistance activities

255. The Commission recalled the importance of support activities and the need to encourage such activities at the global and regional levels through the Secretariat, through the expertise available in the working groups and the Commission, through member States and through partnering arrangements with relevant international organizations. It also recalled the importance of promoting increased awareness of UNCITRAL texts among those organizations and within the United Nations system.[59]

256. The Commission took note of the general priorities identified in the note, as well as the specific priorities for the period 2018–2019.

257. In concluding the consideration of the agenda item, it was emphasized that the above-mentioned activities should be undertaken taking into account the extent of the resources available to the Secretariat.

XVIII. Other business

A. Methods of work

258. The Commission heard a proposal presented by the Governments of France, Germany, Israel, Switzerland and the United States concerning the methods of work of the Commission.

259. In previous UNCITRAL meetings, the possibility had been raised of reducing the duration of Commission sessions to two weeks. The States making that proposal supported that idea and sought to initiate further discussion on the matter. It was suggested that sessions lasting three weeks posed a problem for many member States due to staff workload and that a two-week session would be easier to manage.

260. Those making the proposal also indicated that they saw various possibilities for making the Commission sessions more effective. The following changes were suggested for consideration:

(a) Several agenda items could be suitably addressed, at least in part, through information-only documents, for example, the following agenda items: “Coordination and cooperation”, “Technical assistance to law reform”, “Status and promotion of UNCITRAL legal texts” and “Promotion of ways and means of ensuring a uniform interpretation and application of UNCITRAL legal texts: CLOUT and digests”.

[59] *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), paras. 263–265.

Member States would be informed via those documents, and decisions generally would not need to be made. At most, a short explanation by the Secretariat would be required. States and organizations represented in the meeting could comment on those information documents. It was noted that information-only documents were already used in other United Nations organizations to help meetings run efficiently;

(b) The working groups should increasingly be asked to send legislative texts to the Commission only if they had already undergone extensive consultation; specific details which were of no special significance should be discussed and decided on in the working groups. The Commission should not assume the role of a working group but must continue to make final decisions on the results submitted by the working groups;

(c) Since 2008, the topic "Role of UNCITRAL in promoting the rule of law at the national and international levels" had been handled by the Commission. While the proposal did not aim to suggest that the Commission should no longer deal with that issue and while the presentations made on that topic had succeeded in bringing numerous interesting aspects to the Commission's attention, there had been only a limited amount of subsequent discussion. It was requested that the manner in which that issue was handled within the Commission be reviewed;

(d) Time during the annual sessions that would be freed up as a result of the proposal should still be utilized effectively. For example, those meeting days could be made available to the working groups, if necessary.

261. In summary, the following was proposed:

(a) Use of information-only documents with a short explanation;

(b) More efficient preparation by the working groups to enable more efficient discussions in the Commission;

(c) Review of how to handle the topic "Role of UNCITRAL in promoting the rule of law at the national and international levels" more efficiently;

(d) Flexible use of meeting days that would be freed up as a result of the proposal.

262. The Commission welcomed the proposal and, noting that the Secretariat had already implemented a number of the suggestions, commended its responsiveness to the request of member States for streamlining and focusing the Commission's agenda and the preparation for the Commission's session.

263. The Secretariat was requested to plan and prepare the fifty-second session of the Commission, in 2019, on the basis of the proposal.

264. In subsequent discussion, the Commission considered the proposal to generate discussion within the Commission on agenda item "Role of UNCITRAL in promoting the rule of law at the national and international levels" (see chapter XV above) and to improve the way the Commission handles that agenda item.

265. The Commission considered the possibility of broadening the discussion of its role in promoting the rule of law at the national and international levels to a discussion of the way the work of UNCITRAL relates to the 2030 Agenda for Sustainable Development and 17 Sustainable Development Goals, both with regard to the instruments developed by UNCITRAL and with regard to assistance to States in their achievement of the Goals.

266. It was suggested that in order for the Commission to achieve a more meaningful consideration of that agenda item, the Secretariat could prepare a paper outlining the way that the UNCITRAL instruments and texts relate to the Sustainable Development Goals and identifying concrete issues to be discussed by the Commission. It was further suggested that that paper could also take stock of the evolution of the agenda item relating to the rule of law over several Commission meetings and how the Commission could ensure that its work reflected the broader development agenda of the United Nations as a whole.

267. It was further decided that a discussion would take place at the fifty-second session of the Commission, in 2019, on the basis of the report to be prepared by the Secretariat.

268. Also related to the Commission's working methods, a request was made that email contacts for the delegations attending the Commission and the Working Groups be made available with a view to facilitating intersessional contacts and discussions among delegates. The Secretariat clarified that the list of participants for each session of the Commission and each working group did not contain contact details of the delegates but that it would look into a way to make those contacts available on the new version of the UNCITRAL website, in the areas reserved to States. In that connection, it was noted that the Secretariat needed to examine carefully applicable rules and policies on the treatment of similar data within the United Nations system.

269. A further suggestion was made with regard to the interaction between Working Group III, the Secretariat and the two groups constituted on its margins, namely the Academic Forum and the Group of Practitioners (see para. 144 above). It was suggested that the Working Group should clarify the way that the Academic Forum and the Group of Practitioners interacted with the Secretariat and with the Working Group respectively and how their contributions were made available to the members of the Working Group and were reflected in the background documents prepared by the Secretariat. To that effect, the Secretariat was asked to prepare a short paper establishing methods of work with the two groups already established and any further group of representatives (if any). The Commission requested Working Group III to discuss the issue based on the paper prepared by the Secretariat and to formulate its preferred approach in the report to the Commission.

270. A further question was raised regarding the criteria for posting papers, articles and documents by contributors to Working Group III, by the Academic Forum, the Group of Practitioners or other stakeholders on the UNCITRAL website. The Secretariat indicated that that issue would be considered in the course of the overhaul of its website, and a paper identifying the relevant criteria would be presented to the Commission in its forthcoming session.

B. Internship programme

271. The Commission recalled the considerations taken by the UNCITRAL secretariat in selecting candidates for internship[60] and noted with satisfaction the continuing positive effects of changes introduced in 2013 and 2014 in the United Nations internship programme (selection procedures and eligibility requirements) on the pool of eligible and qualified candidates for internship from underrepresented countries, regions and language groups.

272. The Commission was informed that since the Secretariat's oral report to the Commission at its fiftieth session, in July 2017, 21 new interns had undertaken an internship with the UNCITRAL secretariat in Vienna. Most of the interns were from developing countries.

273. The Commission was informed that the large majority of applicants were from countries of the regional group of Western Europe and other States and that the Secretariat faced difficulties in attracting candidates from African and Latin American States, as well as candidates with fluent Arabic language skills.

274. States and observer organizations were requested to bring the possibility of applying for internships at the UNCITRAL secretariat to the attention of interested persons who met those specific requirements. It was highlighted that, since the internships were unpaid, States and observer organizations might also consider

[60] Ibid., *Sixty-sixth Session, Supplement No. 17* (A/66/17), paras. 328–330; ibid., *Sixty-eighth Session, Supplement No. 17* (A/68/17), para. 344; and ibid., *Sixty-ninth Session, Supplement No. 17* (A/69/17), paras. 277 and 278.

granting scholarships for the purpose of attracting those most qualified for an internship at UNCITRAL.

C. Evaluation of the role of the Secretariat in facilitating the work of the Commission

275. The Commission recalled that at its fortieth session, in 2007,[61] it had been informed of the programme budget for the biennium 2008–2009, which listed among the expected accomplishments of the UNCITRAL secretariat "facilitating the work of UNCITRAL". The performance measure for that expected accomplishment was the level of satisfaction of UNCITRAL with the services provided by its secretariat, as evidenced by a rating on a scale ranging from 1 to 5 (5 being the highest rating).[62] At that session, the Commission had agreed to provide feedback to the Secretariat.

276. From the fortieth session to the forty-fifth session of the Commission, in 2012, feedback was provided by States attending the annual sessions of UNCITRAL in response to the questionnaire circulated by the Secretariat by the end of the session. That practice had changed since the Commission's forty-fifth session, in 2012, partly because of the need to solicit more responses. Instead of an in-session questionnaire, the Secretariat started circulating to all States, closer to the start of each annual session of the Commission, a note verbale with the request to indicate, by filling in the evaluation form enclosed to the note verbale, their level of satisfaction with the services provided to UNCITRAL by the UNCITRAL secretariat during the preceding session. A note verbale requesting to evaluate the performance of the UNCITRAL secretariat during the fiftieth session of UNCITRAL was circulated to all States Members of the United Nations on 14 May 2018, and the period covered was indicated as being from the start of the fiftieth session of UNCITRAL (3 July 2017).

277. The Commission was informed that the request had elicited 25 responses and that the level of satisfaction with the services provided to UNCITRAL by the UNCITRAL secretariat, as indicated in those responses, remained high (21 States respondents gave 5 out of 5 and 4 States respondents gave 4 out of 5). The Commission heard that States in their statements to the Sixth Committee of the General Assembly on the report of the Commission often included their views on the work of the UNCITRAL secretariat in servicing the Commission. Such statements did not easily lend themselves to the quantitative assessment.

278. The Commission took note of the concern that the level of responses to the request for evaluation remained low and that it was essential to receive from more States feedback about the UNCITRAL secretariat's performance in order to have a more objective evaluation of the role of the Secretariat. That was required for budgetary and other purposes.

279. The Commission expressed its deep appreciation to the Secretariat for its excellent work in servicing UNCITRAL.

XIX. Date and place of future meetings

280. The Commission recalled that at its thirty-sixth session, in 2003, it had agreed that: (a) working groups should normally meet for a one-week session twice a year; (b) extra time, if required, could be allocated from the unused entitlement of another working group provided that such arrangement would not result in the increase of the total number of 12 weeks of conference services per year currently allotted to sessions of all six working groups of the Commission; and (c) if any request by a working group for extra time would result in the increase of the 12-week allotment, it should be reviewed by the Commission, with proper justification being given by that working

[61] Ibid., *Sixty-second Session, Supplement No. 17* (A/62/17), part one, para. 243.
[62] A/62/6 (Sect. 8) and Corr.1, table 8.19 (d).

group regarding the reasons for which a change in the meeting pattern was needed.[63] The Commission noted that all working groups would meet for two one-week sessions before its fifty-second session, in 2019, except for Working Group II (Dispute Settlement), which would meet only for one one-week session that would take place in New York in the first half of 2019 (see para. 284 (b) below).

281. The Commission further recalled that at its fiftieth session, in 2017, the Commission had taken note of General Assembly resolutions on the pattern of conferences promulgating policies as regards significant holidays on which United Nations Headquarters and the Vienna International Centre remained open but United Nations bodies were invited to avoid holding meetings. The Commission had agreed to take into account those policies as far as possible when considering the dates of its future meetings.[64] It had noted at that time that dates tentatively scheduled for the second half of 2018 included Gurpurab (23 November 2018). The Commission had requested the Secretariat to explore whether an alternative week in the second half of 2018 could be found for a session of Working Group IV (Electronic Commerce) in Vienna that would not include a significant holiday, and had decided to consider the matter further at its next session.[65]

282. At its fifty-first session, the Commission was informed that no alternative dates for the second half of 2018 were found and the dates for the fifty-seventh session of Working Group IV (Electronic Commerce) therefore included Gurpurab (23 November 2018). The Commission noted that other dates of future meetings as set out below did not include significant holidays.

A. Fifty-second session of the Commission

283. The Commission approved the holding of its fifty-second session in Vienna from 8 to 26 July 2019. The Commission agreed that it would aim to complete its work agenda in the first two weeks of the session, with the third week being devoted, for example, to expert discussions or a colloquium on aspects of topics for which the Commission had requested preparatory work or that were of broader interest for an UNCITRAL-wide discussion, such as the legal issues arising from particular regional or global trade law initiatives.

B. Sessions of working groups

1. Sessions of working groups between the fifty-first and fifty-second sessions of the Commission

284. The Commission approved the following schedule of meetings for its working groups:

(a) Working Group I (Micro, Small and Medium-sized Enterprises) would hold its thirty-first session in Vienna from 8 to 12 October 2018, and its thirty-second session in New York, from 25 to 29 March 2019;

(b) Working Group II (Dispute Settlement) would hold its sixty-ninth session in New York from 4 to 8 February 2019; no session would be held in Vienna in the second half of 2018;

(c) Working Group III (Investor-State Dispute Settlement Reform) would hold its thirty-sixth session in Vienna from 29 October to 2 November 2018, and its thirty-seventh session in New York from 1 to 5 April 2019;

---

[63] *Official Records of the General Assembly, Fifty-eighth Session, Supplement No. 17* (A/58/17), para. 275.

[64] Ibid., *Seventy-second Session, Supplement No. 17* (A/72/17), para. 485.

[65] Ibid., para. 490.

(d) Working Group IV (Electronic Commerce) would hold its fifty-seventh session in Vienna from 19 to 23 November 2018,[66] and its fifty-eighth session in New York from 8 to 12 April 2019;

(e) Working Group V (Insolvency Law) would hold its fifty-fourth session in Vienna from 10 to 14 December 2018, and its fifty-fifth session in New York from 28 to 31 May 2019 (noting that that would be a 4-day session);

(f) Working Group VI (Security Interests) would hold its thirty-fourth session in Vienna from 17 to 21 December 2018, and its thirty-fifth session in New York from 13 to 17 May 2019.

2. Sessions of working groups in 2019 after the fifty-second session of the Commission

285. The Commission noted that the following tentative arrangements had been made for working group meetings in 2019 after its fifty-second session, subject to the approval by the Commission at that session:

(a) Working Group I (Micro, Small and Medium-sized Enterprises) would hold its thirty-third session in Vienna, from 30 September to 4 October 2019;

(b) Working Group II (Dispute Settlement) would hold its seventieth session in Vienna, from 23 to 27 September 2019;

(c) Working Group III (Investor-State Dispute Settlement Reform) would hold its thirty-eighth session in Vienna from 14 to 18 October 2019;

(d) Working Group IV (Electronic Commerce) would hold its fifty-ninth session in Vienna from 25 to 29 November 2019;

(e) Working Group V (Insolvency Law) would hold its fifty-sixth session in Vienna from 2 to 6 December 2019; and

(f) Working Group VI (Security Interests) would hold its thirty-sixth session in Vienna from 18 to 22 November 2019.

[66] 23 November 2018 is Gurpurab.

Annex I

United Nations Convention on International Settlement Agreements Resulting from Mediation

Preamble

The Parties to this Convention,

Recognizing the value for international trade of mediation as a method for settling commercial disputes in which the parties in dispute request a third person or persons to assist them in their attempt to settle the dispute amicably,

Noting that mediation is increasingly used in international and domestic commercial practice as an alternative to litigation,

Considering that the use of mediation results in significant benefits, such as reducing the instances where a dispute leads to the termination of a commercial relationship, facilitating the administration of international transactions by commercial parties and producing savings in the administration of justice by States,

Convinced that the establishment of a framework for international settlement agreements resulting from mediation that is acceptable to States with different legal, social and economic systems would contribute to the development of harmonious international economic relations,

Have agreed as follows:

Article 1. Scope of application

1. This Convention applies to an agreement resulting from mediation and concluded in writing by parties to resolve a commercial dispute ("settlement agreement") which, at the time of its conclusion, is international in that:

(a) At least two parties to the settlement agreement have their places of business in different States; or

(b) The State in which the parties to the settlement agreement have their places of business is different from either:

(i) The State in which a substantial part of the obligations under the settlement agreement is performed; or

(ii) The State with which the subject matter of the settlement agreement is most closely connected.

2. This Convention does not apply to settlement agreements:

(a) Concluded to resolve a dispute arising from transactions engaged in by one of the parties (a consumer) for personal, family or household purposes;

(b) Relating to family, inheritance or employment law.

3. This Convention does not apply to:

(a) Settlement agreements:

(i) That have been approved by a court or concluded in the course of proceedings before a court; and

(ii) That are enforceable as a judgment in the State of that court;

(b) Settlement agreements that have been recorded and are enforceable as an arbitral award.

Article 2. Definitions

1. For the purposes of article 1, paragraph 1:

(a) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement;

(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

2. A settlement agreement is "in writing" if its content is recorded in any form. The requirement that a settlement agreement be in writing is met by an electronic communication if the information contained therein is accessible so as to be useable for subsequent reference.

3. "Mediation" means a process, irrespective of the expression used or the basis upon which the process is carried out, whereby parties attempt to reach an amicable settlement of their dispute with the assistance of a third person or persons ("the mediator") lacking the authority to impose a solution upon the parties to the dispute.

Article 3. General principles

1. Each Party to the Convention shall enforce a settlement agreement in accordance with its rules of procedure and under the conditions laid down in this Convention.

2. If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, a Party to the Convention shall allow the party to invoke the settlement agreement in accordance with its rules of procedure and under the conditions laid down in this Convention, in order to prove that the matter has already been resolved.

Article 4. Requirements for reliance on settlement agreements

1. A party relying on a settlement agreement under this Convention shall supply to the competent authority of the Party to the Convention where relief is sought:

(a) The settlement agreement signed by the parties;

(b) Evidence that the settlement agreement resulted from mediation, such as:

(i) The mediator's signature on the settlement agreement;

(ii) A document signed by the mediator indicating that the mediation was carried out;

(iii) An attestation by the institution that administered the mediation; or

(iv) In the absence of (i), (ii) or (iii), any other evidence acceptable to the competent authority.

2. The requirement that a settlement agreement shall be signed by the parties or, where applicable, the mediator is met in relation to an electronic communication if:

(a) A method is used to identify the parties or the mediator and to indicate the parties' or mediator's intention in respect of the information contained in the electronic communication; and

(b) The method used is either:

(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

(ii) Proven in fact to have fulfilled the functions described in subparagraph (a) above, by itself or together with further evidence.

3. If the settlement agreement is not in an official language of the Party to the Convention where relief is sought, the competent authority may request a translation thereof into such language.

4. The competent authority may require any necessary document in order to verify that the requirements of the Convention have been complied with.

5. When considering the request for relief, the competent authority shall act expeditiously.

Article 5. Grounds for refusing to grant relief

1. The competent authority of the Party to the Convention where relief is sought under article 4 may refuse to grant relief at the request of the party against whom the relief is sought only if that party furnishes to the competent authority proof that:

(a) A party to the settlement agreement was under some incapacity;

(b) The settlement agreement sought to be relied upon:

(i) Is null and void, inoperative or incapable of being performed under the law to which the parties have validly subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority of the Party to the Convention where relief is sought under article 4;

(ii) Is not binding, or is not final, according to its terms; or

(iii) Has been subsequently modified;

(c) The obligations in the settlement agreement:

(i) Have been performed; or

(ii) Are not clear or comprehensible;

(d) Granting relief would be contrary to the terms of the settlement agreement;

(e) There was a serious breach by the mediator of standards applicable to the mediator or the mediation without which breach that party would not have entered into the settlement agreement; or

(f) There was a failure by the mediator to disclose to the parties circumstances that raise justifiable doubts as to the mediator's impartiality or independence and such failure to disclose had a material impact or undue influence on a party without which failure that party would not have entered into the settlement agreement.

2. The competent authority of the Party to the Convention where relief is sought under article 4 may also refuse to grant relief if it finds that:

(a) Granting relief would be contrary to the public policy of that Party; or

(b) The subject matter of the dispute is not capable of settlement by mediation under the law of that Party.

Article 6. Parallel applications or claims

If an application or a claim relating to a settlement agreement has been made to a court, an arbitral tribunal or any other competent authority which may affect the relief being sought under article 4, the competent authority of the Party to the Convention where such relief is sought may, if it considers it proper, adjourn the decision and may also, on the request of a party, order the other party to give suitable security.

Article 7. Other laws or treaties

This Convention shall not deprive any interested party of any right it may have to avail itself of a settlement agreement in the manner and to the extent allowed by the law or the treaties of the Party to the Convention where such settlement agreement is sought to be relied upon.

Article 8. Reservations

1. A Party to the Convention may declare that:

(a) It shall not apply this Convention to settlement agreements to which it is a party, or to which any governmental agencies or any person acting on behalf of a governmental agency is a party, to the extent specified in the declaration;

(b) It shall apply this Convention only to the extent that the parties to the settlement agreement have agreed to the application of the Convention.

2. No reservations are permitted except those expressly authorized in this article.

3. Reservations may be made by a Party to the Convention at any time. Reservations made at the time of signature shall be subject to confirmation upon ratification, acceptance or approval. Such reservations shall take effect simultaneously with the entry into force of this Convention in respect of the Party to the Convention concerned. Reservations made at the time of ratification, acceptance or approval of this Convention or accession thereto, or at the time of making a declaration under article 13 shall take effect simultaneously with the entry into force of this Convention in respect of the Party to the Convention concerned. Reservations deposited after the entry into force of the Convention for that Party to the Convention shall take effect six months after the date of the deposit.

4. Reservations and their confirmations shall be deposited with the depositary.

5. Any Party to the Convention that makes a reservation under this Convention may withdraw it at any time. Such withdrawals are to be deposited with the depositary, and shall take effect six months after deposit.

Article 9. Effect on settlement agreements

The Convention and any reservation or withdrawal thereof shall apply only to settlement agreements concluded after the date when the Convention, reservation or withdrawal thereof enters into force for the Party to the Convention concerned.

Article 10. Depositary

The Secretary-General of the United Nations is hereby designated as the depositary of this Convention.

Article 11. Signature, ratification, acceptance, approval, accession

1. This Convention is open for signature by all States in Singapore, on 1 August 2019, and thereafter at United Nations Headquarters in New York.

2. This Convention is subject to ratification, acceptance or approval by the signatories.

3. This Convention is open for accession by all States that are not signatories as from the date it is open for signature.

4. Instruments of ratification, acceptance, approval or accession are to be deposited with the depositary.

Article 12. Participation by regional economic integration organizations

1. A regional economic integration organization that is constituted by sovereign States and has competence over certain matters governed by this Convention may similarly sign, ratify, accept, approve or accede to this Convention. The regional economic integration organization shall in that case have the rights and obligations of a Party to the Convention, to the extent that that organization has competence over matters governed by this Convention. Where the number of Parties to the Convention is relevant in this Convention, the regional economic integration organization shall not count as a Party to the Convention in addition to its member States that are Parties to the Convention.

2. The regional economic integration organization shall, at the time of signature, ratification, acceptance, approval or accession, make a declaration to the depositary specifying the matters governed by this Convention in respect of which competence has been transferred to that organization by its member States. The regional economic integration organization shall promptly notify the depositary of any changes to the distribution of competence, including new transfers of competence, specified in the declaration under this paragraph.

3. Any reference to a "Party to the Convention", "Parties to the Convention", a "State" or "States" in this Convention applies equally to a regional economic integration organization where the context so requires.

4. This Convention shall not prevail over conflicting rules of a regional economic integration organization, whether such rules were adopted or entered into force before or after this Convention: (a) if, under article 4, relief is sought in a State that is member of such an organization and all the States relevant under article 1, paragraph 1, are members of such an organization; or (b) as concerns the recognition or enforcement of judgments between member States of such an organization.

Article 13. Non-unified legal systems

1. If a Party to the Convention has two or more territorial units in which different systems of law are applicable in relation to the matters dealt with in this Convention, it may, at the time of signature, ratification, acceptance, approval or accession, declare that this Convention is to extend to all its territorial units or only to one or more of them, and may amend its declaration by submitting another declaration at any time.

2. These declarations are to be notified to the depositary and are to state expressly the territorial units to which the Convention extends.

3. If a Party to the Convention has two or more territorial units in which different systems of law are applicable in relation to the matters dealt with in this Convention:

(a) Any reference to the law or rule of procedure of a State shall be construed as referring, where appropriate, to the law or rule of procedure in force in the relevant territorial unit;

(b) Any reference to the place of business in a State shall be construed as referring, where appropriate, to the place of business in the relevant territorial unit;

(c) Any reference to the competent authority of the State shall be construed as referring, where appropriate, to the competent authority in the relevant territorial unit.

4. If a Party to the Convention makes no declaration under paragraph 1 of this article, the Convention is to extend to all territorial units of that State.

Article 14. Entry into force

1. This Convention shall enter into force six months after deposit of the third instrument of ratification, acceptance, approval or accession.

2. When a State ratifies, accepts, approves or accedes to this Convention after the deposit of the third instrument of ratification, acceptance, approval or accession, this Convention shall enter into force in respect of that State six months after the date of the deposit of its instrument of ratification, acceptance, approval or accession. The Convention shall enter into force for a territorial unit to which this Convention has been extended in accordance with article 13 six months after the notification of the declaration referred to in that article.

Article 15. Amendment

1. Any Party to the Convention may propose an amendment to the present Convention by submitting it to the Secretary-General of the United Nations. The Secretary-General shall thereupon communicate the proposed amendment to the Parties to the Convention with a request that they indicate whether they favour a conference of Parties to the Convention for the purpose of considering and voting

upon the proposal. In the event that within four months from the date of such communication at least one third of the Parties to the Convention favour such a conference, the Secretary-General shall convene the conference under the auspices of the United Nations.

2. The conference of Parties to the Convention shall make every effort to achieve consensus on each amendment. If all efforts at consensus are exhausted and no consensus is reached, the amendment shall, as a last resort, require for its adoption a two-thirds majority vote of the Parties to the Convention present and voting at the conference.

3. An adopted amendment shall be submitted by the depositary to all the Parties to the Convention for ratification, acceptance or approval.

4. An adopted amendment shall enter into force six months after the date of deposit of the third instrument of ratification, acceptance or approval. When an amendment enters into force, it shall be binding on those Parties to the Convention that have expressed consent to be bound by it.

5. When a Party to the Convention ratifies, accepts or approves an amendment following the deposit of the third instrument of ratification, acceptance or approval, the amendment shall enter into force in respect of that Party to the Convention six months after the date of the deposit of its instrument of ratification, acceptance or approval.

Article 16. Denunciations

1. A Party to the Convention may denounce this Convention by a formal notification in writing addressed to the depositary. The denunciation may be limited to certain territorial units of a non-unified legal system to which this Convention applies.

2. The denunciation shall take effect 12 months after the notification is received by the depositary. Where a longer period for the denunciation to take effect is specified in the notification, the denunciation shall take effect upon the expiration of such longer period after the notification is received by the depositary. The Convention shall continue to apply to settlement agreements concluded before the denunciation takes effect.

DONE at ---- this [X] day of [X] ------, in a single original, of which the Arabic, Chinese, English, French, Russian and Spanish texts are equally authentic.

Annex II

UNCITRAL Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation, 2018 (amending the UNCITRAL Model Law on International Commercial Conciliation, 2002)

Section 1 — General provisions

Article 1. Scope of application of the Law and definitions

1. This Law applies to international commercial[1] mediation[2] and to international settlement agreements.

2. For the purposes of this Law, "mediator" means a sole mediator or two or more mediators, as the case may be.

3. For the purposes of this Law, "mediation" means a process, whether referred to by the expression mediation, conciliation or an expression of similar import, whereby parties request a third person or persons ("the mediator") to assist them in their attempt to reach an amicable settlement of their dispute arising out of or relating to a contractual or other legal relationship. The mediator does not have the authority to impose upon the parties a solution to the dispute.

Article 2. Interpretation

1. In the interpretation of this Law, regard is to be had to its international origin and to the need to promote uniformity in its application and the observance of good faith.

2. Questions concerning matters governed by this Law which are not expressly settled in it are to be settled in conformity with the general principles on which this Law is based.

Section 2 — International commercial mediation

Article 3. Scope of application of the section and definitions

1. This section applies to international[3] commercial mediation.

2. A mediation is "international" if:

(a) The parties to an agreement to mediate have, at the time of the conclusion of that agreement, their places of business in different States; or

(b) The State in which the parties have their places of business is different from either:

---

[1] The term "commercial" should be given a wide interpretation so as to cover matters arising from all relationships of a commercial nature, whether contractual or not. Relationships of a commercial nature include, but are not limited to, the following transactions: any trade transaction for the supply or exchange of goods or services; distribution agreement; commercial representation or agency; factoring; leasing; construction of works; consulting; engineering; licensing; investment; financing; banking; insurance; exploitation agreement or concession; joint venture and other forms of industrial or business cooperation; and carriage of goods or passengers by air, sea, rail or road.

[2] In its previously adopted texts and relevant documents, UNCITRAL used the term "conciliation" with the understanding that the terms "conciliation" and "mediation" were interchangeable. In preparing this Model Law, the Commission decided to use the term "mediation" instead in an effort to adapt to the actual and practical use of the terms and with the expectation that this change will facilitate the promotion and heighten the visibility of the Model Law. This change in terminology does not have any substantive or conceptual implications.

[3] States wishing to enact this section to apply to domestic as well as international mediation may wish to consider the following changes to the text:

- Delete the word "international" in paragraph 1 of articles 1 and 3; and
- Delete paragraphs 2, 3 and 4 of article 3, and modify references to paragraphs accordingly.

(i) The State in which a substantial part of the obligations of the commercial relationship is to be performed; or

(ii) The State with which the subject matter of the dispute is most closely connected.

3. For the purposes of paragraph 2:

(a) If a party has more than one place of business, the place of business is that which has the closest relationship to the agreement to mediate;

(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

4. This section also applies to commercial mediation when the parties agree that the mediation is international or agree to the applicability of this section.

5. The parties are free to agree to exclude the applicability of this section.

6. Subject to the provisions of paragraph 7 of this article, this section applies irrespective of the basis upon which the mediation is carried out, including agreement between the parties whether reached before or after a dispute has arisen, an obligation established by law, or a direction or suggestion of a court, arbitral tribunal or competent governmental entity.

7. This section does not apply to:

(a) Cases where a judge or an arbitrator, in the course of judicial or arbitral proceedings, attempts to facilitate a settlement; and

(b) […].

Article 4. Variation by agreement

Except for the provisions of article 7, paragraph 3, the parties may agree to exclude or vary any of the provisions of this section.

Article 5. Commencement of mediation proceedings[4]

1. Mediation proceedings in respect of a dispute that has arisen commence on the day on which the parties to that dispute agree to engage in mediation proceedings.

2. If a party that invited another party to mediate does not receive an acceptance of the invitation within 30 days from the day on which the invitation was sent, or within such other period of time as specified in the invitation, the party may elect to treat this as a rejection of the invitation to mediate.

Article 6. Number and appointment of mediators

1. There shall be one mediator, unless the parties agree that there shall be two or more mediators.

2. The parties shall endeavour to reach agreement on a mediator or mediators, unless a different procedure for their appointment has been agreed upon.

3. Parties may seek the assistance of an institution or person in connection with the appointment of mediators. In particular:

(a) A party may request such an institution or person to recommend suitable persons to act as mediator; or

---

[4] The following text is suggested for States that might wish to adopt a provision on the suspension of the limitation period:

Article X. Suspension of limitation period

1. When the mediation proceedings commence, the running of the limitation period regarding the claim that is the subject matter of the mediation is suspended.

2. Where the mediation proceedings have terminated without a settlement agreement, the limitation period resumes running from the time the mediation ended without a settlement agreement.

(b) The parties may agree that the appointment of one or more mediators be made directly by such an institution or person.

4. In recommending or appointing individuals to act as mediator, the institution or person shall have regard to such considerations as are likely to secure the appointment of an independent and impartial mediator and, where appropriate, shall take into account the advisability of appointing a mediator of a nationality other than the nationalities of the parties.

5. When a person is approached in connection with his or her possible appointment as mediator, he or she shall disclose any circumstances likely to give rise to justifiable doubts as to his or her impartiality or independence. A mediator, from the time of his or her appointment and throughout the mediation proceedings, shall without delay disclose any such circumstances to the parties unless they have already been informed of them by him or her.

Article 7. Conduct of mediation

1. The parties are free to agree, by reference to a set of rules or otherwise, on the manner in which the mediation is to be conducted.

2. Failing agreement on the manner in which the mediation is to be conducted, the mediator may conduct the mediation proceedings in such a manner as the mediator considers appropriate, taking into account the circumstances of the case, any wishes that the parties may express and the need for a speedy settlement of the dispute.

3. In any case, in conducting the proceedings, the mediator shall seek to maintain fair treatment of the parties and, in so doing, shall take into account the circumstances of the case.

4. The mediator may, at any stage of the mediation proceedings, make proposals for a settlement of the dispute.

Article 8. Communication between mediator and parties

The mediator may meet or communicate with the parties together or with each of them separately.

Article 9. Disclosure of information

When the mediator receives information concerning the dispute from a party, the mediator may disclose the substance of that information to any other party to the mediation. However, when a party gives any information to the mediator, subject to a specific condition that it be kept confidential, that information shall not be disclosed to any other party to the mediation.

Article 10. Confidentiality

Unless otherwise agreed by the parties, all information relating to the mediation proceedings shall be kept confidential, except where disclosure is required under the law or for the purposes of implementation or enforcement of a settlement agreement.

Article 11. Admissibility of evidence in other proceedings

1. A party to the mediation proceedings, the mediator and any third person, including those involved in the administration of the mediation proceedings, shall not in arbitral, judicial or similar proceedings rely on, introduce as evidence or give testimony or evidence regarding any of the following:

(a) An invitation by a party to engage in mediation proceedings or the fact that a party was willing to participate in mediation proceedings;

(b) Views expressed or suggestions made by a party in the mediation in respect of a possible settlement of the dispute;

(c) Statements or admissions made by a party in the course of the mediation proceedings;

(d) Proposals made by the mediator;

(e) The fact that a party had indicated its willingness to accept a proposal for settlement made by the mediator;

(f) A document prepared solely for purposes of the mediation proceedings.

2. Paragraph 1 of this article applies irrespective of the form of the information or evidence referred to therein.

3. The disclosure of the information referred to in paragraph 1 of this article shall not be ordered by an arbitral tribunal, court or other competent governmental authority and, if such information is offered as evidence in contravention of paragraph 1 of this article, that evidence shall be treated as inadmissible. Nevertheless, such information may be disclosed or admitted in evidence to the extent required under the law or for the purposes of implementation or enforcement of a settlement agreement.

4. The provisions of paragraphs 1, 2 and 3 of this article apply whether or not the arbitral, judicial or similar proceedings relate to the dispute that is or was the subject matter of the mediation proceedings.

5. Subject to the limitations of paragraph 1 of this article, evidence that is otherwise admissible in arbitral or judicial or similar proceedings does not become inadmissible as a consequence of having been used in a mediation.

Article 12. Termination of mediation proceedings

The mediation proceedings are terminated:

(a) By the conclusion of a settlement agreement by the parties, on the date of the agreement;

(b) By a declaration of the mediator, after consultation with the parties, to the effect that further efforts at mediation are no longer justified, on the date of the declaration;

(c) By a declaration of the parties addressed to the mediator to the effect that the mediation proceedings are terminated, on the date of the declaration; or

(d) By a declaration of a party to the other party or parties and the mediator, if appointed, to the effect that the mediation proceedings are terminated, on the date of the declaration.

Article 13. Mediator acting as arbitrator

Unless otherwise agreed by the parties, the mediator shall not act as an arbitrator in respect of a dispute that was or is the subject of the mediation proceedings or in respect of another dispute that has arisen from the same contract or legal relationship or any related contract or legal relationship.

Article 14. Resort to arbitral or judicial proceedings

Where the parties have agreed to mediate and have expressly undertaken not to initiate during a specified period of time or until a specified event has occurred arbitral or judicial proceedings with respect to an existing or future dispute, such an undertaking shall be given effect by the arbitral tribunal or the court until the terms of the undertaking have been complied with, except to the extent necessary for a party, in its opinion, to preserve its rights. Initiation of such proceedings is not of itself to be regarded as a waiver of the agreement to mediate or as a termination of the mediation proceedings.

Article 15. Binding and enforceable nature of settlement agreements

If the parties conclude an agreement settling a dispute, that settlement agreement is binding and enforceable.

Section 3 — International settlement agreements[5]

Article 16. Scope of application of the section and definitions

1. This section applies to international agreements resulting from mediation and concluded in writing by parties to resolve a commercial dispute ("settlement agreements").[6]

2. This section does not apply to settlement agreements:

(a) Concluded to resolve a dispute arising from transactions engaged in by one of the parties (a consumer) for personal, family or household purposes;

(b) Relating to family, inheritance or employment law.

3. This section does not apply to:

(a) Settlement agreements:

(i) That have been approved by a court or concluded in the course of proceedings before a court; and

(ii) That are enforceable as a judgment in the State of that court;

(b) Settlement agreements that have been recorded and are enforceable as an arbitral award.

4. A settlement agreement is "international" if, at the time of the conclusion of the settlement agreement:[7]

(a) At least two parties to the settlement agreement have their places of business in different States; or

(b) The State in which the parties to the settlement agreement have their places of business is different from either:

(i) The State in which a substantial part of the obligations under the settlement agreement is to be performed; or

(ii) The State with which the subject matter of the settlement agreement is most closely connected.

5. For the purposes of paragraph 4:

(a) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement;

(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

6. A settlement agreement is "in writing" if its content is recorded in any form. The requirement that a settlement agreement be in writing is met by an electronic communication if the information contained therein is accessible so as to be useable for subsequent reference.

---

[5] A State may consider enacting this section to apply to agreements settling a dispute, irrespective of whether they resulted from mediation. Adjustments would then have to be made to relevant articles.

[6] A State may consider enacting this section to apply only where the parties to the settlement agreement agreed to its application.

[7] A State may consider broadening the definition of "international" settlement agreement by adding the following subparagraph to paragraph 4: "A settlement agreement is also 'international' if it results from international mediation as defined in article 3, paragraphs 2, 3 and 4."

Article 17. General principles

1. A settlement agreement shall be enforced in accordance with the rules of procedure of this State, and under the conditions laid down in this section.

2. If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, the party may invoke the settlement agreement in accordance with the rules of procedure of this State, and under the conditions laid down in this section, in order to prove that the matter has already been resolved.

Article 18. Requirements for reliance on settlement agreements

1. A party relying on a settlement agreement under this section shall supply to the competent authority of this State:

(a) The settlement agreement signed by the parties;

(b) Evidence that the settlement agreement resulted from mediation, such as:

(i) The mediator's signature on the settlement agreement;

(ii) A document signed by the mediator indicating that the mediation was carried out;

(iii) An attestation by the institution that administered the mediation; or

(iv) In the absence of (i), (ii) or (iii), any other evidence acceptable to the competent authority.

2. The requirement that a settlement agreement shall be signed by the parties or, where applicable, the mediator, is met in relation to an electronic communication if:

(a) A method is used to identify the parties or the mediator and to indicate the parties' or mediator's intention in respect of the information contained in the electronic communication; and

(b) The method used is either:

(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

(ii) Proven in fact to have fulfilled the functions described in subparagraph (a) above, by itself or together with further evidence.

3. If the settlement agreement is not in an official language of this State, the competent authority may request a translation thereof into such language.

4. The competent authority may require any necessary document in order to verify that the requirements of this section have been complied with.

5. When considering the request for relief, the competent authority shall act expeditiously.

Article 19. Grounds for refusing to grant relief

1. The competent authority of this State may refuse to grant relief at the request of the party against whom the relief is sought only if that party furnishes to the competent authority proof that:

(a) A party to the settlement agreement was under some incapacity;

(b) The settlement agreement sought to be relied upon:

(i) Is null and void, inoperative or incapable of being performed under the law to which the parties have validly subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority;

(ii) Is not binding, or is not final, according to its terms; or

(iii) Has been subsequently modified;

(c) The obligations in the settlement agreement:

(i) Have been performed; or

(ii) Are not clear or comprehensible;

(d) Granting relief would be contrary to the terms of the settlement agreement;

(e) There was a serious breach by the mediator of standards applicable to the mediator or the mediation without which breach that party would not have entered into the settlement agreement; or

(f) There was a failure by the mediator to disclose to the parties circumstances that raise justifiable doubts as to the mediator's impartiality or independence and such failure to disclose had a material impact or undue influence on a party without which failure that party would not have entered into the settlement agreement.

2. The competent authority of this State may also refuse to grant relief if it finds that:

(a) Granting relief would be contrary to the public policy of this State; or

(b) The subject matter of the dispute is not capable of settlement by mediation under the law of this State.

Article 20. Parallel applications or claims

If an application or a claim relating to a settlement agreement has been made to a court, an arbitral tribunal or any other competent authority which may affect the relief being sought under article 18, the competent authority of this State where such relief is sought may, if it considers it proper, adjourn the decision and may also, on the request of a party, order the other party to give suitable security.

Annex III

UNCITRAL Model Law on Recognition and Enforcement of Insolvency-related Judgments

Preamble

1. The purpose of this Law is:

(a) To create greater certainty in regard to rights and remedies for recognition and enforcement of insolvency-related judgments;

(b) To avoid the duplication of insolvency proceedings;

(c) To ensure timely and cost-effective recognition and enforcement of insolvency-related judgments;

(d) To promote comity and cooperation between jurisdictions regarding insolvency-related judgments;

(e) To protect and maximize the value of insolvency estates; and

(f) Where legislation based on the UNCITRAL Model Law on Cross-Border Insolvency has been enacted, to complement that legislation.

2. This Law is not intended:

(a) To restrict provisions of the law of this State that would permit the recognition and enforcement of an insolvency-related judgment;

(b) To replace legislation enacting the UNCITRAL Model Law on Cross-Border Insolvency or limit the application of that legislation;

(c) To apply to the recognition and enforcement in the enacting State of an insolvency-related judgment issued in the enacting State; or

(d) To apply to the judgment commencing the insolvency proceeding.

Article 1. Scope of application

1. This Law applies to the recognition and enforcement of an insolvency-related judgment issued in a State that is different to the State in which recognition and enforcement are sought.

2. This Law does not apply to [...].

Article 2. Definitions

For the purposes of this Law:

(a) “Insolvency proceeding” means a collective judicial or administrative proceeding, including an interim proceeding, pursuant to a law relating to insolvency in which proceeding the assets and affairs of a debtor are or were subject to control or supervision by a court or other competent authority for the purpose of reorganization or liquidation;

(b) “Insolvency representative” means a person or body, including one appointed on an interim basis, authorized in an insolvency proceeding to administer the reorganization or the liquidation of the debtor’s assets or affairs or to act as a representative of the insolvency proceeding;

(c) “Judgment” means any decision, whatever it may be called, issued by a court or administrative authority, provided an administrative decision has the same effect as a court decision. For the purposes of this definition, a decision includes a decree or order, and a determination of costs and expenses. An interim measure of protection is not to be considered a judgment for the purposes of this Law;

(d) "Insolvency-related judgment":

(i) Means a judgment that:

a. Arises as a consequence of or is materially associated with an insolvency proceeding, whether or not that insolvency proceeding has closed; and

b. Was issued on or after the commencement of that insolvency proceeding; and

(ii) Does not include a judgment commencing an insolvency proceeding.

Article 3. International obligations of this State

1. To the extent that this Law conflicts with an obligation of this State arising out of any treaty or other form of agreement to which it is a party with one or more other States, the requirements of the treaty or agreement prevail.

2. This Law shall not apply to a judgment where there is a treaty in force concerning the recognition or enforcement of civil and commercial judgments, and that treaty applies to the judgment.

Article 4. Competent court or authority

The functions referred to in this Law relating to recognition and enforcement of an insolvency-related judgment shall be performed by [*specify the court, courts, authority or authorities competent to perform those functions in the enacting State*] and by any other court before which the issue of recognition is raised as a defence or as an incidental question.

Article 5. Authorization to act in another State in respect of an insolvency-related judgment issued in this State

A [*insert the title of the person or body administering a reorganization or liquidation under the law of the enacting State*] is authorized to act in another State with respect to an insolvency-related judgment issued in this State, as permitted by the applicable foreign law.

Article 6. Additional assistance under other laws

Nothing in this Law limits the power of a court or a [*insert the title of the person or body administering a reorganization or liquidation under the law of the enacting State*] to provide additional assistance under other laws of this State.

Article 7. Public policy exception

Nothing in this Law prevents the court from refusing to take an action governed by this Law if the action would be manifestly contrary to the public policy, including the fundamental principles of procedural fairness, of this State.

Article 8. Interpretation

In the interpretation of this Law, regard is to be had to its international origin and to the need to promote uniformity in its application and the observance of good faith.

Article 9. Effect and enforceability of an insolvency-related judgment

An insolvency-related judgment shall be recognized only if it has effect in the originating State and shall be enforced only if it is enforceable in the originating State.

Article 10. Effect of review in the originating State on recognition and enforcement

1. Recognition or enforcement of an insolvency-related judgment may be postponed or refused if the judgment is the subject of review in the originating State or if the time limit for seeking ordinary review in that State has not expired. In such cases, the court may also make recognition or enforcement conditional on the provision of such security as it shall determine.

2. A refusal under paragraph 1 does not prevent a subsequent application for recognition or enforcement of the judgment.

Article 11. Procedure for seeking recognition and enforcement of an insolvency-related judgment

1. An insolvency representative or other person entitled under the law of the originating State to seek recognition and enforcement of an insolvency-related judgment may seek recognition and enforcement of that judgment in this State. The issue of recognition may also be raised as a defence or as an incidental question.

2. When recognition and enforcement of an insolvency-related judgment is sought under paragraph 1, the following shall be submitted to the court:

(a) A certified copy of the insolvency-related judgment; and

(b) Any documents necessary to establish that the insolvency-related judgment has effect and, where applicable, is enforceable in the originating State, including information on any pending review of the judgment; or

(c) In the absence of evidence referred to in subparagraphs (a) and (b), any other evidence on those matters acceptable to the court.

3. The court may require translation of documents submitted pursuant to paragraph 2 into an official language of this State.

4. The court is entitled to presume that documents submitted pursuant to paragraph 2 are authentic, whether or not they have been legalized.

5. Any party against whom recognition and enforcement is sought has the right to be heard.

Article 12. Provisional relief

1. From the time recognition and enforcement of an insolvency-related judgment is sought until a decision is made, where relief is urgently needed to preserve the possibility of recognizing and enforcing an insolvency-related judgment, the court may, at the request of an insolvency representative or other person entitled to seek recognition and enforcement under article 11, paragraph 1, grant relief of a provisional nature, including:

(a) Staying the disposition of any assets of any party or parties against whom the insolvency-related judgment has been issued; or

(b) Granting other legal or equitable relief, as appropriate, within the scope of the insolvency-related judgment.

2. [*Insert provisions (or refer to provisions in force in the enacting State) relating to notice, including whether notice would be required under this article*.]

3. Unless extended by the court, relief granted under this article terminates when a decision on recognition and enforcement of the insolvency-related judgment is made.

Article 13. Decision to recognize and enforce an insolvency-related judgment

Subject to articles 7 and 14, an insolvency-related judgment shall be recognized and enforced provided:

(a) The requirements of article 9 with respect to effect and enforceability are met;

(b) The person seeking recognition and enforcement of the insolvency-related judgment is an insolvency representative within the meaning of article 2, subparagraph (b), or another person entitled to seek recognition and enforcement of the judgment under article 11, paragraph 1;

(c) The application meets the requirements of article 11, paragraph 2; and

(d) Recognition and enforcement is sought from a court referred to in article 4, or the question of recognition arises by way of defence or as an incidental question before such a court.

Article 14. Grounds to refuse recognition and enforcement of an insolvency-related judgment

In addition to the ground set forth in article 7, recognition and enforcement of an insolvency-related judgment may be refused if:

(a) The party against whom the proceeding giving rise to the judgment was instituted:

(i) Was not notified of the institution of that proceeding in sufficient time and in such a manner as to enable a defence to be arranged, unless the party entered an appearance and presented their case without contesting notification in the originating court, provided that the law of the originating State permitted notification to be contested; or

(ii) Was notified in this State of the institution of that proceeding in a manner that is incompatible with the rules of this State concerning service of documents;

(b) The judgment was obtained by fraud;

(c) The judgment is inconsistent with a judgment issued in this State in a dispute involving the same parties;

(d) The judgment is inconsistent with an earlier judgment issued in another State in a dispute involving the same parties on the same subject matter, provided the earlier judgment fulfils the conditions necessary for its recognition and enforcement in this State;

(e) Recognition and enforcement would interfere with the administration of the debtor's insolvency proceedings, including by conflicting with a stay or other order that could be recognized or enforced in this State;

(f) The judgment:

(i) Materially affects the rights of creditors generally, such as determining whether a plan of reorganization or liquidation should be confirmed, a discharge of the debtor or of debts should be granted or a voluntary or out-of-court restructuring agreement should be approved; and

(ii) The interests of creditors and other interested persons, including the debtor, were not adequately protected in the proceeding in which the judgment was issued;

(g) The originating court did not satisfy one of the following conditions:

(i) The court exercised jurisdiction on the basis of the explicit consent of the party against whom the judgment was issued;

(ii) The court exercised jurisdiction on the basis of the submission of the party against whom the judgment was issued, namely that that party argued on the

merits before the court without objecting to jurisdiction or to the exercise of jurisdiction within the time frame provided in the law of the originating State, unless it was evident that such an objection to jurisdiction would not have succeeded under that law;

(iii) The court exercised jurisdiction on a basis on which a court in this State could have exercised jurisdiction; or

(iv) The court exercised jurisdiction on a basis that was not incompatible with the law of this State;

[*States that have enacted legislation based on the UNCITRAL Model Law on Cross-Border Insolvency might wish to enact subparagraph (h).*]

(h) The judgment originates from a State whose insolvency proceeding is not or would not be recognizable under [*insert a reference to the law of the enacting State giving effect to the UNCITRAL Model Law on Cross-Border Insolvency*], unless:

(i) The insolvency representative of a proceeding that is or could have been recognized under [*insert a reference to the law of the enacting State giving effect to the UNCITRAL Model Law on Cross-Border Insolvency*] participated in the proceeding in the originating State to the extent of engaging in the substantive merits of the cause of action to which that proceeding related; and

(ii) The judgment relates solely to assets that were located in the originating State at the time the proceeding in the originating State commenced.

Article 15. Equivalent effect

1. An insolvency-related judgment recognized or enforceable under this Law shall be given the same effect it [has in the originating State] or [would have had if it had been issued by a court of this State].[1]

2. If the insolvency-related judgment provides for relief that is not available under the law of this State, that relief shall, to the extent possible, be adapted to relief that is equivalent to, but does not exceed, its effects under the law of the originating State.

Article 16. Severability

Recognition and enforcement of a severable part of an insolvency-related judgment shall be granted where recognition and enforcement of that part is sought, or where only that part of the judgment is capable of being recognized and enforced under this Law.

[*States that have enacted legislation based on the UNCITRAL Model Law on Cross-Border Insolvency will be aware of judgments that may have cast doubt on whether judgments can be recognized and enforced under article 21 of that Model Law. States may therefore wish to consider enacting the following provision*:]

Article X. Recognition of an insolvency-related judgment under [*insert a cross-reference to the legislation of this State enacting article 21 of the UNCITRAL Model Law on Cross-Border Insolvency*]

Notwithstanding any prior interpretation to the contrary, the relief available under [*insert a cross-reference to the legislation of this State enacting article 21 of the UNCITRAL Model Law on Cross-Border Insolvency*] includes recognition and enforcement of a judgment.

[1] The enacting State may wish to note that it should choose between the two alternatives provided in square brackets. An explanation of this provision is provided in the Guide to Enactment in the notes to article 15.

B. United Nations Conference on Trade and Development (UNCTAD)

There was no action by the United Nations Conference on Trade and Development (UNCTAD) on the United Nations Commission on International Trade Law's report on the work of its fifty-first session, which was held in New York, from 25 June–13 July 2018. It is expected that there will be action on the Commission's report by UNCTAD in 2019.

C. General Assembly: Report of the Sixth Committee on the report of the United Nations Commission on International Trade Law on the work of its fifty-first session (A/73/496)

[Original: English]

Rapporteur: Ms. Nadia Alexandra **Kalb** (Austria)

I. Introduction

1. At its 3rd plenary meeting, on 21 September 2018, the General Assembly, on the recommendation of the General Committee, decided to include in the agenda of its seventy-third session the item entitled "Report of the United Nations Commission on International Trade Law on the work of its fifty-first session" and to allocate it to the Sixth Committee.

2. The Sixth Committee considered the item at its 15th, 32nd and 34th meetings, on 16 October and 2 and 6 November 2018. The views of the representatives who spoke during the Committee's consideration of the item are reflected in the relevant summary records.[1]

3. For its consideration of the item, the Committee had before it the report of the United Nations Commission on International Trade Law on the work of its fifty-first session (A/73/17).

4. At the 15th meeting, on 16 October, the Chair of the United Nations Commission on International Trade Law at its fifty-first session introduced the report of the Commission on the work of its fifty-first session.

II. Consideration of proposals

A. Draft resolution A/C.6/73/L.11

5. At the 32nd meeting, on 2 November, the representative of Austria, on behalf of Argentina, Armenia, Austria, Belarus, Belgium, Bulgaria, Canada, Central African Republic, Croatia, Cyprus, Czechia, El Salvador, Finland, France, Germany, Greece, Honduras, Hungary, Iceland, India, Ireland, Israel, Italy, Japan, Latvia, Liechtenstein, Lithuania, Malaysia, Mauritius, Namibia, Poland, Portugal, Republic of Moldova, Romania, Singapore, Slovakia, Sweden, Thailand and Ukraine, introduced a draft resolution entitled "Report of the United Nations Commission on International Trade Law on the work of its fifty-first session" (A/C.6/73/L.11). At the same meeting, the representative of Austria announced that Mexico, the Russian Federation, Seychelles and Switzerland had joined in sponsoring the draft resolution.

6. At the 34th meeting, on 6 November, the representative of Austria announced that Serbia and Spain had also joined in sponsoring the draft resolution.

7. At the same meeting, the Committee adopted draft resolution A/C.6/73/L.11 without a vote (see para. 14, draft resolution I).

B. Draft resolution A/C.6/73/L.12

8. At the 32nd meeting, on 2 November, the representative of Austria, on behalf of the Bureau, introduced a draft resolution entitled "United Nations Convention on International Settlement Agreements Resulting from Mediation" (A/C.6/73/L.12).

9. At its 34th meeting, on 6 November, the Committee adopted draft resolution A/C.6/73/L.12 without a vote (see para. 14, draft resolution II). The representative of

[1] A/C.6/73/SR.15, A/C.6/73/SR.32 and A/C.6/73/SR.34.

Singapore made a statement in explanation of position, after the adoption of the draft resolution.

C. Draft resolution A/C.6/73/L.13

10. At the 32nd meeting, on 2 November, the representative of Austria, on behalf of the Bureau, introduced a draft resolution entitled "Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation of the United Nations Commission on International Trade Law" (A/C.6/73/L.13).

11. At its 34th meeting, on 6 November, the Committee adopted draft resolution A/C.6/73/L.13 without a vote (see para. 14, draft resolution III).

D. Draft resolution A/C.6/73/L.14

12. At the 32nd meeting, on 2 November, the representative of Austria, on behalf of the Bureau, introduced a draft resolution entitled "Model Law on Recognition and Enforcement of Insolvency-Related Judgments of the United Nations Commission on International Trade Law" (A/C.6/73/L.14).

13. At its 34th meeting, on 6 November, the Committee adopted draft resolution A/C.6/73/L.14 without a vote (see para. 14, draft resolution IV).

III. Recommendations of the Sixth Committee

14. The Sixth Committee recommends to the General Assembly the adoption of the following draft resolutions:

Draft resolution I
Report of the United Nations Commission on International Trade Law on the work of its fifty-first session

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Reaffirming its belief that the progressive modernization and harmonization of international trade law, in reducing or removing legal obstacles to the flow of international trade, especially those affecting developing countries, would contribute significantly to universal economic cooperation among all States on a basis of equality, equity, common interest and respect for the rule of law, to the elimination of discrimination in international trade and, thereby, to peace, stability and the well-being of all peoples,

Having considered the report of the Commission,[2]

Reiterating its concern that activities undertaken by other bodies in the field of international trade law without adequate coordination with the Commission might lead to undesirable duplication of efforts and would not be in keeping with the aim of promoting efficiency, consistency and coherence in the unification and harmonization of international trade law,

[2] *Official Records of the General Assembly, Seventy-third Session, Supplement No. 17* (A/73/17).

Reaffirming the mandate of the Commission, as the core legal body within the United Nations system in the field of international trade law, to coordinate legal activities in this field, in particular to avoid duplication of efforts, including among organizations formulating rules of international trade, and to promote efficiency, consistency and coherence in the modernization and harmonization of international trade law, and to continue, through its secretariat, to maintain close cooperation with other international organs and organizations, including regional organizations, active in the field of international trade law,

1. *Takes note with appreciation* of the report of the United Nations Commission on International Trade Law;[1]

2. *Commends* the Commission for the finalization of the draft convention on international settlement agreements resulting from mediation;[3]

3. *Also commends* the Commission for the finalization and adoption of the Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation,[4] the Legislative Guide on Key Principles of a Business Registry[5] and the Model Law on Recognition and Enforcement of Insolvency-Related Judgments and its Guide to Enactment;[6]

4. *Notes with appreciation* the event held to mark the sixtieth anniversary of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (the New York Convention of 1958),[7] at which it was acknowledged that the Convention, with its almost universal acceptance, brings legal certainty to business operations worldwide, thereby contributing to decreasing the level of risk and transactional costs associated with international trade, furthering the Sustainable Development Goals[8] and, by establishing a fundamental legal framework for the use of arbitration and its effectiveness, strengthens respect for binding commitments, inspires confidence in the rule of law and ensures fair treatment in the resolution of disputes arising over contractual rights and obligations;[9]

5. *Notes with satisfaction* the contributions from the Fund for International Development of the Organization of the Petroleum Exporting Countries and from the European Commission, which allow the operation of the repository of published information under the Rules on Transparency in Treaty-based Investor-State Arbitration[10] and that the Commission reiterated its strong and unanimous opinion that the secretariat of the Commission should continue to operate the transparency repository, which constitutes a central feature both of the Rules on Transparency and of the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration (Mauritius Convention on Transparency);[11]

6. *Requests* the Secretary-General to continue to operate, through the secretariat of the Commission, the repository of published information in accordance with article 8 of the Rules on Transparency, as a pilot project until the end of 2020, to be funded entirely by voluntary contributions, and to keep the General Assembly informed of developments regarding the funding and budgetary situation of the transparency repository based on its pilot operation;

7. *Takes note with interest* of the decisions taken by the Commission as regards its future work and the progress made by the Commission in its work in the areas of micro, small and medium-sized enterprises, dispute settlement, investor-State dispute settlement reform, electronic commerce, insolvency law and security interests

and privately financed infrastructure projects,[12] as well as the decisions to take up work on expedited arbitration and, as its next priority, the judicial sale of ships, to conduct exploratory and preparatory work on warehouse receipts, to compile information on legal issues related to the digital economy aimed at enabling the commercial use of new technologies and methods and assisting developing economies in bridging the digital gap, and to undertake exploratory work on contractual networks and the civil law aspects of asset tracing and recovery,[13] and encourages the Commission to continue to move forward efficiently to achieve tangible work outcomes in those areas;

8. *Welcomes* the decision by the Commission to give Working Group IV a more specific mandate to conduct work on legal issues in the area of identity management and trust services with a view to facilitating cross-border recognition of identity management and trust services on the basis of the principles and issues identified by the Working Group at its fifty-sixth session,[14] and takes note of the decision of the Commission to request the Secretariat to prepare, within existing resources, a pilot online tool containing the draft notes on the main issues of cloud computing contracts, for consideration at its next session, in 2019;[15]

9. *Endorses* the efforts and initiatives of the Commission, as the core legal body within the United Nations system in the field of international trade law, aimed at increasing coordination of and cooperation on legal activities of international and regional organizations active in the field of international trade law and at promoting the rule of law at the national and international levels in this field, and in this regard appeals to relevant international and regional organizations to coordinate their activities with those of the Commission, to avoid duplication of efforts and to promote efficiency, consistency and coherence in the modernization and harmonization of international trade law;

10. *Reaffirms* the importance, in particular for developing countries, of the work of the Commission concerned with technical cooperation and assistance in the field of international trade law reform and development, and in this connection:

(a) Welcomes the initiatives of the Commission towards expanding, through its secretariat, its technical cooperation and assistance programme, in that respect encourages the Secretary-General to seek partnerships with State and non-State actors to increase awareness about the work of the Commission and facilitate the effective implementation of legal standards resulting from its work, and notes in that regard the round table on technical assistance held during the fifty-first session of the Commission, which brought together governmental and intergovernmental organizations active in international development assistance to explore synergies and discuss ways to further cooperate with the secretariat of the Commission in implementing sound reforms of international trade law;

(b) Expresses its appreciation to the Commission for carrying out technical cooperation and assistance activities and for providing assistance with legislative drafting in the field of international trade law, and draws the attention of the Secretary-General to the limited resources that are made available in this field;

(c) Expresses its appreciation to the Governments whose contributions enabled the technical cooperation and assistance activities to take place, and appeals to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the United Nations Commission on International Trade Law trust fund for symposia and, where appropriate, for the financing of special projects and otherwise to assist the secretariat of the Commission in carrying out technical cooperation and assistance activities, in particular in developing countries;

[13] Ibid., chap. XVII, sects. A and B.

[14] Ibid., chap. VIII, para. 159.

[15] Ibid., para. 155.

(d) Reiterates its appeal to the United Nations Development Programme and other bodies responsible for development assistance, such as the World Bank and regional development banks, as well as to Governments in their bilateral aid programmes, to support the technical cooperation and assistance programme of the Commission and to cooperate with the Commission and coordinate their activities with those of the Commission in the light of the relevance and importance of the work and programmes of the Commission for the promotion of the rule of law at the national and international levels and for the implementation of the international development agenda, including the achievement of the 2030 Agenda for Sustainable Development;[7]

(e) Recalls its resolutions stressing the need to strengthen support to Member States, upon their request, in the domestic implementation of their respective international obligations through enhanced technical assistance and capacity-building, and welcomes the efforts of the Secretary-General to ensure greater coordination and coherence among United Nations entities and with donors and recipients;

11. *Recalls* the importance of adherence to the rules of procedure and methods of work of the Commission, including transparent and inclusive deliberations, taking into account the summary of conclusions as reproduced in annex III to the report on the work of its forty-third session,[16] requests the Secretariat to issue, prior to meetings of the Commission and of its working groups, a reminder of those rules of procedure and methods of work with a view to ensuring the high quality of the work of the Commission and encouraging the assessment of its instruments, recalls in this regard its previous resolutions related to this matter, and notes that the Commission, during its fifty-first session, welcomed a joint comprehensive proposal submitted by Member States on its methods of work, including to use information-only documents on matters not requiring in-depth discussions, to apply a flexible approach to the allocation of meeting days with the goal of finalizing instruments and subsequently making decisions on future work in consecutive sessions of the Commission, to conduct a more efficient discussion of the topic of the role of the Commission in the promotion of the rule of law and to explore the possibility of reducing the duration of Commission sessions to two weeks, when possible and subject to the need for finalization of ongoing projects by the Commission, all aimed at enhancing the efficiency of the Commission's work as well as reducing the burden on delegations, and to streamline and focus the Commission's agenda and preparation for the session, and notes in that respect that the Secretariat was requested to plan and prepare for the fifty-second session of the Commission, in 2019, on the basis of that proposal;[17]

12. *Welcomes* the activities of the United Nations Commission on International Trade Law Regional Centre for Asia and the Pacific, in the Republic of Korea, towards providing capacity-building and technical assistance services to States in the Asia-Pacific region, including to international and regional organizations, expresses its appreciation to the Republic of Korea and China, whose contributions enabled continuing operation of the Regional Centre, notes that the continuation of the regional presence relies entirely on extrabudgetary resources, including but not limited to voluntary contributions from States, welcomes expressions of interest from other States in hosting regional centres of the Commission, and requests the Secretary-General to keep the General Assembly informed of developments regarding the establishment of regional centres, in particular their funding and budgetary situation;

13. *Notes* that, further to the offer of the Government of Cameroon in 2017, approved by the Commission, to establish, subject to the relevant rules and regulations of the United Nations and the internal approval process of the Office of Legal Affairs of the Secretariat, a regional centre for Africa in Cameroon,[18] the Government of Cameroon is continuing to examine the financial implications and the

feasibility of establishing that regional centre, and encourages the secretariat of the Commission to continue its consultations and consider carefully the level of human resources that it would need for the efficient management of any new regional centre and for ensuring adequate supervision by, and coordination with, Vienna-based secretariat staff,[19] and requests the Commission, in its annual report, to keep the General Assembly informed of developments regarding the project, in particular its funding and budgetary situation;

14. *Appeals* to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the trust fund established to provide travel assistance to developing countries that are members of the Commission, at their request and in consultation with the Secretary-General, in order to enable renewal of the provision of that assistance and to increase expert representation from developing countries at sessions of the Commission and its working groups, necessary to build local expertise and capacities in those countries to put in place a regulatory and enabling environment for business, trade and investment;

15. *Decides*, in order to ensure full participation of all Member States in the sessions of the Commission and its working groups, to continue, in the competent Main Committee during the seventy-third session of the General Assembly, its consideration of granting travel assistance to the least developed countries that are members of the Commission, at their request and in consultation with the Secretary-General, and notes the contributions from the European Union and the Swiss Agency for Development and Cooperation to the trust fund, which would facilitate the participation of representatives of developing States in the deliberations of Working Group III;

16. *Endorses* the conviction of the Commission that the implementation and effective use of modern private law standards in international trade are essential for advancing good governance, sustained economic development and the eradication of poverty and hunger and that the promotion of the rule of law in commercial relations should be an integral part of the broader agenda of the United Nations to promote the rule of law at the national and international levels, including through the Rule of Law Coordination and Resource Group, supported by the Rule of Law Unit in the Executive Office of the Secretary-General;

17. *Notes* the role of the Commission in promoting the rule of law, respective activity in the Commission at its fifty-first session[20] and the comments transmitted by the Commission, pursuant to paragraph 25 of General Assembly resolution 72/119 of 7 December 2017, highlighting the role in the promotion of the rule of law of the texts adopted or approved by the Commission and of its ongoing work, in particular through wide dissemination of international commercial law, including across the United Nations system;[21]

18. *Notes with satisfaction* that, in paragraph 8 of the declaration of the high-level meeting of the General Assembly on the rule of law at the national and international levels, adopted by consensus as resolution 67/1 of 24 September 2012, Member States recognized the importance of fair, stable and predictable legal frameworks for generating inclusive, sustainable and equitable development, economic growth and employment, generating investment and facilitating entrepreneurship and, in this regard, commended the work of the Commission in modernizing and harmonizing international trade law and that, in paragraph 7 of the declaration, Member States expressed their conviction that the rule of law and development were strongly interrelated and mutually reinforcing;

19. *Also notes with satisfaction* that, in paragraph 89 of the Addis Ababa Action Agenda of the Third International Conference on Financing for Development, adopted by the General Assembly by consensus as resolution 69/313 of 27 July 2015,

[21] Ibid., chap. XV.

States endorsed the efforts and initiatives of the Commission, as the core legal body within the United Nations system in the field of international trade law, aimed at increasing coordination of and cooperation on legal activities of international and regional organizations active in the field of international trade law and at promoting the rule of law at the national and international levels in this field;

20. *Reiterates its request* to the Secretary-General, in conformity with resolutions of the General Assembly on documentation-related matters,[22] which, in particular, emphasize that any invitation to limit, where appropriate, the length of documents should not adversely affect either the quality of the presentation or the substance of the documents, to bear in mind the particular characteristics of the mandate and functions of the Commission in the progressive development and codification of international trade law when implementing page limits with respect to the documentation of the Commission;[23]

21. *Requests* the Secretary-General to continue the publication of Commission standards and the provision of summary records of the meetings of the Commission, including committees of the whole established by the Commission for the duration of its annual session, relating to the formulation of normative texts, and takes note of the decision of the Commission to continue the trial use of digital recordings, in parallel with summary records where applicable, with a view to assessing the experience of using digital recordings and, on the basis of that assessment, taking a decision at a future session regarding the possible replacement of summary records by digital recordings;[24]

22. *Recalls* paragraph 48 of its resolution 66/246 of 24 December 2011 regarding the rotation scheme of meetings between Vienna and New York;

23. *Stresses* the importance of promoting the use of texts emanating from the work of the Commission for the global unification and harmonization of international trade law, and to this end urges States that have not yet done so to consider signing, ratifying or acceding to conventions, enacting model laws and encouraging the use of other relevant texts;

24. *Notes with appreciation* the work of the Secretariat on the system for the collection and dissemination of case law on Commission texts in the six official languages of the United Nations (the CLOUT system), notes the resource-intensive nature of the system, acknowledges the need for further resources to sustain and expand it, and in this regard welcomes efforts by the Secretariat towards building partnerships with interested institutions, and appeals to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to assist the secretariat of the Commission in raising awareness as to the availability and usefulness of the CLOUT system in professional, academic and judiciary circles and in securing the funding required for the coordination and expansion of the system and the establishment, within the secretariat of the Commission, of a pillar focused on the promotion of ways and means of interpreting Commission texts in a uniform manner;

25. *Welcomes* the continuing work of the Secretariat on digests of case law related to Commission texts, including their wide dissemination, as well as the continuing increase in the number of abstracts available through the CLOUT system, in view of the role of the digests and the CLOUT system as important tools for the promotion of the uniform interpretation of international trade law, in particular by building local capacity of judges, arbitrators and other legal practitioners to interpret those standards in the light of their international character and the need to promote uniformity in their application and the observance of good faith in international trade, and notes the satisfaction of the Commission with the performance of the New York

26. *Recalls* its resolutions affirming the importance of high-quality, user-friendly and cost-effective United Nations websites and the need for their multilingual development, maintenance and enrichment,[26] commends the fact that the website of the Commission is published simultaneously in the six official languages of the United Nations, and welcomes the continuous efforts of the Commission to maintain and improve its website, including by developing its latest updated version, and to enhance the visibility of its work by utilizing social media features in accordance with the applicable guidelines.[27]

Draft resolution II
United Nations Convention on International Settlement Agreements Resulting from Mediation

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Recalling also its resolution 57/18 of 19 November 2002, in which it noted the adoption by the Commission of the Model Law on International Commercial Conciliation[28] and expressed the conviction that the Model Law, together with the Conciliation Rules of the Commission[29] recommended in its resolution 35/52 of 4 December 1980, contributes significantly to the establishment of a harmonized legal framework for the fair and efficient settlement of disputes arising in international commercial relations,

Recognizing the value of mediation as a method of amicably settling disputes arising in the context of international commercial relations,

Convinced that the adoption of a convention on international settlement agreements resulting from mediation that is acceptable to States with different legal, social and economic systems would complement the existing legal framework on international mediation and contribute to the development of harmonious international economic relations,

Noting that the decision of the Commission to concurrently prepare a convention on international settlement agreements resulting from mediation and an amendment to the Model Law on International Commercial Conciliation was intended to accommodate the different levels of experience with mediation in different jurisdictions and to provide States with consistent standards on the cross-border enforcement of international settlement agreements resulting from mediation, without creating any expectation that interested States may adopt either instrument,[30]

Noting with satisfaction that the preparation of the draft convention was the subject of due deliberation and that the draft convention benefited from consultations with Governments as well as intergovernmental and non-governmental organizations,

Taking note of the decision of the Commission at its fifty-first session to submit the draft convention to the General Assembly for its consideration,[31]

Taking note with satisfaction of the draft convention approved by the Commission,[32]

Expressing its appreciation to the Government of Singapore for its offer to host a signing ceremony for the Convention in Singapore,

1. *Commends* the United Nations Commission on International Trade Law for preparing the draft convention on international settlement agreements resulting from mediation;

2. *Adopts* the United Nations Convention on International Settlement Agreements Resulting from Mediation, contained in the annex to the present resolution;

3. *Authorizes* a ceremony for the opening for signature of the Convention to be held in Singapore on 7 August 2019, and recommends that the Convention be known as the "Singapore Convention on Mediation";

4. *Calls upon* those Governments and regional economic integration organizations that wish to strengthen the legal framework on international dispute settlement to consider becoming a party to the Convention.

Annex
United Nations Convention on International Settlement Agreements Resulting from Mediation

Preamble

The Parties to this Convention,

Recognizing the value for international trade of mediation as a method for settling commercial disputes in which the parties in dispute request a third person or persons to assist them in their attempt to settle the dispute amicably,

Noting that mediation is increasingly used in international and domestic commercial practice as an alternative to litigation,

Considering that the use of mediation results in significant benefits, such as reducing the instances where a dispute leads to the termination of a commercial relationship, facilitating the administration of international transactions by commercial parties and producing savings in the administration of justice by States,

Convinced that the establishment of a framework for international settlement agreements resulting from mediation that is acceptable to States with different legal, social and economic systems would contribute to the development of harmonious international economic relations,

Have agreed as follows:

Article 1. Scope of application

1. This Convention applies to an agreement resulting from mediation and concluded in writing by parties to resolve a commercial dispute ("settlement agreement") which, at the time of its conclusion, is international in that:

(a) At least two parties to the settlement agreement have their places of business in different States; or

---

[31] *Official Records of the General Assembly, Seventy-third Session, Supplement No. 17* (A/73/17), para. 49.

[32] Ibid., annex I.

(b) The State in which the parties to the settlement agreement have their places of business is different from either:

(i) The State in which a substantial part of the obligations under the settlement agreement is performed; or

(ii) The State with which the subject matter of the settlement agreement is most closely connected.

2. This Convention does not apply to settlement agreements:

(a) Concluded to resolve a dispute arising from transactions engaged in by one of the parties (a consumer) for personal, family or household purposes;

(b) Relating to family, inheritance or employment law.

3. This Convention does not apply to:

(a) Settlement agreements:

(i) That have been approved by a court or concluded in the course of proceedings before a court; and

(ii) That are enforceable as a judgment in the State of that court;

(b) Settlement agreements that have been recorded and are enforceable as an arbitral award.

Article 2. Definitions

1. For the purposes of article 1, paragraph 1:

(a) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement;

(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

2. A settlement agreement is "in writing" if its content is recorded in any form. The requirement that a settlement agreement be in writing is met by an electronic communication if the information contained therein is accessible so as to be useable for subsequent reference.

3. "Mediation" means a process, irrespective of the expression used or the basis upon which the process is carried out, whereby parties attempt to reach an amicable settlement of their dispute with the assistance of a third person or persons ("the mediator") lacking the authority to impose a solution upon the parties to the dispute.

Article 3. General principles

1. Each Party to the Convention shall enforce a settlement agreement in accordance with its rules of procedure and under the conditions laid down in this Convention.

2. If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, a Party to the Convention shall allow the party to invoke the settlement agreement in accordance with its rules of procedure and under the conditions laid down in this Convention, in order to prove that the matter has already been resolved.

Article 4. Requirements for reliance on settlement agreements

1. A party relying on a settlement agreement under this Convention shall supply to the competent authority of the Party to the Convention where relief is sought:

(a) The settlement agreement signed by the parties;

(b) Evidence that the settlement agreement resulted from mediation, such as:

(i) The mediator's signature on the settlement agreement;

(ii) A document signed by the mediator indicating that the mediation was carried out;

(iii) An attestation by the institution that administered the mediation; or

(iv) In the absence of (i), (ii) or (iii), any other evidence acceptable to the competent authority.

2. The requirement that a settlement agreement shall be signed by the parties or, where applicable, the mediator is met in relation to an electronic communication if:

(a) A method is used to identify the parties or the mediator and to indicate the parties' or mediator's intention in respect of the information contained in the electronic communication; and

(b) The method used is either:

(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

(ii) Proven in fact to have fulfilled the functions described in subparagraph (a) above, by itself or together with further evidence.

3. If the settlement agreement is not in an official language of the Party to the Convention where relief is sought, the competent authority may request a translation thereof into such language.

4. The competent authority may require any necessary document in order to verify that the requirements of the Convention have been complied with.

5. When considering the request for relief, the competent authority shall act expeditiously.

Article 5. Grounds for refusing to grant relief

1. The competent authority of the Party to the Convention where relief is sought under article 4 may refuse to grant relief at the request of the party against whom the relief is sought only if that party furnishes to the competent authority proof that:

(a) A party to the settlement agreement was under some incapacity;

(b) The settlement agreement sought to be relied upon:

(i) Is null and void, inoperative or incapable of being performed under the law to which the parties have validly subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority of the Party to the Convention where relief is sought under article 4;

(ii) Is not binding, or is not final, according to its terms; or

(iii) Has been subsequently modified;

(c) The obligations in the settlement agreement:

(i) Have been performed; or

(ii) Are not clear or comprehensible;

(d) Granting relief would be contrary to the terms of the settlement agreement;

(e) There was a serious breach by the mediator of standards applicable to the mediator or the mediation without which breach that party would not have entered into the settlement agreement; or

(f) There was a failure by the mediator to disclose to the parties circumstances that raise justifiable doubts as to the mediator's impartiality or independence and such failure to disclose had a material impact or undue influence on a party without which failure that party would not have entered into the settlement agreement.

2. The competent authority of the Party to the Convention where relief is sought under article 4 may also refuse to grant relief if it finds that:

(a) Granting relief would be contrary to the public policy of that Party; or

(b) The subject matter of the dispute is not capable of settlement by mediation under the law of that Party.

Article 6. Parallel applications or claims

If an application or a claim relating to a settlement agreement has been made to a court, an arbitral tribunal or any other competent authority which may affect the relief being sought under article 4, the competent authority of the Party to the Convention where such relief is sought may, if it considers it proper, adjourn the decision and may also, on the request of a party, order the other party to give suitable security.

Article 7. Other laws or treaties

This Convention shall not deprive any interested party of any right it may have to avail itself of a settlement agreement in the manner and to the extent allowed by the law or the treaties of the Party to the Convention where such settlement agreement is sought to be relied upon.

Article 8. Reservations

1. A Party to the Convention may declare that:

(a) It shall not apply this Convention to settlement agreements to which it is a party, or to which any governmental agencies or any person acting on behalf of a governmental agency is a party, to the extent specified in the declaration;

(b) It shall apply this Convention only to the extent that the parties to the settlement agreement have agreed to the application of the Convention.

2. No reservations are permitted except those expressly authorized in this article.

3. Reservations may be made by a Party to the Convention at any time. Reservations made at the time of signature shall be subject to confirmation upon ratification, acceptance or approval. Such reservations shall take effect simultaneously with the entry into force of this Convention in respect of the Party to the Convention concerned. Reservations made at the time of ratification, acceptance or approval of this Convention or accession thereto, or at the time of making a declaration under article 13 shall take effect simultaneously with the entry into force of this Convention in respect of the Party to the Convention concerned. Reservations deposited after the entry into force of the Convention for that Party to the Convention shall take effect six months after the date of the deposit.

4. Reservations and their confirmations shall be deposited with the depositary.

5. Any Party to the Convention that makes a reservation under this Convention may withdraw it at any time. Such withdrawals are to be deposited with the depositary, and shall take effect six months after deposit.

Article 9. Effect on settlement agreements

The Convention and any reservation or withdrawal thereof shall apply only to settlement agreements concluded after the date when the Convention, reservation or withdrawal thereof enters into force for the Party to the Convention concerned.

Article 10. Depositary

The Secretary-General of the United Nations is hereby designated as the depositary of this Convention.

Article 11. Signature, ratification, acceptance, approval, accession

1. This Convention is open for signature by all States in Singapore, on 7 August 2019, and thereafter at United Nations Headquarters in New York.

2. This Convention is subject to ratification, acceptance or approval by the signatories.

3. This Convention is open for accession by all States that are not signatories as from the date it is open for signature.

4. Instruments of ratification, acceptance, approval or accession are to be deposited with the depositary.

Article 12. Participation by regional economic integration organizations

1. A regional economic integration organization that is constituted by sovereign States and has competence over certain matters governed by this Convention may similarly sign, ratify, accept, approve or accede to this Convention. The regional economic integration organization shall in that case have the rights and obligations of a Party to the Convention, to the extent that that organization has competence over matters governed by this Convention. Where the number of Parties to the Convention is relevant in this Convention, the regional economic integration organization shall not count as a Party to the Convention in addition to its member States that are Parties to the Convention.

2. The regional economic integration organization shall, at the time of signature, ratification, acceptance, approval or accession, make a declaration to the depositary specifying the matters governed by this Convention in respect of which competence has been transferred to that organization by its member States. The regional economic integration organization shall promptly notify the depositary of any changes to the distribution of competence, including new transfers of competence, specified in the declaration under this paragraph.

3. Any reference to a “Party to the Convention”, “Parties to the Convention”, a “State” or “States” in this Convention applies equally to a regional economic integration organization where the context so requires.

4. This Convention shall not prevail over conflicting rules of a regional economic integration organization, whether such rules were adopted or entered into force before or after this Convention: (a) if, under article 4, relief is sought in a State that is member of such an organization and all the States relevant under article 1, paragraph 1, are members of such an organization; or (b) as concerns the recognition or enforcement of judgments between member States of such an organization.

Article 13. Non-unified legal systems

1. If a Party to the Convention has two or more territorial units in which different systems of law are applicable in relation to the matters dealt with in this Convention, it may, at the time of signature, ratification, acceptance, approval or accession, declare that this Convention is to extend to all its territorial units or only to one or more of them, and may amend its declaration by submitting another declaration at any time.

2. These declarations are to be notified to the depositary and are to state expressly the territorial units to which the Convention extends.

3. If a Party to the Convention has two or more territorial units in which different systems of law are applicable in relation to the matters dealt with in this Convention:

(a) Any reference to the law or rule of procedure of a State shall be construed as referring, where appropriate, to the law or rule of procedure in force in the relevant territorial unit;

(b) Any reference to the place of business in a State shall be construed as referring, where appropriate, to the place of business in the relevant territorial unit;

(c) Any reference to the competent authority of the State shall be construed as referring, where appropriate, to the competent authority in the relevant territorial unit.

4. If a Party to the Convention makes no declaration under paragraph 1 of this article, the Convention is to extend to all territorial units of that State.

Article 14. Entry into force

1. This Convention shall enter into force six months after deposit of the third instrument of ratification, acceptance, approval or accession.

2. When a State ratifies, accepts, approves or accedes to this Convention after the deposit of the third instrument of ratification, acceptance, approval or accession, this Convention shall enter into force in respect of that State six months after the date of the deposit of its instrument of ratification, acceptance, approval or accession. The Convention shall enter into force for a territorial unit to which this Convention has been extended in accordance with article 13 six months after the notification of the declaration referred to in that article.

Article 15. Amendment

1. Any Party to the Convention may propose an amendment to the present Convention by submitting it to the Secretary-General of the United Nations. The Secretary-General shall thereupon communicate the proposed amendment to the Parties to the Convention with a request that they indicate whether they favour a conference of Parties to the Convention for the purpose of considering and voting upon the proposal. In the event that within four months from the date of such communication at least one third of the Parties to the Convention favour such a conference, the Secretary-General shall convene the conference under the auspices of the United Nations.

2. The conference of Parties to the Convention shall make every effort to achieve consensus on each amendment. If all efforts at consensus are exhausted and no consensus is reached, the amendment shall, as a last resort, require for its adoption a two-thirds majority vote of the Parties to the Convention present and voting at the conference.

3. An adopted amendment shall be submitted by the depositary to all the Parties to the Convention for ratification, acceptance or approval.

4. An adopted amendment shall enter into force six months after the date of deposit of the third instrument of ratification, acceptance or approval. When an amendment enters into force, it shall be binding on those Parties to the Convention that have expressed consent to be bound by it.

5. When a Party to the Convention ratifies, accepts or approves an amendment following the deposit of the third instrument of ratification, acceptance or approval, the amendment shall enter into force in respect of that Party to the Convention six months after the date of the deposit of its instrument of ratification, acceptance or approval.

Article 16. Denunciations

1. A Party to the Convention may denounce this Convention by a formal notification in writing addressed to the depositary. The denunciation may be limited to certain territorial units of a non-unified legal system to which this Convention applies.

2. The denunciation shall take effect 12 months after the notification is received by the depositary. Where a longer period for the denunciation to take effect is specified in the notification, the denunciation shall take effect upon the expiration of such longer period after the notification is received by the depositary. The Convention shall continue to apply to settlement agreements concluded before the denunciation takes effect.

DONE in a single original, of which the Arabic, Chinese, English, French, Russian and Spanish texts are equally authentic.

Draft resolution III
Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation of the United Nations Commission on International Trade Law

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Recalling also its resolution 57/18 of 19 November 2002, in which it noted the adoption by the Commission of the Model Law on International Commercial Conciliation[33] and expressed the conviction that the Model Law, together with the Conciliation Rules of the Commission[34] recommended in its resolution 35/52 of 4 December 1980, contributes significantly to the establishment of a harmonized legal framework for the fair and efficient settlement of disputes arising in international commercial relations,

Recognizing the value of mediation as a method of amicably settling disputes arising in the context of international commercial relations,

Believing that the amendments to the Model Law on International Commercial Conciliation will significantly assist States in enhancing their legislation governing the use of modern mediation techniques and in formulating such legislation where none currently exists,

Noting that the decision of the Commission to concurrently prepare a convention on international settlement agreements resulting from mediation and an amendment to the Model Law on International Commercial Conciliation was intended to accommodate the different levels of experience with mediation in different jurisdictions and to provide States with consistent standards on the cross-border enforcement of international settlement agreements resulting from mediation, without creating any expectation that interested States may adopt either instrument,[35]

Noting with satisfaction that the preparation of the amendments to the Model Law was the subject of due deliberation and that they benefited from consultations with Governments as well as with intergovernmental and non-governmental organizations,

1. *Expresses its appreciation* to the United Nations Commission on International Trade Law for finalizing and adopting the Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation (amending the Model Law on International Commercial Conciliation);[36]

2. *Requests* the Secretary-General to transmit the text of the Model Law to Governments and other interested bodies;

[36] *Official Records of the General Assembly, Seventy-third Session, Supplement No. 17* (A/73/17), annex II.

3. *Recommends* that all States give favourable consideration to the Model Law when revising or adopting legislation relevant to mediation, bearing in mind the desirability of uniformity of the law of mediation procedures and the specific needs of international commercial mediation practice, and invites States that have used the Model Law to advise the Commission accordingly.

Draft resolution IV
Model Law on Recognition and Enforcement of Insolvency-Related Judgments of the United Nations Commission on International Trade Law

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Recognizing that effective insolvency regimes are increasingly seen as a means of encouraging economic development and investment, as well as fostering entrepreneurial activity and preserving employment,

Convinced that the law of recognition and enforcement of judgments is becoming more and more important in a world in which it is increasingly easy for enterprises and individuals to have assets in more than one State and to move assets across borders,

Considering that international instruments on the recognition and enforcement of judgments in civil and commercial matters exclude insolvency-related judgments from their scope,

Concerned that inadequate coordination and cooperation in cases of cross-border insolvency, which lead to uncertainties associated with recognition and enforcement of insolvency-related judgments, can operate as an obstacle to the fair, efficient and effective administration of cross-border insolvencies, reducing the possibility of rescuing financially troubled but viable businesses, making it more likely that debtors' assets would be concealed or dissipated and hindering reorganizations or liquidations that would be the most advantageous for all interested persons, including the debtors, the debtors' employees and the creditors,

Convinced that fair and internationally standardized legislation on cross-border insolvency that respects national procedural and judicial systems, as expressed by the provisions of the Model Law on Recognition and Enforcement of Insolvency-Related Judgments,[37] that is acceptable to States with different legal, social and economic systems would contribute to the development of international trade and investment,

1. *Expresses its appreciation* to the United Nations Commission on International Trade Law for finalizing and adopting the Model Law on Recognition and Enforcement of Insolvency-Related Judgments[1] and its guide to enactment;

2. *Requests* the Secretary-General to transmit the text of the Model Law, together with its guide to enactment, to Governments and other interested bodies;

3. *Recommends* that all States give favourable consideration to the Model Law when revising or adopting legislation relevant to insolvency, bearing in mind the need for internationally harmonized legislation governing and facilitating instances of cross-border insolvency, and invites States that have used the Model Law to advise the Commission accordingly;

---

[37] *Official Records of the General Assembly, Seventy-third Session, Supplement No. 17* (A/73/17), annex III.

4. *Also recommends* that all States continue to consider implementation of the Model Law on Cross-Border Insolvency of the United Nations Commission on International Trade Law.[38]

[38] Resolution 52/158, annex.

D. General Assembly resolutions 73/197, 73/198, 73/199, 73/200 and 73/207

73/197. Report of the United Nations Commission on International Trade Law on the work of its fifty-first session

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Reaffirming its belief that the progressive modernization and harmonization of international trade law, in reducing or removing legal obstacles to the flow of international trade, especially those affecting developing countries, would contribute significantly to universal economic cooperation among all States on a basis of equality, equity, common interest and respect for the rule of law, to the elimination of discrimination in international trade and, thereby, to peace, stability and the well-being of all peoples,

Having considered the report of the Commission,[39]

Reiterating its concern that activities undertaken by other bodies in the field of international trade law without adequate coordination with the Commission might lead to undesirable duplication of efforts and would not be in keeping with the aim of promoting efficiency, consistency and coherence in the unification and harmonization of international trade law,

Reaffirming the mandate of the Commission, as the core legal body within the United Nations system in the field of international trade law, to coordinate legal activities in this field, in particular to avoid duplication of efforts, including among organizations formulating rules of international trade, and to promote efficiency, consistency and coherence in the modernization and harmonization of international trade law, and to continue, through its secretariat, to maintain close cooperation with other international organs and organizations, including regional organizations, active in the field of international trade law,

1. *Takes note with appreciation* of the report of the United Nations Commission on International Trade Law;[39]

2. *Commends* the Commission for the finalization of the draft convention on international settlement agreements resulting from mediation;[40]

3. *Also commends* the Commission for the finalization and adoption of the Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation,[41] the Legislative Guide on Key Principles of a Business Registry[42] and the Model Law on Recognition and Enforcement of Insolvency-Related Judgments and its Guide to Enactment;[43]

4. *Notes with appreciation* the event held to mark the sixtieth anniversary of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (the New York Convention of 1958),[44] at which it was acknowledged that the Convention, with its almost universal acceptance, brings legal certainty to business operations worldwide, thereby contributing to decreasing the level of risk and transactional costs

associated with international trade, furthering the Sustainable Development Goals[45] and, by establishing a fundamental legal framework for the use of arbitration and its effectiveness, strengthens respect for binding commitments, inspires confidence in the rule of law and ensures fair treatment in the resolution of disputes arising over contractual rights and obligations;[46]

5. *Notes with satisfaction* the contributions from the Fund for International Development of the Organization of the Petroleum Exporting Countries and from the European Commission, which allow the operation of the repository of published information under the Rules on Transparency in Treaty-based Investor-State Arbitration[47] and that the Commission reiterated its strong and unanimous opinion that the secretariat of the Commission should continue to operate the transparency repository, which constitutes a central feature both of the Rules on Transparency and of the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration (Mauritius Convention on Transparency);[48]

6. *Requests* the Secretary-General to continue to operate, through the secretariat of the Commission, the repository of published information in accordance with article 8 of the Rules on Transparency, as a pilot project until the end of 2020, to be funded entirely by voluntary contributions, and to keep the General Assembly informed of developments regarding the funding and budgetary situation of the transparency repository based on its pilot operation;

7. *Takes note with interest* of the decisions taken by the Commission as regards its future work and the progress made by the Commission in its work in the areas of micro, small and medium-sized enterprises, dispute settlement, investor-State dispute settlement reform, electronic commerce, insolvency law and security interests and privately financed infrastructure projects,[49] as well as the decisions to take up work on expedited arbitration and, as its next priority, the judicial sale of ships, to conduct exploratory and preparatory work on warehouse receipts, to compile information on legal issues related to the digital economy aimed at enabling the commercial use of new technologies and methods and assisting developing economies in bridging the digital gap, and to undertake exploratory work on contractual networks and the civil law aspects of asset tracing and recovery, [50] and encourages the Commission to continue to move forward efficiently to achieve tangible work outcomes in those areas;

8. *Welcomes* the decision by the Commission to give Working Group IV a more specific mandate to conduct work on legal issues in the area of identity management and trust services with a view to facilitating cross-border recognition of identity management and trust services on the basis of the principles and issues identified by the Working Group at its fifty-sixth session,[51] and takes note of the decision of the Commission to request the Secretariat to prepare, within existing resources, a pilot online tool containing the draft notes on the main issues of cloud computing contracts, for consideration at its next session, in 2019;[52]

9. *Endorses* the efforts and initiatives of the Commission, as the core legal body within the United Nations system in the field of international trade law, aimed at increasing coordination of and cooperation on legal activities of international and regional organizations active in the field of international trade law and at promoting the rule of law at the national and international levels in this field, and in this regard appeals to relevant international and regional organizations to coordinate their activities with those of the Commission, to avoid duplication of efforts and to promote

efficiency, consistency and coherence in the modernization and harmonization of international trade law;

10. *Reaffirms* the importance, in particular for developing countries, of the work of the Commission concerned with technical cooperation and assistance in the field of international trade law reform and development, and in this connection:

(a) Welcomes the initiatives of the Commission towards expanding, through its secretariat, its technical cooperation and assistance programme, in that respect encourages the Secretary-General to seek partnerships with State and non-State actors to increase awareness about the work of the Commission and facilitate the effective implementation of legal standards resulting from its work, and notes in that regard the round table on technical assistance held during the fifty-first session of the Commission, which brought together governmental and intergovernmental organizations active in international development assistance to explore synergies and discuss ways to further cooperate with the secretariat of the Commission in implementing sound reforms of international trade law;

(b) Expresses its appreciation to the Commission for carrying out technical cooperation and assistance activities and for providing assistance with legislative drafting in the field of international trade law, and draws the attention of the Secretary-General to the limited resources that are made available in this field;

(c) Expresses its appreciation to the Governments whose contributions enabled the technical cooperation and assistance activities to take place, and appeals to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the United Nations Commission on International Trade Law trust fund for symposia and, where appropriate, for the financing of special projects and otherwise to assist the secretariat of the Commission in carrying out technical cooperation and assistance activities, in particular in developing countries;

(d) Reiterates its appeal to the United Nations Development Programme and other bodies responsible for development assistance, such as the World Bank and regional development banks, as well as to Governments in their bilateral aid programmes, to support the technical cooperation and assistance programme of the Commission and to cooperate with the Commission and coordinate their activities with those of the Commission in the light of the relevance and importance of the work and programmes of the Commission for the promotion of the rule of law at the national and international levels and for the implementation of the international development agenda, including the achievement of the 2030 Agenda for Sustainable Development;[45]

(e) Recalls its resolutions stressing the need to strengthen support to Member States, upon their request, in the domestic implementation of their respective international obligations through enhanced technical assistance and capacity-building, and welcomes the efforts of the Secretary-General to ensure greater coordination and coherence among United Nations entities and with donors and recipients;

11. *Recalls* the importance of adherence to the rules of procedure and methods of work of the Commission, including transparent and inclusive deliberations, taking into account the summary of conclusions as reproduced in annex III to the report on the work of its forty-third session,[53] requests the Secretariat to issue, prior to meetings of the Commission and of its working groups, a reminder of those rules of procedure and methods of work with a view to ensuring the high quality of the work of the Commission and encouraging the assessment of its instruments, recalls in this regard its previous resolutions related to this matter, and notes that the Commission, during its fifty-first session, welcomed a joint comprehensive proposal submitted by Member States on its methods of work, including to use information-only documents on matters not requiring in-depth discussions, to apply a flexible approach to the allocation of meeting days with the goal of finalizing instruments and subsequently making decisions on future work in consecutive sessions of the Commission, to

[53] Ibid., *Sixty-fifth Session, Supplement No. 17* (A/65/17).

conduct a more efficient discussion of the topic of the role of the Commission in the promotion of the rule of law and to explore the possibility of reducing the duration of Commission sessions to two weeks, when possible and subject to the need for finalization of ongoing projects by the Commission, all aimed at enhancing the efficiency of the Commission's work as well as reducing the burden on delegations, and to streamline and focus the Commission's agenda and preparation for the session, and notes in that respect that the Secretariat was requested to plan and prepare for the fifty-second session of the Commission, in 2019, on the basis of that proposal;[54]

12. *Welcomes* the activities of the United Nations Commission on International Trade Law Regional Centre for Asia and the Pacific, in the Republic of Korea, towards providing capacity-building and technical assistance services to States in the Asia-Pacific region, including to international and regional organizations, expresses its appreciation to the Republic of Korea and China, whose contributions enabled continuing operation of the Regional Centre, notes that the continuation of the regional presence relies entirely on extrabudgetary resources, including but not limited to voluntary contributions from States, welcomes expressions of interest from other States in hosting regional centres of the Commission, and requests the Secretary-General to keep the General Assembly informed of developments regarding the establishment of regional centres, in particular their funding and budgetary situation;

13. *Notes* that, further to the offer of the Government of Cameroon in 2017, approved by the Commission, to establish, subject to the relevant rules and regulations of the United Nations and the internal approval process of the Office of Legal Affairs of the Secretariat, a regional centre for Africa in Cameroon,[55] the Government of Cameroon is continuing to examine the financial implications and the feasibility of establishing that regional centre, and encourages the secretariat of the Commission to continue its consultations and consider carefully the level of human resources that it would need for the efficient management of any new regional centre and for ensuring adequate supervision by, and coordination with, Vienna-based secretariat staff,[56] and requests the Commission, in its annual report, to keep the General Assembly informed of developments regarding the project, in particular its funding and budgetary situation;

14. *Appeals* to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to make voluntary contributions to the trust fund established to provide travel assistance to developing countries that are members of the Commission, at their request and in consultation with the Secretary-General, in order to enable renewal of the provision of that assistance and to increase expert representation from developing countries at sessions of the Commission and its working groups, necessary to build local expertise and capacities in those countries to put in place a regulatory and enabling environment for business, trade and investment;

15. *Decides*, in order to ensure full participation of all Member States in the sessions of the Commission and its working groups, to continue, in the competent Main Committee during the seventy-third session of the General Assembly, its consideration of granting travel assistance to the least developed countries that are members of the Commission, at their request and in consultation with the Secretary-General, and notes the contributions from the European Union and the Swiss Agency for Development and Cooperation to the trust fund, which would facilitate the participation of representatives of developing States in the deliberations of Working Group III;

16. *Endorses* the conviction of the Commission that the implementation and effective use of modern private law standards in international trade are essential for advancing good governance, sustained economic development and the eradication of poverty and hunger and that the promotion of the rule of law in commercial relations

[54] Ibid., *Seventy-third Session, Supplement No. 17* (A/73/17), chap. XVIII, sect. A.
[55] Ibid., *Seventy-second Session, Supplement No. 17* (A/72/17), para. 293.
[56] Ibid., *Seventy-third Session, Supplement No. 17* (A/73/17), para. 200.

should be an integral part of the broader agenda of the United Nations to promote the rule of law at the national and international levels, including through the Rule of Law Coordination and Resource Group, supported by the Rule of Law Unit in the Executive Office of the Secretary-General;

17. *Notes* the role of the Commission in promoting the rule of law, respective activity in the Commission at its fifty-first session[57] and the comments transmitted by the Commission, pursuant to paragraph 25 of General Assembly resolution 72/119 of 7 December 2017, highlighting the role in the promotion of the rule of law of the texts adopted or approved by the Commission and of its ongoing work, in particular through wide dissemination of international commercial law, including across the United Nations system;[58]

18. *Notes with satisfaction* that, in paragraph 8 of the declaration of the high-level meeting of the General Assembly on the rule of law at the national and international levels, adopted by consensus as resolution 67/1 of 24 September 2012, Member States recognized the importance of fair, stable and predictable legal frameworks for generating inclusive, sustainable and equitable development, economic growth and employment, generating investment and facilitating entrepreneurship and, in this regard, commended the work of the Commission in modernizing and harmonizing international trade law and that, in paragraph 7 of the declaration, Member States expressed their conviction that the rule of law and development were strongly interrelated and mutually reinforcing;

19. *Also notes with satisfaction* that, in paragraph 89 of the Addis Ababa Action Agenda of the Third International Conference on Financing for Development, adopted by the General Assembly by consensus as resolution 69/313 of 27 July 2015, States endorsed the efforts and initiatives of the Commission, as the core legal body within the United Nations system in the field of international trade law, aimed at increasing coordination of and cooperation on legal activities of international and regional organizations active in the field of international trade law and at promoting the rule of law at the national and international levels in this field;

20. *Reiterates its request* to the Secretary-General, in conformity with resolutions of the General Assembly on documentation-related matters,[59] which, in particular, emphasize that any invitation to limit, where appropriate, the length of documents should not adversely affect either the quality of the presentation or the substance of the documents, to bear in mind the particular characteristics of the mandate and functions of the Commission in the progressive development and codification of international trade law when implementing page limits with respect to the documentation of the Commission;[60]

21. *Requests* the Secretary-General to continue the publication of Commission standards and the provision of summary records of the meetings of the Commission, including committees of the whole established by the Commission for the duration of its annual session, relating to the formulation of normative texts, and takes note of the decision of the Commission to continue the trial use of digital recordings, in parallel with summary records where applicable, with a view to assessing the experience of using digital recordings and, on the basis of that assessment, taking a decision at a future session regarding the possible replacement of summary records by digital recordings;[61]

22. *Recalls* paragraph 48 of its resolution 66/246 of 24 December 2011 regarding the rotation scheme of meetings between Vienna and New York;

---

[57] Ibid., paras. 230–231.
[58] Ibid., chap. XV.
[59] Resolutions 52/214, sect. B, 57/283 B, sect. III, and 58/250, sect. III.
[60] See resolutions 59/39, para. 9, and 65/21, para. 18; see also *Official Records of the General Assembly, Fifty-ninth Session, Supplement No. 17* (A/59/17), paras. 124–128.
[61] See *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 276.

23. *Stresses* the importance of promoting the use of texts emanating from the work of the Commission for the global unification and harmonization of international trade law, and to this end urges States that have not yet done so to consider signing, ratifying or acceding to conventions, enacting model laws and encouraging the use of other relevant texts;

24. *Notes with appreciation* the work of the Secretariat on the system for the collection and dissemination of case law on Commission texts in the six official languages of the United Nations (the CLOUT system), notes the resource-intensive nature of the system, acknowledges the need for further resources to sustain and expand it, and in this regard welcomes efforts by the Secretariat towards building partnerships with interested institutions, and appeals to Governments, the relevant bodies of the United Nations system, organizations, institutions and individuals to assist the secretariat of the Commission in raising awareness as to the availability and usefulness of the CLOUT system in professional, academic and judiciary circles and in securing the funding required for the coordination and expansion of the system and the establishment, within the secretariat of the Commission, of a pillar focused on the promotion of ways and means of interpreting Commission texts in a uniform manner;

25. *Welcomes* the continuing work of the Secretariat on digests of case law related to Commission texts, including their wide dissemination, as well as the continuing increase in the number of abstracts available through the CLOUT system, in view of the role of the digests and the CLOUT system as important tools for the promotion of the uniform interpretation of international trade law, in particular by building local capacity of judges, arbitrators and other legal practitioners to interpret those standards in the light of their international character and the need to promote uniformity in their application and the observance of good faith in international trade, and notes the satisfaction of the Commission with the performance of the New York Convention website[62] and the successful coordination between that website and the CLOUT system;

26. *Recalls* its resolutions affirming the importance of high-quality, user-friendly and cost-effective United Nations websites and the need for their multilingual development, maintenance and enrichment,[63] commends the fact that the website of the Commission is published simultaneously in the six official languages of the United Nations, and welcomes the continuous efforts of the Commission to maintain and improve its website, including by developing its latest updated version, and to enhance the visibility of its work by utilizing social media features in accordance with the applicable guidelines.[64]

73/198. United Nations Convention on International Settlement Agreements Resulting from Mediation

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Recalling also its resolution 57/18 of 19 November 2002, in which it noted the adoption by the Commission of the Model Law on International Commercial Conciliation[65] and expressed the conviction that the Model Law, together with the Conciliation Rules of the Commission[66] recommended in its resolution 35/52 of 4 December 1980, contributes significantly to the establishment of a harmonized legal framework for the fair and efficient settlement of disputes arising in international commercial relations,

Recognizing the value of mediation as a method of amicably settling disputes arising in the context of international commercial relations,

Convinced that the adoption of a convention on international settlement agreements resulting from mediation that is acceptable to States with different legal, social and economic systems would complement the existing legal framework on international mediation and contribute to the development of harmonious international economic relations,

Noting that the decision of the Commission to concurrently prepare a convention on international settlement agreements resulting from mediation and an amendment to the Model Law on International Commercial Conciliation was intended to accommodate the different levels of experience with mediation in different jurisdictions and to provide States with consistent standards on the cross-border enforcement of international settlement agreements resulting from mediation, without creating any expectation that interested States may adopt either instrument,[67]

Noting with satisfaction that the preparation of the draft convention was the subject of due deliberation and that the draft convention benefited from consultations with Governments as well as intergovernmental and non-governmental organizations,

Taking note of the decision of the Commission at its fifty-first session to submit the draft convention to the General Assembly for its consideration,[68]

Taking note with satisfaction of the draft convention approved by the Commission,[69]

Expressing its appreciation to the Government of Singapore for its offer to host a signing ceremony for the Convention in Singapore,

1. *Commends* the United Nations Commission on International Trade Law for preparing the draft convention on international settlement agreements resulting from mediation;

2. *Adopts* the United Nations Convention on International Settlement Agreements Resulting from Mediation, contained in the annex to the present resolution;

---

[68] *Official Records of the General Assembly, Seventy-third Session, Supplement No. 17* (A/73/17), para. 49.

[69] Ibid., annex I.

3. *Authorizes* a ceremony for the opening for signature of the Convention to be held in Singapore on 7 August 2019, and recommends that the Convention be known as the "Singapore Convention on Mediation";

4. *Calls upon* those Governments and regional economic integration organizations that wish to strengthen the legal framework on international dispute settlement to consider becoming a party to the Convention.

62nd plenary meeting
20 December 2018

Annex

United Nations Convention on International Settlement Agreements Resulting from Mediation

Preamble

The Parties to this Convention,

Recognizing the value for international trade of mediation as a method for settling commercial disputes in which the parties in dispute request a third person or persons to assist them in their attempt to settle the dispute amicably,

Noting that mediation is increasingly used in international and domestic commercial practice as an alternative to litigation,

Considering that the use of mediation results in significant benefits, such as reducing the instances where a dispute leads to the termination of a commercial relationship, facilitating the administration of international transactions by commercial parties and producing savings in the administration of justice by States,

Convinced that the establishment of a framework for international settlement agreements resulting from mediation that is acceptable to States with different legal, social and economic systems would contribute to the development of harmonious international economic relations,

Have agreed as follows:

Article 1
Scope of application

1. This Convention applies to an agreement resulting from mediation and concluded in writing by parties to resolve a commercial dispute ("settlement agreement") which, at the time of its conclusion, is international in that:

(a) At least two parties to the settlement agreement have their places of business in different States; or

(b) The State in which the parties to the settlement agreement have their places of business is different from either:

(i) The State in which a substantial part of the obligations under the settlement agreement is performed; or

(ii) The State with which the subject matter of the settlement agreement is most closely connected.

2. This Convention does not apply to settlement agreements:

(a) Concluded to resolve a dispute arising from transactions engaged in by one of the parties (a consumer) for personal, family or household purposes;

(b) Relating to family, inheritance or employment law.

3. This Convention does not apply to:

(a) Settlement agreements:

(i) That have been approved by a court or concluded in the course of proceedings before a court; and

(ii) That are enforceable as a judgment in the State of that court;

(b) Settlement agreements that have been recorded and are enforceable as an arbitral award.

Article 2
Definitions

1. For the purposes of article 1, paragraph 1:

(a) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement;

(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

2. A settlement agreement is "in writing" if its content is recorded in any form. The requirement that a settlement agreement be in writing is met by an electronic communication if the information contained therein is accessible so as to be useable for subsequent reference.

3. "Mediation" means a process, irrespective of the expression used or the basis upon which the process is carried out, whereby parties attempt to reach an amicable settlement of their dispute with the assistance of a third person or persons ("the mediator") lacking the authority to impose a solution upon the parties to the dispute.

Article 3
General principles

1. Each Party to the Convention shall enforce a settlement agreement in accordance with its rules of procedure and under the conditions laid down in this Convention.

2. If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, a Party to the Convention shall allow the party to invoke the settlement agreement in accordance with its rules of procedure and under the conditions laid down in this Convention, in order to prove that the matter has already been resolved.

Article 4
Requirements for reliance on settlement agreements

1. A party relying on a settlement agreement under this Convention shall supply to the competent authority of the Party to the Convention where relief is sought:

(a) The settlement agreement signed by the parties;

(b) Evidence that the settlement agreement resulted from mediation, such as:

(i) The mediator's signature on the settlement agreement;

(ii) A document signed by the mediator indicating that the mediation was carried out;

(iii) An attestation by the institution that administered the mediation; or

(iv) In the absence of (i), (ii) or (iii), any other evidence acceptable to the competent authority.

2. The requirement that a settlement agreement shall be signed by the parties or, where applicable, the mediator is met in relation to an electronic communication if:

(a) A method is used to identify the parties or the mediator and to indicate the parties' or mediator's intention in respect of the information contained in the electronic communication; and

(b) The method used is either:

(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

(ii) Proven in fact to have fulfilled the functions described in subparagraph (a) above, by itself or together with further evidence.

3. If the settlement agreement is not in an official language of the Party to the Convention where relief is sought, the competent authority may request a translation thereof into such language.

4. The competent authority may require any necessary document in order to verify that the requirements of the Convention have been complied with.

5. When considering the request for relief, the competent authority shall act expeditiously.

Article 5
Grounds for refusing to grant relief

1. The competent authority of the Party to the Convention where relief is sought under article 4 may refuse to grant relief at the request of the party against whom the relief is sought only if that party furnishes to the competent authority proof that:

(a) A party to the settlement agreement was under some incapacity;

(b) The settlement agreement sought to be relied upon:

(i) Is null and void, inoperative or incapable of being performed under the law to which the parties have validly subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority of the Party to the Convention where relief is sought under article 4;

(ii) Is not binding, or is not final, according to its terms; or

(iii) Has been subsequently modified;

(c) The obligations in the settlement agreement:

(i) Have been performed; or

(ii) Are not clear or comprehensible;

(d) Granting relief would be contrary to the terms of the settlement agreement;

(e) There was a serious breach by the mediator of standards applicable to the mediator or the mediation without which breach that party would not have entered into the settlement agreement; or

(f) There was a failure by the mediator to disclose to the parties circumstances that raise justifiable doubts as to the mediator's impartiality or independence and such failure to disclose had a material impact or undue influence on a party without which failure that party would not have entered into the settlement agreement.

2. The competent authority of the Party to the Convention where relief is sought under article 4 may also refuse to grant relief if it finds that:

(a) Granting relief would be contrary to the public policy of that Party; or

(b) The subject matter of the dispute is not capable of settlement by mediation under the law of that Party.

Article 6
Parallel applications or claims

If an application or a claim relating to a settlement agreement has been made to a court, an arbitral tribunal or any other competent authority which may affect the relief being sought under article 4, the competent authority of the Party to the Convention where such relief is sought may, if it considers it proper, adjourn the decision and may also, on the request of a party, order the other party to give suitable security.

Article 7
Other laws or treaties

This Convention shall not deprive any interested party of any right it may have to avail itself of a settlement agreement in the manner and to the extent allowed by the law or the treaties of the Party to the Convention where such settlement agreement is sought to be relied upon.

Article 8
Reservations

1. A Party to the Convention may declare that:

(a) It shall not apply this Convention to settlement agreements to which it is a party, or to which any governmental agencies or any person acting on behalf of a governmental agency is a party, to the extent specified in the declaration;

(b) It shall apply this Convention only to the extent that the parties to the settlement agreement have agreed to the application of the Convention.

2. No reservations are permitted except those expressly authorized in this article.

3. Reservations may be made by a Party to the Convention at any time. Reservations made at the time of signature shall be subject to confirmation upon ratification, acceptance or approval. Such reservations shall take effect simultaneously with the entry into force of this Convention in respect of the Party to the Convention concerned. Reservations made at the time of ratification, acceptance or approval of this Convention or accession thereto, or at the time of making a declaration under article 13 shall take effect simultaneously with the entry into force of this Convention in respect of the Party to the Convention concerned. Reservations deposited after the entry into force of the Convention for that Party to the Convention shall take effect six months after the date of the deposit.

4. Reservations and their confirmations shall be deposited with the depositary.

5. Any Party to the Convention that makes a reservation under this Convention may withdraw it at any time. Such withdrawals are to be deposited with the depositary, and shall take effect six months after deposit.

Article 9
Effect on settlement agreements

The Convention and any reservation or withdrawal thereof shall apply only to settlement agreements concluded after the date when the Convention, reservation or withdrawal thereof enters into force for the Party to the Convention concerned.

Article 10
Depositary

The Secretary-General of the United Nations is hereby designated as the depositary of this Convention.

Article 11
Signature, ratification, acceptance, approval, accession

1. This Convention is open for signature by all States in Singapore, on 7 August 2019, and thereafter at United Nations Headquarters in New York.

2. This Convention is subject to ratification, acceptance or approval by the signatories.

3. This Convention is open for accession by all States that are not signatories as from the date it is open for signature.

4. Instruments of ratification, acceptance, approval or accession are to be deposited with the depositary.

Article 12
Participation by regional economic integration organizations

1. A regional economic integration organization that is constituted by sovereign States and has competence over certain matters governed by this Convention may similarly sign, ratify, accept, approve or accede to this Convention. The regional economic integration organization shall in that case have the rights and obligations of a Party to the Convention, to the extent that that organization has competence over matters governed by this Convention. Where the number of Parties to the Convention is relevant in this Convention, the regional economic integration organization shall not count as a Party to the Convention in addition to its member States that are Parties to the Convention.

2. The regional economic integration organization shall, at the time of signature, ratification, acceptance, approval or accession, make a declaration to the depositary specifying the matters governed by this Convention in respect of which competence has been transferred to that organization by its member States. The regional economic integration organization shall promptly notify the depositary of any changes to the distribution of competence, including new transfers of competence, specified in the declaration under this paragraph.

3. Any reference to a “Party to the Convention”, “Parties to the Convention”, a “State” or “States” in this Convention applies equally to a regional economic integration organization where the context so requires.

4. This Convention shall not prevail over conflicting rules of a regional economic integration organization, whether such rules were adopted or entered into force before or after this Convention: (a) if, under article 4, relief is sought in a State that is member of such an organization and all the States relevant under article 1, paragraph 1, are members of such an organization; or (b) as concerns the recognition or enforcement of judgments between member States of such an organization.

Article 13
Non-unified legal systems

1. If a Party to the Convention has two or more territorial units in which different systems of law are applicable in relation to the matters dealt with in this Convention, it may, at the time of signature, ratification, acceptance, approval or accession, declare that this Convention is to extend to all its territorial units or only to one or more of them, and may amend its declaration by submitting another declaration at any time.

2. These declarations are to be notified to the depositary and are to state expressly the territorial units to which the Convention extends.

3. If a Party to the Convention has two or more territorial units in which different systems of law are applicable in relation to the matters dealt with in this Convention:

(a) Any reference to the law or rule of procedure of a State shall be construed as referring, where appropriate, to the law or rule of procedure in force in the relevant territorial unit;

(b) Any reference to the place of business in a State shall be construed as referring, where appropriate, to the place of business in the relevant territorial unit;

(c) Any reference to the competent authority of the State shall be construed as referring, where appropriate, to the competent authority in the relevant territorial unit.

4. If a Party to the Convention makes no declaration under paragraph 1 of this article, the Convention is to extend to all territorial units of that State.

Article 14
Entry into force

1. This Convention shall enter into force six months after deposit of the third instrument of ratification, acceptance, approval or accession.

2. When a State ratifies, accepts, approves or accedes to this Convention after the deposit of the third instrument of ratification, acceptance, approval or accession, this Convention shall enter into force in respect of that State six months after the date of the deposit of its instrument of ratification, acceptance, approval or accession. The Convention shall enter into force for a territorial unit to which this Convention has been extended in accordance with article 13 six months after the notification of the declaration referred to in that article.

Article 15
Amendment

1. Any Party to the Convention may propose an amendment to the present Convention by submitting it to the Secretary-General of the United Nations. The Secretary-General shall thereupon communicate the proposed amendment to the Parties to the Convention with a request that they indicate whether they favour a conference of Parties to the Convention for the purpose of considering and voting upon the proposal. In the event that within four months from the date of such communication at least one third of the Parties to the Convention favour such a conference, the Secretary-General shall convene the conference under the auspices of the United Nations.

2. The conference of Parties to the Convention shall make every effort to achieve consensus on each amendment. If all efforts at consensus are exhausted and no consensus is reached, the amendment shall, as a last resort, require for its adoption a two-thirds majority vote of the Parties to the Convention present and voting at the conference.

3. An adopted amendment shall be submitted by the depositary to all the Parties to the Convention for ratification, acceptance or approval.

4. An adopted amendment shall enter into force six months after the date of deposit of the third instrument of ratification, acceptance or approval. When an amendment enters into force, it shall be binding on those Parties to the Convention that have expressed consent to be bound by it.

5. When a Party to the Convention ratifies, accepts or approves an amendment following the deposit of the third instrument of ratification, acceptance or approval, the amendment shall enter into force in respect of that Party to the Convention six months after the date of the deposit of its instrument of ratification, acceptance or approval.

Article 16
Denunciations

1. A Party to the Convention may denounce this Convention by a formal notification in writing addressed to the depositary. The denunciation may be limited to certain territorial units of a non-unified legal system to which this Convention applies.

2. The denunciation shall take effect 12 months after the notification is received by the depositary. Where a longer period for the denunciation to take effect is

specified in the notification, the denunciation shall take effect upon the expiration of such longer period after the notification is received by the depositary. The Convention shall continue to apply to settlement agreements concluded before the denunciation takes effect.

DONE in a single original, of which the Arabic, Chinese, English, French, Russian and Spanish texts are equally authentic.

73/199. Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation of the United Nations Commission on International Trade Law

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Recalling also its resolution 57/18 of 19 November 2002, in which it noted the adoption by the Commission of the Model Law on International Commercial Conciliation[70] and expressed the conviction that the Model Law, together with the Conciliation Rules of the Commission[71] recommended in its resolution 35/52 of 4 December 1980, contributes significantly to the establishment of a harmonized legal framework for the fair and efficient settlement of disputes arising in international commercial relations,

Recognizing the value of mediation as a method of amicably settling disputes arising in the context of international commercial relations,

Believing that the amendments to the Model Law on International Commercial Conciliation will significantly assist States in enhancing their legislation governing the use of modern mediation techniques and in formulating such legislation where none currently exists,

Noting that the decision of the Commission to concurrently prepare a convention on international settlement agreements resulting from mediation and an amendment to the Model Law on International Commercial Conciliation was intended to accommodate the different levels of experience with mediation in different jurisdictions and to provide States with consistent standards on the cross-border enforcement of international settlement agreements resulting from mediation, without creating any expectation that interested States may adopt either instrument,[72]

Noting with satisfaction that the preparation of the amendments to the Model Law was the subject of due deliberation and that they benefited from consultations with Governments as well as with intergovernmental and non-governmental organizations,

1. *Expresses its appreciation* to the United Nations Commission on International Trade Law for finalizing and adopting the Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation (amending the Model Law on International Commercial Conciliation);[73]

2. *Requests* the Secretary-General to transmit the text of the Model Law to Governments and other interested bodies;

3. *Recommends* that all States give favourable consideration to the Model Law when revising or adopting legislation relevant to mediation, bearing in mind the desirability of uniformity of the law of mediation procedures and the specific needs

---

73/200. Model Law on Recognition and Enforcement of Insolvency-Related Judgments of the United Nations Commission on International Trade Law

The General Assembly,

Recalling its resolution 2205 (XXI) of 17 December 1966, by which it established the United Nations Commission on International Trade Law with a mandate to further the progressive harmonization and unification of the law of international trade and in that respect to bear in mind the interests of all peoples, in particular those of developing countries, in the extensive development of international trade,

Recognizing that effective insolvency regimes are increasingly seen as a means of encouraging economic development and investment, as well as fostering entrepreneurial activity and preserving employment,

Convinced that the law of recognition and enforcement of judgments is becoming more and more important in a world in which it is increasingly easy for enterprises and individuals to have assets in more than one State and to move assets across borders,

Considering that international instruments on the recognition and enforcement of judgments in civil and commercial matters exclude insolvency-related judgments from their scope,

Concerned that inadequate coordination and cooperation in cases of cross-border insolvency, which lead to uncertainties associated with recognition and enforcement of insolvency-related judgments, can operate as an obstacle to the fair, efficient and effective administration of cross-border insolvencies, reducing the possibility of rescuing financially troubled but viable businesses, making it more likely that debtors' assets would be concealed or dissipated and hindering reorganizations or liquidations that would be the most advantageous for all interested persons, including the debtors, the debtors' employees and the creditors,

Convinced that fair and internationally standardized legislation on cross-border insolvency that respects national procedural and judicial systems, as expressed by the provisions of the Model Law on Recognition and Enforcement of Insolvency-Related Judgments,[140] that is acceptable to States with different legal, social and economic systems would contribute to the development of international trade and investment,

1. *Expresses its appreciation* to the United Nations Commission on International Trade Law for finalizing and adopting the Model Law on Recognition and Enforcement of Insolvency-Related Judgments[140] and its guide to enactment;

2. *Requests* the Secretary-General to transmit the text of the Model Law, together with its guide to enactment, to Governments and other interested bodies;

3. *Recommends* that all States give favourable consideration to the Model Law when revising or adopting legislation relevant to insolvency, bearing in mind the need for internationally harmonized legislation governing and facilitating instances of cross-border insolvency, and invites States that have used the Model Law to advise the Commission accordingly;

4. *Also recommends* that all States continue to consider implementation of the Model Law on Cross-Border Insolvency of the United Nations Commission on International Trade Law.[141]

[141] Resolution 52/158, annex.

73/207. The rule of law at the national and international levels

The General Assembly,

Recalling its resolution 72/119 of 7 December 2017,

Reaffirming its commitment to the purposes and principles of the Charter of the United Nations and international law, which are indispensable foundations of a more peaceful, prosperous and just world, and reiterating its determination to foster strict respect for them and to establish a just and lasting peace all over the world,

Reaffirming that human rights, the rule of law and democracy are interlinked and mutually reinforcing and that they belong to the universal and indivisible core values and principles of the United Nations,

Reaffirming also the need for universal adherence to and implementation of the rule of law at both the national and international levels and its solemn commitment to an international order based on the rule of law and international law, which, together with the principles of justice, is essential for peaceful coexistence and cooperation among States,

Bearing in mind that the activities of the United Nations carried out in support of efforts of Governments to promote and consolidate the rule of law are undertaken in accordance with the Charter, and stressing the need to strengthen support to Member States, upon their request, in the domestic implementation of their respective international obligations through enhanced technical assistance and capacity-building,

Convinced that the advancement of the rule of law at the national and international levels is essential for the realization of sustained economic growth, sustainable development, the eradication of poverty and hunger and the protection of all human rights and fundamental freedoms, and acknowledging that collective security depends on effective cooperation, in accordance with the Charter and international law, against transnational threats,

Reaffirming the duty of all States to refrain in their international relations from the threat or use of force in any manner inconsistent with the purposes and principles of the United Nations and to settle their international disputes by peaceful means in such a manner that international peace and security and justice are not endangered, in accordance with Chapter VI of the Charter, and calling upon States that have not yet done so to consider accepting the jurisdiction of the International Court of Justice in accordance with its Statute,

Convinced that the promotion of and respect for the rule of law at the national and international levels, as well as justice and good governance, should guide the activities of the United Nations and its Member States,

Recalling paragraph 134 (e) of the 2005 World Summit Outcome,[142]

1. *Recalls* the high-level meeting of the General Assembly on the rule of law at the national and international levels, held during the high-level segment of its sixty-seventh session, and the declaration adopted at that meeting,[143] takes note of the report of the Secretary-General submitted pursuant to paragraph 41 of the declaration,[144] and requests the Sixth Committee to continue its consideration of ways and means of further developing the linkages between the rule of law and the three pillars of the United Nations;

2. *Acknowledges* the efforts to strengthen the rule of law through voluntary pledges, encourages all States to consider making pledges, individually or jointly, based on their national priorities, and also encourages those States that have made pledges to continue to exchange information, knowledge and best practices in this regard;

---

[142] Resolution 60/1.
[143] Resolution 67/1.
[144] A/68/213/Add.1.

3. *Takes note* of the annual report of the Secretary-General on strengthening and coordinating United Nations rule of law activities;[145]

4. *Encourages* the Secretary-General and the United Nations system to accord high priority to rule of law activities;

5. *Reaffirms* the role of the General Assembly in encouraging the progressive development of international law and its codification, and further reaffirms that States shall abide by all of their obligations under international law;

6. *Also reaffirms* the imperative of upholding and promoting the rule of law at the international level in accordance with the principles of the Charter of the United Nations;

7. *Further reaffirms* its commitment to working tirelessly for the full implementation of the 2030 Agenda for Sustainable Development,[146] and recalls that the goals and targets are integrated and indivisible and balance the three dimensions of sustainable development;

8. *Recognizes* the role of multilateral and bilateral treaties and treaty processes in advancing the rule of law, and encourages States to further consider the promotion of treaties in areas where international cooperation could benefit from treaties;

9. *Welcomes* the dialogue initiated by the Rule of Law Coordination and Resource Group and the Rule of Law Unit in the Executive Office of the Secretary-General with Member States on the topic "Promoting the rule of law at the international level", and calls for the continuation of this dialogue with a view to fostering the rule of law at the international level;

10. *Recognizes* the importance of the United Nations Programme of Assistance in the Teaching, Study, Dissemination and Wider Appreciation of International Law to the furtherance of United Nations rule of law programmes and activities, emphasizes that further technical assistance and capacity-building initiatives, focused on increasing and improving the participation of Member States in the multilateral treaty process, should be examined, and invites States to support these activities;

11. *Stresses* the importance of adherence to the rule of law at the national level and the need to strengthen support to Member States, upon their request, in the domestic implementation of their respective international obligations through enhanced technical assistance and capacity-building in order to develop, reinforce and maintain domestic institutions active in the promotion of rule of law at the national and international levels, subject to national ownership, strategies and priorities;

12. *Reiterates its request* to the Secretary-General to ensure greater coordination and coherence among the United Nations entities and with donors and recipients, and reiterates its call for greater evaluation of the effectiveness of such activities, including possible measures to improve the effectiveness of those capacity-building activities;

13. *Calls*, in this context, for dialogue to be enhanced among all stakeholders, with a view to placing national perspectives at the centre of rule of law assistance in order to strengthen national ownership, while recognizing that rule of law activities must be anchored in a national context and that States have different national experiences in the development of their systems of the rule of law, taking into account their legal, political, socioeconomic, cultural, religious and other local specificities, while also recognizing that there are common features founded on international norms and standards;

14. *Calls upon* the Secretary-General and the United Nations system to systematically address, as appropriate, aspects of the rule of law in relevant activities, including the participation of women in rule of law-related activities, recognizing the importance of the rule of law to virtually all areas of United Nations engagement;

---

[145] A/73/253.

[146] Resolution 70/1.

15. *Expresses full support* for the overall coordination and coherence role of the Rule of Law Coordination and Resource Group within the United Nations system, within existing mandates, supported by the Rule of Law Unit and under the leadership of the Deputy Secretary-General;

16. *Requests* the Secretary-General to submit, in a timely manner, his next annual report on United Nations rule of law activities, in accordance with paragraph 5 of its resolution 63/128 of 11 December 2008, addressing, in a balanced manner, the national and international dimensions of the rule of law;

17. *Recognizes* the importance of restoring confidence in the rule of law as a key element of transitional justice;

18. *Recalls* the commitment of Member States to take all necessary steps to provide fair, transparent, effective, non-discriminatory and accountable services that promote access to justice for all, including legal aid, encourages further dialogue and the sharing of national practices and expertise in strengthening the rule of law through access to justice, including with regard to the provision of birth registration for all, appropriate registration and documentation of refugees, migrants, asylum seekers and stateless persons, and legal aid, where appropriate, in both criminal and civil proceedings, and in this regard recognizes the role of knowledge and technology, including in judicial systems, and stresses the need to intensify the assistance extended to Governments upon their request;

19. *Stresses* the importance of promoting the sharing of national practices and of inclusive dialogue, welcomes the proposals made by the Secretary-General, inviting Member States to voluntarily exchange national best practices on the rule of law in informal meetings and on an electronic depository of best practices on the United Nations rule of law website, and invites Member States to do so;

20. *Invites* the International Court of Justice, the United Nations Commission on International Trade Law and the International Law Commission to continue to comment, in their respective reports to the General Assembly, on their current roles in promoting the rule of law;

21. *Invites* the Rule of Law Coordination and Resource Group and the Rule of Law Unit to continue their dialogue with all Member States by interacting with them in a regular, transparent and inclusive manner, in particular in informal briefings;

22. *Stresses* the need for the Rule of Law Unit to carry out its tasks in an effective and sustainable manner and the need to provide it with reasonable means required to that effect;

23. *Decides* to include in the provisional agenda of its seventy-fourth session the item entitled “The rule of law at the national and international levels”, and invites Member States to focus their comments during the upcoming Sixth Committee debate on the subtopic “Sharing best practices and ideas to promote the respect of States for international law”.

62nd plenary meeting
20 December 2018

Part Two

STUDIES AND REPORTS ON SPECIFIC SUBJECTS

I. MICRO, SMALL AND MEDIUM-SIZED ENTERPRISES (MSMEs)

A. Report of the Working Group on MSMEs on the work of its twenty-ninth session (Vienna, 16–20 October 2017)

(A/CN.9/928)

[Original: English]

Contents

I. Introduction

1. At its forty-sixth session, in 2013, the Commission requested that a working group should commence work aimed at reducing the legal obstacles encountered by micro, small and medium-sized enterprises (MSMEs) throughout their life cycle.[1] At that same session, the Commission agreed that consideration of the issues pertaining to the creation of an enabling legal environment for MSMEs should begin with a focus on the legal questions surrounding the simplification of incorporation.[2]

2. At its twenty-second session (New York, 10 to 14 February 2014), Working Group I (MSMEs) commenced its work according to the mandate received from the Commission. The Working Group engaged in preliminary discussion in respect of a number of broad issues relating to the development of a legal text on simplified

[2] For a history of the evolution of this topic on the UNCITRAL agenda, see A/CN.9/WG.I/WP.97, paras. 5–20.

incorporation[3] as well as on what form that text might take,[4] and business registration was said to be of particular relevance in the future deliberations of the Working Group.[5]

3. At its forty-seventh session, in 2014, the Commission reaffirmed the mandate of Working Group I, as set out above in paragraph 1.[6]

4. At its twenty-third session (Vienna, 17 to 21 November 2014), Working Group I continued its work in accordance with the mandate received from the Commission. Following a discussion of the issues raised in working paper A/CN.9/WG.I/WP.85 in respect of best practices in business registration, the Working Group requested the Secretariat to prepare further materials based on parts IV and V of that working paper for discussion at a future session. In its discussion of the legal questions surrounding the simplification of incorporation, the Working Group considered the issues outlined in the framework set out in working paper A/CN.9/WG.I/WP.86, and agreed that it would resume its deliberations at its twenty-fourth session beginning with paragraph 34 of that document.

5. At its twenty-fourth session (New York, 13 to 17 April 2015), the Working Group continued its discussion of the legal questions surrounding the simplification of incorporation. After initial consideration of the issues as set out in Working Paper A/CN.9/WG.I/WP.86, the Working Group decided that it should continue its work by considering the first six articles of the draft model law and commentary thereon contained in Working Paper A/CN.9/WG.I/WP.89, without prejudice to the final form of the legislative text, which had not yet been decided. Further to a proposal from several delegations, the Working Group agreed to continue its discussion of the issues included in A/CN.9/WG.I/WP.89, bearing in mind the general principles outlined in the proposal, including the "think small first" approach, and to prioritize those aspects of the draft text in A/CN.9/WG.I/WP.89 that were the most relevant for simplified business entities. The Working Group also agreed that it would discuss the alternative models introduced in A/CN.9/WG.I/WP.87 at a later stage.

6. At its forty-eighth session, in 2015, the Commission noted the progress made by the Working Group in the analysis of the legal issues surrounding the simplification of incorporation and to good practices in business registration, both of which aimed at reducing the legal obstacles encountered by MSMEs throughout their life cycle. After discussion, the Commission reaffirmed the mandate of the Working Group under the terms of reference established by the Commission at its forty-sixth session in 2013 and confirmed at its forty-seventh session in 2014.[7] In its discussion in respect of the future legislative activity, the Commission also agreed that document A/CN.9/WG.I/WP.83 should be included among the documents under consideration by Working Group I for the simplification of incorporation.[8]

7. At its twenty-fifth session (Vienna, 19 to 23 October 2015), the Working Group continued its preparation of legal standards aimed at the creation of an enabling legal environment for MSMEs, exploring the legal issues surrounding the simplification of incorporation and on good practices in business registration. In terms of the later, following presentation by the Secretariat of documents A/CN.9/WG.I/WP.93, Add.1 and Add.2 on key principles of business registration and subsequent consideration by the Working Group of A/CN.9/WG.I/WP.93, it was decided that a document along the lines of a concise legislative guide on key principles in business registration should be prepared, without prejudice to the final form that the materials might take. To that end, the Secretariat was requested to prepare a set of draft recommendations to be considered by the Working Group when it resumed its consideration of Working

[4] Ibid., paras. 32–38.
[5] Ibid., paras. 47–50.
[6] *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 134.
[7] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), paras. 220 and 225; *Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 134 and *Sixty-eighth Session, Supplement No. 17* (A/68/17), para. 321.
[8] Ibid., *Seventieth Session, Supplement No. 17* (A/70/17), para. 340.

Papers A/CN.9/WG.I/WP.93, Add.1 and Add.2 at its next session.[9] In respect of the legal issues surrounding the simplification of incorporation, the Working Group resumed its consideration of the draft model law on a simplified business entity as contained in working paper A/CN.9/WG.I/WP.89, starting with Chapter VI on organization of the simplified business entity, and continuing on with Chapter VIII on dissolution and winding up, Chapter VII on restructuring, and draft article 35 on financial statements (contained in Chapter IX on miscellaneous matters).[10] The Working Group agreed to continue discussion of the draft text in Working Paper A/CN.9/WG.I/WP.89 at its twenty-sixth session, commencing with Chapter III on shares and capital, and continuing with Chapter V on shareholders' meetings.

8. At its twenty-sixth session (New York, 4 to 8 April 2016), Working Group I continued its consideration of the legal issues surrounding the simplification of incorporation and on key principles in business registration. In respect of the former, the Working Group resumed its deliberations on the basis of working paper A/CN.9/WG.I/WP.89. Following its discussion of the issues in Chapters III and V,[11] the Working Group decided that the text being prepared on a simplified business entity should be in the form of a legislative guide, and requested the Secretariat to prepare for discussion at a future session a draft legislative guide that reflected its policy discussions to date (see A/CN.9/WG.I/WP.99 and Add.1).[12] In respect of key principles in business registration, the Working Group considered recommendations 1 to 10 of the draft commentary (A/CN.9/WG.I/WP.93, Add.1 and Add.2) and recommendations (A/CN.9/WG.I/WP.96 and Add.1) for a legislative guide, and requested the Secretariat to combine those two sets of documents into a single draft legislative guide for discussion at a future session.[13] In addition, the Working Group also considered the general architecture of its work on MSMEs, and agreed that its MSME work should be accompanied by an introductory document along the lines of A/CN.9/WG.I/WP.92, which would form a part of the final text and would provide an overarching framework for current and future work on MSMEs.[14] The Working Group also decided at its twenty-sixth session[15] that it would devote the deliberations at its twenty-seventh session to deliberations on a draft legislative guide on a simplified business entity, and its deliberations at its twenty-eighth session to a consideration of a draft legislative guide reflecting key principles and good practices in business registration.

9. At its forty-ninth session (New York, 27 June to 15 July 2016), the Commission commended the Working Group for its progress in the preparation of legal standards in respect of the legal issues surrounding the simplification of incorporation and to key principles in business registration, both of which aimed at reducing the legal obstacles faced by MSMEs throughout their life cycle. The Commission also noted the decision of the Working Group to prepare a legislative guide on each of those topics and States were encouraged to ensure that their delegations included experts on business registration so as to facilitate its work.[16]

10. At its twenty-seventh session, the Working Group continued its deliberations. As decided at its twenty-sixth session,[17] the Working Group spent the entire twenty-seventh session considering a draft legislative guide on a simplified business entity, leaving consideration of the draft legislative guide on key principles of a business registry for the first week of its twenty-eighth session. The Working Group considered the issues outlined in working papers A./CN.9/WG.I/WP.99 and Add.1 on

[17] A/CN.9/866, para. 90.

an UNCITRAL limited liability organization (UNLLO), beginning with section A on general provisions (draft recommendations 1 to 6), section B on the formation of an UNLLO (draft recommendations 7 to 10), and section C on the organization of an UNLLO (draft recommendations 11 to 13). The Working Group also heard a short presentation of working paper A/CN.9/WG.I/WP.94 of the French legislative approach known as an "Entrepreneur with Limited Liability" (or EIRL), which represented a possible alternative legislative model applicable to micro and small businesses.

11. At its twenty-eighth session (New York, 1 to 9 May 2017), the Working Group considered both topics currently on its agenda. Those deliberations commenced with a review of the entire draft legislative guide on key principles of a business registry (A/CN.9/WG.I/WP.101), save for the introductory section and draft recommendation 9 (Core functions of a business registry) and its attendant commentary, to which the Working Group agreed to revert at a future session. With respect to its deliberations regarding the creation of a simplified business entity (A/CN.9/WG.I/WP.99 and Add.1), the Working Group continued the work begun at its twenty-seventh session, and considered the recommendations (and related commentary) of the draft legislative guide on an UNLLO in sections D, E and F.

12. At its fiftieth session (Vienna, 3 to 21 July 2017), the Commission commended the Working Group for the progress it had made in its two areas of work on the preparation of a draft legislative guide on an UNLLO and a draft legislative guide on key principles of a business registry. In particular, the Commission welcomed the potential completion of the latter guide on business registration for possible adoption at the fifty-first session of the Commission (scheduled for 25 June to 13 July 2018).[18]

II. Organization of the session

13. Working Group I, which was composed of all States Members of the Commission, held its twenty-ninth session in Vienna from 16 to 20 October 2017. The session was attended by representatives of the following States Members of the Working Group: Argentina, Belarus, Brazil, Canada, China, Colombia, Côte d'Ivoire, Czechia, Ecuador, El Salvador, France, Germany, Indonesia, Israel, Italy, Japan, Kenya, Kuwait, Mauritania, Mexico, Pakistan, Panama, Philippines, Poland, Republic of Korea, Romania, Russian Federation, Singapore, Spain, Sri Lanka, Switzerland, Thailand, Turkey and United States of America.

14. The session was attended by observers from the following States: Bolivia (Plurinational State of), Croatia, Cyprus, Dominican Republic, Finland, Luxembourg, Malta, Netherlands, Qatar, Saudi Arabia and Syrian Arab Republic.

15. The session was also attended by observers from the following international organizations:

(a) *Organizations of the United Nations system*: World Bank (WB);

(b) *Intergovernmental organizations*: Gulf Cooperation Council (GCC);

(c) *Invited international non-governmental organizations*: Centro de Estudios de Derecho, Economía y Política (CEDEP); Conseil des Notariats de l'Union Europeene (CNUE); International Bar Association (IBA); the National Law Center for Inter-American Free Trade (NLCIFT); and the Law Association for Asia and the Pacific (LAWASIA).

16. The Working Group elected the following officers:

Chair: Ms. Maria Chiara Malaguti (Italy)

Rapporteur: Mr. Thomas Koshy (Singapore)

17. In addition to documents presented at its previous sessions, the Working Group had before it the following documents:

[18] *Official Records of the General Assembly, Seventy-second Session, Supplement No. 17* (A/72/17), paras. 230–235.

(a) Annotated provisional agenda (A/CN.9/WG.I/WP.105);

(b) Note by the Secretariat on a draft legislative guide on key principles of a business registry (A/CN.9/WG.I/WP.106); and

(c) Note by the Secretariat on reducing the legal obstacles faced by micro, small and medium-sized enterprises (MSMEs) (A/CN.9/WG.I/WP.107).

18. The Working Group adopted the following agenda:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Preparation of legal standards in respect of micro, small and medium-sized enterprises.
5. Other business.
6. Adoption of the report.

III. Deliberations and decisions

19. The Working Group engaged in discussions in respect of the preparation of legal standards aimed at the creation of an enabling legal environment for MSMEs, in particular, on a draft legislative guide on key principles of a business registry on the basis of Secretariat document A/CN.9/WG.I/WP.106. The deliberations and decisions of the Working Group are reflected below.

IV. Preparation of legal standards in respect of micro, small and medium-sized enterprises: draft legislative guide on key principles of a business registry

A. Presentation of A/CN.9/WG.I/WP.106 and preliminary observations

20. The Working Group was reminded that the draft legislative guide on key principles of a business registry in A/CN.9/WG.I/WP.106 was the revised version of A/CN.9/WG.I/WP.101, which the Working Group had reviewed at its twenty-eighth session (1 to 9 May 2017). The Secretariat highlighted certain aspects of the draft text, noting that it included changes that the Working Group had agreed should be made to the legislative guide at its previous session, as reflected in the report for that session (A/CN.9/900), and that those changes had all been extensively referenced in footnotes to the text.

21. The Working Group agreed that it would commence its review of the legislative guide from Part I entitled “Objectives of a business registry” (from para. 26 on). It further agreed that the introductory section of the text, from paragraphs 1 to 25, would be considered once the entire text had been considered, but that the definitions in paragraph 13 should be considered as they arose in conjunction with the review of the related portions of the guide.

22. There was some concern expressed in respect of whether the phrases “legally regulated economy” and “extra legal economy” should be used to denote what may elsewhere be referred to as the “formal” and “informal economy”, but it was observed that consideration of that issue should be left to the discussion of paragraphs 21 to 26 of A/CN.9/WG.I/WP.107 at a later stage. However, it was observed that the adoption of that terminology in the texts appeared to suggest that unregistered businesses were necessarily operating in the extra legal economy, which might not be the case. It was noted that the concepts of business registration and of operation of an enterprise in the legally regulated economy were not entirely synonymous, and that a review of the

terminology should be conducted with that in mind. The Secretariat was requested to review the text to ensure that it appropriately reflected instances in which a business operated in the legally regulated economy even though it was not registered.

B. Objectives of a Business Registry

1. Paragraph 26

23. It was noted that paragraph 26 had been inserted into the draft legislative guide to highlight the importance of one-stop shops to facilitate business registration and assist MSMEs, and that, to that end, several additional references to one-stop shops had also been included in the text.

24. After discussion, the Working Group agreed that an additional recommendation should be inserted after paragraph 26 that would read along the following lines: "The system of business registration should facilitate the movement of businesses from the informal sector to the legally regulated economy as part of the system of all registrations that may be required at start-up, which may include registration with, among others, business registry, taxation and social security authorities."

2. Purposes of the business registry: paragraphs 27 to 29 and recommendation 1

25. It was noted that paragraph 28 recognized that not all businesses in every State were required to register, and that paragraph 28 included a reference to paragraph 130, which expanded upon that theme. After discussion, the Working Group determined that any necessary clarification should be made to paragraph 28 to indicate that it was left to each State to determine which business were required to register and to include reference in the commentary to recommendation 19 in addition to paragraph 130. A suggestion to combine recommendation 19 with recommendation 1 received some support but was not taken up by the Working Group, nor was a suggestion to move recommendation 19 closer to the beginning of the text.

26. The Working Group agreed to end recommendation 1(a) after the term "enacting State" and delete the remainder of it so that the provision read "Providing to a business an identity that is recognized by the enacting State; and". The Working Group also supported a proposal to include reference to "receiving, storing and making accessible" to recommendation 1(b) to make the language compatible with the definition of "business registry or business registration system" in paragraph 13.

3. Simple and predictable legislative framework permitting registration for all businesses: paragraphs 30 to 33 and recommendation 2

27. A suggestion was made to eliminate paragraph 31 and merge its content into paragraph 28, to the extent that it was not already reflected there, and that recommendation 19 already addressed the issue that the law should specify which businesses were permitted or required to register. However, the view was also expressed that the issue outlined in paragraph 31 was an important aspect of establishing a "simple and predictable legislative framework", and that the paragraph should thus be retained.

28. The Working Group reconsidered a proposal to move recommendation 19 to the beginning of the draft legislative guide, but there was agreement that leaving recommendation 19 in the context of "Part IV: Registration of a business" would provide greater guidance to enacting States when creating or updating their business registration systems. Instead, it was agreed that paragraph 31 should be retained and that a reference to recommendation 19 should be added to paragraph 31.

29. There was agreement in the Working Group to delete recommendation 2(b), and a suggestion was noted to make necessary changes to the title of recommendation 2 after the elimination of 2(b).

30. Some delegations were of the view that the text in recommendation 2(c) might imply that business registration was mandatory for MSMEs. The Secretariat was

requested to clarify the text and to consider changes along the lines of making recommendation 2(c) "subject to the minimum procedures as required by law."

4. Key features of a business registration system: paragraphs 34 to 39 and recommendation 3

31. The Working Group recalled its earlier decision (see paras. 31–37 A/CN.9/900) that the text of recommendation 3(d) should be retained since reliability was said to be a key feature of a business registration system, regardless of the method that a State used to ensure that reliability. The Working Group, however, requested the Secretariat to adjust recommendation 3(d) in order to clarify that the registry system and the registered information were of good quality and reliable when they were secure and kept current with periodic updates. It was further observed that in redrafting recommendation 3(d) the Secretariat might have to adjust the terminology, since certain terms (e.g. secure, current) might not be used interchangeably in relation to systems and information.

32. The Working Group agreed that the phrase "is not a legal standard" could be deleted from the current definition of "reliable" in paragraph 13. Further, and in keeping with its previous decision that the phrase "good quality and reliable" should be retained in order to ensure adequate reference to the concept of reliability (see para. 33, A/CN.9/900), the Working Group also supported a suggestion that the definition of the term "reliable" in paragraph 13 should be replaced with a definition of the phrase "good quality and reliable" in order to make it more consistent with the revision agreed to the text of recommendation 3(d) (see para. 31 above). The Secretariat was also requested to ensure consistency with respect to the terms: "system", "process" and "information", for example, in paragraph 34, which referred to both "system" and "process", and in the recommendation, which referred only to "system". Additional lack of clarity was observed in respect of: the penultimate sentence of paragraph 36, in terms of whether "certain requirements in the way it is submitted" was intended to refer to paragraphs 37 and 38; and regarding which aspects of the commentary were intended to refer to MSMEs (as noted in recommendation 2(b)), or whether the entire legislative guide was intended as being suited to the needs of MSMEs.

33. A suggestion was made that reference to sex-disaggregated data could be included in paragraph 36 as well as in other appropriate sections of the legislative guide in order to be consistent with most recent best practice. There was support in the Working Group for that suggestion, although its specific implementation was left to the Secretariat.

34. In response to the observation that subparagraph 39(c) did not appear to be consistent with the rest of paragraph 39, which dealt with the security and integrity of the registry record, the Working Group requested the Secretariat to replace the phrase "to deny access to registry services" with text along the lines of "to modify information that has been submitted to the registry".

C. Establishment and functions of the business registry

1. Responsible authority: paragraphs 40 to 43 and recommendation 4

35. After consideration of a possible replacement for the term "competence" in paragraph 43 and recommendation 4, the Working Group approved of paragraphs 40 to 43 and recommendation 4 as drafted.

2. Appointment and accountability of the registrar: paragraphs 44 to 46 and recommendation 5

36. It was observed that in some States, a delegation of power by the registrar to persons appointed to assist in the performance of the registrar's duties was only possible in a limited sense and that, in other States, registrars were elected. In light of those clarifications, the Working Group agreed that the term "should" in the final

sentence of paragraph 45 should be changed to "may", and that the commentary should be adjusted to note that the "appointment" of a registrar was intended to include all methods by which a registrar was selected, including by way of election. With those changes, the Working Group approved of paragraphs 44 to 46 and recommendation 5 as drafted.

3. Transparency in the operation of the business registration system: paragraphs 47 and 48 and recommendation 6

37. The Secretariat was requested to include the concept of simplification into paragraph 47. The suggestion to add "simplified" or "simplified process" somewhere around the phrase "limited number of steps" in the second sentence was noted.

38. The proposal to change "rules or criteria" to "rules, procedures and service standards" was supported by the Working Group, as was a suggestion to include "developed for the operation of the business registration system". The revised recommendation would thus read: "The registrar should ensure that the rules, procedures and service standards that are developed for the operation of the business registration system are made public to ensure transparency of the registration procedures."

4. Use of standard registration forms: paragraph 49 and recommendation 7

39. Although it was noted that the text in footnote 58 was intended to address the request of the Working Group at its twenty-eighth session (para. 43, A/CN.9/900) that the submission of additional materials by businesses registering should be permitted, there was agreement in the Working Group to incorporate the text of footnote 58 into the commentary. A request to include a reference to the fees part of the legislative guide (paras. 199 to 201 and recommendation 39) was also supported by the Working Group, as was a request to insert the word "simple" before "standard registration form."

5. Capacity-building for registry staff: paragraphs 50 to 53 and recommendation 8

40. The Working Group agreed with the substance of paragraphs 50 to 53 and recommendation 8 of the legislative guide as drafted.

6. Core functions of business registries: paragraphs 54 to 62 and recommendation 9

41. After discussion, the Working Group agreed to retain recommendation 9 and the relevant commentary. In that regard, the Secretariat was requested to consider the following suggestions for amendment of the commentary:

(a) The text of paragraph 55 could be improved so as to avoid possible inconsistency and overlap between the different subparagraphs (for instance, it was noted that the phrase "facilitate trade and interactions" in subparagraph (a) could overlap with the phrase "disclose the existence of the business" in subparagraph (b));

(b) The current text of subparagraph 55 (c) could be replaced with text along the lines of "conferring legal existence on legal persons and recording their legal existence in the cases provided by law";

(c) Information on the email address and the name of the business could be added to paragraph 59, which might also clarify that: (i) information on the business contacts could only be made publicly available if the business agreed; and (ii) making information on the business available to the public was not a mandatory requirement for a State. Moreover, the order in which information was presented in paragraph 59 could be reorganized so that information on who was authorized to sign on behalf of the business or served as the business's legal representative was mentioned before information on its telephone number and address of the business, since that information was of greater importance for third parties;

(d) The function of a business registry to publicize the legal effects of the information maintained in the registry could be included; and

(e) The commentary could include reference to the authority of the State to entrust additional functions to the business registry in addition to those listed in the recommendation, without providing any list of such additional functions.

42. The Working Group also raised a number of concerns in respect of the list of subparagraphs to recommendation 9, including the length of the list and the fact that not all business registries performed all of the functions listed. There was support for a suggestion to amend the chapeau of the recommendation along the following lines: "The law should establish the functions of the business registry, which may include:".

43. The Working Group agreed that the list of functions in recommendation 9 should be reduced to the core functions of a business registry, keeping in mind the general principles enunciated in paragraph 55, and that all other functions currently listed in recommendation 9 should be deleted.

44. After further discussion, a proposal was made to revise the text of recommendation 9 as follows:

"The law should establish the core functions of the business registry, including:

"(a) Providing access to the public of relevant information collected by the business registry;

"(b) Registering the business when the business fulfils the necessary conditions established by the law;

"(c) Assigning a unique business identifier to the registered business;

"(d) Sharing information among the requisite public agencies;

"(e) Ensuring that the information in the registry is kept as current as possible[19]; and

"(f) Protecting the integrity of the information in the registry record".

45. The Working Group supported that proposal, with the following amendments: (a) the inversion of subparagraphs (a) and (b); (b) the modification of subparagraph (e) to read "Keeping the information in the business registry as current as possible"; (c) to include a recommendation instructing the registrar to publicize relevant information concerning the establishment of a business, including associated obligations and responsibilities, and the legal effects of information in the business registry; and (d) to include a recommendation along the lines of "Where applicable, assisting businesses in searching and reserving a business name". With those amendments, the text of recommendation 9 was adopted and the Secretariat was requested to modify the commentary, including paragraph 55, to be in line with the amended version of recommendation 9.

7. Storage of and access to information contained in the registry: paragraphs 63 to 65 and recommendation 10

46. A suggestion was made to change the phrase "process and store all information" in recommendation 10 to "process, store and provide access to all information" so as to accord with its title. However, it was observed that such an inclusion might not be necessary in light of Section VI. B. on "Public availability of information" (paras. 172 to 179) and recommendation 32 of the draft legislative guide. It was observed that the intention of paragraphs 63 to 65 and recommendation 10 was not to focus on providing public access to the information, but rather to ensure that information was stored and shared throughout the registry system through full interconnectivity and multiple access points. The Secretariat was requested to amend the commentary to reflect more clearly that focus, including possibly adjusting the

[19] The new suggested text of recommendation 9(e) is intended to encompass the preservation of historical information on the business such as that indicated in recommendation 9 (e) of A/CN.9/WG.I/WP.106.

recommendation along the lines of changing "process and store all information" to "process, store and provide access to information".

D. Operation of the business registry

1. Operation of the business registry: paragraph 66; Electronic, paper-based or mixed registry: paragraphs 67 to 70; Features of an electronic registry: paragraphs 71 to 75; Phased approach to the implementation of an electronic registry: paragraphs 76 to 84; Other registration-related services supported by ICT solutions: paragraphs 85 to 88 and recommendation 11

47. In respect of footnote 69, the Working Group agreed that the draft legislative guide should be careful to accommodate emerging technology that might further improve the operation of a business registry. To that end, there was agreement that the commentary should include reference to "distributed ledger technology" and other technologies that States might consider when reforming their business registry systems.

48. After discussion, the Working Group agreed to keep intact the structure of the draft legislative guide and to request the Secretariat to review the draft legislative guide generally for references to "developing" States and make appropriate adjustments, including, for example, deleting the phrase "in developing countries" in the third sentence of paragraph 67 and replacing it with text along the lines of "in many jurisdictions". There was also agreement in the Working Group to delete the phrase "to inform their risk analysis of" in subparagraph 69(g) and to make editorial adjustments to the remaining text as necessary. The Secretariat was also requested to ensure that all references in the text of the legislative guide to "paper-based" and "electronic" registry systems listed electronic systems first.

2. Electronic documents and electronic authentication methods: paragraph 89 and recommendation 12

49. A view was expressed that online payments should be included in the commentary to recommendation 12, as they, along with the recognition of electronic signatures, and functional equivalence between document types, would form a legal framework for an electronic business registration system. The Working Group determined that the discussion of electronic payments in recommendation 42 did not need to be relocated within the draft legislative guide, but that a cross reference to recommendation 42 could be included in paragraph 89. It was further suggested that the "three pillars" of an electronic registry system, that is: (a) electronic payments; (b) electronic signatures; and (c) electronic documents, should be included in the commentary.

50. A concern was raised by several delegations that legal standards for electronic documents should not be tailored to business registries, but instead should be compatible with the domestic law of the enacting State. It was recalled that "law" as defined by paragraph 13 was not limited to specific rules adopted to establish the business registry, but included the broader body of domestic law that may be relevant to issues relating to the business registry.

51. It was noted that paragraph 89 and footnote 85 provided references to existing UNCITRAL documents on electronic commerce that were meant to provide further guidance to enacting States and many delegations were of the view that recommendation 12 was therefore too detailed. After discussion, the Secretariat was requested to redraft recommendation 12 by retaining 12(a) and combining elements of 12(b)(i) and 12(b)(iv). The Working Group agreed to delete the rest of the recommendation.

3. A one-stop shop for business registration and registration with other authorities: paragraphs 90 to 100 and recommendation 13

52. It was proposed that the definition of "one-stop shop" in paragraph 13 could be broadened to ensure that it included the concept of establishing a single "gateway"

for interaction between a business and the State. There was support for that suggestion, which included requesting the Secretariat to ensure that that concept was sufficiently included in the commentary so as to also satisfy a suggestion that additional reference to "interoperability" might be required in the commentary. A general proposal was also made to include reference to a "single payment form" in the text, to the extent it had not already been reflected in the draft legislative guide.

53. The Working Group agreed to modify paragraph 92 as follows: (a) in the third sentence, the phrase "The most common of these other functions" should be replaced with text along the lines of "A common additional function"; (b) in the final sentence, the phrase "In rare cases," should be replaced with text along the lines of "Other"; (c) additional examples should be added to the final sentence, such as official diaries and journals, intellectual property registries, and import-export registries. It was observed that not all of the examples of other authorities in the commentary in paragraphs 90 to 100 were confined to public authorities, and that care might be taken to note when such potential participants were instead private sector actors.

54. Various proposals were made to adjust the text of recommendation 13, including possibly changing the reference to "a web platform" in paragraph (a) to "an electronic platform". A suggestion to delete the phrase "but at a minimum should include taxation and social services agencies" in paragraph (b) was made. The Working Group agreed to delete the phrase "at a minimum", possibly replacing "but at a minimum should include" with "including, but not limited to". There was also agreement to ensure that the phrase describing the main relevant public authorities should be standardized, possibly as "business registry, taxation and social security authorities" or by using a defined term, and that "business registry" should be added to paragraph (b).

4. Use of unique business identifiers: paragraphs 101 to 109; Allocation of unique business identifiers: paragraphs 110 and 111; Implementation of a unique business identifier: paragraphs 112 to 116; Exchange of information among business registries: paragraphs 117 and 118; Recommendations 14, 15 and 16

55. In keeping with its earlier decisions (see paras. 48 and 54 above), the Working Group reiterated that the word "developed" should be deleted from the opening phrase of paragraph 104, and that the phrase describing the main relevant public authorities with which a business might have to register should be standardized in the text.

56. The Working Group recalled its decision that the definition of "one-stop shop" in paragraph 13 should include a reference to an integrated application form for registration with business registry, taxation and social security authorities that included all of the information required by those agencies (see para. 52 above). The Secretariat was requested to ensure that appropriate references were also included in paragraph 102 of the draft legislative guide.

57. With those suggested amendments, the Working Group agreed with the substance of paragraphs 101 to 118 and recommendations 14 to 16 of the legislative guide.

5. Sharing of protected data between public agencies: paragraph 119 and recommendation 17

58. The Working Group requested the Secretariat to add the phrase "between public agencies" in the first sentence of paragraph 119, after the term "information-sharing", and to consider whether the use of the term "unique business identifier" in recommendation 17 (and possibly elsewhere in the text) and "unique identifier" as defined in paragraph 13 should be made consistent throughout the draft legislative guide.

59. It was further noted that the terms "information" and "data" appeared to be used interchangeably in the draft legislative guide, although the two terms were not completely synonymous, since data usually referred to information collected electronically or used for decision-making. The Secretariat was requested to review the use of those terms and make appropriate changes throughout the text.

60. With those amendments, the Working Group agreed with the substance of paragraph 119 and recommendation 17 of the legislative guide.

E. Registration of a business

1. Scope of examination by the registry: paragraphs 120 to 122; Accessibility of information on how to register: paragraphs 123 to 127 and recommendation 18

61. It was noted that the term "legal framework" in paragraph 120 and elsewhere in the draft legislative guide might not be consistent with the broader definition of "law" in paragraph 13, and there was support for the suggestion that the text should be standardized to use the defined term "law". An additional suggestion was that the phrase "only records facts" in the final sentence of paragraph 120 should be replaced with "only records information submitted to the registry by the registrant". The Working Group also supported the suggestion that the opening phrase "The law should provide that" should be used at the beginning of recommendation 18.

62. The Working Group also agreed to replace the phrase "court-based registration systems" in the first sentence of paragraph 121 (and throughout the text) with an appropriate term along the lines of "verification-based systems" or "systems under the oversight of the judiciary", as it was noted that in many States the court only performed a supervisory role of the business registry, but was not directly involved in the actual management of the registry.

63. In paragraph 122, the Working Group agreed to delete the phrase "and disadvantages" in the first sentence so as to focus only on the advantages of the different registration systems. It was further agreed that: (a) the paragraph could highlight additional advantages of the approval system (such as the protection of third parties); (b) the phrase "and better-suited to deterring corruption by avoiding an opportunity for official decisions to be made with a view towards personal gain" could be replaced with a phrase along the lines of "to avoid the improper use of discretion by registry officials"; (c) the word "usually" in the second sentence should be deleted; and (d) the phrase "Systems in which business registration procedures are entrusted to an administrative body under the oversight of the judiciary have been said to merge" in the final sentence should be replaced with the phrase "Some systems have merged the".

64. After additional discussion, the Working Group agreed to a proposal that paragraph 122 should be replaced with the following text:

> "Both the approval and the declaratory systems have their advantages. Approval systems intend to protect third parties by preventing errors or omissions prior to registration. Courts and/or intermediaries exercise a formal review and, when appropriate, also a substantive review of the prerequisites for the registration of a business. On the other hand, declaratory systems are said to reduce the inappropriate exercise of discretion; furthermore, they may reduce costs for registrants by negating the need to hire an intermediary and appear to have lower operational costs. Some systems have been said to merge advantages of both the declaratory and approval systems by combining ex ante verification of the requirements for establishing a business with a reduced role for the courts and other intermediaries, thus simplifying procedures and shortening processing times."

65. With those amendments, the Working Group agreed with the substance of paragraphs 120 to 127 and recommendation 18.

2. Businesses permitted or required to register: paragraphs 128 to 131 and recommendation 19

66. It was suggested that, in some instances, business registration for MSMEs might not result in an advantage for them and could instead prove burdensome. A proposal was supported by the Working Group to modify the text of paragraph 131 to emphasize the point that as long as a benefit could be gained, a business should not

be discouraged from registering due to high transaction costs and administrative obstacles.

67. The Working Group agreed to modify 19(a) to read: "that businesses of all sizes and legal forms are permitted to register; and". It was also agreed that the concept of "permitted to register" should include registration with all required registries including business, taxation and social security registries (see recommendation 1).

3. Minimum information required for registration: paragraphs 132 to 136 and recommendation 20

68. The Working Group requested the Secretariat to review the text in light of the following drafting proposals:

(a) In paragraph 132, to add the word "information" between the words "certain" and "requirements" in the first sentence and to delete the word "registered" before the word "information" in the second sentence;

(b) To split the reference to "name and address" in paragraph 133 and recommendation 20 into two separate requirements so as to reflect the importance of providing the name of the business;

(c) To consider whether the term "founders" was the correct term in paragraph 133 and possibly elsewhere in the text;

(d) To review paragraphs 134 to 136 to remove any redundancies, since they seemed to consider similar issues, for example, in the discussion of beneficial ownership;

(e) To standardise the terminology used in paragraph 133(c) and recommendation 20(c) with that of paragraph 59; and

(f) To add the unique business identifier, if one had already been obtained, to the information that might be required.

69. There was agreement in the Working Group that gathering information in respect of the sex of the registrant or persons associated with the business could be statistically important, particularly in light of programmes to support women and improve gender balance. However, it was further agreed that such gender information raised privacy issues, should be requested only on a voluntary basis as well as in a non-binary fashion, should be treated as non-public information as to individuals and should be made available only on a statistical basis. Other statistical information that could be requested on a non-compulsory basis could include information on visible minorities or different language groups, again, so as to promote their wider participation in the business world. The Working Group agreed to refer to those issues in paragraph 134.

4. Language in which information is to be submitted: paragraphs 137 to 139 and recommendation 21

70. The Working Group agreed with the substance of paragraphs 137 to 139 and recommendation 21 of the legislative guide as drafted.

5. Notice of registration: paragraph 140 and recommendation 22

71. The Working Group agreed with the substance of paragraph 140 and recommendation 22 of the legislative guide as drafted.

6. Content of notice of registration: paragraph 141 and recommendation 23

72. The Working Group agreed with the substance of paragraph 141 and recommendation 23 of the legislative guide as drafted.

7. Period of effectiveness of registration: paragraphs 142 to 145 and recommendation 24

73. The Working Group agreed with the substance of paragraphs 142 to 145 and recommendation 24 of the legislative guide as drafted.

8. Time and effectiveness of registration: paragraphs 146 to 148 and recommendation 25

74. A request to move the substance of footnote 162 into the commentary was supported by the Working Group. It was suggested that "in that order" could be deleted from recommendation 25(a) as it did not account for instances of States that permitted the processing of expedited registrations subject to an additional fee or when the application was made electronically or when standard forms or documents were used. After discussion, the Working Group agreed to retain recommendation 25 as drafted so as to avoid any unnecessary exercise of discretion on the part of registry staff, but to clarify the commentary to account for such an exception.

9. Rejection of an application for registration: paragraphs 149 to 152 and recommendation 26

75. The Working Group supported a proposal that paragraphs 149 and 150 be moved after paragraph 136, before recommendation 20, in section D ("Minimum information required for registration"), as it was said that such paragraphs dealt with instances in which the registrar would refuse registration because of errors in the entry of information in the application form. Support was also expressed for adjusting the text in paragraph 152 in accordance with that change and to move any reference in that paragraph to the processing of registration forms under section D.

76. In response to concerns expressed in regard to possible ambiguity arising from the use of the concepts of objective and subjective requirements (both in recommendation 26(a) and in paragraph 151), the Working Group agreed to delete the term "objective" in recommendation 26(a) and to add a new subparagraph in the recommendation along the lines of "the registrar should not have the authority to reject an application based on substantive grounds." The Working Group further agreed that the final sentence of paragraph 151 should be adjusted to mirror the new wording of the recommendation and that reference to "substantive legal requirements", if necessary, should be replaced with "substantive grounds".

10. Registration of branches: paragraphs 153 to 155 and recommendation 27

77. The Secretariat was requested to consider whether additional text was required in the commentary to clarify that, in some jurisdictions, branches were not required to register. Subject to that possible amendment, the Working Group agreed with the substance of paragraphs 149 to 152 and recommendation 26 as drafted.

F. Post-registration

1. Paragraphs 156 and 157

78. The Working Group agreed with the substance of paragraphs 156 and 157 of the legislative guide as drafted.

2. Information required after registration: paragraphs 158 and 159 and recommendation 28

79. A proposal to delete the portion of recommendation 28(a) after the phrase "recommendation 20" was supported by the Working Group, and the Secretariat was requested to make any necessary changes to the commentary to reflect the concept deleted, i.e. that, when required by the State, any changes or amendments to information initially or subsequently required must be filed with the business registry. With those adjustments, the Working Group agreed with the substance of paragraphs 158 and 159 and recommendation 28.

3. Maintaining a current registry: paragraphs 160 to 164 and recommendation 29

80. There was agreement in the Working Group that recommendation 29(a) should be adjusted to reflect that "sending an automated request" was only one way the law could require the registrar to ensure that the information in the business registry was kept current, and to reflect other best practices in the recommendation. It was further suggested that the onus be placed on the registrar to proactively identify sources of information to keep the register up to date. With those changes, the Working Group agreed with the substance of paragraphs 160 to 164 and recommendation 29.

4. Making amendments to registered information: paragraphs 165 and 166 and recommendation 30

81. The Working Group agreed with the substance of paragraphs 165 and 166 and recommendation 30 of the legislative guide as drafted.

G. Accessibility and information-sharing

1. Public access to business registry services: paragraphs 167 to 171 and recommendation 31

82. It was noted that paragraphs 167 to 171 and recommendation 31 pertained to the access of a registrant to registry services. The Working Group supported a proposal to eliminate the word "public" from the titles of the section and of recommendation 31. With that change, the Working Group agreed with the substance of paragraphs 167 to 171 and recommendation 31.

2. Public availability of information: paragraphs 172 to 179 and recommendation 32

83. There was broad support within the Working Group to include the phrase "fully and readily" before the word "available" in recommendation 32, as well as to change "will" to "may" at the beginning of the second sentence of paragraph 172. With those adjustments, the Working Group agreed with the substance of paragraphs 172 to 179 and recommendation 32.

3. Where information is not made public: paragraphs 180 and 181 and recommendation 33

84. A possible ambiguity in respect of the phrase "list the types of information" was noted in the text of recommendation 33(a) and the Secretariat was requested to clarify that the registrar may not decide, but should only publicize, the types of information that cannot publicly be disclosed according to applicable law. With that change, the Working Group agreed with the substance of paragraphs 180 and 181 and recommendation 33.

4. Hours of operation: paragraphs 182 to 184 and recommendation 34

85. The Working Group agreed that "these recommendations" in the final sentence of paragraph 182 should provide greater specificity and be changed to text along the lines of "the requirements above". With that change, the Working Group agreed with the substance of paragraphs 182 to 184 and recommendation 34.

5. Direct electronic access to submit registration, to request amendments and to search the registry: paragraphs 185 to 188 and recommendations 35 and 36

86. It was agreed that the phrase "and to search the registry" should be deleted from the title of recommendation 35 and that the phrase "private computer" in the first sentence of paragraph 185 should be changed to text along the lines of "electronic device". The Working Group also agreed to delete "or the assistance of registry staff" from recommendation 35, and to make any necessary clarification to paragraph 186 to ensure that the focus was on the electronic submission of information and not on

the entry of data into the business registry. With those changes, the Working Group agreed with the substance of paragraphs 185 to 188 and recommendations 35 and 36.

6. Facilitating access to information: paragraphs 189 to 194 and recommendation 37

87. As a matter of drafting, the Secretariat was requested to review the use of the defined term "registered information" in recommendation 37 and elsewhere in the text (including in the commentary to recommendation 38), since the definition included protected information, which might not be appropriate in every instance. The Secretariat was requested to redraft paragraph 189 to eliminate information on how to register a business that might also be found in relation to recommendation 18 and to refer in paragraph 192 to "Part VII: Fees". A suggestion to group similar types of information listed in paragraph 189 together in order to make it more reader-friendly was supported by the Working Group.

88. There was support within the Working Group to delete the word "prohibitively" from recommendation 37 and to replace the phrase "to business registration" with text along the lines of "to information on businesses that are registered".

7. Cross-border access to registered information: paragraphs 195 and 196 and recommendation 38

89. The Working Group supported the following drafting proposals: (a) duplication of commentary in the previous section and in paragraph 196 regarding access of information generally should be eliminated; (b) as agreed previously (see para. 61 above), the Secretariat should review the entire text to ensure that all recommendations stated "The law should"; and (c) references in paragraph 196 should distinguish between information contained in the business registry and information about the business registry. With those adjustments, the Working Group agreed with the substance of paragraphs 195 and 196 and recommendation 38.

H. Fees

1. Paragraphs 197 and 198

90. It was observed that the phrases "information products" and "information services" used throughout the part on fees were not defined in paragraph 13, and it was suggested that they might either be defined or referred to consistently throughout the text.

91. Several drafting suggestions were made for paragraph 198, including: (a) to replace the fourth sentence with text along the lines of "Governments seeking to increase MSME registration and to support MSMEs throughout their lifecycle should consider offering registration and post-registration services free of charge."; (b) to delete the fifth sentence and the phrase "For instance," at the beginning of the sixth sentence; and (c) to substitute "encourages businesses to register" with text along the lines of "is not prohibitive for MSMEs" in the third to last sentence. With those adjustments, the Working Group agreed with the substance of paragraphs 197 and 198.

2. Fees charged for registry services: paragraphs 199 to 201 and recommendation 39

92. The Secretariat was requested to review the text to determine whether "registry services" in the title and the text of recommendation 39 might be changed to "business registry services" to render it consistent with the terminology used elsewhere in the draft legislative guide (for example, in paras. 167 and 171) and to distinguish them from other types of governmental registry services; the Working Group otherwise agreed with the substance of paragraphs 199 to 201 and recommendation 39.

3. Fees charged for information: paragraph 202 and recommendation 40

93. There was broad support within the Working Group to split recommendation 40 into two parts, with the first part ending after the phrase "free of charge", and the second part referring to fees that could be charged for "value-added information" (although a better term might be found, which should be rendered consistent with the

term “more sophisticated information services” in paragraph 202) and that such fees could be linked to the notion of cost-recovery.

94. The Secretariat was requested to redraft the commentary and recommendation 40 to reflect the discussion in the Working Group. Suggestions that the commentary might account for different users or include a cross-reference to or reiteration of some of the commentary in paragraph 194 (on bulk information) were noted.

4. Publication of fee amounts and methods of payment: paragraph 203 and recommendation 41

95. The Working Group agreed that text along the lines of “if any” should be inserted after the phrase “fees payable”, and with that change, agreed with the substance of paragraph 203 and recommendation 41.

5. Electronic payments: paragraph 204 and recommendation 42

96. The Working Group reiterated its earlier decision (see para. 49 above) that recommendation 42 should not be relocated to Part III of the legislative guide (“Operation of the business registry”), but that paragraph 89 and recommendation 12 should cross-refer to paragraph 204 and recommendation 42.

97. A suggestion to delete the phrase “Once States have reached a certain level of technological maturity” from the first sentence of paragraph 204 was accepted by the Working Group on the understanding that text reflecting a sensitivity to States subject to the “digital divide” could be reflected elsewhere in the draft legislative guide. In order to accommodate ongoing developments in technology, the Working Group also agreed to replace the reference to “use of mobile payments” in the first sentence of paragraph 204 with a phrase along the lines of “use of mobile payments and other modern forms of technology”. With those amendments, the Working Group agreed with the substance of paragraph 204 and recommendations 42.

I. Liability and sanctions

1. Liability and sanctions: paragraph 205; Liability for misleading, false or deceptive information: paragraph 206 and recommendation 43

98. It was noted that paragraph 209 provided ways in which a business could be informed of its obligation to provide timely and accurate information to the business registry so as to avoid the need for sanctions. A proposal to relocate that paragraph to immediately follow paragraph 205, so that the discussion appeared before the part on sanctions, was noted.

99. It was recalled that the concept of the publication of the legal effects of information maintained in the registry had been suggested for inclusion into the commentary that preceded recommendation 9 and possibly recommendation 1. It was agreed by the Working Group that the concept of opposability of that information to third parties could be incorporated in paragraph 206 as well, since it was related to potential liability to third parties for both supplying misleading, false or deceptive information and failing to supply information. As a matter of drafting, the Secretariat was requested to standardize references to “liability” or “responsibility” and to elaborate on the phrase “such information” in paragraph 206.

100. Several delegations were of the view that recommendation 43 should separate inadvertent failure to submit information from the intentional submission of false and misleading information or intentional withholding of required information, since inadvertent failure to submit ought not be punished to the same extent as wilful actions. After discussion, the Working Group agreed to leave recommendation 43 as drafted but requested the Secretariat to incorporate the discussion of the Working Group into the commentary, particularly noting that the failure to submit necessary information could amount in some cases to contributing to the existence of misleading, false or deceptive information on the business register. It was further

agreed that recommendation 43 left maximum flexibility for the establishment of liability up to the State through the use of the term "appropriate liability".

2. Sanctions: paragraphs 207 to 209 and recommendation 44

101. The Working Group agreed that the last sentence of paragraph 208 should be deleted, since disqualification of directors was said to be a topic pertaining to corporate law rather than business registration.

102. In keeping with its consideration of issues relating to liability, the Working Group agreed to the following adjustments to subparagraph (a) of recommendation 44: (a) to delete the phrase in brackets; (b) to include the term "appropriate" between "establish" and "sanctions"; and (c) to replace the phrase "under the law, including the provision of accurate and timely information to the business registry" with a phrase along the lines of "regarding information to be submitted to the registry in an accurate and timely fashion".

3. Liability of the business registry: paragraphs 210 to 215 and recommendation 45

103. It was suggested that paragraph 211 (in particular the last sentence) could be clarified in order to take into consideration the practice of some States with electronic registration systems where registry staff must nonetheless enter the information submitted by the registrant into the registry. Support for that suggestion was expressed by the Working Group. It was also agreed that the commentary should reflect the fact that in many States the question of business registry liability was a question for other laws of the State and not a question for the law on business registration.

104. After discussion, the Working Group agreed to modify the text of recommendation 45 along the following lines: "The law should establish whether and to what extent the State is liable for loss or damage caused by error or negligence of the business registry…".

J. Deregistration

1. Paragraphs 216 to 219 and recommendations 46 and 47

105. Support was expressed in the Working Group for a proposal to add a new subparagraph (c) to recommendation 46 that encouraged States to adopt simplified procedures for the deregistration of MSMEs. The Working Group also requested the Secretariat to include any necessary changes to reflect that addition in the commentary for recommendation 46. Moreover, the Working Group agreed to specify in paragraph 219 that deregistration should, in principle, be free of charge.

106. In order to widen the scope of recommendation 47 to include those cases in which deregistration was carried out by the registrar upon court order, the Working Group agreed to delete the phrase "at its own initiative". The Working Group further agreed to change the title of recommendation 47 to "Involuntary deregistration".

2. Process of deregistration: paragraphs 220 and 221 and recommendation 48; Time of effectiveness of business deregistration: paragraph 222 and recommendation 49

107. The Working Group agreed to revise the third sentence in paragraph 220 to phrasing along the lines of "without providing third parties the opportunity to protect their rights" and to strike the introductory clause "If there is no objection to the procedure" from the fourth sentence.

108. In terms of structure, the Working Group supported a proposal to eliminate recommendation 49(b) and to combine recommendations 48 and 49, as well as the commentary in sections B ("Process of deregistration") and C ("Time of effectiveness of business deregistration"). The Secretariat was also requested to move the last three sentences of paragraph 218, which addressed written notice, to the commentary for recommendation 48, and to review and eliminate any portions of paragraph 221 on preservation of records if they were repeated in "Part X: Preservation of records".

3. Reinstatement of registration: paragraph 223 and recommendation 50

109. The Working Group agreed with the substance of paragraph 223 and recommendation 50 of the legislative guide as drafted.

K. Preservation of records

1. Paragraphs 224 to 227 and recommendation 51

110. A suggestion to move "Part X: Preservation of records" to a position earlier in the text was not taken up and the Working Group agreed with the substance of paragraphs 224 to 227 and recommendation 51 of the legislative guide as drafted.

2. Amendment or deletion of information: paragraphs 228 and 229 and recommendation 52

111. It was observed that reference to "registry staff" in paragraph 228 and elsewhere in the text might be changed to "registrar", and with that change, the Working Group agreed with the substance of paragraphs 228 and 229 and recommendation 52.

3. Protection against loss of or damage to the business registry record: paragraphs 230 and 231 and recommendation 53

112. It was observed that recommendation 53 should refer to the "registrar" rather than the "business registry", and with that amendment, the Working Group agreed with the substance of paragraphs 230 and 231 and recommendation 53.

4. Safeguard from accidental destruction: paragraph 232 and recommendation 54

113. The Working Group agreed with the substance of paragraph 232 and recommendation 54 of the legislative guide as drafted.

L. Annex: The underlying legislative framework

Flexible legal forms: paragraphs 7 to 10 and recommendation 2/Annex

114. After a discussion in which strongly held divergent views were expressed, the Working Group agreed as follows: (a) the following text should be added to recommendation 2/Annex: "States should consider providing for the optional use of intermediaries for MSMEs."; (b) to add to the end of the second sentence of paragraph 7 the phrase "and less costly" after "much simpler"; and (c) in the final sentence of paragraph 7, to insert a full stop instead of a semicolon after the phrase "through the business registry", to delete "and" and to insert the phrase "There are many States in which" before the phrase "the involvement of a lawyer". The Working Group further agreed that the remainder of the Annex would be the subject of discussion at a future session, but that the drafting of paragraph 7 of the Annex and recommendation 2/Annex should not be revisited by the Working Group.

V. Other matters

115. The Working Group recalled that its thirtieth session would be held in New York from 12 to 16 March 2018. It was confirmed that the Working Group would return at that session to its consideration of a revised text of the draft legislative guide on key principles of a business registry, particularly of the introductory section (paras. 1 to 25 A/CN.9/WG.I/WP.106) and the Annex, but only of those aspects of the text that the Secretariat had been requested by the Working Group to extensively revise. The Working Group also agreed that it would take up the overarching document A/CN.9/WG.I/WP.107 on "Reducing the legal obstacles faced by MSMEs" which set out more generally the context for its work on MSMEs. There was further agreement that once those tasks had been completed, the Working Group would resume its

consideration of the draft legislative guide on an UNLLO found in documents A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1.

B. Note by the Secretariat on a draft legislative guide on key principles of a business registry

(A/CN.9/WG.I/WP.106)

[Original: English]

Contents

Introduction

1. The present legislative guide has been prepared on the understanding that, for the reasons described in document A/CN.9/WG.I/WP.107 (formerly A/CN.9/WG.I/WP.92), it is in the interests of States and of micro, small and medium-sized enterprises (MSMEs) that such businesses migrate to or be created in the legally regulated economy. In addition, this guide is also intended to reflect the idea that entrepreneurs that have not yet commenced a business may be persuaded to do so in the legally regulated economy if the requirements for formally starting their business are not considered overly burdensome. Finally, these materials are prepared on the understanding that, regardless of the particular nature or legal structure of the business, the primary means for an MSME to enter the legally regulated economy in most cases is through registration of their business.

2. As the Working Group may recall, it agreed[1] at its twenty-fifth session that document A/CN.9/WG.I/WP.107, should be prepared as an introductory document that, once adopted, was intended to form a part of the final text and provide an overarching framework for current and future work by UNCTRAL to assist MSMEs in overcoming the legal barriers faced by them during their life cycle. Underpinning that contextual framework would be a series of legal pillars, which would include both legislative guides currently under preparation by the Working Group – the present guide on key principles of a business registry and the other guide on an UNCITRAL limited liability organization[2] – as well as any other materials adopted by UNCITRAL in respect of MSMEs. In summary, A/CN.9/WG.I/WP.107 currently outlines the following themes as key to UNCITRAL's approach to its MSME work:

---

[1] As agreed by the Working Group (para. 87, A/CN.9/866) and approved by the Commission (*Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17) para. 222).

[2] See A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1.

(a) The importance of MSMEs in the global economy;

(b) Each State should decide what constitutes a micro, small or medium-sized business in its own economic context, the common factor being that the smallest and most vulnerable businesses require assistance;

(c) Although MSMEs are incredibly disparate in their size, goals, the commercial sector in which they operate and their general nature, they usually face a number of common obstacles;

(d) Improving the business environment assists businesses of all sizes, not only MSMEs;

(e) Participation by MSMEs in the legally regulated economy can assist them in successfully negotiating the obstacles they face;

(f) States should make it simple and desirable for MSMEs to participate in the legally regulated economy by:

(i) Explaining what it means and by setting out the advantages for entrepreneurs, as well as by ensuring appropriate communication and education on those advantages and opportunities;

(ii) Making it desirable for MSMEs to conduct their activities in the legally regulated economy, for example, by offering them incentives for doing so; and

(iii) Making it easy for MSMEs to enter the legally regulated economy by enacting laws that:

a. Facilitate creation and operation of legally recognized simple and flexible legal forms that meet the needs of MSMEs;[3] and

b. Ensure that business registration is accessible, simple and streamlined.

3. In light of that general approach, in order to encourage entrepreneurs to start their business and conduct their activities in the legally regulated economy, States may wish to take steps to rationalize and streamline their system of business registration. The recommendations in this legislative guide are intended to be implemented by States that are reforming or improving their system of business registration. Further, as noted above, the present guide takes the approach that since business registration is the primary conduit through which MSMEs can become visible in the legally regulated economy and be able to access programmes intended to assist them, the business registry should continue to *require* only certain types of businesses to register, but it should *enable* all businesses to register. Moreover, general improvements made by a State to its business registration system may be expected to assist not only MSMEs, but businesses of all sizes, including those already operating in the legally regulated economy. Faster and simpler procedures to register a business will assist in business formation and its operation in the legally regulated economy. For these reasons, simplification and streamlining of business registration has become one of the most pursued reforms by States in all regions and at all levels of development. This trend has generated several good practices, whose features are shared among the best performing economies. In order to assist States wishing to reform their business registration procedures so as to take into consideration the particular needs of MSMEs, or simply to adopt additional good practices to streamline existing procedures, this guide sets out key principles and good practices in respect of business registration, and how to achieve the necessary reforms.

4. Further to discussion in the Working Group and decisions made at its twenty-fifth (October 2015) and twenty-sixth sessions (April 2016),[4] the Secretariat

[3] The Working Group is currently preparing a draft legislative guide aimed at this goal, see A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1.

[4] See para. 73, A/CN.9/860 and para. 51, A/CN.9/866.

prepared a consolidated draft legislative guide (A/CN.9/WG.I/WP.101), which addressed legal, technological, administrative and operational issues involved in the creation and implementation of a business registration system. The draft combined into a single text the draft commentary (A/CN.9/WG.I/WP.93, Add.1 and Add.2) and recommendations (A/CN.9/WG.I/WP.96 and Add.1) considered by the Working Group at its twenty-fifth and twenty-sixth sessions.

5. At its twenty-eighth session (May 2017), the Working Group reviewed that consolidated text (A/CN.9/WG.I/WP.101) save for the introductory section and draft recommendation 9 ("Core functions of a business registry") and its attendant commentary to which the Working Group agreed[5] to revert at a future session. The changes to the text arising from the deliberations of the Working Group at that session have been included in this revised draft legislative guide; guidance to the revisions made is reflected in footnotes throughout the text. In addition, the Secretariat has made editorial adjustments necessary to facilitate the cohesion and consistency of the text. Further to decisions of the Working Group at its twenty-eight session, in some cases the Secretariat has also changed the order of the recommendations and the relevant commentary; the recommendations have been renumbered consecutively and any cross-references adjusted accordingly.

A. Purpose of the present guide

6. Business registries are public entities, established by law, that record and update information on new and existing businesses that are operating in the jurisdiction of the registry, both at the outset and throughout the course of their lifespan.[6] This process not only enables such businesses to comply with their obligations under the domestic legal and regulatory framework applicable to them, but it empowers them to participate fully in the legally regulated economy, including enabling them to benefit from legal, financial and policy support services not otherwise available to unregistered businesses. Moreover, when information is appropriately maintained and shared by the registry, it allows the public to access business information, thus facilitating the search for potential business partners, clients or sources of finance and reducing risk when entering into business partnerships.[7] In performing its functions, the registry can thus play a key role in the economic development of a State. In addition, since businesses, including MSMEs, are increasingly expanding their activities beyond national borders, registries efficiently performing their functions can play an important role in a cross-border context[8] by facilitating access to business information of interested users from foreign jurisdictions (see also paras. 195 and 196 below),[9] which greatly reduces the risks of transacting and contracting.

7. Business registration systems vary greatly across States and regions, but a common thread to all is that the obligation to register can apply to businesses of all sizes depending on the legal requirements applicable to them under domestic law. Approaches to business registration reforms are most often "neutral" in that they aim at improving the functioning of the registries without differentiating between large scale business activities and much smaller business entities. Evidence suggests, however, that when business registries are structured and function in accordance with certain features, they are likely to facilitate the registration of MSMEs, as well as

[5] Agreed by the Working Group at its twenty-eighth session (para. 46, A/CN.9/900 and para. 82, A/CN.9/860).

[9] Council of the European Union, Council conclusions on the interconnection of business registers, 25 May 2010.

operating more efficiently for businesses of all sizes. These features are reflected as recommendations in this legislative guide.

8. This legislative guide draws on the lessons learned through the wave of reforms of business registration systems implemented since 2000 by various developed and developing economies.[10] Through this approach, the guide intends to facilitate not only efficient domestic business registration systems, but also cooperation among registries in different national jurisdictions, with a view to facilitating cross-border access to the registries by all interested users. Promoting the cross-border dimension of business registration contributes to foster transparency and legal certainty in the economy and significantly reduces the cost of businesses operating beyond their national borders (see also paras. 195 and 196 below).[11]

9. The present guide supports the view that transitioning to an electronic or mixed (i.e. paper and electronic) registration system, providing registration and post-registration services at no cost or at low cost, and collecting and maintaining high quality information on registered businesses greatly contribute to promoting the registration of MSMEs. Importantly, establishing a one-stop shop for business registration and registration with other authorities such as tax authorities, social services and the like greatly facilitates registration, particularly in the case of MSMEs, and can be expected to have a significant impact on their likelihood to enter the legally regulated economy. In this regard, it should be noted that the terms "business registry" and "one-stop shop" (i.e. a single interface for business registration) as used in this draft guide are not intended to be interchangeable. When these materials refer to the "business registry", it means the system for receiving, storing and making accessible to the public certain information about business entities. When the term one-stop shop is used, it refers to a single entry point, physical or electronic, that a business can use to achieve not only its registration as a business in the legally-regulated economy, but a single entry point to all other regulatory functions in the State that relate to starting and operating a business, including, for example, registering for tax purposes and for social services associated with the operation of a business.

10. These materials have benefited from various tools prepared by international organizations that have supported such reform processes, in particular, in developing and middle income economies. Data made available through the activity of international networks of business registries that, among other activities, survey and compare the practices of their affiliates in various States around the world have also been referenced. The main sources used in the preparation of this draft legislative guide include:

[*The Working Group may wish to note that reference to these specific resources will be changed in the final text to reference to the international organizations that prepared them*]

11. This legislative guide is addressed to States interested in the reform or improvement of their business registration systems, including all stakeholders in the State that are interested or actively involved in the design and implementation of business registries, as well as to those that may be affected by or interested in the establishment and operation of a business registry, such as:

(a) Policymakers;

(b) Registry system designers, including technical staff charged with the preparation of design specifications and with the fulfilment of the hardware and software requirements for the registry;

(c) Registry administrators and staff;

(d) Registry clientele, including business persons, consumers, and creditors, as well as the general public and all others with an interest in the appropriate functioning of the business registry;

(e) Credit agencies and other entities that will provide credit to a business;

(f) The general legal community, including academics, judges, arbitrators and practising lawyers; and

(g) All those involved in company law reform and the provision of technical assistance in the simplification of business registration, such as international organizations, bilateral donors, multilateral development banks and non-governmental organizations active in the field of business registration.

12. The present guide uses neutral legal terminology so that its recommendations can be adapted easily to the diverse legal traditions and drafting styles of different States. This draft legislative guide also takes a flexible approach, which will allow its recommendations to be implemented in accordance with local drafting conventions and legislative policies regarding which rules must be incorporated in principal legislation and which may be left to subordinate regulation or to ministerial or other administrative rules.

B. Terminology

13. The meaning and use of certain expressions that appear frequently in this draft legislative guide is explained in this paragraph. It is to be noted that whenever expressions such as annual accounts, periodic returns, documents, forms (such as search forms, registration forms or other forms to request registry services), notices, notifications and written materials are used, reference is intended to include both their electronic and paper versions unless otherwise indicated in the text. The most used expressions in this draft legislative guide include the following:

- *Annual accounts*: The term “annual accounts” means financial information on the business’ activities prepared at the end of a financial year of the business (see “periodic returns”).[14]

---

[13] UNCTAD is the United Nations Conference on Trade and Development. See http://businessfacilitation.org/index.html.

[14] See Guide to the International Business Registers Surveys 2016, page 2.

- *Branch*: The term "branch" means an entity carrying on business in a new location either within the jurisdiction in which it was formed or in another domestic or cross-border jurisdiction. The branch is not a subsidiary and does not have a separate legal personality from the original or main business.[15]

- *Business name*: The term "business name" means a name registered on behalf of a business.[16]

- *Business registry or business registration system*: The term "business registry or business registration system" means a State's system for receiving, storing and making accessible to the public certain information about businesses.

- *Deregistration*: The term "deregistration" means indicating in the registry that a business is no longer registered.

- *Electronic signature*: The term "electronic signature" means data in electronic form in, affixed to or logically associated with, a data message, which may be used to identify the signatory in relation to the data message and to indicate the signatory's approval of the information contained in the data message.[17]

- *ICT*: The term "ICT" means information and communications technology.

- *Law*: The term "law" means the applicable law in the enacting State and is intended to include both the specific rules adopted to establish the business registry (whether such rules are found in legislation or in administrative regulations or guidelines, see para. 1 in the Annex) and the broader body of domestic law that may be relevant to issues related to the business registry but are found outside of the specific rules establishing the business registry.[18]

- *Legally regulated economy*: The term "legally regulated economy" means that economic activity which takes place in a State within the context of the legal and regulatory regime that the State has established to govern such activity. The legally regulated economy does not include commercial activity that takes place outside of that context (sometimes referred to as the "extra-legal economy"), nor does it include trade in illicit goods or services.

- *Micro, small and medium-sized enterprises (MSMEs)*: The term "MSMEs" means micro, small and medium-sized enterprises as they are defined according to the criteria established by the relevant authority of the State in the law of the State undertaking the business registration reforms.

- *One-stop shop*: The term "one-stop shop" means a physical office, a single interface on an electronic platform or an organization that carries out more than one function relating to the registration of a business with the business registry and other government agencies (e.g. the taxation and social services authorities, and the pension fund) necessary in order for the business to operate in the legally regulated economy.

- *Periodic returns*: The term "periodic returns" means a statement provided annually or at other prescribed intervals which gives essential information about a business' composition, activities, and financial status, and which, subject to applicable law, registered businesses may be required to file with an appropriate authority (see "annual accounts").

- *Protected data*: The term "protected data" means all information that must be kept confidential pursuant to the applicable law of the enacting State.

---

[15] See The International Business Registers Report, 2015, page 43.
[16] See supra, footnote 14.
[17] See UNCITRAL Model Law on Electronic Signatures (2001), article 2.
[18] This approach incorporates the Working Group's suggestion at its twenty-eighth session to use the term "law" (para. 21, A/CN.9/900).

- *Registered business*: The term "registered business" means a business that, further to filing an application for registration, has been officially registered in the business registry.
- *Registered information*: The term "registered information" means information submitted to the registry, including protected data and information that will be made public.
- *Registrant*: The term "registrant" means the natural or legal person that submits the prescribed application form and any additional documents to a business registry.
- *Registrar*: The term "registrar" means the person appointed pursuant to domestic law to supervise and administer the operation of the registry.[19]
- *Registration*: The term "registration" means the entry of information required by domestic law into the business registry.
- *Reliable*: A business registration system and the information it contains is "reliable" when the registered data is of good quality and the system may be considered positively in terms of performance. "Reliable" is not a legal standard and does not refer to whether the information is legally binding on the registry, the registrant, the registered business, or third parties.[20]
- *Unregistered business*: The term "unregistered business" means those businesses that are not included in the business registry.
- *Unique identifier*: The term "unique identifier" means a set of characters (numeric or alphanumeric) that is allocated only once to a business and that is used consistently by the public agencies of a State.

C. Legislative drafting considerations

14. States implementing the principles contained in this legislative guide should consider whether to include them in a law, in a subordinate regulation, in administrative guidelines or in more than one of those texts. This matter would be left for enacting States to decide in accordance with their own legislative drafting conventions. In this respect, it should be noted that this guide does not distinguish between those concepts and uses the general term "law" of the enacting State. As noted in the section on terminology, such term is intended to denote both the rules adopted by the enacting State to establish the business registry and those provisions of domestic legislation in the broader sense that are somehow relevant to and touch upon issues related to business registration.[21]

D. The reform process

15. Streamlining business registration in order to meet the key objective of simplifying the registration process as well as making it time and cost efficient and user friendly (both for registrants and stakeholders searching the registry) usually requires undertaking reforms that address the enacting State's legal and institutional framework. It may also be necessary to reform the business processes that support the

[19] At its twenty-eighth session, the Working Group requested that the Secretariat clarify the difference between "authority" and "designated authority" in the legislative guide (para. 40, A/CN.9/900); instead, use of the defined term "registrar" is suggested as a means to clarify those concepts.

[20] The Working Group agreed at its twenty-eighth session (paras. 32-33, A/CN.9/900) that the Secretariat should adjust the definition of "reliable" in paragraph 13 (para. 12 in A/CN.9/WG.I/WP.101) and should ensure that the term was used consistently throughout the text. To that end, the Secretariat has revised the definition (see also para. 35 below and footnote 40).

[21] This paragraph incorporates the Working Group's suggestion at its twenty-eighth session to use the term "law" (para. 21, A/CN.9/900).

registration system. Sometimes reforms are needed in all of these areas. The approach taken in these reforms may vary considerably among States as the design and features of a registration system are influenced by the State's level of development, priorities and legal framework. There are, however, several common issues that States should consider and several similar recommended steps for reform regardless of jurisdictional differences that may exist. These issues are examined below.

1. The reform catalysts

16. Business registration reform is a multifaceted reform process that addresses various aspects of the State apparatus; its implementation requires the participation of a broad range of stakeholders and a thorough understanding of the State's legal and economic conditions, as well as of the practical needs of registry personnel and the intended users of the registry. To be successful, the reform must be driven by the need to improve private sector development and, for this reason, it is advisable that the reform be part of a larger private sector development or public sector modernization programme.[22] It is thus essential to gain an understanding of the importance of business registration in relation to other business environment challenges and of its relationship to other potential reforms. This analysis will require, as crucial preliminary steps, ensuring that domestic circumstances are amenable to a business reform programme, that incentives for such a reform exist and that there is support for such initiatives in the government and in the private sector prior to embarking on any reform effort.

(a) Relevance of a reform advocate

17. Support or even leadership from the highest levels of the State's government is of key importance for the success of the reform process. The engagement of relevant government ministries and political leadership in the reform effort facilitates the achievement of consensus on the steps required. This can be particularly important to facilitate access to financial resources, to make and implement decisions or when it is necessary to move business registry functions from one branch of government to another or to outsource them.[23]

(b) The steering committee

18. In order to oversee the day-to-day progress of the reform and to manage difficulties as they may arise, it is advisable that a steering committee be established to assist the State representative or body leading the reform. In addition to experts with technological, legal and administrative expertise, this committee should be composed of representatives of the public and private sector and should include a wide range of stakeholders, including those who can represent the perspectives of intended users. It may not always be necessary to create such a committee, since it may be possible to use existing mechanisms; in any event, a proliferation of committees is to be avoided, as their overall impact will be weakened.[24]

19. Experience indicates that a steering committee should have clearly defined functions and accountability; it is advisable that its initial setup be small and that it should grow progressively as momentum and stakeholder support increase. Although linked to the high level government body spearheading and advocating for the reform, the committee should operate transparently and independently from the executive branch. In certain jurisdictions, regulatory reform bodies have later been transformed into more permanent institutions that drive ongoing work on regulatory governance and regulatory impact analysis.

[23] For further reference, see Investment Climate, (World Bank Group) Reforming Business Registration: A Toolkit for the practitioners, 2013, page 23.

[24] For further reference, see World Bank Group, Small and Medium Enterprise Department, Reforming Business Registration Regulatory Procedures at the National Level, A Reform Toolkit for Project Teams, 2006, page 39.

20. The steering committee must nurture the reform process and consider how to address concerns raised in respect of it.[25] Concerns could include those arising from bureaucratic inertia, or fears that registry employees may lose their jobs if their ICT skills are weak or if technology replaces human capital. Thus, it is likely to be important for the body overseeing the reform to be able to consider diverse interests and fully inform potential beneficiaries and political supporters.

(c) The project team

21. In collaboration with the steering committee, it is advisable that a project team be assigned the task of designing a reform programme tailored to an enacting State's circumstances and providing technical expertise to implement the reforms. A successful reform will require a team of international and local specialists, with expertise and experience in business registration reform, in legal and institutional reform, and in a variety of technology matters (for example, software design, hardware, database and web specialists).

(d) Awareness-raising strategies

22. States embarking on a reform process should consider appropriate communication strategies aimed at familiarizing businesses and other potential registry users with the operation of the registry and of the legal and economic significance of business registration. This effort should include informing businesses about the benefits of registration and participation in the legally regulated economy (e.g. visibility to the public, the market and the banking system); opportunity to participate in public procurement; legal validation of the business; access to flexible business forms and asset partitioning; possibility of protecting the business' unique name and other intangible assets; opportunities for the business to grow and to have access to a specialized labour force and access to government assistance programmes. The awareness-raising strategy should also ensure that information on compliance with the law, fulfilment of the obligations taken on by registration (e.g. payment of taxes) and potential penalties for non-compliance is similarly clear and easily available.[26]

23. Effective communication may also be expected to encourage the development of new businesses and the registration of existing unregistered businesses, as well as to provide signals to potential investors about the enacting State's efforts towards improvement of the business environment. Awareness-raising strategies should commence early in the reform process and should be maintained throughout it, including after the enactment of the legal infrastructure and implementation of the new business registration system. In coordination with the steering committee, the project team should determine which cost-effective media can best be used: these can include private-public dialogues, press conferences, seminars and workshops, television and radio programmes, newspapers, advertisements, and the preparation of detailed instructions on submitting registration information and obtaining information from the business registry.[27] In order to raise MSME awareness of the reforms to the business registration system, it may be advisable to consider communication strategies tailored specifically to that audience.[28]

(e) Incentives for businesses to register

24. In addition to an efficient awareness-raising campaign, States should consider adding incentives for MSMEs and other businesses to register through the provision of ancillary services for registered businesses (see para. 2(f)(ii) above). The types of incentives will clearly vary according to the specific economic, business and regulatory context. By way of example, they may include: promoting access to credit

---

[25] See supra, footnote 23, page 25.

[26] For a more detailed presentation of these issues see section III.A.1 of A/CN.9/WG.I/WP.107 and A/CN.9/WG.I/WP.98, Section D.2. See also paras. 124 and 207 to 209 of this working paper.

[27] See supra, footnote 23, pages 26–27.

[28] See section III.A.2 of A/CN.9/WG.I/WP.107.

for registered businesses; offering accounting training and services as well as assistance in the preparation of a business plan; providing credits for training costs; establishing lower and simplified taxation rates and tax mediation services; providing business counselling services; providing monetary compensation, government subsidies or programmes to foster MSME growth and providing low-cost technological infrastructure.[29]

2. Phased reform process

25. The duration of a reform process can vary considerably, depending on the types of reforms implemented and on other circumstances relevant to the particular economy. While the most comprehensive approach may entail a complete reform of the business registry and the legislation establishing it, this may not be realistic in all cases and enacting States may wish to consider a phased implementation of their reform. Lessons learned from experience in various jurisdictions demonstrate, for instance, that in States with a large number of unregistered businesses, a reform process that adopts a "think small" approach at the outset of the reform process, might be more effective than a reform with a broader focus, which could be introduced at a later stage.[30] For example, if the main objective is to promote the registration of MSMEs at the outset, simple solutions addressing the needs of MSMEs operating at the local level may be more successful than introducing sophisticated automated systems that require high-level technological infrastructures, changes in the legal and institutional framework and that may be more appropriate to larger businesses or businesses operating in the international market. Even when the reform is carried out in more developed jurisdictions, it may be advisable to "start small" and pilot the reforms at a local level (for example, in a district or the capital) before extending them state-wide. Success in a pilot stage can have a strong demonstration effect, and is likely to build support for continued reform.[31]

I. Objectives of a business registry[32]

26. The focus of the present legislative guide is primarily the business registry of a State and the adoption of best practices in order to optimise the operation of the business registration system for its users so that it is simple, efficient and cost-effective. However, in most States, in order for a business to participate in the legally regulated economy, it must usually register not only with the business registry but also with various additional public authorities (see also para. 60 below). In addition to the business registry, these agencies often include taxation and social services authorities. States wishing to facilitate the entry of businesses into the legally regulated economy should thus assess the multiple public agencies with which a business must register in addition to the business registry, and consider ways to reduce the burden on businesses by streamlining those requirements. As examined in greater detail in this legislative guide (see paras. 90 to 100 below), one way to accomplish that goal would be for a State to establish a one-stop shop for business registration and for registration with other public authorities, subject to the legal and institutional organization of the enacting State.

---

[29] For a more comprehensive list of incentives, see section III.B of A/CN.9/WG.I/WP.107 and A/CN.9/WG.I/WP.98, section C.6(c).

[30] See Investment Climate (World Bank Group), Innovative Solutions for Business Entry Reforms: A Global Analysis, 2012, page 26.

[31] For further reference, see supra, footnote 24, page 45.

[32] At its twenty-eighth session, the Working Group agreed that the commentary to this recommendation (recommendation 1 of A/CN.9/WG.I/WP.101) could highlight the importance of developing a one-stop shop in order to facilitate business registration and registration with other authorities (paras. 22, 57 and 144 to 145, A/CN.9/900) bearing in mind concerns raised by some delegations that broadening the concept of "business registration" could have a negative impact on the text and on its scope in general. The Working Group may also wish to consider on this issue the content of A/CN.9/WG.I/WP.107 (formerly A/CN.9/WG.I/WP.92) which is intended to form the overarching introduction to all work on MSMEs.

A. Purposes of the business registry

27. The opening provisions of the law that creates the foundation of a business registry should provide for the establishment of the registry and set out explicitly the purpose of a system for the registration of businesses.

28. The law of the enacting State should establish which businesses are required to register. Currently, many States require only businesses of a certain legal form to register, often focusing on those legal forms that have limited liability status. Requiring such businesses to register puts third parties dealing with them on notice of their limited liability status, as well as providing additional information in respect of them, depending on the requirements of the law establishing the legal form. However, since business registration may be viewed as the main conduit through which businesses of all sizes and legal forms interact with the State and operate in the legally regulated economy, States may wish to permit all such businesses to register. Through registration, a business becomes more visible not only in the marketplace, but also to States, who may then be able to more easily identify MSMEs in need of support, and design appropriate programmes for those purposes. As such, permitting the registration of all sizes and legal forms of business may encourage the registration of MSMEs, assisting them in their growth in addition to facilitating their operation in the legally regulated economy (see also para. 2 above, para. 130 below and A/CN.9/WG.I/WP.107).[33]

29. In light of the above, the following overarching principles should govern an effective system of business registration: (a) enabling businesses of all sizes and legal forms to be visible in the marketplace and to operate in the legally regulated commercial environment; and (b) enabling MSMEs to increase their business opportunities and to improve the profitability of their businesses.[34]

Recommendation 1: Purposes of the business registry[35]

The law should provide that the business registry is established for the purposes of:

(a) Providing to a business an identity that is recognized by the enacting State and enables businesses required to register, and assists those permitted to register, to participate in, and receive the benefits of participating in, the legally regulated economy of the State; and

(b) Making information in respect of registered businesses accessible to the public.

B. Simple and predictable legislative framework permitting registration for all businesses

30. States should set the foundations of their business registry by way of law. In order to foster a transparent and reliable business registration system, with clear accountability of the registrar (see also paras. 44 and 46 below), that law should be simple and straightforward. Care should be taken to limit or avoid any unnecessary

[33] At its twenty-eighth session, the Working Group decided that the commentary to this recommendation (recommendation 1 of A/CN.9/WG.I/WP.101) should reflect that enacting States should decide which businesses were required to register (para. 24, A/CN.9/900).

[34] The Working Group agreed at its twenty-eighth session (para. 23, A/CN.9/900) to add to the commentary of this recommendation any necessary detail on the importance of States assisting MSMEs in light of the content of A/CN.9/WG.I/WP.107 (formerly A/CN.9/WG.I/WP.92), which is intended to form the overarching introduction to all work on MSMEs, and para. 2 and the introductory section of the present text.

[35] At its twenty-eighth session, the Working Group agreed to adjust the drafting of this recommendation (recommendation 1 of A/CN.9/WG.I/WP.101) by substituting a word for "entitles" in subparagraph (a) in order to clarify that the enacting State should decide which businesses should be required to register (para. 24, A/CN.9/900).

use of discretionary power, and to provide for appropriate safeguards against its arbitrary use. However, some discretion should be permitted to the registry in order to ensure the smooth functioning of the system. For instance, subject to the requirements of the law and prior notice to the registrant, the registrar may be allowed to correct errors in the registered information (see also paras. 150 and 228 below).

31. The applicable law in each State should determine which business forms are required to register, and which additional conditions those businesses may have to fulfil as part of that requirement. Since business registration is considered the key means through which all businesses, including MSMEs, can participate effectively in the legally regulated economy, States should enable[36] businesses of all sizes and legal forms to register in an appropriate business registry, or create a single business registry that is tailored to accommodate registration by a range of businesses of different sizes and different legal forms.

32. The law governing business registration should also provide for simplified registration and post-registration procedures in order to promote registration of MSMEs. The goal should be for States to establish registration procedures with only the minimum necessary requirements for MSMEs and other businesses to operate in the legally regulated economy. Of course, businesses with more complex legal forms would be subject to additional information requirements under the law of the enacting State as a consequence of their particular legal form or type of business.[37]

33. Further, regardless of the approach chosen to maintain updated information in the business registry, it would be advisable to make updating the records of MSMEs as simple as possible. This could involve a number of different approaches examined in greater detail below, such as extending the period of time for such businesses to declare a change; harmonizing the information needed when the same information is repeatedly required; or exempting MSMEs from certain obligations in specific cases.[38]

Recommendation 2: Simple and predictable legislative framework permitting registration for all businesses

The law should:

(a) Adopt a simple structure for rules governing the business registry and avoid the unnecessary use of exceptions or granting of discretionary power;

(b) Establish a system for the registration of businesses that permits registration of businesses of all sizes and legal forms; and

(c) Ensure that micro, small and medium-sized enterprises (MSMEs) are subject to the minimum procedural requirements.[39]

C. Key features of a business registration system

34. To be effective in registering businesses of all sizes, a business registration system should ensure that, to the extent possible, the registration process is simple, time and cost efficient, user-friendly and publicly accessible. Moreover, care should be taken to ensure that the public registered information on businesses is easily searchable and retrievable, and that the process through which the registered

[36] At its twenty-eighth session, the Working Group decided to delete the phrase “may wish to consider requiring or enabling” and replace it with “should enable” (para. 27, A/CN.9/900).

[37] At its twenty-eighth session, the Working Group agreed to add the phrase “or type of business” at the end of paragraph 29 (para. 27, A/CN.9/900).

[38] See also paragraphs 160 to 164 in this working paper on “Maintaining a current registry”.

[39] At its twenty-eighth session the Working Group agreed (para. 30, A/CN.9/900) to delete the closing phrase of subparagraph (c) of this recommendation (recommendation 2 of A/CN.9/WG.I/WP.101) (“except where such a business is subject to additional requirements under the law of the enacting State as a consequence of its particular legal form”).

information is collected and maintained as well as the registry system are kept as current, reliable and secure as possible.

35. The reliability of the business registration system and the information contained in the registry is a recurring theme in the present guide. In keeping with the definition of reliable as set out in paragraph 13 above,[40] the reliability of the system refers to its positive performance and dependability in collecting and storing data, while reliable information refers to data that is consistently good in quality. The term does not refer to the method that a State uses to ensure that reliability, and this legislative guide leaves it to each enacting State to determine how best to ensure the reliability of its business registration system and the information it contains in light of its own context and legal tradition. Reliability in this guide does not refer to whether or not the information in the business registry is legally binding on the registry, the registrant, the registered business or on third parties, nor to whether the enacting State uses a declaratory or approval approach in respect of its business registration system. However, the extent to which information in the registry is legally binding and whether the State adopts a declaratory or approval system are aspects that should be made clear by the enacting State in its business registry law and on the business registry itself.

36. Regardless of which registration system is adopted, maintaining high quality, current and reliable information is imperative for the business registry in order to make the information useful for the registry users and to establish users' confidence in business registry services. This applies not only to the information provided when applying to register a business, but also to the information that the entrepreneur submits during the lifetime of the business. It is thus important that the information meets certain requirements in the way it is submitted to the registry and then made available to the public. For these reasons, States should devise provisions that allow the registry to operate according to principles of transparency and efficiency in the way information is collected, maintained and released.

37. The registry can implement certain procedures in order to ensure that the information maintained in the registry is of good quality and reliable.[41] Those procedures, which will be further discussed in the following sections of the present guide, can be grouped into two broad categories. One group comprises those measures aimed at protecting the identity and integrity of a business through the prevention of corporate identity theft or the adoption of identity verification methods for those who provide information to the business registry. A wide range of measures can be implemented in this regard, such as the use of monitoring systems or establishing access through the use of passwords to prevent corporate identity theft; or the use of electronic signatures and electronic certificates to verify the identity of those who submit information to the registry. Business registries usually adopt more than one type of measure.[42]

38. Another group of measures that registries can implement to ensure the good quality and reliability[43] of the registered information pertains to the way information is collected and maintained in the registry and the frequency with which it is updated (see paras. 156 to 164 below). In this regard, ensuring that the registry record is regularly updated is of key importance. In electronic registry systems, the software will usually provide for automated periodic updating as amendments are submitted by businesses. However, when registries use paper-based or mixed systems, the

[40] The Working Group agreed at its twenty-eighth session (para. 32, A/CN.9/900) that the Secretariat should adjust the discussion in this paragraph as necessary to acknowledge the definition of "reliable" in paragraph 13 (para. 12 of A/CN.9/WG.I/WP.101), and should ensure that the term was used consistently throughout the text. To that end, the Secretariat has revised the definition and this paragraph.

[41] At its twenty-eight session, the Working Group agreed to retain the phrase "good quality", although such notion was included in the definition of "reliable" (see para. 33, A/CN.9/900). The Working Group may wish to consider whether it is necessary to retain such reference to "good quality" throughout the text.

[42] See International Business Registers Report 2016, page 128.

[43] See supra footnote 41.

registry staff must ensure that updates to the registry record are entered as soon as practicable, and if possible, in real time or at least once daily (see para. 164 below). To underpin these measures, it is important for States to establish effective enforcement mechanisms upon which registries can rely when a business fails to provide accurate and complete information (see paras. 206 to 209 below).[44]

39. Moreover, in order to enhance the quality and reliability[45] of the information deposited in the registry, enacting States should preserve the integrity and security of the registry record itself. Steps to achieve those goals include: (a) requiring the registry to request and maintain the identity of the registrant; (b) obligating the registry to notify promptly the applicant business about the registration and any changes made to the registered information; and (c) eliminating any discretion on the part of registry staff to deny access to registry services.

Recommendation 3: Key features of a business registration system

The law should ensure that the system for business registration contains the following key features:

(a) The registration process is publicly accessible, simple, user-friendly and time- and cost-efficient;

(b) The registration process is suited to the needs of MSMEs;

(c) The registered information on businesses is easily searchable and retrievable; and

(d) The registry system and the registered information are of good quality and are kept as current, reliable and secure as possible.[46]

II. Establishment and functions of the business registry

40. In order to establish an effective business registration system, several approaches may be taken. However, despite the fact that approaches vary in different States, there is broad agreement on certain key objectives of effective business registration systems. Regardless of differences in the way business registries may operate, efficient business registries have a similar structure and perform similar functions when carrying out the registration of a new business or in recording the changes that may occur in respect of an existing business.

A. Responsible Authority

41. In establishing or reforming a business registry, enacting States will have to decide how the business registry will be organized and operated. Different approaches can be taken to its form,[47] the most common of which is based on oversight by the

---

[44] For further reference, see The International Business Registers Report 2015, pages 119 ff. At its twenty-eighth session, the Working Group requested the Secretariat to amend the text as follows: (a) the paragraphs should focus on the general concepts of verification and security of information as well as on best practices to ensure them; (b) cross-references to the concepts expressed in recommendations 28(a), 40 and 41 (as they appeared in A/CN.9/WG.I/WP.101) should be included; and (c) the reference to requiring business to reregister at certain intervals should be deleted since such a practice could be viewed as unduly burdensome on MSMEs (para. 36, A/CN.9/900).

[45] See supra footnote 41.

[46] At its twenty-eighth session, the Working Group agreed to include the phrase “good quality” into subparagraph (d) of this recommendation (recommendation 3 of A/CN.9/WG.I/WP.101) to be consistent with the language of paragraph 35 to delete the square brackets around the subparagraph and to retain the text (paras. 33 and 37, A/CN.9/900).

[47] According to The International Business Registers’ Report 2015, registries are organized in the following ways: 82 per cent of business registries are state-governed; 7 per cent are organized as public-private partnerships; 5 per cent are governed by the judiciary; and 1 per cent are operated by privately owned companies.

government. In such States, a government department or agency, staffed by civil servants, and usually established under the authority of a particular government department or ministry, operates the registration system. Another type of organization of a business registry is one that is subject to administrative oversight by the judiciary. In such contexts, the registration body might be a court or a judicial registry whose function, usually specified in the applicable commercial code, is concerned with verifying the business requisites for registration but does not require prior judicial approval of a business seeking to register.

42. States may also decide to outsource some or all of the registry operations through a contractual or other legal arrangement that may involve public-private partnerships or the private sector.[48] When registration is outsourced to the private sector, it remains a function of the government, but the day-to-day operation of the system is entrusted to privately-owned companies. In one jurisdiction, for instance, such an outsourcing was accomplished by way of appointing a private company, in accordance with the law, as the assistant registrar with full authority to run the registration function.[49] However, operating the registry through public-private partnerships or private sector companies does not yet appear to be as common as the operation of the registry by a government agency.[50] States may also decide to form entities with a separate legal personality, such as chambers of commerce, with the object of managing and developing the business registry,[51] or to establish by law registries as autonomous or quasi-autonomous agencies, which can have their own business accounts and operate in accordance with the applicable regulations governing public agencies. In one State, for example, the business registry is a separate legal person that acts under the supervision of the Ministry of Justice,[52] while in another State the registry is an administratively separate executive agency of a government department, but does not have separate legal status.[53] In deciding which form of organization to adopt, States will have to consider their specific domestic circumstances, evaluate the challenges and trade-offs of the various forms of organization and then determine which one best meets the State's priorities and its human, technological and financial resources.

43. While the day-to-day operation of the registry may be delegated to a private sector firm, the enacting State should always retain the responsibility of ensuring that the registry is operated in accordance with the applicable law. For the purposes of establishing public trust in the business registry and preventing the unauthorized commercialization or fraudulent use of information in the registry record, the enacting State should retain its competence over[54] the registry record. Furthermore, the State should also ensure that, regardless of the daily operation or the structure of the business registry, the State retains the right to control the access to and use of the data in the registry.

---

[48] See European Commerce Registers' Forum, International Business Registers Report, 2014, page 15.

[49] For instance, Gibraltar, cited in Investment Climate (World Bank Group), Outsourcing of Business Registration Activities, Lessons from Experience, 2010, pages 55 ff.

[50] Arrangements involving contracting with the private sector to provide business registration services require careful consideration of several legal and policy issues, such as the responsibilities of the government and the private provider, the form of the arrangements, the allocation of risk, and dispute resolution.

[51] See Luxembourg, supra in footnote 49, pages 52 ff. In Luxembourg, the State, the Chamber of Commerce and the Chamber of Crafts formed an economic interest grouping, i.e. an entity with separate legal personality, with the object of managing and developing the business registry.

[52] See Latvia; for further reference see also A. Lewin, L. Klapper, B. Lanvin, D. Satola, S. Sirtaine, R. Symonds, Implementing Electronic Business Registry (e-BR) Services, Recommendations for policymakers based on the experience of the EU Accession Countries, 2007, page 44.

[53] See the United Kingdom of Great Britain and Northern Ireland; for further reference see also Lewin and others, cited in footnote 50 above, page 44.

[54] At its twenty-eighth session, the Working Group requested the Secretariat to replace the word "ownership" with a concept along the lines of "responsibility" or "rights" in order to be more accurate (para. 38, A/CN.9/900).

Recommendation 4: Responsible authority[55]

The law should provide that:

(a) The business registry should be operated by the State or by an authority appointed by that State; and

(b) The State retains its competence over the business registry.

B. Appointment and accountability of the registrar

44. The law of the State should set out[56] the procedure to appoint and dismiss the registrar, as well as the duties of the registrar, and the authority empowered to supervise the registrar in the performance of those duties.

45. To ensure flexibility in the administration of the business registry, the term "registrar" should be understood as referring to a natural or legal person appointed to administer the business registry. States should permit the registrar to delegate its powers to persons appointed to assist the registrar in the performance of its duties.

46. In addition, the legal framework should clearly set out the functions of the registrar in order to ensure the registrar's accountability in the operation of the registry and the minimization of any potential for abuse of authority. In this regard, the applicable law of the enacting State should establish principles for the liability of the registrar and the registry staff to ensure their appropriate conduct in administering the business registry (the potential liability of the registrar and the registry staff are addressed in paras. 210 to 215 below).[57]

Recommendation 5: Appointment and accountability of the registrar

The law should:

(a) Provide that [*the person or entity authorized by the enacting State or by the law of the enacting State*] has the authority to appoint and dismiss the registrar and to monitor the registrar's performance; and

(b) Determine the registrar's powers and duties and the extent to which those powers and duties may be delegated.

C. Transparency in the operation of the business registration system

47. A legal framework that fosters the transparent and reliable operation of the system for business registration has a number of features. It should allow registration to occur with a limited number of steps, and it should limit interaction with registry authorities, as well as provide short and specified turn-around times, be inexpensive, result in registration of a long-term or unlimited duration, apply throughout the jurisdiction and make registration easily accessible for registrants.

48. Registries should also establish "service standards" that would define the services to which users are entitled and may expect to receive, while at the same time providing the registry with performance goals that the registry should aim to achieve.

---

[55] At its twenty-eighth session, the Working Group agreed to redraft this recommendation (recommendation 4 of A/CN.9/WG.I/WP.101) in order to clarify that the State should retain responsibility over the organization of the business registry, but that it could entrust the operation of the registry to an authority established for that purpose (para. 39, A/CN.9/900).

[56] Further to a decision of the Working Group at its twenty-eighth session that it is not necessary to distinguish between primary or secondary legislation in the legislative guide, the Secretariat has replaced the opening phrase of the paragraph ("The law or the regulation established … (for further discussion on the topic of primary and secondary legislation, see para. 1 of the Annex below) …" with the current drafting (para. 21, A/CN.9/900).

[57] At its twenty-eighth session, there was support in the Working Group for the suggestion to add a cross-reference to the potential liability of the registrar and registry staff (para. 42, A/CN.9/900).

Such service standards could include, for example, rules on the correction of errors (see paras. 30 above, and 150 and 228 below), rules governing the maximum length of time for which a registry may be unavailable (such as for electronic servicing) and providing advance notice of any expected down time. Service standards contribute to ensure further transparency and accountability in the administration of the registry, as such standards provide benchmarks to monitor the quality of the services provided and the performance of the registry staff.

Recommendation 6: Transparency in the operation of the business registration system

The registrar should ensure that the rules or criteria that are developed are made public to ensure transparency of the registration procedures.

D. Use of standard registration forms

49. Another approach that is often used in association with the previous one to promote transparency and reliability in the operation of the business registry, is the use of standard registration forms paired with clear guidance to the registrant on how to complete them. Such forms can easily be filled out by businesses without the need to seek the assistance of an intermediary, thus reducing the cost and de facto contributing to the promotion of business registration among MSMEs. These forms also help prevent errors in entering the data by business registry personnel, thus speeding up the overall process. In some jurisdictions, the adoption of standardized registration forms has been instrumental in streamlining the registration requirements and disposing of unnecessary documents.[58]

Recommendation 7: Use of standard registration forms

The law should provide that standard registration forms are introduced to enable the registration of a business and the registrar should ensure that guidance is available to registrants on how to complete those forms.

E. Capacity-building for registry staff

50. Once a reform of the business registration system has been initiated, developing the capacity of the personnel entrusted with business registration functions is an important aspect of the process. Poor service often affects the efficiency of the system and can result in errors or necessitate multiple visits to the registry by users.[59] Capacity development of registry staff could not only focus on enhancing their performance and improving their knowledge of the new registration processes, ICT solutions and client orientation, but staff could also be trained in new ways of improving business registration.

51. As seen in various States, different approaches to capacity-building can be followed, from the more traditional training methods based on lectures and classroom activities, to more innovative ways that can be driven by the introduction of new business registration systems. In some jurisdictions, team-building activities and role-playing have been used with some success, since reforms often break barriers

[58] It should be noted that the use of standard registration forms should not preclude a business from submitting to the registrar additional materials and documents required by applicable law for the creation of the business, or in the exercise of the freedom of contract in establishing the business, such as agreements in respect of the internal operation of the business or additional information in respect of its financial state. (This footnote is intended to clarify, as agreed by the Working Group at its twenty-eighth session, that the submission of additional materials by businesses registering should be permitted: para. 43, A/CN.9/900.)

[59] The technical assistance experience of international organizations, in particular of the World Bank, has provided most of the background material upon which section “E” is based. See, in particular, supra, footnote 23, page 37.

between various government departments and require the improvement of the flow of information among them, as well as an understanding of different aspects of the procedures with which specific registry staff may not be familiar.[60] In other cases, States have also opted for developing action plans with annual targets in order to meet standards of performance consistent with global best practices and trends, and they have linked promotions and bonuses for staff to the achievement of the action plan's goals.[61] In other cases, States have decided to introduce new corporate values in order to enhance the public service system, including business registration.[62] Although the relevant governmental authority will usually take the lead in organizing capacity development programmes for the registry staff, the expertise of local legal and business communities could also be enlisted to assist.

52. Peer-to-peer learning as well as the establishment of national and international networks are also effective approaches to build capacity to operate the registry. These tools enable registry staff to visit other jurisdictions and States with efficient and effective business registration systems. In order to maximize the impact of such visits, it is important that they occur in jurisdictions familiar to the jurisdiction undergoing the reform. This approach has been followed with success in several jurisdictions engaging in business registration reform. International forums and networks also provide platforms for sharing knowledge and exchanging ideas among registry personnel around the world for implementing business registration reform.

53. In order to facilitate business registration, it may be equally important to build capacity on the part of intermediaries in States where the services of those professionals are required to register a business (see paras. 121 and 122 below).

Recommendation 8: Capacity-building for registry staff

The registrar should ensure that appropriate programmes are established to develop and strengthen the knowledge and skills of the registry staff on business registration procedures, service standards[63] and the operation of electronic registries, as well as the ability of registry staff to deliver requested services.

F. Core functions of business registries[64]

54. There is no standard approach in establishing a business registry or in streamlining an existing one: models of organization and levels of complexity can vary greatly depending on a State's level of development, its priorities and its legal framework. However, regardless of the structure and organization of the registry, certain core functions can be said to be common to all registries.

55. In keeping with the overarching principles governing an effective business registration system (see para. 29 above), the core functions of business registries are to:

(a) Facilitate trade and interactions between business partners, the public and the State, including when such interactions take place in a cross-border context,

[60] See K. Rada and U. Blotte, Improving business registration procedures at the sub-national level: the case of Lima, Peru, 2007, page 3.

[61] At its twenty-eighth session, the Working Group agreed to delete the phrase "any improvement of the registry's standing in international rankings", after the phrase "annual targets" and replace it with the notion that States aimed to meet "global best practices and trends" (para. 44, A/CN.9/900).

[62] See supra, footnote 23, page 21.

[63] At its twenty-eighth session, the Working Group agreed to include the phrase "service standards" after the term "procedures" (para. 45, A/CN.9/900).

[64] At its twenty-eighth session, the Working Group, in accordance with its deliberation at its twenty-sixth session (para. 82, A/CN.9/866), agreed to postpone the review of this draft recommendation until it had reviewed the rest of the draft recommendations and commentary (para. 46, A/CN.9/900).

through the publication of reliable (see paras. 32 and 33 above), current and accessible information that business must provide in order to be registered;

(b) Record the identity and disclose the existence of a business to other businesses, to the public and to the State (ideally in a comprehensive database);

(c) Provide a legal form to a business which, depending on the applicable law of a State, may include legal personality and limited liability; and

(d) Provide a commercial identity recognized by the State to enable a business to interact with business partners, including potential sources of finance, the public and the State.

56. In a standard registration process, the entry point for entrepreneurs to business registries may be the support provided to them in choosing a unique name for the new business that they wish to establish. When registering, businesses are usually required to have a name which must be sufficiently distinguishable from other business names within that jurisdiction so that the business will be recognized and identifiable under that name. Enacting States are likely to establish their own criteria for determining how to decide whether business names are sufficiently distinguishable from other business names, and in any event, the assignment of a unique business identifier will assist in ensuring the unique identity of the business within and across jurisdictions (see also paras. 101 to 118 below). Business registries usually assist entrepreneurs at this stage with a procedure that can be optional or mandatory, or they may provide business name searches as an information service. Registries may also offer a name reservation service prior to registering a new business, so that no other business can use that name. Such a name reservation service may be provided either as a separate procedure (again, which can be optional or mandatory), or as a service integrated into the overall business registration procedure.

57. Business registries also provide forms and various types of guidance to entrepreneurs preparing the application and other necessary documents for registration. Once the application is submitted, the registry performs a series of checks and control procedures to ensure that all the necessary information and documents are included in the application. In particular, a registry verifies the chosen business name as well as any requirements for registration that have been established in the State's applicable law, such as the legal capacity of the entrepreneur to operate the business. Some legal traditions may require the registry to perform simple control procedures (such as establishing that the name of the business is sufficiently unique), which means that if all of the basic administrative requirements are met, the registry must accept the information as filed and record it. Other legal traditions may require more thorough verification of the information filed, such as ensuring that the business name does not violate any intellectual property requirement or that the rights of businesses with similar names are not infringed before the registry can allocate a business name (in those regimes where the registry is mandated to do so). All such information is archived by the registry, either before or after the registration process is complete.[65]

58. Payment of a registration fee (if any – see paras. 197 to 201 below) must usually be made before the registration is complete. Once a business registration is complete, the registry issues a certificate that confirms the registration and contains information about the business. Since most of the registered information must be disclosed to interested parties, registries make its public components available through various means, including through publication on a website, or in publications such as the National Gazette or newspapers. Where the infrastructure permits, registries may offer, as an additional non-mandatory service, subscriptions to announcements of specific types of new registrations.

59. Registered information that is made available to the public can include basic information about the business, such as the telephone number and address, or, depending on the requirements of applicable law, more specific information on the business structure, such as who is authorized to sign on behalf of the business or who

[65] See supra, footnote 30, page 9.

serves as the business's legal representative. In some States, public access to certain information in the business registry is provided free of charge (in respect of fees for information, see para. 202 below).

60. A new business must usually register with several government agencies, such as taxation and social services authorities, which often require the same information as that gathered by the business registry. In certain States, the business registry provides to entrepreneurs information on the necessary requirements of other agencies and refers them to the relevant agencies. In States with more developed registration systems, businesses may be assigned a registration number that also functions as a unique identifier across public agencies (see paras. 94 to 116 below), which can then be used in all of the interactions that the business has with government agencies, other businesses and banks. This greatly simplifies business start-up since it allows the business registry to exchange more easily information with the other public institutions involved in the process. In several States that have reformed their registration systems, business registries function as one-stop shops to support registration with other authorities. The services operated by such outlets may include providing any necessary licensing, or they may simply provide information on the procedures to obtain such licences and refer the entrepreneur to the relevant agency. This legislative guide takes the view (see paras. 84 to 93 below) that establishing such one-stop shops for business registration and registration with other public authorities is the best approach for States wishing to streamline their business registration system.

61. One important aspect that States should take into account when establishing a business registration system is whether the registry should also be required to record certain procedures that affect the status of the business, for example bankruptcy, merger, winding-up, or liquidation. The approach to such changes in status appears to vary from State to State. For instance, in some States, registries are often also entrusted with the registration of bankruptcy cases. In developing States or economies in transition, registries tend not to perform this function. In certain jurisdictions, registries are also given the task of registering mergers as well as the winding-up and liquidation of businesses.[66] In any event, business registries naturally also record the end of the life span of any business that has permanently ceased to do business by deregistering it.[67]

62. The opening provisions of the law governing business registration may include a provision that lists the various functions of the registry, with cross references to the relevant provisions of the law in which those functions are addressed in detail. The advantage of this approach is clarity and transparency as to the nature and scope of the issues that are dealt with in detail later in the law. The possible disadvantage is that the list may not be comprehensive or may be read as implying unintended limitations on the detailed provisions of the law to which cross reference is made. Accordingly, implementation of this approach requires special care to avoid any omissions or inconsistencies as well as to allow for the registry's interoperability with other registries in the jurisdiction, and for access to the information maintained in the registry.

Recommendation 9: Core functions of business registries

The law should establish that the functions of the business registry include:

(a) Publicizing the means of access to the services of the business registry, and the opening days and hours of any office of the registry (see paras. 125 to 127 and 182 to 184, and recommendations 18 and 34);

(b) Providing access to the services of the business registry (see paras. 189 to 194 and recommendation 37);

---

[66] For further reference, see European Commerce Registers' Forum, International Business Registers Report 2014, pages 33 ff.

[67] See paras. 216 to 221 of this legislative guide.

(c) Providing guidance on choosing the appropriate legal form for the business, on the registration process and on the business's rights and obligations in connection thereto (see paras. 49 and 57 and recommendations 7, 31 and 32);

(d) Listing all the information that must be submitted in support of an application to the registry (see paras. 132 to 136 and recommendation 20);

(e) Assisting businesses in searching and reserving a business name (see paras. 56 and 57);

(f) Providing the reasons for any rejection of an application for business registration (see paras. 149 to 152 and recommendation 26);

(g) Registering the business when the business fulfils the necessary conditions established by the law (see para. 140 and recommendation 22);

(h) Ensuring that any required fees for registration have been paid (see paras. 199 to 201 and recommendation 39);

(i) Assigning a unique business identifier to the registered business (see paras. 110 and 111 and recommendation 15);

(j) Ensuring the entry of the information contained in the application submitted to the registry, any amendments thereto and any filing related to that business into the registry record, and indicating the time and date of each registration (see paras. 148, 165 and 166, and recommendations 25 and 30);

(k) Providing the person identified in the application as the registrant of the business with a copy of the notice of registration (see para. 140 and recommendation 22);

(l) Providing public notice of the registration in the means specified by the enacting State (see para. 141 and recommendation 23);

(m) Indexing or otherwise organizing the information in the registry record so as to make it searchable (see paras. 192 and 193 and recommendation 37);

(n) Providing information on the point of contact of the business as established by the law (see paras. 133 and 155 and recommendations 20 and 27);

(o) Sharing information among the requisite public agencies (see para. 119 and recommendation 17);

(p) Monitoring that a registered business has fulfilled and continues to fulfil any obligation to file information with the registry throughout the lifetime of the business (see paras. 158 to 164 and recommendations 28 and 29);

(q) Ensuring the entry of information on the declaration of deregistration of a business in the registry record, including the date of and any reasons for the deregistration (see paras. 216 and 220 and recommendations 46 to 48);

(r) Ensuring that the information in the registry is kept as current as possible (see paras. 160 to 164 and recommendation 29);

(s) Promoting compliance with the law (see paras. 47 and 48 and recommendation 6);

(t) Protecting the integrity of the information in the registry record (see paras. 230 to 232 and recommendation 53 and 54);

(u) Ensuring that information from the registry record is archived as necessary (see paras. 224 to 227 and recommendation 51); and

(v) Offering services incidental to or otherwise connected with business registration (see paras. 85 to 88 and recommendation 11).

G. Storage of and access to information contained in the registry[68]

63. When organizing the storage of the information contained in the business registry, States should be guided by the goals of efficiency, transparency and accessibility. Regardless of how a State decides to store and provide access to the information in its registry system, its goal should be to achieve consistency in the identification and classification of registered businesses, as well as the efficient, non-duplicative collection of data on those businesses. The system should be capable of storing, processing and making information collected anywhere in the system available to users in a timely fashion, even if that information is provided to users in paper format.

64. To achieve these goals, it is important that all business registration offices and repositories of registry information in a State are interconnected regardless of their physical location. Through these means, all information collected or stored anywhere in the system is capable of being shared throughout the system regardless of where or how it is collected, stored or submitted to the registry. This approach will assist the business registration system in processing in a timely fashion the information received, and in making it available to all interested users through multiple access points without regard to their geographic location and without undue delay. In order to function efficiently, the interconnection of the entire business registry system should permit information to be stored and made accessible in digital format and should share such information, possibly in real time, throughout the entire registry system, and providing it to multiple access points (including registry offices, terminals, or using online technology). Access to the entirety of the information stored in the business registry should also allow for its integration with other public registries so as to permit information exchange with those agencies as well (see para. 74 (c) below).

65. Where such an interconnected business registry is set up, streamlining of technical standards and specifications may be required so that the information collected and shared is of similar quality and of a standardised nature. This will include establishing appropriate procedures to handle the exchange of information and communication of errors between the various collection points for and repositories of the information, regardless of their location within the State; providing minimum information technology security standards to ensure, at least, secure channels for data exchange (for instance, the use of “https” protocols); and ensuring the integrity of data while it is being exchanged.

Recommendation 10: Storage of and access to information contained in the registry

The law should establish an interconnected registry system that would process and store all information received from registrants and registered businesses or entered by registry staff.

III. Operation of the business registry

66. As previously noted, business registration can be implemented through many different organizational tools that vary according to jurisdiction. States embarking on a reform process to simplify registration will have to identify the most appropriate and efficient solutions to deliver the service, given the prevailing domestic conditions. Regardless of the approach chosen by the State, aspects such as the general legal and institutional framework affecting business registration, the legal foundation and

[68] As requested by the Working Group at its twenty-eighth session (para. 48, A/CN.9/900), the Secretariat has redrafted the commentary to this recommendation (paras. 59 and 60 of A/CN.9/WG.I/WP.101) to focus less on the contrast between centralized and decentralized systems, but more on how the registry system should be interconnected (regardless of its structure) and have multiple access points.

accountability of the entities mandated to operate the system and the budget needed by such entities should be carefully taken into account. Reform efforts rely to a different extent on a core set of tools, including: the establishment of a one-stop shop for business start-up; the use of technology; and ensuring interconnectivity between the different authorities involved in the registration process (with the possible adoption of a unique business identifier).

A. Electronic, paper-based or mixed registry[69]

67. An important aspect to consider when streamlining a business registration system is the form in which the application for registration should be filed and the form in which information contained in the registry should be stored. Paper-based registration requires sending the documents (usually completed in handwritten form) by mail or delivering them by hand to the registry for manual processing. Hand delivery and manual processing are not unusual in developing States due to a lack of advanced technological infrastructure. In such States, entrepreneurs must personally visit registration offices that are usually located in municipal areas which may not be easily reachable for many MSME entrepreneurs, particularly for those in rural areas. In addition, any copies of the documents required must usually be provided on paper. Paper-based registry systems can facilitate in person communication between the registrant and the registry, and thus may offer an opportunity to clarify aspects of the requirements for registration. However, the labour-intensive nature of this procedure normally results in a time-consuming and expensive process (for example, it may require more than one visit to the business registry), both for the registry and for users, and it can easily lead to data entry errors. Furthermore, paper-based registry systems require considerable storage space as the documents with the registered information may have to be stored as hard copies (although some States using a mixed system may also scan documents and then destroy the paper versions after the expiry of a minimum legal period for their preservation, in this regard see paras. 224 to 227 below). Finally, business registrations transmitted by paper or fax also give rise to delays, since registrants must wait until registry staff manually carry out the business registration and certify it.

68. In comparison, online registration systems allow for improved efficiency of the registry and for more user-friendly services. This approach requires, at a minimum, that the information provided by the registrant be stored in electronic form in a computer database; the most advanced electronic registration systems, however, permit the direct electronic submission of business registration applications and relevant information as well as searches of the registry data over the Internet or via direct networking systems as an alternative to paper-based submissions. The adoption of such systems enhances data integrity, information security, registration system transparency, and verification of business compliance, as well as permitting the avoidance of unnecessary or redundant information storage. Furthermore, when electronic submission of applications is allowed, business registries can produce standard forms that are easier to understand and therefore easier to complete correctly. Although the use of ICT solutions can carry with them risks of software errors, electronic systems do more to reduce those risks by providing automated error checks and other appropriate solutions. Such technology is also instrumental in the development of integrated registration systems and the implementation of unique identification numbers.

[69] At its twenty-eighth session, the Working Group agreed that distributed ledger technology (sometimes referred to as “blockchain technology”) and its potential impact on business registries could be of interest in its current work on MSMEs. The Working Group, however, decided to defer discussion of this topic until a later stage (para. 49, A/CN.9/900).

69. In addition to these features, which result in a more streamlined process and user-friendly services, electronic business registration and access to the business registry also offer the following advantages:

(a) Improved access for smaller businesses that operate at a distance from the registrar's offices;

(b) A very significant reduction in the time and cost required of the entrepreneur to perform the various registration steps, and consequently in the time and cost required before successful registration of a business, as well as in the day-to-day cost of operating the registry;

(c) It permits the handling of increasing demands for company information from other government authorities;

(d) A reduction in the opportunity for fraudulent or improper conduct on the part of registry staff;

(e) A reduction in the potential liability of the registry to users who otherwise might suffer loss as a result of the failure of registry staff to enter accurately registration information;

(f) When direct electronic registration and access to an electronic public registry are allowed, it provides the possibility for the user to access registration and information services outside of normal business hours; and

(g) It provides possible revenue opportunities for the registry from other businesses and financial institutions that seek company information to inform their risk analysis of potential trading counterparties and borrowers.

70. Introducing electronic registration processes, however, often requires an in-depth re-engineering of the way in which the service is delivered, which may involve several core aspects of the State's apparatus in addition to its level of technological infrastructure, including: financial capability, organization and human resources capacity, legislative framework (e.g. commercial code and company law) and institutional setting. Therefore, States launching a reform process aiming at the automation of the business registry would be advised to carry out a careful assessment of the legal, institutional and procedural dimensions (such as legislation to allow for electronic signatures or information security laws, or establishing complex e-government platforms or other ICT infrastructure) in order to identify those areas where reforms are needed and to adopt those technology solutions that are most appropriate to their current needs and capabilities. In several developing States and mid-level economies, only information about registering a business is currently available online, and a functioning electronic registry has not yet been implemented. Making information electronically available is certainly less expensive and less difficult to achieve than is the establishment of an electronic registry, and it does not require any legislative reform or specialized technology. While the adoption of a mixed registration system that combines electronic processing and paper-based manual submission and processing (see para. 84 below) might thus be an appropriate interim solution, it does involve higher maintenance costs, and the ultimate goal should remain the progressive development of fully electronic registration systems (see section C below).

B. Features of an electronic registry

71. When the business registry record is computerized, the hardware and software specifications should be robust and should employ features that minimize the risk of data corruption, technical error and security breaches. Even in a paper-based registry, measures should be taken to ensure the security and integrity of the registry record, but this is more efficiently and easily accomplished if the registry record is electronic. (Regardless of its method of operation, it is important for the registry to have

risk-mitigation measures in place: see paras. 230 and 231 below).[70] In addition to database control programs, software will also need to be developed to manage such aspects as user communications, user accounts, payment of any required fees, financial accounting, computer-to-computer communication, internal workflow and the gathering of statistical data. Software applications enabling data collection would also assist the registry in making evidence-based decisions which would facilitate efficient administration of the system (for example, the collection of data on more frequent requests by registry users would enable evidence-based decisions on how best to allocate registry resources).[71] When the State's technological infrastructure is not sufficiently advanced to allow the features mentioned above to be implemented, it is nevertheless important that the software put in place be flexible enough to accommodate additional and more sophisticated features as they become more feasible in the future.

72. Implementing an online business registration system will require defining the technical standards of the online system, a careful evaluation of the hardware and software needs of the business registry to make those standards operational in the context of the national technological infrastructure, and deciding whether it is feasible to develop the necessary hardware and software in-house or whether it must be purchased from private suppliers. In making that determination, it will be key to investigate whether a ready-made product is available that can easily be adapted to the needs of the State. If different suppliers are used for the hardware and the software, it is important that the software developer or provider is aware of the specifications for the hardware to be supplied, and vice versa.

73. Following more recent technological advances, one option States may want to consider is whether to rely on traditional software or to move to more sophisticated applications such as cloud computing, which is an Internet-based system that allows the delivery of different services, such as storing and processing of data, to an organization's computers through the Internet. The use of cloud computing allows for considerable reduction in the resources needed to operate an electronic registration system, since the registry does not have to maintain its own technological infrastructure. However, data and information security can represent an issue when introducing such a system and it would be advisable for States to conduct a careful risk analysis before establishing a system exclusively based on cloud applications.

74. Additional aspects that States may consider when adopting an online registry should include:

(a) Scalability of the ICT infrastructures, so that the system can handle an increasing volume of clientele over time as well as traffic peaks that may occasionally arise;

(b) Flexibility: the ICT infrastructure of the registry should be easily adaptable to new user and system requirements, and the migration of data from one technology to another may require data-cleansing aspects;

(c) Interoperability: the registry should be designed to allow (even at a later stage) integration with other automated systems, such as other governmental registries operating in the jurisdiction[72] and online or mobile payment portals;

---

[70] At its twenty-eighth session, the Working Group requested the Secretariat to highlight the importance of contingency planning for the registry and in that respect include a cross reference to it in the draft guide. The Secretariat suggests that such a reference would best be included here rather than in the following section as originally suggested (para. 52, A/CN.9/900).

[71] For example, "application programming interfaces" (APIs) may be adopted. APIs have a wide variety of possible uses, such as enabling the submission of applications to the registry through simplified procedures, for instance by pre-filling certain fields by default, or allowing users, and equipping systems with the proper software to connect directly to the registry and retrieve information automatically.

[72] See, for instance, paras. 112 to 116 of this legislative guide.

(d) Costs: the ICT infrastructure should be financially sustainable both in terms of initial and operating costs; and

(e) Intellectual property rights: in order to avoid risks deriving from adverse circumstances affecting the intellectual property rights owner, for example, if the owner ceases to operate or is prohibited from doing business with the government, the State should always either be granted ownership of the system or an unrestricted licence to the source code.

75. With regard to the cost of the ICT infrastructure, it should be noted that the level of security needed by an electronic registration system and its relevant cost must be carefully addressed. In particular, it is important to align the risk attached to a specific interaction (between the registry and the business or the registry and other public agencies) with the costs and administration required to make that interaction secure. Low security may deter parties from using electronic services (unless it is mandatory), but costly high security measures could have the same effect.

C. Phased approach to the implementation of an electronic registry

76. The methods used to establish the online system should be consistent with the reforms required as they would determine the success or the failure of the initiative. Moving directly to a full online solution before re-engineering registry business processes would be a mistake in many cases, as the solutions designed would not be able to capture the technology's full benefits.[73] Moreover, subject to the level of development of the implementing State, factors such as the existence and quality of the infrastructure and the literacy rates (including computer literacy) of the intended users should be carefully considered before the adoption of an online system. Several States, for example, must deal with a non-existent or weak communications infrastructure, lack of dependable electricity supplies and Internet connectivity, and a low literacy rate, which may have a disproportionate effect on women and businesses in rural areas. In these instances,[74] technical and capacity-building assistance programmes coordinated by international organizations might be necessary in order to progress towards the goal of a fully automated electronic registry.

77. In locations where Internet penetration is not extensive, a phased-in approach may be an appropriate way forward. Automation would start with the use of simple databases and workflow applications for basic operations, such as name searches or the sharing of information with other government agencies, and then would progress to more sophisticated web-based systems that would enable customers to conduct business with the registry entirely online. These web-based systems could be quite convenient for smaller businesses operating at a distance from the registry, provided that those entrepreneurs were able to access the system. The final phase of the approach would be to accommodate ICT interoperability between those agencies involved in business registration.

78. The simplest approach for States beginning their activity in this area would be to develop a content-rich website that consolidates registration information, provides downloadable forms, and enables users to submit feedback. This simple resource would allow users to obtain information and forms in one place and would make registries more efficient by enabling users to submit email inquiries before going to registry offices with the completed forms. Since this solution does not require a stable Internet connection, it may appeal to States with limited Internet access.

---

[73] The technical assistance experience of international organizations, in particular of the World Bank, has provided most of the background material upon which sections "C" and "D" are based. See, in particular, supra, footnote 23, pages 12 ff.

[74] At its twenty-eighth session, the Working Group requested the Secretariat to reflect in this section that factors in addition to Internet penetration were important, including literacy rates, infrastructure issues, types of intended users, and access to and reliance on mobile payment systems which were said to be of importance when establishing online registration systems (para. 52, A/CN.9/900).

79. If only limited Internet bandwidth is available, then automating front-counter and back-office operations prior to moving online would be a suitable approach. If the registry has sub-offices outside its main location (for instance, in rural areas), it would be important to establish a dedicated Internet connection with them. This approach would still require entrepreneurs to visit the registry, but at least it would establish a foundation on which the registry could later develop a more sophisticated web platform. A key factor even at this basic stage would be for the system to be able to digitize historical records and capture key information, such as the names of members or owners and directors, in the registry database.

80. Once the State's technological capacity and Internet penetration allows for digital commerce, then platforms that enable businesses to apply and pay for registration online as well as to file annual accounts and update registration details as operations change can be developed. With regard to online payment of a registration fee, it should be noted that ICT supported solutions would depend on a State's available modes of payment and on the regulatory framework that establishes the modes of payment a public authority can accept. When the jurisdiction has enacted laws that allow for online payment, experience shows that the most efficient option is to combine the filing of the electronic application and the fee payment into one step. Error checks should be included in ICT systems that incorporate this facility, so that applications are not submitted before payments are completed and registry officials can see payment information along with the application.[75] When fee payment is required before registration of the business, this constitutes a separate procedural step and the use of ICT solutions in order to be user-friendly would require streamlining the procedures for filing the applications and for payment (see also para. 74(c) above and 204 below). In some States, the use of mobile payment systems might allow for easier and more effective ways of paying for registration and other related fees. In such cases, the same considerations involved in establishing online payments (e.g. enacting appropriate laws, as well as designing efficient options to combine mobile payments and the filing of registration documents) should be applied in order to develop efficient solutions appropriate to the use of mobile technology.[76]

81. As noted above (see para. 70) when introducing electronic registration systems, States should adopt legislation that facilitates the implementation of these electronic solutions, although the obligation to use such solutions should be considered only when the various stakeholders concerned with the registration process (including the registrant, government agencies, and other relevant authorities) are prepared to comply. Furthermore, when developing such laws, States should take into account that while certain elements of a legal framework can be checked electronically, the most complex aspects of the process may need to be addressed by a registry official.[77]

82. Enacting States should also be aware that establishing an electronic registration system requires a well-designed legal and regulatory framework that promotes simplicity and flexibility and avoids, to the greatest extent possible, discretionary power and the making of exceptions (see para. 30 above). For instance, provisions requiring the interpretation of several documents and the collection of several pieces of information are difficult to adapt to electronic processing; the same applies to the use of discretionary power and complex structures of rules and exceptions.

83. When a State has developed the ICT infrastructure to achieve full business registry automation, the integration of other online registration processes for taxation, social services and other purposes could be considered. Even if no integration with registrations required by other public authorities is built into the system, it would nevertheless be advisable that States implement data interchange capabilities so that the relevant business information could be shared across government agencies (see

[75] See supra, footnote 30, page 13.

[76] The Secretariat suggests including the final two sentences at the end of this paragraph to respond to a request of the Working Group, at its twenty-eighth session, that experiences in some developing States regarding the use of mobile payment systems should be properly reflected in the commentary (para. 52, A/CN.9/900).

[77] See supra, footnote 30, page 14.

para. 74 above). A final improvement would be the development of mechanisms for disseminating business information products to interested parties; such products could substantially contribute to the financial sustainability of the registry (see paras. 189 to 191 and 194 below).[78]

84. One issue that would likely arise when the online registry is able to offer full-fledged electronic services would be whether to abolish any paper-based submission or to maintain both paper-based and online registration. In many jurisdictions, registries choose to have mixed solutions with a combination of electronic and paper documents or electronic and manual processing during case handling. This approach may result in considerable cost for registries, since the two systems require different tools and procedures. Moreover, if this option is chosen, it is important to establish rules to determine the time of registration as between paper-based and electronic submissions. Finally, paper applications must be processed in any case, so that the information included in a hard document can be transformed into data that can be processed electronically; this can be done by scanning the paper-based application for registration (possibly using optical character recognition technology so to make the scanned document electronically searchable). However, in order to ensure that the record made by scanning correctly represents the paper application, the registry will likely have to employ staff to check that record, thus adding a step that increases costs and reduces the benefits of using an online system.[79]

D. Other registration-related services supported by ICT solutions

85. Automation should enable the registry to perform other functions in addition to the processing of applications. Where jurisdictions require user-friendly electronic filing and repopulated forms,[80] for instance, it can assist businesses in the mandatory filing of periodic returns and annual accounts. Electronic filing and automated checks also help reduce processing time by the registry.[81]

86. Electronically supported registration could also assist the registry in deregistration procedures, i.e. notations in the registry that a particular business is no longer registered (see paras. 201 to 205 below). Such procedures usually require an official announcement that a business will be deregistered. The use of ICT can provide for the automation of such announcements, from initiating the process to producing a standard notice, thus helping registries to ensure that businesses are not deregistered before any time limit has elapsed and to reduce processing time. In order to be fully effective, however, adoption of an electronic registration system needs to be supported by streamlined procedures that enable the deregistration of businesses in a simplified and quick way.[82]

87. Further, ICT solutions could be applied to assist in the filing of financial information in machine-readable format (such as eXtensible Business Reporting Language, or XBRL). For example, a platform could be provided to assist in the conversion of paper-based financial statements to XBRL format. Machine-readable financial data facilitates the aggregation and analysis of financial information, which could be of significant value to users of the registry.

88. Solutions using ICT could also support follow-up and enforcement procedures of business registries when businesses fail to comply with registration requirements.

---

[78] See supra, footnote 23, page 13.

[79] See supra footnote 30, page 13.

[80] Repopulated forms allow selected fields to be automatically filled based on information previously provided by the registrant or maintained in their user account. When changes in the registrant's information occur, the registrant is not required to fill out the entire form again, but only to enter the relevant changes. Information included in the repopulated form is stored and may be made accessible to and exchangeable with other relevant agencies.

[81] See supra, footnote 30, page 15.

[82] Ibid., page 16.

In one jurisdiction, for instance, the back-office system of the registry monitors the records of businesses and detects whether certain circumstances suggest that the business is not in compliance with statutory requirements. An automatic notice to the business is then produced in order for it to remedy the situation. Should the business fail to do so within the statutory deadline, the ICT solution starts a new procedure to forward the case to the district court, which may make a decision on the compulsory liquidation of the business. Upon issuing an order for compulsory liquidation, the court notifies the registry which deregisters the business.[83]

Recommendation 11: Electronic, paper-based or mixed registry

The law should provide that the optimal medium to operate an efficient business registry is electronic. Should full adoption of electronic services not yet be possible, such an approach should nonetheless be implemented to as great an extent as permitted by the current technological infrastructure of the enacting State, as well as its institutional and legal framework, and expanded as that infrastructure improves.

E. Electronic documents and electronic authentication methods[84]

89. States that enact legal regimes on electronic communications and electronic signatures may wish to consider the legislative texts prepared by UNCITRAL to govern electronic transactions.[85] Such texts establish the principles of technological neutrality and functional equivalence (see also paras. 12 to 15 in the Annex)[86] that are needed to ensure equal treatment between paper-based and electronic communications; they also deal extensively with provisions covering the issues of legal validity of electronic documents and signatures, authentication, and the time and place of dispatch and receipt of electronic messages. Because of the way these texts, and other UNCITRAL legislative texts, are negotiated and adopted, they offer solutions appropriate to different legal traditions and to States at different stages of economic development. Furthermore, domestic legislation based on the UNCITRAL texts on electronic commerce will greatly facilitate cross-border recognition of electronic documents and signatures.

Recommendation 12: Electronic documents and electronic authentication methods

The law should:

(a) Permit and encourage the use of electronic documents as well as of electronic signatures and other equivalent identification methods;

(b) Regulate such use pursuant to the following principles:

(i) Documents cannot be denied legal effect, validity or enforceability solely on the grounds that they are in electronic format, or that they are signed electronically;

---

[83] For further reference see Norway, supra, footnote 79.

[84] At its twenty-eighth session, the Working Group agreed with the substance of this recommendation (recommendation 55 of A/CN.9/WG.I/WP.101) and the relevant commentary and to retain them in the legislative guide, but to move them to an appropriate position in the text (para. 143, A/CN.9/900). Further to the decision of the Working Group, the Secretariat has moved the recommendation and commentary, which has been edited, to this location.

[85] Such texts include: the UNCITRAL Model Law on Electronic Commerce (1996); the UNCITRAL Model Law on Electronic Signatures (2001) and the United Nations Convention on the Use of Electronic Communications in International Contracts (2005). For further information, see http://www.uncitral.org/uncitral/uncitral_texts/electronic_commerce.html.

[86] The principle of "technological neutrality" means that the provisions of the law are "neutral" and do not depend on or presuppose the use of particular types of technology and can be applied to generation, transmission or storage of all types of information. The principle of "functional equivalence" establishes the criteria under which electronic communications and electronic signatures may be considered equivalent to paper-based communications and hand-written signatures.

(ii) The place of origin of the electronic signature should not determine whether and to what extent the electronic signature is legally effective;

(iii) Different technologies that may be used to communicate, store and sign information electronically should be subject to the same legal treatment; and

(iv) Electronic documents and electronic signatures have the same purpose and function as their paper-based counterparts and are thus functionally equivalent to them; and

(c) Establish criteria to reliably identify the person submitting an electronic document and using an electronic signature or equivalent authentication method.

F. A one-stop shop for business registration and registration with other authorities

90. As discussed above (see para. 60 above), before a business may operate in the legally regulated economy, it is often required to register with several different government agencies in addition to the business registry. Those additional agencies often require the same information that has already been gathered by the business registry. Entrepreneurs must often personally visit each agency and fill out multiple forms. Taxation, justice, employment and social services agencies are usually involved in this process; other administrative offices and institutions, specific to each jurisdiction, may also be involved. This often results in multiple procedures governed by different applicable laws, duplication of information and lack of ownership or full control of the process by the agencies involved. Possibly worse for MSMEs wishing to register, the overall process can require weeks, if not months.[87]

91. The establishment of one-stop shops has thus become one of the most popular reforms to streamline business registration in recent years. One-stop shops are single outlets where entrepreneurs receive all of the information and forms they need in order to complete the necessary procedures to establish their business rather than having to visit several different government agencies.

92. Beyond this general definition, the scope of one-stop shops can vary according to the services offered. Some one-stop shops only provide business registration services, which may still be an improvement if the registration process previously involved a number of separate visits to the relevant authorities; others carry out other functions related to business start-up.[88] The most common of these other functions is tax registration, although there are also examples of one-stop shops dealing with registration for social services and statistical purposes and with obtaining the required licenses from municipal and other authorities.[89] In rare cases,[90] one-stop shops assist entrepreneurs not only with business licences and permits but also with investment, privatization procedures, tourism-related issues and State-owned property management, and may provide access to utilities and banking services.

93. The functions of one-stop shops can be carried out through physical offices or an electronic platform. Physical premises, when in rural areas, are particularly appropriate for businesses with limited access to municipal centres; so, too, are mobile offices, particularly in places that are too remote for States to have physical

---

[87] See supra, footnote 24, page 30.

[88] Investment Climate (World Bank Group), How Many Stops in a One-Stop Shop? A Review of Recent Developments in Business Registration, 2009, pages 1 ff.

[89] At its twenty-eighth session of the Working Group, it was suggested that reference could be made to obtaining municipal licenses and access to banking services as examples of additional services that could be linked to the one-stop shop (para. 56, A/CN.9/900).

[90] See Georgia, in World Bank and International Finance Corporation, Doing Business 2011, page 21.

premises.[91] Of course, in addition to physical premises, online business registration can be offered as an option available for registering a business. Online one-stop shops take advantage of solutions supported by ICT, which allow for the rapid completion of several formalities due to the use of dedicated software. Such online portals may provide a fully interconnected system or may still entail separate registration in respect of some requirements, for example, for taxation services.[92]

94. When establishing one-stop shops, in particular those performing functions in addition to business registration, States can choose among different approaches. In the "one door" approach, representatives of different government agencies involved in registration are brought together in one physical place, but the applicant must deal separately with each representative (for example, the business registry official dealing with the approval of the business name, the clerks checking the documents, and the taxation official), although the different agencies liaise among themselves.[93] As may be apparent, this solution is relatively uncomplicated and would normally not require any change in law or ministerial responsibilities, but it would involve establishing effective cooperation between the different government ministries. One issue States should consider when opting for this approach would be how much authority the representatives of each agency should have; for example, should they have the discretion to process the registration forms on site or would they simply be acting on behalf of their agencies and be required to take the documents to their home agencies for further processing?[94] Similarly, it is also important to consider clarifying the lines of accountability of the various representatives from the different agencies to the one-stop shop administrator.[95]

95. Another form of one-stop shop is the so-called "one window" or "one table" version, which offers a higher level of integration of the different agencies involved in the start-up of a business.[96] In this case, the one-stop shop combines the process for obtaining business and other registrations, such as for taxation and social services, with other arrangements, like publishing the registration in a National Gazette or newspapers, when required. All relevant documents are submitted to the one-stop shop administrator who is authorized, and properly trained, to accept them on behalf of the various government agencies involved. Documents are then dispatched, electronically or by hand or courier, to the competent agency for processing. This type of one-stop shop requires detailed coordination between the different government agencies, which must modify their procedures to ensure an effective flow of information. A memorandum of understanding between the key agencies involved may be needed in order to establish the terms in respect of the sharing of business information.[97] In some cases, taking such an approach may also require a change in legislation.[98]

96. A third approach, which is less common, is based upon the establishment of a separate entity to coordinate the business registration function and to deal with other requirements that entrepreneurs must meet, such as making tax declarations, obtaining the requisite licences, and registering with social services authorities. Pursuant to this model, the entrepreneur would apply to the coordinating entity after having registered with the business registry in order to fulfil the various additional aspects of the procedures necessary prior to commencing business operations. Although this approach results in adding a step, it could be useful in some States since it avoids having to restructure the bodies with the main responsibility for business registration.

---

[91] See, for instance, the example of Uganda, available at: http://ursb.go.ug/press-release-new-mobile-business-registration-office/. At its twenty-eighth session, the Working Group suggested that reference to the use of mobile offices as additional access points for the one-stop shops be included in the text (para. 56, A/CN.9/900).

[92] See supra footnote 88, page 4.

[93] Ibid., page 3.

[94] Ibid., page 2.

[95] For further details, see para. 42, A/CN.9/WG.I/WP.85.

[96] See supra footnote 88, page 3.

[97] See supra, footnote 24, page 31.

[98] See supra, footnote 88, page 3.

On the other hand, the adoption of such a structure could involve an increase in the cost of the administrative functions and may only reduce timeframes to the extent that it allows the various functions to take place successively or enables participants in the one-stop shop to network with the other agencies to speed up their operations. From the user's perspective, however, the advantage of being able to deal with a single organization remains.[99]

97. Finally, in States with developed ICT infrastructures, the functions of the agencies concerned with registration could be fully integrated through the use of a common database, which is operated by one of the agencies involved and provides simultaneous registration for various purposes, i.e. business registration, taxation, social services, etc. In some jurisdictions, a public agency (such as the tax administration) is responsible for the registration of business entities, or ad hoc entities have been set up to perform such simultaneous registration.[100]

98. Regardless of the approach chosen in the implementation of a one-stop shop, it is important to emphasize that such an arrangement does not require the establishment of a single government agency with authority over all of the other agencies related to the one-stop shop. Instead, it involves designating which government agency has authority over the single integrated interface, while all of the government agencies participating in the one-stop shop retain their functional autonomy.[101]

99. One issue that States should consider when establishing a one-stop shop is its location. It is usually advisable for the one-stop shop to be directly connected to the business registry office, either because it is hosted there or because the registry is part of the one-stop shop. The organization(s) responsible for the one-stop shop could thus be the same as that/those which oversee(s) the business registration process. This approach should take into account whether such organizations are equipped to administer the one-stop shop. Examples from various jurisdictions indicate that where authorities such as executive agencies are responsible for business registration, they possess the skills to perform one-stop shop functions as well. The same can be said of chambers of commerce, government commissions, and regulatory authorities. There are very few examples of courts that have adopted a one-stop shop approach in those States where business registration is court-based.

100. Although one-stop shops do not necessarily require changes in the domestic legal framework, as seen in the paragraphs above, it is important for the operation of such mechanisms to be legally valid, which may involve adapting existing laws to the new structure and method of proceeding. For instance, effective functioning of the one-stop shop may require provisions governing the collection of information by public authorities as well as the exchange of information among such authorities. The extent of the changes will thus vary according to the different needs of States. In addition, one-stop shops should be given a sufficient budget, since they can be quite expensive to establish and maintain, they should be staffed with well-trained personnel, and they should have their performance regularly monitored by the supervising authority in accordance with client feedback.

Recommendation 13: A one-stop shop for business registration and registration with other authorities

The law should establish a one-stop shop for business registration and registration with other public agencies, including designating which public agency should oversee the functioning of the single interface. Such an interface:

(a) May consist of a web platform or physical offices; and

---

[99] See Benin and France, supra footnote 88, page 4.

[100] See Albania's National Registration Center, supra, footnote 88, page 4.

[101] The Secretariat suggests the inclusion of this paragraph to respond to concerns expressed at the twenty-eighth session of the Working Group that more clarity was needed in the draft legislative guide on the relationship between the agency overseeing the one-stop shop and the other public agencies participating in that arrangement (para. 58, A/CN.9/900).

(b) Should integrate the services of as many public agencies requiring the same information as possible, but at a minimum should include taxation and social services agencies.

G. Use of unique business identifiers[102]

101. As discussed above (see paras. 60 and 90), in those jurisdictions where the government agencies with which businesses are required to register (for example, for taxation and social services) operate in isolation from each other, it is not unusual for this procedure to result in duplication of systems, processes and efforts. This approach is not only expensive but may also cause errors. Moreover, if each agency assigns a registration number to the business when it registers with that agency, and the use and uniqueness of that number is restricted to the authority assigning it, information exchange among the agencies requires each authority to map the different identification numbers applied by the other agencies. When ICT solutions are used, they can facilitate such mapping, but even they cannot exclude the possibility that different entities will have the same identifier, thus reducing the benefits (in terms of cost and usefulness) obtained from the use of such tools.[103]

102. In recent years, several jurisdictions have thus adopted integrated registration systems in which an application submitted for business registration includes all of the information required by the different agencies. Once completed, the information in the application for business registration is transmitted by the registry to all relevant authorities. Information and any necessary approvals from the other agencies are then communicated back to the registry, which immediately forwards the information and approvals to the entrepreneur.[104] While this is beneficial for all businesses, regardless of their size, it is particularly valuable for MSMEs, which may not have the resources necessary to cope with the compliance requirements of multiple government authorities in order to establish their business.

103. States aiming at fostering such integration among different agencies may wish to consider that in recent years some international organizations have developed tools that facilitate inter-agency cooperation. For instance, one international organization has developed an online system that allows for the interoperability of the various public agencies involved in business registration with minimal or no change at all in the internal processes of the participating agencies nor in their computer systems.

104. Some developed States have introduced a more sophisticated approach, which considerably improves information exchange throughout the life cycle of a business. This approach requires the use of a single unique business identification number or unique identifier, which ties information to a given business and allows for information in respect of it to be shared among different public and private agencies.

105. A unique identifier is structured as a set of characters (they may be numeric or alphanumeric) which distinguishes registered entities from each other. When designing a unique identifier, it may be advisable to build some flexibility in the structure of the identifier (for instance, by allowing the addition of new characters to the identifier at a later stage) so that the identifier can be easily adaptable to new system requirements in a national or international context, or both (see also para. 74 above). The unique identifier is allocated only once (usually upon establishment) to a single business and does not change during the existence of that business,[105] nor after its deregistration. The same unique identifier is used for that business by all agencies,

---

[102] At its twenty-eighth session, the Working Group agreed to combine recommendations 13 through 15 of A/CN.9/WG.I/WP.101 into three consecutive recommendations to follow a single commentary (para. 65, A/CN.9/900).

[103] See supra, footnote 88, page 22.

[104] See supra, footnote 23, page 9.

[105] While the unique identifier does not change throughout the lifetime of a business, if the business changes its legal form, a new unique identifier must be allocated.

which permits information about that particular registered entity to be shared within or between the public and private sectors.[106]

106. The experience of States that have adopted unique identifiers has demonstrated their usefulness. As noted above, they permit all government agencies to identify easily new and existing businesses, and cross-check information in respect of them. In addition, the use of unique identifiers improves the quality of the information contained in the business registry, since the identifiers ensure that information is linked to the correct entity even if its identifying attributes (for example name, address, and type of business) change. Moreover, unique identifiers prevent the situation where, intentionally or unintentionally, businesses are assigned the same identification; this can be especially significant where financial benefits are granted to legal entities or where liability to third parties is concerned.[107] Unique identifiers have been found to produce benefits for businesses as well, in that they considerably simplify business administration procedures: entrepreneurs do not have to manage different identifiers from different authorities, nor are they required to provide the same or similar information to different authorities. Introducing unique identifiers can also contribute to improving the visibility of businesses, in particular of MSMEs, with possible partners as well as with potential sources of finance, since it would assist in creating a safe and dependable connection between a business and all of the information that relates to it. This access to relevant information could facilitate the establishment of business relationships, including in the cross-border context.[108]

107. One issue a State may have to consider when introducing unique identifiers is that of individual businesses that do not possess a separate legal status from their owners. In such cases, taxation or other authorities (such as social services) may often prefer to rely on the identifier for the individual, who may be a natural person, rather than on the business identifier. However, States may also opt to assign a separate identifier to a sole proprietor in a business capacity and in a personal capacity.[109]

108. Situations may arise in which different agencies in the same jurisdiction allocate identifiers to businesses based on the particular legal form of the business. States should thus consider adopting a verification system to avoid multiple unique identifiers being allocated to the same business by different public agencies.[110] If the identifier is assigned through a single jurisdictional database the risk of several identifiers being allocated to one business or of several businesses receiving the same identifier is considerably reduced.

109. The effective use of unique identifiers is enhanced by the adoption of full electronic solutions that do not require manual intervention. However, electronic solutions are not a mandatory prerequisite to introducing unique identifiers, as they can also be effective in a paper-based environment.[111] When unique identifiers are connected to an online registration system, it is important that the solution adopted fits the existing technology infrastructure.

(a) Allocation of unique business identifiers

110. The use of unique identifiers requires sustained cooperation and coordination among the authorities involved, and a clear definition of their roles and responsibilities, as well as trust and collaboration between the public and business

---

[106] See supra, footnote 30, page 20.

[107] Ibid., page 22.

[108] This point has been moved to this paragraph further to a decision by the Working Group at its twenty-eighth session to relocate some of the concepts from paragraphs 111 to 116 of A/CN.9/WG.I/WP.101 to other parts of the text (para. 71, A/CN.9/900).

[109] Further to comments at the twenty-eighth session of the Working Group that paragraph 100 in A/CN.9/WG.I/WP.101 may also include reference to a separate business identifier being assigned to a sole proprietor in both a business and an individual capacity, the Secretariat suggests including the final sentence at end of the paragraph (para. 61, A/CN.9/900).

[110] See supra, footnote 30, page 21.

[111] Ibid., page 22.

sectors. Since the introduction of a unique identifier does not of itself prevent government agencies from asking a business for information that has already been collected by other agencies, States should ensure that any reform process in this respect start with a clear and common understanding of the reform objectives among all the stakeholders involved. Moreover, States should ensure that a strong political commitment is in place. Potential partners ideally include the business registry, the taxation authority, the statistics office, the social services agency, the pension fund, and any other relevant agencies. If agreement among these stakeholders is elusive, at a minimum, the business registry and taxation authority should be involved. Information on the identifiers in use by the other authorities and within the business sector is also a prerequisite for reform, as is a comprehensive assessment to identify the needs of all stakeholders.

111. In order to permit the introduction of a unique identifier, the domestic legal framework should include provisions on a number of issues including:

(a) Identification of the authority charged with allocating the unique identifier;

(b) Allocation of the unique identifier before or immediately after registration with the authorities involved in business entry;

(c) Listing of the information that will be related to the identifier, including at least the name, address and type of business;

(d) The legal mandate of the public authorities to use the unique identifier and related information, as well as any restrictions on requesting information from businesses;

(e) Access to registered information by public authorities and the private sector;

(f) Communication of business registrations and amendments among the public authorities involved; and

(g) Communication of deregistration of businesses that cease to operate.[112]

(b) Implementation of a unique business identifier

112. Adoption of a unique business identifier normally requires a centralized database linking the businesses to all relevant government agencies whose information and communication systems must be interoperable. This requirement can be a major obstacle when implementing this in practice if the technological infrastructure of the State is not sufficiently advanced.

113. States can introduce the unique business identifier in one of two ways. In the first approach, business registration is the first step and includes the allocation of a unique identifier, which is made available (together with the identifying information) to the other authorities involved in the registration process (for instance, taxation and social services authorities), and which is re-used by those authorities. In the second approach, the allocation of a unique business identifier represents the beginning of the process. The unique identifier and all relevant information are then made available to the government agencies involved in business registration, including the business registry, and is then re-used by all agencies.[113] Either of these two approaches can be followed by the authority entrusted with allocating unique business identifiers, regardless of whether the authority is the business registry, a facility shared by public agencies or the taxation authority. It would be left to the enacting State to determine the format of the unique business identifier and which agency would have the authority to assign it.[114] It is important to note that in some States, the use of a unique

[112] See supra, footnote 23, page 32.

[113] See supra, footnote 30, page 20.

[114] At its twenty-eighth session, the Working Group agreed that the commentary should clarify the role of the enacting State in deciding the format of the unique identifier and which agency should have the authority to allocate them (para. 63, A/CN.9/900).

identifier may be restricted: in some jurisdictions, certain government agencies still allocate their own identification number[115] although the business carries a unique identifier.[116]

114. Introducing a unique business identifier usually requires adaptation both by public authorities in processing and filing information and by businesses in communicating with public authorities or other businesses. A unique business identifier requires the conversion of existing identifiers, which can be accomplished in various ways. Taxation identifiers are often used as a starting point in designing a new identifier, since the records of the taxation authorities cover most types of businesses and are often the most current.[117] Examples also exist in which, rather than introducing a completely new number, the taxation number itself is retained as the unique business number. New identification numbers can also be created using other techniques according to a country's registration procedures. In such a situation, it is important that each business, once assigned a new number, verifies the related identifying information, such as its name, address, and type of activity.[118]

115. In some jurisdictions, advanced interconnectivity among the different agencies involved in the registration process has resulted in a single form for registration with all agencies. Examples exist of consolidated (electronic) registration forms that can be repopulated[119] with information from the different authorities concerned. Integration of registration functions can be facilitated by the use of one common database. In jurisdictions where this approach has been developed, agencies perform regular file transfers to update the database as well as their own records; they have direct access to the common database and use the same back-office systems to update it; and the information registered is regularly verified by trusted staff of the agencies. Such strong coordination among the concerned agencies is often based on regulatory provisions that allocate roles and responsibilities among the various agencies involved. Appropriate funding should also be allocated from the State's budget.[120]

116. As discussed above (see paras. 70 and 96), the interoperability of the ICT systems of different agencies systems could be a major obstacle when implementing unique business identifiers. The ability of different information technology infrastructures to exchange and interpret data, however, is only one aspect of interoperability that States should consider. Another issue is that of semantic interoperability, which can also pose a serious threat to a successful exchange of information among the agencies involved as well as between relevant agencies and users in the private sector. For this reason, it is important to ensure that the precise meaning of the information exchanged is understood and preserved throughout the process and that semantic descriptions are available to all of the stakeholders involved. Measures to ensure interoperability would thus require State action on a dual level: agreement on common definitions and terminology on one hand, and the development of appropriate technology standards and formats on the other. This approach should be based on a mutual understanding of the legal foundation, responsibilities and procedures among all those involved in the process.[121]

---

[115] In certain cases, agencies may keep their own numbering system in addition to using the unique identifier because of "legacy data", i.e. an obsolete format of identifying the businesses which cannot be converted into unique identifiers. In order to access such information, the registry must maintain the old identification number for internal purposes. In dealing with the public, however, the government agency should use for all purposes the unique identifier assigned to the business.

[116] See supra footnote 113, page 20.

[117] See Belgium in paragraph 35, A/CN.9/WG.I/WP.85.

[118] For further reference, see Norway, in para. 35, A/CN.9/WG.I/WP.85.

[119] For details on repopulated forms, see footnote 81 above.

[120] For further reference, see Norway, supra, footnote 30, page 23.

[121] Ibid.

(c) Exchange of information among business registries[122]

117. States are increasingly aware of the importance of improving the cross-border exchange of data between registries,[123] and sustained progress in respect of ICT development now allows this aspect to be addressed. Introducing unique business identifiers that enable different public authorities to exchange information about a business among themselves could thus be relevant not only at the national level, but also in an international context. Unique identifiers can allow more efficient cross-border cooperation among business registries located in different States, as well as between business registries and public authorities in different States. Implementation of cross-border exchange of data can result in more dependable information for consumers and existing or potential business partners, including small businesses that provide cross-border services, as well as for potential sources of finance for the business (see paras. 195 and 196 below).

118. Accordingly, States implementing reforms to streamline their business registration system may wish to consider adopting solutions that will, in future, facilitate such information exchanges between registries from different jurisdictions and to consult with States that have already implemented approaches[124] that allow for such interoperability. By way of example, one such reform could include developing a system of business prefixes that would make the legal form of the business immediately recognizable across jurisdictions and in a cross-border sense.

Recommendation 14: Use of unique business identifiers

The law should provide that a unique business identifier should be allocated to each registered business and should:

(a) Be structured as a set of numeric or alphanumeric characters;

(b) Be unique to the business to which it has been allocated; and

(c) Remain unchanged and not be reallocated following any deregistration of the business.

Recommendation 15: Allocation of unique business identifiers

The law should specify that the allocation of a unique business identifier should be carried out either by the business registry upon registration of the business, or before registration by a legally-designated authority. In either case, the unique business identifier should then be made available to all other public agencies sharing the information associated with that identifier, and should be used in all official communication in respect of that business.

Recommendation 16: Implementation of a unique business identifier

The law should ensure that, when adopting a unique business identifier across different public agencies:

---

[122] At its twenty-eighth session, the Working Group agreed that recommendation 17 of A/CN.9/WG.I/WP.101 and the relevant commentary (paras. 111 to 116 of A/CN.9/WG.I/WP/101) should be adjusted to focus more on cross-border access to information than on information-sharing (paras. 69 to 71, A/CN.9/900). Having made the requested changes to that recommendation and the relevant commentary in the current text, the Secretariat has retained additional information from those paragraphs and relocated it here.

[123] For instance, there are some regional examples of cross-border information-sharing on businesses between States, but these are cases where the information-sharing was a component of a broader project involving significant economic integration of the relevant States.

[124] Some States with more integrated economies have developed an application that allows users to carry out simultaneous searches of the registries in both States by using their smartphones or mobile devices.

(a) There is interoperability between the technological infrastructure of the business registry and of the other public agencies sharing the information associated with the identifier; and

(b) That existing identifiers are linked to the unique business identifier.

H. Sharing of protected data between public agencies

119. Although unique business identifiers facilitate information-sharing, it is important that they protect sensitive data and privacy. For this reason, when a State introduces interoperability among different authorities, it should address issues of how public agencies should share protected data relating to individuals and businesses so that the sharing does not infringe the right for protection of the data owners. States should thus ensure that all information-sharing among public agencies occurs in accordance with the laws of the State, which should establish the conditions under which such sharing is permitted.[125] Moreover, the law should clearly identify which public agencies are involved, the information shared and the purpose for sharing, and establish that the data owners should be informed that their protected data may be shared among public agencies and for what purpose. In order to further protect data owners, information-sharing should be based on the principle that only the minimum information necessary to achieve the public agency's purpose may be shared and that appropriate measures are in place to protect the rights to privacy of the business.[126] When devising appropriate law or policy on the sharing of protected data between public agencies, it is important for States to consider interoperability among those public agencies (such as the ability of different information technology infrastructures to exchange and interpret data; or the semantic interoperability).

Recommendation 17: Sharing of protected data between public agencies[127]

The law should establish that rules for the sharing of protected data between public agencies pursuant to the unique business identifier system that is adopted:

(a) Conform with the applicable rules in the enacting State on the sharing of protected data between public agencies;

(b) Enable public agencies to access protected data included in the unique business identifier system only in order to carry out their statutory functions; and

(c) Enable public agencies to access protected data included in the unique business identifier system only in relation to those businesses with respect to which they have statutory authority.

IV. Registration of a business

A. Scope of examination by the registry

120. The method through which a business is registered varies from State to State, ranging from those that tend to regulate less and rely on the legal framework that governs business behaviour, to States that opt for ex ante screening of businesses

---

[125] At its twenty-eighth session, the Working Group agreed that para. 110 of A/CN.9/WG.I/WP.101 should focus solely on issues of sharing protected data between public agencies and that references to disclosure of information to the public should be considered in relation to recommendations 32 and 33 of A/CN.9/WG.I/WP.101 (para. 67, A/CN.9/900).

[126] For a relevant example, see the website of the Data Protection Commissioner of the Republic of Ireland, available at: www.dataprotection.ie.

[127] At its twenty-eighth session, the Working Group requested the Secretariat to amend the text of the recommendation (in particular, the chapeau and paragraph (a)) so that it referred to "protected data" and recommended that such data should be shared among public authorities only in conformity with the law of the enacting State (para. 68, A/CN.9/900).

before the business may be registered (see also para. 57 above).[128] In this regard, a State aiming at reforming the registration system must first decide which approach it will take so as to determine the scope of the examination that will have to be carried out by the registry. The State may thus choose to have a system where the registry only records facts or a system where the registry is required to perform legal verifications and decide whether the business meets the criteria to register.

121. States opting for ex ante verification of legal requirements and authorization before businesses can register often have court-based registration systems in which the judiciary, notaries and lawyers perform a key role in the registration process.[129] Other States structure their business registration as a declaratory system, in which no ex ante approval is required before business start-up and where registration is an administrative process. In such declaratory systems,[130] registration is under the oversight of a government department or agency, which can choose whether to operate the business registration system itself or to adopt other arrangements (see paras. 41 to 43 above).[131] There are also States that do not fall neatly within either category and in which there is a certain variation in the level and type of verification carried out as well as in the level of judiciary oversight.[132]

122. Both the approval and the declaratory systems have their advantages and disadvantages. Approval systems are usually said to help prevent errors or omissions prior to registration. Courts and other intermediaries exercise a formal review and, when appropriate, also a substantive review of the pre-requirements for the registration of business. By contrast, declaratory systems are said to be easier to manage and better-suited to deterring corruption by avoiding opportunities for official decisions to be made with a view towards personal gain; furthermore, they may reduce costs for registrants by negating the need to hire an intermediary and appear to have lower maintenance costs. Systems in which business registration procedures are entrusted to an administrative body under the oversight of the judiciary have been said to merge advantages of both the declaratory and approval systems by combining ex ante verification of the requirements needed for establishing a business with a reduced role of the courts and other intermediaries, thus simplifying procedures and shortening the processing times.[133]

B. Accessibility of information on how to register

123. In order for the business registry to facilitate trade and interactions between business partners, the public and the State, easy access to business registry services should be provided both to businesses that want to register and to interested stakeholders who want to search the information on the business registry.

124. For businesses wanting to register, surveys often show that many microbusinesses operating outside of the legally regulated economy are not aware of the process of registering or of its costs: often they overestimate time and cost, even

---

[128] See supra, footnote 24, page 2.

[129] See supra, footnote 30, pages 25–26.

[130] The Secretariat suggests the deletion of the phrase “verification of an event’s legal status is made after it has taken place, and” to improve the clarity of the paragraph as noted at the twenty-eighth session of the Working Group (para. 74, A/CN.9/900).

[131] See supra, footnote 24, page 28.

[132] See, for instance, Italy and the role of the Chambers of Commerce in business registration. The Secretariat has included the last two sentences of para. 121 in order to fulfil the decision of the Working Group, at its twenty-eighth session, that the commentary should include information on those jurisdictions that use a more nuanced approach between the declaratory and the approval systems (para. 73, A/CN.9/900).

[133] The Secretariat has included the sentence at the end of para. 122 further to a decision of the Working Group at its twenty-eighth session that information should also be provided on jurisdictions that used a more nuanced or hybrid approach between the declaratory and the approval systems (para. 73, A/CN.9/900). (See also footnote 133 above.)

after efforts to simplify the registration process.[134] Easily retrievable information on the registration process (such information could include: a list of the steps needed to achieve the registration; the necessary contacts; the data and documents required; the results to be expected; how long the process will take; methods of lodging complaints; and possible legal recourse), including on the advantages offered by a one-stop shop, where available,[135] in accessing multiple services relating to business registration (see also paras. 90 to 100 above) as well as on the relevant fees can reduce compliance costs, and make the outcome of the application more predictable, thus encouraging entrepreneurs to register. Restricted access to such information, on the contrary, might require meetings with registry officials in order to be apprised of the registration requirements, or the involvement of intermediaries to facilitate the registration process.

125. In jurisdictions with developed ICT infrastructures, information on the registration process and documentation requirements should be available in the registry website or the website of the government agency overseeing the process. Moreover, the possibility of establishing direct contact with registry personnel through a dedicated email account of the registry, electronic contact forms or client service telephone numbers should also be provided (see also para. 196 below). As discussed below, States should consider whether the information included on the website should be offered in a foreign language in addition to official and local languages. States with more than one official language should make the information available in all such languages (see para. 139 below).

126. Lack of advanced technology, however, should not prevent access to information that could be ensured through other means, such as the posting of communication notes at the relevant agency or dissemination through public notices. In some jurisdictions, for instance, it is required to have large signs in front of business registry offices stating their processes, time requirements and fees.[136] In any event, information for businesses that want to register should be made available at no cost.

127. It is equally important that potential registry users are given clear advice on the practical logistics of the registration and the public availability of the information on the business registry, for example, through the dissemination of guidelines and tutorials (ideally in both printed and electronic form) and the availability of in-person information and training sessions. In some States, for instance, prospective users of the system are referred to classroom-based or eLearning opportunities available through local educational institutions or professional associations.[137]

Recommendation 18: Accessibility of information on how to register

The registrar should ensure that information on the business registration process and the applicable fees, if any, is widely publicized, readily retrievable, and available free of charge.

C. Businesses permitted or required to register

128. One of the key objectives of business registration is to permit businesses of all sizes and legal form to be visible in the marketplace and to operate in the legally regulated commercial environment. This objective is of particular importance in assisting MSMEs to participate effectively in the economy, and States should

[134] M. Bruhm, D. McKenzie, Entry Regulation and Formalization of Microenterprises in Developing Countries, 2013, pages 7–8.

[135] It was suggested at the twenty-eighth session of the Working Group that reference could be made here to the importance of one-stop shops, including a cross-reference to the earlier discussion of them in the legislative guide (para. 76, A/CN.9/900).

[136] See Bangladesh and Guinea cited in para. 31, A/CN.9/WG.I/WP.85.

[137] For further reference, see Service Alberta, Canada, at www.servicealberta.com/1005.cfm.

enable[138] businesses of all sizes and legal form to register in an appropriate business registry, or create a single business registry that is tailored to accommodate registration by a range of different sizes and different legal forms of business.

129. As noted above (see para. 31), enabling the registration of businesses that would not otherwise be required to register allows such businesses to benefit from a number of services offered by the State and by the registry, including the protection of a business or a trade name, facilitating access to credit, increasing visibility to the public and to markets and, subject to the legal form chosen for the business which may require it to be registered, the separation of personal assets from assets devoted to business or limiting the liability of the owner of the business.[139] Businesses that voluntarily register must, however, fulfil the same registration obligations (e.g. timely filing of periodic returns, updating of registered information, accuracy of information submitted) as those businesses that are required to register and will be subject to the same penalties for non-compliance with those obligations.[140]

130. Nonetheless, States must also define which businesses are required to register under the applicable law. Laws requiring the registration of businesses vary greatly from State to State, but one common aspect is that they all require registration of a particular legal form of business. The nature of the legal forms of economic entity that are required or permitted to register in a given jurisdiction is, of course, determined by the applicable law.[141] In some legal traditions, it is common to require registration of all businesses, including sole proprietorships, professionals, and government bodies, since they are all said to constitute an economic entity;[142] while in other legal traditions, only corporations and similar entities (with legal personality and limited liability) are required to register.[143] This approach can exclude businesses like partnerships and sole proprietorships from mandatory registration. However, variations on these regimes also exist, and some jurisdictions permit voluntary registration for businesses that would not otherwise be required to register.[144]

131. In several jurisdictions, when entrepreneurs decide to establish and to register their business, they tend to choose the simplest legal form available to them in order to minimize the regulatory and financial burden, as well as the expense of establishing the business. A sole proprietorship or similar type of business with low legal and regulatory requirements is thus often the most popular business form. Some jurisdictions require that even simple business forms such as these be registered, and some jurisdictions have carried out reforms to facilitate the registration process for sole proprietorships or for simplified new types of limited liability entities.

Recommendation 19: Businesses permitted or required to register

The law should specify:

(a) That all businesses are permitted to register; and

(b) Which legal forms of businesses are required to register.

---

[138] Further to the decision of the Working Group at its twenty-eighth session, the phrase "should enable" has replaced "may wish to consider requiring or enabling" to ensure consistency with para. 31 above (para. 77, A/CN.9/900).

[139] At its twenty-eighth session, the Working Group requested the Secretariat to clarify the paragraph to clarify that asset partitioning was related to the legal form of the business (see para. 79, A/CN.9/900).

[140] At its twenty-eighth session, the Working Group requested the Secretariat to adjust the text to clarify the scope of the last sentence (para. 80, A/CN.9/900).

[141] See supra, footnote 6, pages 6 ff.

[142] See para. 23, A/CN.9/825.

[143] See supra, footnote 6, page 6. At its twenty-eighth session, the Working Group requested the Secretariat to clarify the final phrase of this paragraph (para. 80, A/CN.9/900).

[144] For further reference, see supra footnote 6, pages 6 ff. In order to clarify the last part of the paragraph, the Secretariat suggests replacing the phrase after "register" ("for example, because they are not economic entities or because they are not engaged in business activities ") with the phrase "such as sole traders and professional associations" (para. 80, A/CN.9/900).

D. Minimum information required for registration

132. As a general rule, businesses must meet certain requirements in order to be registered; those requirements are determined by the State based on its legal and economic framework. In addition, the registered information required usually varies depending on the legal form of business being registered – for example, sole proprietorships and simplified business entities may be required to submit relatively simple details in respect of their business, while businesses such as public and private limited liability companies will be required to provide more complex and detailed information. Although the requirements for registration of each legal form of business will vary according to the applicable law of the relevant jurisdiction, there are, however, some requirements that can be said to be common for many businesses in most States, both during the initial registration process and throughout the life of the business.

133. General requirements for the registration of all legal forms of business are likely to include information in respect of the business and its founders, such as:

(a) The name and address at which the business can be deemed to receive correspondence (such an address can be a "service address" and need not be the residential address of the registrants or the managers of the business);

(b) The name(s) and contact details of the registrant(s);

(c) The identity of the person or persons who may legally bind the business; and

(d) The legal form of business that is being registered.[145]

134. Other information that may be required for registration, depending on the jurisdiction of the registry and the legal form of the business being registered, can include:

(a) The names and addresses of the persons associated with the business, which may include managers, directors and officers of the business;

(b) The name and the address of the owner(s) or the beneficial owner(s);

(c) The rules governing the organization or management of the business; and

(d) Information relating to the capitalization of the business.

135. Depending on the legal form of the business being registered, other details may be required in order to finalize the registration process. In some jurisdictions, proof of the share capital, the name of the chairperson, information on the type of commercial activities engaged in by the business, and agreements in respect of non-cash property constitute information that may also be required by registries in respect of certain legal forms of business.[146] States should however be mindful that requesting a business that intends to register to submit complex and extensive information may result in making registration more difficult and expensive and thus may discourage MSMEs from registering.[147]

136. In addition, in several jurisdictions, registration of shareholder details and any changes therein may be required; in a few cases, registration of shareholder details is carried out by a different authority.[148] In some jurisdictions registration of the identity of the business owner(s) is considered a key requirement;[149] other jurisdictions now make it a practice to register beneficial ownership details and changes in those

---

[145] At its twenty-eighth session, the Working Group agreed to delete subparagraph 130(b) of A/CN.9/WG.I/WP.101 (para. 82, A/CN.9/900).

[146] See supra, footnote 44, pages 26 ff.

[147] See supra, footnote 42, page 6.

[148] See supra, footnote 66, page 26.

[149] At its twenty-eighth session, the Working Group requested the Secretariat to reflect the practice of those States in which the identity of the owner is among the minimum information required for business registration (para. 83, A/CN.9/900).

details,[150] although the business registry is not always the authority entrusted with this task.[151] Transparency in the beneficial ownership of businesses can help prevent the misuse of corporate vehicles, including MSMEs, for illicit purposes.[152]

Recommendation 20: Minimum information required for registration

The law should establish the minimum information and supporting documents required for the registration of a business, including at least:

(a) The name and address at which the business can be deemed to receive correspondence or, in cases where the business does not have a standard form address, the precise description of the geographical location of the business;

(b) The identity of the registrant(s);[153]

(c) The identity of the person or persons who are authorized to act on behalf of the business; and

(d) The legal form of the business being registered.

E. Language in which information is to be submitted

137. When requiring the submission of information for business registration, one important issue for the State to consider is the language in which the required information must be submitted. Language can be a barrier and can cause delays in registration if documents need to be translated into the language of the registry.[154] On the other hand, a business can be registered only if the content of the information is legible to the registry staff. For this reason, it is not common for jurisdictions to allow documents or electronic records to be submitted in a non-official language. States, however, may consider whether such documents can be accepted. There are some States that allow all or some of the information relating to the business registration to be submitted in a non-official language. Should States opt for this approach, it would be advisable to establish that the documents or electronic records must be accompanied by a sworn translation into the registry's national language(s) or any other form of authenticating the documents or electronic records that is used in the State.[155]

138. Another issue is whether the documents submitted to the business registry include information, such as names and addresses, which uses a set of characters

---

[150] See supra, footnote 44, page 37.

[151] A "beneficial owner" is the natural person(s) who ultimately owns or controls a legal person or arrangement even when the ownership or control is exercised through a chain of ownership or by means of control other than direct control. These vehicles may include not only corporations, trusts, foundations, and limited partnerships, but also simplified business forms, and may involve the creation of a chain of cross-border company law vehicles created in order to conceal their ownership. See also, paras. 47 to 55, A/CN.9/825. The Working Group may wish to consider whether further details on this topic should be included in these materials, possibly as an annex.

[152] It should be noted that the Financial Action Task Force (FATF) Recommendation 24 in respect of transparency and beneficial ownership of legal persons encourages States to conduct comprehensive risk assessments of legal persons and to ensure that all companies are registered in a publicly available company registry. The basic information required is: (a) the company name; (b) proof of incorporation; (c) legal form and status; (d) the address of the registered office; (e) its basic regulating powers; and (f) a list of directors. In addition, companies are required to keep a record of their shareholders or members. (See International Standards on Combating Money Laundering and the Financing of Terrorism & Proliferation: The FATF Recommendations, Part E on Transparency and Beneficial Ownership of Legal Persons and Arrangements, Recommendation 24 (www.fatf-gafi.org/media/fatf/documents/recommendations/pdfs/FATF_Recommendations.pdf).

[153] At its twenty-eighth session, the Working Group agreed to clarify the content of this recommendation (recommendation 20(b) of A/CN.9/WG.I/WP.101) by replacing the phrase "person or persons registering the business" with the term "registrant(s)" (para. 83, A/CN.9/900).

[154] See supra, footnote 66, page 23.

[155] Ibid., page 24.

different from the characters used in the language of the registry. In this case, the State should provide guidance on how the characters are to be adjusted or transliterated to conform to the language of the registry.

139. A number of States have more than one official language. In these States, registration systems are usually designed to accommodate registration in all official languages. To ensure that information on businesses operating in the State is available to all registrants and searchers, different approaches can be adopted. States may require parties to make their registration in all official languages; or they may permit filing in one language only, but then require the registry to prepare and register duplicate copies in all official languages. Both these approaches, however, may be quite costly and invite error. A more efficient way of dealing with multiple official languages, any one of which may be used to register, would be to allow registrants to carry out registration in only one of those official languages. Such a language could be that of the province or the region where the registry office or the registry sub-office is located and where the registrant has its place of business. This approach would also take into account the financial constraints of MSMEs and, according to circumstances, possible literacy issues, as entrepreneurs may not be equally fluent in all official languages spoken in a State. When such an approach is chosen, however, States should ensure that the registration and public information relating to the registry are available in all official languages of the registry. Whichever approach is taken, however, States will have to consider ways to address this matter so as to ensure that the registration and any subsequent change can be carried out in a cost effective way for both the registrant and the registry and, at the same time, ensure that information can be understood by the registry's users.

Recommendation 21: Language in which information is to be submitted

The law should provide that the information and documents submitted to the business registry must be expressed in the language or languages specified by the enacting State, and in the character set as determined and publicized by the business registry.

F. Notice of registration

140. The enacting State should establish that the business registry must notify the registrant whether or not the registration of the business was effective as soon as practicable, and, in any event, without undue delay. Obligating the registry to promptly notify the applicant business about the registration helps to ensure the integrity and security of the registry record. In States where online registration is used, the registrant should receive an online notification of the registration of the business immediately after all of the requirements for the registration of that business have been successfully fulfilled.

Recommendation 22: Notice of registration

The law should establish that the business registry should notify the registrant whether or not its registration is effective as soon as practicable, and, in any event, without undue delay.

G. Content of notice of registration

141. The notice of registration should include the minimum information in respect of the registered business necessary to provide conclusive evidence that all requirements for registration have been complied with and that the business is duly registered according to the law of the enacting State.

Recommendation 23: Content of notice of registration

The law should provide that the notice of registration may be in the form of a certificate, notice or card, and that it should contain at least [156] the following information:

(a) The unique business identifier of the business;

(b) The date of its registration;

(c) The name of the business;

(d) The legal form of the business; and

(e) The law under which the business has been registered.

H. Period of effectiveness of registration

142. States may adopt one of two approaches in terms of determining the period of effectiveness of the registration of a business. In some States, the registration of the business is subject to a maximum period of duration established by law. It follows that unless the registration is renewed, the registration of the business will expire on the date stated in the notice of registration or upon the termination of the business. [157] This approach imposes a burden on the registrant, which could be particularly problematic for MSMEs, as they often operate with minimal staff and limited knowledge of the applicable rules. Further, if additional information is required and not furnished by the applicant, renewal of the registration could also be refused, thus further threatening the existence of the business.

143. Under the second approach, no maximum period of validity is established for the registered business and the registration is effective until the business ceases to operate and is deregistered. This approach simplifies the intake process and both encourages registration and reduces its burden on businesses, and in particular on MSMEs. However, States that opt for this approach should ensure the adoption of appropriate methods (e.g. sending regular prompts to businesses, establishing advertising campaigns as reminders, or, as a last resort, enforcement procedures) to encourage businesses to keep their registered information current (see paras. 160 to 164 below). [158]

144. In some cases, both approaches have been adopted: a maximum period of registration, subject to renewal, may apply to registered businesses that are of a legal form that does not have legal personality, while an unlimited period of registration may apply to businesses that have legal personality. This duality of approach reflects the fact that the consequences of the expiry of registration of a business that possesses legal personality are likely to be more serious and may affect the very existence of the business and the limited liability protection afforded its owners. [159]

145. Although some jurisdictions require registered businesses to renew their registration periodically, the practice of establishing registration without a maximum period of validity is a more desirable approach in that it meets the needs of businesses

---

[156] At its twenty-eighth session, the Working Group agreed to add the phrase “at least” to clarify that reference was being made to a minimum requirement (para. 86, A/CN.9/900).

[157] It should be noted that the general law of the enacting State for calculating time periods would apply to the calculation of the period of effectiveness, unless specific legal provisions applicable to registration provides otherwise. For example, if the general law of the enacting State provides that, if the applicable period is expressed in whole years from the day of registration, the year runs from the beginning of that day.

[158] At its twenty-eighth session, the Working Group agreed to clarify that even without periodic renewal of registration, there were other methods of ensuring that information in the business registry was kept current (para. 87, A/CN.9/900).

[159] See, for example, Singapore at http://www.guidemesingapore.com/incorporation/other/singapore-sole-proprietorship-registration-guide.

for simplified and fast procedures, while relieving them, in particular MSMEs, of a potential burden (see also para. 142 above).[160]

Recommendation 24: Period of effectiveness of registration

The law should clearly establish that the registration is valid until the business is deregistered.[161]

I. Time and effectiveness of registration

146. In the interests of transparency and predictability of a business registration system, States should determine the moment at which the registration of a business or any later change made to the registered information is effective.[162] States usually determine that a business registration or any subsequent change made to it is effective either at the time of the entry of that information into the registry record or when the application for registration or a change of registered information is received by the registry. Whichever approach is chosen, the most important factor is that the State makes it clear at which moment the registration or change is effective. In addition, the effective time of registration of the business or any later change to the registered information should be indicated in the registry record relating to the relevant business.

147. If the registry is designed to enable users to submit information electronically in respect of an application for registration or an amendment without the intervention of registry staff and to use online payment methods for the registration, the registry software should ensure that the information becomes effective immediately or nearly immediately after it is transmitted. As a result, any delay between the time of the electronic transmission of the information and the effective time of registration of the business will be eliminated.

148. In registry systems that allow or require registration information to be submitted to the registry using a paper form, registry staff must enter the information on the paper form into the registry record on behalf of the registrant. In such systems, there will inevitably be some delay between the time when the paper form is received in the registry office and the time when the information set out on the form is entered into the registry record. In these cases, the domestic legislative or regulatory framework should provide that the registry must enter the information received into the registry record as soon as practicable and possibly set a deadline by which the application or the amendments should be registered. In a mixed registry system which allows information to be submitted in both paper and electronic form, registrants who elect to use the paper form should be alerted that this method may result in some delay in the time of effectiveness of the registration.

---

[160] At its twenty-eighth session, the Working Group requested the Secretariat (para. 88, A/CN.9/900) to ensure that the commentary emphasized that requiring businesses to reregister might not be good practice, particularly in terms of the potential burden that could be placed on businesses having to meet that requirement. The Secretariat has thus redrafted the commentary to this recommendation (recommendation 24 of A/CN.9/WG.I/WP.101).

[161] At its twenty-eighth session, the Working Group agreed to delete the final phrase of this recommendation (recommendation 24 of A/CN.9/WG.I/WP.101) (para. 89, A/CN.9/900).

[162] In some jurisdictions, businesses may also apply for the protection of certain rights in the period prior to registration, for example, in the provisional registration of the trade name of the business to be registered (see para. 56 above), and the trade name is protected from being used by any other entity until the registration of the business is effective. In such cases, States should be equally clear to establish the moment at which such pre-registration rights are effective and the period of their effectiveness (as agreed should be added at the twenty-eighth session of the Working Group: para. 90, A/CN.9/900).

Recommendation 25: Time and effectiveness of registration

The law should:

(a) Require the business registry to record the date and time that applications for registration are received and to process them in that order as soon as practicable and, in any event, without undue delay;

(b) Establish clearly the moment at which the registration of the business is effective; and

(c) Specify that the registration of the business must be entered into the business registry as soon as practicable thereafter, and in any event without undue delay.

J. Rejection of an application for registration[163]

149. A series of checks and control procedures are required to ensure that the necessary information and documentation is provided in order to register the business, however, the extent of such controls varies according to the jurisdiction. In those legal regimes where the registry performs simple control procedures, if all of the basic legal and administrative requirements established by the domestic legal and regulatory framework are met, the registry must accept the information as filed, record it, and register the business. When the legal regime requires a more thorough verification of the information filed, registries may have to check whether mandatory provisions of the law are met by the content of the application and information submitted, or any changes thereto. Whichever approach is chosen, States should define in their legislative or regulatory framework which requirements the information to be submitted to the registry must meet. In certain jurisdictions, the registrar is given the authority to impose requirements as to the form, authentication and manner of delivery of information to be submitted to the registry.[164] When an MSME is seeking to register, it would be advisable that such requirements be kept to a minimum in order to facilitate the registration process for MSMEs. This will reduce administrative hurdles and help in promoting business registration among such businesses.

150. Registration of MSMEs may also be facilitated if the registry is granted the power to accept and register documents that do not fully comply with the requirements for the form of the submission, and to rectify clerical errors, including its own incidental errors, in order to bring the entry in the business registry into conformity with the documents submitted by the registrant. This will avoid imposing the potentially costly and time-consuming burden of requiring the registrant to resubmit an application for registration. Entrusting the registry with these responsibilities, may be of particular importance if registrants do not have direct access to electronic submission of documents and where their submission, or the entry of data, requires the intervention of the registry staff. In States where it is possible for registrants to submit applications for registration directly online, the electronic registration system is usually designed so as to allow built-in data error checks (see also paras. 185 to 188 below) and to reject automatically an application or a request if it does not comply with the prescribed requirements. When the registry is granted the authority to correct its own errors as well as any incidental errors that may appear in the information submitted in support of the registration of the business, the law of the enacting State should strictly determine under which conditions those responsibilities may be discharged (see also para. 228 below). Clear rules in this regard will ensure the integrity and security of the registry record and minimize any risk of abuse from or corruption by the registry staff (see also paras. 210 to 215 below). The law of the enacting State should thus establish that the registry may only exercise its discretion to correct errors upon having provided prior notification of the intended corrections to the registrant and having received the consent of the registrant in return, although

[163] See footnote 168 below.

[164] See, for instance, Section 1068, UK Companies Act 2006.

this approach could create a delay in the registration of the business while the registry seeks such consent. When the information provided by the business is not sufficient to comply with the requirements for registration, the registry should be granted the authority to request from the business additional information in order to finalize the registration process. The law of the enacting State should specify an appropriate length of time within which the registry should make such a request.

151. States should provide that registries may reject the registration of a business if its application does not meet the objective requirements prescribed by the legislative and regulatory framework for registration.[165] This approach is implemented in several jurisdictions regardless of their legal tradition. In order to prevent any arbitrary use of such power, however, the registry must provide, in writing, a notice of the rejection of an application for registration and the reasons for which it was rejected, and the registrant must be allowed time to appeal against that decision as well as to resubmit its application. Moreover, it should be noted that the authority of the registrar to reject an application should be limited to situations where the application for registration does not meet the objective conditions for registration as required by law. The registrar should not have the authority over the substantive legal requirements for the establishment of a particular legal form of business; such matters should be governed by the law of the enacting State.[166]

152. The rejection of an application for registration is likely to be processed differently depending on whether the registration system is paper-based, electronic or mixed. In cases where the application for registration of a business is submitted in paper form and the reason for its rejection is that the application was incomplete or illegible, there might be some delay between the time of receipt of the application by the registry and the time of communication of its rejection, and the reasons therefor, to the registrant. In a registry system that allows registrants to submit applications and relevant information directly to the registry electronically, the system should be designed, when permitted by the State's technological infrastructure, so as to automatically require correction of the application if it is submitted with an error, and to automatically reject the submission of incomplete or illegible applications, displaying the reasons for the rejection on the registrant's screen. In mixed registry systems which allow applications to be submitted using both paper and electronic means, the design of the electronic medium should include the technical specifications that allow for automatic requests for correction or automatic rejection of an application. Moreover, registrants who elect to use the paper form when such a choice is possible should be alerted that this method may result in some delay between the time of receipt of the application by the registry and the time of communication of any rejection, and the reasons therefor.[167]

---

[165] Instances in which the registry improperly accepts an application and registers a business that does not meet the requirements prescribed by law should be governed by the provisions establishing liability of the business registry, if any (see paras. 210 to 215 below). Moreover, the law of the State should establish how rectification of business registration should be carried out in such instances.

[166] At its twenty-eighth session, the Working Group requested the Secretariat to elaborate in the commentary on the difference between rejection of an application based on formalistic and substantive grounds (para. 94, A/CN.9/900). The final two sentences of this paragraph are intended to address those concerns.

[167] In order to clarify the approach to the correction of errors in the three registry systems (paper-based, mixed and electronic) (para. 92, A/CN.9/900), the Secretariat has revised the text as follows: (a) including a new sentence at the beginning of the paragraph; (b) including the phrase "require correction of the application if submitted with an error and to automatically"; and (c) adding the final two sentences at the end of the paragraph.

Recommendation 26: Rejection of an application for registration[168]

The law should provide that the registrar:

(a) Must reject an application for the registration of a business if the application does not meet the objective requirements specified in the law;

(b) Is required to provide to the registrant in written form the reason for any such rejection; and

(c) Is granted the authority to correct its own errors as well as any incidental errors that may appear in the information submitted in support of the registration of the business, provided that the conditions under which the registrar may exercise this authority are clearly established.

K. Registration of branches

153. Registration of branches of a business is common practice in all geographic regions.[169] Most States require the registration of national branches of a foreign business in order to permit those branches to operate in their jurisdiction and to ensure the protection of domestic creditors, businesses and other interested parties that deal with those branches. In several States, registration of a branch of a business established in another domestic jurisdiction is also required or permitted.[170] Registration of a business branch might not appear to be immediately relevant for MSMEs, whose main concern is more likely to be to consolidate their business without exceeding their human and financial capacity. However, this issue is relevant for those slightly larger business entities that, being of a certain size and having progressed to a certain volume of business, look to expand beyond their local or domestic market. In addition, even micro and very small businesses may be highly successful and may wish to expand their operations. For such businesses, establishing branches in a new location either within or outside the jurisdiction in which they were formed may be both an attractive goal and a realistic option. Although it may seem to be a daunting prospect, in fact, when a business expands, it may find that setting up a branch is cheaper and requires fewer formalities than establishing a subsidiary.[171] This is usually the case even when cross-border branches are established.[172]

154. States have their own rules for governing the operation of foreign businesses,[173] and there may be considerable differences among those jurisdictions that permit the registration of branches of foreign businesses in terms of what triggers the obligation to register them. Some approaches are based on a broad interpretation of the concept of foreign establishment, for example, those which include not only a branch, but also any establishments with a certain degree of permanence or recognisability, such as a

---

[168] At its twenty-eighth session the Working Group agreed to modify the title of this recommendation (recommendation 26 of A/CN.9/WG.I/WP.101) ("Refusal to register" in A/CN.9/WG.I/WP.101) so that it would refer more specifically to errors in the application for registration (para. 93, A/CN.9/900). The Secretariat suggests that in order to ensure consistency with the new title, the language of subparagraph (a) of this recommendation be amended to use the term "rejection".

[169] See supra, footnote 42, page 42.

[170] At its twenty-eighth session, the Working Group agreed that the commentary to this recommendation (recommendation 27 of A/CN.9/WG.I/WP.101) should include reference to the practice of States that permit or require registration of branches of local businesses and adopt appropriate language therein (para. 96(a), A/CN.9/900). The Secretariat has sought to clarify this aspect in the commentary.

[171] For further reference, see K. E. Sørensen, Branches of companies in the EU: balancing the Eleventh Company Law Directive, national company law and the right of establishment, 2013, page 9.

[172] The Secretariat suggests the inclusion of this sentence for further clarity.

[173] At its twenty-eighth session, the Working Group agreed that the commentary should clarify that each State has its own requirements concerning the operation of foreign businesses (para. 95, A/CN.9/900).

place of business in the foreign State.[174] Other approaches define more precisely the elements that constitute a branch that needs to be registered, which may include the presence of some sort of management, the maintenance of an independent bank account, the relation between the branch and the original or main business, or the requirement that the original or main business has its main office registered abroad.[175] Not all States define the notion of branch in their laws, or state under which circumstances a foreign establishment in the State must be registered: laws may simply refer to the existence of a foreign branch. In these cases, registries may fill the gap by issuing guidelines that clarify the conditions under which such a registration should be carried out.[176] When this occurs, the registration guidelines should not be seen as an attempt to legislate by providing a discrete definition of what constitutes a branch, but rather as a tool to explain the features required by a branch of a business in order to be registered.

155. When simplifying or establishing their business registration system, States should consider enacting provisions governing the registration of branches of businesses from other jurisdictions. Those provisions should address, at minimum, issues such as timing of registration, disclosure requirements, information on the persons who can legally represent the branch and the language in which the registration documents should be submitted.[177] Duplication of names could represent a major issue when registering foreign company branches, and it is important to ensure the identity of a business across jurisdictions. In this regard, an optimal approach could be for a business registry to use unique identifiers to ensure that the identity of a business remains consistent and clear within and across jurisdictions (see paras. 101 to 111 above).

Recommendation 27: Registration of branches[178]

The law should establish:

(a) Whether the registration of a branch of a business is required or permitted;

(b) A definition of "branch" for registration purposes that is consistent with the definition provided elsewhere in the law; and

(c) Provisions regarding the registration of a branch to address the following issues:

(i) When a branch must be registered;

(ii) Disclosure requirements, including: the name and address of the registrants; the name and address of the branch; the legal form of the original or main business seeking to register a branch; and current proof of the existence of the original or main business issued by a competent authority of the State or other jurisdiction in which that business is registered; and

(iii) Information on the person or persons who can legally represent the branch.

V. Post-registration

156. While a key function of a business registry is, of course, the registration of a business, registries typically support businesses throughout their life cycle. Further,

[174] See supra footnote 171, page 12.
[175] Ibid.
[176] Ibid., page 13.
[177] Ibid., page 17. The Working Group may wish to consider whether further details on this topic should be included in a future annex to these materials.
[178] At its twenty-eighth session, the Working Group agreed to redraft this recommendation as follows: (a) subparagraph (c)(i) should indicate when a branch was required to register; (b) subparagraph (c)(ii) should include the legal form of the foreign business registering the branch as well as proof of the existence of the foreign business issued by the competent authority rather than its notice of registration; and (c) subparagraph (c)(iv) should be deleted, as redundant in light of recommendation 21.

once a business's registered information is collected and properly recorded in the business registry, it is imperative that it be kept current in order to continue to be of value to users of the registry. Both the registered business and the registry play roles in meeting these goals.

157. In order for a business to remain registered, it is required to submit certain information during the course of its life, either periodically or when changes in its registered information occur, so that the registry is able to maintain the information on that business in as current a state as possible. The registry also plays a role in ensuring that its information is kept as current as possible, and may use various means to do so, such as those explored in greater detail below. Both of these functions permit the registry to provide accurate business information to its users, thus ensuring transparency and supplying interested parties, including potential business partners and sources of finance, the public and the State, with a trustworthy source of data.

A. Information required after registration[179]

158. In many jurisdictions, entrepreneurs have a legal obligation to inform the registry of any changes occurring in the business, whether these are factual changes (for example, address or telephone number) or whether they pertain to the structure of the business (for example, a change in the legal form of business). Information exchange between business registries and different government agencies operating in the same jurisdiction also serves the same purpose. In some cases, registries publish annual accounts, financial statements or periodic returns of businesses that are useful sources of information in that jurisdiction for investors, clients, potential creditors and government agencies. Although the submission and publication of detailed financial statements might be appropriate for public companies, depending on their legal form, MSMEs should be required to submit far less detailed financial information, if any at all, and such information should only be submitted to the business registry and thus made public if desired by the MSME. However, to promote accountability and transparency and to improve their access to credit or attract investment, MSMEs may wish to submit and make public their financial information.[180] In order to encourage MSMEs to do so, States should allow MSMEs to decide on an annual basis whether to opt for disclosure of such information or not.

159. The submission of information that a business is required to provide in order to remain registered may be prompted by periodic returns that are required by the registry at regular intervals in order to keep the information in the registry current or it may be submitted by the business as changes to its registered information occur. Information required in this regard may include:

(a) Changes in any of the information that was initially required for the registration of the business as set out in recommendation 20;[181]

(b) Changes in the name(s) and address(es) of the person(s) associated with the business;

---

[179] At its twenty-eighth session, the Working Group agreed to reverse the order of recommendations 28 and 29 (as they appeared in A/CN.9/WG.I/WP.101) and the related commentary (para. 103, A/CN.9/900).

[180] While MSMEs are not generally required to provide the same flow and rate of information as publicly held firms generally, they may have strong incentives for doing so, particularly as they develop and progress. Indeed, businesses wishing to improve their access to credit or to attract investment may wish to signal their accountability by supplying information about: (1) the business' objectives; (2) principal changes; (3) balance sheet and off-balance sheet items; (4) its financial position and capital needs; (5) the composition of any management board and its policy for appointments and remuneration; (6) forward-looking expectations; and (7) profits and dividends. Such considerations are not likely to trouble MSMEs while they remain small, but could be important for those businesses as they grow.

[181] See supra, footnote 6, page 7.

(c) The submission of financial information in respect of the business, depending on its legal form; and

(d) Depending on the jurisdiction, information concerning insolvency proceedings, liquidation or mergers (see para. 61 above).

Recommendation 28: Information required after registration

The law should specify that after registration, the registered business must file with the business registry at least[182] the following information:

(a) Any changes or amendments to the information that was initially required for the registration of the business pursuant to recommendation 20 or to the current information in the business registry as soon as those changes occur; and

(b) When the law so requires, periodic returns, which may include annual accounts.[183]

B. Maintaining a current registry

160. States should enact provisions that enable the business registry to keep its information as current as possible. A common approach through which that may be accomplished is for the State[184] to require registered businesses to file at regular intervals, for example once a year, a declaration stating that certain core information contained in the register concerning the business is accurate or, as applicable, stating what changes should be made. Although this approach may be valuable as a means of identifying businesses that have permanently ceased to operate and may be deregistered, and may not necessarily be burdensome for larger business with sufficient human resources, it could be quite demanding for less generously staffed MSMEs, in particular if there is a cost associated with making such submissions.

161. Another approach, which seems preferable as it better takes into account the needs of MSMEs, and in particular the less experienced ones, is to require the business to update its information in the registry whenever a change in any of the registered information occurs. The risk of this approach, which is largely dependent on the business complying with the rules, may be that the filing of changes is delayed or does not occur. To prevent this, States could adopt a system pursuant to which regular prompts are sent, usually electronically, to businesses to request them to submit updated information. In order to minimize the burden for registries and to help them make the most effective use of their resources, prompts that registries regularly send out to remind businesses of the periodic returns required of them could also include generic reminders to update registered information. For the same reason, it would be desirable that prompts be sent in electronic format. If the registry is operated in a paper-based or mixed format, it would be desirable for the registry to identify an appropriate means of performing this task: sending paper-based prompts to individual businesses would be time and resource consuming and may not be a sustainable approach. In one State, for instance, where the registry is not operated electronically, reminders to registered businesses to update the information contained in the registry are routinely published in newspapers.[185]

---

[182] At its twenty-eighth session, the Working Group agreed to add the phrase “at least” in the chapeau of this recommendation (recommendation 29 of A/CN.9/WG.I/WP.101) (para. 101, A/CN.9/900).

[183] At its twenty-eighth session, the Working Group agreed to reverse the order of the clauses in subparagraph (b) and to start that subparagraph with the phrase “When the law of the enacting State so requires, periodic returns…” (para. 102, A/CN.9/900).

[184] At its twenty-eighth session, the Working Group agreed that requiring businesses to re-register might not be considered a good practice and that this view should be reflected throughout the commentary as necessary (para. 99, A/CN.9/900). The Secretariat has accordingly deleted re-registration as one option that can be used to maintain a current registry.

[185] This is the practice in Sri Lanka. See, for example, http://www.sundaytimes.lk/090503/FinancialTimes/ft322.html.

162. Regardless of the approach chosen to prompt businesses to inform the registry of any changes in their registered information, States may adopt enforcement measures for businesses that fail to meet their obligations to file amendments with the registry. For example, a State could adopt provisions establishing the liability of the registered business to a fine on conviction if changes are not filed with the business registry within the time prescribed by the law (see paras. 207 to 209 below for a discussion in greater detail of liability and sanctions).

163. A more general method that may help mitigate any potential deterioration of the information collected in the business registry would include enhancing the interconnectivity and the exchange of information between business registries and other public registries.

164. Once the registry has received the updated information, it should ensure that all amendments are entered in the registry record without undue delay. Again, the form in which the registry is operated is likely to dictate what might constitute an undue delay. If the registry allows users to submit information electronically without the intervention of the registry staff, the registry software should permit the amendments to become immediately or nearly immediately effective. Where the registry system (whether paper-based, electronic or mixed) requires the registry staff to enter the information on behalf of the business, it should be ensured that all amendments are reflected in the registry as soon as possible, possibly stipulating a maximum time period in which that should be accomplished.[186]

Recommendation 29: Maintaining a current registry

The law should require the registrar to ensure that the information in the business registry is kept current, including through:

(a) Sending an automated request to registered businesses at periodic intervals requiring them to report whether the information maintained in the registry continues to be accurate or to state which changes should be made; and

(b) Updating the registry as soon as practicable following the receipt of amended information and, in any event, without undue delay thereafter.[187]

C. Making amendments to registered information

165. In keeping with the previous discussion (see paras. 146 to 148 above), States should also determine the time at which changes to the information recorded is effective in order to promote transparency and predictability of the business registration system. It would be advisable for the changes to become effective when the information contained in the notification of changes is entered into the registry record rather than when the information is received by the registry, and that the time of the change should be indicated in the registry record relating to the relevant business. In order to preserve information on the history of the business, amendments

---

[186] At its twenty-eighth session, the Working Group requested the Secretariat to ensure that the commentary and recommendations 22, 25 and 28 were made consistent (para. 98, A/CN.9/900).

[187] At its twenty-eighth session, the Working Group agreed to replace the phrase "immediately… or as soon as practicable thereafter" in subparagraph (b) of this recommendation (recommendation 28 of A/CN.9/WG.I/WP.101) with the phrase "as soon as practicable, and, in any event, without undue delay" in order to be consistent with the language of recommendations 22 and 25 (para. 98, A/CN.9/900). Furthermore, although the Working Group agreed to reverse the order of the two subparagraphs in this recommendation (recommendation 28 of A/CN.9/WG.I/WP.101) so that the text would focus first on the obligation of the business to update information and then on the obligation of the registry (para. 103, A/CN.9/900), the Secretariat suggests that the original order of the subparagraphs be maintained in order to retain the logic of the steps required of the registry and to better reflect the reversal of recommendations 28 and 29 (as they appeared in A/CN.9/WG.I/WP.101).

to previously registered information should be added to the registry record, without deleting previously entered information.[188]

166. As in the case of business registration, if the registry allows users to submit amendments electronically without the intervention of the registry staff, the amendments should become effective immediately or nearly immediately after they are transmitted to avoid delay. If the registry allows or requires paper-based amendments to be submitted to it and the registry staff enters the amendments into the registry on behalf of the registrant, it should be ensured that the amendments received are entered into the registry record as soon as practicable, and possibly stipulate a maximum time period in which the changes should be registered. In a mixed registry system which allows amendments to be submitted using both paper and electronic means, registrants who elect to use the paper form should be alerted that this method may result in some delay in the time of effectiveness of the amendments.

Recommendation 30: Making amendments to registered information

The law should:

(a) Require the business registry to: (i) process amendments to the registered information in the order in which they are received; (ii) record the date and time when the amendments are entered into the registry record; and (iii) notify the registered business as soon as practicable and in any event, without undue delay, that its registered information has been amended;[189] and

(b) Establish when an amendment to the registered information is effective.

VI. Accessibility and information-sharing

A. Public access to business registry services[190]

167. The rules relating to access to business registry services are typically set out in the law of the enacting State. It is desirable that those laws allow all potential registrants to access the registry services without any discrimination based on grounds such as sex, race, ethnic or social origin, religion, belief, or political view. In the interest of promoting domestic economic growth, an increasing number of States allow registrants who are neither citizens of, nor residents in, the State to register a

[188] At its twenty-eighth session, the Working Group requested the Secretariat to clarify that all registered information about the business (previously registered information and any amendments thereof) should remain visible in the registry record (para. 104, A/CN.9/900).

[189] At its twenty-eighth session, the Working Group agreed to: (a) redraft recommendation 30(a) of A/CN.9/WG.I/WP.101 to reflect the order in which a registry actually proceeds when receiving and processing amendments to registered information, i.e. the registry first processes the amendments received from a business in the order in which they were received (this part was said it could become a first subparagraph of the recommendation); then enters such amendments into the registry record and informs the business (this part was said it could become a second subparagraph of the recommendation); (b) ensure that the phrase "time and date stamp" in subparagraph (a) referred to both electronic and paper media; and (c) change the title of recommendation 30 of A/CN.9/WG.I/WP.101 so that it reflects the changes made (paras. 105 and 106, A/CN.9/900). In respect of clarification of the phrase "time and date stamp", it has been revised following a review of article 13(3) ("Time of effectiveness of the registration of a notice") of the Model Registry Provisions included in article 28 of the UNCITRAL Model Law on Secured Transactions (2016).

[190] At its twenty-eighth session, the Working Group agreed to move relevant paragraphs of the commentary to recommendation 31 of A/CN.9/WG.I/WP.101 to the commentary for recommendation 32 of A/CN.9/WG.I/WP.101, and requested the Secretariat to prepare commentary for this recommendation of A/CN.9/WG.I/WP.101 in respect of access to business registry services (para. 108, A/CN.9/900). Further to that request, the Secretariat has prepared revised commentary for this recommendation.

business, provided that such registrants meet certain requirements and comply with certain procedures established by the law concerning foreign registrants.

168. Access of potential registrants to the services of the business registry should thus only be subject to compliance with minimum age requirements, if any, and with the procedural requirements for the use of such services, such as: that the request for registration be submitted via an authorised medium of communication and using the prescribed form; and that the registrant provide identification in the form requested by the registry (see paras. 133 and 134 above and recommendation 20) and has paid (or made arrangements to pay) any fee for registration, if such fee is required (see paras. 197 and 199 to 202 below).[191]

169. The registry should maintain a record of the identity of the registrant. In order to ensure a simple and straightforward registration process, the evidence of identity required of a registrant should be that which is generally accepted as sufficient in day-to-day commercial transactions in the enacting State. When registries are operated electronically and allow for direct access by users, potential registrants should be given the option of setting up a protected user account with the registry in order to transmit information to the registry. This would facilitate access by frequent users of registration services (such as business registration intermediaries or agents), since they would need to provide the required evidence of their identity only once when initially setting up the account.[192]

170. Once the registrant has complied with the requirements mentioned in para. 168 above (and others that may be established by the law of the State) for accessing the registry, the registry cannot deny access to the registry services. The only scrutiny that the registry may conduct at this stage (which is carried out automatically in an electronic registry) is to ensure that legible information (even if incomplete or incorrect) is entered in the form for business registration. If the registrant did not meet the objective conditions for access to the registration services, the registry should provide the reasons for denying access (e.g. the registrant failed to provide valid identification) in order to enable the registrant to address the problem. The registry should provide such reasons as soon as practicable (in this respect see paras. 150 to 152 above).[193]

171. Certain rules relating to access to business registry services may also be addressed in the "terms and conditions of use" established by the registry. For example, the terms and conditions of access to registry services may include offering registrants the opportunity to open an account with the registry to facilitate quick access to registry services and the payment of fees for those services, if any. The terms and conditions of access may also address the concerns of registrants regarding the security and confidentiality of their financial and other data or the risk of changes being made to registered information without the authority of the business. Assigning a unique user name and a password to the registrant, or employing other modern security techniques would help reduce such risks (see paras. 37 and 38 above), as would requiring the registry to notify the business of any changes made by others in the deposited information.

Recommendation 31: Public access to business registry services

The law should permit any qualified person to access the services of the business registry.[194]

---

[191] This approach is consistent with the approach adopted in the UNCITRAL Guide on the Implementation of a Security Rights Registry at paragraphs 95 to 99.

[192] Ibid.

[193] Ibid.

[194] At its twenty-eighth session, the Working Group agreed to delete the phrase "and the information contained in the registry" after the term "registry", in order to make it more consistent with the new structure of this part of the draft legislative guide (para. 109, A/CN.9/900).

B. Public availability of information

172. In keeping with its functions as a collector and disseminator of business-related information, the registry should make publicly available all information on a registered business that is relevant for those that interact with the business (whether they be public authorities or private entities) to be fully aware of the business identity and status of that business. This will allow interested users to make more informed decisions about who they wish to do business with, and for organizations and other stakeholders to gather business intelligence.[195] Moreover, since access to the registered information by general users also enhances certainty of and transparency in the way the registry operates, the principle of public access to the information deposited in the registry should be stated in the law of the enacting State. Evidence shows that in most States, public access to the information in the registry is generally unqualified. Allowing full public access does not compromise the confidentiality of certain registered information, which can be protected by allowing users to access only certain types of information.[196] For these reasons, it is recommended that the registry should be fully accessible to the public, subject only to necessary confidentiality restrictions in respect of certain registered information.

173. While providing public disclosure of the registered information is an approach followed in most States, the way in which stakeholders access information, the format in which the information is presented and the type of information available varies greatly from State to State. This variation is not only a function of the technological development of a State, but of an efficient accessing framework, including that provided by national law.[197] For instance, an aspect on which States may differ concerns the criteria that may be used to search the registry.[198]

174. While this should be decided by the enacting State pursuant to its legislative framework, it is not recommended that States restrict access to search the information on the business registry or that users be required to demonstrate a reason to request access. Such a policy could seriously compromise the core function of the registry to publish and disseminate information on registered entities. Moreover, if a discretionary element is injected into the granting of an information request, equal public access to the information in the registry could be impeded, and some potential users might not have access to information that was available to others.

175. The law of the enacting State can, however, make access to the registry subject to certain procedural requirements, such as requiring users to submit their information request in a prescribed form and pay, or make arrangements to pay, any prescribed fee. If a user does not use the prescribed registry form or pay the necessary fee, the user may be refused access to search the registry. As in the case of refusing access to registration services, the registry should be obliged to give the specific reason for refusing access to information services as soon as practicable so that the user can remedy the problem.

176. Unlike the approach adopted for registrants, the registry should not request and maintain evidence of the identity of a user as a precondition to obtaining access to the information on the business registry since a user is merely retrieving information

---

[195] Further to the decision of the Working Group at its twenty-eighth session (see footnote 191 above), the Secretariat has: (a) included the term “more” in the second sentence; and (b) replaced the sentence “This function of a business registry is demonstrably valuable to the economy of a State.” (previously at the end of para. 159 of A/CN.9/WG.I/WP.101) with “… since access to … the law of the enacting State” (previously, at the end of para. 162 of A/CN.9/WG.I/WP.101 (para. 107, A/CN.9/900).

[196] This paragraph was formerly part of the commentary to recommendation 31 of A/CN.9/WG.I/WP.101 (para. 159 of that document), but was moved here as decided by the Working Group at its twenty-eighth session (para. 108, A/CN.9/900).

[197] See supra, footnote 6, page 8.

[198] This paragraph was formerly part of the commentary to recommendation 31 of A/CN.9/WG.I/WP.101 (para. 160 of that document), but was moved here as decided by the Working Group at its twenty-eighth session (para. 108, A/CN.9/900).

contained in registered information from the public registry record. Accordingly, identification evidence should be requested of users only if it is necessary for the purposes of collecting information retrieval fees, if any.

177. The law of the enacting State should also provide that the registry may reject an information request if the user does not enter a search criterion in a legible manner in the designated field but that the registry must provide the grounds for any rejection as soon as practicable, as in the case of non-compliance with the objective conditions for registration by registrants (see paras. 170 and 171 above). In registry systems that allow users to submit information requests electronically to the registry, the software should be designed to prevent automatically the submission of information requests that do not include a legible search criterion in the designated field and to display the reasons for the refusal on the electronic screen.

178. Further, in order to facilitate dissemination of the information, States should be encouraged to abolish or keep to a bare minimum fees to access basic information on the registered entities (see para. 58 above and para. 202 below). This approach may be greatly facilitated by the development of electronic registries that allow users to submit applications or make searches electronically without the need to rely on intermediation by registry personnel. Such an approach is also much cheaper for the registry. Where registration systems are paper-based, users must either visit the registry office and conduct the research on site (whether manually or using ICT facilities that are available) or have information sent to them on paper. In both cases, registry staff may need to assist the user to locate the information and prepare it for disclosure. Again, paper-based information access is associated with delay, higher costs, and the potential for error and for information to be less current.[199]

179. Simply because information is made available for use does not necessarily mean that the information is being used. It would be useful for the State to devise effective means that encourage customers actually to use the information services of the registry. Adoption of electronic registries that allow direct and continuous access for stakeholders (except for periods of scheduled maintenance) will promote the actual use of the information. Communication campaigns on the services available at the registry will also contribute to the active take-up of registry services by potential users.

Recommendation 32: Public availability of information

The law should specify that all registered information is available to the public unless it is protected data under the applicable law.[200]

C. Where information is not made public

180. Access to the business registry should be granted to all interested entities and to the public at large. In order to maintain the integrity and reputation of the registry as a trusted collector of information that has public relevance, access to sensitive data should be controlled to avoid any breach of confidentiality. States should thus put in place proper disclosure procedures. They may do so by adopting provisions that list which information is not available for public disclosure or they may follow the

[199] This paragraph was formerly part of the commentary to recommendation 31 of A/CN.9/WG.I/WP.101 (para. 161 of that document), but was moved here as decided by the Working Group at its twenty-eighth session (para. 108, A/CN.9/900).

[200] The Secretariat suggests revising the text of the recommendation in order to align it with the definition of "protected data" provided in para. 13 above (para. 111, A/CN.9/900 sets out the discussion of the Working Group at its twenty-eighth session regarding this recommendation).

opposite approach and adopt provisions that list the information that is publicly accessible, indicating that information that is not listed cannot be disclosed.[201]

181. Legislation in each State often include provisions on data protection and privacy. When establishing a registry, in particular an electronic registry, States must consider issues concerning the treatment of protected data that is included in the application for registration and its protection, storage and use. Appropriate legislation should be in place to ensure that such data are protected, including rules on how it may be shared between different public authorities (see para. 119 above). States should also be mindful that a major trend towards increased transparency in order to avoid the misuse of corporate vehicles for illicit purposes has resulted from international efforts to fight money-laundering and terrorist and other illicit activities,[202] including the adoption of policies to know one's customer and business counterpart. States should thus adopt a balanced approach that achieves both transparency and the need to protect access to sensitive data maintained in the registry.[203]

Recommendation 33: Where information is not made public

In cases where information in the business registry is not made public, the law should:

(a) Establish which information concerning the registered business is subject to the applicable rules in the enacting State on public disclosure of protected data and require the registrar to list the types of information that cannot be publicly disclosed; and

(b) Specify the circumstances in which the registrar may use or disclose information that is subject to confidentiality restrictions.

D. Hours of operation

182. The approach to the operating days and hours of the registry depends on whether the registry is designed to allow direct electronic registration and information access by users or whether it requires their physical presence at an office of the registry. In the former case, electronic access should be available continuously except for brief periods to undertake scheduled maintenance; in the latter case, registry offices should operate during dependable and consistent hours that are compatible with the needs of potential registry users. In view of the importance of ensuring ease of access to registry services for users, these recommendations should be incorporated in the law of the enacting State or in administrative guidelines published by the registry, and the registry should ensure that its operating days and hours are widely publicized.

183. If the registry provides services through a physical office, the minimum hours and days of operation should be the normal business days and hours of public offices in the State. To the extent that the registry requires or permits the registration of paper-based submissions, the registry should aim to ensure that the paper-based information is entered into the registry record and made available to searchers as soon as practicable, but preferably on the same business day that the information is received by the registry. Information requests submitted in paper form should likewise be processed on the same day they are received. To achieve this goal, the deadline for

---

[201] At its twenty-eighth session, the Working Group agreed to delete the two sentences at the end of the paragraph (para. 170 of A/CN.9/WG.I/WP.101), as it was noted that the sharing of information by public authorities had already been dealt with in recommendation 17 (i.e. recommendation 16 in of A/CN.9/WG.I/WP.101) and was dependent on the law of the enacting State rather than on the consent of the business or the registry (para. 112, A/CN.9/900).

[202] See information in respect of FATF Recommendation 24 above in footnote 152 supra.

[203] The Secretariat has added the sentence in respect of transparency (originally the third sentence of para. 110 of A/CN.9/WG.I/WP.101) further to a decision of the Working Group, at its twenty-eighth session, that that concept should be considered in relation to this recommendation (para. 68, A/CN.9/900).

submitting paper-based information requests may be set independently from the business hours.[204] Alternatively, the registry office could continue to receive paper forms (regardless if they are applications for registration or for changes) and information requests throughout its business hours, but set a "cut off" time after which information received may not be entered into the registry record, or information searches performed, until the next business day. A third approach would be for the registry to undertake that information will be entered into the registry record and searches for information will be performed within a stated number of business hours after receipt of the application or information request.

184. The law of the enacting State or administrative guidelines of the registry could also enumerate, in either an exhaustive or an indicative way, the circumstances under which access to registry services may temporarily be suspended. An exhaustive list would provide more certainty, but there is a risk that it might not cover all possible circumstances. An indicative list would provide more flexibility but less certainty. Circumstances justifying a suspension of registry services would include any event that makes it impossible or impractical to provide those services (such as force majeure, for example, fire, flood, earthquake or war, or where the registry provides users with direct electronic access, a breakdown in the Internet or network connection).

Recommendation 34: Hours of operation

The registrar should ensure that:

(a) If access to the services of the business registry is provided electronically, access is available at all times;

(b) If access to the services of the business registry is provided through a physical office:

(i) Each office of the registry is open to the public during [*the days and hours to be specified by the enacting State*]; and

(ii) Information about any registry office locations and their opening days and hours is publicized on the registry's website, if any, or otherwise widely publicized, and the opening days and hours of registry offices are posted at each office;[205] and

(c) Notwithstanding subparagraphs (a) and (b) of this recommendation, the business registry may suspend access to the services of the registry in whole or in part in order to perform maintenance or provide repair services to the registry, provided that:

(i) The period of suspension of the registration services is as short as *practicable*;

(ii) Notification of the suspension and its expected duration is widely *publicized*; and

(iii) Such notice should be provided in advance and, if not feasible, as soon after the suspension as is reasonably practicable.

---

[204] For example, the law or administrative guidelines of the registry could stipulate that, while the registry office is open between 9 a.m. and 5 p.m., all applications, changes and search requests must be received by an earlier time (for example, by 4 p.m.) so as to ensure that the registry staff has sufficient time to enter the information included in the application into the registry record or conduct the searches.

[205] At its twenty-eighth session the Working Group agreed to reverse the order of subparagraphs (a) and (b) of this recommendation as it appeared in A/CN.9/WG.I/WP.101 (para. 113, A/CN.9/900).

E. Direct electronic access to submit registration, to request amendments and to search the registry

185. If the State opts to implement an electronic registration system, the registry should be designed, if possible, to allow registry users to submit directly and to conduct searches from any private computer, as well as from computer facilities made available to the public at sub-offices of the registry or other locations. To further facilitate access to business registry services, the registry conditions of use may allow intermediaries (for instance, lawyers, notaries or private sector third-party service providers) to carry out registration and information searches on behalf of their clients when the applicable law allows or requires the involvement of such intermediaries (see also paras. 121 to 122 above).[206] If accommodated by the technological infrastructure of the State, or at a later stage of the reform, States should also consider adopting systems that allow registration, the filing of amendments and searches of the registry to be carried out through the use of mobile technology. This solution may be particularly appropriate for MSMEs in developing economies where mobile services are often easier to access than electronic services.

186. When the registry allows for direct electronic access, the registry user (including intermediaries) bears the burden of ensuring the accuracy of any request for registration or amendment, or of any search of the registry.[207] Moreover, the potential for misconduct on the part of registry staff is greatly minimized, since their duties are essentially limited to managing and facilitating electronic access by users, processing any fees, overseeing the operation and maintenance of the registry system and gathering statistical data.

187. In addition, direct electronic access significantly reduces the costs of operation and maintenance of the system, increases accessibility to the registry (including when registration or searches are carried out through intermediaries, see para. 185 above) and also enhances the efficiency of the registration process by eliminating any time lag between the submission of information to the registry and the actual entry into the database of that information.[208] In some States,[209] electronic access (from the premises of a registrant or a business, or from a branch office of the registry) is the only available mode of access for both registration and information searches. In fact, in many States, where the registration system is both paper-based and electronic, electronic submission is by far the most prevalent mode of data submission and it is used in practice for the vast majority of registrations. As the data to be registered are submitted in electronic form, no paper record is ever generated. A fully electronic system of this kind places the responsibility for accurate data entry directly on the users of the registry. As a result, staffing and operational costs of the registry are minimized and the risk of registry personnel making an error in transcribing documents is eliminated (see also para. 68 above).

188. It is thus recommended that, to the extent possible, States should establish a business registration system that is computerized and that allows direct electronic access by registry clientele. Nonetheless, given the practical considerations involved in establishing an electronic registry, multiple modes of access should be made available to registry clientele at least in the early stages of implementation in order to

---

[206] The Secretariat suggests including this reference to provide additional clarity in the paragraph (para. 115, A/CN.9/900).

[207] At its twenty-eighth session, the Working Group requested the Secretariat to rebalance the tone of paragraphs 186 and 187 (paras. 176 and 177 of A/CN.9/WG.I/WP/101) so that the notion of direct electronic access was placed at the core of this sub-section on registry services. Further to this request, the Secretariat has refocused the opening sentence of para. 186 on the advantages of direct electronic access for the registry (para. 115, A/CN.9/900).

[208] In keeping up with the decision of the Working Group at its twenty-eighth session (see footnote 207, supra), the Secretariat has removed any reference to issues of direct control of the registration by the registrant and has accordingly replaced the phrase "by putting…the registrant" after the term "system" with the phrase "increases accessibility …through intermediaries" (para. 115, A/CN.9/900).

[209] For further details, see para. 44, A/CN.9/WG.I/WP.85.

reassure users who are unfamiliar with the system. Finally, to facilitate use, the registry should be organized to provide for multiple points of access for both electronic and paper submissions and information requests. However, even where States continue to use paper-based registries, the overall objective is the same: that is, to make the registration and information retrieval process as simple, transparent, efficient, inexpensive and publicly accessible as possible.

Recommendation 35: Direct electronic access to submit registration, to request amendments and to search the registry

The law should establish that, in keeping with other applicable law of the enacting State, where information and communication technology is available, the submission of applications for the registration of a business and requests for amendment of the registered information of a business are permitted without requiring the physical presence of the registrant or user in the business registry office or the assistance of the registry staff.[210]

Recommendation 36: Direct electronic access to search the registry

The law should establish that, where information and communication technology is available, searches of the registry are permitted without requiring the physical presence of the user in the business registry office or the intermediation of the registry staff.[211]

F. Facilitating access to information

1. Type of information provided

189. Information can be of particular value to stakeholders if it is available to the public, although the type of registered information that is available will depend on the legal form of the business being searched. Information available from the business registry that may be of value includes: the profile of the business and its officers (directors, auditors); annual accounts; a list of the business's divisions or places of business; the notice of registration or incorporation; the publication of the business's memoranda, articles of association, or other rules governing the operation or management of the business; existing names and history of the business; insolvency-related information; information on the business registration process; any share capital; certified copies of registry documents; notifications of events (late filing of annual accounts, newly submitted documents, etc.); related laws and regulations; information on registry fees; and information on the expected turnaround time in the provision of registry services.[212] In addition, some registries prepare reports relating to the operation of the business registry that may provide registry designers, policymakers and academic researchers with useful data (for example, on the volume of registrations and searches, operating costs, or registration and search fees collected over a given period).[213] According to a recent survey, information on business data, annual accounts and periodic returns, as well as information about fees for registry services, are the most popular pieces of information and the most requested by the public.[214]

---

[210] At its twenty-eighth session, the Working Group agreed that in order to clarify that business registration should not require the physical presence of the registrant in the registry office, this recommendation could be redrafted along the following lines: "The submission of the application and information to register a business should be permitted using information and communication technology, where available, without requiring physical presence in the business registry office, and subject to the laws of the enacting State" (para. 115, A/CN.9/900).

[211] At its twenty-eighth session, the Working Group requested the Secretariat to add a separate recommendation on direct access to search the business registry (para. 116, A/CN.9/900).

[212] See, supra, footnote 66, pages 77 ff.

[213] See, for example, the Report of the Australian Business Registrar, 2013-2014, available at: abr.gov.au, subpara. 46(c).

[214] For further reference, see supra footnote 66, page 131.

190. If the State is one in which member or shareholder details must be registered, access to such information may also be advisable, as most States that register such details make the relevant information available to the public.[215] A similar approach can be recommended with regard to information on beneficial ownership, although, as previously noted, to date, not many jurisdictions collect information on beneficial ownership. A State may also consider making information on beneficial ownership available to the public in order to allay concerns over the potential misuse of business entities. However, the sensitive nature of the information on beneficial ownership may require the State to exercise caution before opting for disclosure of beneficial ownership without any limitation.[216]

191. Some States not only provide for electronic registration and information searches but also give clients the option of submitting a registration or information search request in other forms. The information is distributed through other channels that can complement the use of the Internet or that may even represent the main method of distribution if an online registration system is not yet fully developed. The following means of sharing information are also used in some States:

(a) Telephone services to provide information on registered businesses and product ordering;

(b) Subscription services to inform subscribers about events pertaining to specified businesses or for announcements of certain kinds of business registrations;

(c) Ordering services to enable access to various products, most often using an Internet browser; and

(d) Delivery services to convey various products, such as transcripts of registered information on a business, paper lists, or electronic files with selected data.

2. Unnecessary barriers to accessibility

192. The registry needs to ensure that searchable information is easily accessible. Even though the information is available, it does not always mean that it is easy for stakeholders to access. There are often different barriers to accessing the information, such as the format in which the information is presented: if special software is required to read the information, or if it is only available in one particular format, it cannot be said to be broadly accessible. In several States, some information is made available in paper and electronic formats; however, information available only on paper likely entails reduced public accessibility. Other barriers that may make information less accessible are charging fees for it, requiring users to register prior to providing access to the information, and if there is a fee connected to the user registration. States should find the most appropriate solutions according to their needs, their conditions and their legal framework.

193. One often overlooked barrier to accessing information, whether in order to register a business or to review data in the registry, is a lack of knowledge of the official language(s). Providing forms and instructions in other languages is likely to make the registry more accessible to users. However, recent evidence shows that, with the exception of Europe, business registries seldom offer such services in languages additional to the official language(s).[217] Although making all information available in additional languages may incur some expense for the registry, a more modest approach may be to consider making information on only core aspects of registration, for instance in respect of instructions or forms, available in a non-official language. In deciding which non-official language would be most appropriate, the registry may wish to base its decision on historical ties, the economic interests of the jurisdiction and the geographic area in which the jurisdiction is situated (see paras. 137 to 139 above).

---

[215] Ibid., pages 30 ff, and footnote 44 [2015], pages 35–36.

[216] See information in respect of FATF Recommendation 24 above in footnote 152.

[217] See supra, footnote 44, page 141.

3. Bulk information

194. In addition to making information on individual business entities available, business registries in some jurisdictions also offer the possibility of obtaining "bulk" information,[218] i.e. a compilation of data on selected, or all, registered businesses. Such information can be requested for commercial or non-commercial purposes and is often used by public agencies as well as private organizations (such as banks) that deal with businesses and perform frequent data processing on them. Distribution of bulk information varies according to the needs and capability of the receiving entity. In performing this function, one approach would be for the registry to ensure the electronic transfer of selected data on all registered entities, combined with the transfer of data about all new registrations, amendments, and deregistration during a specified period. Another option for the registry would be to make use of web-based or similar services for system-to-system integration that provides both direct access to selected data on specific entities and name searches. Direct access avoids unnecessary and redundant storage of information by the receiving organization and States where such services are not yet available should consider it as a viable option when streamlining their business registration system.[219] Distribution of bulk information can represent a practicable approach for the registry to derive self-generated funds (see para. 202 below).

Recommendation 37: Facilitating access to information

The law should ensure the facilitation of access to business registration and registered information by avoiding the creation of unnecessary barriers such as: requirements for the installation of specific software; charging prohibitively expensive access fees; or requiring users of information services to register or otherwise provide information on their identity.[220]

G. Cross-border access to registered information[221]

195. The internationalization of businesses of all sizes creates an increasing demand for access to information on businesses operating outside their national borders. However, official information on registered businesses is not always readily available on a cross-border basis due to technical or language barriers. Making such cross-border access as simple and fast as possible is thus of key importance in order to ensure the traceability of businesses, the transparency of their operations and to create a more business-friendly environment.

196. A range of measures can be adopted to facilitate the retrieval of information stored in the business registry by interested users from foreign jurisdictions. Implementing an online business registration system that can allow registration and search requests in at least one foreign language (see also paras. 125 and 139 above) may facilitate cross-border access as it would eliminate the burden for interested users to travel to the jurisdiction where the business is registered and minimize the need for translation of the information into a language that is understandable to the user. In

---

[218] See supra, footnote 30, pages 140–141.

[219] See supra, footnote 30, page 14.

[220] At its twenty-eighth session the Working Group agreed to delete the last phrase of the recommendation ("or unduly limiting the languages in which information on the registration process is available") since it was noted that in some jurisdictions it would not be possible to make available information on the registration process in a non-official language of the State (para. 117, A/CN.9/900).

[221] At its twenty-eighth session, the Working Group agreed that the approach in paragraphs 111 to 116 and recommendation 17 of A/CN.9/WG.I/WP.101 should be adjusted to one focusing more on cross-border access to information than on information-sharing and that those issues might best be considered in conjunction with part VI of the draft legislative guide on accessibility and information-sharing (para. 71, A/CN.9/900). Accordingly, the Secretariat has revised para. 115 of A/CN.9/WG.I/WP.101 for insertion in the commentary here, in addition to a new paragraph and a revised text of recommendation 17 as it appeared in A/CN.9/WG.I/WP.101 (see also footnotes 108 and 122 supra).

addition, adopting easy-to-use search criteria and an easy-to-understand information structure would further contribute to simplify access to users from foreign jurisdictions. In this respect, when streamlining their business registration system, States may wish to consider coordinating with other States (at least with those from the same geographic region) in order to adopt approaches that would allow for standardization and comparability across jurisdictions of the information transmitted. Finally, foreign users may also be provided information in at least one foreign language, on how to access the information in the registry, and, as in the case of domestic users of the registry, they should be advised of the possibility of establishing direct contact with registry personnel through a dedicated email account of the registry, electronic contact forms or client service telephone numbers.

Recommendation 38: Cross-border access to registered information

The registrar should ensure that systems for the registration of businesses adopt solutions that facilitate cross-border access to the information in the registry.[222]

VII. Fees

197. Payment of a fee in order to receive registration services can be said to be a standard procedure across jurisdictions. As previously noted, in return for that fee, registered businesses receive access to business registry services and to the many advantages that registration offers them, including receipt of a commercial identity recognized by the State that allows them to interact with business partners, the public and the State (see paras. 50 and 51 above). The most common types of fees are those payable for registration of a business and for the provision of information products, while fines may also generate funding to a lesser extent. In some jurisdictions, registries may also charge an annual fee to keep a business in the registry (these fees are unrelated to any particular activity), as well as fees to register annual accounts or financial statements.[223]

198. Although they generate revenue for the registries, fees can affect a business's decision whether to register, since such payments may impose a burden, in particular on MSMEs. Fees for new registration, for instance, can prevent businesses from registering, while annual fees to keep a company in the registry or to register annual accounts could discourage businesses from maintaining their registered status. States should take these and other indirect effects into consideration when establishing fees for registration services. A registration system aiming to support MSMEs and increase the number of them that register should thus consider the adoption of policies where registration and post-registration services, including access to the information on the business registry, are provided free of charge. Where it might be too onerous on States to implement such policies, States should adopt a balanced approach between recovering capital and operational costs within a reasonable period of time and encouraging MSMEs to register. For instance, in several States that consider business registration as a public service intended to encourage businesses to enter the legally regulated economy rather than as a revenue-generating mechanism, registration fees are often set at a level that encourages businesses to register. In such States, the use of flat fee schedules for registration, regardless of the size of the business, is the most common approach. There are also examples of States that provide business registration free of charge.

---

[222] As requested by the Working Group at its twenty-eighth session, the Secretariat has revised the text to focus on cross-border access to information on the business registry (para. 69, A/CN.9/900).

[223] For further reference, see European Commerce Registers' Forum Report 2013, page 72.

A. Fees charged for registry services

199. Striking a balance between the sustainability of the registry operations and the promotion of business registration is a key consideration when setting fees, regardless of the type of fee. One recommended approach, followed in many States, is to apply the principle of cost-recovery, according to which there should be no profit from fees generated in excess of costs. When applying such a principle, States would be required to first assess the level of revenue needed from registry fees to achieve cost-recovery. In carrying out that assessment, account should be taken not only of the initial start-up costs related to the establishment of the registry but also of the costs necessary to fund its operation. By way of example, these costs may include: (a) the salaries of registry staff; (b) upgrading and replacing hardware and software; (c) ongoing staff training; and (d) promotional activities and training for registry users. In the case of online registries, if the registry is developed in partnership with a private entity, it may be possible for the private entity to make the initial capital investment in the registry infrastructure and recoup its investment by taking a percentage of the service fees charged to registry users once the registry is operational.

200. Evidence shows, however, that even when the cost-recovery approach is followed, there is considerable room for variation among States, as that approach requires a determination of which costs should be included, which can be interpreted in many different ways. In one jurisdiction, for instance, fees for new registrations are calculated according to costs incurred by an average business for registration activities over the life cycle of the business. In this way, potential amendments, apart from those requiring official announcements, are already covered by the fee that companies pay for new registration. This approach is said to result in several benefits, such as: (a) rendering most amendments free of charge, which encourages compliance among registered businesses; (b) saving resources related to fee payment for amendments for both the registry and the businesses; and (c) using the temporary surplus produced by advance payment for amendments to improve registry operations and functions. In other cases, jurisdictions have decided to charge fees below the actual costs registries incur in order to promote business registration. In these cases, however, the services provided to businesses would likely be subsidized with public funds.

201. In setting fees in a mixed registry system, it may be reasonable for the State to decide to charge higher fees to process applications and information requests submitted in paper form because they must be processed by registry staff, whereas electronic applications and information requests are directly submitted to the registry and are less likely to require attention from registry staff. Charging higher fees for paper-based registration applications and information requests will also encourage the user community to eventually transition to using the direct electronic registration and information request functionalities. However, in making this decision, States may wish to consider whether charging such fees may have a disproportionate effect on MSMEs that may not have easy access to electronic services.

Recommendation 39: Fees charged for registry services

The law should establish fees, if any, for registration and post-registration services at a level that is low enough that it encourages business registration, in particular of MSMEs,[224] and that, in any event, do not exceed a level that enables the business registry to cover the cost of providing those services.

[224] At its twenty-eighth session, the Working Group agreed to add the phrase “in particular of MSMEs” to emphasize further that business registration should be provided at no cost or for the lowest fee possible for such businesses (para. 119, A/CN.9/900).

B. Fees charged for information

202. In various jurisdictions, fees charged for the provision of information products are a more viable option for registries to derive self-generated funding. Such fees also motivate registries to provide valuable information to their clients, to maintain the currency of their records and to offer additional information services. A recommended good practice for jurisdictions aiming at improving this type of revenue generation would be to avoid charging fees for basic information services such as name or address searches, but to charge for more sophisticated information services or for those that are more expensive for the registry to provide (for example, direct downloading or providing bulk information). Since fees charged for information products are likely to influence users, such fees should be set at a level low enough to make the use of such products attractive to users.[225]

Recommendation 40: Fees charged for information

The law should establish that information contained in the business registry should be available to the public free of charge, but should permit modest fees to be charged at a level that enables the business registry to cover the cost of providing those services,[226] for value-added information products produced or developed by the registry.

C. Publication of fee amounts and methods of payment

203. Regardless of the approach taken to determine the applicable fees, if any, States should clearly establish the amount of the registration and information fees charged to registry users, as well as the acceptable methods of payment. Such methods of payment should include allowing users to enter into an agreement with the business registry to establish a user account for the payment of fees. States in which businesses can register directly online should also consider developing electronic platforms that enable businesses to pay online when filing their application with the registry (see para. 204 below). When establishing registration and information fees, one approach would be for the State to set out the fees in either a formal regulation or more informal administrative guidelines, which the registry can revise according to its needs. If administrative guidelines are used, this approach would provide greater flexibility to adjust the fees in response to subsequent events, such as the need to reduce the fees once the capital cost of establishing the registry has been recouped. The disadvantage of this approach, however, is that this greater flexibility could be abused by the registry to adjust the fees upwards unjustifiably. Alternatively, a State may choose not to specify the registry fees in such a regulation, but rather to designate the administrative or other authority that is mandated to set the registry fees.[227] The State may also wish to consider specifying in the law the types of service that the registry may or must provide free of charge.

Recommendation 41: Publication of fee amounts and methods of payment

The registrar should ensure that fees payable for registration and information services are widely publicized, as are acceptable methods of payment.

---

[225] In some States, registries can derive up to forty per cent of their operating revenues by selling such information. For further reference, see supra, footnote 30, page 17.

[226] At its twenty-eighth session, the Working Group agreed that the notion of cost-recovery should be included in the drafting of this recommendation in order to make it more consistent with recommendation 39 (i.e. recommendation 37 in A/CN.9/WG.I/WP.101, see para. 120, A/CN.9/900).

[227] For instance, in the United Kingdom registry fees are set by statutory fee regulations and confirmed by the Parliament. See https://www.gov.uk/government/organisations/companies-house/about/about-our-services#about-fees.

D. Electronic payments[228]

204. Once States have reached a certain level of technological maturity, they should consider developing electronic platforms that enable businesses to pay online, including the use of mobile payments,[229] to access registry services for which a fee is charged. This will require enacting appropriate laws concerning electronic payments in order to enable the registry to accept online payments. By way of example, such laws should address issues like who should be allowed to provide the service and under which conditions; access to online payment systems; liability of the institution providing the service; customer liability and error resolution. Furthermore, such laws should be consistent with the general policy of the country on financial services.

Recommendation 42: Electronic payments

The law should include legislation to enable and facilitate electronic payments.

VIII. Liability and sanctions[230]

205. While each business must ensure that its registered information is kept as accurate as possible by submitting amendments in a timely fashion, the State should have the ability to enforce proper compliance with initial and ongoing registration requirements. Compliance with those requirements is usually encouraged through the availability of enforcement mechanisms such as the impositions of sanctions on businesses that fail to provide timely and accurate information to the registry (see paras. 158 and 159 above).[231]

A. Liability for misleading, false or deceptive information

206. In order to ensure that reliable information is contained in the business registry, States should adopt provisions that establish responsibility for any misleading, false or deceptive information that is submitted to the registry upon registration or amendment of the registered information, and for failure to submit such information when it ought to have been submitted.[232]

Recommendation 43: Liability for misleading, false or deceptive information

The law should establish appropriate liability for any misleading, false or deceptive information that is provided to the business registry or for failure to provide the required information.[233]

---

[228] At its twenty-eighth session, the Working Group agreed with the substance of this recommendation (recommendation 56 of A/CN.9/WG.I/WP.101) and the relevant commentary and to retain them in the legislative guide in an appropriate location (para. 143, A/CN.9/900).

[229] Access to mobile payments has been identified in the Working Group as of particular importance in respect of developing States and MSMEs (para. 52, A/CN.9/900, see also para. 80 above).

[230] At its twenty-eighth session, the Working Group agreed to reverse the order of recommendations 40 and 41 of A/CN.9/WG.I/WP.101 so that the issue of "liability" would be discussed before "sanctions" as it was said to be a more logical structure (para. 126, A/CN.9/900). Further to that decision, the concepts expressed in para. 192 of A/CN.9/WG.I/WP.101 (the opening paragraph of subsection "A. Sanctions") have been inserted into para. 205.

[231] For further reference, see Ireland, in D. Christow, J. Olaisen, Business Registration Reform Case Studies, Ireland, 2009, pages 15 ff. Failure to notify the information required after registration, however, will not affect the validity of the registration, but will have legal consequences on the business pursuant to the applicable law of the enacting State.

[232] The commentary has been modified in keeping with the views of the Working Group, as expressed at its twenty-eighth session (paras. 124 and 125, A/CN.9/900).

[233] This recommendation has been revised as agreed by the Working Group at its twenty-eighth session (para. 125, A/CN.9/900).

B. Sanctions

207. The establishment of fines for the breach of obligations related to business registration, such as late filing of periodic returns or failure to record changes in the registered information (see para. 160 above) are measures often adopted by States to enforce compliance. In several cases, fines can also represent a means of revenue generation. Their imposition, however, again requires a balanced approach. Several jurisdictions use fines as disincentives for businesses to operate outside of the legally regulated economy. In some cases, legislative provisions link the company's enjoyment of certain benefits to the timely filing of required submissions; in others, a series of increasing fines for late filing is enforced that can ultimately result in compulsory liquidation. However, if fines are used as the main source of funding for the registry, as occurs in some jurisdictions, it can have a detrimental effect on the efficiency of the registry. Since registries in such jurisdictions lose revenue as a result of improved business compliance, they may have weak motivation to improve the level of compliance. It is thus recommended that States should not consider fines as the main source of revenue of a business registry, but that they establish and impose fines at a level that encourages business registration without negatively affecting the funding of registries when compliance improves.

208. Since the recurrent use of fines to sanction the breach of initial and ongoing registration requirements might discourage businesses, in particular MSMEs, from registering or properly maintaining their registration, States might consider establishing a range of possible sanctions which would apply depending on the seriousness of the violation or, in the case of MSMEs meeting certain conditions established by the law, to forego any sanction for businesses defaulting for the first time. One remedy States may wish to consider is to include in the registry information on sanctions imposed by a court or other designated public authority on directors that have breached their legal duties in managing the business, which may include barring a director from taking part in the management of the business, and on the businesses.

209. Moreover, a system of notices and warnings could be set up in order to alert businesses of the consequences for failing to comply with specific requirements of business registration (for instance, late filing of periodic returns). When the registry is operated electronically, automated warnings and notices could be periodically sent out to registered businesses. In addition, notices and warnings could be visibly displayed on the premises of the registration offices and routinely published in newspapers and magazines. In order to best assist businesses, in particular MSMEs, States could also consider designing training programs, in particular addressing micro and small entrepreneurs, to raise awareness of businesses regarding their responsibility to comply with registration requirements and to advise them on how to discharge that responsibility.[234]

Recommendation 44: Sanctions

The law should:

(a) Establish sanctions (including fines, deregistration and loss of access to services) that may be imposed on a business for a breach of its obligations under the law, including the provision of accurate and timely information to the business registry;[235]

(b) Include provisions pursuant to which a breach of obligation may be forgiven provided it is rectified within a specified time; and

(c) Require the registrar to ensure broad publication of those rules.

---

[234] The Secretariat suggests the inclusion of this new paragraph in order to address concerns expressed at the twenty-eighth session of the Working Group that non-compliance with obligations related to business registration requires a more graduated approach for the treatment of violations of differing levels of seriousness (paras. 100, 122 and 123, A/CN.9/900).

[235] The recommendation has been revised in keeping with the changes made to the commentary in light of the views of the Working Group expressed its twenty-eighth session (paras. 100, 122 and 123, A/CN.9/900).

C. Liability of the business registry

210. The law of the State should provide for the allocation of responsibility for loss or damage caused by an error or through negligence in the administration or operation of the business registration and information system.[236]

211. As noted above, users of the registry bear the responsibility for any errors or omissions in the information contained in an application for registration or a request for an amendment submitted to the registry, and bear the burden of making the necessary corrections. If applications for registration and amendment requests are directly submitted by users electronically without the intervention of registry staff, the potential liability of the enacting State would, therefore, be limited to system malfunction, since any other error would be attributable to users. However, if paper-based application forms or amendment requests are submitted, the State must address the existence and extent of its potential liability for the refusal or failure of the registry to enter correctly information contained in the application or amendment.

212. Further, it should be made clear to registry staff and registry users, inter alia, that registry staff are not allowed to give legal advice on the legal requirements for effective registration and amendment requests, or on their legal effects, nor should staff make recommendations on which intermediary (if any) the entrepreneur should choose to perform its registration or any amendments thereto. However, registry staff should be able to give practical guidance with respect to the registration and amendment request processes. In States that opt for a judiciary-based registry system, this measure should of course not be applicable to the judges, notaries and lawyers entrusted with the registration procedures.

213. While it should be made clear that registry staff are not allowed to give legal advice (subject to the type of registration system of the State), the State will also need to address whether and to what extent it should be liable if registry staff nonetheless provide incorrect or misleading information on the requirements for effective registration and amendment requests or on the legal effects of registration.

214. In addition, in order to minimize the potential for misconduct by registry staff, the registry should consider establishing certain practices such as instituting financial controls that strictly monitor staff access to cash payments of fees and to the financial information submitted by clients who use other modes of payment. Such practices may also include the institution of audit mechanisms that regularly assess the efficiency and the financial and administrative effectiveness of the registry. Additional mechanisms to limit the potential for misconduct by registry staff are considered in paragraph 229 below.[237]

215. If States accept legal responsibility for loss or damage caused by system malfunction or error or misconduct by registry staff, they may consider whether to allocate part of the registration and information fees collected by the registry to a compensation fund to cover possible claims, or whether the claims should be paid out

---

[236] In Norway, for instance, the registrar may be liable if it supplies incorrect information in transcripts, certificates or public notices, which causes damage to persons who relied on the incorrect information. See The Business Enterprise Registration Act (Act of 15 June 2001, No. 59 and Act of 19 December 2003, No. 120), § 10-3, available at www.brreg.no. In some legal traditions, the liability of the registrar for causing damage through the negligent performance of its obligations is usually dealt with under a general legal doctrine requiring a duty of care.

[237] This new paragraph consists of former subparagraphs (b) and (c) of para. 229 (para. 212 of A/CN.9/WG.I/WP.101). Further to a comment of the Working Group at its twenty-eighth session that those subparagraphs were not properly placed in the context of the Section "Alteration or deletion of information" and could be moved elsewhere (see also footnote 255 below), the Secretariat suggests including that part of the commentary here (para. 139, A/CN.9/900).

of general revenue. States might also decide to set a maximum limit on the monetary compensation payable in respect of each claim.[238]

Recommendation 45: Liability of the business registry

The law should establish whether the business registry may be held liable for loss or damage caused by error or negligence in the registration of businesses or the administration or operation of the registry.

IX. Deregistration

A. Deregistration[239]

216. Deregistration of a business means that a notation has been made in the registry that it is no longer registered, and that it has ceased to operate. In such instances, the public details in respect of the business usually remain visible on the register, but the status of the business has been changed to indicate that it has been removed or that the business is no longer registered. Deregistration occurs once the business, for whatever reason, has permanently ceased to operate, including as a result of a merger, or forced liquidation due to bankruptcy, or in cases where applicable law requires the registrar to deregister the business for failing to fulfil certain legal requirements.

217. States should consider the role of the registry in deregistering a business. In most jurisdictions, deregistration of a business is included as one of the core functions of the registry. It appears to be less common, however, to entrust the registry with the decision whether or not a business should be deregistered as a result of insolvency proceedings or winding-up.[240] In jurisdictions where this function is included, statutory provisions determine the conditions that result in deregistration and the procedures to follow in carrying it out.

218. Because deregistration pursuant to winding-up or insolvency proceedings of a business are matters regulated by laws other than those governing the registration of a business and since such laws vary greatly from State to State, this legislative guide refers only to deregistration of those solvent businesses that the enacting State has deemed dormant or no longer in operation pursuant to the legal regime governing the business registry. In such cases, most States allow for deregistration to be carried out either upon the request of the business (often referred to as "voluntary deregistration") or at the initiative of the registry (frequently referred to as "striking-off"). In order to avoid difficulties for the registrar in determining when an exercise of the power to deregister is warranted because a business is a dormant solvent business or when is no longer in operation, the law should clearly establish the conditions that must be fulfilled. This approach will also avoid a situation where that power may be exercised in an arbitrary fashion. Permitting a registrar to carry out deregistration at its own initiative but pursuant to clear rules permits the maintenance of a current registry and avoids cluttering the record with businesses that do not carry on any activity. When

---

[238] A suggestion was made during the twenty-eighth session of the Working Group that the text of the UNCITRAL Model Law on Secured Transactions might provide guidance for the discussion of a legislative recommendation on the liability of the business registry (para. 127, A/CN.9/900). Article 32 of that text sets out three optional approaches to a model provision establishing a limitation on the liability of the secured transactions registry, but the Secretariat suggests that this reference in the commentary to the possibility of setting a limitation on the liability of the business registry may be sufficient for the purposes of the present legislative guide.

[239] At its twenty-eighth session, the Working Group requested the Secretariat to adjust the commentary in paras. 216 to 221 (paras. 201 to 205 of A/CN.9/WG.I/WP.101) by: (a) ensuring that it was consistent with the definition of "deregistration" provided in paragraph 13 of the present guide; (b) differentiating "striking off" by the registry from winding-up; and (c) clarifying the purpose and scope of the entire section (see paras. 129 and 130, and 133, A/CN.9/900).

[240] See supra, footnote 66, page 34, and footnote 44, pages 40 ff.

deregistration is initiated by the registrar,[241] there must be reasonable cause to believe that a registered business has not carried on business or that it has not been in operation for a certain period of time. Such a situation may arise, for example, when the State requires the business to submit periodic reports or annual accounts and a business has failed to comply within a certain period of time following the filing deadline. In any case, the ability of the registrar to deregister a business should be limited to ensuring compliance with clear and objective legal requirements for the continued registration of a business. In several States, before commencing deregistration procedures, the registrar must inform the business in writing of its intended deregistration and allow sufficient time for the business to reply and to oppose that decision. Only if the registrar receives a reply that the business is no longer active or if no reply is received within the time prescribed by law will the business be deregistered. A common requirement for a deregistration to become effective is that notice of it be published.[242]

219. Deregistration may also be carried out upon the request of the business, which most often occurs if the business ceases to operate or has never operated.[243] States should specify in which circumstances businesses can apply for deregistration and which persons associated with the business are authorized to request deregistration on behalf of the business. Voluntary deregistration is not an alternative to more formal proceedings, such as winding-up or insolvency, when those proceedings are prescribed by the law of the State in order to liquidate a business.

Recommendation 46: Voluntary deregistration

The law should:

(a) Specify the conditions under which a business can request deregistration; and

(b) Require the registrar to deregister a business that fulfils those conditions.

Recommendation 47: Deregistration at the initiative of the registrar[244]

The law should specify the conditions pursuant to which a registrar can deregister a business at its own initiative.

B. Process of deregistration

220. Regardless of whether the deregistration is requested by the business or initiated by the registrar, where the business is registered as a separate entity, the registry must issue a public notice of the proposed deregistration and when that deregistration will become effective. Such an announcement is usually published on the website of the registry or in official publications such as the National Gazette or in both. This procedure ensures that businesses are not deregistered without providing creditors and other interested parties (e.g. members of the business) the opportunity to object

---

[241] The Secretariat suggests adding the first three sentences at the beginning of this paragraph (formerly the second part of para. 202 of A/CN.9/WG.I/WP.101) further to a request of the Working Group at its twenty-eighth session that the section on deregistration should differentiate between "striking off" by the registrar and winding-up and dissolution of a business and that it should not focus on deregistration as a result of these latter procedures (para. 130, A/CN.9/900).

[242] For further reference, see Lexis PSL Corporate, Striking off and dissolution overview, www.lexisnexis.com/uk/lexispsl/corporate/document/391387/55YB-2GD1-F186-H4MP-00000-00/Strikingoffanddissolutionoverview. See also T. F. MacLaren, in Eckstrom's Licensing in Foreign and Domestic Operations: Joint Ventures, 2015 [as it appears in Westlaw], page 30.

[243] The Secretariat has revised this paragraph of the commentary in keeping with the approach suggested by the Working Group at its twenty-eighth session (paras. 130 and 133, A/CN.9/900).

[244] In keeping with its revision of the section on "Deregistration", the Secretariat has revised the title of the recommendation and subparagraph (a) to reflect the changes to the commentary as well as the decision of the Working Group at its twenty-eighth session that the recommendation should clarify that deregistration is subject to the law of the enacting State (para. 131, A/CN.9/900).

to the procedure in order to protect their rights (the usual practice is to submit a written complaint corroborated by any required evidence to the registry). If there is no objection to the procedure, after the period indicated in the announcement has passed, a notation is made in the registry that the business is deregistered. It should be noted that pending completion of the deregistration procedure, the business remains in operation and will continue to carry on its activities.

221. Registries should retain historical information on businesses that have been deregistered, leaving it to the State to decide the appropriate length of time for which such information should be preserved (see paras. 224 to 227 below). The length of the period of preservation is likely to be influenced by the way in which the registry is structured and operated. Fully electronic registries usually allow for the information to be preserved indefinitely, if the registries have been developed according to technical standards of scalability and flexibility (see paras. 71 to 75 above). When the registry is paper-based or mixed, preserving documents indefinitely may not be a feasible approach, due to the high cost of storage involved. It may thus be desirable for States to establish a minimum period of time for the retention of such documents (see paras. 224 to 227 below). When the State has adopted a unique identifier system, the information related to the business will remain linked to that identifier even if the business is deregistered.

Recommendation 48: Process of deregistration

The law should provide that:

(a) A written notice[245] of the deregistration is sent to the registered business; and

(b) The deregistration is publicized in accordance with the legal requirements of the enacting State.

C. Time of effectiveness of business deregistration

222. The time of effectiveness of the deregistration should be established by way of law, and the status of the business in the registry should indicate the time and date of its effect, in addition to the reasons therefor. The registrar should enter such information in the registry as soon as practicable so that the users of the registry are apprised of the changed status of the business without undue delay.

Recommendation 49: Time and effectiveness of deregistration

The law should:

(a) Specify when the deregistration of a business has legal effect;

(b) Specify that any required notice of the deregistration for that legal form of business must be publicized in accordance with the law; and

(c) Specify the legal effects of deregistration.

D. Reinstatement of registration

223. In several States, it is possible to reinstate the registration of a business that has been deregistered at the initiative of the registrar or upon the request of the

[245] Further to a suggestion at the twenty-eighth session of the Working Group that the term “written” should be understood as applicable to both electronic and paper notices (para. 132, A/CN.9/900), the Secretariat has implemented that approach throughout the draft legislative guide (in this regard, see para. 13 above).

business,[246] provided that the request to the registrar for reinstatement meets certain conditions (in some States this latter procedure is defined as "administrative restoration") or is made by way of a court order. In certain States, both procedures are available and choosing either of them usually depends on the reason for which the business was deregistered or the purpose of restoring the business. The two procedures usually differ in some key aspects, such as who can apply to have the business restored, which business entities are eligible for restoration and the time limit for filing an application for restoration. The requirements for "administrative restoration" in States that provide for both procedures are often stricter than those for restoration by court order. For instance, in such States, only an aggrieved person, which may include a former director or member, can submit an application to the registrar,[247] and the time limit within which the application can be submitted to the registry may be shorter than the time granted to apply for a court order.[248] Regardless of the method(s) chosen by the State to permit reinstatement of the registration of a business, once the registration has been reinstated, the business is deemed to have continued its existence as if it had not been deregistered, which includes maintaining its former business name. In cases where the business name is no longer available as having been assigned to another business registered in the interim, procedures are usually established by the State to govern the change of name of the reinstated business.

Recommendation 50: Reinstatement of registration

The law should specify the circumstances under which and the time limit within which the registrar is required to reinstate a business that has been deregistered.

X. Preservation of records

A. Preservation of records[249]

224. As a general rule, the information in the business registry should be kept indefinitely. The enacting State should decide on the appropriate length of time for which such information should be kept and may choose to apply its general rules on the preservation of public documents.

225. However, the length of the preservation period for records is most often influenced by the way the registry operates, and whether the registry is electronic, paper-based or a mixed system. Those States with paper-based or mixed registration systems, for instance, must decide the length of time for which the paper documents submitted to it should be kept by the registry, in particular in situations where the relevant business has been deregistered (see para. 221 above). Considerations relating to the availability of storage space and the expense of storing such documents would likely play a role in that decision.

---

[246] At its twenty-eighth session, the Working Group requested the Secretariat to redraft paragraph 223 (para. 206 of A/CN.9/WG.I/WP.101) and recommendation 50 (recommendation 46 of A/CN.9/WG.I/WP.101) to clearly state what pertains to the processes and law of the business registry and what pertains to other areas of the law (para. 134, A/CN.9/900). Further to the redrafting of paragraphs 216 to 221, the Secretariat has inserted the phrase "at the initiative of the registry or upon request of the business".

[247] See, for instance, the United Kingdom in Companies House, Strike off, dissolution & restoration, 2015, pages 12 and 17, available at https://www.gov.uk/government/organisations/companies-house.

[248] See, for instance, Ireland, in https://www.cro.ie/Termination-Restoration/Overview.

[249] The Secretariat has revised the commentary (previously paras. 208 to 210 of A/CN.9/WG.I/WP.101) further to comments made at the twenty-eighth session of the Working Group that suggesting a time period for preservation of electronic and paper records was not appropriate and that the commentary to this recommendation should instead focus on the importance of preserving the information (para. 137, A/CN.9/900).

226. In the case of electronic registries, the preservation of original documents submitted in hard copy for extended periods of time might not be necessary, provided that the information contained in such documents has been recorded in the registry or that the paper documents have been digitized (through scanning or other electronic processing).

227. Regardless of the way in which the business registry is operated, providing prospective future users with long-term access to information maintained in the registry is of key importance, not only for historical reasons, but also to provide evidence of past legal, financial and management issues relating to a business that might still be of relevance. The preservation of electronic records is likely to be easier and more cost-effective than preserving paper records. In order to minimize the cost and considerable storage space required for the preservation of documents in hard copy, paper-based registries that cannot convert the documents received into an electronic form may adopt alternative solutions (for instance, the use of microfilm) that allow for the transmission, storage, reading, and printing of the information.

Recommendation 51: Preservation of records

The law should provide that documents and information submitted by the registrant and the registered business, including information in respect of deregistered businesses, should be preserved by the registry so as to enable the information to be retrieved by the registry and other interested users.[250]

B. Alteration or deletion of information[251]

228. The law should establish that registry staff may not alter or remove registered information, except as specified by law and that any change can be made only in accordance with the applicable law. However, to ensure the smooth functioning of the registry, in particular when registrants submit registration information using paper forms, registry staff should be authorized to correct its own clerical errors (see paras. 30, 48 and 150 above) made in entering the information from the paper forms into the registry record. If this approach is adopted, notice of this or any other correction should promptly be sent to the registrant (and a notification of the nature of the correction and the date it was effected should be added to the public registry record linked to the relevant business). Alternatively, the State could require the registrar to notify the registrant of its error and that person could then submit an amendment free of charge.

229. Further, the potential for misconduct by registry staff should be minimized by: (a) designing the registry system to make it impossible for registry staff to alter the time and date of registration or any registered information entered by a registrant; and (b) designing the registry infrastructure so as to ensure that it can preserve the information and the documents concerning a deregistered business for as long as prescribed by the law of the enacting State.[252]

Recommendation 52: Alteration or deletion of information

---

[250] At its twenty-eighth session, the Working Group requested the Secretariat to address concerns in respect of this recommendation's reference to "perpetuity" and the difference between the time requirements for print and electronic preservation (para. 137, A/CN.9/900). Subparagraphs (b) and (c) of the recommendation have thus been deleted and the remainder of the text has been adjusted accordingly.

[251] At its twenty-eighth session, the Working Group requested the Secretariat to change the text of this recommendation (recommendation 49 of A/CN.9/WG.I/WP.101) and the commentary to "alteration" instead of "amendment" (para. 138, A/CN.9/900).

[252] Further to a request of the Working Group at its twenty-eighth session, former subparagraphs (b) and (c) of paragraph 212 of A/CN.9/WG.I/WP.101 have been relocated to the commentary to recommendation 45 (para. 139, A/CN.9/900) and what was previously subparagraph 43(c) of A/CN.9/WG.I/WP.93/Add.1 was reinstated here as subparagraph (b).

The law should provide that the registrar does not have the authority to alter or delete information contained in the business registry record except in those cases specified in the law.

C. Protection against loss of or damage to the business registry record

230. To protect the business registry from the risk of loss or physical damage or destruction, the State should maintain back-up copies of the registry record. Any rules governing the security of other public records in the enacting State might be applicable in this context.

231. The threats that can affect an electronic registry also include criminal activities that may be committed through the use of technology. Providing effective enforcement remedies would thus be an important part of a legislative framework aimed at supporting the use of electronic solutions for business registration. Typical issues that should be addressed by enacting States would include unauthorized access or interference with the electronic registry; unauthorized interception of or interference with data; misuse of devices; fraud and forgery.[253]

Recommendation 53: Protection against loss of or damage to the business registry record

The law should:

(a) Require the business registry to protect the registry records from the risk of loss or damage; and

(b) Establish and maintain back-up mechanisms to allow for any necessary reconstruction of the registry record.

D. Safeguard from accidental destruction

232. An aspect that may warrant consideration by States is that of natural hazards or other accidents that can affect the processing, collection, transfer and protection of the data housed in the electronic registry and under the responsibility of the registry office. Given user expectations that the business registry will function reliably, the registrar should ensure that any interruptions in operations are brief, infrequent and minimally disruptive to users and to States.[254] For this reason, States should devise appropriate measures to facilitate protection of the registry. One such measure could be to develop a business continuity plan that sets out the necessary arrangements for managing disruptions in the operations of the registry and ensures that services to users can continue. In one State, for instance, the registry has established a "risk register", i.e. a dynamic document that is updated as changes in the operation of the registry occur. Such a risk register allows the registry staff to identify possible risks for the registration service as well as the appropriate mitigation measures. Designated staff are required to report on an annual basis the threats to the registry and the relevant actions taken to mitigate such threats.[255]

Recommendation 54: Safeguard from accidental destruction

The law should provide that appropriate procedures should be established to mitigate risks from force majeure, natural hazards, or other accidents that can affect the processing, collection, transfer and protection of data housed in electronic or paper-based business registries.

[255] For instance, this is the practice in the United Kingdom Companies' House.

Annex*

The underlying legislative framework

A. Changes to underlying laws and regulations

1. Business registration reform can entail amending either primary legislation or secondary legislation or both. Primary legislation concerns texts such as laws and codes that must be passed by the legislative bodies of a State. Reforms that consider this type of legislation thus require the involvement of the legislature and, for this reason, can be quite time-consuming. Secondary legislation is that body of texts composed of regulations, directives and other similar acts made by the executive branch within the boundaries laid down by the legislature. Reform of secondary legislation does not need to be reviewed by the legislature and thus it can be carried out in a shorter time frame. Therefore, when domestic circumstances allow, the use of secondary legislation may be a more attractive option than the reform of primary legislation.

2. Business registration reform can entail amending different aspects of the domestic legislation of a State. In addition to legislation that is meant to prescribe the conduct of business registration, States may need to update or change laws that may simply affect the registration process in order to ensure that such laws respond to the needs of MSMEs and other businesses. There is no single solution in this process that will work for all States, since the reforms will be influenced by a State's legislative framework. However, the reforms should aim at developing a domestic legal framework that supports business registration with features such as: transparency and accountability, clarity of the law and the use of flexible legal entities.

3. Regardless of the approach chosen and the extent of the reform, changes in the domestic legal framework should carefully consider the potential costs and benefits of this process, as well as the capacity and the will of the government and the human resources available. An important preparatory step of a reform programme involves a thorough inventory and analysis of the laws that are relevant to business registration [1] with a view to evaluating the need for change, the possible solutions, and the prospects for effective reform. In some cases, this assessment could result in deferring any major legislative reform, particularly if significant gains to the process of simplification can be achieved by the introduction of operational tools.[2] Once it has been decided what changes should be made and how, ensuring their implementation is equally important. In order to avoid the possible risk of unimplemented reforms, the government, the reform steering committee and the project teams should carefully monitor the application of the new legal regime. The following paragraphs offer some examples of approaches that can be taken to streamline domestic laws and regulations with a view to simplifying business registration and to making it more accessible to MSMEs.

B. Clarity of the law

4. For jurisdictions wishing to facilitate business start-up, in particular of MSMEs, it is important to review the existing legal framework so as to identify possible impediments to the simplification of the registration process. The nature of the reform would depend on the status of the domestic legal framework, and a variety of examples based on States' experiences are available.[3]

---

* At its twenty-eighth session, the Working Group agreed with the substance of the sections reproduced in this Annex (Chapter XI, Sections A through E of A/CN.9/WG.I/WP.101) and recommendations 52 to 54 of A/CN.9/WG.I/WP.101, but decided to move them into an annex to the legislative guide (para. 142, A/CN.9/900).

[1] See World Bank Group, Small and Medium Enterprise Department, Reforming Business Registration Regulatory Procedures at the National Level, A Reform Toolkit for Project Teams, 2006, page 40.

[2] Ibid., page 74.

[3] Ibid., para. 65.

5. These reforms may include decisions by States to shift the focus of the law towards privately held businesses, as opposed to public limited companies, particularly if the former currently account for the majority of the firms in the State. Reforms could also include the decision to move the legal provisions pertaining to small businesses to the beginning of any new law on business forms in order to make such provisions easier to find or to use simpler language in any updated legislation.[4]

6. One particularly relevant reform that would especially serve the purpose of clarity of the law would be a comprehensive review of the legal framework on business registration and a resulting unification of the various rules into a single piece of legislation. This could also allow for some flexibility to be built into the system, with the adoption of certain provisions as regulations or simply providing for the development of the necessary legal basis in order to introduce legal obligations by way of regulation at a later stage.[5]

Recommendation 1/Annex: Clarity of the law

The law should, to the extent possible, consolidate legal provisions pertaining to business registration in a single legislative text, which is clearly written and uses simple language that can be easily understood.

C. Flexible legal forms[6]

7. Evidence suggests that entrepreneurs tend to choose for their business the simplest legal form available when they decide to register and that States with rigid legal forms have an entry rate considerably lower than States with more flexible requirements. In States that have introduced new and simplified legal forms for business, the registration process for those new business types is much simpler. Entrepreneurs are not required to publish their rules governing the operation or management of their business in the Official Gazette; instead, these can be posted online through the business registry; and the involvement of a lawyer, notary or other intermediary is not obligatory for the preparation of documents or conducting a business name search.[7]

8. Legislative changes to abolish or reduce the minimum paid in capital requirement[8] for businesses also tend to facilitate MSME registration, since micro and small businesses may have limited funds to meet a minimum capital requirement, or they may be unwilling or unable to commit their available capital in order to establish their business. Instead of relying on a minimum capital requirement to protect creditors and investors, some States have implemented alternative approaches such as the inclusion of provisions on solvency safeguards in their legislation; conducting solvency tests; or preparing audit reports that show that the amount a company has invested is enough to cover the establishment costs.[9]

9. Introducing new simplified forms of limited liability and other types of businesses is often coupled with a considerable reduction or complete abolition of the minimum capital requirements that other legal forms of business are required to deposit upon formation. In several States that have adopted simplified business entities, the minimum capital requirement has been abolished completely, and in other

[6] The Working Group may wish to note parallel work that it is undertaking in respect of an UNCITRAL limited liability organization (A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1).

[7] For further reference, see, for example, Greece in V. Saltane, J. Pan, Getting Down to Business: Strengthening Economies through Business Registration Reforms, 2013, page 2, as well as other examples, such as Colombia (see A/CN.9/WG.I/WP.83).

[8] For a more thorough discussion on minimum capital requirements and simplified business entities, see paras. 75 to 79, A/CN.9/825 as well as paras. 46 and 47, A/CN.9/WG.I/WP.99/Add.1.

[9] For further details, see para. 28, A/CN.9/WG.I/WP.85.

cases, initial registration or incorporation has been allowed upon deposit of a nominal amount of capital. In other States, progressive capitalization has been introduced, requiring the business to set aside a certain percentage of its annual profits until its reserves and the share capital jointly total a required amount.[10] In other cases, progressive capitalization is required only if the simplified limited liability entity intends to graduate into a full-fledged limited liability company, for which a higher share capital would be required. There is however no obligation to do so.[11]

10. Another reform that would be conducive to improved business registration is to provide freedom to entrepreneurs to conduct all lawful activities without requiring them to specify the scope of their venture.[12] This is particularly relevant in those jurisdictions where entrepreneurs are required to list in their articles of association the specific activity or activities in which they intend to engage so as to restrain firms from acting beyond the scope of their goals and, according to certain literature, to protect shareholders and creditors. Allowing for the inclusion in the articles of association (or other rules governing the operation or management of a business) of a so-called "general purpose clause" which states that the company's aim is to conduct any trade or business and grants it the power to do so, facilitates business registration. This approach is far less likely to require additional or amended registration in the future, as businesses may change their focus since entrepreneurs could change activities without amending their registration, provided that the new business activity is a lawful one and that the appropriate licences have been obtained. Additional options to the inclusion of a general purpose clause, which would support the same goal, could be passing legislation that makes unrestricted objectives the default rule in the jurisdiction, or abolishing any requirement for businesses, in particular those that are privately held, to state objectives for registration purposes.[13]

Recommendation 2/Annex: Flexible legal forms

The law should permit flexible and simplified legal forms for business in order to facilitate and encourage registration of businesses of all sizes, including those forms considered in the [UNCITRAL legislative guide on an UNCITRAL limited liability organization].

D. Primary and secondary legislation to accommodate the evolution of technology

11. Since information technology is a field marked by rapid technological evolution, it would be advisable to establish guiding legal principles in the primary legislation, leaving secondary legislation to stipulate the specific provisions regulating the detailed functioning and the requirements of the system.[14] Once the business registration process is fully automated, States should establish provisions (preferably in the secondary legislation) or policies that discipline government-to-government data exchange in order to avoid any lack of cooperation among different agencies.

Recommendation 3/Annex: Primary and secondary legislation to accommodate the evolution of technology

The law should establish guiding legal principles in relation to electronic registration in primary legislation, and should set out specific provisions on the

[10] See Italy, para. 29, A/CN.9/WG.I/WP.85.

[11] For further reference, see, for instance, Germany, presentation by Dr. Leif Boettcher, Federal Ministry of Justice on "Simplified business forms in the context of small and medium enterprises, the German approach" at the UNCITRAL International Colloquium on Microfinance (16–18 January 2013), available at http://www.uncitral.org/uncitral/en/commission/colloquia/microfinance-2013-papers.html.

[12] This is a feature on which the Working Group has already agreed in its discussion of a legislative text on a simplified business entity (para. 70, A/CN.9/825). See also paras. 31–34, A/CN.9/WG.I/WP.99.

[13] For further details, see para. 52, A/CN.9/WG.I/WP.85.

[14] See main text, supra, footnote 30, page 7.

detailed functioning and requirements of the electronic system in secondary legislation.

E. Electronic documents and electronic authentication methods

12. Entering information into an online registry is a business-to-government transaction that should be subject to the same treatment, under domestic legislation, as any other electronic transaction.[15] Therefore, if an appropriate domestic legislative framework for electronic transactions is not in place, a preliminary step for a reform aimed at supporting electronic business registration would be to recognize and regulate the use of such electronic transactions. Among other things, States should adopt laws permitting electronic signatures and the submission of electronic documents.[16] In some States, for instance, the use of an advanced electronic signature is mandatory when transmitting information to a business registry. When laws on electronic communication are enacted, they should establish, at minimum, principles of non-discrimination, technological neutrality and functional equivalence allowing for equal treatment of paper-based and electronic information. The principle of non-discrimination ensures that a document would not be denied legal effect, validity or enforceability solely on the grounds that it is in electronic form. The principle of technological neutrality mandates the adoption of provisions that are neutral with respect to the technology used. The principle of functional equivalence lays out criteria under which electronic communications and electronic signatures may be considered equivalent to paper-based communications and hand-written signatures.

13. Further, it would be advisable that the laws include provisions to mitigate the risks that the use of ICT can carry with it and that can affect the validity, and in certain jurisdictions the legal validity, of the information transmitted through the electronic means. The most common risks include: confirming the identity of the entrepreneur filing for registration (referred to as “authentication”); preventing conscious or unconscious alteration of information during transmission (referred to as “integrity”); ensuring that sending and receiving parties cannot deny having sent or received the transferred message (referred to as “non-repudiation”) and preventing disclosure of information to unauthorized individuals or systems (referred to as “confidentiality”).[17] In those States where the law does not require business registries to check the veracity of the information submitted during the registration process, these risks may be more problematic as it can be relatively easy to manipulate registration systems and filing processes.

14. Verifying the identity of the registrant and ensuring the integrity of the application and the supporting information are key elements to ensure trust in ICT-supported registration systems and their corresponding use. Consequently, States should carefully consider the requirements that electronic signatures and electronic documents should have in order to minimize any risk of corporate identity theft[18] and the transmission of invalid information.

15. Whether or not the adoption of legislation on electronic signatures is premature due to the technological infrastructure of the State, various other techniques can

---

[15] See A. Lewin, L. Klapper, B. Lanvin, D. Satola, S. Sirtaine, R. Symonds, Implementing Electronic Business Registry (e-BR) Services, Recommendations for policymakers based on the experience of EU Accession Countries, 2007, page 47.

[16] UNCITRAL has adopted several texts dealing with electronic commerce. Those texts and relevant information on them can be found on the UNCITRAL website at: http://www.uncitral.org/uncitral/uncitral_texts/electronic_commerce.html (see also para. 89 above).

[17] See main text, supra, footnote 30, page 12.

[18] Corporate identity theft can occur through the theft or misuse of key business identifiers and credentials, manipulation or falsification of business filings and records, and other related criminal activities. Despite the use of the term “corporate”, corporations are not the only business entities that are victimized by this crime. Any type of business or organization of any size or legal structure, including sole proprietorships, partnerships and limited liability companies can be targets of business identity theft.

prevent corporate identity theft and ensure security. The experience of several States has laid the groundwork for practices that may be replicated in other regions. Simple methods include the use of user names and passwords; electronic certificates; biometric verification (for example, fingerprints); monitoring systems and email systems that notify registered users about changes or whenever documents are filed on their business record; and the implementation or increase of penalties for false or misleading information submitted to the commercial registries. In order to facilitate MSME registration, States may wish to opt for the adoption of such simple ways of ensuring the authentication of the identity of business entrepreneurs.

F. Dispatch and receipt of electronic messages[19]

16. Another issue to consider when implementing a business registry through the use of ICT solutions is that electronic registries may make it difficult to ascertain the time and place of dispatch and receipt of information. This is an aspect that may acquire relevance due to the time sensitivity of certain submissions, such as establishing the exact time and place at which a business has been registered. For this reason, it is important to have clear rules that define the time of "dispatch" and "receipt" of electronic messages. If such rules are not clearly defined in a State's legislative framework, or if they are not defined with the specificity required for the purposes of time-sensitive registration applications, then ad hoc laws addressing the issues of dispatch and receipt may be required.

[19] See supra, footnote 15, page 48.

C. Note by the Secretariat on reducing the legal obstacles faced by micro, small and medium-sized enterprises (MSMEs)

(A/CN.9/WG.I/WP.107)

[Original: English]

Contents

Introduction

1. At its twenty-sixth session (April 2016), the Working Group considered document A/CN.9/WG.I/WP.92 (paras. 86 to 88, A/CN.9/866) which had been prepared by the Secretariat to provide the overall context for work prepared by the United Nations Commission on International Trade Law (UNCITRAL) in respect of micro, small and medium-sized enterprises (MSMEs). While the Working Group did not have sufficient time to consider A/CN.9/WG.I/WP.92 in detail, there was broad support for the proposal that a document along those lines could accompany its MSME work as an introduction to the final text and that it could provide an overarching framework for UNCITRAL's current and future work on MSMEs. Further, the Working Group was of the view that, once specifically considered and adopted by the Working Group and the Commission, that contextual framework could be underpinned by legal standards that would provide legislative pillars to the framework; importantly, such an approach would accommodate expansion through the addition of other legislative texts regarding MSMEs as such texts might be adopted by the Commission. Those views were noted by the Commission at its forty-ninth session (2016), at which the Working Group was commended for the progress that it had made on its work to date.[1]

2. This working paper is a revised version of A/CN.9/WG.I/WP.92, taking into account the general views expressed by the Working Group at its twenty-sixth session (paras. 86 to 88, A/CN.9/866), as well as appropriate material drawn from the contribution by the United Nations Conference on Trade and Development (UNCTAD) in document A/CN.9/WG.I/WP.98. Necessary amendments have also been made in light of the development by the Working Group of the draft legislative guides on key principles of a business registry (A/CN.9/WG.I/WP.106) and on an UNCITRAL limited liability organization (A/CN.9/WG.I/WP.99 and Add.1).

[1] *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), paras. 222 and 224.

I. Micro, small and medium-sized enterprises (MSMEs)

3. At its forty-sixth session, in 2013, UNCITRAL decided to commence work on reducing the legal obstacles faced by MSMEs throughout their life cycle, and in particular, specified that such work should focus on MSMEs in developing economies. This matter was placed on UNCITRAL's work programme for Working Group I, which was requested to begin its mandate with a focus on the legal questions surrounding the simplification of incorporation.[2] In taking up this topic, UNCITRAL has decided to focus its attention, at least initially, on the reduction of legal obstacles that MSMEs face at the beginning of their life cycle.

4. In light of the disadvantaged position in which many MSMEs are found globally, undertaking this work emphasizes the relevance and importance of UNCITRAL's work and programmes for the promotion of the rule of law at the national and international levels and for the implementation of the international development agenda. These include the achievement of the Sustainable Development Goals, which, of course, build upon the successes of the Millennium Development Goals, and which specifically note the encouragement of the formalization and growth of MSMEs in target 3 of goal 8 to "Promote inclusive and sustainable economic growth, employment and decent work for all". The global community has recognized both the importance of fair, stable and predictable legal frameworks for: generating inclusive, sustainable and equitable development, economic growth and employment; stimulating investment; and facilitating entrepreneurship, as well as UNCITRAL's contribution to the attainment of those goals through its efforts to modernize and harmonize international trade law.[3] Work aimed at supporting and fostering the establishment and growth of MSMEs further underpins UNCITRAL's contribution in providing internationally acceptable rules in commercial law, and supporting the enactment of those rules to assist in strengthening the economic fibre of States.

5. The international community has underscored the importance of business law as one of four pillars key to strengthening the legal empowerment of the poor, many of whom rely upon micro and small businesses for their livelihood.[4] In addition to other pillars (such as access to justice and the rule of law; property rights; and labour rights), business rights are seen as important to empower the less advantaged, not only in terms of their employment by others, but in developing micro and small businesses of their own. Business rights may be regarded as a composite of existing rights of groups and individuals to engage in economic activity and market transactions, and which include the right to start a business in the legally regulated economy without facing arbitrarily enforced regulations or discrimination, removing unnecessary barriers that limit economic opportunities, and protecting business investments, regardless of their size.[5] Measures that have been called for to strengthen business rights include:

The findings of this Commission formed an integral part of the United Nations Development Programme's (UNDP) Initiative on Legal Empowerment of the Poor (www.undp.org/content/undp/en/home/ourwork/democraticgovernance/focus_areas/focus_justice_law/legal_empowerment.html) and have contributed to similar work on Legal Empowerment of the Poor in international organizations such as the World Bank Group.

[5] Ibid., pp. 30–31.

(a) Guaranteeing basic business rights, including the right to sell, the right to have a workspace and the right to have access to the necessary infrastructure and services (for example, to electricity, water and sanitation);

(b) Strengthening, and making effective, economic governance in order to permit entrepreneurs to easily and affordably establish and operate a business, permit them access to markets, and permit them to exit a business;

(c) Expanding the accessibility of entrepreneurs to limited liability entities and to other legal mechanisms that allow owners to separate their business and personal assets;

(d) Promoting inclusive financial services that offer savings, credit, insurance, pensions and other tools for risk management; and

(e) Expanding the access of entrepreneurs to new business opportunities through specialized programmes to familiarize entrepreneurs with new markets, assisting them in creating links with other businesses of all sizes, and in complying with regulations and requirements.[6]

6. The experience of UNCITRAL may assist in the identification of the legal and regulatory framework that can best assist entrepreneurs and MSMEs in establishing business rights, thereby reducing some of the legal obstacles that such businesses face.

A. The importance of MSMEs in the global economy

7. UNCITRAL's decision to work on reducing the legal obstacles faced by MSMEs recognizes the importance of such enterprises to the economic health of the States in which they are found, and to the global economy more generally. This importance is underscored by a number of key facts that illustrate that MSMEs are seen as the backbone of the economy in both the developed and the developing world.

8. The total number of MSMEs worldwide is estimated to be between 425 to 520 million businesses, of which 365 to 445 million (around 85 per cent) are in emerging markets. Those small and medium-sized enterprises (SMEs) operating within the legally regulated economy total 36 to 44 million globally and 25 to 30 million in emerging markets, while an additional 55 to 70 million microenterprises operate within the legally regulated economy of emerging markets. Of the total estimated MSMEs operating in emerging markets, 285 to 345 million (approximately 77 per cent) are thought to be operating outside of the legally regulated economy.[7] In addition, SMEs (operating both within and outside of the legally regulated economy) account for 72 per cent of total employment and 64 per cent of Gross Domestic Product (GDP) in developed economies, while they represent 47 per cent of employment and 63 per cent of GDP in low-income countries. SMEs operating outside of the legally regulated economy are estimated to provide 48 per cent of all jobs in emerging market countries, and 25 per cent of all jobs in developed countries, but account for only 37 per cent and 16 per cent of GDP in these markets, respectively.[8]

9. It may also be instructive to review some of the statistics on such enterprises on a regional and subregional basis. In the European Union (EU), 99 per cent of all businesses are SMEs, which provide two out of three private sector jobs and contribute to more than half of total value-added created by business in the EU. Further, nine out of ten SMEs in the EU are microenterprises (defined in the EU as

having fewer than 10 employees), thus illustrating that the mainstays of Europe's economy are micro firms.[9]

10. Microenterprises are no less influential in other developed States. For example, the United States of America has 25.5 million micro-businesses (defined as enterprises having fewer than 5 employees, including the owner), or 92 per cent of all businesses. In 2011, the direct, indirect and induced effect of microenterprises had an impact on over 40 million jobs in the United States: directly accounting for 26 million jobs; indirectly supporting 1.9 million jobs through business purchases; and having an induced effect (through the personal purchasing power of owners and employees of micro-businesses) on an additional 13.4 million jobs.[10]

11. MSMEs are also of great importance in regions of the world where a large number of developing States are found. SMEs represent 99 per cent of all enterprises in the Association of Southeast Asian Nations (ASEAN) region, and contribute from 30 to 60 per cent of the GDP.[11] In the States of the Asia-Pacific Economic Cooperation (APEC), SMEs account for around 97 per cent of all businesses and employ over half of the work force.[12] In the Caribbean Community and Common Market (CARICOM), MSMEs provide more than 50 per cent of GDP and account for 70 per cent of the jobs,[13] while in Latin America, over 18.5 million MSMEs provide employment to about 70 per cent of the regional workforce and contribute almost 50 per cent of the region's GDP.[14] According to the African Development Bank (AfDB), SMEs in Africa, account for more than 45 per cent of employment and contribute 33 per cent to GDP.[15]

B. Defining MSMEs

12. There is no standardized international definition of what constitutes an MSME, since each economy will define its own parameters for each category of business size by taking into account its own specific economic context. For the purposes of work undertaken by UNCITRAL, it is not necessary or advisable to seek consensus on a definition for each category of MSME, since any legislative texts produced will be applied by States or regional economic groups to their MSMEs as defined by each of them, based on each unique economic context. The important common factor from State to State is that MSMEs, regardless of how they are defined in that jurisdiction, are enterprises that, by virtue of being the smallest and most vulnerable, face a number of common obstacles regardless of the particular jurisdiction in which they are found. For that reason, these materials do not offer guidance on how a State should define the different categories of MSMEs.[16]

[16] States may wish to note the definitions of the different categories of businesses included in MSMEs that have been established either by various States or by regional economic groups. Those definitions tend to be based on a number of elements, considered separately or along with other factors, including: (i) the number of employees at a specific point in time, such as the end

C. The nature of MSMEs

13. MSMEs are incredibly varied in nature. They may consist of sole entrepreneurs, small family businesses or larger enterprises with several or many employees, and may operate in virtually any commercial sector, including in the service industry and the artisanal and agricultural sectors.

14. Moreover, MSMEs may be expected to vary depending on the local economic conditions, cultural traditions and the different motivations and characteristics of the entrepreneurs establishing them. Enterprises that have entered the legally regulated economy may also take various legal forms, depending on the options available to them under applicable law, and on how those different forms may meet their needs.

15. In addition, although MSMEs may be seen, particularly in the context of developing economies, mainly as a source of livelihood for the working poor, such enterprises need not be static; in fact, MSMEs may also serve a dynamic purpose as a source of entrepreneurial talent in an economy. Indeed, their importance in the world economy suggests that providing for and fostering the growth of MSMEs is a key goal in order to achieve economic progress, innovation and success.

16. However, despite their disparate nature, certain characteristics of MSMEs may be broadly shared. Some of these similarities may include, among others:

(a) Being and remaining small operations;

(b) Facing burdensome regulatory hurdles, which tend to have a disproportionate effect on them;

(c) Reliance on family and friends for loans or risk-sharing;

(d) Limited access to capital or to banking services;

(e) Employees, if any, are often drawn from family and friends and may be unpaid and unskilled, including having limited administrative capacity;

(f) Markets may be limited to relatives, close friends and local contacts;

(g) Vulnerability to arbitrary and corrupt behaviour;

(h) Limited access to dispute settlement which puts them at a disadvantage in disputes with the State or with larger businesses;

(i) A lack of asset partitioning, so business failure often means that personal assets are also lost;

(j) Vulnerability to financial distress; and

(k) Difficulty in transferring or selling a business and in profiting from both tangible and intangible assets (such as client lists or relationships with customers).[17]

D. Creating sound business environments for all businesses

17. Efforts to assist MSMEs at the start of their life cycle might first begin with consideration of the business environment in which an MSME will be conducting its affairs. A “business environment” may be defined in a number of different ways, but could be said to comprise the policy, legal, institutional and regulatory conditions that govern business activities, as well as the administration and enforcement mechanisms established to implement government policy, and the institutional arrangements that influence the way key actors operate. These key actors may include government

---

of the financial or calendar year; (ii) the amount of annual revenue or turnover generated by the enterprise, or the balance sheet total of the business; (iii) the asset base of the business; (iv) the total monthly wages paid by the enterprise; or (v) the amount of capital invested in the enterprise.

[17] See, for example, supra note 4, pp. 8–9, 38–39 and 70–73.

agencies, regulatory authorities, business organizations, trade unions, and civil society organizations. All of these factors contribute to affect business performance.[18]

18. Sound business environments clearly have a positive influence on economic growth and poverty reduction. Views differ as to the significance and measurability of the link between the business environment, on one hand, and economic growth and poverty reduction, on the other. However, poor business environments may not provide sufficient incentive and opportunity for entrepreneurs to carry on their commercial activities in the legally regulated economy where their enterprise is more likely to thrive. In addition, poor business environments tend to be more susceptible to corruption and usually have a disproportionate gender impact, since the businesses most vulnerable in a weak business environment are micro-businesses, which are often owned by women.[19]

19. It should be noted that the quality of the business environment varies not only as between States but within their different regions as well. Such regional variations make it unlikely that a single solution will provide the answer for improving the business environment in every State. Similarly, the challenges faced by entrepreneurs, particularly by MSMEs, vary depending on the context in which they are doing business. However, the two concepts are linked, since many of the challenges faced by MSMEs are similar to those considered detrimental to a favourable business environment in general, including: burdensome regulation, high economic inequality, low institutional quality, low quality of public infrastructure, and a lack of access to credit and other resources.[20]

20. Improving the quality of the business environment and assisting MSMEs in overcoming the particular challenges facing them often require a State to take measures towards legal and policy reform. These reforms may include, among others, providing for a simple and effective system of business registration, as well as providing for a range of simplified and flexible business forms so as to meet the varied needs of MSMEs. States most often initiate such business reforms in order to: facilitate business start-up and operations, stimulate investment opportunities, and increase growth rates and employment. Such reforms require careful planning and commitment on the part of the State, as well as the involvement of many different entities at various administrative and governmental levels.[21]

II. The extralegal economy

21. As outlined above in paragraph 16, MSMEs generally face a number of key challenges, some of which are caused, and many of which are exacerbated, by operating in the extralegal economy.[22] As noted above, developing States host over 85 per cent of the large number of MSMEs in business globally; of these, an estimated 77 per cent of MSMEs operate in the extralegal economy, which is sometimes referred to as the "informal" economy.

22. "Informality" is by no means a uniform concept. Many "informal" businesses actually operate in fixed premises and according to locally accepted commercial rules. In addition, they may be well-known by local authorities, pay some form of local taxes, and may even engage in cross-border trade. Others, on the other hand, may have little interaction with the State.

[18] Donor Committee for Enterprise Development (DCED), 2008, "Supporting Business Environment Reforms", p. 2.

[19] Ibid., p. 3; see also, "Making the Law Work for Everyone", Volume I, Report of the Commission on Legal Empowerment of the Poor, supra note 4.

[20] See K. Kushnir, M. L. Mirmulstein and R. Ramalho, "Micro, small and medium enterprises around the world: How many are there, and what affects their count?", 2010, World Bank/IFC.

[21] See Donor Committee for Enterprise Development (DCED), Supporting Business Environment Reforms: Practical Guidance for Development Agencies, Annex: How Business Environment Reform Can Promote Formalisation, 2011.

[22] See, for example, A. M. Oviedo, M. R. Thomas, K. K. Özdemir, Economic Informality, causes, costs and polices – a literature survey, 2009, pp. 14 et seq.

23. Although measurement tools are imperfect and no clear boundaries exist between formal (or legally regulated) and informal (or extralegal) sectors, businesses can be viewed as operating on a formality-informality (or legal-extralegal) spectrum. They can be qualified as more or less formal or informal according to the extent to which their operations fall within the ambit of a State's official laws or take place outside of its official structures. Reference in these materials to the "legally regulated economy" thus refers to the sector of the economy characterized by activities that are conducted within the ambit of formal regulation and structure and commercial activity that falls outside of this scope will be referred to as "extralegal" rather than "informal". Moreover, since the entry point for businesses wishing to access the legally regulated economy is often by way of registration with a commercial or business registry, extralegal enterprises will refer to those that are not entered into the official commercial or business registry of a State, such registration will be considered in these materials to be the main conduit through which businesses are encouraged to operate in the legally regulated economy.

24. It should also be noted that the extralegal economy is not related to illegal or criminal activity. Illegal activities are contrary to the law, but informal activities are extralegal, in that they are not officially declared and do not occur in the context of the legal and regulatory regime that should govern such activities. The discussion in these materials is limited to extralegal commercial activities and does not address trade in illicit goods or services.

25. In addition, extralegal commercial activity may be mainly of a different nature in some States, such as in developed economies. In such States, the extralegal economy may consist mainly of formal firms and workers that underreport their income to tax authorities, or that use undeclared labour in certain business domains.[23] These types of extralegal activities are not the focus of these materials.

26. It is also important to note that although extralegal commercial activity, particularly in the developing world, may exist largely as a result of economic necessity (as noted above in respect of MSMEs in general)[24] components of the extralegal economy may also be seen as quite dynamic and as an incubator for business potential that in fact provides economies with a large number of potential contributors to business development. In fact, businesses operating in the extralegal economy may be seen to provide a pool of talent and an important base of operations from which entrepreneurs can access, and graduate into, the legally regulated economy. There is increasing recognition that the extralegal sector is growing and that it should not be considered a marginal or peripheral sector, but rather as an important building block of a State's overall economy.[25]

27. In fact, a majority of the world's working population operates in the extralegal economy; that number is projected to grow to two-thirds of the global work force by 2020.[26] Although the very nature of such enterprises prevents the identification of precise statistics, estimates of the regional prevalence of extralegal economic activity as a percentage of GDP are as follows: 38 per cent in sub-Saharan Africa; 18 per cent in East Asia and the Pacific; 36 per cent in Europe and Central Asia; 35 per cent in Latin America and the Caribbean; and 27 per cent in the Middle East and North Africa. By way of comparison, the level of the extralegal economy as a percentage of GDP is estimated at 13 per cent in high-income Organisation for Economic Co-Operation and Development (OECD) States, and at 17 per cent globally.[27]

---

28. The institution of reforms to improve the business environment, as noted above in paragraphs 17 to 20, may encourage and facilitate the creation of enterprises through official registration and the migration of extralegal businesses to the legally regulated economy. However, in order to achieve success, policies that encourage businesses to enter the legally regulated economy should take into account the different motivations and characteristics of entrepreneurs operating in the extralegal sector. Such motivations will vary depending on the economy, and may include: micro and small businesses that cannot access the legally regulated economy due to high entry barriers and costs (including taxes and other social contributions) or lack of information; subsistence entrepreneurs that lack alternative job opportunities; and those entrepreneurs that consider that the costs of entering the legally regulated economy outweigh the benefits they expect to receive.[28]

29. Variations in the size and characteristics of the extralegal economy are also apparent from region to region. An analysis of one region, for example, indicates high levels of extralegal commercial activity, partially due to the fact that the extralegal economy is where most new jobs are found, and in which many entrepreneurs must trade by necessity.[29] In this region, a job, an enterprise and a household are often the same thing,[30] and lack of entrepreneurial skills, access to credit, and infrastructure are seen as the most restrictive constraints to growth. In other regions, the extralegal sector tends to behave like a typical small business sector, and is often the main entry point for young, uneducated workers seeking employment, as well as for those seeking part-time work.[31] Other regions have experienced growth of the extralegal economy in recent years, apparently driven by a lack of jobs in the legally regulated sector and reduced demand for goods and services from those employed in that sector.[32]

30. The debate on the reasons for the extralegal sector, on its effect on national economies and on how to approach the issue has been vibrant for decades and has in recent years had a major influence on policymaking. The view that extralegal commercial activity is the result of burdensome regulation and costly procedures required by the State for businesses to enter the legally regulated economy, and that a reduction of those barriers will help extralegal MSMEs move towards a higher degree of business registration, has generated strong momentum for reforming regulations and laws in order to simplify business entry into the legally regulated economy.[33] A wide array of policies have been designed and implemented in several States and regions of the world, since, as noted earlier, the variable nature of the extralegal sector, and the different levels of development of States, render elusive the identification of a single optimal approach. The most successful interventions have been comprehensive policy packages that aimed at achieving various goals, such as economic growth, social protection, and inclusion, and which often include:

(a) Reducing the costs of a business entering (and remaining in) the legally regulated sector, which include entry costs, taxes, fees and social contributions, and costs of compliance;

[33] Supra, note 28, pp. 2 et seq.

(b) Improving the benefits of entering the legally regulated economy by reducing the bureaucracy and expense involved in obtaining fixed premises, and obtaining access to business development services and new markets;

(c) Improving the general business environment, so that policies to reduce costs and to improve the benefits of entering the legally regulated economy also assist firms already operating in that sector; and

(d) Strengthening the enforcement of a State's legal regime in order to encourage entry to the legally regulated economy.[34]

III. Making entry into the legally regulated economy simple and desirable for MSMEs

31. In order to encourage MSMEs to start their business in the legally regulated economy or to move their extralegal businesses into that sector, States may wish to consider how best to effectively convey to MSMEs the availability and advantages of that approach. In addition, States should also consider what steps they can take to motivate such behaviour by making it a desirable, easily accessible process, which will pose the least burden possible on the MSME.

A. Explain what entering the legally regulated economy means

32. To ensure widespread understanding of the advantages available to MSMEs, steps must be taken to explain to them the meaning of participating in the legally regulated economy and to provide clear and accessible information to them on how to achieve that aim. The State should consider how best to effectively convey relevant information to MSMEs, including how such businesses can register in the jurisdiction (whether they are required or merely encouraged to do so), the minimum requirements for registration and any other information necessary for them to operate in the legally regulated economy. This information should advise entrepreneurs of the benefits of official registration, as well as which legal business forms are available to them and the advantages of each, and which additional registrations might be necessary, for example for the purposes of licensing, taxation, social services, and the like. Ideally, a business should be able to use a single physical or electronic interface (a "one-stop shop") to register simultaneously with all necessary public authorities. Information in respect of these matters should be specifically adapted so that it is clear and easily understandable for the target audience, and it should be conveyed in a manner that is tailored for them.

1. The advantages of the legally regulated economy

33. Part of the message that must be conveyed to MSMEs in order to persuade them to operate their businesses in the legally regulated economy is to explain to them the advantages of that approach. The following sections outline the advantages of encouraging businesses to operate in the legally regulated economy for both the State and for entrepreneurs.

(a) Advantages for the State

34. States have a clear interest in encouraging MSMEs to operate in the legally regulated economy. One of the reasons often cited for that interest is in terms of taxation, since encouraging MSMEs to migrate to, or to operate in, the legally regulated economy will broaden the tax base of the State.[35] It may also help reduce any friction that may exist with enterprises that are already operating in the legally

[34] International Labour Organization (ILO), GIZ, Enterprise formalization: fact or fiction?, A quest for case studies, 2014, p. 24.

[35] States may wish to note that reduced taxation rates and administration may be an incentive offered to MSMEs to join the legally regulated economy, and that too great an emphasis on expanding the tax base may be counterproductive.

regulated economy and are tax contributors, but that must compete for market share with extralegal businesses. However, there are additional reasons for the State to take action to encourage businesses to operate in the legally regulated economy, such as, depending upon the specific economic sector, ensuring consumer protection and in generally engendering trust in business and commerce in the State for stakeholders including consumers, business partners and banks.

35. Other advantages to the State may be less direct, but are no less valuable. For example, providing previously extralegal businesses with the means to enter the legally regulated economy will permit those MSMEs to grow, to create jobs, and to increase their earnings and contribution to the creation of wealth and the reduction of poverty in the State. Businesses that enter the legally regulated economy can be expected to attract more qualified employees and to stay in business longer, thus making investment in the training of personnel and the acquisition of capital more profitable. The increase in the number of businesses registered will mean that there is more and better economic data available by way of the business registry, and that information exchange in respect of such businesses will increase and become more transparent. All of these effects will have an overall positive impact on the economy of the State.[36]

(b) Advantages for entrepreneurs

36. States must also ensure to convey clearly and effectively to MSMEs and entrepreneurs the benefits of doing business in the legally regulated economy. The following factors are often cited as key advantages for MSMEs that operate in that commercial context.

(a) Visibility to the public and to markets

Registering a business is the primary means through which it becomes visible to the public and to markets, thus providing a means for exposure to potential clients and business contacts, and an expansion of market opportunities. This membership in the marketplace may provide opportunities both in terms of becoming a supplier of goods and services and in accessing them under favourable conditions, and can dramatically improve the profitability of the business. Moreover, such visibility enables, and reduces the costs of, MSMEs trading in economic circles beyond their relatives, friends and local contacts, thus opening up new markets for them.

(b) Visibility to the banking system and financial institutions

Business registration can also provide an enterprise with improved access to banking and financial services, including to bank accounts, loans and credit. This permits MSMEs to move away from financial reliance on relatives and friends and makes it easier for them to raise capital from a broader group of investors, as well as lowering the cost of that capital. This, in turn, permits businesses to expand, to make new investments, to diversify their risk, and to take up new business opportunities.

(c) Public procurement

In most States, public procurement contracts are only available to those businesses that are registered and are part of the legally regulated economy. Access to such contracts may be enhanced for certain groups, since some States have developed specific programmes to ensure that a certain percentage of public procurement contracts are granted to less entitled entrepreneurs, including women, youth, the disabled and the elderly.

(d) Legal validation

Officially registering a business permits it to operate commercially in the jurisdiction and provides the entrepreneur with documentation proving that status, and that the business is in compliance with the registration requirements. This status also permits registered businesses to enter into and enforce contracts more easily, and to have access to justice for commercial purposes, including in respect of reorganization or

[36] See, for example, supra, note 22, pp. 14 et seq.

liquidation. In some legal systems, registration provides additional legal rights for the entrepreneur operating in the commercial sector, including flexible provisions on commercial contracts, specialized commercial court divisions, a relaxation of certain requirements in terms of legal form, and the like.

(e) Legal compliance

While related to the concept of legal validation, compliance with the law can itself be seen as an advantage, since it alleviates entrepreneurial anxiety in respect of operating extralegally, and makes it less likely that fines may be imposed. Being in compliance with the law will also reduce the business' vulnerability to corruption and bribery, and should assist the entrepreneur by providing recourse in cases of tax and other inspections.

(f) Access to flexible business forms and asset partitioning

Through registration, the entrepreneur will be entitled to choose the legal form available in the jurisdiction that is best suited for the business, and ideally, the State will provide for a range of legal business forms for that purpose. Most jurisdictions have at least one legal form that permits the entrepreneur to separate personal finances from business finances; such asset partitioning can be invaluable to a business, particularly if financial difficulty is encountered, as the entrepreneur is not in danger of losing all personal assets, and the value of the business assets can be maximized in the case of reorganization or liquidation. Moreover, the value of a business with separate assets may be greater and can be more readily transferred.

(g) Unique name and intangible assets

Business registration usually requires an enterprise to operate under a sufficiently unique business name. This unique name translates through the business registry and other means into a market identity that can develop a value of its own, and that can be traded to a subsequent owner. Other intangible assets that can add to the value of a business and can be traded, particularly in the case of asset partitioning and a separate legal business identity, include client lists and commercial relationships.

(h) Opportunities for growth

In addition to the advantages of visibility set out above, business registration provides an enterprise with access to a much larger business network, which can permit it to grow the business and operate it on a much greater scale. Some States permit a registered business to become a member of the Chamber of Commerce or other trade organization, which can greatly enhance an enterprise's opportunities for development.

(i) Opportunities for specialization of labour

Registered businesses tend to be less constrained in their hiring practices and may be able to hire employees outside of family and friends. This can permit the business to have access to a larger pool of talent and to permit specialization among employees to make better use of their talent and improve overall productivity.

(j) Access to government assistance programmes

Many States provide specific assistance programmes for MSMEs or for specific types of disadvantaged entrepreneurs. Registration in the legally regulated economy will permit an enterprise to access all forms of government assistance available to such businesses.

(k) Empowerment and emancipation effects

Registration of businesses owned by women, youth, the disabled, the elderly and other less advantaged groups may have important empowerment and emancipation effects. This may be particularly so in respect of women entrepreneurs, many of whom are micro entrepreneurs and who are often exposed to greater risk as a result of corruption and abuse of authority.

(l) Longer term gains

Business registration is also the main conduit for the growth of an enterprise into cross-border trading. It is also possible that, in the longer term, and particularly through the use of electronic commerce and Internet facilities, robust business registration will lead to an increase in cross-border trading and foreign investment – advantages not only for the enterprise, but for the State as well.

2. Communication and education

37. Communication of, and education on, the advantages of legal and policy reforms undertaken by the State to assist MSMEs will be key to the success of those reforms. While this might seem a relatively small detail, in the context of States and regions in transition or with remote areas, all potential entrepreneurs may not be well-served by mass media or have dependable and regular access to telecommunications or the Internet. In such contexts, the potential obstacles to communication and education, and thus to the success of the reforms, can be expected to be more numerous.

38. An additional consideration for a State in developing communication and education strategies should be to consider that many micro entrepreneurs may face literacy challenges and that particular steps may need to be taken to overcome this hurdle. For example, pictograms could be used in addition to text in order to inform potential businesses of the programmes and advantages offered to them. Additional options could include using other culturally significant means of communicating with such groups, including through songs and storytelling. One example demonstrates how,[37] in order to publicize its programmes aimed at fostering micro entrepreneurs, a State launched a national campaign illustrating the benefits of those programmes by way of broadcasting on radio and television a simple and interesting scenario using well-known national actors performing in the national languages of the State.

39. In designing its communication and education plan, a State must be cognizant of the potential impediments outlined above and think practically how best to bridge such gaps. Possible solutions could include:

(a) Providing for mobile education and communication efforts, and for mobile business registration and facilitation counters, so as to enable travel to the entrepreneur's location;

(b) Using trade organizations or informal workers' associations to assist in publicizing the programmes;

(c) Using mass media that is broadly available, including radio, television and print media, as well as posters and billboards;

(d) Making blanket announcements via text on mobile phones; this may be particularly effective in areas where mobile payments are being used;

(e) Ensuring that communication and education is in the local language;

(f) Making use of social media; while less practical in terms of States that face technological hurdles, social media may be an effective tool, particularly to disseminate information among younger entrepreneurs and family members;

(g) Developing courses for gender-specific trading or involving other disadvantaged groups could be developed; and

(h) Using educational techniques that may be particularly useful in the context.[38]

---

[37] See, for example, efforts of the Democratic Republic of Congo in publicizing its OHADA "entreprenant" programme (www.ohada.com/actualite/2609/ohada-rdc-campagne-mediatique-de-sensibilisation-sur-l-entreprenant-communication-de-la-commission-nationale-ohada-de-rdc.html). A sample video may be viewed here: www.youtube.com/watch?v=lE1OIo1eNic.

[38] One such method may be "participatory learning and action", which has been described as an approach traditionally used with rural communities in the developing world. It combines

B. Make it desirable for MSMEs to enter the legally regulated economy

40. Another component of the communication package that should be conveyed to prospective business registrants is clear information on the incentives that a State provides to MSMEs to encourage them to register and participate in the legally regulated economy.

41. The effectiveness of the incentives offered by the State will vary according to the specific economic, business and regulatory context. As such, it is not possible to specify precisely which incentives should be offered to encourage businesses to operate in the legally regulated economy. However, States may wish to consider the following possible incentives, each of which, often in combination with others, has been found to be an effective means of encouraging MSMEs to enter the legally regulated economy. In addition, in planning for the creation of these incentives, States may need to ensure coordination with international organizations active in this area (including, for example, the World Bank Group, UNCTAD, UNIDO, the Asian Development Bank, or OHADA), business registration officials, local business incubators, the tax authority, and banks in order to maximize the impact of the incentives chosen.

42. The following is a non-exhaustive list of the incentives that States may consider offering to MSMEs in order to persuade them to operate their businesses in the legally regulated economy or to migrate them from the extralegal economy.[39] A State may consider programmes along the following lines:

(a) Simplification of the business registration process;

(b) Assistance in the business registration process;

(c) Free (or at least very low-cost) business registration;

(d) Receipt of an official certificate indicating the registered status and legal form of the business;

(e) Organized access to and support with banking services (bank accounts and chequing accounts);

(f) Promoting access to credit for registered businesses;

(g) Accounting training and services, and ensuring simplified accounting rules suitable for MSMEs;

(h) Assistance in the preparation of a business plan;

(i) Training (including managing inventory and finances);

(j) Providing credits for training costs;

(k) Protection against potential administrative abuse, possibly through access to mediation or other dispute resolution;

(l) Simpler and more equitable taxation (lower, simplified taxation rates), including tax mediation services and simplified tax forms;

(m) Business counselling services;

---

participatory and visual methods with natural interviewing techniques and is intended to facilitate a process of collective analysis and learning. The approach can be used in identifying needs, planning, monitoring or evaluating projects and programmes, and offers the opportunity to go beyond mere consultation and promote the active participation of communities in the issues and interventions that shape their lives. See, for example, "What is Participatory Learning and Action (PLA): An Introduction", Sarah Thomas (http://idp-key-resources.org/documents/0000/d04267/000.pdf) or www.iied.org/participatory-learning-action.

[39] The Working Group may wish to note that each of these incentives, and any additional ones suggested for inclusion, could be described in a brief paragraph, if desired.

(n) Permitting a transition period to give new businesses time to comply fully with applicable laws;

(o) Providing a temporary "tax holiday" for small and microenterprises upon their initial registration;

(p) Providing lump sum monetary compensation or government subsidies and programmes[40] to foster MSME growth;

(q) Providing public communication and promotion of the registered business, as well as networking opportunities and access to experienced businesses, for example through free memberships in industry organizations;

(r) Tailoring specific public procurement programmes to encourage small and micro-businesses or those owned by disadvantaged groups to have access to contracts;

(s) Providing low-cost technological infrastructure;

(t) Promoting access to and support with obtaining health insurance; and

(u) The establishment of a business mentoring programme with experienced business owners to facilitate access to experience and information for MSMEs.

C. Make it easy for MSMEs to enter the legally regulated economy

43. In addition to a lack of information, one of the most often-cited reasons given by MSMEs for their reluctance to register their business is the cost and administrative burden of doing so. Two areas of reform that States may undertake to assuage these concerns are to simplify and streamline the procedures necessary to register a business, focussing on the needs of the user, and to provide for flexible and simplified business forms for MSMEs.

1. Simplified and streamlined business registration

44. One aspect of making it simple and desirable for an MSME to operate its business in the legally regulated economy is to take a user-centric approach and to make the procedures for business registration accessible, simple and clear. In order to facilitate the operation of MSMEs in the legally regulated economy, States may wish to take steps to rationalize and streamline their system of business registration. Improvements made by a State to its business registration system may be expected to assist not only MSMEs, but businesses of all sizes, including those already operating in the legally regulated economy. Importantly, care must also be taken to effectively communicate these changes and their advantages to MSMEs and potential entrepreneurs throughout the jurisdiction.

45. The draft legislative guide on key principles of a business registry (A/CN.9/WG.I/WP.106) explores in detail the steps that can be taken by a State to simplify, streamline and adopt good practices in its system of business registration.

2. Flexible and simplified business forms for MSMEs

46. Another aspect of creating an enabling legal environment and an attractive business registration programme for MSMEs is for the State to permit them simple access to flexible, legally recognized business forms. Many micro and small businesses are either sole proprietorships or family enterprises that do not possess a legal identity or a business form distinct from that of the owner. An entrepreneur should be permitted to easily and inexpensively register a business with a legally recognized form in that jurisdiction. States may wish to permit business registration of a range of different legal forms so as to provide entrepreneurs with sufficient flexibility to meet the needs of MSMEs, and to encourage their registration and foster their growth.

[40] For example, some States have programmes to encourage young nationals who have been educated abroad to return to their State and start businesses.

47. For some businesses, registering in the official business register as a simple sole proprietor may be sufficient for their purposes. However, some States and regional economic organizations have created a legal business form for individual entrepreneurs (defined as those whose business turnover is below a certain amount) which adds through simple business registration certain benefits to those otherwise available to the sole proprietor.[41] These benefits tend to include being subject to a simplified scheme for the calculation and payment of taxes and social security contributions, as well as fast, simplified and low (or no) cost registration requirements and formalities. In addition, States may also adopt a number of incentives available to such businesses which may include: assistance in opening a bank account and gaining access to banking services, access to mediation services (for example, in respect of taxation and legal services) and practical training and advisory services in key business areas (for example, in accounting, management and inventory, legal and tax obligations, financial education and awareness, business planning, and restructuring and growth strategies). Nonetheless, such schemes typically do not change the unlimited personal liability of a sole proprietor, whose personal and professional assets are all available to meet any business debt.

48. An important business right that should be offered to MSMEs is the opportunity for an enterprise to partition its business assets from the personal assets of its owner(s). The legal ability of an enterprise to partition its business assets from the personal assets of its owner(s) is an important building block for the encouragement of entrepreneurial activity since, even though a business may fail, the personal assets of the entrepreneur(s) will be protected.

49. Asset partitioning is seen as one of the defining features of a limited liability business entity, which is said to be among the most productivity enhancing legal institutions available. Offering entrepreneurs the opportunity to take on legal personality and limited liability through the adoption of a simplified business form is certainly a feature that States should consider in making policy decisions on legal forms to adopt in order to reduce the legal obstacles encountered by MSMEs. The key issues involved in adopting a legal regime for simplified business entities with these features, but adapted for MSMEs (including sole proprietors), is considered in detail in the draft legislative guide on an UNCITRAL limited liability organization (A/CN.9/WG.I/WP.99 and Add.1). However, it should be noted that the benefits of asset partitioning for MSMEs registering their businesses may also be available in a legal structure that stops short of full limited liability and legal personality, and is thus subject to fewer formal requirements.

50. One such model that has been adopted is that which permits an individual entrepreneur to officially allocate (and register with the business registry) a certain share of personal assets to the entrepreneur's professional activity. This approach permits the entrepreneur to segregate professional assets from personal assets so that, in the event of financial difficulty of the business, creditors will have access only to the professional assets of the entrepreneur.[42]

51. Another model that has been used in this regard is the establishment of a separate capital fund that has been established for a specific purpose. Such a fund may be established by individuals (and their spouses), into which specific assets can be placed that are identified as necessary for the family requirements of the individuals. Such assets are then protected from seizure in the case of business insolvency. A variation on this model may also be created by a corporation, which can establish a separate capital fund devoted to a specific purpose or which can agree that the earnings of an activity be dedicated to the repayment of loans obtained for the execution of certain specified activities. The establishment of such a fund is subject to certain

[41] See, for example, the "entrepreneur with limited liability" (EIRL) or the "auto-entrepreneur" in France (A/CN.9/WG.I/WP.94 and A/CN.9/WG.I/WP.87, paras. 22–23, and pp. 10 et seq., respectively), or the "entreprenant" in OHADA, Acte Uniforme Révisé Portant sur le Droi Commercial General, adopted 15 December 2011, entry into force 16 May 2011 (www.ohada.com/actes-uniformes/940/acte-uniforme-revise-portant-sur-le-droit-commercial-general.html).

[42] See A/CN.9/WG.I/WP.87, paras. 26–27.

requirements, including that its existence be made public by way of the business registry, and that it be open to opposition by existing creditors of the corporation. Once the fund is constituted, it is segregated from the other funds of the company, and may only be used to satisfy the claims of creditors arising as a result of the relevant activities. Other variations on the creation of a segregated fund may include the declaration of the fund to a specific purpose to the benefit of a natural or legal person, a public administrative body, or other entity, provided that the fund is established by public deed and is registered.[43]

52. An additional example of asset partitioning that stops short of providing legal personality and limited liability is the concept of "business network contracts". This legal tool can be used by a group of entrepreneurs (of various types and sizes, including sole proprietors, companies, public entities, and non-commercial and not-for-profit entities) who undertake a joint venture as agreed in the business network contract, which may be in respect of certain services or common activities within the scope of their business, or even with respect to the exchange of information. The goal of such an approach is to strengthen the individual businesses involved in the contract, as well as the network itself, at the national and international levels, so as to enable access to business opportunities not available to an individual enterprise, and thus to improve competitiveness. The contract must meet the formal requirements established by the State (for example, be duly executed in writing, indicate the objectives of the venture, its duration, the rights and obligations of participants, etc.), and be registered with the business registry. In addition, the contract must establish a capital fund to carry out the programme of the business network; this fund is then segregated from the individual assets of the founding entrepreneurs, and is available only to satisfy claims deriving from the activities performed within the scope of the network, and not for creditors of the individual entrepreneurs that created the business network.[44]

D. Report of the Working Group on MSMEs on the work of its thirtieth session (New York, 12–16 March 2018)

(A/CN.9/933)

[Original: English]

Contents

I. Introduction

1. At its forty-sixth session, in 2013, the Commission requested that a working group should commence work aimed at reducing the legal obstacles encountered by micro, small and medium-sized enterprises (MSMEs) throughout their life cycle.[1] At that same session, the Commission agreed that consideration of the issues pertaining to the creation of an enabling legal environment for MSMEs should begin with a focus on the legal questions surrounding the simplification of incorporation.[2]

2. At its twenty-second session (New York, 10 to 14 February 2014), Working Group I (MSMEs) commenced its work according to the mandate received from the Commission. The Working Group engaged in preliminary discussion in respect of a number of broad issues relating to the development of a legal text on simplified incorporation[3] as well as on what form that text might take,[4] and business registration was said to be of particular relevance in the future deliberations of the Working Group.[5]

3. At its forty-seventh session, in 2014, the Commission reaffirmed the mandate of Working Group I, as set out above in paragraph 1.[6]

4. At its twenty-third session (Vienna, 17 to 21 November 2014), Working Group I continued its work in accordance with the mandate received from the Commission. Following a discussion of the issues raised in working paper A/CN.9/WG.I/WP.85 in respect of best practices in business registration, the Working Group requested the Secretariat to prepare further materials based on parts IV and V of that working paper for discussion at a future session. In its discussion of the legal questions surrounding the simplification of incorporation, the Working Group considered the issues outlined in the framework set out in working paper A/CN.9/WG.I/WP.86, and agreed that it would resume its deliberations at its twenty-fourth session beginning with paragraph 34 of that document.

[2] For a history of the evolution of this topic on the UNCITRAL agenda, see A/CN.9/WG.I/WP.97, paras. 5–20.
[3] A/CN.9/800, paras. 22–31, 39–46 and 51–64.
[4] Ibid., paras. 32–38.
[5] Ibid., paras. 47–50.
[6] *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), para. 134.

5. At its twenty-fourth session (New York, 13 to 17 April 2015), the Working Group continued its discussion of the legal questions surrounding the simplification of incorporation. After initial consideration of the issues as set out in Working Paper A/CN.9/WG.I/WP.86, the Working Group decided that it should continue its work by considering the first six articles of the draft model law and commentary thereon contained in Working Paper A/CN.9/WG.I/WP.89, without prejudice to the final form of the legislative text, which had not yet been decided. Further to a proposal from several delegations, the Working Group agreed to continue its discussion of the issues included in A/CN.9/WG.I/WP.89, bearing in mind the general principles outlined in the proposal, including the "think small first" approach, and to prioritize those aspects of the draft text in A/CN.9/WG.I/WP.89 that were the most relevant for simplified business entities. The Working Group also agreed that it would discuss the alternative models introduced in A/CN.9/WG.I/WP.87 at a later stage.

6. At its forty-eighth session, in 2015, the Commission noted the progress made by the Working Group in the analysis of the legal issues surrounding the simplification of incorporation and to good practices in business registration, both of which aimed at reducing the legal obstacles encountered by MSMEs throughout their life cycle. After discussion, the Commission reaffirmed the mandate of the Working Group under the terms of reference established by the Commission at its forty-sixth session in 2013 and confirmed at its forty-seventh session in 2014.[7] In its discussion in respect of the future legislative activity, the Commission also agreed that document A/CN.9/WG.I/WP.83 should be included among the documents under consideration by Working Group I for the simplification of incorporation.[8]

7. At its twenty-fifth session (Vienna, 19 to 23 October 2015), the Working Group continued its preparation of legal standards aimed at the creation of an enabling legal environment for MSMEs, exploring the legal issues surrounding the simplification of incorporation and on good practices in business registration. In terms of the later, following presentation by the Secretariat of documents A/CN.9/WG.I/WP.93, Add.1 and Add.2 on key principles of business registration and subsequent consideration by the Working Group of A/CN.9/WG.I/WP.93, it was decided that a document along the lines of a concise legislative guide on key principles in business registration should be prepared, without prejudice to the final form that the materials might take. To that end, the Secretariat was requested to prepare a set of draft recommendations to be considered by the Working Group when it resumed its consideration of Working Papers A/CN.9/WG.I/WP.93, Add.1 and Add.2 at its next session.[9] In respect of the legal issues surrounding the simplification of incorporation, the Working Group resumed its consideration of the draft model law on a simplified business entity as contained in working paper A/CN.9/WG.I/WP.89, starting with Chapter VI on organization of the simplified business entity, and continuing on with Chapter VIII on dissolution and winding up, Chapter VII on restructuring, and draft article 35 on financial statements (contained in Chapter IX on miscellaneous matters).[10] The Working Group agreed to continue discussion of the draft text in Working Paper A/CN.9/WG.I/WP.89 at its twenty-sixth session, commencing with Chapter III on shares and capital, and continuing with Chapter V on shareholders' meetings.

8. At its twenty-sixth session (New York, 4 to 8 April 2016), Working Group I continued its consideration of the legal issues surrounding the simplification of incorporation and on key principles in business registration. In respect of the former, the Working Group resumed its deliberations on the basis of working paper A/CN.9/WG.I/WP.89. Following its discussion of the issues in Chapters III and V,[11] the Working Group decided that the text being prepared on a simplified business entity should be in the form of a legislative guide, and requested the Secretariat to prepare

[8] Ibid., *Seventieth session, Supplement No. 17* (A/70/17), para. 340.

[9] See A/CN.9/860, para. 73.

[10] Ibid., paras. 76 to 96.

[11] See A/CN.9/866, paras. 22 to 47.

for discussion at a future session a draft legislative guide that reflected its policy discussions to date (see A/CN.9/WG.I/WP.99 and Add.1).[12] In respect of key principles in business registration, the Working Group considered recommendations 1 to 10 of the draft commentary (A/CN.9/WG.I/WP.93, Add.1 and Add.2) and recommendations (A/CN.9/WG.I/WP.96 and Add.1) for a legislative guide, and requested the Secretariat to combine those two sets of documents into a single draft legislative guide for discussion at a future session.[13] In addition, the Working Group also considered the general architecture of its work on MSMEs, and agreed that its MSME work should be accompanied by an introductory document along the lines of A/CN.9/WG.I/WP.92, which would form a part of the final text and would provide an overarching framework for current and future work on MSMEs.[14] The Working Group also decided at its twenty-sixth session[15] that it would devote the deliberations of its twenty-seventh session to deliberations on a draft legislative guide on a simplified business entity, and its deliberations at its twenty-eighth session (New York, 1 to 9 May 2017) to a consideration of a draft legislative guide reflecting key principles and good practices in business registration.

9. At its forty-ninth session (New York, 27 June to 15 July 2016), the Commission commended the Working Group for its progress in the preparation of legal standards in respect of the legal issues surrounding the simplification of incorporation and to key principles in business registration, both of which aimed at reducing the legal obstacles faced by MSMEs throughout their life cycle. The Commission also noted the decision of the Working Group to prepare a legislative guide on each of those topics and States were encouraged to ensure that their delegations included experts on business registration so as to facilitate its work.[16]

10. At its twenty-seventh session (Vienna, 3 to 7 October 2016), the Working Group continued its deliberations. As decided at its twenty-sixth session,[17] the Working Group spent the entire twenty-seventh session considering a draft legislative guide on a simplified business entity, leaving consideration of the draft legislative guide on key principles of a business registry for the first week of its twenty-eighth session (New York, 1 to 9 May 2017). The Working Group considered the issues outlined in working papers A/CN.9/WG.I/WP.99 and Add.1 on an UNCITRAL limited liability organization (UNLLO), beginning with section A on general provisions (draft recommendations 1 to 6), section B on the formation of an UNLLO (draft recommendations 7 to 10), and section C on the organization of an UNLLO (draft recommendations 11 to 13). The Working Group also heard a short presentation of working paper A/CN.9/WG.I/WP.94 of the French legislative approach known as an "Entrepreneur with Limited Liability" (or EIRL), which represented a possible alternative legislative model applicable to micro and small businesses.

11. At its twenty-eighth session (New York, 1 to 9 May 2017), the Working Group considered both topics currently on its agenda. Those deliberations commenced with a review of the entire draft legislative guide on key principles of a business registry (A/CN.9/WG.I/WP.101), save for the introductory section and draft recommendation 9 (Core functions of a business registry) and its attendant commentary, to which the Working Group agreed to revert at a future session. With respect to its deliberations regarding the creation of a simplified business entity (A/CN.9/WG.I/WP.99 and Add.1), the Working Group continued the work begun at its twenty-seventh session, and considered the recommendations (and related commentary) of the draft legislative guide on an UNLLO in sections D, E and F.

12. At its fiftieth session (Vienna, 3 to 21 July 2017), the Commission commended the Working Group for the progress it had made in its two areas of work on the preparation of a draft legislative guide on an UNCITRAL limited liability

[17] A/CN.9/866, para. 90.

organization and a draft legislative guide on key principles of a business registry. In particular, the Commission welcomed the potential completion of the latter guide on business registration for possible adoption at the fifty-first session of the Commission (scheduled for 25 June to 13 July 2018).[18]

13. At its twenty-ninth session (Vienna, 16 to 20 October 2017), the Working Group continued its deliberations. As decided at its twenty-eighth session,[19] the Working Group spent the entire twenty-ninth session reviewing a draft legislative guide on key principles of a business registry (A/CN.9/WG.I/WP.106) save for the introductory section and part of the Annex (paras. 1 to 6 and 8 to 16 and recommendations 1 and 3/Annex) to which the Working Group agreed to revert at a future session.

II. Organization of the session

14. Working Group I, which was composed of all States Members of the Commission, held its thirtieth session in New York from 12 to 16 March 2018. The session was attended by representatives of the following States Members of the Working Group: Argentina, Brazil, Bulgaria, Burundi, Canada, China, Colombia, Czechia, El Salvador, France, Germany, Greece, Honduras, India, Indonesia, Israel, Italy, Japan, Kuwait, Mexico, Nigeria, Panama, Philippines, Poland, Republic of Korea, Romania, Russian Federation, Singapore, Spain, Switzerland, Thailand, Turkey and United States of America.

15. The session was attended by observers from the following States: Algeria, Croatia, Finland, Grenada, Iraq, Paraguay, and Saudi Arabia.

16. The session was also attended by observers from the following international organizations:

(a) *Organizations of the United Nations system*: United Nations Industrial Development Organization (UNIDO); World Bank Group (WB);

(b) *Intergovernmental organizations*: Commonwealth Secretariat; Cooperation Council for the Arab States of the Gulf;

(c) *Invited international non-governmental organizations*: American Bar Association (ABA); Conseils des Notariats de l' Union Europenne (CNUE); European Law Students Association (ELSA); International Bar Association (IBA); National Law Center for Inter-American Free Trade (NLCIFT); the Law Association for Asia and the Pacific (LAWASIA) and Union International du Notariat (UINL).

17. The Working Group elected the following officers:

Chair: Ms. Maria Chiara Malaguti (Italy)

Rapporteur: Mr. Mohamad Almutairi (Kuwait)

18. In addition to documents presented at its previous sessions, the Working Group had before it the following documents:

(a) Annotated provisional agenda (A/CN.9/WG.I/WP.108);

(b) Note by the Secretariat on a draft legislative guide on key principles of a business registry (A/CN.9/WG.I/WP.109); and

(c) Note by the Secretariat on reducing the legal obstacles faced by micro, small and medium-sized enterprises (MSMEs) (A/CN.9/WG.I/WP.110).

19. The Working Group adopted the following agenda:

1. Opening of the session.

2. Election of officers.

---

[18] *Official Records of the General Assembly, Seventy-second session, Supplement No. 17* (A/72/17), paras. 230–235.

[19] A/CN.9/900, para. 169.

3. Adoption of the agenda.
4. Preparation of legal standards in respect of micro, small and medium-sized enterprises.
5. Other business.
6. Adoption of the report.

III. Deliberations and decisions

20. The Working Group engaged in discussions in respect of the preparation of legal standards aimed at the creation of an enabling legal environment for MSMEs, in particular, on a draft legislative guide on key principles of a business registry on the basis of Secretariat documents A/CN.9/WG.I/WP.109 and the overarching document setting out the context for its work on MSMEs in A/CN.9/WG.I/WP.110. The deliberations and decisions of the Working Group on these topics are reflected below.

21. After discussion, the Working Group agreed to transmit the texts of the draft legislative guide on key principles of a business registry and the overarching document setting out the context for UNCITRAL's current and future work on MSMEs to the Commission for consideration and adoption at its fifty-first session (New York, 25 June to 13 July 2018). Those texts, as revised by the Secretariat to reflect the deliberations and decisions of the Working Group at its thirtieth session, are contained in documents A/CN.9/940 and A/CN.9/941 respectively.

IV. Preparation of legal standards in respect of micro, small and medium-sized enterprises

A. Draft legislative guide on key principles of a business registry

1. Presentation of A/CN.9/WG.I/WP.109 and introductory observations

22. The Working Group was reminded that the draft legislative guide in A/CN.9/WG.I/WP.109 on key principles of a business registry included changes in the text of A/CN.9/WG.I/WP.106 that the Working Group had agreed to at its twenty-ninth session in Vienna, 16 to 20 October 2017.

2. Introduction

Paragraphs 1 to 7

23. The Working Group reviewed the Introduction of the draft guide (paras. 1 to 28) after deliberating on A/CN.9/WG.I/WP.110 in order to ensure consistency between the two texts (see paras 102 to 113 below). As a matter of drafting, the Secretariat was requested to make any necessary adjustments to paragraphs 1 to 7 to eliminate redundancy with A/CN.9/WG.I/WP.110, and to remove paragraphs 4, 6, and 7, which summarized aspects of the *travaux préparatoires*. The Working Group further agreed that paragraph 3 could be made more consistent with the commentary to recommendation 20 (see paras. 64 and 65 below) and should include reference to States in which certain businesses are not required to register due to their size and legal form.

Purpose of the present guide: paragraphs 8 to 15

24. After discussion, the Working Group agreed to simplify paragraph 14 by eliminating all subparagraphs (i.e. (a) to (g)) and maintaining only the chapeau with the necessary editorial adjustments. The Secretariat was also requested to reflect the importance of a user-centric approach regarding the business registry and registration with other authorities in paragraph 12. With those changes, the Working Group supported the substance of paragraphs 8 to 15 as drafted.

Terminology: paragraph 16

25. With respect to the defined terms in paragraph 16, the Working Group agreed to revise the following (see also paras. 28, 47 and 73 below):

(a) Good quality and reliable: to add "good quality and" before "reliable" at the beginning of the second sentence;

(b) Registered information: to replace "information that will be made public" with "publicly available information";

(c) Unique identifier: to insert "or a non-business entity" after "a business"; and

(d) One-stop shop: to delete the term "simultaneous".

It was further suggested to delete the definition of MSMEs and insert in A/CN.9/WG.I/WP.109 a concept of MSMEs along the lines of section B "Defining MSMEs" in A/CN.9/WG.I/WP.110 (para. 12).

Legislative drafting considerations: paragraph 17

26. It was noted that paragraph 17 would need to be redrafted to comply with the definition of "law" that the Working Group agreed upon in paragraph 16.

The reform process: paragraphs 18 to 28

27. After discussion, the Working Group agreed with the substance of paragraphs 18 to 28 of the legislative guide as drafted.

3. Objectives of a Business Registry

Objectives of the business registry: paragraph 29 and recommendation 1

28. It was observed that the terms "business registry" and "business registration system" were used interchangeably in the text of the draft legislative guide, but it was felt that "business registration system" might be understood to encompass a broader environment of business registration, including, for example, registration with other public authorities. The Working Group agreed to provide greater clarity to recommendation 1 by replacing "a system of business registration" with "a business registry". It was also determined to review the definitions at a later stage and the Working Group requested the Secretariat to note when suggestions were made. It was suggested to add a definition of the term "business registration" due to the frequent use of such term throughout the draft legislative guide.

29. The Working Group agreed to insert into paragraph 29 language along the lines of "States should adopt a user-centric approach where the goal at all times should be simple low-cost registration and simple low cost procedures. States should make it possible for businesses to register simultaneously with all mandatory authorities, providing only one set of documents and only one payment through physical outlets or electronic windows".

Purposes of the business registry: paragraphs 30 to 32 and recommendation 2

30. It was felt that an inclusion of a reference to the section on core functions of business registries, paragraphs 57 to 65, would ensure that the concepts were not duplicated in the text in paragraphs 30 to 32. After discussion, it was agreed to leave the text of recommendation 2 as drafted, but to provide greater clarity in the commentary regarding the meaning of the phrase "providing to a business an identity" in recommendation 2(a).

31. A concern was raised that the phrase "enacting State" might be more suitable for a model law than for a legislative guide, but it was noted that other UNCITRAL legislative guides have used the same terminology.

32. The Working Group agreed to insert "provided that fees are low" after "all such businesses to register in the business registry" in paragraph 31. In terms of drafting,

proposals to eliminate the word "key" and to specify that registration "may" make businesses more visible were both supported by the Working Group.

Simple and predictable legislative framework permitting registration for all businesses: paragraphs 33 to 36 and recommendation 3

33. It was widely felt that any example of the type of discretion described in paragraph 33 would provide insufficient and potentially unclear guidance to enacting States. After discussion, the Working Group agreed to remove the example of discretion from paragraph 33 but to retain cross references to paragraphs 153 and 233.

34. There was consensus to remove the phrase "for all businesses" from the title and recommendation 3, and to change the word "rules" in recommendation 3(a) to "laws."

Key features of a business registration system: paragraphs 37 to 42 and recommendation 4

35. There was agreement in the Working Group to the following changes in the commentary to recommendation 4: (a) the language used in paragraphs 37 to 42 should be consistent with that of recommendation 4(d) (i.e. "good quality and reliable"); (b) in order to avoid redundancy, the definition of "good quality and reliable" should not be repeated in paragraph 38 and elsewhere in the draft text, since that phrase is a defined term in paragraph 16 of the draft guide. In the same way, definitions of other defined terms in the commentary should be deleted; (c) in the second sentence of paragraph 39, the phrase "the information that the entrepreneurs submit during the lifetime of the business" should be replaced with a sentence along the lines of "information that is submitted during the lifetime of the business; (d) in the last sentence of paragraph 39 the term "released" should be replaced with "disclosed"; and (e) in paragraph 41, the next to last sentence "However, … or at least daily" should be made consistent with paragraphs 189 and 215 of the draft guide and include reference to those instances in which staff may be required to enter in the business registry record information submitted electronically.

36. The Working Group further agreed to change the title of Section C and recommendation 4 to "key features of a business registry" and to replace "methods" in recommendation 4(b) with "procedures" or "process". With those changes, the Working Group agreed with the substance of recommendation 4 as drafted.

Responsible authority: paragraphs 44 to 46 and recommendation 5

37. The Working Group heard a proposal to further clarify the language in recommendation 5(a) as it was said that the term "authority" did not properly reflect those instances in which States would decide to outsource registry operations to a private company. There was wide support in the Working Group, however, for the view that the text of the commentary to recommendation 5 made sufficiently clear that the use of the term "authority" referred to both public agencies and private entities mandated by States to operate the registry. After discussion, the Working Group agreed to replace the term "authority" in recommendation 5(a) with "entity", leaving the title of the section and the recommendation unaltered.

4. Establishment and functions of the business registry

Appointment and accountability of the registrar: paragraphs 47 to 49 and recommendation 6

38. It was noted that paragraph 48 had been amended to indicate that States "may" permit the registrar to delegate its powers. In that context, the Working Group agreed to modify recommendation 6(b) to read "and if and to what extent those powers and duties may be delegated."

39. In terms of drafting, the Secretariat was requested to remove the definition of registrar from paragraph 48 and to rely on the definition in paragraph 16.

Transparency in the operation of the business registration system: paragraphs 50 and 51 and recommendation 7

40. The Working Group agreed with the substance of paragraphs 50 and 51 and recommendation 7 of the legislative guide as drafted.

Use of standard registration forms: paragraph 52 and recommendation 8

41. The Working Group agreed with recommendation 8 of the legislative guide as drafted. After discussion, the Working Group determined to add the phrase "or allowed" after the word "required" in the final sentence of paragraph 52 and to eliminate the remainder of the sentence after the phrase "for the creation of the business."

Capacity-building for registry staff: paragraphs 53 to 56 and recommendation 9

42. After discussion the Working Group agreed to the substance of paragraphs 53 to 56 and recommendation 9 as drafted.

Core functions of business registries: paragraphs 57 to 65 and recommendation 10

43. Regarding the issue of access to information collected by the registry, it was felt that the recommendation should be consistent with the terminology in recommendations 4 and 39. The Working Group therefore agreed on the following change to recommendation 10(b): "Providing access to publicly available registered information" and to include cross-references to recommendations 33 and 34 in paragraph 62 in the commentary. After discussion, the Working Group also agreed to substitute "providing information" for "publicizing any relevant information" in recommendation 10(g).

44. The Secretariat was requested to modify the commentary as necessary to reflect the amendments to the recommendations. While it was noted that subparagraph 58(b) included the concept of information currency through its use of the defined phrase "good quality and reliable," it was felt that more emphasis could be placed on keeping information as current as possible in the commentary to provide greater clarity to recommendation 10(e). It was also noted that paragraph 58 addressed more than core functions, so the Secretariat was requested to include language along the lines of "core functions and desired outcomes" in the chapeau.

45. It was agreed to change "several" to "many" in paragraph 63 in reference to States that have reformed their registration systems. While there was some support within the Working Group to include one-stop shops in recommendation 10, given that they were discussed in paragraph 63, others were of the view that one-stop shops were not a core function of the business registry. After discussion, it was determined to retain the discussion of one-stop shops in the commentary but not to add a reference to them in the recommendation itself.

46. It was noted that a recent survey found no jurisdictions where business registries were required to perform intellectual property verification of business names, and there was agreement within the Working Group to eliminate the last two sentences after the phrase "such as ensuring" in paragraph 60. It was also noted that business names were addressed in the preceding paragraph and the Secretariat was requested to contain the discussion of business names to paragraph 59 but to retain the discussion of control procedures within the operation of the registry in paragraph 60.

47. Noting that the phrase "business name" had been used throughout the draft legislative guide to encompass names of businesses that had not yet been registered, there was agreement within the Working Group to redefine "business name" in paragraph 16 to something along the lines of "a name registered on behalf of a business, or a name used or planned to be used by a business".

Storage of information and access to it throughout the registry: paragraphs 66 to 68 and recommendation 11

48. The Working Group agreed to replace the phrase "all information collected or stored anywhere in the system is capable of being processed or accessed", in the third sentence of paragraph 67, with text along the lines of "all information collected or stored anywhere in the system can be processed or accessed" for improved clarity of the language. With that change, the Working Group agreed with the substance of paragraphs 66 to 68.

49. The Working Group heard various proposals on editorial adjustments to the text of recommendation 11, but it decided to consider those proposals at a later stage of its deliberations (see para. 89 below).

5. Operation of the business registry

Operation of the business registry: paragraph 69; Electronic, paper-based or mixed registry: paragraphs 70 to 73; Features of an electronic registry: paragraphs 74 to 78; Phased approach to the implementation of an electronic registry: paragraphs 79 to 87; Other registration-related services supported by ICT solutions: paragraphs 88 to 91 and recommendation 12

50. After discussion, the Working Group agreed to consider any possible change to recommendation 12 at a later stage (see para. 90 below), but agreed to make the following changes to the commentary: (a) to edit the middle sentence of paragraph 71 to read: "The adoption of such systems enhances data integrity, information security, registration system transparency, and verification of business compliance registration requirements, which helps avoid unnecessary or redundant information storage"; (b) to delete "which result in a more streamlined process and user-friendly services," from the chapeau of paragraph 72; (c) to describe the word "handling" with "improved" in subparagraph 72(c); (d) to include in subparagraph 72(e) cross-references to paragraphs 189 and 215; (e) to include in paragraph 85 cross-references to paragraphs 153 and 233; (f) to substitute "implemented" for "considered" in paragraph 86; and (g) to delete "i.e., notations in the registry that a particular business is no longer registered" from paragraph 89.

51. In addition, there was discussion within the Working Group about the technological terminology used in paragraphs 80 and 83. It was agreed that the terms should be more general to account for digital and mobile access. After discussion, the Working Group agreed to substitute "digital access" for "internet penetration" in paragraph 80 and to modify the first sentence of paragraph 83 to language along the following lines: "Platforms that enable businesses to apply and pay for registration online as well as to file annual accounts and update registration details as operations change can be developed once the State's technological capacity allow for it."

Electronic documents and electronic authentication methods: paragraph 92 and recommendation 13

52. After discussion, the Working Group agreed to modify recommendation 13(b) to read: "Regulate such use pursuant to principles whereby electronic documents and signatures are functionally equivalent to their paper-based counterparts and cannot be denied legal validity or enforceability for the sole reason that they are in electronic form."

A one-stop shop for business registration and registration with other authorities: paragraphs 93 to 103 and recommendation 14

53. It was felt that the type of information needed by various public authorities could differ, and after discussion, the Working Group supported a proposal to delete "requiring the same information" from the text of recommendation 14(b).

54. It was noted that the definition of "one-stop shops" in paragraph 16 differed from the text in paragraph 94 and the Secretariat was requested to ensure consistency in the text, particularly with reference to integrated forms for registration and payment.

It was agreed to modify the second sentence of paragraph 94 to read something along the lines of "One-stop shops enable entrepreneurs to receive all of the information and forms they need in order to complete the necessary procedures to establish their business through single outlets rather than having to visit several different government authorities".

55. There was support within the Working Group to invert paragraphs 97 and 98 in order to highlight the less burdensome "one window" approach for entrepreneurs in paragraph 98 over the "one door" approach described in paragraph 97.

56. It was felt that the final sentence in paragraph 102 did not reflect the reality of one-stop shops in States where business registration would be found under the administrative oversight of the judiciary and the Working Group agreed to amend the beginning of the sentence to read "There are examples of adoption of a one-stop shop approach also in those States …".

57. In terms of drafting, proposals to change "public agencies" to "authorities" throughout the text and to change "database" to "platform" in paragraph 101 were supported by the Working Group. The Secretariat was also requested to redraft the last sentence of paragraph 103 to clarify that one-stop shops should not be expensive to maintain and should be self-sustainable.

58. It was further agreed to move the discussion of integration among public authorities in paragraph 68 to the commentary under recommendation 14, and to add to recommendation 14 a subsection (c), focusing on the exchange of information among the authorities (see para. 91 below). In this respect, it was noted that the term "interconnected" in recommendation 11 would need to be clarified (see para. 89).

Use of a unique identifier: paragraphs 104 to 111; Allocation of unique identifiers: paragraphs 112 and 113; Implementation of a unique identifier: paragraphs 114 to 117; Cross-border exchange of information among business registries: paragraphs 118 and 119 and recommendations 15, 16 and 17

59. A concern was raised that the notion of a unique identifier as the same business identification number used by all relevant authorities and not only by the business registry was not expressed with sufficient clarity in paragraphs 104 to 111 and the Secretariat was requested to eliminate any ambiguity in this part of the commentary.

60. With respect to paragraphs 107 and 110, it was noted that in certain States unique identifiers are allocated to non-business entities as well. The Working Group further agreed to change the term "must" into "may" in footnote 54 since changes in the legal form of the business do not require the allocation of a new identifier in all States.

61. With respect to recommendations 15 to 17, there was agreement in the Working Group to: (a) add text along the lines of "with a relationship with the enterprise being registered" between "authorities" and "sharing the information" in recommendation 16; and (b) add "or replaced by" after "linked to" in recommendation 17(b).

Sharing of protected data between public authorities: paragraph 120 and recommendation 18

62. There was support in the Working Group for a proposal to remove recommendations 18(b) and (c) and to adjust the rest of recommendation 18 along the following lines: "the sharing of protected data between public authorities pursuant to a unique identifier system should conform to the applicable law on the sharing of protected data between public authorities". In light of this change, the Working Group also requested the Secretariat to modify paragraph 120.

6. Registration of a business

Scope of examination by the registry: paragraphs 121 to 123; Accessibility of information of how to register: paragraphs 124 to 128 and recommendation 19

63. The Working Group agreed with the substance of paragraphs 121 to 128 and recommendation 19 as drafted.

Business permitted or required to register: paragraphs 129 to 132 and recommendation 20

64. The Working Group agreed to reverse the order of paragraphs 130 and 131, as it was considered more logical to first focus on instances of mandatory registration of businesses before instances of optional registration. In light of this change, the Secretariat was requested to reverse the order of recommendations 20(a) and (b).

65. A proposal that the phrase "and other entities" should be added in the first sentence of paragraph 130 (between "by the registry" and "including") received wide support from the Working Group. As a matter of drafting, the Secretariat was requested to further clarify in the final sentence of paragraph 130 that businesses that are not required to register, but that voluntarily do so, must fulfil whatever obligations have been established by the law for those types of businesses. Finally, the Working Group agreed that the commentary in paragraph 132 could include reference to States in which certain businesses are not required to register due to their size and legal form.

Minimum information required for registration: paragraphs 133 to 138 and recommendation 21

66. While recommendation 21 focused on minimum requirements, it was widely felt within the Working Group that greater clarity could be provided to States by removing the word "minimum" from the chapeau. The Secretariat was requested to clarify paragraph 133, which implied that public and private limited liability companies should be treated the same.

Language in which information is to be submitted: paragraphs 139 to 141 and recommendation 22

67. It was noted that paragraph 141 was descriptive of practices in a number of States but it was widely felt that the paragraph would benefit from an emphasis on the registration process being subject to the State's language laws, if any, and would also benefit from simplification and the elimination of the discussion of provinces and regions. It was also agreed to delete "or electronic records" from the last line of paragraph 139.

Notice of registration: paragraph 142 and recommendation 23

68. The Working Group supported a proposal to incorporate the final sentence of paragraph 142 into the text of recommendation 23.

Content of notice of registration: paragraph 143 and recommendation 24

69. The Working Group agreed to include "and time" after "date" in recommendation 24(b).

Period of effectiveness of registration: paragraphs 144 to 147 and recommendation 25

70. After discussion, the Working Group agreed with the substance of paragraphs 144 to 147 and recommendation 25 as drafted.

Time and effectiveness of registration: paragraphs 148 to 151 and recommendation 26

71. The Working Group agreed with the substance of paragraphs 148 to 151 and recommendation 26 as drafted.

Rejection of an application for registration: paragraphs 152 to 156 and recommendation 27

72. There was agreement within the Working Group to add the word "only" after the word "business" in recommendation 27(a). In that context, the Working Group agreed to delete recommendation 27(d) and the final sentence of paragraph 155.

Registration of branches: paragraphs 156 to 158 and recommendation 28

73. Concern was expressed that the definition of "branch" as an "entity" in paragraph 16 did not properly reflect the legal nature of branches since an "entity" could be understood to have an independent legal personality. The Working Group agreed that "entity" should be replaced with a term along the lines of "establishment" and requested the Secretariat to adjust the definition accordingly. In response to a comment that the second and third sentences of paragraph 156 seemed to overlap by referring to registration of national branches of foreign businesses, the Working Group agreed that the third sentence should be clarified to refer to the registration of national branches of national companies. The Working Group further supported the view that the last four sentences of paragraph 156 did not relate to the registration of branches but rather to the reason for having branches, a matter outside the scope of the draft guide, and it agreed to remove those sentences.

74. In respect to recommendation 28, it was further noted that both subparagraphs (a) and (c)(i) addressed the issue of when a branch should be registered and the Secretariat was requested to remove recommendation 28(c)(i).

7. Post-Registration

Paragraphs 159 and 160

75. The Working Group agreed with the substance of paragraphs 159 and 160 as drafted.

Information required after registration: paragraphs 161 and 162 and recommendation 29

76. The Working Group agreed to delete recommendation 29(b) as the filing of periodic returns would not be mandatory in every jurisdiction, and requested the Secretariat to make any necessary editorial adjustments to the remaining text of the recommendation. With that change, the Working Group agreed with the substance of paragraphs 161 and 162 and recommendation 29.

Maintaining a current registry: paragraphs 163 to 167 and recommendation 30; Making amendments to registered information: paragraphs 168 and 169 and recommendation 31

77. After discussion, the Working Group agreed with the substance of paragraphs 163 to 169 and recommendations 30 and 31 as drafted.

8. Accessibility and information-sharing

Access to business registry services: paragraphs 170 to 174 and recommendation 32

78. The Working Group heard a number of proposals to modify paragraphs 170 to 174 and recommendation 32 and agreed to consider them at a later stage (see paras. 92 to 95 below).

Public availability of information: paragraphs 175 to 182 and recommendation 33

79. The Working Group agreed to delete the phrase "that is relevant … status of that business" from paragraph 175 and left the Secretariat to make editorial changes if necessary. With those changes, the Working Group agreed with the substance of paragraphs 175 to 182 and recommendation 33 as drafted.

Where information is not made public: paragraphs 183 and 184 and recommendation 34

80. A request was made to clarify the rights and responsibilities of the registrar in recommendation 34, which could be understood to provide discretion to the registrar. The Working Group heard a proposal to eliminate recommendation 34(a) and another

proposal to modify 34(a) by adding "which type of information cannot be publicly disclosed" after "protected data and" and eliminating the latter portion of 34(a). After discussion, the Secretariat was requested to redraft the recommendation based on the deliberations of the Working Group.

Hours of operation: paragraphs 185 to 187 and recommendation 35

81. While the Working Group supported the substance of paragraphs 185 to 187 and recommendation 35 as drafted, it was noted that the text of Part VI contained ambiguities in its use of the terms "business registry services" and "services of the business registry." In that context, the Working Group agreed to relocate recommendation 35 and its commentary to the beginning of Part VI to provide greater clarity to the text. The Secretariat was requested to check that Part for consistency in use of terminology regarding the registrar, the registry, registry services, and information services (see also para. 95 below).

Direct electronic access to submit registration, to request amendments and to search the registry: paragraphs 188 to 191 and recommendations 36 and 37

82. The Working Group agreed to eliminate the phrase "are permitted without requiring" and subsequent text from recommendations 36 and 37 and to replace it with "may be done remotely through electronic means." With those amendments, the Working Group agreed with the substance of paragraphs 188 to 191 and recommendations 36 and 37 as drafted.

Facilitating access to information: paragraphs 192 to 197 and recommendation 38

83. In paragraph 194, after the phrase "less accessible are" the Working Group agreed to include "limiting search criteria to unique business identifiers (as opposed to also allowing searches by business names)" and requested the Secretariat to make editorial changes if necessary. With that change, the Working Group agreed with the substance of paragraphs 192 to 197 and recommendation 38 as drafted.

Cross-border access to publicly available registered information: paragraphs 198 and 199 and recommendation 39

84. The Working Group agreed with the substance of paragraphs 198 and 199 and recommendation 39 as drafted.

9. Fees

Paragraphs 200 and 201

Fees charged for business registry services: paragraphs 202 to 204 and recommendation 40; Fees charged for information: paragraph 205 and recommendation 41; Publication of fee amounts and methods of payment: paragraph 206 and recommendation 42; Electronic payments: paragraph 207 and recommendation 43

85. The Working Group agreed with the substance of paragraphs 200 to 207 and recommendations 40 to 43 as drafted.

10. Liability and sanctions

Paragraphs 208 and 209

Liability for misleading, false or deceptive information: paragraphs 210 and 211 and recommendation 44; Sanctions: paragraphs 212 and 213 and recommendation 45; Liability of the business registry: paragraphs 214 to 219 and recommendation 46

86. The Secretariat was requested to move paragraph 211 to the commentary under recommendation 45, which dealt with sanctions. In terms of drafting, the Secretariat was requested to review the final sentence of paragraph 216 in an effort to make it more similar to the previous version of the draft legislative guide (see para. 212 of

A/CN.9/WG.I/WP.106). With those changes, the Working Group agreed with the substance of paragraphs 208 and 209 and recommendations 44 and 45.

87. With respect to the liability of the business registry, a suggestion was made to clarify that the issue of liability would not necessarily be addressed by the laws governing the business registry. The Working Group did not take up the proposal and agreed with the substance of paragraphs 214 to 219 and recommendation 46 as drafted.

11. Operation of a business registry (*ctd.*)

Recommendations 11: Storage of and access to information contained in the registry; 12: Electronic, paper-based or mixed registry; and 14(c): A one-stop shop for business registration and registration with other authorities

88. The Working Group resumed consideration of the drafting of recommendations 11, 12 and 14(c) (see paras. 49, 50 and 58 above).

89. There was agreement in the Working Group that the opening phrase of recommendation 11 be redrafted along the following lines: "the law should establish that the business registry offices and repositories are interconnected…" and the Secretariat was requested to make editorial adjustments to the remaining text as needed. After further discussion, the Working Group agreed upon the following language to slightly adjust the text of the recommendation: "the law should establish that business registry offices are interconnected in regard to storage of and access to information received from registrants and registered businesses or entered by registry staff".

90. The Working Group agreed to leave recommendation 12 as drafted, but that drafting proposals could be considered at the fifty-first session of UNCITRAL (New York, 25 June to 13 July 2018).

91. With respect to recommendation 14(c) (see para. 58 above), there was support in the Working Group for a proposal along the following lines: [such an interface] "should provide for connectivity of all authorities with which a business is required to register and provide for the sharing of information on the business among the authorities as well as the use of a single, integrated application form for registration and payment to those authorities and a unique identifier."

12. Accessibility and information-sharing (*ctd.*)

Access to business registry services: paragraphs 170 to 174 and recommendation 32

92. In resuming its discussion of paragraphs 170 to 174 and recommendation 32 (see para. 78 above), the Working Group heard a proposal to insert a new recommendation into the section on "Access to business registry services" in order to promote equality of rights for women to register and start a business. It was pointed out that studies show that there is a disparity in access to business registration based on legal discrimination against women. Therefore the guide should include a recommendation on equal access to business registration for women. Because of the importance of women's entrepreneurship for economic development, it was said that such a recommendation would address instances in which legal disparities prevented businesses owned by women from realizing their full potential and resulted in those businesses operating in the informal economy. While there was wide support in the Working Group for the principles underpinning that proposal, concerns were raised that an exclusive focus on discrimination against women would create an imbalanced approach in the draft guide, since it would seem to suggest that discrimination based on grounds other than sex did not hinder the economic development of a State and the legal empowerment of other vulnerable groups. Moreover, it was stated that including such a recommendation in the legislative guide must be done with language and an approach consistent with those used in other Conventions and texts of the United Nations that provided for the promotion of human rights. It was also pointed out that the proposed recommendation was consistent with non-discrimination commitments of States under international human rights instruments, such as the Universal

Declaration of Human Rights, as well as the obligations of States parties to the United Nations Convention on the Elimination of All Forms of Discrimination Against Women (CEDAW) to eliminate discrimination against women. Finally, a concern was raised that the location of the proposal referred only to access of women to business registration, without consideration of the guide as a whole.

93. After discussion, the Working Group agreed that recommendation 32 be redrafted to refer to the text used in the opening sentence of paragraph 170 ("the law should…political view"). In addition, a new recommendation 33 should be inserted to read something along the lines of: "the law should ensure that women have equality in enforceable legal rights for registering and starting a business and avoid requirements for registering a business that treat applicants less favourably based on their gender". During discussions leading to the adoption of recommendations 32 and 33, a concern was raised that these recommendations only apply to the prohibition of discrimination against registrants and not against all of the users of the registry services.

94. The Working Group also agreed that commentary be drafted consistent with the proposed recommendation 33 and include a separate section B entitled "women's equality of rights". It was further suggested that the commentary should include appropriate reference to the United Nations Sustainable Development Goal 5 which calls on States "to end all forms of discrimination against all women and girls everywhere".

95. Finally, in response to reiterated concerns expressed about possible ambiguity arising from the use of the phrase "access to business registry services", the Secretariat was again requested to review the text for improved clarity of the language (see also para. 81 above).

13. Deregistration

Deregistration: paragraphs 220 to 224 and recommendations 47 and 48

96. After discussion, the Working Group agreed with the substance of paragraphs 220 to 224 and recommendations 47 and 48 of the legislative guide as drafted.

Process of deregistration: paragraphs 225 to 227 and recommendation 49; Reinstatement of registration: paragraph 228 and recommendation 50

97. The Working Group agreed with the substance of paragraphs 225 to 228 and recommendations 49 and 50 of the legislative guide as drafted.

14. Preservation of records

Preservation of records: paragraphs 229 to 232 and recommendation 51; Alteration or deletion of information: paragraphs 233 and 234 and recommendation 52; Protection against loss of or damage to the business registry record: paragraphs 235 and 236 and recommendation 53; Safeguard from accidental destruction: paragraph 237 and recommendation 54

98. The Working Group agreed to change "entered" to "submitted" in paragraph 234 and otherwise agreed with the substance of paragraphs 229 to 237 and recommendations 51 to 54 as drafted.

15. Annex: The underlying legislative framework

99. Differing views were expressed about the merits of eliminating the Annex, of retaining the Annex, and of integrating the Annex into the main text. It was felt that portions of the Annex could be incorporated into the introduction, but a concern was raised about providing recommendations in the introductory section of a legislative guide. After discussion, the Working Group agreed to relocate the content of the Annex as a whole into a new chapter, Part XI.

100. It was noted that the Secretariat would need to ensure that the terms in Part XI were consistent with the rest of the text and the definitions in paragraph 16, and that

some editorial adjustments would need to be made to eliminate repetition and to avoid inconsistencies, particularly in paragraphs 10 and 13. It was noted that section E of the Annex duplicated the title of section E of Part III, Operation of the business registry, in the draft legislative guide and would need to be amended by the Secretariat.

101. The Secretariat was further requested to delete the final sentences of paragraphs 1, 11 and 13, and to eliminate repetition of the term "simpler" in paragraph 7.

B. Reducing the legal obstacles faced by micro, small and medium-sized enterprises (MSMEs)

1. Presentation of A/CN.9/WG.I/WP.110 and introductory comments

102. The Working Group was reminded that at its twenty-sixth session (New York, 4 to 8 April 2016), it had considered document A/CN.9/WG.I/WP.92 (a previous version of A/CN.9/WG.I/WP.110) which had been prepared by the Secretariat to provide the overall context for work prepared by the UNCITRAL in respect of MSMEs. While the Working Group did not have sufficient time to consider A/CN.9/WG.I/WP.92 in detail, there was broad support for the proposal that a document along those lines could accompany its MSME work as an introduction to the final text and that it could provide an overarching framework for UNCITRAL's current and future work on MSMEs.

103. The Working Group was reminded that most references to data, statistics, and specific jurisdictions would be removed from the text of A/CN.9/WG.I/WP.110, but there was some support for a suggestion to retain general statistics on MSMEs in the global economy.

104. It was felt that the title of the document did not accurately reflect the contents therein, and suggestions were made to change the title to something along the lines of "Adopting an enabling legal environment for the operation of MSMEs" rather than emphasizing "reducing the legal obstacles." The Secretariat was requested to make this change based on the deliberations of the Working Group.

2. Micro, small and medium-sized enterprises (MSMEs): paragraphs 3 to 6

105. It was widely felt that the standards developed by the Working Group would be beneficial to all economies, regardless of their size and stage of development, and the Secretariat was requested to include a statement to that effect in the text of the document. It was noted that paragraph 4 referenced the Sustainable Development Goals, and could be expanded to reference UNCITRAL's work.

106. A suggestion was made to reorder the sequence of the discussion of MSMEs, but it was generally felt that a discussion of the importance of MSMEs in the global economy should precede their definition and descriptive nature, and that the section on creating a sound business environment for all business should follow.

3. The importance of MSMEs in the global economy: paragraphs 7 to 11; Defining MSMEs: paragraph 12; the nature of MSMEs: paragraphs 13 to 16

107. Some delegations were of the view that several of the characteristics of MSMEs described in paragraph 16 only applied to microbusinesses. Others were of the view that some of the characteristics would apply to larger businesses as well, depending on the jurisdiction. The Working Group agreed to change the chapeau to read "… despite their disparate nature (especially in terms of size), certain possible characteristics of MSMEs may be broadly shared, such as:".

4. Creating sound business environments for all businesses: paragraphs 17 to 20

108. It was noted that the document described certain legal obstacles faced by MSMEs, such as bureaucracy and cost, but that taxes were another obstacle. While it was noted that paragraph 42 discusses tax in its programme for States to consider to

make it more desirable for MSMEs to enter the legal economy, the Secretariat was requested to make reference to taxes in the commentary under section D.

5. The extralegal economy: paragraphs 21 to 30

109. It was noted that the document used the words "legally regulated economy/ extralegal". The Working Group agreed to change those words to "formal/informal" in all its materials to make the term more consistent with how other organizations refer to businesses that operate outside of the legal environment.

110. There was some discussion about whether to remove references to taxation and social security authorities from paragraph 23, but the Working Group agreed to the substance of paragraphs 21 to 30 as drafted.

6. Ensuring that operation in the legally regulated economy is simple and desirable for MSMEs

Paragraph 31

Explaining the meaning of operating in the legally regulated economy: paragraphs 32 to 39

111. The Working Group accepted several proposals for minor changes: (a) to include a reference to labour laws in paragraph 34; (b) to soften language in paragraph 36 such as "primary" and "dramatically" in subparagraph 36(a) and "proving" in 36(d); (c) to clarify "legal forms" in subparagraphs 36(d) and (f); (d) to add reference in 36(f) to facilitating access to investment and venture capital; and (e) to remove reference to "Chamber of Commerce" in 36(h).

7. Making it desirable for MSMEs to operate in the legally regulated economy: paragraphs 40 to 42; Making it easy for MSMEs to operate in the legally regulated economy: paragraphs 43 to 52

112. A concern was raised that paragraph 49 did not accurately reflect the models of business forms that could provide limited liability protection and the segregation of assets without the creation of a separate legal personality. The Working Group agreed to modify the final sentence of paragraph 49 to read: "… stops short of legal personality, while being subject to fewer formal requirements." In that context, the Working Group also agreed to eliminate the reference to "limited liability" from paragraph 52.

113. The Working Group considered changing the order of paragraphs 49 to 52, the possibility of including paragraphs 51 and 52 in document A/CN.9/WG.I/WP.109, and inserting a discussion of other examples of flexible and simple business forms. After discussion, it was agreed to retain the order of the paragraphs as they appeared but the Secretariat was requested to create a new paragraph on simplified business incorporation regimes in a balanced manner that described various options.

V. Other matters

114. The Working Group recalled that its thirty-first session was tentatively scheduled to be held in Vienna from 8 to 12 October 2018. The Working Group confirmed that at that session it would resume its consideration of the draft legislative guide on an UNCITRAL Limited Liability Organization (while currently found in A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1, revised versions of those working papers will be prepared for the thirty-first session).

E. Note by the Secretariat on a draft legislative guide on key principles of a business registry

(A/CN.9/WG.I/WP.109)

[Original: English]

Contents

Introduction

1. The present legislative guide has been prepared on the understanding that, for the reasons described in document A/CN.9/WG.I/WP.110 (formerly A/CN.9/WG.I/WP.107), it is in the interests of States and of micro, small and medium-sized enterprises (MSMEs) that such businesses operate in the legally regulated economy. This guide is also intended to reflect the idea that entrepreneurs that have not yet commenced a business may be persuaded to do so in the legally regulated economy if the requirements for formally starting their business are not considered overly burdensome, and if the advantages for doing so outweigh their interest in operating in the extralegal economy.

2. This legislative guide recognizes that in several States, MSMEs, especially micro and small businesses, may not be required to register with the business registry in order to operate in the legally regulated economy, but they may be required to register with other public authorities such as taxation and social security authorities. The operation of a business in the legally regulated economy refers to a business that has complied with all mandatory registration and other requirements of the jurisdiction in which it is doing business.

3. Depending on the jurisdiction in which the business is operating and the legal form of the business, registration with the business registry may be one of the mandatory registration requirements for doing business in that jurisdiction. However, this guide recommends that even States that do not require mandatory business registration should consider permitting, but not necessarily requiring, businesses of all sizes and legal forms to register in the business registry. This permissive approach

could significantly enhance the advantages for businesses operating in the legally regulated economy as set in paragraph 36 of document A/CN.9/WG.I/WP.110.[1]

4. As the Working Group may recall, it agreed[2] at its twenty-fifth session that document A/CN.9/WG.I/WP.110, should be prepared as an introductory document that, once adopted, was intended to form a part of the final text and provide an overarching framework for current and future work by UNCTRAL to assist MSMEs in overcoming the legal barriers faced by them during their life cycle. Underpinning that contextual framework would be a series of legal pillars, which would include both legislative guides currently under preparation by the Working Group – the present guide on key principles of a business registry and the other guide on an UNCITRAL limited liability organization[3] – as well as any other materials adopted by UNCITRAL in respect of MSMEs. In summary, A/CN.9/WG.I/WP.110 currently outlines the following themes as key to UNCITRAL's approach to its MSME work:

(a) The importance of MSMEs in the global economy;

(b) Each State should decide what constitutes a micro, small or medium-sized business in its own economic context, the common factor being that the smallest and most vulnerable businesses require assistance;

(c) Although MSMEs are incredibly disparate in their size, goals, the commercial sector in which they operate and their general nature, they usually face a number of common obstacles;

(d) Improving the business environment assists businesses of all sizes, not only MSMEs;

(e) Participation by MSMEs in the legally regulated economy can assist them in successfully negotiating the obstacles they face;

(f) States should make it simple and desirable for MSMEs to participate in the legally regulated economy by:

(i) Explaining what it means and by setting out the advantages for entrepreneurs, as well as by ensuring appropriate communication of and education on those advantages and opportunities;

(ii) Making it desirable for MSMEs to conduct their activities in the legally regulated economy, for example, by offering them incentives for doing so; and

(iii) Making it easy for MSMEs to operate in the legally regulated economy by enacting laws that:

a. Facilitate creation and operation of legally recognized simple and flexible legal business forms that meet the needs of MSMEs;[4] and

b. Ensure that business registration and any mandatory registration with public authorities is accessible, simple and streamlined.

5. In order to encourage entrepreneurs to operate their business in the legally regulated economy – particularly when business registration is a requirement for them to do so – States may wish to take steps to rationalize and streamline their system of business registration. Faster and simpler procedures to register a business could be expected to assist in business formation of all sizes and types of businesses, not only MSMEs. For these reasons, simplification and streamlining of business registration has become one of the most pursued reforms by States in all regions and at all levels

[1] At its twenty-ninth session, the Working Group requested the Secretariat to clarify what form of registration by a business is required to operate in the "legally regulated economy" as opposed to the "extralegal economy" (para. 22, A/CN.9/928). That clarification has been made to the relevant paragraphs of this guide and of document A/CN.9/WG.I/WP.110.

[2] As agreed by the Working Group (para. 87, A/CN.9/866) and approved by the Commission (*Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17) para. 222).

[3] See A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1.

[4] See A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1.

of development. This trend has generated several good practices, whose features are shared among the best performing economies. In order to assist States wishing to reform their business registration procedures so as to take into consideration the particular needs of MSMEs, or simply to adopt additional good practices to streamline existing procedures, this guide sets out key principles and good practices in respect of business registration, and how to achieve the necessary reforms.

6. Further to discussion in the Working Group and decisions made at its twenty-fifth (October 2015) and twenty-sixth sessions (April 2016),[5] the Secretariat prepared a consolidated draft legislative guide (A/CN.9/WG.I/WP.101), which addressed legal, technological, administrative and operational issues involved in the creation and implementation of a business registration system. The draft combined into a single text the draft commentary (A/CN.9/WG.I/WP.93, Add.1 and Add.2) and recommendations (A/CN.9/WG.I/WP.96 and Add.1) considered by the Working Group at its twenty-fifth and twenty-sixth sessions.

7. At its twenty-eighth session (May 2017), the Working Group reviewed that consolidated text (A/CN.9/WG.I/WP.101) save for the introductory section and draft recommendation 9 ("Core functions of a business registry")[6] and its attendant commentary to which the Working Group agreed[7] to revert at a future session. The changes to the text arising from the deliberations of the Working Group at that session were included in a revised draft of the legislative guide (A/CN.9/WG.I/WP.106) which was considered by the Working Group at its twenty-ninth session (October 2017) save for the introductory section and part of the Annex (paras. 1 to 6 and 8 to 16 and recs. 1 and 3/Annex). The current revision of the legislative guide includes changes arising from the deliberations of the Working Group at that session; guidance to the revisions made is reflected in footnotes throughout the text. As in A/CN.9/WG.I/WP.106, the Secretariat has also made editorial adjustments necessary to facilitate the cohesion and consistency of the text.

A. Purpose of the present guide

8. Business registries are systems established by law that receive, store and make accessible to the public certain information on new and existing businesses that are operating in the jurisdiction of the registry, both when those businesses are established and throughout the course of their lifespan. This process not only enables such businesses to comply with their obligations under the domestic law applicable to them, but it empowers them to participate fully in the legally regulated economy when registration is required for that purpose, and otherwise enables them to benefit from legal, financial and policy support services that are more readily available to registered businesses. Moreover, when information is appropriately maintained and shared by the registry, it allows the public to access business information, thus facilitating the search for potential business partners, clients or sources of finance and reducing risk when entering into business partnerships. In performing its functions, the registry can thus play a key role in the economic development of a State. In addition, since businesses, including MSMEs, are increasingly expanding their activities beyond national borders, registries efficiently performing their functions can play an important role in a cross-border context by facilitating access to business information of interested users from foreign jurisdictions (see also paras. 198 and 199 below), which greatly reduces the risks of transacting and contracting.

9. Business registration systems vary greatly across States and regions, but a common thread to all is that the obligation to register can apply to businesses of all sizes depending on the legal requirements applicable to them under domestic law. Approaches to business registration reforms are most often "neutral" in that they aim at improving the functioning of the registries without differentiating between

[5] See para. 73, A/CN.9/860 and para. 51, A/CN.9/866.
[6] Recommendation 9 of A/CN.9/WG.I/WP.106 is recommendation 10 in this draft of the legislative guide.
[7] See para. 46, A/CN.9/900 and para. 82, A/CN.9/860.

large-scale business activities and much smaller business entities. Evidence suggests, however, that when business registries are structured and function in accordance with certain features, they are likely to facilitate the registration of MSMEs, as well as operating more efficiently for businesses of all sizes. These features are reflected as recommendations in this legislative guide.

10. This legislative guide draws on the lessons learned through the wave of reforms of business registration systems implemented since 2000 by States in various geographic regions.[8] Through this approach, the guide intends to facilitate not only efficient domestic business registration systems, but also cooperation among registries in different national jurisdictions, with a view to facilitating cross-border access to registries by all interested users. Promoting the cross-border dimension of business registration contributes to foster transparency and legal certainty in the economy and significantly reduces the cost of businesses operating beyond their national borders (see also paras. 198 and 199 and rec. 39 below).

11. The present guide supports the view that transitioning to an electronic or mixed (i.e. electronic and paper-based) registration system greatly contributes to promoting the registration of MSMEs. The guide recognizes that adoption of modern technology has not progressed equally among or within States, and it recommends that any reform towards an electronic business registration system should be tailored to the State's technological and socioeconomic capacity. This may include phasing in implementation, particularly if the technology that is adopted requires a complete reengineering of registration processes (see paras. 79 to 83 below). It should be noted that reference to electronic or online registration is not intended to recommend the use of any particular technology, but rather describes the performance of the business registry's functions through electronically operated devices. In keeping with that approach, this guide has been drafted with the aim of accommodating the use of existing information and communications technology (ICT) as well as any emerging technology, such as distributed ledger technology, that States may consider appropriate when reforming their registration systems.[9]

12. Other features that encourage the registration of MSMEs include providing registration and post-registration services at no cost or at low cost, and collecting and maintaining good quality and reliable information on registered businesses. Importantly, establishing a one-stop shop for business registration and registration with other public authorities, such as taxation and social security authorities, greatly facilitates such registration, particularly in the case of MSMEs. In this regard, it should be noted that the terms "business registry" and "one-stop shop" (i.e. a single interface for business registration) as used in this draft guide are not intended to be interchangeable. When these materials refer to the "business registry", it means the system for receiving, storing and making accessible to the public certain information about business entities. When the term "one-stop shop" is used, it refers to a single entry point, physical or electronic, that a business can use to achieve not only its registration with the business registry, but that acts as a single entry point to all other regulatory functions in the State that relate to starting and operating a business, including, at a minimum, registering for tax purposes and for social security services. This guide supports the view that one-stop shops are a key means to improve institutional interoperability among relevant public authorities and that States should use one-stop shops to establish integrated registration procedures for the establishment of a business (see paras. 100 and 101 and rec. 14 below).[10]

---

[8] In keeping with a decision of the Working Group at its twenty-ninth session to avoid using terms such as "developing" or "developed" States, the Secretariat has made those adjustments in the text (paras. 48 and 55, A/CN.9/928).

[9] The Secretariat has included a reference to "distributed ledger technology" and other emerging technologies further to a request of the Working Group (see also para. 69 below) (para. 47, A/CN.9/928).

[10] The Secretariat has added the final sentence of this paragraph further to the decision of the Working Group at its twenty-ninth session that additional reference to the concept of "interoperability" should be included (para. 52, A/CN.9/928).

13. These materials have benefited from various tools prepared by international organizations that have supported such reform processes in numerous regions around the world. Data made available through the activity of international networks of business registries that, among other activities, survey and compare the practices of their affiliates in various States around the world have also been referenced. The main sources used in the preparation of this draft legislative guide include:

- How Many Stops in a One-Stop Shop? (Investment Climate, World Bank Group, 2009)
- Outsourcing of business registration activities, lessons from experience (Investment Climate Advisory Services, World Bank Group, 2010)
- Innovative Solutions for Business Entry Reforms: A Global Analysis (Investment Climate, World Bank Group, 2012)
- Reforming Business Registration: A Toolkit for the Practitioners (Investment Climate, World Bank Group, 2013)
- The annual International Business Registers Report (prepared previously by ECRF, and currently by ASORLAC, CRF, ECRF and IACA)
- The Business Facilitation Programme website (developed by UNCTAD)[11]
- Guide to the International Business Registers Surveys 2016 (available at http://www.ecrforum.org)
- […]

[*The Working Group may wish to note that reference to these specific resources will be changed in the final text to reference to the international organizations that prepared them*]

14. This legislative guide is addressed to States interested in the reform or improvement of their business registration system, and to all stakeholders in the State that are interested in or actively involved in the design and implementation of business registries, as well as to those that may be affected by or interested in the establishment and operation of a business registry. These may include:

(a) Policymakers;

(b) Registry system designers, including technical staff charged with the preparation of design specifications and with the fulfilment of the hardware and software requirements for the registry;

(c) Registry administrators and staff;

(d) Registry users, including business persons, consumers, and creditors, as well as the general public and all others with an interest in the appropriate functioning of the business registry;

(e) Credit agencies and other entities that will provide credit to a business;

(f) The general legal community, including academics, judges, arbitrators and practising lawyers; and

(g) All those involved in company law reform and the provision of technical assistance in the simplification of business registration, such as international organizations, bilateral donors, multilateral development banks and non-governmental organizations active in the field of business registration.

15. The present guide uses neutral legal terminology so that its recommendations can be adapted easily to the diverse legal traditions and drafting styles of different States. This draft legislative guide also takes a flexible approach, which will allow its recommendations to be implemented in accordance with local drafting conventions and legislative policies regarding which rules must be incorporated in principal

[11] UNCTAD is the United Nations Conference on Trade and Development. See http://businessfacilitation.org/index.html.

legislation and which may be left to subordinate regulation or to ministerial or other administrative rules.

B. Terminology

16. The meaning and use of certain expressions that appear frequently in this draft legislative guide is explained in this paragraph. It is to be noted that whenever terms such as annual accounts, periodic returns, documents, forms (such as search forms, registration forms or other forms to request registry services), notices, notifications and written materials are used, reference is intended to include both their electronic and paper versions unless otherwise indicated in the text. Frequently used expressions include the following:

- *Annual accounts*: The term "annual accounts" means financial information on the business' activities prepared at the end of a financial year of the business (cf. "periodic returns").
- *Branch*: The term "branch" means an entity carrying on business in a new location either within the jurisdiction in which it was formed or in another domestic or cross-border jurisdiction. The branch is not a subsidiary and does not have a separate legal personality from the original or main business.
- *Business name*: The term "business name" means a name registered on behalf of a business.
- *Business registry* or *Business registration system*: The term "business registry" or "business registration system" means a State's system for receiving, storing and making accessible to the public certain information about businesses, as distinct from mandatory registration by the business with other public authorities (e.g. taxation and social security authorities).
- *Deregistration*: The term "deregistration" means indicating in the registry that a business is no longer registered.
- *Electronic signature*: The term "electronic signature" means data in electronic form in, affixed to or logically associated with, a data message, which may be used to identify the signatory in relation to the data message and to indicate the signatory's approval of the information contained in the data message.[12]
- *Good quality and reliable*: A business registration system and the information it contains is of "good quality and reliable" when the registered information is kept as current and accurate as possible and the system may be considered positively in terms of performance and security. The term "reliable" does not refer to whether the information is legally binding on the registry, the registrant, the registered business, or third parties.[13]
- *ICT*: The term "ICT" means information and communications technology.
- *Information products*: The term "information products" means information that is processed or published by the business registry (in electronic or paper form) to convey data requested by users.
- *Information services*: The term "information services" means the system established by the business registry through which it supplies information products to users.[14]

---

[12] See UNCITRAL Model Law on Electronic Signatures (2001), article 2.

[13] At its twenty-ninth session, the Working Group agreed to replace the definition of "reliable" with that of "good quality and reliable", which was said to be more consistent with the agreed revision of recommendation 4(d) (recommendation 3(d) in A/CN.9/WG.I/WP.106), and to delete the phrase "is not a legal standard" from the definition (para. 32, A/CN.9/928).

[14] The Secretariat has included the definition of "information products" and "information services" further to a comment of the Working Group at its twenty-ninth session that such terms could be defined in the section on "Terminology" (para. 90, A/CN.9/928).

- *Law*: The term "law" means the applicable law in the enacting State and is intended to include both the specific rules adopted to establish the business registry (whether such rules are found in legislation or in administrative regulations or guidelines; see also para. 1 in the Annex) and the broader body of domestic law that may be relevant to issues related to the business registry, but are found outside of the specific rules establishing the business registry.

- *Legally regulated economy*: The term "legally regulated economy" means economic activity that takes place in a State within the context of the legal and regulatory regime that the State has established to govern such activity. The legally regulated economy does not include commercial activity that takes place outside of that context (sometimes referred to as the "extralegal economy"), nor does it include illicit trade in goods or services.

- *Micro, small and medium-sized enterprises (MSMEs)*: The term "MSMEs" means micro, small and medium-sized enterprises as they are defined according to the criteria established by the State undertaking the business registration reforms.

- *One-stop shop*: The term "one-stop shop" means a physical office, a single interface on an electronic platform or an organization that carries out more than one function relating to the registration of a business with at least the business registry, as well as taxation and social security authorities necessary for the business to operate in the legally regulated economy. A one-stop shop should ensure the interoperability of all public authorities with which a business is required to register, and allow for the simultaneous sharing of information on the business among those authorities, as well as the use of a single integrated application form for registration with, and payment to, those authorities.[15]

- *Periodic returns*: The term "periodic returns" means a statement provided annually or at other prescribed intervals which gives essential information about a business' composition, activities, and financial status, and which, subject to applicable law, registered businesses may be required to file with an appropriate authority (cf. "annual accounts").

- *Protected data*: The term "protected data" means all information that must be kept confidential pursuant to the applicable law of the enacting State.

- *Registered business*: The term "registered business" means a business that, further to filing an application for registration, has been officially registered in the business registry.

- *Registered information*: The term "registered information" means information regarding the business that has been submitted to the registry, including protected data and information that will be made public.

- *Registrant*: The term "registrant" means the natural or legal person that submits the prescribed application form and any additional documents to a business registry.

- *Registrar*: The term "registrar" means the natural or legal person appointed pursuant to domestic law to supervise and administer the operation of the business registry.[16]

---

[15] At its twenty-ninth session, the Working Group agreed to standardize the phrase describing the main relevant public authorities in business registration throughout the legislative guide and to make reference to an integrated application form with those authorities in the definition of "one-stop shop" (para. 54, A/CN.9/928).

[16] The Secretariat has adjusted the definition of "registrar" to ensure improved consistency with paragraph 48 (para. 45 of A/CN.9/WG.I/WP.106) of this guide.

- *Unique identifier*[17]: The term "unique identifier" means a set of characters (numeric or alphanumeric) that is allocated only once to a business and that is used consistently by the public authorities of a State.

C. Legislative drafting considerations

17. States implementing the principles contained in this legislative guide should consider whether to include them in a law, in a subordinate regulation, in administrative guidelines or in more than one of these texts, depending on their legislative drafting conventions. This guide does not distinguish between these legislative mechanisms and uses "law" to denote both the rules adopted by the enacting State to establish the business registry and those provisions of domestic legislation in the broader sense that are somehow relevant to and touch upon issues related to business registration.

D. The reform process

18. Streamlining business registration to meet the key objective of simplifying the registration process and making it time and cost efficient, as well as user friendly (both for registrants and users searching the registry), usually requires undertaking reforms that address the enacting State's legal and institutional framework. It may also be necessary to reform the business processes that support the registration system. Sometimes reforms are needed in all of these areas. The approach taken in these reforms may vary considerably among States as the design and features of a registration system are influenced by the State's level of development, priorities and laws. There are, however, several common issues that States should consider and several similar recommended steps for reform regardless of jurisdictional differences that may exist. These issues are examined below.

1. The reform catalysts

19. Business registration reform is a multifaceted reform process that addresses various aspects of the State apparatus; its implementation requires the participation of a broad range of stakeholders and a thorough understanding of the State's legal and economic conditions, as well as of the practical needs of registry personnel and the intended users of the registry. To be successful, the reform must be driven by the need to improve private sector development and, for this reason, it is advisable that the reform be part of a larger private sector development or public sector modernization programme. It is thus essential to gain an understanding of the importance of business registration in relation to other business environment challenges and of its relationship to other potential reforms. This analysis will require, as crucial preliminary steps, ensuring that domestic circumstances are amenable to a business registration reform programme, that incentives for such a reform exist and that there is support for such initiatives in the government and in the private sector prior to embarking on any reform effort.

(a) Relevance of a reform advocate

20. Support or even leadership from the highest levels of the State's government is of key importance for the success of the reform process. The engagement of relevant government ministries and political leadership in the reform effort facilitate the achievement of consensus on the steps required. This can be particularly important to facilitate access to financial resources, to make and implement decisions, or when it is necessary to move business registry functions from one branch of government to another or to outsource them.

---

[17] Further to a suggestion made by the Working Group at its twenty-ninth session, that the use of the terms "unique business identifier" and "unique identifier" should be made consistent, the Secretariat has made the necessary revisions (para. 58, A/CN.9/928).

(b) The steering committee

21. In order to oversee the day-to-day progress of the reform and to manage difficulties as they may arise, it is advisable that a steering committee be established to assist the State representative or body leading the reform. In addition to experts with technological, legal and administrative expertise, this committee should be composed of representatives of the public and private sector and should include a wide range of stakeholders, including those who can represent the perspectives of intended users. It may not always be necessary to create such a committee, since it may be possible to use existing mechanisms; in any event, a proliferation of committees is to be avoided, as their overall impact will be weakened.

22. The steering committee should have clearly defined functions and accountability; it is advisable that its initial setup be small and that it should grow progressively as momentum and stakeholder support increase. Although linked to the high-level government body spearheading and advocating for the reform, the committee should operate transparently and independently from the executive branch. In certain jurisdictions, regulatory reform bodies have later been transformed into more permanent institutions that drive ongoing work on regulatory governance and regulatory impact analysis.

23. The steering committee must nurture the reform process and consider how to address concerns raised in respect of it. Concerns could include those arising from bureaucratic inertia, or fears that registry employees may lose their jobs if their ICT skills are weak or if technology replaces human capital. Thus, it is likely to be important for the body overseeing the reform to be able to consider diverse interests and fully inform potential beneficiaries and political supporters.

(c) The project team

24. In collaboration with the steering committee, it is advisable that a project team be assigned the task of designing a reform programme tailored to an enacting State's circumstances and providing technical expertise to implement the reforms. A successful reform will require a team of international and local specialists, with expertise and experience in business registration reform, in legal and institutional reform, and in a variety of technology matters (for example, software design, hardware, database and web specialists).

(d) Awareness-raising strategies

25. States embarking on a reform process should consider appropriate communication strategies aimed at familiarizing businesses and other potential registry users with the operation of the registry and of the legal and economic significance of business registration. This effort should include informing businesses of the benefits of registration with the business registry and mandatory registration with other public authorities (e.g. taxation and social security), and of participation in the legally regulated economy (e.g. visibility to the public, the market and improved access to the banking system). Awareness should also be increased of the incentives that the State may offer businesses to operate in the legally regulated economy, including (see para. 27 below) the opportunity to participate in public procurement; legal validation of the business; access to flexible legal business forms and asset partitioning; the possibility of protecting the business' unique name and other intangible assets; opportunities for the business to grow and to have access to a specialized labour force and access to government assistance programmes. The awareness-raising strategy should also ensure that clear information is readily accessible on compliance with the law, fulfilment of the obligations taken on by registering (e.g. the payment of taxes) and potential penalties for non-compliance.[18]

---

[18] For a more detailed presentation of the advantages of operating in the legally regulated economy, and the incentives that can be offered to businesses that do so, see paragraphs 36 and 40 to 42 of A/CN.9/WG.I/WP.110. For more information on awareness-raising and compliance, see

26. Effective communication may also be expected to encourage the development of new businesses and to encourage existing businesses to comply with mandatory registrations, as well as to provide signals to potential investors about the enacting State's efforts to improve the business environment. Awareness-raising strategies should commence early in the reform process and should be maintained throughout it, including after the enactment of the legal infrastructure and implementation of the new business registration system. In coordination with the steering committee, the project team should determine which cost-effective media can best be used: these can include private-public dialogues, press conferences, seminars and workshops, television and radio programmes, newspapers, advertisements, and the preparation of detailed instructions on submitting registration information and obtaining information from the business registry. In order to raise MSME awareness of the reforms to the business registration system, it may be advisable to consider communication strategies tailored specifically to that audience.[19]

(e) Incentives for businesses to register

27. In addition to an efficient awareness-raising campaign, States should consider adding incentives for MSMEs and other businesses to comply with mandatory registration with public authorities through the provision of ancillary services for businesses that are in compliance. The types of incentives will vary according to the specific economic, business and regulatory context, and may include: promoting access to credit for registered businesses; offering accountancy training and services as well as assistance in the preparation of a business plan; providing credits for training costs; establishing lower and simplified taxation rates and tax mediation services; providing business counselling services; providing monetary compensation, government subsidies or programmes to foster MSME growth and providing low-cost technological infrastructure.[20]

2. Phased reform process

28. The duration of a reform process can vary considerably, depending on the types of reforms implemented and on other circumstances relevant to the particular economy. While the most comprehensive approach may entail a complete reform of the business registry and the law establishing it, this may not be realistic in all cases and enacting States may wish to consider a phased implementation of their reform. In States with a large number of unregistered businesses, a reform process that adopts a "think small" approach at the outset might be more effective than a reform with a broader focus, which could be introduced at a later stage. For example, if the main objective is initially to promote the registration of MSMEs, simple solutions addressing their needs at the local level may be more successful than introducing sophisticated automated systems that require high-level technological infrastructure, and changes in the legal and institutional framework, and that may be more appropriate to larger businesses or businesses operating in the international market. Even when the reform is carried out in jurisdictions with more advanced business registration systems, it may be advisable to "start small" and pilot the reforms at a local level (for example, in a district or the capital) before extending them throughout the State. Success in a pilot stage can have a strong demonstration effect, and is likely to build support for continued reform.

I. Objectives of a business registry

29. The focus of the present legislative guide is primarily the business registry of a State and the adoption of best practices in order to optimise the operation of the business registration system for its users so that it is simple, efficient and cost-effective. However, in most States, in order for a business to participate in the

---

paragraphs 125 (para. 124 of A/CN.9/WG.I/WP.106), 212 and 213 (paras. 207 to 209 of A/CN.9/WG.I/WP.106) of this draft guide.

[19] See paragraphs 37 to 39 of A/CN.9/WG.I/WP.110.

[20] For a more comprehensive list of incentives, see paras. 40 to 42 of A/CN.9/WG.I/WP.110.

legally regulated economy, it must usually register not only with the business registry but also with various additional public authorities (see also para. 63 below). In addition to the business registry, these authorities often include taxation and social security authorities. States wishing to facilitate the entry of businesses into the legally regulated economy should thus assess the multiple public authorities with which a business must register and consider ways to reduce the burden on businesses by streamlining those requirements. As examined in greater detail in this legislative guide (see paras. 93 to 103 and rec. 14 below), a best practice to accomplish that goal would be for a State to establish a one-stop shop for business registration and for registration, at a minimum, with taxation and social security authorities, subject to the legal and institutional organization of the enacting State.

Recommendation 1: Objectives of the business registry[21]

The law should ensure the establishment of a system of business registration that facilitates the operation of businesses in the legally regulated economy as part of the system of all registrations that may be required of a business and may include registration with business registry, taxation and social security authorities, as well as with other authorities.

A. Purposes of the business registry

30. The opening provisions of the law that establishes the business registry should set out explicitly the purpose of a system for the registration of businesses.

31. The law of the enacting State should establish which businesses are required to register with the business registry. Currently, many States require only businesses of a certain legal form to register, often focusing on those that have limited liability status. Requiring such businesses to register puts third parties dealing with them on notice of their limited liability status, as well as providing additional information in respect of the business. However, since business registration may be viewed as a key conduit through which businesses of all sizes and legal forms interact with the State and operate in the legally regulated economy, States may wish to permit (but not necessarily to require) all such businesses to register in the business registry. Through registration, a business becomes more visible not only in the marketplace, but also to States, who may then be able to more easily identify MSMEs in need of support, and design appropriate programmes for those purposes (see the discussion in paras. 40 to 42 of A/CN.9/WG.I/WP.110). Permitting voluntary registration of a range of different legal forms of business may encourage the registration of MSMEs, assisting them in their growth in addition to facilitating their operation in the legally regulated economy (see also para. 3 above, para. 131 and rec. 20 below and A/CN.9/WG.I/WP.110).[22]

32. The following overarching principles should govern an effective system of business registration: (a) enabling businesses of all sizes and legal forms to be visible in the marketplace and to operate effectively in the legally regulated economy; and (b) enabling MSMEs to increase their business opportunities and to improve the profitability of their businesses.

Recommendation 2: Purposes of the business registry

The law should provide that the business registry is established for the purposes of:

(a) Providing to a business an identity that is recognized by the enacting State; and

[21] At its twenty-ninth session, the Working Group agreed on the insertion of an additional recommendation after paragraph 29 (para. 26 of A/CN.9/WG.I/WP.106) (para. 24, A/CN.9/928).

[22] As agreed by the Working Group at its twenty-ninth session, the Secretariat has added a reference to recommendation 20 (recommendation 19 in A/CN.9/WG.I/WP.106) in paragraph 31 (para. 28 of A/CN.9/WG.I/WP.106). In respect of the comments of the Working Group that any necessary clarification should be made to indicate that it was for each State to determine which businesses were required to register, the opening sentence of paragraph 31 and the reference to voluntary registration in the second and third sentences provide information on this aspect (para. 25, A/CN.9/928).

(b) Receiving, storing and making information in respect of registered businesses accessible to the public.[23]

B. Simple and predictable system of laws permitting registration for all businesses

33. States should set the foundations of their business registry by way of law. In order to foster a transparent and reliable business registration system, with clear accountability of the registrar (see also paras. 47 and 49 below), that law should be simple and straightforward. Care should be taken to limit or avoid any unnecessary use of discretionary power, and to provide for appropriate safeguards against its arbitrary use. However, some discretion should be permitted to the registrar in order to ensure the smooth functioning of the system. For example, subject to the requirements of the law and prior notice to the registrant, the registrar may be allowed to correct errors in the registered information (see also paras. 153 and 233 below).

34. The applicable law in each State should determine which business forms are required to register, and which additional conditions those businesses may have to fulfil as part of that requirement. Business registration may not be required for all businesses, but it may facilitate the effective participation of all businesses, including MSMEs, in the legally regulated economy (see paras. 129 to 132 below and rec. 20). States should thus consider enabling[24] businesses of all sizes and legal forms to register in an appropriate business registry, or create a single business registry that is tailored to accommodate registration by a range of businesses of different sizes and different legal forms.

35. The law governing registration with the business registry and other public authorities (including taxation and social security authorities) should also provide for simplified registration and post-registration procedures in order to promote registration of MSMEs. The goal should be for States to establish procedures with only the minimum necessary requirements for MSMEs and other businesses to register in order to operate in the legally regulated economy. Of course, businesses with more complex legal forms would be subject to additional information requirements under the law of the enacting State as a consequence of their particular legal form or type of business.

36. Further, regardless of the approach chosen to maintain updated information in the business registry, it would be advisable to make updating the records of MSMEs as simple as possible. This could involve a number of different approaches examined in greater detail below, such as extending the period of time for such businesses to declare a change; harmonizing the information needed when the same information is repeatedly required; or exempting MSMEs from certain obligations in specific cases (see also paras. 163 to 167 and rec. 30 below).

Recommendation 3: Simple and predictable system of laws permitting registration for all businesses

The law should:

(a) Adopt a simple structure for rules governing the business registry and avoid the unnecessary use of exceptions or granting of discretionary power; and

[23] At its twenty-ninth session, the Working Group agreed to: (a) end recommendation 2(a) (recommendation 1(a) in A/CN.9/WG.I/WP.106) after the term “enacting State”; and (b) to make recommendation 2(b) compatible with the definition of “business registry or business registration system” in paragraph 16 of the legislative guide (para. 13 of A/CN.9/WG.I/WP.106) (para. 26, A/CN.9/928).

[24] The Secretariat has added a reference to recommendation 20 (recommendation 19 in A/CN.9/WG.I/WP.106) in paragraph 34 (para. 31 of A/CN.9/WG.I/WP.106) as agreed by the Working Group at its twenty-ninth session (para. 28, A/CN.9/928).

(b) Ensure that micro, small and medium-sized enterprises (MSMEs) that are required or permitted to register are subject to the minimum procedures necessary pursuant to the law.[25]

C. Key features of a business registration system

37. To be effective in registering businesses of all sizes, a business registration system should ensure that, to the extent possible, the registration process is simple, time and cost efficient, user-friendly and publicly accessible. Moreover, care should be taken to ensure that the publicly available registered information on businesses is easily searchable and retrievable, and that the process through which the registered information is collected and maintained as well as the registry system are kept as current, reliable and secure as possible.

38. The reliability of the business registration system and the information contained in the registry is a recurring theme in the present guide. In keeping with the definition of "good quality and reliable" in paragraph 16 above, the reliability of the system refers to a system that may be considered positively in terms of performance and security and in which registered information is kept as current and accurate as possible. "Good quality and reliable" does not refer to the method that a State uses to ensure that reliability, and this legislative guide leaves it to each enacting State to determine how best to ensure the reliability of its business registration system and the information it contains in light of its own context and legal tradition. Reliability in this guide does not refer to whether or not the information in the business registry is legally binding on the registry, the registrant, the registered business or on third parties, nor to whether the enacting State uses a declaratory approach or an approval approach in respect of its business registration system. However, the extent to which information in the registry is legally binding and whether the State adopts a declaratory system or an approval system (see paras. 121 to 123 below) are aspects that should be made clear by the enacting State in its business registry law and on the business registry itself.

39. Regardless of which registration system is adopted, maintaining high quality, current and reliable information is imperative for the business registry in order to make the information useful for the registry users and to establish confidence in business registry services. This applies not only to the information provided when applying to register a business, but also to the information that the entrepreneur submits during the lifetime of the business. It is thus important that the information meets certain requirements in the way it is submitted to the registry and then made available to the public (see, for example, paras. 40 and 41 below).[26] For these reasons, States should devise provisions that allow the registry to operate according to principles of transparency and efficiency in the way information is collected, maintained and released.

40. The registry can implement certain procedures in order to ensure that the information maintained in the registry is of good quality and reliable. Those procedures, which will be further discussed below, can be grouped into two broad categories. One group comprises those measures aimed at protecting the identity and integrity of a business through the prevention of corporate identity theft or the adoption of identity verification methods for those who provide information to the business registry. A wide range of measures can be implemented in this regard, such

---

[25] At its twenty-ninth session, the Working Group requested the Secretariat to: (a) delete recommendation 3(b) (recommendation 2(b) in A/CN.9/WG.I/WP.106); (b) make the necessary adjustments to the title of the recommendation; (c) adjust the text of recommendation 3(c) to clarify that business registration was not mandatory for MSMEs; and (d) adjust the final phrase of recommendation 3(c) along the lines of "subject to the minimum procedures as required by law" (paras. 29 and 30, A/CN.9/928).

[26] The Secretariat has included a cross reference to paragraphs 40 and 41 (paras. 37 and 38 of A/CN.9/WG.I/WP.106) in response to concerns expressed by the Working Group at its twenty-ninth session about the lack of clarity of the penultimate sentence of paragraph 39 (para. 36 of A/CN.9/WG.I/WP.106) (para. 32, A/CN.9/928).

as the use of monitoring systems or establishing access through the use of passwords to prevent corporate identity theft; or the use of electronic signatures and electronic certificates to verify the identity of those who submit information to the registry. Business registries usually adopt more than one type of measure.

41. Another group of measures that registries can implement to ensure the good quality and reliability of the registered information pertains to the way information is collected and maintained in the registry and the frequency with which it is updated (see paras. 159 to 167 and recs. 29 and 30 below). Ensuring that the registry record is regularly updated is of key importance. In electronic registry systems, the software will usually provide for automated periodic updating as amendments are submitted by businesses. However, when registries use paper-based or mixed systems, the registrar must ensure that updates to the registry record are entered as soon as practicable, and if possible, in real time or at least once daily. To underpin these measures, it is important for States to establish effective enforcement mechanisms upon which registries can rely when a business fails to provide accurate and complete information (see paras. 208 to 213 and recs. 44 and 45 below).

42. Moreover, in order to enhance the quality and reliability of the information deposited in the registry, enacting States should preserve the integrity and security of the registry record itself. Steps to achieve those goals include: (a) requiring the registry to request and maintain the identity of the registrant; (b) obligating the registry to notify promptly the business about the registration and any changes made to the registered information; and (c) eliminating any discretion on the part of the registrar to modify information that has been submitted to the registry.[27]

Recommendation 4: Key features of a business registration system

The law should ensure that the business registration system contains the following key features:

(a) Registration is publicly accessible, simple, user-friendly and time- and cost-efficient;

(b) The registration methods are suited to the needs of MSMEs;

(c) The publicly available registered information on businesses is easily searchable and retrievable; and

(d) The registry system and the registered information are of good quality and reliable, and are maintained that way through periodic updates and system verification.[28]

II. Establishment and functions of the business registry

43. Several different approaches may be taken in establishing an effective business registration system, but there is broad agreement on certain key objectives of such systems. Regardless of differences in the way business registries may operate, efficient business registries have a similar structure and perform similar functions when carrying out the registration of a new business or in recording the changes that may occur in respect of an existing business.

---

[27] At its twenty-ninth session, the Working Group requested the Secretariat to replace the phrase “to deny access to registry services” in subparagraph 42(c) (subpara. 39(c) of A/CN.9/WG.I/WP.106) (after “registry staff to”) with text along the lines of “to modify information that has been submitted to the registry” (para. 34, A/CN.9/928).

[28] At its twenty-ninth session, the Working Group requested the Secretariat: (a) to ensure consistency between the terms “system”, “process” and “information” in paragraph 37 (para. 34 of A/CN.9/WG.I/WP.106) and recommendation 4 (recommendation 3 in A/CN.9/WG.I/WP.106); (b) to clarify in recommendation 4(d) that the registry system and the registered information are of good quality and reliable when they are secure and kept current with periodic updates; and (c) to adjust the terminology of recommendation 4(d), since certain terms might not be used interchangeably in relation to systems and information. The Secretariat has implemented those changes (paras. 31 and 32, A/CN.9/928).

A. Responsible authority

44. In establishing or reforming a business registry, enacting States will have to decide how the business registry will be organized and operated. Different approaches can be taken regarding its form, the most common of which is based on oversight by the government. In such States, a government department or agency, staffed by civil servants, and usually established under the authority of a particular government department or ministry, operates the registration system. Another type of organization of a business registry is one that is subject to administrative oversight by the judiciary. In such contexts, the registration body might be a court or a judicial registry whose function, usually specified in the applicable commercial code, is concerned with verifying the business requisites for registration but does not require prior judicial approval of a business seeking to register.

45. States may also decide to outsource some or all of the registry operations through a contractual or other legal arrangement that may involve public-private partnerships or the private sector. When registration is outsourced to the private sector, it remains a function of the government, but the day-to-day operation of the system is entrusted to privately owned companies. In one jurisdiction, for example, such an outsourcing was accomplished by way of appointing a private company, in accordance with the law, as the assistant registrar with full authority to run the registration function. However, operating the registry through public-private partnerships or private sector companies does not yet appear to be as common as the operation of the registry by a government agency.[29] States may also decide to form entities with a separate legal personality, such as chambers of commerce, with the object of managing and developing the business registry, or to establish by law registries as autonomous or quasi-autonomous agencies, which can have their own business accounts and operate in accordance with the applicable regulations governing public authorities. In one State, for example, the business registry is a separate legal person that acts under the supervision of the Ministry of Justice, while in another State the registry is an administratively separate executive agency of a government department, but does not have separate legal status. In deciding which form of organization to adopt, States will have to consider their specific domestic circumstances, evaluate the challenges and trade-offs of the various forms of organization and then determine which one best meets the State's priorities and can be achieved within the limits of its human, technological and financial resources.

46. While the day-to-day operation of the registry may be delegated to a private sector firm, the enacting State should always retain the liability for ensuring that the registry is operated in accordance with the applicable law. For the purposes of establishing public trust in the business registry and preventing the unauthorized commercialization or fraudulent use of information in the registry record, the enacting State should retain its competence over the registry record. Furthermore, the State should also ensure that, regardless of the daily operation or the structure of the business registry, the State retains the right to control the access to and use of the data and information in the registry.

Recommendation 5: Responsible authority

The law should provide that:

(a) The business registry should be operated by the State or by an authority appointed by that State; and

(b) The State retains its competence over the business registry.

[29] Arrangements involving contracting with the private sector to provide business registration services require careful consideration of several legal and policy issues, such as the responsibilities of the government and the private provider, the form of the arrangements, the allocation of risk, and dispute resolution.

B. Appointment and accountability of the registrar

47. The law of the State should set out the procedure to appoint and dismiss the registrar, as well as the duties of the registrar, and the authority empowered to supervise the registrar in the performance of those duties.

48. "Registrar" is a defined term and refers to a natural or legal person appointed to supervise and administer the business registry (see para. 16 above). In keeping with the practice of some States, it should also be noted that the appointment of a registrar is intended to include all methods by which a registrar can be selected, including through election. Further, States may permit the registrar to delegate its powers to persons appointed to assist the registrar in the performance of its duties.[30]

49. In addition, the laws of the enacting State should clearly set out the functions of the registrar in order to ensure the registrar's accountability in the operation of the registry and the minimization of any potential for abuse of authority. In this regard, the applicable law of the enacting State should establish principles for the liability of the registrar and the registry staff to ensure their appropriate conduct in administering the business registry (the potential liability of the registrar and the registry staff are addressed in paras. 214 to 219 and rec. 46 below).

Recommendation 6: Appointment and accountability of the registrar

The law should:

(a) Provide that [*the person or entity authorized by the enacting State or by the law of the enacting State*] has the authority to appoint and dismiss the registrar and to monitor the registrar's performance; and

(b) Determine the registrar's powers and duties and the extent to which those powers and duties may be delegated.

C. Transparency in the operation of the business registration system

50. Laws that foster the transparent and reliable operation of the system for business registration have a number of features. They should allow registration to occur as a simplified process[31] with a limited number of steps, and they should limit interaction with registry authorities, as well as provide short and specified turn-around times, be inexpensive, result in registration of a long-term or unlimited duration, apply throughout the jurisdiction and make registration easily accessible for registrants.

51. Registries should also establish "service standards" that would define the services to which users are entitled and may expect to receive, while at the same time providing the registry with performance goals that the registry should aim to achieve. Such service standards could include, for example, rules on the correction of errors (see paras. 33 above, and 153 and 233 below), rules governing the maximum length of time for which a registry may be unavailable (such as for electronic servicing) and providing advance notice of any expected down time. Service standards contribute to ensuring further transparency and accountability in the administration of the registry, as such standards provide benchmarks to monitor the quality of the services provided and the performance of the registry staff.

Recommendation 7: Transparency in the operation of the business registration system

---

[30] At its twenty-ninth session, the Working Group agreed that the term "should" in the final sentence of paragraph 48 (para. 45 of A/CN.9/WG.I/WP.106) should be changed to "may", and that the commentary should be adjusted to note that the "appointment" of a registrar was intended to include all methods by which a registrar was selected, including by way of election (para. 36, A/CN.9/928).

[31] At its twenty-ninth session, the Working Group requested the Secretariat to include the concept of simplification of the registration process in paragraph 50 (para. 47 of A/CN.9/WG.I/WP.106) (para. 37, A/CN.9/928).

The law should ensure that the rules, procedures and service standards that are developed for the operation of the business registration system are made public to ensure transparency of the registration procedures.[32]

D. Use of standard registration forms

52. Another approach that is often used to promote transparency and reliability in the operation of the business registry is the use of simple standard registration forms paired with clear guidance to the registrant on how to complete them. Such forms can easily be completed by businesses without the need to seek the assistance of an intermediary, thus reducing the cost and de facto contributing to the promotion of business registration among MSMEs. These forms also help prevent errors in entering the data by business registry staff, thus speeding up the overall process. In some jurisdictions, the adoption of standardized registration forms has been instrumental in streamlining the registration requirements and disposing of unnecessary documents. Moreover, in jurisdictions with enhanced interoperability between the public authorities involved in the establishment of a business (e.g. the business registry, taxation and social security authorities), the adoption of a standardized registration form that consolidates in one form all of the information required of a business by such authorities has reduced duplication of information requests and has enabled the streamlining of registration procedures with multiple authorities. It should be noted that the use of standard registration forms should not preclude a business from submitting to the registrar additional materials and documents required by applicable law for the creation of the business, or in the exercise of the freedom of contract in establishing the business, such as agreements in respect of the internal operation of the business or additional information in respect of its financial state.[33]

Recommendation 8: Use of standard registration forms

The law should provide that simple[34] standard registration forms are introduced to enable the registration of a business and the registrar should ensure that guidance is available to registrants on how to complete those forms.

E. Capacity-building for registry staff

53. Once a reform of the business registration system has been initiated, developing the capacity of the personnel entrusted with business registration functions is an important aspect of the process. Poor service often affects the efficiency of the system and can result in errors or necessitate multiple visits to the registry by users. Capacity development of registry staff could not only focus on enhancing their performance and improving their knowledge of the new registration processes, ICT solutions and client orientation, but staff could also be trained in new ways of improving business registration.

54. Different approaches to capacity-building can be followed, from the more traditional training methods based on lectures and classroom activities, to more innovative ways that can be driven by the introduction of new business registration systems. In some jurisdictions, team-building activities and role-playing have been

[32] At its twenty-ninth session, the Working Group agreed to: (a) change the phrase “rules or criteria” to “rules, procedures and service standards”; and (b) include the phrase “developed for the operation of the business registration system” (para. 38, A/CN.9/928). Moreover, it was agreed that all recommendations in the draft guide should commence with: “The law should” (para. 89, A/CN.9/928).

[33] At its twenty-ninth session, the Working Group agreed to incorporate the text of footnote 58 in A/CN.9/WG.I/WP.106 and to include a reference to Part VII (para. 39, A/CN.9/928). The Secretariat has not included a reference to Part VII in the commentary, since it may not be consistent with the text of paragraph 52 (para. 49 of A/CN.9/WG.I/WP.106), as recommendation 40 and its commentary refer to the approach States should take when establishing fees for business registry services.

[34] At its twenty-ninth session, the Working Group agreed to insert the word “simple” before “standard registration forms” (para. 39, A/CN.9/928).

used with some success, since reforms often break barriers between various government departments and require the improvement of the flow of information among them, as well as an understanding of different aspects of the procedures with which specific registry staff may not be familiar. In other cases, States have also opted for developing action plans with annual targets in order to meet standards of performance consistent with global best practices and trends, and they have linked promotions and bonuses for staff to the achievement of the action plan's goals. In other cases, States have decided to introduce new corporate values in order to enhance the public service system, including business registration. Although the relevant governmental authority will usually take the lead in organizing capacity development programmes for the registry staff, the expertise of local legal and business communities could also be enlisted to assist.

55. Peer-to-peer learning and the establishment of national and international networks are also effective approaches to build capacity to operate the registry. These tools enable registry staff to visit other jurisdictions and States with efficient and effective business registration systems. In order to maximize the impact of such visits, it is important that they occur in jurisdictions familiar to the jurisdiction undergoing the reform. This approach has been followed with success in several jurisdictions engaging in business registration reform. International forums and networks also provide platforms for sharing knowledge and exchanging ideas for implementing business registration reform among registry personnel from around the world.

56. In order to facilitate business registration, it may be equally important to build capacity on the part of intermediaries in States where the services of those professionals are required to register a business (see paras. 121 and 122 below).

Recommendation 9: Capacity-building for registry staff

The law should ensure that appropriate programmes are established to develop and strengthen the knowledge and skills of the registry staff on business registration procedures, service standards and the operation of electronic registries, as well as the ability of registry staff to deliver requested services.

F. Core functions of business registries

57. There is no standard approach in establishing a business registry or in streamlining an existing one: models of organization and levels of complexity can vary greatly depending on a State's level of development, its priorities and its legislation. However, regardless of the structure and organization of the registry, certain core functions can be said to be common to all registries.

58. Subject to the enacting State's legal and institutional organization, core functions in addition to those listed below may be added to the business registry. But, in keeping with the overarching principles governing an effective business registration system (see para. 32 above), the core functions of business registries are, at a minimum, to:

(a) Register a business when it fulfils the necessary conditions established by the law of the enacting State, which may include conferring legal existence on the business and recording that status;

(b) Publish and make accessible good quality and reliable information on the business to be registered so as to facilitate trade and interactions between business partners, the public and the State, including when such interactions take place in a cross-border context;

(c) Assign a unique identifier to the business to facilitate information exchange between the business and the State;

(d) Share information on the registered business among public authorities to promote and facilitate coordination among such authorities;

(e) Protect the integrity of the registry record to protect the identity and integrity of the businesses that are registered;

(f) Publicize information concerning the establishment of a business, including any associated obligations and responsibilities of the registered business, as well as the legal effects of information maintained in the business registry; and

(g) Provide assistance to the business in searching and reserving a business name when required by the law so that the business can establish its commercial identity.[35]

59. In a standard registration process, the entry point for entrepreneurs to the business registry may be the support provided to them in choosing a unique name for the new business that they wish to establish. When registering, a business is usually required to have a name that must be sufficiently distinguishable from other business names within that jurisdiction so that the business will be recognized and identifiable under that name. Enacting States are likely to establish their own criteria for determining how to decide whether a business name is sufficiently distinguishable from other business names, and in any event, the assignment of a unique identifier will assist in ensuring the unique identity of the business within and across jurisdictions (see also paras. 104 to 111 below). Business registries usually assist entrepreneurs at this stage with a procedure that can be optional or mandatory, or they may provide business name searches as an information service. Registries may also offer a name reservation service prior to registering a new business, so that no other business can use that name. Such a name reservation service may be provided either as a separate procedure (again, which can be optional or mandatory), or as a service integrated into the overall business registration procedure.

60. Business registries also provide forms and various types of guidance to entrepreneurs preparing the application and other necessary documents for registration. Once the application is submitted, the registry performs a series of checks and control procedures to ensure that all the necessary information and documents are included in the application. In particular, a registry verifies the chosen business name as well as any requirements for registration that have been established in the State's applicable law, such as the legal capacity of the entrepreneur to operate the business. Some legal traditions may require the registry to perform simple control procedures (such as establishing that the name of the business is sufficiently unique), which means that if all of the basic administrative requirements are met, the registry must accept the information as filed and record it. Other legal traditions may require more thorough verification of the information filed, such as ensuring that the business name does not violate any intellectual property requirement or that the rights of businesses with similar names are not infringed before the registry can allocate a business name (in those regimes where the registry is mandated to do so). All such information is archived by the registry, either before or after the registration process is complete.

61. Payment of a registration fee (if any, see paras. 200 to 204 and rec. 40 below) must usually be made before the registration is complete. Once a business registration is complete, the registry issues a certificate that confirms the registration and contains information about the business. Since much of the registered information should be disclosed to interested parties, registries make their public components available through various means, including through publication on a website, or in publications such as the National Gazette or newspapers. Where the infrastructure permits, registries may offer, as an additional non-mandatory service, subscriptions to announcements of specific types of new registrations.

62. In accordance with the applicable law of the enacting State, registered information that is made available to the public can include specific information on the business structure, such as who is authorized to sign on behalf of the business or

[35] At its twenty-ninth session, the Working Group requested the Secretariat to modify paragraph 58 (para. 55 of A/CN.9/WG.I/WP.106) in line with the revised text of recommendation 10 (recommendation 9 in in A/CN.9/WG.I/WP.106) (paras. 41 and 45, A/CN.9/928).

who serves as the business's legal representative. Basic information about the business, such as the name of the business, its telephone number, email and postal addresses (in addition to the addresses at which the businesses deemed to receive correspondence) can also be made public, but the publication of such details may be subject to the agreement of the business. When business registries collect disaggregated information submitted on a voluntary basis on the registrant or the persons associated with the business according to gender or other indicators that could raise privacy issues (e.g. association with an ethnic or language group), the law should establish whether and subject to which conditions that information can be made available to the public (see para. 192 below).[36] In some States, public access to certain information in the business registry is provided free of charge (in respect of fees for information, see para. 205 and rec. 41 below).

63. A new business must usually register with several government agencies, such as taxation and social security authorities, which often require the same information as that gathered by the business registry. In certain States, the business registry provides to entrepreneurs information on the necessary requirements of other public authorities and refers them to the relevant agencies. In States with more developed registration systems, businesses may be assigned a registration number that also functions as a unique identifier across public authorities (see paras. 104 to 111 below), which can then be used in all of the interactions that the business has with government agencies, other businesses and banks. This greatly simplifies the establishment of a business since it allows the business registry to exchange more easily information with the other public institutions involved in the process. In several States that have reformed their registration systems, business registries function as one-stop shops to support registration with other authorities. The services operated by such outlets may include providing any necessary licensing, or they may simply provide information on the procedures to obtain such licences and refer the entrepreneur to the relevant agency. As noted above (see para. 12 above), this legislative guide takes the view that establishing such one-stop shops for registration with at least the business registry, taxation and social security authorities, and enhancement of the integration of the registration procedures of all such authorities is the best approach for States wishing to optimise their business registration system (see paras. 93 to 103 and rec. 14 below).

64. One important aspect that States should take into account when establishing a business registration system is whether the registry should also be required to record certain procedures that affect the status of the business, for example bankruptcy, merger, winding-up, or liquidation. The approach to such changes in status appears to vary from State to State. For example, in some States, registries are often also entrusted with the registration of bankruptcy cases, while in other States, they tend not to perform this function. In certain jurisdictions, registries are also given the task of registering mergers as well as the winding-up and liquidation of businesses. In any event, business registries naturally also record the end of the life span of any business that has permanently ceased to do business by deregistering it (see paras. 220 to 227 and recs. 47, 48 and 49 below).

65. The opening provisions of the law governing business registration may include a list of the various functions of the registry, with cross references to the relevant provisions of the law in which those functions are addressed in detail. The advantage of this approach is clarity and transparency as to the nature and scope of the issues that are dealt with in detail later in the law. The possible disadvantage is that the list may not be comprehensive or may be read as placing unintended limitations on the detailed provisions of the law to which cross reference is made. Accordingly, implementation of this approach requires special care to avoid any omissions or inconsistencies as well as to allow for the registry's interoperability with other public

[36] At its twenty-ninth session, the Working Group agreed to revise paragraph 62 (para. 59 of A/CN.9/WG.I/WP.106) by reorganizing the order in which information was presented, and including additional information that business registry could make accessible to the public (para. 41(c), A/CN.9/928). Moreover, the Secretariat has added reference to the collection of disaggregated data to the legislative guide as appropriate as agreed by the Working Group (para. 33, A/CN.9/928).

authorities in the jurisdiction, and for access to the information maintained in the registry.

Recommendation 10: Core functions of business registries

The law should establish the core functions of the business registry, including:

(a) Registering the business when the business fulfils the necessary conditions established by the law;

(b) Providing access to the public of relevant information collected by the business registry;

(c) Assigning a unique identifier to the registered business;

(d) Sharing information among the requisite public authorities;

(e) Keeping the information in the business registry as current as possible;

(f) Protecting the integrity of the information in the registry record;

(g) Publicizing any relevant information on the establishment of the business, including the obligations and responsibilities of the business and the legal effects of the information publicly available on the business registry; and

(h) Assisting businesses in searching and reserving a business name when required by the law.[37]

G. Storage of information and access to it throughout the registry

66. When organizing the storage of the information contained in the business registry, States should be guided by the goals of efficiency, transparency and accessibility. Regardless of how a State decides to store and ensure the availability of the information throughout its registry system, its goal should be to achieve consistency in the identification and classification of registered businesses, as well as the efficient, non-duplicative collection of information on those businesses.

67. To achieve these goals, it is important that all business registration offices, sub-offices and repositories of registry information in a State be interconnected regardless of their physical location. In order to function efficiently, such interconnection should be established through an electronic interface linking all such outlets and allowing for their technical interoperability (see para. 77(c) below). Through these means, all information collected or stored anywhere in the system is capable of being processed or accessed in a timely fashion regardless of how (whether in electronic or paper format) or where it is collected, stored by or submitted to the registry. Ensuring the electronic interconnection of the entire business registry system would permit all information contained in it to be stored and made accessible in digital format and would permit the sharing of such information, possibly in real time, throughout the entire registry system, providing it simultaneously to multiple access points without regard to their geographic location (including business registry sub-offices, terminals, or using online technology). Further, access to the entirety of the information stored in the business registry should allow for its integration with other public authorities to permit information exchange with those authorities as well (see para. 77 (c) below).[38] This approach will strengthen the institutional interoperability among such public authorities in order not only to simplify the process of registration with the business registry, but also to streamline all registrations that may be required of a business at its establishment (see rec. 1 above).

---

[37] At its twenty-ninth session, the Working Group agreed on a new text for recommendation 10 (recommendation 9 in A/CN.9/WG.I/WP.106) (para. 45, A/CN.9/928).

[38] Further to comments made by the Working Group at its twenty-ninth session that the intention of paragraphs 66 to 68 (paras. 63 to 65 of A/CN.9/WG.I/WP.106) was to ensure that information was stored and shared throughout the registry system through full interconnectivity and multiple access points, the Secretariat has made the necessary adjustments to paragraphs 64 and 65 (para. 46, A/CN.9/928).

68. Where such an interconnected business registry is set up, it may be necessary to streamline technical standards and specifications so that the information collected and shared is of similar quality and of a standardised nature. This will include: establishing appropriate procedures to handle the exchange of information and communication of errors between the various collection points for and repositories of the information, regardless of their location within the State; providing minimum information technology security standards to ensure, at least, secure channels for data exchange (for example, the use of "https" protocols); and ensuring the integrity of data while it is being exchanged.

Recommendation 11: Storage of information and access to it throughout the registry

The law should establish an interconnected registry system that would process, store and provide access to information received from registrants and registered businesses or entered by registry staff.[39]

III. Operation of the business registry

69. As noted above, business registration can be implemented through many different organizational tools that vary according to jurisdiction. States embarking on a reform process to simplify registration will have to identify the most appropriate and efficient solutions to deliver the service, given the prevailing domestic conditions. Regardless of the approach chosen by the State, aspects such as the general legal and institutional framework affecting business registration, the legal foundation and accountability of the entities mandated to operate the system and the budget needed by such entities should be carefully taken into account. Reform efforts rely to a different extent on a core set of tools, including: the use of technology; the establishment of a one-stop shop; and ensuring interconnectivity between the different authorities involved in the registration process (with the possible adoption of a unique identifier). States should also ensure that their reform efforts do not inadvertently exclude the adoption of emerging technologies that might further improve the operation of the business registry (e.g. the use of distributed ledger technology).[40]

A. Electronic, paper-based or mixed registry[41]

70. An important aspect to consider when reforming a business registration system is the form in which the application for registration should be filed and the form in which information contained in the registry should be stored. Paper-based registration requires sending documents (usually completed in handwritten form) by mail or delivering them by hand to the registry for manual processing. Hand delivery and manual processing are not unusual in many jurisdictions due to the lack of an advanced technological infrastructure. In such States, entrepreneurs may have to visit personally registration offices that are usually located in municipal areas that may not be easily reachable for many MSME entrepreneurs, particularly for those in rural areas. In addition, any copies of the documents required must usually be provided on

[39] At its twenty-ninth session, the Working Group requested the Secretariat to replace the phrase "process and store all information" (between the terms "would" and "receive") to "process, store and provide access to information" to better reflect the focus of the recommendation on information storing and sharing (para. 46, A/CN.9/928).

[40] In keeping with the decision of the Working Group at its twenty-ninth session that reference to emerging technology should be included in the commentary, the Secretariat has added the final sentence (para. 47, A/CN.9/928) (see also para. 11 above).

[41] At its twenty-ninth session, the Working Group requested the Secretariat to ensure that all references to "paper-based" and "electronic" registry systems listed electronic systems first. The Secretariat has implemented that change throughout the guide save for the order of paragraphs 70 and 71 of this section (paras. 67 and 68 of A/CN.9/WG.I/WP.106), since the current drafting of these two paragraphs allows to better focus on the advantages of an electronic business registration system (para. 48, A/CN.9/928).

paper. Paper-based registry systems can facilitate in-person communication between the registrant and the registry, and thus may offer an opportunity to clarify aspects of the requirements for registration. However, the labour-intensive nature of this procedure normally results in a time-consuming and expensive process (for example, it may require more than one visit to the business registry), both for the registry and for users, and it can easily lead to data entry errors. Furthermore, paper-based registry systems require considerable storage space as the documents with the registered information may have to be stored as hard copies (although some States using a mixed system may also scan documents and then destroy the paper versions after the expiry of a minimum legal period for their preservation; in this regard, see paras. 229 to 232 and rec. 51 below). Finally, registration requests transmitted by paper or fax also give rise to delays, since registrants must wait until registry staff manually carry out the business registration and certify it.

71. In comparison, online registration systems allow for improved efficiency of the registry and for more user-friendly services. This approach requires, at a minimum, that the information provided by the registrant be stored in electronic form in a computer database; the most advanced electronic registration systems, however, permit the direct electronic submission of business registration applications and relevant information (as well as searches of the registry) over the Internet or via direct networking systems as an alternative to paper-based submissions. The adoption of such systems enhances data integrity, information security, registration system transparency, and verification of business compliance, as well as permitting the avoidance of unnecessary or redundant information storage. Furthermore, when electronic submission of applications is allowed, business registries can produce standard forms that are easier to understand and therefore easier to complete correctly. Although the use of ICT solutions can carry with them risks of software errors, electronic systems do more to reduce those risks by providing automated error checks and other appropriate solutions. Such technology is also instrumental in the development of integrated registration systems and the implementation of unique identification numbers.

72. In addition to these features, which result in a more streamlined process and user-friendly services, electronic business registration and access to the business registry also offer the following advantages:

(a) Improved access for smaller businesses that operate at a distance from the registry offices;

(b) A very significant reduction in the time and cost required of the entrepreneur to perform the various registration steps, and consequently in the time and cost required before successful registration of a business, as well as in the day-to-day cost of operating the registry;

(c) The handling of increasing demands for company information from other government authorities;

(d) A reduction in the opportunity for fraudulent or improper conduct on the part of registry staff;

(e) A reduction in the potential liability of the registry to users who otherwise might suffer loss due to the failure of registry staff to enter accurately registration information;

(f) User access to registration and information services outside of normal business hours; and

(g) Possible revenue opportunities for the registry from other businesses and financial institutions that seek company information as potential trading counterparties and borrowers.[42]

[42] At its twenty-ninth session, the Working Group requested the Secretariat to delete the phrase “to inform their risk analysis of” in subparagraph 72(g) (subpara. 69(g) of A/CN.9/WG.I/WP.106) and to adjust the remaining text as necessary (para. 48, A/CN.9/928).

73. Introducing electronic registration processes, however, often requires an in-depth re-engineering of the way in which the service is delivered, which may involve several core aspects of the State's governance systems in addition to its level of technological infrastructure, including: financial capability, organization and human resources capacity, legislative framework (e.g. commercial code and company law) and institutional setting. Therefore, States launching a reform process aiming at the automation of the business registry would be advised to carry out a careful assessment of the legal, institutional and procedural dimensions (such as legislation authorizing electronic signatures or information security laws, or establishing complex e-government platforms or other ICT infrastructure) in order to identify those areas where reforms are needed and to adopt those technology solutions that are most appropriate to their current needs and capabilities. In several States, only information about registering a business is currently available online, and a functioning electronic registry has not yet been implemented. Making information electronically available is certainly less expensive and less difficult to achieve than is the establishment of an electronic registry, and it does not require any legislative reform or specialized technology. While the adoption of a mixed registration system that combines electronic processing and paper-based manual submission and processing might thus be an appropriate interim solution, it does involve higher maintenance costs, and the ultimate goal of a State should remain the progressive development of fully electronic registration systems (see paras. 79 to 87 and rec. 12 below).

B. Features of an electronic registry

74. When the business registry record is computerized, the hardware and software specifications should be robust and should employ features that minimize the risk of data corruption, technical error and security breaches. Even in a paper-based registry, measures should be taken to ensure the security and integrity of the registry record, but this is more efficiently and easily accomplished if the registry record is electronic. (Regardless of its method of operation, it is important for the registry to have risk-mitigation measures in place: see paras. 235 and 236 and rec. 53 below.) In addition to database control programs, software must also be developed to manage such aspects as user communications, user accounts, payment of any required fees, financial accounting, computer-to-computer communication, internal workflow and the gathering of statistical data. Software applications enabling data collection would also assist the registry in making evidence-based decisions which would facilitate efficient administration of the system (for example, the collection of data on more frequent requests by registry users would enable evidence-based decisions on how best to allocate registry resources).[43] When the State's technological infrastructure is not sufficiently advanced to allow the features mentioned above to be implemented, it is nevertheless important that the software put in place be flexible enough to accommodate additional and more sophisticated features as they become more feasible in the future.

75. Implementing an online business registration system will require defining the technical standards of the online system, carefully evaluating the hardware and software needs of the business registry to make those standards operational in the context of the national technological infrastructure, and deciding whether it is feasible to develop the necessary hardware and software in-house or whether it must be purchased from private suppliers. In making that determination, it will be key to investigate whether a ready-made product is available that can easily be adapted to the needs of the State. If different suppliers are used for the hardware and the

[43] For example, "application programming interfaces" (APIs) may be adopted. APIs have a wide variety of possible uses, such as enabling the submission of applications to the registry through simplified procedures, for example by pre-filling certain fields by default, or allowing users, and equipping systems with the proper software to connect directly to the registry and retrieve information automatically.

software, it is important that the software developer or provider is aware of the specifications of the hardware to be supplied, and vice versa.

76. Following more recent technological advances, one option States may want to consider is whether to rely on traditional software or to move to more sophisticated applications such as cloud computing, which is an Internet-based system that allows the delivery of different services (such as storing and processing of data) to an organization's computers through the Internet. The use of cloud computing allows for a considerable reduction in the resources needed to operate an electronic registration system, since the registry does not have to maintain its own technological infrastructure. However, data and information security can represent an issue when introducing such a system and it would be advisable for States to conduct a careful risk analysis before establishing a system exclusively based on cloud applications.

77. Additional aspects that States should consider when adopting an online registry include:

(a) Scalability: the ICT infrastructure should be capable of handling an increasing volume of users over time, as well as traffic peaks that may occasionally arise;

(b) Flexibility: the ICT infrastructure of the registry should be easily adaptable to new user and system requirements, and the migration of data from one technology to another may require data-cleansing aspects;

(c) Interoperability: the registry should be designed to allow (even at a later stage) integration with other automated systems, such as other governmental authorities operating in the jurisdiction and online or mobile payment portals;

(d) Costs: the ICT infrastructure should be financially sustainable both in terms of initial and operating costs; and

(e) Intellectual property rights: in order to avoid risks deriving from adverse circumstances that might affect an owner of intellectual property rights in the technology used (for example, if the owner ceases to operate or is prohibited from doing business with the government), the State should always either be granted ownership of the system or an unrestricted licence to the source code.

78. In terms of the cost of the ICT infrastructure, the level of security needed by an electronic registration system and its cost must be carefully addressed. In particular, it is important to align the risk attached to a specific interaction (between the registry and the business or the registry and other public authorities) with the costs and administration required to make that interaction secure. Low security may deter parties from using electronic services (unless it is mandatory), but costly high security measures could have the same effect.

C. Phased approach to the implementation of an electronic registry

79. The methods used to establish the online system should be consistent with the reforms required as they can determine the success or the failure of the initiative. Moving directly to a full online solution before re-engineering registry business processes would be a mistake in many cases, as the solutions designed would not be able to capture the technology's full benefits. Moreover, subject to the level of development of the implementing State, factors such as the existence and quality of the infrastructure and literacy rates (including computer literacy) of the intended users should be carefully considered before the adoption of an online system. Several States, for example, must deal with a non-existent or weak ICT infrastructure, lack of dependable electricity supplies and Internet connectivity, and a low literacy rate, which may have a disproportionate effect on women and businesses in rural areas. In these instances, technical and capacity-building assistance programmes coordinated by international organizations might be necessary in order to progress towards the goal of a fully automated electronic registry.

80. In locations where Internet penetration is not extensive, a phased approach may be an appropriate way forward. Automation would start with the use of simple databases and workflow applications for basic operations, such as name searches or the sharing of information with other government authorities, and then would progress to more sophisticated web-based systems that would enable customers to conduct business with the registry entirely online. These web-based systems could be quite convenient for smaller businesses operating at a distance from the registry, provided that those entrepreneurs were able to access the system. The final phase of the approach would be to accommodate ICT interoperability between those authorities involved in business registration.

81. The simplest approach for States beginning their activity in this area would be to develop a content-rich website that consolidates registration information, provides downloadable forms, and enables users to submit feedback. This simple resource would allow users to obtain information and forms in one place and would make registries more efficient by enabling users to submit email inquiries before going to registry offices with the completed forms. Since this solution does not require a stable Internet connection, it may appeal to States with limited Internet access.

82. If only limited Internet bandwidth is available, then automating front-counter and back-office operations prior to moving online would be a suitable approach. If the registry has sub-offices outside its main location (for example, in rural areas), it would be important to establish a dedicated Internet connection with them. This approach would still require entrepreneurs to visit the registry, but at least it would establish a foundation on which the registry could later develop a more sophisticated web platform. A key factor even at this basic stage would be for the system to be able to digitize historical records and capture key information in the registry, such as the names of members or owners and directors of the business.

83. Once the State's technological capacity and Internet penetration allows for digital commerce, then platforms that enable businesses to apply and pay for registration online as well as to file annual accounts and update registration details as operations change can be developed. With regard to online payment of a registration fee, it should be noted that ICT-supported solutions would depend on a State's available modes of payment and on the regulatory framework that establishes the modes of payment that a public authority can accept. When the jurisdiction has enacted laws that allow for online payment, the most efficient option is to combine the filing of the electronic application and the fee payment into one step. Error checks should be included in ICT systems that incorporate this facility, so that applications are not submitted before payments are completed and registry officials can see payment information along with the application. When fee payment is required before registration of the business, this constitutes a separate procedural step and the use of ICT solutions in order to be user-friendly would require streamlining the procedures for filing the application and for payment (see also para. 77(c) above). In some States, the use of mobile payment systems might permit easier and more effective methods of payment for registration and other related fees. In such cases, the same considerations involved in establishing online payments (e.g. enacting appropriate laws, as well as designing efficient options to combine mobile payments and the filing of registration documents) should be applied in order to develop efficient solutions appropriate to the use of mobile technology.

84. As noted above (see para. 73) when introducing electronic registration systems, States should adopt legislation that facilitates the implementation of these electronic solutions, although the obligation to use such solutions should be considered only when the various stakeholders concerned with the registration process (including the registrant, government authorities, and other relevant authorities) are prepared to comply. Furthermore, when developing such laws, States should take into account that while certain legal requirements can be checked electronically, the most complex aspects of the process may need to be addressed by a registry official.

85. Enacting States should also be aware that establishing an electronic registration system requires a well-designed legal and regulatory framework that promotes

simplicity and flexibility and avoids, to the greatest extent possible, discretionary power and the making of exceptions (see para. 33 above). For example, provisions requiring the interpretation of the content of documents and the collection of various pieces of information are difficult to adapt to electronic processing; the same applies to granting authority to the registrar to establish fees for the services of the registry and establishing a complex structure of rules and exceptions.

86. When a State has developed the ICT infrastructure necessary to achieve full business registry automation, the integration of other online registration processes for taxation, social security and other purposes could be considered. Even if no integration with registrations required by other public authorities is built into the system, it would nevertheless be advisable that States implement data interchange capabilities so that the relevant business information could be shared across government authorities (see para. 77(c) above). A final improvement would be the development of mechanisms for disseminating value-added business information products to interested parties; such products could substantially contribute to the financial sustainability of the registry (see paras. 192 to 193 and 197 below).

87. One issue that would likely arise when the online registry is able to offer full-fledged electronic services would be whether to abolish any paper-based submission of information or to maintain both online and paper-based registration. In many jurisdictions, registries choose to have mixed solutions with a combination of electronic and paper documents or electronic and manual processing during case handling. This approach may result in considerable cost for registries, since the two systems require different tools and procedures. Moreover, if this option is chosen, it is important to establish rules to determine the time of registration as between electronic and paper-based submissions. Finally, paper applications must be processed in any case, so that the information included in a paper document can be transformed into data that can be processed electronically; this can be done by scanning the paper-based application for registration (possibly using optical character recognition technology so as to make the scanned document electronically searchable). However, in order to ensure that the record made by scanning correctly represents the paper application, the registry will likely have to employ staff to check that record, thus adding a step that increases costs and reduces the benefits of using an online system.

D. Other registration-related services supported by ICT solutions

88. Automation should enable the registry to perform other functions in addition to the processing of applications. Where States require user-friendly electronic filing and repopulated forms,[44] for example, it can assist businesses in the mandatory filing of periodic returns and annual accounts. Electronic filing and automated checks also help reduce processing time by the registry.

89. Electronically supported registration could also assist the registry in deregistration procedures, i.e. notations in the registry that a particular business is no longer registered (see paras. 225 to 227 and rec. 49 below). Such procedures usually require an official announcement that a business will be deregistered. The use of ICT can provide for the automation of such announcements, from initiating the process to producing a standard notice, thus helping registries to ensure that businesses are not deregistered before any time limit has elapsed and to reduce processing time. In order to be fully effective, however, adoption of an electronic registration system needs to be supported by streamlined procedures that enable the deregistration of businesses in a simplified and quick way.

[44] Repopulated forms allow selected fields to be automatically filled based on information previously provided by the registrant or maintained in their user account. When changes in the registrant's information occur, the registrant is not required to fill out the entire form again, but only to enter the relevant changes. Information included in the repopulated form is stored and may be made accessible to and exchangeable with other relevant authorities.

90. Further, ICT solutions could be applied to assist in the filing of financial information in machine-readable format (such as extensible Business Reporting Language, or XBRL). For example, a platform could be provided to assist in the conversion of paper-based financial statements to XBRL format. Machine-readable financial data facilitates the aggregation and analysis of financial information, which could be of significant value to users of the registry.

91. Solutions using ICT could also support follow-up and enforcement procedures of business registries when businesses fail to comply with registration requirements. In one jurisdiction, for example, the back-office system of the registry monitors the records of businesses and detects whether certain circumstances suggest that the business is not in compliance with statutory requirements. An automatic notice to the business is then produced in order for it to remedy the situation. Should the business fail to do so within the statutory deadline, the ICT solution starts a new procedure to forward the case to the district court, which may make a decision on the compulsory liquidation of the business. Upon issuing an order for compulsory liquidation, the court notifies the registry, which then deregisters the business.

Recommendation 12: Electronic, paper-based or mixed registry

The law should provide that the optimal medium to operate an efficient business registry is electronic. Should full adoption of electronic services not yet be possible, such an approach should nonetheless be implemented to as great an extent as permitted by the current technological infrastructure of the enacting State, as well as its institutional framework and laws, and expanded as that infrastructure improves.

E. Electronic documents and electronic authentication methods

92. As noted above (see, for example, paras. 73 and 83), an efficient electronic business registry system should allow users to submit and receive documents in electronic format, to sign electronically when transmitting information or requests to the registry and to pay online for business registry services (see also para. 207 below and rec. 43). Therefore, as a preliminary step, appropriate domestic law should be in place to regulate all such matters (see also paras. 84 and 85 above).[45] States that enact legal regimes on electronic communications and electronic signatures may wish to consider the legislative texts prepared by UNCITRAL to govern electronic transactions.[46] Such texts establish the principles of technological neutrality and functional equivalence (see also paras. 12 to 15 in the Annex) that are needed to ensure equal treatment between electronic and paper-based communications; they also deal extensively with provisions covering the issues of legal validity of electronic documents and signatures,[47] authentication, and the time and place of dispatch and receipt of electronic messages. Because of the way these texts, and other UNCITRAL legislative texts, are negotiated and adopted, they offer solutions appropriate to

[45] At its twenty-ninth session, the Working Group agreed to include a cross reference to recommendation 43 (recommendation 42 in A/CN.9/WG.I/WP.106) and to include reference to the main features of an electronic business registry (i.e. electronic payments, electronic signatures and electronic documents) (para. 49, A/CN.9/928).

[46] Such texts include: the UNCITRAL Model Law on Electronic Commerce (1996); the UNCITRAL Model Law on Electronic Signatures (2001) and the United Nations Convention on the Use of Electronic Communications in International Contracts (2005). For further information, see http://www.uncitral.org/uncitral/uncitral_texts/electronic_commerce.html.

[47] Further to changes made in recommendation 13 (recommendation 12 in A/CN.9/WG.I/WP.106), the Secretariat has added a new sentence at the end of this footnote (footnote 86 in A/CN.9/WG.I/WP.106) which would now read: "The principle of 'technological neutrality' means that the provisions of the law are 'neutral' and do not depend on or presuppose the use of particular types of technology and can be applied to generation, transmission or storage of all types of information. The principle of 'functional equivalence' establishes the criteria under which electronic communications and electronic signatures may be considered equivalent to paper-based communications and hand-written signatures. According to the principle of 'legal validity' communications and signatures cannot be denied legal effect, validity or enforceability on the sole ground that they are in electronic form."

different legal traditions and to States at different stages of economic development. Furthermore, domestic legislation based on the UNCITRAL texts on electronic commerce will greatly facilitate cross-border recognition of electronic documents and signatures.

Recommendation 13: Electronic documents and electronic authentication methods[48]

The law should:

(a) Permit and encourage the use of electronic documents as well as of electronic signatures and other equivalent identification methods; and

(b) Regulate such use pursuant to principles established by law that electronic documents and signatures cannot be denied legal validity or enforceability, and that they are functionally equivalent to their paper-based counterparts.

F. A one-stop shop for business registration and registration with other authorities

93. As discussed above (beginning in para. 2), before a business may operate in the legally regulated economy, it is often required to register with several different government authorities in addition to the business registry. These additional authorities often require the same information that has already been gathered by the business registry. Entrepreneurs must often personally visit each authority and fill out multiple forms. Taxation, social security, justice and employment authorities are usually involved in this process; other administrative offices and institutions, specific to each jurisdiction, may also be involved. This often results in multiple procedures governed by different laws, duplication of information and lack of ownership or full control of the process by the authorities involved. Moreover, the entire process can require weeks, if not months.

94. The establishment of one-stop shops has thus become one of the most popular reforms to streamline business registration in recent years. One-stop shops are single outlets where entrepreneurs receive all of the information and forms they need in order to complete the necessary procedures to establish their business rather than having to visit several different government authorities.

95. Beyond this general description, the scope of one-stop shops can vary according to the services offered. Some one-stop shops only provide business registration services, which may still be an improvement if the registration process previously involved a number of separate visits to the relevant authorities; others carry out other functions related to the establishment of a business. A common additional function is registration with taxation authorities, although there are also examples of one-stop shops dealing with registration for social security and statistical purposes and with obtaining the required licences from municipal and other authorities. In some cases, one-stop shops assist entrepreneurs not only with business licences and permits but also with investment, privatization procedures, official diaries and journals, intellectual property and import-export registries, tourism-related issues and State-owned property management, and may provide access to utilities and banking services.[49]

96. The functions of one-stop shops can be carried out through physical offices or an electronic platform. Physical premises, when in rural areas, are particularly appropriate for businesses with limited access to municipal centres; so, too, are mobile offices, particularly in places that are too remote for States to have physical premises. In addition to physical premises, online business registration can be offered

[48] At its twenty-ninth session, the Working Group requested the Secretariat to redraft recommendation 13 (recommendation 12 in A/CN.9/WG.I/WP.106) by retaining subparagraph 13(a), combining elements of subparagraphs 13(b)(i) and 13(b)(iv) and deleting the remaining text (para. 51, A/CN.9/928).

[49] Further to a decision of the Working Group at its twenty-ninth session, the Secretariat has modified paragraph 95 as requested (para. 53, A/CN.9/928).

as an option available for registering a business. Online one-stop shops take advantage of solutions supported by ICT, which allow for the rapid completion of several formalities due to the use of dedicated software. Such online portals may provide a fully interconnected system or may still entail separate registration in respect of some requirements, for example, for taxation services.

97. When establishing one-stop shops, in particular those performing functions in addition to business registration, States can choose among different approaches. In the "one door" approach, representatives of different government authorities involved in registration are brought together in one physical place, but the registrant must deal separately with each representative (for example, the business registry official dealing with the approval of the business name, the clerks checking the documents, and the taxation official), although the different authorities liaise among themselves. As may be apparent, this solution is relatively uncomplicated and would normally not require any change in law or ministerial responsibilities, but it would involve establishing effective cooperation between the different government ministries. One issue States should consider when opting for this approach would be how much authority the representatives of each government authority should have; for example, should they have the discretion to process the registration forms on site or would they simply be acting on behalf of their agencies and be required to take the documents to their home agencies for further processing? Similarly, it is also important to consider clarifying the lines of accountability of the various representatives from the different agencies to the administrator of the one-stop shop.

98. Another form of one-stop shop is the so-called "one window" or "one table" version, which offers a higher level of integration of the different public agencies involved in the establishment of a business. In this case, the one-stop shop combines the process for obtaining business and other registrations with public authorities, such as for taxation and social security, with other arrangements, like publishing the registration in a National Gazette or newspapers, when required. All relevant documents are submitted to the one-stop shop administrator who is authorized, and properly trained, to accept them on behalf of the various government authorities involved. Documents are then dispatched, electronically or by hand or courier, to the competent authority for processing. This type of one-stop shop requires detailed coordination between the different government authorities, which must modify their procedures to ensure an effective flow of information. A memorandum of understanding between the key agencies involved may be needed in order to establish the terms in respect of the sharing of business information. In some cases, taking such an approach may also require a change in legislation.

99. A third approach, which is less common, is based upon the establishment of a separate entity to coordinate the business registration function and to deal with other requirements that entrepreneurs must meet, such as making tax declarations, obtaining the requisite licences, and registering with social security authorities. Pursuant to this model, the entrepreneur would apply to the coordinating entity after having registered with the business registry in order to fulfil the various additional aspects of the procedures necessary prior to commencing business operations. Although this approach results in adding a step, it could be useful in some States since it avoids having to restructure the bodies with the main liability for business registration. On the other hand, the adoption of such a structure could involve an increase in the cost of the administrative functions and may only reduce time frames to the extent that it allows the various functions to take place successively or enables participants in the one-stop shop to network with the other agencies to speed up their operations. From the user's perspective, however, the advantage of being able to deal with a single organization remains.

100. Regardless of the approach chosen in the implementation of a one-stop shop, it is important to emphasize that such an arrangement does not require the establishment of a single government authority with authority over all of the other agencies related to the one-stop shop. Instead, it involves designating which government authority has authority over the single integrated interface, while all of the government authorities participating in the one-stop shop retain their functional autonomy. In order to

enhance the benefits deriving from the establishment of a one-stop shop, it would be desirable that States facilitate improved technical and institutional interoperability among the public authorities participating in the one-stop shop, including through the adoption of a unique identifier for each business (see paras. 104 to 117 and rec. 15 below) and a single form for registration with, and payment of fees to each authority. In recent years, for example, several jurisdictions have adopted integrated online registration systems in which an application submitted for business registration includes all of the information required by business registry, taxation, social security and possibly other authorities. Once completed, the information in the integrated application is transmitted by the business registry to all relevant authorities.[50] Information and any necessary approvals from the other authorities are then communicated back to the registry, which immediately forwards the information and approvals to the business. While this is beneficial for all businesses, regardless of their size, it is particularly valuable for MSMEs, which may not have the resources necessary to cope with the compliance requirements of multiple government authorities in order to establish their business.

101. In States with developed ICT infrastructures, the functions of the agencies concerned with registration may be fully integrated through the use of a common database which is operated by one of the agencies involved and provides simultaneous registration for various purposes, i.e. business registration, taxation, and social security, etc. In some jurisdictions, a public agency (such as the tax administration) is responsible for the registration of businesses, or ad hoc entities have been set up to perform simultaneous registration with all public authorities. In other jurisdictions, advanced interoperability among the different public authorities involved in the registration process has resulted in a consolidated electronic registration form that can be repopulated[51] with information from the different agencies concerned. In jurisdictions where this approach has been developed, agencies perform regular file transfers to update the database as well as their own records; they have direct access to the common database and use the same back-office systems to update it; and the information registered is regularly verified by trusted staff of the agencies. Such strong coordination among the relevant public authorities is often based on regulatory provisions that allocate roles and responsibilities among the various agencies involved. Moreover, in certain jurisdictions such integrated delivery and governance of the registration process with the relevant public authorities takes the form of an electronic platform that allows other public authorities involved in the establishment of a business to connect to the platform and share information on the business.[52]

102. One issue that States should consider when establishing a one-stop shop is its location. It is usually advisable for the one-stop shop to be directly connected to the business registry office, either because it is hosted there or because the registry is part of the one-stop shop. The organization responsible for the one-stop shop could thus be the same as that which oversees the business registration process. This approach should take into account whether such organizations are equipped to administer the one-stop shop. Examples from various jurisdictions indicate that where authorities such as executive agencies are responsible for business registration, they possess the skills to perform one-stop shop functions as well. The same can be said of chambers of commerce, government commissions, and regulatory authorities. There are very few examples of adoption of a one-stop shop approach in those States where business registration is under the administrative oversight of the judiciary.

103. Although one-stop shops do not necessarily require changes to domestic legislation, it is important that the operation of such mechanisms be legally valid, which may involve adapting existing law to the new structure and method of

[50] Further to the decision of the Working Group at its twenty-ninth session, the Secretariat has adjusted paragraph 100 (para. 102 of A/CN.9/WG.I/WP.106) to include reference to an integrated application form for registration with the main relevant public authorities with which a business may have to register at its establishment (para. 56, A/CN.9/928).

[51] For details on repopulated forms, see footnote 44, supra.

[52] The Secretariat has made the necessary adjustments to this paragraph in light of the request made by the Working Group at its twenty-ninth session to ensure that the concept of “interoperability” was sufficiently included in the commentary (para. 52, A/CN.9/928).

proceeding. For example, effective functioning of the one-stop shop may require provisions governing the collection of information by public authorities as well as the exchange of information among such authorities. The extent of the changes required will thus vary according to the different needs of the State and the structure of its system of registration with public authorities mandatorily involved in the establishment of a business. For example, in several States, enhanced interoperability between the business registry, taxation and social security authorities through the one-stop shop may have to take into consideration that while registration with taxation and social security authorities is usually mandatory, registration with the business registry may be on a voluntary basis. In addition, one-stop shops should be given a sufficient budget (since they can be quite expensive to establish and maintain), they should be staffed with well-trained personnel, and they should have their performance regularly monitored by the supervising authority in accordance with user feedback.

Recommendation 14: A one-stop shop for business registration and registration with other authorities

The law should establish a one-stop shop for business registration and registration with other public authorities, including designating which public authority should oversee the functioning of the single interface. Such an interface:

(a) May consist of an electronic platform or physical offices; and

(b) Should integrate the services of as many public authorities requiring the same information as possible, including, but not limited to, business registry, taxation and social security authorities.[53]

G. Use of unique identifiers

104. In those jurisdictions where the government authorities with which businesses are required to register operate in isolation from each other, it is not unusual for this procedure to result in duplication of systems, processes and efforts. This approach is not only expensive but may cause errors. Moreover, if each authority assigns a registration number to the business when it registers with that authority, and the use and uniqueness of that number is restricted to the authority assigning it, information exchange among the authorities requires each authority to map the different identification numbers applied by the other authorities. When ICT solutions are used, they can facilitate such mapping, but even they cannot exclude the possibility that different entities will have the same identifier, thus reducing the benefits (in terms of cost and usefulness) obtained from the use of such tools.

105. States wishing to foster advanced integration among different authorities, in order to minimize duplication of procedures and facilitate exchange of information among relevant public authorities, may wish to consider that in recent years, tools have been developed to facilitate inter-agency cooperation. For example, one international organization has developed an online system that allows for the interoperability of the various public authorities involved in business registration with minimal or no change at all in the internal processes of the participating authorities nor in their computer systems.

106. Some States have introduced a more sophisticated approach, which considerably improves information exchange throughout the life cycle of a business. This approach, which is based on enhanced technical and institutional interoperability of the authorities involved (such as the ability of different ITC infrastructures to exchange and interpret data; or semantic interoperability – see para. 117 below), requires the use of a single unique business identification number or unique identifier, which ties information to a given business and allows for information in respect of it

[53] At its twenty-ninth session, the Working Group agreed to replace the phrase “but at a minimum should include” in recommendation 14(b) (recommendation 13(b) in A/CN.9/WG.I/WP.106) with “including, but not limited to” (para. 54, A/CN.9/928).

to be shared among business registry, taxation and social security authorities as well as other public authorities and possibly private agencies.

107. A unique identifier is structured as a set of characters (numeric or alphanumeric) which distinguish registered entities from each other. When designing a unique identifier, it may be advisable to build some flexibility in the structure of the identifier (for example, by allowing the addition of new characters to the identifier at a later stage) so that the identifier can be easily adaptable to new system requirements in a national or international context, or both. The unique identifier is allocated only once (usually upon establishment) to a single business and does not change during the existence of that business,[54] nor after its deregistration. The same unique identifier is used for that business by all public authorities (and possibly private agencies), which permits information about that particular registered entity to be shared.

108. The experience of States that have adopted unique identifiers has demonstrated the usefulness of such tools. As noted above, they permit all government authorities to identify easily new and existing businesses, and to verify information in respect of them. In addition, the use of unique identifiers improves the quality of the information contained in the business registry, and in the records of the other interconnected authorities, since the identifiers ensure that information is linked to the correct entity even if its identifying attributes (for example name, address, and type of business) change. Moreover, unique identifiers prevent the situation where, intentionally or unintentionally, businesses are assigned the same identification; this can be especially significant where financial benefits are granted to legal entities or where liability to third parties is concerned. Unique identifiers have been found to produce benefits for businesses as well, in that they considerably simplify business administration procedures: entrepreneurs do not have to manage different identifiers from different authorities, nor are they required to provide the same or similar information to different authorities. Introducing unique identifiers can also contribute to improving the visibility of businesses, in particular of MSMEs, with possible partners as well as with potential sources of finance, since it would assist in creating a safe and dependable connection between a business and all of the information that relates to it. This access to relevant information could facilitate the establishment of business relationships, including in the cross-border context.

109. One issue a State may have to consider when introducing unique identifiers is that of individual businesses that do not possess a separate legal status from their owners. In such cases, taxation, social security or other authorities may often prefer to rely on the identifier for the individual, who may be a natural person, rather than on the business identifier. However, States may also opt to assign a separate identifier to a sole proprietor in a business capacity and in a personal capacity.

110. Situations may arise in which different agencies in the same jurisdiction allocate identifiers to businesses based on the particular legal form of the business. States should thus consider adopting a verification system to avoid multiple unique identifiers being allocated to the same business by different public authorities. If the identifier is assigned through a single jurisdictional database the risk of several identifiers being allocated to one business or of several businesses receiving the same identifier is considerably reduced.

111. The effective use of unique identifiers is enhanced by the complete adoption of electronic solutions that do not require manual intervention. However, electronic solutions are not a mandatory prerequisite to introducing unique identifiers, as they can also be effective in a paper-based environment. When unique identifiers are connected to an online registration system, it is important that the solution adopted fits the existing technology infrastructure.

(a) Allocation of unique identifiers

[54] While the unique identifier does not change throughout the lifetime of a business, if the business changes its legal form, a new unique identifier must be allocated.

112. The use of unique identifiers requires sustained cooperation and coordination among the authorities involved, and a clear definition of their roles and responsibilities, as well as trust and collaboration between the public and business sectors. Since the introduction of a unique identifier does not of itself prevent government authorities from asking a business for information that has already been collected by other authorities, States should ensure that any reform process in this respect start with a clear and common understanding of the reform objectives among all the stakeholders involved. Moreover, States should ensure that a strong political commitment to the reform is in place. Potential partners ideally include the business registry, taxation and social security authorities, at a minimum, and if possible, the statistics office, the pension fund, and any other relevant authorities. If agreement among these stakeholders is elusive, at least the business registry, taxation and social security authorities should be involved. Information on the identifiers in use by the other authorities and within the business sector is also a prerequisite for reform, as is a comprehensive assessment to identify the needs of all stakeholders.

113. In order to permit the introduction of a unique identifier, the law should include provisions on a number of issues including:

(a) Identification of the authority charged with allocating the unique identifier;

(b) Allocation of the unique identifier before or immediately after registration with the authorities involved in the establishment of a business;

(c) Listing the information that will be related to the identifier, including at least the name, address and type of business;

(d) The legal mandate of the public authorities to use the unique identifier and related information, as well as any restrictions on requesting information from businesses;

(e) Access to registered information by public authorities and the private sector;

(f) Communication of business registration and amendments among the public authorities involved; and

(g) Communication of deregistration of businesses that cease to operate.

(b) Implementation of a unique identifier

114. Adoption of a unique identifier normally requires a centralized database linking the business to all relevant government authorities whose information and communication systems must be interoperable. This requirement can be a major obstacle to implementation if the technological infrastructure of the State is not sufficiently advanced.

115. States can introduce the unique identifier in one of two ways. In the first approach, business registration is the first step and includes the allocation of a unique identifier, which is made available (together with the identifying information) to the other authorities involved in the registration process (for example, taxation and social security authorities), and which is re-used by those authorities. In the second approach, the allocation of a unique identifier represents the beginning of the process. The unique identifier and all relevant information are then made available to the government authorities involved in business registration, including the business registry, and is then re-used by all authorities. Either of these two approaches can be followed by the authority entrusted with allocating unique identifiers, regardless of whether the authority is the business registry, a facility shared by public authorities or the taxation authority. The enacting State should determine the format of the unique identifier and which authority would have the authority to assign it. It is important to note that in some States, the use of a unique identifier may be restricted: in some

jurisdictions, certain government authorities still allocate their own identification number[55] although the business is assigned a unique identifier.

116. Introducing a unique identifier usually requires adaptation both by public authorities in processing and filing information and by businesses in communicating with public authorities or other businesses. A unique identifier requires the conversion of existing identifiers, which can be accomplished in various ways. Taxation identifiers are often used as a starting point in designing a new identifier, since the records of the taxation authorities cover most types of businesses and are often the most current. Examples also exist in which, rather than introducing a completely new number, the taxation number itself is retained as the unique business number. New identification numbers can also be created using other techniques according to a State's registration procedures. In such a situation, it is important that each business, once assigned a new number, verify the related identifying information, such as its name, address, and type of activity.

117. The interoperability of the ICT systems of different agencies could be a major obstacle when implementing unique identifiers. The ability of different information technology infrastructures to exchange and interpret data, however, is only one aspect of interoperability that States should consider. Another issue is that of semantic interoperability, which can also pose a serious threat to a successful exchange of information among the authorities involved as well as between relevant authorities and users in the private sector. For this reason, it is important to ensure that the precise meaning of the information exchanged is understood and preserved throughout the process and that semantic descriptions are available to all of the stakeholders involved. Measures to ensure interoperability would thus require State action on a dual level: agreement on common definitions and terminology on the one hand, and the development of appropriate technology standards and formats on the other. This approach should be based on a mutual understanding of the legal foundation, responsibilities and procedures among all those involved in the process.

(c) Cross-border exchange of information among business registries

118. States are increasingly aware of the importance of improving the cross-border exchange of data and information between registries,[56] and sustained progress in respect of ICT development now allows this aspect to be addressed. Introducing unique identifiers that enable different public authorities to exchange information about a business could thus be relevant not only at the national level, but also in an international context. Unique identifiers can allow more efficient cross-border cooperation among business registries located in different States, as well as between business registries and public authorities in different States. Implementation of cross-border exchange of data and information can result in more dependable information for consumers and existing or potential business partners, including small businesses that provide cross-border services, as well as for potential sources of finance for the business (see paras. 198 and 199 and rec. 39 below).

119. Accordingly, States implementing reforms to streamline their business registration system may wish to consider adopting solutions that will, in future, facilitate such information exchanges between registries from different jurisdictions and to consult with States that have already implemented approaches that allow for such interoperability.[57] One such reform could include developing a system of

[55] In certain cases, authorities may keep their own numbering system in addition to using the unique identifier because of "legacy data", i.e. an obsolete format of identifying a business that cannot be converted into unique identifiers. In order to access such information, the registry must maintain the old identification number for internal purposes. In dealing with the public, however, the government authority should use for all purposes the unique identifier assigned to the business.

[56] For example, there are some regional examples of cross-border information-sharing on businesses between States, but these are cases where the information-sharing was a component of a broader project involving significant economic integration of the relevant States.

[57] Some States with more integrated economies have developed an application that allows users to carry out simultaneous searches of the registries in both States by using their smartphones or mobile devices.

business prefixes that would make the legal form of the business immediately recognizable across international and other borders.

Recommendation 15: Use of unique identifiers

The law should provide that a unique identifier should be allocated to each registered business and should:

(a) Be structured as a set of numeric or alphanumeric characters;

(b) Be unique to the business to which it has been allocated; and

(c) Remain unchanged and not be reallocated following any deregistration of the business.

Recommendation 16: Allocation of unique identifiers

The law should specify that the allocation of a unique identifier should be carried out either by the business registry upon registration of the business, or before registration by the designated authority. In either case, the unique identifier should then be made available to all other public authorities sharing the information associated with that identifier, and should be used in all official communication in respect of that business.

Recommendation 17: Implementation of a unique identifier

The law should ensure that, when adopting a system for the use of a unique identifier:

(a) There is interoperability between the technological infrastructure of the business registry and of the other public authorities sharing the information associated with the identifier; and

(b) That existing identifiers are linked to the unique identifier.

H. Sharing of protected data between public authorities

120. Although the adoption of a system of unique identifiers facilitates information sharing between public agencies,[58] it is important that sensitive data and privacy be protected. For this reason, when a State introduces interoperability among different authorities, it should address how public authorities may share protected data relating to individuals and businesses so that there is no infringement of the rights of data owners. States should thus ensure that all information sharing among public authorities occurs in accordance with the applicable law, which should establish the conditions under which such sharing is permitted. Moreover, the law should clearly identify which public authorities are involved, the information shared and the purpose for sharing, and establish that the owners of the data should be informed of the purposes for which their protected data may be shared among public authorities. Information-sharing should be based on the principle that only the minimum information necessary to achieve the public authority's purpose may be shared and that appropriate measures are in place to protect the rights to privacy of the business. When devising appropriate law or policy on the sharing of protected data between public authorities, it is important for States to consider the interoperability of those public authorities.

Recommendation 18: Sharing of protected data between public authorities

The law should establish that rules for the sharing of protected data between public authorities pursuant to a unique identifier system:

(a) Conform to the applicable law on the sharing of protected data between public authorities;

(b) Enable a public authority to access protected data only in order to carry out their statutory functions; and

(c) Enable a public authority to access protected data only in relation to those businesses with respect to which it has statutory authority.

IV. Registration of a business

A. Scope of examination by the registry

121. The method through which a business is registered varies from State to State, ranging from those that tend to regulate less and rely on the law that governs business behaviour, to States that opt for ex ante screening of a business before it may be registered (see also para. 60 above). In this regard, a State aiming at reforming the registration system must first decide which approach it will take to determine the scope of the examination that will have to be carried out by the registry. The State may thus choose to have a system where the registry only records information submitted to it by the registrant or a system where the registry is required to perform legal verifications and decide whether the business meets the criteria to register.[59]

122. States opting for ex ante verification of legal requirements and authorization before businesses can register (referred to as an "approval system") often have registration systems under the oversight of the judiciary in which intermediaries such

[58] At its twenty-ninth session, the Working Group requested the Secretariat to add the phrase "between public agencies" (para. 58, A/CN.9/928).

[59] At its twenty-ninth session, the Working Group agreed: (a) to replace the term "legal framework" in the opening sentence of paragraph 121 (para. 120 of A/CN.9/WG.I/WP.106) and elsewhere in the draft legislative guide with the defined term "law" (para. 13 of A/CN.9/WG.I/WP.106); and (b) to replace the phrase "only records facts" in the final sentence of paragraph 121 with "only records information submitted to the registry by the registrant" (para. 61, A/CN.9/928).

as notaries and lawyers perform a key role.[60] Other States structure their business registration as a declaratory system, in which no ex ante approval is required before the establishment of a business and where registration is an administrative process. In such declaratory systems, registration is under the oversight of a government department or authority, which can choose whether to operate the business registration system itself or to adopt other arrangements. There are also States that do not fall neatly within either category and in which there is a certain variation in the level and type of verification carried out as well as in the level of judiciary oversight.

123. Both the approval and the declaratory system have their advantages. Approval systems intend to protect third parties by preventing errors or omissions prior to registration. Courts and intermediaries exercise a formal review and, when appropriate, a substantive review of the prerequisites for the registration of a business. On the other hand, declaratory systems are said to reduce the inappropriate exercise of discretion; furthermore, they may reduce costs for registrants by negating the need to hire an intermediary and appear to have lower operational costs. Some systems have been said to merge advantages of both the declaratory system and the approval system by combining ex ante verification of the requirements for establishing a business with a reduced role for the courts and other intermediaries, thus simplifying procedures and shortening processing times.[61]

B. Accessibility of information on how to register

124. In order for the business registry to facilitate trade and interactions between business partners, the public and the State, easy access to business registry services should be provided both to businesses that want to register and to interested users who want to search the information on the business registry.

125. For businesses wanting or required to register, many microbusinesses may not be aware of the process of registration nor of its costs: they often overestimate time and cost, even after the registration process has been simplified. Easily retrievable information on the registration process should be made available (e.g. a list of the steps needed to achieve the registration; the necessary contacts; the data and documents required; the results to be expected; how long the process will take; methods of lodging complaints; and possible legal recourse), including on the advantages offered by a one-stop shop (where available) (see also paras. 93 to 103 and rec. 14 above) as well as on the relevant fees. This approach can reduce compliance costs, and make the outcome of the application more predictable, thus encouraging entrepreneurs to register. Restricted access to such information, on the other hand, might require meetings with registry officials in order to be apprised of the registration requirements or the involvement of intermediaries to facilitate the registration process.

126. In jurisdictions with developed ICT infrastructures, information on the registration process and documentation requirements should be available on the registry website or the website of the government authority overseeing the process. Moreover, the possibility of establishing direct contact with registry personnel through a dedicated email account of the registry, electronic contact forms or client service telephone numbers should also be provided. As discussed below (see para. 141), States should consider whether the information included on the website should be offered in a foreign language in addition to official and local languages. States with more than one official language should make the information available in all such languages.

---

[60] At its twenty-ninth session, the Working Group agreed to replace the phrase “court-based registration systems” in the first sentence and throughout the text with an appropriate term such as “verification-based systems” or “systems under the oversight of the judiciary” (para. 62, A/CN.9/928).

[61] At its twenty-ninth session, the Working Group agreed to replace the text of paragraph 123 (para. 122 of A/CN.9/WG.I/WP.106) with text proposed at that session (para. 64, A/CN.9/928).

127. A lack of advanced technology, however, should not prevent access to information that could be ensured through other means, such as through the posting of communication notes at the premises of the relevant agency or dissemination through public notices. In some jurisdictions, for example, it is required to have large signs in front of business registry offices advising of their processes, time requirements and fees. In any event, information for businesses to register should be made available at no cost.

128. It is equally important that potential registry users are given clear information on the logistics of registration and on the public availability of information on the business registry. This may be achieved, for example, through the dissemination of guidelines and tutorials (ideally in both printed and electronic form) and through the availability of in-person information and training sessions. In some States, for example, prospective users of the system are referred to classroom-based or eLearning opportunities available through local educational institutions or professional associations.

Recommendation 19: Accessibility of information on how to register

The law should provide that the registrar should ensure that information on the business registration process and any applicable fees is widely publicized, readily retrievable, and available free of charge.

C. Businesses permitted or required to register

129. One of the key objectives of business registration is to permit businesses of all sizes and legal form to improve their visibility in the marketplace and to the public. This objective is of particular importance in assisting MSMEs to participate effectively in the economy and to take advantage of State programmes available to assist them. States should enable businesses of all sizes and legal form to register in an appropriate business registry, or create a single business registry that is tailored to accommodate registration by a range of different sizes and different legal forms of business.

130. Enabling the registration of businesses that would not otherwise be required to register with the business registry (but may be subject to mandatory registration with other public authorities, such as taxation and social security)[62] allows such businesses to benefit from a number of services offered by the State and by the registry, including the protection of a business or a trade name, facilitating access to credit, accessing additional opportunities for growth, improving visibility to the public and to markets and, subject to the legal form chosen for the business which may require it to be registered, the separation of personal assets from assets devoted to business or limiting the liability of the owner of the business. Businesses that voluntarily register with the business registry must, however, fulfil the same registration obligations (e.g. timely filing of periodic returns, updating of registered information, accuracy of information submitted) as those businesses that are required to register and will be subject to the same penalties for non-compliance.

131. States must also define which businesses are required to register under the applicable law. Laws requiring the registration of businesses vary greatly from State to State, but one common aspect is that they all require registration of a particular legal form of business. The nature of the legal forms of business that are required to register in a given jurisdiction is, of course, determined by the applicable law. In some legal traditions, it is common to require registration of all businesses, including sole proprietorships, professionals, and government bodies; in other legal traditions, only corporations and similar entities (with legal personality and limited liability) are required to register. This latter approach can exclude businesses like partnerships and

[62] In keeping with the views of the Working Group at its twenty-ninth session that the concepts of registration with the business registry and of operation of a business in the legal economy are not necessarily synonymous, the Secretariat has added the phrase “with the … security)” to paragraph 130 (para. 129 of A/CN.9/WG.I/WP.106) (para. 22, A/CN.9/928).

sole proprietorships from mandatory registration. However, variations on these regimes also exist, and some jurisdictions permit voluntary registration for businesses that would not otherwise be required to register, such as sole traders and professional associations.

132. Even when business registration is voluntary, it may still prove burdensome for MSMEs and outweigh the benefits the business could gain as a registered business, thus discouraging registration. Some jurisdictions have carried out reforms to simplify the registration process by decreasing its cost (see paras. 202 to 204 and rec. 40 below) and by removing administrative obstacles. In any event, States should encourage micro and small businesses to register by adopting policies especially tailored to the needs of such businesses in order to convey to them the advantages of registration, including specific incentives available for MSMEs (see paras. 40 to 42 in document A/CN.9/WG.I/WP.110). [63]

Recommendation 20: Businesses permitted or required to register

The law should specify:

(a) That businesses of all sizes and legal forms are permitted to register; [64] and

(b) Which legal forms of businesses are required to register.

D. Minimum information required for registration

133. Businesses must meet certain information requirements in order to be registered; those requirements are determined by the State based on its laws and economic framework. The information required usually varies depending on the legal form of business being registered – for example, sole proprietorships and simplified business entities may be required to submit relatively simple details (if at all) in respect of their business, while businesses such as public and private limited liability companies will be required to provide more complex and detailed information. Although the requirements for registration of each legal form of business will vary according to the applicable law, there are, however, some requirements that can be said to be common for many businesses in most States, both during the initial registration process and throughout the lifecycle of the business.

134. General requirements for the registration of all legal forms of business are likely to include information in respect of the business and its registrant(s), such as:

(a) The name of the business;

(b) The address at which the business can be deemed to receive correspondence (such an address can be a "service address" and need not be the residential address of the registrants or the managers of the business);

(c) The name(s) and contact details of the registrant(s);

(d) The identity of the person or persons who are authorized to sign on behalf of the business or who serve as the business's legal representative(s); and

(e) The legal form of the business that is being registered and its unique identifier, if such an identifier has already been assigned (see paras. 112 and 113 above). [65]

---

[63] At its twenty-ninth session, the Working Group requested the Secretariat to emphasize that transaction costs and administrative requirements should not create obstacles for businesses that want to register (para. 66, A/CN.9/928).

[64] At its twenty-ninth session, the Working Group agreed to modify recommendation 20(a) (recommendation 19(a) in A/CN.9/WG.I/WP.106) to read: "that businesses of all sizes and legal forms are permitted to register; and" (para. 67, A/CN.9/928).

[65] The Secretariat has adjusted the text in keeping with suggestions made by the Working Group at its twenty-ninth session (para. 68, A/CN.9/928).

135. Other information that may be required for registration, depending on the jurisdiction of the registry and the legal form of the business being registered, can include:

(a) The names and addresses of the persons associated with the business, which may include managers, directors and officers of the business;

(b) The rules governing the organization or management of the business; and

(c) Information relating to the capitalization of the business.[66]

136. Business registries may request information on the gender identification, ethnicity or language group of the registrant and other persons associated with the business, but the provision of such information should not be a requirement for registration. It should be noted, however, that while such information can be statistically important, particularly in light of State programmes that may exist to support under-represented groups, its collection could raise privacy issues. Such information should thus be requested only on a voluntary basis, should be treated as protected data and made available, if at all, only on a statistical basis.[67]

137. Depending on the legal form of the business being registered, other details may be required in order to finalize the registration process. In some jurisdictions, proof of the share capital, information on the type of commercial activities engaged in by the business, and agreements in respect of non-cash property constitute information that may also be required in respect of certain legal forms of business. In addition, in several jurisdictions, registration of shareholder details and any changes therein may be required; in a few cases, registration of shareholder details is carried out by a different authority. States should, however, be mindful that requesting a prospective business to submit complex and extensive information may result in making registration more difficult and expensive and thus may discourage MSMEs from registering.

138. It should also be noted that in some jurisdictions, registration of the identity of the business owner(s) is considered a key requirement; other jurisdictions now make it a practice to register beneficial ownership details and changes in those details, although the business registry is not always the authority entrusted with this task.[68] Transparency in the beneficial ownership of businesses can help prevent the misuse of corporate vehicles, including MSMEs, for illicit purposes.[69]

---

[66] As suggested by the Working Group at its twenty-ninth session, the Secretariat has removed redundancies in the commentary to recommendation 21 (recommendation 20 in A/CN.9/WG.I/WP.106) (para. 68, A/CN.9/928).

[67] Further to agreement by the Working Group at its twenty-ninth session on the importance of gathering disaggregated information in respect of the persons associated with the business, the Secretariat has drafted this paragraph (para. 69, A/CN.9/928).

[68] A "beneficial owner" is the natural person(s) who ultimately owns or controls a legal person or arrangement even when the ownership or control is exercised through a chain of ownership or by means of control other than direct control. These vehicles may include not only corporations, trusts, foundations, and limited partnerships, but also simplified business forms, and may involve the creation of a chain of cross-border company law vehicles created in order to conceal their ownership. See also paragraphs 47 to 55, A/CN.9/825.

[69] It should be noted that the Financial Action Task Force (FATF) Recommendation 24 in respect of transparency and beneficial ownership of legal persons encourages States to conduct comprehensive risk assessments of legal persons and to ensure that all companies are registered in a publicly available company registry. The basic information required is: (a) the company name; (b) proof of incorporation; (c) legal form and status; (d) the address of the registered office; (e) its basic regulating powers; and (f) a list of directors. In addition, companies are required to keep a record of their shareholders or members. (See International Standards on Combating Money Laundering and the Financing of Terrorism & Proliferation: The FATF Recommendations, Part E on Transparency and Beneficial Ownership of Legal Persons and Arrangements, Recommendation 24 (www.fatf-gafi.org/media/fatf/documents/recommendations/pdfs/FATF_Recommendations.pdf).)

Recommendation 21: Minimum information required for registration

The law should establish the minimum information and supporting documents required for the registration of a business, including at least:

(a) The name of the business;

(b) The address at which the business can be deemed to receive correspondence or, in cases where the business does not have a standard form address, the precise description of the geographical location of the business;

(c) The identity of the registrant(s);

(d) The identity of the person or persons who are authorized to sign on behalf of the business or who serve as the business's legal representative(s); and

(e) The legal form of the business being registered and its unique identifier, if such an identifier has already been assigned.

E. Language in which information is to be submitted

139. When requiring the submission of information for business registration, one important issue for the State to consider is the language in which the required information must be submitted. Language can be a barrier and can cause delays in registration if documents need to be translated into the language of the registry. On the other hand, a business can be registered only if the content of the information is legible to the registry staff. For this reason, it is not common for jurisdictions to allow documents or electronic records to be submitted in a non-official language. States, however, may consider whether such documents can be accepted. There are some States that allow all or some of the information relating to the business registration to be submitted in a non-official language. Should States opt for this approach, they may wish to require that the documents or electronic records must be accompanied by a sworn translation into the registry's national language(s) or any other form of authenticating the documents or electronic records that is used in the State.

140. Another issue is whether the documents submitted to the business registry include information, such as names and addresses, that uses a set of characters different from the characters used in the language of the registry. In such a situation, the State should provide guidance on how the characters are to be adjusted or transliterated to conform to the language of the registry.

141. A number of States have more than one official language. In these States, registration systems are usually designed to accommodate registration in all official languages. To ensure that information on businesses operating in the State is available to all registrants and searchers, different approaches can be adopted. States may require parties to make their registration in all official languages; or they may permit filing in one language only, but then require the registry to prepare and register duplicate copies in all official languages. Both these approaches, however, may be costly and invite error. A more efficient method to deal with multiple official languages, any one of which may be used to register, would be to allow registrants to carry out registration in only one of those official languages. Such a language could be that of the province or the region where the registry office or the registry sub-office is located and where the registrant has its place of business. This approach would also take into account the financial constraints of MSMEs and additional circumstances, such as possible literacy issues, when entrepreneurs may not be equally fluent in all official languages spoken in a State. When such an approach is chosen, however, States should ensure that the registration and public information relating to the registry are available in all official languages of the registry. Whichever approach is taken, States will have to consider ways to address this matter so as to ensure that the registration and any subsequent change can be carried out in a cost effective way for both the registrant and the registry and, at the same time, ensure that information can be understood by the registry's users.

Recommendation 22: Language in which information is to be submitted

The law should provide that the information and documents submitted to the business registry must be expressed in the language or languages specified, and in the character set as determined and publicized by the business registry.

F. Notice of registration

142. The enacting State should establish that the business registry must notify the registrant whether or not the registration of the business was effective as soon as practicable, and, in any event, without undue delay. Obligating the registry to inform promptly the registrant of the registration helps to ensure the integrity and security of the registry record. In States where online registration is used, the registrant should receive an online notification of the registration of the business immediately after all of the requirements for the registration of that business have been successfully fulfilled.

Recommendation 23: Notice of registration

The law should establish that the business registry should notify the registrant whether or not the registration of its business is effective as soon as practicable, and, in any event, without undue delay.

G. Content of notice of registration

143. The notice of registration should include the minimum information in respect of the registered business necessary to provide conclusive evidence that all requirements for registration have been complied with and that the business is duly registered according to the law of the enacting State.

Recommendation 24: Content of notice of registration

The law should provide that the notice of registration may be in the form of a certificate, notice or card, and that it should contain at least the following information:

(a) The unique identifier of the business;

(b) The date of its registration;

(c) The name of the business;

(d) The legal form of the business; and

(e) The law under which the business has been registered.

H. Period of effectiveness of registration

144. States may adopt one of two approaches to determine the period of effectiveness of the registration of a business. In some States, the registration of the business is subject to a maximum period of duration established by law. It follows that unless the registration is renewed, the registration of the business will expire on the date stated in the notice of registration or upon the termination of the business.[70] This approach imposes a burden on the registered business, which could be particularly problematic for MSMEs, as they often operate with minimal staff and limited knowledge of the applicable rules. Further, if additional information is required and not furnished by the business, renewal of its registration could also be refused.

[70] It should be noted that the general law of the enacting State for calculating time periods would apply to the calculation of the period of effectiveness, unless specific legal provisions applicable to registration provides otherwise. For example, if the general law of the enacting State provides that, if the applicable period is expressed in whole years from the day of registration, the year runs from the beginning of that day.

145. Under the second approach, no maximum period of validity is established for the registered business and the registration is effective until the business ceases to operate and is deregistered. This approach simplifies the intake process and both encourages registration and reduces its burden on all businesses. However, States that opt for this approach should ensure the adoption of appropriate methods (e.g. sending regular prompts to businesses, establishing advertising campaigns as reminders, or, as a last resort, enforcement procedures) to encourage businesses to keep their registered information current (see paras. 163 to 167 and rec. 30 below).

146. In some cases, both approaches have been adopted: a maximum period of registration, subject to renewal, may apply to registered businesses that are of a legal form that does not have legal personality, while an unlimited period of registration may apply to businesses that have legal personality. This duality of approach reflects the fact that the consequences of the expiry of registration of a business that possesses legal personality are likely to be more serious and may affect the very existence of the business and the limited liability protection afforded its owners.

147. Although some jurisdictions require registered businesses to renew their registration periodically, the practice of establishing registration without a maximum period of validity is a more desirable approach as it meets the needs of businesses for simplified and fast procedures, while relieving them, in particular MSMEs, of a potential burden.

Recommendation 25: Period of effectiveness of registration

The law should establish that the registration is valid until the business is deregistered.

I. Time and effectiveness of registration

148. In the interests of transparency and predictability of a business registration system, States should determine the moment at which the registration of a business or any later change made to the registered information is effective. States usually determine that a business registration or any subsequent change made to it is effective either at the time of the entry of that information into the registry record or when the application for registration (or a change to that information) is received by the registry. Whichever approach is chosen, the most important factor is that the State makes it clear at which moment the registration or change is effective. In addition, the effective time of registration of the business or any later change to the registered information should be indicated in the registry record relating to the relevant business.

149. In some jurisdictions, businesses may also apply for the protection of certain rights in the period prior to registration. For example, the provisional registration of the trade name of the business to be registered may protect that name from being used by any other entity until the registration of the business is effective. In such cases, States should be equally clear to establish the moment at which such pre-registration rights are effective and the period of their effectiveness.[71]

150. If the registry is designed to enable users to submit or amend registered information electronically without the intervention of registry staff and to use online payment methods for the registration, the registry software should ensure that the information becomes effective immediately or nearly immediately after it is transmitted. As a result, any delay between the time of the electronic transmission of the information and the effective time of registration of the business will be eliminated.

151. In registry systems in which the registry staff must enter the information into the registry record (whether it is received electronically or in paper form), there will inevitably be some delay between the time when the information is received in the

[71] At its twenty-ninth session, the Working Group agreed to move the substance of footnote 162 of A/CN.9/WG.I/WP.106 into the commentary (para. 74, A/CN.9/928).

registry office and the time when the information is entered into the registry record. In these cases, the law should provide that the registry must enter the information received into the registry record as soon as practicable and possibly set a deadline by which that entry should be completed. In a mixed registry system which allows information to be submitted in both electronic and paper form, registrants who elect to use the paper form should be alerted that this method may result in some delay in the time of effectiveness of the registration. Finally, a business registry usually processes applications for registration in the order in which they have been received, although some jurisdictions may permit expedited processing of applications, subject to the payment of an additional fee.[72]

Recommendation 26: Time and effectiveness of registration

The law should:

(a) Require the business registry to record the date and time that applications for registration are received and to process them in that order as soon as practicable and, in any event, without undue delay;

(b) Establish clearly the moment at which the registration of the business is effective; and

(c) Specify that the registration of the business must be entered into the business registry as soon as practicable thereafter, and in any event without undue delay.

J. Rejection of an application for registration

1. Rejection due to errors in the application for registration

152. A series of checks and control procedures are required to ensure that the necessary information is provided in order to register the business, however, the extent of such controls varies according to the jurisdiction. In those legal regimes where the registry performs simple control procedures, if all of the basic legal and administrative requirements established by applicable law are met, the registrar must accept the information as filed, record it, and register the business. When the legal regime requires a more thorough verification of the information filed, registries may have to check whether mandatory provisions of the law are met by the content of the application and information submitted, or by any amendments thereto. Whichever approach is chosen, States should define in their law which requirements the information to be submitted to the registry must meet. In certain jurisdictions, the registrar is given the authority to impose requirements as to the form, authentication and manner of delivery of information to be submitted to the registry. When an MSME is seeking to register, such requirements should be kept to a minimum in order to facilitate the registration process for MSMEs. This will reduce administrative hurdles and help in promoting business registration among such businesses.

153. Registration of MSMEs may also be facilitated if the registrar is granted the power to accept and register documents that do not fully comply with the requirements for the form of the submission, and to rectify clerical errors, including its own incidental errors, in order to bring the entry in the business registry into conformity with the documents submitted by the registrant. This will avoid imposing the potentially costly and time-consuming burden of requiring the registrant to resubmit its application for registration. Entrusting the registrar with these responsibilities may be particularly important if registrants do not have direct access to electronic submission of documents and where such submission, or the entry of data, requires the intervention of the registry staff. In States where it is possible for registrants to submit applications for registration directly online, the electronic

[72] The Secretariat has added a sentence at the end of the paragraph further to a request of the Working Group at its twenty-ninth session that the commentary should include a reference to States that permitted the processing of expedited registration subject to the payment of an additional fee (para. 74, A/CN.9/928).

registration system usually provides automated scrutiny of the data entered in the application. When the registrar is granted the authority to correct its own errors as well as any incidental errors that may appear in the information submitted in support of the registration of the business, the law of the enacting State should strictly determine under which conditions those responsibilities may be discharged (see also para. 233 and 234 and rec. 52 below). Clear rules in this regard will ensure the integrity and security of the registry record and minimize any risk of abuse from or corruption by the registry staff (see also paras. 214 to 219 and rec. 46 below). The law of the enacting State should thus establish that the registry may only exercise its discretion to correct errors upon having provided prior notification of the intended corrections to the registrant and having received the consent of the registrant in return, although this approach could create a delay in the registration of the business while the registrar seeks such consent. When the information provided by the business is not sufficient to comply with the requirements for registration, the registrar should be granted the authority to request from the business additional information in order to finalize the registration process. The law of the enacting State should specify an appropriate length of time within which the registrar should make such a request.

154. The rejection of an application for registration is likely to be processed differently depending on whether the registration system is electronic, paper-based, or mixed. In a registry system that allows registrants to submit applications and relevant information directly to the registry electronically, the system should be designed, when permitted by the State's technological infrastructure, so as to automatically require correction of the application if it is submitted with an error, and to automatically reject the submission of incomplete or illegible applications, displaying the reasons for the rejection on the registrant's screen. In cases where the application for registration of a business is submitted in paper form and the reason for its rejection is that the application was incomplete or illegible, there might be some delay between the time of receipt of the application by the registry and the time of communication of its rejection, and the reasons therefor, to the registrant. In mixed registry systems which allow applications to be submitted using both paper and electronic means, the design of the electronic medium should include the technical specifications that allow for automatic requests for correction or automatic rejection of an application. Moreover, registrants who elect to use the paper form when such a choice is possible should be alerted that this method may result in some delay between the time of receipt of the application by the registry and the time of communication of any rejection, and the reasons therefor.

2. Rejection of an application for failure to meet the requirements prescribed by law

155. States should provide that registries may reject the registration of a business if its application does not meet the requirements prescribed by the applicable law of the State.[73] This approach is implemented in several jurisdictions regardless of their legal tradition. In order to prevent any arbitrary use of such power, however, the registrar must provide, in writing, a notice of the rejection of an application for registration and the reasons for which it was rejected, and the registrant must be allowed time to appeal against that decision as well as to resubmit its application. Moreover, it should be noted that the authority of the registrar to reject an application should be limited to situations where the application for registration does not meet the conditions for registration as required by law. The registrar should not have the authority over the substantive grounds for the establishment of a particular legal form of business; such matters should be governed by the law of the enacting State.[74]

---

[73] Instances in which the registry improperly accepts an application and registers a business that does not meet the requirements prescribed by law should be governed by the provisions establishing liability of the business registry, if any (see paras. 214 to 219 below). Moreover, the law of the State should establish how rectification of business registration should be carried out in such instances.

[74] At its twenty-ninth session, the Working Group requested the Secretariat to move paragraphs 152, 153 and any reference in paragraph 154 (paras. 149, 150 and 152 of

Recommendation 27: Rejection of an application for registration

The law should provide that the registrar:

(a) Must reject an application for the registration of a business if the application does not meet the requirements specified in the law;

(b) Is required to provide to the registrant in written form the reason for any such rejection;

(c) Is granted the authority to correct its own errors as well as any incidental errors that may appear in the information submitted in support of the registration of the business, provided that the conditions under which the registrar may exercise this authority are clearly established; and

(d) Is not authorized to reject an application for registration based on substantive grounds.[75]

K. Registration of branches

156. Registration of branches of a business is a common practice, although there are jurisdictions in which such registration is not required.[76] Most States require the registration of national branches of a foreign business in order to permit those branches to operate in their jurisdiction and to ensure the protection of domestic creditors, businesses and other interested parties that deal with those branches. In several States, registration of a branch of a business established in another domestic jurisdiction is also required or permitted. Registration of a business branch might not appear to be immediately relevant for MSMEs, whose main concern is more likely to be to consolidate their business without exceeding their human and financial capacity. However, this issue is relevant for those slightly larger businesses that, being of a certain size and having progressed to a certain volume of business, look to expand beyond their local or domestic market. In addition, even micro and very small businesses may be highly successful and may wish to expand their operations. For such businesses, establishing branches in a new location either within or outside the jurisdiction in which they were formed may be both an attractive goal and a realistic option. Although it may seem to be a daunting prospect, in fact, when a business expands, it may find that setting up a branch is cheaper and requires fewer formalities than establishing a subsidiary. This is usually the case even when cross-border branches are established.

157. States have their own rules for governing the operation of foreign businesses, and there may be considerable differences among those States that permit the registration of branches of foreign businesses in terms of what triggers the obligation to register them. Some approaches are based on a broad interpretation of the concept of foreign establishment, for example, those that include not only a branch, but also any establishments with a certain degree of permanence or recognizability, such as a place of business in the foreign State. Other approaches define more precisely the elements that constitute a branch which needs to be registered, possibly including the

---

A/CN.9/WG.I/WP.106) to the processing of registration forms in the commentary before recommendation 21 (recommendation 20 in A/CN.9/WG.I/WP.106). However, upon review it is suggested that those paragraphs remain in Section J of the guide for consistency with recommendation 27 (recommendation 26 in A/CN.9/WG.I/WP.106) and in accordance with previous decisions of the Working Group at its twenty-eighth session (para. 93, A/CN.9/900). The Secretariat has thus streamlined Section J by grouping paragraphs 152, 153 and 154 under subsection "1. Rejection due to errors in the application for registration" and relocated paragraph 155 (para. 151 of A/CN.9/WG.I/WP.106) under subsection "2. Rejection of an application for failure to meet the requirements prescribed by law" (para. 75, A/CN.9/928).

[75] Further to a request of the Working Group at its twenty-ninth session, the Secretariat has: (a) deleted the term "objective" in recommendation 27(a) (recommendation 26(a) in A/CN.9/WG.I/WP.106); and (b) added a subparagraph (d) (para. 76, A/CN.9/928).

[76] At its twenty-ninth session, the Working Group requested the Secretariat to consider clarifying that in some jurisdictions, branches were not required to register (para. 77, A/CN.9/928).

presence of some sort of management, the maintenance of an independent bank account, the relation between the branch and the original or main business, or the requirement that the original or main business has its main office registered abroad. Not all States define a branch in their laws, or state under which circumstances a foreign establishment in the State must be registered: laws may simply refer to the existence of a foreign branch. In these cases, registries may fill the gap by issuing guidelines that clarify the conditions under which such a registration should be carried out. When this occurs, the registration guidelines should not be seen as an attempt to legislate by providing a discrete definition of what constitutes a branch, but rather as a tool to explain the features required by a branch of a business in order to be registered.

158. When simplifying or establishing their business registration system, States should consider enacting provisions governing the registration of branches of businesses from other jurisdictions. Those provisions should address, at minimum, issues such as timing of registration, disclosure requirements, information on the persons who can legally represent the branch and the language in which the registration documents should be submitted. Duplication of names could represent a major issue when registering foreign company branches, and it is important to ensure that the identity of a business is consistent in different jurisdictions. In this regard, an optimal approach could be for a business registry to use unique identifiers to ensure that the identity of a business remains consistent and clear within and across jurisdictions (see paras. 104 to 111 above).

Recommendation 28: Registration of branches

The law should establish:

(a) Whether the registration of a branch of a business is required or permitted;

(b) A definition of “branch” for registration purposes that is consistent with the definition provided elsewhere in the law; and

(c) Provisions regarding the registration of a branch to address the following issues:

(i) When a branch must be registered;

(ii) Disclosure requirements, including: the name and address of the registrants; the name and address of the branch; the legal form of the original or main business seeking to register a branch; and current proof of the existence of the original or main business issued by a competent authority of the State or other jurisdiction in which that business is registered; and

(iii) Information on the person or persons who can legally represent the branch.

V. Post-registration

159. While a key function of a business registry is, of course, the registration of a business, registries typically support businesses throughout their life cycle. Once a business’s registered information is collected and properly recorded in the business registry, it is imperative that it be kept current in order for it to continue to be of value to users of the registry. Both the registered business and the registry play roles in meeting these goals.

160. In order for a business to remain registered, it must submit certain information during the course of its life, either periodically or when changes in its registered information occur, so that the registry is able to maintain the information on that business in as current a state as possible. The registry also plays a role in ensuring that its information is kept as current as possible, and may use various means to do so, such as those explored in greater detail below. Both of these functions permit the registry to provide accurate business information to its users, thus ensuring transparency and supplying interested parties, including potential business partners

and sources of finance, the public and the State, with a trustworthy source of information.

A. Information required after registration

161. In many jurisdictions, entrepreneurs have a legal obligation to inform the registry of any changes occurring in the business, whether these are factual changes (for example, address or telephone number) or whether they pertain to the structure of the business (for example, a change in the legal form of business). Information exchange between business registries and different government authorities operating in the same jurisdiction serves the same purpose. In some cases, business registries publish annual accounts, financial statements or periodic returns of businesses that are useful sources of information in that jurisdiction for investors, business clients, potential creditors and government authorities. Although the submission and publication of detailed financial statements might be appropriate for public companies, depending on their legal form, MSMEs should be required to submit far less detailed financial information, if any at all, and such information should only be submitted to the business registry and made public if desired by the MSME. However, to promote accountability and transparency and to improve their access to credit or attract investment, MSMEs may wish to submit and make public their financial information.[77] In order to encourage MSMEs to do so, States should allow MSMEs to decide on an annual basis whether to opt for disclosure of such information or not.

162. The submission of information that a business is required to provide in order to remain registered may be prompted by periodic returns that are required by the registry at regular intervals in order to keep the information in the registry current or it may be submitted by the business as changes to its registered information occur. Information required in this regard may include:

(a) Amendments to any of the information that was initially or subsequently required for the registration of the business as set out in recommendation 21;

(b) Changes in the name(s) and address(es) of the person(s) associated with the business;

(c) Financial information in respect of the business, depending on its legal form; and

(d) Information concerning insolvency proceedings, liquidation or mergers (see para. 64 above).

Recommendation 29: Information required after registration

The law should specify that after registration, the registered business must file with the business registry at least the following information:

(a) Any changes or amendments to the information that was initially required for the registration of the business pursuant to recommendation 21;[78] and

(b) Periodic returns, as required, which may include annual accounts.

---

[77] While MSMEs are not generally required to provide the same flow and rate of information as publicly held firms generally, they may have strong incentives for doing so, particularly as they develop and progress. Businesses wishing to improve their access to credit or to attract investment may wish to signal their accountability by supplying information on: (1) the business' objectives; (2) principal changes; (3) balance sheet and off-balance sheet items; (4) its financial position and capital needs; (5) the composition of any management board and its policy for appointments and remuneration; (6) forward-looking expectations; and (7) profits and dividends. Such considerations are not likely to trouble MSMEs while they remain small, but could be important for such businesses as they grow.

[78] Further to a decision of the Working Group at its twenty-ninth session, the Secretariat has deleted the portion of recommendation 29(a) (recommendation 28(a) in A/CN.9/WG.I/WP.106) after the phrase "recommendation 21" (recommendation 20 in A/CN.9/WG.I/WP.106) ("or to the … changes occur") and has reflected the concept deleted in subparagraph 162(a) (para. 159(a) of A/CN.9/WG.I/WP.106) (para. 79, A/CN.9/928).

B. Maintaining a current registry

163. States should enact provisions that enable the business registry to keep its information as current as possible. A common approach through which that may be accomplished is for the State to require registered businesses to file at regular intervals, for example once a year, a declaration stating that certain core information contained in the register concerning the business is accurate or stating what changes should be made. Although this approach may be valuable as a means of identifying businesses that have permanently ceased to operate and may be deregistered, and may not be burdensome for larger business with sufficient human resources, such a requirement could be quite demanding for MSMEs, in particular if there is an associated cost.

164. Another approach, which seems preferable in the case of MSMEs, is to require the business to update its information in the registry whenever a change in any of the registered information occurs. The risk of this approach, which is largely dependent on the business complying with the rules, may be that the filing of changes is delayed or does not occur. To prevent this, States could adopt a system pursuant to which regular prompts are sent, usually electronically, to businesses to request them to ensure that their registered information is current. In order to minimize the burden for registries and to help them make the most effective use of their resources, prompts that registries regularly send out to remind businesses to submit their periodic returns could also include generic reminders to update registered information. If the registry is operated in a paper-based or mixed format, the registry should identify the best means of performing this task, since sending paper-based prompts to individual businesses would be time and resource consuming and may not be a sustainable approach. In one State, where the registry is not operated electronically, reminders to businesses to update their registered information are routinely published in newspapers.

165. Regardless of the approach chosen to prompt businesses to inform the registry of any changes in their registered information, States may adopt enforcement measures for businesses that fail to meet their obligations to file amendments. For example, a State could adopt provisions establishing the liability of the registered business to a fine on conviction if changes are not filed with the business registry within the time prescribed by law (see paras. 212 to 213 and rec. 45 below).

166. A more general method that may help mitigate any potential deterioration of the information collected in the business registry would include enhancing the interconnectivity and the exchange of information between business registries and taxation and social security authorities as well as other public authorities. The adoption of integrated electronic interfaces among the authorities involved in the business registration process allowing for their technical interoperability and the use of unique identifiers could play a key role (see paras. 100 and 101 and 104 to 111 above). Moreover, the registrar could identify sources of information on the registered business that would assist in maintaining a current registry record.[79]

167. Once the registry has received the updated information, it should ensure that all amendments are entered in the registry record without undue delay. Again, the form in which the registry is operated is likely to dictate what might constitute an undue delay. If the registry allows users to submit information electronically without the intervention of the registry staff, the registry software should permit the amendments to become immediately or nearly immediately effective. Where the registry system (whether electronic, paper-based or mixed) requires the registry staff to enter the information on behalf of the business, all amendments should be reflected in the

[79] The final sentence has been added to reflect the view of the Working Group at its twenty-ninth session that there should be an onus on the registrar to proactively identify sources of information to keep the registry up to date (para. 80, A/CN.9/928).

registry as soon as possible, and a maximum time period in which that should be accomplished could be stipulated.

Recommendation 30: Maintaining a current registry[80]

The law should require the registrar to ensure that the information in the business registry is kept current, including through:

(a) Sending an automated request to registered businesses to prompt them to report whether the information maintained in the registry continues to be accurate or to state which changes should be made;

(b) Displaying notices of the required updates in the registry office and sub-offices and routinely publishing reminders on the registry website and social media and in national and local electronic and print media;

(c) Identification of sources of information on the registered businesses that would assist in maintaining the currency of the registry; and

(d) Updating the registry as soon as practicable following the receipt of amendments to registered information and, in any event, without undue delay thereafter.

C. Making amendments to registered information

168. States should also determine the time at which changes to the registered information are effective in order to promote transparency and predictability of the business registration system. Changes should become effective when the information contained in the notification of amendments is entered into the registry record rather than when the information is received by the registry, and the time of the change should be indicated in the registry record of the relevant business. In order to preserve information on the history of the business, amendments to previously registered information should be added to the registry record without deleting previously entered information.

169. As in the case of business registration, if the registry allows users to submit amendments electronically without the intervention of the registry staff, the amendments should become effective immediately or nearly immediately after they are transmitted. If the registry staff must enter the amendments into the registry on behalf of the business, amendments received should be entered into the registry record as soon as practicable, possibly within a maximum time. In a mixed registry system that allows amendments to be submitted using both paper and electronic means, registrants who elect to use the paper form should be alerted that this method may result in some delay in the effectiveness of the amendments.

Recommendation 31: Making amendments to registered information

The law should:

(a) Require the business registry to: (i) process amendments to the registered information in the order in which they are received; (ii) record the date and time when the amendments are entered into the registry record; and (iii) notify the registered business as soon as practicable and in any event, without undue delay, that its registered information has been amended; and

(b) Establish when an amendment to the registered information is effective.

VI. Accessibility and information-sharing

[80] In keeping with the deliberations of the Working Group at its twenty-ninth session that recommendation 30(a) (recommendation 29(a) in A/CN.9/WG.I/WP.106) should be adjusted to reflect additional best practices to keep registered information current, the Secretariat has added subparagraphs (b) and (c) to the recommendation (para. 80, A/CN.9/928).

A. Access to business registry services[81]

170. The law should permit all potential registrants to access business registry services without discrimination based on grounds such as sex, race, ethnic or social origin, religion, belief, or political view. In the interest of promoting domestic economic growth, an increasing number of States allow registrants who are neither citizens of, nor residents in, the State to register a business, provided that such registrants meet certain requirements and comply with certain procedures established by the law concerning foreign registrants.

171. Access of potential registrants to the services of the business registry should only be subject to compliance with minimum age requirements, and with procedural requirements for the use of such services, such as: that the request for registration be submitted via an authorized medium of communication and on the prescribed form; and that the registrant provide identification in the form requested by the registry (see paras. 134 and 135 above and rec. 21) and pay any fee required for registration (see paras. 200 and 202 to 204 and rec. 40 below).[82]

172. The registry should maintain a record of the identity of the registrant. In order to ensure a simple and straightforward registration process, the evidence of identity required of a registrant should be that which is generally accepted as sufficient in day-to-day commercial transactions in the enacting State. When registries are operated electronically and allow for direct access by users, potential registrants should be given the option of setting up a protected user account with the registry in order to transmit information to the registry. This would facilitate access by frequent users of registration services (such as business registration intermediaries or agents), since they would need to provide the required evidence of their identity only when initially setting up the account.[83]

173. Once the registrant has complied with the requirements mentioned in paragraph 171 above (and any others established by the law of the State) for accessing the registry, the registry cannot deny access to the registry services. The only scrutiny that the registry may conduct at this stage (which is carried out automatically in an electronic registry) is to ensure that legible information (even if incomplete or incorrect) is entered in the form for business registration. If the registrant did not meet the objective conditions for access to the registration services, the registry should provide the reasons for denying access (e.g. the registrant failed to provide valid identification) in order to enable the registrant to address the problem. The registry should provide such reasons as soon as practicable (in this respect see paras. 153 to 155 and rec. 27 above).[84]

174. Certain rules relating to access to business registry services may also be addressed in the "terms and conditions of use" established by the registry. These may include offering the user the opportunity to open an account to facilitate quick access to registry services and any necessary payment of fees for those services. The terms and conditions of access may also address the concerns of registrants regarding the security and confidentiality of their financial and other information or the risk of changes being made to registered information without the authority of the business. Assigning a unique user name and a password to the registrant, or employing other modern security techniques would help reduce such risks, as would requiring the registry to notify the business of any changes made by others in the user account information.

Recommendation 32: Access to business registry services

---

[81] At its twenty-ninth session, the Working Group agreed to delete the word "public" from the title of the section and of recommendation 32 (recommendation 31 in A/CN.9/WG.I/WP.106) (para. 82, A/CN.9/928).

[82] This approach is consistent with the approach adopted in the UNCITRAL Guide on the Implementation of a Security Rights Registry at paragraphs 95 to 99.

[83] Ibid.

[84] Ibid.

The law should permit any qualified person to access the services of the business registry.

B. Public availability of information

175. In keeping with its functions as a collector and disseminator of business-related information, the registry should make available all public information on a registered business that is relevant for those that interact with the business (whether they be public authorities or private entities) to be fully aware of the business identity and status of that business. This may[85] allow interested users to make more informed decisions about who they wish to do business with, and for organizations and other stakeholders to gather business intelligence. Moreover, since access to the publicly available registered information by general users also enhances certainty of and transparency in the way the registry operates, the principle of public access to the information deposited in the registry should be stated in the law of the enacting State. In most States, public access to the information in the registry is generally unqualified, and allowing full public access does not compromise the confidentiality of certain registered information, which can be protected by allowing users to access only certain types of information. For these reasons, it is recommended that the registry should be fully accessible to the public, subject only to necessary confidentiality restrictions in respect of certain registered information.

176. While providing disclosure of the publicly available registered information is an approach followed in most States, the way in which users access information, the format in which the information is presented and the type of information available varies greatly from State to State. This variation is not only a function of the technological development of a State, but of the framework for accessing such information, for example, in respect of different criteria that may be used to search the registry.

177. It is not recommended that States restrict access to search the information on the business registry or that users be required to demonstrate a reason to request access. Such a policy could seriously compromise the core function of the registry to publish and disseminate information on registered businesses. Moreover, if a discretionary element is injected into the granting of an information request, equal public access to the information in the registry could be impaired, and some potential users might not have access to information that was available to others.

178. Access to the business registry can be made subject to certain procedural requirements, such as requiring users to submit their information request in a prescribed form and to pay any prescribed fee. If a user does not use the prescribed registry form or pay the necessary fee, the user may be refused access to search the registry. As in the case of refusing access to registration services, the registry should be obliged to give the specific reason for refusing access to information services as soon as practicable so that the user can remedy the problem.

179. Unlike the approach adopted for registrants, the registry should not request and maintain evidence of the identity of a user as a precondition to obtaining access to the information on the business registry, since a user is merely retrieving information contained in the public registry record. Identification should be requested of users only if it is necessary for the purposes of collecting any fees applicable to the retrieval of such information.

180. The registry may also reject an information request if the user does not enter a search criterion in a legible manner in the designated field but the registry should provide the grounds for any rejection as soon as practicable, as in the case of non-compliance with the objective conditions for registration by registrants (see paras. 173 and 174 above). In registry systems that allow users to submit information requests electronically to the registry, the software should be designed to prevent

[85] At its twenty-ninth session, the Working Group agreed to replace the term “will” with “may” (para. 83, A/CN.9/928).

automatically the submission of information requests that do not include a legible search criterion in the designated field and to display the reasons for refusal on the user's screen.

181. Further, in order to facilitate dissemination of the information, States should be encouraged to abolish or keep to a minimum fees charged to access basic information on registered businesses (see para. 205 below). This approach may be greatly facilitated by the development of electronic registries that allow users to submit requests or make searches electronically without the need to rely on intermediation by registry personnel. Such an approach is also much cheaper for the registry. Where registration systems are paper-based, users may be required to either visit the registry office and conduct the search on site (whether manually or using ICT facilities that are available) or have information sent to them on paper. In both cases, registry staff may need to assist the user to locate the information and prepare it for disclosure. Again, paper-based information access is associated with delay, higher costs, the potential for error, and the possibility that the information obtained is less current.

182. Finally, States should devise effective means to encourage the use of information services provided by the registry. The adoption of electronic registries that allow direct and continuous access for users (except for periods of scheduled maintenance) will promote the actual use of the information. Communication campaigns on the services available from the business registry will also contribute to the active take-up of information services.

Recommendation 33: Public availability of information

The law should specify that all registered information is fully and readily[86] available to the public unless it is protected under the applicable law.

C. Where information is not made public

183. Access to the business registry should be granted to all interested entities and to the public at large. In order to maintain the integrity and reputation of the registry as a trusted collector of information that has public relevance, access to sensitive information should be controlled to avoid any breach of confidentiality. States should thus put in place proper disclosure procedures. They may do so by adopting provisions that list which information is not available for public disclosure or they may follow the opposite approach and adopt provisions that list the information that is publicly accessible, indicating that information that is not listed cannot be disclosed.

184. Legislation in each State often includes provisions on data protection and privacy. When establishing a registry, in particular an electronic registry, States must consider issues concerning the treatment of protected data that is included in the application for registration and its protection, storage and use. Appropriate legislation should be in place to ensure that such data are protected, including rules on how it may be shared between different public authorities (see para. 120 and rec. 18 above). States should also be mindful that a major trend towards increased transparency in order to avoid the misuse of corporate vehicles for illicit purposes has resulted from international efforts to fight money-laundering, terrorist, and other illicit activities.[87] States should thus adopt a balanced approach that achieves both transparency and the need to protect access to sensitive information maintained in the registry.

Recommendation 34: Where information is not made public

In cases where information in the business registry is not made public, the law should:

---

[86] At its twenty-ninth session, the Working Group agreed to include the phrase "fully and readily" before the word "available" in recommendation 33 (recommendation 32 in A/CN.9/WG.I/WP.106) (para. 83, A/CN.9/928).

[87] See supra, note 69 for additional information in respect of FATF Recommendation 24.

(a) Establish which information concerning the registered business is subject to the applicable law on public disclosure of protected data and require the registrar to publicize the types of information that cannot be publicly disclosed pursuant to that law;[88] and

(b) Specify the circumstances in which the registrar may use or disclose information that is subject to confidentiality restrictions.

D. Hours of operation

185. Establishing the operating days and hours of the business registry depends on whether the registry is designed to allow direct electronic registration and information access by users or whether it requires their physical presence at an office of the registry. In the former case, electronic access should be available continuously except for brief periods to undertake scheduled maintenance; in the latter case, registry offices should operate during dependable and consistent hours that are compatible with the needs of potential registry users. In view of the importance of ensuring ease of access to registry services for users, the above criteria[89] should be incorporated in the law of the enacting State or in administrative guidelines published by the registry, and the registry should ensure that its operating days and hours are widely publicized.

186. If the registry provides services through a physical office, the minimum hours and days of operation should be the normal business days and hours of public offices in the State. To the extent that the registry requires or permits paper-based submissions, the registry should aim to ensure that the paper-based information is entered into the registry record and made available as soon as practicable, but preferably on the same business day that the information is received by the registry. Information requests submitted in paper form should likewise be processed on the same day they are received. To achieve this goal, the deadline for submitting paper-based information requests may be set independently from the business hours of the registry office.[90] Alternatively, the business registry could continue to receive paper submissions and information requests throughout its business hours, but set a "cut off" time after which information received may not be entered into the registry record, or information searches performed, until the next business day. A third approach would be for the registry to undertake that information will be entered into the registry record and searches for information will be performed within a stated number of business hours after receipt of the application or information request.

187. The law could also enumerate, in either an exhaustive or an indicative way, the circumstances under which access to registry services may temporarily be suspended. An exhaustive list would provide more certainty, but there is a risk that it might not cover all possible circumstances. An indicative list would provide more flexibility but less certainty. Circumstances justifying a suspension of registry services would include any event that makes it impossible or impractical to provide those services (for example, due to force majeure such as fire, flood, earthquake or war, or to a breakdown in the Internet or network connection).

Recommendation 35: Hours of operation

The law should ensure that:

---

[88] At its twenty-ninth session, the Working Group requested the Secretariat to clarify that the registrar should only publicize, and may not decide, the types of information that cannot be publicly disclosed according to the applicable law (para. 84, A/CN.9/928).

[89] At its twenty-ninth session, the Working Group agreed that the phrase "these recommendations" in the final sentence of paragraph 185 (para. 182 of A/CN.9/WG.I/WP.106) should be changed to text along the lines of "the requirements above" (para. 85, A/CN.9/928).

[90] For example, the law or administrative guidelines of the registry could stipulate that, while the registry office is open between 9 a.m. and 5 p.m., all applications, changes and search requests must be received by an earlier time (for example, by 4 p.m.) to ensure that the registry staff has sufficient time to enter the information included in the application into the registry record or conduct the searches.

(a) If access to the services of the business registry is provided electronically, access is available at all times;

(b) If access to the services of the business registry is provided through a physical office:

(i) Each office of the registry is open to the public during [*the days and hours to be specified by the enacting State*]; and

(ii) Information about any registry office locations and their opening days and hours is publicized on the registry's website, if any, or otherwise widely publicized, and the opening days and hours of registry offices are posted at each office; and

(c) Notwithstanding subparagraphs (a) and (b) of this recommendation, the business registry may suspend access to the services of the registry in whole or in part in order to perform maintenance or provide repair services to the registry, provided that:

(i) The period of suspension of the registration services is as short as practicable;

(ii) Notification of the suspension and its expected duration is widely publicized; and

(iii) Such notice should be provided in advance and, if not feasible, as soon after the suspension as is reasonably practicable.

E. Direct electronic access to submit registration, to request amendments and to search the registry

188. If the State opts to implement an electronic registration system, the registry should be designed, if possible, to allow registry users to submit directly and to conduct searches from any electronic device,[91] as well as from computer facilities made available to the public at sub-offices of the registry or other locations. To further facilitate access to business registry services, the registry conditions of use may allow intermediaries (for example, lawyers, notaries or private sector third-party service providers) to carry out registration and information searches on behalf of their clients when the applicable law allows or requires the involvement of such intermediaries. If accommodated by the technological infrastructure of the State, or at a later stage of the reform, States should also consider adopting systems that allow registration, the filing of amendments and searches of the registry to be carried out through the use of mobile technology. This solution may be particularly appropriate for MSMEs in those economies where mobile services are often easier to access than electronic services.

189. When the registry allows for direct electronic access, the registry user (including an intermediary) bears the burden of ensuring the accuracy of any request for registration or amendment, or of any search of the registry. Since the required digital forms are completed by registry users without assistance from the registry staff, the potential for alteration of those forms by the registry staff is greatly minimized, as their duties are essentially limited to managing and facilitating electronic access by users, processing any fees, overseeing the operation and maintenance of the registry system and gathering statistical data. Even when direct electronic access is allowed, however, the possibility of error or misconduct on the part of the registry staff may exist if the registry staff is still required to intervene and enter information submitted to it electronically into the business registry record (see also para. 215 below).[92]

---

[91] In keeping with a decision of the Working Group at its twenty-ninth session, the Secretariat has replaced the term "private computer" (para. 86, A/CN.9/928).

[92] The Secretariat has adjusted this paragraph in light of the request of the Working Group at its twenty-ninth session that the focus of paragraph 189 (para. 186 of A/CN.9/WG.I/WP.106) should be on the electronic submission of information and not the entry of data in the registry record (para. 86, A/CN.9/928).

190. Direct electronic access significantly reduces the costs of operation and maintenance of the system, increases accessibility to the registry (including when registration or searches are carried out through intermediaries) and enhances the efficiency of the registration process by eliminating any time lag between the submission of information to the registry and the actual entry of that information into the record. In some States, electronic access (from the premises of a registrant or a business, or from a branch office of the registry) is the only available mode of access for both registration and information searches. In fact, in many States, where the registration system is both electronic and paper-based, electronic submission is by far the most prevalent mode of data submission.

191. It is thus recommended that, to the extent possible, States should establish a business registration system that is computerized and that permits direct electronic access by registry users. Given the practical considerations involved in establishing an electronic registry, multiple modes of access should be made available to registry users at least in the early stages of implementation in order to reassure those who are unfamiliar with the system. To facilitate its use, the registry should be organized to provide for multiple points of access for both electronic and paper submissions and information requests. However, even where States continue to use paper-based registries, the overall objective is the same: that is, to make the registration and information retrieval process as simple, transparent, efficient, inexpensive and publicly accessible as possible.

Recommendation 36: Direct electronic access to submit registration and to request amendments[93]

The law should establish that, in keeping with other applicable law of the enacting State, where information and communications technology is available, the submission of applications for the registration of a business and requests for amendment of the registered information of a business are permitted without requiring the physical presence of the registrant or user in the business registry office.

Recommendation 37: Direct electronic access to search the registry

The law should establish that, where information and communications technology is available, searches of the registry are permitted without requiring the physical presence of the user in the business registry office or the intermediation of the registry staff.

F. Facilitating access to information

1. Type of information provided

192. Information can be of particular value to users if it is available to the public, although the type of registered information that is available will depend on the legal form of the business being searched and on the applicable law regarding what registered information is protected and what may be made available to the public. Valuable information on a business that may be available on the registry: the profile of the business and its officers (directors, auditors); annual accounts; a list of the business's divisions or places of business; the notice of registration or incorporation; the publication of the business's memoranda, articles of association, or other rules governing the operation or management of the business; existing names and history of the business; insolvency-related information; any share capital; certified copies of registry documents; and notifications of events (late filing of annual accounts, newly submitted documents, etc.). Other valuable information relating to the business registry may include the identification of relevant additional laws and regulations, or information on the expected turnaround time in the provision of registry information

[93] At its twenty-ninth session, the Working Group agreed to delete the phrase "and search the registry" from the title of the recommendation and the phrase "or assistance of the registry staff" after the term "registry office" at the end of the recommendation (para. 86, A/CN.9/928).

services and fees for such services.[94] In addition, some registries prepare reports relating to the operation of the business registry that may provide registry designers, policymakers and academic researchers with useful data (for example, on the volume of registrations and searches, operating costs, or registration and search fees collected over a given period). Information on business data, annual accounts and periodic returns, as well as information about fees for registry services, are usually the most popular pieces of information and the most requested by the public. When registration procedures permit, and subject to the law of the enacting State, business registries may also make available to users disaggregated statistical information that has voluntarily been submitted in respect of the gender, ethnicity, or language group of persons associated with the business. Such information can be of particular importance for States wishing to develop policies and programmes to support under-represented societal groups (see paras. 62 and 136 above).[95]

193. If the State is one in which member or shareholder details must be registered, the public may also be granted access to such information. A similar approach may be taken with respect to information on the beneficial ownership of a business, which may be made available to the public in order to allay concerns over the potential misuse of business entities. However, the sensitive nature of the information on beneficial ownership may require the State to exercise caution before opting for disclosure of beneficial ownership without any limitation.[96]

2. Removing unnecessary barriers to accessibility

194. The registry needs to ensure that searchable information is easily accessible; even though the information is available, it does not always mean that it is easy for users to access. There are often different barriers to accessing the information, such as the format in which the information is presented: if special software is required to read the information, or if it is only available in one particular format, it cannot be said to be broadly accessible. In several States, some information is made available in paper and electronic formats; however, information made available only on paper likely entails reduced public accessibility. Other barriers that may make information less accessible are charging fees for it (see para. 205 below),[97] requiring users to register prior to providing access to the information, and charging a fee for user registration. States should find the most appropriate solutions according to their needs, their conditions and their laws.

195. Some States not only provide for electronic information searches but also distribute the information through other channels that can complement the use of the Internet or that may even represent the main method of distribution if an online registration system is not yet fully developed. The following additional means of sharing information are used in some States:

(a) Telephone services to provide information on registered businesses and product ordering;

(b) Subscription services to inform subscribers about events pertaining to specified businesses or for announcements of certain kinds of business registrations;

(c) Ordering services to enable access to various products, most often using an Internet browser; and

---

[94] The Secretariat has adjusted the text further to a decision of the Working Group at its twenty-ninth session that paragraph 192 (para. 189 of A/CN.9/WG.I/WP.106) should not duplicate information on business registration that might also be found in the commentary to recommendation 19 (recommendation 18 in A/CN.9/WG.I/WP.106) (para. 87, A/CN.9/928).

[95] The Secretariat has added two sentences (“When registration … social groups”) at the end of paragraph 192 (para. 189 of A/CN.9/WG.I/WP.106) in response to the comment of the Working Group at its twenty-ninth session that reference to gender-disaggregated data could be included in appropriate section of the draft guide (para. 33, A/CN.9/928).

[96] See, supra, note 69 for further information in respect of FATF Recommendation 24.

[97] The Secretariat has entered a reference to paragraph 205 (para. 202 of A/CN.9/WG.I/WP.106) further to a request of the Working Group at its twenty-ninth session (para. 87, A/CN.9/928).

(d) Delivery services to convey various products, such as transcripts of publicly available registered information on a business, paper lists, or electronic files with selected data.[98]

196. One often overlooked barrier to accessing information, whether in order to register a business or to review data and information in the registry, is a lack of knowledge of the official language(s). Providing forms and instructions in other languages is likely to make the registry more accessible to users. However, business registries seldom offer such services in languages additional to the official language(s). Making all information available in additional languages may incur additional expense for the registry, a more modest approach may be to consider making information on only core aspects of registration, for example in respect of instructions or forms, available in a non-official language. In deciding which non-official language would be most appropriate, the registry may wish to base its decision on historical ties, the economic interests of the jurisdiction and the geographic area in which the jurisdiction is situated (see paras. 139 to 141 and rec. 22 above), as well as consider the use of a widely used language that facilitates cross-border communication.

3. Bulk information

197. In addition to making information on individual businesses available, business registries in some jurisdictions also offer the possibility of obtaining "bulk" information, i.e. a compilation of information on selected, or all, registered businesses. Such information can be requested for commercial or non-commercial purposes and is often used by public authorities as well as private organizations (such as banks) that deal with businesses and perform frequent data processing on them. Distribution of bulk information varies according to the needs and capability of the receiving entity. In performing this function, one approach would be for the registry to ensure the electronic transfer of selected data on all registered entities, combined with the transfer of data on all new registrations, amendments, and deregistration during a specified period. Another option for the registry would be to make use of web-based or similar services for system-to-system integration that provide both name searches and direct access to selected data on specific entities. Direct access avoids unnecessary and redundant storage of information by the receiving organization, and States where such services are not yet available should consider it as a viable option when streamlining their business registration system. Distribution of bulk information can represent a practical approach for the registry to derive self-generated funds (see para. 205 below).

Recommendation 38: Facilitating access to information

The law should ensure the facilitation of access to public information on registered businesses by avoiding the creation of unnecessary barriers such as: requirements for the installation of specific software; charging expensive access fees; or requiring users of information services to register or otherwise provide information on their identity.[99]

G. Cross-border access to publicly available registered information

198. The internationalization of businesses of all sizes creates an increasing demand for access to information on businesses operating outside their national borders. However, official information on registered businesses is not always readily available on a cross-border basis due to technical or language barriers. Making such

[98] For improved consistency of the guide, the Secretariat has: (a) moved this paragraph (para. 191 of A/CN.9/WG.I/WP.106) to subsection 2; and (b) made editorial adjustments to its two opening sentences.

[99] In keeping with comments of the Working Group at its twenty-ninth session, the Secretariat has adjusted recommendation 38 (recommendation 37 in A/CN.9/WG.I/WP.106) as follows: (a) the phrase "to business registration and" has been replaced with "public information on registered businesses that are"; and (b) the word "prohibitively" has been deleted (para. 88, A/CN.9/928).

cross-border access as simple and fast as possible is thus of key importance in order to ensure the traceability of businesses, the transparency of their operations and to create a more business-friendly environment.

199. A range of measures can be adopted to facilitate access by foreign users of the business registry. Certain measures can be implemented to ensure the easy retrieval of information stored in the business registry by such users. In addition to allowing for registration and search requests in at least one non-official language (see para. 196 above), adopting easy-to-use search criteria and a simply understood information structure would further simplify access by users from foreign jurisdictions. States may wish to consider coordinating with other States (at least with those from the same geographic region) in order to adopt approaches that would allow for cross-border standardization and comparability of the information transmitted. Another group of measures that could be adopted pertain to providing information in a non-official but widely understood language on how foreign users can access the services of the business registry. As in the case of domestic users, users from foreign jurisdictions should be advised of the possibility of establishing direct contact with registry personnel through a dedicated email account of the registry, electronic contact forms or client service telephone numbers (see para. 126 above).[100]

Recommendation 39: Cross-border access to publicly available registered information

The law should ensure that systems for the registration of businesses adopt solutions that facilitate cross-border access to the public information in the registry.

VII. Fees

200. It is standard practice in many States to require the payment of a fee for registration services. In return for that fee, registered businesses receive access to business registry services and to the many advantages that registration offers them. The most common types of fees are those payable for registration of a business and for the provision of information products and services, while to a lesser extent, fines may also generate funds. In some jurisdictions, registries may also charge an annual fee to keep a business in the registry (these fees are unrelated to any particular activity), as well as fees to register annual accounts or financial statements.

201. Although they generate revenue for the registries, fees can affect a business's decision whether to register, since such payments may impose a burden, in particular on MSMEs. Fees for new registration, for example, can prevent businesses from registering, while annual fees to keep a company in the registry or to register annual accounts could discourage businesses from maintaining their registered status. States should take these and other indirect effects into consideration when establishing fees for registration services. States seeking to increase the business registration of MSMEs and to support such businesses throughout their lifecycle should consider offering registration and post-registration services free of charge. In several States that consider business registration as a public service intended to encourage businesses of all sizes and legal forms to register rather than as a revenue-generating mechanism, registration fees are often set at a level that is not prohibitive for MSMEs.[101] In such States, the use of flat fee schedules for registration, regardless of the size of the business, is the most common approach. There are also examples of States that provide business registration free of charge. In States with enhanced interoperability among the business registry, taxation and social security authorities that results in the adoption of integrated registration and payment forms, a uniform approach should be taken to fees charged for registration by all relevant authorities.

---

[100] The Secretariat has made adjustments to this paragraph to reflect drafting proposals made by the Working Group at its twenty-ninth session (para. 89, A/CN.9/928).

[101] In keeping with drafting suggestions made by the Working Group at its twenty-ninth session, the Secretariat has adjusted paragraph 201 (para. 91, A/CN.9/928).

A. Fees charged for business registry services

202. Striking a balance between the sustainability of the registry operations and the promotion of business registration is a key consideration when setting fees, regardless of the type of fee. One recommended approach followed in many States is to apply the principle of cost-recovery, according to which there should be no profit generated from fees in excess of costs. When applying such a principle, States should first assess the level of revenue needed from registry fees to achieve cost-recovery, taking into account not only the initial costs related to the establishment of the registry but also the costs necessary to fund its operation. These costs may include: (a) the salaries of registry staff; (b) upgrading and replacing hardware and software; (c) ongoing staff training; and (d) promotional activities and training for registry users. In the case of online registries, if the registry is developed in partnership with a private entity, it may be possible for the private entity to make the initial capital investment in the registry infrastructure and recoup its investment by taking a percentage of the service fees charged to registry users once the registry is operational.

203. Even when the cost-recovery approach is followed, there is considerable variation in its application by States, as it requires a determination of which costs should be included. In one State, fees for new registrations are calculated according to costs incurred by an average business for registration activities over the life cycle of the business. In this manner, potential amendments, apart from those requiring official announcements, are already covered by the fee that companies pay for new registration. That approach is said to result in several benefits, such as: (a) rendering most amendments free of charge, which encourages compliance among registered businesses; (b) saving resources related to fee payment for amendments for both the registry and the businesses; and (c) using the temporary surplus produced by advance payment for amendments to improve registry operations and functions. In other cases, States have decided to charge fees below the actual cost that the business registry incurs in order to promote business registration. In such cases, however, the services provided to businesses would likely be subsidized with public funds.

204. In setting fees in a mixed registry system, it may be reasonable for the State to charge higher fees to process applications and information requests submitted in paper form because they must be processed by registry staff, whereas electronic applications and information requests are directly submitted to the registry and are less likely to require attention from registry staff. Charging higher fees for paper-based registration applications and information requests will also encourage the user community to eventually transition to using the direct electronic registration and information request services. However, in making that decision, States may wish to consider whether charging such fees may have a disproportionate effect on MSMEs that may not have ready access to electronic services.

Recommendation 40: Fees charged for business registry services[102]

The law should establish fees, if any, for business registration and post-registration services at a level that is low enough to encourage business registration, in particular of MSMEs, and that, in any event, does not exceed a level that enables the business registry to cover the cost of providing those services.

B. Fees charged for information

205. In various States, fees charged for the provision of information services are a more viable option for registries to derive self-generated funding. Such fees also motivate registries to provide valuable information products to their users, to maintain the currency of their records and to offer more advanced information services. A recommended good practice for States aiming to improve this type of revenue

[102] The Secretariat has adjusted the text further to a proposal by the Working Group at its twenty-ninth session that terminology in the recommendation should be consistent with other parts of the legislative guide in referring to “business registry services” (para. 92, A/CN.9/928).

generation would be to avoid charging fees for basic information services such as simple name or address searches, but to charge for more advanced information services that require greater processing by the business registry or that are more expensive to provide (e.g. direct downloading, subscription services or bulk information services; see also paras. 197 and 200 above). Since fees charged for information services are likely to influence users, such fees should be set at a level low enough to make the use of such services attractive. Again, the level of any such fee should be established according to the principle of cost-recovery, so as not to generate a profit in addition to covering the cost of the service. Moreover, when fees for information services are charged, States might consider establishing different fee regimes for different categories of user, such as private users, corporate or public entities, occasional users and users with an established user account. This approach would take account of the frequency with which or the purpose for which users request information services, their need for expedited or regular service, or the type of information products requested (e.g. on individual businesses or bulk information).[103]

Recommendation 41: Fees charged for information

The law should establish that:

(a) Information contained in the business registry should be available to the public free of charge; and

(b) Information services that require greater processing by the business registry could be provided for a fee that reflects the cost of providing the information products requested.[104]

C. Publication of fee amounts and methods of payment

206. Regardless of the approach taken in determining applicable fees, States should clearly establish the amount of any registration and information fees charged to registry users, as well as the acceptable methods of payment. Such methods of payment should include allowing users to enter into an agreement with the business registry to establish a user account for the payment of fees. States in which businesses can register directly online should also consider developing an electronic platform that enables businesses to pay online when filing their application with the registry (see paras. 83 above and 207 below). When publicizing the amount of registration and information fees, one approach would be for the State to set out the fees in either a formal regulation or more informal administrative guidelines, which the registry can revise according to its needs. If administrative guidelines are used, this approach would provide greater flexibility to adjust the fees in response to subsequent events, such as the need to reduce the fees once the capital cost of establishing the registry has been recouped. The disadvantage of this approach, however, is that this greater flexibility could be abused by the registry to adjust the fees upwards unjustifiably. Alternatively, a State may choose not to specify the level of the fees payable, but rather to designate the authority that is authorized to establish the fees payable. The State may also wish to consider specifying in the law the types of service that the registry may or must provide free of charge.

Recommendation 42: Publication of fee amounts and methods of payment

---

[103] Further to a decision of the Working Group at its twenty-ninth session, the Secretariat has clarified paragraph 205 (para. 94, A/CN.9/928).

[104] Further to a decision of the Working Group at its twenty-ninth session, the Secretariat has split recommendation 41 (recommendation 40 in A/CN.9/WG.I/WP.106) into two parts to first emphasize that information services should be free of charge and then to clarify that fees for information services, if any, should be established on a cost-recovery basis (para. 93, A/CN.9/928).

The law should ensure that fees payable, if any,[105] for registration and information services are widely publicized, as are the acceptable methods of payment.

D. Electronic payments

207. States should consider developing an electronic platform that enable businesses to pay online (including the use of mobile payment systems and other modern forms of technology[106]) to access registry services for which a fee is charged (see para. 83 above). This will require enacting appropriate laws concerning electronic payments in order to enable the registry to accept online payments. Such laws should address issues such as who should be allowed to provide the service and under which conditions; access by users to online payment systems; the liability of the institution providing the service; customer liability and error resolution. Finally, such laws should also be consistent with the general policy of the State on financial services.

Recommendation 43: Electronic payments

The law should enable and facilitate electronic payments.

VIII. Liability and sanctions

208. While each business must ensure that its registered information is kept as accurate as possible by submitting amendments in a timely fashion, the State should have the ability to enforce proper compliance with initial and ongoing registration requirements. Compliance with those requirements is usually encouraged through the availability of enforcement mechanisms such as the imposition of sanctions on businesses that fail to provide timely and accurate information to the registry (see paras. 161 and 162 and rec. 29 above).

209. In addition, a system of notices and warnings could be set up in order to alert businesses of the consequences of failure to comply with specific requirements of business registration (for example, late filing of periodic returns). When the registry is operated electronically, automated warnings and notices could be periodically sent out to registered businesses. In addition, notices and warnings could be visibly displayed on the premises of the registration offices and routinely published electronically and in print media. To better assist businesses, in particular MSMEs, States could also consider designing training programs to raise the awareness of businesses regarding their liability to comply with registration requirements and to advise them on how to discharge that liability.[107]

A. Liability for misleading, false or deceptive information

210. States should adopt provisions that establish liability for any misleading, false or deceptive information that is submitted to the registry upon registration or amendment of the registered information of a business, and for failure to submit information required by the business registry when it ought to have been submitted. Care should be taken, however, to distinguish inadvertent failure to submit the required information from intentional submission of misleading, false or deceptive information, as well as from the intentional failure to submit information that could amount to submitting misleading, false or deceptive information. While wilful actions or omissions should be sanctioned with appropriate measures, inadvertent failure to

[105] At its twenty-ninth session, the Working Group agreed to insert the phrase “if any” after “fees payable” (para. 95, A/CN.9/928).

[106] As agreed by the Working Group at its twenty-ninth session, the Secretariat has deleted the opening phrase (“Once States have reached a certain level of technological maturity”) and has added the phrase “and other modern forms of technology” after “mobile payments” in the first sentence of the paragraph (para. 97, A/CN9/928).

[107] The Secretariat has relocated this paragraph (para. 209 of A/CN.9/WG.I/WP.106) here further to a suggestion of the Working Group at its twenty-ninth session (para. 98, A/CN.9/928).

submit the required information should result in less punitive measures, in particular if the inadvertent failure is rectified in a timely fashion.

211. In order to further clarify potential liability, States should also ensure that a notice on the business registry clearly specifies whether the information it contains has legal effect and is opposable to third parties in the form in which it is deposited in the registry (see also para. 58(f) above).[108]

Recommendation 44: Liability for misleading, false or deceptive information

The law should establish appropriate liability for any misleading, false or deceptive information that is provided to the business registry or for failure to provide the required information.

B. Sanctions

212. The establishment of fines for the breach of obligations related to business registration, such as late filing of periodic returns or failure to record changes in the registered information (see para. 163 above) are measures often adopted by States to enforce compliance. Fines can also represent a means of revenue generation, but their imposition again requires a balanced approach. Several States use fines as disincentives for businesses that are required to register to operate outside of the legally regulated economy. In some cases, legislative provisions link the company's enjoyment of certain benefits to the timely filing of required submissions; in others, a series of increasing fines for late filing is enforced that can ultimately result in compulsory liquidation. However, if fines are used as the main source of funding for the business registry, it can have a detrimental effect on the efficiency of the registry. Since registries in such States lose revenue generated by fines when compliance improves, there is little motivation for such registries to improve the level of compliance. States should, therefore, not rely upon fines as the main source of revenue of a business registry; instead, fines should be established and imposed at a level that encourages business registration without negatively affecting the funding of registries once compliance improves.

213. The recurrent use of fines to sanction the breach of initial and ongoing registration obligations might discourage businesses, in particular MSMEs, from registering or properly maintaining their registration. States should consider establishing a range of possible sanctions that would apply depending on the seriousness of the violation or, in the case of MSMEs failing to meet certain conditions established by the law, to forego any sanction for businesses defaulting for the first time.

Recommendation 45: Sanctions

The law should:

(a) Establish appropriate sanctions that may be imposed on a business for a breach of its obligations regarding information to be submitted to the registry in an accurate and timely fashion;[109]

(b) Include provisions pursuant to which a breach of obligation may be forgiven provided it is rectified within a specified time; and

(c) Require the registrar to ensure broad publication of those rules.

---

[108] At its twenty-ninth session, the Working Group agreed that the commentary to recommendation 44 (recommendation 43 in A/CN.9/WG.I/WP.106) should: (a) clarify the different consequences of inadvertent failure to submit the required information to the business registry and of intentional submission of false and misleading information as well as intentional failure to submit the required information; and (b) include the concept of opposability of information to third parties (paras. 99 and 100, A/CN.9/928).

[109] The Secretariat has redrafted recommendation 45(a) as requested by the Working Group at its twenty-ninth session (para. 102, A/CN.9/928).

C. Liability of the business registry

214. The law[110] of the State should provide for the allocation of liability for loss or damage caused by error or through negligence in the administration or operation of the business registration and information system.

215. As noted above, users of the registry bear the liability for any errors or omissions in the information contained in an application for registration or a request for an amendment submitted to the registry, and bear the burden of making the necessary corrections. If applications for registration and amendment are directly submitted by users electronically without the intervention of registry staff, the potential liability of the enacting State would be limited to system malfunctions, since any other error would be attributable to users. However, if paper-based application forms or amendment requests are submitted, the State must address the extent of its potential liability for the refusal or failure of the registry to enter such information correctly. A similar approach should be taken in States with electronic business registration systems that require certain information submitted electronically to nonetheless be entered by registry staff into the registry record and where such entry might also be subject to error (see also para. 189 above).[111]

216. Further, it should be made clear to registry staff and registry users that registry staff are not allowed to provide legal advice on requirements for effective registration and amendment, or on their legal effects, nor should staff make recommendations on which intermediary (if any) the business should choose to take charge its registration or amendment process. However, registry staff should be permitted to give practical guidance with respect to the registration and amendment processes. In States that opt for an approval system, this restriction on the provision of legal advice should, of course, not be applicable to the judges, notaries and lawyers acting as intermediaries or entrusted with the administration of registration procedures.

217. While it should be made clear that registry staff may not provide legal advice (subject to the type of registration system of the State), the State must also address whether and to what extent it should be liable if registry staff nonetheless provide incorrect or misleading information on the requirements for effective registration and amendment or on the legal effects of registration.

218. In addition, in order to minimize the potential for misconduct by registry staff, the registry should consider establishing certain practices such as instituting financial controls that strictly monitor staff access to cash payments of fees and to the financial information submitted by users who use other modes of payment. Such practices may include the institution of audit mechanisms that regularly assess the efficiency and the financial and administrative effectiveness of the registry.

219. If States accept liability for loss or damage caused by system malfunction or error or misconduct by registry staff, they may consider whether to allocate part of the registration and information fees collected by the registry to a compensation fund to cover possible claims, or whether the claims should be paid out of general revenue. States might also decide to set a maximum limit on the monetary compensation payable in respect of each claim.

Recommendation 46: Liability of the business registry

---

[110] At its twenty-ninth session, the Working Group requested the Secretariat to clarify that in many States the question of business registry liability was dealt with by other laws of the State and not the law on business registration. The Secretariat, however, has left the commentary unaltered, since the term "law" as defined in paragraph 16 (para. 13 of A/CN.9/WG.I/WP.106) already includes the broader body of domestic law and was not limited to provisions on business registration (para. 103, A/CN.9/928).

[111] The Secretariat has added a new sentence at the end of paragraph 215 (para. 211 of A/CN.9/WG.I/WP.106) further to the decision of the Working Group at its twenty-ninth session that the paragraph should reflect the practice of States where registry staff must enter information submitted electronically into the registry (para. 103, A/CN.9/928).

The law should establish whether and to what extent the State is liable for loss or damage caused by error or negligence of the business registry in the registration of businesses or the administration or operation of the registry.[112]

IX. Deregistration

A. Deregistration

220. Deregistration of a business means that a notation has been made in the registry that it is no longer registered, and that it has ceased to operate. In such instances, the public details in respect of the business usually remain visible on the register, but the status of the business has been changed to indicate that it has been removed or that the business is no longer registered. Deregistration occurs once the business, for whatever reason, has permanently ceased to operate, including as a result of a merger, or forced liquidation due to bankruptcy, or in cases where applicable law requires the registrar to deregister the business for failing to fulfil certain legal requirements.

221. States should consider the role of the registry in deregistering a business. In most jurisdictions, deregistration of a business is included as one of the core functions of the registry. It appears to be less common, however, to entrust the registry with the decision whether or not a business should be deregistered as a result of insolvency proceedings or winding-up. In States where this function is included, statutory provisions determine the conditions that result in deregistration and the procedures to follow in carrying it out.

222. Because deregistration pursuant to winding-up or insolvency proceedings of a business are matters regulated by laws other than those governing the registration of a business, and since such laws vary greatly from State to State, this legislative guide refers only to deregistration of those solvent businesses that the enacting State has deemed dormant or no longer in operation pursuant to the legal regime governing the business registry. In such cases, most States allow for deregistration to be carried out either upon the request of the business (often referred to as "voluntary deregistration") or at the initiative of the registry (frequently referred to as "striking-off"). In order to avoid difficulties for the registrar in determining when an exercise of the power to deregister is warranted because a business is a dormant solvent business or when it is no longer in operation, the law should clearly establish the conditions that must be fulfilled. This approach will also avoid a situation where that power may be exercised in an arbitrary fashion. Permitting a registrar to carry out deregistration pursuant to clear rules permits the maintenance of a current registry and avoids cluttering the record with businesses that do not carry on any activity. When deregistration is initiated by the registrar, there must be reasonable cause to believe that a registered business has not carried on business or that it has not been in operation for a certain period of time. Such a situation may arise, for example, when the State requires the business to submit periodic reports or annual accounts and a business has failed to comply within a certain period of time following the filing deadline. In any case, the ability of the registrar to deregister a business should be limited to ensuring compliance with clear and objective legal requirements for the continued registration of a business. In several States, before commencing deregistration procedures, the registrar must inform the business in writing of its pending deregistration and allow sufficient time for the business to reply and to oppose that decision. Only if the registrar receives a reply that the business is no longer active or if no reply is received within the time prescribed by law will the business be deregistered.

223. Deregistration may also be carried out upon the request of the business, which most often occurs if the business ceases to operate or has never operated. States should specify in which circumstances businesses can apply for deregistration and which persons associated with the business are authorized to request deregistration on behalf of the business. Voluntary deregistration is not an alternative to more formal

[112] Further to a decision of the Working Group at its twenty-ninth session, the Secretariat has redrafted recommendation 46 as requested (para. 104, A/CN.9/928).

proceedings, such as winding-up or insolvency, when those proceedings are prescribed by the law of the State in order to liquidate a business.

224. Deregistration should in principle be free of charge regardless of whether it is carried out at the initiative of the registrar or upon the request of the business. Further, States should consider adopting simplified procedures for the deregistration of MSMEs.

Recommendation 47: Voluntary deregistration

The law should:

(a) Specify the conditions under which a business can request deregistration;

(b) Require the registrar to deregister a business that fulfils those conditions; and

(c) Permit the State to adopt simplified procedures for deregistration of MSMEs.[113]

Recommendation 48: Involuntary deregistration

The law should specify the conditions pursuant to which a registrar can deregister a business.[114]

B. Process of deregistration and time of effectiveness of deregistration[115]

225. Regardless of whether deregistration is requested by the business or initiated by the registrar, where the business is registered as a separate entity, the registry must issue a public notice of the proposed deregistration and when that deregistration will become effective. Such an announcement is usually published on the website of the registry or in official publications such as the National Gazette or in both. This procedure ensures that businesses are not deregistered without providing interested third parties (e.g. creditors, members of the business) the opportunity to protect their rights (the usual practice is to submit a written complaint corroborated by any required evidence to the registry). After the period indicated in the announcement has passed, a notation is made in the registry that the business is deregistered. Prior to the deregistration becoming effective, the applicable law may require that a further notice be published. Pending completion of the deregistration procedure, the business remains in operation and will continue to carry on its activities.

226. The law should establish the time of effectiveness of the deregistration, and the status of the business in the registry should indicate the time and date of its effect, in addition to the reasons for the deregistration. The registrar should enter such information in the registry as soon as practicable so that users of the registry are apprised without undue delay of the changed status of the business.

227. Registries should retain historical information on businesses that have been deregistered, leaving it to the State to decide the appropriate length of time for which such information should be preserved (see paras. 229 to 232 and rec. 51 below). When the State has adopted a unique identifier system, the information related to the business should remain linked to that identifier even if the business is deregistered.

---

[113] The Secretariat has added subparagraph (c) to the recommendation and reference in the commentary to reflect the decision of the Working Group at its twenty-ninth session that States should be encouraged to adopt simplified procedures for the deregistration of MSMEs (para. 105, A/CN.9/928).

[114] At its twenty-ninth session the Working Group requested the Secretariat to eliminate the phrase "at its own initiative" from the recommendation and to change its title to "Involuntary deregistration" (para. 106, A/CN.9/928).

[115] The Secretariat has revised the commentary in this section in accordance with the views expressed by the Working Group at its twenty-ninth session (paras. 107 and 108, A/CN.9/928).

Recommendation 49: Process of deregistration and time and effectiveness of deregistration

The law should:

(a) Provide that a written notice of the deregistration is sent to the registered business;

(b) Establish that the deregistration is publicized in accordance with the legal requirements of the enacting State;

(c) Specify when the deregistration of a business is effective; and

(d) Specify the legal effects of deregistration.[116]

C. Reinstatement of registration

228. In several States, it is possible to reinstate the registration of a business that has been deregistered at the initiative of the registrar or upon the request of the business, provided that the request to the registrar for reinstatement meets certain conditions (in some States, this latter procedure is called "administrative restoration") or is made by court order. In certain States, both procedures are available and choosing either of them usually depends on the reason for which the business was deregistered or the purpose of restoring the business. The two procedures usually differ in some key aspects, such as who can apply to have the business restored, which business entities are eligible for restoration and the time limit for filing an application for restoration. The requirements for "administrative restoration" in States that provide for both procedures are often stricter than those for restoration by court order. For example, in such States, only an aggrieved person, which may include a former director or member, can submit an application for reinstatement to the registrar, and the time limit within which the application can be submitted to the registry may be shorter than the time granted to apply for a court order. Regardless of the method(s) chosen by the State to permit reinstatement of the registration of a business, once the registration has been reinstated, the business is deemed to have continued its existence as if it had not been deregistered, which includes maintaining its former business name. In cases where the business name is no longer available (as having been assigned to another business registered in the interim), procedures are usually established by the State to govern the change of name of the reinstated business.

Recommendation 50: Reinstatement of registration

The law should specify the circumstances under which and the time limit within which the registrar is required to reinstate a business that has been deregistered.

X. Preservation of records

A. Preservation of records

229. As a general rule, the information in the business registry should be kept indefinitely. The enacting State should decide on the appropriate length of time for which such information should be kept and may choose to apply its general rules on the preservation of public documents.

230. However, the length of the preservation period for records is most often influenced by the way the registry operates, and whether the registry is electronic, paper-based or a mixed system. In the case of electronic registries, the preservation for extended periods of time of original documents submitted in hard copy might not

[116] As requested by the Working Group at its twenty-ninth session, the Secretariat has deleted subparagraph (b) of recommendation 49 (recommendation 49 in A/CN.9/WG.I/WP.106) and combined the remainder with what was formerly recommendation 48 in A/CN.9/WG.I/WP.106 (para. 107, A/CN.9/928).

be necessary, provided that the information contained in such documents has been recorded in the registry or that the paper documents have been digitized (through scanning or other electronic processing).

231. Those States with paper-based or mixed registration systems, for example, must decide the length of time for which the paper documents submitted to it should be kept by the registry, in particular in situations where the relevant business has been deregistered. Considerations relating to the availability of storage space and the expense of storing such documents would likely play a role in that decision.

232. Regardless of the way in which the business registry is operated, providing prospective future users with long-term access to information maintained in the registry is of key importance, not only for historical reasons, but also to provide evidence of past legal, financial and management issues relating to a business that might still be of relevance. The preservation of electronic records is likely to be easier and more cost-effective than preserving paper records. In order to minimize the cost and considerable storage space required for the preservation of documents in hard copy, paper-based registries that cannot convert the documents received by it into an electronic form may adopt alternative solutions (for example, the use of microfilm) that allow for the transmission, storage, reading, and printing of the information.

Recommendation 51: Preservation of records

The law should provide that documents and information submitted by the registrant and the registered business, including information in respect of deregistered businesses, should be preserved by the registry so as to enable the information to be retrieved by the registry and other interested users.

B. Alteration or deletion of information

233. The law should establish that the registrar may not alter or remove registered information, except as specified by law and that any change to that information can be made only in accordance with the applicable law. However, to ensure the smooth functioning of the registry, in particular when registrants submit registration information using paper forms, the registrar[117] should be authorized to correct its own clerical errors (see paras. 33, 51 and 153 above) made in entering the information from the paper forms into the registry record. If this approach is adopted, notice of this or any other correction should promptly be sent to the business (and a notification of the nature of the correction and the date it was effected should be added to the public registry record linked to the relevant business). Alternatively, the State could require the registrar to notify the business of its error and permit the submission of an amendment free of charge.

234. Further, the potential for misconduct by registry staff should be minimized by: (a) designing the registry system to make it impossible for registry staff to alter the time and date of registration or any registered information entered by a registrant; and (b) designing the registry infrastructure so as to ensure that it can preserve the information and the documents concerning a deregistered business for as long as prescribed by the law of the enacting State.

Recommendation 52: Alteration or deletion of information

The law should provide that the registrar does not have the authority to alter or delete information contained in the business registry record except in those cases specified in the law.

[117] At its twenty-ninth session, the Working Group requested the Secretariat to replace the term "registry staff" with "registrar" in paragraph 233 (para. 228 of A/CN.9/WG.I/WP.106) and elsewhere in the text (para. 111, A/CN.9/928). The Secretariat has made appropriate adjustments to the text.

C. Protection against loss of or damage to the business registry record

235. To protect the business registry from the risk of loss or physical damage or destruction, the State should maintain back-up copies of the registry record. Any rules governing the security of other public records in the enacting State might be applicable in this context.

236. The threats that can affect an electronic registry also include criminal activities that may be committed through the use of technology. Providing effective enforcement remedies would thus be an important part of a legislative framework aimed at supporting the use of electronic solutions for business registration. Typical issues that should be addressed by enacting States would include unauthorized access or interference with the electronic registry; unauthorized interception of or interference with data; misuse of devices; fraud and forgery.

Recommendation 53: Protection against loss of or damage to the business registry record

The law should:

(a) Require the registrar to protect the registry records from the risk of loss or damage; and

(b) Establish and maintain back-up mechanisms to allow for any necessary reconstruction of the registry record.

D. Safeguard from accidental destruction

237. An aspect that may warrant consideration by States is that of natural hazards or other accidents that can affect the processing, collection, transfer and protection of the data housed in the electronic registry and under the liability of the registry office. Given user expectations that the business registry will function reliably, the registrar should ensure that any interruptions in operations are brief, infrequent and minimally disruptive to users and to States. For this reason, States should devise appropriate measures to facilitate protection of the registry. One such measure could be to develop a business continuity plan that sets out the necessary arrangements for managing disruptions in the operations of the registry and ensures that services to users can continue. In one State, for example, the registry has established a “risk register”, i.e. a dynamic document that is updated as changes in the operation of the registry occur. Such a risk register allows the registrar to identify possible risks for the registration service as well as the appropriate mitigation measures. Designated staff are required to report on an annual basis the threats to the registry and the relevant actions taken to mitigate such threats.

Recommendation 54: Safeguard from accidental destruction

The law should provide that appropriate procedures should be established to mitigate risks from force majeure, natural hazards, or other accidents that can affect the processing, collection, transfer and protection of data housed in electronic or paper-based business registries.

Annex*

The underlying legislative framework

A. Changes to underlying laws and regulations

1. Business registration reform can entail amending either primary legislation or secondary legislation or both. Primary legislation concerns texts such as laws and codes that must be passed by the legislative bodies of a State. Reforms that consider this type of legislation thus require the involvement of the legislature and, for this reason, can be quite time-consuming. Secondary legislation is that body of texts composed of regulations, directives and other similar acts made by the executive branch within the boundaries laid down by the legislature. Reform of secondary legislation does not need to be reviewed by the legislature and thus it can be carried out in a shorter time frame. Therefore, when possible, the use of secondary legislation may be a more attractive option than the reform of primary legislation.

2. Business registration reform can entail amending different aspects of the domestic legislation of a State. In addition to legislation that is meant to prescribe the conduct of business registration, States may need to update or change laws that may simply affect the registration process in order to ensure that such laws respond to the needs of MSMEs and other businesses. There is no single solution in this process that will work for all States, since the reforms will be influenced by a State's legislative framework. However, the reforms should aim at developing domestic laws that support business registration with features such as: transparency and accountability, clarity of the law and the use of flexible legal entities.

3. Regardless of the approach chosen and the extent of the reform, changes in domestic laws should carefully consider the potential costs and benefits of this process, as well as the capacity and the will of the government and the human resources available. An important preparatory step of a reform programme involves a thorough inventory and analysis of the laws that are relevant to business registration with a view to evaluating the need for change, the possible solutions, and the prospects for effective reform. In some cases, this assessment could result in deferring any major legislative reform, particularly if significant gains to the process of simplification can be achieved by the introduction of operational tools. Once it has been decided what changes should be made and how, it is equally important to ensure their implementation. In order to avoid the possible risk of unimplemented reforms, the government, the reform steering committee and the project teams should carefully monitor the application of the new legal regime. The following paragraphs offer some examples of approaches that can be taken to streamline domestic laws and regulations with a view to simplifying business registration and to making it more accessible to MSMEs.

B. Clarity of the law

4. For States wishing to facilitate the establishment of businesses, in particular of MSMEs, it is important to review existing law to identify possible impediments to the simplification of the registration process. The nature of the reform would depend on the status of the domestic law, and a variety of examples based on States' experiences are available.

5. These reforms may include decisions by States to shift the focus of the law towards privately held businesses, and away from public limited companies, particularly if the former currently account for the majority of the firms in the State. Reforms could also include the decision to move the legal provisions pertaining to

* At its twenty-eighth session, the Working Group agreed with the substance of the sections reproduced in this Annex (Chapter XI, Sections A through E of A/CN.9/WG.I/WP.101) and recommendations 52 to 54 of A/CN.9/WG.I/WP.101, but decided to move them into an annex to the legislative guide (para. 142, A/CN.9/900).

small businesses to the beginning of any new law on business forms in order to make such provisions easier to find or to use simpler language in any updated legislation.

6. One reform that would greatly clarify the law would be a comprehensive review of all laws affecting business registration and a unification of the various rules into a single piece of legislation. This could also allow for some flexibility to be built into the system, with the adoption of certain provisions as regulations, or simply providing the legal basis to introduce regulations at a later stage.

Recommendation 1/Annex: Clarity of the law

The law should, to the extent possible, consolidate legal provisions pertaining to business registration in a single clear legislative text.

C. Flexible legal forms[1]

7. Entrepreneurs tend to choose the simplest legal form available for their business when they decide to register, and that States with rigid legal forms have an entry rate considerably lower than those with more flexible requirements. In States that have introduced simplified legal forms for business, the registration process for these business types is much simpler and less costly. Entrepreneurs are not required to publish the rules governing the operation or management of their business in the Official Gazette; instead, these can be posted online through the business registry. There are many States in which the involvement of a lawyer, notary or other intermediary is not obligatory for the preparation of documents or conducting a business name search.[2]

8. Legislative changes to abolish or reduce the minimum paid in capital requirement for businesses also tend to facilitate MSME registration, since micro and small businesses may have limited funds to meet a minimum capital requirement, or they may be unwilling or unable to commit their available capital in order to establish their business. Instead of relying on a minimum capital requirement to protect creditors and investors, some States have implemented alternative approaches such as the inclusion of provisions on solvency safeguards in their legislation; conducting solvency tests; or preparing audit reports that show that the amount a company has invested is enough to cover the establishment costs.

9. Introducing simplified forms of limited liability and other types of businesses is often coupled with a considerable reduction or complete abolition of the minimum capital requirements that other legal forms of business are required to meet upon formation. In several States that have adopted simplified business entities, the minimum capital requirement has been abolished completely, and in other cases, initial registration or incorporation has been allowed upon deposit of a nominal amount. In other States, progressive capitalization has been introduced, requiring the business to set aside a certain percentage of its annual profits until its reserves and the share capital jointly total a required amount. In other cases, progressive capitalization is required only if the simplified limited liability entity intends to graduate into a full-fledged limited liability company (for which a higher share capital would be required), but there is no obligation to do so.

10. Another reform that would be conducive to improved business registration is to provide freedom to entrepreneurs to conduct all lawful activities without requiring

---

[1] The Working Group may wish to note parallel work that it is undertaken in respect of an UNCITRAL limited liability organization (A/CN.9/WG.I/WP.99 and A/CN.9/WG.I/WP.99/Add.1).

[2] At its twenty-ninth session, the Working Group agreed to the following changes in paragraph 7: (a) the phrase “and less costly” should be added at the end of the second sentence; (b) a full stop should be inserted instead of a semi-colon after the phrase “through the business registry” in the next to the last sentence; and (c) the term “and” should be deleted and the phrase “There are many States in which” inserted before the phrase “the involvement of a lawyer …” in the final sentence (para. 114, A/CN.9/928).

them to specify the scope of their venture.[3] This is particularly relevant in those jurisdictions where entrepreneurs are required to list in their articles of association the specific activity or activities in which they intend to engage so as to restrain firms from acting beyond the scope of their goals and, according to certain literature, to protect shareholders and creditors. Allowing for the inclusion in the articles of association (or other rules governing the operation or management of a business) of a so-called "general purpose clause" which states that the company's aim is to conduct any trade or business and grants it the power to do so, facilitates business registration. This approach is far less likely to require additional or amended registration in the future, as businesses may change their focus since entrepreneurs could change activities without amending their registration, provided that the new business activity is a lawful one and that the appropriate licences have been obtained. Additional options to the inclusion of a general purpose clause, which would support the same goal, could be passing legislation that makes unrestricted objectives the default rule in the jurisdiction, or abolishing any requirement for businesses, in particular those that are privately held, to state objectives for registration purposes.

Recommendation 2/Annex: Flexible legal forms

(a) The law should permit flexible and simplified legal forms for business in order to facilitate and encourage registration of businesses of all sizes, including those forms considered in the [UNCITRAL legislative guide on an UNCITRAL limited liability organization]; and

(b) States should consider providing for the optional use of intermediaries by MSMEs.[4]

D. Primary and secondary legislation to accommodate the evolution of technology

11. Since information technology is a field marked by rapid technological evolution, it would be advisable to establish guiding legal principles in the primary legislation, leaving secondary legislation to stipulate the specific provisions regulating the detailed functioning and the requirements of the system. Once the business registration process is fully automated, States should establish provisions (preferably in the secondary legislation) or policies that discipline government-to-government data exchange in order to avoid any lack of cooperation among different authorities.

Recommendation 3/Annex: Primary and secondary legislation to accommodate the evolution of technology

The law should establish guiding legal principles in relation to electronic registration in primary legislation, and should set out specific provisions on the detailed functioning and requirements of the electronic system in secondary legislation.

E. Electronic documents and electronic authentication methods

12. Entering information into an online registry is a business-to-government transaction that should be subject to the same treatment, under domestic legislation, as any other electronic transaction. Therefore, if an appropriate domestic legislative framework for electronic transactions is not in place, a preliminary step for a reform aimed at supporting electronic business registration would be to recognize and regulate the use of such electronic transactions. Among other things, States should

[3] This is a feature on which the Working Group has already agreed in its discussion of a legislative text on a simplified business entity (para. 70, A/CN.9/825). See also paras. 31 to 34, A/CN.9/WG.I/WP.99.

[4] At its twenty-ninth session, the Working Group agreed to add recommendation 2/Annex (b) (para. 113, A/CN.9/928).

adopt laws permitting electronic signatures and the submission of electronic documents.[5] In some States, for example, the use of an advanced electronic signature is mandatory when transmitting information to a business registry. When laws on electronic communication are enacted, they should establish, at minimum, principles of non-discrimination, technological neutrality and functional equivalence, allowing for equal treatment of electronic and paper-based information. The principle of non-discrimination ensures that a document would not be denied legal effect, validity or enforceability solely on the grounds that it is in electronic form. The principle of technological neutrality requires the adoption of provisions that are neutral with respect to the technology used. The principle of functional equivalence lays out criteria under which electronic communications and electronic signatures may be considered equivalent to paper-based communications and hand-written signatures.

13. Further, it would be advisable that the law includes provisions to mitigate the risks that the use of ICT can carry with it and that can affect the validity, and in certain jurisdictions the legal validity, of the information transmitted through the electronic means. The most common risks include: confirming the identity of the entrepreneur filing for registration (referred to as "authentication"); preventing conscious or unconscious alteration of information during transmission (referred to as "integrity"); ensuring that sending and receiving parties cannot deny having sent or received the transferred message (referred to as "non-repudiation") and preventing disclosure of information to unauthorized individuals or systems (referred to as "confidentiality"). In those States where the law does not require business registries to check the veracity of the information submitted during the registration process, these risks may be more problematic as it can be relatively easy to manipulate registration systems and filing processes.

14. Verifying the identity of the registrant and ensuring the integrity of the application and the supporting information are key elements to ensure trust in ICT-supported registration systems and their corresponding use. Consequently, States should carefully consider the requirements that electronic signatures and electronic documents should have in order to minimize any risk of corporate identity theft[6] and the transmission of invalid information.

15. Whether or not the adoption of legislation on electronic signatures is premature due to the technological infrastructure of the State, various other techniques can prevent corporate identity theft and ensure security. The experience of several States has laid the groundwork for practices that may be replicated in other regions. Simple methods include the use of user names and passwords; electronic certificates; biometric verification (for example, fingerprints); monitoring systems and email systems that notify registered users about changes or whenever documents are filed on their business record; and the implementation or increase of penalties for false or misleading information submitted to the commercial registries. In order to facilitate MSME registration, States may wish to opt for the adoption of such simple ways of ensuring the authentication of the identity of business entrepreneurs.

F. Dispatch and receipt of electronic messages

16. Another issue to consider when implementing a business registry through the use of ICT solutions is that electronic registries may make it difficult to ascertain the time and place of dispatch and receipt of information. This is an aspect that may be

[5] UNCITRAL has adopted several texts dealing with electronic commerce. Those texts and relevant information on them can be found on the UNCITRAL website at: http://www.uncitral.org/uncitral/uncitral_texts/electronic_commerce.html (see also para. 89 above).

[6] Corporate identity theft can occur through the theft or misuse of key business identifiers and credentials, manipulation or falsification of business filings and records, and other related criminal activities. Despite the use of the term "corporate", corporations are not the only business entities that are victimized by this crime. Any type of business or organization of any size or legal structure, including sole proprietorships, partnerships and limited liability companies can be targets of business identity theft.

relevant due to the time sensitivity of certain submissions, such as establishing the exact time and place at which a business has been registered. For this reason, it is important to have clear rules that define the time of “dispatch” and “receipt” of electronic messages. If such rules are not clearly defined in a State’s legislative framework, or if they are not defined with the specificity required for the purposes of time-sensitive registration applications, then ad hoc laws addressing the issues of dispatch and receipt may be required.

F. Note by the Secretariat on reducing the legal obstacles faced by micro, small and medium-sized enterprises (MSMEs)

(A/CN.9/WG.I/WP.110)

[Original: English]

Contents

Introduction

1. At its twenty-sixth session (April 2016), the Working Group considered document A/CN.9/WG.I/WP.92 (paras. 86 to 88, A/CN.9/866) which had been prepared by the Secretariat to provide the overall context for work prepared by the United Nations Commission on International Trade Law (UNCITRAL) in respect of micro, small and medium-sized enterprises (MSMEs). While the Working Group did not have sufficient time to consider A/CN.9/WG.I/WP.92 in detail, there was broad support for the proposal that a document along those lines could accompany its MSME work as an introduction to the final text and that it could provide an overarching framework for UNCITRAL's current and future work on MSMEs. Further, the Working Group was of the view that, once specifically considered and adopted by the Working Group and the Commission, that contextual framework could be underpinned by legal standards that would provide legislative pillars to the framework; importantly, such an approach could accommodate expansion through the addition of other legislative texts regarding MSMEs as such texts might be adopted by the Commission. Those views were noted by the Commission at its forty-ninth session (2016), at which the Working Group was commended for the progress that it had made on its work to date.[1]

2. This working paper is a revised version of A/CN.9/WG.I/WP.92 (and its update, A/CN.9/WG.I/WP.107, which there was insufficient time to consider at the twenty-ninth session of the Working Group), taking into account the general views expressed by the Working Group at its twenty-sixth session (paras. 86 to 88, A/CN.9/866), as well as appropriate material drawn from the contribution by the United Nations Conference on Trade and Development (UNCTAD) in document A/CN.9/WG.I/WP.98. Necessary amendments have also been made in light of the development by the Working Group of the draft legislative guides on key principles of a business registry (A/CN.9/WG.I/WP.109) and on an UNCITRAL limited liability organization (A/CN.9/WG.I/WP.99 and Add.1).

[1] *Official Records of the General Assembly, Seventy-first Session, Supplement No. 17* (A/71/17), paras. 222 and 224.

I. Micro, small and medium-sized enterprises (MSMEs)

3. At its forty-sixth session, in 2013, UNCITRAL decided to commence work on reducing the legal obstacles faced by MSMEs throughout their life cycle, and in particular, specified that such work should focus on MSMEs in developing economies. This matter was placed on UNCITRAL's work programme for Working Group I, which was requested to begin work on its mandate with a focus on the legal questions surrounding the simplification of incorporation.[2] In taking up this topic, UNCITRAL has decided to focus its attention, at least initially, on the reduction of legal obstacles that MSMEs face at the beginning of their life cycle.

4. In light of the disadvantaged position in which many MSMEs are found globally, undertaking this work emphasizes the relevance and importance of UNCITRAL's work and programmes for the promotion of the rule of law at the national and international levels and for the implementation of the international development agenda. These include the achievement of the Sustainable Development Goals, which build upon the successes of the Millennium Development Goals, and which specifically note the encouragement of the formalization and growth of MSMEs in target 3 of goal 8 to "Promote inclusive and sustainable economic growth, employment and decent work for all". The global community has recognized both the importance of fair, stable and predictable legal frameworks for: generating inclusive, sustainable and equitable development, economic growth and employment; stimulating investment; and facilitating entrepreneurship, as well as UNCITRAL's contribution to the attainment of those goals through its efforts to modernize and harmonize international trade law.[3] Work aimed at supporting and fostering the establishment and growth of MSMEs further underpins UNCITRAL's contribution in providing internationally acceptable rules in commercial law, and supporting the enactment of those rules to assist in strengthening the economic fibre of States.

5. The international community has underscored the importance of business law as one of four pillars key to strengthening the legal empowerment of the poor, many of whom rely upon micro and small businesses for their livelihood.[4] In addition to other pillars (such as access to justice and the rule of law; property rights; and labour rights), business rights are seen as important to empower the less advantaged, not only in terms of their employment by others, but in developing micro and small businesses of their own. Business rights may be regarded as a composite of existing rights of groups and individuals to engage in economic activity and market transactions, and which include the right to start a business in the legally regulated economy without facing arbitrarily enforced regulations or discrimination, removing unnecessary barriers that limit economic opportunities, and protecting business investments, regardless of their size.[5] Measures that have been called for to strengthen business rights include:

The findings of this Commission formed an integral part of the United Nations Development Programme's (UNDP) Initiative on Legal Empowerment of the Poor (www.undp.org/content/undp/en/home/ourwork/democraticgovernance/focus_areas/focus_justice_law/legal_empowerment.html) and have contributed to similar work on Legal Empowerment of the Poor in international organizations such as the World Bank Group.

[5] Ibid, pp. 30–31.

(a) Guaranteeing basic business rights, including the right to sell, the right to have a workspace and the right to have access to the necessary infrastructure and services (for example, to electricity, water and sanitation);

(b) Strengthening, and making effective, economic governance in order to permit entrepreneurs to easily and affordably establish and operate a business, to access markets, and to exit a business;

(c) Expanding the accessibility of entrepreneurs to limited liability entities and to other legal mechanisms that allow owners to separate their business and personal assets;

(d) Promoting inclusive financial services that offer savings, credit, insurance, pensions and other tools for risk management; and

(e) Expanding the access of entrepreneurs to new business opportunities through specialized programmes to familiarize entrepreneurs with new markets, assisting them in creating links with other businesses of all sizes, and in complying with regulations and requirements.[6]

6. UNCITRAL's experience in developing international trade law texts may assist in the identification of the legal and regulatory framework that can best assist entrepreneurs and MSMEs in establishing business rights, thereby reducing some of the legal obstacles that such businesses face.

A. The importance of MSMEs in the global economy

7. UNCITRAL's decision to work on reducing the legal obstacles faced by MSMEs recognizes the importance of such enterprises to the economic health of the States in which they are found, and to the global economy more generally. This importance is underscored by a number of key facts that illustrate that MSMEs are seen as the backbone of the economy in both the developed and the developing world.

8. The total number of MSMEs worldwide is estimated to be around 500 million, of which approximately 85 per cent are in emerging markets.[7] Statistics for small and medium-sized enterprises (SMEs), a subset of MSMEs, indicate that such businesses account for over 70 per cent of total employment and 64 per cent of Gross Domestic Product (GDP) in developed economies, and approximately 45 per cent of employment and 63 per cent of GDP in low-income countries.[8]

9. It may also be instructive to review some of the statistics on such enterprises on a regional and subregional basis. In the European Union (EU), over 95 per cent of all businesses are SMEs, which provide two out of three private sector jobs and contribute to more than half of total value-added created by business in the EU. Further, nine out of ten SMEs in the EU are microenterprises (defined in the EU as enterprises having fewer than 10 employees), thus illustrating that the mainstays of Europe's economy are micro firms.[9]

10. Microenterprises are no less influential in other developed States. Over 90 per cent of all businesses in the United States of America are microenterprises (defined in the United States as enterprises having fewer than 5 employees, including the owner). The direct, indirect and induced effect of microenterprises have an impact on over 40 million jobs in the United States: directly accounting for over 25 million jobs; indirectly supporting close to 2 million jobs through business purchases; and having

an induced effect (through the personal purchasing power of owners and employees of microbusinesses) on over 13 million jobs.[10]

11. MSMEs are also of great importance in regions of the world where a large number of developing States are found. In the Caribbean Community and Common Market (CARICOM), MSMEs provide more than 50 per cent of GDP and account for around 70 per cent of jobs,[11] while in Latin America, MSMEs provide employment to about 70 per cent of the regional workforce and contribute almost 50 per cent of the region's GDP.[12] Statistics available for SMEs, a subcategory of MSMEs, are no less impressive: in the Association of Southeast Asian Nations (ASEAN) region, they represent over 95 per cent of all enterprises and contribute approximately 50 per cent of GDP;[13] in Asia-Pacific Economic Cooperation (APEC) economies, SMEs account for over 95 per cent of all businesses and employ over half of the work force;[14] and in Africa, they provide more than 45 per cent of employment and contribute over 30 per cent of GDP.[15]

B. Defining MSMEs

12. There is no standardized international definition of what constitutes an MSME, since each economy will define its own parameters for each category of business size by taking into account its own specific economic context. For the purposes of work undertaken by UNCITRAL, it is not necessary or advisable to seek consensus on a definition for each category of MSME, since any legislative texts produced will be applied by States or regional economic groups to MSMEs in accordance with their own definitions, based on each unique economic context. The important common factor from State to State is that MSMEs, regardless of how they are defined, are enterprises that, by virtue of being the smallest and most vulnerable, face a number of common obstacles irrespective of the particular jurisdiction in which they are found. For that reason, these materials do not offer guidance on how a State should define the different categories of MSMEs.[16]

C. The nature of MSMEs

13. MSMEs are incredibly varied in nature. They may consist of sole entrepreneurs, small family businesses or larger enterprises with several or many employees, and may operate in virtually any commercial sector, including in the service industry and the artisanal and agricultural sectors.

[16] States may wish to note the definitions of the different categories of businesses included in MSMEs that have been established either by various States or by regional economic groups. Those definitions tend to be based on a number of elements, considered separately or along with other factors, including: (i) the number of employees at a specific point in time, such as the end of the financial or calendar year; (ii) the amount of annual revenue or turnover generated by the enterprise, or the balance sheet total of the business; (iii) the asset base of the business; (iv) the total monthly wages paid by the enterprise; or (v) the amount of capital invested in the enterprise.

14. Moreover, MSMEs may be expected to vary depending on the local economic conditions, cultural traditions and the different motivations and characteristics of the entrepreneurs establishing them. Enterprises that operate in the legally regulated economy may also take various legal forms, depending on the options available to them under applicable law, and on how those different forms may meet their needs.

15. In addition, although MSMEs may be seen, particularly in the context of developing economies, mainly as a source of livelihood for the working poor, such enterprises need not be static; in fact, MSMEs may also serve a dynamic purpose as a source of entrepreneurial talent in an economy. Indeed, their importance in the world economy suggests that providing for and fostering the growth of MSMEs is a key goal in order to achieve economic progress, innovation and success.

16. However, despite their disparate nature, certain characteristics of MSMEs may be broadly shared, including:

(a) Small size; they are and remain small operations;

(b) Disproportionate impact of burdensome regulatory hurdles;

(c) Reliance on family and friends for loans or risk-sharing;

(d) Limited access to capital or to banking services;

(e) Limited source of employees; if any, they are often drawn from family and friends and may be unpaid and unskilled, including having limited administrative capacity;

(f) Limited markets; these may comprise only relatives, close friends and local contacts;

(g) Vulnerability to arbitrary and corrupt behaviour;

(h) Limited access to dispute settlement mechanisms, which puts them at a disadvantage in disputes with the State or with larger businesses;

(i) Lack of ability to partition assets, so business failure often means that personal assets are also lost;

(j) Vulnerability to financial distress; and

(k) Difficulty in transferring or selling a business and in profiting from both tangible and intangible assets (such as client lists or relationships with customers).[17]

D. Creating sound business environments for all businesses

17. Efforts to assist MSMEs at the start of their life cycle might first begin with consideration of the business environment in which an MSME will be conducting its affairs. A “business environment” may be defined in a number of different ways, but could be said to comprise the policy, legal, institutional and regulatory conditions that govern business activities, and the administration and enforcement mechanisms established to implement government policy, as well as the institutional arrangements that influence the way key actors operate. These key actors may include government agencies, regulatory authorities, business organizations, trade unions, and civil society organizations. All of these factors affect business performance.[18]

18. Sound business environments can have a positive influence on economic growth and poverty reduction. While views differ as to the significance and measurability of the link between the business environment, on one hand, and economic growth and poverty reduction, on the other, poor business environments are unlikely to provide sufficient incentives and opportunities for entrepreneurs to carry on their commercial activities in the legally regulated economy. In addition, poor business environments tend to be more susceptible to corruption and usually have a disproportionate gender

[17] See, for example, supra note 4, pp. 8–9, 38–39 and 70–73.

[18] Donor Committee for Enterprise Development (DCED), 2008, “Supporting Business Environment Reforms”, p. 2.

impact, since the businesses most vulnerable in a weak business environment are micro-businesses, which are often owned by women.[19]

19. It should be noted that the quality of the business environment varies not only as between States, but also within the different regions of those States. Such regional variations make it unlikely that a single solution will provide the answer for improving the business environment in every State. Similarly, the challenges faced by MSME entrepreneurs vary depending on the context in which they are doing business. However, the two concepts are linked, since many of the challenges faced by MSMEs are similar to those considered detrimental to a favourable business environment in general, including: burdensome regulation, high economic inequality, low institutional quality, low quality of public infrastructure, and a lack of access to credit and other resources.[20]

20. Improving the quality of the business environment and assisting MSMEs in overcoming the particular challenges facing them often require a State to take measures towards legal and policy reform. These reforms may include, among others, providing for a simple and effective system of registration with those public authorities with which a business may be required to register (which may include the business or commercial registry, as well as taxation and social security authorities), as well as providing for a range of simplified and flexible legal forms for business so as to meet the varied needs of MSMEs. States most often initiate such reforms in order to: facilitate business start-up and operations, stimulate investment opportunities, and increase growth rates and employment. Such reforms require careful planning and commitment on the part of the State, as well as the involvement of many different entities at various administrative and governmental levels.[21]

II. The extralegal economy

21. As outlined above in paragraph 16, MSMEs generally face a number of key challenges, some of which are caused, and many of which are exacerbated, by operating in the extralegal economy,[22] also referred to as the "informal" economy. While developing States host over 85 per cent of the large number of MSMEs in business globally, an estimated 77 per cent of them operate in the extralegal economy.[23] Statistics for SMEs (a subset of MSMEs) that are operating in the extralegal economy indicate that such businesses are estimated to provide over 45 per cent of all jobs in developing States and 25 per cent in developed States, but that they account for only around 35 per cent and 15 per cent of the GDP, respectively, in those economies.[24]

22. "Informality" is by no means a uniform concept. Many businesses that might be considered "informal" actually operate in fixed premises and according to locally accepted commercial rules. In addition, they may be well-known by local authorities, pay some form of local taxes, and may even engage in cross-border trade. Others, on the other hand, may have little interaction with the State.

23. Although measurement tools are imperfect and no clear boundaries exist between formal (or legally regulated) and informal (or extralegal) sectors, businesses can be viewed as operating on a formality-informality (or legal-extralegal) spectrum, according to the extent to which their operations fall within the ambit of a State's official laws or take place outside its official structures. [24] Supra, note 8.

to the "legally regulated economy" thus refers to the sector of the economy characterized by activities that are conducted within the ambit of formal regulation and structure, and commercial activity that falls outside of this scope will be referred to as "extralegal" rather than "informal". Moreover, since the entry point for businesses wishing to access the legally regulated economy is often by way of mandatory registration with certain public authorities (often the commercial or business registry, as well as taxation or social security authorities), extralegal enterprises will refer to those that have not complied with mandatory registration with the authorities as required by the applicable law of the State. Mandatory registration with those public authorities will be considered in these materials to be the main conduit through which businesses are encouraged to operate in the legally regulated economy. However, it should be noted that in some States, certain businesses (due to their size and legal form) are not required to register with the business registry, taxation or social security authorities and provided those businesses fulfil other mandatory requirements, they are regarded as operating in the legally regulated economy.[25]

24. In addition, the extralegal economy is not related to illegal or criminal activity. Illegal activities are contrary to the law, but informal activities are extralegal, in that they are not officially declared and occur outside the legal and regulatory regime that should govern such activities. The discussion in these materials is limited to extralegal commercial activities and does not address illicit trade in goods or services.

25. Further, extralegal commercial activity may be mainly of a different nature in some States, such as in developed economies. In such States, the extralegal economy may consist mainly of formal firms and workers that underreport their income to tax authorities, or that use undeclared labour in certain business domains.[26] These types of extralegal activities are not the focus of these materials.

26. It is also important to note that although extralegal commercial activity, particularly in the developing world, may exist largely as a result of economic necessity (as noted above in respect of MSMEs in general)[27] components of the extralegal economy may also be seen as quite dynamic and as an incubator for business potential that in fact provides economies with a large number of potential contributors to business development. In fact, businesses operating in the extralegal economy may be seen to provide a pool of talent and an important base of operations from which entrepreneurs can access, and graduate into, the legally regulated economy. There is increasing recognition that the extralegal sector is growing and that it should not be considered a marginal or peripheral sector, but rather as an important building block of a State's overall economy.[28]

27. In fact, a majority of the world's working population operates in the extralegal economy; that number is projected to grow to two-thirds of the global work force by 2020.[29] Although the very nature of such enterprises prevents the identification of precise statistics, estimates of the regional prevalence of extralegal economic activity as a percentage of GDP are as follows: 38 per cent in sub-Saharan Africa; 18 per cent in East Asia and the Pacific; 36 per cent in Europe and Central Asia; 35 per cent in Latin America and the Caribbean; and 27 per cent in the Middle East and North Africa. By way of comparison, the level of the extralegal economy as a percentage of GDP is estimated at 13 per cent in high-income Organisation for

[25] Further to the request of the Working Group at its twenty-ninth session, the Secretariat has clarified throughout this text that the operation of a business in the legally regulated economy refers to a business that has complied with the system of mandatory registrations and other requirements of the jurisdiction in which it operates (para. 22, A/CN.9/928).

[29] "How to formalize the informal sector: Make formalization easy and desirable", UNCTAD, (www.businessfacilitation.org/topics/formalizing-the-informal-sector.pdf).

Economic Co-Operation and Development (OECD) States, and at 17 per cent globally.[30]

28. The institution of reforms to improve the business environment, as noted above in paragraphs 17 to 20, may encourage and facilitate the operation of enterprises in the legally regulated economy. However, in order to achieve success, policies encouraging businesses to operate in that economy should take into account the different motivations and characteristics of entrepreneurs operating in the extralegal sector, and ensure sufficient incentives are offered to encourage them to operate in the legally regulated economy. An entrepreneur's reasons for operating a business in the extralegal sector will vary depending on the economy, but may include: high entry barriers and costs (including taxes and other social contributions) that outweigh the benefits that can be expected from entering the legally regulated economy; lack of information required to access the legally regulated economy; and a lack of job opportunities in the legally regulated economy.[31]

29. Variations in the size and characteristics of the extralegal economy are also apparent from region to region. An analysis of one region, for example, indicates high levels of extralegal commercial activity, partially due to the fact that the extralegal economy is where most new jobs are found, and where many entrepreneurs must trade by necessity.[32] In this region, a job, an enterprise and a household are often the same thing,[33] and lack of entrepreneurial skills, access to credit, and infrastructure are seen as the most obvious constraints to growth. In other regions, the extralegal sector tends to behave like a typical small business sector, and is often the main entry point for young, uneducated workers seeking employment, as well as for those seeking part-time work.[34] Other regions have experienced growth of the extralegal economy in recent years, apparently driven by a lack of jobs in the legally regulated sector and reduced demand for goods and services from those employed in that sector.[35]

30. The debate on the reasons for the extralegal sector, on its effect on national economies and on how to approach the issue has been vibrant for decades and has in recent years had a major influence on policymaking. The view that extralegal commercial activity is the result of burdensome regulation and costly procedures required by the State for businesses to enter the legally regulated economy, and that a reduction of those barriers will help extralegal MSMEs move towards a higher degree of compliance with mandatory registration requirements, has generated strong momentum for reforming regulations and laws in order to simplify business entry into the legally regulated economy.[36] A wide array of policies has been designed and implemented in several States and regions of the world, since, as noted earlier, the variable nature of the extralegal sector, and the different levels of development of States, render elusive the identification of a single optimal approach. The most successful interventions have been comprehensive policy packages aimed at achieving various goals, such as economic growth, social protection and inclusion, and which often include:

(a) Reducing the costs of a business entering and operating in the legally regulated sector, which include entry costs, taxes, fees and social contributions, and costs of compliance;

(b) Improving the benefits of operating in the legally regulated economy by reducing the bureaucracy and expense involved in obtaining fixed premises, and providing access to business development services and new markets;

(c) Improving the general business environment, so that policies to reduce costs and to improve the benefits of entering the legally regulated economy also assist firms already operating in that sector; and

(d) Strengthening the enforcement of a State's legal regime in order to encourage operation in the legally regulated economy.[37]

III. Ensuring that operation in the legally regulated economy is simple and desirable for MSMEs

31. In order to encourage MSMEs to operate their business in the legally regulated economy, States may wish to consider how best to effectively convey to MSMEs the availability of and the advantages offered by that approach. In addition, States should also consider what steps they can take to motivate such behaviour by making it a desirable, easily accessible process, that will impose the least burden possible on the MSME.

A. Explaining the meaning of operating in the legally regulated economy

32. To ensure widespread understanding of the advantages available to MSMEs, steps must be taken to explain the meaning of participating in the legally regulated economy and to provide clear and accessible information on how to achieve that aim. The State should consider how best to effectively convey relevant information to MSMEs, including on the necessary requirements in their jurisdiction and how such businesses can fulfil them, and any other information necessary for them to operate in the legally regulated economy. In addition to advising on the benefits of operating in the legally regulated economy, information should also be provided on the types and advantages of the legal forms that are available to a business, and the public authorities with which registration might be necessary (e.g. business registration, taxation and social security authorities). Ideally, a business should be able to use a single physical or electronic interface (a "one-stop shop") to register simultaneously with all necessary public authorities. Information in respect of these matters should be specifically adapted so that it is tailored to and clear and easily understandable by the target audience.

1. The advantages of the legally regulated economy

33. Part of the message that must be conveyed to MSMEs in order to persuade them to operate their businesses in the legally regulated economy is an explanation of the advantages of that approach. These advantages are outlined below.

(a) Advantages for the State

34. States have a clear interest in encouraging MSMEs to operate in the legally regulated economy. One of the reasons often cited for that interest is in terms of taxation, since encouraging MSMEs to operate in the legally regulated economy will

[37] International Labour Organization (ILO), GIZ, Enterprise formalization: fact or fiction?, A quest for case studies, 2014, p. 24.

broaden the tax base of the State.[38] It may also help reduce any friction that may exist with enterprises already operating in the legally regulated economy and paying taxes, but that must compete for market share with extralegal businesses. Additional reasons for a State to take action to encourage businesses to operate in the legally regulated economy, may include, depending upon the specific economic sector, ensuring consumer protection and, in general, engendering trust in business and commerce in the State for stakeholders including consumers, business partners and banks.

35. Other advantages to the State may be less direct, but are no less valuable. For example, providing previously extralegal businesses with the means to enter the legally regulated economy will permit those MSMEs to grow, to create jobs, and to increase their earnings and contribution to the creation of wealth and the reduction of poverty in the State. Businesses that operate in the legally regulated economy can be expected to attract more qualified employees and to stay in business longer, thus making investment in the training of personnel and the acquisition of capital more profitable. The increase in the number of businesses that comply with mandatory registrations will mean that there is more and better economic data available, that more information will be exchanged in respect of such businesses and that information will become more transparent. All of these effects will have an overall positive impact on the economy of the State.[39]

(b) Advantages for entrepreneurs

36. States must also ensure that they convey clearly and effectively to MSMEs and entrepreneurs the benefits of doing business in the legally regulated economy. The following factors are often cited as key advantages for MSMEs that operate in that commercial context.

(a) Visibility to the public and to markets

Registering a business with public authorities, including mandatory or non-mandatory registration in the business registry, can be a primary means through which the business becomes visible to the public and to markets, thus providing a means for exposure to potential clients and business contacts, and an expansion of market opportunities. This membership in the marketplace may provide opportunities to become a supplier of goods and services under favourable conditions, and can dramatically improve the profitability of the business. Moreover, such visibility both reduces the costs of and enables MSMEs to trade in economic circles beyond their relatives, friends and local contacts, thus opening up new markets.

(b) Visibility to the banking system and financial institutions

Registration with public authorities, including mandatory or non-mandatory business registration, can also provide an enterprise with improved access to banking and financial services, including to bank accounts, loans and credit. This permits MSMEs to move away from financial reliance on relatives and friends, making it easier for them to raise capital from a broader group of investors, as well as lowering the cost of that capital. This, in turn, permits businesses to expand, to make new investments, to diversify their risk, and to take up new business opportunities.

(c) Public procurement

In most States, public procurement contracts are only available to those businesses that are in compliance with mandatory registration requirements and are part of the legally regulated economy. Access to such contracts may be enhanced for certain groups, since some States have developed specific programmes to ensure that a certain percentage of public procurement contracts are granted to less entitled entrepreneurs, including women, youth, the disabled and the elderly.

---

[38] States may wish to note that reduced taxation rates and administration may be an incentive offered to MSMEs to join the legally regulated economy, and that too great an emphasis on expanding the tax base might be counterproductive.

[39] See, for example, supra, note 22, pp. 14 et seq.

(d) Legal validation

Compliance with mandatory registration requirements permits a business to operate legally in the jurisdiction and provides the entrepreneur with documentation proving that status. This status also enables such businesses to have access to justice for commercial purposes, to enter into and enforce contracts more easily, and may facilitate access to exit mechanisms, such as reorganization or liquidation, in the event of financial difficulty. In some legal systems, compliance with all mandatory registrations provides additional legal rights for the entrepreneur operating in the commercial sector, including flexible provisions on commercial contracts, specialized commercial court divisions, a relaxation of certain requirements in terms of legal forms of business, and similar benefits.

(e) Legal compliance

While related to the concept of legal validation, compliance with the law can itself be seen as an advantage, since it alleviates entrepreneurial anxiety in respect of operating extralegally, and makes it less likely that fines may be imposed. Being in compliance with the law will also reduce the business' vulnerability to corruption and bribery, and should assist the entrepreneur by providing recourse in cases of tax and other inspections.

(f) Access to flexible business forms and asset partitioning

Through registration, the entrepreneur will be entitled to choose the legal business form available in the jurisdiction that is best suited to his or her needs; ideally, the State will provide for a range of legal business forms for that purpose. Most jurisdictions have at least one legal form that permits the entrepreneur to separate personal finances from business finances; such asset partitioning can be invaluable to a business, particularly if financial difficulty is encountered, as the entrepreneur is not in danger of losing all personal assets, and the value of the business assets can be maximized in the case of reorganization or liquidation. Moreover, the value of a business with separate assets may be greater and can be more readily transferred.

(g) Unique name and intangible assets

Compliance with mandatory registrations often requires an enterprise to operate under a sufficiently unique business name. This unique name translates into a market identity that can develop a value of its own and be traded to a subsequent owner. Other intangible assets that can add to the value of a business and be traded, particularly in the case of asset partitioning and a separate legal business identity, include client lists and commercial relationships.

(h) Opportunities for growth

In addition to the advantages of visibility set out above, compliance with mandatory registration requirements, including with the business registry, provides an enterprise with access to a much larger business network, which can permit it to grow the business and operate it on a much greater scale. Some States permit a business that has fulfilled its legal requirements to become a member of the Chamber of Commerce or other trade organization, which can greatly enhance an enterprise's opportunities for development.

(i) Opportunities for specialization of labour

Businesses that have complied with their mandatory registration requirements tend to be less constrained in their hiring practices and may be able to recruit employees outside of family and friends. This can facilitate access to a larger pool of talent and permit specialization among employees, enabling the MSME to make better use of employee talents and improving overall productivity.

(j) Access to government assistance programmes

Many States provide specific assistance programmes for MSMEs or for specific types of disadvantaged entrepreneurs. Operation in the legally regulated economy will usually permit an enterprise to access all forms of government assistance available to such businesses.

(k) Empowerment and emancipation effects

The operation in the legally regulated economy of businesses that are owned by women, youth, the disabled, the elderly and other less advantaged groups may have important empowerment and emancipation effects. This may be particularly so in respect of women entrepreneurs, many of whom are micro-entrepreneurs that are often exposed to greater risk as a result of corruption and abuse of authority.

(l) Longer term gains

The visibility of a business operating in the legally regulated economy can also be the main conduit for its growth into cross-border trading. It is also possible that, in the longer term, and particularly through the use of electronic commerce and Internet facilities, robust compliance of businesses with mandatory registration requirements may lead to an increase in cross-border trading and foreign investment – advantages not only for the enterprise, but for the State as well.

2. Communication and education

37. Communication of, and education on, the advantages of legal and policy reforms undertaken by the State to assist MSMEs will be key to the success of those reforms. While this might seem a relatively small detail, in the context of States and regions in transition or with remote areas, all potential entrepreneurs may not be well-served by mass media or have dependable and regular access to telecommunications or the Internet. In such contexts, the potential obstacles to communication and education, and thus to the success of the reforms, can be expected to be more numerous.

38. An additional consideration for a State in developing communication and education strategies should be the literacy challenges faced by many micro-entrepreneurs and the particular steps that may need to be taken to overcome this hurdle. For example, pictograms could be used in addition to text in order to inform potential businesses of the programmes and advantages offered to them. Additional options could include using other culturally significant means of communicating with such groups, including through songs and storytelling. One example demonstrates how,[40] in order to publicize its programmes aimed at fostering micro entrepreneurs, a State launched a national campaign illustrating the benefits of those programmes by way of radio and television broadcasts of a simple and interesting scenario using well-known national actors performing in the national languages of the State.

39. In designing its communication and education plan, a State must be cognizant of the potential impediments outlined above and think practically about how best to overcome such difficulties. Possible solutions could include:

(a) Providing mobile education and communication efforts, and for mobile registration and facilitation counters, so as to enable travel to the entrepreneur's location;

(b) Using trade organizations or informal workers' associations to assist in publicizing the programmes;

[40] See, for example, efforts of the Democratic Republic of Congo in publicizing its OHADA (Organisation pour l'Harmonisation en Afrique de Droit) "entreprenant" programme (www.ohada.com/actualite/2609/ohada-rdc-campagne-mediatique-de-sensibilisation-sur-l-entreprenant-communication-de-la-commission-nationale-ohada-de-rdc.html). A sample video may be viewed here: www.youtube.com/watch?v=lE1OIo1eNic.

(c) Using mass media that is broadly available, including radio, television and print media, as well as posters and billboards;

(d) Making blanket announcements via text on mobile phones; this may be particularly effective in areas where mobile payments are being used;

(e) Ensuring communication and education is in the local language;

(f) Making use of social media; while less practical in terms of States that face technological hurdles, social media may be an effective tool, particularly to disseminate information among younger entrepreneurs and family members;

(g) Developing courses for gender-specific trading or involving other disadvantaged groups; and

(h) Using educational techniques that may be particularly useful in the context.[41]

B. Making it desirable for MSMEs to operate in the legally regulated economy

40. Another component of the communication package that should be conveyed to prospective businesses is clear information on the incentives a State provides to MSMEs to encourage them to participate in the legally regulated economy. It is important that businesses are made aware of such incentives and that they outweigh the perceived advantages of operating in the extralegal economy.

41. The effectiveness of the incentives offered by the State will vary according to the specific economic, business and regulatory context. While it is not possible to specify precisely which incentives should be offered, States may wish to consider the incentives outlined in the following paragraph, each of which, often in combination with others, has been found to be an effective means of encouraging MSMEs to enter the legally regulated economy. In addition, in planning for the creation of these incentives, States may need to ensure coordination with international organizations active in this area (including, for example, the World Bank Group, UNCTAD, UNIDO, the Asian Development Bank, or OHADA), officials of public authorities with which businesses must register, local business incubators, the tax authority, and banks in order to maximize the impact of the incentives chosen.

42. A State may consider programmes along the following lines: [42]

(a) Simplification of the registration process for businesses;

(b) Assistance with the registration process for businesses;

(c) Free (or at least very low-cost) registration;

(d) Receipt of an official certificate indicating the registered status and legal form of the business;

(e) Organized access to and support with banking services (bank accounts and chequing accounts);

---

[41] One such method may be “participatory learning and action”, which has been described as an approach traditionally used with rural communities in the developing world. It combines participatory and visual methods with natural interviewing techniques and is intended to facilitate a process of collective analysis and learning. The approach can be used in identifying needs, planning, monitoring or evaluating projects and programmes, and offers the opportunity to go beyond mere consultation and promote the active participation of communities in the issues and interventions that shape their lives. See, for example, “What is Participatory Learning and Action (PLA): An Introduction”, Sarah Thomas (http://idp-key-resources.org/documents/0000/d04267/000.pdf) or www.iied.org/participatory-learning-action.

[42] The Working Group may wish to note that each of these incentives, and any additional ones suggested for inclusion, could be described in a brief paragraph, if desired.

(f) Easier access to credit for businesses operating in the legally regulated economy;

(g) Accountancy training and services, and ensuring simplified accounting rules suitable for MSMEs;

(h) Assistance with the preparation of a business plan;

(i) Training (including managing inventory and finances);

(j) Tax and other credits for training costs;

(k) Protection against potential administrative abuse, possibly through access to mediation or other dispute resolution mechanisms;

(l) Simpler and more equitable taxation (lower, simplified taxation rates), including tax mediation services and simplified tax forms;

(m) Business counselling services;

(n) A transition period to give new businesses time to comply fully with applicable laws;

(o) A temporary "tax holiday" for small and microenterprises upon their initial registration with the necessary public authorities;

(p) Lump sum monetary compensation or government subsidies and programmes[43] to foster MSME growth;

(q) Public communication and promotion of the business, as well as networking opportunities and access to experienced businesses, for example through free memberships in industry organizations;

(r) Specific public procurement programmes to encourage small and micro-businesses or those owned by disadvantaged groups to have access to contracts;

(s) Low-cost technological infrastructure;

(t) Access to and support with obtaining health insurance; and

(u) The establishment of a business mentoring programme with experienced business owners to facilitate access to experience and information for MSMEs.

C. Making it easy for MSMEs to operate in the legally regulated economy

43. In addition to a lack of information, one of the most often-cited reasons given by MSMEs for their reluctance to operate in the legally regulated economy is the cost and administrative burden of doing so. Two areas of reform that States may undertake to assuage these concerns are to simplify and streamline the procedures necessary for a business to comply with the mandatory registrations with public authorities, focussing on the needs of the user, and to provide flexible and simplified legal business forms for MSMEs.

1. Simplified and streamlined registration for businesses

44. One aspect of making it simple and desirable for an MSME to operate its business in the legally regulated economy is to take a user-centric approach and to make the procedures for mandatory registrations with public authorities, including business registration, accessible, simple and clear. Improvements made by a State to its registration system may be expected to assist not only MSMEs, but businesses of all sizes, including those already operating in the legally regulated economy. Importantly, care must also be taken to effectively communicate these changes and their advantages to MSMEs and potential entrepreneurs throughout the jurisdiction.

[43] For example, some States have programmes to encourage young nationals who have been educated abroad to return to their State and start businesses.

45. The draft legislative guide on key principles of a business registry (A/CN.9/WG.I/WP.109) explores in detail the steps that can be taken by a State to simplify, streamline and adopt good practices in its system of business and other registration.

2. Flexible and simplified business forms for MSMEs

46. Another aspect of creating an enabling legal environment and an attractive business environment for MSMEs is for the State to permit them simple access to flexible, legally recognized business forms. Many micro and small businesses are either sole proprietorships or family enterprises that do not possess a legal identity or a business form distinct from that of the owner. An entrepreneur should be permitted to easily and inexpensively register a business with a legally recognized form in that jurisdiction. States may wish to permit registration of a range of different legal forms so as to provide entrepreneurs with sufficient flexibility to meet the needs of MSMEs, and to foster their growth.

47. For some businesses, operation as a simple sole proprietor may be sufficient for their purposes. However, some States and regional economic organizations have created a legal business form for individual entrepreneurs (defined as those whose business turnover is below a certain amount) which adds certain benefits to those otherwise available to the sole proprietor.[44] These benefits tend to include being subject to a simplified scheme for the calculation and payment of taxes and social security contributions, as well as fast, simplified and low (or no) cost registration requirements and formalities. In addition, States may also adopt a number of incentives available to such businesses which may include: assistance in opening a bank account and gaining access to banking services, access to mediation services (for example, in respect of taxation and legal services) and practical training and advisory services in key business areas (for example, in accounting, management and inventory, legal and tax obligations, financial education and awareness, business planning, and restructuring and growth strategies). Nonetheless, such schemes typically do not change the unlimited personal liability of a sole proprietor, whose personal and professional assets are all available to meet any business debt.

48. An important business right that should be offered to MSMEs is the opportunity for an enterprise to partition its business assets from the personal assets of its owner(s). The legal ability of an enterprise to partition its business assets from the personal assets of its owner(s) is an important building block for the encouragement of entrepreneurial activity since, even though a business may fail, the personal assets of the entrepreneur(s) will be protected.

49. Asset partitioning is seen as one of the defining features of a limited liability business entity, which is said to be among the most productivity enhancing legal institutions available. Offering entrepreneurs the opportunity to take on legal personality and limited liability through the adoption of a simplified business form is certainly a feature that States should consider in making policy decisions on legal forms to adopt in order to reduce the legal obstacles encountered by MSMEs. The key issues involved in adopting a legal regime for simplified business entities with these features, but adapted for MSMEs (including sole proprietors), is considered in detail in the draft legislative guide on an UNCITRAL limited liability organization (A/CN.9/WG.I/WP.99 and Add.1). However, it should be noted that the benefits of asset partitioning for MSMEs registering their businesses may also be available in a legal structure that stops short of full limited liability and legal personality, and is thus subject to fewer formal requirements.

---

[44] See, for example, the “entrepreneur with limited liability” (EIRL) or the “auto-entrepreneur” in France (A/CN.9/WG.I/WP.94 and A/CN.9/WG.I/WP.87, paras. 22–23, and pp. 10 et seq., respectively), or the “entreprenant” in OHADA, Acte Uniforme Révisé Portant sur le Droit Commercial General, adopted 15 December 2011, entry into force 16 May 2011 (www.ohada.com/actes-uniformes/940/acte-uniforme-revise-portant-sur-le-droit-commercial-general.html).

50. One such model that has been adopted is that which permits an individual entrepreneur to officially allocate a certain share of personal assets to the entrepreneur's professional activity. This approach permits the entrepreneur to segregate professional assets from personal assets so that, in the event of financial difficulty of the business, creditors will have access only to the professional assets of the entrepreneur.[45]

51. Another model that has been used in this regard is the establishment of a separate capital fund that has been established for a specific purpose. Such a fund may be established by individuals (and their spouses), into which specific assets can be placed that are identified as necessary for the family requirements of the individuals. Such assets are then protected from seizure in the case of business insolvency. A variation on this model may also be created by a corporation, which can establish a separate capital fund devoted to a specific purpose or which can agree that the earnings of an activity be dedicated to the repayment of loans obtained for the execution of certain specified activities. The establishment of such a fund is subject to certain requirements, including that its existence be made public by way of the business registry, and that it be open to opposition by existing creditors of the corporation. Once the fund is constituted, it is segregated from the other funds of the company, and may only be used to satisfy the claims of creditors arising as a result of the relevant activities. Other variations on the creation of a segregated fund may include the declaration of the fund to a specific purpose to the benefit of a natural or legal person, a public administrative body, or other entity, provided that the fund is established by public deed and is registered.[46]

52. An additional example of asset partitioning that stops short of providing legal personality and limited liability is the concept of "business network contracts". This legal tool can be used by a group of entrepreneurs (of various types and sizes, including sole proprietors, companies, public entities, and non-commercial and not-for-profit entities) who undertake a joint venture as agreed in the business network contract, which may be in respect of certain services or common activities within the scope of their business, or even with respect to the exchange of information. The goal of such an approach is to strengthen the individual businesses involved in the contract, as well as the network itself, at the national and international levels, so as to enable access to business opportunities not available to an individual enterprise, and thus to improve competitiveness. The contract must meet the formal requirements established by the State (for example, be duly executed in writing, indicate the objectives of the venture, its duration, the rights and obligations of participants, etc.), and be registered with the business registry. In addition, the contract must establish a capital fund to carry out the programme of the business network; this fund is then segregated from the individual assets of the founding entrepreneurs, and is available only to satisfy claims deriving from the activities performed within the scope of the network, and not for creditors of the individual entrepreneurs that created the business network.[47]

G. Note by the Secretariat on a draft legislative guide on key principles of a business registry

(A/CN.9/940)

[Original: English]

Contents

Introduction

1. This introduction clarifies amendments and additions to the current revision of the draft legislative guide on key principles of a business registry based upon the deliberations and decisions of Working Group I at its thirtieth session (New York, 12 to 16 March 2018, see document A/CN.9/933 for the report of that meeting) as well as aspects of the final structure of the guide once published.

1. The current revision of the draft legislative guide on key principles of a business registry

2. The draft guide before the Commission not only reflects the decisions of the Working Group at its thirtieth session, but also incorporates editorial adjustments made by the Secretariat in order to facilitate the cohesion and consistency of the text. In order to be consistent with the final form in which the draft guide will be published, guidance to the changes arising from the thirtieth session of the Working Group is not reflected in footnotes to the text and the Commission might wish to refer to the report of that meeting (see para. 1 above).

3. The Commission may also wish to note that in a few instances the Secretariat has used some flexibility in implementing the changes agreed upon by the Working Group at its thirtieth session. For example, certain references have not been included in the form or in the paragraph(s) suggested by the Working Group, or certain sentences have been retained since they were thought to be still relevant for the commentary. In a few cases the Secretariat has adjusted the drafting suggestions of the Working Group for improved consistency with the text of the guide (e.g. recommendations 11, 14, 18 and 34).

4. In addition, the Secretariat has made a few other revisions, such as: (a) removing cross references to document A/CN.9/941 (previously A/CN.9/WG.I/WP.110) and to previous revisions of this draft guide; (b) replacing the list of resources used in the preparation of the working papers with reference to the organizations and institutions that have authored such resources (para. 10 of the draft guide); (c) adjusting the definition of "unique identifier" (para. 12 of the draft guide) in order to avoid redundancy with the text of the commentary; (d) revising the text of recommendation 33 and the relevant part of the commentary (para. 167 of the draft guide) for improved consistency with the language used in Core International Human Rights Treaties adopted by the United Nations; (e) eliminating redundancy in the draft guide and (f) revising the text of recommendation 58.

5. The Commission may wish to note that in accordance with the deliberations of the Working Group at its thirtieth session, the Secretariat has relocated the former Annex to the guide (see A/CN.9/WG.I/WP.109) as a new chapter, Part XI. Further to the requests of the Working Group, the Secretariat has also ensured that substance, drafting, and terminology of this new chapter are consistent with the remainder of the guide. Consequently, sections E (Electronic documents and electronic authentication methods) and F (Dispatch and receipt of electronic messages) of the Annex have been removed (and a few aspects relocated in the commentary to recommendations 4, 13 and 58). The Secretariat has also deleted the discussion on primary and secondary legislation (Section A of the Annex) in light of earlier deliberations of the Working Group that the guide should not distinguish between primary and secondary legislation (see para. 21, A/CN.9/900 and also the definition of "law" in para. 12 of the current revision of the draft guide) and in this regard has revised the text of recommendation 58.

6. Even with these adjustments, however, Part XI does not appear to be fully consistent with the focus of the guide, as it discusses aspects pertaining to general legal reform rather than to registration of a business. The Commission might thus wish to consider whether it would be more appropriate to relocate this part of the guide to the materials prepared for the other project discussed by the Working Group, i.e. the draft legislative guide on an UNCITRAL limited liability organization (UNLLO).

2. The final structure of the legislative guide on key principles of a business registry

7. The guide will be published in electronic and paper format. In order to ensure consistency with the approach adopted by other UNCITRAL legislative guides, the text of the guide will be preceded by a short "Preface" that will read along these lines:

> "*The legislative guide on key principles of a business registry was prepared by the United Nations Commission on International Trade Law (UNCITRAL). At its forty-sixth session, in 2013, the Commission agreed that work on reducing the legal obstacles faced by micro, small and medium-sized enterprises (MSMEs) throughout their life cycle, in particular, in developing economies, should be added to the work programme of the Commission, and that such work should begin with a focus on the legal questions surrounding the simplification of incorporation (A/68/17, para. 321).*
>
> *Working Group I commenced its work in February 2014 according to the mandate received by the Commission and agreed that in addition to simplification of incorporation, simplification of business registration also contributed to reducing the legal obstacles faced by MSMEs throughout their life cycle. The Working Group thus added a second project on best practices for business registration (approved by the Commission) to the work on legal questions surrounding the simplification of incorporation.*
>
> *In 2015 and 2016, the Working Group discussed several documents which included portions of draft commentary and recommendations (see A/CN.9/860 and A/CN.9/866 for the reports of those meetings). A draft consolidated text of legislative guide was first discussed in 2017 (see A/CN.9/900 for the report of that meeting) and work was further developed through two one-week sessions,*

the last one being held in March 2018 (see A/CN.9/928 and A/CN.9/933 for the reports of those meetings). In addition to representatives of the member States of the Commission, representatives of observer States and a number of international organizations, both intergovernmental and non-governmental, participated actively in the preparatory work.

The final negotiations on the draft legislative guide on key principles of a business registry were held during the fifty-first session of UNCITRAL in New York from 26 to 27 June 2018 and the text was adopted by consensus on ___ ___ 2018. Subsequently, the General Assembly adopted resolution ___ of ____ in which it expressed its appreciation to UNCITRAL for completing and adopting the legislative guide".

8. The guide will also include Annexes, such as those that will contain a list of all recommendations of the guide, and reproduce the text of the Commission's decision adopting the guide and the resolution of the General Assembly, as well as an Index.

9. The text of the draft legislative guide is reproduced as an Annex to this introduction for consideration by the Commission.

Annex

Draft legislative guide on key principles of a business registry

Introduction

1. The legislative guide on key principles of a business registry has been prepared on the understanding that, in order to create a sound business environment, it is in the interests of States and of micro, small and medium-sized enterprises (MSMEs) that such businesses operate in the formal economy. This guide is also intended to reflect the idea that entrepreneurs that have not yet commenced a business may be persuaded to do so in the formal economy if the requirements for formally starting their business are not considered overly burdensome, and if the advantages for doing so outweigh their interest in operating in the informal economy.

2. This legislative guide recognizes that in certain States, MSMEs, especially micro and small businesses, are not required to register with the business registry in order to operate in the formal economy, but they may be required to register with other relevant authorities such as taxation and social security authorities. The operation of a business in the formal economy refers to a business that has complied with all mandatory registration and other requirements of the jurisdiction in which it is doing business.

3. Depending on the jurisdiction in which the business is operating and the legal form of the business, registration with the business registry may be one of the mandatory registration requirements for doing business in that jurisdiction. However, this guide recommends that even States that do not require mandatory business registration should consider permitting, but not necessarily requiring, businesses of all sizes and legal forms to register in the business registry. This permissive approach could significantly enhance the advantages for businesses operating in the formal economy.

4. In order to encourage entrepreneurs to operate their business in the formal economy – particularly when business registration is a requirement for them to do so – States may wish to take steps to rationalize and streamline their system of business registration. Faster and simpler procedures to register a business could be expected to assist in business formation of all sizes and types of businesses, not only MSMEs. For these reasons, simplification and streamlining of business registration has become one of the most pursued reforms by States in all regions and at all levels of development. This trend has generated several good practices, whose features are shared among the best performing economies. In order to assist States wishing to reform their business registration procedures so as to take into consideration the particular needs of MSMEs, or simply to adopt additional good practices to streamline existing procedures, this guide sets out key principles and good practices in respect of business registration, and how to achieve the necessary reforms.

A. Purpose of the present guide

5. Business registries (see para. 12 below) are systems established by law that facilitate the interaction of new and existing businesses that are operating in the jurisdiction of the registry with the State, other businesses and the public, both when those businesses are established and throughout the course of their lifespan (see para. 52(b) below). The business registry not only enables such businesses to comply with their obligations under the domestic law applicable to them, but it empowers them to participate fully in the formal economy when registration is required for that purpose, and otherwise enables them to benefit from legal, financial and policy support services that are more readily available to registered businesses. Moreover, when information is appropriately maintained and shared by the registry, it allows the public to access business information, and thus may facilitate the search for potential

business partners, clients or sources of finance and reducing risk when entering into business partnerships. In performing its functions, the registry can thus play a role in the economic development of a State. In addition, since businesses, including MSMEs, are increasingly expanding their activities beyond national borders, registries efficiently performing their functions can play an important role in a cross-border context by facilitating access to business information by interested users from foreign jurisdictions (see also paras. 195 and 196 below), which greatly reduces the risks of transacting and contracting.

6. Business registration systems vary greatly across States and regions, but a common thread to all is that the obligation to register can apply to businesses of all sizes depending on the legal requirements applicable to them under domestic law. Approaches to business registration reforms are most often "neutral" in that they aim at improving the functioning of the registries without differentiating between large-scale business activities and much smaller business entities. Evidence suggests, however, that when business registries are structured and function in accordance with certain features, they are likely to facilitate the registration of MSMEs, as well as operating more efficiently for businesses of all sizes. These features are reflected as recommendations in this legislative guide.

7. This legislative guide draws on the lessons learned through the wave of reforms of business registration systems implemented since 2000 by States in various geographic regions. Through this approach, the guide intends to facilitate not only efficient domestic business registration systems, but also cooperation among registries in different national jurisdictions, with a view to facilitating cross-border access to registries by all interested users. Promoting the cross-border dimension of business registration contributes to transparency and legal certainty in the economy and significantly reduces the cost of businesses operating beyond their national borders (see also paras. 195 and 196 and rec. 40 below).

8. The present guide supports the view that transitioning to an electronic or mixed (i.e. electronic and paper-based) registration system greatly contributes to promoting the registration of MSMEs. The guide recognizes that adoption of modern technology has not progressed equally among or within States, and it recommends that any reform towards an electronic business registration system should be tailored to the State's technological and socioeconomic capacity. This may include phasing in implementation, particularly if the technology that is adopted requires a complete reengineering of registration processes (see paras. 72 to 80 below). It should be noted that reference to electronic or online registration is not intended to recommend the use of any particular technology, but rather describes the performance of the business registry's functions through electronically operated devices. In keeping with that approach, this guide has been drafted with the aim of accommodating the use of existing information and communications technology (ICT) as well as any emerging technology, such as distributed ledger technology, that States may consider appropriate when reforming their registration systems.

9. Other features that encourage the registration of MSMEs include providing registration and post-registration services at no cost or at low cost, and collecting and maintaining good quality and reliable information on registered businesses. Importantly, establishing a one-stop shop for business registration and registration with other relevant authorities that are involved in establishing a business, such as taxation and social security authorities, greatly facilitates such registration, particularly in the case of MSMEs. A one-stop shop adopts a user-centric approach that is driven by the needs of the businesses, thus providing services that respond to their expectations in terms of cost efficiency, delivery time and engagement of the service providers. For this reason, the guide supports the view that one-stop shops are a key means to improve institutional interoperability among relevant public authorities and that States should use one-stop shops to establish integrated registration procedures for the establishment of a business (see paras. 94 and 95 and rec. 14 below). In this regard, it should be noted that the terms "business registry" and "one-stop shop" as used in this guide are not intended to be interchangeable (see para. 12 below).

10. These materials have benefited from various tools prepared by international organizations that have supported such reform processes in numerous regions around the world. Data made available through the activity of international networks of business registries that, among other activities, survey and compare the practices of their affiliates in various States around the world have also been referenced. The main sources used in the preparation of this draft legislative guide include publications and online resources from various institutions and organizations, including, but not limited to: the Association of Registers of Latin America and the Caribbean, the Corporate Registers Forum, the Companies House of the United Kingdom of Great Britain and Northern Ireland, the European Commerce Registers' Forum, the European Union, the International Anti-Corruption Academy, the Ministry of Service of Alberta (Canada), the Québec Registraire des enterprises (Canada), the World Bank Group and the United Nations Conference on Trade and Development. Moreover legislation enacted in several jurisdictions, of different legal traditions, around the world has provided guidance on all aspects of business registration.

11. This legislative guide is addressed to States interested in the reform or improvement of their business registration system, and to all stakeholders in the State that are interested in or actively involved in the design and implementation of business registries, as well as to those that may be affected by or interested in the establishment and operation of a business registry.

B. Terminology

12. The meaning and use of certain expressions that appear frequently in this draft legislative guide is explained in this paragraph. It is to be noted that whenever terms such as annual accounts, periodic returns, documents, forms (such as search forms, registration forms or other forms to request registry services), notices, notifications and written materials are used, reference is intended to include both their electronic and paper versions unless otherwise indicated in the text. Frequently used expressions include the following:

- *Annual accounts*: "Annual accounts" means financial information on the business' activities prepared at the end of a financial year of the business (cf. "periodic returns").
- *Branch*: "branch" means an establishment that depends on a main business and carries on the same commercial activity in a separate location (whether foreign or domestic). A branch is not a subsidiary and does not have a separate legal personality from the original or main business.
- *Business name*: "Business name" means a name registered on behalf of a business, or a name used or planned to be used by a business.
- *Business registration:* "Business registration" means the entry of certain information about a business, as required by the domestic law, into the business registry (cf. "business registry or business registration system").
- *Business registry* or *business registration system*: "Business registry" or "business registration system" means a State's system for receiving, storing and making accessible to the public certain information about businesses, as distinct from mandatory registration by the business with other relevant authorities (e.g. taxation and social security authorities).
- *Deregistration*: "Deregistration" means indicating in the registry that a business is no longer registered.
- *Electronic signature*: "Electronic signature" means data in electronic form in, affixed to or logically associated with, a data message, which may be used to identify the signatory in relation to the data message and to indicate the signatory's approval of the information contained in the data message.[1]

[1] See UNCITRAL Model Law on Electronic Signatures (2001), article 2.

- *Good quality and reliable*: A business registration system and the information it contains is of "good quality and reliable" when the registered information is kept as current and accurate as possible and the system may be considered positively in terms of performance and security. The term "good quality and reliable" does not refer to whether the information is legally binding on the registry, the registrant, the registered business, or third parties.

- *ICT*: "ICT" means information and communications technology.

- *Information products*: "Information products" means information that is processed or published by the business registry (in electronic or paper form) to convey data requested by users.

- *Information services*: "Information services" means the system established by the business registry through which it supplies information products to users.

- *Law*: "Law" means the applicable law in the enacting State and is intended to include both the specific rules adopted to establish the business registry (whether such rules are found in legislation or in administrative regulations or guidelines) and the broader body of domestic law that may be relevant to issues related to the business registry, but are found outside of the specific rules establishing the business registry.

- *Formal economy*: "Formal economy" means economic activity that takes place in a State within the context of the legal and regulatory regime that the State has established to govern such activity. Formal economy does not include commercial activity that takes place outside of that context (often referred to as the informal economy), nor does it include illicit trade in goods or services.

- *Micro, small and medium-sized enterprises (MSMEs)*: "MSMEs" means micro, small and medium-sized enterprises as they are defined according to the criteria established by the State undertaking the business registration reforms.

- *One-stop shop*: "One-stop shop" means a physical office, a single interface on an electronic platform or an organization that carries out more than one function relating to the registration of a business with at least the business registry, as well as taxation and social security authorities necessary for the business to operate in the formal economy. A one-stop shop should ensure the interoperability of all relevant authorities with which a business is required to register, and allow for the sharing of information on the business among those authorities, as well as the use of a single integrated application form for registration with, and payment to, those authorities.

- *Periodic returns*: "Periodic returns" means a statement provided annually or at other prescribed intervals which gives essential information about a business' composition, activities, and financial status, and which, subject to applicable law, registered businesses may be required to file with an appropriate authority (cf. "annual accounts").

- *Protected data*: "Protected data" means all information that must be kept confidential pursuant to the applicable law of the enacting State.

- *Registered business*: "Registered business" means a business that, further to filing an application for registration, has been officially registered in the business registry.

- *Registered information*: "Registered information" means information regarding a business that is registered in the business registry, including protected data and publicly available information.

- *Registrant*: "Registrant" means the natural or legal person that submits the prescribed application form and any additional documents to a business registry.

- *Registrar*: "Registrar" means the natural or legal person appointed pursuant to domestic law to supervise and administer the operation of the business registry.

- *Unique identifier*: "Unique identifier" means a single unique business identification number that is allocated only once to a business, or a non-business entity, and that is used consistently by the public authorities of a State.

C. Legislative drafting considerations

13. States implementing the principles contained in this legislative guide should consider how to include them in their legislation and ensure consistency with it. This draft legislative guide does not recommend the choice of any particular legislative methods and uses neutral legal terminology so that its recommendations can be adapted easily to the diverse legal traditions and drafting styles of different States. The present guide also takes a flexible approach, which will allow its recommendations to be implemented in accordance with local drafting conventions and legislative policies of the States.

D. The reform process

14. Streamlining business registration to meet the key objective of simplifying the registration process and making it time and cost efficient, as well as user friendly (both for registrants and users searching the registry), usually requires undertaking reforms that address the enacting State's legal and institutional framework. It may also be necessary to reform the business processes that support the registration system. Sometimes reforms are needed in all of these areas. The approach taken in these reforms may vary considerably among States as the design and features of a registration system are influenced by the State's level of development, priorities and laws. There are, however, several common issues that States should consider and several similar recommended steps for reform regardless of jurisdictional differences that may exist. These issues are examined below.

1. The reform catalysts

15. Business registration reform is a multifaceted reform process that addresses various aspects of the State apparatus; its implementation requires the participation of a broad range of stakeholders and a thorough understanding of the State's legal and economic conditions, as well as of the practical needs of registry personnel and the intended users of the registry. To be successful, the reform must be driven by the need to improve private sector development and, for this reason, it is advisable that the reform be part of a larger private sector development or public sector modernization programme. It is thus essential to gain an understanding of the importance of business registration in relation to other business environment challenges and of its relationship to other potential reforms. This analysis will require, as crucial preliminary steps, ensuring that domestic circumstances are amenable to a business registration reform programme, that incentives for such a reform exist and that there is support for such initiatives in the government and in the private sector prior to embarking on any reform effort.

(a) Relevance of a reform advocate

16. Support or even leadership from the highest levels of the State's government is of key importance for the success of the reform process. The engagement of relevant government ministries and political leadership in the reform effort facilitate the achievement of consensus on the steps required. This can be particularly important to facilitate access to financial resources, to make and implement decisions, or when it is necessary to move business registry functions from one branch of government to another or to outsource them.

(b) The steering committee

17. In order to oversee the day-to-day progress of the reform and to manage difficulties as they may arise, it is advisable that a steering committee be established

to assist the State representative or body leading the reform. In addition to experts with technological, legal and administrative expertise, this committee should be composed of representatives of the public and private sector and should include a wide range of stakeholders, including those who can represent the perspectives of intended users. It may not always be necessary to create such a committee, since it may be possible to use existing mechanisms; in any event, a proliferation of committees is to be avoided, as their overall impact will be weakened.

18. The steering committee should have clearly defined functions and accountability; it is advisable that its initial setup be small and that it should grow progressively as momentum and stakeholder support increase. Although linked to the high-level government body spearheading and advocating for the reform, the committee should operate transparently and independently from the executive branch. In certain jurisdictions, regulatory reform bodies have later been transformed into more permanent institutions that drive ongoing work on regulatory governance and regulatory impact analysis.

19. The steering committee must nurture the reform process and consider how to address concerns raised in respect of it. Concerns could include those arising from bureaucratic inertia, or fears that registry employees may lose their jobs if their ICT skills are weak or if technology replaces human capital. Thus, it is likely to be important for the body overseeing the reform to be able to consider diverse interests and fully inform potential beneficiaries and political supporters.

(c) The project team

20. In collaboration with the steering committee, it is advisable that a project team be assigned the task of designing a reform programme tailored to an enacting State's circumstances and providing technical expertise to implement the reforms. A successful reform will require a team of international and local specialists, with expertise and experience in business registration reform, in legal and institutional reform, and in a variety of technology matters (for example, software design, hardware, database and web specialists).

(d) Awareness-raising strategies

21. States embarking on a reform process should consider appropriate communication strategies aimed at familiarizing businesses and other potential registry users with the operation of the registry and of the legal and economic significance of business registration. This effort should include informing businesses of the benefits of registration with the business registry and mandatory registration with other relevant authorities (e.g. taxation and social security), and of participation in the formal economy (e.g. visibility to the public, the market and improved access to the banking system). Awareness should also be increased of the incentives that the State may offer businesses to operate in the formal economy (see para. 23 below), including the opportunity to participate in public procurement; legal validation of the business; access to flexible legal business forms and asset partitioning; the possibility of protecting the business' unique name and other intangible assets; opportunities for the business to grow and to have access to a specialized labour force and access to government assistance programmes. The awareness-raising strategy should also ensure that clear information is readily accessible on compliance with the law, fulfilment of the obligations taken on by registering (e.g. the payment of taxes) and potential penalties for non-compliance.

22. Effective communication may also be expected to encourage the development of new businesses and to encourage existing businesses to comply with mandatory registrations, as well as to provide signals to potential investors about the enacting State's efforts to improve the business environment. Awareness-raising strategies should commence early in the reform process and should be maintained throughout it, including after the enactment of the legal infrastructure and implementation of the new business registration system. In coordination with the steering committee, the project team should determine which cost-effective media can best be used: these can

include private-public dialogues, press conferences, seminars and workshops, television and radio programmes, newspapers, advertisements, and the preparation of detailed instructions on submitting registration information and obtaining information from the business registry. In order to raise MSME awareness of the reforms to the business registration system, it may be advisable to consider communication strategies tailored specifically to that audience.

(e) Incentives for businesses to register

23. In addition to an efficient awareness-raising campaign, States should consider adding incentives for MSMEs and other businesses to comply with mandatory registration with the relevant authorities through the provision of ancillary services for businesses that are in compliance. The types of incentives will vary according to the specific economic, business and regulatory context, and may include: promoting access to credit for registered businesses; offering accountancy training and services as well as assistance in the preparation of a business plan; providing credits for training costs; establishing lower and simplified taxation rates and tax mediation services; providing business counselling services; providing monetary compensation, government subsidies or programmes to foster MSME growth and providing low-cost technological infrastructure.

2. Phased reform process

24. The duration of a reform process can vary considerably, depending on the types of reforms implemented and on other circumstances relevant to the particular economy. While the most comprehensive approach may entail a complete reform of the business registry and the law establishing it, this may not be realistic in all cases and enacting States may wish to consider a phased implementation of their reform. In States with a large number of unregistered businesses, a reform process that adopts a "think small" approach at the outset might be more effective than a reform with a broader focus, which could be introduced at a later stage. For example, if the main objective is initially to promote the registration of MSMEs, simple solutions addressing their needs at the local level may be more successful than introducing sophisticated automated systems that require high-level technological infrastructure, and changes in the legal and institutional framework, and that may be more appropriate to larger businesses or businesses operating in the international market. Even when the reform is carried out in jurisdictions with more advanced business registration systems, it may be advisable to "start small" and pilot the reforms at a local level (for example, in a district or the capital) before extending them throughout the State. Success in a pilot stage can have a strong demonstration effect, and is likely to build support for continued reform.

I. Objectives of a business registry

25. The focus of the present legislative guide is primarily the business registry of a State and the adoption of best practices in order to optimise the operation of the business registration system for its users so that it is simple, efficient and cost-effective. However, in most States, in order for a business to participate in the formal economy, it must usually register not only with the business registry but also with various additional authorities (see also para. 57 below). In addition to the business registry, these authorities often include taxation and social security authorities. States wishing to facilitate the entry of businesses into the formal economy should thus assess the multiple authorities with which a business must register and consider ways to reduce the burden on businesses by streamlining those requirements. A desirable approach would be to implement a registration system that is designed around the perspective of the business and tailored to its needs (see also para. 9 above), that is: the system should be accessible through a single entry point, either physical or electronic and allow for simultaneous registration with all relevant public authorities; the services (e.g. registration of businesses, provision of information) should be offered at a fee that is not burdensome for the users (see

paras. 199 to 201 and 202 below) and should be delivered in the shortest time possible and user procedures should be simple and easy to follow. As examined in greater detail in this legislative guide (see paras. 86 to 97 and rec. 14 below), a best practice to accomplish that goal would be for a State to establish a one-stop shop for business registration and for registration, at a minimum, with taxation and social security authorities, subject to the legal and institutional organization of the enacting State. Simultaneous registration with all such authorities and the use of a single integrated application form for registration and payment would further improve the efficiency of the one-stop shop.

Recommendation 1: Objectives of the business registry

The law should ensure the establishment of a business registry that facilitates the operation of businesses in the formal economy as part of the system of all registrations that may be required of a business and may include registration with business registry, taxation and social security authorities, as well as with other authorities.

A. Purposes of the business registry

26. The law should set out explicitly the purpose of a system for the registration of businesses (see also paras. 51 to 59 with regard to the core functions of the business registry). In addition, it should determine which business forms are required to register with the business registry and which additional conditions those businesses may have to fulfil as part of that requirement. Currently, many States require only businesses of a certain legal form to register, often focusing on those that have limited liability status. Requiring such businesses to register puts third parties dealing with them on notice of their limited liability status, as well as providing additional information in respect of the business. However, since business registration may be viewed as a conduit through which businesses of all sizes and legal forms interact with the State and operate in the formal economy (see paras. 123 to 126 below and rec. 20), States may wish to permit (but not necessarily to require) all such businesses to register in the business registry, provided that fees are low. Through registration, a business receives a commercial identity, recognized by the State, that enables the business to interact with its business partners, the public and the State (see also para. 52 (h) below). Moreover, registered businesses may become more visible not only in the marketplace, but also to States, who may then be able to more easily identify MSMEs in need of support, and design appropriate programmes for those purposes. Permitting voluntary registration of a range of different legal forms of business may encourage the registration of MSMEs, assisting them in their growth in addition to facilitating their operation in the formal economy.

27. The following overarching principles should govern an effective system of business registration: (a) enabling businesses of all sizes and legal forms to be visible in the marketplace and to operate effectively in the formal economy; and (b) enabling MSMEs to increase their business opportunities and to improve the profitability of their businesses.

Recommendation 2: Purposes of the business registry

The law should provide that the business registry is established for the purposes of:

(a) Providing to a business an identity that is recognized by the enacting State; and

(b) Receiving, storing and making information in respect of registered businesses accessible to the public.

B. Simple and predictable system of laws permitting registration

28. In order to foster a transparent and reliable business registration system, with clear accountability of the registrar (see also paras. 41 and 43 below), the law setting

the foundations of the business registry should be simple and straightforward. Care should be taken to limit or avoid any unnecessary use of discretionary power, and to provide appropriate safeguards against its arbitrary use. However, some discretion should be permitted to the registrar in order to ensure the smooth functioning of the system (see paras. 147 and 230 below).

29. The law governing registration with the business registry and other relevant authorities (including taxation and social security authorities) should also provide for simplified registration and post-registration procedures in order to promote registration of MSMEs. The goal should be for States to establish procedures with only the minimum necessary requirements for MSMEs and other businesses to register in order to operate in the formal economy. Of course, businesses with more complex legal forms would be subject to additional information requirements under the law of the enacting State as a consequence of their particular legal form or type of business.

30. Further, regardless of the approach chosen to maintain updated information in the business registry, it would be advisable to make updating the records of MSMEs as simple as possible. This could involve a number of different approaches examined in greater detail below, such as extending the period of time for such businesses to declare a change; harmonizing the information needed when the same information is repeatedly required; or exempting MSMEs from certain obligations in specific cases (see also paras. 157 to 161 and rec. 30 below).

Recommendation 3: Simple and predictable system of laws permitting registration

The law should:

(a) Adopt a simple structure for laws governing the business registry and avoid the unnecessary use of exceptions or granting of discretionary power; and

(b) Ensure that micro, small and medium-sized enterprises (MSMEs) that are required or permitted to register are subject to the minimum procedures necessary pursuant to the law.

C. Key features of a business registry

31. To be effective in registering businesses of all sizes, a business registration system should ensure that, to the extent possible, the registration process is simple, time and cost efficient, user-friendly and publicly accessible. Moreover, care should be taken to ensure that the publicly available registered information on businesses is easily searchable and retrievable, and that the process through which the registered information is collected and maintained as well as the registry system are kept as current, reliable and secure as possible.

32. The good quality and reliability of the business registration system and the information contained in the registry is a recurring theme in the present guide. In keeping with the definition in paragraph 12 above, it should be noted that the phrase “good quality and reliable” does not refer to the method that a State uses to ensure that reliability, and this legislative guide leaves it to each enacting State to determine how best to ensure the good quality and reliability of its business registration system and the information it contains in light of its own context and legal tradition. “Good quality and reliable” in this guide does not refer to whether or not the information in the business registry is legally binding on the registry, the registrant, the registered business or on third parties, nor to whether the enacting State uses a declaratory approach or an approval approach in respect of its business registration system. However, the extent to which information in the registry is legally binding and whether the State adopts a declaratory system or an approval system (see paras. 115 to 117 below) are aspects that should be made clear by the enacting State in its law and made available in the business registry.

33. Regardless of which registration system is adopted, maintaining good quality, and reliable information is imperative for the business registry in order to make the information useful for the registry users and to establish confidence in business registry services. This applies not only to the information provided when applying to register a business, but also to the information that is submitted to the registry during the lifetime of the business. It is thus important that the information meets certain requirements in the way it is submitted to the registry and then made available to the public (see, for example, paras. 34 and 35 below). For these reasons, States should devise provisions that allow the registry to operate according to principles of transparency and efficiency in the way information is collected, maintained and disclosed.

34. The registry can implement certain procedures in order to ensure that the information maintained in the registry is of good quality and reliable. Those procedures, which will be further discussed below, can be grouped into two broad categories. One group comprises those measures aimed at protecting the identity and integrity of a business through the prevention of corporate identity theft[2] or the adoption of identity verification methods for those who provide information to the business registry. A wide range of measures can be implemented in this regard, such as the use of monitoring systems or establishing access through the use of user names and passwords or biometric verifications (e.g. fingerprints) to prevent corporate identity theft; or the use of electronic signatures and electronic certificates to verify the identity of those who submit information to the registry; or the adoption of notification systems that notify the registered business about changes of whenever documents are filed on their business record. Business registries usually adopt more than one type of measure.

35. Another group of measures that registries can implement to ensure the good quality and reliability of the registered information pertains to the way information is collected and maintained in the registry and the frequency with which it is updated (see paras. 155 to 161 and recs. 29 and 30 below). Ensuring that the registry record is regularly updated is of key importance. In electronic registry systems, the software will usually provide for automated periodic updating as amendments are submitted by businesses. However, when registries use paper-based or mixed systems, or when certain information submitted electronically must nonetheless be entered into the business registry record (see paras. 186 and 212 below), the registrar must ensure that updates to the registry record are entered as soon as practicable, and if possible, in real time or at least once daily. To underpin these measures, it is important for States to establish effective enforcement mechanisms upon which registries can rely when a business fails to provide accurate and complete information (see paras. 207 to 210 and recs. 45 and 46 below).

36. Moreover, in order to enhance the good quality and reliability of the information deposited in the registry, enacting States should preserve the integrity and security of the registry record itself. Steps to achieve those goals include: (a) requiring the registry to request and maintain the identity of the registrant; (b) obligating the registry to notify promptly the business about the registration and any changes made to the registered information; and (c) eliminating any discretion on the part of the registrar to modify information that has been submitted to the registry.

Recommendation 4: Key features of a business registry

The law should ensure that the business registration system contains the following key features:

[2] Corporate identity theft can occur through the theft or misuse of key business identifiers and credentials, manipulation or falsification of business filings and records, and other related criminal activities. Despite the use of the term “corporate”, corporations are not the only business entities that are victimized by this crime. Any type of business or organization of any size or legal structure, including sole proprietorships, partnerships and limited liability companies can be targets of business identity theft.

(a) Registration is publicly accessible, simple, user-friendly and time- and cost-efficient;

(b) The registration procedures are suited to the needs of MSMEs;

(c) The publicly available registered information on businesses is easily searchable and retrievable; and

(d) The registry system and the registered information are of good quality and reliable, and are maintained that way through periodic updates and system verification.

II. Establishment and functions of the business registry

37. Several different approaches may be taken in establishing an effective business registration system, but there is broad agreement on certain key objectives of such systems. Regardless of differences in the way business registries may operate, efficient business registries have a similar structure and perform similar functions when carrying out the registration of a new business or in recording the changes that may occur in respect of an existing business.

A. Responsible authority

38. In establishing or reforming a business registry, enacting States will have to decide how the business registry will be organized and operated. Different approaches can be taken regarding its form, the most common of which is based on oversight by the government. In such States, a government department or agency, staffed by civil servants, and usually established under the authority of a particular government department or ministry, operates the registration system. Another type of organization of a business registry is one that is subject to administrative oversight by the judiciary. In such contexts, the registration body might be a court or a judicial registry whose function, usually specified in the applicable commercial code, is concerned with verifying the business requisites for registration but does not require prior judicial approval of a business seeking to register.

39. States may also decide to outsource some or all of the registry operations through a contractual or other legal arrangement that may involve public-private partnerships or the private sector. When registration is outsourced to the private sector, it remains a function of the government, but the day-to-day operation of the system is entrusted to privately owned companies. In one jurisdiction, for example, such an outsourcing was accomplished by way of appointing a private company, in accordance with the law, as the assistant registrar with full authority to run the registration function. However, operating the registry through public-private partnerships or private sector companies does not yet appear to be as common as the operation of the registry by a government agency.[3] States may also decide to form entities with a separate legal personality, such as chambers of commerce, with the object of managing and developing the business registry, or to establish by law registries as autonomous or quasi-autonomous agencies, which can have their own business accounts and operate in accordance with the applicable regulations governing public authorities. In one State, for example, the business registry is a separate legal person that acts under the supervision of the Ministry of Justice, while in another State the registry is an administratively separate executive agency of a government department, but does not have separate legal status. In deciding which form of organization to adopt, States will have to consider their specific domestic circumstances, evaluate the challenges and trade-offs of the various forms of organization and then determine

[3] Arrangements involving contracting with the private sector to provide business registration services require careful consideration of several legal and policy issues, such as the responsibilities of the government and the private provider, the form of the arrangements, the allocation of risk, and dispute resolution.

which one best meets the State's priorities and can be achieved within the limits of its human, technological and financial resources.

40. While the day-to-day operation of the registry may be delegated to a private sector firm, the enacting State should always retain the liability for ensuring that the registry is operated in accordance with the applicable law. For the purposes of establishing public trust in the business registry and preventing the unauthorized commercialization or fraudulent use of information in the registry record, the enacting State should retain its competence over the registry record. Furthermore, the State should also ensure that, regardless of the daily operation or the structure of the business registry, the State retains the right to control the access to and use of the registered information.

Recommendation 5: Responsible authority

The law should provide that:

(a) The business registry should be operated by the State or by an entity appointed by that State; and

(b) The State retains its competence over the business registry.

B. Appointment and accountability of the registrar

41. The law of the State should set out the procedure to appoint and dismiss the registrar, as well as the duties of the registrar, and the authority empowered to supervise the registrar in the performance of those duties.

42. In keeping with the practice of some States, it should be noted that the appointment of a registrar is intended to include all methods by which a registrar can be selected, including through election. Further, States may permit the registrar to delegate its powers to persons appointed to assist the registrar in the performance of its duties.

43. In addition, the laws of the enacting State should clearly set out the functions of the registrar in order to ensure the registrar's accountability in the operation of the registry and the minimization of any potential for abuse of authority. In this regard, the applicable law of the enacting State should establish principles for the liability of the registrar and the registry staff to ensure their appropriate conduct in administering the business registry (the potential liability of the registrar and the registry staff are addressed in paras. 213 to 218 and rec. 47 below).

Recommendation 6: Appointment and accountability of the registrar

The law should:

(a) Provide that the person or entity authorized by the enacting State or by the law of the enacting State has the authority to appoint and dismiss the registrar and to monitor the registrar's performance; and

(b) Determine the registrar's powers and duties and if and to what extent those powers and duties may be delegated.

C. Transparency in the operation of the business registration system

44. Laws that foster the transparent and reliable operation of the system for business registration have a number of features. They should allow registration to occur as a simplified process with a limited number of steps, and they should limit interaction with registry authorities, as well as provide short and specified turn-around times, be inexpensive, result in registration of a long-term or unlimited duration, apply throughout the jurisdiction and make registration easily accessible for registrants.

45. Registries should also establish "service standards" that would define the services to which users are entitled and may expect to receive, while at the same time

providing the registry with performance goals that the registry should aim to achieve. Such service standards could include, for example, rules on the correction of errors (see paras. 28 above, and 147 and 230 below), rules governing the maximum length of time for which a registry may be unavailable (such as for electronic servicing) and providing advance notice of any expected down time. Service standards contribute to ensuring further transparency and accountability in the administration of the registry, as such standards provide benchmarks to monitor the quality of the services provided and the performance of the registry staff.

Recommendation 7: Transparency in the operation of the business registration system

The law should ensure that the rules, procedures and service standards that are developed for the operation of the business registration system are made public to ensure transparency of the registration procedures.

D. Use of standard registration forms

46. Another approach that is often used to promote transparency and reliability in the operation of the business registry is the use of simple standard registration forms paired with clear guidance to the registrant on how to complete them. Such forms can easily be completed by businesses without the need to seek the assistance of an intermediary, thus reducing the cost and de facto contributing to the promotion of business registration among MSMEs. These forms also help prevent errors in data entry by business registry staff, thus speeding up the overall process. In some jurisdictions, the adoption of standardized registration forms has been instrumental in streamlining the registration requirements and disposing of unnecessary documents. Moreover, in jurisdictions with enhanced interoperability between the authorities involved in the establishment of a business (e.g. the business registry, taxation and social security authorities), the adoption of a single standardized registration form that consolidates all of the information required of a business by such authorities has reduced duplication of information requests and has enabled the streamlining of registration procedures with multiple authorities. It should be noted that the use of standard registration forms should not preclude a business from submitting to the registrar additional materials and documents required or allowed by applicable law for the creation of the business.

Recommendation 8: Use of standard registration forms

The law should provide that simple standard registration forms are introduced to enable the registration of a business and the registrar should ensure that guidance is available to registrants on how to complete those forms.

E. Capacity-building for registry staff

47. Once a reform of the business registration system has been initiated, developing the capacity of the personnel entrusted with business registration functions is an important aspect of the process. Poor service often affects the efficiency of the system and can result in errors or necessitate multiple visits to the registry by users. Capacity development of registry staff could not only focus on enhancing their performance and improving their knowledge of the new registration processes, ICT solutions and client orientation, but staff could also be trained in new ways of improving business registration.

48. Different approaches to capacity-building can be followed, from the more traditional training methods based on lectures and classroom activities, to more innovative ways that can be driven by the introduction of new business registration systems. In some jurisdictions, team-building activities and role-playing have been used with some success, since reforms often break barriers between various government departments and require the improvement of the flow of information

among them, as well as an understanding of different aspects of the procedures with which specific registry staff may not be familiar. In other cases, States have also opted for developing action plans with annual targets in order to meet standards of performance consistent with global best practices and trends, and they have linked promotions and bonuses for staff to the achievement of the action plan's goals. In other cases, States have decided to introduce new corporate values in order to enhance the public service system, including business registration. Although the relevant governmental authority will usually take the lead in organizing capacity development programmes for the registry staff, the expertise of local legal and business communities could also be enlisted to assist.

49. Peer-to-peer learning and the establishment of national and international networks are also effective approaches to build capacity to operate the registry. These tools enable registry staff to visit other jurisdictions and States with efficient and effective business registration systems. In order to maximize the impact of such visits, it is important that they occur in jurisdictions familiar to the jurisdiction undergoing the reform. This approach has been followed with success in several jurisdictions engaging in business registration reform. International forums and networks also provide platforms for sharing knowledge and exchanging ideas for implementing business registration reform among registry personnel from around the world.

50. In order to facilitate business registration, it may be equally important to build capacity on the part of intermediaries in States where the services of those professionals are required to register a business (see paras. 116 and 117 below).

Recommendation 9: Capacity-building for registry staff

The law should ensure that appropriate programmes are established to develop and strengthen the knowledge and skills of the registry staff on business registration procedures, service standards and the operation of electronic registries, as well as the ability of registry staff to deliver requested services.

F. Core functions of business registries

51. There is no standard approach to establishing a business registry or to streamlining an existing one: models of organization and levels of complexity can vary greatly depending on a State's level of development, its priorities and its legislation. However, regardless of the structure and organization of the registry, certain core functions can be said to be common to all registries.

52. Subject to the enacting State's legal and institutional organization, core functions in addition to those listed below may be added to the business registry. But, in keeping with the overarching principles governing an effective business registration system (see para. 27 above), the core functions and intended goals of business registries are, at a minimum, to:

(a) Register a business when it fulfils the necessary conditions established by the law of the enacting State, which may include conferring legal existence on the business and recording that status;

(b) Publish and make accessible good quality and reliable information on the business to be registered so as to facilitate trade and interactions between business partners, the public and the State, including when such interactions take place in a cross-border context;

(c) Assign a unique identifier to the business to facilitate information exchange between the business and the State (see also paras. 100 to 107 below);

(d) Share information on the registered business among relevant authorities to promote and facilitate coordination among such authorities;

(e) Ensure the information on a registered business is as current and accurate as possible, so that such information is of value for all users of the registry (see also paras. 32 and 35 and rec. 4);

(f) Protect the integrity of the registry record to protect the identity and integrity of the businesses that are registered (see also paras. 232 and 233 and rec. 54);

(g) Provide information concerning the establishment of a business, including any associated obligations and responsibilities of the registered business, as well as the legal effects of information maintained in the business registry; and

(h) Provide assistance to the business in searching and reserving a business name when required by the law so that the business can establish its commercial identity.

53. In a standard registration process, the entry point for entrepreneurs to the business registry may be the support provided to them in choosing a unique name for the new business that they wish to establish. When registering, a business is usually required to have a name that must be sufficiently distinguishable from other business names within that jurisdiction so that the business will be recognized and identifiable under that name. Enacting States are likely to establish their own criteria for determining how to decide whether a business name is sufficiently distinguishable from other business names, and in any event, the assignment of a unique identifier will assist in ensuring the unique identity of the business within and across jurisdictions (see also paras. 98 to 105 below). Business registries usually assist entrepreneurs at this stage with a procedure that can be optional or mandatory, or they may provide business name searches as an information service. Registries may also offer a name reservation service prior to registering a new business, so that no other business can use that name. Such a name reservation service may be provided either as a separate procedure (again, which can be optional or mandatory), or as a service integrated into the overall business registration procedure.

54. Business registries also provide forms and various types of guidance to entrepreneurs preparing the application and other necessary documents for registration. Once the application is submitted, the registry performs a series of checks and control procedures to ensure that all the necessary information and documents are included in the application. In particular, the registry verifies any requirements for registration that have been established in the State's applicable law, such as the legal capacity of the entrepreneur to operate the business. Some legal traditions may require the registry to perform simple control procedures (such as establishing that the name of the business is sufficiently unique), which means that if all of the basic administrative requirements are met, the registry must accept the information as filed and record it. Other legal traditions may require more thorough verification of the information filed.

55. Payment of a registration fee (if any, see paras. 199 to 201 and rec. 41 below) must usually be made before the registration is complete. Once a business registration is complete, the registry issues a certificate that confirms the registration and contains information about the business. Since much of the registered information should be disclosed to interested parties, registries make their public components available through various means, including through publication on a website, or in publications such as the National Gazette or newspapers. Where the infrastructure permits, registries may offer, as an additional non-mandatory service, subscriptions to announcements of specific types of new registrations.

56. In accordance with the applicable law of the enacting State (see also rec. 35), registered information that is made available to the public can include specific information on the business structure, such as who is authorized to sign on behalf of the business or who serves as the business's legal representative. Basic information about the business, such as the name of the business, its telephone number, email and postal addresses (in addition to the addresses at which the businesses deemed to receive correspondence) can also be made public, but the publication of such details may be subject to the agreement of the business. When business registries collect disaggregated information submitted on a voluntary basis on the registrant or the persons associated with the business according to gender or other indicators that could raise privacy issues (e.g. association with an ethnic or language group), the law should

establish whether and subject to which conditions that information can be made available to the public (see para. 189 below). In some States, public access to certain information in the business registry is provided free of charge (in respect of fees for information, see para. 202 and rec. 42 below).

57. A new business must usually register with many government authorities, such as taxation and social security authorities, which often require the same information as that gathered by the business registry. In certain States, the business registry provides to entrepreneurs information on the necessary requirements of other relevant authorities and refers them to such authorities. In States with more developed registration systems, businesses may be assigned a registration number that also functions as a unique identifier across public authorities (see paras. 100 to 107 below) and can then be used in all of the interactions that the business has with those authorities, other businesses and banks. This greatly simplifies the establishment of a business since it allows the business registry to exchange information more easily with the other authorities involved in the establishment of a business. In several States that have reformed their registration systems, business registries function as one-stop shops to support registration with other authorities. The services operated by such outlets may include providing any necessary licensing, or they may simply provide information on the procedures to obtain such licences and refer the entrepreneur to the relevant agency. As noted above (see paras. 9 and 25), this legislative guide takes the view that establishing such one-stop shops for registration with at least the business registry, taxation and social security authorities, and enhancement of the integration of the registration procedures of all such authorities is the best approach for States wishing to optimize their business registration system (see paras. 86 to 97 and rec. 14 below).

58. One important aspect that States should take into account when establishing a business registration system is whether the registry should also be required to record certain procedures that affect the status of the business, for example insolvency, merger or winding-up. The approach to such changes in status appears to vary from State to State. For example, in some States, registries are often also entrusted with the registration of insolvency cases, while in other States, they tend not to perform this function. In certain jurisdictions, registries are also given the task of registering mergers as well as the winding-up and liquidation of businesses. In any event, business registries naturally also record the end of the life span of any business that has permanently ceased to do business by deregistering it (see paras. 217 to 224 and recs. 48, 49 and 50 below).

59. The opening provisions of the law governing business registration may include a list of the various functions of the registry, with cross references to the relevant provisions of the law in which those functions are addressed in detail. The advantage of this approach is clarity and transparency as to the nature and scope of the issues that are dealt with in detail later in the law. The possible disadvantage is that the list may not be comprehensive or may be read as placing unintended limitations on the detailed provisions of the law to which cross reference is made. Accordingly, implementation of this approach requires special care to avoid any omissions or inconsistencies as well as to allow for the registry's interoperability with other relevant authorities in the jurisdiction, and for access to the information maintained in the registry.

Recommendation 10: Core functions of business registries

The law should establish the core functions of the business registry, including:

(a) Registering the business when it fulfils the necessary conditions established by the law;

(b) Providing access to publicly available registered information;

(c) Assigning a unique identifier to the registered business;

(d) Sharing information among the requisite public authorities;

(e) Keeping the information in the business registry as current as possible;

(f) Protecting the integrity of the information in the registry record;

(g) Providing information on the establishment of the business, including the obligations and responsibilities of the business and the legal effects of the information publicly available on the business registry; and

(h) Assisting businesses in searching and reserving a business name when required by the law.

G. Storage of information and access to it throughout the registry

60. When organizing the storage of the information contained in the business registry, States should be guided by the goals of efficiency, transparency and accessibility. Regardless of how a State decides to store and ensure the availability of the information throughout its registry system, its goal should be to achieve consistency in the identification and classification of registered businesses, as well as the efficient, non-duplicative collection of information on those businesses.

61. To achieve these goals, it is important that all business registration offices, sub-offices and repositories of registry information in a State be interconnected regardless of their physical location. In order to function efficiently, such interconnection should be established through an electronic interface linking all such outlets and allowing their technical interoperability (see para. 70(c) below). Through these means, all information collected or stored anywhere in the system can be processed or accessed in a timely fashion regardless of how (whether in electronic or paper format) or where it is collected, stored by or submitted to the registry. Ensuring the electronic interconnection of the entire business registry system would permit all information contained in it to be stored and made accessible in digital format and would permit the sharing of such information, possibly in real time, throughout the entire registry system, providing it simultaneously to multiple access points without regard to their geographic location (including business registry sub-offices, terminals, or using online technology). Further, access to the entirety of the information stored in the business registry should facilitate its integration with other public authorities in order to permit information exchange with those authorities as well (see para. 93 below and rec. 14). This approach will strengthen the institutional interoperability among such public authorities in order not only to simplify the process of registration with the business registry, but also to streamline all registrations that may be required of a business at its establishment (see rec. 1 above).

Recommendation 11: Storage of information and access to it throughout the registry

The law should establish the interconnection of business registry offices with regard to storage of and access to information received from registrants and registered businesses or entered by registry staff.

III. Operation of the business registry

62. As noted above, business registration can be implemented through many different organizational tools that vary according to jurisdiction. States embarking on a reform process to simplify registration will have to identify the most appropriate and efficient solutions to deliver the service, given the prevailing domestic conditions. Regardless of the approach chosen by the State, aspects such as the general legal and institutional framework affecting business registration, the legal foundation and accountability of the entities mandated to operate the system and the budget needed by such entities should be carefully taken into account. Reform efforts rely to different extents on a core set of tools, including: the use of technology; the establishment of a one-stop shop; and interconnectivity between the different authorities involved in the registration process (with the possible adoption of a unique identifier). States should

also ensure that their reform efforts do not inadvertently exclude the adoption of emerging technologies that might further improve the operation of the business registry (e.g. the use of distributed ledger technology).

A. Electronic, paper-based or mixed registry

63. An important aspect to consider when reforming a business registration system is the form in which the application for registration should be filed and the form in which information contained in the registry should be stored. Paper-based registration requires sending documents (usually completed in handwritten form) by mail or delivering them by hand to the registry for manual processing. Hand delivery and manual processing are not unusual in many jurisdictions due to the lack of an advanced technological infrastructure. In such States, entrepreneurs may have to attend business registry offices in person and these offices may be located in municipal areas that may not be easily reachable for many MSME entrepreneurs, particularly for those in rural areas. In addition, any copies of the documents required must usually be provided on paper. Paper-based registry systems can facilitate in-person communication between the registrant and the registry, and thus may offer an opportunity to clarify aspects of the requirements for registration. However, the labour-intensive nature of this procedure normally results in a time-consuming and expensive process (for example, it may require more than one visit to the business registry), both for the registry and for users, and it can easily lead to data entry errors. Furthermore, paper-based registry systems require considerable storage space as the documents with the registered information may have to be stored as hard copies (although some States using a mixed system may also scan documents and then destroy the paper versions after the expiry of any minimum legal period for their preservation; see paras. 226 to 229 and rec. 52 below). Finally, registration requests transmitted by paper or fax also give rise to delays, since registrants must wait until registry staff manually carry out and certify the business registration.

64. In comparison, online registration systems facilitate improved efficiency of the registry and more user-friendly services. This approach requires, at a minimum, that the information provided by the registrant be stored in electronic form in a computer database; the most advanced electronic registration systems, however, permit the direct electronic submission of business registration applications and relevant information (as well as searches of the registry) over the Internet or via direct networking systems as an alternative to paper-based submissions. The adoption of such systems enhances data integrity, information security, registration system transparency, and verification of business compliance registration requirements, which helps avoid unnecessary or redundant information storage. Furthermore, when electronic submission of applications is allowed, business registries can produce standard forms that are easier to understand and therefore easier to complete correctly. Although the use of ICT solutions can carry with them risks of software errors, electronic systems do more to reduce those risks by providing automated error checks and other appropriate solutions. Such technology is also instrumental in the development of integrated registration systems and the implementation of unique identification numbers.

65. In addition to these features, electronic business registration and access to the business registry also offer the following advantages:

(a) Improved access for smaller businesses that operate at a distance from the registry offices;

(b) A very significant reduction in the time and cost required of the entrepreneur to perform the various registration steps, and consequently in the time and cost required before successful registration of a business, as well as in the day-to-day cost of operating the registry;

(c) Improved handling of increasing demands for company information from other government authorities;

(d) A reduction in the opportunity for fraudulent or improper conduct on the part of registry staff;

(e) A reduction in the potential liability of the registry to users who otherwise might suffer loss due to the failure of registry staff to enter accurately registration information (see also paras. 186 and 212 below);

(f) User access to registration and information services outside of normal business hours; and

(g) Possible revenue opportunities for the registry from other businesses and financial institutions that seek company information on potential trading counterparties and borrowers.

66. Introducing electronic registration processes, however, often requires an in-depth re-engineering of the way in which the service is delivered, which may involve several core aspects of the State's governance systems in addition to its level of technological infrastructure, including: financial capability, organization and human resources capacity, legislative framework (e.g. commercial code and company law) and institutional setting. Therefore, States launching a reform process aiming at the automation of the business registry would be advised to carry out a careful assessment of the legal, institutional and procedural dimensions (such as legislation authorizing electronic signatures or information security laws, or establishing complex e-government platforms or other ICT infrastructure) in order to identify those areas where reforms are needed and to adopt those technology solutions that are most appropriate to their current needs and capabilities (see also paras. 244 and 245 and rec. 58 below). In several States, only information about registering a business is currently available online, and a functioning electronic registry has not yet been implemented. Making information electronically available is certainly less expensive and less difficult to achieve than the establishment of an electronic registry, and does not require any legislative reform or specialized technology. While the adoption of a mixed registration system that combines electronic processing and paper-based manual submission and processing might thus be an appropriate interim solution, it does involve higher maintenance costs, and the ultimate goal of a State should remain the progressive development of fully electronic registration systems (see paras. 72 to 80 and rec. 12 below).

B. Features of an electronic registry

67. When the business registry record is computerized, the hardware and software specifications should be robust and should employ features that minimize the risk of data corruption, technical error and security breaches. Even in a paper-based registry, measures should be taken to ensure the security and integrity of the registry record, but this is more efficiently and easily accomplished if the registry record is electronic. (Regardless of its method of operation, it is important for the registry to have risk-mitigation measures in place: see paras. 232 and 233 and rec. 54 below.) In addition to database control programs, software must also be developed to manage such aspects as user communications, user accounts, payment of any required fees, financial accounting, computer-to-computer communication, internal workflow and the gathering of statistical data. Software applications enabling data collection would also assist the registry in making evidence-based decisions which would facilitate efficient administration of the system (for example, the collection of data on more frequent requests by registry users would enable evidence-based decisions on how best to allocate registry resources).[4] When the State's technological infrastructure is not sufficiently advanced to allow the features mentioned above to be implemented, it is nevertheless important that the software put in place be flexible enough to

[4] For example, "application programming interfaces" (APIs) may be adopted. APIs have a wide variety of possible uses, such as enabling the submission of applications to the registry through simplified procedures, for example by pre-filling certain fields by default, or allowing users, and equipping systems with the proper software to connect directly to the registry and retrieve information automatically.

accommodate additional and more sophisticated features as they become more feasible in the future.

68. Implementing an online business registration system will require defining the technical standards of the online system, carefully evaluating the hardware and software needs of the business registry to make those standards operational in the context of the national technological infrastructure, and deciding whether it is feasible to develop the necessary hardware and software in-house or whether it must be purchased from private suppliers. In making that determination, it will be key to investigate whether a ready-made product is available that can easily be adapted to the needs of the State. If different suppliers are used for the hardware and the software, it is important that the software developer or provider is aware of the specifications of the hardware to be supplied, and vice versa.

69. Following more recent technological advances, one option States may want to consider is whether to rely on traditional software or to move to more sophisticated applications such as cloud computing, which is an Internet-based system that allows the delivery of different services (such as storing and processing of data) to an organization's computers through the Internet. The use of cloud computing allows for a considerable reduction in the resources needed to operate an electronic registration system, since the registry does not have to maintain its own technological infrastructure. However, data and information security can represent an issue when introducing such a system and it would be advisable for States to conduct a careful risk analysis before establishing a system exclusively based on cloud applications.

70. Additional aspects that States should consider when adopting an online registry include:

(a) Scalability: the ICT infrastructure should be capable of handling an increasing volume of users over time, as well as traffic peaks that may occasionally arise;

(b) Flexibility: the ICT infrastructure of the registry should be easily adaptable to new user and system requirements, and the migration of data from one technology to another may require data-cleansing aspects;

(c) Interoperability: the registry should be designed to allow (even at a later stage) integration with other automated systems, such as other governmental authorities operating in the jurisdiction and online or mobile payment portals;

(d) Costs: the ICT infrastructure should be financially sustainable both in terms of initial and operating costs; and

(e) Intellectual property rights: in order to avoid risks deriving from adverse circumstances that might affect an owner of intellectual property rights in the technology used (for example, if the owner ceases to operate or is prohibited from doing business with the government), the State should always either be granted ownership of the system or an unrestricted licence to the source code.

71. In terms of the cost of the ICT infrastructure, the level of security needed by an electronic registration system and its cost must be carefully addressed. In particular, it is important to align the risk attached to a specific interaction (between the registry and the business or the registry and other public authorities) with the costs and administration required to make that interaction secure. Low security may deter parties from using electronic services (unless it is mandatory), but costly high security measures could have the same effect.

C. Phased approach to the implementation of an electronic registry

72. The methods used to establish the online system should be consistent with the reforms required as they can determine the success or the failure of the initiative. Moving directly to a full online solution before re-engineering registry business processes would be a mistake in many cases, as the solutions designed would not be able to capture the technology's full benefits. Moreover, subject to the level of

development of the implementing State, factors such as the existence and quality of the infrastructure and literacy rates (including computer literacy) of the intended users should be carefully considered before the adoption of an online system. For example, States may have to deal with a non-existent or weak ICT infrastructure, lack of dependable electricity supplies and Internet connectivity, and low literacy rates, which may have a disproportionate effect on women and businesses in rural areas. In these instances, technical and capacity-building assistance programmes coordinated by international organizations might be necessary in order to progress towards the goal of a fully automated electronic registry.

73. In locations where digital access is not extensive, a phased approach may be an appropriate way forward. Automation would start with the use of simple databases and workflow applications for basic operations, such as name searches or the sharing of information with other government authorities, and then would progress to more sophisticated web-based systems that would enable customers to conduct business with the registry entirely online. These web-based systems could be quite convenient for smaller businesses operating at a distance from the registry, provided that those entrepreneurs were able to access the system. The final phase of the approach would be to accommodate ICT interoperability between those authorities involved in business registration.

74. The simplest approach for States beginning their activity in this area would be to develop a content-rich website that consolidates registration information, provides downloadable forms, and enables users to submit feedback. This simple resource would allow users to obtain information and forms in one place and would make registries more efficient by enabling users to submit email inquiries before going to registry offices with the completed forms. Since this solution does not require a stable Internet connection, it may appeal to States with limited Internet access.

75. If only limited Internet bandwidth is available, then automating front-counter and back-office operations prior to moving online would be a suitable approach. If the registry has sub-offices outside its main location (for example, in rural areas), it would be important to establish a dedicated Internet connection with them. This approach would still require entrepreneurs to visit the registry, but at least it would establish a foundation on which the registry could later develop a more sophisticated web platform. A key factor even at this basic stage would be for the system to be able to digitize historical records and capture key information in the registry, such as the names of members or owners and directors of the business.

76. Platforms that enable businesses to apply and pay for registration online as well as to file annual accounts and update registration details as operations change can be developed once the State's technological capacity and rate of digital access allows for it. With regard to online payment of a registration fee, it should be noted that ICT-supported solutions would depend on a State's available modes of payment and on the regulatory framework that establishes the modes of payment that a public authority can accept. When the jurisdiction has enacted laws that allow for online payment, the most efficient option is to combine the filing of the electronic application and the fee payment into one step. Error checks should be included in ICT systems that incorporate this facility, so that applications are not submitted before payments are completed and registry officials can see payment information along with the application. When fee payment is required before registration of the business, this constitutes a separate procedural step and the use of ICT solutions in order to be user-friendly would require streamlining the procedures for filing the application and for payment (see also para. 70(c) above). In some States, the use of mobile payment systems might permit easier and more effective methods of payment for registration and other related fees. In such cases, the same considerations involved in establishing online payments (e.g. enacting appropriate laws, as well as designing efficient options to combine mobile payments and the filing of registration documents) should be applied in order to develop efficient solutions appropriate to the use of mobile technology.

77. As noted above (see para. 66) when introducing electronic registration systems, States should adopt legislation that facilitates the implementation of these electronic

solutions, although the obligation to use such solutions should be considered only when the various stakeholders concerned with the registration process (including the registrant, government authorities, and other relevant authorities) are prepared to comply. Furthermore, when developing such laws, States should take into account that while certain legal requirements can be checked electronically, the most complex aspects of the process may need to be addressed by a registry official.

78. Enacting States should also be aware that establishing an electronic registration system requires a well-designed body of law that promotes simplicity and flexibility and avoids, to the greatest extent possible, discretionary power and the making of exceptions (see paras. 28 above and 147 and 230 below). For example, provisions requiring the interpretation of the content of documents and the collection of various pieces of information are difficult to adapt to electronic processing; the same applies to granting authority to the registrar to establish fees for the services of the registry and establishing a complex structure of rules and exceptions.

79. When a State has developed the ICT infrastructure necessary to achieve full business registry automation, it could be integrated with other online registration processes for taxation, social security and other purposes (for sharing of protected data between public authorities, see para. 114 below). Even if no integration with registrations required by other public authorities is built into the system, it would nevertheless be advisable that States implement data interchange capabilities so that the relevant business information could be shared across government authorities (see paras. 70(c) above and 93 below). A final improvement would be the development of mechanisms for disseminating value-added business information products to interested parties; such products could substantially contribute to the financial sustainability of the registry (see paras. 189, 190 and 194 below).

80. One issue that would likely arise when the online registry is able to offer fully-fledged electronic services would be whether to abolish any paper-based submission of information or to maintain both online and paper-based registration. In many jurisdictions, registries choose to have mixed solutions with a combination of electronic and paper documents or electronic and manual processing during case handling. This approach may result in considerable cost for registries, since the two systems require different tools and procedures. Moreover, if this option is chosen, it is important to establish rules to determine the time of registration as between electronic and paper-based submissions. Finally, paper applications must be processed in any case, so that the information included in a paper document can be transformed into data that can be processed electronically; this can be done by scanning the paper-based application for registration (possibly using optical character recognition technology so as to make the scanned document electronically searchable). However, in order to ensure that the record made by scanning correctly represents the paper application, the registry will likely have to employ staff to check that record, thus adding a step that increases costs and reduces the benefits of using an online system.

D. Other registration-related services supported by ICT solutions

81. Automation should enable the registry to perform other functions in addition to the processing of applications. Where States require user-friendly electronic filing and pre-populated forms,[5] for example, it can assist businesses in the mandatory filing of periodic returns and annual accounts. Electronic filing and automated checks also help reduce processing time by the registry.

[5] Pre-populated forms allow selected fields to be automatically filled based on information previously provided by the registrant or maintained in their user account. When changes in the registrant's information occur, the registrant is not required to fill out the entire form again, but only to enter the relevant changes. Information included in the pre-populated form is stored and may be made accessible to and exchangeable with other relevant authorities.

82. Electronically supported registration could also assist the registry with deregistration procedures (see paras. 222 to 224 and rec. 50 below). Such procedures usually require an official announcement that a business will be deregistered. The use of ICT can provide for the automation of such announcements, from initiating the process to producing a standard notice, thus helping registries to ensure that businesses are not deregistered before any time limit has elapsed and to reduce processing time. In order to be fully effective, however, adoption of an electronic registration system needs to be supported by streamlined procedures that enable the deregistration of businesses in a simplified and quick way.

83. Further, ICT solutions could be applied to assist in the filing of financial information in machine-readable format (such as extensible Business Reporting Language, or XBRL). For example, a platform could be provided to assist in the conversion of paper-based financial statements to XBRL format. Machine-readable financial data facilitates the aggregation and analysis of financial information, which could be of significant value to users of the registry.

84. Solutions using ICT could also support follow-up and enforcement procedures of business registries when businesses fail to comply with registration requirements. In one jurisdiction, for example, the back-office system of the registry monitors the records of businesses and detects whether certain circumstances suggest that the business is not in compliance with statutory requirements. An automatic notice to the business is then produced in order for it to remedy the situation. Should the business fail to do so within the statutory deadline, the ICT solution starts a new procedure to forward the case to the district court, which may make a decision on the compulsory liquidation of the business. Upon issuing an order for compulsory liquidation, the court notifies the registry, which then deregisters the business.

Recommendation 12: Electronic, paper-based or mixed registry

The law should provide that the optimal medium to operate an efficient business registry is electronic. Should full adoption of electronic services not yet be possible, such an approach should nonetheless be implemented to as great an extent as permitted by the current technological infrastructure of the enacting State, as well as its institutional framework and laws, and expanded as that infrastructure improves.

E. Electronic documents and electronic authentication methods

85. As noted above (see, for example, paras. 66 and 76), an efficient electronic business registry system should allow users to submit and receive documents in electronic format, to sign electronically when transmitting information or requests to the registry and to pay online for business registry services (see also para. 204 below and rec. 44). Therefore, as a preliminary step, appropriate domestic law should be in place to regulate all such matters (see also paras. 77 and 78 above). States that enact legal regimes on electronic communications and electronic signatures may wish to consider the legislative texts prepared by UNCITRAL to govern electronic transactions.[6] Such texts establish the principles of technological neutrality and functional equivalence (see also paras. 244 and 245 below) that are needed to ensure equal treatment between electronic and paper-based communications; they also deal extensively with provisions covering the issues of legal validity of electronic documents and signatures,[7] authentication, and the time and place of dispatch and

[6] Such texts include: the UNCITRAL Model Law on Electronic Commerce (1996); the UNCITRAL Model Law on Electronic Signatures (2001) and the United Nations Convention on the Use of Electronic Communications in International Contracts (2005). For further information, see http://www.uncitral.org/uncitral/uncitral_texts/electronic_commerce.html.

[7] The principle of "technological neutrality" means that the provisions of the law are 'neutral' and do not depend on or presuppose the use of particular types of technology and can be applied to generation, transmission or storage of all types of information. The principle of "functional equivalence" establishes the criteria under which electronic communications and electronic signatures may be considered equivalent to paper-based communications and hand-written

receipt of electronic messages.[8] Because of the way these texts, and other UNCITRAL legislative texts, are negotiated and adopted, they offer solutions appropriate to different legal traditions and to States at different stages of economic development. Furthermore, domestic legislation based on the UNCITRAL texts on electronic commerce will greatly facilitate cross-border recognition of electronic documents and signatures.

Recommendation 13: Electronic documents and electronic authentication methods

The law should:

(a) Permit and encourage the use of electronic documents as well as of electronic signatures and other equivalent identification methods; and

(b) Regulate such use pursuant to principles whereby electronic documents and signatures are functionally equivalent to their paper-based counterparts and cannot be denied legal validity or enforceability for the sole reason that they are in electronic form.

F. A one-stop shop for business registration and registration with other authorities

86. As discussed above (see paras. 2, 3 and 57), before a business may operate in the formal economy, it is often required to register with several different government authorities in addition to the business registry. These additional authorities often require the same information that has already been gathered by the business registry. Entrepreneurs must often personally visit each authority and fill out multiple forms. Taxation, social security, justice and employment authorities are usually involved in this process; other administrative offices and institutions, specific to each jurisdiction, may also be involved. This often results in multiple procedures governed by different laws, duplication of information and lack of ownership or full control of the process by the authorities involved. Moreover, the entire process can require weeks, if not months.

87. The establishment of one-stop shops has thus become one of the most popular reforms to streamline business registration in recent years. One-stop shops enable entrepreneurs to receive all of the information and forms (possibly integrated forms for registration and payment with all of the authorities in the one-stop shop) they need in order to complete the necessary procedures to establish their business through single outlets rather than having to visit several different government authorities.

88. Beyond this general description, the scope of one-stop shops can vary according to the services offered. Some one-stop shops only provide business registration services, which may still be an improvement if the registration process previously involved a number of separate visits to the relevant authorities; others carry out other functions related to the establishment of a business. A common additional function is registration with taxation authorities, although there are also examples of one-stop shops dealing with registration for social security and statistical purposes and with obtaining the required licences from municipal and other authorities. In some cases, one-stop shops assist entrepreneurs not only with business licences and permits but also with investment, privatization procedures, official diaries and journals, intellectual property and import-export registries, tourism-related issues and State-owned property management, and may provide access to utilities and banking services.

---

signatures. According to the principle of "legal validity" communications and signatures cannot be denied legal effect, validity or enforceability on the sole ground that they are in electronic form.

[8] This is an aspect that may be relevant due to the time sensitivity of certain submissions, such as establishing the exact time and place at which a business has been registered.

89. The functions of one-stop shops can be carried out through physical offices or an electronic platform. Physical premises, when located in rural areas, are particularly appropriate for businesses with limited access to municipal centres; so, too, are mobile offices, particularly in places that are too remote for States to have physical premises. In addition to physical premises, online business registration can be offered as an option available for registering a business. Online one-stop shops take advantage of solutions supported by ICT, which allow for the rapid completion of several formalities due to the use of dedicated software. Such online portals may provide a fully interconnected system or may still entail separate registration in respect of some requirements, for example, for taxation services.

90. When establishing one-stop shops, in particular those performing functions in addition to business registration, States can choose among different approaches. One form of one-stop shop is the so-called “one window” or “one table” version, which offers a high level of integration of the different authorities involved in the establishment of a business. In this case, the one-stop shop combines the process for obtaining business and other registrations with public authorities, such as for taxation and social security, with other arrangements, like publishing the registration in a National Gazette or newspapers, when required. All relevant documents are submitted to the one-stop shop administrator who is authorized, and properly trained, to accept them on behalf of the various government authorities involved. Documents are then dispatched, electronically or by hand or courier, to the competent authority for processing. This type of one-stop shop requires detailed coordination between the different government authorities, which must modify their procedures to ensure an effective flow of information. A memorandum of understanding between the key authorities involved may be needed in order to establish the terms in respect of the sharing of business information. In some cases, taking such an approach may also require a change in legislation.

91. Another form of one-stop shop is the “one door” approach, in which representatives of different government authorities involved in registration are brought together in one physical place, but the registrant must deal separately with each representative (for example, the business registry official dealing with the approval of the business name, the clerks checking the documents, and the taxation official), although the different authorities liaise among themselves. As may be apparent, this solution is relatively uncomplicated and would normally not require any change in law or ministerial responsibilities, but it would involve establishing effective cooperation between the different government ministries. One issue States should consider when opting for this approach would be how much authority the representatives of each government authority should have; for example, should they have the discretion to process the registration forms on site or would they simply be acting on behalf of the authority they represent and be required to take the documents to their home authority for further processing? Similarly, it is also important to consider clarifying the lines of accountability of the various representatives from the different authorities to the administrator of the one-stop shop.

92. A third approach, which is less common, is based upon the establishment of a separate entity to coordinate the business registration function and to deal with other requirements that entrepreneurs must meet, such as making tax declarations, obtaining the requisite licences, and registering with social security authorities. Pursuant to this model, the entrepreneur would apply to the coordinating entity after having registered with the business registry in order to fulfil the various additional aspects of the procedures necessary prior to commencing business operations. Although this approach results in adding a step, it could be useful in some States since it avoids having to restructure the bodies with the main liability for business registration. On the other hand, the adoption of such a structure could involve an increase in the cost of the administrative functions and may only reduce time frames to the extent that it allows the various functions to take place successively or enables participants in the one-stop shop to network with the other authorities to speed up their operations. From the user’s perspective, however, the advantage of being able to deal with a single organization remains.

93. Regardless of the approach chosen in the implementation of a one-stop shop, it is important to emphasize that such an arrangement does not require the establishment of a single government authority with authority over all of the other authorities related to the one-stop shop. Instead, it involves designating which government authority has authority over the single integrated interface, while all of the government authorities participating in the one-stop shop retain their functional autonomy. In order to enhance the benefits deriving from the establishment of a one-stop shop, it would be desirable that States facilitate improved technical and institutional interoperability among the public authorities participating in the one-stop shop. It may thus be necessary to streamline technical standards and specifications so that the information collected and shared is of similar quality and of a standardized nature. This will include: establishing appropriate procedures to handle the exchange of information and communication of errors between the various collection points for and repositories of the information, regardless of their location within the State; providing minimum information technology security standards to ensure, at least, secure channels for data exchange (for example, the use of "https" protocols); and ensuring the integrity of data while it is being exchanged.

94. The adoption of a unique identifier for each business (see paras. 98 to 105 and rec. 15 below) and a single form for registration with, and payment of fees to, each authority (see also paras. 9 and 25 above) will also contribute to interoperability among the authorities participating in the one-stop shop. In recent years, for example, several jurisdictions have adopted integrated online registration systems in which an application submitted for business registration includes all of the information required by business registry, taxation, social security and possibly other authorities. Once completed, the information in the integrated application is transmitted by the business registry to all relevant authorities. Information and any necessary approvals from the other authorities are then communicated back to the registry, which immediately forwards the information and approvals to the business. While this is beneficial for all businesses, regardless of their size, it is particularly valuable for MSMEs, which may not have the resources necessary to cope with the compliance requirements of multiple government authorities in order to establish their business.

95. In States with developed ICT infrastructures, the functions of the authorities concerned with registration may be fully integrated through the use of a common electronic platform which is operated by one of the authorities involved and provides simultaneous registration for various purposes, i.e. business registration, taxation, and social security, etc. In some jurisdictions, an authority (such as the tax administration) is responsible for the registration of businesses, or ad hoc entities have been set up to perform simultaneous registration with all relevant authorities. In other jurisdictions, advanced interoperability among the different authorities involved in the registration process has resulted in a consolidated electronic registration form that can be pre-populated [9] with information from the different authorities concerned. In jurisdictions where this approach has been developed, authorities perform regular file transfers to update the electronic platform as well as their own records; they have direct access to the common platform and use the same back-office systems to update it; and the information registered is regularly verified by trusted staff of the authorities. Such strong coordination among the relevant authorities is often based on regulatory provisions that allocate roles and responsibilities among those authorities. Moreover, in certain jurisdictions such integrated delivery and governance of the registration process with the relevant authorities takes the form of an electronic platform that allows other authorities involved in the establishment of a business to connect to the platform and share information on the business.

96. One issue that States should consider when establishing a one-stop shop is its location. It is usually advisable for the one-stop shop to be directly connected to the business registry office, either because it is hosted there or because the registry is part of the one-stop shop. The organization responsible for the one-stop shop could thus be the same as that which oversees the business registration process. This approach

[9] For details on pre-populated forms, see footnote 5, supra.

should take into account whether such organizations are equipped to administer the one-stop shop. Examples from various jurisdictions indicate that where authorities such as executive agencies are responsible for business registration, they possess the skills to perform one-stop shop functions as well. The same can be said of chambers of commerce, government commissions, and regulatory authorities. There are examples of adoption of a one-stop shop approach also in those States where business registration is under the administrative oversight of the judiciary.

97. Although one-stop shops do not necessarily require changes to domestic legislation, it is important that the operation of such mechanisms be legally valid, which may involve adapting existing law to the new structure and method of proceeding. For example, effective functioning of the one-stop shop may require provisions governing the collection of information by public authorities as well as the exchange of information among such authorities. The extent of the changes required will thus vary according to the different needs of the State and the structure of its system of registration with public authorities mandatorily involved in the establishment of a business. For example, in several States, enhanced interoperability between the business registry, taxation and social security authorities through the one-stop shop may have to take into consideration the fact that while registration with taxation and social security authorities is usually mandatory, registration with the business registry may be on a voluntary basis. In addition, States should determine how to finance the one-stop shop: the goal should be to ensure wide user accessibility, while providing for low maintenance cost and financial sustainability of the one-stop shop. Finally, one-stop shops should be staffed with well-trained personnel, and they should have their performance regularly monitored by the supervising authority in accordance with user feedback.

Recommendation 14: A one-stop shop for business registration and registration with other authorities

The law should establish a one-stop shop for business registration and registration with other public authorities, including designating which public authority should oversee the functioning of the single interface. Such an interface:

(a) May consist of an electronic platform or physical offices;

(b) Should ensure interconnected services of as many authorities as possible, including, but not limited to, business registry, taxation and social security authorities; and

(c) Should provide for the sharing of information on the business among the interconnected authorities and the use of a single, integrated application form for registration with, and payment to, those authorities and a unique identifier.

G. Use of unique identifiers

98. In those jurisdictions where the government authorities with which businesses are required to register operate in isolation from each other, it is not unusual for this procedure to result in duplication of systems, processes and efforts. This approach is not only expensive but may cause errors. Moreover, if each authority assigns a registration number to the business when it registers with that authority, and the use and uniqueness of that number is restricted to the authority assigning it, information exchange among the authorities requires each authority to map the different identification numbers applied by the other authorities. When ICT solutions are used, they can facilitate such mapping, but even they cannot exclude the possibility that different entities will have the same identifier, thus reducing the benefits (in terms of cost and usefulness) obtained from the use of such tools.

99. States wishing to foster advanced integration among different authorities, in order to minimize duplication of procedures and facilitate exchange of information among relevant public authorities, may wish to consider that in recent years, tools have been developed to facilitate inter-agency cooperation. For example, one

international organization has developed an online system that allows for the interoperability of the various public authorities involved in business registration with minimal or no change at all in the internal processes of the participating authorities nor in their computer systems.

100. Some States have introduced a more sophisticated approach, which considerably improves information exchange throughout the life cycle of a business. This approach, which is based on enhanced technical and institutional interoperability of the authorities involved (such as the ability of different ITC infrastructures to exchange and interpret data; or semantic interoperability – see paras. 110 and 111 below), requires the use of a unique identifier, which ties information to a given business and allows the business to be uniquely identified in its interactions with the business registry, taxation and social security authorities as well as other public authorities and possibly private agencies.

101. A unique identifier is structured as a set of characters (numeric or alphanumeric) which distinguish registered entities from each other. When designing a unique identifier, it may be advisable to build some flexibility in the structure of the identifier (for example, by allowing the addition of new characters to the identifier at a later stage) so that the identifier can be easily adaptable to new system requirements in a national or international context, or both. The unique identifier is usually allocated upon establishment of the business (in some States unique identifiers may be allocated to non-business entities as well) and does not change during the existence of that business,[10] nor after its deregistration. The same unique identifier is used for that business by all public authorities (and possibly private agencies), which permits information about that particular registered entity to be shared. Moreover, the unique identifier is intended to replace all other registration or identification numbers that any such authorities (and private agencies) may use in reference to a business.[11]

102. The experience of States that have adopted unique identifiers has demonstrated the usefulness of such tools. As noted above, they permit all government authorities to identify easily new and existing businesses, and to verify information in respect of them. In addition, the use of unique identifiers improves the quality of the information contained in the business registry, and in the records of the other interconnected authorities, since the identifiers ensure that information is linked to the correct entity even if its identifying attributes (for example name, address, and type of business) change. Moreover, unique identifiers prevent the situation where, intentionally or unintentionally, businesses are assigned the same identification; this can be especially significant where financial benefits are granted to legal entities or where liability to third parties is concerned. Unique identifiers have been found to produce benefits for businesses as well, in that they considerably simplify business administration procedures: entrepreneurs do not have to manage different identifiers from different authorities, nor are they required to provide the same or similar information to different authorities. Introducing unique identifiers can also contribute to improving the visibility of businesses, in particular of MSMEs, with possible partners as well as with potential sources of finance, since it would assist in creating a safe and dependable connection between a business and all of the information that relates to it. This access to relevant information could facilitate the establishment of business relationships, including in the cross-border context.

103. One issue a State may have to consider when introducing unique identifiers is that of individual businesses that do not possess a separate legal status from their owners. In such cases, taxation, social security or other authorities may often prefer to rely on the identifier for the individual, who may be a natural person, rather than

[10] While the unique identifier does not change throughout the lifetime of a business, if the business changes its legal form, a new unique identifier may be allocated.

[11] In certain cases, authorities may keep their own numbering system in addition to using the unique identifier because of “legacy data”, i.e. an obsolete format of identifying a business that cannot be converted into unique identifiers. In order to access such information, the registry must maintain the old identification number for internal purposes. In dealing with the public, however, the government authority should use for all purposes the unique identifier assigned to the business.

on the business identifier. However, States may also opt to assign a separate identifier to a sole proprietor in a business capacity and in a personal capacity.

104. Situations may arise in which different authorities in the same jurisdiction allocate identifiers to businesses, or non-business entities, based on the particular legal form of the business, or the non-business entity. States should thus consider adopting a verification system to avoid multiple unique identifiers being allocated to the same business by different public authorities. If the identifier is assigned through a single jurisdictional database the risk of several identifiers being allocated to one business or of several businesses receiving the same identifier is considerably reduced.

105. The effective use of unique identifiers is enhanced by the complete adoption of electronic solutions that do not require manual intervention. However, electronic solutions are not a mandatory prerequisite to introducing unique identifiers, as they can also be effective in a paper-based environment. When unique identifiers are connected to an online registration system, it is important that the solution adopted fits the existing technology infrastructure.

1. Allocation of unique identifiers

106. The use of unique identifiers requires sustained cooperation and coordination among the authorities involved, and a clear definition of their roles and responsibilities, as well as trust and collaboration between the public and business sectors. Since the introduction of a unique identifier does not of itself prevent government authorities from asking a business for information that has already been collected by other authorities, States should ensure that any reform process in this respect starts with a clear and common understanding of the reform objectives among all the stakeholders involved. Moreover, States should ensure that there is strong political commitment to the reform. Potential partners ideally include the business registry, taxation and social security authorities, at a minimum, and if possible, the statistics office, the pension fund, and any other relevant authorities. If agreement among these stakeholders is elusive, at least the business registry, taxation and social security authorities should be involved. Information on the identifiers in use by the other authorities and within the business sector is also a prerequisite for reform, as is a comprehensive assessment to identify the needs of all stakeholders.

107. In order to permit the introduction of a unique identifier, the law should include provisions on a number of issues including:

(a) Identification of the authority charged with allocating the unique identifier;

(b) Allocation of the unique identifier before or immediately after registration with the authorities involved in the establishment of a business;

(c) Listing of the information that will be related to the identifier, including at least the name, address and type of business;

(d) The legal mandate of the public authorities to use the unique identifier and related information, as well as any restrictions on requesting information from businesses;

(e) Access to registered information by public authorities and the private sector;

(f) Communication of business registration and amendments among the public authorities involved; and

(g) Communication of deregistration of businesses that cease to operate.

2. Implementation of a unique identifier

108. Adoption of a unique identifier normally requires a centralized database linking the business to all relevant government authorities whose information and communication systems must be interoperable. This requirement can be a major obstacle to implementation if the technological infrastructure of the State is not sufficiently advanced.

109. States can introduce the unique identifier in one of two ways. In the first approach, business registration is the first step and includes the allocation of a unique identifier, which is made available (together with the identifying information) to the other authorities involved in the registration process (for example, taxation and social security authorities), and which is re-used by those authorities. In the second approach, the allocation of a unique identifier represents the beginning of the process. The unique identifier and all relevant information are then made available to the government authorities involved in business registration, including the business registry, and is then re-used by all authorities. Either of these two approaches can be followed by the authority entrusted with allocating unique identifiers, regardless of whether the authority is the business registry, a facility shared by public authorities or the taxation authority. The enacting State should determine the format of the unique identifier and which authority would have the authority to assign it.

110. Introducing a unique identifier usually requires adaptation both by public authorities in processing and filing information and by businesses in communicating with public authorities or other businesses. A unique identifier requires the conversion of existing identifiers, which can be accomplished in various ways. Taxation identifiers are often used as a starting point in designing a new identifier, since the records of the taxation authorities cover most types of businesses and are often the most current. Examples also exist in which, rather than introducing a completely new number, the taxation number itself is retained as the unique business number. New identification numbers can also be created using other techniques according to a State's registration procedures. In such a situation, it is important that each business, once assigned a new number, verify the related identifying information, such as its name, address, and type of activity.

111. The interoperability of the ICT systems of different authorities could be a major obstacle when implementing unique identifiers. The ability of different information technology infrastructures to exchange and interpret data, however, is only one aspect of interoperability that States should consider. Another issue is that of semantic interoperability, which can also pose a serious threat to a successful exchange of information among the authorities involved as well as between relevant authorities and users in the private sector. For this reason, it is important to ensure that the precise meaning of the information exchanged is understood and preserved throughout the process and that semantic descriptions are available to all of the stakeholders involved. Measures to ensure interoperability would thus require State action on a dual level: agreement on common definitions and terminology on the one hand, and the development of appropriate technology standards and formats on the other. This approach should be based on a mutual understanding of the legal foundation, responsibilities and procedures among all those involved in the process.

3. Cross-border exchange of information among business registries

112. States are increasingly aware of the importance of improving the cross-border exchange of data and information between registries,[12] and sustained progress in respect of ICT development now allows this aspect to be addressed. Introducing unique identifiers that enable different public authorities to exchange information about a business could thus be relevant not only at the national level, but also in an international context. Unique identifiers can allow more efficient cross-border cooperation among business registries located in different States, as well as between business registries and public authorities in different States. Implementation of cross-border exchange of data and information can result in more dependable information for consumers and existing or potential business partners, including small businesses that provide cross-border services, as well as for potential sources of finance for the business (see paras. 195 and 196 and rec. 40 below).

[12] For example, there are some regional examples of cross-border information-sharing on businesses between States, but these are cases where the information-sharing was a component of a broader project involving significant economic integration of the relevant States.

113. Accordingly, States implementing reforms to streamline their business registration system may wish to consider adopting solutions that will, in future, facilitate such information exchanges between registries from different jurisdictions and to consult with States that have already implemented approaches that allow for such interoperability.[13] One such reform could include developing a system of business prefixes that would make the legal form of the business immediately recognizable across international and other borders.

Recommendation 15: Use of unique identifiers

The law should provide that a unique identifier should be allocated to each registered business and should:

(a) Be structured as a set of numeric or alphanumeric characters;

(b) Be unique to the business to which it has been allocated; and

(c) Remain unchanged and not be reallocated following any deregistration of the business.

Recommendation 16: Allocation of unique identifiers

The law should specify that the allocation of a unique identifier should be carried out either by the business registry upon registration of the business, or before registration by the designated authority. In either case, the unique identifier should then be made available to all other public authorities involved in the registration of a business and in the sharing of the information associated with that identifier, and should be used in all official communications in respect of that business.

Recommendation 17: Implementation of a unique identifier

The law should ensure that, when adopting a system for the use of a unique identifier:

(a) There is interoperability between the technological infrastructure of the business registry and of the other public authorities sharing the information associated with the identifier; and

(b) That existing identifiers are linked to, or replaced by, the unique identifier.

H. Sharing of protected data between public authorities

114. Although the adoption of a system of unique identifiers facilitates information sharing between public authorities, it is important that sensitive data and privacy be protected. For this reason, when a State introduces interoperability among different authorities, it should address how public authorities may share protected data relating to individuals and businesses so that there is no infringement of the rights of data owners. States should thus ensure that all information sharing among public authorities occurs in accordance with the applicable law, which should establish the conditions under which such sharing is permitted. Moreover, the law should clearly identify which public authorities are involved, the information shared and the purpose for sharing, and establish that the owners of the data should be informed of the purposes for which their protected data may be shared among public authorities. Information-sharing should be based on the principle that only the minimum information necessary to achieve the public authority's purpose may be shared and that appropriate measures are in place to protect the rights to privacy of the business. When devising appropriate law or policy on the sharing of protected data between public authorities, it is important for States to consider the interoperability of those public authorities.

[13] Some States with more integrated economies have developed an application that allows users to carry out simultaneous searches of the registries in both States by using their smartphones or mobile devices.

Recommendation 18: Sharing of protected data between public authorities

The law should establish the conditions on which protected data can be shared between public authorities pursuant to a unique identifier system.

IV. Registration of a business

A. Scope of examination by the registry

115. The method through which a business is registered varies from State to State, ranging from those that tend to regulate less and rely on the law that governs business behaviour, to States that opt for ex ante screening of a business before it may be registered (see also para. 54 above). In this regard, a State aiming at reforming the registration system must first decide which approach it will take to determine the scope of the examination that will have to be carried out by the registry. The State may thus choose to have a system where the registry only records information submitted to it by the registrant or a system where the registry is required to perform legal verifications and decide whether the business meets the criteria to register.

116. States opting for ex ante verification of legal requirements and authorization before businesses can register (referred to as an "approval system") often have registration systems under the oversight of the judiciary in which intermediaries such as notaries and lawyers perform a key role. Other States structure their business registration as a declaratory system, in which no ex ante approval is required before the establishment of a business and where registration is an administrative process. In such declaratory systems, registration is under the oversight of a government department or authority, which can choose whether to operate the business registration system itself or to adopt other arrangements. There are also States that do not fall neatly within either category and in which there is a certain variation in the level and type of verification carried out as well as in the level of judiciary oversight.

117. Both the approval and the declaratory system have their advantages. Approval systems intend to protect third parties by preventing errors or omissions prior to registration. Courts and intermediaries exercise a formal review and, when appropriate, a substantive review of the prerequisites for the registration of a business. On the other hand, declaratory systems are said to reduce the inappropriate exercise of discretion; furthermore, they may reduce costs for registrants by negating the need to hire an intermediary and appear to have lower operational costs. Some systems have been said to merge advantages of both the declaratory system and the approval system by combining ex ante verification of the requirements for establishing a business with a reduced role for the courts and other intermediaries, thus simplifying procedures and shortening processing times.

B. Accessibility of information on how to register

118. In order for the business registry to facilitate trade and interactions between business partners, the public and the State, easy access to business registry services should be provided both to businesses that want to register and to interested users who want to search the information on the business registry.

119. For businesses wanting or required to register, many microbusinesses may not be aware of the process of registration nor of its costs: they often overestimate time and cost, even after the registration process has been simplified. Easily retrievable information on the registration process should be made available (e.g. a list of the steps needed to achieve the registration; the necessary contacts; the data and documents required; the results to be expected; how long the process will take; methods of lodging complaints; and possible legal recourse), including on the advantages offered by a one-stop shop (where available) (see also paras. 86 to 97 and rec. 14 above) as well as on the relevant fees. This approach can reduce compliance costs, and make the outcome of the application more predictable, thus encouraging

entrepreneurs to register. Restricted access to such information, on the other hand, might require meetings with registry officials in order to be apprised of the registration requirements or the involvement of intermediaries to facilitate the registration process.

120. In jurisdictions with developed ICT infrastructures, information on the registration process and documentation requirements should be available on the registry website or the website of the government authority overseeing the process. Moreover, the possibility of establishing direct contact with registry personnel through a dedicated email account of the registry, electronic contact forms or client service telephone numbers should also be provided. As discussed below (see para. 135 below), States should consider whether the information included on the website should be offered in a foreign language in addition to official and local languages. States with more than one official language should make the information available in all such languages in accordance with the language laws of the State, if any (see also paras. 133 to 135 below).

121. A lack of advanced technology, however, should not prevent access to information that could be ensured through other means, such as through the posting of communication notes at the premises of the relevant agency or dissemination through public notices. In some jurisdictions, for example, it is a requirement to have large signs in front of business registry offices advising of their procedures, time requirements and fees. In any event, information for businesses to register should be made available at no cost.

122. It is equally important that potential registry users are given clear information on the logistics of registration and on the public availability of information on the business registry. This may be achieved, for example, through the dissemination of guidelines and tutorials (ideally in both printed and electronic form) and through the availability of in-person information and training sessions. In some States, for example, prospective users of the system are referred to classroom-based or eLearning opportunities available through local educational institutions or professional associations.

Recommendation 19: Accessibility of information on how to register

The law should require the registrar to ensure that information on the business registration process and any applicable fees is widely publicized, readily retrievable, and available free of charge.

C. Businesses permitted or required to register

123. One of the key objectives of business registration is to permit businesses of all sizes and legal form to improve their visibility in the marketplace and to the public. This objective is of particular importance in assisting MSMEs to participate effectively in the economy and to take advantage of State programmes available to assist them. States should enable businesses of all sizes and legal form to register in an appropriate business registry, or create a single business registry that is tailored to accommodate registration by a range of different sizes and different legal forms of business.

124. States must also define which businesses are required to register under the applicable law. Laws requiring the registration of businesses vary greatly from State to State, but one common aspect is that they all require registration of particular legal forms of business. The nature of the legal forms of business that are required to register in a given jurisdiction is, of course, determined by the applicable law. In some legal traditions, it is common to require registration of all businesses, including sole proprietorships, professionals, and government bodies; in others, certain businesses, usually the smallest, are not required to register due to their size and legal form; in yet other legal traditions, only corporations and similar entities (with legal personality and limited liability) are required to register. This latter approach can exclude businesses like partnerships and sole proprietorships from mandatory registration. However, variations on these regimes also exist, and some jurisdictions permit

voluntary registration for businesses that would not otherwise be required to register, such as sole traders and professional associations.

125. Enabling the registration of businesses that would not otherwise be required to register with the business registry (but may be subject to mandatory registration with other public authorities, such as taxation and social security) allows such businesses to benefit from a number of services offered by the State, by the registry and other entities, including the protection of a business or a trade name, facilitating access to credit, accessing additional opportunities for growth, improving visibility to the public and to markets and, subject to the legal form chosen for the business which may require it to be registered, the separation of personal assets from assets devoted to business or limiting the liability of the owner of the business. The law should establish registration obligations (e.g. timely filing of periodic returns, updating of registered information, accuracy of information submitted) also for businesses that voluntarily register with the business registry as well as appropriate sanctions for non-compliance with those obligations, in order to ensure a consistent approach with the regime established for those businesses that are required to register.

126. Even when business registration is voluntary, it may still prove burdensome for MSMEs and outweigh the benefits the business could gain as a registered business, thus discouraging registration. Some jurisdictions have carried out reforms to simplify the registration process by decreasing its cost (see paras. 198 to 201 and rec. 41 below) and by removing administrative obstacles. In any event, States should encourage micro and small businesses to register by adopting policies especially tailored to the needs of such businesses in order to convey to them the advantages of registration, including specific incentives available for MSMEs.

Recommendation 20: Businesses permitted or required to register

The law should specify:

(a) Which legal forms of businesses are required to register; and

(b) That businesses of all sizes and legal forms are permitted to register.

D. Minimum information required for registration

127. Businesses must meet certain information requirements in order to be registered; those requirements are determined by the State based on its laws and economic framework. The information required usually varies depending on the legal form of business being registered – for example, sole proprietorships and simplified business entities may be required to submit relatively simple details (if at all) in respect of their business, while businesses such as public and private limited liability companies will be required to provide more complex and detailed information depending on the requirements established by the law in respect of those types of business. Although the requirements for registration of each legal form of business will vary according to the applicable law, there are, however, some requirements that can be said to be common for many businesses in most States, both during the initial registration process and throughout the lifecycle of the business.

128. General requirements for the registration of all legal forms of business are likely to include information in respect of the business and its registrant(s), such as:

(a) The name of the business;

(b) The address at which the business can be deemed to receive correspondence (such an address can be a “service address” and need not be the residential address of the registrants or the managers of the business);

(c) The name(s) and contact details of the registrant(s);

(d) The identity of the person or persons who are authorized to sign on behalf of the business or who serve as the business’s legal representative(s); and

(e) The legal form of the business that is being registered and its unique identifier, if such an identifier has already been assigned (see paras. 106 and 107 above).

129. Other information that may be required for registration, depending on the jurisdiction of the registry and the legal form of the business being registered, can include:

(a) The names and addresses of the persons associated with the business, which may include managers, directors and officers of the business;

(b) The rules governing the organization or management of the business; and

(c) Information relating to the capitalization of the business.

130. Business registries may request information on the gender identification, ethnicity or language group of the registrant and other persons associated with the business, but the provision of such information should not be a requirement for registration. It should be noted, however, that while such information can be important for statistical purposes, particularly in light of State programmes that may exist to support under-represented groups, its collection could raise privacy issues. Such information should thus be requested only on a voluntary basis, should be treated as protected data and made available, if at all, only on a statistical basis.

131. Depending on the legal form of the business being registered, other details may be required in order to finalize the registration process. In some jurisdictions, proof of the share capital, information on the type of commercial activities engaged in by the business (see however paras. 240 to 243 below), and agreements in respect of non-cash property constitute information that may also be required in respect of certain legal forms of business. In addition, in several jurisdictions, registration of shareholder details and any changes therein may be required; in a few cases, registration of shareholder details is carried out by a different authority. States should, however, be mindful that requesting a prospective business to submit complex and extensive information may result in making registration more difficult and expensive and thus may discourage MSMEs from registering.

132. It should also be noted that in some jurisdictions, registration of the identity of the business owner(s) is considered a key requirement; other jurisdictions now make it a practice to register beneficial ownership details and changes in those details, although the business registry is not always the authority entrusted with this task.[14] Transparency in the beneficial ownership of businesses can help prevent the misuse of corporate vehicles, including MSMEs, for illicit purposes.[15]

---

[14] A “beneficial owner” is the natural person(s) who ultimately owns or controls a legal person or arrangement even when the ownership or control is exercised through a chain of ownership or by means of control other than direct control. These vehicles may include not only corporations, trusts, foundations, and limited partnerships, but also simplified business forms, and may involve the creation of a chain of cross-border company law vehicles created in order to conceal their ownership.

[15] It should be noted that the Financial Action Task Force (FATF) Recommendation 24 in respect of transparency and beneficial ownership of legal persons encourages States to conduct comprehensive risk assessments of legal persons and to ensure that all companies are registered in a publicly available company registry. The basic information required is: (a) the company name; (b) proof of incorporation; (c) legal form and status; (d) the address of the registered office; (e) its basic regulating powers; and (f) a list of directors. In addition, companies are required to keep a record of their shareholders or members. (See International Standards on Combating Money Laundering and the Financing of Terrorism & Proliferation: The FATF Recommendations, Part E on Transparency and Beneficial Ownership of Legal Persons and Arrangements, Recommendation 24 (www.fatf-gafi.org/media/fatf/documents/recommendations/pdfs/FATF_Recommendations.pdf).)

Recommendation 21: Minimum information required for registration

The law should establish the required information and supporting documents for the registration of a business, including at least:

(a) The name of the business;

(b) The address at which the business can be deemed to receive correspondence or, in cases where the business does not have a standard form address, the precise description of the geographical location of the business;

(c) The identity of the registrant(s);

(d) The identity of the person or persons who are authorized to sign on behalf of the business or who serve as the business's legal representative(s); and

(e) The legal form of the business being registered and its unique identifier, if such an identifier has already been assigned.

E. Language in which information is to be submitted

133. When requiring the submission of information for business registration, one important issue for the State to consider is the language in which the required information must be submitted. Language can be a barrier and can cause delays in registration if documents need to be translated into the language of the registry. On the other hand, a business can be registered only if the content of the information is legible to the registry staff. For this reason, it is not common for jurisdictions to allow documents or electronic records to be submitted in a non-official language. States, however, may consider whether such documents can be accepted. There are some States that allow all or some of the information relating to the business registration to be submitted in a non-official language. Should States opt for this approach, they may wish to require that the documents or electronic records must be accompanied by an official translation into the registry's national language(s) or any other form of authenticating the documents that is used in the State.

134. Another issue is whether the documents submitted to the business registry include information, such as names and addresses, that uses a set of characters different from the characters used in the language of the registry. In such a situation, the State should provide guidance on how the characters are to be adjusted or transliterated to conform to the language of the registry.

135. A number of States have more than one official language or no official language. In these States, the language in which the information is to be submitted to the business registry is usually determined by the language laws of the State, if any (see also para. 120 above). When States decide to accommodate registration in more than one language, different approaches can be adopted. For example, States may require parties to make their registration in all official languages; or they may permit filing in one language only, but then require the registry to prepare and register duplicate copies in all official languages. Both these approaches, however, may be costly and invite error. A more efficient method to deal with multiple official languages, any one of which may be used to register, would be to allow registrants to carry out registration in only one of those official languages. This approach would also take into account the financial constraints of MSMEs and additional circumstances, such as possible literacy issues, when entrepreneurs may not be equally fluent in all official languages spoken in a State. Whichever approach is taken, States will have to consider ways to address this matter so as to ensure that the registration and any subsequent change can be carried out in a cost effective way for both the registrant and the registry and, at the same time, ensure that information can be understood by the registry's users.

Recommendation 22: Language in which information is to be submitted

The law should provide that the information and documents submitted to the business registry must be expressed in the language or languages specified, and in the character set as determined and publicized by the business registry.

F. Notice of registration

136. The business registry should notify the registrant whether or not the registration of the business was effective as soon as practicable, and, in any event, without undue delay. Requiring the registry to inform promptly the registrant of the registration helps to ensure the integrity and security of the registry record. In States where online registration is used, the registrant should receive an online notification of the registration of the business.

Recommendation 23: Notice of registration

The law should require the business registry to notify the registrant whether or not the registration of its business is effective as soon as practicable, and, in any event, without undue delay. In an online registration system, the business registry should send an online notification to the registrant immediately after all of the requirements for the registration of the business have been successfully fulfilled.

G. Content of notice of registration

137. The notice of registration should include the minimum information in respect of the registered business necessary to provide conclusive evidence that all requirements for registration have been complied with and that the business is duly registered according to the law of the enacting State.

Recommendation 24: Content of notice of registration

The law should provide that the notice of registration may be in the form of a certificate, notice or card, and that it should contain at least the following information:

(a) The unique identifier of the business;

(b) The date and time of its registration;

(c) The name of the business;

(d) The legal form of the business; and

(e) The law under which the business has been registered.

H. Period of effectiveness of registration

138. States may adopt one of two approaches to determine the period of effectiveness of the registration of a business. In some States, the registration of the business is subject to a maximum period of duration established by law. It follows that unless the registration is renewed, the registration of the business will expire on the date stated in the notice of registration or upon the termination of the business.[16] This approach imposes a burden on the registered business, which could be particularly problematic for MSMEs, as they often operate with minimal staff and limited knowledge of the applicable rules. Further, if additional information is required and not furnished by the business, renewal of its registration could also be refused.

[16] It should be noted that the general law of the enacting State for calculating time periods would apply to the calculation of the period of effectiveness, unless specific legal provisions applicable to registration provides otherwise. For example, if the general law of the enacting State provides that, if the applicable period is expressed in whole years from the day of registration, the year runs from the beginning of that day.

139. Under the second approach, no maximum period of validity is established for the registered business and the registration is effective until the business ceases to operate and is deregistered. This approach simplifies the intake process and both encourages registration and reduces its burden on all businesses. However, States that opt for this approach should ensure the adoption of appropriate methods (e.g. sending regular prompts to businesses, establishing advertising campaigns as reminders, or, as a last resort, enforcement procedures) to encourage businesses to keep their registered information current (see paras. 157 to 161 and rec. 30 below).

140. In some cases, both approaches have been adopted: a maximum period of registration, subject to renewal, may apply to registered businesses that are of a legal form that does not have legal personality, while an unlimited period of registration may apply to businesses that have legal personality. This duality of approach reflects the fact that the consequences of the expiry of registration of a business that possesses legal personality are likely to be more serious and may affect the very existence of the business and the limited liability protection afforded to its owners.

141. Although some jurisdictions require registered businesses to renew their registration periodically, the practice of establishing registration without a maximum period of validity is a more desirable approach as it meets the needs of businesses for simplified and fast procedures, while relieving them, in particular MSMEs, of a potential burden.

Recommendation 25: Period of effectiveness of registration

The law should establish that the registration is valid until the business is deregistered.

I. Time and effectiveness of registration

142. In the interests of transparency and predictability of a business registration system, States should determine the moment at which the registration of a business or any later change made to the registered information is effective. States usually determine that a business registration or any subsequent change made to it is effective either at the time of the entry of that information into the registry record or when the application for registration (or a change to that information) is received by the registry. Whichever approach is chosen, the most important factor is that the State makes it clear at which moment the registration or change is effective. In addition, the effective time of registration of the business or any later change to the registered information should be indicated in the registry record relating to the relevant business.

143. In some jurisdictions, businesses may also apply for the protection of certain rights in the period prior to registration. For example, the provisional registration of the trade name of the business to be registered may protect that name from being used by any other entity until the registration of the business is effective. In such cases, States should be equally clear to establish the moment at which such pre-registration rights are effective and the period of their effectiveness.

144. If the registry is designed to enable users to submit or amend registered information electronically without the intervention of registry staff and to use online payment methods for the registration, the registry software should ensure that the information becomes effective immediately or nearly immediately after it is transmitted. As a result, any delay between the time of the electronic transmission of the information and the effective time of registration of the business will be eliminated.

145. In registry systems in which the registry staff must enter the information into the registry record (whether it is received electronically or in paper form), there will inevitably be some delay between the time when the information is received in the registry office and the time when the information is entered into the registry record. In these cases, the law should provide that the registry must enter the information received into the registry record as soon as practicable and possibly set a deadline by

which that entry should be completed. In a mixed registry system which allows information to be submitted in both electronic and paper form, registrants who elect to use the paper form should be alerted that this method may result in some delay in the time of effectiveness of the registration. Finally, a business registry usually processes applications for registration in the order in which they have been received, although some jurisdictions may permit expedited processing of applications, subject to the payment of an additional fee.

Recommendation 26: Time and effectiveness of registration

The law should:

(a) Require the business registry to record the date and time that applications for registration are received and to process them in that order as soon as practicable and, in any event, without undue delay;

(b) Establish clearly the moment at which the registration of the business is effective; and

(c) Specify that the registration of the business must be entered into the business registry as soon as practicable thereafter, and in any event without undue delay.

J. Rejection of an application for registration

1. Rejection due to errors in the application for registration

146. A series of checks and control procedures are required to ensure that the necessary information is provided in order to register the business, however, the extent of such controls varies according to the jurisdiction. In those legal regimes where the registry performs simple control procedures, if all of the basic legal and administrative requirements established by applicable law are met, the registrar must accept the information as filed, record it, and register the business. When the legal regime requires a more thorough verification of the information filed, registries may have to check whether mandatory provisions of the law are met by the content of the application and information submitted, or by any amendments thereto. Whichever approach is chosen, States should define in their law which requirements the information to be submitted to the registry must meet. In certain jurisdictions, the registrar is given the authority to impose requirements as to the form, authentication and manner of delivery of information to be submitted to the registry. When an MSME is seeking to register, such requirements should be kept to a minimum in order to facilitate the registration process for MSMEs. This will reduce administrative hurdles and help in promoting business registration among such businesses.

147. Registration of MSMEs may also be facilitated if the registrar is granted the power to accept and register documents that do not fully comply with the requirements for the form of the submission, and to rectify clerical errors, including its own incidental errors, in order to bring the entry in the business registry into conformity with the documents submitted by the registrant. This will avoid imposing the potentially costly and time-consuming burden of requiring the registrant to resubmit its application for registration. Entrusting the registrar with these responsibilities may be particularly important if registrants do not have direct access to electronic submission of documents and where such submission, or the entry of data, requires the intervention of the registry staff. In States where it is possible for registrants to submit applications for registration directly online, the electronic registration system usually provides automated scrutiny of the data entered in the application. When the registrar is granted the authority to correct its own errors as well as any incidental errors that may appear in the information submitted in support of the registration of the business, the law of the enacting State should strictly determine under which conditions those responsibilities may be discharged (see also paras. 230 and 231 and rec. 53 below). Clear rules in this regard will ensure the integrity and security of the registry record and minimize any risk of abuse from or

corruption by the registry staff (see also paras. 211 to 216 and rec. 47 below). The law of the enacting State should thus establish that the registry may only exercise its discretion to correct errors upon having provided prior notification of the intended corrections to the registrant and having received the consent of the registrant in return, although this approach could create a delay in the registration of the business while the registrar seeks such consent. When the information provided by the business is not sufficient to comply with the requirements for registration, the registrar should be granted the authority to request from the business additional information in order to finalize the registration process. The law of the enacting State should specify an appropriate length of time within which the registrar should make such a request.

148. The rejection of an application for registration is likely to be processed differently depending on whether the registration system is electronic, paper-based, or mixed. In a registry system that allows registrants to submit applications and relevant information directly to the registry electronically, the system should be designed, when permitted by the State's technological infrastructure, so as to automatically require correction of the application if it is submitted with an error, and to automatically reject the submission of incomplete or illegible applications, displaying the reasons for the rejection on the registrant's screen. In cases where the application for registration of a business is submitted in paper form and the reason for its rejection is that the application was incomplete or illegible, there might be some delay between the time of receipt of the application by the registry and the time of communication of its rejection, and the reasons therefor, to the registrant. In mixed registry systems which allow applications to be submitted using both paper and electronic means, the design of the electronic medium should include the technical specifications that allow for automatic requests for correction or automatic rejection of an application. Moreover, registrants who elect to use the paper form when such a choice is possible should be alerted that this method may result in some delay between the time of receipt of the application by the registry and the time of communication of any rejection, and the reasons therefor.

2. Rejection of an application for failure to meet the requirements prescribed by law

149. States should provide that registries may reject the registration of a business if its application does not meet the requirements prescribed by the applicable law of the State.[17] This approach is implemented in several jurisdictions regardless of their legal tradition. In order to prevent any arbitrary use of such power, however, the registrar must provide, in writing, a notice of the rejection of an application for registration and the reasons for which it was rejected, and the registrant must be allowed time to appeal against that decision as well as to resubmit its application. Moreover, it should be noted that the authority of the registrar to reject an application should be limited to situations where the application for registration does not meet the conditions for registration as required by law.

Recommendation 27: Rejection of an application for registration

The law should provide that the registrar:

(a) Must reject an application for the registration of a business only if the application does not meet the requirements specified in the law;

(b) Is required to provide to the registrant in written form the reason for any such rejection; and

(c) Is granted the authority to correct its own errors as well as any incidental errors that may appear in the information submitted in support of the registration of

[17] Instances in which the registry improperly accepts an application and registers a business that does not meet the requirements prescribed by law should be governed by the provisions establishing liability of the business registry, if any (see paras. 211 to 216 below). Moreover, the law of the State should establish how rectification of business registration should be carried out in such instances.

the business, provided that the conditions under which the registrar may exercise this authority are clearly established.

K. Registration of branches

150. Registration of branches of a business is a common practice, although there are jurisdictions in which such registration is not required. Most States require the registration of national branches of a foreign business in order to permit those branches to operate in their jurisdiction and to ensure the protection of domestic creditors, businesses and other interested parties that deal with those branches. In several States, registration of a national branch of a national company is also required or permitted. Registration of a business branch might not appear to be immediately relevant for MSMEs, whose main concern is more likely to be to consolidate their business without exceeding their human and financial capacity. However, this issue is relevant for those slightly larger businesses that, being of a certain size and having progressed to a certain volume of business, look to expand beyond their local or domestic market.

151. States have their own rules for governing the operation of foreign businesses, and there may be considerable differences among those States that permit the registration of branches of foreign businesses in terms of what triggers the obligation to register them. Some approaches are based on a broad interpretation of the concept of foreign establishment, for example, those that include not only a branch, but also any establishments with a certain degree of permanence or recognizability, such as a place of business in the foreign State. Other approaches define more precisely the elements that constitute a branch which needs to be registered, possibly including the presence of some sort of management, the maintenance of an independent bank account, the relation between the branch and the original or main business, or the requirement that the original or main business has its main office registered abroad. Not all States define a branch in their laws, or state under which circumstances a foreign establishment in the State must be registered: laws may simply refer to the existence of a foreign branch. In these cases, registries may fill the gap by issuing guidelines that clarify the conditions under which such a registration should be carried out. When this occurs, the registration guidelines should not be seen as an attempt to legislate by providing a discrete definition of what constitutes a branch, but rather as a tool to explain the features required by a branch of a business in order to be registered.

152. When simplifying or establishing their business registration system, States should consider enacting provisions governing the registration of branches of businesses from other jurisdictions. Those provisions should address, at minimum, issues such as timing of registration, disclosure requirements, information on the persons who can legally represent the branch and the language in which the registration documents should be submitted. Duplication of names could represent a major issue when registering foreign company branches, and it is important to ensure that the identity of a business is consistent in different jurisdictions. In this regard, an optimal approach could be for a business registry to use unique identifiers to ensure that the identity of a business remains consistent and clear within and across jurisdictions (see paras. 98 to 105 above).

Recommendation 28: Registration of branches

The law should establish:

(a) Whether the registration of a branch of a business is required or permitted;

(b) A definition of “branch” for registration purposes that is consistent with the definition provided elsewhere in the law; and

(c) Provisions regarding the registration of a branch to address the following issues:

(i) Disclosure requirements, including: the name and address of the registrants; the name and address of the branch; the legal form of the original or

main business seeking to register a branch; and current proof of the existence of the original or main business issued by a competent authority of the State or other jurisdiction in which that business is registered; and

(ii) Information on the person or persons who can legally represent the branch.

V. Post-registration

153. While a key function of a business registry is, of course, the registration of a business, registries typically support businesses throughout their life cycle. Once a business's registered information is collected and properly recorded in the business registry, it is imperative that it be kept current in order for it to continue to be of value to users of the registry. Both the registered business and the registry play roles in meeting these goals.

154. In order for a business to remain registered, it must submit certain information during the course of its life, either periodically or when changes in its registered information occur, so that the registry is able to maintain the information on that business in as current a state as possible. The registry also plays a role in ensuring that its information is kept as current as possible, and may use various means to do so, such as those explored in greater detail below. Both of these functions permit the registry to provide accurate business information to its users, thus ensuring transparency and supplying interested parties, including potential business partners and sources of finance, the public and the State, with a trustworthy source of information.

A. Information required after registration

155. In many jurisdictions, entrepreneurs have a legal obligation to inform the registry of any changes occurring in the business, whether these are factual changes (for example, address or telephone number) or whether they pertain to the structure of the business (for example, a change in the legal form of business). Information exchange between business registries and different government authorities operating in the same jurisdiction serves the same purpose. In some cases, business registries publish annual accounts, financial statements or periodic returns of businesses that are useful sources of information in that jurisdiction for investors, business clients, potential creditors and government authorities. Although the submission and publication of detailed financial statements might be appropriate for public companies, depending on their legal form, MSMEs should be required to submit far less detailed financial information, if any at all, and such information should only be submitted to the business registry and made public if desired by the MSME. However, to promote accountability and transparency and to improve their access to credit or attract investment, MSMEs may wish to submit and make public their financial information.[18] In order to encourage MSMEs to do so, States should allow MSMEs to decide on an annual basis whether to opt for disclosure of such information or not.

156. The submission of information that a business is required to provide in order to remain registered may be prompted by periodic returns that are required by the registry at regular intervals in order to keep the information in the registry current or it may be submitted by the business as changes to its registered information occur. Information required in this regard may include:

[18] While MSMEs are not generally required to provide the same flow and rate of information as publicly held firms generally, they may have strong incentives for doing so, particularly as they develop and progress. Businesses wishing to improve their access to credit or to attract investment may wish to signal their accountability by supplying information on: (1) the business' objectives; (2) principal changes; (3) balance sheet and off-balance sheet items; (4) its financial position and capital needs; (5) the composition of any management board and its policy for appointments and remuneration; (6) forward-looking expectations; and (7) profits and dividends. Such considerations are not likely to trouble MSMEs while they remain small, but could be important for such businesses as they grow.

(a) Amendments to any of the information that was initially or subsequently required for the registration of the business as set out in recommendation 21;

(b) Changes in the name(s) and address(es) of the person(s) associated with the business;

(c) Financial information in respect of the business, depending on its legal form; and

(d) Information concerning insolvency proceedings, mergers or winding-up (see para. 58 above).

Recommendation 29: Information required after registration

The law should specify that after registration, the registered business must at least file with the business registry information on any changes or amendments to the information that was initially required for the registration of the business pursuant to recommendation 21.

B. Maintaining a current registry

157. States should enact provisions that enable the business registry to keep its information as current as possible. A common approach through which that may be accomplished is for the State to require registered businesses to file at regular intervals, for example once a year, a declaration stating that certain core information contained in the register concerning the business is accurate or stating what changes should be made. Although this approach may be valuable as a means of identifying businesses that have permanently ceased to operate and may be deregistered, and may not be burdensome for larger business with sufficient human resources, such a requirement could be quite demanding for MSMEs, in particular if there is an associated cost.

158. Another approach, which seems preferable in the case of MSMEs, is to require the business to update its information in the registry whenever a change in any of the registered information occurs. The risk of this approach, which is largely dependent on the business complying with the rules, may be that the filing of changes is delayed or does not occur. To prevent this, States could adopt a system pursuant to which regular prompts are sent, usually electronically, to businesses to request them to ensure that their registered information is current. In order to minimize the burden for registries and to help them make the most effective use of their resources, prompts that registries regularly send out to remind businesses to submit their periodic returns could also include generic reminders to update registered information. If the registry is operated in a paper-based or mixed format, the registry should identify the best means of performing this task, since sending paper-based prompts to individual businesses would be time and resource consuming and may not be a sustainable approach. In one State, where the registry is not operated electronically, reminders to businesses to update their registered information are routinely published in newspapers.

159. Regardless of the approach chosen to prompt businesses to inform the registry of any changes in their registered information, States may adopt enforcement measures for businesses that fail to meet their obligations to file amendments. For example, a State could adopt provisions establishing the liability of the registered business to a fine on conviction if changes are not filed with the business registry within the time prescribed by law (see paras. 209 and 210 and rec. 46 below).

160. A more general method that may help mitigate any potential deterioration of the information collected in the business registry would include enhancing the interconnectivity and the exchange of information between business registries and taxation and social security authorities as well as other public authorities. The adoption of integrated electronic interfaces among the authorities involved in the business registration process allowing for their technical interoperability and the use of unique identifiers could play a key role (see paras. 93, 94 and 98 to 105 above).

Moreover, the registrar could identify sources of information on the registered business that would assist in maintaining a current registry record.

161. Once the registry has received the updated information, it should ensure that all amendments are entered in the registry record without undue delay. Again, the form in which the registry is operated is likely to dictate what might constitute an undue delay. If the registry allows users to submit information electronically without the intervention of the registry staff, the registry software should permit the amendments to become immediately or nearly immediately effective. Where the registry system (whether electronic, paper-based or mixed) requires the registry staff to enter the information on behalf of the business, all amendments should be reflected in the registry as soon as possible, and a maximum time period in which that should be accomplished could be stipulated.

Recommendation 30: Maintaining a current registry

The law should require the registrar to ensure that the information in the business registry is kept current, including through:

(a) Sending an automated request to registered businesses to prompt them to report whether the information maintained in the registry continues to be accurate or to state what changes should be made;

(b) Displaying notices of the required updates in the registry office and sub-offices and routinely publishing reminders on the registry website and social media and in national and local electronic and print media;

(c) Identification of sources of information on the registered businesses that would assist in maintaining the currency of the registry; and

(d) Updating the registry as soon as practicable following the receipt of amendments to registered information and, in any event, without undue delay thereafter.

C. Making amendments to registered information

162. States should also determine the time at which changes to the registered information are effective in order to promote transparency and predictability of the business registration system. Changes should become effective when the information contained in the notification of amendments is entered into the registry record rather than when the information is received by the registry, and the time of the change should be indicated in the registry record of the relevant business. In order to preserve information on the history of the business, amendments to previously registered information should be added to the registry record without deleting previously entered information.

163. As in the case of business registration, if the registry allows users to submit amendments electronically without the intervention of the registry staff, the amendments should become effective immediately or nearly immediately after they are transmitted. If the registry staff must enter the amendments into the registry on behalf of the business, amendments received should be entered into the registry record as soon as practicable, possibly within a maximum time. In a mixed registry system that allows amendments to be submitted using both paper and electronic means, registrants who elect to use the paper form should be alerted that this method may result in some delay in the effectiveness of the amendments.

Recommendation 31: Making amendments to registered information

The law should:

(a) Require the business registry to: (i) process amendments to the registered information in the order in which they are received; (ii) record the date and time when the amendments are entered into the registry record; and (iii) notify the registered

business as soon as practicable and in any event, without undue delay, that its registered information has been amended; and

(b) Establish when an amendment to the registered information is effective.

VI. Accessibility and information-sharing

A. Hours of operation of the business registry

164. Establishing the operating days and hours of the business registry depends on whether the registry is designed to allow direct electronic registration and information access by users or whether it requires their physical presence at an office of the registry. In the former case, electronic access should be available continuously except for brief periods to undertake scheduled maintenance; in the latter case, registry offices should operate during dependable and consistent hours that are compatible with the needs of potential registry users. In view of the importance of ensuring ease of access to the business registry for all users, the above criteria should be incorporated in the law of the enacting State or in administrative guidelines published by the registry, and the registry should ensure that its operating days and hours are widely publicized.

165. If the registry provides services (e.g. registration of a business, provision of information services) through a physical office, the minimum hours and days of operation should be the normal business days and hours of public offices in the State. To the extent that the registry requires or permits paper-based submissions, the registry should aim to ensure that the paper-based information is entered into the registry record and made available as soon as practicable, but preferably on the same business day that the information is received by the registry. Information requests submitted in paper form should likewise be processed on the same day they are received. To achieve this goal, the deadline for submitting paper-based information requests may be set independently from the business hours of the registry office.[19] Alternatively, the business registry could continue to receive paper submissions and information requests throughout its business hours, but set a "cut off" time after which information received may not be entered into the registry record, or information searches performed, until the next business day. A third approach would be for the registry to undertake that information will be entered into the registry record and searches for information will be performed within a stated number of business hours after receipt of the application or information request.

166. The law could also enumerate, in either an exhaustive or an indicative way, the circumstances under which access to the business registry may temporarily be suspended. An exhaustive list would provide more certainty, but there is a risk that it might not cover all possible circumstances. An indicative list would provide more flexibility but less certainty. Circumstances justifying a suspension of registry services would include any event that makes it impossible or impractical to provide those services (for example, due to force majeure such as fire, flood, earthquake or war, or to a breakdown in the Internet or network connection).

Recommendation 32: Hours of operation of the business registry

The law should ensure that:

(a) If access to the services of the business registry is provided electronically, access is available at all times;

[19] For example, the law or administrative guidelines of the registry could stipulate that, while the registry office is open between 9 a.m. and 5 p.m., all applications, changes and search requests must be received by an earlier time (for example, by 4 p.m.) to ensure that the registry staff has sufficient time to enter the information included in the application into the registry record or conduct the searches.

(b) If access to the services of the business registry is provided through a physical office:

(i) Each office of the registry is open to the public during the days and hours to be specified by the enacting State; and

(ii) Information about any registry office locations and their opening days and hours is publicized on the registry's website, if any, or otherwise widely publicized, and the opening days and hours of registry offices are posted at each office; and

(c) Notwithstanding subparagraphs (a) and (b) of this recommendation, the business registry may suspend access to the services of the registry in whole or in part in order to perform maintenance or provide repair services to the registry, provided that:

(i) The period of suspension of the registration services is as short as practicable;

(ii) Notification of the suspension and its expected duration is widely publicized; and

(iii) Such notice should be provided in advance and, if not feasible, as soon after the suspension as is reasonably practicable.

B. Access to registration services of the business registry

167. The law should permit all potential registrants to access the registration services of the business registry without discrimination based on grounds such as race, colour, gender, language, religion, political or other opinion, national or social origin, property, birth or other status. In the interest of promoting domestic economic growth, an increasing number of States allow registrants who are neither citizens of, nor residents in, the State to register a business, provided that such registrants meet certain requirements and comply with certain procedures established by the law concerning foreign registrants.

168. Access of potential registrants to the registration services of the business registry should only be subject to compliance with minimum age requirements, and with procedural requirements for the use of the registration services of the registry, such as: that the request for registration be submitted via an authorized medium of communication and on the prescribed form; and that the registrant provide identification in the form requested by the registry (see paras. 128 and 129 above and rec. 21) and pay any fee required for registration (see paras. 197 and 199 to 201 and rec. 41 below).

169. The registry should maintain a record of the identity of the registrant. In order to ensure a simple and straightforward registration process, the evidence of identity required of a registrant should be that which is generally accepted as sufficient in day-to-day commercial transactions in the enacting State. When registries are operated electronically and allow for direct access by users, potential registrants should be given the option of setting up a protected user account with the registry in order to transmit information to the registry. This would facilitate access by frequent users of the registration services of the business registry (such as business registration intermediaries or agents), since they would need to provide the required evidence of their identity only when initially setting up the account.

170. Once the registrant has complied with the requirements mentioned in paragraph 168 above (and any others established by the law of the State) for accessing the registry, the registry cannot deny access to the registration services of the registry. The only scrutiny that the registry may conduct at this stage (which is carried out automatically in an electronic registry) is to ensure that legible information (even if incomplete or incorrect) is entered in the form for business registration. If the registrant did not meet the objective conditions for access to the registration services of the business registry, the registry should provide the reasons for denying access

(e.g. the registrant failed to provide valid identification) in order to enable the registrant to address the problem. The registry should provide such reasons as soon as practicable (in this respect see paras. 146 to 149 and rec. 27 above).

171. Certain rules relating to access to the registration services of the business registry may also be addressed in the "terms and conditions of use" established by the registry. These may include offering the user the opportunity to open an account to facilitate quick access to the registration services of the registry and any necessary payment of fees for those services. The terms and conditions of access may also address the concerns of registrants regarding the security and confidentiality of their financial and other information or the risk of changes being made to registered information without the authority of the business. Assigning a unique user name and a password to the registrant, or employing other modern security techniques would help reduce such risks, as would requiring the registry to notify the business of any changes made by others in the user account information.

Recommendation 33: Access to registration services of the business registry

The law should permit all potential registrants to access the registration services of the business registry without discrimination based on any ground such as race, colour, gender, language, religion, political or other opinion, national or social origin, property, birth or other status.

C. Equal rights of women to access the registration services of the business registry

172. While the non-discrimination principle set out in recommendation 33 clearly encompasses all types of discrimination, including that based on gender, this guide supports the view, consistent with goals and resolutions of the United Nations,[20] that empowerment of women should be a main concern for States and international organizations in light of the key role women play in promoting sustainable development and the persistent social, economic and political inequalities they experience. In this respect, it should be noted that in many regions around the world, businesses owned by women, in particular micro and small businesses, represent a significant percentage of all MSMEs and in certain States such businesses have an average growth rate higher than businesses owned by men. Across all regions, however, MSMEs owned by women are often over-represented in the informal economy and in many regions, such businesses experience high barriers in their commercial activities. These barriers may range from lower access to finance (e.g. women are less likely to take out a loan, or the terms of borrowing can be less favourable for them) to the legal and regulatory environment (e.g. weak property rights or legal capacity); to education gaps (e.g. lower access to education, lower financial literacy) and to social and cultural norms (e.g. restrictions on mobility or on engagement with people outside the home or on the types of activities women can engage in).

173. In certain States, gender inequality may even result in different formal requirements or restrictions for women who want to start a business, including requirements for registration of a business. In those States, for example, women may have to submit additional documents in order to register a business or may not be permitted to register a business without spousal consent. In other States, even when the principle of economic equality of women is incorporated in fundamental laws (e.g. the Constitution), its practical effect may be limited by practical impediments, customary practices, or parallel legal systems that infringe the rights of some women.

174. States aiming to improve their business environment should take an inclusive approach in promoting entrepreneurship and address the legal, social and regulatory barriers that prevent equal and effective economic participation of all businesses, with particular emphasis on MSMEs owned by women.[21] This responds to the commitment

[20] See for example A/RES/70/1.

[21] See for example A/RES/67/202.

undertaken by all States under internationally agreed goals and targets to achieve gender equality and empowerment of women and girls, including economic empowerment, at the global, regional and national levels. Such steps are also in compliance with the obligations undertaken by many States with the ratification of the United Nations Conventions on the Elimination of All Forms of Discrimination against Women (CEDAW) and other treaties adopted by the United Nations for elimination of discrimination based on gender.

Recommendation 34: Equal rights of women to access the registration services of the business registry

The law should:

(a) Provide that women have equal and enforceable rights of access to the registration services of the business registry in order to start a business; and

(b) Ensure that requirements for business registration do not discriminate against potential registrants because of their gender.

D. Public availability of information

175. In keeping with its functions as a collector and disseminator of business-related information (see also para. 52 (b) above), the registry should make available all public information on a registered business. This may allow interested users to make more informed decisions about who they wish to do business with, and for organizations and other stakeholders to gather business intelligence. Moreover, since access to the publicly available registered information by general users also enhances certainty of and transparency in the way the registry operates, the principle of public access to the information deposited in the registry should be stated in the law of the enacting State. In most States, public access to the information in the registry is generally unqualified, and allowing full public access does not compromise the confidentiality of certain registered information, which can be protected by allowing users to access only certain types of information. For these reasons, it is recommended that the registry should be fully accessible to the public, subject only to necessary confidentiality restrictions in respect of certain registered information.

176. While providing disclosure of the publicly available registered information is an approach followed in most States, the way in which users access information, the format in which the information is presented and the type of information available varies greatly from State to State. This variation is not only a function of the technological development of a State, but of the framework for accessing such information, for example, in respect of different criteria that may be used to search the registry.

177. It is not recommended that States restrict access to search the information on the business registry or that users be required to demonstrate a reason to request access. Such a policy could seriously compromise the core function of the registry to publish and disseminate information on registered businesses. Moreover, if a discretionary element is injected into the granting of an information request, equal public access to the information in the registry could be impaired, and some potential users might not have access to information that was available to others.

178. Access to the business registry can be made subject to certain procedural requirements, such as requiring users to submit their information request in a prescribed form and to pay any prescribed fee. If a user does not use the prescribed registry form or pay the necessary fee, the user may be refused access to search the registry. As in the case of refusing access to registration of a business, the registry should be obliged to give the specific reason for refusing access to information services as soon as practicable so that the user can remedy the problem.

179. Unlike the approach adopted for registrants, the registry should not request and maintain evidence of the identity of a user as a precondition to obtaining access to the information on the business registry, since a user is merely retrieving information

contained in the public registry record. Identification should be requested of users only if it is necessary for the purposes of collecting any fees applicable to the retrieval of such information.

180. The registry may also reject an information request if the user does not enter a search criterion in a legible manner in the designated field but the registry should provide the grounds for any rejection as soon as practicable, as in the case of non-compliance with the objective conditions for registration by registrants (see paras. 170 and 171 above). In registry systems that allow users to submit information requests electronically to the registry, the software should be designed to prevent automatically the submission of information requests that do not include a legible search criterion in the designated field and to display the reasons for refusal on the user's screen.

181. Further, in order to facilitate dissemination of the information, States should be encouraged to abolish or keep to a minimum fees charged to access basic information on registered businesses (see para. 202 below). This approach may be greatly facilitated by the development of electronic registries that allow users to submit requests or make searches electronically without the need to rely on intermediation by registry personnel. Such an approach is also much cheaper for the registry. Where registration systems are paper-based, users may be required to either visit the registry office and conduct the search on site (whether manually or using ICT facilities that are available) or have information sent to them on paper. In both cases, registry staff may need to assist the user to locate the information and prepare it for disclosure. Again, paper-based information access is associated with delay, higher costs, the potential for error, and the possibility that the information obtained is less current.

182. Finally, States should devise effective means to encourage the use of information services provided by the registry. The adoption of electronic registries that allow direct and continuous access for users (except for periods of scheduled maintenance) will promote the actual use of the information. Communication campaigns on the services available from the business registry will also contribute to the active take-up of information services.

Recommendation 35: Public availability of information

The law should specify that all registered information is fully and readily available to the public unless it is protected under the applicable law.

E. Where information is not made public

183. Access to the business registry should be granted to all interested entities and to the public at large. In order to maintain the integrity and reputation of the registry as a trusted collector of information that has public relevance, access to sensitive information should be controlled to avoid any breach of confidentiality. States should thus put in place proper disclosure procedures. They may do so by adopting provisions that list which information is not available for public disclosure or they may follow the opposite approach and adopt provisions that list the information that is publicly accessible, indicating that information that is not listed cannot be disclosed.

184. Legislation in each State often includes provisions on data protection and privacy. When establishing a registry, in particular an electronic registry, States must consider issues concerning the treatment of protected data that is included in the application for registration and its protection, storage and use. Appropriate legislation should be in place to ensure that such data are protected, including rules on how data may be shared between different public authorities (see para. 114 and rec. 18 above). States should also be mindful that a major trend towards increased transparency in order to avoid the misuse of corporate vehicles for illicit purposes has resulted from international efforts to fight money-laundering, terrorist, and other illicit activities.[22]

[22] See supra, footnote 15 for additional information in respect of FATF Recommendation 24.

States should thus adopt a balanced approach that achieves both transparency and the need to protect access to sensitive information maintained in the registry.

Recommendation 36: Where information is not made public

In cases where information in the business registry is not made public, the law should:

(a) Establish which information concerning the registered business is subject to the applicable law on public disclosure of protected data and which types of information cannot be publicly disclosed; and

(b) Specify the circumstances in which the registrar may use or disclose information that is subject to confidentiality restrictions.

F. Direct electronic access to submit registration, to request amendments and to search the registry

185. If the State opts to implement an electronic registration system, the registry should be designed, if possible, to allow registry users to submit directly and to conduct searches from any electronic device, as well as from computer facilities made available to the public at offices of the registry or other locations. To further facilitate access to business registry services, the registry conditions of use may allow intermediaries (for example, lawyers, notaries or private sector third-party service providers) to carry out registration and information searches on behalf of their clients when the applicable law allows or requires the involvement of such intermediaries. If accommodated by the technological infrastructure of the State, or at a later stage of the reform, States should also consider adopting systems that allow registration, the filing of amendments and searches of the registry to be carried out through the use of mobile technology. This solution may be particularly appropriate for MSMEs in those economies where mobile services are often easier to access than electronic services.

186. When the registry allows for direct electronic access, the registry user (including an intermediary) bears the burden of ensuring the accuracy of any request for registration or amendment, or of any search of the registry. Since the required digital forms are completed by registry users without assistance from the registry staff, the potential for alteration of those forms by the registry staff is greatly minimized, as their duties are essentially limited to managing and facilitating electronic access by users, processing any fees, overseeing the operation and maintenance of the registry system and gathering statistical data. Even when direct electronic access is allowed, however, the possibility of error or misconduct on the part of the registry staff may exist if the registry staff is still required to intervene and enter information submitted to it electronically into the business registry record (see also para. 212 below).

187. Direct electronic access significantly reduces the costs of operation and maintenance of the system, increases accessibility to the registry (including when registration or searches are carried out through intermediaries) and enhances the efficiency of the registration process by eliminating any time lag between the submission of information to the registry and the actual entry of that information into the record. In some States, electronic access (from the premises of a registrant or a business, or from an office of the registry) is the only available mode of access to business registry services. In fact, in many States, where the registration system is both electronic and paper-based, by far the most prevalent mode of accessing the registry services is electronically.

188. It is thus recommended that, to the extent possible, States should establish a business registration system that is computerized and that permits direct electronic access by registry users. Given the practical considerations involved in establishing an electronic registry, multiple modes of access should be made available to registry users at least in the early stages of implementation in order to reassure those who are unfamiliar with the system. To facilitate its use, the registry should be organized to provide for multiple points of access for both electronic and paper submissions and

information requests. However, even where States continue to use paper-based registries, the overall objective is the same: that is, to make the registration and information retrieval process as simple, transparent, efficient, inexpensive and publicly accessible as possible.

Recommendation 37: Direct electronic access to submit registration and to request amendments

The law should establish that, in keeping with other applicable law of the enacting State, where information and communications technology is available, the submission of applications for the registration of a business and requests for amendment of the registered information of a business may be done remotely through electronic means.

Recommendation 38: Direct electronic access to search the registry

The law should establish that, where information and communications technology is available, searches of the registry may be done remotely through electronic means.

G. Facilitating access to information

1. Type of information provided

189. Information can be of particular value to users if it is available to the public, although the type of registered information that is available will depend on the legal form of the business being searched and on the applicable law regarding what registered information is protected and what may be made available to the public. Valuable information on a business that may be available on the registry: the profile of the business and its officers (directors, auditors); annual accounts; a list of the business's divisions or places of business; the notice of registration or incorporation; the publication of the business's memoranda, articles of association, or other rules governing the operation or management of the business; existing names and history of the business; insolvency-related information; any share capital; certified copies of registry documents; and notifications of events (late filing of annual accounts, newly submitted documents, etc.). Other valuable information relating to the business registry may include the identification of relevant additional laws and regulations, or information on the expected turnaround time in the provision of registry information services and fees for such services. In addition, some registries prepare reports relating to the operation of the business registry that may provide registry designers, policymakers and academic researchers with useful data (for example, on the volume of registrations and searches, operating costs, or registration and search fees collected over a given period). Information on business data, annual accounts and periodic returns, as well as information about fees for registry services, are usually the most popular pieces of information and the most requested by the public. When registration procedures permit, and subject to the law of the enacting State, business registries may also make available to users disaggregated statistical information that has voluntarily been submitted in respect of the gender, ethnicity, or language group of persons associated with the business. Such information can be of particular importance for States wishing to develop policies and programmes to support under-represented societal groups (see paras. 56 and 130 above).

190. If the State is one in which member or shareholder details must be registered, the public may also be granted access to such information. A similar approach may be taken with respect to information on the beneficial ownership of a business, which may be made available to the public in order to allay concerns over the potential misuse of business entities. However, the sensitive nature of the information on beneficial ownership may require the State to exercise caution before opting for disclosure of beneficial ownership without any limitation.[23]

[23] See supra, footnote 15 for further information in respect of FATF Recommendation 24.

2. Removing unnecessary barriers to accessibility

191. The registry needs to ensure that searchable information is easily accessible; even though the information is available, it does not always mean that it is easy for users to access. There are often different barriers to accessing the information, such as the format in which the information is presented: if special software is required to read the information, or if it is only available in one particular format, it cannot be said to be broadly accessible. In several States, some information is made available in paper and electronic formats; however, information made available only on paper likely entails reduced public accessibility. Other barriers that may make information less accessible are: limiting search criteria to unique business identifiers (as opposed to also allowing searches by business names); charging fees for the provision of information services (see para. 202 below); requiring users to register prior to providing access to the information, and charging a fee for user registration. States should find the most appropriate solutions according to their needs, their conditions and their laws.

192. Some States not only provide for electronic information searches but also distribute the information through other channels that can complement the use of the Internet or that may even represent the main method of distribution if an online registration system is not yet fully developed. The following additional means of sharing information are used in some States:

(a) Telephone services to provide information on registered businesses and product ordering;

(b) Subscription services to inform subscribers about events pertaining to specified businesses or for announcements of certain kinds of business registrations;

(c) Ordering services to enable access to various products, most often using an Internet browser; and

(d) Delivery services to convey various products, such as transcripts of publicly available registered information on a business, paper lists, or electronic files with selected data.

193. One often overlooked barrier to accessing business registry services, whether to register a business or to review information in the registry, is a lack of knowledge of the official language(s). Providing forms and instructions in other languages is likely to make the registry more accessible to users. However, business registries seldom offer such services in languages additional to the official language(s). Since making all information available in additional languages may incur additional expense for the registry, a more modest approach may be to consider making information on only core aspects of registration, for example in respect of instructions or forms, available in a non-official language. In deciding which non-official language would be most appropriate, the registry may wish to base its decision on historical ties, the economic interests of the jurisdiction and the geographic area in which the jurisdiction is situated (see paras. 133 to 135 and rec. 22 above), as well as consider the use of a widely used language that facilitates cross-border communication.

3. Bulk information

194. In addition to making information on individual businesses available, business registries in some jurisdictions also offer the possibility of obtaining “bulk” information, i.e. a compilation of information on selected, or all, registered businesses. Such information can be requested for commercial or non-commercial purposes and is often used by public authorities as well as private organizations (such as banks) that deal with businesses and perform frequent data processing on them. Distribution of bulk information varies according to the needs and capability of the receiving entity. In performing this function, one approach would be for the registry to ensure the electronic transfer of selected data on all registered entities, combined with the transfer of data on all new registrations, amendments, and deregistration during a specified period. Another option for the registry would be to make use of web-based or similar services for system-to-system integration that provide both name searches

and direct access to selected data on specific entities. Direct access avoids unnecessary and redundant storage of information by the receiving organization, and States where such services are not yet available should consider it as a viable option when streamlining their business registration system. Distribution of bulk information can represent a practical approach for the registry to derive self-generated funds (see para. 202 below).

Recommendation 39: Facilitating access to information

The law should ensure the facilitation of access to public information on registered businesses by avoiding the creation of unnecessary barriers such as: requirements for the installation of specific software; charging expensive access fees; or requiring users of information services to register or otherwise provide information on their identity.

H. Cross-border access to publicly available registered information

195. The internationalization of businesses of all sizes creates an increasing demand for access to information on businesses operating outside their national borders. However, official information on registered businesses is not always readily available on a cross-border basis due to technical or language barriers. Making such cross-border access as simple and fast as possible is thus of key importance in order to ensure the traceability of businesses, the transparency of their operations and to create a more business-friendly environment.

196. A range of measures can be adopted to facilitate access by foreign users of the business registry. Certain measures can be implemented to ensure the easy retrieval of information stored in the business registry by such users. In addition to allowing for registration and search requests in at least one non-official language (see para. 193 above), adopting easy-to-use search criteria and a simply understood information structure would further simplify access by users from foreign jurisdictions. States may wish to consider coordinating with other States (at least with those from the same geographic region) in order to adopt approaches that would allow for cross-border standardization and comparability of the information transmitted. Another group of measures that could be adopted pertain to providing information in a non-official but widely understood language on how foreign users can access the services of the business registry. As in the case of domestic users, users from foreign jurisdictions should be advised of the possibility of establishing direct contact with registry personnel through a dedicated email account of the registry, electronic contact forms or client service telephone numbers (see para. 120 above).

Recommendation 40: Cross-border access to publicly available registered information

The law should ensure that systems for the registration of businesses adopt solutions that facilitate cross-border access to the public information in the registry.

VII. Fees

197. It is standard practice in many States to require the payment of a fee for registration services. In return for that fee, registered businesses receive access to business registry services and to the many advantages that registration offers them. The most common types of fees are those payable for registration of a business and for the provision of information products and services, while to a lesser extent, fines may also generate funds. In some jurisdictions, registries may also charge an annual fee to keep a business in the registry (these fees are unrelated to any particular activity), as well as fees to register annual accounts or financial statements.

198. Although they generate revenue for the registries, fees can affect a business's decision whether to register, since such payments may impose a burden, in particular on MSMEs (see also paras. 9 and 25 above). Fees for new registration, for example,

can prevent businesses from registering, while annual fees to keep a company in the registry or to register annual accounts could discourage businesses from maintaining their registered status. States should take these and other indirect effects into consideration when establishing fees for registration services. States seeking to increase the business registration of MSMEs and to support such businesses throughout their lifecycle should consider offering registration and post-registration services free of charge. In several States that consider business registration as a public service intended to encourage businesses of all sizes and legal forms to register rather than as a revenue-generating mechanism, registration fees are often set at a level that is not prohibitive for MSMEs. In such States, the use of flat fee schedules for registration, regardless of the size of the business, is the most common approach. There are also examples of States that provide business registration free of charge. In States with enhanced interoperability among the business registry, taxation and social security authorities that results in the adoption of integrated registration and payment forms, a uniform approach should be taken to fees charged for registration by all relevant authorities.

A. Fees charged for business registry services

199. Striking a balance between the sustainability of the registry operations and the promotion of business registration is a key consideration when setting fees, regardless of the type of fee. One recommended approach followed in many States is to apply the principle of cost-recovery, according to which there should be no profit generated from fees in excess of costs. When applying such a principle, States should first assess the level of revenue needed from registry fees to achieve cost-recovery, taking into account not only the initial costs related to the establishment of the registry but also the costs necessary to fund its operation. These costs may include: (a) the salaries of registry staff; (b) upgrading and replacing hardware and software; (c) ongoing staff training; and (d) promotional activities and training for registry users. In the case of online registries, if the registry is developed in partnership with a private entity, it may be possible for the private entity to make the initial capital investment in the registry infrastructure and recoup its investment by taking a percentage of the service fees charged to registry users once the registry is operational.

200. Even when the cost-recovery approach is followed, there is considerable variation in its application by States, as it requires a determination of which costs should be included. In one State, fees for new registrations are calculated according to costs incurred by an average business for registration activities over the life cycle of the business. In this manner, potential amendments, apart from those requiring official announcements, are already covered by the fee that companies pay for new registration. That approach is said to result in several benefits, such as: (a) rendering most amendments free of charge, which encourages compliance among registered businesses; (b) saving resources related to fee payment for amendments for both the registry and the businesses; and (c) using the temporary surplus produced by advance payment for amendments to improve registry operations and functions. In other cases, States have decided to charge fees below the actual cost that the business registry incurs in order to promote business registration. In such cases, however, the services provided to businesses would likely be subsidized with public funds.

201. In setting fees in a mixed registry system, it may be reasonable for the State to charge higher fees to process applications and information requests submitted in paper form because they must be processed by registry staff, whereas electronic applications and information requests are directly submitted to the registry and are less likely to require attention from registry staff. Charging higher fees for paper-based registration applications and information requests will also encourage the user community to eventually transition to using the direct electronic registration and information request services. However, in making that decision, States may wish to consider whether charging such fees may have a disproportionate effect on MSMEs that may not have ready access to electronic services.

Recommendation 41: Fees charged for business registry services

The law should establish fees, if any, for business registration and post-registration services at a level that is low enough to encourage business registration, in particular of MSMEs, and that, in any event, does not exceed a level that enables the business registry to cover the cost of providing those services.

B. Fees charged for information

202. In various States, fees charged for the provision of information services are a more viable option for registries to derive self-generated funding. Such fees also motivate registries to provide valuable information products to their users, to maintain the currency of their records and to offer more advanced information services. A recommended good practice for States aiming to improve this type of revenue generation would be to avoid charging fees for basic information services such as simple name or address searches (see also para. 178 above), but to charge for more advanced information services that require greater processing by the business registry or that are more expensive to provide (e.g. direct downloading, subscription services or bulk information services; see also paras. 194 and 197 above). Since fees charged for information services are likely to influence users, such fees should be set at a level low enough to make the use of such services attractive. Again, the level of any such fee should be established according to the principle of cost-recovery, so as not to generate a profit in addition to covering the cost of the service. Moreover, when fees for information services are charged, States might consider establishing different fee regimes for different categories of user, such as private users, corporate or public entities, occasional users and users with an established user account. This approach would take account of the frequency with which or the purpose for which users request information services, their need for expedited or regular service, or the type of information products requested (e.g. on individual businesses or bulk information).

Recommendation 42: Fees charged for information

The law should establish that:

(a) Information contained in the business registry should be available to the public free of charge; and

(b) Information services that require greater processing by the business registry could be provided for a fee that reflects the cost of providing the information products requested.

C. Publication of fee amounts and methods of payment

203. Regardless of the approach taken in determining applicable fees, States should clearly establish the amount of any registration and information fees charged to registry users, as well as the acceptable methods of payment. Such methods of payment should include allowing users to enter into an agreement with the business registry to establish a user account for the payment of fees. States in which businesses can register directly online should also consider developing an electronic platform that enables businesses to pay online when filing their application with the registry (see paras. 76 above and 204 below). When publicizing the amount of registration and information fees, one approach would be for the State to set out the fees in either a formal regulation or more informal administrative guidelines, which the registry can revise according to its needs. If administrative guidelines are used, this approach would provide greater flexibility to adjust the fees in response to subsequent events, such as the need to reduce the fees once the capital cost of establishing the registry has been recouped. The disadvantage of this approach, however, is that this greater flexibility could be abused by the registry to adjust the fees upwards unjustifiably. Alternatively, a State may choose not to specify the level of the fees payable, but rather to designate the authority that is authorized to establish the fees payable. The

State may also wish to consider specifying in the law the types of service that the registry may or must provide free of charge.

Recommendation 43: Publication of fee amounts and methods of payment

The law should ensure that fees payable, if any, for registration and information services are widely publicized, as are the acceptable methods of payment.

D. Electronic payments

204. States should consider developing an electronic platform that enables businesses to pay online (including the use of mobile payment systems and other modern forms of technology) to access registry services for which a fee is charged (see para. 76 above). This will require enacting appropriate laws concerning electronic payments in order to enable the registry to accept online payments. Such laws should address issues such as who should be allowed to provide the service and under which conditions; access by users to online payment systems; the liability of the institution providing the service; customer liability and error resolution. Finally, such laws should also be consistent with the general policy of the State on financial services.

Recommendation 44: Electronic payments

The law should enable and facilitate electronic payments.

VIII. Liability and sanctions

205. While each business must ensure that its registered information is kept as accurate as possible by submitting amendments in a timely fashion, the State should have the ability to enforce proper compliance with initial and ongoing registration requirements. Compliance with those requirements is usually encouraged through the availability of enforcement mechanisms such as the imposition of sanctions on businesses that fail to provide timely and accurate information to the registry (see paras. 155 and 156 and rec. 29 above).

206. In addition, a system of notices and warnings could be set up in order to alert businesses of the consequences of failure to comply with specific requirements of business registration (for example, late filing of periodic returns). When the registry is operated electronically, automated warnings and notices could be periodically sent out to registered businesses. In addition, notices and warnings could be visibly displayed on the premises of the registration offices and routinely published electronically and in print media. To better assist businesses, in particular MSMEs, States could also consider designing training programmes to raise the awareness of businesses regarding their liability to comply with registration requirements and to advise them on how to discharge that liability.

A. Liability for misleading, false or deceptive information

207. States should adopt provisions that establish liability for any misleading, false or deceptive information that is submitted to the registry upon registration or amendment of the registered information of a business, and for failure to submit information required by the business registry when it ought to have been submitted. Care should be taken, however, to distinguish inadvertent failure to submit the required information from intentional submission of misleading, false or deceptive information, as well as from the intentional failure to submit information that could amount to submitting misleading, false or deceptive information. While wilful actions or omissions should be sanctioned with appropriate measures, inadvertent failure to submit the required information should result in less punitive measures, in particular if the inadvertent failure is rectified in a timely fashion.

Recommendation 45: Liability for misleading, false or deceptive information

The law should establish appropriate liability for any misleading, false or deceptive information that is provided to the business registry or for failure to provide the required information.

B. Sanctions

208. The establishment of fines for the breach of obligations related to business registration, such as late filing of periodic returns or failure to record changes in the registered information (see para. 157 above) are measures often adopted by States to enforce compliance. Fines can also represent a means of revenue generation, but their imposition again requires a balanced approach. Several States use fines as disincentives for businesses that are required to register to operate outside of the formal economy. In some cases, legislative provisions link the company's enjoyment of certain benefits to the timely filing of required submissions; in others, a series of increasing fines for late filing is enforced that can ultimately result in compulsory liquidation. However, if fines are used as the main source of funding for the business registry, it can have a detrimental effect on the efficiency of the registry. Since registries in such States lose revenue generated by fines when compliance improves, there is little motivation for such registries to improve the level of compliance. States should, therefore, not rely upon fines as the main source of revenue of a business registry; instead, fines should be established and imposed at a level that encourages business registration without negatively affecting the funding of registries once compliance improves.

209. The recurrent use of fines to sanction the breach of initial and ongoing registration obligations might discourage businesses, in particular MSMEs, from registering or properly maintaining their registration. States should consider establishing a range of possible sanctions that would apply depending on the seriousness of the violation or, in the case of MSMEs failing to meet certain conditions established by the law, to forego any sanction for businesses defaulting for the first time.

210. In order to further clarify potential liability, States should also ensure that a notice on the business registry clearly specifies whether the information it contains has legal effect and is opposable to third parties in the form in which it is deposited in the registry (see also para. 52(g) and rec. 10 (g) above).

Recommendation 46: Sanctions

The law should:

(a) Establish appropriate sanctions that may be imposed on a business for a breach of its obligations regarding information to be submitted to the registry in an accurate and timely fashion;

(b) Include provisions pursuant to which a breach of obligation may be forgiven provided it is rectified within a specified time; and

(c) Require the registrar to ensure broad publication of those rules.

C. Liability of the business registry

211. The law of the State should provide for the allocation of liability for loss or damage caused by error or through negligence in the administration or operation of the business registration and information system.

212. As noted above, users of the registry bear the liability for any errors or omissions in the information contained in an application for registration or a request for an amendment submitted to the registry, and bear the burden of making the necessary corrections. If applications for registration and amendment are directly submitted by users electronically without the intervention of registry staff, the potential liability of

the enacting State would be limited to system malfunctions, since any other error would be attributable to users. However, if paper-based application forms or amendment requests are submitted, the State must address the extent of its potential liability for the refusal or failure of the registry to enter such information correctly. A similar approach should be taken in States with electronic business registration systems that require certain information submitted electronically to nonetheless be entered by registry staff into the registry record and where such entry might also be subject to error (see also para. 186 above).

213. Further, it should be made clear to registry staff and registry users that registry staff may not provide legal advice on requirements for effective registration and amendment, or on their legal effects, unless specifically authorized to do so, nor should staff make recommendations on which intermediary (if any) the business should choose to assist in the registration or amendment process. However, registry staff should be permitted to give practical guidance with respect to the registration and amendment processes. In States that opt for an approval system, this measure on the provision of legal advice should, of course, not be applicable to the judges, notaries and lawyers entrusted with the administration of registration procedures.

214. While it should be made clear that registry staff may not provide legal advice (subject to the type of registration system of the State), the State must also address whether and to what extent it should be liable if registry staff nonetheless provide incorrect or misleading information on the requirements for effective registration and amendment or on the legal effects of registration.

215. In addition, in order to minimize the potential for misconduct by registry staff, the registry should consider establishing certain practices such as instituting financial controls that strictly monitor staff access to cash payments of fees and to the financial information submitted by users who use other modes of payment. Such practices may include the institution of audit mechanisms that regularly assess the efficiency and the financial and administrative effectiveness of the registry.

216. If States accept liability for loss or damage caused by system malfunction or error or misconduct by registry staff, they may consider whether to allocate part of the registration and information fees collected by the registry to a compensation fund to cover possible claims, or whether the claims should be paid out of general revenue. States might also decide to set a maximum limit on the monetary compensation payable in respect of each claim.

Recommendation 47: Liability of the business registry

The law should establish whether and to what extent the State is liable for loss or damage caused by error or negligence of the business registry in the registration of businesses or the administration or operation of the registry.

IX. Deregistration

A. Deregistration

217. Deregistration occurs once the business, for whatever reason, has permanently ceased to operate, including as a result of a merger, or forced liquidation due to insolvency, or in cases where applicable law requires the registrar to deregister the business for failing to fulfil certain legal requirements. When a business is deregistered, the public details in respect of the business usually remain visible on the register, but the status of the business is changed to indicate that it has been removed or that the business is no longer registered.

218. States should consider the role of the registry in deregistering a business. In most jurisdictions, deregistration of a business is included as one of the core functions of the registry. It appears to be less common, however, to entrust the registry with the decision whether or not a business should be deregistered as a result of insolvency proceedings or winding-up. In States where this function is included, statutory

provisions determine the conditions that result in deregistration and the procedures to follow in carrying it out.

219. Because deregistration pursuant to winding-up or insolvency proceedings of a business are matters regulated by laws other than those governing the registration of a business, and since such laws vary greatly from State to State, this legislative guide refers only to deregistration of those solvent businesses that the enacting State has deemed dormant or no longer in operation pursuant to the legal regime governing the business registry. In such cases, most States allow for deregistration to be carried out either upon the request of the business (often referred to as "voluntary deregistration") or at the initiative of the registry (frequently referred to as "striking-off"). In order to avoid difficulties for the registrar in determining when an exercise of the power to deregister is warranted because a business is a dormant solvent business or when it is no longer in operation, the law should clearly establish the conditions that must be fulfilled. This approach will also avoid a situation where that power may be exercised in an arbitrary fashion. Permitting a registrar to carry out deregistration pursuant to clear rules permits the maintenance of a current registry and avoids cluttering the record with businesses that do not carry on any activity. When deregistration is initiated by the registrar, there must be reasonable cause to believe that a registered business has not carried on business or that it has not been in operation for a certain period of time. Such a situation may arise, for example, when the State requires the business to submit periodic reports or annual accounts and a business has failed to comply within a certain period of time following the filing deadline. In any case, the ability of the registrar to deregister a business should be limited to ensuring compliance with clear and objective legal requirements for the continued registration of a business. In several States, before commencing deregistration procedures, the registrar must inform the business in writing of its pending deregistration and allow sufficient time for the business to reply and to oppose that decision. Only if the registrar receives a reply that the business is no longer active or if no reply is received within the time prescribed by law will the business be deregistered.

220. Deregistration may also be carried out upon the request of the business, which most often occurs if the business ceases to operate or has never operated. States should specify in which circumstances businesses can apply for deregistration and which persons associated with the business are authorized to request deregistration on behalf of the business. Voluntary deregistration is not an alternative to more formal proceedings, such as winding-up or insolvency, when those proceedings are prescribed by the law of the State in order to liquidate a business.

221. Deregistration should in principle be free of charge regardless of whether it is carried out at the initiative of the registrar or upon the request of the business. Further, States should consider adopting simplified procedures for the deregistration of MSMEs.

Recommendation 48: Voluntary deregistration

The law should:

(a) Specify the conditions under which a business can request deregistration;

(b) Require the registrar to deregister a business that fulfils those conditions; and

(c) Permit the State to adopt simplified procedures for deregistration of MSMEs.

Recommendation 49: Involuntary deregistration

The law should specify the conditions pursuant to which a registrar can deregister a business.

B. Process of deregistration and time of effectiveness of deregistration

222. Regardless of whether deregistration is requested by the business or initiated by the registrar, where the business is registered as a separate entity, the registry must issue a public notice of the proposed deregistration and when that deregistration will become effective. Such an announcement is usually published on the website of the registry or in official publications such as the National Gazette or in both. This procedure ensures that businesses are not deregistered without providing interested third parties (e.g. creditors, members of the business) the opportunity to protect their rights (the usual practice is to submit a written complaint corroborated by any required evidence to the registry). After the period indicated in the announcement has passed, a notation is made in the registry that the business is deregistered. Prior to the deregistration becoming effective, the applicable law may require that a further notice be published. Pending completion of the deregistration procedure, the business remains in operation and will continue to carry on its activities.

223. The law should establish the time of effectiveness of the deregistration, and the status of the business in the registry should indicate the time and date of its effect, in addition to the reasons for the deregistration. The registrar should enter such information in the registry as soon as practicable so that users of the registry are apprised without undue delay of the changed status of the business.

224. Registries should retain historical information on businesses that have been deregistered, leaving it to the State to decide the appropriate length of time for which such information should be preserved (see paras. 226 to 229 and rec. 52 below). When the State has adopted a unique identifier system, the information related to the business should remain linked to that identifier even if the business is deregistered.

Recommendation 50: Process of deregistration and time and effectiveness of deregistration

The law should:

(a) Provide that a written notice of the deregistration is sent to the registered business;

(b) Establish that the deregistration is publicized in accordance with the legal requirements of the enacting State;

(c) Specify when the deregistration of a business is effective; and

(d) Specify the legal effects of deregistration.

C. Reinstatement of registration

225. In several States, it is possible to reinstate the registration of a business that has been deregistered at the initiative of the registrar or upon the request of the business, provided that the request to the registrar for reinstatement meets certain conditions (in some States, this latter procedure is called “administrative restoration”) or is made by court order. In certain States, both procedures are available and choosing either of them usually depends on the reason for which the business was deregistered or the purpose of restoring the business. The two procedures usually differ in some key aspects, such as who can apply to have the business restored, which business entities are eligible for restoration and the time limit for filing an application for restoration. The requirements for “administrative restoration” in States that provide for both procedures are often stricter than those for restoration by court order. For example, in such States, only an aggrieved person, which may include a former director or member, can submit an application for reinstatement to the registrar, and the time limit within which the application can be submitted to the registry may be shorter than the time granted to apply for a court order. Regardless of the method(s) chosen by the State to permit reinstatement of the registration of a business, once the

registration has been reinstated, the business is deemed to have continued its existence as if it had not been deregistered, which includes maintaining its former business name. In cases where the business name is no longer available (as having been assigned to another business registered in the interim), procedures are usually established by the State to govern the change of name of the reinstated business.

Recommendation 51: Reinstatement of registration

The law should specify the circumstances under which and the time limit within which the registrar is required to reinstate a business that has been deregistered.

X. Preservation of records

A. Preservation of records

226. As a general rule, the information in the business registry should be kept indefinitely. The enacting State should decide on the appropriate length of time for which such information should be kept and may choose to apply its general rules on the preservation of public documents.

227. However, the length of the preservation period for records is most often influenced by the way the registry operates, and whether the registry is electronic, paper-based or a mixed system. In the case of electronic registries, the preservation for extended periods of time of original documents submitted in hard copy might not be necessary, provided that the information contained in such documents has been recorded in the registry or that the paper documents have been digitized (through scanning or other electronic processing).

228. Those States with paper-based or mixed registration systems, for example, must decide the length of time for which the paper documents submitted to it should be kept by the registry, in particular in situations where the relevant business has been deregistered. Considerations relating to the availability of storage space and the expense of storing such documents would likely play a role in that decision.

229. Regardless of the way in which the business registry is operated, providing prospective future users with long-term access to information maintained in the registry is of key importance, not only for historical reasons, but also to provide evidence of past legal, financial and management issues relating to a business that might still be of relevance. The preservation of electronic records is likely to be easier and more cost-effective than preserving paper records. In order to minimize the cost and considerable storage space required for the preservation of documents in hard copy, paper-based registries that cannot convert the documents received by it into an electronic form may adopt alternative solutions (for example, the use of microfilm) that allow for the transmission, storage, reading, and printing of the information.

Recommendation 52: Preservation of records

The law should provide that documents and information submitted by the registrant and the registered business, including information in respect of deregistered businesses, should be preserved by the registry so as to enable the information to be retrieved by the registry and other interested users.

B. Alteration or deletion of information

230. The law should establish that the registrar may not alter or remove registered information, except as specified by law and that any change to that information can be made only in accordance with the applicable law. However, to ensure the smooth functioning of the registry, in particular when registrants submit registration information using paper forms, the registrar should be authorized to correct its own clerical errors (see paras. 28, 45 and 147 above) made in entering the information from the paper forms into the registry record. If this approach is adopted, notice of

this or any other correction should promptly be sent to the business (and a notification of the nature of the correction and the date it was effected should be added to the public registry record linked to the relevant business). Alternatively, the State could require the registrar to notify the business of its error and permit the submission of an amendment free of charge.

231. Further, the potential for misconduct by registry staff should be minimized by: (a) designing the registry system to make it impossible for registry staff to alter the time and date of registration or any registered information submitted by a registrant; and (b) designing the registry infrastructure so as to ensure that it can preserve the information and the documents concerning a deregistered business for as long as prescribed by the law of the enacting State.

Recommendation 53: Alteration or deletion of information

The law should provide that the registrar does not have the authority to alter or delete information contained in the business registry record except in those cases specified in the law.

C. Protection against loss of or damage to the business registry record

232. To protect the business registry from the risk of loss or physical damage or destruction (see also para. 52(f) and rec. 10(f) above), the State should maintain back-up copies of the registry record. Any rules governing the security of other public records in the enacting State might be applicable in this context.

233. The threats that can affect an electronic registry also include criminal activities that may be committed through the use of technology. Providing effective enforcement remedies would thus be an important part of a legislative framework aimed at supporting the use of electronic solutions for business registration. Typical issues that should be addressed by enacting States would include unauthorized access or interference with the electronic registry; unauthorized interception of or interference with data; misuse of devices; fraud and forgery.

Recommendation 54: Protection against loss of or damage to the business registry record

The law should:

(a) Require the registrar to protect the registry records from the risk of loss or damage; and

(b) Establish and maintain back-up mechanisms to allow for any necessary reconstruction of the registry record.

D. Safeguard from accidental destruction

234. An aspect that may warrant consideration by States is that of natural hazards or other accidents that can affect the processing, collection, transfer and protection of the data housed in the electronic registry and under the liability of the registry office. Given user expectations that the business registry will function reliably, the registrar should ensure that any interruptions in operations are brief, infrequent and minimally disruptive to users and to States. For this reason, States should devise appropriate measures to facilitate protection of the registry. One such measure could be to develop a business continuity plan that sets out the necessary arrangements for managing disruptions in the operations of the registry and ensures that services to users can continue. In one State, for example, the registry has established a “risk register”, i.e. a dynamic document that is updated as changes in the operation of the registry occur. Such a risk register allows the registrar to identify possible risks for the registration service as well as the appropriate mitigation measures. Designated staff are required to report on an annual basis the threats to the registry and the relevant actions taken to mitigate such threats.

Recommendation 55: Safeguard from accidental destruction

The law should provide that appropriate procedures should be established to mitigate risks from force majeure, natural hazards, or other accidents that can affect the processing, collection, transfer and protection of data housed in electronic or paper-based business registries.

XI. Underlying legal reforms

A. Changes to underlying laws

235. Business registration reform can entail amending different aspects of the law of a State. In addition to legislation that is meant to prescribe the conduct of business registration, States may need to update or change laws that may simply affect the registration process in order to ensure that such laws respond to the needs of MSMEs and other businesses. There is no single solution in this process that will work for all States, since the reforms will be influenced by a State's legislative approach. However, the reforms should aim at developing laws that support business registration with features such as: transparency and accountability, clarity and the use of flexible legal forms for business.

236. Regardless of the approach chosen and the extent of the reform, changes in laws should carefully consider the potential costs and benefits of this process, as well as the financial capacity and the commitment of the government and whether sufficient human resources are available to implement the reform. An important preparatory step of a reform programme involves a thorough inventory and analysis of the laws that are relevant to business registration with a view to evaluating the need for change, the possible solutions, and the prospects for effective reform. In some cases, this assessment could result in deferring any major legislative reform, particularly if significant gains to the process of simplification can be achieved by the introduction of operational tools. Once it has been decided what changes should be made and how, it is equally important to ensure their implementation. In order to facilitate successful reform, the implementation of the new legal regime should be carefully monitored.

B. Clarity of the law

237. For States wishing to facilitate the establishment of businesses, in particular of MSMEs, it is important to review existing laws to identify possible impediments to the simplification of the registration process.

238. These reforms may include shifting the focus of the law towards privately held businesses, and away from public limited companies, particularly if the former currently account for the majority of the firms in the State. Other approaches may involve moving the legal provisions pertaining to small businesses to the beginning of any new law on legal forms for business in order to make such provisions easier to find or to use simpler language when legislation is updated.

239. One reform that would greatly clarify the law would be a comprehensive review of all laws affecting business registration a simplification of their provisions and their unification into a single piece of legislation. This could also facilitate building some flexibility into the system, with the general principles of business registration incorporated in the legislation and more detailed provisions on the operation of the system, which could be introduced even at a later stage, that are left to other operational tools.

Recommendation 56: Clarity of the law

The law should, to the extent possible, consolidate legal provisions pertaining to business registration in a single clear legislative text.

C. Flexible legal forms for business

240. Entrepreneurs tend to choose the simplest legal form available for their business when they decide to register, and States with rigid legal forms have an entry rate considerably lower than those with more flexible requirements. For example, in States that have introduced simplified legal forms for business, the registration process for these business types is much faster and less costly. Businesses are not required to publish the rules governing the operation or management of their business in the Official Gazette; instead, these can be posted online through the business registry. There are many States in which the involvement of a lawyer, notary or other intermediary is not obligatory for the preparation of documents or conducting a business name search.

241. Legislative changes to abolish or reduce the minimum paid in capital requirement for businesses also tend to facilitate MSME registration, since micro and small businesses may have limited funds to meet a minimum capital requirement, or they may be unwilling or unable to commit their available capital in order to establish their business. Instead of relying on a minimum capital requirement to protect creditors and investors, some States have implemented alternative approaches such as the inclusion of provisions on solvency safeguards in their legislation; conducting solvency tests; or preparing audit reports that show that the amount a company has invested is enough to cover the establishment costs.

242. Introducing simplified forms of limited liability and other types of businesses may also be coupled with a considerable reduction or complete abolition of the minimum capital requirements that other legal forms of business are required to meet upon formation. In several States that have adopted simplified legal business forms, the minimum capital requirement has been abolished completely, and in other cases, initial registration or incorporation has been allowed upon deposit of a nominal amount. In other States, progressive capitalization has been introduced, requiring the business to set aside a certain percentage of its annual profits until its reserves and the share capital jointly total a required amount. In other cases, progressive capitalization is required only if the simplified limited liability entity intends to graduate into a full-fledged limited liability company (for which a higher share capital would be required), but there is no obligation to do so.

243. Another reform that would be conducive to improved business registration is to provide freedom to entrepreneurs to conduct all lawful activities without requiring them to specify the scope of their venture. This is particularly relevant in those jurisdictions where entrepreneurs are required to list in their articles of association the specific activity or activities in which they intend to engage so as to restrain businesses from acting beyond the scope of their goals and, if needed, to protect shareholders and creditors. Allowing for the inclusion in the articles of association (or other rules governing the operation or management of a business) of a so-called "general purpose clause" which states that the business's aim is to conduct any trade or business and grants it the power to do so, facilitates business registration. This approach is far less likely to require additional or amended registration in the future, as businesses may change their focus and activities without amending the registration, provided that the new business activity is a lawful one and that the appropriate licences have been obtained. Additional options to the inclusion of a general purpose clause, which would support the same goal, could include passing legislation that makes unrestricted objectives the default rule in the jurisdiction, or abolishing any requirement for businesses, in particular those that are privately held, to state objectives for registration purposes.

Recommendation 57: Flexible legal forms for business

(a) The law should permit flexible and simplified legal forms for business in order to facilitate and encourage registration of businesses of all sizes; and

(b) States should consider providing for the optional use of intermediaries by MSMEs.

D. Legislative approach to accommodate the evolution of technology

244. As noted above (see paras. 8 and 85 and rec. 13), this guide supports the view that online registration systems greatly facilitate the registration of MSMEs. If appropriate laws governing electronic transactions are not in place, a preliminary step for a reform aimed at supporting electronic business registration would be to recognize and regulate the use of such electronic transactions in the domestic legislation. In this respect, States should consider adopting laws permitting electronic signatures and the submission of electronic documents (see para. 85 above).

245. Since information technology is a field marked by rapid technological evolution, however, requirements in the law that establish a technology-specific approach may result in preventing further technological development. States should thus consider establishing only guiding legal principles in their legislation (in particular those of technical neutrality and functional equivalence, see para. 85 and rec. 13 above), leaving the specific provisions regulating the detailed functioning and requirements of an online registration system to other policy or legal tools.

Recommendation 58: Legislative approach to accommodate the evolution of technology

The law should establish provisions on electronic transactions that accommodate the evolution of technology.

H. Note by the Secretariat on adopting an enabling environment for the operation of micro, small and medium-sized enterprises (MSMEs)

(A/CN.9/941)

[Original: English]

Contents

Introduction

1. The current revision of the document on adopting an enabling legal environment for the operation of micro, small and medium-sized enterprises (MSMEs) is based on the deliberations and decisions of Working Group I at its thirtieth session (New York, 12 to 16 March 2018).

2. In order to be consistent with the final form in which the document will be published, guidance to the changes arising from the thirtieth session of the Working Group is not reflected in footnotes to the text and the Commission might wish to refer to the report of that session (A/CN.9/933).

3. In the final version of the document, text along the following lines will be inserted into the preface:

> "*In light of the disadvantaged position in which many micro, small and medium-sized enterprises (MSMEs) are found globally, UNCITRAL, at its forty-sixth session in 2013, decided to commence work on reducing the legal obstacles faced by MSMEs throughout their life cycle, and in particular, specified that such work should focus on MSMEs in developing economies. In taking up this topic, UNCITRAL decided to focus its attention, at least initially, on the reduction of legal obstacles that MSMEs face at the beginning of their life cycle*".

4. The text of the document on adopting an enabling legal environment for the operation of MSMEs is reproduced as an Annex to this introduction.

Annex

Adopting an enabling legal environment for the operation of micro, small and medium-sized enterprises (MSMEs)

Introduction

1. The work of UNCITRAL on micro, small and medium-sized enterprises (MSMEs) aims at facilitating the formalization and operation of such enterprises throughout their life cycle. Undertaking this work emphasizes the relevance and importance of UNCITRAL in the promotion of the rule of law at the national and international levels and for the implementation of the international development agenda. UNCITRAL's work also supports the achievement of the Sustainable Development Goals, which build upon the successes of the Millennium Development Goals, and which specifically note the encouragement of the formalization and growth of MSMEs in target 3 of goal 8 to "Promote inclusive and sustainable economic growth, employment and decent work for all". By focusing on the legal environment for the operation of MSMEs, UNCITRAL's work is intended to be applicable to all States, regardless of the level of development of the local economy.

2. The global community has recognized the importance of fair, stable and predictable legal frameworks for: generating inclusive, sustainable and equitable development, economic growth and employment; stimulating investment; and facilitating entrepreneurship, as well as UNCITRAL's contribution to the attainment of those goals through its efforts to modernize and harmonize international trade law.[1] Work aimed at supporting and fostering the establishment and growth of MSMEs further underpins UNCITRAL's contribution in providing internationally acceptable rules in commercial law, and supporting the enactment of those rules to assist in strengthening the economic fibre of States.

3. To accompany UNCITRAL's work programme on adopting an enabling legal environment for the operation of MSMEs, this text serves as an introduction and overarching framework for UNCITRAL's current and future work on MSMEs. This contextual framework is underpinned by the legal standards developed to provide legislative pillars; importantly, such an approach could accommodate expansion through the addition of other legislative texts regarding MSMEs as such texts might be adopted by the Commission. This work is further underpinned by texts already developed by UNCITRAL, such as the Model Law on Secured Transactions (2016), which seeks to increase access to credit at affordable rates, and the Model Law on Public Procurement (2011), which promotes access to and participation of small and medium-sized enterprises (SMEs), a subset of MSMEs, to public procurement markets. MSMEs will benefit from other work, including UNCITRAL's electronic commerce texts.[2] Taken in conjunction, current and future work by UNCITRAL will assist in creating a legal and regulatory framework that can best support entrepreneurs and MSMEs in establishing business rights, thereby reducing some of the legal obstacles that such businesses face.

---

[1] See, for example, "Declaration of the High-level Meeting of the General Assembly on the Rule of Law at the National and International Levels", United Nations General Assembly resolution A/RES/67/1 (67th session, 2012), para. 8; and "Addis Ababa Action Agenda of the Third International Conference on Financing for Development (Addis Ababa Action Agenda)", United Nations General Assembly resolution A/RES/69/313 (69th session, 2015), Annex, para. 89.

[2] Such texts include: the UNCITRAL Model Law on Electronic Commerce (1996); the UNCITRAL Model Law on Electronic Signatures (2001) and the United Nations Convention on the Use of Electronic Communications in International Contracts (2005).

I. Micro, small and medium-sized enterprises (MSMEs)

4. The international community has underscored the importance of business law as one of four pillars key to strengthening the legal empowerment of the poor, many of whom rely upon micro and small businesses for their livelihood. In addition to other pillars (such as access to justice and the rule of law; property rights; and labour rights), business rights are seen as important to empower the less advantaged, not only in terms of their employment by others, but also in developing micro and small businesses of their own. Business rights may be regarded as a composite of existing rights of groups and individuals to engage in economic activity and market transactions, and which include the right to start a business in the formal economy without facing arbitrarily enforced regulations or discrimination, removing unnecessary barriers that limit economic opportunities, and protecting business investments, regardless of their size. Measures that have been called for to strengthen business rights include:

(a) Guaranteeing basic business rights, including the right to sell, the right to have a workspace and the right to have access to the necessary infrastructure and services (for example, to electricity, water and sanitation);

(b) Strengthening, and making effective, economic governance in order to permit entrepreneurs to easily and affordably establish and operate a business, to access markets, and to exit a business;

(c) Expanding the accessibility for entrepreneurs of limited liability entities and other legal mechanisms that allow owners to separate their business and personal assets;

(d) Promoting inclusive financial services that offer savings, credit, insurance, pensions and other tools for risk management; and

(e) Expanding the access of entrepreneurs to new business opportunities through specialized programmes to familiarize entrepreneurs with new markets, assisting them in creating links with other businesses of all sizes, and in complying with regulations and requirements.

A. The importance of MSMEs in the global economy

5. UNCITRAL's decision to work on reducing the legal obstacles faced by MSMEs recognizes the importance of such enterprises to the economic health of the States in which they are found, and to the global economy more generally. This importance is underscored by a number of key facts that illustrate that MSMEs are seen as the backbone of the economy in both the developed and the developing world.

6. The total number of MSMEs worldwide is estimated to be around 500 million, of which approximately 85 per cent are in emerging markets. Statistics for SMEs indicate that such businesses account for over 70 per cent of total employment and 64 per cent of Gross Domestic Product (GDP) in developed economies, and approximately 45 per cent of employment and 63 per cent of GDP in low-income countries.[3]

7. While MSMEs are of great importance in regions of the world where a large number of developing States are found, it may be instructive to note that MSMEs constitute the vast majority of business types in all States. Even in the most developed economies, upwards of 90 per cent of all business are MSMEs, or which 90 per cent are microenterprises.

[3] "IFC Jobs Study: Assessing Private Sector Contributions to Job Creation and Poverty Reduction", 2013, pp. 10–11 (https://www.ifc.org).

B. Defining MSMEs

8. There is no standardized international definition of what constitutes an MSME, since each economy will define its own parameters for each category of business size by taking into account its own specific economic context.[4] For that reason, it is not necessary or advisable for UNCITRAL to seek consensus on a definition for each category of MSME, since any legislative texts produced will be applied by States or regional economic groups to MSMEs in accordance with their own definitions, based on each unique economic context. The important common factor from State to State is that MSMEs, regardless of how they are defined, are enterprises that, by virtue of being the smallest and most vulnerable, face a number of common obstacles irrespective of the particular jurisdiction in which they are found.

C. The nature of MSMEs

9. MSMEs are incredibly varied in nature. They may consist of sole entrepreneurs, small family businesses or larger enterprises with several or many employees, and may operate in virtually any commercial sector, including in the service industry and the artisanal and agricultural sectors.

10. Moreover, MSMEs may be expected to vary depending on the local economic conditions, cultural traditions and the different motivations and characteristics of the entrepreneurs establishing them. Enterprises that operate in the formal economy may also take various legal forms, depending on the options available to them under applicable law, and on how those different forms may meet their needs.

11. In addition, although MSMEs may be seen, particularly in the context of developing economies, mainly as a source of livelihood for the working poor, such enterprises need not be static; in fact, MSMEs may also serve a dynamic purpose as a source of entrepreneurial talent in an economy. Indeed, their importance in the world economy suggests that providing for and fostering the growth of MSMEs is a key goal in order to achieve economic progress, innovation and success.

12. However, despite their disparate nature and size, certain possible characteristics of MSMEs may be broadly shared, such as:

(a) Small size; they are and remain small operations;

(b) Disproportionate impact of burdensome regulatory hurdles;

(c) Reliance on family and friends for loans or risk-sharing;

(d) Limited access to capital or to banking services;

(e) Limited source of employees; if any, they are often drawn from family and friends and may be unpaid and unskilled, including having limited administrative capacity;

(f) Limited markets; these may comprise only relatives, close friends and local contacts;

(g) Vulnerability to arbitrary and corrupt behaviour;

(h) Limited access to dispute settlement mechanisms, which puts them at a disadvantage in disputes with the State or with larger businesses;

---

[4] States may wish to note the definitions of the different categories of businesses included in MSMEs that have been established either by various States or by regional economic groups. Those definitions tend to be based on a number of elements, considered separately or along with other factors, including: (i) the number of employees at a specific point in time, such as the end of the financial or calendar year; (ii) the amount of annual revenue or turnover generated by the enterprise, or the balance sheet total of the business; (iii) the asset base of the business; (iv) the total monthly wages paid by the enterprise; or (v) the amount of capital invested in the enterprise.

(i) Lack of ability to partition assets, so business failure often means that personal assets are also lost;

(j) Vulnerability to financial distress; and

(k) Difficulty in transferring or selling a business and in profiting from both tangible and intangible assets (such as client lists or relationships with customers).

D. Creating sound business environments for all businesses

13. Efforts to assist MSMEs at the start of their life cycle might first begin with consideration of the business environment in which an MSME will be conducting its affairs. A "business environment" may be defined in a number of different ways, but could be said to comprise the policy, legal, institutional and regulatory conditions that govern business activities, and the administration and enforcement mechanisms established to implement government policy, as well as the institutional arrangements that influence the way key actors operate. These key actors may include government agencies, regulatory authorities, business organizations, trade unions, and civil society organizations. All of these factors affect business performance.

14. Sound business environments can have a positive influence on economic growth and poverty reduction. While views differ as to the significance and measurability of the link between the business environment, on one hand, and economic growth and poverty reduction, on the other, poor business environments are unlikely to provide sufficient incentives and opportunities for entrepreneurs to carry on their commercial activities in the formal economy. In addition, poor business environments tend to be more susceptible to corruption and usually have a disproportionate gender impact, since the businesses most vulnerable in a weak business environment are micro-businesses, which are often owned by women.[5]

15. It should be noted that the quality of the business environment varies not only as between States, but also within the different regions of those States. Such regional variations make it unlikely that a single solution will provide the answer for improving the business environment in every State. Similarly, the challenges faced by MSME entrepreneurs vary depending on the context in which they are doing business. However, the two concepts are linked, since many of the challenges faced by MSMEs are similar to those considered detrimental to a favourable business environment in general, including: burdensome regulation and taxation rates, high economic inequality, low institutional quality, low quality of public infrastructure, and a lack of access to credit and other resources.

16. Improving the quality of the business environment and assisting MSMEs in overcoming the particular challenges facing them often require a State to take measures towards legal and policy reform. These reforms may include, among others, providing for a simple and effective system of registration with those public authorities with which a business may be required to register (which may include the business registry, as well as taxation and social security authorities), as well as providing for a range of simplified and flexible legal forms for business so as to meet the varied needs of MSMEs. States most often initiate such reforms in order to: facilitate business start-up and operations, stimulate investment opportunities, and increase growth rates and employment. Such reforms require careful planning and commitment on the part of the State, as well as the involvement of many different entities at various administrative and governmental levels.

II. MSMEs in the informal economy

17. As outlined above in paragraph 12, MSMEs generally face a number of key challenges, some of which are caused, and many of which are exacerbated, by

[5] The draft legislative guide on key principles of a business registry (A/CN.9/940) provides greater detail on the challenges faced by women running micro-businesses.

operating in the informal economy. While developing States host the largest percentage of the number of MSMEs in business globally, the vast majority of these enterprises operate in the informal economy. Moreover, the percentage of MSMEs operating in the informal economy is likely to grow. Although SMEs that are operating in the informal economy are estimated to provide nearly half of all jobs in developing States and a quarter in developed States, they account for only around 35 per cent and 15 per cent of the GDP, respectively, in those economies.[6]

18. "Informality" is by no means a uniform concept. Many businesses that might be considered "informal" actually operate in fixed premises and according to locally accepted commercial rules. In addition, they may be well-known by local authorities, pay some form of local taxes, and may even engage in cross-border trade. Others, on the other hand, may have little interaction with the State.

19. Although measurement tools are imperfect and no clear boundaries exist between formal and informal sectors, businesses can be viewed as operating on a formality-informality spectrum, according to the extent to which their operations fall within the ambit of a State's official laws or take place outside its official structures. The term "formal economy" in these materials thus refers to the sector of the economy characterized by activities that are conducted within the ambit of formal regulation and structure, and commercial activity that falls outside of this scope will be referred to as "informal". Moreover, since the entry point for businesses wishing to access the formal economy is often by way of mandatory registration with certain public authorities (often the business registry, as well as taxation or social security authorities), informal enterprises will refer to those that have not complied with mandatory registration with the authorities as required by the applicable law of the State. Mandatory registration with those public authorities will be considered in these materials to be the main conduit through which businesses are encouraged to operate in the formal economy. However, it should be noted that in some States, certain businesses (due to their size and legal form) are not required to register with the business registry, taxation or social security authorities, and provided those businesses fulfil other mandatory requirements, they are regarded as operating in the formal economy.

20. In addition, the informal economy is not related to illegal or criminal activity. Illegal activities are contrary to the law, but informal activities are extralegal, in that they are not officially declared and occur outside the legal and regulatory regime that should govern such activities. The discussion in these materials is limited to extralegal commercial activities and does not address illicit trade in goods or services.

21. Further, informal commercial activity may be mainly of a different nature in some States, such as in developed economies. In such States, the informal economy may consist mainly of firms and workers that underreport their income to tax authorities, or that use undeclared labour in certain business domains. These types of informal activities are not the focus of these materials.

22. It is also important to note that although informal commercial activity, particularly in the developing world, may exist largely as a result of economic necessity (as noted above in respect of MSMEs in general, see para. 11) components of the informal economy may also be seen as quite dynamic and as an incubator for business potential that in fact provides economies with a large number of potential contributors to business development. In fact, businesses operating in the informal economy may be seen to provide a pool of talent and an important base of operations from which entrepreneurs can access, and graduate into, the formal economy. In that regard, the informal economy should not be considered a marginal or peripheral sector, but rather as an important building block of a State's overall economy.

23. The institution of reforms to improve the business environment, as noted above in paragraphs 13 to 16, may encourage and facilitate the operation of enterprises in the formal economy. However, in order to achieve success, policies encouraging businesses to operate in that economy should take into account the different

[6] Supra, note 4.

motivations and characteristics of entrepreneurs operating in the informal sector, and ensure sufficient incentives are offered to encourage them to operate in the formal economy. An entrepreneur's reasons for operating a business in the informal sector will vary depending on the economy, but may include: high entry barriers and costs (including taxes and other social contributions) that outweigh the benefits that can be expected from entering the formal economy; lack of information required to access the formal economy; and a lack of job opportunities in the formal economy.

24. Variations in the size and characteristics of the informal economy are also apparent from region to region. In some regions, for example, high levels of informal commercial activity may be partially due to the fact that the informal economy is where most new jobs are found, and where many entrepreneurs must trade by necessity. In such a region, a job, an enterprise and a household may be the same thing, and lack of entrepreneurial skills, access to credit, and infrastructure are seen as the most obvious constraints to growth. In other regions, the informal sector tends to behave like a typical small business sector, and is often the main entry point for young, uneducated workers seeking employment, as well as for those seeking part-time work. Other regions have experienced growth of the informal economy in recent years, apparently driven by a lack of jobs in the formal sector and reduced demand for goods and services from those employed in that sector.

25. The debate on the reasons for the informal sector, on its effect on national economies and on how to approach the issue has been vibrant for decades and has in recent years had a major influence on policymaking. The view that informal commercial activity is the result of burdensome regulation and costly procedures required by the State for businesses to enter the formal economy, and that a reduction of those barriers will help informal MSMEs move towards a higher degree of compliance with mandatory registration requirements, has generated momentum for reforming regulations and laws in order to simplify business entry into the formal economy. A wide array of policies has been designed and implemented in several States and regions of the world, since, as noted earlier, the variable nature of the informal sector, and the different levels of development of States, render elusive the identification of a single optimal approach. The most successful interventions have been comprehensive policy packages aimed at achieving various goals, such as economic growth, social protection and inclusion, and which often involve:

(a) Reducing the costs of a business entering and operating in the formal sector, which include entry costs, taxes, fees and social contributions, and costs of compliance;

(b) Improving the benefits of operating in the formal economy by reducing the bureaucracy and expense involved in obtaining fixed premises, and providing access to business development services and new markets;

(c) Improving the general business environment, so that policies to reduce costs and to improve the benefits of entering the formal economy also assist firms already operating in that sector; and

(d) Strengthening the enforcement of a State's legal regime in order to encourage operation in the formal economy.

III. Ensuring that operation in the formal economy is simple and desirable for MSMEs

26. In order to encourage MSMEs to operate their business in the formal economy, States may wish to consider how best to effectively convey to MSMEs the availability of and the advantages offered by that approach. In addition, States should also consider what steps they can take to motivate such behaviour by making it a desirable, easily accessible process that will impose the least burden possible on MSMEs.

A. Explaining the meaning of operating in the formal economy

27. To ensure widespread understanding of the advantages available to MSMEs, steps must be taken to explain the meaning of participating in the formal economy and to provide clear and accessible information on how to achieve that aim. The State should consider how best to effectively convey relevant information to MSMEs, including on the necessary requirements in their jurisdiction and how such businesses can fulfil them, and any other information necessary for them to operate in the formal economy. In addition to advising on the benefits of operating in the formal economy, information should also be provided on the types and advantages of the legal forms that are available to a business, and the public authorities with which registration might be necessary (e.g. business registration, taxation and social security authorities). Ideally, a business should be able to use a single physical or electronic interface (a "one-stop shop") to register simultaneously with all necessary public authorities.[7] Information in respect of these matters should be specifically adapted so that it is tailored to and clear and easily understandable by the target audience.

1. The advantages of the formal economy

28. Part of the message that must be conveyed to MSMEs in order to persuade them to operate their businesses in the formal economy is an explanation of the advantages of that approach. These advantages are outlined below.

(a) Advantages for the State

29. States have a clear interest in encouraging MSMEs to operate in the formal economy. One of the reasons often cited for that interest is in terms of taxation, since encouraging MSMEs to operate in the formal economy will broaden the tax base of the State.[8] It may also help reduce any friction that may exist with enterprises already operating in the formal economy and paying taxes, but that must compete for market share with informal businesses. Additional reasons for a State to take action to encourage businesses to operate in the formal economy may include, depending upon the specific economic sector, ensuring consumer protection and compliance with labour laws, and, in general, engendering trust in business and commerce in the State for stakeholders including consumers, business partners and banks.

30. Other advantages to the State may be less direct, but are no less valuable. For example, providing previously informal businesses with the means to enter the formal economy will permit those MSMEs to grow, create jobs, and increase their earnings and contribution to the creation of wealth and the reduction of poverty in the State. Businesses that operate in the formal economy can be expected to attract more qualified employees and to stay in business longer, thus making investment in the training of personnel and the acquisition of capital more profitable. The increase in the number of businesses that comply with mandatory registrations will mean that there is more and better economic data available, that more information will be exchanged in respect of such businesses and that information will become more transparent. All of these effects will have an overall positive impact on the economy of the State.

(b) Advantages for entrepreneurs

31. Entrepreneurs will also receive benefits from operating in the formal economy. The following factors are often cited as key advantages for MSMEs that operate in that commercial context.

---

[7] The draft legislative guide on key principles of a business registry (A/CN.9/940) provides greater detail on the function of one-stop shops.

[8] States may wish to note that reduced taxation rates and administration may be an incentive offered to MSMEs to join the formal economy, and that too great an emphasis on expanding the tax base might be counterproductive.

(a) Visibility to the public and to markets

Registering a business with public authorities, including mandatory or non-mandatory registration in the business registry, can be a means through which the business becomes visible to the public and to markets, thus providing a means for exposure to potential clients and business contacts, and an expansion of market opportunities. This membership in the marketplace may provide opportunities to become a supplier of goods and services under favourable conditions, and can improve the profitability of the business. Moreover, such visibility both reduces costs and enables MSMEs to trade in economic circles beyond their relatives, friends and local contacts, thus opening up new markets.

(b) Visibility to the banking system and financial institutions

Registration with public authorities, including mandatory or non-mandatory business registration, can also provide an enterprise with improved access to banking and financial services, including to bank accounts, loans and credit. This permits MSMEs to move away from financial reliance on relatives and friends, making it easier for them to raise capital from a broader group of investors, as well as lowering the cost of that capital. This, in turn, permits businesses to expand, to make new investments, to diversify their risk, and to take up new business opportunities.

(c) Public procurement

In most States, public procurement contracts are only available to those businesses that are in compliance with mandatory registration requirements and are part of the formal economy. Access to such contracts may be enhanced for certain groups, since some States have developed specific programmes to ensure that a certain percentage of public procurement contracts are granted to less entitled entrepreneurs, including women, youth, the disabled and the elderly.

(d) Legal validation

Compliance with mandatory registration requirements permits a business to operate legally in the jurisdiction and provides the entrepreneur with documentation of that status. This status also enables businesses to have access to justice for commercial purposes, to enter into and enforce contracts more easily, and may facilitate access to exit mechanisms, such as reorganization or liquidation, in the event of financial difficulty. In some legal systems, compliance with all mandatory registrations provides additional legal rights for the entrepreneur operating in the commercial sector, including flexible provisions on commercial contracts, specialized commercial court divisions, a relaxation of certain requirements in forming a business entity, and similar benefits.

(e) Legal compliance

While related to the concept of legal validation, compliance with the law can itself be seen as an advantage, since it alleviates entrepreneurial anxiety in respect of operating informally, and makes it less likely that fines may be imposed. Being in compliance with the law will also reduce the business' vulnerability to corruption and bribery, and should assist the entrepreneur by providing recourse in cases of tax and other inspections.

(f) Access to flexible business forms and asset partitioning

Through registration, the entrepreneur will be entitled to choose the legal business form available in the jurisdiction that is best suited to his or her needs; ideally, the State will provide for a range of legal business forms for that purpose. Most jurisdictions have at least one business form that permits the entrepreneur to separate personal finances from business finances; such asset partitioning can be invaluable to a business, particularly if financial difficulty is encountered, as the entrepreneur is not in danger of losing all personal assets, and the value of the business assets can be

maximized in the case of reorganization or liquidation. Moreover, the value of a business with separate assets may be greater and can be more readily transferred.

(g) Unique name and intangible assets

Compliance with mandatory registrations often requires an enterprise to operate under a sufficiently unique business name. This unique name translates into a market identity that can develop a value of its own and be traded to a subsequent owner. Other intangible assets that can add to the value of a business and be traded, particularly in the case of asset partitioning and a separate legal business identity, include client lists and commercial relationships.

(h) Opportunities for growth

In addition to the advantages of visibility set out above, compliance with mandatory registration requirements, including with the business registry, provides an enterprise with access to a much larger business network, which can permit it to grow the business and operate on a much greater scale. Some States permit a business that has fulfilled its legal requirements to become a member of a trade organization, which can greatly enhance an enterprise's opportunities for development.

(i) Opportunities for specialization of labour

Businesses that have complied with their mandatory registration requirements tend to be less constrained in their hiring practices and may be able to recruit employees outside of family and friends. This can facilitate access to a larger pool of talent and permit specialization among employees, enabling the MSME to make better use of employee talents and improving overall productivity.

(j) Access to government assistance programmes

Many States provide specific assistance programmes for MSMEs or for specific types of disadvantaged entrepreneurs. Operation in the formal economy will usually permit an enterprise to access all forms of government assistance available to such businesses.

(k) Empowerment and emancipation effects

The operation in the formal economy of businesses that are owned by women, youth, the disabled, the elderly and other less advantaged groups may have important empowerment and emancipation effects. This may be particularly so in respect of women entrepreneurs, many of whom are micro-entrepreneurs that are often exposed to greater risk as a result of corruption and abuse of authority.

(l) Longer term gains

The visibility of a business operating in the formal economy can also be the main conduit for its growth into cross-border trading. It is also possible that, in the longer term, and particularly through the use of electronic commerce and Internet facilities, robust compliance of businesses with mandatory registration requirements may lead to an increase in cross-border trading and foreign investment – advantages not only for the enterprise, but for the State as well.

2. Communication and education

32. Communication of, and education on, the advantages of legal and policy reforms undertaken by the State to assist MSMEs will be key to the success of those reforms. While this might seem a relatively small detail, in the context of States and regions in transition or with remote areas, all potential entrepreneurs may not be well-served by mass media or have dependable and regular access to telecommunications or the Internet. In such contexts, the potential obstacles to communication and education, and thus to the success of the reforms, can be expected to be more numerous.

33. An additional consideration for a State in developing communication and education strategies should be the literacy challenges faced by many

micro-entrepreneurs and the particular steps that may need to be taken to overcome this hurdle.

34. In designing its communication and education plan, a State must be cognizant of the potential impediments outlined above and think practically about how best to overcome such difficulties. Possible solutions could include:

(a) Providing mobile education and communication efforts, and for mobile registration and facilitation counters, so as to enable travel to the entrepreneur's location;

(b) Using trade organizations or informal workers' associations to assist in publicizing the programmes;

(c) Using mass media that is broadly available, including radio, television and print media, as well as posters and billboards;

(d) Making blanket announcements via text on mobile phones; this may be particularly effective in areas where mobile payments are being used;

(e) Ensuring communication and education is in the local language;

(f) Making use of social media; while less practical in terms of States that face technological hurdles, social media may be an effective tool, particularly to disseminate information among younger entrepreneurs and family members;

(g) Developing courses for gender-specific trading or involving other disadvantaged groups; and

(h) Using educational techniques that may be particularly useful in the context.

B. Making it desirable for MSMEs to operate in the formal economy

35. Another component of the communication package that should be conveyed to prospective businesses is clear information on the incentives a State provides to MSMEs to encourage them to participate in the formal economy. It is important that businesses are made aware of such incentives and that they outweigh the perceived advantages of operating in the informal economy.

36. The effectiveness of the incentives offered by the State will vary according to the specific economic, business and regulatory context. While it is not possible to specify precisely which incentives should be offered, States may wish to consider the incentives outlined in the following paragraph, each of which, often in combination with others, has been found to be an effective means of encouraging MSMEs to enter the formal economy. In addition, in planning for the creation of these incentives, States may need to ensure coordination with international organizations which work with MSMEs (including, for example, the World Bank Group, UNCTAD, UNIDO, the Asian Development Bank, or OHADA), officials of public authorities with which businesses must register, local business incubators, the tax authority, and banks in order to maximize the impact of the incentives chosen.

37. A State may consider programmes along the following lines:

(a) Simplification of the registration process for businesses;

(b) Assistance with the registration process for businesses;

(c) Free (or at least very low-cost) registration;

(d) Receipt of an official certificate indicating the registered status and legal form of the business;

(e) Organized access to and support with banking services (bank accounts and chequing accounts);

(f) Easier access to credit for businesses operating in the formal economy;

(g) Accountancy training and services, and ensuring simplified accounting rules suitable for MSMEs;

(h) Assistance with the preparation of a business plan;

(i) Training (including managing inventory and finances);

(j) Tax and other credits for training costs;

(k) Protection against potential administrative abuse, possibly through access to mediation or other dispute resolution mechanisms;

(l) Simpler and more equitable taxation (lower, simplified taxation rates), including tax mediation services and simplified tax forms;

(m) Business counselling services;

(n) A transition period to give new businesses time to comply fully with applicable laws;

(o) A temporary "tax holiday" for small and microenterprises upon their initial registration with the necessary public authorities;

(p) Lump sum monetary compensation or government subsidies and programmes to foster MSME growth;

(q) Public communication and promotion of the business, as well as networking opportunities and access to experienced businesses, for example through free memberships in industry organizations;

(r) Specific public procurement programmes to encourage small and micro-businesses or those owned by disadvantaged groups to have access to contracts;

(s) Low-cost technological infrastructure;

(t) Access to and support with obtaining health insurance; and

(u) The establishment of a business mentoring programme with experienced business owners to facilitate access to experience and information for MSMEs.

C. Making it easy for MSMEs to operate in the formal economy

38. In addition to a lack of information, one of the most often-cited reasons given by MSMEs for their reluctance to operate in the formal economy is the cost and administrative burden of doing so. Two areas of reform that States may undertake to assuage these concerns are to simplify and streamline the procedures necessary for a business to comply with the mandatory registrations with public authorities, focusing on the needs of the user, and to provide flexible and simplified legal business forms for MSMEs.

1. Simplified and streamlined registration for businesses

39. One aspect of making it simple and desirable for an MSME to operate its business in the formal economy is to take a user-centric approach and to make the procedures for mandatory registrations with public authorities, including business registration, accessible, simple and clear. Improvements made by a State to its registration system may be expected to assist not only MSMEs, but also larger businesses, including those already operating in the formal economy. Importantly, care must also be taken to effectively communicate these changes and their advantages to MSMEs and potential entrepreneurs throughout the jurisdiction.

2. Flexible and simplified business forms for MSMEs

40. Another aspect of creating an enabling legal environment for MSMEs is for the State to permit them simple access to flexible, legally recognized business forms. Many micro and small businesses are either sole proprietorships or family enterprises that do not possess a legal identity or a business form distinct from that of the owner.

An entrepreneur should be permitted to easily and inexpensively register a business with a legally recognized form in that jurisdiction. States may wish to permit registration of a range of different legal forms so as to provide entrepreneurs with sufficient flexibility to meet the needs of MSMEs, to allow them access to investment and venture capital, and to foster their growth.

41. In this respect, some States and regional economic organizations have created a legal business form for individual entrepreneurs (for example, for those whose business turnover is below a certain amount) which adds certain benefits to those otherwise available to the sole proprietor. These benefits tend to include being subject to a simplified scheme for the calculation and payment of taxes and social security contributions, as well as fast, simplified and low (or no) cost registration requirements and formalities. Nonetheless, such business forms typically do not change the unlimited personal liability of a sole proprietor, whose personal and professional assets are all available to meet any business debt.

42. States should also consider offering to MSMEs the opportunity for an enterprise to partition its business assets from the personal assets of its owner(s). The legal ability of an enterprise to partition its business assets from the personal assets of its owner(s) is an important building block for the encouragement of entrepreneurial activity since, even though a business may fail, the personal assets of the entrepreneur(s) will be protected.

43. Asset partitioning is seen as one of the defining features of a limited liability business entity, which is said to be among the most productivity enhancing legal institutions available. Models that provide limited liability may include stock companies, and many States have introduced simplified forms of stock companies that prioritize flexibility and contractual freedom, making them suitable for MSMEs. However, it should be noted that the benefits of asset partitioning for MSMEs registering their businesses may also be available in a legal structure that stops short of legal personality, while being subject to fewer formal requirements. Offering entrepreneurs the opportunity to take on legal personality and limited liability through the adoption of a simplified business form is a feature that States should consider in making policy decisions on legal forms to adopt in order to reduce the legal obstacles encountered by MSMEs.

44. One model that has been adopted permits an individual entrepreneur to officially allocate a certain share of personal assets to the entrepreneur's professional activity. This approach permits the entrepreneur to segregate professional assets from personal assets so that, in the event of financial difficulty of the business, creditors will have access only to the professional assets of the entrepreneur. In several States, the adoption of simplified corporate forms has enabled SMEs, in particular, to become more competitive with larger businesses by offering greater flexibility (as compared with the potentially burdensome and complex mandatory rules often required in more traditional incorporation regimes), limited liability of the partners in the business, and relative ease and simplicity of formation and registration, including the typical absence of a minimum capital requirement. Simplified corporate forms usually provide default provisions to fill any gaps that might exist in the rules established by the founders of the enterprise. These default rules can be particularly important for smaller or less-experienced business persons.

45. Another model that has been used in this regard is the establishment of a separate capital fund that has been established for a specific purpose. Such a fund may be established by individuals (and their spouses), into which specific assets can be placed that are identified as necessary for the family requirements of the individuals. Such assets are then protected from seizure in the case of business insolvency. A variation on this model may also be created by a corporation, which can establish a separate capital fund devoted to a specific purpose or which can agree that the earnings of an activity be dedicated to the repayment of loans obtained for the execution of certain specified activities. The establishment of such a fund is subject to certain requirements, including that its existence be made public by way of the business registry, and that it be open to opposition by existing creditors of the corporation.

Once the fund is constituted, it is segregated from the other funds of the company, and may only be used to satisfy the claims of creditors arising as a result of the relevant activities. Other variations on the creation of a segregated fund may include the declaration of the fund to a specific purpose to the benefit of a natural or legal person, a public administrative body, or other entity, provided that the fund is established by public deed and is registered.

46. An additional example of asset partitioning that stops short of providing legal personality is the concept of "business network contracts". This legal tool can be used by a group of entrepreneurs (of various types and sizes, including sole proprietors, companies, public entities, and non-commercial and not-for-profit entities) who undertake a joint venture as agreed in the business network contract, which may be in respect of certain services or common activities within the scope of their business, or even with respect to the exchange of information. The goal of such an approach is to strengthen the individual businesses involved in the contract, as well as the network itself, at the national and international levels, so as to enable access to business opportunities not available to an individual enterprise, and thus to improve competitiveness. The contract must meet the formal requirements established by the State (for example, be duly executed in writing, indicate the objectives of the venture, its duration, the rights and obligations of participants, etc.), and be registered with the business registry. In addition, the contract must establish a capital fund to carry out the programme of the business network; this fund is then segregated from the individual assets of the founding entrepreneurs, and is available only to satisfy claims deriving from the activities performed within the scope of the network, and not for creditors of the individual entrepreneurs that created the business network.

II. DISPUTE SETTLEMENT

A. Report of the Working Group on Dispute Settlement on the work of its sixty-seventh session (Vienna, 2–6 October 2017)

(A/CN.9/929)

[Original: English]

Contents

I. Introduction

1. At its forty-eighth session, in 2015, the Commission mandated the Working Group to commence work on the topic of enforcement of settlement agreements to identify relevant issues and develop possible solutions, including the possible preparation of a convention, model provisions or guidance texts. The Commission agreed that the mandate of the Working Group should be broad to take into account the various approaches and concerns.[1] The Working Group commenced its consideration of that topic at its sixty-third session (A/CN.9/861).

2. At its forty-ninth session, in 2016, the Commission had before it the report of the Working Group on the work of its sixty-third and sixty-fourth sessions (A/CN.9/861 and A/CN.9/867, respectively). After discussion, the Commission commended the Working Group for its work on the preparation of an instrument dealing with enforcement of international commercial settlement agreements resulting from conciliation and confirmed that the Working Group should continue its work on the topic.[2]

3. At its fiftieth session, in 2017, the Commission had before it the report of the Working Group on the work of its sixty-fifth and sixty-sixth sessions (A/CN.9/896 and A/CN.9/901, respectively). The Commission took note of the compromise reached by the Working Group at its sixty-sixth session, which addressed five key issues as a package (A/CN.9/901, para. 52) and expressed support for the Working Group to continue pursuing its work based on that compromise. The Commission

[1] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), paras. 135-142.

[2] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), paras. 162–165.

expressed its satisfaction with the progress made by the Working Group and requested the Working Group to complete the work expeditiously.[3]

II. Organization of the session

4. The Working Group, which was composed of all States members of the Commission, held its sixty-seventh session in Vienna, from 2-6 October 2017. The session was attended by the following States members of the Working Group: Argentina, Australia, Austria, Belarus, Brazil, Bulgaria, Cameroon, Canada, Chile, China, Colombia, Côte d'Ivoire, Czechia, Denmark, Ecuador, El Salvador, France, Germany, Hungary, India, Indonesia, Iran (Islamic Republic of), Israel, Italy, Japan, Kuwait, Malaysia, Mexico, Panama, Philippines, Poland, Republic of Korea, Romania, Russian Federation, Singapore, Spain, Switzerland, Thailand, Turkey, Uganda, United Kingdom of Great Britain and Northern Ireland, United States of America and Venezuela (Bolivarian Republic of).

5. The session was attended by observers from the following States: Belgium, Bolivia (Plurinational State of), Bosnia and Herzegovina, Croatia, Cyprus, Democratic Republic of the Congo, Dominican Republic, Estonia, Finland, Luxembourg, Malta, Morocco, Netherlands, Norway, Paraguay, Qatar, Saudi Arabia, Slovakia, South Africa, Sweden, Syrian Arab Republic and Viet Nam.

6. The session was also attended by observers from the European Union.

7. The session was also attended by observers from the following international organizations:

(a) *Intergovernmental organization*: Gulf Cooperation Council (GCC);

(b) *Invited non-governmental organizations*: American Arbitration Association/International Centre for Dispute Resolution (AAA/ICDR), Arab Association for International Arbitration (AAIA), Association for the Promotion of Arbitration in Africa (APAA), Beijing Arbitration Commission/Beijing International Arbitration Center (BAC/BIAC), Belgian Centre for Arbitration and Mediation (CEPANI), Center for International Legal Studies (CILS), Chartered Institute of Arbitrators (CIARB), Construction Industry Arbitration Council (CIAC), Forum for International Commercial Arbitration (FICA), Hong Kong Mediation Centre (HKMC), International Academy of Mediators (IAM), International Council for Commercial Arbitration (ICCA), International Law Association (ILA), International Mediation Institute (IMI), Korean Commercial Arbitration Board (KCAB), Law Association for Asia and the Pacific (LAWASIA), Madrid Court of Arbitration (CÁMARA), Miami International Arbitration Society (MIAS), Moot Alumni Association (MAA), Russian Arbitration Association (RAA), Singapore International Mediation Institute (SIMI), Swiss Arbitration Association (ASA) and Vienna International Arbitration Centre (VIAC).

8. The Working Group elected the following officers:

Chairperson: Ms. Natalie Yu-Lin Morris-Sharma (Singapore)

Rapporteur: Mr. Itai Apter (Israel)

9. The Working Group had before it the following documents: (a) provisional agenda (A/CN.9/WG.II/WP.201); and (b) notes by the Secretariat regarding the preparation of an instrument on enforcement of international commercial settlement agreements resulting from conciliation (A/CN.9/WG.II/WP.202 and addendum as well as A/CN.9/WG.II/WP.203).

10. The Working Group adopted the following agenda:

1. Opening of the session.
2. Election of officers.

[3] Ibid., *Seventy-second Session, Supplement No. 17* (A/72/17), paras. 236–239.

3. Adoption of the agenda.
4. Preparation of an instrument on enforcement of international commercial settlement agreements resulting from conciliation.
5. Other business.
6. Adoption of the report.

III. Deliberations and decisions

11. The Working Group considered agenda item 4 on the basis of the notes by the Secretariat (A/CN.9/WG.II/WP.202 and addendum as well as A/CN.9/WG.II/WP.203). The deliberations and decisions of the Working Group with respect to item 4 are reflected in chapter IV. At the close of its session, the Working Group requested the Secretariat to prepare revised draft model legislative provisions complementing the UNCITRAL Model Law on International Commercial Conciliation ("Model Law on Conciliation" or "Model Law") and a draft convention, both addressing enforcement of international settlement agreements resulting from conciliation, reflecting the deliberations and decisions of the Working Group.

IV. International commercial conciliation: preparation of an instrument on enforcement of international commercial settlement agreements resulting from conciliation

12. The Working Group continued its deliberations on the preparation of an instrument on enforcement of international commercial settlement agreements resulting from conciliation ("instrument") on the basis of document A/CN.9/WG.II/WP.202 and its addendum.

13. The Working Group recalled that the draft provisions contained in A/CN.9/WG.II/WP.202 reflected the compromise reached by the Working Group at its sixty-sixth session (the "compromise"), which had received the support of the Commission at its fiftieth session (see, para. 3 above). It was further agreed that texts as agreed in the compromise should be preserved with minimal revisions to clarify the meaning of those texts.

A. Scope

1. Draft provision 1(1)

14. While a suggestion was made to include a reference to "enforcement" in draft provision 1(1), it was widely felt that that provision, which reflected the compromise, should remain unchanged because the instrument did not deal only with enforcement of settlement agreements and the insertion of the word "enforcement" could be misleading.

2. Draft provision 1(2)

15. A suggestion to clarify draft provision 1(2) received support. Accordingly, it was agreed that it could read along the following lines: "2. This [instrument] does not apply to settlement agreements: (a) Concluded to resolve a dispute arising from transactions engaged by one of the parties (a consumer) for personal, family or household purposes; (b) Relating to family, inheritance or employment law."

16. In that context, the Working Group confirmed that draft provision 1 provided an exhaustive list of exclusions, where the instrument would take the form of a convention.

3. Draft provision 1(3)

Purpose and placement

17. With respect to draft provision 1(3), it was reiterated that the purpose of excluding from the scope of the instrument settlement agreements that have been approved by a court or concluded before a court was to avoid possible overlap or gap with other existing or future international instruments (see A/CN.9/901, para. 26). The view was expressed that, due to their different substantive nature, such settlement agreements required a treatment different from that provided under the instrument. Accordingly, it was suggested that draft provision 1(3) should be retained in the scope provision rather than in the provision on grounds for refusing to grant relief. That suggestion received support.

18. The Working Group then considered a number of issues raised in paragraphs 8 to 22 of document A/CN.9/WG.II/WP.202 and reached the following conclusions.

The more-favourable-right provision

19. It was clarified that the more-favourable-right provision that was being contemplated for inclusion in the instrument would not allow States to apply the instrument to settlement agreements excluded in draft provision 1(3), as such settlement agreements would fall outside the scope of the instrument (see para. 8 of document A/CN.9/WG.II/WP.202). After discussion, it was understood that States would have the flexibility to enact domestic legislation, which would include in its scope such settlement agreements and that such an inclusion would not be a breach of their international obligations under the instrument, if it were to be a convention.

Meaning of "approved by a court or concluded before a court"

20. Regarding the notions of a settlement agreement being approved by a court or concluded before a court, it was clarified that if court proceedings began but the parties were able to settle through conciliation without any court assistance, such settlement agreements would fall outside the scope of the instrument as long as the settlement agreement was enforceable as a judgment in the State where court proceedings began (see para. 11 of document A/CN.9/WG.II/WP.202).

21. The Working Group further clarified that settlement agreements reached during court proceedings but not recorded as judicial decisions would fall outside the scope of the instrument as long as the settlement agreement was enforceable as a judgment in the State where court proceedings took place (see para. 12 of document A/CN.9/WG.II/WP.202). It was noted that this would be different from the Working Group's understanding prior to the compromise (see A/CN.9/867, para. 125, A/CN.9/896, para. 48 and A/CN.9/901, para. 25).

22. The suggestion that the instrument should also use the term "judicial settlement" found in the Convention on Choice of Court Agreements (2005) and the draft convention on judgments under preparation by The Hague Conference on Private International Law was not supported as that term, though used in some legal systems, was not necessarily known in all jurisdictions.

"in the same manner"

23. The Working Group agreed that the square-bracketed phrase "in the same manner" should be deleted to avoid any uncertainty about its meaning (see para. 13 of document A/CN.9/WG.II/WP.202). It was further clarified that the phrase "enforceable as" in draft provision 1(3) referred to the possibility of enforcement (see para. 14 of document A/CN.9/WG.II/WP.202).

Determination of the enforceability

24. It was widely felt that enforceability should be determined by considering whether settlement agreements approved by a court or concluded before a court were enforceable as a judgment "in the State of that court." It was agreed that the phrase

"according to the law of" in the square-bracketed text was not necessary as it might create confusion (see paras. 15 and 16 of document A/CN.9/WG.II/WP.202). A suggestion to align draft provision 1(3)(a) with draft provision 1(3)(b) so that enforceability would be determined according to the law of the State where enforcement was sought did not receive support.

25. It was pointed out that the addition of the phrase "enforceable as an arbitral award [legislative provision: according to the law of this State] [convention: according to the law of the Contracting State where enforcement is sought]" in draft provision 1(3)(b) was intended to address the gap that might arise from non-enforceability of settlement agreements recorded in the form of awards in certain jurisdictions. In that respect, it was clarified that if an arbitral award recording a settlement agreement fell outside the scope of the relevant enforcement regime at the place where enforcement of the settlement agreement was sought, the settlement agreement might still be considered for enforcement under the instrument (see paras. 17 and 18 of document A/CN.9/WG.II/WP.202).

26. However, doubts were expressed with regard to adopting such an approach, which would be distinct from that in draft provision 1(3)(a) (see para. 24 above). It was stated that enforceability of an arbitral award should be determined by reference to the place of arbitration. In that context, reference was made to article V(1)(e) of the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958) ("New York Convention"). It was explained that if enforceability were to be determined by reference to the place where enforcement of the settlement agreement was sought, it would provide a party the opportunity to seek enforcement twice (as an award and as a settlement agreement). It was therefore suggested that determining the "enforceability" by reference to the place of arbitration would ensure a similar approach as taken with regard to settlement agreements approved by a court or concluded before a court.

27. After discussion, it was agreed that enforceability of a settlement agreement as an arbitral award would be left to the competent authority and that the square-bracketed texts in draft provision 1(3)(b) would be deleted.

"prior to any application under article 3"

28. The Working Group agreed that the square-bracketed phrase "prior to any application under article 3" would not be necessary. Nonetheless, it was agreed that draft provision 1(3) should not be interpreted to allow a party against whom the enforcement of a settlement agreement was sought to, at that stage, seek a consent award or apply to a court for the approval of a settlement agreement, which would result in the settlement agreement falling outside the scope of the instrument (see para. 22 of document A/CN.9/WG.II/WP.202).

Revised draft provision 1(3)

29. After discussion, the Working Group agreed that draft provision 1(3) should read as follows: "This [instrument] does not apply to: (a) Settlement agreements (i) that have been approved by a court or have been concluded in the course of proceedings before a court; and (ii) that are enforceable as a judgment in the State of that court; (b) Settlement agreements that have been recorded and are enforceable as an arbitral award."

4. Conclusion on draft provision 1

30. Subject to the above-mentioned changes (see paras. 15, 23 and 27 to 29 above), the Working Group approved draft provision 1.

B. Definitions

1. Draft provisions 2(1) and 2(2)

31. The Working Group recalled that draft provisions 2(1) and 2(2) contained a definition of "international" settlement agreements modelled on articles 1(4) and 1(5) of the Model Law on Conciliation. The Working Group also recalled its decision that the "international" nature of settlement agreements should not be derived from the "international" nature of conciliation but from the settlement agreement itself.

Definition of "international"

32. Noting that the place of business of the parties constituted the criteria for determining the "internationality" of settlement agreements, it was questioned whether that definition should be expanded to also cover situations where parties would have their places of business in the same State, but the settlement agreement would nevertheless contain an international element, for instance, where the parties' parent company or shareholders were located in different States. It was suggested that such an expansion would reflect current global business practices as well as complex corporate structures.

33. The Working Group recalled that it had agreed that the instrument should contain a clear and objective criteria for defining "international" settlement agreements (A/CN.9/896, paras. 20 and 21, and A/CN.9/867, paras. 93–101). In that light, it was generally felt that there would be complexities in referring to circumstances mentioned in paragraph 32 above and that providing a comprehensive definition to capture complex corporate structures would be difficult.

34. It was recalled that when preparing the Model Law on International Commercial Arbitration ("Model Law on Arbitration"), that matter was resolved by including article 1(3)(c), which provided that the parties might agree that the "subject matter of the arbitration agreement relates to more than one country". A similar approach was adopted in article 1(6) of the Model Law on Conciliation.

35. After discussion, the Working Group agreed that draft provisions 2(1) and 2(2) would remain unchanged subject to any concrete drafting proposals.

Article 1(6) of the Model Law on Conciliation

36. On whether draft provision 2 should include a provision similar to article 1(6) of the Model Law on Conciliation, the Working Group reaffirmed its understanding that the instrument should not contain a similar provision where it would take the form of a convention.

37. Therefore, the discussion focused on how article 1(6) would operate when the Model Law on Conciliation would be complemented by draft provisions on settlement agreement (referred to as the "amended Model Law"). One view was that article 1(6) should also apply to those provisions. It was stated that article 1(6) currently applied to article 14 of the Model Law, which dealt with enforceability of settlement agreements. In addition, it was said that the Model Law had already been enacted in a number of States, and that deleting that provision in the amended Model Law would be problematic. In line with the understanding that the existing provisions of the Model Law should not be modified to the extent possible as States had already enacted legislation based on it, it was suggested that article 1(6) should apply also to the draft provisions on settlement agreements. Another view was that article 1(6) should either be deleted entirely from the amended Model Law or not be applicable to provisions on settlement agreements for the sake of consistency with the approach in the draft convention (see para. 36 above).

"at the time of the conclusion of that agreement"

38. To ensure consistency of the temporal determination between subparagraphs (a) and (b) in draft provision 2(1), the Working Group agreed to move the words "at the

time of the conclusion of that agreement" in subparagraph (a) to the chapeau of draft provision 2(1).

Definition of "internationality" of the "conciliation" and "settlement agreement" under the amended Model Law on Conciliation

39. The Working Group considered whether the amended Model Law should contain a single definition of "internationality", which would apply to both conciliation and settlement agreements as provided for in document A/CN.9/WG.II/WP.202/Add.1, paragraph 6. It was noted that the draft contained in that document defined the internationality of conciliation by reference to the place of business of the parties at the time of the conclusion of the settlement agreement. However, it was stated that the applicability of the law would need to be determined when the conciliation was initiated and not at a later stage when a settlement agreement was concluded. It was further said that parties might not necessarily conclude a settlement agreement. It was therefore suggested to define separately the internationality of the conciliation and the internationality of the settlement agreement by reference to the agreement to conciliate in accordance with article 1(4) of the Model Law. However, it was suggested that a reference to the agreement to conciliate might not always be feasible, as there might not be such an agreement concluded by the parties as a basis for the conciliation process.

Additional definitions

40. A suggestion was made to include a definition of "parties", which would clarify that reference to "parties" in the instrument would include their authorized representatives. In response, it was said that including a reference to authorized representatives in the definition of "parties" would be problematic. For example, the "internationality" of a settlement agreement was determined in accordance with the parties' places of business.

41. As an alternative, it was suggested that draft provision 3(3)(a) could include a reference to "authorized representatives of the parties". It was also mentioned that reference to the authorized representatives of the parties might be implicit in the instrument (as is the case with other UNCITRAL texts), which could be clarified in any material accompanying the instrument. After discussion, the Working Group agreed to consider that matter further when discussing draft provision 3(3)(a) (see paras. 49 and 50 below).

2. Draft provisions 2(3) and 2(4)

42. There was general support for draft provisions 2(3) and 2(4). In that light, the Working Group agreed to consider in the context of draft provision 3(3)(a) whether draft provision 2(3) would include a reference to parties' authorized representatives (see paras. 40 and 41 above, and paras. 49 and 50 below). In response to a question whether the instrument would apply to settlement agreements whether or not they resulted from conciliation, the Working Group agreed to consider that question in conjunction with matters raised in paragraphs 37 and 38 of document A/CN.9/WG.II/WP.202 (see paras. 68–72 below).

3. Conclusion on draft provision 2

43. **Subject to the above-mentioned change (see para. 38 above)** and subject to further consideration of the remaining issues pertaining to how article 1(6) and other related provisions would operate in the amended Model Law (see paras. 36 and 37 above), the Working Group approved draft provision 2.

C. Application

1. Draft provisions 3(1) and 3(2)

Placement and heading

44. With regard to the placement of draft provisions 3(1) and 3(2), the Working Group agreed that they should be placed under a separate article in the instrument following draft provision 1, possibly entitled "General principles". In response to a question about the meaning of the draft provision 3(2), an explanation from the sixty-sixth session was reiterated, namely that by meeting all the conditions laid down in the instrument, the party seeking relief would thereby be able to prove that the dispute had been settled.

"in order to conclusively prove that the matter has been already resolved"

45. With regard to the square-bracketed text at the end of draft provision 3(2), a number of suggestions were made. The suggestion to delete that text as it could narrow the scope of application of the draft provision did not receive support. It was widely felt that the text, which was part of the compromise, should be retained outside square brackets. It was said that that phrase removed the ambiguity regarding the consequences of invoking the settlement agreement as a defence and clarified that the settlement agreement could prove that the dispute had been resolved.

46. Nonetheless, concerns were expressed regarding the inclusion of the word "conclusively". It was said that the inclusion could affect the application of the rules of procedure of the State. In response, it was said that the word "conclusively" would not affect the application of rules of procedure but that that deletion would be acceptable as it would not alter the meaning of the provision. It was generally felt that the inclusion did not have much merit and therefore, it was agreed that the word "conclusively" should be deleted.

47. In addition, the Working Group agreed that draft provision 3(2) with the above-mentioned changes (see paras. 45 and 46 above) was broad enough to cover set-off claims and that there was no need to make a specific reference to such claims in that provision.

48. After discussion, the Working Group agreed that draft provision 3(2) should read as follows: [Legislative provision] "If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, the party may invoke the settlement agreement in accordance with the rules of procedure of this State and under the conditions laid down in this Law, in order to prove that the matter has been already resolved." [Convention] "If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, a Contracting State shall allow the party to invoke the settlement agreement in accordance with its rules of procedure and under the conditions laid down in this Convention, in order to prove that the matter has been already resolved."

2. Draft provision 3(3)(a)

49. The Working Group considered whether draft provision 3(3)(a) should provide that settlement agreements might be signed by the parties "or their authorized representatives" (see paras. 40-42 above). It was pointed out that it was common for representatives of parties to sign settlement agreements on their behalf and referring only to the parties in draft provision 3(3)(a) could unduly restrict the application requirement. However, it was mentioned that the notion of parties' representatives might be understood differently in different jurisdictions and in different contexts. It was further mentioned that including the words "or their authorized representatives" in draft provision 3(3)(a) might create complexities and discrepancies, as there were other instances where the instrument referred to "parties". It was suggested that the matter should be left to be addressed in relevant applicable domestic legislation.

50. After discussion, the Working Group agreed that the instrument should not include a reference to "authorized representatives" of the parties with the understanding that that notion was implicit in the text of the instrument.

51. During the discussion on draft provision 3(3)(a), a proposal was made that the instrument should require that the settlement agreement should set out in a clear and comprehensible manner its enforceable content. It was explained that the purpose of adding such a requirement would mean that only settlement agreements with enforceable obligations and which clearly set out the content of the settlement, would be accepted for enforcement under the instrument. After hearing the suggestion that such a requirement might be better placed in the draft provision on grounds for refusing enforcement, the Working Group agreed to consider the matter in conjunction with draft provision 4 (see para. 88 below).

3. Draft provision 3(3)(b)

52. The Working Group agreed to retain the word "evidence" as it was considered more appropriate than the word "indication" for the purpose of draft provision 3.

53. Various suggestions were made regarding subparagraph (b). It was suggested that the list of examples contained in subparagraph (b) should be deleted, as draft provisions 1 and 2(4) required that the settlement agreement resulted from conciliation, and defined conciliation as requiring the involvement of a third party; and as it would be preferable to leave it to the competent authority to determine the evidence required to prove that the settlement agreement resulted from conciliation.

54. As a matter of drafting, it was suggested that the phrase "attesting to the involvement of the conciliator in the conciliation process," should be replaced by the words "to that effect". It was explained that subparagraph (b) should make it clear that the attestation to be produced should be to the effect that the settlement agreement resulted from conciliation, and not refer to a mere involvement of the conciliator.

55. In relation to the example that an attestation could be provided by an institution that administered the conciliation process, it was said that institutions were generally not involved in conciliation processes; therefore, that example would not necessarily constitute an appropriate means to prove that the settlement agreement resulted from conciliation.

56. A question was raised whether the list in subparagraph (b) should be illustrative (open) (as currently drafted with the words "such as") or exhaustive (closed). On a practical note, it was suggested that an illustrative list would be preferable as it would not necessarily be feasible to reach out to the conciliator in various circumstances, including when the settlement agreement would need to be raised as a defence against a claim, a procedure which might take place a number of years after the conciliation. It was also highlighted that there might be costs involved, or conciliators might be hesitant, in providing attestations or signing settlement agreements.

57. A proposal was made to amend subparagraph (b) to the effect that it would establish a hierarchy among the means for evidencing that a settlement agreement resulted from conciliation, along the following lines: "(b) Evidence that the settlement agreement resulted from conciliation either by including the conciliator's signature on the settlement agreement or by providing a separate statement by the conciliator attesting to the involvement of the conciliator in the conciliation process; the competent authority can accept any other form of evidence that the settlement agreement resulted from conciliation only if the party has shown that it has made an attempt to receive either of the above."

58. Some support was expressed for that proposal, as it provided a middle ground between an open-list and a close-list approach. However, it was widely felt that a flexible approach as provided in the current draft provision 3(3)(b) (see document A/CN.9/WG.II/WP.202, para. 29) was preferable. It was pointed out that it would be difficult to provide a hierarchy, particularly when the list was open-ended. It was further said that prescribing a hierarchy would give prevalence to certain practices to the detriment of others and could run contrary to existing laws and practices. Further,

it was suggested that the proposal would be difficult to implement, for instance when the conciliation involved multiple conciliators, and might give rise to legal disputes particularly with regard to the party being obliged to demonstrate that it had made such attempts.

59. After consideration of various drafting suggestions, the Working Group agreed that draft provision 3(3)(b) should read as follows: "(b) Evidence that the settlement agreement resulted from conciliation, such as: (i) the conciliator's signature on the settlement agreement; (ii) a document signed by the conciliator indicating that the conciliation was carried out; (iii) an attestation by an institution that administered the conciliation process; or (iv) in the absence of (i), (ii) or (iii), any other evidence acceptable to the competent authority."

4. Draft provision 3(3)(c)

60. The Working Group then considered a number of suggestions with respect to draft provision 3(3)(c).

61. One view was that draft provision 3(3)(c) should remain unchanged. In support, it was noted that the competent authority should be provided flexibility in requiring documents as necessary in the enforcement process. In that context, it was noted that draft provision 3(3)(c) should be read in conjunction with draft provision 3(6) requiring the competent authority to act expeditiously. Another view was that draft provision 3(3)(c) should be qualified with additional wording along the following lines: "to demonstrate that the requirements of this [instrument] are met." It was further mentioned that the requirements were those found in draft provisions 3(3)(a) and 3(3)(b). During the discussion, a suggestion was made that the word "necessary" could be replaced by "relevant". Yet another view was that draft provision 3(3)(c) could be deleted as it might invite the competent authority to require parties to supply documents not required in the instrument, which would make it burdensome for parties seeking enforcement. It was further pointed out that the rules of procedure of a given State would generally allow the competent authority to require such necessary documents.

62. Considering the revised draft provision 3(3)(b) (see para. 59 above), a proposal was made that draft provision 3(3)(c) should be deleted and that a separate paragraph should be added in draft provision 3. It was said that article 13(2) of the Convention on Choice of Court Agreements (also reproduced in the draft convention on judgments, under preparation by The Hague Conference on Private International Law) could provide a useful model for drafting that new paragraph, which would allow the competent authority to require necessary documents to verify that the conditions of the instrument have been complied with.

63. While views were expressed that there was no need for such a provision in light of the inclusion of subparagraph (iv) in draft provision 3(3)(b) (see para. 59 above), general support was expressed for inclusion of a new paragraph. In that context, it was highlighted that draft provisions 3(3)(a) and 3(3)(b) dealt with what a party would need to supply to the competent authority upon submitting an application, whereas the new paragraph could address the power of the competent authority to require documents necessary for considering an application. It was further mentioned that the new paragraph would provide broader flexibility to the competent authority as subparagraph (iv) in draft provision 3(3)(b) was limited to any other evidence acceptable to the competent authority to prove that the settlement agreement resulted from conciliation.

64. Concerns were expressed that the new paragraph could result in the competent authority introducing additional application requirements, which would unduly burden the party seeking enforcement. In response, it was stated that such concerns could be addressed by providing that the competent authority would be able to require any necessary document "only to verify that the conditions of this instrument are met." In that context, it was suggested that the new paragraph could indicate what those conditions were, for example, by stating that request of additional documents by the competent authority should be limited to verifying that the requirements in

draft provisions 3(3)(a) and 3(3)(b) were met. That suggestion did not receive support, as it would restrict the powers of the competent authority. As illustrations, it was mentioned that the competent authority might require (i) proof of authority of parties' representatives where they signed the settlement agreement on the parties' behalf, or (ii) proof of the internationality of a settlement agreement, which was not covered under draft provisions 3(3)(a) and 3(3)(b). It was pointed out that limiting the power of the competent authority to require documents as necessary in light of the conditions of the instrument constituted an acceptable safeguard.

65. After discussion, the Working Group agreed that a new paragraph replacing paragraph (3)(c) would be included in draft provision 3 along the following lines: "The competent authority may require any necessary document in order to verify that the conditions of this [instrument] have been complied with."

5. Draft provision 3(4)

66. The Working Group approved draft provision 3(4) without any modification.

6. Draft provisions 3(5) and 3(6)

67. While a suggestion was made that draft provision 3(5) would be superfluous if a new paragraph were to be included in draft provision 3 (see para. 65 above), the Working Group agreed to retain draft provision 3(5) unchanged. While a suggestion was made that an element of "reasonableness" should qualify the relative notion of "expeditiously" in draft provision 3(6), the Working Group agreed to retain draft provision 3(6) unchanged.

7. Informal processes

68. The Working Group then considered whether the instrument should provide flexibility to States to broaden the scope of the instrument to agreements settling disputes between parties not reached through conciliation (see para. 42 above). The discussion took into account drafting proposals for a reservation or declaration (where the instrument would take the form of a convention) and a footnote (where the instrument would take the form of the amended Model Law) (see document A/CN.9/WG.II/WP.202, para. 38).

69. One view was that flexibility should be provided to States that wished to provide agreements settling disputes not reached through conciliation a similar enforcement mechanism as envisaged by the instrument for settlement agreements resulting from conciliation. In support, it was suggested that the instrument could include a reservation or a footnote to that effect, which would afford such flexibility to States and encourage States adopting the instrument to consider such options. It was further mentioned that there would be no detriment in allowing States to expand the scope of the instrument, as it would actually be beneficial to parties wishing to enforce such agreements.

70. Another view was that States should not be given the flexibility to overstep the scope of the instrument. In support, it was stated that providing such flexibility would defeat not only the purpose of the instrument but also the carefully drafted scope and definitions provisions therein. Concerns were also expressed about the possible negative consequences such provisions could have on the overall credibility of the enforcement mechanism envisaged by the instrument. Furthermore, it was stated that a reservation to that effect would be considered not permissible under article 19 of the Vienna Convention on the Law of Treaties, as it would be incompatible with the object and purpose of the convention. It was further mentioned that the mandate given to the Working Group was limited to preparing an instrument on enforcement of international settlement agreements "resulting from conciliation". While there was less hesitation about including a footnote in the amended Model Law, it was indicated that it would not be appropriate for an instrument on enforcement of settlement agreements to encourage States to consider expanding the regime to agreements not reached through conciliation.

71. With respect to a suggestion that a more-favourable-right provision contemplated for inclusion in the instrument could allow States to apply the enforcement regime to agreements not reached through conciliation, it was stated that a more-favourable-right provision presupposed that the agreement in question fell within the scope of the instrument and would not allow the State to extend the scope of the instrument. In that context, it was emphasized that States, in any case, would be free to enact legislation that would grant agreements not reached through conciliation a treatment similar to that granted to settlement agreements under the instrument, which need not be mentioned in the instrument. In contrast, it was stated that this possibility needed to be highlighted in the instrument as a footnote in the amended Model Law, which would encourage States to consider that approach.

72. After discussion, it was agreed that the instrument in the form of a convention would not include a provision that would allow a State to declare that it would apply the convention to agreements not reached through conciliation. The Working Group decided to further consider whether the instrument in the form of an amended Model Law could include a footnote indicating that States may consider applying the instrument to such agreements. It was also agreed that explanatory material accompanying the instrument, if any, could outline relevant considerations.

8. Conclusion on draft provision 3

73. Subject to the above-mentioned modifications (see paras. 44, 48, 52, 59 and 65 above) and decision (see para. 72 above), the Working Group approved draft provision 3.

D. Defences

1. Draft provision 4 – title and chapeau

74. To clarify that draft provision 4 applied to both enforcement dealt with in draft provision 3(1) and the procedure dealt with in draft provision 3(2), a suggestion was made to revise the heading of draft provision 4 along the following lines: “Grounds for refusing to enforce or to invoke the settlement agreement”. In that context, some concerns were expressed whether draft provision 4 applied to both enforcement dealt with in draft provision 3(1) and the procedure dealt with in draft provision 3(2). It was said that draft provision 4 would not be applicable to certain procedures, for example, declaratory procedures.

75. With regard to the chapeau of draft provision 4(1), the Working Group agreed to delete the square-bracketed text “under article 3” where it appeared after the word “relief”.

2. Draft provision 4(1)(a)

76. Recalling its previous consideration of subparagraph (a) (A/CN.9/896, para. 85), the Working Group agreed to retain that subparagraph unchanged.

3. Draft provision 4(1)(b)

77. With respect to subparagraph (b), a suggestion was made to delete the first clause, which read: “The settlement agreement is not binding or is not a final resolution of the dispute covered by the settlement agreement.” In support, it was said that the clause was redundant as the binding nature of a settlement agreement would be derived from complying with the requirements in draft provisions 1(1) and 3(3)(a). It was also said that the “final” nature of a settlement agreement was addressed in the second clause of subparagraph (b) as well as draft provision 3(3)(a). In addition, it was stated that other subparagraphs of draft provision 4 sufficiently addressed those points.

78. A contrary view was that the first clause ought to be retained as it served an important purpose to ensure that only final and binding agreements would be enforced. It was stated that such a defence needed to be provided at the stage of enforcement, and was not covered by other provisions in the instrument, which served

different purposes. In addition, it was suggested that the first clause could be supplemented by the following words: "in accordance with the law of the State where relief is sought, including the law designated by its private international law".

79. With respect to the second clause of subparagraph (b) that "the obligations in the settlement agreement have been subsequently modified by the parties or have been performed", a suggestion was made to delete the words "by the parties" as there might be instances where the settlement agreement might be modified without the involvement of the parties. In addition, it was mentioned that the clause should be clarified in order to avoid situations where enforcement of a settlement agreement would be denied because the parties subsequently modified certain terms of that agreement.

80. With respect to the phrase "other than a failure by the party" in the third clause of subparagraph (b), it was suggested to clarify its meaning using the following phrase: "other than the non-performance by the party".

81. From a practical perspective, concerns were expressed that including too detailed as well as broad grounds to refuse enforcement would run contrary to the expectations of the parties that the instrument would provide for an efficient mechanism to enforce or invoke settlement agreements. It was mentioned that detailed or ambiguous provisions could lead the competent authority to question a number of issues at the enforcement stage and provide parties not willing to comply with the settlement agreement tools to impede enforcement. It was emphasized that such a result could eventually weaken the usefulness of the instrument. While acknowledging the need to reflect the perspectives of the practitioners, it was underlined that the instruments being prepared were texts for adoption or enactment by States and that if their concerns were not adequately addressed in the instruments, they were not likely to be adopted. Therefore, the need to balance both aspects was emphasized.

82. The Working Group considered a number of proposals in relation to draft provision 4(1)(b).

83. One proposal was to replace subparagraph (b) with the following text: "(i) The obligations in the settlement agreement have been subsequently modified, except where those subsequent modifications have been reflected in the settlement agreement, or have been performed; or (ii) the settlement agreement is not a final resolution of the dispute covered by the settlement agreement because the conditions set forth in the settlement agreement have not been met other than for the non-performance of the party against whom the settlement agreement was invoked and, therefore, have not yet given rise to the obligations of that party". It was further suggested that the *travaux préparatoires* should explain that while not explicitly mentioned in subparagraph (b), a party would be able to argue that the settlement agreement was not binding or to present evidence of the non-binding nature of the settlement agreement (for instance, a party could argue that the person who signed the settlement agreement was not authorized to do so).

84. While there was some support for that proposal, it was felt that it was complicated and could lead to difficulties in interpretation. It was pointed out that the conditions of the settlement agreement not being met could mean that the settlement agreement would be enforceable at a later stage, and not necessarily that it was not the final resolution of the dispute. With respect to the additional language suggested for the *travaux préparatoires*, it was cautioned that the grounds for resisting enforcement should be exhaustive, as indicated by the word "only" in the chapeau of draft provision 4(1).

85. With a view to provide a simpler text, the following proposal was made: "The settlement agreement is not binding, or is not final, or is conditional, or the obligations in the settlement agreement have been modified or have been performed." While there was support for that proposal, a number of drafting suggestions were made.

86. First, it was suggested to replace the word "modified" by the words "subsequently modified without consent". While there was support for the inclusion

of the word "subsequently", there was hesitation about including the words "without consent" as the purpose of the clause was to ensure that only the latest version of the settlement agreement "concluded by the parties" should be enforced.

87. Second, it was suggested that the meaning of the terms "binding" and "final" should be set out, by providing that a settlement agreement would be binding under the terms of the instrument and would be final in light of whether conditions therein have been met or modified. A further suggestion was to replace the word "final" by explanatory language, along the following lines: "or the obligation that is sought for enforcement was not meant to be enforced by the parties independently of the other parts of the settlement agreement". It was noted, however, that it might be cumbersome to agree on a definition of the terms "binding" and "final" which had already been interpreted in a variety of manners under various instruments, including the New York Convention.

88. Third, it was suggested to include an additional ground for refusing enforcement along the following lines: "the settlement agreement is not clear or comprehensible rendering it not capable of being enforced" (see para. 51 above). As an alternative, the following text was suggested: "the settlement agreement is not capable of being enforced". Concerns were expressed that those suggestions would introduce ambiguity and provide too wide a discretionary power to the competent authority. It was further suggested that such text would be redundant as only a clear and comprehensible settlement agreement would be binding and enforceable.

89. During the discussion, a number of other drafting proposals to replace or clarify subparagraph (b) were made.

90. A drafting proposal was made with the aim of retaining a simple drafting approach, while clarifying certain elements, along the following lines: "The settlement agreement: (i) is not binding or not final [under the conditions of this instrument]; (ii) is conditional or the settlement agreement has been [subsequently] modified [without consent] so that the obligations in the settlement agreement of the party against whom the settlement agreement is invoked have not yet arisen; (iii) the obligations in the settlement agreement have been performed; or (iv) is not clear or comprehensible rendering it not capable of being enforced."

91. Another drafting proposal read along the following lines: "the settlement agreement is not final and binding; or the obligations of the settlement agreement have been fully performed; or it is impossible to enforce the settlement agreement because significant modifications have been made by the parties in the absence of a conciliator, or because reciprocal obligations of the other party have not been performed. For the purpose of this [instrument], 'final' means that the implementation of the agreement shall not be dependent on a condition that has not yet been achieved, or a specific date that has not yet been reached; ''obligation' means that the subject matter of the agreement is clear, understandable and final, and can be settled by applicable law."

92. Yet another proposal was made aimed at avoiding the notions of binding and final, and focusing on the time of performance of obligations. It read: "Under the terms of the settlement agreement, the obligations sought to be enforced were not agreed to be performed by the time of enforcement."

93. After discussion, the Working Group agreed that the following text would form the basis of its future discussion on subparagraph (b), not disregarding the above-mentioned proposals and suggestions, and acknowledging that there could be further improvements of the text: "The settlement agreement: (i) obligations have been performed; (ii) is not binding, or is not final, according to its terms; (iii) has been subsequently modified; (iv) is conditional so that the obligations in the settlement agreement of the party against whom the settlement agreement is invoked have not yet arisen; or (v) is not capable of being enforced because it is not clear and comprehensible."

4. Draft provision 4(1)(c)

94. With respect to draft provision 4(1)(c), it was suggested that the phrase "under the law to which the parties have subjected it, or failing any indication thereon," should be deleted because party autonomy should operate within the limits of mandatory laws and public policy. The Working Group recalled that the matter had already been addressed at a previous session (see A/CN.9/896, para. 101). However, to clarify the meaning of draft provision 4(1)(c), the Working Group agreed to insert the word "validly" between the words "have" and "subjected" in subparagraph (c). It was explained that the addition would highlight that the competent authority could assess the validity of the choice of law made by the parties in the settlement agreement in accordance with applicable mandatory laws and public policy.

95. The Working Group heard a suggestion that subparagraph (c) should be placed before subparagraph (b) and requested the Secretariat to make the necessary drafting adjustments.

5. Draft provisions 4(1)(d) and 4(1)(e)

96. With respect to a suggestion to replace the word "standards" by the word "requirements" or to add the word "requirements" in subparagraph (d), the Working Group recalled its previous discussion on the topic mainly that subparagraph (d) would allow the competent authority to determine the standards applicable, which could take different forms such as the law governing conciliation and codes of conduct, including those developed by professional associations (see A/CN.9/901, para. 87). It was further confirmed that the text accompanying the instrument would provide an illustrative list of examples of such standards. In response, it was also suggested that there would be merit in including a definition of "standards" in the instrument, possibly based on article 6(3) of the Model Law, as that would prevent legal disputes in relation to the interpretation of subparagraph (d). That suggestion did not receive support.

97. With respect to the suggestion that subparagraphs (d) and (e) should be merged (also considering the repetition of words to the end of the subparagraphs), or their sequence changed considering the importance of the standard in subparagraph (e), the Working Group recalled that the substance of both subparagraphs had been already agreed upon by the Working Group subject only to drafting improvements. There was strong support to retain the subparagraphs as separate subparagraphs.

98. After discussion, the Working Group agreed to retain subparagraphs (d) and (e) without any modifications.

6. Draft provision 4(2)

99. With regard to the chapeau of draft provision 4(2), the Working Group agreed to delete the square-bracketed text "under article 3" where it appeared after the word "relief".

7. Draft provision 4(2)(a)

100. With regard to the suggestions to add the word "manifestly" before the word "contrary" along the lines of the Convention on Choice of Court Agreements and to add the words "including the national security or national interest of the State" in subparagraph (a), it was agreed that the subparagraph should remain unchanged mirroring the phrase in the New York Convention and the Model Law on Arbitration, which have already been broadly interpreted. It was cautioned that departure from such language could raise more confusion for the competent authority, which would be tasked with determining what the public policy of that State was. During the discussion, it was also mentioned that public policy could, in any case, include issues relating to national security or national interest.

8. Conclusion on draft provision 4

101. Subject to the above-mentioned modifications (see paras. 94, 95 and 99 above) and subject to further consideration of subparagraph (1)(b) (see para. 93 above) and issues that may arise on subparagraph (1)(c) from the revision of subparagraph (1)(b), the Working Group approved draft provision 4.

E. Terminology and presentation of draft provisions

1. Terminology

102. The Working Group considered the possibility of replacing the terms "conciliation" and "conciliator" in the instrument as well as other UNCITRAL texts on conciliation with the terms "mediation" and "mediator". Some hesitation was expressed about changing the terminology historically used in UNCITRAL texts. It was also mentioned that a cautious approach should be taken in making any such change as there could be substantive change in meaning (for example, the term "mediation" included not only facilitative but also evaluative conciliation).

103. Nonetheless, it was stated that there was merit in considering the replacement, as the terms "mediation" and "mediator" were more widely used and it would make it easier to promote the instrument giving it more visibility. It was mentioned that this would not entail any substantive change. To ensure that there was no confusion or misunderstanding about the replacement, it was suggested that the text accompanying the instrument (or a footnote therein) could explain the historical developments of the terminology in UNCITRAL texts and emphasize that the term "mediation" was intended to cover a broad range of activities that would fall under the definition as provided in article 1(3) of the Model Law regardless of the expressions used. That text would also stress that the replacement was not aimed at promoting a notion known to a specific legal system or tradition. It was also stated that if the replacement were to be made, it should be done consistently throughout UNCITRAL texts along with accompanying explanations as discussed above.

104. After discussion, the Working Group confirmed its shared understanding that the replacement of the term "conciliation" by the term "mediation" could be implemented as a basis for further consideration by the Working Group.

2. Presentation of the draft provisions in the draft convention and the amended Model Law

105. The Working Group then considered how the draft provisions as approved at its current session could be presented in a draft convention and in an amended Model Law (see annex). There was general support for the presentation provided in the annex.

106. With regard to the annex, the following suggestions were made, but not discussed:

- There should be a consistent definition of "conciliation" in the convention and in the amended Model Law (reference was made to draft article 3(4) of the draft convention and article 1(3) of the Model Law);
- The title of the amended Model Law should include the notion of international settlement agreements;
- Draft article 1(1) of the amended Model Law should read, along with the footnotes in article 1 of the Model Law: "This Law applies to international commercial conciliation or to international settlement agreements.";
- Article 1(8) of the Model Law should be placed in section 1 of the amended Model Law, and should be subject to (i) article 1(9) of the Model Law, which, if retained, should be placed in section 2 of the amended Model Law and (ii) draft articles 15(2) and 15(3) of the amended Model Law;

- Article 1(8) of the Model Law should be amended taking into account decisions reached by the Working Group;
- Article 3 of the Model Law should be placed in section 2 of the amended Model Law;
- Section 2 of the amended Model Law should be titled “international conciliation” and section 3 should be titled “international settlement agreement”; and
- Noting that article 14 of the Model Law also used the term “settlement agreement”, the interaction between that article and article 15 of the amended Model Law, which addressed international settlement agreements, should be considered.

Annex

Draft convention and draft amended Model Law on International Commercial Conciliation

The texts below illustrate how draft provisions 1 to 3, as revised by the Working Group (see paras. 14–73), could possibly appear in the draft convention and in the amended Model Law.

1. Draft convention

Title: [*to be determined*]

Article 1. Scope of application

1. This Convention applies to international agreements resulting from conciliation and concluded in writing by parties to resolve a commercial dispute ("settlement agreements").

2. This Convention does not apply to settlement agreements:

(a) Concluded to resolve a dispute arising from transactions engaged by one of the parties (a consumer) for personal, family or household purposes;

(b) Relating to family, inheritance or employment law.

3. This Convention does not apply to:

(a) Settlement agreements:

(i) That have been approved by a court or have been concluded in the course of proceedings before a court; and

(ii) That are enforceable as a judgment in the State of that court;

(b) Settlement agreements that have been recorded and are enforceable as an arbitral award.

Article 2. General principles

1. Each Contracting State shall enforce a settlement agreement in accordance with its rules of procedure, and under the conditions laid down in this Convention.

2. If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, a Contracting State shall allow the party to invoke the settlement agreement in accordance with its rules of procedure and under the conditions laid down in this Convention, in order to prove that the matter has been already resolved.

Article 3. Definitions

[For the purposes of this Convention:]

1. A settlement agreement is "international" if, at the time of the conclusion of that agreement:

(a) At least two parties to the settlement agreement have their places of business in different States; or

(b) The State in which the parties to the settlement agreement have their places of business is different from either:

(i) The State in which a substantial part of the obligations under the settlement agreement is to be performed; or

(ii) The State with which the subject matter of the settlement agreement is most closely connected.

2. For the purposes of this article:

(a) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement;

(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

3. A settlement agreement is in "writing" if its content is recorded in any form. The requirement that a settlement agreement be in writing is met by an electronic communication if the information contained therein is accessible so as to be useable for subsequent reference; "electronic communication" means any communication that the parties make by means of data messages; "data message" means information generated, sent, received or stored by electronic, magnetic, optical or similar means, including, but not limited to, electronic data interchange (EDI), electronic mail, telegram, telex or telecopy.

4. "Conciliation" means a process, regardless of the expression used and irrespective of the basis upon which the process is carried out, whereby parties attempt to reach an amicable settlement of their dispute with the assistance of a third person or persons ("the conciliator") lacking the authority to impose a solution upon the parties to the dispute.

Article 4. Application

1. A party relying on a settlement agreement under this Convention shall supply to the competent authority of the Contracting State where relief is sought:

(a) The settlement agreement signed by the parties;

(b) Evidence that the settlement agreement resulted from conciliation, such as:

(i) The conciliator's signature on the settlement agreement;

(ii) A document signed by the conciliator indicating that the conciliation was carried out;

(iii) An attestation by an institution that administered the conciliation process; or

(iv) In the absence of (i), (ii) or (iii), any other evidence acceptable to the competent authority.

2. The requirement that a settlement agreement shall be signed by the parties or, where applicable, the conciliator, is met in relation to an electronic communication if:

(a) A method is used to identify the parties or the conciliator and to indicate the parties' or conciliator's intention in respect of the information contained in the electronic communication; and

(b) The method used is either:

(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

(ii) Proven in fact to have fulfilled the functions described in subparagraph (a) above, by itself or together with further evidence.

3. If the settlement agreement is not in the official language(s) of the Contracting State where the application is made, the competent authority may request the party making the application to supply a translation thereof into such language.

4. The competent authority may require any necessary document in order to verify that the conditions of the Convention have been complied with.

5. When considering the application, the competent authority shall act expeditiously.

[...]

2. Draft amended Model Law on International Commercial Conciliation

Title: UNCITRAL Model Law on International Commercial Conciliation (2002) With amendments as adopted in 201*

Section 1 – General provisions

Article 1. Scope of application and definitions

1. This Law applies to […].

2. For the purposes of this Law, "conciliator" means a sole conciliator or two or more conciliators, as the case may be. [*Article 1(2) of the Model Law*]

3. For the purposes of this Law, "conciliation" means a process, whether referred to by the expression conciliation, mediation or an expression of similar import, whereby parties request a third person or persons ("the conciliator") to assist them in their attempt to reach an amicable settlement of their dispute arising out of or relating to a contractual or other legal relationship. The conciliator does not have the authority to impose upon the parties a solution to the dispute. [*Article 1(3) of the Model Law*]

[*Placement of Article 1 (6) to (9) of the Model Law to be determined*]

Article 2. Interpretation

1. In the interpretation of this Law, regard is to be had to its international origin and to the need to promote uniformity in its application and the observance of good faith.

2. Questions concerning matters governed by this Law which are not expressly settled in it are to be settled in conformity with the general principles on which this Law is based.

Article 3. Variation by agreement [*placement to be determined*]

Except for the provisions of [*article 2, article 6, paragraph 3 – numbering to be adjusted and consideration whether any other articles to be included*] the parties may agree to exclude or vary any of the provisions of this Law.

Section 2 – Conciliation

Article aa. Scope and definitions

1. This section applies to international[4] commercial[5] conciliation. [*Article 1(1) of the Model Law*]

2. A conciliation is international if:

(a) The parties to an agreement to conciliate have, at the time of the conclusion of that agreement, their places of business in different States; or

(b) The State in which the parties have their places of business is different from either:

(i) The State in which a substantial part of the obligations of the commercial relationship is to be performed; or

[4] Footnote 1 in the Model Law.
[5] Footnote 2 in the Model Law.

(ii) The State with which the subject matter of the dispute is most closely connected. [*Article 1(4) of the Model Law*]

3. For the purposes of this article:

(a) If a party has more than one place of business, the place of business is that which has the closest relationship to the agreement to conciliate;

(b) If a party does not have a place of business, reference is to be made to the party's habitual residence. [*Article 1(5) of the Model Law*]

Articles 4 to 13 of the Model Law would remain unchanged.

Article 14. [*title to be determined*]

If the parties conclude an agreement settling a dispute, that settlement agreement is binding and enforceable.

[*Footnote 4 in the Model Law to be considered in conjunction with articles 1(7) and 3*]

Section 3 – Enforcement of international settlement agreements[6]

Article 15. Scope and definitions

1. This section applies to international agreements resulting from conciliation and concluded in writing by parties to resolve a commercial dispute ("settlement agreements").

2. This section does not apply to settlement agreements:

(a) Concluded to resolve a dispute arising from transactions engaged by one of the parties (a consumer) for personal, family or household purposes;

(b) Relating to family, inheritance or employment law.

3. This section does not apply to:

(a) Settlement agreements:

(i) That have been approved by a court or have been concluded in the course of proceedings before a court; and

(ii) That are enforceable as a judgment in the State of that court;

(b) Settlement agreements that have been recorded and are enforceable as an arbitral award.

4. A settlement agreement is international if, at the time of conclusion of the settlement agreement [*or at the time of the conclusion of the agreement to conciliate*]:

(a) At least two parties to the settlement agreement have their places of business in different States; or

(b) The State in which the parties to the settlement agreement have their places of business is different from either:

(i) The State in which a substantial part of the obligations under the settlement agreement is to be performed; or

(ii) The State with which the subject matter of the settlement agreement is most closely connected.

5. For the purposes of this article:

(a) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to the dispute resolved by the

[6] *Footnote to be considered.* [A State may consider enacting this section to apply to agreements settling a dispute, irrespective of whether they resulted from conciliation. Adjustments would then have to be made to relevant articles.]

settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement;

(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

6. A settlement agreement is in writing if its content is recorded in any form. The requirement that a settlement agreement be "in writing" is met by an electronic communication if the information contained therein is accessible so as to be useable for subsequent reference; "electronic communication" means any communication that the parties make by means of data messages; "data message" means information generated, sent, received or stored by electronic, magnetic, optical or similar means, including, but not limited to, electronic data interchange (EDI), electronic mail, telegram, telex or telecopy.

Article 16. General Principles

1. A settlement agreement shall be enforced in accordance with the rules of procedure of this State and under the conditions laid down in this Law.

2. If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, the party may invoke the settlement agreement in accordance with the rules of procedure of this State and under the conditions laid down in this Law in order to prove that the matter has been already resolved.

Article 17. Application

1. A party relying on a settlement agreement under this section shall supply to the competent authority of this State:

(a) The settlement agreement signed by the parties;

(b) Evidence that the settlement agreement resulted from conciliation, such as:

(i) The conciliator's signature on the settlement agreement;

(ii) A document signed by the conciliator indicating that the conciliation was carried out;

(iii) An attestation by an institution that administered the conciliation process; or

(iv) In the absence of (i), (ii) or (iii), any other evidence acceptable to the competent authority.

2. The requirement that a settlement agreement shall be signed by the parties or, where applicable, the conciliator, is met in relation to an electronic communication if:

(a) A method is used to identify the parties or the conciliator and to indicate the parties' or conciliator's intention in respect of the information contained in the electronic communication; and

(b) The method used is either:

(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

(ii) Proven in fact to have fulfilled the functions described in subparagraph (a) above, by itself or together with further evidence.

3. If the settlement agreement is not in the official language(s) of this State, the competent authority may request the party making the application to supply a translation thereof into such language.

4. The competent authority may require any necessary document in order to verify that the conditions of this law have been complied with.

5. When considering the application, the competent authority shall act expeditiously.

[...]

B. Note by the Secretariat on settlement of commercial disputes: international commercial conciliation: preparation of an instrument on enforcement of international commercial settlement agreements resulting from conciliation

(A/CN.9/WG.II/WP.202 and Add.1)

[Original: English]

Contents

I. Introduction

1. At its forty-seventh session, in 2014, the Commission considered a proposal to undertake work on the preparation of a convention on the enforceability of settlement agreements reached through international commercial conciliation (A/CN.9/822).[1] It requested the Working Group to consider the feasibility and possible form of work in that area.[2] At its forty-eighth session, in 2015, the Commission took note of the consideration of the topic by the Working Group at its sixty-second session[3] and agreed that the Working Group should commence work at its sixty-third session to identify relevant issues and develop possible solutions. The Commission also agreed that the mandate of the Working Group with respect to that topic should be broad to take into account the various approaches and concerns.[4] At its forty-ninth session, in 2016, the Commission confirmed that the Working Group should continue its work on the topic.[5] At its fiftieth session, in 2017, the Commission took note of the compromise reached by the Working Group at its sixty-sixth session, which addressed five key issues as a package (referred to as the "compromise proposal", see A/CN.9/901, para. 52) and expressed support for the Working Group to continue pursuing its work based on that compromise.[6]

2. At its sixty-third to sixty-sixth sessions, the Working Group undertook work on the preparation of an instrument on enforcement of international settlement agreements resulting from conciliation.[7]

[4] Ibid., *Seventieth Session, Supplement No. 17* (A/70/17), para. 142.

[5] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), paras. 162–165.

[6] Report of the Commission on the work of its fiftieth session, under preparation.

[7] The reports of the Working Group on the work of its sixty-third, sixty-fourth, sixty-fifth and sixty-sixth sessions are contained in documents A/CN.9/861, A/CN.9/867, A/CN.9/896 and A/CN.9/901, respectively.

3. This note, which consists of document A/CN.9/WG.II/WP.202 and its addendum, outlines the issues considered so far by the Working Group. Document A/CN.9/WG.II/WP.202 contains annotations to draft provisions to be included in an instrument on enforcement of international settlement agreements resulting from conciliation (referred to as the "instrument") and highlights provisions that were included in the compromise proposal. The addendum illustrates how the draft provisions would be adjusted where the instrument takes the form of a convention and of a complement to the UNCITRAL Model Law on International Commercial Conciliation ("Model Law on Conciliation" or "Model Law").

II. Draft instrument on enforcement of international commercial settlement agreements resulting from conciliation

A. Annotated draft provisions

1. Scope of the instrument

4. The Working Group may wish to consider the following formulation regarding the scope of the instrument:

Draft provision 1 (Scope of application)

"1. This [instrument] applies to international agreements resulting from conciliation and concluded in writing by parties to resolve a commercial dispute ('settlement agreements').

"2. This [instrument] does not apply to settlement agreements:

"(a) Concluded for personal, family or household purposes by one of the parties (a consumer); or

"(b) Relating to family, inheritance or employment law.

"3. This [instrument] does not apply to settlement agreements that[, prior to any application under article 3]:

"(a) have been approved by a court, or have been concluded before a court in the course of proceedings, either of which are enforceable [in the same manner] as a judgment [according to the law of the State of that court]; or

"(b) have been recorded and are enforceable as an arbitral award [legislative provision: *according to the law of this State] [*convention: *according to the law of the Contracting State where enforcement is sought]."*

Comments on draft provision 1

Paragraph 1

5. Paragraph 1, which was addressed under issue 1 of the compromise proposal (A/CN.9/901, para. 52), reflects the discussion of the Working Group that the objective of the instrument would need to be clearly spelled out, preferably in draft provision 1 (A/CN.9/896, paras. 151–155 and 200–203 and A/CN.9/901, para. 56). The Working Group may wish to consider whether to move draft provisions 3(1) and 3(2) after draft provision 1(1) where the instrument takes the form of a convention in order to indicate in the scope provision the key obligations of the contracting States (see below, para. 33).

6. The term "settlement agreement" is defined under paragraph 1 (see A/CN.9/896, paras. 32, 64, 117, 145, 146 and 152), in line with the understanding of the Working Group that (i) the written requirement for the settlement agreement should be contained in draft provision 1 (1), with draft provision 2 (3) defining how that requirement is met, in particular in relation to electronic communications (see A/CN.9/896, para. 66); and (ii) the instrument should apply to "commercial" settlement agreements, concluded by

parties to resolve a "commercial" dispute, without providing for any limitation as to the nature of the remedies or contractual obligations (see A/CN.9/896, para. 16).

Paragraph 2

7. Paragraph 2 contains draft formulation on exclusion of settlement agreements dealing with consumer, family and employment law matters, in accordance with the discussion of the Working Group (A/CN.9/896, paras. 55–60).

Paragraph 3(a)

- *General comments*

8. Paragraph 3(a), which was addressed under issue 2 of the compromise proposal (A/CN.9/901, para. 52), deals with the exclusion from the scope of the instrument of agreements concluded in the course of judicial proceedings (A/CN.9/896, paras. 48–54, 169–176, 205–210 and A/CN.9/901, paras. 25–34, 58–71). The manner in which paragraph 3(a) is meant to operate had been described by the Working Group as follows: (i) the competent authority where enforcement was sought would determine both the application of the instrument and the enforceability of the settlement agreement; (ii) whether a settlement agreement was enforceable in the same manner as a judgment would be determined in accordance with the law of the State where the settlement agreement was approved or court proceedings took place; and (iii) the more-favourable-right provision would allow States to apply the instrument, for example, to a settlement agreement approved by a court and enforceable in the same manner as a judgment (A/CN.9/901, para. 71).

9. Paragraph 3(a) should be considered in light of its objective, which is to avoid possible gaps or overlap with existing and future conventions, namely the Convention on Choice of Court Agreements (2005) (the "Choice of Court Convention"), and the draft convention on judgments, under preparation by The Hague Conference on Private International Law ("draft convention on judgments"). The Working Group may wish to consider that the risk of gaps or overlap exists mainly in relation to the provisions of the draft convention on judgments that would apply to "judicial settlements".[8] The draft convention on judgments aims at establishing a system among contracting States whereby judgments in the contracting State of origin would be recognized and enforced as such in the contracting State where enforcement is sought. The Working Group may wish to consider that excluding from the scope of the instrument settlement agreements that would be considered as judicial settlements and are enforceable as judgments at the place of origin would avoid overlap, but may create gaps until the draft convention on judgments is concluded, and adopted by a sufficient number of States. Indeed, under paragraph 3(a), a settlement agreement that is enforceable as a judgment at the place of origin, but cannot be enforced as a judgment at the place of enforcement would be excluded from the scope of the instrument, thereby depriving parties of recourse for enforcement (see below, paras. 15 and 16).

10. On a practical note, the determination of enforceability in reference to other mechanisms poses some questions that the Working Group may wish to consider. First, it creates a hierarchy among the possible options for parties because parties can rely on the instrument only when the settlement agreement is not enforceable under other instruments. If a similar provision were to be inserted in the draft convention on judgments (for example, excluding from its scope settlement agreements that are enforceable under this instrument), it could pose a circular problem where potential

[8] Article 13 of the draft convention on judgments (as of February 2017) provides that: "Judicial settlements (transactions judiciaires) which a court of a Contracting State has approved, or which have been concluded in the course of proceedings before a court of a Contracting State, and which are enforceable in the same manner as a judgment in the State of origin, shall be enforced under this Convention in the same manner as a judgment[, provided that such settlement is permissible under the law of the requested State]." Draft article 14 (1)(d) provides that: "The party seeking recognition or applying for enforcement shall produce – (d) in the case referred to in Article 13, a certificate of a court of the State of origin that the judicial settlement or a part of it is enforceable in the same manner as a judgment in the State of origin."

enforceability in different regimes would need to be considered prior to enforcement. Further, complications may arise from the fact that the determination by competent authorities may differ if enforcement is sought in more than one jurisdiction.

- *"approved by a court" – "concluded before a court in the course of proceedings"*

11. The Working Group may wish to consider the meaning of, and the difference between, the notions of a settlement agreement being "approved" by a court, and being "concluded before a court" (A/CN.9/901, para. 58). The involvement of a judge might vary from merely recording the parties' settlement agreement to taking an active role in the settlement process and whether the intention is to exclude from the scope of the instrument a wide range of circumstances would need to be confirmed (A/CN.9/901, para. 69). For example, it should be clarified whether situations where court proceedings begin but parties are able to settle through conciliation without any court involvement would be excluded from the scope of the instrument, and whether any formal act by a court would be required (A/CN.9/901, para. 61).

12. The Working Group may wish to recall its understanding at previous sessions that: (i) settlement agreements reached during judicial proceedings but not recorded as judicial decisions should fall within the scope of the instrument (A/CN.9/867, para. 125, A/CN.9/896, para. 48 and A/CN.9/901, para. 25); and (ii) the mere involvement of a judge in the conciliation process should not result in the settlement agreement being excluded from the scope of the instrument (A/CN.9/867, para. 131 and A/CN.9/896, para. 54, and A/CN.9/901, para. 25). The Working Group may wish to consider the extent to which paragraph 3(a) remains consistent with that understanding, in particular as it does not refer to the notion of a settlement agreement being "recorded".

- *Meaning of "enforceable [in the same manner] as"*

13. The Working Group may wish to further consider whether the bracketed phrase "[in the same manner]" should be retained. This phrase may be understood broadly to cover situations where a settlement agreement approved by a court or concluded before a court is considered to "be" a judgment or "has the same effect as" a judgement in that jurisdiction. Possible different interpretations might create uncertainty.

14. The Working Group may wish to confirm its understanding that the phrase "enforceable as" refers to the possibility of enforcement. The competent authority would only determine whether an approved settlement agreement, or a settlement agreement concluded before a court may be potentially enforceable, and would not inquire whether there is the possibility of such an enforcement being granted or refused.

- *According to the law of the State of the court that approved the settlement agreement or before which the settlement agreement was concluded*

15. The Working Group may wish to confirm that the intention of referring to a settlement agreement "approved by a court" or "concluded before a court" is to exclude those settlement agreements from the scope of the instrument because they would be subject to a separate enforcement mechanism. For instance, if a settlement agreement has been approved by a court, but is not enforceable as a judgment, the competent authority would determine that the settlement agreement fall within the scope of the instrument and would proceed to enforcement under the instrument.

16. The determination whether a settlement agreement approved by a court or concluded before a court is enforceable in the same manner as a judgment is to be made in accordance with the law of the State where court proceedings took place (A/CN.9/901, paras. 59 and 71). For example, if a party applies for enforcement in State B of a settlement agreement which was approved by a court (or concluded before a court) in State A, the competent authority in State B would examine whether the approved settlement agreement is enforceable in the same manner as a judgment in State A. If it finds that this is the case, the competent authority would determine that

the underlying settlement agreement does not fall within the scope of the instrument and would not proceed with the enforcement of the settlement agreement under the instrument (due to it being outside the scope). The competent authority in State B would decide so, even if State B does not have an enforcement regime for foreign judgments. In other words, the settlement agreement would be denied enforcement, and this would be regardless of whether the approved settlement agreement (or the settlement agreement concluded before a court) is enforceable in the same manner as a judgement in State B. In confirming this understanding, the Working Group may wish to take into account the view that requiring the competent authority to inquire about the enforceability in a different jurisdiction could be an additional burden, costly and potentially lead to complications and delays (A/CN.9/901, paras. 28 and 63). By comparison, the draft convention on judgments aims at establishing a mechanism whereby the State of origin would issue a certificate stating that the judicial settlement or a part of it is enforceable in the same manner as a judgment in the State of origin. This mechanism would only operate among contracting States because the purpose of the draft convention on judgments is to include judicial settlements within its scope, and to provide a mechanism for mutual recognition and enforcement of judgments.[9]

Paragraph 3(b)

17. Paragraph 3(b), which was addressed under issue 2 of the compromise proposal (A/CN.9/901, para. 52), deals with the exclusion from the scope of the instrument of agreements concluded in the course of arbitral proceedings (A/CN.9/896, paras. 48–54, 169–176, 205–210 and A/CN.9/901, paras. 25–34, 58–71). This provision should be considered in light of its objective, which is to avoid possible gap or overlap with the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958) (the "New York Convention").

18. The Working Group may wish to confirm its understanding that: (i) if the arbitral award recording the settlement agreement falls outside the scope of the relevant enforcement regime (such as the New York Convention) at the place where enforcement is sought, the settlement agreement would be considered for enforcement under the instrument (A/CN.9/901, para. 71 (v)); and (ii) the word "enforceable" refers only to the possibility of enforcement as the competent authority would only determine whether the award may be potentially enforceable, and not inquire whether there is the possibility of such an enforcement being granted or refused.

Other comments on paragraph 3

- *Determination by the court at the place of enforcement ex officio or upon request, burden of proof*

19. The Working Group may wish to clarify whether the determination that the settlement agreement cannot be enforced through the regime available for judgments and arbitral awards is to be made by the competent authority on its own initiative. If so, it may be appropriate to provide the parties an opportunity to be heard particularly as the competent authority may not necessarily have all relevant information on the matter.

20. If the burden of proof would be on the parties, the party seeking enforcement of the settlement agreement would need to indicate that there is no other mechanism to enforce the settlement agreement; the party against whom the application is being invoked would need to indicate that there exists such a mechanism (A/CN.9/901, para. 70). If it is the latter, the Working Group may wish to further consider whether paragraph 3 could be instead formulated as a ground to refuse enforcement under draft provision 4 (A/CN.9/901, para. 67), as follows.

Option for draft provision 4

"*1. The competent authority of [*legislative provision*: this State][* convention*: the Contracting State where the application [under article 3] is made] may*

[9] Ibid.

refuse to grant relief [under article 3] at the request of the party against whom the application is made, only if that party furnishes to the competent authority proof that: (...)

"(f) The settlement agreement has been approved by a court [prior to any application under article 3] and is enforceable [in the same manner] as a judgment under the law of the State of that court;

"(g) The settlement agreement has been concluded before a court in the course of proceedings [prior to any application under article 3] and is enforceable [in the same manner] as a judgment under the law of the State of that court; or

*"(h) The settlement agreement has been recorded as an arbitral award [prior to any application under article 3] and that award is enforceable under the law of [*legislative provision*: this State][* convention*: the Contracting State where enforcement is sought]."*

- *Invoking a settlement agreement in accordance with draft provision 3(2)*

21. The instrument not only addresses enforcement but also the possibility for a party to invoke a settlement agreement in accordance with draft provision 3(2). The Working Group may wish to consider whether this notion needs to be covered and, if so, whether it would be considered as covered under the term "enforceable as".

- *"[prior to any application under article 3]"*

22. The Working Group may wish to confirm that paragraph 3 shall not allow a party against whom the enforcement of a settlement agreement is sought to, at that stage, seek a consent award or apply to a court for the approval of a settlement agreement as a means to resist enforcement of the underlying settlement agreement. The Working Group may wish to consider inserting the bracketed words "[prior to any application for relief under article 3]" to clarify this point. In addition, this language would make it clear that consideration by a court of an application under draft provision 3 would not fall under paragraph 3(a).

- *Alternative approaches*

23. Some of the alternative approaches discussed at the sixty-sixth session of the Working Group were to (i) include settlement agreements reached during judicial or arbitral proceedings recorded as judicial decisions or arbitral awards within the scope of the instrument to the extent that they were not enforceable under the specific enforcement regime applicable to them (A/CN.9/901, para. 30); (ii) leave it to contracting States to determine the application of the instrument regarding such settlement agreements (A/CN.9/901, paras. 31 and 32); or (iii) leave it to the enforcing authority to determine the applicable enforcement regime (A/CN.9/901, para. 64).

2. Definitions

24. The Working Group may wish to consider the following formulation regarding the definitions:

Draft provision 2 (Definitions)

"1. A settlement agreement is 'international' if:

"(a) At least two parties to the settlement agreement have, at the time of the conclusion of that agreement, their places of business in different States; or

"(b) The State in which the parties to the settlement agreement have their places of business is different from either: (i) The State in which a substantial part of the obligations under the settlement agreement is to be performed; or (ii) The State with which the subject matter of the settlement agreement is most closely connected.

"2. For the purposes of this article:

"(a) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement;

"(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

"3. A settlement agreement is 'in writing' if its content is recorded in any form. The requirement that a settlement agreement be 'in writing' is met by an electronic communication if the information contained therein is accessible so as to be useable for subsequent reference; 'electronic communication' means any communication that the parties make by means of data messages; 'data message' means information generated, sent, received or stored by electronic, magnetic, optical or similar means, including, but not limited to, electronic data interchange (EDI), electronic mail, telegram, telex or telecopy.

"4. 'Conciliation' means a process, regardless of the expression used and irrespective of the basis upon which the process is carried out, whereby parties attempt to reach an amicable settlement of their dispute with the assistance of a third person or persons ('the conciliator') lacking the authority to impose a solution upon the parties to the dispute."

Comments on draft provision 2

Paragraphs 1 and 2

25. Paragraphs 1 and 2 contain a definition of "international" settlement agreement and are modelled on article 1(4) and (5) of the Model Law on Conciliation (A/CN.9/896, paras. 17–31 and 161). Upon considering whether the international nature of settlement agreements should be derived from the international nature of the conciliation (as defined in article 1(4) of the Model Law), the Working Group agreed that the instrument should instead refer to the internationality of "settlement agreements" (A/CN.9/896, paras. 19 and 158–163).

26. Paragraph 1 does not include a provision similar to that found in article 1(6) of the Model Law on Conciliation that "*This Law also applies to a commercial conciliation when the parties agree that the conciliation is international or agree to the applicability of this Law*". The Working Group agreed that the instrument should not contain a similar provision where it takes the form of a convention, but that the matter might need to be considered further where it takes the form of a complement to the Model Law (A/CN.9/896, para. 26).

Paragraph 3

27. Paragraph 3 addresses the requirement found in draft provision 1(1) that settlement agreements should be in writing (A/CN.9/896, paras. 33–38 and 64–66). It may be recalled that the definition of the written requirement incorporates the principle of functional equivalence embodied in UNCITRAL texts on electronic commerce.

Paragraph 4

28. Paragraph 4 contains a definition of "conciliation", based on article 1, paragraphs (3) and (8) of the Model Law (A/CN.9/896, paras. 39–47 and 164–168).

3. Application requirements

29. The Working Group may wish to consider the following formulation regarding the application to the competent authority.

Draft provision 3 (Application)

"1. [Legislative provision:] *A settlement agreement shall be enforced in accordance with the rules of procedure of this State and under the conditions*

laid down in this Law. [Convention:] *Each Contracting State shall enforce a settlement agreement in accordance with its rules of procedure, and under the conditions laid down in this Convention.*

"2. [Legislative provision:] *If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, the party may invoke the settlement agreement in accordance with the rules of procedure of this State and under the conditions laid down in this Law[, in order to conclusively prove that the matter has been already resolved.]* [Convention:] *If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, a Contracting State shall allow the party to invoke the settlement agreement in accordance with its rules of procedure and under the conditions laid down in this Convention[, in order to conclusively prove that the matter has been already resolved].*

*"3. A party relying on a settlement agreement under this [instrument] shall supply to the competent authority of [*legislative provision: *this State] [*convention: *the Contracting State where relief is sought]:*

"(a) The settlement agreement signed by the parties;

"(b) [Evidence][Indication] that the settlement agreement resulted from conciliation, such as by including the conciliator's signature on the settlement agreement, by providing a separate statement by the conciliator attesting to the involvement of the conciliator in the conciliation process or by providing an attestation by an institution that administered the conciliation process; and

"(c) Such other necessary document as the competent authority may require.

"4. The requirement that a settlement agreement shall be signed by the parties or, where applicable, the conciliator, is met in relation to an electronic communication if:

"(a) A method is used to identify the parties or the conciliator and to indicate the parties' or conciliator's intention in respect of the information contained in the electronic communication; and

"(b) The method used is either: (i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or (ii) Proven in fact to have fulfilled the functions described in article 2(3) above, by itself or together with further evidence.

*"5. If the settlement agreement is not in an official language of [*legislative provision: *this State][* convention: *the Contracting State where the application is made], the competent authority may request the party making the application to supply a translation thereof into such language.*

"6 When considering the application, the competent authority shall act expeditiously."

Comments on draft provision 3

Paragraphs 1 and 2

30. Paragraph 1 reflects the principle that the instrument should provide a mechanism whereby a party to a settlement agreement would be able to seek enforcement directly in the State of enforcement without a review or control mechanism in the State where the settlement agreement originated from as a precondition (see A/CN.9/896, para. 83).

31. Paragraph 2, which was addressed under issue 1 of the compromise proposal (A/CN.9/901, para. 52), reflects the understanding of the Working Group that the instrument should address situations where a party might not necessarily be seeking enforcement of a settlement agreement but instead would be seeking to rely

on the settlement agreement in different procedural contexts, including when a settlement agreement might be raised in defence against a claim (A/CN.9/901, para. 54).[10] The Working Group may wish to consider whether there is a need to address set-off claims using a settlement agreement and if so, whether paragraph 2 is broad enough to cover such claims. Regarding drafting, the Working Group may wish to consider whether the last square bracketed text "[in order to conclusively prove that the matter has been already resolved]" could be deleted so as to avoid narrowing the scope of the application (A/CN.9/901, para. 55).

32. It is suggested that, where the instrument takes the form of a convention, paragraphs 1 and 2 should be drafted as an obligation to a contracting State rather than a right of party to invoke a settlement agreement.

33. Regarding placement, the Working Group may wish to consider whether paragraphs 1 and 2 which address contracting States' obligations would be better placed under draft provision 1 where the instrument takes the form of a convention (see above, para. 5), and under a new article provisionally titled "General principles" where the instrument takes the form of a complement to the Model Law (see A/CN.9/WG.II/WP.202/Add.1, para. 6, article 14 of the draft Model Law, as amended).

Paragraphs 3 to 6

34. Paragraphs 3 and 4 deal with the requirements for an application under the instrument. Paragraph 3(a) provides that a settlement agreement shall be signed by the parties (A/CN.9/896, para. 64), and paragraph 4 determines how that requirement would be met in relation to a settlement agreement concluded through electronic communication, in line with UNCITRAL texts on electronic commerce.

35. Paragraph 3(b) corresponds to the understanding of the Working Group that the instrument would need to require, in some fashion, that the settlement agreement indicate that a conciliator was involved in the process and that the settlement agreement resulted from conciliation (A/CN.9/896, paras. 70–75 and 186–190). It was generally felt by the Working Group that such an indication would distinguish a settlement agreement from other contracts and provide for legal certainty, facilitate the enforcement procedure and prevent possible abuse. However, it was also emphasized that the additional requirement should not be burdensome, should be kept simple to the extent possible (see A/CN.9/896, paras. 40 and 70), and that the means of proving that a conciliator was involved should not be construed as an exhaustive list (A/CN.9/896, para. 188).

36. Paragraphs 3(c) and 6 correspond to suggestions that the competent authority should have the ability to require additional documents that would be necessary and should act expeditiously (A/CN.9/896, paras. 82 and 183). By way of background, the Working Group considered whether the instrument should provide that the settlement agreement should be in one single document, or in a complete set of documents. After discussion, there was general support for not including such a requirement in the instrument, but instead providing that the competent authority should have, at the stage of the application, the ability to require from the parties documents that would be strictly necessary (A/CN.9/896, paras. 67–69 and 177–185).

Additional matter – Informal processes

37. The Working Group may wish to consider whether the form requirements of settlement agreements in draft provisions 1(1) and 2, as well as the application process in draft provision 3, sufficiently ensures that settlement agreements resulting from

[10] The Working Group may wish to note the following alternative drafting proposal discussed at its sixty-fifth session: "*A settlement agreement shall be enforced in accordance with the rules of procedure of [*legislative provision: *this State][*convention: *the State where enforcement is sought] and shall be given effect in defence against any claim to the same extent as in enforcement proceedings*" (A/CN.9/896, para. 152).

informal processes are excluded (A/CN.9/867, paras. 117 and 121; A/CN.9/896, paras. 42–44 and 164–167).

38. The Working Group may wish to consider further the suggestion that flexibility should be provided to States to broaden the scope of the instrument to include agreements between the parties not necessarily reached through conciliation. For example, a reservation (where the instrument takes the form of a convention), or a footnote (where it takes the form of model legislative provisions) could indicate that the application of the instrument extends to agreements settling a dispute reached without the assistance of a third person (A/CN.9/896, paras. 40 and 41). A reservation could read as follows: "*A Contracting State may declare that it shall apply this Convention to international agreements concluded in writing by parties to resolve a commercial dispute regardless of whether [a conciliator assisted the parties in resolving their dispute][the agreements resulted from conciliation]. As a result, articles 2(4), 3(3)(b), 4(1)((d) and (e) would not apply*" A footnote in the model legislative text could read as follows: "*A State may consider applying this Section to international agreements concluded in writing by parties to resolve a commercial dispute, irrespective of whether such agreements resulted from conciliation. Adjustments would need to be made to relevant articles*".

4. Defences

39. The Working Group may wish to consider the following formulation regarding the defences:

Draft provision 4 (Grounds for refusing to grant relief)

"*1. The competent authority of [*legislative provision*: this State][*convention*: the Contracting State where the application [under article 3] is made] may refuse to grant relief [under article 3] at the request of the party against whom the application is made, only if that party furnishes to the competent authority proof that:*

"(a) A party to the settlement agreement was under some incapacity; or

"(b) The settlement agreement is not binding or is not a final resolution of the dispute covered by the settlement agreement; or the obligations in the settlement agreement have been subsequently modified by the parties or have been performed; or the conditions set forth in the settlement agreement have not been met for a reason other than a failure by the party against whom the settlement agreement is invoked and, therefore, have not yet given rise to the obligations of that party; or

*"(c) The settlement agreement is null and void, inoperative or incapable of being performed under the law to which the parties have subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority of [*option 1, legislative provision*: this State][*option 2, convention*: the Contracting State where the application under draft provision 3 is made]; or*

"(d) There was a serious breach by the conciliator of standards applicable to the conciliator or the conciliation, without which breach that party would not have entered into the settlement agreement; or

"(e) There was a failure by the conciliator to disclose circumstances to the parties that raise justifiable doubts as to the conciliator's impartiality or independence and such failure to disclose had a material impact or undue influence on a party, without which failure that party would not have entered into the settlement agreement.

*"2. The competent authority of [*legislative provision*: this State] [*convention*: the Contracting State where the application [under article 3] is made] may also refuse to grant relief [under article 3] if it finds that:*

"(a) Granting relief would be contrary to the public policy of that State; or

"(b) The subject matter of the dispute is not capable of settlement by conciliation under the law of that State."

Comments on draft provision 4

- *Chapeau*

40. The chapeau to draft provision 4 (1) and (2) was addressed under issue 1 of the compromise proposal (A/CN.9/901, para. 52). The phrase "grant relief" intends to encompass both the right of a party to seek enforcement and to invoke a settlement agreement under draft provision 3 (A/CN.9/901, para. 57). The Working Group may wish to consider whether the phrase "under article 3" needs to be repeated in the chapeau.

- *Paragraph 1, subparagraph (a)*

41. Subparagraph (a) reflects the agreement in substance by the Working Group (A/CN.9/896, para. 85).

- *Paragraph 1, subparagraph (b)*

42. Subparagraph (b) refers to various grounds that relate to the settlement agreement. Regarding the ground that the settlement agreement is not binding or is not a final resolution of the dispute covered by the settlement agreement, the Working Group agreed to retain that ground, in particular to avoid situations where parties would submit a draft agreement, or a text that would not be a final resolution between the parties of the dispute (A/CN.9/896, paras. 88 and 89). Regarding the ground that the settlement agreement had been subsequently modified by the parties, the Working Group generally agreed that that ground should be retained, and could possibly be merged with the ground that the obligations in the settlement agreement have been performed (A/CN.9/896, paras. 90 and 98). Regarding the last ground that the conditions stipulated in the agreement were not met, it is clarified that the ground would apply only if the conditions were not met or if the obligations had not been performed or complied with by the applicant (A/CN.9/896, paras. 91 and 98).

- *Paragraph 1, subparagraph (c)*

43. Subparagraph (c) is based on article II (3) and article V (1)(a) of the New York Convention. It seeks to reflect the understanding of the Working Group that the instrument should not give the competent authority the ability to interpret the validity defence to impose requirements in domestic law, and that consideration of the validity of settlement agreements by the competent authority should not extend to form requirements (A/CN.9/896, paras. 99–102).

- *Paragraph 1, subparagraphs (d) and (e)*

44. Subparagraph (d) addresses the impact of serious breach by the conciliator of standards applicable to the conciliator or the conciliation at the enforcement stage (A/CN.9/896, paras. 103–109 and 191–194, A/CN.9/901, paras. 41–50 and 72–88). Subparagraph (e) addresses the impact of failure by the conciliator to disclose information on circumstances likely to give rise to justifiable doubts regarding impartiality or independence at the enforcement stage (A/CN.9/896, paras. 104, 105, 108 and 194, A/CN.9/901, paras. 41–50 and 72–88). Both provisions, which were addressed under issue 4 of the compromise proposal (A/CN.9/901, para. 52), reflect the understanding of the Working Group that the defences should be limited to instances where the conciliator's breach or failure had a direct impact on the party's decision to enter into the settlement agreement (A/CN.9/896, paras. 107 and 194).

45. The Working Group may wish to consider the views expressed that subparagraphs (d) and (e) would run contrary to the objective of the instrument and

were not necessary (A/CN.9/901, paras. 46–50 and 76), on the basis that: (i) those matters were covered under other grounds for refusing enforcement in subparagraph (c) and paragraph 2(a) and any material accompanying the instrument could clarify that point; (ii) subparagraphs (d) and (e) would require the enforcing authority to take into account relevant domestic standards on conduct of the conciliator and the conciliation process, and to inquire about a breach or a failure which did not necessarily take place in that jurisdiction; (iii) including non-disclosure by a conciliator as a defence to resist enforcement would run contrary to the approach adopted in the Model Law on Conciliation (see paragraph 52 of the Guide to Enactment and Use of the Model Law on Conciliation); (iv) inclusion of subparagraphs (d) and (e) may deter the utility of the instrument, as it could create ancillary disputes; and (v) conciliators were bound by ethical duties and professional standards and subparagraphs (d) and (e) would be superfluous.

46. Subparagraphs (d) and (e) reflect a compromise among the divergence in views and the drafting proposal that the Working Group agreed to consider further (A/CN.9/901, paras. 52, 72, 79, and 81–88). The proposal had been made on the basis that there was merit in retaining subparagraphs (d) and (e), which were essentially an extension of subparagraph (c). They dealt with a situation where a conduct by the conciliator had an impact on the parties entering into the agreement, which could lead to the settlement agreement being null and void. It was explained that subparagraphs (d) and (e) would not impact the confidential nature of conciliation and that the enforcing authority would generally not be expected to inquire into the details of the process (A/CN.9/901, paras. 82). It was further explained that subparagraphs (d) and (e) provided for an objective threshold by limiting the grounds to when a breach or a failure to disclose had an impact on the parties entering into the agreement (A/CN.9/901, para. 84).

47. With respect to subparagraph (d), the Working Group highlighted the need to clarify the scope and the meaning of "standards applicable" to the conciliator and the conciliation process (A/CN.9/901, paras. 87 and 88). Noting that such applicable standards might change over time, the Working Group may wish to consider clarifying that standards applicable may take different forms such as the law governing conciliation and codes of conduct, including those developed by professional associations. Such standards contain different elements such as independence, impartiality, confidentiality and fair treatment (see for instance article 6(3) of the UNCITRAL Model Law on Conciliation, paragraph 55 of the Guide to Enactment and Use of the UNCITRAL Model Law on Conciliation, article 7 of the UNCITRAL Conciliation Rules).

48. Subparagraph (e) was retained in addition to subparagraph (d), as it would allow the competent authority to refuse enforcement even when the applicable standard did not necessarily include a disclosure obligation (A/CN.9/901, paras. 78 and 85). The Working Group may wish to confirm this approach in light of questions raised about the need to retain subparagraph (e) (A/CN.9/901, paras. 49, 73 and 76) and the fact that it would, in essence, introduce a disclosure obligation for the conciliator into a conciliation process, which may be more flexible in that respect.

- *Paragraph 2*

49. Paragraph 2 covers situations where the competent authority would consider the defences on its own initiative, and reflects the agreement in substance by the Working Group (A/CN.9/896, paras. 110–112).

5. Relationship of the enforcement process to judicial or arbitral proceedings

50. The Working Group may wish to consider the following formulation regarding parallel applications or claims:

Draft provision 5 (Parallel applications or claims)

> *"If an application or a claim relating to a settlement agreement has been made to a court, an arbitral tribunal or any other competent authority which may affect enforcement of that settlement agreement, the competent authority of*

*[*option 1, legislative provision*: this State][*option 2, convention*: the Contracting State where the enforcement of the settlement agreement is sought] may, if it considers it proper, adjourn the decision on the enforcement of the settlement agreement and may also, on the request of a party, order the other party to give suitable security."*

Comments on draft provision 5

51. Draft provision 5 addresses how a competent authority would treat a situation where an application (or claim), which might impact the enforcement, has been made to a court, an arbitral tribunal or any other authority. The Working Group generally agreed that it would be appropriate for the competent authority to be given the discretion to adjourn the enforcement process if an application (or claim) relating to the settlement agreement had been made to a court, arbitral tribunal or any other authority, which might affect the enforcement process (A/CN.9/896, paras. 122–125). It may be noted that draft provision 5 does not deal with applications referred to in draft provision 3(2).

6. Other matters

(a) "More-favourable-right" provision

52. The proposal for a provision mirroring article VII(1) of the New York Convention,[11] which would permit application of more favourable national legislation or treaties to enforcement, was considered by the Working Group. There was general support for including such a provision in the instrument, as a separate provision, even though reservation was expressed (A/CN.9/896, paras. 154, 156, and 204; A/CN.9/901, paras. 65, 66 and 71). The Working Group may wish to consider the following draft formulation: *"This [instrument] shall not deprive any interested party of any right it may have to avail itself of a settlement agreement in the manner and to the extent allowed by the law or the treaties of the Contracting State where such settlement agreement is sought to be relied upon."*

53. The Working Group may wish to confirm the following: (i) whether a more-favourable-right provision would be required only where the instrument takes the form of a convention (because under a legislative provision, States would have the flexibility to address the issue by expanding the scope provision); and (ii) whether the more-favourable-right provision could allow State courts to apply the convention to settlement agreements explicitly excluded from the scope of the convention.

(b) States and other public entities

54. Regarding settlement agreements involving States and other public entities, the Working Group reaffirmed its decision that such agreements should not be automatically excluded from the scope of the instrument (see A/CN.9/896, paras. 61 and 62), and could be addressed through a declaration where the instrument takes the form of a convention. Where the instrument takes the form of a complement to the Model Law, it is for each State to decide the extent to which such agreements would fall under the enacting legislation. The Working Group may wish to consider the following formulation for a declaration on the application of the instrument to settlement agreements concluded by States and other public entities where the instrument takes the form of a convention (A/CN.9/862, para. 62): *"A Contracting State may declare that [*option 1: *it shall apply][*option 2: *it shall not apply] this Convention to settlement agreements to which it is a party, or to which any governmental agencies or any person acting on behalf of a governmental agency is a party, only to the extent specified in the declaration."*

[11] Article VII of the New York Convention provides that: "The provisions of the present Convention shall not affect the validity of multilateral or bilateral agreements concerning the recognition and enforcement of arbitral awards entered into by the Contracting States nor deprive any interested party of any right he may have to avail himself of an arbitral award in the manner and to the extent allowed by the law or the treaties of the country where such award is sought to be relied upon."

(c) Declaration by contracting States on application of the Convention based on parties' agreement

55. During the previous discussions at the Working Group, it was suggested that the question whether the application of the instrument would depend on the consent of the parties to the settlement agreement need not necessarily be dealt with in the instrument, but could be left to States when adopting or implementing the instrument (A/CN.9/896, paras. 130 and 196; A/CN.9/901, paras. 39 and 40). This matter was dealt with under issue 3 of the compromise proposal (A/CN.9/901, para. 52). It may be envisaged that States that wish to incorporate such a mechanism could make a declaration to that effect. The Working Group may wish to consider the following formulation: "*A Contracting State may declare that it shall apply this Convention only to the extent that the parties to the settlement agreement have agreed to the application of the Convention*." Where the instrument takes the form of a complement to the Model Law, an opt-in mechanism could be included as an option for States to consider when enacting the Model Law (A/CN.9/896, para. 196, A/CN.9/901, para. 39).

56. The Working Group may wish to further clarify how the reservation would operate. For example, it may be clarified whether a State, not making this reservation upon becoming a Party to the Convention, could apply the Convention automatically even when the parties to the settlement agreement have opted-out of the Convention.

57. The Working Group may wish to consider that it would generally be in the interest of a State to make that reservation to protect its businesses' interests. It is likely that enforcement of settlement agreements involving businesses in State A would be sought in State A. By making the reservation, State A could protect the interest of those businesses, particularly those that had not agreed to the application of the convention. This might have a domino effect in almost all States making the reservation.

(A/CN.9/WG.II/WP.202/Add.1) (Original: English)

Note by the Secretariat on settlement of commercial disputes: international commercial conciliation: preparation of an instrument on enforcement of international commercial settlement agreements resulting from conciliation

ADDENDUM

Contents

II. Draft instrument on enforcement of international commercial settlement agreements resulting from conciliation

B. Form of the draft instrument

1. The Working Group considered the form of the instrument at its sixty-fifth and sixty-sixth sessions (A/CN.9/896, paras. 135–143 and 211–213, and A/CN.9/901, paras. 52 and 89–93). At the sixty-sixth session of the Working Group, in a spirit of compromise and to accommodate the different levels of experience with conciliation in different jurisdictions, it was agreed that the Working Group would continue to prepare both a model legislative text complementing the Model Law on Conciliation, and a convention, on enforcement of international commercial settlement agreements resulting from conciliation (A/CN.9/901, para. 93). This suggestion was reflected in the compromise proposal, under issue 5 (A/CN.9/901, para. 52). It was further agreed that a possible approach to address the specific circumstance of preparing both a model legislative text and a convention could be to suggest that the General Assembly resolution accompanying those instruments would express no preference on the type of instrument to be adopted by States (A/CN.9/901, para. 93).

2. In that context, the Working Group may wish to consider suggesting the following wording for the resolutions:

3. *"Recalling that the decision of the Commission to prepare a draft [full title of the Convention] and an amendment to the UNCITRAL Model Law on International Commercial Conciliation was intended to accommodate the different levels of experience with conciliation in different jurisdictions, and to provide States with consistent standards to address the cross-border enforcement of international settlement agreements resulting from conciliation, without creating any preference for the instrument to be adopted."*

4. As requested by the Working Group at its sixty-sixth session, this section contains the draft uniform provisions presented in document A/CN.9/WG.II/WP.202 indicating how they are adjusted where the instrument takes the form of a convention and of a complement to the Model Law on Conciliation (A/CN.9/901, paras. 13 and 93). An annex to this note contains a table of concordance between the provisions of the two instruments.

1. Draft convention

5. The draft text of a convention on enforcement of international settlement agreements resulting from conciliation might read as follows:

"**Preamble**

"*The Parties to this Convention*,

"*Recognizing* the value for international trade of methods for settling commercial disputes in which the parties in dispute request a third person or persons to assist them in their attempt to settle the dispute amicably,

"*Noting* that such dispute settlement methods, referred to by expressions such as conciliation and mediation and expressions of similar import, are increasingly used in international and domestic commercial practice as an alternative to litigation,

"*Considering* that the use of such dispute settlement methods results in significant benefits, such as reducing the instances where a dispute leads to the termination of a commercial relationship, facilitating the administration of international transactions by commercial parties and producing savings in the administration of justice by States,

"*Convinced* that the establishment of a framework for international settlement agreements resulting from such dispute settlement methods that is acceptable to States with different legal, social and economic systems would contribute to the development of harmonious international economic relations,

"*Have agreed* as follows:

"**Article 1 – Scope of application**

"1. This Convention applies to international agreements resulting from conciliation and concluded in writing by parties to resolve a commercial dispute ('settlement agreements').

"2. This Convention does not apply to settlement agreements:

"(a) Concluded for personal, family or household purposes by one of the parties (a consumer); or

"(b) Relating to family, inheritance or employment law.

[*Paragraph (3) below as alternative to article 4(1)(f) to (h)*]

"3. This Convention does not apply to settlement agreements that[, prior to any application under article 3]:

"(a) Have been approved by a court, or have been concluded before a court in the course of proceedings, either of which are enforceable [in the same manner] as a judgment [according to the law of the State of that court]; or

"(b) Have been recorded and are enforceable as an arbitral award [according to the law of the Contracting State where enforcement is sought].

"**Article 2 – Definitions**

"1. A settlement agreement is 'international' if:

"(a) At least two parties to the settlement agreement have, at the time of the conclusion of that agreement, their places of business in different States; or

"(b) The State in which the parties to the settlement agreement have their places of business is different from either:

"(i) The State in which a substantial part of the obligations under the settlement agreement is to be performed; or

"(ii) The State with which the subject matter of the settlement agreement is most closely connected.

"2. For the purposes of this article:

"(a) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement;

"(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

"3. A settlement agreement is 'in writing' if its content is recorded in any form. The requirement that a settlement agreement be 'in writing' is met by an electronic communication if the information contained therein is accessible so as to be useable for subsequent reference; 'electronic communication' means any communication that the parties make by means of data messages; 'data message' means information generated, sent, received or stored by electronic, magnetic, optical or similar means, including, but not limited to, electronic data interchange (EDI), electronic mail, telegram, telex or telecopy.

"4. 'Conciliation' means a process, regardless of the expression used and irrespective of the basis upon which the process is carried out, whereby parties attempt to reach an amicable settlement of their dispute with the assistance of a third person or persons ('the conciliator') lacking the authority to impose a solution upon the parties to the dispute.

"**Article 3 – Application**

"1. Each Contracting State shall enforce a settlement agreement in accordance with its rules of procedure, and under the conditions laid down in this Convention.

"2. If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, a Contracting State shall allow the party to invoke the settlement agreement in accordance with its rules of procedure and under the conditions laid down in this Convention[, in order to conclusively prove that the matter has been already resolved].

"3. A party relying on a settlement agreement under this Convention shall supply to the competent authority of the Contracting State where relief is sought:

"(a) The settlement agreement signed by the parties;

"(b) [Evidence][Indication] that the settlement agreement resulted from conciliation, such as by including the conciliator's signature on the settlement agreement, by providing a separate statement by the conciliator attesting to the involvement of the conciliator in the conciliation process or by providing an attestation by an institution that administered the conciliation process; and

"(c) Such other necessary document as the competent authority may require.

"4. The requirement that a settlement agreement shall be signed by the parties or, where applicable, the conciliator, is met in relation to an electronic communication if:

"(a) A method is used to identify the parties or the conciliator and to indicate the parties' or conciliator's intention in respect of the information contained in the electronic communication; and

"(b) The method used is either:

"(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

"(ii) Proven in fact to have fulfilled the functions described in article 2(3) above, by itself or together with further evidence.

"5. If the settlement agreement is not in the official language(s) of the Contracting State where the application is made, the competent authority may request the party making the application to supply a translation thereof into such language.

"6. When considering the application, the competent authority shall act expeditiously.

"**Article 4 – Grounds for refusing to grant relief**

"1. The competent authority of the Contracting State where the application [under article 3] is made may refuse to grant relief [under article 3] at the request of the party against whom the application is made, only if that party furnishes to the competent authority proof that:

"(a) A party to the settlement agreement was under some incapacity; or

"(b) The settlement agreement is not binding or is not a final resolution of the dispute covered by the settlement agreement; or the obligations in the settlement agreement have been subsequently modified by the parties or have been performed; or the conditions set forth in the settlement agreement have not been met for a reason other than a failure by the party against whom the settlement agreement is invoked and, therefore, have not yet given rise to the obligations of that party; or

"(c) The settlement agreement is null and void, inoperative or incapable of being performed under the law to which the parties have subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority of the Contracting State where the application under article 3 is made; or

"(d) There was a serious breach by the conciliator of standards applicable to the conciliator or the conciliation, without which breach that party would not have entered into the settlement agreement; or

"(e) There was a failure by the conciliator to disclose circumstances to the parties that raise justifiable doubts as to the conciliator's impartiality or independence and such failure to disclose had a material impact or undue influence on a party, without which failure that party would not have entered into the settlement agreement[.][; or]

[*Subparagraphs (f) to (h) below as alternative to article 1 (3)*]

"(f) The settlement agreement has been approved by a court [prior to any application under article 3] and is enforceable [in the same manner] as a judgment under the law of the State of that court;

"(g) The settlement agreement has been concluded before a court in the course of proceedings [prior to any application under article 3] and is enforceable [in the same manner] as a judgment under the law of the State of that court; or

"(h) The settlement agreement has been recorded as an arbitral award [prior to any application under article 3] and that award is enforceable under the law of the Contracting State where enforcement is sought."

"2. The competent authority of the Contracting State where the application [under article 3] is made may also refuse to grant relief [under article 3] if it finds that:

"(a) Granting relief would be contrary to the public policy of that State; or

"(b) The subject matter of the dispute is not capable of settlement by conciliation under the law of that State.

"**Article 5 – Parallel applications or claims**

"If an application or a claim relating to a settlement agreement has been made to a court, an arbitral tribunal or any other competent authority which may affect enforcement of that settlement agreement, the competent authority of the Contracting State where the enforcement of the settlement agreement is sought may, if it considers it proper, adjourn the decision on the enforcement of the settlement agreement and may also, on the request of a party, order the other party to give suitable security.

"**Article 6 – Other laws or treaties**

"This Convention shall not deprive any interested party of any right it may have to avail itself of a settlement agreement in the manner and to the extent allowed by the law or the treaties of the Contracting State where such settlement agreement is sought to be relied upon.

"**Article 7 – Reservations**

"1. A Contracting State may declare that:

"(a) [Option 1: It shall apply][Option 2: It shall not apply] this Convention to settlement agreements to which it is a party, or to which any governmental agencies or any person acting on behalf of a governmental agency is a party, only to the extent specified in the declaration;

"(b) It shall apply this Convention to international agreements concluded in writing by parties to resolve a commercial dispute regardless of whether [a conciliator assisted the parties in resolving their dispute][the agreements resulted from conciliation]; as a result, articles 2(4), 3(3)(b), 4(1)(d) and (e) do not apply;

"(c) It shall apply this Convention only to the extent that the parties to the settlement agreement have agreed to the application of the Convention.

"2. No reservations are permitted except those expressly authorized in this article.

"3. Reservations may be made by a Contracting State at any time. Reservations made at the time of signature shall be subject to confirmation upon ratification, acceptance or approval. Such reservations shall take effect simultaneously with the entry into force of this Convention in respect of the Contracting State concerned. Reservations made at the time of ratification, acceptance or approval of this Convention or accession thereto shall take effect simultaneously with the entry into force of this Convention in respect of the Contracting State concerned. Reservations deposited after the entry into force of the Convention for that Party shall take effect [three] months after the date of its deposit.

"4. Reservations and their confirmations shall be deposited with the depositary.

"5. Any Contracting State that makes a reservation under this Convention may withdraw it at any time. Such withdrawals are to be deposited with the depositary, and shall take effect three months after deposit."

"**Article 8 – Depositary**

"The Secretary-General of the United Nations is hereby designated as the depositary of this Convention.

"**Article 9 – Signature, ratification, acceptance, approval, accession**

"1. This Convention is open for signature by all States in [...] on [...], and thereafter at United Nations Headquarters in New York.

"2. This Convention is subject to ratification, acceptance, or approval by the signatories.

"3. This Convention is open for accession by all States that are not signatories as from the date it is open for signature.

"4. Instruments of ratification, acceptance, approval, or accession are to be deposited with the depositary.

"**Article 10 – Participation by regional economic integration organizations**

"1. A regional economic integration organization that is constituted by sovereign States and has competence over certain matters governed by this Convention may similarly sign, ratify, accept, approve, or accede to this Convention. The regional economic integration organization shall in that case have the rights and obligations of a Contracting State, to the extent that that organization has competence over matters governed by this Convention. Where the number of Contracting States is relevant in this Convention, the regional economic integration organization shall not count as a Contracting State in addition to its member States that are Contracting States.

"2. The regional economic integration organization shall, at the time of signature, ratification, acceptance, approval, or accession, make a declaration to the depositary specifying the matters governed by this Convention in respect of which competence has been transferred to that organization by its member States. The regional economic integration organization shall promptly notify the depositary of any changes to the distribution of competence, including new transfers of competence, specified in the declaration under this paragraph.

"3. Any reference to a "Contracting State", "Contracting States", a "State" or "States" in this Convention applies equally to a regional economic integration organization where the context so requires.

"4. This Convention shall not prevail over conflicting rules of a regional economic integration organization if, under article 3, the application is submitted to a competent authority of a State that is a member of such an organization and all the States relevant under article 2(1) are members of any such organization.

"**Article 11 – Effect in domestic territorial units**

"1. If a Contracting State has two or more territorial units in which different systems of law are applicable in relation to the matters dealt with in this Convention, it may, at the time of signature, ratification, acceptance, approval, or accession, declare that this Convention is to extend to all its territorial units or only to one or more of them, and may amend its declaration by submitting another declaration at any time.

"2. These declarations are to be notified to the depositary and are to state expressly the territorial units to which the Convention extends.

"3. If, by virtue of a declaration under this article, this Convention extends to one or more but not all of the territorial units of a Contracting State, and if the place of business of a party is located in that State, this place of business, for the purposes of this Convention, is considered not to be in a Contracting State, unless it is in a territorial unit to which the Convention extends.

"4. If a Contracting State makes no declaration under paragraph 1 of this article, the Convention is to extend to all territorial units of that State.

"**Article 12 – Entry into force**

"1. This Convention enters into force on the first day of the month following the expiration of three months after the date of deposit of the [third] instrument of ratification, acceptance, approval, or accession.

"2. When a State ratifies, accepts, approves, or accedes to this Convention after the deposit of the [third] instrument of ratification, acceptance, approval, or accession, this Convention enters into force in respect of that State on the first day of the month following the expiration of three months after the date of the deposit of its instrument of ratification, acceptance, approval, or accession.

"**Article 13 – Amendment**

"1. Any Contracting State may propose an amendment to the present Convention by submitting it to the Secretary-General of the United Nations. The Secretary-General shall thereupon communicate the proposed amendment to the Contracting States to this Convention with a request that they indicate whether they favour a conference of Contracting States for the purpose of considering and voting upon the proposal. In the event that within four months from the date of such communication at least one third of the Contracting States favour such a conference, the Secretary-General shall convene the conference under the auspices of the United Nations.

"2. The conference of Contracting States shall make every effort to achieve consensus on each amendment. If all efforts at consensus are exhausted and no consensus is reached, the amendment shall, as a last resort, require for its adoption a two-thirds majority vote of the Contracting States present and voting at the conference.

"3. An adopted amendment shall be submitted by the Secretary-General of the United Nations to all the Contracting States for ratification, acceptance, or approval.

"4. An adopted amendment enters into force six months after the date of deposit of the third instrument of ratification, acceptance, or approval. When an amendment enters into force, it shall be binding on those Contracting States that have expressed consent to be bound by it.

"5. When a State ratifies, accepts, or approves an amendment that has already entered into force, the amendment enters into force in respect of that state six months after the date of the deposit of its instrument of ratification, acceptance, or approval.

"6. Any State that becomes a Contracting State after the entry into force of the amendment shall be considered as a Contracting State to the Convention as amended.

"**Article 14 – Denunciations**

"1. A Contracting State may denounce this Convention by a formal notification in writing addressed to the depositary.

"2. The denunciation takes effect on the first day of the month following the expiration of twelve months after the notification is received by the depositary. Where a longer period for the denunciation to take effect is specified in the notification, the denunciation takes effect upon the expiration of such longer period after the notification is received by the depositary. The Convention shall continue to apply to applications under article 3 that have already been made before the denunciation takes effect.

"DONE at ---- this [X] day of [X] ------, in a single original, of which the Arabic, Chinese, English, French, Russian, and Spanish texts are equally authentic."

2. Draft Model Law on International Commercial Conciliation, as amended

6. The Working Group may wish to consider whether the provisions of the Model Law on Conciliation could possibly be presented in three sections, as follows: section 1 on General Provisions would contain articles 1 to 3 of the Model Law, as completed by new definitions (modifications to these provisions are underlined in the draft below); section 2 on Conciliation Procedure would contain articles 4 to 13 of the

Model Law; and section 3 on Settlement Agreements would contain the new provisions, replacing article 14. The Working Group may wish to note that additional adjustments to the Model Law might be required based on further consideration of issues that remain to be decided and that, at this stage, the presentation below may not be exhaustive regarding the amendments that might need to be made to the Model Law. Following this approach, the Model Law, as amended, would read as follows.

"**Section 1 – General provisions**

"**Article 1. Scope of application and definitions**

"1. This Law applies to international* commercial** conciliation.[1]

"2. For the purposes of this Law, 'conciliator' means a sole conciliator or two or more conciliators, as the case may be.

"3. For the purposes of this Law, "conciliation" means a process, whether referred to by the expression conciliation, mediation or an expression of similar import, whereby parties request a third person or persons ('the conciliator') to assist them in their attempt to reach an amicable settlement of their dispute arising out of or relating to a contractual or other legal relationship. The conciliator does not have the authority to impose upon the parties a solution to the dispute.

"4. A [conciliation or a settlement agreement] is international if:

"(a) At least two parties to the conciliation have, at the time of the conclusion of the settlement agreement, their places of business in different States; or

"(b) The State in which the parties have their places of business is different from either:

"(i) The State in which a substantial part of the obligations of the commercial relationship is to be performed; or

"(ii) The State with which the subject matter of the dispute is most closely connected.

"5. For the purposes of this article:

"(a) If a party has more than one place of business, the place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement; ~~the agreement to conciliate~~;

"(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

"[6. This Law also applies to a commercial conciliation when the parties agree that the conciliation is international or agree to the applicability of this Law.]

"7. The parties are free to agree to exclude the applicability of this Law.

---

[1] Footnotes to article 1(1):

* States wishing to enact this Model Law to apply to domestic as well as international conciliation may wish to consider the following changes to the text:
- Delete the word "international" in paragraph 1 of article 1; and
- Delete paragraphs 4, 5 and 6 of article 1.

** The term "commercial" should be given a wide interpretation so as to cover matters arising from all relationships of a commercial nature, whether contractual or not. Relationships of a commercial nature include, but are not limited to, the following transactions: any trade transaction for the supply or exchange of goods or services; distribution agreement; commercial representation or agency; factoring; leasing; construction of works; consulting; engineering; licensing; investment; financing; banking; insurance; exploitation agreement or concession; joint venture and other forms of industrial or business cooperation; carriage of goods or passengers by air, sea, rail or road.

"8. Subject to the provisions of paragraph 9 of this article, this Law applies irrespective of the basis upon which the conciliation is carried out, including agreement between the parties whether reached before or after a dispute has arisen, an obligation established by law, or a direction or suggestion of a court, arbitral tribunal or competent governmental entity.

"9. *Option 1*: This Law does not apply to:

(a) Cases where a judge or an arbitrator, in the course of judicial or arbitral proceedings, attempts to facilitate a settlement;[2]

"(b) Settlement agreements concluded for personal, family or household purposes by one of the parties (a consumer);

"(c) Settlement agreement relating to family, inheritance or employment law;

"(d) Settlement agreements concluded by a State or any governmental agencies or any person acting on behalf of a governmental agency; and

"(e) […].

"9. *Option 2*:[3] This Law shall not affect any other law of this State by virtue of which certain disputes may not be submitted to conciliation or may be submitted to conciliation only according to provisions other than those of this Law.

"10. A 'settlement agreement' is an international agreement resulting from conciliation and concluded in writing by parties to resolve a commercial dispute.

"11. For the purposes of this article, a settlement agreement is 'in writing' if its content is recorded in any form. The requirement that a settlement agreement be 'in writing' is met by an electronic communication if the information contained therein is accessible so as to be useable for subsequent reference; 'electronic communication' means any communication that the parties make by means of data messages; 'data message' means information generated, sent, received or stored by electronic, magnetic, optical or similar means, including, but not limited to, electronic data interchange (EDI), electronic mail, telegram, telex or telecopy.

"**Article 2. Interpretation**

"1. In the interpretation of this Law, regard is to be had to its international origin and to the need to promote uniformity in its application and the observance of good faith.

"2. Questions concerning matters governed by this Law which are not expressly settled in it are to be settled in conformity with the general principles on which this Law is based.

"**Article 3. Variation by agreement**

"Except for the provisions of article 2 [and] article 6, paragraph 3, [and section 3][4] the parties may agree to exclude or vary any of the provisions of this Law.

---

[2] Article 1(9)(a) might need to be adjusted to take account of the decision of the Working Group on the matter of settlement agreements concluded in the course of judicial or arbitral proceedings (see A/CN.9/WG.II/WP.202, paras. 8–23).

[3] A similar provision can be found in article 1(5) of the UNCITRAL Model Law on International Commercial Arbitration.

[4] The Working Group may wish to consider whether to indicate that an enacting State may consider the possibility of section 3 being mandatory. Draft provision 1 (7) would then need to be adjusted accordingly.

"**Section 2 – Conciliation Procedure**

[*Article 4 to Article 13 unchanged*]

"**Section 3 – Settlement Agreements**[***5]

"**Article 14. General principles**

"1. A settlement agreement shall be enforced in accordance with the rules of procedure of this State, and under the conditions laid down in this Law.

"2. If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, the party may invoke the settlement agreement in accordance with the rules of procedure of this State and under the conditions laid down in this Law[, in order to conclusively prove that the matter has been already resolved].

[*Article 14 (3) as alternative to article 16(1)(f) to (h)*]

"3. The procedure in this section does not apply to settlement agreements that[, prior to any application under article 15]:

"(a) have been approved by a court, or have been concluded before a court in the course of proceedings, either of which are enforceable [in the same manner] as a judgment [according to the law of the State of that court]; or

"(b) have been recorded and are enforceable as an arbitral award according to the law of this State.

"4. The functions referred to in this Section shall be performed by […] (referred to as the 'competent authority') [Each State enacting the Model Law specifies the court, courts or other competent authorities to perform the functions].

"**Article 15. Application**

"1. A party relying on a settlement agreement under this Section shall supply to the competent authority of this State:

"(a) The settlement agreement signed by the parties;

"(b) [Evidence][Indication] that the settlement agreement resulted from conciliation, such as by including the conciliator's signature on the settlement agreement, by providing a separate statement by the conciliator attesting to the involvement of the conciliator in the conciliation process or by providing an attestation by an institution that administered the conciliation process; and

"(c) Such other necessary document as the competent authority may require.

"2. The requirement that a settlement agreement shall be signed by the parties or, where applicable, the conciliator is met in relation to an electronic communication if:

"(a) A method is used to identify the parties or the conciliator and to indicate the parties' or conciliator's intention in respect of the information contained in the electronic communication; and

"(b) The method used is either:

[5] [Footnote to the title of section 3: "***A State may consider enacting this Section so as to apply it to agreements settling a dispute, irrespective of whether they resulted from conciliation. Adjustments would then have to be made to relevant provisions of section 3 referring to "conciliation" or "conciliator". Articles 15(1)(b) and 16(1)(d) and (e) would need to be deleted.]

"(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

"(ii) Proven in fact to have fulfilled the functions described in article 1(11) above, by itself or together with further evidence.

"3. If the settlement agreement is not in the official language(s) of this State, the competent authority may request the party making the application to supply a translation thereof into such language.

"4. When considering the application, the competent authority shall act expeditiously.

"**Article 16. Grounds for refusing to grant relief**

"1. The competent authority of this State may refuse to grant relief [under article 15] at the request of the party against whom the application is made, only if that party furnishes to the competent authority proof that:

"(a) A party to the settlement agreement was under some incapacity; or

"(b) The settlement agreement is not binding or is not a final resolution of the dispute covered by the settlement agreement; or the obligations in the settlement agreement have been subsequently modified by the parties or have been performed; or the conditions set forth in the settlement agreement have not been met for a reason other than a failure by the party against whom the settlement agreement is invoked, and therefore, have not yet given rise to the obligations of that party; or

"(c) The settlement agreement is null and void, inoperative or incapable of being performed under the law to which the parties have subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority of this State; or

"(d) There was a serious breach by the conciliator of standards applicable to the conciliator or the conciliation, without which breach that party would not have entered into the settlement agreement; or

"(e) There was a failure by the conciliator to disclose circumstances to the parties that raise justifiable doubts as to the conciliator's impartiality or independence and such failure to disclose had a material impact or undue influence on a party, without which failure that party would not have entered into the settlement agreement[.][; or]

[*Subparagraphs (f) to (h) below as alternative to article 14 (3)*]

"(f) The settlement agreement has been approved by a court [prior to any application under article 15] and is enforceable [in the same manner] as a judgment under the law of the State of that court;

"(g) The settlement agreement has been concluded before a court in the course of proceedings [prior to any application under article 15] and is enforceable [in the same manner] as a judgment under the law of the State of that court; or

"(h) The settlement agreement has been recorded as an arbitral award [prior to any application under article 15] and that award is enforceable under the law of this State."

"2. The competent authority of this State may also refuse to grant relief [under article 3] if it finds that:

"(a) Granting relief would be contrary to the public policy of this State; or

"(b) The subject matter of the dispute is not capable of settlement by conciliation under the law of this State."

"3. If an application or a claim relating to a settlement agreement has been made to a court, an arbitral tribunal or any other competent authority which may affect enforcement of that settlement agreement, the competent authority of this State may, if it considers it proper, adjourn the decision on the enforcement of the settlement agreement and may also, on the request of a party, order the other party to give suitable security."

Annex

Table of concordance

Draft provisions	*Convention*	*Legislative provisions*
Scope and definition of "settlement agreement"	Article 1(1)	Article 1.10 for the definition of "settlement agreement" (Amendment to article 1 of the Model Law)
Exclusion of family, inheritance employment and consumer law matters	Article 1(2)	Article 1(9) (Amendment to article 1 of the Model Law)
Exclusion of settlement agreements recorded as judicial settlements and arbitral awards	Article 1(3) or 4(1) (f)–(h)	Article 14(3) or 16(1)(f)–(h) (Amendment to article 14 of the Model Law)
Determination of the competent authority	N/A	Article 14(4) (Amendment to article 14 of the Model Law)
Definitions	Article 2	Article 1
Definition of "international"	Article 2(1) and (2)	Article 1(4) and (5) (Amendment to article 1 of the Model Law)
Definition of the "written requirement"	Article 2(3)	Article 1(11) (Amendment to article 1 of the Model Law)
Definition of "conciliation"	Article 2(4)	Current article 1(3) and (8) of the Model Law

C. Note by the Secretariat on settlement of commercial disputes: comments by the Government of the United States of America

(A/CN.9/WG.II/WP.203)

[Original: English]

In preparation for the sixty-seventh session of the Working Group, the Government of the United States of America submitted to the Secretariat comments regarding the preparation of an instrument on enforcement of international settlement agreements resulting from conciliation (see document A/CN.9/WG.II/WP.202 and addendum). The English version of the comments was submitted to the Secretariat on 23 August 2017. The text received by the Secretariat is reproduced as an annex to this note in the form in which it was received.

Annex

1. The United States would like to thank the Secretariat for its continued excellent work on the conciliation project. The working papers for the October 2017 session of Working Group II will greatly aid the Working Group's deliberations, and they also demonstrate that the project is nearing completion. In particular, the compromise that was reached on five key issues during the February 2017 session has resolved the main substantive issues that had remained open. In July, the Commission endorsed the compromise approach and encouraged the Working Group to proceed on that basis. Thus, the United States believes that very little substantive work remains to be done on the draft text provided in the working papers; in general, most of the remaining points to be considered relate to drafting issues. However, we would like to highlight the following three substantive issues for other delegations' consideration:

Article 3(2)

2. In draft Article 3(2), brackets now appear around the final clause–"in order to conclusively prove that the matter has been already resolved." Document referenced A/CN.9/WG.II/WP.202 notes that the Working Group may wish to consider whether this text could be deleted. We believe that retaining this text is important in order to preserve the compromise on this issue that was developed at the February 2017 session. Based on that compromise, the word "recognition" would not be included in this article, as for some legal systems that term has consequences that are not desired here, such as the implication that a court might be precluded from opening a case at all. Instead of referring to recognition, the compromise resulted in a paragraph that would functionally describe the most relevant aspect of recognition (i.e., the use of a settlement agreement as a defence). If the bracketed phrase were omitted, Article 3(2) might be misunderstood as providing only a procedural opportunity to refer to a settlement agreement or introduce it into evidence, without any guarantee that the settlement agreement would not be ultimately disregarded by a court. By contrast, including the bracketed phrase removes the ambiguity regarding the consequences of invoking the settlement agreement as a defence and clarifies that the settlement agreement conclusively proves that the dispute was resolved (subject to the exceptions in Article 4).

Article 4(1)(b)

3. In draft Article 4(1)(b), we suggest deleting the first clause, "The settlement agreement is not binding or is not a final resolution of the dispute covered by the settlement agreement." Although the rest of Article 4(1)(b) should be retained, this first clause would lead to significant uncertainty regarding the scope of the exception and its relationship to other provisions. This instrument itself determines that a settlement agreement is enforceable (and, a fortiori, binding) as long as the requirements of the first few articles are met and no other Article 4 exception applies. Thus, referring separately in Article 4(1) to whether a settlement agreement is "binding" is at best redundant and at worst could generate significant litigation over what could be misunderstood as a subjective test (e.g., permitting a party to argue that it did not "intend" a settlement agreement to be binding despite its signature on the written document). Moreover, the reference to whether a settlement agreement is "final" is also redundant and unnecessary. The following clause in Article 4(1)(b) already addresses the situation in which the obligations in a settlement agreement have been subsequently modified, and the signature requirement in Article 3 already sufficiently ensures that relief can be denied for settlement agreements that were only drafts.

Article 4(1)(c)

4. As explained in paragraph 43 of document A/CN.9/WG.II/WP.202, the Working Group previously determined that the exception contained in Article 4(1)(c) "should not give the competent authority the ability to interpret the validity defence to impose requirements in domestic law, and that consideration of the validity of settlement agreements by the competent authority should not extend to form requirements." We

believe that this principle is sufficiently important that it should be explicitly stated in the text of the instrument. Otherwise, courts might be tempted to use Article 4(1)(c) to find that a settlement agreement is not valid because it did not comply with pre-existing domestic law requirements regarding the formalities for settlement agreements (e.g., a requirement that a settlement agreement be notarized) or because the parties did not follow domestic procedural requirements beyond those contained in Articles 2 or 3 (e.g., domestic law that would only treat a settlement agreement as valid if the conciliation was conducted under a particular set of conciliation rules or if the conciliator met particular licensing requirements). While this instrument would not affect the ability of States to impose regulatory requirements on conciliation occurring within their territory, courts should not be able to invoke Article 4(1)(c) to deny the validity of international settlement agreements on the basis of domestic requirements that go beyond those established in this instrument.

5. Addressing this issue explicitly would also avoid the risk that Article 3(3)(c) could be interpreted to create the same problem. While Article 3(3)(c) permits a court to require submission of additional documents to demonstrate that the requirements of this instrument are met, it should not be misinterpreted to permit a court to use that authority in ways that would effectively circumvent the instrument's limited rules on formalities or the very broad definition of conciliation. (For example, a court should not be able to use Article 3(3)(c) to require a party to submit a copy of the settlement agreement that was notarized at the time of signature, nor to require a party to submit evidence that a conciliation was conducted under certain rules or conducted by a domestically-licensed conciliator.)

6. We therefore propose adding the following text as a new Article 4(3):

> "For greater certainty, nothing in Articles 3(3)(c) or 4(1)(c) or any other provision of this instrument permits a court to deny relief on the basis of domestic law requirements regarding the formalities, or conduct, of the conciliation process, such as requirements regarding notarization of a settlement agreement or use of a particular type of conciliation process or conciliator."

D. Report of the Working Group on Dispute Settlement on the work of its sixty-eighth session (New York, 5–9 February 2018)

(A/CN.9/934)

[Original: English]

Contents

I. Introduction

1. At its forty-eighth session, in 2015, the Commission mandated the Working Group to commence work on the topic of enforcement of settlement agreements to identify relevant issues and develop possible solutions, including the possible preparation of a convention, model provisions or guidance texts. The Commission agreed that the mandate of the Working Group should be broad to take into account the various approaches and concerns.[1] The Working Group commenced its consideration of that topic at its sixty-third session (A/CN.9/861).

2. At its forty-ninth session, in 2016, the Commission had before it the report of the Working Group on the work of its sixty-third and sixty-fourth sessions (A/CN.9/861 and A/CN.9/867, respectively). After discussion, the Commission commended the Working Group for its work on the preparation of an instrument dealing with enforcement of international commercial settlement agreements resulting from conciliation and confirmed that the Working Group should continue its work on the topic.[2]

3. At its fiftieth session, in 2017, the Commission had before it the report of the Working Group on the work of its sixty-fifth and sixty-sixth sessions (A/CN.9/896 and A/CN.9/901, respectively). The Commission took note of the compromise reached by the Working Group at its sixty-sixth session, which addressed five key

[1] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), paras. 135–142.
[2] Ibid., *Seventy-first Session, Supplement No. 17* (A/71/17), paras. 162–165.

issues as a package (A/CN.9/901, para. 52) and expressed support for the Working Group to continue pursuing its work based on that compromise. The Commission expressed its satisfaction with the progress made by the Working Group and requested the Working Group to complete the work expeditiously.[3]

4. At its sixty-seventh session (A/CN.9/929), the Working Group requested the Secretariat to prepare a revised draft of amendments to the UNCITRAL Model Law on International Commercial Conciliation ("Model Law on Conciliation" or "Model Law") and a draft convention, reflecting the deliberations and decisions of the Working Group.

II. Organization of the session

5. The Working Group, which was composed of all States members of the Commission, held its sixty-eighth session in New York, from 5–9 February 2018. The session was attended by the following States members of the Working Group: Argentina, Australia, Austria, Bulgaria, Cameroon, Canada, Chile, China, Colombia, Czechia, Denmark, Ecuador, El Salvador, France, Germany, Greece, Hungary, India, Indonesia, Israel, Italy, Japan, Kuwait, Lebanon, Libya, Malaysia, Mexico, Namibia, Nigeria, Philippines, Republic of Korea, Romania, Russian Federation, Sierra Leone, Singapore, Spain, Switzerland, Thailand, Turkey, United Kingdom of Great Britain and Northern Ireland, United States of America and Venezuela (Bolivarian Republic of).

6. The session was attended by observers from the following States: Algeria, Belgium, Benin, Cyprus, Democratic Republic of the Congo, Dominican Republic, Finland, Iraq, Morocco, Nepal, Netherlands, Norway, Saudi Arabia, Syrian Arab Republic and Viet Nam.

7. The session was also attended by observers from the European Union and the Holy See.

8. The session was also attended by observers from the following invited non-governmental international organizations: American Arbitration Association/International Centre for Dispute Resolution (AAA/ICDR), American Bar Association (ABA), Arab Association for International Arbitration (AAIA), Arbitrators' and Mediators' Institute of New Zealand (AMINZ), Beijing Arbitration Commission/Beijing International Arbitration Center (BAC/BIAC), Belgian Centre for Arbitration and Mediation (CEPANI), Chartered Institute of Arbitrators (CIARB), China International Economic and Trade Arbitration Commission (CIETAC), Commonwealth Secretariat (CS), Forum for International Conciliation and Arbitration (FICA), Hong Kong Mediation Centre (HKMC), Inter-American Bar Association (IABA), Inter-American Commercial Arbitration Commission (IACAC), International Academy of Mediators (IAM), International Institute for Conflict Prevention & Resolution (CPR), International Law Association (ILA), International Mediation Institute (IMI), Jerusalem Arbitration Centre (JAC), Korean Commercial Arbitration Board (KCAB), Law Association for Asia and the Pacific (LAWASIA), Madrid Court of Arbitration, Miami International Arbitration Society (MIAS), Milan Club of Arbitrators (MCA), Moot Alumni Association (MAA), New York International Arbitration Center (NYCIAC), Panel of Recognised International Market Experts in Finance (P.R.I.M.E.), Regional Centre for International Commercial Arbitration, Lagos (RCICAL), Russian Arbitration Association (RAA) and The European Law Students' Association (ELSA).

9. The Working Group elected the following officers:

Chairperson: Ms. Natalie Yu-Lin Morris-Sharma (Singapore)

Rapporteur: Mr. Khory McCormick (Australia)

[3] Ibid., *Seventy-second Session, Supplement No. 17* (A/72/17), paras. 236–239.

10. The Working Group had before it the following documents: (a) provisional agenda (A/CN.9/WG.II/WP.204); and (b) note by the Secretariat regarding the preparation of instruments on enforcement of international commercial settlement agreements resulting from mediation (A/CN.9/WG.II/WP.205 and addendum).

11. The Working Group adopted the following agenda:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Preparation of instruments on enforcement of international commercial settlement agreements resulting from mediation.
5. Future work.
6. Adoption of the report.

III. Deliberations and decisions

12. The Working Group considered agenda item 4 on the basis of the note by the Secretariat (A/CN.9/WG.II/WP.205 and addendum). The deliberations and decisions of the Working Group with respect to item 4 are reflected in chapter IV, and deliberations and decisions with respect to item 5 are reflected in chapter V.

13. At the closing of its deliberations, the Working Group requested the Secretariat: (i) to prepare a draft convention and draft amended Model Law ("draft instruments") based on the deliberations and decisions of the Working Group and, in that respect, to make the necessary drafting adjustments to ensure consistency of language in the text of the draft instruments; and (ii) to circulate the draft instruments to Governments for their comments, with a view to consideration of the draft instruments by the Commission at its fifty-first session, to be held in New York from 25 June–13 July 2018.

IV. International commercial mediation: preparation of instruments on enforcement of international commercial settlement agreements resulting from mediation

14. The Working Group continued its deliberations on the preparation of the draft instruments on the basis of document A/CN.9/WG.II/WP.205 and its addendum.

15. The Working Group agreed to consider issues in the order that they were raised in document A/CN.9/WG.II/WP.205, taking into account the draft text of the instruments as presented in document A/CN.9/WG.II/WP.205/Add.1 and any other drafting suggestions.

A. Terminology

16. The Working Group took note of, and approved the replacement of the term "conciliation" by "mediation" throughout the draft instruments. The Working Group further approved the explanatory text describing the rationale for that change (see A/CN.9/WG.II/WP.205, para. 5), which would be used when revising existing UNCITRAL texts on conciliation.

B. Scope and exclusions

1. Scope of application (articles 1(1) and 3(1) of the draft convention)

17. It was suggested that the use of the term "international agreements" in article 1(1) of the draft convention could raise confusion as that expression often

referred to agreements between States or other international legal persons binding under international law. Based on the shared understanding that the draft convention should avoid using the term "international agreement", it was suggested that articles 1(1) and 3(1) of the draft convention should be merged into a single paragraph, with no reference to the term "international" before the word "agreement". Those suggestions received support.

18. After discussion, the Working Group decided that article 1(1) of the draft convention could read as follows: "This Convention applies to agreements resulting from mediation and concluded in writing by parties to resolve a commercial dispute ('settlement agreements') if, at the time of the conclusion of that agreement: (a) at least two parties to the settlement agreement have their places of business in different States; or (b) the State in which the parties to the settlement agreement have their places of business is different from either: (i) the State in which a substantial part of the obligations under the settlement agreement is performed; or (ii) the State with which the subject matter of the settlement agreement is most closely connected."

19. However, questions were raised on which terminology would be used to refer to settlement agreements that fell under article 1(1), particularly in the title of the draft convention. In addition, a concern was expressed that combining articles 1(1) and 3(1) may introduce a structural flaw as it would result in combining a provision on the scope of application with a provision on the definition of the term "international".

20. Having considered the suggested modifications further, there was general support in the Working Group to merge articles 1(1) and 3(1) of the draft convention. On the other hand, based on a preference to include the term "international settlement agreements" in the title of the draft convention (see para. 143 below), it was suggested that article 1(1) should include a reference to "international" settlement agreements in some fashion, for example, by adding the words "which are international in that" in the chapeau or by including at the end of that paragraph "(hereinafter referred to as "international settlement agreements")". With respect to the latter example, it was pointed out that caution should be taken as the remaining parts of the draft convention simply referred to "settlement agreements". Overall, there was general support for inserting the term "international" in article 1(1) and the Secretariat was requested to formulate a draft for consideration by the Commission.

21. Subject to that change, the Working Group approved in substance article 1(1) of the draft convention as reflected in paragraph 18 above.

22. With regard to the corresponding changes that might need to be implemented in the draft amended Model Law (for example, articles 1(1), 15(1), 15(4) and 15(5)), the Working Group decided to consider them separately at a later stage of its deliberations (see paras. 120–127 below).

2. Exclusions from the scope (articles 1(2) and 1(3) of the draft convention and articles 15(2) and 15(3) of the draft amended Model Law)

23. With regard to the exclusions provided in article 1(2) of the draft convention and article 15(2) of the draft amended Model Law, suggestions to move the phrase "concluded to resolve a dispute" in subparagraph (i) to the chapeau of that paragraph and to delete that phrase entirely did not receive support. It was explained that the two types of exclusion should be treated differently, which was adequately reflected in the current text. After discussion, the Working Group approved in substance article 1(2) of the draft convention and article 15(2) of the draft amended Model Law, unchanged.

24. With respect to a question whether the draft instruments should set forth how a competent authority would ascertain whether a settlement agreement fell within the scope of article 1(3) of the draft convention and article 15(3) of the draft amended Model Law, it was noted that such a procedure would largely depend on the domestic rules of procedure and, therefore, it was not necessary for the draft instruments to prescribe any particular procedure for that purpose. After discussion, the Working

Group approved in substance article 1(3) of the draft convention and article 15(3) of the draft amended Model Law, unchanged.

C. General principles

25. Subject to further deliberations on the appropriateness of using the term "Contracting States" in the draft convention (see paras. 116–118 below), the Working Group approved in substance article 2 of the draft Convention and article 16 of the draft amended Model Law, unchanged.

D. Definitions

26. The Working Group considered article 3 of the draft convention taking into consideration the suggested modification to article 1(1) (see paras. 18, 20 and 21 above). It was clarified that paragraph 1 of article 3 would be deleted resulting in the consequential change of numbering to the remaining paragraphs. It was further agreed that the current paragraph 2 (renumbered paragraph 1) would begin with the words "For the purposes of article 1, paragraph 1 (…)".

1. Notion of "place of business"

27. The Working Group then considered whether the current article 3, paragraph 2 of the draft convention should be expanded to also cover situations where parties would have their places of business in the same State, but the settlement agreement would nevertheless contain an international element, for instance, where the parties' parent company or shareholders were located in different States. It was mentioned that such an approach would reflect current global business practices as well as complex corporate structures. Nonetheless, it was generally felt that it would not be feasible to agree on a simple and clear formulation that would be generally acceptable in different jurisdictions. It was also mentioned that introducing such an expansion could unduly burden the competent authority as it would have to assess the corporate structure of the parties. Furthermore, it was mentioned that introducing such language could pose conflicts with relevant domestic laws and regulations.

28. After discussion, the Working Group approved in substance article 3(2) of the draft Convention and article 15(5) of the draft amended Model Law, unchanged (for further consideration of article 15(5) of the draft amended Model Law, see para. 127 below).

2. Definition of "writing requirement"

29. The Working Group approved in substance article 3(3) of the draft Convention and article 15(6) of the draft amended Model Law, unchanged.

3. Definition of "mediation"

30. With regard to the definition of "mediation" in article 3(4) of the draft convention and article 1(3) of the draft amended Model Law, it was noted that they were formulated slightly differently reflecting the nature of the respective instruments.

31. In that context, a concern was expressed that the phrase "lacking the authority to impose a solution upon the parties to the dispute" might be interpreted to exclude from the scope of the draft instruments circumstances where the appointed mediator was also expected to act as an arbitrator if the parties were not able to reach an amicable solution at the end of the mediation.

32. Acknowledging the growth of such "med-arb" practice, it was suggested that the phrase "at the time of mediation" could be added at the end of those paragraphs to clarify the condition that the mediator was not able to impose a solution was limited to the stage of mediation. While some support was expressed for the clarification, it was mentioned that the addition would be unnecessary as the current text applied to

med-arb situations, and a mediator in a med-arb proceeding would only be able to impose a solution once it started its functions as an arbitrator. Accordingly, the Working Group approved in substance article 3(4) of the draft convention and article 1(3) of the draft amended Model Law, unchanged.

E. Application

1. Notion of application

33. The Working Group considered article 4 of the draft convention and article 17 of the draft revised Model Law, which addressed the requirements for parties to apply to the competent authority.

34. A suggestion was made to revise the chapeau of paragraph 1 so as to include the term “application” in line with the heading of the provisions as follows. Article 4(1) of the draft convention would read: “A party relying on a settlement agreement under this Convention shall make an application to the competent authority of the Contracting State where relief is sought and supply: (…)” ; and article 17(1) of the draft amended Model Law would read: “A party relying on a settlement agreement under this section shall make an application to the competent authority of this State and supply: (...)”.

35. A further suggestion was made that the headings of article 4 of the draft convention and article 17 of the draft amended Model Law should be amended so as to refer to “requirements” for application in order to better capture their content.

36. During its consideration of article 4 of the draft convention and article 17 of the draft amended Model Law, the Working Group confirmed its understanding that those provisions should apply to both instances as provided for in article 2 of the draft convention and article 16 of the draft amended Model Law (i.e., where the request related to the enforcement of a settlement agreement and where the settlement agreement was invoked as a defence against a claim). It was said that the use of the term “application” could be understood as only referring to procedures for requesting enforcement, and not necessarily to procedures where the settlement agreement was invoked as a defence. Accordingly, the Working Group agreed that the draft instruments should avoid using the term “application”.

37. After discussion, the Working Group agreed that: (i) the heading of article 4 of the draft convention and article 17 of the draft amended Model Law should read “Requirements for reliance on settlement agreements”; (ii) the chapeau of article 4(1) of the draft convention and of article 17(1) of the draft amended Model Law should remained unchanged; (iii) the words “where the application is made” and “the party making the application” in article 4(3) of the draft convention and 17(3) of the draft amended Model Law should be replaced respectively by the words “where relief is sought” and “the party requesting relief”; and (iv) the word “the application” in article 4(5) of the draft convention and article 17(5) of the draft amended Model Law should be replaced by the words “the request for relief”.

2. Settlement agreement resulting from mediation

38. The Working Group considered article 4(1)(b) of the draft convention and article 17(1)(b) of the draft amended Model Law, which provided an illustrative and non-hierarchical list of means to evidence that a settlement agreement resulted from mediation. To highlight that the list was non-exhaustive and did not enumerate the entirety of evidence that might be provided, a suggestion was made to add the words “and/or” following each subparagraph. After discussion, the Working Group agreed that the non-exhaustive nature of the list was clearly expressed through subparagraph (iv). It was reiterated that the understanding of the Working Group was that only if the evidences mentioned in subparagraphs (i) to (iii) could not be produced, then would the requesting party be allowed to submit any other evidence.

3. Use of the terms “conditions” – “requirements”

39. In relation to article 4(4) of the draft convention and article 17(4) of the draft amended Model Law, the Working Group considered whether the word “conditions” or “requirements” should be used. After discussion, it was agreed that the word “requirements” should be used in article 4 for the sake of consistency (see articles 4(2) of the draft convention and 17(2) of the draft amended Model Law referring to “requirement”).

F. Defences

40. The Working Group considered article 5 of the draft convention and article 18 of the draft amended Model Law, which addressed grounds for refusing to grant relief.

41. The Working Group confirmed that the grounds listed for refusing to grant relief in those provisions applied both to requests for enforcement (under article 2(1) of the draft convention and article 16(1) of the draft amended Model Law) and to situations where a party invoked a settlement agreement as a defence against a claim (under article 2(2) of the draft convention and article 16(2) of the draft amended Model Law). Accordingly, the Working Group agreed that article 5 should avoid language referring only to enforcement or only to invoking a settlement agreement.

1. Chapeau of article 5(1) of the draft convention and article 18(1) of the draft amended Model Law

42. In line with the decision that the word “application” should not be used in article 4 of the draft convention and article 17 of the draft revised Model Law (see para. 36 above), the Working Group agreed to amend the chapeau of the provisions as follows. Article 5(1) of the draft convention would read: “The competent authority of the Contracting State where relief is sought under article 4 may refuse to grant relief at the request of the party against whom the relief is sought, only if that party furnishes to the competent authority proof that: (…)”; and article 18(1) of the draft amended Model Law would read: “The competent authority of this State may refuse to grant relief at the request of the party against whom the relief is sought, only if that party furnishes to the competent authority proof that: (…)”.

2. Article 5(1)(b) of the draft convention and article 18(1)(b) of the draft amended Model Law

43. Recalling a suggestion made at a previous session of the Working Group (see A/CN.9/896, para. 100), it was reiterated that the word “voidable” should be inserted after the word “void” to put it beyond doubt that subparagraph (b) covered instances of fraud, mistake, misrepresentation, duress and deceit. After discussion, the Working Group reaffirmed its understanding that the current wording of subparagraph (b) was sufficiently broad to encompass those elements and concluded that the addition of the word “voidable” was not necessary.

3. Article 5(1)(c) of the draft convention and article 18(1)(c) of the draft amended Model Law

44. The Working Group recalled that subparagraph (c) had been the subject of extensive deliberations at its previous sessions. A number of suggestions were made with a view to clarifying its drafting.

45. In relation to subparagraph (c)(ii), it was suggested to add the word “substantially” after the word “subsequently” to clarify that minor modifications should not be a ground for refusing enforcement of the modified settlement agreement. In response, it was said that the word “substantially” would introduce a discretionary or subjective assessment by the competent authority and was therefore not desirable.

46. In relation to subparagraph (c)(iii), as a matter of drafting, it was suggested to replace the words “so that” after the word “conditional” by the words “in that”. As a matter of substance, it was said that that subparagraph as currently drafted would not

properly cover situations where parties after mediation did not intend to enforce the obligations therein but rather formulated the settlement agreement as a framework to shape their future relation and clarify mutual obligations. It was suggested that the focus of the provision should be on the obligations not being intended to be performed under the given circumstances, instead of the settlement agreement itself being conditional. In that light, it was suggested that subparagraph (c)(iii) could be modified along the lines of: "contains obligations for the party against whom relief is sought that are not enforceable independent of other parts of the agreement or were not agreed to be performed at the time the relief is sought". In response, it was clarified that the purpose of the current subparagraph (c)(iii) was to encapsulate the non-fulfilment of existing preconditions. A further suggestion was made to avoid the use of the term "conditional" as that term might carry different legal meanings in different legal traditions. It was suggested that it would be preferable to draft the provision in a descriptive fashion, for instance, along the lines of "relief sought by the requesting party is related to an obligation of that party which has not been performed".

47. In relation to subparagraph (c)(iv), it was suggested that the subparagraph should be revised to state "is so unclear and incomprehensible that it is not capable of being enforced according to its terms." In support of that suggestion, it was said that such modification would make it clear to the competent authority that the focus of its assessment would be with regard to the terms of the settlement agreement. It was explained that the suggested revision aimed at providing guidance and a framework to the competent authority to implement the provision. In response, it was said that such a revision would not bring clarity to the provision, and might result in accommodating jurisprudence in certain States to the detriment of others. Another suggestion was to revise the subparagraph along the following lines: "is so unclear and incomprehensible that it is not capable of being relied upon". Yet another suggestion was that the subparagraph should focus only on the operative provisions in the settlement agreement.

48. It was also suggested that subparagraph (c)(iv) should be deleted as it was already covered in subparagraph (b) and, if retained, could pose uncertainties on how it was to be implemented by competent authorities. Along the same lines, it was pointed out that paragraph 1(c) was not necessary as the grounds contained therein were sufficiently addressed in paragraph 1(b).

Proposal

49. After discussion, the Working Group considered the following proposal (the "Proposal") regarding article 5(1)(a) to (c) of the draft convention and article 18(1)(a) to (c) of the draft amended Model Law (with the necessary adjustments): "1. The competent authority of the Contracting State where relief is sought under article 4 may refuse to grant relief at the request of the party against whom the relief is sought, only if that party furnishes to the competent authority proof that: (a) a party to the settlement agreement was under some incapacity; (b) the settlement agreement sought to be relied upon: (i) is null and void, inoperative or incapable of being performed under the law to which the parties have validly subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority of the Contracting State where relief is sought under article 4; (ii) is not binding, or is not final, according to its terms; (iii) has been subsequently modified; or (iv) [option A: is not capable of being relied upon because its operative part is not clear or comprehensible][option B: is so unclear or incomprehensible that it is not capable of being relied upon]; (c) the obligations in the settlement agreement have been performed; (c bis) [option X: granting relief would be contrary to the terms of the settlement agreement in the circumstances then prevailing] [option Y: the obligations in the settlement agreement of the party against whom the relief is sought cannot be relied upon independent of other parts of the agreement or have not yet arisen] [option Z: the settlement agreement is conditional in that the obligations in the settlement agreement of the party against whom relief is sought have not yet arisen]; (…)".

50. The Proposal was generally considered as a drafting improvement. Suggestions were made in relation to the options provided for in subparagraphs (b)(iv) and (c bis).

Subparagraph (b)(iv) of the Proposal

51. The suggestion to delete subparagraph (b)(iv) was reiterated because the terms "clear" or "comprehensible" were not necessarily familiar in certain jurisdictions and could be interpreted differently. That suggestion did not receive support.

52. There was a general preference for option A. Various suggestions were made to clarify the words "operative part", including to replace the word "operative" by "prescriptive", or by referring to the "terms" of the settlement agreement. Yet, another suggestion, which received support, was to specify that "the obligations" in the settlement agreement were not clear or comprehensible.

53. After discussion, the Working Group agreed to merge subparagraph (b)(iv) with subparagraph (c) by adding the words "or are not clear or comprehensible" at the end of subparagraph (c).

Subparagraph (c bis) of the Proposal

54. The Working Group considered the options provided for in subparagraph (c bis). In support of option X, it was said that it avoided reference to legal terms that could be understood differently in different legal systems. It was explained that the words "in the conditions then prevailing" had been inserted in option X to provide guidance to the competent authority. It was, however, agreed that those words might introduce ambiguity and were not necessary. It was suggested that option X could be improved along the following lines: "Granting relief would be contrary to the terms of the settlement agreement, among other reasons, for not fulfilling the provisions contained in the settlement agreement or because the other party has not fulfilled its own obligations."

55. It was said that option Y was ambiguous, and if retained, it should be clarified to indicate that the obligations in the settlement agreement of the party against whom the relief was sought related to obligations of the other party that had not been, or could not be, performed or were subject to events that had not occurred or could not occur. It was noted that option Z was based on subparagraph (c)(iii) as contained in document A/CN.9/WG.II/WP.205/Add.1.

56. During the deliberation, it was pointed out that subparagraph (c bis) might overlap with the public policy exception already provided for in paragraph 2 of both article 5 of the draft convention and article 18 of the draft amended Model Law.

57. After discussion, the Working Group approved subparagraph (c bis), which would read: "Granting relief would be contrary to the terms of the settlement agreement". It was confirmed that such wording was broad enough to encompass situations in which the obligations in a settlement agreement would be conditional or reciprocal, and their non-performance could be justified for a variety of reasons. It was said that many different circumstances could affect the enforceability of obligations in settlement agreements, in particular in complex contractual arrangements, and that subparagraph (c bis) should be broadly interpreted as covering a variety of factual situations. It was further highlighted that the circumstances that had been provided for in options Y and Z would be covered.

58. Subject to the above-mentioned changes (see paras. 53 and 57 above), the Working Group approved in substance the Proposal regarding article 5(1)(a) to (c) of the draft convention and article 18(1)(a) to (c) of the draft amended Model Law.

4. Conclusions on article 5 of the draft convention and article 18 of the draft amended Model Law

59. After discussion, the Working Group approved in substance article 5 of the draft convention (and article 18 of the draft amended Model Law with the necessary adjustments), which would read along the following lines:

"Article 5. Grounds for refusing to grant relief

"1. The competent authority of the Contracting State where relief is sought under article 4 may refuse to grant relief at the request of the party against whom the relief is sought, only if that party furnishes to the competent authority proof that: (a) A party to the settlement agreement was under some incapacity; (b) The settlement agreement sought to be relied upon: (i) Is null and void, inoperative or incapable of being performed under the law to which the parties have validly subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority of the Contracting State where relief is sought under article 4; (ii) Is not binding, or is not final, according to its terms; (iii) Has been subsequently modified; (c) The obligations in the settlement agreement have been performed, or are not clear or comprehensible; (d) Granting relief would be contrary to the terms of the settlement agreement; (e) There was a serious breach by the mediator of standards applicable to the mediator or the mediation, without which breach that party would not have entered into the settlement agreement; or (f) There was a failure by the mediator to disclose to the parties circumstances that raise justifiable doubts as to the mediator's impartiality or independence and such failure to disclose had a material impact or undue influence on a party, without which failure that party would not have entered into the settlement agreement.

"2. The competent authority of the Contracting State where relief is sought under article 4 may also refuse to grant relief if it finds that: '(a) Granting relief would be contrary to the public policy of that State;' or '(b) The subject matter of the dispute is not capable of settlement by mediation under the law of that State.'"

60. As a drafting improvement, a suggestion was made to regroup the various grounds, in particular in light of the observations made that certain grounds were illustrations of the ground provided for in paragraph (1)(b)(i). In that context, the following drafting suggestion was made: "(1) The competent authority of the Contracting State where relief is sought under article 4 may refuse to grant relief at the request of the party against whom the relief is sought, only if that party furnishes to the competent authority proof that: (a) a party to the settlement agreement was under some incapacity; (b) the settlement agreement sought to be relied upon is null and void, inoperative or incapable of being performed [under the law to which the parties have validly subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority of the Contracting State], including when: (i) the settlement agreement (1) is not binding, or is not final, according to its terms; or (2) has been subsequently modified; (ii) the obligations in the settlement agreement (1) have been performed; or (2) are not clear or comprehensible; (iii) granting relief would be contrary to the terms of the settlement agreement; (…)".

61. While there was some support for that drafting improvement (in particular, to make the text of article 5 of the draft convention and article 18 of the draft amended Model Law simpler and for the purposes of promoting the adoption of the draft instruments by States), it was considered that regrouping of grounds posed practical challenges, in particular, with regard to the application of the party's freedom to choose the applicable law in paragraph 1(b). Therefore, it was agreed to retain the structure of the provisions as found in paragraph 59 above.

62. In so doing, the Working Group took note of extensive consultations among delegations aimed at clarifying the various grounds provided for in paragraph 1, in particular the relationship between subparagraph (b)(i), which mirrored a similar provision of the New York Convention and was considered to be of a generic nature, and subparagraphs (b)(ii), (b)(iii), (c) and (d), which were deemed to be illustrative in nature. It was noted that various attempts for regrouping the grounds had been unsuccessful.

63. A further suggestion was made to add a new paragraph in article 5 aimed at providing guidance to competent authorities when considering the different grounds. One of the drafting suggestions read: "3. The competent authority, in interpreting and applying the various grounds for refusing requested relief under paragraph 1, may

take into account that the grounds for such refusal identified under paragraph 1(b) may overlap with other grounds for refusal in paragraph 1." The Working Group took note that attempts at clarifying and possibly providing guidance on paragraph 1 had also not been successful.

64. It was further noted that such attempts represented serious efforts at avoiding overlap in light of the importance of the issue. However, difficulties arose because of the need to accommodate the concerns of different domestic legal systems, which resulted in the failure of such attempts to gain consensus.

65. Therefore, the Working Group expressed a shared understanding that there might be overlap among the grounds provided for in paragraph 1 and that competent authorities should take that aspect into account when interpreting the various grounds.

66. After discussion, the Working Group reiterated its approval of article 5 of the draft convention and article 18 of the draft amended Model Law (see para. 59 above) subject to the following editorial modifications. First, the word "or" should be added between subparagraphs (b)(ii) and (b)(iii) and second, subparagraph (c) should be revised as follows: "The obligations in the settlement agreement (i) have been performed; or (ii) are not clear or comprehensible."

67. In relation to the notion of public policy in article 5(2)(a) of the draft convention and article 18(2)(a) of the draft amended Model Law, it was said that it would be up to each Contracting State to determine what constituted public policy. In that context, it was agreed that public policy could include, in certain cases, issues relating to national security or national interest.

G. Parallel applications or claims

68. A number of suggestion were made with respect to article 6 of the draft convention and article 18(3) of the draft amended Model Law, which dealt with parallel proceedings which may affect the enforcement of a settlement agreement. It was recalled that the text was based on article VI of the New York Convention.

69. One suggestion was that the provision should apply to both when enforcement of a settlement agreement was sought and when a settlement agreement was invoked as a defence. Accordingly, it was suggested that wording such as "relief being sought" should be used instead of "enforcement". Another suggestion was that the words "if it considers proper" should be deleted as they might be considered as providing too much discretion to the competent authority in making a decision on whether to adjourn the decision to grant relief. The latter suggestion did not receive support.

70. After discussion, the Working Group approved in substance article 6 of the draft convention and article 18(3) of the draft amended Model Law which would read as follows (see also para. 139 below): "If an application or a claim relating to a settlement agreement has been made to a court, an arbitral tribunal or any other competent authority which may affect the relief being sought under article 4, the competent authority of the Contracting State where such relief is sought may, if it considers it proper, adjourn the decision and may also, on the request of a party, order the other party to give suitable security."

H. Issues regarding the draft convention

1. Article 7 – Other laws or treaties

71. The Working Group approved in substance article 7 of the draft convention, unchanged.

2. Article 8 – Reservations

States and other public entities (article 8(1)(a))

72. With respect to article 8(1)(a) of the draft convention, a suggestion was made to replace it with a provision along the following lines: "Nothing in this Convention shall affect privileges and immunities of States or of international organizations, in respect of themselves and of their property." That suggestion did not receive support. It was further recalled that the Working Group had agreed that a State should be given certain flexibility in excluding from the scope of the draft instruments settlement agreements to which it was a party or which its government agencies or any person acting on behalf of a governmental agency was a party (see A/CN.9/896, para. 62).

73. It was generally noted that the objective of permitting a reservation was to allow a State to exclude or to modify the legal effect of certain provisions of the treaty in their application to that State. In that context, it was noted that the draft convention did not contain any explicit provision that it applied to such settlement agreements. However, it was explained that the broad scope of application as provided in article 1(1) of the draft convention should be interpreted to encompass such settlement agreements.

74. It was further explained that the inclusion of a reservation along the lines of article 8(1)(a) would give flexibility to States and thus make it possible for more States to consider becoming a party to the draft convention.

75. With respect to the two options provided for in article 8(1)(a), there was general support for option 2 as it clearly indicated that the State making that reservation would be limiting the scope of application of the draft convention. In that context, it was suggested that the word "only" should be deleted.

76. However, based on the perspective that the draft convention should not apply to such agreements, a view was expressed that option 1 should be retained in the draft convention and that the provision as a whole could be included in the scope provision. That view was not supported.

77. After discussion, the Working Group approved in substance the following text for article 8(1)(a): "1. A Contracting State may declare that: (a) it shall not apply this Convention to settlement agreements to which it is a party, or to which any governmental agencies or any person acting on behalf of a governmental agency is a party, to the extent specified in the declaration."

Opt-in and opt-out by parties (article 8(1)(b))

78. With regard to how article 8(1)(b) of the draft convention would operate in practice, the Working Group confirmed its understanding that even without an explicit provision in the draft convention, parties to a settlement agreement would be able to exclude the application of the draft convention. It was further mentioned that such an agreement between the parties excluding the application of the draft convention would be given effect by the competent authority, because if a party were to seek relief relying on such an agreement, it would be refused as being contrary to the terms of the settlement agreement as provided for in article 5(1)(d) of the draft convention and article 18(1)(d) of the draft amended Model Law (see para. 59 above).

79. With that understanding, the Working Group approved in substance article 8(1)(b), unchanged.

Heading of article 8

80. With the understanding that paragraph 1(a) and (b) constituted reservations, the Working Group agreed that the heading of article 8 should remain unchanged.

No other reservations permitted (article 8(2))

81. A suggestion to include a reciprocal reservation in the draft convention similar to that found in article I(3) of the New York Convention did not receive support.

82. A further suggestion was made to delete article 8(2) in order to allow States to make additional reservations. It was stated that even without article 8(2), States would not be able to make reservations that were incompatible with the object and purpose of the draft convention according to article 19 of the Vienna Convention on the Law of Treaties (the "Vienna Convention").

83. In response, it was stated that because article 8(3) allowed for reservations set out in article 8(1) to be made at any time, there was a need to retain a balance by restricting additional reservations. It was further noted that a number of private international trade law instruments included provisions that did not permit unauthorized reservations (for instance article 98 of the United Nations Convention on Contracts for the International Sale of Goods (CISG) and article 22 of the United Nations Convention on the Use of Electronic Communications in International Contracts). Concerns were expressed that if article 8(2) were to be deleted, a wide range of reservations could be made, particularly with regard to the scope of application of the convention, thus making the regime envisaged by the convention potentially confusing for commercial parties and creating legal uncertainties. As an example, it was mentioned that if a State were to formulate a reciprocity reservation along the lines of article I(3) of the New York Convention, parties would not be certain whether the convention would be applicable as it would not necessarily be feasible to identify a country of origin of the settlement agreement.

84. With a view to address the above-mentioned concerns, another proposal was made that reservations not expressly authorized in the draft convention would be permitted only at the time of signature, ratification, acceptance or approval, with the withdrawal of reservations being possible at any time, and entering into force six months after deposit. That suggestion did not receive support.

85. Based on the understanding that the draft convention would operate in the context of international trade law and that there was a need to provide legal certainty on its application, the Working Group agreed to retain article 8(2) unchanged.

Reservations to be made "at any time" (article 8(3))

86. With respect to the fourth sentence of article 8(3), it was suggested that the words "or at the time of making a declaration under article 12" should be added after the word "accession", which received support.

87. In response to an observation that the possibility to make a reservation at any time as provided for in article 8(3) was not usual in treaty practice, it was explained that that approach had been adopted in treaties dealing with international trade law and private law matters. In addition, it was said that the flexibility provided would be an incentive for States considering to join the convention. It was further indicated that reservations might need to be made at any time for the purposes of article 12 of the draft convention.

88. In order to enhance legal certainty for parties to settlement agreements, the following text was suggested for addition in article 8(3): "A reservation made after the time of signature, ratification, acceptance or approval shall not affect applications under article 4, which have been made before that reservation entered into force." It was explained that the purpose of the suggested text was to avoid parties from being deprived of the possibility of enforcing a settlement agreement due to a later reservation. In that context, it was mentioned that the last sentence of article 8(3) already provided a grace period during which parties could initiate the procedure under article 4 and thus there was no need for an additional text.

89. In relation to the suggested text in paragraph 88 above, it was said that the words "applications under article 4" should be replaced by "settlement agreements". However, it was highlighted that it might not be easy to verify when a settlement agreement was concluded and, therefore, it would be preferable to retain the reference to "applications". A further suggestion was that the draft convention should not only address the effect of reservations on settlement agreements but more generally the effect of entry into force of the convention as well as any reservation.

90. Thereafter, the Working Group considered the following text to be placed as a separate provision in the draft convention: "The Convention and any reservation, or withdrawal of a reservation shall apply only to settlement agreements concluded after the date when the Convention, reservation, or withdrawal of reservation enters into force for the Contracting State." It was further suggested that the last sentence of article 15(2) should be revised as follows: "The Convention shall continue to apply to settlement agreements concluded before the denunciation takes effect."

91. While it was noted that the New York Convention did not have such a temporal scope provision, the draft additional provision in paragraph 90 above as well as the revision to article 15(2) received general support. A suggestion to delete the reference to "withdrawal of a reservation" to facilitate enforcement of settlement agreements that were not enforceable before the withdrawal of the reservation did not gain support as it could lead to uncertainty about the application of the draft convention to such settlement agreements.

92. After discussion, the Working Group approved in substance the draft provision as outlined in paragraph 90 above for insertion in the draft convention along with the corresponding revision to article 15(2).

Conclusion on article 8

93. Subject to the modifications reflected in paragraphs 77 and 86 above, the Working Group approved in substance article 8 of the draft convention.

3. Articles 9 and 10

94. After discussion, the Working Group approved in substance articles 9 and 10 of the draft convention, unchanged. In that context, the delegation of Singapore expressed an interest in hosting a ceremony for the signing of the convention, once adopted. That proposal was welcomed and supported by the Working Group and it was agreed to make the corresponding recommendation to the Commission.

4. Article 11 – Regional economic integration organizations

95. With respect to article 11 of the draft convention, it was explained that inclusion of that article would facilitate a regional economic integration organization and its member States becoming party to the draft convention.

96. It was suggested that article 11(4) could be revised along the following lines: "This Convention shall not prevail over conflicting rules of a regional economic integration organization, whether adopted or entered into force before or after this Convention: (a) if, under article 4, relief is sought to a competent authority of a State that is member of such an organization and all the States relevant under article 1(1) are members of any such organization; or (b) as concerns the recognition or enforcement of judgments as between member States of the regional economic integration organization."

97. In response to a question on how article 11(4)(b) as proposed in paragraph 96 above would operate, it was explained that subparagraph (b) would ensure that when a party invoking a settlement agreement in a court of a member State of the regional economic integration organization was not granted relief under the convention, such a judgment by the court would circulate within the regional economic integration organization, while that party would no longer be able to rely on the settlement agreement in a court of another member State of the regional economic integration organization. It was pointed that, in practice, this would require a party to seek relief in only one member State of the regional economic integration organization.

98. Subject to the proposed revision to paragraph 4 (see para. 96 above), the Working Group approved in substance article 11 of the draft convention.

5. Article 12 – Non-unified legal systems

99. The Working Group considered article 12, which would permit a Contracting State, at the time of signature, ratification, acceptance, approval or accession, to declare that the convention would extend to all its territorial units or only to one or more of them and to amend its declaration by submitting another declaration at any time. That provision was said to be a well-established standard provision in private international law instruments.

100. The Working Group agreed that the heading of article 12 should read "Non-unified legal systems".

101. A suggestion to delete article 12(3)(b) did not receive support, as that provision was said to clarify the notion of "place of business" in States having different territorial units.

102. Another suggestion was made to clarify that a Contracting State making a declaration under article 12 would have the discretion to make different reservations over time for different territorial units. In response, it was said that the practice of making or withdrawing reservations in relation to different territorial units was established, and it would not be necessary to include a provision for that purpose in the draft convention.

103. After discussion, the Working Group approved in substance article 12 of the draft convention, unchanged, with the heading "Non-unified legal systems".

6. Article 13 – Entry into force

104. Divergent views were expressed on paragraph 1 which provided that the draft convention would enter into force after the deposit of the third instrument of ratification, acceptance, approval or accession.

105. One view was that the number of ratifications required for the entry into force of the convention should be higher (for example, ten) for the reasons that: (i) there was no urgency for the draft convention to enter into force; (ii) a higher threshold would result in more confidence in the regime envisaged therein; and (iii) States would be encouraged to promote the convention more widely in order to ensure its coming into force.

106. Another view was that requiring three ratifications would be appropriate for the purposes of the draft convention as that: (i) had been the general practice and trend for private international law treaties, and there was no compelling reasons for providing for a higher threshold; (ii) would ensure the earlier entry into force of the convention, which would allow for relevant practice to develop for the benefit of other States that would consider becoming parties to the convention; and (iii) would send a positive signal for the users of mediation that an international legal framework for the enforcement of settlement agreements would soon be in place.

107. While some hesitation was expressed, after discussion and for the purposes of achieving consensus, it was agreed that the draft convention should enter into force after the deposit of the third instrument of ratification, acceptance, approval or accession.

108. While a suggestion was made to add the phrase "or regional economic integration organization" after the word "State" in the first sentence of article 13(2), it was agreed that article 11(3) sufficiently addressed the underlying concern.

109. The Working Group agreed that six months would be an appropriate period for the purposes of article 13. Therefore, it was agreed that the word "six" should be kept outside square brackets in paragraphs 1 and 2.

110. As a drafting point, it was agreed that the words "on the first day of the month following the expiration of" and the words "date of" should be deleted in paragraphs 1 and 2. It was also agreed that the words "enters into force" would be replaced by "shall enter into force".

111. Subject to the above-mentioned changes (see paras. 109 and 110 above), the Working Group approved in substance article 13 of the draft convention.

7. Article 14 – Amendment

112. The Working Group agreed that the references to "four" months in paragraph 1 and to "six" months in paragraphs 4 and 5 were appropriate and therefore, it agreed that those words should be retained outside square brackets. The Working Group further agreed that the word "Secretary-General of the United Nations" in paragraph 3 should be replaced by the word "depositary" in line with article 9 of the draft convention.

113. A concern was raised regarding paragraph 6, in that it established a difference of treatment between States. As per paragraph 4, States that were Contracting States prior to the entry into force of the amendment had a choice whether to be bound or not by the amendment. On the contrary, under paragraph 6, States that became Contracting States after the entry into force of the amendment would have no choice but to adopt the convention as amended. In response to the observation that paragraphs 4 and 6 would result in two different regimes for Contracting States before and after an amendment to the convention, the Working Group agreed to consider the issue further. It was generally felt that amendments should enter into force for States only when they expressly consented to it.

114. Having considered various options, the Working Group agreed that the draft convention should provide that amendments would enter into force only for States that had expressed their consent to be bound by them, and that this would also be the case for States adopting the convention after the amendment. Accordingly, the Working Group agreed that paragraph 6 of article 14 should be deleted and that paragraphs 3 to 5 would read as follows: "3. An adopted amendment shall be submitted by the depositary to all the Contracting States for ratification, acceptance, or approval. 4. An adopted amendment shall enter into force six months after the date of deposit of the third instrument of ratification, acceptance, or approval. When an amendment enters into force, it shall be binding on those Contracting States that have expressed consent to be bound by it. 5. When a Contracting State ratifies, accepts, or approves an amendment following the deposit of the third instrument of ratification, acceptance, or approval, the amendment enters into force in respect of that Contracting State six months after the date of the deposit of its instrument of ratification, acceptance, or approval."

8. Article 15 – Denunciation

115. The Working Group agreed that "twelve" months would be an appropriate period for the purposes of article 15 and therefore agreed to retain that word outside square brackets. It was further agreed that the words "on the first day of the month following the expiration of" should be deleted. Subject to those changes, as well as the agreed modification reflected in paragraph 90 above, the Working Group approved in substance article 15 of the draft convention.

9. "Contracting States"

116. With regard to the use of the term "Contracting States" in the draft convention, the attention of the Working Group was drawn to the fact that that term was referred to in article 2(1)(f) of the Vienna Convention to mean a State which had consented to be bound by the treaty, whether or not the treaty had entered into force. In that light, a suggestion was made to replace the term "Contracting States" by the words "Parties" or "State Parties" to mean a State which had consented to be bound by the treaty and for which the treaty was in force in accordance with article 2(1)(g) of the Vienna Convention.

117. In response, it was noted that the use of the term "Parties" could be confusing as the draft convention often referred to "parties" to the settlement agreement and thus, it was suggested that the term "States Parties" might be more appropriate. Another suggestion was to use the term "Contracting Parties", while it was noted that

that term might be more confusing and not known in the treaty law context. The Working Group also noted that the term "Contracting States" had been used in existing conventions in the field of international trade law.

118. After discussion, the Working Group agreed that the draft convention could tentatively use the terms "Parties to the Convention" or "a Party to the Convention". It was further clarified that the draft convention would continue to refer to "States" where appropriate.

I. Issues regarding the draft amended Model Law

119. The Working Group noted that the presentation of the provisions of the draft amended Model Law in three sections in document A/CN.9/WG.II/WP.205/Add.1 reflected the suggestions made at its sixty-seventh session (A/CN.9/929). There was general support for that structure. In its deliberations of the draft amended Model Law, the Working Group generally agreed that the guiding principles would be to ensure a level of consistency with the draft convention and at the same time to preserve the existing text of the Model Law to the extent possible.

1. Scope

120. The Working Group approved in substance article 1(1) (in section 1) of the draft amended Model Law, which set forth the expanded scope of the draft amended Model Law, applying to both international commercial mediation and international settlement agreements. It also approved article aa(1) and 15(1), which provided the scope of application of sections 2 and 3, respectively.

2. "Internationality" of the mediation and of settlement agreements

121. The Working Group noted that the draft amended Model Law included two separate provisions on the notion of internationality: (i) articles aa(2) and aa(3) (definition of international mediation), which mirrored articles 1(4) and 1(5) of the Model Law, and (ii) articles 15(4) and 15(5) (definition of international settlement agreement), which mirrored the corresponding provision in the draft convention.

122. The Working Group considered whether the internationality of a settlement agreement should be assessed at the time of the conclusion of the agreement to mediate or at the time of the conclusion of the settlement agreement.

123. In favour of the latter, it was said that assessment of the internationality of the settlement agreement at the time of its conclusion would be more in line with the approach taken in the draft convention. Further, that would also cater for situations where there might not necessarily be an agreement to mediate between the parties. It was further suggested that assessment of internationality as provided for in article 15(4)(b) (referring to the obligations of the parties under the settlement agreement), would not be feasible at the time of the conclusion of the agreement to mediate as the place of performance of such obligation would not be known at that time.

124. Whilst the benefit of consistency with the draft convention was acknowledged, it was also pointed out that parties to international mediation might expect the settlement agreement resulting from that process to be subject to enforcement under section 3 of the draft amended Model Law. Therefore, caution was expressed about entirely disconnecting the internationality of the settlement agreement from the mediation process itself. A view was expressed that an international mediation would rarely result in a purely domestic settlement agreement not falling under the scope of section 3. It was noted that referring to agreement to mediate would also make it possible to determine the applicability of the law at the time mediation was initiated, thereby providing more legal certainty to the parties.

125. However, it was reiterated that the regime for enforcement of international settlement agreements as provided for in section 3 should not be made applicable to purely domestic settlement agreements. It was observed that article 14 of the Model

Law referred to the enforceability of settlement agreement, without requiring such agreements to be international. It was therefore suggested that article 14 of the Model Law in section 2 could govern enforcement of settlement agreements resulting from international mediation, whereas section 3 should be strictly applicable to settlement agreements that were international at the time of their conclusion. Such an approach was said to preserve the existing approach under the Model Law.

126. It was therefore suggested that options should be provided in the draft amended Model Law regarding whether section 3 would also apply to settlement agreements that were not international under article 15(4), but resulted from international mediation under article aa(2). The first option would suggest that section 3 should only apply to international settlement agreements that were international at the time of their conclusion according to article 15(4). The second option would suggest that States might also apply section 3 to settlement agreements resulting from international mediation as defined in article aa(1). It was noted that, for the purpose of consistency, referring to "international mediation" would be preferable than referring to the "agreement to mediate", which was not a defined term in the Model Law nor in the draft amended Model Law.

127. After discussion, the Working Group approved in substance articles 15(4) and 15(5) with the deletion of the square-bracketed text. It further agreed that section 3 would include a footnote incorporating the second option, in which a State could provide in article 15(4) an additional paragraph stating that a settlement agreement was "international" if it resulted from international mediation as defined in article aa(2) and (3).

3. Article 1(6) of the Model Law

128. The Working Group had agreed not to include a provision similar to article 1(6) of the Model Law in the draft convention. In that light, the Working Group considered whether article 1(6) should be retained in the draft amended Model Law and, if so, whether it should be placed in section 1 or 2 of the draft amended Model Law. Suggestions to delete article 1(6) entirely or to make it applicable to section 3 only did not receive support.

129. After discussion, it was agreed that article 1(6) of the Model Law should be placed in section 2 of the draft amended Model Law and revised as follows: "This section also applies to commercial mediation when the parties agree that the mediation is international or agree to the applicability of this section."

4. Articles 1(7) to 1(9) of the Model Law

130. The Working Group considered whether articles 1(7) to 1(9) of the Model Law should be retained in the draft amended Model Law and, if so, in which section. After discussion, it was agreed that those articles should be placed in section 2 with the replacement of the word "Law" by "Section".

5. Article 3 of the Model Law

131. After discussion, it was agreed that article 3 of the Model Law should be placed in section 2 with appropriate cross-references to relevant articles and with the replacement of the word "Law" by "Section".

6. Article 14 of the Model Law

132. While some concerns were expressed about retaining article 14 in section 2 of the draft amended Model Law (as the term "settlement agreement" was defined in section 3 and grounds for refusing enforcement of a settlement agreement included the settlement agreement not being binding), it was generally felt that article 14 should be retained in section 2 as it dealt with the outcome of the mediation process, which should be binding and enforceable. It was further said that article 14 provided a natural link to the provisions in section 3. The Secretariat was requested to revise

article 14 (including its title) as a provision in section 2 of the draft amended Model Law.

7. Agreements settling disputes not reached through mediation

133. The Working Group then considered the possible expansion of the scope of section 3 of the draft amended Model Law to apply to agreements not reached through mediation as provided for in footnote 4 of the draft amended Model Law. Diverging views were expressed.

134. One was that the draft amended Model Law should include a footnote in section 3 that would indicate that States might wish to consider that possibility. It was suggested that a footnote in the draft amended Model Law would promote harmonization which was one of the objectives of the instrument, while providing sufficient flexibility to States that might wish to broaden the scope of section 3.

135. Another view was that the draft amended Model Law should not include such a footnote as the draft instruments focused on "mediated" settlement agreements and that even without such an indication as provided for in footnote 4, States would be able to broaden the scope of the draft amended Model Law if they wished to do so.

136. After discussion, it was agreed that footnote 4 in the draft amended Model Law would be retained in its current form outside square brackets.

137. In addition, it was agreed that section 3 would include an additional footnote, reflecting the reservation provided for in article 8(1)(b) of the draft convention, which would read as follows: "A State may consider enacting this section to apply only where the parties to the settlement agreement agreed to its application."

J. Other issues relating to the draft instruments

1. Translation issues

138. The Working Group took note of drafting issues that might arise from ensuring consistency among the various linguistic versions of the draft instruments, which would require further adjustments to the text. It was pointed out that, for instance, the words "granting relief" might need to be adjusted in certain language versions of the draft instruments.

2. Structural suggestions

139. During the deliberation, the following drafting suggestions were made: (i) to align article 18 of the draft amended Model Law with articles 5 and 6 of the draft convention, which would result in paragraph 3 of article 18 becoming article 19 (see para. 70 above); (ii) to align the structure of the draft convention to follow the structure of the draft amended Model Law, which would result in reversing the order of articles 2 and 3 in the draft convention; and (iii) to revise the title of section 3 of the draft amended Model Law to better reflect its contents. All those suggestions were approved.

3. Draft General Assembly resolution

140. With respect to the proposed wording for the General Assembly resolution provided in paragraph 3 of document A/CN.9/WG.II/WP.205/Add.1, it was suggested that the following words should be inserted at the end: "nor any expectation to sign, ratify or accede or implement one instrument or the other." Another proposal was made to replace the phrase "without creating any preference for the instrument [that interested States may adopt][to be adopted]" by the words "without creating any expectations for which of the instruments interested States would adopt". Doubts were expressed about the need for the additional language, as States would in any case retain the freedom to adopt any of the draft instruments.

141. While it was mentioned that resolution 69/116 of the General Assembly adopting the United Nations Convention on Transparency in Treaty-based

Investor-State Arbitration contained the phrase "without creating any expectation", it was also recalled that the rationale for inserting such a phrase was quite different.

142. After discussion, it was agreed that the word "concurrently" would be inserted after the words "decision of the Commission to" and that the last part of the paragraph would read as follows: "without creating any expectation that interested States may adopt either instrument."

4. Title of the draft instrument

143. The Working Group tentatively approved the title of the draft convention as: "United Nations Convention on International Settlement Agreements Resulting from Mediation".

144. With respect to the provisional title of the draft amended Model Law, the Working Group approved the following: "UNCITRAL Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation, 2018 (amending the UNCITRAL Model Law on International Commercial Conciliation, 2002)."

5. Preamble to the draft convention

145. The Working Group approved the preamble of the draft convention as provided for in paragraph 5 of document A/CN.9/WG.II/WP.205/Add.1 subject to replacing the words "such dispute settlement methods" by "mediation".

6. Materials accompanying the draft instruments

146. The Working Group turned its attention to the question of materials that could be prepared to accompany the draft instruments. The suggestion to supplement the Guide to Enactment of the Model Law with information on the revised and additional provisions of the amended Model Law received support. Regarding the material accompanying the draft convention, it was suggested that the reports of the sessions of the Working Group and of the Commission devoted to the preparation of the draft convention, which encompassed a vast amount of information that was shared during the negotiation process, should be compiled and presented in a user-friendly manner on the UNCITRAL website.

147. The suggestion to prepare additional reports or interpretative guidelines on the draft convention did not receive support.

148. After discussion, the Working Group agreed that, resources permitting, the *travaux preparatoires* should be compiled by the Secretariat, so that they could be easily accessible and user-friendly. It was further agreed that the Secretariat should be tasked with the preparation of a text to supplement the Guide to Enactment of the Model Law.

V. Future work

149. Having completed its work on the draft instruments, the Working Group considered agenda item 5 on possible future work. Various suggestions were made.

1. Possible revision of the UNCITRAL Conciliation Rules (1980) and preparation of notes on mediation

150. The Working Group considered whether the Conciliation Rules would need to be updated as they did not necessarily reflect recent developments in the field (see para. 5 of document A/CN.9/WG.II/WP.205). Possible areas of work included: providing a comprehensive definition of mediation; defining the effect of the agreement to refer a dispute to mediation; elaborating on the appointing authority mechanism; providing additional elements regarding the content of the request for mediation, and further statements; and adding provisions on preparatory meetings. It was suggested that the Conciliation Rules, if revised, could include provisions aimed

at strengthening due process aspects in mediation and elaborating on the impartiality and independence of mediators, their role and expected conduct.

151. It was further suggested to consider preparation of notes, akin to the UNCITRAL Notes on Organizing Arbitral Proceedings, with the aim of having a complete set of mediation instruments including an explanation for practitioners. Such notes would be intended to be used in a general and universal manner, taking account of works undertaken by other relevant organizations.

2. Expedited arbitration procedure and adjudication

152. A proposal was made to examine the issue of expedited dispute resolution and to develop a set of tools to address different aspects. It was suggested that that could have two components, which could be handled simultaneously: (i) the development of model rules, model contractual clauses, or similar tools facilitating the use of expedited arbitration procedures for reducing the cost and time of arbitration; and (ii) the development of model legislative provisions or model contractual clauses facilitating the use of adjudication in the context of long-term projects, in particular construction projects.

153. With respect to the first component, it was explained that expedited arbitration procedures had been a focus of many arbitral institutions in recent years, in part as a response to concerns among users about rising costs and lengthier timelines making arbitration more burdensome and similar to litigation. The usefulness of having a common international expedited procedure framework was highlighted, as there was an increasing demand to resolve simple, low value cases by arbitration but there was a lack of international mechanisms to cope with such disputes.

154. With respect to the second component, it was pointed out that adjudication could be useful in the context of long-term projects where work must continue despite disagreements regarding quality or payment. It was noted that adjudication clauses were used and a number of jurisdictions had enacted legislation on adjudication. It was suggested that model legislative provisions and contractual clauses could be developed to facilitate the broader use of adjudication.

155. It was highlighted that the two components would fit together well, as one would provide generally applicable tools for reducing the cost and time of arbitration, while the other would facilitate use of a particular tool that has demonstrated its utility in efficiently resolving disputes in a specific sector.

3. Uniform principles on the quality and efficiency of arbitral proceedings

156. Another proposal, which would build on the above-mentioned proposal (see para. 152 above), was to develop uniform principles on the quality and efficiency of arbitral proceedings. Those principles would build on existing norms and practices and take the form of soft law instruments or legislative provisions. It was highlighted that the principles would address concerns raised in relation to commercial arbitration procedure. The following sub-topics were identified: emergency arbitration; arbitration clauses and non-signatory parties; legal privileges and international arbitration; basic uniform principles for arbitral institutional rules; expedited arbitration procedure; and adjudication. It was stressed that the principles would contribute to strengthening the arbitration framework.

4. General discussion

157. As a general point, it was suggested that the recommendations of the Working Group on future work should be based on the needs of the users, particularly those of the business community, and on the feasibility of the work. It was also emphasized that any work should focus on promoting arbitration as an efficient method and avoid possible over-regulation. It was further mentioned that any decision should also respond to the request of developing States that were in their initial stages of implementing a legislative framework for dispute resolution.

158. It was also suggested that any future work should not impact work currently being conducted by other Working Groups, particularly Working Group III on investor-State dispute settlement reform. It was generally mentioned that any future work should not overlap with those being planned at other international organizations.

159. There was general support for the future work topics mentioned above (see paras. 150–156).

160. There was general support for giving priority to work on expedited arbitration procedure, which would maximize the benefits of arbitration. Considering the criticism that arbitration was a lengthy and costly process, it was said that that work would be timely and reflect the needs of the businesses. In that context, it was noted that caution should be taken so that family and consumer law issues should be excluded from that work and its focus should be on commercial arbitration. It was also suggested that the topic could be expanded to address more comprehensively expedited procedures as a means to ensure efficient resolution of disputes.

161. There was also some support for work on adjudication. It was explained that such work should focus on adjudication as a mechanism to accelerate proceedings and to provide a provisional enforcement of decisions, which would be subject to review by the same tribunal or another arbitral tribunal. Nonetheless, there was some hesitation about undertaking work on adjudication as it would mainly concern a specific industry and as it required a more detailed assessment of the legislative framework surrounding adjudication as well as the practice that governed adjudication clauses. It was also questioned whether it would be feasible to undertake such work concurrently with work on expedited arbitration procedure. It was thus suggested that a gradual approach could be taken by first taking stock of relevant practice and assessing feasibility of any work in that area. In so doing, it was suggested that the focus could be on (i) adjudication as an efficient means to solve disputes in long-term contracts generally, as well as (ii) the means to ensure provisional enforcement of decisions.

162. As to the preparation of principles on quality and effectiveness, it was emphasized that there could be benefit in assessing the current status of arbitration and to further develop principles to ensure that arbitration continued to be an efficient method for resolving disputes. It was further noted that quality and effectiveness would in any case form the basis of any work on arbitration. It was suggested that the scope of work being suggested was quite broad. Thus, it was suggested that efforts should be made to narrow down the scope of work to those matters that would require more urgent work. Some interest was expressed for engaging in work on non-signatories and on group enterprises. It was further pointed out that the work might not necessarily result in soft law instruments and might result in legislative texts.

5. Conclusion

163. After discussion, the Working Group agreed to recommend to the Commission that the Secretariat be mandated (i) to work on updating the Conciliation Rules to both reflect current practice and be consistent with the contents of the draft instruments to be finalized by the Commission in 2018 and (ii) to prepare notes on organizing mediation proceedings. It was suggested that such further work on mediation should be conducted by the Secretariat in consultation with experts and relevant organizations in the field of mediation and that the final product could be presented to the Commission at a future session.

164. The Working Group also agreed to recommend to the Commission that work on expedited arbitration procedure should be given priority for future work, together with the suggestion to work on the preparation of uniform principles, which could serve as an umbrella for other topics. Regarding adjudication, the Working Group agreed to bring that topic to the attention of the Commission, taking into account that more information might need to be provided as highlighted above (see para. 161 above).

E. Note by the Secretariat on settlement of commercial disputes: international commercial mediation: preparation of instruments on enforcement of international commercial settlement agreements resulting from mediation

(A/CN.9/WG.II/WP.205 and Add.1)

[Original: English]

Contents

I. Introduction

1. At its forty-seventh session, in 2014, the Commission considered a proposal to undertake work on the preparation of a convention on the enforceability of settlement agreements reached through international commercial conciliation (A/CN.9/822).[1] It requested the Working Group to consider the feasibility and possible form of work in that area.[2] At its forty-eighth session, in 2015, the Commission took note of the consideration of the topic by the Working Group[3] and agreed that the Working Group should commence work at its sixty-third session to identify relevant issues and develop possible solutions. The Commission also agreed that the mandate of the Working Group with respect to that topic should be broad to take into account the various approaches and concerns.[4] At its forty-ninth session, in 2016, the Commission confirmed that the Working Group should continue its work on the topic.[5] At its fiftieth session, in 2017, the Commission took note of the compromise reached by the Working Group at its sixty-sixth session, which addressed five key issues as a package (referred to as the "compromise proposal", see A/CN.9/901, para. 52) and expressed support for the Working Group to continue its work based on that compromise.[6]

2. At its sixty-third to sixty-seventh sessions, the Working Group undertook work on the preparation of instruments on enforcement of international settlement agreements resulting from conciliation, consisting of a draft convention and draft amendments to the UNCITRAL Model Law on International Commercial

[1] *Official Records of the General Assembly, Sixty-ninth Session, Supplement No. 17* (A/69/17), paras. 123–125.

[6] Ibid., *Seventy-second Session, Supplement No. 17* (A/72/17), paras. 236–239.

Conciliation (the "Model Law").[7] For ease of reference, this note refers to the "draft convention" and "draft amended Model Law"; jointly, they are referred to as the "instruments".

3. This note outlines the main matters for consideration by the Working Group, and its addendum contains the text of the instruments.

II. Annotations

A. Terminology

4. At its sixty-fourth session, the Working Group considered whether the term "mediation" should replace the term "conciliation" throughout the instruments and, if so, the possible implications on existing UNCITRAL texts, which were prepared using the term "conciliation". At that session, a view was expressed that the instruments should refer to "mediation" instead of "conciliation", as it was a more widely used term (A/CN.9/867, para. 120). At its sixty-seventh session, the Working Group reached a shared understanding that the terms "conciliation", "conciliator" and other similar terms should be replaced with the terms "mediation", "mediator" and corresponding terms in the instruments as well as in the UNCITRAL Conciliation Rules (1980) (A/CN.9/929, paras. 102–104). These changes have been implemented in this note for further consideration by the Working Group.

5. It is suggested that explanation about the change of terminology be provided in material accompanying the draft convention, if any, as well as in a footnote to the draft amended Model Law (see footnote 3 in document A/CN.9/WG.II/WP.205/Add.1), as follows:

> "'*Mediation' is a widely used term for a process where parties request a third person or persons to assist them in their attempt to reach an amicable settlement of their dispute arising out of, or relating to, a contractual or other legal relationship. In its previously adopted texts and relevant documents, UNCITRAL used the term 'conciliation' with the understanding that the terms 'conciliation' and 'mediation' were interchangeable. In preparing the [Convention/amendment to the Model Law], the Commission decided to use the term 'mediation' instead in an effort to adapt to the actual and practical use of the terms and with the expectation that this change will facilitate the promotion and heighten the visibility of the [Convention/ Model Law]. This change in terminology does not have any substantive or conceptual implications.*"

6. As mentioned above (see para. 4), corresponding adjustments of terminology will need to be implemented in the UNCITRAL Conciliation Rules (1980), which could also include a similar explanatory note. In that context, the Working Group may wish to consider whether the Rules would need to be amended further to take account of developments in the field since their adoption. If so, this matter would need to be referred to the Commission for further consideration.

B. Scope and exclusions

1. Scope

7. With regard to the scope of the instruments, the Working Group approved article 1(1) of the draft convention and article 15(1) of the draft amended Model Law (A/CN.9/929, paras. 14 and 30; for consideration of the matter at previous sessions, see A/CN.9/901, paras. 52 and 56; A/CN.9/896, paras. 14–16, 113–117, 145 and 146; and A/CN.9/867, para. 94; for questions on the scope of the different sections of the draft amended Model Law, see para. 39 below).

---

[7] The reports of the Working Group on the work of its sixty-third, sixty-fourth, sixty-fifth, sixty-sixth, and sessions sixty-seventh are contained in documents A/CN.9/861, A/CN.9/867, A/CN.9/896, A/CN.9/901, and A/CN.9/929, respectively.

2. Exclusions

- *Personal, family, inheritance, employment matters*

8. The Working Group approved article 1(2) of the draft convention and article 15(2) of the draft amended Model Law, excluding from the scope of the instruments settlement agreements (i) concluded to resolve a dispute arising from transactions engaged in by one of the parties (a consumer) for personal, family or household purposes; (ii) relating to family, inheritance or employment law matters (A/CN.9/929, paras. 15 and 30; for consideration of the matter at previous sessions, see A/CN.9/896, paras. 55–60; A/CN.9/867, paras. 106–108; and A/CN.9/861, paras. 41–43; for questions on the articulation between article 15(2) of the draft amended Model Law and article 1(9) of the Model Law, see para. 43 below).

- *Settlement agreement enforceable as a judgment or as an arbitral award*

9. The Working Group approved article 1(3) of the draft convention and article 15(3) of the draft amended Model Law, excluding from the scope of the instruments (i) settlement agreements that have been approved by a court or have been concluded before a court and that are enforceable as a judgment as well as (ii) those that have been recorded and are enforceable as an arbitral award (A/CN.9/929, paras. 17–29 and 30; for consideration of the matter at previous sessions, see A/CN.9/901, paras. 25–34, 52, and 58–71; A/CN.9/896, paras. 48–54, 169–176 and 205–210; A/CN.9/867, paras. 118 and 125; and A/CN.9/861, paras. 24–28; for questions on the articulation between article 15(3) of the draft amended Model Law and article 1(9) of the Model Law, see para. 43 below).

10. The Working Group may wish to consider whether the instruments should indicate how the competent authority would ascertain whether a settlement agreement falls within or outside the scope of article 1(3) of the draft convention and article 15(3) of the draft amended Model Law. For example, the party against whom the enforcement of a settlement agreement was sought may be required to provide proof that the settlement agreement was concluded before a court and was enforceable as a judgment in the State of that court (and therefore, that it falls outside the scope of the instruments) or the party relying on a settlement agreement may be required to provide proof that the settlement agreement was not concluded before a court or that it was not enforceable as a judgment in the State of that court (and therefore, that it falls within the scope of the instruments).

C. General principles

11. The instruments address both enforcement of settlement agreements (article 2(1) of the draft convention and article 16(1) of the draft amended Model Law) and the possibility for a party to invoke a settlement agreement as a defence against a claim (article 2(2) of the draft convention and article 16(2) of the draft amended Model Law). Relevant provisions, including their placement, were approved by the Working Group at its sixth-seventh session (A/CN.9/929, paras. 44–48 and 73; for consideration of the matter at previous sessions, see A/CN.9/901, paras. 16–24, 52, 54 and 55; A/CN.9/896, paras. 76–81, 152, 153, 155 and 200–204; A/CN.9/867, para. 146; and A/CN.9/861, paras. 71–79).

D. Definitions

1. “International” settlement agreement

12. The Working Group approved article 3(1) of the draft convention on the definition of “international” settlement agreement (A/CN.9/929, paras. 31–35 and 43; for consideration of the matter at previous sessions, see A/CN.9/896, paras. 17–24 and 158–163; A/CN.9/867, paras. 93–98 and 101; and A/CN.9/861, paras. 33–39). With respect to the draft amended Model Law, the Working Group may wish to consider whether and, if so, how to define separately the internationality of mediation (see article aa(2) of the draft amended Model Law) and of settlement agreements (see

article 15(4) of the draft amended Model Law) (A/CN.9/929, para. 39; see also para. 40 below).

2. Notion of "place of business"

13. It may be recalled that article 1(6) of the Model Law fulfilled the purpose of allowing parties to expand the notion of internationality, and that the Working Group agreed that a provision mirroring article 1(6) of the Model Law should not be included in the draft convention (A/CN.9/929, para. 36). The Working Group also agreed to further consider whether to retain article 1(6) in the draft amended Model Law (see (A/CN.9/929, para. 37; see also para. 41 below).

14. In that light, at previous sessions, suggestions were made that the definition of "international" settlement agreements might need to be expanded to also cover situations where parties would have their places of business in the same State, but the settlement agreement would nevertheless contain an international element, for instance, where the parties' parent company or shareholders were located in different States. It was suggested that such an expansion would reflect current global business practices as well as complex corporate structures (A/CN.9/929, paras. 32–35; for consideration of the matter at previous sessions, see A/CN.9/896, paras. 27–31; and A/CN.9/861, para. 39).

15. The Working Group may wish to consider whether articles 3(1)(b) and 3(2)(a) of the draft convention and articles 15(4)(b) and 15(5)(a) of the draft amended Model Law could address such situations, or whether a provision, complementing article 3(1) of the draft convention and article 15(4) of the draft amended Model Law, should be added, along the lines of:

> "(c) *The parties to the settlement agreement have their place of business in the same State, but at least one of the parties is [wholly owned][controlled][8] by an entity having its place of business in a different State and that entity participated in the mediation process that led to the settlement agreement*."

3. "Writing" requirement

16. The Working Group approved the definition of the term "writing" as it appears in article 3(3) of the draft convention and article 15(6) of the draft amended Model Law (A/CN.9/929, para. 43; for consideration of the matter at previous sessions, see A/CN.9/896, paras. 32–38 and 66; and A/CN.9/867, para. 133).

4. "Mediation"

17. The Working Group approved the definition of the term "mediation" as it appears in article 3(4) of the draft convention and article 1(3) of the draft amended Model Law (A/CN.9/929, para. 43). The Working Group may wish to note that the definition of "mediation" in the draft convention and the draft amended Model Law are formulated slightly differently due to the different nature of the instruments. The definition in article 1(3) of the Model Law provided the model for the definition of that term in the draft convention (A/CN.9/929, paras. 43 and 106; for consideration of the matter at previous sessions, see A/CN.9/896, paras. 47 and 116; and A/CN.9/861, para. 21).

E. Application

18. Article 4 of the draft convention and article 17 of the draft amended Model Law, both dealing with the application process, reflect the discussion and decisions by the Working Group at its sixty-seventh session (A/CN.9/929, paras. 49–67 and 73; for

[8] The Working Group may wish to note the definition of "control" in the UNCITRAL Legislative Guide on Insolvency Law (Part three: Treatment of enterprise groups in insolvency), which reads as follows: "'Control': the capacity to determine, directly or indirectly, the operating and financial policies of an enterprise."

consideration of the matter at previous sessions, see A/CN.9/896, paras. 67–75, 82, and 177–190; A/CN.9/867, paras. 133–144; and A/CN.9/861, paras. 51–67).

19. Article 4(1)(b) of the draft convention and article 17(1)(b) of the draft amended Model Law provide an illustrative and non-hierarchical list of means to evidence that the settlement agreement resulted from mediation (A/CN.9/929, paras. 52–59). Article 4(4) of the draft convention and article 17(4) of the draft amended Model Law address the right for the competent authority to require any additional document necessary for considering the application in light of the conditions in the instruments (A/CN.9/929, paras. 60–65). The Working Group may wish to consider whether the word "conditions" or "requirements" should be used in that provision, for the sake of consistency (for instance, article 4(2) refers to "requirement").

20. Further, the Working Group approved article 4(2) of the draft convention and article 17(2) of the draft amended Model Law, which provide a functional equivalence rule for meeting the requirement that a settlement agreement was signed by the parties (article 4(1) of the draft convention and article 17(1)(a) of the draft amended Model Law) or, where applicable, the mediator (article 4(1)(b)(i) of the draft convention and article 17(1)(b)(i) of the draft amended Model Law) in relation to electronic communication (A/CN.9/929, paras. 66 and 73; for consideration of the matter at previous sessions, see A/CN.9/896, paras. 65–66, and 71–75; A/CN.9/867, para. 133; and A/CN.9/861, para. 53).

F. Defences

21. Article 5 of the draft convention and article 18 of the draft amended Model Law, both addressing defences, reflect the discussion and decisions of the Working Group at its sixty-seventh session (A/CN.9/929, paras. 74–101; for consideration of the matter at previous sessions, see A/CN.9/901, paras. 41–50, 52 and 72–88; A/CN.9/896, paras. 84–117 and 191–194; A/CN.9/867, paras. 147–167; and A/CN.9/861, paras. 85–102).

22. With regard to subparagraph (1)(b) (A/CN.9/929, paras. 94 and 95),[9] the Working Group may wish to note that the phrase "the obligations in the settlement agreement have been performed" has been moved from subparagraph (c) to subparagraph (b) as subparagraph (b) addresses issues relating to the performance of the settlement agreement, and in order to improve the presentation of subparagraph (c) in all United Nations languages. As agreed at its sixty-seventh session, the Working Group may wish to further consider subparagraph (1)(b) after its consideration and finalization of subparagraph (1)(c) (A/CN.9/929, para. 101).

23. Subparagraph (1)(c)[10] was agreed by the Working Group as forming the basis for further discussion (A/CN.9/929, para. 93), but not disregarding proposals and suggestions made during the sixty-seventh session (A/CN.9/929, paras. 77–92).

24. The Working Group may wish to confirm that the grounds listed in article 5 of the draft convention and article 18 of the draft amended Model Law apply also to situations where a party invoked a settlement agreement as a defence against a claim under article 2(2) of the draft convention and article 16(2) of the draft amended Model Law (A/CN.9/929, para. 74).

G. Relationship of the enforcement process to judicial or arbitral proceedings

25. The Working Group may wish to consider the formulation in article 6 of the draft convention and article 18(3) of the draft amended Model Law regarding parallel applications or claims. The Working Group generally agreed that it would be appropriate for the competent authority to be given the discretion to adjourn the enforcement process

[9] The provision was formerly numbered draft provision 4(1)(c) (see A/CN.9/929, para. 95).
[10] The provision was formerly numbered draft provision 4(1)(b) (see A/CN.9/929, para. 95).

if an application (or claim) relating to the settlement agreement had been made to a court, arbitral tribunal or any other authority, which might affect the enforcement process (A/CN.9/896, paras. 122–125; for consideration of the matter at a previous session, see A/CN.9/867, paras. 168 and 169). The Working Group may wish to confirm that article 6 of the draft convention and article 18(3) of the draft amended Model Law do not deal with procedure referred to in article 2(2) of the draft convention and article 16(2) of the draft amended Model Law.

H. Questions regarding the draft convention

1. "More-favourable-right" provision

26. The proposal for a provision mirroring article VII(1) of the New York Convention,[11] which would permit application of more favourable national legislation or treaties to matters covered by the draft convention, was considered by the Working Group and is reflected in article 7 of the draft convention. There was general support for including such a provision in the draft convention even though reservation was expressed (A/CN.9/901, paras. 65, 66 and 71; for consideration of the matter at a previous session, see A/CN.9/896, paras. 154, 156, and 204).

27. The understanding of the Working Group was that article 7 of the draft convention would not allow States to apply the draft convention to settlement agreements excluded in articles 1(2) and (3), as such settlement agreements would fall outside the scope of the draft convention. However, States would have the flexibility to enact relevant domestic legislation, which could include in its scope such settlement agreements (A/CN.9/929, para. 19).

2. Declarations

- *States and other public entities*

28. Regarding settlement agreements involving States and other public entities, the Working Group reaffirmed its decision that such agreements should not be excluded from the scope (A/CN.9/896, paras. 61 and 62; for consideration of the matter at a previous session, see A/CN.9/861, paras. 44–46). Rather, it was agreed that the treatment of such agreements could be addressed through a declaration in the draft convention. Under the draft amended Model Law, it would be for each State to decide the extent to which such agreements would fall outside the enacting legislation. The Working Group may wish to consider the formulation for a declaration on the application of the draft convention to settlement agreements concluded by States and other public entities, as formulated in article 8(1)(a) of the draft convention.

- *Application of the draft convention based on parties' agreement*

29. During previous sessions of the Working Group, it was suggested that the question whether the application of the draft convention would depend on the consent of the parties to the settlement agreement need not necessarily be addressed in the draft convention, but could be left to States when adopting or implementing the convention (A/CN.9/901, paras. 39 and 40; and A/CN.9/896, paras. 130 and 196). This matter was dealt with under issue 3 of the compromise proposal reached at the sixty-sixth session of the Working Group (A/CN.9/901, para. 52). It was envisaged that States that wish to apply the convention only to the extent that the parties to the settlement agreement have agreed to the application of the convention could make a declaration to that effect, as formulated in article 8(1)(b) of the draft convention (A/CN.9/901, para. 39; and A/CN.9/896, para. 196).

[11] Article VII of the New York Convention provides that: "The provisions of the present Convention shall not affect the validity of multilateral or bilateral agreements concerning the recognition and enforcement of arbitral awards entered into by the Contracting States nor deprive any interested party of any right he may have to avail himself of an arbitral award in the manner and to the extent allowed by the law or the treaties of the country where such award is sought to be relied upon."

30. The Working Group may wish to clarify how the reservation would operate. For example, it may be clarified whether a State, not making this reservation upon becoming a Party to the convention, could apply the convention automatically even when the parties to the settlement agreement have opted-out of the convention.

31. The Working Group may wish to consider that it would generally be in the interests of a State to make such a reservation to protect its businesses' interests. It is likely that enforcement of settlement agreements involving businesses in State A would be sought in State A. By making the reservation, State A could protect the interests of those businesses, particularly those that had not agreed to the application of the draft convention. This might have a domino effect, resulting in almost all States making the reservation.

- *Conditions applicable to declarations*

32. The Working Group may wish to consider the conditions applicable to the declarations, and in particular confirm that the list of declarations is exhaustive (see article 8(2) of the draft convention), and that reservations deposited after the entry into force of the draft convention for that Contracting State, as well as any withdrawal thereof, shall take effect six months after the date of deposit or withdrawal (see articles 8(3) and (5) of the draft convention).

3. Final provisions

33. Articles 9 to 15 of the draft convention are customary provisions in conventions and are not intended to create rights and obligations for private parties. However, these provisions regulate the extent to which a Contracting State is bound by the convention, including the time the convention or any declaration submitted thereunder enter into force; therefore, they may affect the ability of the parties to the settlement agreement to rely on the provisions of the convention.

34. In addition to "States", the draft convention allows participation by international organizations of a particular type, namely "regional economic integration organizations" (see article 11). Usually, the notion of "regional economic integration organizations" encompasses two key elements: the grouping of States in a certain region for the realization of common purposes, and the transfer of competencies relating to those common purposes from the members of the regional economic integration organization to the organization.

35. Article 12 permits a Contracting State, at the time of signature, ratification, acceptance, approval or accession, to declare that the convention is to extend to all its territorial units or only to one or more of them and to amend its declaration by submitting another declaration at any time. This provision, often called "the federal clause", is of interest to relatively few States – namely, those with federal systems where the central Government lacks treaty power to establish uniform law for the subject matter covered by the convention.

36. The provisions governing the entry into force of the draft convention are laid down in article 13. Three ratifications correspond to the modern trend in commercial law conventions, which promotes their application as early as possible. A six-month period from the date of deposit of the third instrument of ratification, acceptance, approval or accession is provided so as to give Contracting States to the convention sufficient time to notify all the national organizations and individuals concerned that a convention which could affect them would soon enter into force. Paragraph (2) deals with the entry into force of the draft convention as regards those Contracting States that become parties thereto after the time for its entry into force under paragraph (1).

37. Article 14 relates to the amendment process of the draft convention. Article 15 addresses the procedure of denunciation by a Contracting State to the convention.

I. Questions regarding the draft amended Model Law

1. General remark

38. The Working Group may wish to note that the presentation of the provisions of the draft amended Model Law in three sections in document A/CN.9/WG.II/WP.205/Add.1 reflects the presentation in the annex to the report of the sixth-seventh session (A/CN.9/929), which received general support.

2. Scope

39. The Working Group may wish to consider article 1(1) (in section 1) of the draft amended Model Law, which sets forth the expanded scope of the draft amended Model Law, applying to both international commercial mediation and international settlement agreements (A/CN.9/929, para. 106). The Working Group may also wish to consider article aa(1) (in section 2) of the draft amended Model Law, which provides that section 2 applies to international commercial mediation (see also above, para. 7).

3. "Internationality" of the mediation and of settlement agreements

40. The draft amended Model Law includes two separate provisions on the notion of internationality: (i) article aa(2) (definition of international mediation), which mirrors article 1(4) of the Model Law, and (ii) article 15(4) (definition of international settlement agreement), which mirrors article 3(1) of the draft convention. The Working Group may wish to consider whether the internationality of a settlement agreement should be assessed at the time of the conclusion of the agreement to mediate (which would provide consistency with the definition of international mediation and would make it possible to determine the applicability of the law when mediation was initiated, yet this would be different from the approach in article 3(1) of the draft convention) or at the time of the conclusion of the settlement agreement (which would be in line with the approach in article 3(1) of the draft convention and would cater for situations where there might not necessarily be an agreement to mediate between the parties) (A/CN.9/929, para. 39; see also, para. 12 above).

4. Article 1(6) of the Model Law

41. The Working Group agreed not to include a provision similar to article 1(6) of the Model Law[12] in the draft convention. In that light, the Working Group may wish to consider whether article 1(6) should be retained in the draft amended Model Law and, if so, whether it should be placed in section 1 or 2 of the draft amended Model Law (A/CN.9/929, paras. 36 and 37; for consideration of the matter at previous sessions, see A/CN.9/896, paras. 25 and 26; and A/CN.9/867, para. 99; see also above, para. 13).

5. Article 1 (7) and (8) of the Model Law

42. The Working Group may wish to consider whether articles 1(7) and (8) of the Model Law should be retained in the draft amended Model Law and, if so, in which section:

- Article 1(7) of the Model Law permits parties to exclude the applicability of the law; in that respect, the Working Group may wish to consider whether the application of article 1(7) should be limited to section 2 of the draft amended Model Law;
- Article 1(8) of the Model Law clarifies that the law applies, irrespective of the basis on which the mediation is carried out; if this article is retained, it might need to be subject to exclusions from the scope of application of settlement

[12] Article 1(6) provides that: "*This Law also applies to a commercial conciliation when the parties agree that the conciliation is international or agree to the applicability of this Law.*"

agreements concluded before a court, or approved by a court, and subject to the provisions of article 1(9).

6. Article 1(9) of the Model Law and exhaustive list of exclusions in article 15(2) and (3) of the draft amended Model Law

43. Article 1(9) of the Model Law provides for an open list of exclusions from the scope of the law. In contrast to article 1(9) of the Model Law,[13] articles 15(2) and (3) the draft amended Model Law are presented as an exhaustive list of exclusions. The Working Group may wish to consider whether those exclusions should be retained in section 3 as an exhaustive list or be mentioned as examples under article 1(9). If the former approach is taken, the Working Group may wish to consider whether to retain article 1(9) of the Model Law, particularly as subparagraph (a) of that article is dealt with under article 15(3) of the draft amended Model Law. If the latter approach is taken, the Working Group may wish to consider the placement of article 1(9) and whether it should remain an illustrative or become an exhaustive list (A/CN.9/929, para. 106). The Working Group may wish to note that as far as the draft convention is concerned, articles 1(2) and (3) (which mirror articles 15(2) and (3) of the draft amended Model Law) provide for an exhaustive list of exclusions (A/CN.9/929, para. 16).

7. Placement of article 3 of the Model Law in the draft amended Model Law

44. The Working Group may wish to consider the placement in the draft amended Model Law of article 3 of the Model Law (on variations by agreement of the provisions of the law). It may wish to also consider whether reference to section 3 (or to specific articles therein) of the draft amended Model Law should be added to the list of exceptions contained in article 3.

8. Article 14 of the Model Law

45. The Working Group may wish to consider whether to retain in the draft amended Model Law article 14 of the Model Law, which provides that if the parties conclude an agreement settling a dispute, that settlement agreement is binding and enforceable. If so, the Working Group may wish to consider whether that provision should continue to be numbered article 14 in light of the definition of the term "settlement agreement", which is contained in article 15.

46. The Working Group may wish to consider the possibility of placing the provision of article 14 in article 15, along the lines of: "A settlement agreement is binding and enforceable." As an alternative, article 14 could be combined with article 16 on general principles.

9. Agreements settling disputes not reached through mediation

47. The Working Group may wish to also consider whether the draft amended Model Law should provide flexibility to States to broaden the scope of application to agreements not reached through mediation (A/CN.9/929, paras. 68–72; for consideration of the matter at previous sessions, see A/CN.9/896, paras. 40 and 41; and A/CN.9/867, para. 115). The Working Group may wish to consider the formulation in footnote 4 to the title of section 3 of the draft amended Model Law, which seeks to address the matter.

[13] Article 1(9) of the Model Law provides as follows: "*This Law does not apply to: (a) Cases where a judge or an arbitrator, in the course of judicial or arbitral proceedings, attempts to facilitate a settlement; and (b) [. . .]]*".

(A/CN.9/WG.II/WP.205/Add.1) (Original: English)

Note by the Secretariat on settlement of commercial disputes: international commercial mediation: preparation of instruments on enforcement of international commercial settlement agreements resulting from mediation

ADDENDUM

Contents

III. Draft text of the instruments

A. Form and title of the instruments

1. Form

1. The Working Group considered the form of the instrument at its sixty-fifth and sixty-sixth sessions (A/CN.9/896, paras. 135–143 and 211–213, and A/CN.9/901, paras. 52 and 89–93). At the sixty-sixth session of the Working Group, in a spirit of compromise and to accommodate the different levels of experience with mediation in different jurisdictions, it was agreed that the Working Group would continue to prepare both a model legislative text complementing the Model Law on International Commercial Conciliation (the "Model Law"), and a convention, on enforcement of international commercial settlement agreements resulting from mediation (A/CN.9/901, para. 93). This suggestion was reflected in the compromise proposal, under issue 5 (A/CN.9/901, para. 52). It was further agreed that a possible approach to address the specific circumstance of preparing both a model legislative text and a convention could be to suggest that the resolutions of the General Assembly accompanying those instruments would express no preference on the instrument to be adopted by States (A/CN.9/901, para. 93).

2. In that context, the Working Group may wish to consider the following wording which would be recommended to the Commission and eventually to the General Assembly for inclusion in the relevant resolution:

3. "*Recalling that the decision of the Commission to prepare a draft [full title of the Convention] and an amendment to the UNCITRAL Model Law on International Commercial Conciliation was intended to accommodate the different levels of experience with mediation in different jurisdictions, and to provide States with consistent standards on cross-border enforcement of international settlement agreements resulting from mediation, without creating any preference for the instrument [that interested States may adopt][to be adopted].*"

2. Title of the instruments

4. The Working Group may wish to consider the possible title of the instruments, including the following options:

- *For the draft convention*

"United Nations Convention on International Settlement Agreements [resulting from mediation]"

- *For the draft amended Model Law*

"UNCITRAL Model Law on International Commercial Mediation (2002), With Amendments as adopted in 201*"

"UNCITRAL Model Law on International Commercial Mediation and International Settlement Agreements, 201* (*amending the UNCITRAL Model Law on International Commercial Conciliation (2002)*)"

B. Draft convention

5. The draft convention might read as follows:

"**Preamble**

"*The Parties to this Convention*,

"*Recognizing* the value for international trade of methods for settling commercial disputes in which the parties in dispute request a third person or persons to assist them in their attempt to settle the dispute amicably,

"*Noting* that such dispute settlement methods, referred to by expressions such as mediation and conciliation and expressions of similar import, are increasingly used in international and domestic commercial practice as an alternative to litigation,

"*Considering* that the use of such dispute settlement methods results in significant benefits, such as reducing the instances where a dispute leads to the termination of a commercial relationship, facilitating the administration of international transactions by commercial parties and producing savings in the administration of justice by States,

"*Convinced* that the establishment of a framework for international settlement agreements resulting from such dispute settlement methods that is acceptable to States with different legal, social and economic systems would contribute to the development of harmonious international economic relations,

"*Have agreed* as follows:

Title: [United Nations Convention on International Settlement Agreements [resulting from mediation]]

"**Article 1. Scope of application**

"1. This Convention applies to international agreements resulting from mediation and concluded in writing by parties to resolve a commercial dispute ("settlement agreements").

"2. This Convention does not apply to settlement agreements:

"(a) Concluded to resolve a dispute arising from transactions engaged in by one of the parties (a consumer) for personal, family or household purposes;

"(b) Relating to family, inheritance or employment law.

"3. This Convention does not apply to:

"(a) Settlement agreements:

"(i) That have been approved by a court or have been concluded in the course of proceedings before a court; and

"(ii) That are enforceable as a judgment in the State of that court;

"(b) Settlement agreements that have been recorded and are enforceable as an arbitral award.

"**Article 2. General principles**

"1. Each Contracting State shall enforce a settlement agreement in accordance with its rules of procedure, and under the conditions laid down in this Convention.

"2. If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, a Contracting State shall allow the party to invoke the settlement agreement in accordance with its rules of procedure and under the conditions laid down in this Convention, in order to prove that the matter has been already resolved.

"**Article 3. Definitions**

"For the purposes of this Convention:

"1. A settlement agreement is 'international' if, at the time of the conclusion of that agreement:

"(a) At least two parties to the settlement agreement have their places of business in different States; or

"(b) The State in which the parties to the settlement agreement have their places of business is different from either:

"(i) The State in which a substantial part of the obligations under the settlement agreement is to be performed; or

"(ii) The State with which the subject matter of the settlement agreement is most closely connected.

"2. For the purposes of paragraph (1):

"(a) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement;

"(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

"3. A settlement agreement is in 'writing' if its content is recorded in any form. The requirement that a settlement agreement be in writing is met by an electronic communication if the information contained therein is accessible so as to be useable for subsequent reference; 'electronic communication' means any communication that the parties make by means of data messages; 'data message' means information generated, sent, received or stored by electronic, magnetic, optical or similar means, including, but not limited to, electronic data interchange (EDI), electronic mail, telegram, telex or telecopy.

"4. 'Mediation' means a process, regardless of the expression used and irrespective of the basis upon which the process is carried out, whereby parties attempt to reach an amicable settlement of their dispute with the assistance of a third person or persons ('the mediator') lacking the authority to impose a solution upon the parties to the dispute.

"**Article 4. Application**

"1. A party relying on a settlement agreement under this Convention shall supply to the competent authority of the Contracting State where relief is sought:

"(a) The settlement agreement signed by the parties;

"(b) Evidence that the settlement agreement resulted from mediation, such as:

"(i) The mediator's signature on the settlement agreement;

"(ii) A document signed by the mediator indicating that the mediation was carried out;

"(iii) An attestation by the institution that administered the mediation; or

"(iv) In the absence of (i), (ii) or (iii), any other evidence acceptable to the competent authority.

"2. The requirement that a settlement agreement shall be signed by the parties or, where applicable, the mediator, is met in relation to an electronic communication if:

"(a) A method is used to identify the parties or the mediator and to indicate the parties' or mediator's intention in respect of the information contained in the electronic communication; and

"(b) The method used is either:

"(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

"(ii) Proven in fact to have fulfilled the functions described in subparagraph (a) above, by itself or together with further evidence.

"3. If the settlement agreement is not in the official language(s) of the Contracting State where the application is made, the competent authority may request the party making the application to supply a translation thereof into such language.

"4. The competent authority may require any necessary document in order to verify that the [conditions] [requirements] of the Convention have been complied with.

"5. When considering the application, the competent authority shall act expeditiously.

"**Article 5. Grounds for refusing to grant relief**

"1. The competent authority of the Contracting State where the application under article 4 is made may refuse to grant relief at the request of the party against whom the application is made, only if that party furnishes to the competent authority proof that:

"(a) A party to the settlement agreement was under some incapacity; or

"(b) The settlement agreement is null and void, inoperative or incapable of being performed under the law to which the parties have validly subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority of the Contracting State where the application under article 4 is made; or the obligations in the settlement agreement have been performed; or

"(c) The settlement agreement:

"(i) Is not binding, or is not final, according to its terms;

"(ii) Has been subsequently modified;

"(iii) Is conditional so that the obligations in the settlement agreement of the party against whom the settlement agreement is invoked have not yet arisen; or

"(iv) Is not capable of being enforced because it is not clear and comprehensible; or

"(d) There was a serious breach by the mediator of standards applicable to the mediator or the mediation, without which breach that party would not have entered into the settlement agreement; or

"(e) There was a failure by the mediator to disclose to the parties circumstances that raise justifiable doubts as to the mediator's impartiality or independence and such failure to disclose had a material impact or undue influence on a party, without which failure that party would not have entered into the settlement agreement.

"2. The competent authority of the Contracting State where the application under article 4 is made may also refuse to grant relief if it finds that:

"(a) Granting relief would be contrary to the public policy of that State; or

"(b) The subject matter of the dispute is not capable of settlement by mediation under the law of that State.

"**Article 6. Parallel applications or claims**

"If an application or a claim relating to a settlement agreement has been made to a court, an arbitral tribunal or any other competent authority which may affect enforcement of that settlement agreement, the competent authority of the Contracting State where the enforcement of the settlement agreement is sought may, if it considers it proper, adjourn the decision on the enforcement of the settlement agreement and may also, on the request of a party, order the other party to give suitable security.

"**Article 7. Other laws or treaties**

"This Convention shall not deprive any interested party of any right it may have to avail itself of a settlement agreement in the manner and to the extent allowed by the law or the treaties of the Contracting State where such settlement agreement is sought to be relied upon.

"**Article 8. Reservations**

"1. A Contracting State may declare that:

"(a) [Option 1: It shall apply][Option 2: It shall not apply] this Convention to settlement agreements to which it is a party, or to which any governmental agencies or any person acting on behalf of a governmental agency is a party, only to the extent specified in the declaration;

"(b) It shall apply this Convention only to the extent that the parties to the settlement agreement have agreed to the application of the Convention.

"2. No reservations are permitted except those expressly authorized in this article.

"3. Reservations may be made by a Contracting State at any time. Reservations made at the time of signature shall be subject to confirmation upon ratification, acceptance or approval. Such reservations shall take effect simultaneously with the entry into force of this Convention in respect of the Contracting State concerned. Reservations made at the time of ratification, acceptance or approval of this Convention or accession thereto shall take effect simultaneously with the entry into force of this Convention in respect of the Contracting State concerned. Reservations deposited after the entry into force of the Convention for that Contracting State shall take effect [six] months after the date of the deposit.

"4. Reservations and their confirmations shall be deposited with the depositary.

"5. Any Contracting State that makes a reservation under this Convention may withdraw it at any time. Such withdrawals are to be deposited with the depositary, and shall take effect [six] months after deposit.

"**Article 9. Depositary**

"The Secretary-General of the United Nations is hereby designated as the depositary of this Convention.

"**Article 10. Signature, ratification, acceptance, approval, accession**

"1. This Convention is open for signature by all States in [...] on [...], and thereafter at United Nations Headquarters in New York.

"2. This Convention is subject to ratification, acceptance, or approval by the signatories.

"3. This Convention is open for accession by all States that are not signatories as from the date it is open for signature.

"4. Instruments of ratification, acceptance, approval, or accession are to be deposited with the depositary.

"**Article 11. Participation by regional economic integration organizations**

"1. A regional economic integration organization that is constituted by sovereign States and has competence over certain matters governed by this Convention may similarly sign, ratify, accept, approve, or accede to this Convention. The regional economic integration organization shall in that case have the rights and obligations of a Contracting State, to the extent that that organization has competence over matters governed by this Convention. Where the number of Contracting States is relevant in this Convention, the regional economic integration organization shall not count as a Contracting State in addition to its member States that are Contracting States.

"2. The regional economic integration organization shall, at the time of signature, ratification, acceptance, approval, or accession, make a declaration to the depositary specifying the matters governed by this Convention in respect of which competence has been transferred to that organization by its member States. The regional economic integration organization shall promptly notify the depositary of any changes to the distribution of competence, including new transfers of competence, specified in the declaration under this paragraph.

"3. Any reference to a 'Contracting State', 'Contracting States', a 'State' or 'States' in this Convention applies equally to a regional economic integration organization where the context so requires.

"4. This Convention shall not prevail over conflicting rules of a regional economic integration organization if, under article 4, an application is submitted to a competent authority of a State that is a member of such an organization and all the States relevant under article 3(1) are members of any such organization.

"**Article 12. [Effect in domestic territorial units][Non-unified legal systems]**

"1. If a Contracting State has two or more territorial units in which different systems of law are applicable in relation to the matters dealt with in this Convention, it may, at the time of signature, ratification, acceptance, approval, or accession, declare that this Convention is to extend to all its territorial units or only to one or more of them, and may amend its declaration by submitting another declaration at any time.

"2. These declarations are to be notified to the depositary and are to state expressly the territorial units to which the Convention extends.

"3. If a Contracting State has two or more territorial units in which different systems of law are applicable in relation to the matters dealt with in this Convention,

"(a) Any reference to the law or rule of procedure of a State shall be construed as referring, where appropriate, to the law or rule of procedure in force in the relevant territorial unit;

"(b) Any reference to the place of business in a State shall be construed as referring, where appropriate, to the place of business in the relevant territorial unit;

"(c) Any reference to the competent authority of the State shall be construed as referring, where appropriate, to the competent authority in the relevant territorial unit.

"4. If a Contracting State makes no declaration under paragraph 1 of this article, the Convention is to extend to all territorial units of that State.

"**Article 13. Entry into force**

"1. This Convention enters into force on the first day of the month following the expiration of [six] months after the date of deposit of the third instrument of ratification, acceptance, approval, or accession.

"2. When a State ratifies, accepts, approves, or accedes to this Convention after the deposit of the [third] instrument of ratification, acceptance, approval, or accession, this Convention enters into force in respect of that State on the first day of the month following the expiration of [six] months after the date of the deposit of its instrument of ratification, acceptance, approval, or accession. The Convention enters into force for a territorial unit to which this Convention has been extended in accordance with article 12 on the first day of the month following the expiration of [six] months after the notification of the declaration referred to in that article.

"**Article 14. Amendment**

"1. Any Contracting State may propose an amendment to the present Convention by submitting it to the Secretary-General of the United Nations. The Secretary-General shall thereupon communicate the proposed amendment to the Contracting States to this Convention with a request that they indicate whether they favour a conference of Contracting States for the purpose of considering and voting upon the proposal. In the event that within [four] months from the date of such communication at least one third of the Contracting States favour such a conference, the Secretary-General shall convene the conference under the auspices of the United Nations.

"2. The conference of Contracting States shall make every effort to achieve consensus on each amendment. If all efforts at consensus are exhausted and no consensus is reached, the amendment shall, as a last resort, require for its adoption a two-thirds majority vote of the Contracting States present and voting at the conference.

"3. An adopted amendment shall be submitted by the Secretary-General of the United Nations to all the Contracting States for ratification, acceptance, or approval.

"4. An adopted amendment enters into force [six] months after the date of deposit of the third instrument of ratification, acceptance, or approval. When an amendment enters into force, it shall be binding on those Contracting States that have expressed consent to be bound by it.

"5. When a State ratifies, accepts, or approves an amendment that has already entered into force, the amendment enters into force in respect of that State [six] months after the date of the deposit of its instrument of ratification, acceptance, or approval.

"6. Any State that becomes a Contracting State after the entry into force of the amendment shall be considered as a Contracting State to the Convention as amended.

"**Article 15. Denunciations**

"1. A Contracting State may denounce this Convention by a formal notification in writing addressed to the depositary. The denunciation may be limited to certain territorial units of a non-unified legal system to which this Convention applies.

"2. The denunciation takes effect on the first day of the month following the expiration of [twelve] months after the notification is received by the depositary. Where a longer period for the denunciation to take effect is specified in the notification, the denunciation takes effect upon the expiration of such longer period after the notification is received by the depositary. The Convention shall continue to apply to applications under article 4 that have already been made before the denunciation takes effect.

"DONE at ---- this [X] day of [X] ------, in a single original, of which the Arabic, Chinese, English, French, Russian, and Spanish texts are equally authentic."

C. Draft amended Model Law

6. The Working Group may wish to note that additional adjustments to the draft amended Model Law might be required based on further consideration of issues that remain to be decided. At this stage, the draft amended Model Law might read as follows.

Title: [UNCITRAL Model Law on International Commercial Mediation (2002) With amendments as adopted in 201*]
[UNCITRAL Model Law on International Commercial Mediation and International Settlement Agreements, 201*,
(amending the Model Law on International Commercial Conciliation (2002)]

"**Section 1 – General provisions**

"**Article 1. Scope of application and definitions**

"1. This Law applies to international[1] commercial[2] mediation[3] and to international settlement agreements.

"2. For the purposes of this Law, 'mediator' means a sole mediator or two or more mediators, as the case may be. [*Article 1(2) of the Model Law*]

"3. For the purposes of this Law, 'mediation' means a process, whether referred to by the expression mediation, conciliation or an expression of similar import, whereby parties request a third person or persons ('the mediator') to assist them in their attempt to reach an amicable settlement of their dispute arising out of or relating to a contractual or other legal relationship. The mediator

[1] Footnote 1 in the Model Law.

[2] Footnote 2 in the Model Law.

[3] "Mediation" is a widely used term for a process where parties request a third person or persons to assist them in their attempt to reach an amicable settlement of their dispute arising out of, or relating to, a contractual or other legal relationship. In its previously adopted texts and relevant documents, UNCITRAL used the term "conciliation" with the understanding that the terms "conciliation" and "mediation" were interchangeable. In preparing the amendment to the Model Law, the Commission decided to use the term "mediation" instead in an effort to adapt to the actual and practical use of the terms and with the expectation that this change will facilitate the promotion and heighten the visibility of the Model Law. This change in terminology does not have any substantive or conceptual implications.

does not have the authority to impose upon the parties a solution to the dispute. [*Article 1(3) of the Model Law*]

[*Placement of articles 1 (6) to (9) of the Model Law to be determined*]

"**Article 2. Interpretation**

"1. In the interpretation of this Law, regard is to be had to its international origin and to the need to promote uniformity in its application and the observance of good faith.

"2. Questions concerning matters governed by this Law, which are not expressly settled in it, are to be settled in conformity with the general principles on which this Law is based.

"**Article 3. Variation by agreement [*placement to be determined*]**

"Except for the provisions of [*article 2, article 6, paragraph 3 (numbering to be adjusted) – reference to other articles to be considered*] the parties may agree to exclude or vary any of the provisions of this Law.

"**Section 2 – Mediation**

"**Article aa. Scope and definitions**

"1. This section applies to international commercial mediation. [*Article 1(1) of the Model Law, without the footnotes*]

"2. A mediation is 'international' if:

"(a) The parties to an agreement to mediate have, at the time of the conclusion of that agreement, their places of business in different States; or

"(b) The State in which the parties have their places of business is different from either:

"(i) The State in which a substantial part of the obligations of the commercial relationship is to be performed; or

"(ii) The State with which the subject matter of the dispute is most closely connected. [*Article 1(4) of the Model Law*]

"3. For the purposes of paragraph (2):

"(a) If a party has more than one place of business, the place of business is that which has the closest relationship to the agreement to mediate;

"(b) If a party does not have a place of business, reference is to be made to the party's habitual residence. [*Article 1(5) of the Model Law*]

[Articles 4 to 13 of the Model Law would remain unchanged.]

["**Article 14. [*title to be determined*]**

"If the parties conclude an agreement settling a dispute, that settlement agreement is binding and enforceable.]

[*Footnote 4 in the Model Law to be considered in conjunction with articles 1(7) and 3*]

"**Section 3 – Enforcement of international settlement agreements**[4]

"**Article 15. Scope and definitions**

"1. This section applies to international agreements resulting from mediation and concluded in writing by parties to resolve a commercial dispute ('settlement agreements').

"2. This section does not apply to settlement agreements:

"(a) Concluded to resolve a dispute arising from transactions engaged in by one of the parties (a consumer) for personal, family or household purposes;

"(b) Relating to family, inheritance or employment law.

"3. This section does not apply to:

"(a) Settlement agreements:

"(i) That have been approved by a court or have been concluded in the course of proceedings before a court; and

"(ii) That are enforceable as a judgment in the State of that court;

"(b) Settlement agreements that have been recorded and are enforceable as an arbitral award.

"4. A settlement agreement is 'international' if, at the time of the conclusion of the settlement agreement [or at the time of the conclusion of the agreement to mediate]:

"(a) At least two parties to the settlement agreement have their places of business in different States; or

"(b) The State in which the parties to the settlement agreement have their places of business is different from either:

"(i) The State in which a substantial part of the obligations under the settlement agreement is to be performed; or

"(ii) The State with which the subject matter of the settlement agreement is most closely connected.

"5. For the purposes of paragraph 4:

"(a) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement [or at the time of the conclusion of the agreement to mediate];

"(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

"6. A settlement agreement is in 'writing' if its content is recorded in any form. The requirement that a settlement agreement be in writing is met by an electronic communication if the information contained therein is accessible so as to be useable for subsequent reference; 'electronic communication' means any communication that the parties make by means of data messages; 'data message' means information generated, sent, received or stored by electronic, magnetic, optical or similar means, including, but not limited to, electronic data interchange (EDI), electronic mail, telegram, telex or telecopy.

[4] *Footnote to be considered.* [A State may consider enacting this section to apply to agreements settling a dispute, irrespective of whether they resulted from mediation. Adjustments would then have to be made to relevant articles.]

"**Article 16. General Principles**

"1. A settlement agreement shall be enforced in accordance with the rules of procedure of this State, and under the conditions laid down in this section.

"2. If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, the party may invoke the settlement agreement in accordance with the rules of procedure of this State, and under the conditions laid down in this section, in order to prove that the matter has been already resolved.

"**Article 17. Application**

"1. A party relying on a settlement agreement under this section shall supply to the competent authority of this State:

"(a) The settlement agreement signed by the parties;

"(b) Evidence that the settlement agreement resulted from mediation, such as:

"(i) The mediator's signature on the settlement agreement;

"(ii) A document signed by the mediator indicating that the mediation was carried out;

"(iii) An attestation by the institution that administered the mediation; or

"(iv) In the absence of (i), (ii) or (iii), any other evidence acceptable to the competent authority.

"2. The requirement that a settlement agreement shall be signed by the parties or, where applicable, the mediator, is met in relation to an electronic communication if:

"(a) A method is used to identify the parties or the mediator and to indicate the parties' or mediator's intention in respect of the information contained in the electronic communication; and

"(b) The method used is either:

"(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

"(ii) Proven in fact to have fulfilled the functions described in subparagraph (a) above, by itself or together with further evidence.

"3. If the settlement agreement is not in the official language(s) of this State, the competent authority may request the party making the application to supply a translation thereof into such language.

"4. The competent authority may require any necessary document in order to verify that the [conditions] [requirements] of this section have been complied with.

"5. When considering the application, the competent authority shall act expeditiously.

"**Article 18. Grounds for refusing to grant relief**

"1. The competent authority of this State may refuse to grant relief at the request of the party against whom the application is made, only if that party furnishes to the competent authority proof that:

"(a) A party to the settlement agreement was under some incapacity; or

"(b) The settlement agreement is null and void, inoperative or incapable of being performed under the law to which the parties have validly subjected it or, failing any indication thereon, under the law deemed applicable by the

competent authority of this State; or the obligations in the settlement agreement have been performed; or

"(c) The settlement agreement:

"(i) Is not binding, or is not final, according to its terms;

"(ii) Has been subsequently modified;

"(iii) Is conditional so that the obligations in the settlement agreement of the party against whom the settlement agreement is invoked have not yet arisen; or

"(iv) Is not capable of being enforced because it is not clear and comprehensible; or

"(d) There was a serious breach by the mediator of standards applicable to the mediator or the mediation, without which breach that party would not have entered into the settlement agreement; or

"(e) There was a failure by the mediator to disclose to the parties circumstances that raise justifiable doubts as to the mediator's impartiality or independence and such failure to disclose had a material impact or undue influence on a party, without which failure that party would not have entered into the settlement agreement.

"2. The competent authority of this State may also refuse to grant relief if it finds that:

"(a) Granting relief would be contrary to the public policy of this State; or

"(b) The subject matter of the dispute is not capable of settlement by mediation under the law of this State.

"3. If an application or a claim relating to a settlement agreement has been made to a court, an arbitral tribunal or any other competent authority which may affect enforcement of that settlement agreement, the competent authority of this State may, if it considers it proper, adjourn the decision on the enforcement of the settlement agreement and may also, on the request of a party, order the other party to give suitable security."

F. Note by the Secretariat on settlement of commercial disputes: international commercial mediation: draft convention on international settlement agreements resulting from mediation

(A/CN.9/942)

[Original: English]

Contents

Paragraphs

I. Introduction

1. At its forty-seventh session, in 2014, the Commission considered a proposal to undertake work on the preparation of a convention on the enforceability of settlement agreements reached through international commercial conciliation (A/CN.9/822).[1] It requested the Working Group to consider the feasibility and possible form of work in that area.[2] At its forty-eighth session, in 2015, the Commission took note of the consideration of the topic by the Working Group[3] and agreed that the Working Group should commence work at its sixty-third session to identify relevant issues and develop possible solutions. The Commission also agreed that the mandate of the Working Group with respect to that topic should be broad to take into account the various approaches and concerns.[4] At its forty-ninth session, in 2016, the Commission confirmed that the Working Group should continue its work on the topic.[5] At its fiftieth session, in 2017, the Commission took note of the compromise reached by the Working Group at its sixty-sixth session, which addressed five key issues as a package (referred to as the "compromise proposal", see A/CN.9/901, para. 52) and expressed support for the Working Group to continue its work based on the compromise proposal.[6]

2. At its sixty-third to sixty-eighth sessions, the Working Group undertook work on the preparation of instruments on enforcement of international settlement agreements resulting from mediation, consisting of a draft convention and draft amendments to the UNCITRAL Model Law on International Commercial Conciliation (the "Model Law").[7] For ease of reference, this note refers to the "draft convention" and "draft amended Model Law"; jointly, they are referred to as the "draft instruments".

3. In accordance with the request of the Working Group at its sixty-eighth session, this note contains the draft convention with annotations, based on the deliberations and decisions of the Working Group (A/CN.9/934, para. 13). The text of the draft amended Model Law with annotations is contained in document A/CN.9/943.

II. Draft convention on international settlement agreements resulting from mediation

A. Text of the draft convention

4. The text of the draft convention reads as follows.

"United Nations Convention on International Settlement Agreements Resulting from Mediation

"**Preamble**

"*The Parties to this Convention*,

"*Recognizing* the value for international trade of mediation as a method for settling commercial disputes in which the parties in dispute request a third person or persons to assist them in their attempt to settle the dispute amicably,

"*Noting* that mediation is increasingly used in international and domestic commercial practice as an alternative to litigation,

"*Considering* that the use of mediation results in significant benefits, such as reducing the instances where a dispute leads to the termination of a commercial relationship, facilitating the administration of international transactions by commercial parties and producing savings in the administration of justice by States,

"*Convinced* that the establishment of a framework for international settlement agreements resulting from mediation that is acceptable to States with different legal, social and economic systems would contribute to the development of harmonious international economic relations,

"*Have agreed* as follows:

"**Article 1. Scope of application**

"1. This Convention applies to an agreement resulting from mediation and concluded in writing by parties to resolve a commercial dispute ('settlement agreement') which, at the time of its conclusion, is international in that:

(a) At least two parties to the settlement agreement have their places of business in different States; or

(b) The State in which the parties to the settlement agreement have their places of business is different from either:

(i) The State in which a substantial part of the obligations under the settlement agreement is performed; or

(ii) The State with which the subject matter of the settlement agreement is most closely connected.

"2. This Convention does not apply to settlement agreements:

(a) Concluded to resolve a dispute arising from transactions engaged in by one of the parties (a consumer) for personal, family or household purposes;

(b) Relating to family, inheritance or employment law.

"3. This Convention does not apply to:

(a) Settlement agreements:

(i) That have been approved by a court or concluded in the course of proceedings before a court; and

(ii) That are enforceable as a judgment in the State of that court;

(b) Settlement agreements that have been recorded and are enforceable as an arbitral award.

"**Article 2. Definitions**

"1. For the purposes of article 1, paragraph 1:

(a) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement;

(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

"2. A settlement agreement is 'in writing' if its content is recorded in any form. The requirement that a settlement agreement be in writing is met by an electronic communication if the information contained therein is accessible so as to be useable for subsequent reference; 'electronic communication' means any communication that the parties make by means of data messages; 'data message' means information generated, sent, received or stored by electronic, magnetic, optical or similar means, including, but not limited to, electronic data interchange (EDI), electronic mail, telegram, telex or telecopy.

"3. 'Mediation' means a process, irrespective of the expression used or the basis upon which the process is carried out, whereby parties attempt to reach an amicable settlement of their dispute with the assistance of a third person or persons ('the mediator') lacking the authority to impose a solution upon the parties to the dispute.

"4. 'Seeking relief' means a party to a settlement agreement requesting enforcement of a settlement agreement under article 3, paragraph 1, or invoking a settlement agreement under article 3, paragraph 2. Similarly, 'granting relief' means a competent authority enforcing a settlement agreement under article 3, paragraph 1, or allowing a party to invoke a settlement agreement under article 3, paragraph 2.

"**Article 3. General principles**

"1. Each Party to the Convention shall enforce a settlement agreement in accordance with its rules of procedure and under the conditions laid down in this Convention.

"2. If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, a Party to the Convention shall allow the party to invoke the settlement agreement in accordance with its rules of procedure and under the conditions laid down in this Convention, in order to prove that the matter has already been resolved.

"**Article 4. Requirements for reliance on settlement agreements**

"1. A party relying on a settlement agreement under this Convention shall supply to the competent authority of the Party to the Convention where relief is sought:

(a) The settlement agreement signed by the parties;

(b) Evidence that the settlement agreement resulted from mediation, such as:

(i) The mediator's signature on the settlement agreement;

(ii) A document signed by the mediator indicating that the mediation was carried out;

(iii) An attestation by the institution that administered the mediation; or

(iv) In the absence of (i), (ii) or (iii), any other evidence acceptable to the competent authority.

"2. The requirement that a settlement agreement shall be signed by the parties or, where applicable, the mediator is met in relation to an electronic communication if:

(a) A method is used to identify the parties or the mediator and to indicate the parties' or mediator's intention in respect of the information contained in the electronic communication; and

(b) The method used is either:

(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

(ii) Proven in fact to have fulfilled the functions described in subparagraph (a) above, by itself or together with further evidence.

"3. If the settlement agreement is not in an official language of the Party to the Convention where relief is sought, the competent authority may request a translation thereof into such language.

"4. The competent authority may require any necessary document in order to verify that the requirements of the Convention have been complied with.

"5. When considering the request for relief, the competent authority shall act expeditiously.

"**Article 5. Grounds for refusing to grant relief**

"1. The competent authority of the Party to the Convention where relief is sought under article 4 may refuse to grant relief at the request of the party against whom the relief is sought only if that party furnishes to the competent authority proof that:

(a) A party to the settlement agreement was under some incapacity;

(b) The settlement agreement sought to be relied upon:

(i) Is null and void, inoperative or incapable of being performed under the law to which the parties have validly subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority of the Party to the Convention where relief is sought under article 4;

(ii) Is not binding, or is not final, according to its terms; or

(iii) Has been subsequently modified;

(c) The obligations in the settlement agreement:

(i) Have been performed; or

(ii) Are not clear or comprehensible;

(d) Granting relief would be contrary to the terms of the settlement agreement;

(e) There was a serious breach by the mediator of standards applicable to the mediator or the mediation without which breach that party would not have entered into the settlement agreement; or

(f) There was a failure by the mediator to disclose to the parties circumstances that raise justifiable doubts as to the mediator's impartiality or independence and such failure to disclose had a material impact or undue influence on a party without which failure that party would not have entered into the settlement agreement.

"2. The competent authority of the Party to the Convention where relief is sought under article 4 may also refuse to grant relief if it finds that:

(a) Granting relief would be contrary to the public policy of that Party; or

(b) The subject matter of the dispute is not capable of settlement by mediation under the law of that Party.

"**Article 6. Parallel applications or claims**

"If an application or a claim relating to a settlement agreement has been made to a court, an arbitral tribunal or any other competent authority which may affect the relief being sought under article 4, the competent authority of the Party to the Convention where such relief is sought may, if it considers it proper, adjourn the decision and may also, on the request of a party, order the other party to give suitable security.

"**Article 7. Other laws or treaties**

"This Convention shall not deprive any interested party of any right it may have to avail itself of a settlement agreement in the manner and to the extent allowed by the law or the treaties of the Party to the Convention where such settlement agreement is sought to be relied upon.

"**Article 8. Reservations**

"1. A Party to the Convention may declare that:

(a) It shall not apply this Convention to settlement agreements to which it is a party, or to which any governmental agencies or any person acting on behalf of a governmental agency is a party, to the extent specified in the declaration;

(b) It shall apply this Convention only to the extent that the parties to the settlement agreement have agreed to the application of the Convention.

"2. No reservations are permitted except those expressly authorized in this article.

"3. Reservations may be made by a Party to the Convention at any time. Reservations made at the time of signature shall be subject to confirmation upon ratification, acceptance or approval. Such reservations shall take effect simultaneously with the entry into force of this Convention in respect of the Party to the Convention concerned. Reservations made at the time of ratification, acceptance or approval of this Convention or accession thereto, or at the time of making a declaration under article 13 shall take effect simultaneously with the entry into force of this Convention in respect of the Party to the Convention concerned. Reservations deposited after the entry into force of the Convention for that Party to the Convention shall take effect six months after the date of the deposit.

"4. Reservations and their confirmations shall be deposited with the depositary.

"5. Any Party to the Convention that makes a reservation under this Convention may withdraw it at any time. Such withdrawals are to be deposited with the depositary, and shall take effect six months after deposit.

"**Article 9. Effect on settlement agreements**

"The Convention and any reservation or withdrawal thereof shall apply only to settlement agreements concluded after the date when the Convention, reservation or withdrawal thereof enters into force for the Party to the Convention concerned.

"**Article 10. Depositary**

"The Secretary-General of the United Nations is hereby designated as the depositary of this Convention.

"**Article 11. Signature, ratification, acceptance, approval, accession**

"1. This Convention is open for signature by all States in [...] on [...], and thereafter at United Nations Headquarters in New York.

"2. This Convention is subject to ratification, acceptance or approval by the signatories.

"3. This Convention is open for accession by all States that are not signatories as from the date it is open for signature.

"4. Instruments of ratification, acceptance, approval or accession are to be deposited with the depositary.

"**Article 12. Participation by regional economic integration organizations**

"1. A regional economic integration organization that is constituted by sovereign States and has competence over certain matters governed by this Convention may similarly sign, ratify, accept, approve or accede to this Convention. The regional economic integration organization shall in that case have the rights and obligations of a Party to the Convention, to the extent that that organization has competence over matters governed by this Convention. Where the number of Parties to the Convention is relevant in this Convention, the regional economic integration organization shall not count as a Party to the Convention in addition to its member States that are Parties to the Convention.

"2. The regional economic integration organization shall, at the time of signature, ratification, acceptance, approval or accession, make a declaration to the depositary specifying the matters governed by this Convention in respect of which competence has been transferred to that organization by its member States. The regional economic integration organization shall promptly notify the depositary of any changes to the distribution of competence, including new transfers of competence, specified in the declaration under this paragraph.

"3. Any reference to a 'Party to the Convention', 'Parties to the Convention', a 'State' or 'States' in this Convention applies equally to a regional economic integration organization where the context so requires.

"4. This Convention shall not prevail over conflicting rules of a regional economic integration organization, whether such rules were adopted or entered into force before or after this Convention: (a) if, under article 4, relief is sought in a State that is member of such an organization and all the States relevant under article 1(1) are members of such an organization; or (b) as concerns the recognition or enforcement of judgments between member States of such an organization.

"**Article 13. Non-unified legal systems**

"1. If a Party to the Convention has two or more territorial units in which different systems of law are applicable in relation to the matters dealt with in this Convention, it may, at the time of signature, ratification, acceptance, approval or accession, declare that this Convention is to extend to all its territorial units or only to one or more of them, and may amend its declaration by submitting another declaration at any time.

"2. These declarations are to be notified to the depositary and are to state expressly the territorial units to which the Convention extends.

"3. If a Party to the Convention has two or more territorial units in which different systems of law are applicable in relation to the matters dealt with in this Convention,

(a) Any reference to the law or rule of procedure of a State shall be construed as referring, where appropriate, to the law or rule of procedure in force in the relevant territorial unit;

(b) Any reference to the place of business in a State shall be construed as referring, where appropriate, to the place of business in the relevant territorial unit;

(c) Any reference to the competent authority of the State shall be construed as referring, where appropriate, to the competent authority in the relevant territorial unit.

"4. If a Party to the Convention makes no declaration under paragraph 1 of this article, the Convention is to extend to all territorial units of that State.

"**Article 14. Entry into force**

"1. This Convention shall enter into force six months after deposit of the third instrument of ratification, acceptance, approval, or accession.

"2. When a State ratifies, accepts, approves or accedes to this Convention after the deposit of the third instrument of ratification, acceptance, approval or accession, this Convention shall enter into force in respect of that State six months after the date of the deposit of its instrument of ratification, acceptance, approval or accession. The Convention shall enter into force for a territorial unit to which this Convention has been extended in accordance with article 13 six months after the notification of the declaration referred to in that article.

"**Article 15. Amendment**

"1. Any Party to the Convention may propose an amendment to the present Convention by submitting it to the Secretary-General of the United Nations. The Secretary-General shall thereupon communicate the proposed amendment to the Parties to the Convention with a request that they indicate whether they favour a conference of Parties to the Convention for the purpose of considering and voting upon the proposal. In the event that within four months from the date of such communication at least one third of the Parties to the Convention favour such a conference, the Secretary-General shall convene the conference under the auspices of the United Nations.

"2. The conference of Parties to the Convention shall make every effort to achieve consensus on each amendment. If all efforts at consensus are exhausted and no consensus is reached, the amendment shall, as a last resort, require for its adoption a two-thirds majority vote of the Parties to the Convention present and voting at the conference.

"3. An adopted amendment shall be submitted by the depositary to all the Parties to the Convention for ratification, acceptance or approval.

"4. An adopted amendment shall enter into force six months after the date of deposit of the third instrument of ratification, acceptance or approval. When an amendment enters into force, it shall be binding on those Parties to the Convention that have expressed consent to be bound by it.

"5. When a Party to the Convention ratifies, accepts or approves an amendment following the deposit of the third instrument of ratification, acceptance or approval, the amendment shall enter into force in respect of that Party to the Convention six months after the date of the deposit of its instrument of ratification, acceptance or approval.

"**Article 16. Denunciations**

"1. A Party to the Convention may denounce this Convention by a formal notification in writing addressed to the depositary. The denunciation may be limited to certain territorial units of a non-unified legal system to which this Convention applies.

"2. The denunciation shall take effect twelve months after the notification is received by the depositary. Where a longer period for the denunciation to take

effect is specified in the notification, the denunciation shall take effect upon the expiration of such longer period after the notification is received by the depositary. The Convention shall continue to apply to settlement agreements concluded before the denunciation takes effect.

"DONE at ---- this [X] day of [X] ------, in a single original, of which the Arabic, Chinese, English, French, Russian and Spanish texts are equally authentic."

B. Annotations

1. Terminology

5. The Commission may wish to note the decision of the Working Group to replace the term "conciliation" by "mediation" throughout the draft instruments. The Working Group further approved the explanatory text describing the rationale for that change (A/CN.9/934, para. 16), which would be used with necessary adjustments when revising existing UNCITRAL texts on conciliation (for consideration of the matter at previous sessions of the Working Group, see A/CN.9/929, paras. 102–104; and A/CN.9/867, para. 120). The explanatory text reads as follows:

> "'*Mediation' is a widely used term for a process where parties request a third person or persons to assist them in their attempt to reach an amicable settlement of their dispute arising out of, or relating to, a contractual or other legal relationship. In its previously adopted texts and relevant documents, UNCITRAL used the term 'conciliation' with the understanding that the terms 'conciliation' and 'mediation' were interchangeable. In preparing the Convention on International Settlement Agreements Resulting from Mediation and the Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation, 2018 (amending the UNCITRAL Model Law on International Commercial Conciliation, 2002), the Commission decided to use the term 'mediation' instead in an effort to adapt to the actual and practical use of the terms and with the expectation that this change will facilitate the promotion and heighten the visibility of the instruments. This change in terminology does not have any substantive or conceptual implications.*"

2. Title and preamble

6. The Working Group tentatively approved the title of the draft convention (A/CN.9/934, para. 143) as well as the preamble (A/CN.9/934, para. 145). The Commission may wish to note the adjustments made to the preamble resulting from the decision of the Working Group to use the word "mediation" instead of the generic phrase "dispute settlement methods".

3. Reference to "Party/Parties to the Convention"

7. The draft convention tentatively uses the terms "a Party to the Convention" or "Parties to the Convention", instead of referring to "Contracting State(s)" for the reason that the term "Contracting State(s)" is referred to in article 2(1)(f) of the Vienna Convention on the Law of Treaties to mean a State which consents to be bound by the treaty, whether or not the treaty has entered into force (A/CN.9/934, paras. 116–118). The Commission may wish to note that the term "Contracting States" has been used in existing conventions in the field of international trade law, with the purpose of avoiding confusions between the Parties to the convention and the parties to the contractual relation covered by the convention.[8] The Commission may wish to consider the term that should be used under this draft convention.

---

[8] See, for instance, Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958), United Nations Convention on the Limitation Period in the International Sale of Goods (1974); United Nations Convention on Contracts for the International Sale of Goods (CISG, 1980); United Nations Convention on Independent Guarantees and Stand-by Letters of Credit (1995); United Nations Convention on the Assignment of Receivables in International

4. Remarks on article 1 – Scope of application

8. Paragraph 1 introduces the generic term "settlement agreement" (A/CN.9/896, para. 146). The Commission may wish to note that reference to "international agreements" has been avoided in paragraph 1 as that expression often refers to agreements between States or other international legal persons binding under international law (A/CN.9/934, para. 17). Therefore, paragraph 1 reflects the modification agreed by the Working Group in that respect.

For approval of article 1(1) at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 18 and 21; for consideration of the matter at previous sessions, see A/CN.9/929, paras. 14 and 30; A/CN.9/901, paras. 52 and 56; A/CN.9/896, paras. 14–16, 113–117, 145 and 146; and A/CN.9/867, para. 94; for consideration of the notion of internationality, see A/CN.9/929, paras. 31–35 and 43; A/CN.9/896, paras. 17–24 and 158–163; A/CN.9/867, paras. 93–98; and A/CN.9/861, paras. 33–39.

- *Exclusions: personal, family, inheritance, employment matters – settlement agreement enforceable as a judgment or as an arbitral award*

9. Paragraphs 2 and 3 address exclusions from the scope of the draft convention. The Commission may wish to note that paragraph 3 aims at avoiding possible overlap with existing and future conventions, namely the Convention on the Recognition and Enforcement of Foreign Arbitral Awards (New York, 1958) (the "New York Convention"), the Convention on Choice of Court Agreements (2005) and the 2016 preliminary draft convention on judgments, under preparation by the Hague Conference on Private International Law (A/CN.9/896, para. 49).

For approval of article 1(2) at the sixty-eighth session of the Working Group, see A/CN.9/934, para. 23; for consideration of the matter at previous sessions, see A/CN.9/929, paras. 15 and 30; A/CN.9/896, paras. 55–60; A/CN.9/867, paras. 106–108; and A/CN.9/861, paras. 41–43.

For approval of article 1(3) at the sixty-eighth session of the Working Group, see A/CN.9/934, para. 24; for consideration of the matter at previous sessions, see A/CN.9/929, paras. 17–29 and 30; A/CN.9/901, paras. 25–34, 52, and 58–71; A/CN.9/896, paras. 48–54, 169–176 and 205–210; A/CN.9/867, paras. 118 and 125–131; and A/CN.9/861, paras. 24–28.

5. Remarks on article 2 – Definitions

10. Paragraphs 1 to 3 of article 2 (previously numbered art. 3, see A/CN.9/934, para. 139(ii)) contain definitions approved in substance by the Working Group.

11. The Commission may wish to consider whether the definition of the terms "electronic communication" and "data message" could be deleted from paragraph 2. The purpose of the draft convention is not to address these matters in detail and definitions are contained in other United Nations and UNCITRAL instruments, which could be used as a reference in the context of the draft convention. Further, the definition of these terms may not fully reflect technological developments in this field over time, and amending the convention to reflect such developments might not be practicable.

12. As a matter of drafting, the Commission may wish to note that the words "regardless of the expression used and irrespective of the basis upon which the process is carried out" in paragraph 3 have been replaced by the words "irrespective of the expression used or the basis upon which the process is carried out".

13. The Commission may wish to consider paragraph 4, which aims at clarifying the notions of "granting relief" and "seeking relief". As these expressions may have

---

Trade (2001); United Nations Convention on the Use of Electronic Communications in International Contracts (2005); United Nations Convention on Contracts for the International Carriage of Goods Wholly or Partly by Sea (Rotterdam Rules, 2008); HCCH Convention on Choice of Court Agreements, 2005.

a generic connotation, in particular when translated in different official languages of the United Nations, it is suggested to clarify that the expressions refer to possible actions under the draft convention as defined under article 3 (A/CN.9/934, para. 138).

For approval of the definitions under article 2, paragraphs 1 to 3, see:

- Regarding paragraph 1, at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 26 and 28; for consideration of the matter at previous sessions, see A/CN.9/929, paras. 31–35 and 43; A/CN.9/896, paras. 17–24 and 158–163; A/CN.9/867, para. 101; and A/CN.9/861, paras. 33–39
- Regarding paragraph 2, at the sixty-eighth session of the Working Group, see A/CN.9/934, para. 29; for consideration of the matter at previous sessions, see A/CN.9/929, para. 43; A/CN.9/896, paras. 32–38 and 66; and A/CN.9/867, para. 133
- Regarding paragraph 3, at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 30–32; for consideration of the matter at previous sessions, see A/CN.9/929, para. 43; A/CN.9/896, paras. 39–47; A/CN.9/867, para. 121; and A/CN.9/861, para. 21.

6. Remarks on article 3 – General principles

14. Article 3 (previously numbered art. 2, see A/CN.9/934, para. 139(ii)) provides for States' obligations under the draft convention regarding both enforcement of settlement agreements (para. 1) and the right for a party to invoke a settlement agreement as a defence against a claim (para. 2).

For approval of article 3 at the sixty-eighth session of the Working Group, see A/CN.9/934, para. 25; for consideration of the matter at previous sessions, see A/CN.9/929, paras. 44–48 and 73; A/CN.9/901, paras. 16–24, 52, 54 and 55; A/CN.9/896, paras. 76–81, 152, 153, 155 and 200–203; A/CN.9/867, para. 146; and A/CN.9/861, paras. 71–79).

7. Remarks on article 4 – Requirements for reliance on settlement agreements

15. The Commission may wish to note that article 4 reflects a balance between, on the one hand, the formalities that are required to ascertain that a settlement agreement result from mediation and, on the other, the need for the draft convention to preserve the flexible nature of the mediation process (A/CN.9/867, para. 144).

16. As matters of drafting, the Commission may wish (i) to consider whether the words "such as" which appear at the end of the chapeau of paragraph 1(b) could be replaced by the words "in the form of"; and (ii) to note that, for the sake of simplification and consistency between paragraphs 3 and 4, the words "the party requesting relief to supply" which appeared after the words "may request" in paragraph 3 have been deleted.

For approval of article 4 at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 37–39; for consideration of the matter at previous sessions, see A/CN.9/929, paras. 49–67 and 73; see A/CN.9/896, paras. 67–75, 82 and 177–190; A/CN.9/867, paras. 133–144; and A/CN.9/861, paras. 51–67.

8. Remarks on article 5 – Grounds for refusing to grant relief

17. The Commission may wish to note the extensive consultations of the Working Group at its sixty-eighth session aimed at clarifying the various grounds provided for in paragraph 1, in particular the relationship between subparagraph (b)(i), which mirrored a similar provision of the New York Convention and was considered to be of a generic nature, and subparagraphs (b)(ii), (b)(iii), (c) and (d), which were deemed to be illustrative in nature. At that session, it was noted that various attempts for regrouping the grounds had been unsuccessful. It was further noted that such attempts represented serious efforts at avoiding overlap in light of the importance of the issue. However, difficulties arose because of the need to accommodate the concerns of different domestic legal systems, which resulted in the failure of such attempts to gain

consensus. Therefore, the Working Group expressed a shared understanding that there might be overlap among the grounds provided for in paragraph 1 and that competent authorities should take that aspect into account when interpreting the various grounds (A/CN.9/934, paras. 60–65).

For approval of article 5 at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 59 and 66; for consideration of the matter at previous sessions, see A/CN.9/929, paras. 74–101; A/CN.9/901, paras. 41–50, 52 and 72–88; A/CN.9/896, paras. 84–117 and 191–194; A/CN.9/867, paras. 147–167; and A/CN.9/861, paras. 85–102.

9. Remarks on article 6 – Parallel applications or claims

18. Article 6 provides the competent authority with the discretion to adjourn its decision if an application or claim relating to a settlement agreement had been made to a court, arbitral tribunal or other competent authority, which might affect the process (A/CN.9/896, para. 123). It is based on article VI of the New York Convention, which addresses the situation where a party seeks to set aside an arbitral award at the place of arbitration while the other party seeks to enforce it elsewhere. The Working Group agreed that article 6 should apply to both when enforcement of a settlement agreement was sought and when a settlement agreement was invoked as a defence (A/CN.9/934, para. 69).

For approval of article 6 at the sixty-eighth session of the Working Group, see A/CN.9/934, para. 70; for consideration of the matter at previous sessions, see A/CN.9/896, paras. 122–125; A/CN.9/867, paras. 168 and 169; and A/CN.9/861, paras. 103–107.

10. Remarks on article 7 – Other laws or treaties

19. Article 7, which mirrors article VII of the New York Convention would permit application of more favourable national legislation or treaties to matters covered by the draft convention. The understanding of the Working Group was that article 7 would not allow States to apply the draft convention to settlement agreements excluded in article 1, paragraphs 2 and 3, as such settlement agreements would fall outside the scope of the draft convention. However, States would have the flexibility to enact relevant domestic legislation, which could include in its scope such settlement agreements (A/CN.9/929, para. 19).

For approval of article 7 at the sixty-eighth session of the Working Group, see A/CN.9/934, para. 71; for consideration of the matter at previous sessions, see A/CN.9/929, para. 19; A/CN.9/901, paras. 65, 66 and 71; and A/CN.9/896, paras. 154, 156, and 204.

11. Remarks on the final provisions

(i) Article 8 – Reservations

20. Article 8 provides for two reservations authorized under the draft convention. Regarding the first reservation on settlement agreements involving States and other public entities, the Working Group agreed that such agreements should not be excluded from the scope. Rather, it was agreed that the treatment of such agreements could be addressed through a reservation in the draft convention. Regarding the second reservation on the application of the draft convention based on the parties' consent, the Working Group agreed that that question need not be addressed in the draft convention, but should be left to States when adopting or implementing the convention.

For approval of article 8(1)(a) at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 77 and 93; for consideration of the matter at previous sessions, see A/CN.9/896, paras. 61 and 62; and A/CN.9/861, paras. 44–46.

For approval of article 8(1)(b) at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 79 and 93; for consideration of the matter at previous sessions, see A/CN.9/901, paras. 39 and 40; and A/CN.9/896, paras. 130 and 196.

For approval of article 8, paragraphs (2) to (5) at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 81–93.

(ii) Article 9 – Effect on settlement agreements

21. Article 9 addresses the impact of the entry into force of the draft convention and of any reservations or withdrawal thereof on settlement agreements concluded before such entry into force (A/CN.9/934, para. 90). Similarly, article 16(2) addresses the effect of the denunciation of the draft convention on settlement agreements concluded before such denunciation takes effect. The purpose of the provisions is to enhance legal certainty for parties to settlement agreements.

(iii) Articles 10 to 16

22. At its sixty-eighth session, the Working Group approved in substance articles 10 to 16 (A/CN.9/934, paras. 94–115).

23. The Commission may wish to note that, as indicated in para. 94 of document A/CN.9/934, the delegation of Singapore expressed an interest in hosting a ceremony for the signing of the convention, once adopted. That proposal was welcomed and supported by the Working Group. The Commission may wish to consider this offer in relation to its consideration of article 11(1).

12. Other matters

(i) General Assembly resolution

24. The Commission may wish to note that the Working Group prepared both a draft convention and a draft amended Model Law in a spirit of compromise and to accommodate the different levels of experience with mediation in different jurisdictions. The Working Group agreed that a possible approach to address the specific circumstance of preparing both a convention and a model legislative text could be to suggest that the resolutions of the General Assembly accompanying those instruments would express no preference on the instrument to be adopted by States (A/CN.9/901, para. 93).

25. In that context, the Working Group agreed on the following wording for consideration by the Commission, and eventually recommendation to the General Assembly for inclusion in the relevant resolution: "*Recalling that the decision of the Commission to concurrently prepare a convention on international settlement agreements resulting from mediation and an amendment to the UNCITRAL Model Law on International Commercial Conciliation was intended to accommodate the different levels of experience with mediation in different jurisdictions, and to provide States with consistent standards on cross-border enforcement of international settlement agreements resulting from mediation, without creating any expectation that interested States may adopt either instrument.*"

For consideration by the Working Group of the form of the instruments, see A/CN.9/901, paras. 52 and 89–93; and A/CN.9/896, paras. 135–143 and 211–213;

For approval of the draft text in para. 25 above at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 140–142.

(ii) Material accompanying the draft convention

26. The Commission may wish to note the recommendation by the Working Group that, resources permitting, the *travaux preparatoires* of the draft convention should be compiled by the Secretariat, so that they could be easily accessible and user-friendly (A/CN.9/934, paras. 146–148).

G. Note by the Secretariat on settlement of commercial disputes: international commercial mediation: draft model law on international settlement agreements resulting from mediation

(A/CN.9/943)

[Original: English]

Contents

Paragraphs

I. Introduction

1. At its forty-seventh session, in 2014, the Commission considered a proposal to undertake work on the preparation of a convention on the enforceability of settlement agreements reached through international commercial conciliation (A/CN.9/822).[9] It requested the Working Group to consider the feasibility and possible form of work in that area.[10] At its forty-eighth session, in 2015, the Commission took note of the consideration of the topic by the Working Group[11] and agreed that the Working Group should commence work at its sixty-third session to identify relevant issues and develop possible solutions. The Commission also agreed that the mandate of the Working Group with respect to that topic should be broad to take into account the various approaches and concerns.[12] At its forty-ninth session, in 2016, the Commission confirmed that the Working Group should continue its work on the topic.[13] At its fiftieth session, in 2017, the Commission took note of the compromise reached by the Working Group at its sixty-sixth session, which addressed five key issues as a package (referred to as the "compromise proposal", see A/CN.9/901, para. 52) and expressed support for the Working Group to continue its work based on the compromise proposal.[14]

2. At its sixty-third to sixty-eighth sessions, the Working Group undertook work on the preparation of instruments on enforcement of international settlement agreements resulting from mediation, consisting of a draft convention and draft amendments to the UNCITRAL Model Law on International Commercial Conciliation (the "Model Law").[15] For ease of reference, this note refers to the "draft convention" and "draft amended Model Law"; jointly, they are referred to as the "draft instruments".

3. In accordance with the request of the Working Group at its sixty-eighth session, this note contains the draft amended Model Law, with annotations, based on the deliberations and decisions of the Working Group (A/CN.9/934, para. 13). The text of the draft convention with annotations is contained in document A/CN.9/942.

[15] The reports of the Working Group on the work of its sixty-third to sixty-eighth sessions are contained in documents A/CN.9/861, A/CN.9/867, A/CN.9/896, A/CN.9/901, A/CN.9/929 and A/CN.9/934, respectively.

II. Draft model law on international commercial mediation and international settlement agreements resulting from mediation

A. Text of the draft amended Model Law

4. The text of the draft amended Model Law reads as follows.

UNCITRAL Model Law on International Commercial Mediation and International Settlement Agreements Resulting from Mediation, 2018 (amending the UNCITRAL Model Law on International Commercial Conciliation, 2002)

"**Section 1 – General provisions**

"**Article 1. Scope of application of the Law and definitions**

"1. This Law applies to international commercial[1] mediation[2] and to international settlement agreements.

"2. For the purposes of this Law, 'mediator' means a sole mediator or two or more mediators, as the case may be.

"3. For the purposes of this Law, 'mediation' means a process, whether referred to by the expression mediation, conciliation or an expression of similar import, whereby parties request a third person or persons ('the mediator') to assist them in their attempt to reach an amicable settlement of their dispute arising out of or relating to a contractual or other legal relationship. The mediator does not have the authority to impose upon the parties a solution to the dispute.

"**Article 2. Interpretation**

"1. In the interpretation of this Law, regard is to be had to its international origin and to the need to promote uniformity in its application and the observance of good faith.

"2. Questions concerning matters governed by this Law which are not expressly settled in it are to be settled in conformity with the general principles on which this Law is based.

"**Section 2 – Mediation**

"**Article 3. Scope of application of the section and definitions**

"1. This section applies to international[3] commercial mediation.

"2. A mediation is 'international' if:

---

[1] The term "commercial" should be given a wide interpretation so as to cover matters arising from all relationships of a commercial nature, whether contractual or not. Relationships of a commercial nature include, but are not limited to, the following transactions: any trade transaction for the supply or exchange of goods or services; distribution agreement; commercial representation or agency; factoring; leasing; construction of works; consulting; engineering; licensing; investment; financing; banking; insurance; exploitation agreement or concession; joint venture and other forms of industrial or business cooperation; carriage of goods or passengers by air, sea, rail or road.

[2] In its previously adopted texts and relevant documents, UNCITRAL used the term "conciliation" with the understanding that the terms "conciliation" and "mediation" were interchangeable. In preparing this Model Law, the Commission decided to use the term "mediation" instead in an effort to adapt to the actual and practical use of the terms and with the expectation that this change will facilitate the promotion and heighten the visibility of the Model Law. This change in terminology does not have any substantive or conceptual implications.

[3] States wishing to enact this section to apply to domestic as well as international mediation may wish to consider the following changes to the text:

- Delete the word "international" in paragraph 1 of articles 1 and 3; and
- Delete paragraphs 2, 3 and 4 of article 3, and modify references to paragraphs accordingly.

(a) The parties to an agreement to mediate have, at the time of the conclusion of that agreement, their places of business in different States; or

(b) The State in which the parties have their places of business is different from either:

(i) The State in which a substantial part of the obligations of the commercial relationship is to be performed; or

(ii) The State with which the subject matter of the dispute is most closely connected.

"3. For the purposes of paragraph (2):

(a) If a party has more than one place of business, the place of business is that which has the closest relationship to the agreement to mediate;

(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

"4. This section also applies to commercial mediation when the parties agree that the mediation is international or agree to the applicability of this section.

"5. The parties are free to agree to exclude the applicability of this section.

"6. Subject to the provisions of paragraph 7 of this article, this section applies irrespective of the basis upon which the mediation is carried out, including agreement between the parties whether reached before or after a dispute has arisen, an obligation established by law, or a direction or suggestion of a court, arbitral tribunal or competent governmental entity.

"7. This section does not apply to:

(a) Cases where a judge or an arbitrator, in the course of judicial or arbitral proceedings, attempts to facilitate a settlement; and

(b) […].

"**Article 4. Variation by agreement**

"Except for the provisions of article 7, paragraph 3, the parties may agree to exclude or vary any of the provisions of this section.

"**Article 5. Commencement of mediation proceedings**[4]

"1. Mediation proceedings in respect of a dispute that has arisen commence on the day on which the parties to that dispute agree to engage in mediation proceedings.

"2. If a party that invited another party to mediate does not receive an acceptance of the invitation within thirty days from the day on which the invitation was sent, or within such other period of time as specified in the invitation, the party may elect to treat this as a rejection of the invitation to mediate.

"**Article 6. Number and appointment of mediators**

"1. There shall be one mediator, unless the parties agree that there shall be two or more mediators.

"2. The parties shall endeavour to reach agreement on a mediator or mediators, unless a different procedure for their appointment has been agreed upon.

[4] The following text is suggested for States that might wish to adopt a provision on the suspension of the limitation period:

Article X. Suspension of limitation period

1. When the mediation proceedings commence, the running of the limitation period regarding the claim that is the subject matter of the mediation is suspended.

2. Where the mediation proceedings have terminated without a settlement agreement, the limitation period resumes running from the time the mediation ended without a settlement agreement.

"3. Parties may seek the assistance of an institution or person in connection with the appointment of mediators. In particular:

(a) A party may request such an institution or person to recommend suitable persons to act as mediator; or

(b) The parties may agree that the appointment of one or more mediators be made directly by such an institution or person.

"4. In recommending or appointing individuals to act as mediator, the institution or person shall have regard to such considerations as are likely to secure the appointment of an independent and impartial mediator and, where appropriate, shall take into account the advisability of appointing a mediator of a nationality other than the nationalities of the parties.

"5. When a person is approached in connection with his or her possible appointment as mediator, he or she shall disclose any circumstances likely to give rise to justifiable doubts as to his or her impartiality or independence. A mediator, from the time of his or her appointment and throughout the mediation proceedings, shall without delay disclose any such circumstances to the parties unless they have already been informed of them by him or her.

"**Article 7. Conduct of mediation**

"1. The parties are free to agree, by reference to a set of rules or otherwise, on the manner in which the mediation is to be conducted.

"2. Failing agreement on the manner in which the mediation is to be conducted, the mediator may conduct the mediation proceedings in such a manner as the mediator considers appropriate, taking into account the circumstances of the case, any wishes that the parties may express and the need for a speedy settlement of the dispute.

"3. In any case, in conducting the proceedings, the mediator shall seek to maintain fair treatment of the parties and, in so doing, shall take into account the circumstances of the case.

"4. The mediator may, at any stage of the mediation proceedings, make proposals for a settlement of the dispute.

"**Article 8. Communication between mediator and parties**

"The mediator may meet or communicate with the parties together or with each of them separately.

"**Article 9. Disclosure of information**

"When the mediator receives information concerning the dispute from a party, the mediator may disclose the substance of that information to any other party to the mediation. However, when a party gives any information to the mediator, subject to a specific condition that it be kept confidential, that information shall not be disclosed to any other party to the mediation.

"**Article 10. Confidentiality**

"Unless otherwise agreed by the parties, all information relating to the mediation proceedings shall be kept confidential, except where disclosure is required under the law or for the purposes of implementation or enforcement of a settlement agreement.

"**Article 11. Admissibility of evidence in other proceedings**

"1. A party to the mediation proceedings, the mediator and any third person, including those involved in the administration of the mediation proceedings, shall not in arbitral, judicial or similar proceedings rely on, introduce as evidence or give testimony or evidence regarding any of the following:

(a) An invitation by a party to engage in mediation proceedings or the fact that a party was willing to participate in mediation proceedings;

(b) Views expressed or suggestions made by a party in the mediation in respect of a possible settlement of the dispute;

(c) Statements or admissions made by a party in the course of the mediation proceedings;

(d) Proposals made by the mediator;

(e) The fact that a party had indicated its willingness to accept a proposal for settlement made by the mediator;

(f) A document prepared solely for purposes of the mediation proceedings.

"2. Paragraph 1 of this article applies irrespective of the form of the information or evidence referred to therein.

"3. The disclosure of the information referred to in paragraph 1 of this article shall not be ordered by an arbitral tribunal, court or other competent governmental authority and, if such information is offered as evidence in contravention of paragraph 1 of this article, that evidence shall be treated as inadmissible. Nevertheless, such information may be disclosed or admitted in evidence to the extent required under the law or for the purposes of implementation or enforcement of a settlement agreement.

"4. The provisions of paragraphs 1, 2 and 3 of this article apply whether or not the arbitral, judicial or similar proceedings relate to the dispute that is or was the subject matter of the mediation proceedings.

"5. Subject to the limitations of paragraph 1 of this article, evidence that is otherwise admissible in arbitral or judicial or similar proceedings does not become inadmissible as a consequence of having been used in a mediation.

"**Article 12. Termination of mediation proceedings**

"The mediation proceedings are terminated:

(a) By the conclusion of a settlement agreement by the parties, on the date of the agreement;

(b) By a declaration of the mediator, after consultation with the parties, to the effect that further efforts at mediation are no longer justified, on the date of the declaration;

(c) By a declaration of the parties addressed to the mediator to the effect that the mediation proceedings are terminated, on the date of the declaration; or

(d) By a declaration of a party to the other party or parties and the mediator, if appointed, to the effect that the mediation proceedings are terminated, on the date of the declaration.

"**Article 13. Mediator acting as arbitrator**

"Unless otherwise agreed by the parties, the mediator shall not act as an arbitrator in respect of a dispute that was or is the subject of the mediation proceedings or in respect of another dispute that has arisen from the same contract or legal relationship or any related contract or legal relationship.

"**Article 14. Resort to arbitral or judicial proceedings**

"Where the parties have agreed to mediate and have expressly undertaken not to initiate during a specified period of time or until a specified event has occurred arbitral or judicial proceedings with respect to an existing or future dispute, such an undertaking shall be given effect by the arbitral tribunal or the court until the terms of the undertaking have been complied with, except to the extent necessary for a party, in its opinion, to preserve its rights. Initiation of such proceedings is not of itself to

be regarded as a waiver of the agreement to mediate or as a termination of the mediation proceedings.

"**Article 15. Binding and enforceable nature of settlement agreements**

"If the parties conclude an agreement settling a dispute, that settlement agreement is binding and enforceable.

"**Section 3 – International settlement agreements**[5]

"**Article 16. Scope of application of the section and definitions**

"1. This section applies to international agreements resulting from mediation and concluded in writing by parties to resolve a commercial dispute ('settlement agreements').

"2. This section does not apply to settlement agreements:

(a) Concluded to resolve a dispute arising from transactions engaged in by one of the parties (a consumer) for personal, family or household purposes;

(b) Relating to family, inheritance or employment law.

"3. This section does not apply to:

(a) Settlement agreements:

(i) That have been approved by a court or concluded in the course of proceedings before a court; and

(ii) That are enforceable as a judgment in the State of that court;

(b) Settlement agreements that have been recorded and are enforceable as an arbitral award.

"4. A settlement agreement is 'international' if, at the time of the conclusion of the settlement agreement:[6]

(a) At least two parties to the settlement agreement have their places of business in different States; or

(b) The State in which the parties to the settlement agreement have their places of business is different from either:

(i) The State in which a substantial part of the obligations under the settlement agreement is to be performed; or

(ii) The State with which the subject matter of the settlement agreement is most closely connected.

"5. For the purposes of paragraph 4:

(a) If a party has more than one place of business, the relevant place of business is that which has the closest relationship to the dispute resolved by the settlement agreement, having regard to the circumstances known to, or contemplated by, the parties at the time of the conclusion of the settlement agreement;

(b) If a party does not have a place of business, reference is to be made to the party's habitual residence.

"6. A settlement agreement is 'in writing' if its content is recorded in any form. The requirement that a settlement agreement be in writing is met by an electronic communication if the information contained therein is accessible so as to be useable

[5] A State may consider enacting this section to apply to agreements settling a dispute, irrespective of whether they resulted from mediation. Adjustments would then have to be made to relevant articles. Further, a State may consider enacting this section to apply only where the parties to the settlement agreement agreed to its application.

[6] A State may consider broadening the definition of "international" settlement agreement by adding the following subparagraph to paragraph 4: "A settlement agreement is 'international' if it results from international mediation as defined in article 3, paragraphs 2, 3 and 4.

for subsequent reference; ‘electronic communication’ means any communication that the parties make by means of data messages; ‘data message’ means information generated, sent, received or stored by electronic, magnetic, optical or similar means, including, but not limited to, electronic data interchange (EDI), electronic mail, telegram, telex or telecopy.

“7. ‘Seeking relief’ means a party to a settlement agreement requesting enforcement of a settlement agreement under article 17, paragraph 1 or invoking a settlement agreement under article 17, paragraph 2. Similarly, ‘granting relief’ means a competent authority enforcing a settlement agreement under article 17, paragraph 1 or allowing a party to invoke a settlement agreement under article 17, paragraph 2.

“**Article 17. General Principles**

“1. A settlement agreement shall be enforced in accordance with the rules of procedure of this State, and under the conditions laid down in this section.

“2. If a dispute arises concerning a matter that a party claims was already resolved by a settlement agreement, the party may invoke the settlement agreement in accordance with the rules of procedure of this State, and under the conditions laid down in this section, in order to prove that the matter has already been resolved.

“**Article 18. Requirements for reliance on settlement agreements**

“1. A party relying on a settlement agreement under this section shall supply to the competent authority of this State:

(a) The settlement agreement signed by the parties;

(b) Evidence that the settlement agreement resulted from mediation, such as:

(i) The mediator’s signature on the settlement agreement;

(ii) A document signed by the mediator indicating that the mediation was carried out;

(iii) An attestation by the institution that administered the mediation; or

(iv) In the absence of (i), (ii) or (iii), any other evidence acceptable to the competent authority.

“2. The requirement that a settlement agreement shall be signed by the parties or, where applicable, the mediator, is met in relation to an electronic communication if:

(a) A method is used to identify the parties or the mediator and to indicate the parties’ or mediator’s intention in respect of the information contained in the electronic communication; and

(b) The method used is either:

(i) As reliable as appropriate for the purpose for which the electronic communication was generated or communicated, in the light of all the circumstances, including any relevant agreement; or

(ii) Proven in fact to have fulfilled the functions described in subparagraph (a) above, by itself or together with further evidence.

“3. If the settlement agreement is not in an official language of this State, the competent authority may request a translation thereof into such language.

“4. The competent authority may require any necessary document in order to verify that the requirements of this section have been complied with.

“5. When considering the request for relief, the competent authority shall act expeditiously.

"**Article 19. Grounds for refusing to grant relief**

"1. The competent authority of this State may refuse to grant relief at the request of the party against whom the relief is sought only if that party furnishes to the competent authority proof that:

(a) A party to the settlement agreement was under some incapacity;

(b) The settlement agreement sought to be relied upon:

(i) Is null and void, inoperative or incapable of being performed under the law to which the parties have validly subjected it or, failing any indication thereon, under the law deemed applicable by the competent authority;

(ii) Is not binding, or is not final, according to its terms; or

(iii) Has been subsequently modified;

(c) The obligations in the settlement agreement:

(i) Have been performed; or

(ii) Are not clear or comprehensible;

(d) Granting relief would be contrary to the terms of the settlement agreement;

(e) There was a serious breach by the mediator of standards applicable to the mediator or the mediation without which breach that party would not have entered into the settlement agreement; or

(f) There was a failure by the mediator to disclose to the parties circumstances that raise justifiable doubts as to the mediator's impartiality or independence and such failure to disclose had a material impact or undue influence on a party without which failure that party would not have entered into the settlement agreement.

"2. The competent authority of this State may also refuse to grant relief if it finds that:

(a) Granting relief would be contrary to the public policy of this State; or

(b) The subject matter of the dispute is not capable of settlement by mediation under the law of this State.

"**Article 20. Parallel applications or claims**

"If an application or a claim relating to a settlement agreement has been made to a court, an arbitral tribunal or any other competent authority which may affect the relief being sought under article 18, the competent authority of this State where such relief is sought may, if it considers it proper, adjourn the decision and may also, on the request of a party, order the other party to give suitable security."

B. Annotations

1. Title, sections and terminology

5. The Commission may wish to note that the Working Group tentatively approved the title of the draft amended Model Law (A/CN.9/934, para. 144; see also A/CN.9/929, para. 106) as well as its structure and presentation in three different sections (A/CN.9/934, para. 119; see also A/CN.9/929, para. 105 and annex). The Working Group also approved the replacement of the term "conciliation" by "mediation" throughout the draft instruments, as well as the explanatory text describing the rationale for that change reproduced in footnote 2 to the draft amended Model Law (A/CN.9/934, para. 16; for consideration of the matter at previous sessions of the Working Group, see A/CN.9/929, paras. 102–104; and A/CN.9/867, para. 120; see also below, para. 19).

6. The Commission may wish to note that in its deliberations of the draft amended Model Law, the Working Group generally agreed that the guiding principles would be

to ensure a level of consistency with the draft convention and, at the same time, to preserve the existing text of the Model Law to the extent possible (A/CN.9/934, para. 119).

2. Remarks on section 1 – General provisions

7. Section 1 of the draft amended Model Law applies to sections 2 and 3. This is reflected in article 1, paragraph 1, which provides that the law apply to both international commercial mediation and international settlement agreements. The Commission may wish to note that, in line with the decision of the Working Group, paragraphs 4 to 9 of article 1 of the Model Law have been moved to section 2 of the draft amended Model Law (see below, paras. 9 and 10).

8. Article 1, paragraphs 2 and 3 and article 2 are in substance unchanged from the Model Law.

For approval of article 1(1) at the sixty-eighth session of the Working Group, see A/CN.9/934, para. 120; for consideration of the matter at previous sessions, see A/CN.9/929, para. 106;

For approval of article 1(3) at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 30–32; for consideration of the matter at previous sessions, see A/CN.9/929, para. 43; A/CN.9/896, paras. 39–47; A/CN.9/867, para. 121; and A/CN.9/861, para. 21.

3. Remarks on section 2 – Mediation

9. Section 2 addresses the mediation process, and includes the following provisions of the Model Law: article 1, paragraphs 1 and 4 to 9, and articles 3 to 14.

10. The Commission may wish to note the following adjustments:

- Footnote 1 of the Model Law which provides guidance to States wishing to enact the Model Law to apply to domestic and international mediation has been moved to section 2 of the draft amended Model Law (article 3(1)); this has been done in light of the disconnection between the definitions of the internationality of mediation and internationality of settlement agreements;
- Article 4 on variation by agreement refers to article 7(3) of the draft amended Model Law (numbered article 6(3) in the Model Law); the reference in article 4 to article 2 has been deleted as article 4 is placed in section 2, and applies only to provisions in that section;
- The title of article 15 of the draft amended Model Law (corresponding to article 14 of the Model Law) has been amended to read: “Binding and enforceable nature of settlement agreements” (A/CN.9/934, para. 132).

For approval of article 3(1) at the sixty-eighth session of the Working Group, see A/CN.9/934, para. 120;

For approval of the placement of article 1, paragraphs 4 to 9 of the Model Law under article 3, paragraphs 2 to 7 of the draft amended Model Law at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 128–130; for consideration of the matter at previous sessions, see A/CN.9/929, para. 106.

4. Remarks on section 3 – International settlement agreements

11. Articles 16 to 20 address international settlement agreements in a manner consistent with the draft convention. The title of section 3 has been adjusted as agreed by the Working Group (A/CN.9/934, para. 139(iii)).

(i) Remarks on article 16 – Scope of application of the section and definitions

12. Paragraphs 1 to 6 have been approved in substance by the Working Group. Paragraph 1 introduces the generic term "settlement agreement". Paragraphs 2 to 6 are consistent with the corresponding provisions in articles 1 and 2 of the draft convention.

13. The Commission may wish to consider paragraph 7, which aims at clarifying the notions of "granting relief" and "seeking relief". As these expressions may have a generic connotation, in particular when translated in different official languages of the United Nations, it is suggested to clarify that the expressions refer to possible actions referred to under article 17 (A/CN.9/934, para. 138).

For approval of the scope of application and definitions under article 16, paragraphs 1 to 6, see:

- For approval of paragraph 1 at the sixty-eighth session of the Working Group, see A/CN.9/934, para. 120; for consideration of the matter at previous sessions, see A/CN.9/929, paras. 14 and 30; A/CN.9/901, paras. 52 and 56; A/CN.9/896, paras. 14–16, 113–117, 145 and 146; and A/CN.9/867, para. 94;
- For approval of paragraph 2 at the sixty-eighth session of the Working Group, see A/CN.9/934, para. 23; for consideration of the matter at previous sessions, see A/CN.9/929, paras. 15 and 30; A/CN.9/896, paras. 55–60; A/CN.9/867, paras. 106–108; and A/CN.9/861, paras. 41–43;
- For approval of paragraph 3 at the sixty-eighth session of the Working Group, see A/CN.9/934, para. 24; for consideration of the matter at previous sessions, see A/CN.9/929, paras. 17–29 and 30; A/CN.9/901, paras. 25–34, 52, and 58–71; A/CN.9/896, paras. 48–54, 169–176 and 205–210; A/CN.9/867, paras. 118 and 125–131; and A/CN.9/861, paras. 24–28;
- For approval of paragraphs 4 and 5 at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 28 and 121–127; for consideration of the matter at previous sessions, see A/CN.9/929, paras. 31–35, 39 and 43; A/CN.9/896, paras. 17–24 and 158–163; A/CN.9/867, paras. 93–98 and 101; and A/CN.9/861, paras. 33–39;
- For approval of paragraph 6 at the sixty-eighth session of the Working Group, see A/CN.9/934, para. 29; for consideration of the matter at previous sessions, see A/CN.9/929, para. 43; A/CN.9/896, paras. 32–38 and 66; and A/CN.9/867, para. 133.

(ii) Remarks on article 17 – General principles

14. Article 17 provides for the principles regarding both enforcement of settlement agreements (paragraph 1) and the right for a party to invoke a settlement agreement as a defence against a claim (paragraph 2).

For approval of article 17 at the sixty-eighth session of the Working Group, see A/CN.9/934, para. 25; for consideration of the matter at previous sessions, see A/CN.9/929, paras. 44–48 and 73; A/CN.9/901, paras. 16–24, 52, 54 and 55; A/CN.9/896, paras. 76–81, 152, 153, 155 and 200–203; A/CN.9/867, para. 146; and A/CN.9/861, paras. 71–79.

(iii) Remarks on article 18 – Requirements for reliance on settlement agreements

15. The Commission may wish to note that article 18 reflects a balance between, on the one hand, the formalities that would be required to ascertain that the settlement agreement resulted from mediation and, on the other, the need for the instrument to preserve the flexible nature of the mediation process (A/CN.9/867, para. 144).

16. As matters of drafting, the Commission may wish (i) to consider whether the words "such as" which appear at the end of the chapeau of paragraph 1(b) could be replaced by the words "in the form of"; and (ii) to note that, for the sake of simplification and consistency between paragraphs 3 and 4, the words "the party

requesting relief to supply" which appeared after the words "may request" in paragraph 3 have been deleted.

For approval of article 18 at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 37–39; for consideration of the matter at previous sessions, see A/CN.9/929, paras. 49–67 and 73; A/CN.9/896, paras. 67–75, 82, and 177–190; A/CN.9/867, paras. 133–144; and A/CN.9/861, paras. 51–67.

(iv) Remarks on article 19 – Grounds for refusing to grant relief

17. The Commission may wish to note the extensive consultations of the Working Group at its sixty-eighth session aimed at clarifying the various grounds provided for in paragraph 1, in particular the relationship between subparagraph (b)(i), which mirrored a similar provision of the New York Convention and was considered to be of a generic nature, and subparagraphs (b)(ii), (b)(iii), (c) and (d), which were deemed to be illustrative in nature. At that session, it was noted that various attempts for regrouping the grounds had been unsuccessful. It was further noted that such attempts represented serious efforts at avoiding overlap in light of the importance of the issue. However, difficulties arose because of the need to accommodate the concerns of different domestic legal systems, which resulted in the failure of such attempts to gain consensus. Therefore, the Working Group expressed a shared understanding that there might be overlap among the grounds provided for in paragraph 1 and that competent authorities should take that aspect into account when interpreting the various grounds (A/CN.9/934, paras. 60–65).

For approval of article 5 at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 59 and 66; for consideration of the matter at previous sessions, see A/CN.9/929, paras. 74–101; A/CN.9/901, paras. 41–50, 52 and 72–88; A/CN.9/896, paras. 84–117 and 191–194; A/CN.9/867, paras. 147–167; and A/CN.9/861, paras. 85–102.

(v) Remarks on article 20 – Parallel applications or claims

18. Article 6 provides the competent authority with the discretion to adjourn its decision if an application or claim relating to the settlement agreement had been made to a court, arbitral tribunal or other competent authority, which might affect the process (A/CN.9/896, para. 123). It is based on article VI of the New York Convention, which addresses the situation where a party seeks to set aside an arbitral award at the place of arbitration while the other party seeks to enforce it elsewhere. The Working Group agreed that article 20 should apply to both when enforcement of a settlement agreement was sought and when a settlement agreement was invoked as a defence (A/CN.9/934, para. 69).

For approval of article 6 at the sixty-eighth sessions of the Working Group, see A/CN.9/934, para. 70; for consideration of the matter at previous sessions, see A/CN.9/896, paras. 122–125; A/CN.9/867, paras. 168 and 169; and A/CN.9/861, paras. 103–107.

(vi) Footnotes

19. The Commission may wish to note that the following additional footnotes have been inserted in the draft amended Model Law:

- Footnote 2, which addresses the decision to replace the term "conciliation" by "mediation" throughout the draft instruments; footnote 2 reflects the explanatory text that was agreed for use when revising UNCITRAL texts on conciliation (see A/CN.9/934, para. 16; A/CN.9/929, paras. 102–104; and A/CN.9/867, para. 120). The Commission may wish to note that the first sentence of the explanatory text, which reads: "*'Mediation' is a widely used term for a process where parties request a third person or persons to assist them in their attempt to reach an amicable settlement of their dispute arising out of, or relating to, a contractual or other legal relationship.*" has not been inserted

in footnote 2 in order to avoid possible confusion with the definition of mediation provided for in article 1(3) of the draft amended Model Law.

- Footnote 5 provides States with the options of (i) broadening the scope of section 3 to agreements not reached through mediation (for approval of footnote 5 at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 133–136; for consideration of the matter at previous sessions, see A/CN.9/929, paras. 68–72; A/CN.9/896, paras. 40 and 41; and A/CN.9/867, para. 115); and (ii) applying section 3 only to the extent that the parties to a settlement agreement have agreed to its application (thereby mirroring article 8(1)(b) of the draft convention; see A/CN.9/934, para. 137).
- Footnote 6 provides States with the option of adding a subparagraph to article 16(4) so that section 3 would apply to settlement agreements that are not international at the time of their conclusion, but that result from international mediation as defined under article 3, paragraphs 2 to 4 (A/CN.9/934, para. 127).

(vii) Other matters

(i) General Assembly resolution

20. The Commission may wish to note that the Working Group prepared both a draft convention and a draft amended Model Law in a spirit of compromise and to accommodate the different levels of experience with mediation in different jurisdictions. The Working Group agreed that a possible approach to address the specific circumstance of preparing both a convention and a model legislative text could be to suggest that the resolutions of the General Assembly accompanying those instruments would express no preference on the instrument to be adopted by States (A/CN.9/901, para. 93).

21. In that context, the Working Group agreed on the following wording for consideration by the Commission, and eventually recommendation to the General Assembly for inclusion in the relevant resolution: "*Recalling that the decision of the Commission to concurrently prepare a draft convention on international settlement agreements resulting from mediation and an amendment to the UNCITRAL Model Law on International Commercial Conciliation was intended to accommodate the different levels of experience with mediation in different jurisdictions, and to provide States with consistent standards on cross-border enforcement of international settlement agreements resulting from mediation, without creating any expectation that interested States may adopt either instrument*."

For consideration by the Working Group of the form of the draft instruments, see A/CN.9/901, paras. 52 and 89–93; and A/CN.9/896, paras. 135–143 and 211–213;

For approval of the draft text in para. 21 above at the sixty-eighth session of the Working Group, see A/CN.9/934, paras. 140–142.

(ii) Material accompanying the draft amended Model Law

22. The Commission may wish to note the recommendation of the Working Group that, resources permitting, the *travaux preparatoires* of the draft amended Model Law should be compiled by the Secretariat, so that they could be easily accessible and user-friendly. It was further recommended that the Secretariat should be tasked with the preparation of a text to supplement the Guide to Enactment of the Model Law (A/CN.9/934, paras. 146–148). In that light, the Commission may wish to consider whether the Guide to enactment should provide guidance on how sections 2 and 3 of the draft amended Model Law could each be enacted as a stand-alone legislative text.

H. Note by the Secretariat on settlement of commercial disputes: draft convention on international settlement agreements resulting from mediation – draft model law on international commercial mediation and international settlement agreements resulting from mediation

(A/CN.9/945)

[Original: English]

Contents

I. Introduction

1. At its forty-eighth session, in 2015, the Commission agreed that Working Group II (Dispute Settlement) should commence work regarding international settlement agreements resulting from mediation.[1] At its sixty-third to sixty-eighth sessions, the Working Group undertook work on the preparation of instruments on enforcement of international settlement agreements resulting from mediation, consisting of a draft convention and draft amendments to the UNCITRAL Model Law on International Commercial Conciliation (the "instruments")[2] At its sixty-eighth session, the Working Group completed its preparation of the instruments, and requested the Secretariat to circulate them to Governments for their comments, with a view to consideration by the Commission at its fifty-first session (A/CN.9/934, para. 13).

2. Further to that request, the Secretariat circulated the draft instruments in the form set out in documents A/CN.9/942 (draft convention) and A/CN.9/943 (draft amendments to the UNCITRAL Model Law on International Commercial Conciliation.) The present document reproduces comments received by the Secretariat on the draft instruments. Comments received by the Secretariat after the issuance of the present document will be published as addenda thereto in the order in which they are received.

[Original: English]
[Date: 8 June 2018]

1. Title of Section 2

At present, the Draft Model Law appearing in A/CN.9/943 uses the term “Mediation” as a title for Section 2. As the title of the Model Law uses the term “International Commercial Mediation” as opposed to “Mediation”, and as comparable Section 3 uses the term “International Settlement Agreement” copied from the title of the Model Law, it would be prudent, for the sake of consistency, to use the term “International Commercial Mediation” as the title for Section 2. As a matter of fact, what is provided in Section 2 is not merely “mediation” but “international commercial mediation”. Mediation is currently being used in other contexts as well, such as state-to-state mediation or investor-state mediation in lieu of ISDS proceedings. As such, it would be more accurate and appropriate to use an accurate term as the title for Section 2.

2. Ambiguity of the Term “Settlement Agreement” in Article 15

Article 15 of the Model Law uses the term “settlement agreement”. On the other hand, in Section 3, from Article 16 to Article 20, the term “settlement agreement” is then used in a specific manner as defined in paragraph 1 of Article 16. Thus, the term “settlement agreement” in Article 15 may cause confusion. In light of this, it may be prudent to use the term “agreement” rather than “settlement agreement” in Article 15 (both in the title and in the text). The article then would read as follows:

> “Article 15: Binding and enforceable nature of agreement settling disputes
>
> If the parties conclude an agreement settling a dispute, that agreement is binding and enforceable.”

3. Title of Article 17

The current title of Article 17 reads “General Principle”. As the term would be interpreted as general principle applicable to the entire text of the Model Law as in Section 1, the Secretariat might want to consider using more specific terms to describe Article 17. For instance, the title of the provision may read: “General Principles Regarding Enforcement”, or something along the line. As it currently stands, Section 1 of the Model Law already uses the term “General Provision”. So, the term “General Principles” of the Article 17 may be found to be slightly confusing to the readers.

III. INVESTOR-STATE DISPUTE SETTLEMENT REFORM (ISDS)

A. Report of the Working Group on ISDS on the work of its thirty-fourth session (Part I) (Vienna, 27 November–1 December 2017)

(A/CN.9/930/Rev.1 and Add.1/Rev.1)

[Original: English]

Contents

I. Introduction

1. At its forty-eighth session, in 2015, the Commission noted that the current circumstances in relation to investor-State arbitration posed challenges and proposals for reform had been formulated by a number of organizations. In that context, the Commission was informed that the Secretariat was conducting a study on whether the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration ("Mauritius Convention on Transparency" or "Mauritius Convention") could provide a useful model for possible reforms in the field of investor-State arbitration, in conjunction with interested organizations, including the Centre for International Dispute Settlement (CIDS), a joint research centre of the Graduate Institute of International and Development Studies and the University of Geneva Law School. In that light, the Secretariat was requested to report to the Commission at a future session with an update on the matter.[1]

2. Pursuant to that request, at its forty-ninth session in 2016, the Commission had before it a note providing an update on a study conducted within the framework of a research project of CIDS (referred to below as the "CIDS report"),[2] and a short overview of its outcome (A/CN.9/890).

3. After discussion, the Commission requested the Secretariat to review how the project described in document A/CN.9/890 might be best carried forward, if approved as a topic of future work at the fiftieth session of the Commission. In so

[1] *Official Records of the General Assembly, Seventieth Session, Supplement No. 17* (A/70/17), para. 268.

[2] Kaufmann-Kohler, Gabrielle, and Michele Potestà. "Can the Mauritius Convention serve as a model for the reform of investor-State arbitration in connection with the introduction of a permanent investment tribunal or an appeal mechanism? Analysis and road map" (2016), available via the UNCITRAL website at: http://www.uncitral.org/pdf/english/commissionsessions/unc/unc-49/CIDS_Research_Paper_-_Can_the_Mauritius_Convention_serve_as_a_model.pdf.

doing, the Secretariat was requested to conduct broad consultations,[3] and to take into consideration the views of all States and other stakeholders, including on how this project might interact with other initiatives in this area and on the format and processes that could be used.

4. The Commission also decided to retain two additional topics in the field of investment arbitration on its agenda for further consideration: possible future work on concurrent proceedings and on ethics for arbitrators.[4] It further requested that the Secretariat, within its existing resources, continue to update and conduct preparatory work on all three topics so that the Commission would be in a position to make an informed decision on whether to mandate a working group to undertake work in any or all of them.[5]

5. At its fiftieth session, the Commission had before it Notes by the Secretariat on "Possible future work in the field of dispute settlement: Concurrent proceedings in international arbitration" (A/CN.9/915); on "Possible future work in the field of dispute settlement: Ethics in international arbitration" (A/CN.9/916), and on "Possible future work in the field of dispute settlement: Reforms of investor-State dispute settlement (ISDS)" (A/CN.9/917). Also before it was a compilation of comments by States and international organizations on "Investor-State Dispute Settlement Framework" (A/CN.9/918 and addenda).

6. Having considered the topics in documents A/CN.9/915, A/CN.9/916 and A/CN.9/917, the Commission entrusted Working Group III with a broad mandate to work on the possible reform of investor-State dispute settlement (ISDS). In line with the UNCITRAL process, Working Group III would, in discharging that mandate, ensure that the deliberations, while benefiting from the widest possible breadth of available expertise from all stakeholders, would be government-led with high-level input from all governments, consensus-based and be fully transparent. The Working Group would proceed to: (i) first, identify and consider concerns regarding ISDS; (ii) second, consider whether reform was desirable in light of any identified concerns; and (iii) third, if the Working Group were to conclude that reform was desirable, develop any relevant solutions to be recommended to the Commission. The Commission agreed that broad discretion should be left to the Working Group in discharging its mandate, and that any solutions devised would be designed taking into account the ongoing work of relevant international organizations and with a view of allowing each State the choice of whether and to what extent it wishes to adopt the relevant solution(s).[6]

II. Organization of the session

7. The Working Group, which was composed of all States members of the Commission, held its thirty-fourth session in Vienna, from 27 November–1 December 2017. The session was attended by the following States members of the Working Group: Argentina (2022), Armenia (2019), Australia (2022), Austria (2022), Belarus (2022), Brazil (2022), Bulgaria (2019), Cameroon (2019), Canada (2019), Chile (2022), China (2019), Colombia (2022), Côte d'Ivoire (2019), Czechia (2022), Denmark (2019), Ecuador (2019), El Salvador (2019), France (2019), Germany (2019), Greece (2019), Honduras (2019), Hungary (2019), India (2022), Indonesia (2019), Iran (Islamic Republic of) (2022), Israel (2022), Italy (2022), Japan (2019), Kuwait (2019), Malaysia (2019), Mauritius (2022), Mexico (2019), Nigeria (2022), Pakistan (2022), Panama (2019), Philippines (2022), Poland (2022), Republic of Korea (2019), Romania (2022), Russian Federation (2019), Singapore (2019), Spain (2022), Switzerland (2019), Thailand (2022), Turkey (2022), Uganda (2022), United

Kingdom of Great Britain and Northern Ireland (2019), United States of America (2022) and Venezuela (Bolivarian Republic of) (2022).

8. The session was attended by observers from the following States: Albania, Belgium, Bolivia (Plurinational State of), Bosnia and Herzegovina, Costa Rica, Croatia, Cyprus, Dominican Republic, Egypt, Estonia, Finland, Georgia, Iceland, Malta, Montenegro, Morocco, Netherlands, New Zealand, Niger, Norway, Paraguay, Peru, Portugal, Saudi Arabia, Serbia, Slovakia, South Africa, Sudan, Sweden, Uruguay and Viet Nam.

9. The session was also attended by observers from the European Union.

10. The session was also attended by observers from the following international organizations:

(a) *United Nations System*: International Centre for the Settlement of Investment Disputes (ICSID) and United Nations Conference on Trade and Development (UNCTAD);

(b) *Intergovernmental organizations*: Energy Community Secretariat, Gulf Cooperation Council (GCC), Organization for Economic Cooperation and Development (OECD) and Permanent Court of Arbitration (PCA);

(c) *Invited non-governmental organizations*: Arab Association for International Arbitration (AAIA), Arbitrators' and Mediators' Institute of New Zealand (AMINZ), Association for the Promotion of Arbitration in Africa (APAA), Beijing Arbitration Commission/Beijing International Arbitration Center (BAC/BIAC), Cairo Regional Centre for International Commercial Arbitration (CRCICA), Center for International Dispute Settlement (CIDS), Center for International Environmental Law (CIEL), Center for International Legal Studies (CILS), CISG Advisory Council (CISG-AC), Council of the Interparliamentary Assembly of Member Nations of the Commonwealth of Independent States (CIS), Forum for International Conciliation and Arbitration (FICA), International Chamber of Commerce (ICC), International Council for Commercial Arbitration (ICCA), International Institute for Sustainable Development (IISD), International Law Association (ILA), International Law Institute (ILI), Korean Commercial Arbitration Board (KCAB), Law Association for Asia and the Pacific (LAWASIA), Madrid Court of Arbitration, Miami International Arbitration Society (MIAS), Moot Alumni Association (MAA), Queen Mary University of London School of International Arbitration (QMUL), Regional Centre for International Commercial Arbitration, Lagos (RCICAL), Russian Arbitration Association (RAA), Stockholm Chamber of Commerce Arbitration Institute (SCC Arbitration), Swiss Arbitration Association (ASA) and Vienna International Arbitration Centre (VIAC).

Election of officers

11. The Working Group proceeded to elect the chairperson for the session. The importance of transparency, neutrality and inclusiveness of the process and of the deliberations of the Working Group were emphasized. Proposals to elect a chairperson and a rapporteur, who would alternate their roles in subsequent sessions, and to elect co-chairs did not gain support.

12. In the absence of consensus on the election of a chairperson and having received more than one nomination for that position, the Working Group proceeded with the election of the chairperson by secret ballot in accordance with the Rules of Procedure of the General Assembly as applicable to UNCITRAL.

13. Forty-five ballots were cast, of which one was invalid; forty-four ballots were valid; there were three abstentions; the number of States members of the Working Group present and voting were therefore forty-one and the required majority for the election was twenty-one.

14. Mr. Shane Spelliscy (Canada) having obtained twenty-four votes and consequently the required majority in the first ballot, was elected as the Chairperson of the session.

15. The Working Group elected as Rapporteur Ms. Natalie Yu-Lin Morris-Sharma (Singapore).

Documents and adoption of the agenda

16. The Working Group had before it the following documents: (a) provisional agenda (A/CN.9/WG.III/WP.141); and (b) notes by the Secretariat on "Possible reform of investor-State dispute settlement (ISDS)" (A/CN.9/WG.III/WP.142) and on submissions from International Intergovernmental Organizations (A/CN.9/WG.III/WP.143).

17. The Working Group adopted the following agenda:

1. Opening of the session.
2. Election of officers.
3. Adoption of the agenda.
4. Possible reform of investor-State dispute settlement (ISDS).
5. Adoption of the report.

III. Deliberations and decisions

18. The Working Group considered agenda item 4 on the basis of the notes by the Secretariat (A/CN.9/WG.III/WP.142 and A/CN.9/WG.III/WP.143). The deliberations and decisions of the Working Group with respect to item 4 are reflected in chapter IV.

IV. Possible reform of Investor-State Dispute Settlement

A. General remarks

19. It was recalled at the outset that the mandate given to the Working Group contained three stages: (i) to identify and consider concerns regarding ISDS; (ii) to consider whether reform was desirable in light of any identified concerns; and (iii) if the Working Group were to conclude that reform was desirable, to develop any relevant solutions to be recommended to the Commission.[7]

20. It was also recalled that ISDS provided a method to enforce the substantive obligations of States. It was noted that critical questions on possible ISDS reform involved the underlying substantive rules. Nonetheless, it was clarified that the mandate given to the Working Group focused on the procedural aspects of dispute settlement rather than on the substantive provisions.

21. There was general agreement on the importance and sensitivity of the work to be undertaken by the Working Group. It was said that work should be based on a thorough analysis of all relevant issues. It was added that a full and candid exchange of views would support the consensus-driven approach.

22. Considering that the mandate consisted of three stages, it was agreed that each stage would be considered in sequence. It was also agreed that the Working Group should take a gradual and cautious approach, without undue haste, but would proceed efficiently. Consequently, it was generally felt that the second and third stages of the mandate should be considered in due course, once the Working Group has had sufficient opportunity to consider the concerns.

23. Nonetheless, it was said that it might not be practicable to separate a discussion of concerns and whether or not they were valid concerns justifying reform. From this perspective, it was said that the first two stages of the mandate could be considered together, if the element of ISDS concerned so warranted. In addition, an indication of whether the issues might warrant reforms, and whether the reforms might be

[7] Ibid.

incremental or systemic, might be made. Any such indications would be recorded to allow the Working Group to prepare for any future discussions on the second and third stages of the mandate. It was emphasized that the Working Group would respect the order of the mandate and allow sufficient time for discussion of all issues.

24. It was also stated that the objective of the Working Group was to identify and address the core concerns in relation to ISDS, and that an exhaustive consideration of all issues would not be desirable.

25. In discharging the mandate of the Working Group, the cooperation between UNCITRAL and other relevant international bodies was welcomed.

26. In addition, it was stated that ISDS reform raised complex issues of public international law, highlighting that the process should be government-led, as recognized in the mandate of the Working Group. Nonetheless, it was noted that the contributions from observer organizations, and the transparent nature of the UNCITRAL process, would assist the Working Group in its deliberations on ISDS reform.

ISDS under investment treaties, laws and contracts

27. The Working Group proceeded to consider whether work should be limited to ISDS under investment treaties or should encompass all forms of ISDS regardless of the instrument upon which cases arose. It was reported that 75 per cent of investment claims before ICSID (which comprised over 70 per cent of all ISDS claims) were treaty-based, and the remaining 25 per cent were divided between claims based on investment contracts and those arising as a matter of domestic investment law. It was further reported that 46 per cent of ICSID claims with African States as respondent were based on or related to investment contracts.

28. In response to a suggestion that the focus of the Working Group should be confined to treaty-based ISDS cases, it was said that the level and apparent increase in the number of cases based on contractual provisions was such that the door should be left open to investment law- and contractual-based ISDS cases. In addition, it was mentioned that, as a matter of procedure, the concerns arising in the different underlying instruments were not dissimilar, even if there were policy differences between the instruments themselves. However, it was suggested that such an approach might extend the scope of the Working Group's tasks to include what might be difficult issues on investment contracts.

29. On the other hand, it was said that the broader approach would also allow parties to a variety of instruments to apply the eventual results of possible reform. It would also allow the Working Group to consider all concerns as envisaged by its mandate, would avoid unnecessary definitional difficulties, and would not require the Working Group to engage in an unnecessary exhaustive analysis. In addition, it was pointed out that excluding investment contracts completely might have the potential to undermine the results of possible reform, if investors chose to negotiate contractual mechanisms instead of relying on treaty provisions.

30. In light of the above, it was agreed that the Working Group would focus on treaty-based ISDS and would later consider the possibility of extending the results of its work to contract and investment law based ISDS. That said, it was understood that delegations continue to raise concerns and views on contract and investment law based ISDS.

Investment arbitration and other types of ISDS mechanisms

31. The Working Group then considered whether work should be limited to arbitration or should include other types of existing ISDS mechanisms. Recalling its earlier discussion, there was a generally-shared view that alternative dispute resolution methods, including mediation, ombudsman, consultation, conciliation and any other amicable settlement mechanisms, could operate to prevent the escalation of disputes to arbitration and could alleviate concerns about the costs and duration of arbitration. In that context, the Working Group recalled the work done by the

Commission in the field of conciliation and the current work being undertaken by Working Group II on enforcement of mediated settlement agreements.

32. One view was that such alternative methods were an integral part of ISDS, might be mandatory under some investment treaties, might assist in identifying concerns and possible procedural solutions to concerns about arbitration in ISDS and so should be considered by the Working Group.

33. In response, it was recalled that the mandate of the Working Group related to identifying concerns about ISDS and that concerns about ISDS had generally focused on arbitration. While some potential concerns were mentioned regarding mediation, it was widely felt that work should focus on arbitration and the concerns it raised. Accordingly, it was said that the work should first concentrate on identifying concerns regarding arbitration, and that other types of ISDS mechanisms could subsequently be considered as part of a holistic approach to addressing those concerns. From this perspective, States' experience in domestic court mechanisms and sequencing issues, the relationship between arbitration, alternative dispute resolution mechanisms and court procedures, and State-to-State mechanisms, might inform the Working Group's considerations of solutions at the third stage of its mandate.

B. Consideration of the arbitral process and outcomes

1. Procedural aspects

34. The Working Group undertook its consideration of concerns relating to the arbitral process and outcomes based on document A/CN.9/WG.III/WP.142, paras. 22–41. In that context, the Working Group took note that, as indicated in paragraph 19 of that document, the issues listed therein were not exhaustive, and that any additional issues might be raised, and considered, by the Working Group at a later stage of its deliberations.

(a) Duration and cost

Overall levels of duration and cost

35. During the discussion, the experience of States and of intergovernmental organizations in connection with ISDS was shared. The Working Group was informed that the Secretariat had consulted extensively with key international organizations involved in ISDS and in the wider reform of investment treaties, including UNCTAD, ICSID, OECD and PCA, as reflected in the documents available to the Working Group. The Secretariat had also taken into account data made available by relevant arbitration institutions.

36. The Working Group took note of analyses based on limited available information suggesting that 80 to 90 per cent of costs in ISDS were associated with fees for legal representation and for experts and that the amount of costs per proceeding averaged US$ 8 million.

37. It was widely felt that lengthy and costly ISDS proceedings under some approaches raised concerns and practical challenges to respondent States as well as to claimant investors. Highlighting the resource-intensive nature of the proceedings, it was mentioned that the very inclusion of ISDS provisions in investment treaties could have financial implications for respondent States.

38. There was a shared understanding that the duration and cost of the proceedings were interlinked, as lengthy proceedings were likely to result in higher costs.

39. It was mentioned that there was little doubt about the negative impact of duration and costs on respondent States, but that the Working Group could design a model to relate duration and the level of costs to the benefits of investment to the investors, as a practical tool to prevent such disputes.

40. Particular attention was drawn to the fact that the high costs of ISDS paid with public funds were difficult to justify for developing States, whose financial resources were scarce. In that context, it was stated that such costs and awards made against

those States could compete with urgent developmental needs. It was added that responding to an ISDS claim posed a disproportionately heavy burden on the officials of smaller States.

41. It was further stated that the high costs of ISDS under some approaches could limit the access of small and medium-sized enterprises to the ISDS mechanism, thus depriving them of the protection provided to them under investment treaties.

42. The Working Group was cautioned that deliberations relating to duration and cost should be fact-based. At the same time, it was noted that perceptions were also relevant in terms of maintaining the legitimacy of ISDS. Furthermore, it was emphasized that notions of duration and cost were relative in nature, and whether the process was excessively lengthy and/or costly should be determined on a case-by-case basis and taking into account the need for effective administration of justice.

43. It was emphasized that the duration and costs of ISDS proceedings should not be examined in isolation, but by reference to suitable comparators, which might include other international dispute settlement bodies (such as the International Court of Justice and the Dispute Settlement Body of the World Trade Organization), and domestic court procedures. The costs of ISDS might need to be further assessed from that perspective, even if it were acknowledged that the costs had risen over time.

44. It was pointed out that the implications of the duration and cost of the procedures were also derived from the fact that the ISDS regime lacked a rule of binding precedent and a consequent lack of predictability. As a result, it was said, legal counsel would be under a duty to press all available arguments, whether or not those arguments had been accepted or rejected by earlier tribunals.

45. The following items were noted as contributing to the levels of costs: complexities of the case, the underlying treaties and the proceeding; large volume of evidence; quality of factual records; conduct of the proceedings; ineffective case management; the need for States to have time to develop their defences and to ensure the best possible representation; the need for parties to expend considerable sums in appointing tribunals; and the need to translate numerous documents and evidence into the language of the arbitration. In addition, a lack of organization, tribunal dynamics leading to lengthy deliberations and sometimes dissenting opinions, and excessive numbers of hearings also contributed to the levels of cost. In that relation, concerns were expressed about the negative effects on case management due to fears of challenges and annulment of awards.

46. It was also stated, however, that excess costs could be attributed under some approaches in part to abusive practices, parallel proceedings, the absence of clear procedures, and the absence of a mechanism to dismiss frivolous claims at an early stage. In addition, it was pointed out that the increase in costs was related to systemic issues and the structure of the ISDS regime, or, alternatively, the lack of a system. These issues, it was added, had led to a lack of consistency and, importantly for States as respondents in particular, a lack of predictability of outcome. A further issue was that the same arbitrators were commonly appointed in a number of cases, resulting in further delays, extended durations and leading to further increases in costs.

47. It was suggested that the increasing complexities of the underlying treaties was an additional cause of increased costs.

48. With regard to the duration, it was mentioned that the appointment of the tribunal, disclosure or discovery and the deliberations when drafting the award were the three time-intensive stages. In addition, concerns were expressed with regard to the lengthy period of time that might elapse between the final hearing and the rendering of the award. An additional stage that contributed to the overall duration of ISDS proceedings was noted to be enforcement action, which was reported in some cases to have exceeded the original arbitration proceedings in length.

49. On the other hand, it was also mentioned that disputing parties as well as States parties to the treaty under which the dispute arose had a role to play in determining the overall duration of an ISDS proceeding.

50. It was added that States generally required more time to respond to claims, as they were required to coordinate among a number of authorities, and to engage legal counsel and experts to defend their case. In that context, the need for States to be given sufficient time to respond to claims was emphasized.

51. It was observed that States had the opportunity to take steps to control both duration and cost through effective case management and their decisions as respondents, including in selecting counsel and experts, in considering their choices of arbitrators and of arbitration institutions to administer the case, in agreeing on the procedural timetable, in deciding to bifurcate proceedings, and in seeking early dismissal where possible. All these steps, it was noted, had the potential to shorten the duration.

52. In addition, it was stated that the States could use tools in their investment treaties to reduce duration and cost proceedings, including using forms of dispute settlement other than arbitration (negotiation, consultations, diplomatic efforts or mediation). It was further added that some treaties allowed for early dismissal of frivolous claims and provided for consolidation, might address allocation of costs, and might provide for effective means of constituting tribunal, for example, requiring the claimant to nominate its arbitrator in its initial notice of claim to expedite the process.

Allocation of costs

53. The allocation of costs by arbitral tribunals in ISDS was highlighted as a concern that merited further consideration. It was explained that arbitral tribunals in ISDS had historically followed the default rule under public international law and in inter-State cases that each party would bear its own costs. It was pointed out that the respondent State might find itself in the position of not being able to recover a substantial part or any of its costs in defending an unsuccessful, frivolous or bad faith claim by investors. In addition, it was stated that in the absence of allocation of costs, there was no incentive for the parties to limit their arguments and submissions.

54. In that context, an institution reported that costs had been allocated among parties in approximately half of recently issued arbitral awards, and therefore that a trend in favour of departing from the traditional public international law default rule mentioned above could be identified. In the awards concerned, arbitral tribunals had ordered that the costs of the arbitration should be borne by the unsuccessful party, or costs had been apportioned between the parties. Article 42 of the UNCITRAL Arbitration Rules (2010, as revised in 2013) was given as an example of a rule providing for allocation of costs among the parties.

55. As regards cost allocation, it was suggested that the Working Group might take note of an emerging approach based on a proportional allocation of costs. It was explained that an award of costs might reflect the relative success of the winning party in terms of the proportion of successful limbs of its claims.

Security for costs

56. A further area of concern mentioned related to difficulties faced by successful respondent States in recovering costs from claimant investors. It was said that investors might use shell companies, or might be impecunious, which left States with no possibility of recovery. That was highlighted as another area of imbalance as States had a permanent and financial standing, which investors did not. It was said that that situation was aggravated by the fact that the possibility of obtaining security for costs was not provided for under investment treaties or in certain arbitration rules.

Third-party funding

57. It was observed that investors sometimes resorted to third-party funding, and to other forms of external financing, which were not available to States. It was suggested that the development of that practice raised concerns that might require further consideration.

(b) Other procedural issues

58. Further, it was highlighted that arbitral institutions had sought to implement a number of measures to tackle certain procedural issues, in particular to streamline the process. Such efforts were also made with regard to the revision of the UNCITRAL Arbitration Rules in 2010/2013. By way of example, it was reported that the ICSID Arbitration Rules had provided for an early dismissal mechanism since 2006. Over 20 applications for such dismissal had been made, leading to the conclusion that where such an application was successful, time and costs were saved. (On the other hand, where the application failed, additional time and costs clearly arose.) A further example of efforts to streamline the process was the consolidation of claims, whether formal or informal.

(c) Holistic approach to procedural reform

59. Comments were made that concerns regarding duration and costs had to be examined as a whole; its constituent parts interacted in different ways, so that once the various concerns had been identified, it would be necessary to consider them from a systemic viewpoint. In particular, attention was called on the need to consider the issues of duration and costs in the broader context of (a) innovations in arbitration rules and investment treaties (such as early dismissal of frivolous, unmeritorious claims, preliminary objections, security for costs); (b) the need to ensure correctness of decisions; and (c) enhancing the predictability of decisions by reducing unnecessary submissions. It was added that a comprehensive analysis would require nuanced and not merely simple solutions.

60. The extent to which experience from international commercial arbitral tribunals should guide an analysis of ISDS concerns was discussed. In that regard, it was stated that arbitrators might take an overly narrow view of the issues concerned, and so pay insufficient attention to the public international law context, that they might be reluctant to manage concurrent proceedings through consolidation and to limit the submission of documents and discovery. On the other hand, it was said that developments in arbitration practice regarding case management including matters such as time limits, cost ceilings and transparency, as well as encouraging mediation and other alternative dispute resolution mechanisms, could be taken into account by the Working Group at a later stage in its deliberations.

2. Summary of the deliberations

61. After discussion, the Working Group summarized its deliberations on duration and costs in ISDS proceedings, as follows.

(a) The overall duration and costs of ISDS proceedings

62. The Working Group recalled the need to ensure that it had the appropriate facts before it, and in that light, that it should consider carefully the appropriate comparators when assessing whether costs were in fact excessive (see para. 36 above), or durations unnecessarily long. In addition, the Secretariat was requested to seek further information on appropriate comparative information from States and other organizations. It was also noted, however, that document A/CN.9/WG.III/WP.142 was prepared taking into consideration the available information and data, much of which was already in the public domain. In addition, it was mentioned that the Working Group had had the benefit of (a) data from States, drawn from their direct experiences as respondents, on the duration and costs of ISDS proceedings, and (b) data provided by international organizations and other bodies involved in investment treaty policymaking and reform in ISDS.

63. While the importance of a fact-based analysis was generally accepted, it was also said that the Working Group should not lose sight of perceptions on the issues under discussion, in light of the overall concerns about the legitimacy of the system. In that context, it was observed that perceptions were indeed relevant to States in making policy decisions.

64. It was added that the costs of ISDS had risen to a level where they could be seen as imposing a barrier to accessing the system to some investors, particularly small and medium-sized enterprises (see para. 34 above). Investors were resorting to third-party funding, a mechanism that caused significant concern and created a structural imbalance between States and investors.

65. In addition, the Working Group took note that the most time-consuming stages of ISDS cases included the appointment of the tribunal members, discovery or document production, and the issuance of awards.

(b) Allocation of costs

66. There was a widely shared view that allocation of costs in ISDS warranted detailed consideration. A key concern was that the costs to the State in defending claims were significant, and that even where the State was successful in its defence and notwithstanding recent trends, it was not always awarded its costs (see para. 46 above).

67. It was mentioned that a consideration of the topic should include the possibility of specific and clear rules on the allocation of costs, including on awards of costs proportionate with results, and reflecting the conduct of the parties, among other things (see para. 48 above).

(c) Security for costs

68. It was highlighted that States often encountered difficulties in recovering awards of costs. That issue exemplified an imbalance between the parties, because States, given their permanence, were in a different position from investors, who might be unable to pay. The link between this question and the lack of rules allowing orders for security for costs was emphasized (see para. 49 above).

(d) Third-party funding

69. It was observed that third-party funding had become a significant concern, in that it created a systemic imbalance and did not ensure a level playing field. It was added that issues of third-party funding related not just to costs, but also had an impact on other issues, such as conflicts of interest, collection and enforcement of costs awards.

(e) Indications of possible solutions on procedural issues

70. Without prejudice to future work by the Working Group, some preliminary indications of issues that the Working Group might wish to include in its discussions of possible solutions at a later stage were given.

71. It was highlighted that it would be important to draw a distinction between what could be termed “excessive” or “unjustified” time and costs, on the one hand, and “necessary” or “justified” time and costs on the other. In that regard, it was recalled that the quality of outcomes should be balanced with the desire to reduce duration and cost. With respect to “unjustified” time and costs, a number of procedural mechanisms were mentioned, including bifurcation of claims, expeditious dismissal of frivolous claims, consolidation of concurrent claims, and clear and definitive rules on cost allocation that took into account proportionality as well as party conduct. With respect to “justified” time and costs, it was said that the use of tools such as procedural timetables, of arbitral institutions and of modern technologies could be considered. In addition, fixed tariffs and time limits as well as training for arbitrators on case management were mentioned.

72. However, it was added that each case would be different in terms of the time and the costs that would be needed and so justified and thus one-size-fits-all rules would not be appropriate. Further, it was noted that for developing States even justified costs carried significant budgetary impacts. A possible support mechanism could be the establishment of a fund for defence costs or other forms of assistance such as advisory centres.

73. It was also stated that States might improve cost-effectiveness through engaging legal counsel on better contractual terms, which need not sacrifice the quality of representation.

74. The use of methods other than arbitration to resolve disputes, including mediation, were also considered as potential measures that could reduce time and costs in ISDS.

75. It was also noted that some of the above measures were already being implemented in recent treaties and procedural rules, and that a number of clear approaches could be implemented through treaty provisions or through case management in specific cases. However, it was said that such an approach would not address the existing treaties, of which there were over 3,000.

76. It was said that the systematic nature of the concerns identified indicated a need for systemic solutions, which would bring with them the reduction of the overall costs through enhanced predictability and a greater ability to control proceedings themselves.

77. The possibility of developing solutions that could be applied on a bilateral and a multilateral basis was mentioned. In that context, it was added that such bilateral and multilateral approaches need not be mutually exclusive, and that there could be a suite of solutions developed simultaneously on both tracks, particularly in light of the differences in experiences between States. It was observed that soft law instruments on questions such as the extent of discretionary powers of the tribunal under existing arbitral rules could support such efforts.

78. It was noted that its deliberations had explored key concerns that could be taken into account as its work progressed.

3. Transparency

79. The Working Group undertook its consideration of transparency in ISDS, based on document A/CN.9/WG.III/WP.142, paragraphs 26 and 27.

80. Throughout the deliberations, the importance of transparency in ISDS was underlined. It was also stated that transparency was a key element of the rule of law, and of access to justice as well as the legitimacy of the ISDS system. In that light, it was said that transparency was important for shedding light on ISDS, thus providing States the necessary information to respond to general criticisms of ISDS.

81. The Working Group recalled that UNCITRAL had undertaken work to address the lack of transparency in ISDS. Such work had resulted in the UNCITRAL Rules on Transparency in Treaty-based Investor-State arbitration (“Transparency Rules”), which the Commission had adopted in 2013, and the United Nations Convention on Transparency in Treaty-Based Investor-State Arbitration (“Mauritius Convention”) adopted by the General Assembly in 2014. It was noted that both texts (referred to jointly as the “transparency standards”) were recommended by the General Assembly for consideration of use by States.[8]

82. It was noted that the Transparency Rules constituted a set of procedural rules that ensured transparency in the conduct of treaty-based investor-State arbitration. The Working Group was informed that the Transparency Rules had been incorporated in a large number of investment treaties concluded after 1 April 2014. In addition, a number of investment treaties had introduced elements of transparency for arbitral proceedings within its provisions. The Working Group was informed that the Mauritius Convention was signed by twenty-two States and entered into force on 18 October 2017, after having been ratified by three States.

83. While some observations were made regarding the slow rate of adoption of the transparency standards, the Working Group was informed that progress was being made through inclusion of the Transparency Rules in investment agreements

[8] General Assembly resolutions 68/109 and 69/116, respectively.

concluded after 1 April 2014, voluntary adoption by the parties and the entry into force of the Mauritius Convention.

84. The Working Group took note of comments and explanations from States on their experience with transparency in ISDS including the operation of the Transparency Rules as well as their treaty practice. It was suggested that stocktaking of efforts to enhance transparency would be advisable before proceeding to address concerns related to transparency.

85. A comment was made that transparency was a matter for each State to consider when negotiating investment treaties or as a respondent State in a specific case. It was further said that transparency was relevant to various aspects of ISDS and not necessarily limited to the conduct of the proceedings. In that light, it was suggested that additional information on how transparency operated within the broader notion of ISDS would assist the Working Group in its further consideration of the topic.

86. Recognizing that a distinction should be drawn between the transparency of the arbitral proceedings (which the Commission has already addressed through the transparency standards) and a broader notion of transparency, the Working Group heard suggestions on possible issues that could be considered at a later stage.

87. With regard to enhancing transparency of arbitral proceedings, two potential areas of work were identified. One area related to the implementation and promotion of the transparency standards, including preparation of soft law instruments that could encourage parties and tribunals to apply such standards where not explicitly prohibited by treaty or other applicable law or arbitration rules. Another area related to enhancing the public understanding of ISDS through the transparency mechanism already in place. It was highlighted that enhancing public understanding of ISDS was key in addressing the perceived lack of legitimacy of the system. In addition, the asymmetry of information available to the States and investors was highlighted.

88. With regard to the broader notion of transparency, there was shared interest in the Working Group in exploring concerns relating to third-party funding arrangements, transparency in appointment of arbitrators and transparency with respect to the compensation of arbitrators. It was noted that the broader concept of transparency was indeed cross-cutting and related to many aspects of possible ISDS reform. In consequence, transparency would be considered when addressing those issues.

(A/CN.9/930/Add.1/Rev.1) (Original: English)

Report of the Working Group on ISDS on the work of its thirty-fourth session (Part II) (Vienna, 27 November–1 December 2017)

ADDENDUM

Contents

IV. Possible reform of investor-State dispute settlement (*continued*)

4. Other procedural issues

Early dismissal mechanism

1. The Working Group recalled its discussion of concerns stemming from the lack of an early dismissal mechanism to deal with unfounded claims – that is, unmeritorious, frivolous and abusive claims (see para. 39 of A/CN.9/930). The importance of those concerns from a legitimacy perspective was highlighted. Accordingly, it was agreed that there was merit in considering the possible provision of an early dismissal mechanism in ISDS.

2. In that context, it was also noted that such consideration should take into account existing mechanisms that had been developed by States (as well as in the ICSID Arbitration Rules) to provide for early dismissal and that the focus of the work should be on addressing circumstances where such mechanisms were not yet in place. It was added that other issues should be borne in mind, including possible barriers to access to ISDS (see para. 59 of A/CN.9/930), which might increase the risk of unfounded claims. It was suggested that claims by shell companies, other abusive procedures and inflated or unsubstantiated claims, which might not be considered unfounded claims per se but had the potential to increase duration and costs, should also be brought into consideration at a later stage.

Counterclaims

3. The Working Group undertook a consideration of the question of the limited ability of respondent States to make counterclaims in ISDS. Noting that that issue was closely related to the substantive obligations in investment treaties, a suggestion was made that the Working Group should not address the topic, as it had decided that its work should focus on the procedural aspects of dispute settlement rather than on the substantive provisions in investment treaties (see para. 20 of A/CN.9/930).

4. It was added that provisions permitting counterclaims were provided for in recent investment treaties. Certain arbitration rules, such as Rule 40 of the ICSID Arbitration Rules on ancillary claims, also provided for such a possibility. It was underlined that the main issue arose from the fact that investment treaties were generally formulated to provide protection to investors. As the latter had limited reciprocal obligations, the respondent States did not have a basis to bring a counterclaim. It was further mentioned that the basis for counterclaims might be and were often included in investment contracts, which then raised other practical difficulties not only with respect to the jurisdiction of the forum but also to the applicable law (public international law/domestic law). A cautious approach was suggested, given that there might be drawbacks in undertaking work in that area.

5. A different view was that providing a mechanism for States to raise counterclaims was an important aspect of ensuring an appropriate balance between respondent States and claimant investors as well as for promoting procedural

efficiency, fairness and the rule of law. It was mentioned that allowing States to raise counterclaims could eliminate parallel proceedings and thus might have a positive impact on duration and costs as well as on a number of other procedural issues, including third-party funding.

6. While an approach taken by some arbitral tribunals happened to accept jurisdiction to address counterclaims in reliance on substantive obligations in investment treaties, it was reiterated that the nature of the substantive obligations themselves was not the focus of the Working Group. It was noted that there was a distinction between substantive obligations provided for in investment treaties and the dispute settlement mechanisms used to enforce those obligations.

7. After discussion, the general understanding was that any work by the Working Group would not foreclose consideration of the possibility that a State might bring a counterclaim where there was a legal basis (or an underlying provision) for so doing.

Account to be taken of ongoing reforms

8. It was widely felt that any reform of ISDS procedure should take into account ongoing States' reforms of the underlying treaties. Accordingly, it was suggested that provisions in more recent treaties on procedural matters in dispute settlement might inform the future deliberations of the Working Group. Such procedural matters, it was added, sought to address some concerns discussed earlier in the session. Indeed, more recent treaty provisions also included procedures to address subject-matter specific claims, and the relief that arbitral tribunals could grant.

5. Outcomes: coherence and consistency

9. The Working Group undertook its consideration of coherence and consistency in ISDS outcomes, based on document A/CN.9/WG.III/WP.142, paragraphs 31 to 38.

10. At the outset of the deliberations, it was noted that a coherent system would ensure that its components were logically related with no contradictions and that a consistent system would ensure that identical or similar situations were treated in the same manner. In that context, a distinction was made between circumstances in which inconsistent interpretations might be justified due to, for example, variations in the language of the investment treaties and circumstances in which such inconsistencies would not be justified, as the same measure and the same underlying treaty provision were being addressed. Similarly, the need to distinguish between achieving consistency of interpretation within the same investment treaty and consistency of interpretation across investment treaties was highlighted.

11. Acknowledging the importance of ensuring a coherent and consistent ISDS regime as described in paragraph 31 of A/CN.9/WG.III/WP.142, it was said that such a regime would support the rule of law, enhance confidence in the stability of the investment environment and further bring legitimacy to the regime. It was also said that inconsistency and lack of coherence, on the other hand, could negatively affect the reliability, effectiveness and predictability of the ISDS regime and, in the longer term, its credibility and legitimacy. It was mentioned that criticism of a lack of consistency and coherence was one of the reasons behind the Commission's decision to embark on work on possible ISDS reform. It was underlined that consistency was a crucial element of the rule of law and would contribute to the development of investment law. However, it was also noted that consistency and coherence were not objectives in themselves and extreme caution should be taken in trying to achieve uniform interpretation of provisions across the wide range of investment treaties.

12. Yet another view was that the discussions should fully take into account the historical background of ISDS as an effort to provide investors a neutral mechanism to resolve their disputes with States.

13. The fragmented nature of the underlying investment treaties, as well as the ad hoc nature of arbitration, in which individual tribunals were tasked with interpreting investment treaties, were mentioned as contributing to a lack of consistency and predictability in outcomes. It was further said that international rules on treaty

interpretation and customary international law were not always consistently applied by ad hoc tribunals.

14. It was added that the long-term nature of investment treaties was such that multiple disputes might be expected to arise under them. Therefore, ensuring consistent interpretation of the treaty provisions would enhance the stability of the overall investment framework. It was further mentioned that many treaties contained similar provisions on investment protection (such as fair and equitable treatment, the most favoured nation obligation, the umbrella clause and provisions on compensation for expropriation). It was reported that, in the experience of some States that had concluded a number of investment treaties with similar provisions, those investment treaties had been interpreted differently by tribunals, including in an instance of concurrent proceedings in which the facts, parties, treaty provisions and applicable arbitration rules were identical.

15. It was said that predictability of treaty interpretation was also critical to allow States to understand whether their actions, such as possible future legislative or regulatory activities, might breach their obligations, and to set their investment policies. Predictability would also allow investors to assess whether certain treatment was in accordance with treaty obligations. It was further said that the existing lack of consistency imposed significant costs because of the consequent lack of predictability, as each party could often point to differing interpretations from other cases in support of its arguments. Interpretation of certain standards in investment treaties by tribunals was further said to be important for States when negotiating their treaties, as many elements of interpretation could be drawn from disputes under different treaties.

16. It was said that other solutions that had been tried, such as seeking to address concerns about consistency through case law analysis, following quasi precedent, and through references in awards to other decisions, had not proved sufficient. Continuing uncertainties in the interpretation of key notions, such as the definition of an investment and whether investments were required to be made in or for the benefit of the host country, were cited in that regard. Consequently, it was suggested that other mechanisms were needed.

17. A different view was that the lack of coherence and consistency was a logical result of the fragmentation of existing underlying investment treaties and that seeking to achieve coherence and consistency might not be feasible nor desirable considering that the underlying investment treaty regime itself was not uniform. In that context, the possible drawbacks of a consistent and coherent regime based on unified standards of protection were mentioned.

18. In that regard, the reasons for the development of a non-uniform regime were highlighted, noting that the investment treaty regime had been developed taking into consideration elements of foreign policy, economic and trade policy as well as development strategies. It was emphasized that each investment treaty was the result of negotiation among States, with particular State interests and needs in mind and, in some cases, taking into account the interests of a particular region.

19. It was said that varied treaty practice with a wide range of differing investor protection standards as well as ISDS provisions were natural results of that process. It was noted that such divergence was a reflection of the different approaches to and peculiarities of investment protection, which were deliberate in nature and should not be overridden in the pursuit of consistency and predictability.

20. With regard to the interpretation of same or similar provisions in different investment treaties, it was recalled that, though not in the context of ISDS, certain international judicial bodies had stated in their decisions that the mere fact that provisions of a treaty were identical or similar to those of another treaty did not necessarily mean that they should be interpreted identically. From this perspective, the different interpretations by ad hoc tribunals could also be considered as not indicating a lack of consistency.

21. It was also argued that a lack of consistency and coherence as well as fragmentation might be perceptions based on anecdotal evidence. For example,

different factual situations might lead to different interpretations of the same treaty provision. It was added that there was a need for more experience sharing among States on inconsistent cases and any negative impact. Furthermore, it was stated that experience showed that domestic courts as well as international judicial bodies, permanent in nature, with an appeal mechanism and bound by precedent, had reached inconsistent decisions.

22. During the deliberations, reference was made to articles 31 and 32 of the Vienna Convention on the Law of Treaties, which provided for general and supplementary rule of interpretation of treaties respectively. It was highlighted that a treaty should be interpreted in good faith in accordance with the ordinary meaning to be given to the terms of the treaty in their context and in the light of its object and purpose. Therefore, it was said that articles 31 and 32 provided a certain latitude to tribunals to interpret the same provisions in a number of investment treaties differently according to the intention of the parties to such treaties.

23. In the context of discussions of the issue of consistency and coherence, several possibilities for States to tackle the issues through provisions in their investment treaties were mentioned. Examples included clarity in substantive protection standards and in procedural provisions, the inclusion of detailed and perhaps mandatory guidance for arbitral tribunals (for example, binding interpretation) and other procedural tools (such as allowing submissions from non-disputing treaty parties). It was added that consistency in States' instructions to their own legal counsel with respect to their submissions would be critical. As a further measure to achieve consistency and coherence the possibility of issuing joint interpretations by treaty parties to be taken into account by the tribunal was mentioned.

24. In response, it was said that the above-mentioned measures might not be sufficient to provide a comprehensive solution for existing (as opposed to future) treaties. It was added that joint interpretations were rarely used in practice, as once treaties had been concluded, treaty parties might find it difficult to agree on the interpretations. It was therefore stated that a systemic solution was needed, to address both lack of consistency and coherence, which might include a system of precedent. Such a system might also promote the accountability of adjudicators. Possible systemic solutions might include an appellate mechanism or a multilateral court. In that context, the example of the Dispute Settlement Body of the World Trade Organization system, which combined an ad hoc panel and a standing appellate body was given.

6. Concluding remarks on coherence and consistency

25. Another view was that desirable consistency in ISDS should be clarified, as divergences in outcomes might be derived from legitimate distinctions, themselves arising from different facts before the tribunals and the arguments presented by counsel, as well as from differences in the underlying treaty provisions. Second, clarity was also needed on the extent to which undesirable inconsistency in ISDS raised concerns.

26. With respect to the first aspect of the question, there was discussion of two types of potential inconsistency, inconsistency in the interpretation of a single treaty, and inconsistency in the interpretation of an identical or similar provision in different treaties. There was broad agreement that inconsistent interpretations of a provision in a single treaty could be a concern.

27. On the second issue, it was pointed out that divergent outcomes did not raise concerns if they were appropriately based on the proper interpretation of the language in those treaties. However, it was noted that differences in treaty language had been exaggerated and that the vast majority of investment treaties contained very similar if not identical language, and examples were provided to the Working Group.

28. It was also stated that rigid adherence to principle of consistency between arbitral decisions could be dangerous in that it could create a jurisprudence constante that was itself inconsistent with the intentions of the parties. A further view was that consistency did not necessarily ensure accuracy.

29. It was said that the more appropriate consideration was whether decisions were correctly interpreting treaties in line with the rules of public international law, rather than whether they were ensuring consistency with decisions by other tribunals. It was added that the goal of consistency should not be to ensure that same or similar provisions were interpreted identically in all circumstances but to ensure that unjustifiable inconsistencies did not arise. One cause of inconsistency, it was added, was treaty language that was vague or in need of clarification.

30. It was also noted that there had been inconsistent decisions with respect to general rules of customary international law involving the state of necessity/emergency, the law of attribution, and the legal principles regarding damages.

31. It was suggested that inconsistencies in ISDS arose not from legitimate distinctions but rather from the nature of the system itself, and in some cases from the arbitrators.

32. It was also said that efforts of tribunals to react to concerns and to ensure consistency had not proved successful, and that revising all existing treaties would not be a feasible approach.

33. It was said that consistency and coherence in a legal system were in the interests of all stakeholders, and that a dispute settlement mechanism that issued unjustified conflicting decisions would be unpredictable, and that an unpredictable system would lack credibility and legitimacy.

34. In that light, some States suggested that the Working Group might consider, at the appropriate time, potential solutions to include some type of hierarchical system, an appellate body, an investment court, and a mechanism through which tribunals could direct questions to the treaty partners prior to the issuance of awards. Other States questioned whether such a formal structure was necessary and whether it would provide the appropriate remedy.

35. The Working Group recalled that its deliberations at the 34th session on these issues were to be continued at its 35th session.

B. Note by the Secretariat on possible reform of investor-State dispute settlement (ISDS)

(A/CN.9/WG.III/WP.142)

[Original: English]

Contents

I. Introduction

1. At its fiftieth session, in 2017, the Commission had before it notes by the Secretariat on possible future work on concurrent proceedings in international arbitration (A/CN.9/915), on ethics in international arbitration (A/CN.9/916), and on possible reform of investor-State dispute settlement (ISDS) (A/CN.9/917), together with a compilation of comments by States and international organizations (A/CN.9/918 and addenda). The Commission also had before it a research paper by the Centre for International Dispute Settlement (CIDS) on whether the United Nations Convention on Transparency in Treaty-based Investor-State Arbitration could serve as a model for further reforms (the "CIDS report").[1]

2. Having considered the topics in documents A/CN.9/915, A/CN.9/916 and A/CN.9/917, the Commission entrusted Working Group III with a broad mandate to work on the possible reform of ISDS.[2]

3. In line with the UNCITRAL process, Working Group III, in discharging its mandate, was requested to ensure that the deliberations, while benefiting from the widest possible breadth of available expertise from all stakeholders, would be Government-led with high-level input from all Governments, consensus-based and fully transparent. The Working Group would proceed to: (i) first, identify and consider concerns regarding ISDS; (ii) second, consider whether reform was desirable in light of any identified concerns; and (iii) third, if the Working Group were to conclude that reform was desirable, develop any relevant solutions to be recommended to the Commission. The Commission agreed that broad discretion should be left to the Working Group in discharging its mandate, and that any solutions devised would be designed taking into account the ongoing work of relevant international organizations
